I don't need to belabor the tremendous contributions to the growth of radio and television which network service has made. Most of the areas of this country would still be without television service if it were not for the pioneering of the networks—for the high-grade programing and the revenues which network service has provided to the many individual stations in different cities across the Nation. To network service and to network service alone must be accorded the principal credit for the present tremendous success of TV today.

It is important, however, to emphasize the breadth and variety of national network service. From some things that have been said, it might be thought that network programing consisted solely of entertainment. This is far from the case. A station is licensed to serve the public interest; and it is basic that this means serving the diversified needs of the public—providing programs not merely of an entertaining nature, but religious, news, special events, agricultural, educational, civic, cultural, public affairs and the many other kinds of program fare the public is interested in. And network service provides just such programing—in considerable abundance and at very substantial cost.

On a regular basis, the NBC-TV network provides several discussion programs devoted to public affairs, current issues and controversial matters, namely Meet the Press, American Forum, and Youth Wants to Know. I am sure that all members of this committee are familiar with the public service which these programs perform—many of them at first hand as the result of personal participation in the recent past in these programs on one or more occasions. The NBC-TV network also carries regular programs devoted to the religious needs—Frontiers of Faith—and to educational and cultural matters such as Zoo Parade, NBC Opera Theatre, Wide, Wide World, Medic, and Ding Dong School, and others to the interests of children.

In addition to these regular programs, the NBC-TV network makes available to its member stations a continuous flow of special programs covering or interpreting the important developments and events of the day and serving some timely civic, educational, religious or comparable need. For example, over the last year, the NBC-TV network has carried many addresses and talks by Members of Congress, and other public figures; it has carried many other special programs devoted to public affairs and issues, such as a panel discussion by juvenile court judges on juvenile delinquency; Operation Alert, dealing with civilian defense; a number of programs dealing with or reporting on the meeting at the summit; a discussion on equal job opportunities; the Meet the Press 10th Anniversary Dinner; The Man in Two Places at Once, emphasizing the importance of the Army Reserve Corps in defense.

It has carried many special educational and cultural programs, such as Ten Years After Hiroshima, devoted to medicine in the atomic age; Talk with Arnold Toynbee; The Saint of Bleecker Street, the Pulitzer prize winning opera; We, the Mentally Ill, in connection with the observance of Mental Health Week; the March of Medicine, devoted to advances in the field of medicine; Read to Me, Please, devoted to children's classics; The Ion Knife, a report on the use of radioactive isotopes to combat cancer; a special documentary on India; Alcoholism, its great menace; Antarctica, a special documentary on Operation Deepfreeze. It has carried many special religious programs, such as Home for Passover, a special dramatic program in cooperation with the Jewish Theolgical Seminary; Mass from the Cincinnati Cathedral at Easter; the Enchanted Top, celebrating the Jewish Festival of Hanukkah; the Christmas Eve Mass from St. Patrick's Cathedral in New York; the Holy Communion Services from the Washington Cathedral on Christmas Day; No Room at the Inn, the story of the Nativity on Christmas Day; For God and Country, inaugurating the 1956 American Legion's Back to God movement; Children of Israel, a special drama on the Passover; the Palm Sunday Mass from Boston; the Easter Service from the Episcopal Church in Cincinnati. And it has carried many diverse special events or campaigns and appeals in behalf of civic, charitable, and similar organizations, such as the square dance festival in Oklahoma City; the atomic bomb test a year ago at Yucca Flat involving a series of telecasts; a special drama in cooperation with the United Jewish appeal; Second Chance, dedicated to promoting highway safety; Salk Vaccine Report at the beginning of last summer; the Argentine revolt against Peron; the First Step Into Space dealing with the manmade earth-circling satellite; a number of special emergency programs on Hurricane Connie; many special programs on the illness of the President and his arrival home last November; the Macy Thanksgiving Day Parade; the Tournament of Roses in Pasadena on New Year's Day.

Most of the programs, both regular and special, mentioned above are sustaining; that is, they are paid for by the network itself out of the revenues obtained from sale of other programs to advertisers over the network. To be able to render such services as these, the networks must maintain extensive facilities, and employ a large staff. Network service means that member stations can obtain high quality programs—sustaining, if not sponsored—throughout most of the broadcast day. On the average, WSJS-TV broadcasts every week about 10 hours of the kind of network regular and special sustaining programs briefly summarized above. This represents a very important part of our programing, and a really significant service to our audience in the Winston-Salem area. Such programs as these are not available elsewhere.

How is such network service made possible? By the revenues derived from the sale of network time and programs to national advertisers. And how are such sales made possible? By the ability of the programing and sales agency to clear time for the programs on the many member stations.

Don't think for a moment that the present high quality of network service—that the many different kinds of programing, much of which is not self-sustaining—can be maintained, unless the networks have the tools to provide simultaneous distribution on a national scale of programs and advertising. It need not be emphasized that if such network service is impaired it is not primarily the programing and sales organizations—NBC, CBS, and ABC—which suffer; those who lose are the viewing public across this land which is served by many independent members stations that depend so vitally upon network service.

Now what is the complaint about option time? One complaint, as I understand it, is that option time prevents film producers from being able to compete on an equal basis with the networks for time on network member stations during some of the prime viewing hours. It is their complaint that since option time gives the networks the ability to preempt certain hours of the day for their programs, they are unable to sell their products to the stations for use during those hours. Of course, option time amounts only to 3 hours before 1 o'clock in the afternoon and 3 hours before and 3 hours after 6 o'clock—roughly half of the broadcasting day. To be sure, the best viewing hours for TV are between 6 and 11 p. m., and it is to the 3 hours of option time during this segment that the film producers, as I understand it, are primarily directing their attack.

But, based on our own experience, I don't believe the film producers have proved a case of real injury to themselves from option time. Over and above the numerous programs sold by the film producers to the networks, WSJS-TV, each week, during the prime viewing hours of 6 to 11 p. m., of which option time occupies 3 hours, carries about 5 hours of film bought from representative suppliers. This is a good portion of all worthwhile, top-quality film that is offered to us. I exclude, of course, the many old features and shorts not produced especially for TV, and the technical quality of which in many cases is far below par. So that based on our own experience, I would say that when the film producers have come up with good productions which are priced right, they have found customers.

Let us take a look at the alternatives—network service and the offerings of the film producers. The latter are limited almost solely, if not solely, to the lighter form of entertainment, such as situation comedies, thrillers, westerns, and variety shows. All of these, while undoubtedly quite fine productions, are mostly entertainment. On the other hand, network service provides a wide variety of offerings—not only entertainment, but special event and news coverage, sports coverage, educational, cultural, religious, and similar programs, and many discussion programs and other large blocks of time devoted to public affairs and issues. Certainly, it would be foolhardy to jeopardize such a fine diversified service even to a slight extent in order to make way for purely entertainment offerings of those who would abolish option time.

The objection will be immediately raised that there is no question of jeopardizing network service, but merely of eliminating one of the practices of networks which enables them to obtain a competitive advantage. I am firmly convinced that this approaches nonsense. Option time is the necessary tool with which effective network service is fashioned. If the network sales and programing agency does not have the use of option time privileges which the member stations confer upon it, effective network service to member stations is seriously impaired if not largely destroyed. Unless the networks as a whole—the affiliated stations and their sales and programing agency—can derive the revenues from the sale of program and time to sponsors during 3 of the 5 prime viewing hours, and have the assurance of being able to make such sales which option time affords, then the many other services in the nonentertainment fields cannot possibly be rendered by the networks.

But let it clearly be understood that my purpose in being here today is not to attack the film producers. Neither is it my purpose to defend the networks in all of their practices. Certainly we have had our differences with NBC during the years of our affiliation, but such differences have been resolved between us, always in a businesslike manner.

My reason for being here is solely in the interest of the stations that I represent—that they may continue to be able to render as good a radio and television service as possible, both in the public interest and so that they can obtain and hold audiences, which attract advertising revenues that mean profits for their owners. WSJS wants to insure that the means to make such service possible are not eliminated or impaired.

So, I come back to the point of beginning. In our view a network service, with all it brings, is essential to our greatest success. We want to be sure that we, along with the other independent outlets, are able to operate effectively as a network. Option time seems to us to be the adhesive which enables the aggregation of separate stations to cooperate effectively. The day may well come when network operation will no longer be the effective method that it is today. If and when that day comes, then the independent operators have the right to make their choice—network or not. We reserve that right of choice for ourselves, and we request now a continuation of the right to grant, if we so choose, option time to the network with which we are affiliated. When option time seems to us to be no longer in the best interest of our operation, the matter can be settled by the termination of our network agreement, a situation which I am certain exists with all affiliates alike.

I submit that the abolition or curtailment of option time now will represent a serious overall loss to listeners, viewers and station operators alike, resulting in a certain and substantial deterioration of the fine broadcast service our country enjoys today.

Thank you for listening to our views on this most important matter.[1a]

Senator PASTORE. Is Mr. Abeloff in the room?

(No response).

Senator PASTORE. Is Mr. Rogers in the room?

Mr. ROGERS. Yes, sir.

Senator PASTORE. How long would your statement be, sir?

Mr. ROGERS. 15 minutes.

Senator PASTORE. Mr. Floyd?

Mr. FLOYD. Fifteen minutes.

Senator PASTORE. Mr. Saddler, is he in the room?

Is Mr. Saddler in the room?

(No response.)

Senator PASTORE. Is Mr. Putnam in the room?

(No response.)

Senator PASTORE. Mr. Breen?

Mr. BREEN. Yes, sir.

Senator PASTORE. How long will your statement be?

Mr. BREEN. A little less than 15 minutes.

Senator PASTORE. Is Mr. Chisman in the room?

(No response.)

Senator PASTORE. Is Mr. Swezey in the room?

Mr. SWEZEY. Swezey is here, sir.

Senator PASTORE. How long will your statement be, sir?

Mr. SWEZEY. Between 5 and 10 minutes.

Senator PASTORE. Is Mr. Bryant in the room?

(No response.)

Senator PASTORE. Is Mr. Harris in the room?

Mr. HARRIS. Yes, sir; 10 minutes.

Senator PASTORE. Mr. Gross in the room, is he?

(No response.)

Senator PASTORE. Mr. Warren, is he here?

Mr. WARREN. Yes, sir.

Senator PASTORE. How long will your statement be, Mr. Warren?

Mr. WARREN. 15 minutes.

Senator PASTORE. Is Mr. Lambert in the room?

Mr. LAMBERT. Yes, sir. 15 minutes.

Senator PASTORE. Mr. Wagstaff, is he in the room?

Mr. WAGSTAFF. Here, sir.

Senator PASTORE. How long will your statement be?

Mr. WAGSTAFF. 12 minutes.

[Laughter.]

Senator PASTORE. Is Mr. Gilchrist in the room ?

Mr. GILCHRIST. Gilchrist, yes, sir. Less than 15 minutes.

[1a] Pursuant to later request, the program schedule of WSJS–TV for a sample week in April, 1956, was furnished and is printed at p. 2987.

Senator PASTORE. Well, that all sounds pretty good.

The only thing I want to say off the record—

(Discussion off the record.)

Senator PASTORE. Our first witness is Mr. Rogers.

Mr. ROGERS. Yes, sir.

Senator PASTORE. May we have quiet please, so that the witness may be heard.

All right, Mr. Rogers, you may proceed.

STATEMENT OF LAWRENCE H. ROGERS II, VICE PRESIDENT AND GENERAL MANAGER, WSAZ, INC. HUNTINGTON, W. VA.

Mr. ROGERS Mr. Chairman, Mr. Cox, distinguished Senators, my name is Lawrence H. Rogers II, and I am vice president and general manager of WSAZ–TV, with studios in Huntington and Charleston, W. Va.

I should like to offer this statement for the record in this hearing, and read some salient parts of it; and I invite any questions at any time during the course of this reading, which I will try to make as quick as possible.

Senator PASTORE. We appreciate that very much and without objection, it is so ordered.

(The statement of Mr. Rogers is as follows:)

STATEMENT OF LAWRENCE H. ROGERS II, VICE PRESIDENT AND GENERAL MANAGER, WSAZ, INC., HUNTINGTON, W. VA.

Mr. ROGERS. Mr. Chairman, distinguished Senators, my name is Lawrence H. Rogers II and I am vice president and general manager of WSAZ, Inc., Huntington, W. Va., licensee of television station WSAZ–TV, with studios in Huntington and Charleston, W. Va.

WSAZ–TV has been in commercial operation for 7 years, and is affiliated with the National Broadcasting Co. My appearance here is in behalf of the stockholders of the licensee corporation and it is prompted by only one pressure group; namely, the approximately half a million television-set owners in the West Virginia-Ohio-Kentucky-Virginia area who depend upon WSAZ–TV for service.

Over a period of months this committee has heard reports, documents, and testimony to the effect that network television, as it is constituted today, is a monopolistic force operating against or outside various laws and regulations to the general detriment of the public. Chief amongst these charges were the testimony of Mr. Richard A. Moore and the special report of the Honorable John W. Bricker, himself a member of this committee. I feel it my duty as a station operator to deny these major allegations, not in defense of the network companies, but because the facts simply do not justify these claims insofar as my experience in the operation of a small-city television station is concerned. Indeed, it is my contention that many of the network practices under attack are largely responsible for the growth and success of television in the hinterlands and that the restriction of basic network operations by Government action would be detrimental to the public interest, which as a licensee I am pledged to serve.

STATION OPTION TIME AND MUST-BUYS

I do not propose to treat in detail the questions raised by Mr. Moore as to the legality of option time contracts and minimum station purchases, since Messrs. Stanton, Sarnoff, and Kintner, who are far better qualified than I, have already adequately answered them. Suffice it to say that to expect a network to operate without basic network sales tools is ridiculous on its face, and I strongly suspect that Mr. Moore is well aware of it. To refute his claim that the elimination of these so-called evils will solve the problems of station operators and program packagers alike, one needs only to examine the very record Mr. Moore refers to in the motion-picture industry. He has claimed that the network option-time agreements and the basic network must-buy lists constitute the same type of restraint as block booking by motion-picture producers and chain ownership of theaters by producers. In the first place, the Moore statement actually reads:

> * * * each station agrees to withhold certain desirable time periods from sale to any advertiser unless the advertiser agrees to purchase equivalent time on all stations throughout the country who are parties to this agreement. (Statement of Richard A. Moore, March 26, 1956.)

This is a plain misstatement of fact and simply is not true. WSAZ–TV is not now nor ever has been a party to such an agreement with a network or another station.

In the second place, Dr. Frank Stanton, in his testimony last week, adequately disposed of the claim that a must-buy list is harmful by demonstrating how it actually serves to spread the use of television far beyond the normally anticipated bounds by the average national advertiser. Selective market, or spot buys, are almost invariably smaller than network purchases, and with the program extension plan and the extended market plans of NBC and CBS, the average network show is reaching the great majority of people of the Nation through the overwhelming majority of affiliated stations.

The system works, in fact, exactly the opposite to the claims of Mr. Moore. Now let us examine the movie industry under the divorcement procedure recommended by the Moore testimony. The May 16 issue of Variety, so-called bible of the entertainment industry, carried a story under the head "TV: Studio Meat, Exhib Poison." (See exhibit No. 1, Variety, May 16, 1956, p. 2721.)

> Divorce has not solved the exhibitors' pattern of frustration—

the story begins—

> Today the production side of the motion-picture industry is health and promising while the theater-operating side is notably depressed.

It goes on to say:

> The sages of yesteryear who solemnly assured the Department of Justice that the studios could not survive without exhibition had the argument rear end foremost since events established that it is the theaters that cannot survive without the wholesale supply of entertainment.

Stripped of option time and must-buy minimumus, the networks would probably do very well by redoubling their stake and efforts in programing and film production; but the rap will be taken by the stations who have thrived under the network system, and the biggest loss must inevitably be suffered by the public.

It is a matter of record that most stations, including WSAZ-TV, lost heavily before the advent of network programing. In our own case, we invested an additional $150,000 in private microwave facilities in 1950 after suffering losses in the neighborhood of $200,000, because we felt network programing was the only hope of success of a station in a city of our size. Subsequent events justified our gamble and that of NBC—because at that time it was a loss operation for the network to feed any programs at all over our 120-mile system from Cincinnati to Huntington.[1b] The fact that both of us have made money and the public has received a service great enough to cause them to spend over $200 million on television sets in our area alone is, I believe, a credit to native American ingenuity, rather than a reprehensible action worthy of legal reprisal.

You may help the film production business by Mr. Moore's proposals, and you may help this station in Los Angeles as well as similar operations in New York, but in so doing you will degrade the service of stations in wholesale numbers throughout the rest of the Nation, or so severely limit the scope of their operations as to make them mere jukeboxes for the film producers to display their wares to a disillusioned public. There is only one Los Angeles situation, and there is only one New York, but there are parallels to Huntington in two-hundred-odd American markets. A limitation or destruction of the present technique of network operation will do severe damage to the more than $2-million investment of my stockholders, but much more important, it will degrade and delimit the scope and quality of the service we are rendering to over half a million American families.

INVASION OF STATION TIME

It has been charged that the superior bargaining position of the so-called network monopoly has resulted in increased invasions of station time and that operators are abdicating their prerogatives because of the bullying of the networks. Let me quote an example of this alleged bullying that has resulted in my station's surrender of more than 15 hours per week of station option time to the NBC network:

Through 1954 we used to program feature-length Hollywood movies, of ancient vintage, in the hours from 11: 30 p. m. to 1 a. m. These film features were largely unsuccessful from a commercial point of view. The only regular advertisers who would buy them were the 5-minute and 10-minute "pitch-man" programs which WSAZ-TV now refuses to telecast because of their doubtful programing content and direct contravention of the NARTB code. There were times when this film programing would cost us, out of pocket, over $600 per week for the film alone, with anywhere from little to no revenue return. Thus, when NBC proposed to make its local New York Steve Allen show

[1b] The then station rate of $150 per class A hour converted to 24 average class A hours at $180 meant, under the terms of our contract, that NBC would receive a gross, before discounts, commissions, and program and administrative costs, of $4,320 for the first 24 hours per month waived by the station for interconnection. It further meant the station was waiving $1,440 per month, or 33⅓ percent of gross rate. In return, NBC agreed to pay WSAZ-TV the amount of A. T. & T. tariffs for this service * * * or a little over $6,000 per month. The network lost money on this affiliation arrangement until the station's share reached $6,000 * * * or an hourly class A rate of $625 * * * by which time the hours of operation increased the monthly cost to $7,200. Before NBC reached a break-even point on this deal, A. T. & T. took over the facilities on November 1, 1954.

Tonight available on a network basis, WSAZ–TV was only one of dozens of stations who seized eagerly the opportunity to insert fresh, new programing with real audience and commercial appeal in place of a stereotyped form of late-night timekiller which has become a sort of nationwide joke. Thus, at no additional program cost whatever, we were enabled to improve tremendously the quality of our late-night schedule and at the same time eliminate permanently a large quantity of sustaining film expenditures.

This is one of the great concomitants of networking that benefits station and public alike, but is not calculated by the critics or uninformed competitors. That the film people deplore network programing should appear obvious when you consider that at one fell swoop in the case of Tonight, they lost something like 7½ hours a week of material for 50 stations. This is nearly 20,000 station-film hours per year saving to the affiliates before a single network sale was made. Figuring a modest average of $250 per station per average hour of film cost, here is a minimum saving at the station level of some $5 million per year through scheduling of Tonight. Add to that the network, national spot, and local sales increases which followed and it is small wonder that the stations are pleased with network operation—or conversely that the film interests would like to defeat it.

The same story applies to Today for 10 hours a week from 7 to 9 a. m., with the exception that none of us in the station business ever dreamed of the potential service to be rendered at these hours until this NBC participating program made it possible. In this connection, it is interesting to note that a questionnaire circulated by this committee to all affiliated stations inquired as to the restrictive sales practices of the networks in such participation shows as Today. It would be equally interesting to know how many stations ever had any local or national spot revenue at all earlier than 9 a. m. until the development of Today?

From the foregoing examples it is easy to see that the popular sport of criticizing network compensation on the basis of free hours and a 33⅓ percent of gross rate payment is merely an exercise in arithmetic semantics which springs from a deep well of ignorance. In the final analysis, a station's network compensation is comparable to that which it would have received from a national spot sale or a local sale when program costs, program quality, and audience attractions are weighed in the balance.

SYNDICATION SALES PRACTICES

A curious fact is that the very detractors of networks who sell syndicated film shows derive their greatest sales benefits when their shows run adjacent to successful network schedules. The Moore testimony stated that syndicators and producers are inhibited or restrained from sales and eventual profits because they are blocked by networks; or else they are forced to sell to a network alone.

While this makes an attractive argument legalistically, in practice the opposite is true. Historically the biggest profits in syndicated films are in the residual rights—the resale of the shows after the first run in all markets for a whatever-the-market-will-bear price. Almost invariably, the use of a series by a network is used as basic sales ammunition when reselling the series later under the same or another name. Frequently the sale is made to the same network station that originally ran the show in a given market, and frequently the same package will be sold four or more times. This bespeaks neither a restrictive influence by the networks nor a concern for the viewing public by the film syndicators. (See attached exhibit No. 2, with analysis of WSAZ–TV syndicated film programing, June 10 through 16, 1956, at p. 2722.)

LIMITATION OF PERMISSIBLE NETWORK HOURS

The proposal has been made to reduce the number of evening hours which a network would be permitted to use on a given station. This, too, is an unrealistic proposal which would work against, rather than for, the public interest. Regardless of the pressures for or against clearance of a network schedule, the greater the number of program sources available, the better choice of programing the licensee should be able to provide.

To restrict the ability of a network to provide any service in a given time period would defeat the very purpose of increasing competition. It would mean the licensee would have 1 less rather than 1 more source of program material. It would force him to add 7 more hours per week of film or live local production, with no guaranty whatever that the public would receive as good a service as it had before.

OTHER CHARGES AND PROPOSALS

Other charges and proposals have been made here that range from astounding to downright ridiculous. For example, a scenery builder got big headlines with his charge that NBC was hurting him by building their own props and scenery. If this is a crime, I suspect every station operator is equally guilty. In the considerable amount of live local production done at my station, all artwork, scenery, and properties are either built or rebuilt on our own premises by our own staff. I have yet to hear a complaint from an outside supplier. The proposal that networks or operators should not have a free choice of providing their own scenery material strikes me as a restraint on ingenuity and placing a premium on efficiency. I am reminded of the story of young Henry Ford who was ingenious enough at one time to insist that his carburetors be shipped by the supplier in crates of his own specification, which he in turn knocked down for floorboards in a model T Ford. Surely Mr. Ford was not discredited for muscling in on the floorboard industry.

Just last week I read where a worthy member of the clergy weighed NBC's religious schedule in the balance and found it wanting. Here again a little bit of ignorance goes a long, long way. The one thing I have learned for sure about religion in 10 years of broadcasting is that it is largely both sectarian and local in nature. For a network to try to supply programing suited to all the local religious needs of all its affiliates would consume more hours per week than most of them are on the air. Speaking as a single affiliate, if my network supplied any more religious programing that it does, I would probably not carry it. The reason is simply that we program our religious schedule according to local needs and demands and feel that most other stations must do the same.

ALLOCATION

Now I should like to make a few observations of a positive nature. First of all, I must agree with every witness who has stated that the crux of the problems facing the industry and the networks today is one of available stations. Having been through every stage of construction and operation of a television station in the past 8 years, I am constantly amazed at the incredible productivity of our free competitive enterprise system, which has brought the American people in such a short time a system of over 400 television outlets, transmitting programs of individual producers and 3 networks to more than 95 percent of the population of the United States, and with advertising revenue support of more than a billion dollars a year. I am hardly surprised it's not perfect—I am positively amazed it could have happened at all.

LICENSEE RESPONSIBILITY

If, indeed, the networks have an uncommon or undesirable amount of control over licensees, this is perhaps as much the fault of the licensees as the networks. As many have stated before me, it is much easier to patch in and ride the network than it is to operate a station with comprehensive local programing. Perhaps the general excellence of network programs has led to this tendency, and perhaps it is the laxity of the average station operator. But this much is certain: It is possible and desirable to do strong and comprehensive programing at the local level, and this in turn enhances the schedule of any network. I am proud, and I believe justifiably so, of the record of local and regional interest program service developed and maintained by WSAZ-TV.

Consistently 20 percent of our schedule is originated live in our studios in Huntington and Charleston. We pioneered the development of a local-regional television news operation; and finally, we have been in regular color operation for over 2 years (we originate 2 hours or more of color daily in our studios). These things have not come about as a result of being a slave to a bullying network, but rather from network-affiliate teamwork in a workable business partnership. Indeed, it is my belief that strong local programing accounts for the fact that our ratings on our network shows are as high or higher than any station in the country. It is my recommendation that this committee give some attention to the kind of service the average licensee is giving the public he is pledged to serve before determining that any great wrongs are being perpetuated by the industry in the name of the networks.

Successful operators at every level have been constantly under attack in television. It is my feeling that this is not reflective of the spirit of competitive enterprise that has made our Nation great. It is more than coincidence that operators who have not been immediately successful tend to gather in Washington to petition for a restriction of competition against them. An examination of the chronic complainers will reveal that they have largely tried to get on a gravy train with a minimum stake in television. It is more than coincidence that those stations and those networks that have dedicated themselves to a total service to the public have been successful. Very few stations, indeed, who have fulfilled the maximum possible prerogatives of their licenses with respect to technical facilities, effective power, and on-the-air service to their audiences have fallen by the wayside. It is curious that in the much-maligned UHF band, those few stations which have utilized maximum power and full local facilities have crashed the black ink barrier. It is even more than curious; it is frightening that the anguished cries of the unsuccessful entrepreneurs have been to protect them and their facilities—not to guarantee the public a constantly upgraded television service. To blame the networks with monopoly and restrict their programing because some operators use too many network shows seems to me to be like declaring candy illegal because we can't get our children to stop eating it.

Perhaps the answer in each case is to teach the art of discrimination.

LICENSE PERIODS

Finally, I propose what I believe would materially reduce any imbalance of bargaining power between networks and affiliates during the time we must still wait for a solution to the major problems of allocations. This proposal can also relieve the FCC of so much of its administrative burden that faster progress in licensing new stations is almost certain to follow.

I propose that the present 2-year license period for television stations be materially increased—to as much as 6 years. The present burden of license renewals at the FCC is like painting the Golden Gate Bridge—it is time to start again before you have reached the middle. On the network side, it has been repeatedly charged here that an affiliate whose network contract is a matter of paramount importance is in no position to bargain when he has one eye on a biennial expiration date. If the stations were licensed for as much as 6 years, it would be relatively simple to reduce the problem by two-thirds—by the simple expedient of enabling network contracts to be 3 times as long. In the amortization of such a colossal investment as a maximum power television station, this makes much more sense than either a 2-year license or a 2-year network contract, and might well encourage all operators to use maximum facilities.

The question might be asked: "How can you give a station a 6-year license, cut out FCC work, and still scrutinize licensee qualifications?" I believe it is capable of easy solution. A license renewal in its present form is a time-consuming and frustrating operation for both the licensee and the FCC. Because of the press of time, this is a quantitative examination only, an almost meaningless statistical study which does not reveal the qualitative aspects of each operation. But each station can and does submit an annual financial report with no great strain. Why not submit an annual report of program accomplishment and evaluation? This would not be a collection of statistics on numbers of spot announcements, but an analysis of what each licensee has undertaken within his own sphere and his own local conditions to foster the public interest, convenience, and necessity.

Most stations are proud of their local programing achievements and at WSAZ–TV we frequently have notified the Commission of our activities in the local field as a matter of information without such requirement. It is my impression that any steps which will reduce administrative burden and give a clearer picture of actual TV operations at the local level would be welcomed by FCC and station operators alike.

CONCLUSION

Thus, it is my conviction that there is no network monopoly in any accepted sense of that word, and that most network practices as we know them are in the public interest, having been largely responsible for the development of the art thus far. But in conclusion, I respectfully submit to the committee these recommendations:

1. The qualifications and performance of individual television station licensees operating pursuant to the Communications Act of 1934 should be subject to the most rigorous inspection to assure the greatest possible use of available physical facilities for the benefit of the general public.

2. The license period of television broadcast stations should be increased materially beyond the present 2 years, preferably as much as 6 years, in order to achieve among other benefits: (*a*) longer and more stable network affiliation contracts; (*b*) greater administrative efficiency as well as qualitative analysis of stations by the FCC.

I wish to express the appreciation of the stockholders and management of WSAZ, Inc., for this opportunity to express these views. I am certain that the committee, in arriving at its conclusions in these matters, will be guided not by the exigencies of any group of operators, producers, or networks, but by the interest of our collective audiences, the public.

(Exhibits 1 and 2 referred to in Mr. Rogers' statement are as follows:)

EXHIBIT NO. 1

[Variety, May 16, 1956]

TV: STUDIO MEAT, EXHIB POISON—THAT'S MORAL OF WARNER SELLOUT

Divorce has not solved the exhibitors' pattern of frustration. Today the production side of the motion-picture industry is healthy and promising while the theater-operating side is notably depressed. Small exhibs in particular shoulda stood imbedded in the old system where the studios had to produce a lot of features in order to service their own owned and operated circuits.

The moral of today's predicament is seen starkly outlined in the current financial drama of the Warner Bros. sellout and the attendant insights. In short, film studios are on a found-money gravy train, thanks to the very television which so badly dents the filmgoing habits of the American public.

The sages of yesteryear who solemnly assured the Department of Justice that the studios could not survive without exhibition had the argument rear end foremost since events establish that it is the theaters (retail) which cannot survive without the wholesale supply of entertainment.

Thanks to careful adjustments in their output (which in turn affected the theater box office) and to a natural ability to latch on gradually to the television found-money train, production-distribution today is comparatively healthy; whereas the theaters are crying the blues.

Wall Street, with its ears to the ground, is testifying forcefully to this new shape of things. It is investing in production, but it considers exhibition an increasingly poor risk.

The circuits themselves, while maintaining an optimistic front, are doing some hardheadedly realistic thinking about the future. They're diversifying into nontheatrical fields for their own protection.

EXHIBIT NO. 2

Syndicated film programing, WSAZ–TV, week of June 10–16, 1956 (total hours on the air: 122 hours 33 minutes)

Sources	Total hours	Percent of total
NBC network	69:21	56.5
Local live studio	24:00	19.6
Local syndicated film	20:10	16.5
Remote baseball (Cincinnati Reds)	6:47	5.5
Miscellaneous public service films	2:15	1.9
Total	122:33	100.0
Hours local syndicated film (above)	20:10	16.5
Hours network syndicated film (included in NBC above)	11:00	9.0
Grand total syndicated film	31:10	25.5
Hours local syndicated film, 7 to 11 p. m	6:30	23.2
Hours network syndicated film, 7 to 11 p. m	6:00	21.4
Total syndicated film, 7 to 11 p. m	12:30	44.6

NOTE.—¼ of all WSAZ-TV programing during most recent week was provided by film syndicators. Nearly ½ of all WSAZ-TV programing between the hours of 7 and 11 p. m. during the most recent week was provided by film syndicators.

Mr. ROGERS. My appearance here is in behalf of the stockholders of the licensee corporation and it is prompted by only one pressure group, namely, the approximately half a million television set owners in the West Virginia-Ohio-Kentucky-Virginia area who depend upon WSAZ–TV for service.

Over a period of months, this committee has heard reports, documents and testimony to the effect that network television is a monopolistic force operating against or outside various laws and regulations to the general detriment of the public. Chief amongst these charges were the testimony of Mr. Richard A. Moore and the special report of the Honorable John W. Bricker, himself a member of this committee.

I feel it is my duty as a station operator to deny these major allegations, not in defense of the network companies but because the facts simply do not justify these claims insofar as my experience in the operation of a small-city television station is concerned.

STATION OPTION TIME AND "MUST-BUYS"

I do not propose to treat in detail the questions raised by Mr. Moore as to the legality of option time contracts and minimum station purchases, since Messrs. Stanton, Sarnoff, and Kintner, who are far better qualified than I, have already adequately answered them. Suffice it to say that to expect a network to operate without basic network sales tools is ridiculous on its face, and I strongly suspect that Mr. Moore is well aware of it. To refute his claim that the elimination of these so-called evils will solve the problems of station operators and program packagers alike, one needs only to examine the very record Mr. Moore refers to in the motion picture industry.

He has claimed that the network option time agreements and the basic network "must-buy" lists constitute the same type of restraint as block-booking by motion picture producers and chain-ownership of theaters by producers. In the first place, the Moore statement actually reads:

* * * each station agrees to withhold certain desirable time periods from sale to any advertiser unless the advertiser agrees to purchase equivalent time on all stations throughout the country who are parties to this agreement.

This is a plain misstatement of fact and simply is not true. WSAZ–TV is not now nor ever has been a party to such an agreement with a network or another station.

In the second place, Dr. Frank Stanton, in his testimony last week, adequately disposed of the claim that a "must-buy" list is harmful by demonstrating how it actually serves to spread the use of television. It is well known that selective market, or "spot" buys, are almost invariably smaller than network purchases, and with the program extension plan and the extended market plans of NBC and CBS, the average network show is reaching the great majority of people of the Nation through the overwhelming majority of affiliated stations. The system works, in fact, exactly the opposite to the claims of Mr. Moore. Now, as to the divorcement procedure recommended by the Moore testimony, I would like to offer as part of my testimony, the May 16th issue of Variety, so-called bible of the entertainment industry, carrying a story under the head "TV: Studio Meat, Exhib Poison." This article says in part:

Divorce has not solved the exhibitors pattern of frustration—

the story begins.

Today the production side of the motion picture industry is healthy and promising while the theater-operating side is notably depressed.

It goes on to say:

The sages of yesteryear who solemnly assured the Department of Justice that the studios could not survive without exhibition had the argument rear and foremost since events established that it is the theaters that cannot survive without the wholesale supply of entertainment.

My point is that stripped of option time and must-buy minimums, the networks would probably do very well by redoubling their stake and efforts in programing and film production; but the rap will be taken by the stations who have thrived under the network system, and the biggest loss must inevitably be suffered by the public.

In our own case, and I will spare you the details, we invested an additional $150,000 in private microwave facilities in 1950, after suffering losses in the neighborhood of $200,000. It is a matter of record that this system was used by NBC network at a loss to them, and footnote 2, which is part of this record, gives a financial detail as to the working of this system and how the network paid for it. It never did make a profit for NBC. The fact that both of us have made money in the long run and the public has received a service great enough to cause them to spend over $200 million on television sets in our area alone is, I believe, a credit to native American ingenuity, rather than a reprehensible action.

You may help the film production business by Mr. Moore's proposals, and you may help his station in Los Angles, as well as similar operations in New York, but in so doing you will degrade the service of stations in wholesale numbers throughout the rest of the Nation, or so severely limit the scope of their operations as to make them mere "jukeboxes" for the film producers to display their wares to a disillusioned public. There is only one Los Angeles situation, and there is only one New York, but there are parallels to Huntington in two-hundred-odd American markets.

A limitation or destruction of the present technique of network operation will do severe damage to the more than $2 million investment of my stockholders, but much more important, it will degrade and delimit the scope and quality of the service we are now rendering to a segment of the public.

INVASION OF STATION TIME

It has been charged that the superior bargaining position of the so-called network monopoly has caused the networks to invade "station time." I would like to give you an example of a surrender of station option time in our case, and the true facts surrounding it. Up to 1954 we used full-length Hollywood movies, of ancient vintage, in the hours from 11:30 p. m. to 1 a. m. These film features were largely unsuccessful from a commercial point of view. The only regular advertisers who would buy them were the 5-minute and 10-minute "pitchmen" programs which WSAZ–TV now refuses to telecast because of their doubtful programing content and direct contravention of the NARTB code. There were times when this film programing would cost us, out of pocket, over $600 per week for the film alone, with anywhere from little to no revenue return.

When NBC proposed to make its local New York Steve Allen show, Tonight, available on a network basis, we were only one of dozens of stations who seized eagerly the opportunity to insert fresh, new programing with real audience and commercial appeal in place of a sterotyped form of late-night timekiller which has become a sort of nationwide joke. Thus, at no additional program cost whatever, we were enabled to improve tremendously the quality of our late-night schedule and at the same time eliminate large film expenditures. This is one of the great concomitants of networking that benefits station and public.

That the film people deplore network programing should appear obvious when you consider that at one fell swoop in the case of Tonight, they lost something like 7½ hours a week of material for 50 stations—20,000 station-film-hours per year saving to the affiliates before a single network sale was made. Figuring a modest average of $250 per station per average hour of film cost, this adds up to a saving of some $5 million per year through scheduling Tonight. Add to that the network, national spot, and local sales increases which followed, and it is small wonder that the stations are pleased with network operation, or conversely, that the film interests would like to defeat it.

The same story applies to Today, with the exception that none of us in the station business ever dreamed of the potential service to be rendered before 9 o'clock until this NBC program made it possible. In this connection, it is interesting to note we all received a questionnaire circulated by this committee inquiring as to the "restrictive" sales practices of the networks in participation shows. It would be equally interesting to know how many stations ever had any local or national spot revenue at all earlier than 9 a. m. until the development of Today.

SYNDICATION SALES PRACTICES

The Moore testimony also stated that syndicators of films and producers are inhibited and restrained in their sales because of networks. They are blocked by networks from sales, or they are forced to sell to a network. I agree this argument sounds very attractive legalistically, but in practice, it works the very opposite. Historically, the biggest profits in syndicated films are in the residual rights—the resale of the shows after the first run in all markets for a whatever-the-market-will-bear price. Almost invariably, the use of a series by a network is used as basic sales ammunition when reselling the series later under the same or another name.

Frequently, the sale is made to the same network station that originally ran the show in the market. In this connection I have exhibit 2 which is part of this record, and I would like to call your attention to the fact that, counting locally originated film programing and network, that one-third in the most recent week, ended last Saturday, was originated by syndicated film. Nearly one-half of all our programing between the hours of 7 and 11 p. m., during this most recent week, was provided by film syndicators. This hardly seems like an inhibition or restraint of sale on film because of network operation.

LIMITATION OF PERMISSIBLE NETWORK HOURS

There has been a proposal made to reduce the number of evening hours which a network would be permitted to use on a given station. This, too, is an unrealistic proposal which would work against, rather than for, the public interest. Regardless of the pressures for or against clearance of a network schedule, the greater the number of program sources available, the better choice of programing the licensee should be able to provide.

To restrict the ability of a network to provide any service in a given time period would defeat the purpose. It would mean the licensee would have one less, rather than one more, source of program material. It would force him to add 7 more hours per week of film or live local production, with no guaranty whatever that the public would receive as good a service as it had before.

Mr. Cox. If, however, the option is binding on you in the evening hours, you are limited, in effect, to one supplier—unless you affirmatively find that to offer his program in your market would not be in the public interest.

Mr. Rogers. Presumably that is correct, unless we were to make such a finding. However, I refer back to this exhibit, Mr. Cox, which actually shows that during the hours from 7 to 11 p. m., we were offering 12 hours and 30 minutes, or 44.6 percent of those 28 hours, of syndicated film program. This does not include a number of half hours of local live originated programing in those hours.

Mr. Cox. Half of the film that you referred to there had been sold to the network?

Mr. Rogers. Yes, sir.

Mr. Cox. And therefore would fit in with the pattern, suggested by Mr. Moore, of an increasing tendency on the part of syndicators to make only those programs which they thought they could sell on a national basis?

Mr. ROGERS. I don't know that that necessarily follows, Mr. Cox. The fact that they sell to a network and then recoup the film after it has been sold and used by a network does not necessarily inhibit them from making films which they will not sell on a network basis.

Mr. COX. Have you been approached by any film syndicator with the proposal that you buy a new film series which he is offering for broadcast next fall?

Mr. ROGERS. I couldn't state positively any specific film syndicator or specific series. However, this is a common practice that occurs weekly—we are approached by a film syndicator to buy a new series.

Mr. COX. Now, is that a new series, in the sense that it is making its first appearance on television, or is this an offer to you of a program which has been run on the network or in other markets?

Mr. ROGERS. No, sir; I am referring to a new series. I would refer specifically to a series like Highway Patrol by the Frederick Ziv Co. which was offered to our station, and we didn't buy it and a competing station did. Series like Waterfront and I Led Three Lives, which in our case we did.

Mr. COX. Those are series which have been in the market for some months, at least, or years.

Mr. ROGERS. Yes, sir. As far as I know, no one of those series has ever run on a network, either.

Mr. COX. Could you check your records when you get back and supply us with information as to whether any new syndicated program has been offered to you on a syndicated basis for broadcasting this fall?

Mr. ROGERS. Yes, sir. I will make a check on that and report to you.[2]

Senator PASTORE. Go on, Mr. Rogers.

Mr. ROGERS. I would like to leave out the detail on some of these other things like scenery building and religious programs. I think they are terribly uninformed comments that have been made here and do not reflect the facts of the business as we experience them.

ALLOCATION

Now, I would like to make a few observations of a positive nature. First of all, I certainly agree with every witness that has faced this committee who has stated that the crux of the problems facing the industry and the networks today is one of available stations. Having been through every stage of construction and operation of a television station in the past 8 years, I am constantly amazed at the incredible productivity of our free competitive enterprise system, which has brought the American people in such a short time a system of over 400 television outlets, transmitting programs of individual producers and 3 networks to more than 95 percent of the population of the United States, and with advertising revenue support of more than a billion dollars a year. One can hardly be surprised it is not perfect—I am positively amazed it could have happened at all.

---

[2] This material was forwarded in a letter dated July 6, 1956, which is printed at the conclusion of Mr. Rogers' testimony at p. 2732.

LICENSEE RESPONSIBILITY

If the networks have an uncommon or undesirable amount of control over licensees, this is perhaps as much the fault of the licensees as the networks. As many have stated before me, it is much easier to patch in and ride the network than it is to operate a station with comprehensive local programing. But this much is certain: I am sure every affiliate here is proud of the record of local and regional interest programing its station has developed. Consistently 20 percent of our schedule is originated live in our studios in Huntington and Charleston.

We originate such things as our News Picture program and transmit them from our two city origination points. We use a very large amount of remote programs to reflect the local activities in our State and our area. We pioneered the development of a local-regional television news operation; and finally, we have been in regular color operation for over 2 years—we originate 2 hours or more of color daily in our studios. These things have not come about as a result of being a slave to a bullying network, but rather from network-affiliate teamwork in a workable business partnership. Indeed, it is my belief that strong local programing accounts for the fact that our ratings on our network shows are as high or higher than any station in the country.

Successful operators at every level have been constantly under attack in television. It is my feeling that this is not reflective of the spirit of competitive enterprise that has made our Nation great. It is more than coincidence that operators who have not been immediately successful tend to gather in Washington to petition for a restriction of competition against them. An examination of the chronic complainers will reveal that they have largely tried to get on a gravy train with a minimum stake in television. It is more than coincidence that those stations and those networks that have dedicated themselves to a total service to the public have been successful. Very few stations, indeed, who have fulfilled the maximum possible prerogatives of their licenses with respect to technical facilities, effective power, and on-the-air service to their audiences have fallen by the wayside.

Senator Pastore. You don't mean that about UHF station operators, too?

Mr. Rogers. Yes, sir.

Senator Pastore. You mean to tell me it is the fault of the operator that he is going out of business, and losing money?

Mr. Rogers. I say even with the UHF band, where stations have utilized maximum power and full facilities, they have crashed into the black. There are not many but there are several examples.

Senator Pastore. Are you a VHF station operator?

Mr. Rogers. Yes, sir.

Senator Pastore. How many VHF's in your locality?

Mr. Rogers. Two.

Senator Pastore. How many U's?

Mr. Rogers. There are none.

Senator Pastore. Do you think a U can come in your locality and be in the black?

Mr. Rogers. No, sir.

Mr. Cox. With any power?

Mr. ROGERS. I don't think they can now. I don't think they necessarily will add an additional service that cannot be added by a V service that is already there.

Senator PASTORE. I realize that, but the point of the fact is that there are many localities where we have had very good business-minded people, and where you have two U's and one V and the U's don't survive, because you can't get conversion and power.

As a matter of fact, even where they are in a locality before you come in with a VHF, the networks, who only do business with them on a temporary basis, turn over and go to a VHF station the minute one is available. Now, that has happened time and time again. I am not being critical, because after all they get a better spread on a V. But after all I don't think we ought to be too prone to criticize the people operating these U's that if they did their business better they would still be in business. That isn't the case at all. They are bucking their heads up against circumstances over which they have no control. I am not saying it is your fault, but I don't think it is quite right to come in and say the reason they are not making money is because it is their own fault, businesswise.

It isn't their own fault. It comes fundamentally down to the point that you don't have the same spread on a U as you have on a V and you don't have that many sets insofar as conversions are concerned. These operators in communities that already have V's are finding it pretty hard to operate only because of circumstances unfavorable to them. And these circumstances are way, way, way beyond their own control. I think I ought to make that speech for the UHF operators.

Mr. ROGERS. Thank you, sir.

LICENSE PERIODS

I would like to propose what I think would materially reduce any imbalance of bargaining power between networks and affiliates during the time we must still wait for a solution to the major problems of allocations. This proposal can also relieve the FCC of so much of its administrative burden that faster progress in licensing new stations is almost certain to follow.

I propose that the present 2-year license period for television stations be materially increased—to as much as 6 years. The present burden of license renewals at the FCC is like painting the Golden Gate Bridge—it is time to start again before you have reached the middle. On the network side, it has been repeatedly charged here that an affiliate whose network contract is a matter of paramount importance is in no position to bargain when he has one eye on a biennial expiration date. If the stations were licensed for as much as 6 years, it would be relatively simple to reduce the problem by two-thirds—by the simple expedient of enabling network contracts to be three times as long.

The question might be asked: "How can you give a station a 6-year license, cut out FCC work, and still scrutinize licensee qualifications?" I believe it is easy. A license renewal in its present form is a time-consuming and frustrating operation for both the licensee and the FCC. Because of the press of time, this is a quantitative examination only, an almost meaningless statistical study which does not reveal the qualitative aspects of each operation. But each station can and does submit an annual financial report with no great strain. Why not submit an annual report of program accomplishment and evaluation. This would not be a collection of statistics on numbers of spot announcements, but an analysis of what each licensee has undertaken within his own sphere and his own local conditions to foster the public interest, convenience, and necessity.

CONCLUSION

Thus, it is my conviction that there is no network monopoly in any accepted sense of that word, and that most network practices as we know them are in the public interest, having been largely responsible for the development of the art thus far.

I might say parenthetically that networks are in fact regulated to the fullest extent simply because of the fact that with no stations there can be no networks and the stations themselves are beholden to the FCC for licensing based on their program record.

Mr. Cox. What would be the substantial difference if this was put in direct form by provision that networks be licensed, that they apply for renewal at specified intervals, and that that portion of the programing of their affiliates which they provide be subjected to criteria as to balance, fairness in treatment of the news and things of that sort?

Mr. Rogers. Mr. Cox, I respectfully submit that this is already the fact, since in each case the 2 networks own at least 5 stations of their own which are licensed and which are responsible for and originate the programing which is seen on the rest of the network.

Mr. Cox. Then——

Mr. Rogers. The fact of the matter is this licensing is already in effect.

Mr. Cox. You say this is not undesirable, it is unnecessary?

Mr. Rogers. I say it is unnecessary because it would be duplicated regulation.

Senator Pastore. Let me ask you this question: Of course, it gets to the point in all of these hearings, Mr. Rogers, where it is pretty hard, if a man attends them all, that you don't find out how he feels about some of these things. In that spirit let me say I am one of those who would be rather reluctant to put the networks under any Government regulation as of this time. I don't think we have had a development of circumstances nor of situations which would at this time warrant it in the public interest—although I feel that if the Congress did decide to do it, that they have the jurisdiction and that they have the right as they supervise a local broadcasting station—that they do have, under the law, the right to supervise a network. But be that feeling, as I have already expressed, as it may, the thing that I marvel at is this: You, the broadcasting station, are now under supervision, and every affiliate that has been in here testifying for the last 3 days is under supervision. Yet, they have all come in here to make a very strong appeal for not putting the networks under supervision. Why do you do it? What is this strong solicitation on part of the affiliate to come here and be the advocate for the network with reference to this bill? I mean, it is getting to amuse me a little bit.

Mr. ROGERS. Speaking for myself——

Senator PASTORE. Every affiliate has come in here with a dedication to protect the network against being under supervision. Now, I am perfectly willing to admit that it shouldn't be. But why have all you affiliates become the advocates of the networks on this proposition, when you yourselves are under supervision and all making a lot of money under it?

Mr. ROGERS. I believe it may be the question of exactly what I mentioned to Cox, a pyramiding of supervision upon supervision.

Senator PASTORE. But why is that so much your business? Why don't you leave it to the networks to come in here and plead their own cause? The thing that has intrigued me here is that we have had about 25 witnesses who have all come in here as advocates of the networks. Why? What is this close attachment—what is this interest on the part of the broadcasting station to protect the network?

Mr. ROGERS. I am not sure it is an impulse to protect the network so much as it is an interest to protect our station operation.

Senator PASTORE. Why does it protect your station operation? I mean, supervision thus far hasn't censored you in anyway; has it?

Mr. ROGERS. No, sir.

Senator PASTORE. It hasn't bothered you in anyway; has it?

Mr. ROGERS. No, sir.

Senator PASTORE. Why do you think it is such a tragic calamity?

Mr. ROGERS. Simply because our relationship with the network has enabled us to build a service with the network which is successful and is one which our license requirements allow us to deal with as an ordinary business relationship which we feel is entirely unnecessary to have supervision. We are not bound beyond the point of our own free programing choice to follow the dictates of a network.

Senator PASTORE. I realize that; that has been said time and time again. But after all you are not being interfered with by the FCC in the projection of your programs, in doing business as you like. Certain standards are set, but they really don't step in and run your business; do they?

Mr. ROGERS. No, sir.

Senator PASTORE. The FCC hasn't been telling you how to run your business?

Mr. ROGERS. No, sir.

Senator PASTORE. What makes you think that the FCC would step in and tell the networks?

Mr. ROGERS. I believe any regulation over a service that is a program service is inevitably a step in the direction of censorship.

Senator PASTORE. You are a program service, insofar as local program services are concerned?

Mr. ROGERS. We are also a technical distribution service.

Senator PASTORE. I know. But insofar as the principle is concerned, you are doing no more on a local level than the network is doing on a national network level. Let's face it, let's be realistic. I am afraid we sometimes strain these logics too far, to the point of creating an atmosphere of insincerity. I am one of those who doesn't feel that the circumstances are present whereby we ought to put the networks under supervision. I am against that unless it is absolutely necessary. I don't think anything has been developed in my mind. There may be people who might disagree with it.

If the Bricker bill came up tomorrow I would vote against it, because I think, in the public interest, the situation has not arisen for us to make a change at this time. But after all, let us face it; on the local level you do nothing more or nothing less than the network does on a national level. You have to program your own programs, your own local programs; you call in citizens off the street, you may even put on a little production of your own. You are doing that every day in the week and the FCC is not interfering with it, and I think we create a wrong impression here that Government supervision in the public interest is such an odious thing. It isn't, if the public interest is there. I say, of course, the public interest is such, at the present time, that under the present prevailing conditions it has been protected—it has been protected because we are somehow supervising the local stations on the local level, and I am perfectly willing to admit that. But I think, myself, that sometimes this strong advocacy on a matter that is not of intimate interest to you creates an atmosphere of insincerity here that I think does you more harm than good in pleading your case.

I had to get that whistlestop speech off my chest. I have been listening to this now for 3 days. [Laughter.]

Senator Wofford?

Senator Wofford. Mr. Rogers, doesn't it really narrow down to this proposition, more in answer to the Senator's question: You all, as affiliates, think you have a good contract and you don't want anything to upset it—isn't that the truth of the situation?

Mr. Rogers. Yes, sir. In fact it was going to be my recommendation that if any changes are made in the situation, we lengthen the licensing period for the station so that stations could make an even longer network contract. So that they need not be in any fear that renegotiation of a contract might inhibit them in the future.

Senator Pastore. Well, now that the question is brought up, wherein will supervision of the network interfere with your contractual relationship with the network? That is a very amusing point that I think we ought to explore.

Mr. Rogers. I don't know——

Senator Pastore. Do you mean to tell me, if the networks were put under supervision as you are now, that that would interfere with your contractual obligations or relationship with the network?

Mr. Rogers. No, sir; I don't believe it would, inasmuch as our contract with the network is already on file with the FCC in any event.

Senator Pastore. Of course not. I repeat again I am not being critical at all of the situation as it now exists. And I tell you very frankly after having sat here as I have for the past few weeks, I am pretty much convinced that it wouldn't serve the public interest if the networks were put under supervision. I am not for that at all, now. But I am a little amused, and I repeat again—as a matter of fact this presents the relationship and the connection much stronger than I thought was there. Now, it may be love; it may be love. [Laughter.]

It may be love that motivates all this. I don't know. But it could be something else. I have lived long enough to realize it could be.

Mr. Rogers. You have made my point much more eloquently than I could and I thank you very much for it.

Senator PASTORE. Thank you.

Mr. COX. Could you furnish the committee with a copy of your program schedule for the week of April 1 to 7 of this year? We made that request of the CBS affiliates.

Mr. ROGERS. April 1 to 7, this year. Yes, sir; it will be furnished to you.

(This program schedule was furnished later and is printed in the appendix at p. 2990. The covering letter contained certain requested information as to syndicated films, and is as follows:)

WSAZ TELEVISION,
Huntington, W. Va., July 6, 1956.

Mr. KENNETH A. COX,
Special Counsel, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR MR. COX: In reply to your request for additional information following my testimony in the matter of network practices, I am enclosing a copy of our weekly program schedule for the week April 1 through 7, 1956.

A percentage breakdown of the source of this programing will reveal a very slight difference from the breakdown in my testimony applying to the week of June 10 through 16. This is attributable to the change in the program structure due to daylight saving time, plus our carrying about 5½ percent of the schedule in remote baseball telecasts, which has the effect of reducing the percentage of network programing by that amount.

In regard to your question concerning film programing, a search of our records reveals that there have been only two new syndicated film shows offered to us for showing in 1956. One of these is the Dr. Hudson show from MCA; and the other is Long John Silver, produced by CBS. We are carrying through the rest of this year the new Dr. Hudson show for a local client. We have not purchased Long John Silver and, as far as I know, it is not in the market at all.

In the process of furnishing this information, my film director and program director both report that their biggest difficulty in negotiating with syndicated film sales organizations is the invariable requirement that a repeat package be purchased. Specifically, practically all syndicated film firms will only sell a 52-week run if it contains a minimum of 13 repeat shows and 39 new ones per year. If a new program is bought for 26 weeks, it is impossible to buy an additional 26-week schedule without taking either the same 26 on a repeat basis or 13 new ones with 13 repeats. This has inhibited us from the purchase of syndicated films more than any other single practice, the reason being that most national advertisers and all local advertisers in our experience have a distinct aversion to repeat runs of syndicated film shows.

It is the estimate of our film and program people that between 2 and 3 dozen syndicated film packages have been offered us for play during 1956, some of which are reruns of shows we have had before, and many are shows that have never run in the market at all. Our selection of syndicated film packages is invariably based upon what we feel is the program content and the salability of the show.

I trust this adequately supplies the additional information you requested.

Kind personal regards.

Cordially,

L. H. ROGERS,
Vice President and General Manager.

Senator PASTORE. Is Mr. Abeloff in the room?

(No response.)

All right. Counsel would like to read something into the record.

Mr. COX. Senator Schoeppel has requested that the record show that Mr. W. J. Moyer, of KARD–TV of Wichita, Kans., had asked to appear on this date and present testimony to the committee, but that upon checking on the situation the Senator discovered that so many had asked to come that it was not going to be possible to fit Mr. Moyer into the schedule. Therefore Senator Schoeppel suggested to Mr.

Moyer that he submit a written statement for the record. That is being done and will be made a part of the official record upon its receipt.[3]

Senator PASTORE. All right, Mr. Floyd.

STATEMENT OF JOE FLOYD, PRESIDENT, KELO-TV, SIOUX FALLS, S. DAK., KDLO-TV, FLORENCE, S. DAK.

Mr. FLOYD. I am Joe Floyd, of Sioux Falls, S. Dak., president of Midcontinent Broadcasting Co., operators of television stations KELO of Sioux Falls and KDLO of Florence, S. Dak.

After filling out the confidential television questionnaire for network affiliates for this committee, and reading several writings on the complaints against the networks because of their practices with their affiliates, I would like to submit my thoughts on the subject. Realizing that the major complaints were directed toward option time and network practices, I felt our television operation would be an extremely important example because it is a nonbasic station which has agreements, contracts primary and secondary, with all three networks, with the commitment of option time in the contracts.

Mr. COX. Do you give the option to everyone?

Mr. FLOYD. We have an agreement with CBS on a per program basis and option on NBC and ABC option times.

Mr. COX. ABC has an option on your time?

Mr. FLOYD. Secondary affiliation.

Mr. COX. It covers the same option time as NBC but is subject to it.

Mr. FLOYD. Subject to it.

When we started operations in May of 1953, because we are in a smaller market, we originally had a great deal of difficulty in securing programing for viewing from any television advertisers, that is, network advertisers, national spot advertisers, and local advertisers. This was because there was a limited number of sets in our new market and the cost to any advertiser on a circulation basis was almost prohibitive. We were actually faced with the old riddle of "which came first, the chicken or the egg." With programing, our station could gain set circulation, or, with set circulation, our station could gain programing. Of these three sources, that is, the networks, national spot advertisers, and local advertisers, I found that the only one of the three sources I could turn to for help in this program predicament were the networks, CBS, NBC, ABC, and Du Mont. They encouraged me by giving me all the across-the-board programs they had available. They aided me through their sales service and station relations departments, because these departments had had experience in similar markets and had a thorough understanding of this problem. They gave me assistance and the know-how to call on their clients to help in getting our station programing. Only the networks were interested in my problems of getting me scheduled programing because of their potential stake and interest in the future of our television station. This was not true with local or national spot advertisers because they deal with the current hard facts of circulation per dollar spent.

I readily agreed with the form contracts of the networks on regular option time, and I would have been happy to agree to more option time

[3] Mr. Moyer's statement was received later and is printed at p. 2830.

if I only could have solved our problem of programing in this smaller market for the viewing public.

Our next big hurdle, to increase our minimum circulation to a reasonable cost per thousand and enable our station to bring more informative and entertaining programing to the people, was to obtain a network live connection. In order to get this connection, cable or microwave meant a large financial obligation guaranty over several years. Again it was necessary for me to seek assistance, and the only people I could turn to for help were the networks. This was negotiated individually with all the networks, NBC, ABC, and CBS, and they all stood their proportionate share of the per-pr[illegible] obligation.

After obtaining our live connection, our circulation increased [illegible] leaps and bounds and we were able to bring to the public, in our [illegible] tant area, the splendors of live programing. So may I repeat, w[illegible] the help and assurance of the networks, our circulation grew, un[illegible] today we are an established market for not only the networks but f[illegible] national spot and local advertisers as well, furnishing our viewers wit[illegible] the top interconnected available television programs.

Although I am ever conscious of the favors, the assistance, and the effort which all the networks gave our station and am forever grateful that I was able to turn to institutions of this kind, I am at this time carrying local and national spot advertisers in, and closely adjacent to, my agreed option time. I have yet to be demanded by either NBC, ABC, or CBS to cancel any local programs, national spot programs, previously ordered, or public service programs for their use, regardless of option time. We have never been asked by our primary network, NBC, to give them any primary consideration in option time for their programs over our other network affiliates, ABC and CBS.

I'm sure this committee will be interested to know that we are carrying more commercial time from our secondary network affiliates than we are from the primary affiliate; and although now we have orders from NBC, our primary network, that we are unable to clear because of interconnection conflicts, NBC has never insisted that we give them first consideration.

Mr. Cox. In other words, they never insist on the enforcement of the option?

Mr. Floyd. They have never insisted that we clear the network for that time.

Mr. Cox. They have no legal right to do so?

Mr. Floyd. I have never been asked. I have always informed them we have other programs on the line.

Mr. Cox. The terms of your contract prevent you from honoring their option against another network program?

Mr. Floyd. Well, I have never been asked, I really haven't. If we had ever brought the terms of the contract into the discussion——

Senator Pastore. But you do say, Mr. Floyd, that the option time has worked to your advantage?

Mr. Floyd. The option time—really, this option time hasn't been a big thing with me, because it is kind of a rule of thumb actually. We schedule in and around and about all their option time and other times.

Senator PASTORE. Do you believe in this argument that has been advanced here that if option time were cut down or eliminated—before we get to the elimination, if it were cut down—that that would be planting a seed of erosion insofar as good programing is concerned in your station that would eventually lead to a disadvantage to the public interest?

Mr. FLOYD. I think anything in this particular, referring to my station; yes. I use it as a rule of thumb when they say we have an order for a thing; it automatically comes to my time, option time, and I give it all consideration possible. I think if we shortened this and the network was unable to put all the programing that they have now across all the stations, I think it would be harmful.

Senator PASTORE. And you are perfectly willing to accept the value of the 3 hours advanced by the station as binding upon you—that that is the prescribed option time that they should have?

Mr. FLOYD. I am willing to accept it. However, I never have been worked a hardship with it. I have never had any problem with it, so naturally I will accept it.

Senator PASTORE. You are willing to take their word for it that if you cut it down you may be planting a seed of erosion?

Mr. FLOYD. I do not exactly take their word for it; I think it is good healthy programing.

Senator PASTORE. You think they are in a better position to know? At least let me say this to you: I think they are in a better position to know, if you want that reassurance and comfort. I have had to listen to this for 3 days now.

Mr. FLOYD. I think the rest of this document here will point out exactly what I mean.

Also, the committee may be interested in knowing my answer to their television questionnaire in which I stated we are carrying 9 hours a week of commercial network programs outside of our option time. This time has not always been most satisfactory to the clients, but through the cooperation of the networks and their sales organizations, we have been able to program many of these outstanding shows outside of their regular broadcast period. This enabled the public to see more programs than they would see just in option time, because of the conflict on the live cable.

I would like to state to this committee at this time that our background has been that of operators in the motion-picture theater business, and because of this training, we are ever conscious of programing to the general public.

I might add in this case we were programing for money.

We have been trained to know our success depends on program quality and audience acceptance. We have seen what has happened in our motion picture theater experience. When major producers and distributors were curtailed by regulations such as the "divorcement" or "consent decree," it rendered it impossible for them to depend on, or be assured of, major outlets which would give them dependable runs and playing dates for their pictures or programs.

Mr. COX. The regulation to which you refer was simply the enforcement of the antitrust laws, wasn't it?

Mr. FLOYD. I know they were not programing their theaters; they did not have to. As far as we are concerned, for us it has been very, very harmful.

Mr. COX. However, the regulation to which you refer, both in terms of divorcement and in terms of the consent decree, were incidents to legal actions brought in the courts, in which it was held that the antitrust laws applied to certain practices in the motion picture industry, and you deplore the results of that?

Mr. FLOYD. That is correct.

It has been demonstrated they are no longer interested or financially capable of furnishing enough programing to satisfy the demands of the thousands of motion-picture theaters. They are no longer interested in these demands because they are not being forced to program or furnish pictures day in and day out to the major theaters they formerly owned or were affiliated with. Thus they have curtailed their motion-picture production by over 50 percent and are only producing top-budget pictures with no consideration of what the theater operator can do, or is doing, to fill out a well-rounded program entertainment year. Neither are they developing new stars nor are they forced to keep under contract major talent to protect and assure the theater operators product and programing at a price they can afford to pay for exhibition. Thus you have many of these thousands of theaters closing and going out of business at this time because of their inability to get the volume of programs that is demanded at a price that the theater operators can afford.

Senator PASTORE. Let's be fair about it: Plus the fact that you have television today.

Mr. FLOYD. Well, I am not so sure about this. We are still operating theaters and in some particular theaters, where we have a healthy product that we can secure enough for, we are doing a pretty good business; grosswise better than before. Maybe this is peculiar in our area, but we have been successful. We have found in a lot of our drive-in situations, where we are programing 3 or 4 pictures a week, we cannot get them now. We cannot do the business in these theaters.

Senator PASTORE. I have a very particular friend of mind who in the beginning of television—and when the theaters began to feel this pinch—who would always deny that television was good enough to hurt them. And I think it was part of their pattern of publicity never to admit that they were weakening, but he is willing to admit it today.

Mr. FLOYD. I think there is——

Senator PASTORE. Television has been one of the greatest boons for entertainment that this world has ever known. I think it is a wonderful thing; I think it ought to be encouraged, protected, and preserved. Let us not play down the effectiveness of it. It is a wonderful, wonderful medium of communications and of entertainment. It has been accepted by the public; it is a free thing; it is a wonderful thing, and it has had its effect upon the moving-picture house; there is no question at all about it. And it has created the situation where it is almost hard to get these tremendously good extravaganzas that can keep up the demand that would be necessary if you were to keep these movie houses going.

Now in my own State I know of four theaters that have had to close down. Now those men who run those theaters today have the same capacity, the same intelligence, the same creativeness, and the same initiative as they had 10, 20 years ago. They are still the same men. They have grown up in the moving-picture industry, in the theater industry. Today they have to close their doors. Why? Because people would prefer to sit in the comfort of their own parlors and look at a good television program without having to go out and pay money to do it. I mean that is the practical value of life, and I don't think we can change it. I am willing to accept that one, too, for the record. [Laughter.]

Mr. FLOYD. Senator, we have a problem——

Senator PASTORE. My hat is off to you, because you are in charge of a medium today that is such an effective medium. That shows you why these hearings are very important, because, say what we may, we are dealing here intimately with the public interest; we are dealing here with the desires, the aspirations, the hopes, the entertainments, and the emotions of people throughout the land. And you would be surprised how much we Senators and we Congressmen receive in the way of letters from back home on programs and on stations, why these matters become so important; it is because it is a very attractive thing. It is a great thing; it is one of the most modern things—and I say "Lucky we have it so much here in America, and we ought to promote it on a more competitive nationwide basis." This has been said time and time again and I think much of what we have been talking about for the last 3 days doesn't attack the very problem at its source. The problem is allocation. We should have more allocations, more stations, more networks, more entertainment, more program sources, more pleasure, more of everything. [Laughter.]

Mr. FLOYD. Shall I continue, Senator?

Senator PASTORE. Yes, go ahead.

Mr. FLOYD. So with this knowledge in mind, we feel and think all television stations should learn by this experience: Networks must be assured a number of basic affiliated stations in larger markets so they can continue to assure coverage for their clients. This gives them the necessary financial wherewithall to pioneer some new stars and lay off these threadbaring characters—we might get some new business in the theaters.[4]

Senator PASTORE. You have something there, but you have to admit television is developing a lot of new ones, too.

Mr. FLOYD. That is right.

Senator PASTORE. And what is wrong with Kim Novak? [Laughter and applause.]

Senator PASTORE. It looks like the boys in the back are having a picnic.

Mr. FLOYD. I think those points were well taken.

For an example of the last statement, when many of our small markets were pressed for programing, the networks (a year or so ago), recognizing their responsibility in the smaller markets, devised individual plans such as the Extended Market Plan and the Program

[4] The only particular in which Mr. Floyd's written statement differed significantly from his oral testimony was at this point, where it read: "This gives them the necessary financial wherewithal to program to the best of their ability at all periods of the day. It also enables them to afford long-term contracts to their talent and leaves them capable of having experimental money to pioneer in new programing, continually developing new talent as well as to furnish unsponsored or sustaining programs currently available to their affiliates and the general public.

Extension Plan, which were set up to assist the small markets by putting them in a group of buys that would attract national advertisers, thus making programing available for smaller markets or allowing smaller stations not ordered by the advertiser to play the program on a participating or a sustaining basis, which, I'm sure is agreed, was a great assistance. With the exception of the networks, I know of no other national program source or film interests that have been concerned or helpful with the overall small-market problems.

In conclusion, I'm sure it is recognized by all concerned that if the network's option-time and basic-network practices are disturbed, it will impair, if not destroy, the network chain programing that we have today. This will put all stations, small and large alike, in the position of individual all-day programing and at the mercy of film interests who do not have, and will be unable to take, the responsibility of network broadcasting as we know it. Theater owners have learned a severe lesson. So let's not let the broadcasting industry and the public suffer by such a mistake again.

Of course, I have no idea as to what, if any, legislation will result from these hearings, but I do urge you not to deprive television stations in small markets of our cheapest, our most plentiful and the best program source, the networks. If harsh measures and restrictions are applied against the networks, I fear that television operators in small markets will find themselves without adequate program material, thus not only working a severe hardship on the stations, but also on the viewing public.

Senator PASTORE. Senator Wofford?

Senator WOFFORD. No questions.

Mr. COX. Would you likewise, Mr. Floyd, provide us with a copy of your program schedule for the week of April 1 to 7, and would you indicate the source of the programing—which network, whether it is local, whether it is syndicated? Would you do that also, Mr. Rogers?

Mr. ROGERS. Yes, sir.

Mr. FLOYD. Yes, sir.[5]

Senator PASTORE. I want to say this off the record, gentlemen.

(Discussion off the record.)

Senator PASTORE. Mr. Saddler——

STATEMENT OF OWEN L. SADDLER, EXECUTIVE VICE PRESIDENT, THE MAY BROADCASTING CO., OMAHA, NEBR.

Mr. SADDLER. My name is Owen L. Saddler. I am executive vice president and general manager of the May Broadcasting Co., which owns and operates radio station KMA, Shenandoah, Iowa, and television station KMTV, in Omaha, Nebr.

I certainly appreciate the privilege of appearing before this committee and I will abide by the Senator's suggestions of briefing my 14-page statement down to about 2 or 3 minutes.

Senator PASTORE. That is fine, if you can do that, and then if you feel that you want to expand it any, you are welcome to do so. But do it with regard to the number of people that are to follow you.

---

[5] The program schedule was furnished later and is printed in the appendix at p. 2993.

Because, after all, we have just put these names down as they come, and I wouldn't want someone to wait here all day and then find out they have to come back sometime later. So if we can fit them all in, let's synopsize this. Now, the whole statement will go in the record as though it were read.

(The prepared statement of Mr. Saddler follows:)

STATEMENT OF OWEN L. SADDLER, EXECUTIVE VICE PRESIDENT, THE MAY BROADCASTING CO., OMAHA, NEBR.

My name is Owen L. Saddler. I am executive vice president and general manager of the May Broadcasting Co., which owns and operates radio station KMA, Shenandoah, Iowa, and television station KMTV, in Omaha, Nebr.

I am here to speak in behalf of our own radio and television facilities and interests, and for this privilege I sincerely thank this committee. Our radio station is a "supplementary" on the ABC network; our television station is in the must-buy group of NBC. On the radio side, we have had affiliations with Mutual and ABC. On the television side, we have had affiliations with four networks, ABC, Du Mont, CBS, and NBC. Further, I have served on the advisory committee of ABC and later CBS. I currently am a member of the affiliates group of NBC. We do, therefore, feel that we can speak on network practices and policies with some knowledge and experience.

I want to point up the fact that our radio station is in a small Iowa town of 7,000 people. Our television station, however, is in Nebraska's biggest city with a population close to 300,000. We, therefore, can speak knowledgeably about a small town as well as a big-city operation.

A. UNFOUNDED ACCUSATIONS

I am afraid that a lot of loose talk has and will be presented to this committee. To some advocates, there is a sense of life so real that it becomes a sense of something more real than life itself. They employ some facts, ignore others, and often speak out of frenzy or emotion, rather than truth. Many are simply decrying the loss of something they have never had. Very few people, it seemed to us, wanted to get into television back in 1947, when we filed our application for a television station in Omaha, even though the American public of 1947 was just as deserving of a television service as are the people of today. History has proved, however, that few have the courage and hardihood of pioneers, because most people refuse to pay the penalties but will fight violently for an unjust share of the rewards after the way has been shown to them.

When our application was filed for Omaha, there were no television stations in Omaha, Kansas City, Des Moines, or Denver. In fact, no applications had even been filed for Denver and Des Moines, and one channel was still unapplied for in Omaha. Further, Commander McDonald of Zenith about that time was making some bold pronouncements to the effect that television could never be self-supporting and that some "toll method" would have to be devised and he, therefore, was proposing his system called Phonovision. A number of people believed him. I recall getting a questionnaire from the National Association of Broadcasters regarding our opinions on these and kindred issues.

Our basic answer then was this: That radio in its early days was certainly not self-supporting. In our own case, we lost money a number of years before we developed a service that was self-supporting. We felt that television would certainly go through the same cycle. We expected to lose money for an indefinite period, but were confident that our prior experiences in broadcasting would enable us to develop a service so adequate and wanted by the public that advertising could and would support it.

Now, a lot of the people who called us foolish back in 1947, also want to get into the proverbial "act." They want to do so, however, by damaging or destroying some of the things that have enabled us to build a fine, strong, dependable television service. Some would like to cut all stations to the same size. Some would like to destroy networks or to put so many restrictions on network operations that they would become ineffective as networks. These frightened operators are unabashedly asking the Government to protect them from some of the risks and hazards we willingly encountered several years ago. I do not suggest, of course, that the television field should be limited to those who were its pioneers. In an industry as dynamic as ours newcomers are needed, expanded program sources are desirable, and increased competition can serve only the public good. But in providing for these things we cannot afford to wreck the very structure that has made such a good television service available to the public. Networks as we know them and the network-station arrangement as we know it is an integral part of that structure.

B. MUST-BUY STATIONS ARE A MUST

There is nothing wrong, so far as the public is concerned, with networks having a must-buy group of stations. In fact, it is definitely to the public's advantage that networks do have, and effectively use, such groups of stations. A chain of any sort must have a certain number of links to be effective for given uses, and certainly if a network is to be national in scope, it must be national with a minimum group of links or stations it is representing.

If programs have to appear on a minimum group of stations, a network can then afford to produce expensive programs which will be in the high public interest. These shows then become economically feasible to the producers and to the advertisers, because then the program cost will be divided by the number of stations in the minimum group. In other words, the cost-per-station share for Omaha for a very lavish production might be only $300 to an advertiser, but the show, if produced for the Omaha area only, would probably cost so much it would be forever unavailable to Omaha people.

My own experience has definitely proved that a station is much more healthy when it is in the must-buy network group than when it is not. I can also say, too, that the networks which do have must-buy groups have proved stronger and far superior operations than those that have not had such groups. And the reasons are not vague or dialectical. A must-buy station usually carries most, if not all, the best shows on the network. This fact insures good, or substantial, audience acceptance to the obvious benefit of the local station and the people it serves. It is also good for the network because they are performing a truly national service.

Then, too, the network must have a strong, competent program department which can produce shows worthy of a national service. It must also have a strong sales department which can procure the revenue to make these fine shows possible and available to the public nationally.

I can speak from personal experience, too, that this must-buy feature is not something that has been rigidly imposed upon clients. They have not been forced to take our station against their will. For instance, in 1951 the sponsor of a dramatic program on CBS indicated that their distribution pattern was not too satisfactory in the Omaha area and that they would like to cancel. To this wish we acceded and filled that period locally with a program which after 5 years is still on our station in prime evening time. When we became affiliated with NBC, in January of this year, there was another sponsor who indicated that since we were on the must-buy list, he would buy our station if he had to, but that he would be quite willing to be left out if we wanted to use his period locally. This we did and in its stead we have a topflight syndicated film production. Such facts, I am sure, could be duplicated among the better television operations throughout the country.

In passing, it is only fair to note that the networks are more reasonable and gentlemanly in these matters than are many film syndicators. All network programs are on the 28-day cancellation basis. Some film producers, however, insist upon firm 52-week contracts. In short, if you have need for a program for 13 or 26 weeks, you cannot get it from them unless you contract and pay for 52, whether or not you, the sponsor, or the public want all 52 programs in a series. In one instance in our experience an appliance firm had to cancel its advertising because of changing marketing conditions but it had to pay for the eight unused programs remaining in the series anyhow.

I want to point out, too, that when a station is on the must-buy list it does not imply that it is also on the must-take list. Naturally, any station operator must be cooperative with his network. He cannot deny the network practical and proper use of his facilities, under the terms and conditions of the contract he voluntarily negotiated. On the other hand, whenever we've pointed out to any network with which we have done business that certain programs at certain times were unacceptable to us because of well-established local programs, they did not protest or threaten, but were thoroughly sympathetic to our situation and were happy to cooperate with us, either by not having the program in our area or on our station at all, or by accepting a delayed broadcast which was satisfactory to the client. In some instances, such programs have wound up on a competitive station when the advertiser felt that the time period and the simultaneity of network broadcasting were desirable or necessary.

C. MANY ADVERTISERS DO NOT USE NETWORKS

If any advertiser finds that a must-buy group of stations does not fit his distribution pattern, he has many other ways of doing business with television stations. He can do so with local shows or he can buy programs from the film or syndication people. We have a number of such instances on our station. One of our advertisers currently uses 5-minute weather reports on about 18 stations. All these programs are patterned after the one we developed in our studios. There are several network advertisers who also wish additional regional impact. One company sponsors our sportscast in the evening, three times a week, and another has a dramatic program on film. We have 1 national advertiser who sponsors only 1 television program in the country, and that program is on our station. In radio, however, they are using 30 stations and transcribe the programs in Omaha. In short, they have set up their own transcription network.

D. NETWORKS HELP OTHER STATIONS IN COMPETING WITH THEIR OWN AFFILIATES

It should also be pointed out that the networks themselves syndicate their own programs. In short, they have some good film programs of network caliber which they make available to all stations, and by all stations I most certainly am including stations not affiliated with them as a network.

Then, too, after a network program has been well received, it can be rerun on film and earn a very fine audience. For instance, Badge 714 was the repeat of NBC's Dragnet. We ran Badge 714 in prime evening time, getting higher ratings for it than the Dragnet programs that were currently being released by the network on our competitor. Despite the fact that we are now an NBC station, we are the station that carries Annie Oakley, a CBS syndicated program. In a sense, then, the networks are currently competing with themselves on their own affiliates and for this, I feel, they deserve tremendous applause.

E. ANYBODY CAN FORM A NETWORK—AND MANY DO

In instances where an advertiser does not wish to buy film programs for a special list of stations, or to buy local programs on individual stations, he can still do business by setting up his own network. In other words, he is not restricted to the national networks as such, because informal networks can be set up by anybody. In radio, for instance, when an advertiser has wanted to buy two or more stations, we have used as a cutting or closing cue, "This is a special Iowa radio network." In radio, we are a member of a special baseball network carrying the games of the Kansas City Athletics. There are some 28 to 32 stations on the list and they are fed over special telephone lines. It works out rather economically this way because a station does not have to buy individual lines all the way to Kansas City, but only to the nearest station carrying the games.

F. NETWORKS SOMETIMES HELP STATIONS TO THE NETWORKS' DISADVANTAGE

Such things are possible in television, too. For instance, back in February, I received a call from WCCO-TV, which is a CBS outlet in Minneapolis, to the effect that Secretary of Agriculture Benson would be in Minneapolis to make an address which he wanted carried by television in several other important cities in the Middle West. It was pointed out that if we were to buy special loops and connections for this broadcast, the cost would be exorbitant, but if NBC would allow us the use of their loops and connections at a prorated cost, the telecast would be economically feasible. We found NBC most cooperative in this regard, even though we were preempting one of their top evening shows to take a feed from a CBS station in Minneapolis.

I reiterate: There are many ways in which networks operate in the public interest, convenience, and necessity, which some inexperienced operators will probably never know.

G. OPTION TIME IS NOT OPTIONABLE—IT IS NECESSARY

And then, there is the very important question of option time. That this can be said to work to the detriment of the public or of the television station is ridiculous and can issue only from misconception or misguidance. A network, as such, cannot exist if it does not have certain definite areas in which it can do business. Option time clears the air of doubts and pettifoggery for both the networks and the television station management. Many of our topflight local features are built and established in periods other than option time. They fit there logically. Some, however, are in option time or during the prime viewing hours.

I might emphasize here—contrary to some impressions you may have received—that network option hours are not the only good hours available to a station. For example, our evening option hours are 6:30–9:30, Omaha time. A substantial time period immediately following these hours can be equally good if the programing is of sufficient public interest. The same point can be made with respect to afternoon time.

Option time is a factor helpful to the network in getting station clearances and without such clearances a network cannot exist. For instance, I quote from the April 16, 1955, Television Digest, volume 11, No. 16, page 4: "Du Mont spent nearly $3 million last year for rental of coaxial and microwave connections, he (Ted Bergmann) said, but because of shortages of stations in many markets, it was able to get back only $150,000 of this investment—or 5 percent." In short, option time or station clearances are necessary and exigent to the health and success of a network.

However, even if a network has a great number of affiliates, but still would not have option time, they would be under a grave handicap. Option time makes possible program or advertising position. To use an analogy, would it not be hard to sustain the editorial content of The Saturday Evening Post, Life, Collier's, and so forth, if your ad might appear on page 7 in one city, page 50 in another, and so forth? Such chaos would not only ruin the networks, but the television industry as we now know it.

Further, by having option time, a network knows that it can and will produce programs in certain time brackets. It therefore sees that there is diversity of program content, public interest, and a general well-rounded blend of information, entertainment, and all the other ingredients that make up good public service. They could certainly not do this if it were not for option time.

H. EXCLUSIVE AFFILIATIONS ARE LOGICAL AND JUST

On this same matter, I would like to point out, too, that there is nothing more wrong in having an exclusive national network in a city than there is in having an exclusive national representative. Both are salesmen, in a sense, and they can hardly do a conscientious and thorough job of representing more than one facility at a time in a city. While we sometimes lose business to our competitors, we certainly do not want our own sales people compelled by law to aid and abet such things. Competition has helped make our economy strong. It has helped us build a sound television service. I reiterate that what we want is competition, not chaos.

I. STATIONS CAN AND DO USE OWN DISCRETION IN ACCEPTING OR REJECTING NETWORK PROGRAMS

Some statements have been presented to this committee to the effect that option time gives the networks an undue programing prerogative and that stations in many cases program blindly without having any information in advance as to what the program content or overall value will be.

There might be some instances in which this situation occurs, but I have always found the networks very cooperative in offering us the fullest kind of information about the programs they would like on our station. Usually much in advance, we get lots of literature, even to pictures of the stars, and so forth, and in cases where such printed material is not satisfactory, we can usually get more than adequate information by telephoning the networks and asking them specifiic questions. In short, because of regular program releases, special traffic bulletins, and TWX messages, our programing department has sometimes complained to me that such a deluge of information from the network can be burdensome.

We usually don't go into a whole lote of preprogram inquiry about the world series, or a championship boxing bout, but I want to assure this committee that this is about as blind as we navigate regarding network programs.

J. GOOD NETWORK STATIONS ARE GOOD FILM CUSTOMERS, TOO

Some statements have been presented to this committee to the effect that the stations which option time to a network and are members of a must-buy group are, perforce, not good customers of film program producers. Certainly, if this fact were true at all, it would be true in our case where we are in a 2-station market and do business with 2 networks. But the facts indicate that we are a fine customer indeed of the film syndication people. For instance, I am listing below the syndicated film programs we are currently carrying in prime evening time.

Program	Night	Time
Celebrity Playhouse	Monday	8:30 to 9 p. m.
City Assignment	do	11 to 11:30 p. m.
Les Paul and Mary Ford	Tuesday	6:40 to 6:45 p. m.
Patti Page	do	6:45 to 7 p. m.
Cross Current	do	10:30 to 11 p. m.
Dr. Hudson's Secret Journal	Wednesday	8:30 to 9 p. m.
Wrestling from Texas	do	10:30 to 11 p. m.
Les Paul and Mary Ford	Thursday	6:40 to 6:45 p. m.
Patti Page	do	6:45 to 7 p. m.
Turning Point	do	7 to 7:30 p. m.
Annie Oakley	Friday	6 to 6:30 p. m.
Superman	do	6:30 to 7 p. m.
Death Valley Days	do	10:30 to 11 p. m.
Man Called X	Saturday	9 to 9:30 p. m.
Waterfront	do	9:30 to 10 p. m.

I have noted that even networks are good film customers, too.

K. YOU CANNOT LEGISLATE SUCCESS

I want to say to this committee that the network policies and practices here under challenge are vital to the most successful method of communication yet developed. Some newcomers to the field would love to legislate themselves into success. No one coerced them into television. You cannot be asked to vindicate their mistakes in judgment in entering television where and when they did. Further, you cannot assure their success or prosperity by destroying the great system of networks which we now have. You cannot guarantee that there will be enough apples for all by cutting down the tree.

Senator PASTORE. Now, you may continue.

Mr. SADDLER. I simply want to point out that in our careers we have had experience with all networks on the radio and television side. So we have had some considerable experience and do feel, out of that experience, that must-buy stations are a must if a network is to operate as such. I think many of the reasons given here—well, we concur with most of the reasons given. We certainly feel, too, that option time is a must; in fact the two are conjunctive; one without the other doesn't mean much. If you are going to have a group of must-buy station you must have option time; it is a two-way street. Not only that, but option time does this: It assures advertising or programing position which is very important. It would be very hard to sustain the editorial contents of Collier's, Saturday Evening Post, or Life magazine if your ad is going to appear on page 7 in one market, page 50 in another, and so on. That way you would have chaos. On option time I am sure an advertiser finds that position desirable.

Mr. Cox. Don't you state that you make adjustments—that you carry network programs on a delayed basis in order to permit the broadcast of local programs that you are originating—and don't you therefore get the same disruptive effect to the continuity of the network schedule that you are suggesting in the magazine field?

Mr. SADDLER. Those things are here, Mr. Cox. They are not everyday happenstances, and I would say that the several divorces that we might have had with the network, that does not gainsay the 300 or 400 happy marriages we have had. Basically, you must have a system and an organization, and there are exceptions. I would like to point out that on the network side you have people and on the station side you have people, and these two groups of people get together to serve people. So we have to be rational and there are exceptions that are made. But by and large we have to have a general pattern of framework within which we operate or we are lost.

Senator PASTORE. Do you feel that without the option time on the part of the network—that is, the agreement that it has with you in the affiliate agreement—that without that the network could not be in a position of dealing with advertisers so as to promote an overall, well-rounded, qualitative type of program on a national basis.

Mr. SADDLER. Precisely.

Senator PASTORE. That would meet the public interest in your community?

Mr. SADDLER. Precisely so. The thing is that option time does work directly to that because a network will program within its option time. It will not program, normally, within—to a great extent within station time. Therefore, they are block programing and are seeing that we do have an overall qualitative type program which you have said.

Senator PASTORE. Now, has this agreement, in granting option time to the network, deterred you or interfered in your negotiations with an independent producer if you so chose to do on a specific program?

Mr. SADDLER. No, sir, it has not.

Mr. COX. How many of those do you clear in the hours 7:30 to 10:30?

Mr. SADDLER. I give you a list, sir. In our prime evening time, what we clear, starting on pages 13 and 14.

Mr. COX. Part of those programs you list there are cleared in the period 9:30 to 10:30 which is, however, not option time in your time zone?

Mr. SADDLER. That is right.

Mr. COX. It is still prime time?

Mr. SADDLER. It is still prime time. We consider that prime up to 11. I would like to point out very definitely that the time the network goes on is certainly not the only good time of our broadcasting day.

Mr. COX. Do you have a different spot rate for different parts of the day?

Mr. SADDLER. We have a rate that runs until 10 o'clock. That, Mr. Cox, will vary from area to area. In the Middle West most stations, or many stations, will consider noon as class A time, which I am sure you won't find so in the East. That will vary according to area.

Senator PASTORE. Mr. Saddler, do you feel that if the rule restriction as to the term of your contract with the network were removed that that would improve your possibility of negotiating a longer contract with the network?

Mr. SADDLER. **Yes; it would.**

Senator PASTORE. Are you in favor of the removal of such a restriction?

Mr. SADDLER. Either the removal or the extension of it.

Senator PASTORE. When I say restriction, as to 2 years, I mean.

Mr. SADDLER. Yes; the 2 years is hardly satisfactory.

Senator PASTORE. We have had much testimony here that it ought to be made 5 years. How do you feel about that? Do you cover that in your statement?

Mr. SADDLER. I do not. But in the questionnaire that was sent, I did mention 5 years.

Senator PASTORE. I see. Is that the way you feel about it, sir?

Mr. SADDLER. That is the way we feel about it, sir.

Senator PASTORE. Are you at all disturbed that this option time is invoked during prime time, sir?

Mr. SADDLER. No, sir; we are not. In fact, we feel very good about option time being in the prime time because it assures us of topflight network programing in those prime evening hours, which is something we might not otherwise have.

Senator PASTORE. Any further questions of Mr. Saddler?

Thank you very much, Mr. Saddler.

Senator PASTORE. Mr. Putnam.

Mr. COX. Mr. Saddler, I forgot to ask, will you also supply a copy of your schedule—this will apply to all witnesses—for the week of April 1 to 7.

Mr. SADDLER. Yes, sir.

Mr. COX. Showing the sources of your programing.

Mr. SADDLER. Very happy to.[6]

Senator PASTORE. All right, Mr. Putnam. May we have quiet, please?

Mr. PUTNAM. Before I start, Senator, I would like to thank you for that plug for UHF. We can use it.

STATEMENT OF WILLIAM L. PUTNAM, TREASURER AND GENERAL MANAGER OF THE SPRINGFIELD TELEVISION BROADCASTING CORP., SPRINGFIELD, MASS.

Mr. PUTNAM. My statement is quite short.

My name is William L. Putnam. I am the treasurer and general manager of the Springfield Television Broadcasting Corp. which is the licensee for channel 22, WWLP, in the city of Springfield, Mass. We operate in the UHF portion of the television band.

I would like also to point out, sir, that we do not have any radio, newspaper, or other connections whatsoever. Our sole source of livelihood is UHF television.

Our station has been on the air since March 17, 1953. We operate with a peak visual power output of 206 kilowatts and for practical purposes cover the northern part of the Connecticut Valley in western Massachusetts and northern Connecticut.

Prior to our taking the air we secured network affiliations with the National Broadcasting Co. and with the American Broadcasting Co.

[6] The program schedule was furnished later and is printed in the appendix at p. 2998.

To this date our affiliation status is unchanged. We, naturally, receive more programing from NBC than from ABC, since from the date of our sign-on, NBC has had considerably more programing to offer.

Long before the time we went on the air, many NBC programs were carried on a VHF station located some 60 miles away and toward which a large part of our potential audience was already oriented. We, nevertheless, were offered on a commercial basis and accepted practically all the NBC programs that were carried on this VHF station.

In this regard I would like to point out that, although we do share our affiliation with ABC we, naturally, orient our thinking around the NBC programing which we take from 7 in the morning to 1 a. m., on most days. The amount of ABC programing that we carry is relatively limited, although it is of high quality.

Mr. Cox. Does that mean that you accept all the NBC programing that is offered to you?

Mr. Putnam. Not quite all. We have a couple of orders we have not been able to fill, but we accept 98 percent of it.

During all the time of our affiliation we have enjoyed extremely friendly relations with both of our networks. Naturally, as in any business arrangement, there have been things that I would have preferred done differently, but I am sure that our networks would have preferred that we would have done some things in a different manner. There has been the usual give and take of good business relations.

We have been offered all the network programs we could profitably use and have found NBC particularly willing to aid us in a great number of ways, not only by making their programs easy for us to carry but also with advice which we solicited and assistance in promotion and other matters.

Gentlemen, to put it simply, we are very happy with our networks. They have been good to us.

In noting our case, it is important to bear in mind that we are a small station in the UHF band with no large corporate connections—and no influential stockholders. NBC has helped us and we are grateful.

If there is anything malicious to be said about networks, I am not about to say it, for I have absolutely no reason.

Senator Pastore. As far as you are concerned, this option requirement provision in your contract, and this designation for prime time, and this must-buy feature that has been talked about—any change of that would not be in the public interest in your opinion?

Mr. Putnam. I don't know about the must-buy business, sir, because I am not on the list.

Senator Pastore. All right. Then eliminate that from the question.

Mr. Putnam. As far as option time is concerned, I don't have any great amount of outstanding orders for people who want to buy the time that is optioned out. Therefore, I am perfectly happy with the option arrangement. I have had no conflict on it.

Senator Pastore. Are you ever approached by independent producers?

Mr. Putnam. Not enough to put in your eye. [Laughter.]

Senator Pastore. How big is that eye?

Mr. PUTNAM. Well, I don't want to get into a conflict on the size of your eye, sir, but we haven't—whatever inquiries we have had from that source haven't stuck in my mind as worth remembering.

Senator PASTORE. Do you feel if you were approached, and you want to substitute any program on option time and prime time, that you are at liberty under your contract and you have enough flexibility to do so?

Mr. PUTNAM. I think if the contract were to be held strictly, I probably am not at liberty. But I have never had a conflict with the networks on that count when I have said, "Here is a program I would like to carry." In either case, whichever network I have had to go to have been quite willing.

Mr. COX. On the other hand, you cleared these NBC programs whether they had an option or not?

Mr. PUTNAM. In most cases I have. Although I have upon occasion not cleared in nonoption time because I have had other programing that I thought was of more value to the community.

Senator PASTORE. Senator Wofford?

Senator WOFFORD. No questions.

Senator PASTORE. Senator Magnuson?

Thank you very much.

Mr. COX. Will you furnish us the same data on your programing?

Mr. PUTNAM. Yes; I will send it to you when I get home.[7]

Senator PASTORE. Mr. Breen.

STATEMENT OF EDWARD BREEN, PRESIDENT AND GENERAL MANAGER, TELEVISION STATION KQTV, FORT DODGE, IOWA

Mr. BREEN. Mr. Chairman, I have a rather long statement. I am a UHF operator in a very small market.

Senator PASTORE. Without objection, the statement will be inserted into the record as though read into the record.

(The prepared statement of Mr. Breen follows:)

STATEMENT OF EDWARD BREEN, FORT DODGE, IOWA, PRESIDENT AND GENERAL MANAGER OF KQTV, CHANNEL 21, FORT DODGE, IOWA

My name is Ed Breen. I am the manager and one of the principal owners of KQTV, a UHF television station on channel 21 in Fort Dodge, Iowa. KQTV is the only UHF television station in Iowa. One other UHF station, which started in Des Moines a short time ahead of us, has been dark for over a year. Another UHF station licensed for Sioux City turned in its license without making any effort to start.

To give my background briefly, I am a lawyer by profession, having graduated at Wisconsin in liberal arts and in law at Drake University. I got into radio, when I was going to law school, at WHO, a clear-channel, 50-kilowatt NBC station in Des Moines, Iowa. I was employed there as an announcer and later as a program director and for a short time as local manager. In 1938, I was practicing law in Fort Dodge. I had served as Webster County attorney for 4 years, and then served in the Iowa Senate. I helped organize and became one of the principal owners of radio station KVFD. That station went on the air in 1939. I have been president of the corporation since its inception. A few years later I took over its management, and have been in active charge for the past 14 years. I was once my party's candidate for Congress and once ran for Governor of Iowa. I am a Democrat

In radio, KVFD has been affiliated with the Mutual network for 16 years, and is still a member of that network. It has been my privilege to serve as

[7] The program schedule was furnished later and is printed in the appendix at p. 3000.

president of the Iowa Tall Corn Network, an affiliation of 14 Iowa stations; as president of the Iowa Broadcasters Association; and as small-station representative on the board of the National Association of Radio & Television Broadcasters. At present, I am serving as a director of Radio Advertising Bureau.

The Northwest Television Co. was financed by the purchase of stock by some 243 people living in 26 towns and on farms in northwest Iowa. Those people wanted television. Our own service at that time was from WOI–TV at Ames, a station owned by the State of Iowa through its agricultural and engineering college. Representations had been made by people in authority at the college that as soon as other stations came into the area, WOI–TV would drop its network affiliations. Relying upon these representations, we went ahead with KQTV. The people at Ames defaulted upon their representations, however, and held on to the networks they had as long as they could. When WHO–TV came into being at Des Moines, WOI–TV, which is only 25 air miles from Des Moines, lost NBC, and later when KRNT–TV at Des Moines came into being, WOI–TV lost CBS.

About the time NBC left WOI–TV at Ames, it became possible for us to talk about an affiliation with NBC and within a few months we had a contract with NBC. That dates back to November of 1954, about a year after we started. We had no telephone facility for bringing network programs into Fort Dodge from Des Moines and we were told it would be a matter of some 7 or 8 months before we could expect such service. We petitioned the Federal Communications Commission for permission to build our own microwave relay. It was granted and we brought the first programs into Fort Dodge from NBC and Du Mont in December of 1954.

Fort Dodge is a town of 27,000. It serves a trade area embracing several counties and about 250,000 people. It has 1 daily newspaper, circulation 18,500, 2 radio stations, 1 only a month old, and our television station, KQTV, channel 21.

It is not a big market. National advertisers avoid it by the hundreds. Our affiliation with NBC served us with many sustaining programs from the start, but it was some months before we got our first commercial show.

Then someone at NBC came up with a brilliant idea that changed everything for us. The Program Expansion Plan came into being. I was notified of it confidentially in the early fall of 1955 by Bob Aaron, station relations representative for our area for NBC. The plan started working November 1, 1955. Since I may be the only small market station representative here affiliated with NBC, let me tell you how it worked for us. Some 44 or 45 stations our size, but most of them bigger, were asked if they would come into this plan. I would guess that most of those so invited came in because the advantage was on our side. NBC, through its officers, Pat Weaver and Bob Sarnoff, said to us, "We are going to put all of your stations in a package. We will pay you your regular rates, but we are going to ask the advertisers if they buy all of you to pay only half." The language was a little different than that but that is roughly how it worked. In addition, we were told that starting May 1, 1956, advertisers who wished to buy time between 7 and 11 in the evening, would have to buy more stations. The minimum was upped from 50 to 100.

The only out on that was that in certain cases they would be allowed to buy fewer stations if NBC was permitted to send the unpurchased NBC stations the programs on a sustaining basis or in some cases on a co-op basis. Co-op, as the industry knows, is that arrangement where you are allowed to cut out the network commercials or the network credits and sell those spots yourself. You pay the network a small fee for that right. Incidentally, these co-op fees are all we have ever paid NBC and we are not required to give the network any free time.

We agreed to that plan. We not only agreed—we embraced it as we would a long-lost brother. It was the greatest leg-up that small-town television had ever gotten. We wired our enthusiastic response. What did NBC ask in return? Nothing, except that we stay in the buggy for a year—just our agreement that once we had accepted the plan, we would go along with it for at least a year.

What has it meant to us? It has meant programs, prestige, conversions, lowered operating costs. For our corporation it has meant salvation. We have had a very rough 2½ years. We have lost a tremendous amount of money. We are not out of the woods, but we can see the light. So you can see that NBC has been our great benefactor. We owe NBC and its people for everything we are today.

So to turn to the charge of monopoly, if there is monopoly in television, it exists, it seems to me, because of fundamental mistakes made long since—and I fear in danger of being repeated—by the Government's own agency, the Federal Communications Commission, that has charge of such matters. It is my opinion that there should have been no intermixture of UHF and VHF unless the licensing agency, the Federal Communications Commission, upon whose order such intermixture was determined, had first made sure by law that VHF-only sets would be taxed out of existence. There is very little difference in the UHF and VHF signals, as I have been able to observe them. In some respects the UHF may be better than the VHF; in coverage the VHF may be better by a few miles than the UHF. The vital difference is that today all sets will receive VHF signals and only more expensive special or converted sets will receive the UHF signals. It is my opinion that no one today in his right mind will risk many dollars to go into UHF operation until this condition is corrected.

So we will continue to have a monopoly created by conditions which exist under the control of Congress and the Federal Communications Commission. As long as most of the sets manufactured in this country are going to be designed to receive only one kind of television signal, you are not going to have enough equal facilities assigned to defeat the scarcity that makes for monopoly.

To aggravate this scarcity of equal facilities, a great number of allocations have been reserved for education. We have one of these in Des Moines, channel 11. While every other VHF channel in Iowa has been spoken for and is in use, this channel remains idle. No one wants it for education. No one has been permitted to have it for commercial use. So Des Moines, the capital of Iowa, our largest city, home of a great newspaper, several great magazines, and of 6 radio stations, has only 2 television stations, while another VHF, the only one left in Iowa, remains idle. NBC has WHO for its outlet, CBS has KRNT. ABC has to be satisfied with the college station 25 miles away, while channel 11 remains idle.

A condition of scarcity has been created, although hardly one of monopoly. NBC has to be in Des Moines; so does CBS, and ABC would like to be. Nobody on a network level is in any position to push those stations around. In turn, however, the stations are so loaded with network and spot advertising, there is a real scarcity of time for local projects. I can remember when we used to say it was harder to get on WHO radio than on NBC.

How do I feel about option time? I feel this way. If NBC is going to sell our station, it must have some assurance that when it has sold KQTV, there will be time for the program that it has sold. I want those NBC people to work for me as they have been, getting me wonderful programs, making me money, treating me better than I have ever had any right to expect.

Now, I understand that there are other people in the film industry and in pay television who cry "monopoly," and point their fingers at the networks and say, "There is the villain in the piece." I think they have got something to complain about, but it is not the networks. No, my feeling is that they are the victims of this same scarcity of equal outlets that I complain about. Let's take Des Moines as an example. Allow four equal facilities in Des Moines. There is then plenty of room for three networks, pay television, and a film network, and also plenty of time for local affairs. But it can't be done as long as you have two brands of television operating in the same market, one that can be gotten by every receiver and the other by only a special and more expensive receiver.

The reason for the cry of monopoly lies in a system that wears the label "Made in Washington," and one that can only be corrected here in Washington. The American people deserve the best in television. They will only get that under a system of television big enough to insure competition for viewer interest everywhere. Aside from the sacred VHF's reserved for reluctant educationalists, there are no more VHF's to be had. More stations means more UHF stations. But that day will only come when the UHF's are raised to a position of equality with the VHF's. Until you change that condition of scarcity, by taxing out of existence the profitable manufacture and sale of one-lung television sets—the kind that get only one kind of television signal—the television system of this country will remain plagued by all the problems and ills that scarcity creates in any field of human endeavor.

Change that one condition under which we must operate and you open the way for film networks, for pay television, for the serving of every local, educational, political, social, and religious and economic need in this country. Don't let anyone fool you into believing that you can help this situation by

drop-ins and such. All you are doing then is debasing the very service you hope to improve. Go the whole way. Tax one-lung television out of existence.

Mr. BREEN. I have been in radio business with a small station in a small market for about 20 years. We started UHF in 1953. We had no commercial V near us—at least we thought we had none. We actually had one at about 40 miles owned by the State of Iowa through its college of engineering and agriculture. They had made repeated statements to the effect that as soon as commercial stations came into the area they would leave the commercial field. That they failed to do. So for a period of some months we were without any network. Eventually, Ames, WOI–TV, lost NBC to WHO in Des Moines, and also lost CBS to KRNT in Des Moines, and we were then able to talk to NBC, although Des Moines is only 72 air miles away from Fort Dodge.

Fort Dodge, Iowa, is a small market, 27,000. Just hundreds of national advertisers avoid it like poison. Nevertheless, we were able to negotiate a contract with NBC. We then found that we had no service, or no means of securing programs into our market through the ordinary facilities. We petitioned the FCC and were allowed to build a microwave relay. Later, we bobtailed that relay and we are now receiving service by air from WHO–TV, through their permission and by agreement with NBC, from Des Moines to a point located about 32 miles south of our station, at which place we pick up the signal and bring it into Fort Dodge.

As I say, national advertisers are not looking for markets of 27,000, in my experience. However, because I am almost a freak in this gathering, I think, being a small market and UHF both, I want to tell you something about what NBC has done for us. Maybe this spells the reason for love.

In the fall of last year Bob Aaron, station-relations man for NBC for our area, called me and said, "Confidentially, we are planning to bring you more program service than you have had, under a plan known as the Program Extension Plan. Since nobody else will tell you about this, let me take a minute to tell you." Bob said, "We are going to have a package of 44 or 45 small stations, or small market stations, some VHF, some UHF, most of them larger than your market. We are going to put these stations all together in one package. We are going to sell the whole kit and caboodle for half of the rate that is normally charged, but we are still going to pay you your full rate." He said, "Will you go along with that?"

There were no strings on it at all, except if we accepted this plan they wanted us to stay in the buggy for a year. We not only said we would; we embraced that plan enthusiastically. It brought us about 32 hours of NBC programing—the first real break that we had in our market. We have been on the air 2½ years; we have lost a tremendous amount of money; we are still not making money. Part of the reason for that, of course, was the fact that for a time we had all 4 networks concentrated at a point just 42 miles away, WOI–TV in Ames.

Now, I was on vacation when I heard from you, Senator. So I was a long way away from where I could find out what was going on here in Washington, or what charges were being made, or what the shooting was all about. So this was composed at a lake resort, and I want to say something here about this charge of monopoly. And I would like to read a short statement.

Senator PASTORE. All right, sir, go ahead.

Mr. BREEN. If there is monopoly in television it exists, it seems to me, because of fundamental mistakes made long since—and I fear in danger of being repeated—by the Government's own agency, the Federal Communications Commission, that has charge of such matters. It is my opinion that there should have been no intermixture of UHF and VHF unless the licensing agency, the Federal Communications Commission, upon whose order such intermixture was determined, had first made sure by law that VHF-only sets would be taxed out of existence. There is very little difference in the UHF and VHF signals as I have been able to observe them.

Out in our country, where it is flat, I can't see that there is very much difference. There has been a little difference in 7 or 8 miles, something like that, with comparable powers and comparable antennas. In fact, in some respects, maybe, UHF under certain conditions is a little better in that area where it has a strong enough signal. The vital difference is today that all sets will receive VHF signals and only more expensive, special or converted sets—and most of them converted badly—will receive the UHF signals. It is my opinion that no one today in his right mind will risk many dollars to go into UHF operation until this condition is corrected.

So we will continue to have a monopoly created by conditions which exist under the control of Congress and the Federal Communications Commission. As long as most of the sets manufactured in this country are going to be designed to receive only one kind of television signal, you are not going to have enough equal facilities assigned to defeat the scarcity that makes for monopoly.

To aggravate this scarcity of equal facilities, a great number of allocations have been reserved for education. We have one of these in Des Moines, channel 11. While every other VHF channel in Iowa has been spoken for and is in use, this channel remains idle. No one wants it for education. No one has been permitted to have it for commercial use. So Des Moines, the capital of Iowa, our largest city, home of a great newspaper, several great magazines, and of 6 radio stations, has only 2 television stations, while another VHF—the only one left in Iowa—remains idle, right there in Des Moines. NBC has WHO for its outlet; CBS had KRNT. ABC has to be satisfied with the college station 25 miles away, while channel 11 remains idle.

A condition of scarcity has been created, although hardly one of monopoly. NBC has to be in Des Moines; so does CBS, and ABC would like to be. Nobody on a network level is in any position to push those stations around. In turn, however, the stations are so loaded with network and spot advertising, there is a real scarcity of time for local projects.

I used to work for WHO years and years ago; that is how I got started in this racket.

Senator PASTORE. Change that to business. [Laughter.]

Mr. BREEN. Yes; that is the business.

I can remember when we used to say that it was harder to get on WHO radio than to get on to NBC. That was true.

Now, how do I feel about option time? I feel this way. If NBC is going to sell our station it must have some assurance that when it has sold KQTV, there will be time there for the program it has sold. I want these NBC people—and Lord knows they have been good to us; they have been getting me wonderful programs, making me the first network money I have seen in a long time, and treating me better than I have had any right to expect—I want them to continue to work as hard for me as they can, and get as many of those programs as possible.

I understand there are some people—this is almost hearsay—there are people in the film industry and pay television, who cry "monopoly" and point their fingers at the networks and say, "There is the villain in the piece." I think they have got something to complain about, but it is not the networks. No; my feeling is that they are the victims of this same scarcity of equal outlets that I complain about. Let's take Des Moines as an example. Allow four equal facilities in Des Moines. There is then plenty of room for three networks, pay television and a film network, and also plenty of time for local affairs. But it can't be done as long as you have two brands of television operating in the same market, one that can be gotten by every receiver and the other by only a special and more expensive receiver.

The reason for the cry of monopoly lies in a system that wears the label "Made in Washington," and one that can only be corrected here in Washington. The American people deserve the best in television, and the FCC has said this time and time again. They will only get that under a system of television big enough to insure competition for viewer interest everywhere. Aside from the sacred VHF's reserved for reluctant educationalists, there are no more VHF's to be had. More stations mean more UHF stations. But that day will only come when the UHF's are raised to a position of equality with the VHF's. Until you change that condition of scarcity, by taxing out of existence the profitable manufacture and sale of one-lung television sets, the kind that get only one kind of television signal, the television system of this country will remain plagued by all the problems and ills that scarcity creates in any field of human endeavor.

Change that one condition under which we must operate and you open the way for film networks, for pay television, for the serving of every local, educational, political, social and religious and economic need in this country. Don't let anyone fool you into believing that you can help this situation by drop-ins and such. All you are doing then is debasing the very service you hope to improve. Go the whole way. Tax one-lung television out of existence.

Senator PASTORE. Wouldn't you say, sir, that the longer we wait to solve that problem——

Mr. BREEN. The worse it gets.

Senator PASTORE. Of developing a nationwide UHF–VHF system of television, the more impossible it becomes?

Mr. BREEN. The more impossible it becomes.

Senator PASTORE. Because, fundamentally, more stations drop out, there is less incentive to make dual function sets; then it becomes an economic problem of tremendous proportions and gets so far beyond you that there is no coming back.

Mr. BREEN. Moreover, we have this growing state of mind on Madison Avenue that if you are UHF you shouldn't be purchased under any condition.

Senator PASTORE. You may be interested to know that the chairman, whom we are happy to have here today, has taken this matter up with the Treasury Department. Through his insistence, this committee has gone on record advocating to the Treasury that, at least insofar as color television is concerned, that they be made all-channel sets, and if they are that the excise tax be removed. That, of course, is somewhat encouraging. It may be comforting to you. It is only one step in the right direction. There are many other steps to be taken, but we want you to know that we are very conscious of this problem, that we feel that fundamentally that is the source of all the trouble that we are having, and that we are alive to the problem and that we are trying to do the best that we can. I can only speak for myself when I say this, but I think, myself, that the FCC in this particular area has actually dragged its feet.

Mr. BREEN. Thank you very much, Senator. There is one other person I would like to see you get before this committee. That is a man who purports to tell the world how many receivers you have in your area. He publishes a television magazine called Television. And I can tell you this, that his report on our station is biased, prejudiced, unreliable, and does not represent the truth. [Laughter.] I hope you will get him here and ask him where he gets his figures.

Mr. Cox. Will you provide us with that data on your programing?

Mr. BREEN. Yes, sir.[8]

Senator PASTORE. Mr. Chisman, please.

Mr. CHISMAN. Yes, sir.

STATEMENT OF THOMAS P. CHISMAN, PRESIDENT AND GENERAL MANAGER OF PENINSULA BROADCASTING CORP. (WVEC-TV)

Mr. CHISMAN. Senator, my name is Thomas P. Chisman. I am president and general manager of Peninsula Broadcasting Corp., which owns and operates WVEC-TV in Hampton, Va., which serves the Norfolk and Hampton markets. We operate on channel 15 and are a basic affiliate of the National Broadcasting Co. We have been in business since 1953.

For the sake of brevity, I will submit the statement.

Senator PASTORE. For the record.

(The complete statement follows:)

STATEMENT OF THOMAS P. CHISMAN, PRESIDENT AND GENERAL MANAGER OF PENINSULA BROADCASTING CORP. (WVEC-TV)

Mr. CHISMAN. My name is Thomas P. Chisman. I am president and general manager of Peninsula Broadcasting Corp. which owns and operates WVEC-TV in Hampton, Va., which serves the Norfolk and Hampton markets. We operate on channel 15 and are a basic affiliate of the National Broadcasting Co.

In 1952, when the FCC issued its sixth report and order, it hoped that it was, on the basis of the best available information, instituting a system of nationwide competitive television that would, in a short time, bring the social, economic, and cultural benefits of such a service to all of the people. It is obvious that it has at least partially succeeded, but the plan would have failed completely, and the people would have lost tremendously, had it not been for the networks and many of their policies. Neither VHF nor UHF could have prospered without network affiliations. A great number of people have forgotten too soon the fact that television had its phenomenal growth

[8] The program schedule was furnished later and is printed in the appendix at p. 3003.

from infancy to maturity at the very time and in direct relationship to the increase of network service. I am not of the opinion that all past and present networks and all past and present network officials are entitled to equal praise for what has been accomplished, for it is possible that some deserving stations may never have been given the support that WVEC-TV received. But I do believe that the best things in television have been made possible principally because of the very existence of networks and the farsighted action of some of their officials.

We received our construction permit from the FCC in February 1953; we signed an affiliation agreement with NBC in June of that same year. It was our first association with a network. Realizing this, two NBC station relations representatives, Thomas Knode and Paul Hancock, explained at great length the affiliation agreement to our attorney and to me. We signed the agreement feeling that it was a contract that had conditions in it which would be of mutual benefit. We fully realized the implications of option time and, quite frankly, were very happy that there was such a clause in the contract. To us, option time meant assurance of programing during certain prime hours of each telecast day. Since our only product was a program service, that assurance was vital and extremely important. We believe that the principle of option time is not only necessary but completely equitable.

Initially, we and the network had to sell each network advertiser on the facilities of WVEC-TV. We sold all but one advertiser. After we went on the air, that advertiser ordered our station but we declined the order and have never carried its show. We generally have that time period sold locally, and the network has never exerted any pressure to recapture the time. From time to time, we have exercised our right to preempt network shows for shows which we felt were more in the interest of our local viewers, and our decisions have never been questioned by the network or any of its representatives. We feel that our time is still ours and when we can put on a local live or filmed show which is superior to the network schedule we do not hesitate to preempt the network time for such shows. We exercise the final control on what does or does not go on the air. And we get our decisions from the people—our viewers.

You have heard much of the great shows, the spectaculars, the Wide, Wide Worlds, the See it Nows, but I would like to mention a service that is of equal, if not more, importance—the news service offered by the networks. No local station could possibly duplicate this service in terms of coverage or depth in news reporting. Like so many other programs, they provide stations with a service for our viewers not otherwise obtainable, and their importance to our democratic way of life should never be underestimated.

It is almost inconceivable that any station would ever have enough money and enough staff to duplicate, on its own, the quality and quantity of network programing. Certainly there is no station in our area with the facilities to touch network programing, and filmed shows can never replace the network.

We use approximately 4 hours of film per day. These films have been purchased from various film companies, and in all our negotiations with these film companies we never have found any of them which were interested in anything other than the amount of money they could get for their properties. There is a basic difference in the philosophy of film people and network people, and the difference, in my opinion, can never be reconciled. I consider the sense of public responsibility of the networks to be unmatched by any other business in this country. I am convinced that the networks fully realize the importance of their position—and their grave responsibilities—and I know of no case where they have disregarded or carelessly flaunted their power and influence.

Our contract with NBC has been one of the principal reasons for our ability to serve the people in the Norfolk area with good television programing. We have provided the network advertisers with a sound and successful outlet for their wares and services, and being more or less a pioneer in the UHF field, we have provided the network with statistical studies never before made and information as to marketing and viewing habits of UHF audiences which we feel have aided both the network and ourselves.

It is inconceivable to me that anyone would tamper with the present network-affiliate agreements as they exist today. The economy, the cultural well-being, and the political progress of this country have all been enlarged and strengthened by our present system of television, and a breakdown of today's network-affiliate structure would be a deterrent to continued progress. I might also add that our present healthy economy is indebted to this new marvel. The $17 billion that has been spent in the television industry in the past 8 years—which is the largest amount of money ever invested in one new industry in such a short period of time—has increased employment, lowered the cost of goods, and created a general increase in the mass purchasing power of the consuming public. I, therefore, urge this committee to weigh carefully the implications of this hearing. Any impediment to the growth of the industry would have far-reaching adverse economic and social effects.

Mr. CHISMAN. I would like to make a few comments on it.

In 1952, when the FCC issued its Sixth Report and Order, it hoped that it was, on the basis of the best available information, instituting a system of nationwide competitive television that would, in a short time, bring the social, economic, and cultural benefits of such a service to all of the people.

Senator PASTORE. May we have quiet, please? I realize there is a certain amount of noise in moving around. But we would all like to hear the witness.

Mr. CHISMAN. It has succeeded partially, in my opinion, but it would not have succeeded at all had it not been for the action of the networks and the network officials in getting the programs to the people—instituting better programs to get more sets.

We received such help from the networks in 1953 that it would have been impossible for us to operate a station without that help.

We believe that the system of option time is fair, it is equitable, in our case it was absolutely necessary.

Senator PASTORE. Have you ever been deterred or interfered with in any way in dealing with an independent producer only because of your option time obligation with the network?

Mr. CHISMAN. No, sir. The independent producers who have approached us have always had only one thesis, that is: How much can I get for my product? They don't give a damn where you put it.

Mr. COX. They are not concerned about the time?

Mr. CHISMAN. No, sir; so long as they can sell it and you will pay for it.

Mr. COX. You can broadcast it at any time of the day, and it makes no difference to them as to what time slot you put it in?

Mr. CHISMAN. No, sir. I am the customer, I am paying for it.

Mr. COX. You buy it?

Mr. CHISMAN. Yes, sir.

Mr. COX. What is the situation when a nonnetwork supplier of programs has tried to make a sale to a national advertiser, who then attempts to place the program on a national spot basis—is he interested in the time in which that program will be broadcast in the Norfolk area?

Mr. CHISMAN. Yes, sir; he absolutely is.

Mr. COX. Does the option that the network has prevent you in any way, or inhibit you in any way, from placing that in times desired by this advertiser?

Mr. CHISMAN. No, sir; it never has. While we are a basic NBC affiliate, we do have some prime time for national advertisers; and some of it, frankly, since we are a UHF, goes begging. We still consider that our time is ours, that we are the licensee, and that at any time when we feel that we can produce a show, live or on film, that is superior to the network, I think that we would certainly do so. We know of none right now.

Mr. Cox. So regardless of the option, you would displace a network program if you thought that another program offered was better; and, on the other hand, you would clear for the network programs when they are good, whether the network had an option or not?

Mr. Chisman. Yes, sir.

Senator Pastore. How do you feel about this term extension of your contract with the network?

Mr. Chisman. I think it is very vital. I think the investment that stations make in facilities—to put out a better signal and give them better coverage, both for themselves and for the network advertisers—is so extensive that 2 years is an insufficient length of time to recoup.

Senator Pastore. For how long does your license run?

Mr. Chisman. Two years, sir.

Mr. Cox. Three years.

Mr. Chisman. Three years? Three years. I am not particularly bothered about the term of the license.

Senator Pastore. Doesn't it occur to you that if you are to enter into an effective contract with the network for 5 years, you would have to have a license for 5 years, too?

Mr. Chisman. Yes, sir.

Senator Pastore. You are adding that to it, too.

Mr. Chisman. Yes, sir.

Senator Magnuson. Have you anything to say about the time—as long as it is brought up here—that the license, the 3-year period—whether the law should be changed, or the FCC regulations should be changed, for a longer period?

Mr. Chisman. I am of the opinion that it should be, sir.

Senator Magnuson. What would you say?

Mr. Chisman. A minimum of 5 years, possibly 10.

Senator Magnuson. Five years. Because that is the general time of your contracts with the network?

Mr. Chisman. No, sir; the network contract is only two. But I do believe that the investment——

Senator Magnuson. What options do you have in that?

Mr. Chisman. It is automatically renewable every 2 years unless either side gives notice.

Senator Magnuson. But how much notice do you have to give?

Mr. Chisman. Three months.

Senator Magnuson. Three months?

Mr. Chisman. Yes, sir. I think that the investment there, too, just as you invest in a network and the network invests in you, your license should be extended in order to give you a better chance to recoup the capital that you put forth when you initially get your license.

Senator Magnuson. Isn't is a fact that sometimes stations run without the extension of their license—just stay on the air, and the FCC has failed to extend the license?

Mr. Chisman. No, sir; I don't know about that. It doesn't happen in our particular case. I am not aware of any case where it does.[8a]

Senator Pastore. Any further questions? All right, sir. Thank you very much.

Senator Pastore. Now our next witness is Mr. Robert D. Swezey.

[8a] Pursuant to later request, the program schedule of WVEC-TV for a sample week in April, 1956, was furnished and is printed at p. 3005.

STATEMENT OF ROBERT D. SWEZEY, WDSU BROADCASTING CORP.

Mr. SWEZEY. Mr. Chairman, my name is Robert D. Swezey. I live in New Orleans, La. My other qualifications, such as they are, are included in this statement which I would like to deposit for the record.

Senator PASTORE. Without objection, it is so ordered.

(The complete statement of Mr. Swezey is as follows:)

STATEMENT OF ROBERT D. SWEZEY, EXECUTIVE VICE PRESIDENT, WDSU BROADCASTING CORP.

My name is Robert D. Swezey. I live in New Orleans, La. I am executive vice president and general manager of WDSU Broadcasting Corp., which is the licensee of radio stations WDSU–AM and FM, and of television station WDSU–TV, in New Orleans. I am also vice president and director of the Modern Broadcasting Co., licensee of radio stations, WAFB–AM and FM, and WAFB–TV, in Baton Rouge, La.

I have been actively engaged in the broadcasting business since 1939, when I joined the legal department of the National Broadcasting Co. in New York as an attorney. I was subsequently employed, in 1942, as general attorney and secretary to the board of the Blue Network Co. (now the American Broadcasting Co.), and then vice president and general manager of the Mutual Broadcasting System from 1944 until the latter part of 1948.

I have worked in many industry undertakings, particularly with respect to television, and served as a member of the boards of the National Association of Broadcasters and the National Association of Radio & Television Broadcasters continuously from November 1949 to April 1956. During that period I acted as chairman of a number of standing and special committees, and for 2 years as chairman of the television board.

It is furthest from my intent to add needlessly to the tremendous volume of testimony which has already been presented to your committee in these hearings, the trade-paper accounts of which I have been reading with interest. However, I have been impelled to request the opportunity to appear before the committee for the following reasons.

The matters in issue are of such tremendous importance I think none of us who has any real interest in television can afford to withold from your committee any information he may have which would be of the slightest assistance to you in your inquiry.

I am disturbed by the fact that much of the testimony which has been presented to your committee, though it may have been sincerely offered, appears to be sadly lacking in objectivity.

I am equally disturbed by what seems to me to be an increasing impatience to take some immediate action, however drastic, to appease the more virulent critics of the television industry, and to offer some manner of relief to those who find themselves in an unfavorable competitive position under the present allocation pattern and network affiliation arrangements.

I am fearful that in this climate there is a possibility of hasty and ill-considered actions being taken which might dislocate and irreparably damage the structure of our national television system, greatly impairing its efficacy and the quality of its service to the public, in order to provide correction for relatively minor maladjustments in that system.

It has occurred to me that it might be helpful to the committee to have me present the point of view of one television operation in a principal market which has contracted and dealt with all of the networks and most of the companies producing film for television; an operation which is financially interested in both a VHF and UHF station, which is seeking no relief, and which is speaking in its own behalf as a station licensee and not on behalf of any network or other organization or group.

I cannot help feeling that this committee is presented with an ironical situation. The television industry is not under inquiry before the committee because it has failed to do a good job. Although there is a great deal of comment in the testimony already presented to the committee concerning the failure of the present television structure fully to serve the public interest, there is still very little credible evidence to that effect. I think it is probably impossible for any other medium of entertainment or information to boast of any period of comparable performance in public service such as that which has been demonstrated by the relatively immature television industry. Certainly, by any fair test, it has more than fulfilled all reasonable expectations.

Television is being scrutinized by the committee because, in the opinion of some, it has been too successful; because some people, through imprudence or unfortunate business decisions, have found themselves in an uncompetitive position within the industry, and because others would like gratuitously to cut themselves in on television profits and take a free ride on the investment, the work, and the risk of those who built the business.

The testimony of the unsuccessful UHF operators, the disgruntled affiliate, the pay-television exponent, the independent station, the motion-picture producer, is quite apparently predicated upon considerations of personal rather than public interest.

It seems to me a little incredible that the networks, without whose efforts I am convinced television would still be a relatively mediocre and undeveloped medium, are put in the position of fighting for their very existence against the frontal attacks of a self-seeking and opportunistic nature.

There has been evidenced in these hearings, and in previous hearings conducted by Senator Potter's subcommittee, an alarming lack of appreciation of the real facts of the development of the television industry in this country. It is intimated that a handful of people with some extraordinary prophetic powers, seized control of all of the effective frequencies and shrewdly planned, through network organization and allegedly restrictive agreements, utterly to control the industry—and to their own selfish ends with little or no regard to freedom of competition and to consideration of public interest. This by and large is nonsense. It is quite true that some operators had more confidence in television than others. It is also true that some were willing or able to make more venturesome investments than others, but there is no evidence whatever that the network organizations, for example, had any greater insight into the future of television or any greater opportunity to take advantage of its earlier development than anyone else. It is quite clear from the Columbia Broadcasting Co.'s failure to acquire, at a much earlier time, the maximum number of owned-and-operated stations in selected large markets, that that company was completely unprepared for the course of development that the industry took.

It seems quite apparent that the networks followed, in their television operations, substantially the same method and procedures used for so many years in the operation of their radio networks. They did so hoping, rather than knowing, that television would ultimately become a profitable business.

A few years ago, there was a great deal of informed opinion to the effect that live television networks could not subsist for any appreciable period because of the enormous burden of cable and relay interconnection and other operating costs. The current situation is actually one which has evolved much more from happenstance than intent: if there are objectionable features in our allocation and network structure they are scarcely the result of deep-laid plot or malice aforethought.

It seems, too, a little extraordinary that attacks against the networks should be predicated, in some instances, upon business practices which have been openly and continuously followed in the radio business for many years with the complete knowledge and sanction of the Federal Communications Commission. For example, Mr. Moore, of KTTV, and his associates have contended that optional time provisions are illegal, and that they "restrict the affiliated station from exercising its own judgment in programing and from discharging its nondelegable responsibility to serve the needs of its own community." Like Mr. Moore, I am an ex-lawyer and like him, I believe I am presently incompetent to pose as an expert in the legal aspects of this matter. I can only say that, in my opinion, the validity of Mr. Moore's legal conclusions has been most persuasively refuted. I should like to say further that the owners and management of WDSU–TV are not conscious of having surrendered to the networks, or to anyone else, any portion of their responsibility for judging program acceptability.

I am also convinced, from a fairly long and varied experience on both sides of this network-station relationship, that some general commitment in advance on the part of affiliated stations with respect to the time which they are willing to permit the networks to sell, is absolutely necessary to the continuation of the network business. A network organization must have something definite to offer its advertisers. There may be some practical alternative to the option-time mechanism which will provide this assurance, but thus far, I am unaware of it. I am inclined to think that any other method calculated to achieve a similar result would in all probability be more complicated and inconvenient.

Similarly, I am not, I believe, qualified to pass upon the legality of the "must-buy" aspect of the network rate card. WDSU–TV is included in the NBC list of basic stations, although we are certainly not there by virtue of any negotiations or agreement with NBC. So far as we are concerned, we are delighted, for ourselves and our viewers, to be guaranteed access in this manner to a larger share of network programing than we might otherwise enjoy. We cannot feel that this must-buy condition is one that any advertiser interested in securing a national advertising vehicle could reasonably find embarrassing or undesirable. Nor can we see how a network could be expected to operate as a national medium if it permitted its clients to use small sections of the network of their own choosing.

Mr. Moore is, in my opinion, somewhat oversolicitous of the welfare of affiliated stations. I believe that the overwhelming majority of affiliates do not find themselves oppressed in any respect by their network arrangements. Certainly, it seems to me Mr. Moore should permit us to speak for ourselves.

It has been my observation, both as a network executive and as a station operator, that affiliation contracts are not casually entered into, arbitrarily enforced, or hastily terminated. The unique nature of the reciprocal services to be performed under them requires continuing compromise, cooperation, and understanding. I believe a network will always give important consideration in any affiliation arrangement to the reputation and acceptance of a station in its own community, and to the degree of alertness and conscientiousness it has demonstrated in serving the need of its local audience.

As one of the pioneer stations in television, WDSU–TV commenced operation in New Orleans on December 18, 1948. It was immediately affiliated with the National Broadcasting Co. under a standard option time contract and, subsequently, within the first year of its operation, entered affiliation agreements with all three of the other national networks, CBS, ABC, and Du Mont. None of these affiliation agreements, with the exception of the contract with NBC, contained optional time provisions. The station accepted network programs very much on the basis of first come, first served, with due regard to program balance; and NBC, aware of the station's position as the single TV outlet in the market, at no time insisted upon a strict observance of the optional time provision contained in its contract. The first 2 years of operation involved considerable loss of money and continuous efforts to increase the number of receiving sets in the market, to attract network programs, to improve the quality of local productions and increase local and national sales. Grants for the construction of two VHF television facilities, which had been made to other companies prior to the issuance of the construction permit to WDSU–TV, were surrendered by the grantees.

In commenting upon its reluctance to proceed with construction, one grantee testified:

"I will say to you there is every intention on the part of (grantee) to go through with a television station if and when we feel and can readily see we can do it without incurring a tremendous financial loss we would be enforced to incur at the present * * * while we are great believers in the future of television * * * we want to be reasonably sure we can get a reasonable return on our investment or not stand a loss before we embark on this investment. For that reason, I am here to ask for an extension * * *. They (the board of directors) happen to be very well acquainted with the owners of the station (WDSU–TV) already operated in New Orleans. They know the financial loss that has been entailed since that station was established * * * I can only answer you, although we have a station (WDSU–TV) there, and there has been many hundreds of thousands of dollars spent on publicity, the result on the sales of sets has been most unsatisfactory * * *."

The other grantee, in surrendering its construction permit in July 1949, explained that it was doing so due to "serious and fundamental uncertainties involved in television."

Yet, it was only 2 or 3 years later, when television began to pay its way, that people were looking askance at WDSU–TV's improved program schedule and growing list of clients and making snide remarks about its being a "fat cat." I am not quite sure what a "fat cat" is, but if WDSU–TV is one, it became so only because others refused to drink the milk.

New Orleans, at the present time, is a two-station market. The second station is WJMR–TV, a UHF, which first began operation in November 1953. For a period of nearly 5 years, WDSU–TV had a temporary and involuntary monopoly. This situation did not result from any action on the part of WDSU–TV, except for the fact it proceeded with the construction and operation of its station when others failed to do so.

Reverting to Mr. Moore's testimony, it seems to me that portions of it left serious misimpressions on the record. There are very definite implications in certain of his statements that a network affiliate need not work hard to develop live programs or otherwise "to serve the local community." This is far from the case. Even though station WDSU-TV in New Orleans has probably as many or more network programs available to it than any other single station in the country, of its 123 hours and 40 minutes of weekly programing, it does an average of 62 hours and 35 minutes per week in local programing, 19 hours and 5 minutes of which are devoted to live studio or remote productions. WDSU-TV maintains a news staff of 6 people, has a regular daily schedule of 10 local live newscasts, and shoots an average of 700 feet of local film each day—employing a regular newsreel staff of 3 men for that purpose, with part-time additional men when needed. At times, we send news and cameramen out to cover a story for a week or more at a time, as in the case of the recent Till murder trial in Mississippi. WDSU-TV is the only single station, to my knowledge, employing a full-time Washington correspondent and producing in Washington, for its local audience, a regular biweekly film program to bring home the facts of legislation and other governmental action of particular interest to the people of its area. WDSU-TV was one of the first stations to become fully equipped to do local programing in color.

Without attempting to give a full picture of WDSU-TV's community service, I should like to add that during the past 3 months we have produced 3 half-hour documentaries in cooperation with the New Orleans School Board, 1 half-hour program commemorating the 75th anniversary of the Red Cross, 3 comprehensive features spotlighting the shortage of trained scientists and teachers (cooperating with the American Chemical Society and local industry), a statewide Governor's inauguration telecast feeding 2 other television stations, a special remote from Tulane Stadium of the Air Force armament show. On June 24, we will telecast an Olympic preview program of outstanding local candidates for the United States Olympic team (featuring a remote from the Southern Yacht Club covering a sailing demonstration by Gene Walet), and on Tuesday night, June 26, we will telecast at 9 o'clock a special half-hour local spectacular of Summer Pops featuring the symphony orchestra.

Mr. Moore makes considerable capital of the fact that his staff made a 4-hour telecast of the medical meeting announcing the result of the Salk vaccine test. We share his enthusiasm for that accomplishment, but we cannot feel that it greatly overshadows in importance a number of things that WDSU-TV has accomplished in New Orleans—such as canceling its entire program schedule for the first telecast of the Kefauver hearings, concerning which Senator Kefauver later said in a letter of thanks adressed to the station:

"In view of the fact that this hearing was the first televised, it has been a revelation and undoubtedly our future hearings will be aired in this manner. Our committee policy deems it of value to educate and acquaint the public as well as the Senate with the situations brought to light by the hearings in order to prepare for remedial legislation, and television seems to have proved itself a splendid medium for this purpose.

"The quiet and efficient operations of your staff and cameramen did not detract from the hearings themselves and I want you to know that the members of my staff join me in expressing our appreciation for the skillful handling of this matter."

Similar cancellations of schedules for a full day or more at a time were made in order to permit the telecasting of the full preceedings of Senator Tobey's committee investigating waterfront activities and those of Senator Eastland's Committee on Internal Security.

Mr. Moore refers several times in his testimony to affiliates "patching in the network" and abandoning their local responsibility. He queries: "To what extent can we expect station licensees to depend on their own self-reliance, good management, and plain hard work when the result of applying these honorable American virtues can be financial ruin, and when the network companies can pay such a handsome reward for patching in the network and abdicating station responsibility to them?" This is clearly rhetorical nonsense, and its sinister conclusions completely unwarranted. There is no reason why a station cannot accept with a completely clear conscience the national programs which it contracts to receive from its network without surrendering any part of its American ideals or licensee responsibilities.

According to Mr. Moore, the affiliated stations are so intimidated by their networks that they must, for example, take a program like Disneyland at an hour too late for the wholesome enjoyment of its child audience. I do not know what other stations are doing, but we are presently telecasting Disneyland at 4:30 on Saturday afternoon, which seems to us a period well suited to the convenience and attention of the juvenile viewers.

Though at the present time we clear for a very large percentage of the network programs which are offered to us in option time, we do so because we honestly believe it is in our interest and in the public interest to do so. On the other hand, we have never refrained from rejecting a particular network show if we felt it incumbent upon us to take such action. We recapture a great deal of option time for events of local importance, such as our Mardi Gras and various Sugar Bowl events. During our last gubernatorial election we recaptured over 20 hours of time, 70 percent of which was in option time periods, in order to carry political broadcasts of local interest.

We carry relatively few network programs which are offered to us outside of our option time, because we feel that it is highly desirable for us to achieve a reasonable balance between network and local programs and to respond to the needs of our local advertisers.

I find Mr. Moore's concern for the motion picture producers and the creative talent they have at their command, a little unnecessary when I assay their situation in the light of our market. We have found it possible in New Orleans to place virtually all of the top syndicated film properties which have been produced and to broadcast them at times when they have excellent audiences. Following is a partial list of the syndicated properties currently carried by WDSU-TV indicating in terms of local time the program periods in which they are scheduled.

Program	*Schedule*
All Star Theatre	Monday through Friday, 3:30 to 4 p.m.
Amos 'n' Andy	Sunday 8:30 to 9 p. m.
Annie Oakley	Friday, 4:30 to 5 p. m.
Biff Baker, U. S. A.	Sunday, 9 to 9:30 p. m.
Celebrity Playhouse	Tuesday, 10 to 10:30 p. m.
Cisco Kid	Tuesday, 6 to 6:30 p. m.
Count of Monte Cristo	Tuesday, 8:30 to 9 p. m.
Crunch and Des	Saturday, 10 to 10:30 p. m.
Death Valley Days	Alternate Saturdays, 10:30 to 11 p. m.
Dr. Hudson's Secret Journal	Wednesday, 10:30 to 11 p. m
Four Star Playhouse	Wednesday, 10 to 10:30 p. m.
Grand Old Opry	Saturday, 4 to 4:30 p. m.
Great Gildersleeve	Sunday, 9:30 to 10 p. m.
Highway Patrol	Friday, 10 to 10:30 p. m.
I Led Three Lives	Saturday, 8:30 to 9 p. m.
I Spy	Thursday, 10:30 to 11 p. m.
Lassie	Sunday, 3:30 to 4 p. m.
Liberace	Saturday, 9:30 to 10 p. m.
Little Rascals	Friday, 5 to 5:30 p. m.
Lone Ranger	Tuesday, 5 to 5:30 p. m.
Man Behind the Badge	Saturday, 9 to 9:30 p. m.
Man Called X	Monday, 8:30 to 9 p. m.
Range Rider	Thursday, 5 to 5:30 p. m.
Ray Milland Show	Thursday, 6 to 6:30 p. m.
Rin Tin Tin	Saturday, 10:30 to 11 a. m.
San Francisco Beat	Wednesday, 8:30 to 9 p. m.
Science Fiction Theatre	Monday, 10 to 10:30 p. m.
Sky King	Saturday, 3:30 to 4 p. m.
Stage Seven	Thursday, 10 to 10:30 p. m.
Steve Donovan, Western Marshal	Alternate Saturdays, 10:30 to 11 p. m.
Stories of the Century	Monday, 6 to 6:30 p. m.
Studio 57	Tuesday, 10:30 to 11 p. m.
Summer Theatre	Wednesday, 9:30 to 10 p. m.
Superman	Wednesday, 5 to 5:30 p. m.
Susie	Monday through Friday, 4 to 4:30 p. m.
Tales of the Texas Rangers	Saturday, 11 to 11:30 p. m.
The Playhouse	Friday, 9:30 to 10 p. m.
Turning Point	Friday, 10:30 to 11 p. m.
Wild Bill Hickok	Sunday, 12:30 to 1 p. m.; Monday, 5 to 5:30 p. m.

At the present time, local advertisers are sponsoring 33 local programs and program series. Seventy local clients are using spot announcement schedules. Although we have not always been able to give a local sponsor the precise program period he would like to have, we have usually been able to provide a time period reasonably suited to his requirements. His and our position in this respect should be improved as additional television facilites become available in New Orleans.

It seems to me that Mr. Moore's suggestion of placing a purely arbitrary limitation upon the amount of programing which a station can be permitted to accept from any one source is at best unrealistic and meaningless. At worst, it might seriously impair a station's ability to program in the public interest.

I can see no reason to believe the imposition of such a restriction will necessarily have the effect, that Mr. Moore predicts, of increasing the opportunity of independent film producers to place their wares in more favorable time. I have no idea quite where we would turn for program material to fill the gap if any such rule were adopted. I do think our present ratio of film to the network and local live programs is just about right.

There seems always to be a great deal of talk about "scarcity of facilities," and I sometimes wonder whether the phrase is not misleading. In formulating any allocation pattern or other plans for the containment of the television industry, it seems to me great emphasis should be placed upon the reasonable future requirements of the medium.

As I look at the picture in New Orleans, there seems to me to be every indication that there are already more than enough television allocations made for use in that city. The effectiveness of the disposition of those allocations is quite another matter.

At the present time, stations are operating only on channel 6 and channel 20. Channel 4 is in a three-way hearing on which final arguments have already been heard by the Commission, and presumably a decision will issue without too much further delay. Channel 8 has been granted to the New Orleans Educational Foundation, which is proceeding with construction. Channels 26, 32, and 61 are still available for additional stations.

Let me say, finally, that if there are compelling reasons of national security or public interest which require drastic changes in the present allocation plan, I honestly think that most television operators would go along with them willingly, even though personal inconvenience and sacrifice were involved. I certainly would. But, on the other hand, we are entitled vigorously to protest any arbitrary changes in the structure which have no sound basis in public necessity, but are proposed only in pacification of some of the vocal elements in this hearing.

Mr. SWEZEY. I am very pleased that the Chairman made the suggestion he did. I don't know whether it has been because I have been working so hard, but I must admit I am a little bored with the repetitiveness of the testimony myself, and think I can add nothing to it with the possibility of applying——

Senator MAGNUSON. You can add something. You have had a lot of experience in this business.

Mr. SWEZEY. Yes, Senator.

Senator MAGNUSON. You have been in it a long time—you have worked for NBC, you have worked for ABC. Now tell us what you think about it.

Mr. SWEZEY. All right. [Laughter.]

May I just thumb through the statement with you?

Senator MAGNUSON. You have worked for them all.

Mr. SWEZEY. I worked for all but one, Senator—Columbia. I just was tempted to complete the circle, but I didn't. [Laughter.]

My qualifications the Senator has already elaborated on.

I next give the reasons for testifying—which I have already said—the only purpose I am here is that I think I might be able to add a little something.

I do think we are faced here with an ironical situation where the industry is under scrutiny not because it is unsuccessful, but possibly because, in the opinion of some of us, it is too successful. I think there is a little lack of understanding as to the real facts of the development of the television industry in this country.

Senator MAGNUSON. Let's get down to cases; we are running out of time. New Orleans is a two-station market?

Mr. SWEZEY. All right, let's do that.

Senator MAGNUSON. New Orleans is a two-station market?

Mr. SWEZEY. Yes, sir.

Senator MAGNUSON. Do you think that is good for the country?

Mr. SWEZEY. No, I don't, sir.

Senator MAGNUSON. That is one question.

Mr. SWEZEY. May I say this: When we first went into that market we had every reason to believe it would be a three-station market. There were already two grants for construction permits when we got ours. The only reason is wasn't a 3-station market, and it isn't now, is that the other 2 backed out. So it is now a 2-station market, with 1 V and 1 UHF, which came on about 2 years ago. For about 5 years we had sort of an involuntary monopoly, which we tried not to misuse.

Senator MAGNUSON. That is a new term, "involuntary monopoly."

Senator PASTORE. It is a nice way of saying, "I have got a monopoly, but I am not guilty." (Laughter.)

Mr. SWEZEY. I submit, Mr. Chairman, we were not guilty. And I would like—may I just quote one sentence——

Senator PASTORE. I am being funny now.

Mr. SWEZEY. And that is that if we are a "fat cat" it is only because everybody else refused to drink the milk, gentlemen. That is the true situation.

Now, I have got everything in here, I think. Very briefly, our own public service record—I was a little miffed myself when my friend Dick Moore intimated, it seems to me, that an affiliated station had only, and I quote him, "to patch in the network and didn't have to worry too much about public service." I am sorry he made that statement because I honestly don't think he believes it. Dick is a good man on public service. And I think I show in this statement, as many others will and have, that the affiliated stations are doing very creditable public service, Mr. Chairman.

I also take up the situation, in New Orleans at least, of the syndicated film producers, and so forth; and I think I show in 2 or 3 pages that they get excellent time on our station, in spite of the fact that our station, I assume, is offered at least as much, and probably more, network programing than any other station in the country.

Senator PASTORE. Do you feel that the option rights that the network have are necessary in the proper conduct of their business in order to promote, encourage and preserve a nationwide good quality type of network programing?

Mr. SWEZEY. Either these option rights or some other similar mechanism, Mr. Chairman. And I don't know what it would be. It seems to me that these option rights have worked very well over a long, long period of time. They have been examined and reexamined by various Government authorities now for years. And I was a little shocked that they were so vituperatively attacked as illegal and in violation of the antitrust laws, and so forth. If they are, it seems to me we have been an awful long time getting around to it. They have been part of the glass house condition of business operations of the networks for years and years. I think it is essential to have something like that.

Mr. COX. Isn't it true that both the Paramount case and the Griffith case were decided after the adoption by the FCC of its chain broadcast regulations?

Mr. SWEZEY. I think probably so, Mr. Cox, although I am an ex-lawyer and I would rather not answer any legal questions. I am really not qualified.

Mr. COX. I was referring to the matter of chronology.

Mr. SWEZEY. I think that is probably true; yes, sir.

Senator PASTORE. Any further questions?

Senator MAGNUSON. I think on page 14 you probably state your position—and this has bothered me considerably, and the members of the committee, too. You do have local advertisers sponsoring 33 local programs?

Mr. SWEZEY. In series, Senator. Some of those are programs that appear every day.

Senator MAGNUSON. Yes. Then there are the spot schedules, of course?

Mr. SWEZEY. Plenty of those; yes, sir.

Senator MAGNUSON. But you believe, and I think you state your position very well—you say "His"—speaking of the local man——

Mr. SWEZEY. Yes.

Senator MAGNUSON. "And our position in this respect should be improved as additional television facilities become available in New Orleans." Isn't that the crux of the whole thing?

Mr. SWEZEY. I believe that to be so, Senator.

Senator PASTORE. All right, Mr. Swezey. Thank you.

Mr. SWEZEY. Thank you.

Mr. COX. Will you provide us with the same information——

Senator PASTORE. Mr. Cox has a question or two, Mr. Swezey.

Mr. SWEZEY. Yes, sir.

Mr. COX. What percentage of the NBC programs that are offered you in your evening option time do you clear time for?

Mr. SWEZEY. I think at the present time, Mr. Cox, virtually all of them.

Mr. Cox. And your option time is the period 6: 30 to 9: 30 in your time zone?

Mr. Swezey. No, there is 2 hours difference right now because we are on standard time. That would ordinarily be the case—7: 30 to 10: 30 New York time. Right at the moment I think we are 5: 30 to 8: 30.

Mr. Cox. Then a good many of these film programs which you show here as being carried in desirable time are being carried, however, in those periods because the option of the network programing does not apply?

Mr. Swezey. Let me say that none of these—even when daylight time is not in effect would be in undesirable time. They would all be before—the last period would be 10: 30 to 11, I think, in all these cases.

Mr. Cox. You have an affiliation—some sort of arrangement with all three of the networks?

Mr. Swezey. Yes; we do, sir.

Mr. Cox. Do the other two networks attempt to clear time on your station in what they regard as the prime viewing hours which are covered by the option of NBC?

Mr. Swezey. Yes, sir.

Mr. Cox. Now, that option is not good against the programs of the other two networks?

Mr. Swezey. That is correct.

Mr. Cox. How do you explain that you clear nearly all of the NBC programs and do not clear programs for the other networks, if this is not a matter of honoring a binding option?

Mr. Swezey. Well, NBC is our basic network, it is the one that has been—we have had it ever since the beginning, of course, as the initial network with option time. However, we have taken many of the programs of the other networks. At the present time we are carrying much more of NBC, there is no question about it. The other station is carrying pretty largely the CBS schedule, and we share the ABC between us.

Mr. Cox. Mr. McGannon of Westinghouse Broadcasting Co. testified yesterday that with respect to KDKA—where they occupy a similar situation—that of the 42 one-half hours of evening option time, that station was carrying 17 NBC half-hours, 7 CBS half-hours, no ABC half-hours, and 18 one-half hours from nonnetwork sources.

Do you think that such a distribution would give fairer access to your important market for advertisers whose programs were carried on the various networks, and would also recognize in a more desirable fashion the availability of nonnetwork programs?

Mr. Swezey. It might possibly, Mr. Cox; I would have to examine the program content to answer that definitely.

Mr. Cox. You received a firm order from ABC, did you not, for its convention coverage and election night reporting before NBC had obtained a sponsor for its similar service?

Mr. Swezey. Yes, sir. We also received one from CBS.

Mr. Cox. You did not accept either of the orders from CBS or ABC?

Mr. Swezey. No, because it seemed to us the conventions were reasonably far removed so that we should wait until we had all of the offers in. We knew NBC would come in with an offer. It didn't seem to us that we had to act immediately. I didn't see how we could act in the public interest without determining first the relative merits of each organization.

Mr. Cox. Has NBC now placed an order for your station?

Mr. SWEZEY. We have such an order.

Mr. Cox. And you have accepted it?

Mr. SWEZEY. Yes, sir. I might add that one of the reasons for our doing so was that we felt that NBC—the other programing on NBC would also be tied into its convention coverage. For example, references would be made, we were advised by NBC, on the Today program and various of their other shows throughout the daily schedule that would supplement very adequately the actual convention coverage.

Mr. Cox. Did ABC, in particularly, make a second offer to you which would have involved sharing time on your station with NBC?

Mr. SWEZEY. Yes, sir, and we thought that would be an awkward and rather ineffectual way of covering the convention, because you would have to arbitrarily split the commentaries, and we honestly didn't think that that would be nearly as good as the single coverage from any one of the three networks.

Mr. Cox. Now, the present allocation to New Orleans is not any longer three commercial VHF stations, is it, because one of them has been reserved for educational use and there is now a station assigned to that channel and in operation?

Mr. SWEZEY. No, not in operation, Mr. Cox. The grant has been made and the educational foundation is about to construct, I believe. All plans are made for going ahead.

Senator MAGNUSON. Is it Government owned?

Mr. SWEZEY. No, it isn't; it is the New Orleans Educational Foundation, an educational group set up to take advantage of the educational grant.

Mr. Cox. Would you agree, then, that two V's, plus as many more UHF stations as could survive in New Orleans, might have some difficulty providing adequate outlets for all available programs sources and adequate services to the public?

Mr. SWEZEY. They might have some difficulty, Mr. Cox.

Mr. Cox. Yes.

Mr. SWEZEY. I don't see how. You say——

Mr. Cox. In other words, do you think if two VHF stations go on the air in New Orleans and if, as has proved to be the case in a number of other instances, the UHF station is forced off the air, that those two stations can provide a completely adequate television service to a market the size of New Orleans?

Mr. SWEZEY. I don't think there is any reason to assume that the UHF will be forced off the air, if there are only two V's. I would be perfectly willing to attempt to run the U. I would rather not exchange my V for it. [Laughter.]

Senator MAGNUSON. I was just going to say, I was going to put you wise.

Mr. SWEZEY. But I mean that I think it can be profitably operated. I think the market will probably stand three stations.

Mr. Cox. Would you supply us with this program information?

Mr. SWEZEY. I would be very glad to.[9]

[9] The program schedule was furnished later and is printed in the appendix at p. 3007.

Senator PASTORE. Thank you very much, Mr. Swezey.
Mr. SWEZEY. Not at all, sir.
Senator MAGNUSON. I want to say off the record——
(Statement off the record.)
Senator PASTORE. All right, Mr. Bryant.

STATEMENT OF JOE H. BRYANT, PRESIDENT, BRYANT RADIO & TELEVISION CO., INC., OPERATORS OF KCBD-TV, CHANNEL 11, LUBBOCK, TEX.

Mr. BRYANT. Gentlemen, I appreciate the opportunity you have given me to express here, from the standpoint of a medium-sized station operator, the value of the present network setup for our station.

To acquaint you with myself, my station and my community, stating our background as briefly as possible, I am president and general manager of Bryant Radio & Television Co., Inc., of Lubbock, Tex. We operate television station KCBD-TV, channel 11, in Lubbock, Tex., a medium-sized city of 128,000 people centrally located on the south plains of west Texas, the principal city in this area comprising a population of approximately a half million people. Lubbock is served by 2 television stations, our own and 1 other. We are affiliated with the National Broadcasting Co. and the American Broadcasting Co. as an optional affiliate.

Senator PASTORE. Even we Senators have to be told from time to time.

Mr. BRYANT. As the operator of a television station in a typical medium-sized market I would like to recite to you from the practical experience of the past 3 years the relationship and the benefits of the networking process to our station's operation.

I would like to state that we are unalterably opposed to the proposals which have been made to this committee that would prohibit stations from devoting more than 75 percent of their time between 7:30 and 10:30 p. m. to network broadcasts, that would do away with option time, and that would destroy the policy of selling a basic network—and in our opinion it would destroy the policy of selling a basic network.

We make this statement in spite of the fact that our station is not one of the basic stations of the National Broadcasting Co. We are an optional affiliate of the National Broadcasting Co.

We know from practical experience the importance of the basic network to create business which then flows to the optional stations. It is our opinion that the basic network stimulates business for us, as optional operators. After advertisers make their buy on the basic stations they further extend their purchases to the optional stations. Without their original purchase from the basic group, however, this business potential would be lost to us. The origin of business, then, is with the basic stations, but flows to us to give the national advertiser further exposure to television audiences throughout the Nation.

Senator PASTORE. Mr. Bryant, you are skipping around, but you want the whole statement in the record.

Mr. BRYANT. Well, I can read it. I thought in the interest of brevity we might leave some of this out.

Senator PASTORE. All right, proceed.

Mr. BRYANT. The basic network stations and the optional affiliate stations become a part of an overall system mutually beneficial to both types of stations, enabling the small- and medium-size stations to broadcast programs that our viewers would not otherwise receive.

We are for the continuance of present network structure, functions, and procedures, because they have made it possible for 108,000 homes in west Texas to receive television service comparable in quality to that offered in the major cities of the Nation. To the consumer, or the person who buys a television set, the costs are the same whether he lives in the largest city in the Nation or the smallest. The consumer's interest in the television media is the same no matter where he lives, but for the program service to be comparable in the medium-sized market, the present networking procedures must be preserved.

The two television stations located in Lubbock serve an area within a radius of our city of approximately 80 miles. Within this area are more than 100,000 homes and a population of approximately one-half million people. Each of the stations is presently rendering approximately 110 hours weekly of television service to the people of this area.

Senator MAGNUSON. How is that broken down with local programs and national programs, generally speaking?

Mr. BRYANT. Well, in a typical week we carry approximately 60 hours from the network, 30 hours from the film resources and—well, it would be more than that.

Senator MAGNUSON. Would you say that your local programing would run 50–50?

Mr. BRYANT. Oh, no, no. Our local programing would account for perhaps 17 or 18 percent.

Senator MAGNUSON. And the rest is all national advertisers?

Mr. BRYANT. No, not all national advertisers.

Senator MAGNUSON. Leave the spots out.

Mr. BRYANT. The rest is either network service, Senator, or film.

Senator MAGNUSON. The network service is a national advertiser, isn't it, unless you put spots in?

Mr. BRYANT. Well, we have programs like Today, Home, Matinee, that type of thing, that is made available to us—where we sell this in the local market so it is not national advertiser.

Senator MAGNUSON. Local—isn't that what you call, technically, spot advertising of local people?

Mr. BRYANT. That is right.

Senator MAGNUSON. Taking a program and putting their own advertising in?

Mr. BRYANT. Yes; using the national program.

Senator MAGNUSON. How much of that would you say dollarwise comes to your station as compared to the network programing?

Mr. BRYANT. Would you ask your question again, sir? You mean what percentage?

Senator MAGNUSON. Yes; what percentage of your gross take would come from local advertisers and what percentage from national advertisers?

Mr. BRYANT. That was covered in the questionnaire.

Senator MAGNUSON. Generally speaking.

Mr. BRYANT. Six or seven percent of our total income is from the network.

Senator MAGNUSON. Sixty or seventy?

Mr. BRYANT. No, 6 or 7 percent of our total income comes from the network, the 2 networks we serve. Then approximately—I have those percentages here.

Senator MAGNUSON. I mean just generally. We have them in the questionnaire.

Mr. BRYANT. Yes. Virtually 50 to 70 percent of our income is from the local level.

Senator MAGNUSON. The reason I always ask this question when I have the chance is, what is bothering me is the inability of local people, in some cases, to use the medium of television.

Mr. BRYANT. Well, I think we can cover that further here.

Senator MAGNUSON. Very well. When you can point out that the opportunity is there, I think you do a service to the committee—that there is the opportunity.

Mr. BRYANT. All right.

These two stations operate on a very competitive basis in the truest American tradition, vying for the viewing interest of the people of our area. This affords effective television service for the people of our area who have invested more than $30 million to equip themselves to receive television. Without the network process affording us the program resources that we have throughout the day and night periods, I would venture to say that neither of the two television stations could be sustained economically. Neither would the people of our area have the widely diversified program service now available to them, and television generally would not have the interest of the viewer which is stimulated by the quality of the present network program service.

Our responsibility as an operator of a television station is to render to the people of our area a well-rounded television program service, diversified in nature. Programs of the character of Today, Home, Ding Dong School, Matinee, in addition to the great current events such as the political conventions, world series, and other sporting events such as baseball games, football games, fights, golf tournaments, Broadway shows of the character of Peter Pan, opera, great musical events, and spectaculars, are all out of the reach of local programing presentations. Our association with the network, then, enables us to bring to the people we serve these outstanding attractions and is also the basis of viewing interests to the television media. The great programs created by the network give our programing service a character and depth beyond our ability to produce.

Our television station in Lubbock represents a total investment of approximately $700,000. There are within our area more than 100,000 homes with television sets. Our problem in bringing television service to Lubbock was largely an economic one, because we were faced with the responsibility of bringing to these 100,000 homes the same type and quality of television service rendered by stations in major cities. It is an obvious fact that an advertiser could not afford to pay any higher costs per 1,000 homes for the use of our station than a similar service would cost him in the major cities.

We were then faced with the problem of rendering a maximum service embracing all that television had to offer but within the economic boundaries imposed on us by the limits of our television homes. Where our 1-minute announcements sold for a $40 price, the same 1-minute announcement in a major market where several times

100,000 television homes are served, the cost might range upward to several hundred dollars per 1 minute. The people of our area, however, who own television sets expect our station to render to them the same high quality service available to the owners of sets in the major cities. Through the process of networking we have been able to bring to these people the same type of program service available to viewers in major cities. Our viewers, then, have not been penalized by the limitations of programing service that would be imposed on them if the network service were not available.

To reduce our program schedule to the economics involved—and I believe here, Senator, we cover this.

Senator MAGNUSON. Yes; I see it.

Mr. BRYANT. In a recent week our station carried approximately 61 hours of network programing, 30 hours of film programing, and 17 hours of live programing.

Senator PASTORE. Are you really saying, sir, that in a small community, if you were obliged by any means or method to subscribe more extensively to independently produced programs, that because of the very nature of your location and the number of people that you service, that you would not be in the same position of buying the same type of high quality independently produced programs as they can afford to buy in the larger city, where they charge more money for advertising?

Mr. BRYANT. That is right.

Senator PASTORE. For that reason, the only equality that you can hope to aspire for is through the uniformity of a national television network?

Mr. BRYANT. That is true.

Mr. COX. Isn't it true that the price for a film in your market is proportioned, to some degree at least, to the size of your market?

Mr. BRYANT. Well, there is no established price, actually, on film. It is a matter of bartering and trading.

Mr. COX. But you don't pay for the rights to exhibit in Lubbock what would be paid for the rights to exhibit in Chicago?

Mr. BRYANT. Oh, of course not. They are relative to what you sell them for. But I think in this next paragraph here we will cover the point that I would like to establish, and that is that the very cost of any alternative type programing would make it impossible for stations in our size markets to operate with anything like the length of service periods we now have. For example, I believe that Lubbock is perhaps the smallest city in the Nation that has two television services from 6:55 in the morning to 12 at night, which constitutes a good deal of television service to the people of our area, which wouldn't be possible without the network.

Mr. COX. For these 30 hours of film program that you indicate here, are you able to sell that to either national or local advertisers and make a profit on the time in which those films are shown, over and above your program costs?

Mr. BRYANT. Our price to the local or regional advertiser on the film type show is the film cost plus the time cost allotted to it.

Mr. COX. So you get your full-time charge on these programs, over and above the cost of the programing to you, and you keep 100 percent of the time charge, rather than making your division which applies to your network service?

Mr. BRYANT. That is true, that is true.

The top syndicated film shows available to our television station are priced to us at approximately $100 per half hour per showing, or a cost of $200 per hour. Your inquiry as to price there—this is the top bracket of shows that we buy. Of course, they range downward in other areas.

Mr. COX. This would be good film programing?

Mr. BRYANT. That is right.

Were this same pro rata cost applied to the hours devoted to network programs, the result would so increase our cost of doing business that it would be economically impossible to operate the station, assuming we were attempting to offer program service for the same period of hours we now broadcast, and also assuming sufficient program material were available—and this is actually a wide assumption, because I don't know where there would be sufficient resources to program the periods of time we now operate.

I would cite here, also, that the 61 hours devoted to the network in our program schedule were revenue-producing hours for us rather than an expense the station would not be able to bear to program these periods, locally or through film service.

Back to your question, Senator: One of the best arrangements that we have is the Program Service Plan, whereby the network makes available to us these programs of the character of Today, Home, and Matinee. Now, in our market, we are down the list a good ways. Many of the national advertisers who buy participations in these programs do not buy our station. The network allows us, in the place of this national advertiser, to put the advertising of the local merchant—

Senator MAGNUSON. That is what I was going to ask. I want this clear. When the network sells, say, a show like Today, they have certain national advertisers that get the basic stations. But a station such as yours, sometimes they buy and sometimes they do not?

Mr. BRYANT. That is right.

Senator MAGNUSON. But when they don't, you have the opportunity to put—to let the local advertiser come in?

Mr. BRYANT. That is right. In a typical month, for example, last March, we carried 192 advertising participations from local advertisers in these program service shows that I have mentioned, which gives the local advertiser quite an opportunity to have a resource such as these to create an audience for his advertising.

Senator MAGNUSON. How many similar stations would there be in the United States that have the same opportunity on these network programs, would you say, generally?

Mr. BRYANT. Well, I would—I don't know as a fact—I am sure NBC could acquaint you with those facts, but I think this same opportunity is available to all of the optional stations.

Senator MAGNUSON. Regardless of where they are located?

Mr. BRYANT. On this program service plan?

Senator MAGNUSON. Yes.

Mr. BRYANT. I believe earlier, the smaller group—what they call the Program Extension Plan, covers one group, and then the Program Service Plan, I believe, covers the other. I believe there are two categories there: One group of stations that as one gentleman before me here mentioned, is sold on what is called the Program Extension Plan; that is, the real small stations, and then——

Senator Magnuson. Of course, that has been only recently put into effect?

Mr. BRYANT. I think a matter of several months.

Senator MAGNUSON. Yes, a few months. Columbia started and then NBC, with this so-called package expansion progam.

Mr. BRYANT. Yes.

Senator MAGNUSON. Do you agree that that has been a very good program for the stations of your character?

Mr. BRYANT. It is the lifeblood of our station. Without this service I wouldn't be in the television business in Lubbock—I couldn't be.

Senator MAGNUSON. Well, this committee is very conscious of when that happened.

Mr. BRYANT. Shall I resume?

Senator PASTORE. All right.

Mr. BRYANT. I cite again that the physical time periods and their cost outlined here do not reflect all of the picture because the content of the network programing is of much higher quality and character than would be available to us through any other method, and thereby stimulates the viewing interest of the people, affording us an opportunity to sell this audience to the advertiser.

The present option-time arrangements between the networks and stations have been attacked before this committee. Option time is an absolute necessity for the network to be able to function and stations of our type to survive economically. The networks could not sell the national advertisers station time unless they had some contractual position with the station to assure the advertiser of getting what he purchased. The very cost of any other procedure in the networks' dealing with the stations would be prohibitive. Option time does not constitute a burden on optional stations for these reasons:

1. As previously cited here, it enables the small- and medium-sized stations to receive the flow of programing from the basic stations simultaneously across the Nation. The optional station is continually seeking out good programing resources to excite viewing interest for his station. Adjacent spots to these programs—again, I think this is the meat of the thing, as far as our local revenue is concerned—adjacent spots to these programs sold by the networks are the local station's principal source of revenue. Without the network programing creating an audience, the spot adjacency to the program would not be as salable, as if the station were dependent on local programing or programing from other sources.

2. Option time does not represent any waiver of responsibility on the part of the station in that the station management has not only the right but the responsibiliy to refuse any program offered him not suited or adapted to his particular location or circumstance. The problem in the optional station in reality is to get the program ordered for his station; in other words, we are not in the category that is crowded. Our problem is to actually get the programs ordered for our station so that our schedule may offer to our viewers television service comparable in the larger markets.

3. The advertisers, the network, the station, and the viewers are all better served by virtue of an arrangement that makes it possible for the network to function in cooperation with the station in selling

the station's time and delivering quality programing service to the viewers throughout the nation.

Our option-time arrangements with the network has not interfered with our responsibility to our viewers or our community.

Senator MAGNUSON. And isn't it true that these comparatively new arrangements have worked out so that you can make that statement you just made there?

Mr. BRYANT. By "comparatively new arrangements," Senator, I don't believe I understand what you mean.

Senator MAGNUSON. With the networks—I mean, to be able to take these programs, and the Program Extension Plan service.

Mr. BRYANT. This program service that I have mentioned in our station—we are not in this group. We have had this Program Service Plan in operation for 2 years.

Senator MAGNUSON. It has worked out so that you can actually make this statement?

Mr. BRYANT. That is right.

Senator MAGNUSON. I think it is good.

Mr. BRYANT. On several occasions we have seen fit to recapture option-time periods for specific purposes. An hour long kick-off for the community chest campaign in our community, time for a town-meeting type discussion of the Canadian River Dam proposal as a source of water supply for our city, and many other programs devoted to the public interest have been presented over our station in option time periods. Time has been made available to our city government and to our schools for discussion with the public of their problems. Option time not used by the network has been used for the showing of syndicated programing. In other words, the dearth of orders in our market enables us to have more flexibility than would be true in the larger markets.

Senator PASTORE. May I interrupt at this point—and this is off the record.

(Discussion off the record.)

Senator PASTORE. Proceed.

Mr. BRYANT. Mr. Chairman, if it is all right with you, I will just submit the rest of this for the record.

(The balance of the statement is as follows:)

Option time makes it possible for a network to invest risk capital to develop new programing material. A program may be carried at a tremendous cost to the network long before it's sold. Without option time they could not afford the risk capital required to develop the programs of the character of Home, Matinee, Today, the spectaculars and the many other fine types of programs that network pioneering has brought to television. Certainly no station, regardless of the market in which it was operated, could afford this type of creative activity for particular programs they were attempting to develop.

One of television's major assets is its ability to deliver simultaneously across the whole Nation a program service that affords a showcase for an advertiser's product. Option time is a prerequisite to this being possible. It enables the viewer to see at the same time events and programing no matter where he is located. Immediacy is one of television's greatest assets.

Television is rapidly becoming a new form of journalism, a method by which worldwide, national, State, and local news reports can be disseminated to people over a wide area instantaneously. In most markets our size in the Nation, television affords a competitive news dissemination resource. I cite this as only one of the great areas of public service television renders. The network enables us to present many of the news events as they occur. I cite the political conventions as a prime example.

For our station to render maximum service it must have the program resources with which to stimulate an interested viewing audience. Without the program resources of the network, our service would be limited in scope and the economic burden of programing upon the station would be too great to overcome. Instead of people of our area receiving a high-quality television service from two stations competing for their interest, I do not think that even one station could survive the cost burden of programing were the network resources not available.

The network function and process is a delicate procedure mutually beneficial to the advertiser, the network, and above all, the viewers that make up television circulation. Present arrangements between the networks and the stations affiliated with them have proven to be sufficient and practicable. The optional time arrangement being attacked here has evolved from the practical experience of the networking structure that dates back to the beginning of the network concept which made radio, as well as television, a national service.

The television industry, in its short lifetime, has experienced the most phenomental growth of any industry in the history of the Nation, and in this short period of time, through the pioneering efforts of the networks themselves, a national television service has been created. The network system is the channel through which the lifeblood of this great new industry flows. It provides entertainment and information resources to an entire Nation. Our affiliation with this system enables us as station operators to bring to the people of our area the same quality television service that is available anywhere in the Nation. Without the system this quality service would not be possible.

Throughout the past 5 years of association with the National Broadcasting Co. in both radio and television, we have found that they are sensitive to our needs, requirements, and problems in operation and that we have had the fullest freedom to make our own decisions as to programing our facilities in both radio and television. Present rules and regulations of the Federal Communication Commission under which we operate place upon the station operator the responsibility to determine his policies and exercise final judgment as to programs. We do not feel that there has been any instance in our association or dealings under the present network plan in which our own discretion as to policies deemed by us to be in the public interest have met with any interference, directly or indirectly, on the part of the network or any of its representatives.

I do not believe there is any need for any change in option-time arrangements between the network and stations in our present option-time arrangement. Rather than the option time arrangement being imposed on us by the network we look upon it as a reasonable and practicable method of selling our station, along with other stations throughout the Nation, to the national advertiser. We do not see how a network could function without option-time arrangements with the stations affiliated with it. Neither do we see how we could survive economically without the resources made available to us through this arrangement.

In the inquiry mailed to me from your committee I was asked my opinion of paid television. Throughout the history of the broadcasting industry in this Nation, this industry has established an unsurpassed national broadcasting service in both radio and television on a free basis. Millions of our citizens have invested billions of dollars in television sets with the expectancy of receiving a television service on a free basis. The networks, the advertisers, and stations have invested tremendous sums of money to make a free national television service available to these people. In its short lifetime television has already matured to an effective high-quality television service with unsurpassed public acceptance. I think it is a moral responsibility of the industry, and the people who have a voice in regulating it, to see that free television service remains available to these people who made their investments in good faith. To impose paid television upon our present system would, in my opinion, destroy it and would amount to the prostitution of a virgin industry.

Thank you for the time which you have given me. I appreciate the opportunity as a west Texan to present my views to your committee.

Mr. Bryant. One mention I would like to make is the news coverage of television in a market——

Senator Magnuson. Now, we are interested in your opinion on the last page. Read that for the committee. That is another matter that is before us. Just that last paragraph.

Mr. Bryant. This paragraph here?

Senator MAGNUSON. Yes.

Mr. BRYANT. In the inquiry mailed to me from your committee I was asked my opinion of paid television. Throughout the history of the broadcasting industry in this Nation, this industry has established an unsurpassed national broadcasting service in both radio and television on a free basis. Millions of our citizens have invested billions of dollars in television sets with the expectancy of receiving a television service on a free basis. The networks, the advertisers and stations have invested tremendous sums of money to make a free national television service available to these people. In its short lifetime, television has already matured to an effective high-quality television service with unsurpassed public acceptance. I think it is a moral responsibility of the industry, and the people who have a voice in regulating it, to see that free television service remains available to these people who made their investments in good faith. To impose paid television upon our present system would, in my opinion, destroy it and would amount to the prostitution of a virgin industry.

Senator PASTORE. Thank you very much, sir.

Mr. COX. Would you furnish us the same data for the week of April 1 to 7?

Mr. BRYANT. I believe I did that in the questionnaire.

Mr. COX. I mean actual schedules.

Mr. BRYANT. All right. I will mail it in.[10]

Senator MAGNUSON. I would like to exercise a little Senatorial prerogative. The next witness is from Houston, Tex., and the next one is from Lansing, Mich. In case I am called to the floor, I would like to call, out of order, Mr. Warren, from Seattle, so that I may be here when he testifies.

Senator PASTORE. We will give you that pleasure in about 10 minutes, Mr. Magnuson.

Senator MAGNUSON. All right, sir.

Senator PASTORE. Mr. Abeloff.

Mr. ABELOFF. It may not be necessary for me to sit down even. You all have copies of my statement. I am here to answer any questions if you wish. If not, the statement has been presented.

Senator PASTORE. The counsel is already familiar with your statement. Do you have any questions?

Mr. COX. I have just a few.

Senator PASTORE. The statement will be put in the record as though you had read it.

(The complete statement is as follows:)

STATEMENT OF IRVIN G. ABELOFF, VICE PRESIDENT, PETERSBURG TELEVISION CORP., LICENSEE OF WXEX-TV, CHANNEL 8, PETERSBURG, VA.

Mr. ABELOFF. My name is Irvin G. Abeloff. I am general manager and vice president of Petersburg Television Corp., owners and operators of television station WXEX-TV channel 8, Petersburg, Va. I am also vice president of the Lee Broadcasting Corp., owners and operators of radio station WLEE, Richmond, Va. WXEX-TV went on the air on August 15, 1955, as a basic affiliate of the National

[10] The program schedule was supplied later and is printed in the appendix at p. 3011.

Broadcasting Co.'s television network. WLEE has been on the air since October 1, 1945. It has been affiliated with the National Broadcasting Co.'s radio network since October 1955.

On May 15, 1956, certain statements were made before this committee by Mr. Wilbur M. Havens, presidents of Havens & Martin, Inc., owners and operators of television station WTVR, channel 6, Richmond, Va. At least two of Mr. Havens' statements have reference to WLEE and WXEX-TV. On May 29 I requested permission to appear before this committee to comment on some of Mr. Havens' remarks. I appreciate the courtesy of this committee in allowing me to do so.

The first item concerns radio station WLEE. Mr. Havens said in his statement:

> In the spring of 1955, however, NBC was preparing to launch its Monitor program for radio. Monitor is a program which runs for the entire weekend from early Saturday morning to late Sunday night. We did not think it was in the public interest or our own interest to devote the entire weekend to a single marathon program, which would reduce our station function to plugging in of the network early Saturday morning, reading an occasional local commercial, and pulling out the plug late Sunday night. We objected, and we still object, to the so-called magazine network programs, in which NBC in effect is selling spot announcements for which the affiliate's compensation is far less than the compensation for spot announcements sold directly. On April 18, 1955, NBC switched its TV affiliation from WTVR to the second television station in the Richmond area, and shortly thereafter NBC signed a radio affiliation agreement with a Richmond station owned by the same interests. It is pertinent to note that this Richmond station carried the complete Monitor program from the time it began on Saturday morning until the time it ended on Sunday night.

Affiliation of WLEE with NBC radio began officially on October 1, 1955, although WLEE had carried certain few programs from NBC radio during the preceding 2 months. A survey of the program logs of WLEE on a typical Saturday and Sunday in October of 1955 shows the following:

On Saturday:

Local programing was carried from signon at 6 a. m. to 11 p. m.

Monitor was scheduled from 11 a. m. to 12 noon.

Programing was local from 12 noon through the University of Richmond football broadcasts until approximately 5 p. m.

Monitor was carried from 5 to 5: 30 p. m.

Local programing was scheduled from 5: 30 to 7: 30 p. m.

Monitor then ran from 7: 30 to 10: 30 p. m.

Local programing was scheduled from 10: 30 p. m. to signoff at 12: 45 a. m.

Please note that WLEE signed off at 12: 45 o'clock on Sunday morning and, of course, did not carry either Monitor or any other programing from 12: 45 a. m. until signon at 6: 30 a. m. on Sunday morning. The schedule for Sunday then shows the following typical programing:

Local programs from 6: 30 a. m. to 3 p. m.

Monitor from 3 to 6 p. m.

Local from 6 to 6: 30 p. m.

Monitor from 6: 30 to 8 p. m.

Church services in conjunction with station WBBL from 8 to 9 p. m.

Monitor from 9 to 11 p. m.

Local from 11 to 11:30 p. m.
Monitor from 11:30 p. m. to midnight.
Local from midnight to signoff at 12:45 a. m.

NBC schedules Monitor for approximately 40 hours from 8 a. m. Saturday to midnight Sunday. On a typical weekend in October 1955, the first month of WLEE's affiliation with NBC radio, WLEE carried approximately 12 hours of the 40 Monitor hours. During this past weekend, June 16 and 17, with no football on Saturday afternoons, WLEE carried a few more hours of Monitor but the logs for this past weekend show that WLEE carried a total of approximately 15 out of the 40 Monitor hours.

As you can see, Mr. Havens was mistaken when he stated that we carried "the complete Monitor program from the time it began on Saturday morning until the time it ended on Sunday night."

The second item in Mr. Havens' testimony is of considerably more importance and, again, Mr. Havens is mistaken. Mr. Havens indulged in certain speculations as to why the National Broadcasting Co. canceled its television affiliation with WTVR and negotiated a television affiliation with the Petersburg Television Corp. Again, I quote from Mr. Havens' statement.

The second television station in the Richmond area is station WXEX-TV, which serves both Petersburg and Richmond, 20 miles apart, from a transmitter between the two cities. On September 21, 1953, the ultimately successful applicant for this station filed an application indicating that its principal transmitting equipment, including the tower, would be purchased from DuMont at a cost of approximately $500,000. On September 29, 1954, the Commission approved this applicant. Presumably, the applicant began negotiating for a network affiliation agreement immediately thereafter.

Then, on March 11, 1955, a month after NBC had delivered its letter of February 10 to us, the applicant applied for modification of its construction permit, showing that instead of using Du Mont equipment, it now intended to purchase approximately $700,000 worth of equipment from another manufacturer. You have undoubtedly guessed the name of the other manufacturer. It was the Radio Corporation of America, parent corporation of the National Broadcasting Co. The Commission approved this change on April 6, 1955. Approximately 2 weeks later, on April 18, 1955, NBC signed an affiliation agreement with the new station.

Mr. Havens then went on to ask a question and answer it.

Was it simply a coincidence that WXEX-TV canceled its order for Du Mont equipment and placed an order for RCA equipment instead, just before obtaining its affiliation agreement with NBC? I do not know. But I think that this committee, or the Department of Justice, or the Federal Communications Commission could find out.

I agree with one sentence of that last paragraph in Mr. Havens' testimony. Of course he does not know. He has made an insinuation rather than a formal charge and this insinuation is completely unsupported by the facts.

Mr. Havens is trying to read the minds of third persons; namely, the officials of the National Broadcasting Co. I shall not attempt a similar feat. Mr. Havens is attempting to tell this committee why the National Broadcasting Co. decided to offer television affiliation to WXEX-TV. Again, I shall not attempt to do that. The proper officials of NBC can certainly speak for themselves on this subject—and indeed have done so.

As for my company, all I can say is that my associates and I were delighted when the opportunity was presented to us to become affiliated with a network such as NBC, with a reputation for fine public service, good commercial success, and fair dealings with its affiliates.

However, I can speak positively about any relationship between our purchase of RCA equipment and our securing an affiliation with the NBC television network. There was absolutely no connection. At no time did any official of NBC attempt in anyway to influence us in our equipment purchases.

Gentlemen of the committee, any further elaboration of this statement would simply consume your valuable time. You have many more witnesses to be heard. Since I am, of course, subject to your jurisdiction, I am ready and willing to attempt to answer any questions you may wish to ask. I cannot allow Mr. Havens' insinuation to go unchallenged so I close this statement of mine by repeating as positively as I know how that there was absolutely no connection between our purchase of RCA equipment and our securing an affiliation with the NBC television network.

Mr. Cox. You are correcting here a misstatement by a prior witness as to the policy of a radio station which you manage regarding the carrying of the program Monitor?

Mr. Abeloff. That is one correction.

Mr. Cox. Has there been any time since your station was affiliated with NBC when you have carried more than 15 of the 40 hours of Monitor that are offered over the weekend interval?

Mr. Abeloff. The answer is "No," with this qualification: It may be 16.

Mr. Cox. But no major excess?

Mr. Abeloff. No major change.

Mr. Cox. The other matter with which you deal is in connection with the allegation of Mr. Havens regarding a change in the specifications in your application for your CP regarding your transmitter. Now in that connection, did you approach the National Broadcasting Co regarding affiliation in the Richmond market or did the network people come to you?

Mr. Abeloff. They approached us.

Mr. Cox. When was this?

Mr. Abeloff. In the late fall of 1954.

Mr. Cox. The late fall of 1954. Was there any discussion at that time about the amount of clearance for their programs they would expect you to provide, or about any difficulty in clearing they had had with their then affiliate?

Mr. Abeloff. To part 1, yes. Part 2, no. The difficulties with their former affiliate were not discussed with me.

Mr. Cox. What did they discuss with your regarding your clearance policy?

Mr. Abeloff. They asked what would my policy be, with regard to clearance.

Mr. Cox. What did you tell them?

Mr. Abeloff. I told them I would try to cooperate.

Mr. Cox. What percentage of the programs they offer you do you clear on the station?

Mr. Abeloff. In or out of option time?

Mr. Cox. Overall, first.

Mr. Abeloff. Most of the programs. I can't give you the exact percentage.

Mr. Cox. And the same would be true, then, for the option period as well?

Mr. Abeloff. No. There are certain programs in option time, which conflict with local programs, that we don't clear for them.

Mr. Cox. When did you decide to make the change in transmitters which you later effected—from DuMont to RCA?

Mr. Abeloff. That was done in the spring of 1955.

Mr. Cox. And what was the basis for this change—purely technical?

Mr. Abeloff. Partly.

Mr. Cox. What other factors?

Mr. Abeloff. We had advice both from sources which were using the two types of equipment we were considering; and also involved was the fact that we were about to issue an additional stock to be handled by a local underwriter, and the underwriter felt that—and the underwriter advised us that he felt his sale of stock would be more easily done with one type of equipment rather than another.

Mr. Cox. That is all.

Senator Pastore. Thank you very much, sir. We appreciate your cooperation.

Mr. Warren? Your complete statement will be inserted in the record.

(The complete statement is as follows:)

Statement of William W. Warren, Executive Vice President and General Manager, KOMO–TV, Seattle, Wash.

I am executive vice president and general manager of Fisher's Television Co. and of Fisher's Blend Station, Inc., owners and operators respectively of KOMO–TV and KOMO Radio in Seattle, Wash.

KOMO Radio and KOMO–TV are basic affiliates of NBC. KOMO Radio has been under the same ownership control since its inception 30 years ago on December 31, 1926, and became a charter member of the NBC Pacific coast network April 5, 1927. KOMO–TV began commercial operation on December 10, 1953, and has been an affiliate of NBC since December 11, 1953. I have been in the employ of KOMO since 1933. I was program manager for 18 years and have been general manager for 4 years.

The Seattle-Tacoma market has 4 commercial VHF stations and 1 educational VHF station.

Seattle is the 19th market in the Nation. In the area served by KOMO–TV there are approximately 514,000 sets, KOMO–TV operates a total of about 126 hours weekly. Network programs provide about 71 hours of which 13 hours are sustaining. Local live programs 20 hours, syndicated films 9 hours and all other films 26 hours. In the week of May 27, 1956, KOMO–TV scheduled eight ½-hour and one 1-hour syndicated film programs between 7:30 p. m. and 10:30 p. m. A tenth syndicated film program was scheduled at 7 p. m. on Thursday.

KOMO–TV went on the air the winter of 1953, releasing 5¼ hours per week of film syndicated programs. The next year this figure had increased to 6½ hours per week. We are currently airing 8½ hours per week and our estimate for the coming season is 10 hours.

SYNDICATED FILM STATUS ON THE THREE NETWORK STATIONS IN THE SEATTLE-TACOMA MARKET

In the Seattle-Tacoma market on the three network stations in the week of May 27, 1956, there were thirty-two ½-hour syndicated film programs scheduled in prime time between the hours of 7 p. m. and 11 p. m., Sunday through Saturday.[11]

[11] See appendix A at end of statement for list of film programs and scheduled times.

Only 15 of the 32 programs were fully sponsored during this week, 14 of the 32 programs were available for full sponsorship and 3 were available for cosponsorship. Twenty-eight of the total of thirty-two film programs were scheduled between 7:30 p. m. and 10:30 p. m.

Certainly there is no dearth of available time or programs for local, regional or national advertisers in the 7: 30 p. m. to 10: 30 p. m. period on network stations in the Seattle-Tacoma market.

As a matter of fact, in our market most local, regional and national spot advertisers are not interested in sponsorship or part-sponsorship of ½-hour film programs because of the resultant limitation to weekly or alternate-week exposure. A majority of such advertisers prefer multiple presentation of their commercials. These schedules consist of announcements in various times of day and evening, and particularly important, live participations in programs produced live locally which can be effectively merchandised and tailored to his product or service. A further advantage is the great flexibility attained in types of audiences reached and in the ease of expanding or modifying schedules to meet varying market conditions.

As a case in point, one of the most consistent regional television advertisers in the Pacific Northwest, a local concern which is the largest in its field, has recently discontinued one-half sponsorship of one of the highest rated syndicated film programs. This program has been consistently shown in the vicinity of 9 p. m. and has been considered a very successful vehicle. However, the advertiser and its agency felt that they could best achieve the desired advertising impact by spending the same budget for an announcement schedule spread throughout the telecasting day. They had previously proven this formula in one or more other markets within their distribution area.

NETWORK PROGRAMING IS THE FOUNDATION FOR THE TOTAL TELEVISION SERVICE

Network programs have given the tremendous impetus to set sales in the Seattle-Tacoma area. The public has bought their television sets primarily because of the great network programs appearing weekly, or as spectaculars, or the national conventions, or the world series. This is the primary reason why set ownership in the Seattle-Tacoma market has reached about 82 percent of saturation. Network shows and network stars are the talked about shows and stars—they are the ones about which our promotion people are able to create the greatest excitment. The diversification of programs, service to minority as well as majority interests, public affairs, sports, cultural, news, as well as entertainment programs—this is the basic network service—a service which the Seattle-Tacoma public has come to expect as a matter of course—a service providing the greatest system of mass communication ever devised. The other programing sources such as local and film have been able to profitably trade upon the basic circulation created by this network service over the years.

THE AFFILIATE-NETWORK RELATIONSHIP PROVIDES THE ULTIMATE OF NATIONAL PROGRAM SERVICE WITHIN THE SCOPE OF THE LICENSEE'S RESPONSIBILITY

For the station to have effective control in the influencing of nationally originated programs, there must be a national program entity of which it is part. This is the network form which is the aggregate of the network's affiliated stations throughout the country.

Because of the nature of the affiliate-network relationship, the first objective of the network is the same as the station's—to best serve the audience of my community at, say, 8 p. m. on Sunday. This is so because the network is obliged to program this period to the best of its ability in competition with other networks vying for the public's attention. The public benefits. This is not the first objective of the advertiser with a film program looking for an availability in the market. Regardless of how good his program may be, he will avoid 8 p. m. on Sunday if the competition is strong. He will seek an availability on one of the stations in the market which has the least competition. He therefore gets his audience largely by default and my station gets the business, providing the competition is weak opposite my availability.

If the advertiser does take the period and his program subsequently is failing in audience, chances are there is little can be done about it because all of the episodes in the series are probably already in the "can." If my station were to buy a film program to schedule at 8 p. m. on Sunday, chances are that our experience would be similar. In other words, film buying of syndicated programs is a gamble entered into at the time of commitment and little or no recourse is available to the station if the program doesn't live up to the original estimate.

The affiliate is a soundingboard to the network broadcaster and the sum of the reactions, opinions, suggestions and criticisms of the affiliates provides the network with fast and professional information, enabling it to measure the effectiveness of its programing upon all communities of the nation.

To properly serve the public interest, a station should provide different types of programs even though some types do not appeal to as many viewers as others. The entire program schedule must add up to something more than a lot of good ratings. There are periods on KOMO–TV where, because of scheduling a program of news, a competing station can schedule a film program with a good box-office appeal and get a very high rating. However, few would argue that the station should not schedule news, and I am sure that if the station or the network did not provide the news program, no one else would, or could. It exists because the station and the network believe it should to best serve my community.

No two stations or networks are alike. Each has a character of its own which is the result not just of the programs on the station and on the network, but of the control of those programs as to type, appeal, and placements. Each has a program philosophy somewhat different. The result is a great variety of programs, and the public benefits. Philosophy and psychology of programing are important and, to be constructive and progressive, the experience of the many broadcasters and their opinions should, for the public benefit, be interpreted and evaluated and where change is indicated, direction should be given. It is fortunate, indeed, that out of the affiliate-network relationship the means exists for changing the direction of programing before it reaches the stage of sameness and mediocrity.

A secondary but very important benefit resulting from the affiliate-network relationship is the outlet provided for the origination of programs from the affiliate's community to the Nation. Since June 22 of last year KOMO-TV has released 10 programs to the network, totaling 6 hours and 24 minutes.

In recognition of the great value that this outlet provides for expression by my community to the Nation, the Seattle Chamber of Commerce awarded the coveted Paul Bunyan trophy to KOMO–TV for the year 1955 for having made the greatest contribution toward focusing favorable national attention upon the city of Seattle during that year. This award was based upon the origination, during 3 days, of the program Home from the city of Seattle. This program depicted the mode of living and the attractions of my community before the Nation.

For the past year and one-half I have served as a member of the NBC television affiliates executive advisory committee. This is an elective position and I am 1 of 9 representatives of the NBC television affiliates. This committee meets frequently with the president of NBC together with his department heads and policy level staff members. Suggestions and problems having to do with programing policies, programing effectiveness, types of programs, standards of good taste, and questions of propriety in both program and commercial content are discussed and opinions exchanged.

At least once a year there is a national meeting of all the affiliates with the network. Broad fundamental subjects and problems are discussed and resolved. No such relationship exists between my station and any film producer. The relationship here is nothing more than that of a buyer and seller. We purchase film in two different ways. At least twice a year our program manager goes to Hollywood to audition pilots, and to purchase or recommend the purchase of new syndicated shows. KOMO–TV has tried to have top shows and I believe we have bought or bid on every outstanding show since we have been on the air. In addition to these periodic trips, we audition dozens of programs each year in Seattle with the salesmen for the distributing companies. Either way, we are constantly faced with the fact that we are expected to spend $20,000 to $25,000 for each series on the strength of one episode plus the experienced pitch of a salesman. Once we have signed a contract we have no more control over the quality of the product than our most distant viewer. In fact we have less, because we cannot switch to another station. We have to play them out, good, bad, or indifferent.

ONLY THE NETWORK MAINTAINS RESPONSIBILITY TO THE STATION FOR PROGRAM PERFORMANCE AND SALE

The important difference between the position occupied by the film syndicator and that of the networks is that only the latter maintain a continuing control and responsibility of programing and this responsibility, because of the affiliate-network relationship, is directly to the viewing public. Generally speaking, the syndicators have no financial investment in television stations. They are not worried about station responsibilities.

Their sole standard is ratings. I do not believe that the film companies, with all of their knowledge of the film business, could locate for me syndicated programs in the fields of education, agriculture, religion, discussion, or special interest, and yet they maintain that they are at least as well equipped to help program our station as the network.

Syndicated film, as such, is in no way a guaranty of quality nor popularity. It cannot supply those subjects which demand immediacy, such as news, sports, special events, etc. Apparently it cannot involve itself in any experiment in the field of new art forms. If the television industry ever reached the point of depending upon the syndicators for its programs, this exciting medium would be guilty of cultivating mediocrity.

The network assumes prime responsibility for the sale of all network option time. The burden for the sale rests continually upon it. On the other hand, the film syndicator, in my experience, assumes no resposibility for the continued sale of a period of time occupied by a film which he has sold the station.

THE FILM SYNDICATORS HAVE MADE VIRTUALLY NO CONTRIBUTION TO THE DEVELOPMENT OF COLOR TELEVISION

KOMO–TV is active in the development of color television. The station is equipped to release network, local live and film in color. Of all the color programs on the station, not one is a syndicated film program. With about $65,000 invested in color film projection equipment, virtually the only color film available is free film supplied by industrial concerns, nonprofit organizations, and governmental agencies. A one-half hour commercial film program produced locally for a regional sponsor is produced in color. Seventy-three stations in the Nation are equipped now to release color film.[12] The film producers are certainly not making any proportionate contribution to the development and pioneering of color television. Here again all the spadework and initial investment and risk is being undertaken by the networks and stations.

All of the color programs released on KOMO–TV are from the network or are produced locally except for so-called free films. To my knowledge only two first line syndicated film programs Judge Roy Bean and Long John Silver—the latter is produced in Australia—are available in color.

NETWORK OPTION TIME IS VITAL TO THE EXISTENCE OF THE NETWORK

To exist, the network must be able to clear time in all of the principal markets. If each station made up its schedule locally, no two stations on the network would have the same availabilities. The network would not be able to clear simultaneous time and the use of microwave interconnection facilities would not be practical. Programs would have to be delivered by film. The network would collapse as such. This would be the result if network option time were eliminated. The network as a programing entity—an organization existing primarily to provide direction, purpose, and control to programing—would cease to exist. The greatest programs—the spectaculars, national conventions, Wide Wide Worlds, matinee theatres, the world series—would no longer be available to the television viewing public. The public would have no choice but of local programs and standardized film programs. The blind would be drawn on the "window on the world."

Except for the testimony of Mr. Moore of KTTV and his attorney, I have not had the opportunity of either hearing or reading the testimony of other

[12] Compiled from RCA Color TV News and Television Digest.

witnesses before your committee. Mr. Moore speaks as the operator of a nonnetwork station in Los Angeles, but by inference at least he also pleads a case for film producers and purveyors.

A network affiliation is generally recognized to be a valuable franchise to a television station. Independent stations, however, fulfill a useful and important purpose in their ability to carry many programs which can only be presented during times in which network programs are being presented on network affiliates. For example, the independent station in our locality, KTVW, carries all of the Pacific coast baseball games played by Seattle in both Seattle and Portland. They also carry basketball games and certain football games which only an independent station with heavy unprogramed time could handle. To say, however, that a nonnetwork station fulfills a useful and important purpose, or to say that film is an important source of program material, does not mean that the networks should be sacrificed for the benefit of the independent stations or the film merchants. It is my personal belief that if Mr. Moore's demand that network option time be reduced by 25 percent is granted, the death knell of the networks would be sounded. It is my impression that profits in running a network are not large, comparatively speaking. Taking away as much as 25 percent of the ability of the networks to sell programs in prime evening hours could very well mean the difference between survival and nonsurvival.

It has always been my feeling that, in the absence of something evil, success in any line of endeavor—be it banking, manufacturing, or operating a television network—should not be penalized at the behest of competitors who would like to cut the successful ones down to their size. With all due respect to Mr. Moore's excellent television station, to the syndicated film producers, and to the old and new owners of the vast supply of old motion-picture film, I do not think that on merit they stand in a very good position to ask for regulations, the purpose of which is to cripple network telecasting. Furthermore, I cannot believe that, after hearing both sides, legislators will look with sympathy to the eloquent plea of these entrepreneurs who want an assist from the Government to improve their competitive position.

In conclusion, may I say that our station has a very genuine feeling of appreciation to the network for its contribution to our success as broadcasters over a period of almost 30 years. Telecasting, in a short space of time, has resulted in 4 out of 5 people in this country having access to a television screen in their homes. The networks are, to a large measure, responsible for this phenomenal growth. We as a network affiliate ask your favorable consideration for the position of the networks as against the position of certain elements in the industry whose manifest intention is to tear down network telecasting for the financial betterment of themselves.

(The appendix referred to is as follows:)

APPENDIX A.—*Syndicated film programs on the 3 network stations in the Seattle-Tacoma market in the week of May 27, 1956*

FULLY SPONSORED

	Day	Time	Channel
1. Turning Point	Monday	9:30 to 10 p. m.	4
2. Waterfront	Wednesday	do	4
3. Highway Patrol	Thursday	7 to 7:30 p. m.	4
4. Celebrity Playhouse	do	8 to 8:30 p. m.	4

30. Counterpoint	Wednesday	do	11
31. City Assignment	Thursday	do	11
32. Guy Lombardo	Friday	do	11

NOTE.—This list of film programs does not include those film programs released on the 4th station which is nonnetwork.

Mr. WARREN. Mr. Chairman, Senator Magnuson, my name is William W. Warren. I am executive vice president and general manager of Fisher's Television Co. and of Fisher's Blend Station, Inc., owners and operators respectively of KOMO–TV and KOMO Radio in Seattle, Wash.

KOMO Radio and KOMO–TV are basic affiliates of NBC. KOMO Radio has been under the same ownership control since its inception 30 years ago on December 31, 1926, and became a charter member of the NBC Pacific coast network April 5, 1927. KOMO–TV began commercial operation on December 10, 1953, and has been an affiliate of NBC since December 11, 1953. I have been in the employ of KOMO since 1933. I was program manager for 18 years and have been general manager for 4 years.

The Seattle-Tacoma market has 4 commercial VHF stations and 1 educational VHF station.

Seattle is the 19th market in the Nation. In the area served by KOMO–TV there are approximately 514,000 sets. KOMO–TV operates a total of about 126 hours weekly. Network programs provide about 71 hours of which 13 hours are sustaining. Local live programs 20 hours, syndicated films 9 hours and all other films 26 hours. In the week of May 27, 1956, KOMO–TV scheduled eight one-half-hour and one 1-hour syndicated film programs between 7:30 p. m. and 10:30 p. m. A 10th syndicated film program was scheduled at 7 p. m. on Thursday.

KOMO–TV went on the air the winter of 1953, releasing 5¼ hours per week of film syndicated programs. The next year this figure had increased to 6½ hours. We are currently airing 8½ hours per week and our estimate for the coming season is 10 hours.

SYNDICATED FILM STATUS ON THE THREE NETWORK STATIONS IN THE SEATTLE-TACOMA MARKET

In the Seattle-Tacoma market on the 3 network stations in the week of May 27, 1956, there were 32 one-half-hour syndicated film programs scheduled in prime time between the hours of 7 and 11 p. m., Sunday through Saturday.[18]

[18] These film programs and their scheduled times are listed in appendix A to Mr. Warren's written statement, printed at p. 2783.

Only 15 of the 23 programs were fully sponsored during this week. Fourteen of the thirty-two programs were available for full sponsorship and three were available for cosponsorship. Twenty-eight of the total of thirty-two film programs were scheduled between 7:30 and 10:30 p. m.

Mr. Cox. What are your network option hours?

Mr. WARREN. In the wintertime our network option is 7:30 to 10:30. During the 5 months when the rest of the Nation is on daylight saving time, it is from 6:30 to 9:30.

Mr. Cox. So that the entire period after 9:30 p. m. on the three stations in the market is available for nonnetwork programing?

Mr. WARREN. The station time as contrasted with option time, yes, sir.

Mr. Cox. Would that be the substantial cause for the high number of these film programs carried in this period and for the fact that a good many of them are as yet unsold?

Mr. WARREN. No, sir. Let me say that on our station there has, I believe, never been a time when there hasn't been a half hour available for sale between 7 and 11 p. m.

Mr. Cox. In the period before daylight saving time—just before you went on it this time—how many nonnetwork programs were you carrying in the period 7:30 to 10:30?

Mr. WARREN. We were carrying, I believe I state it later on, 4 or 5.

Certainly there is no dearth of available time or programs for local, regional, on national advertisers in the 7:30 to 10:30 p. m. period on network stations in the Seattle-Tacoma market.

Senator MAGNUSON. Bill, isn't that largely due to the 4 hours difference in our time, wouldn't you say—particularly in the summer?

Mr. WARREN. No, sir. I would say the same programs between 7 and 11—in the schedule between 7 and 11, now, on the three stations as were between 7 and 11 during standard time.

Senator MAGNUSON. That is because they sometimes spot them at different hours because of the west coast difference in time?

Mr. WARREN. Well, on our station——

Senator MAGNUSON. Except live.

Mr. WARREN. Yes. On our station we would carry, for example, Highway Patrol at 7 o'clock during standard time on Thursday. That is station time. During the 5 months when the rest of the country is on daylight, Groucho Marx would move, normally, to 7 o'clock. However, in our case we scheduled Groucho at 10 o'clock and retain Highway Patrol at 7 o'clock.

Senator MAGNUSON. You change your programing around?

Mr. WARREN. Yes, sir.

Mr. Cox. Isn't it true that if you took these identical 32 time periods for the period prior to daylight saving time, that instead of all 32 being filled with syndicated programs it would get down in the neighborhood of 10 that would be occupied by nonnetwork programs?

Mr. WARREN. I believe I said that 28 of the 32 were between 7:30 and 10:30.

Mr. Cox. I am talking about the period, let's say, in February of this year.

Mr. WARREN. I see.

Mr. Cox. In February of this year, for instance, the period on Monday from 9:30 to 10 p. m., which you indicate is now occupied by a syndicated program, was then occupied by Robert Montgomery Presents which is an NBC program.

Mr. WARREN. Yes.

Mr. Cox. In fact, all of the periods which you indicate for KOMO were occupied by network programs except for the Highway Patrol example that you just used?

Mr. WARREN. I would say that all the programs listed of the 32—I expect that practically, or all, of them would be between the period of 7 to 11 throughout the entire year.

Mr. Cox. Throughout the entire year?

Mr. WARREN. Yes.

Mr. Cox. That is, they are adjusted as you shift the network block—either at beginning or the end of the period?

Mr. WARREN. That is right. In our case we must consider the total year, 12 months, in building our schedules and in doing business with the network and with other advertisers.

Mr. Cox. That is, you carry, then, all 7 or 8 of the nonnetwork shows here, the year round?

Mr. WARREN. Yes, sir.

NETWORK PROGRAMING IS THE FOUNDATION FOR THE TOTAL TELEVISION SERVICE

Network programs have given a tremendous impetus to set sales in the Seattle-Tacoma area. The public has bought their television sets primarily because of the great network programs appearing weekly, or as spectaculars, or the national conventions, or the world series. This is the primary reason why set ownership in the Seattle-Tacoma market has reached about 82 percent of saturation. Network shows and network stars are the talked about shows and stars—they are the ones about which our promotion people are able to create the greatest excitement.

The diversification of program, service to minority as well as majority interests, public affairs, sports, cultural, news, as well as entertainment programs—this is the basic network service—a service which the Seattle-Tacoma public has come to expect as a matter of course—a service providing the greatest system of mass communication ever devised. The other programing sources such as local and film have been able to profitably trade upon the basic circulation created by this network service over the years.

NETWORK OPTION TIME IS VITAL TO THE EXISTENCE OF THE NETWORK

To exist, the network must be able to clear time in all of the principal markets. If each station made up its schedule locally, no two stations on the network would have the same availabilities. The network would not be able to clear simultaneous time and the use of microwave interconnection facilities would not be practical.

Programs would have to be delivered by film. The network would collapse as such. This would be the result if network option time were eliminated. The network as a programing entity—an organization existing primarily to provide direction, purpose, and control to programing—would cease to exist. The greatest programs—the spectaculars, national conventions, Wide Wide Worlds, Matinee Theaters, the World Series—would no longer be available to the television viewing public. The public would have no choice but of local programs and standardized film programs. The blind would be drawn on the "window on the world."

Except for the testimony of Mr. Moore of KTTV and his attorney, I have not had the opportunity of either hearing or reading the testimony of other witnesses before your committee. Mr. Moore speaks as the operator of a nonnetwork station in Los Angeles, but by inference at least he also pleads a case for film producers and purveyors.

A network affiliation is generally recognized to be a valuable franchise to a television station. Independent stations, however, fulfill a useful and important purpose in their ability to carry many programs which can only be presented during times in which network programs are being presented on network affiliates. For example, the independent station in our locality, KTVW, carries all of the Pacific coast baseball games played by Seattle in both Seattle and Portland. They also carry basketball games and certain football games which only an independent station with heavy unprogramed time could handle. To say, however, that a nonnetwork station fulfills a useful and important purpose, or to say that film is an important source of program material, does not mean that the networks should be sacrificed for the benefit of the independent stations or the film merchants.

It is my personal belief that if Mr. Moore's demand that network option time be reduced by 25 percent is granted, the death knell of the networks would be sounded. It is my impression that profits in running a network are not large, comparatively speaking. Taking away as much as 25 percent of the ability of the networks to sell programs in prime evening hours could very well mean the difference between survival and nonsurvival.

It has always been my feeling that, in the absence of something evil, success in any line of endeavor—be it banking, manufacturing, or operating a television network—should not be penalized at the behest of competitors who would like to cut the successful ones down to their size. With all due respect to Mr. Moore's excellent television station, to the syndicated film producers, and to the old and new owners of the vast supply of old motion-picture film, I do not think that on merit they stand in a very good position to ask for regulations, the purpose of which is to cripple network telecasting. Furthermore, I cannot believe that, after hearing both sides, legislators will look with sympathy to the eloquent plea of these entrepreneurs who want an assist from the Government to improve their competitive position.

In conclusion may I say that our station has a very genuine feeling of appreciation to the network for its contribution to our success as broadcasters over a period of almost 30 years. Telecasting, in a short space of time, has resulted in 4 out of 5 people in this country having access to a television screen in their homes. The networks are, to a large measure, responsible for this phenomenal growth. We as a network affiliate ask your favorable consideration for the position of the networks as against the position of certain elements in the industry whose manifest intention is to tear down network telecasting for the financial betterment of themselves.[13a]

[13a] Pursuant to later request, the program schedule of KOMO–TV for a sample week in April, 1956, was furnished and is printed at p. 3014.

Senator PASTORE. Any questions, Senator Magnuson?
Senator MAGNUSON. No, sir.
Senator PASTORE. Mr. Harris?

STATEMENT OF JACK HARRIS, VICE PRESIDENT AND GENERAL MANAGER OF KPRC-TV, HOUSTON, TEX.

Mr. HARRIS. Mr. Chairman, my name is Jack Harris, KPRC-TV, Houston. I will dispense with the reading of this and ask that it be on the record.

Senator PASTORE. Make it part of the record.

(The full statement follows:)

STATEMENT OF JACK HARRIS, VICE PRESIDENT AND GENERAL MANAGER OF KPRC-TV, HOUSTON, TEX.

My name is Jack Harris. I am vice president of the Houston Post Co., general manager of KPRC-TV, Houston.

KPRC-TV is the second oldest television station in Texas. It was formerly affiliated with all the national networks and is still affiliated with one, the National Broadcasting Co.

There is nothing in our experience of the past 7 years to impel us to recommend any substantial changes in present operations of the networks.

In our own station and through my participation as a member of the NBC affiliates executive committee, our relation with the networks has been one of partnership, not dictatorship.

We have tangible evidence that our ability to serve our viewers with live network programing is a prime reason for our growth and progress.

Prior to the cable facilities which enabled us to bring live network programs to our area, channel 2 had been in operation 29 months. We served, at that time, 142,000 television homes. In the 29 months following the arrival of live network programs, our television homes increased 273 percent to a total of 389,000. Today, there are approximately 500,000 television homes in our area, and in our home county more families have television than telephones.

These figures are but one indication that an unprecedented public approval has made television the fastest growing postwar industry—that the public whom we are licensed to serve, and without whose approval we are lost, is not among the groups who petition this committee to make drastic changes.

During the past few weeks, testimony has been offered by or on behalf of film syndicators, designed to impose certain limitations on the national television networks. As we understand these proposed restrictions, the American viewing public, and the stations which serve it, would be the beneficiaries of expanded so-called local service made up in large part of film programs.

In this connection, a glance at our present schedule will be illuminating.

We are now carrying 6½ hours per week of nonnetwork syndicated programs between 6:30 p. m. and 9:30 p. m. An additional 3 hours and 55 minutes per week of nonnetwork syndicated programs is telecast each week prior to 10:30 p. m., or a total of 10 hours 25 minutes weekly between 6:30 p. m., and 10:30 p. m.

In other periods, we currently telecast an additional 7 hours of nonnetwork syndicated features each week.

This represents a total of 17 hours and 25 minutes each week of nonnetwork syndicated programs, aproximately 75 hours per month.

This does not include feature films, many of which are purchased from the syndicators who also supply nonnetwork syndicated programs. Feature films represent an additional 19 hours per week.

In other words, one-third of our current schedule in so-called premium hours is made up of nonnetwork syndicated programs.

It should be noted that our present schedule is tailored to daylight saving time, which is now in effect for 6 months of the year. Last April, when our schedule was tailored to standard time, we were carrying a total of 6½ hours per week of nonnetwork syndicated programs between 6:30 p. m. and 10:30 p. m., representing 23 percent of our schedule in premium hours. The average for the entire year would be approximately 8½ hours per week of nonnetwork syndicated programs or about 30 percent in premium time.

One additional point should be made, inasmuch as a strictly quantitative analysis cannot be complete and may be misleading: We are constantly seeking better and more varied programs from the film syndicators. And yet, fewer and fewer quality shows are being offered for local syndication. The syndicators are generally following a practice of making their programs available to the networks or national network clients, and then offering them for syndication as reruns after they have had network exposure.

I have personally discussed this problem with several syndicators, who have stated frankly that the one sale to the network advertiser had the advantage to them of eliminating a great deal of the risk from their venture, plus eliminating the cost of trying to make many individual sales. Consequently, it was to be preferred over multiple-station sales.

Thus, I am somewhat baffled as a station operator, to read of testimony before this committee wherein film syndicators are seeking to limit network option time in order, they say, to open more and better periods for them to sell their product to the stations. My own experience is that we have a difficult time in finding suitable, first-rate, first-run film material for us to use in the periods we already have available.

As a station we have made investments in color equipment. The cost of equipping our station to carry color films was roughly three times as great as the equipment for network color programs.

And yet, the film syndicators are not making their product available in color. The reason is pretty simple. It is not profitable with present limited color set circulation.

This is not meant as a criticism of the film syndicators. But it does point up, I believe, that while they are good businessmen, they have neither the obligation nor the urge for pioneering where a profit does not appear to be in the immediate offing.

As a network-affiliated station, if we were interested merely in the profits side of the ledger, on a short-range basis, we would certainly side with the film-syndicator's proposed cutting back the amount of network option time permitted, since the immediate revenue from spot business is greater than from network business.

However, that is only a small part of the story. While we pride ourselves on the contribution we have made in pioneering television in the Houston area, we are conscious that the really great advances of television development in the country as a whole, our area included, have sprung from the strong foundation laid down by the networks.

While our investments were substantial to us, they were small as compared to those of the major networks. While we had a vision of the future, it was constantly being raised by the farsighted planning and leadership of the networks.

And from the contributions of the networks the people of this country have been the principal beneficiaries. I find no one in our area asking that the networks be curbed and that more syndicated films be substituted. On the contrary, praise from our viewers comes principally for the exciting attractions made available to them from our network: Sadlers Wells Ballet, Wide Wide World, Maurice Evans, Barretts of Wimpole Street, George Gobel, Peter Pan, Robert Montgomery, Steve Allen, Matinee Theater, Perry Como, the political conventions, great sporting events, and so forth.

We are not averse to change, if it represents an improvement, for ours is a constantly changing industry; but we strongly oppose any attempt to turn back the clock to force a market, if you will, for somewhat shopworn products which have already passed the peak of usefulness.

And, in our opinion, in these still formative, pioneering years of television, it would be a sad day for the American people to handcuff the major television networks.

I am confident that when this committee has studied all the facts, it will give a green light to the continued growth and improvement of the American television service, which in a brief 10 years has already become a vital part of American life.

Mr. HARRIS. There is only one part of my statement that I think has not been fully covered here that I would like to touch upon. And that deals with the film producers.

Senator PASTORE. What page are you on, sir?

Mr. HARRIS. I will start on page 3.

Roughly, on our present schedule between 6:30 and 10:30 in the evening, about one-third of our time is composed of nonnetwork, syndicated programs. This is during the 6-month period of daylight saving time. In the other 6-month period it is roughly 30 percent during that period.

I make this point because the film producers and Mr. Moore have indicated that there is a great scarcity of time, which seems to be limiting their ability to expand their operation. We are 1 of 4 stations—3 commercial stations, 1 educational station—in the market, and the other 2 commercial stations have an equal, if not greater, amount of time available for the film producers.

However, I would like to make one additional point, inasmuch as a strictly quantitative analysis cannot be complete and may be misleading. We are constantly seeking better and more varied program fare from the film syndicators, and yet fewer and fewer quality shows are being offered for local syndication. The syndicators are generally following the practice of making their programs available to the networks or to the national network clients and then offering them as syndication reruns after they have had network exposure.

I have personally discussed this problem with several syndicators who have stated frankly that the one sale to the network advertiser had the advantage to them of eliminating a great deal of risk from their venture, plus eliminating the cost of trying to make individual sales. Consequently, it was to be preferred over multiple-station sales.

Thus, I am somewhat baffled——

Senator MAGNUSON. Could I ask a question there for information?

Mr. HARRIS. Yes, sir.

Senator MAGNUSON. If a syndicator sells a film to the network, and you are one of the affiliates of the network, the network offers the film to you; exercising your right to refuse, you do not take that film. Then do you buy it from him separately, independently of the network?

Mr. HARRIS. Normally not, because it is sold to one advertiser and it is not available. What would normally happen if we did not take the film—the network would then undertake to place it on one of the other two stations. If neither one of those cleared, it would probably not be on the market——

Senator MAGNUSON. You have the right to take it either from the network or buy it independently from the syndicator?

Mr. HARRIS. No; it is not available to the local station because if they sell it to a national advertiser, he has bought that for the country.

Senator MAGNUSON. And then it is not sold——

Mr. HARRIS. It is not sold.

Senator MAGNUSON. It is not peddled to independent stations?

Mr. HARRIS. Not until the national advertiser has released it and had his run on it.

Senator MAGNUSON. How is it we see these films running 2 and 3 times?

Mr. HARRIS. You are getting them on the reruns. You are getting the shopworn commodity that they offer to the local stations.

Thus I am somewhat baffled as a station operator to read of testimony before this committee wherein film syndicators are seeking to ime, in order, they say, to open more and better sell their product to the stations. My own experi- ve a difficult time in finding suitable first-rate, first- for us to use in the periods we already have available. that connection, Mr. Harris, do you think that the the film producers for the one sale has been contributed gree by the fact that, because of the option rights of the they have found difficulty making sales across the country dvertisers regard as the best time?

HARRIS. No. That is not our experience at all. We have good available for them. There is plenty of time available in the ston market, and we do not have first-rate good film material to that now.

Mr. Cox. In what time periods?

Mr. HARRIS. I am talking about between 6:30 and 10:30 which we consider our class A time.

Mr. Cox. Now if, however, they are going to produce only for this ne sale, then that poses a problem not only for you but a more acute for the independent station, which must look to these non- ources for all of his other than local programing?

RRIS. Yes. It does to some extent, except the independent usually goes into feature films and does not buy film series. not entirely true, but generally speaking, I would think that he n longer periods of feature films.

. Cox. Is feature film as competitive with network programing rograms made especially for television?

Mr. HARRIS. Good feature films directly outrate half-hour shows, if hat is what you mean.

Mr. Cox. Very well.

Mr. HARRIS. I might say parenthetically that at the moment we have four class A half hours that are sold to local sponsors that we are trying to find good first-rate, first-run products for next fall. So far there is only one film syndicator, to my knowledge, who has come up with a show that is not a rerun of a network—that is a new product—that is available next fall.

As a station, we have made investments in color equipment. The cost of equipping our station to carry color films was roughly three times as great as the equipment for network color programs. And yet the film syndicators are not making their product available in color. The reason is pretty simple. It is not profitable with the present limited color set circulation. This is not meant as a criticism of the film syndicators, but it does point up that while they are good businessmen, they have neither the obligation nor the urge for pioneering where profit does not appear to be in the immediate offing.

As a network-affiliated station, if we were interested merely in the profit side of the ledger, on a short-range basis, we would certainly side with the film-syndicator's proposed cutting back the amount of network option time permitted, since the immediate revenue from spot business is greater than from network business.

However, that is only a small part of the story. While we pride ourselves on the contribution we have made in pioneering television in the Houston area, we are conscious that the really great advances of

television development in the country as a whole,
have sprung from the strong foundation laid down

While our investments were substantial to us, th
compared to those of the major networks.

We are not averse to change, if it represents an im
ours is a constantly changing industry. But we stro
attempt to turn back the clock—to force a market, i
somewhat shopworn products which have already pa
of usefulness.

And, in our opinion, in these still formative, pioneer
television, it would be a sad day for the American people
the major television networks.

I am confident that when this committee has studied al
it will give a green light to the continued growth and imp
of the American television service, which in a brief 10 years has
become a vital part of American life.

Senator PASTORE. Thank you very much.

Senator MAGNUSON. How many stations are there in Houston?

Mr. HARRIS. In the Houston area there are 4 stations, includi
educational station.

Senator MAGNUSON. Four? Three and one?

Mr. HARRIS. That is right.

Mr. COX. Would you supply us with the same programi
scheduling?

Mr. HARRIS. Yes, sir.[14]

Senator PASTORE. Mr. Gross. Do you intend to read your statement
sir?

Mr. GROSS. Just very small parts of it.

(The prepared statement of Mr. Gross follows:)

STATEMENT OF HAROLD F. GROSS, PRESIDENT AND GENERAL MANAGER, WJIM AND WJIM-TV, LANSING, MICH.

Mr. GROSS. My name is Harold F. Gross. I am president and general manager of Gross Telecasting, Inc., owners and operators of Stations WJIM and WJIM-TV, Lansing, Mich. I appear here solely at my own request because I believe it is important for your committee to have the thinking and experience of an individual station in a typical American community, and because of my great interest in the future of both the television industry and my own properties.

WJIM-TV is a prefreeze station—we were one of the first 100 stations on the air, having commenced operations early in 1950. Lansing was a small market in comparison to most of the cities that had television stations at that time, and there was great doubt in the minds of many experienced broadcasters, including myself at times, that a market the size of Lansing could support a television station. There were no A. T. & T. line facilities available to us. Detroit was the closest connecting point and if we were to have network programing, it would be necessary for us to build our own microwave link from Detroit to Lansing at a cost of approximately $100,000—this in addition to our original capital investment of $250,000.

[14] The program schedule was furnished later and is printed in the appendix at p. 3018.

We made the decision at that time, in 1949, to proceed if network service was available to the station. We felt that if we could bring our viewers the programs and talent from the entertainment centers of the country, through the facilities of the networks, we had a chance to succeed.

Without the assurance of network programing, we would not have built WJIM–TV and without network programing WJIM–TV would not have succeeded. Programs of network quality and telecasts of nationally important special events were essential to building a viewing audience and interesting people in purchasing a TV set. Remember, we started with practically no sets in the area we were to serve. Ours was the first television service for nearly a million people in the central Michigan area. It would have been a lost cause from the beginning if our programing had been dependent upon pupils of Miss Simmons' dancing class, an Arbor Day address by the mayor, the local hillbilly band, or a hopeful contralto—which is about the extent of the talent available in so many communities the size of Lansing. These local talent programs have their proper place in a balanced program schedule, but they could not build the audience which this new medium needed to survive and grow.

At this point, you might well say: "We have no intention of abolishing television networks. It is only certain practices and policies that we are investigating." It is my belief that option time is the essence of a network operation, for without it we have no network. We cannot be competitive with newspapers, magazines, outdoor displays, or various other media unless we can create a simultaneous impact upon a major segment of the buying public. This is as basic as day and night. Without the ability to provide that service, a network has little reason for existence so far as service to national advertisers is concerned. When we consider the programing service offered by the networks, the need for option time is even more obvious, for where else would stations like WJIM–TV get the news, sports, and special events coverage offered by the networks? Certainly not from the film industry.

I would like to cite an actual experience. Back in 1950, in order to schedule a news show of local origination, we contracted for a nationally syndicated news film service and sold a daily 15-minute news program to a local merchant. With considerable effort we succeeded in averaging 4 or 5 minutes of worthwhile local news and the balance of the 15-minute program was devoted to films of national news from this service.

Within a few days both the station and the sponsor started receiving complaints that the news we presented was 1 and 2 days old, and that the same film and same events had been shown previously on the network news program and also depicted in the local newspaper. In other words, we were 28 to 48 hours behind with the news because of shipping time in getting the films to us from New York. The same time delay exists today and we cannot compete for news coverage against the newspaper without network news service.

Without option hours the network would have no assurance that such events as the world series, the Big Ten football games, the political conventions, the world championship fights, or the $64,000 Question would be simultaneously telecast, and I certainly would not want to

face the WJIM–TV audience if anything happened
continuity of these programs.

It seems as though everybody is having their say. The film
panies have complained. Certain station owners have bitterly assai
present network practices, and various private interests and indivi
uals have expressed themselves before your committee; but the
one group I don't believe has been heard from—the people. I wo
if your committee has received any complaints from them. I
we haven't. They seem happy and well pleased with the ne
service we are furnishing. The only time they complain is wh
cancel or lose an established network program, and I wonder

ing prime viewing hours. I
and I am quite familiar with

Now to the point of their complaints: They claim it is difficult to have their film productions scheduled during prime listening hours. Let's again take WJIM–TV as our example. During the class A hours (6 to 11 p. m.) we schedule 9 hours and 15 minutes of film programs per week. Three hours of these are during network option time, and the programs include features produced by Ziv, Screen Gems, TPA, Four Star Productions—the same organizations who agree with, or sponsor, the testimony of Mr. Moore of KTTV. When you get down to actual figures from a typical station in a typical community, I don't believe any of these individuals or commercial companies have a just complaint, and if you believe, gentlemen, that the additional film products of these various concerns could be substituted for live network shows, then I again refer you to a poll of the people which I am sure would prove my point.

In connection with these film companies I mentioned the word "commercial." Let me give you an example of the amount of money involved in these film contracts. When we went on the air in 1950 we leased 630 old film clips which averaged 3 minutes in length. For the privilege of using this old film—which we seldom did—we paid one of the film companies $8,000. Multiply this by the number of potential markets and you have a very imposing figure.

Now, let me give you a sample of the ancient talent included in this series: Frank Yankovic and his polka orchestra, The DeHavillands, Marion Morgan, Carolos Ramierez, Yogi Yorgesson, Red Nichols and orchestra, Nick Lucas, Rowena, the King Sisters, Happy Jesters, and Bonnie Baker.

Would you sit at home and be entertained during an entire evening with talent of this vintage? Yet this is the type of program that the film companies have offered in the past and are still offering today.

The film companies do not offer an improved or superior service, rather they seek laws which will substitute their entertainment ware for network programs during prime evening viewing hours covered by option time. They do not purport to provide a diversified program service which will meet the needs of the viewing public. They prefer to utilize the network stations which have achieved their standing and audience primarily through the very network service they would now cripple and destroy.

Voltaire is supposed to have said that "If there wasn't a God, we would have to create one." Let me say as emphatically as I can that if there were not a network service available to the TV stations like WJIM–TV, those stations would have to create one, to provide us with the very programing services which the film companies make no pretense of providing.

A network is a voluntary association of independent stations joined together as a salable unit, thus being able to offer the advertiser simultaneous national circulation. Without this we do not have a network.

In closing, gentlemen, I would like to suggest that the case of the networks be determined by the people to whom, above everyone else, we are responsible. I believe I can speak for 2 million people in Michigan who have enjoyed the finest of television service for the past 6 years, and 81 percent of whom have bought television sets during that time. This represents an investment of approximately $110 million. We have been in the fortunate position of offering them the programs from the three major networks, from the film syndicates and a variety of local live features. They have seen everything from Wide Wide World, Omnibus, and Peter Pan to the world series, two Rose Bowl games in which Michigan State participated, the Kentucky derby, the great political conventions of 1952, and today's No. 1 and No. 2 rated entertainment programs, $64,000 Question and Ed Sullivan show, all because of network service available to them during prime viewing hours. This network programing has made it possible for WJIM-TV to grow and expand, to the extent that we spent $1 million for improvements in 1954 and are spending another $250,000 this year in plant facilities.

Before closing, I would like to say that there has been a persistent rumor that your committee may not take seriously what station owners and managers have to say in this matter; that we are appearing at the request of and for the benefit of the networks. I am sure this cannot be true and feel certain that this committee would not prejudge such an important matter as this or impugn the good faith of the many independent station operators who, like myself, have appeared here. We all have a great interest in the results of this investigation and I am here to speak for, and protect, only the interests of my company and stockholders.

It is because I feel that the continuation of network service unimpaired is vital to the future of our company that I have appeared here today. I believe I express the views of over 2,000 stockholders of Gross Telecasting, Inc. when I say that network service has been basic and essential both to our company and to the industry. I sincerely appreciate the opportunity of appearing before you today and thank you for your attendance and your patience in listening to our thinking in Lansing, Mich., a typical American city.

Senator PASTORE. How long is it going to take you, sir? I think it is going to be most unfair. I don't want to shut anybody out.

Mr. GROSS. Three or four minutes.

Senator PASTORE. All right, sir.

Mr. GROSS. My name is Harold F. Gross. I am president and general manager of Gross Telecasting, Inc., owners and operators of stations WJIM and WJIM-TV, Lansing, Mich. I appear here solely at my own request because I believe it is important for your committee to have the thinking and experience of an individual station in a typical American community, and because of my great interest in the future of both the television industry and my own properties.

WJIM-TV is a pre-freeze station—we were one of the first 100 stations on the air, having commenced operations early in 1950. Lansing was a small market in comparison to most of the cities that had television stations at that time and there was great doubt in the minds of many experienced broadcasters, including myself at times, that a market the size of Lansing could support a television station. There were no A. T. & T. line facilities available to us. Detroit was the closest connecting point and if we were to have network programing, it would be necessary for us to build our own microwave link from Detroit to Lansing at a cost of approximately $100,000—this in addition to our original investment of $250,000. We made the decision at that time, in 1949, to proceed if network service was available to the station. We felt that if we could bring our viewers the programs and talent from the entertainment centers of the country, through the facilities of the networks, that we had a chance to succeed.

Without the assurance of network programing, we would not have built WJIM–TV and without network programing WJIM–TV would not have succeeded.

We have been affiliated and happily associated with the 3 major networks for the past 6 years, originally and currently having contracts with NBC, CBS, and ABC. This obviously presents problems as we are a basic NBC station and because of the demands upon our time, we do not clear for all of their programs. Yet our relations today, after 6 years of doing business with each other, I believe are more firmly cemented than ever before.

Here is a typical example of our program schedule: Network option time amounts to 9 hours per day, or 63 hours per week. Of this option time we clear only 47 hours for all 3 networks and of these 47 only 25 are cleared for NBC, our basic network. During 13 hours per week, we carry CBS programs and during 9 we schedule those from ABC. In addition we carry 13 hours of local and national spot programs during network option hours. These figures are very revealing and I believe are typical of many stations in the country. They are actual figures from the WJIM–TV logs for the week of April 22, 1956. It is difficult to understand how anyone can suggest the elimination of option-time hours when a factual study of the application of the present option-time clause is considered. Our record certainly does not betoken network domination of affiliates, or dictation as to what programs the public shall see. No sustenance for the campaign by the film people to eliminate option hours can be obtained from this case study.

They claim it is difficult to have their film productions scheduled during prime listening hours. Let's again take WJIM–TV as our example. During the class A hours (6 to 11 p. m.) we schedule 9 hours and 15 minutes of film programs per week, these 9 hours including 19 different film programs. Three hours of these are during network option time, and the programs include features produced by Ziv, Screen Gems, TPA, some of the other organizations—the same organizations who agree with, or sponsor, the testimony of Mr. Moore of KTTV.

The CHAIRMAN. You are skipping all your old films?

Mr. GROSS. They are going into the record; I am just skipping the details.

The CHAIRMAN. They make very interesting reading. As a matter of fact, the Senator from Rhode Island and myself remember all these programs.

Senator PASTORE. I will admit that Senator Magnuson remembers them; I don't. [Laughter.]

The CHAIRMAN. Red Nichols, I remember him. Nick Lucas. I don't remember the King Sisters. Well, go ahead.

Mr. GROSS. Voltaire is supposed to have said that "if there wasn't a God, we would have to create one." Let me say as emphatically as I can, that if there were not a network service available to the TV stations like WJIM–TV, those stations would have to create one, to provide us with the very programing services which the film companies make no pretense at providing.

The CHAIRMAN. In other words, what you say in there is probably as important a contribution—at least what you think about this matter—that if you had abolished all networks as of today, that networks would spring up again as a necessity in the industry?

Mr. GROSS. I would certainly think they would have to.

In closing, gentlemen, I would like to suggest that the case of the networks be determined by the people to whom, above everyone else, we are responsible. I believe I can speak for 2 million people in Michigan who have enjoyed the finest of television service for the past 6 years, 81 percent of whom have bought television sets during that time. This represents an investment of approximately $110 million, I believe. We have been in the fortunate position of offering them the programs of the three major networks, of the film syndicates and a variety of local live features. They have seen everything from Wide Wide World, Omnibus, and Peter Pan, to the World Series, two Rose Bowl games in which Michigan State participated, the Kentucky Derby, the great political conventions of 1952, and today's No. 1 and No. 2 rated entertainment programs, $64,000 Question and Ed Sullivan Show, all because of network service.

We all have a great interest in the results of this investigation and I am here to speak for and protect only the interests of my company and stockholders. It is because I feel that the continuation of network service unimpaired is vital to the future of our company that I have appeared here today. I believe I express the views of over 2,000 stockholders of Gross Telecasting, Inc., when I say that network service has been basic and essential both to our company and to the industry. I sincerely appreciate the opportunity of appearing before you today and thank you for your attendance and your patience in listening to our thinking in Lansing, Mich., a typical American city.

Senator PASTORE. Thank you very much.

Mr. Cox. Will you furnish us with the schedule?

Mr. GROSS. Yes.[15]

Mr. Cox. Very well.

Senator PASTORE. Dr. Edward C. Lambert.

(The full statement of Dr. Lambert follows:)

STATEMENT OF DR. EDWARD C. LAMBERT, GENERAL MANAGER OF KOMU–TV AND DIRECTOR OF TELEVISION, UNIVERSITY OF MISSOURI, COLUMBIA, MO.

Mr. LAMBERT. The use of the term "monopolistic" to describe the fine United States television networks is indeed disturbing. On the basis of our experience with these networks, at least, the adjective "altruistic" would be more apt.

I represent KOMU–TV, the commercial television station owned and operated by the University of Missouri in Columbia, Mo. The opinions I express today, however, are my own and are the result of the splendid relationships we at KOMU–TV have had with all of the major networks in general, and with NBC in particular.

KOMU–TV is a primary affiliate on NBC, and the facilities of our station are sold by this network on an optional basis to advertisers interested in using the central Missouri market. For more than a year, until another station came into the market, we worked with all of the networks, and all of us at KOMU–TV have the utmost respect for the goals and aspirations of each of these networks. Currently, in addition to our primary affiliation with NBC, we are a secondary affiliate of the American Broadcasting Co.'s television network. We have been treated with consideration and respect and have received excellent cooperation from this fine network.

[15] The program schedule was furnished later and is printed in the appendix at p. 3022.

Today, however, I would like to discuss our exemplary working relationships with that great network, the National Broadcasting Co.

Prior to the time KOMU–TV went on the air in December 1953, central Missouri had no consistent TV reception. True, occasionally there was a snowy signal from either St. Louis or Kansas City for those brave souls who bought high antennas, but most of the 403,000 persons in this area were without adequate television service. In fact, careful study by the NBC research staff in February 1953 revealed that there were fewer than 18,000 sets in the area. Most assuredly, NBC executives realized that they would lose considerable money in this area for a period of several years until the set count could be increased. These same executives, however, recognized that central Missouri should have television service. Consequently, early in 1953, KOMU–TV received a primary affiliation contract from NBC, and NBC officials began immediate negotiations with the American Telegraph & Telephone Co. to provide live, interconnected television service for mid-Missouri. Needless to say, this audio and video linking of central Missouri with the rest of the United States was achieved at great expense and with considerable effort on the part of NBC.

Certainly, the element of public service, not profit, was uppermost in the minds of the officials at NBC as the people of mid-Missouri found themselves for the first time, via television, enjoying fine comedy, excellent plays, and outstanding operas; witnessing political events; and becoming box seat spectators at outstanding athletic contests.

For many—I wish you could read the letters of appreciation in our files—a life of loneliness had ended. They had a sense of belonging, a sense of at last being a real part of the American scene. For all, there was at last the opportunity for magnificent entertainment, and, thanks to Sylvester Weaver's policy of upgrading programs, an equally fine opportunity for culture and enlightenment. Today, mainly because of superior network programing, there are nearly 100,000 television sets in our area. I seriously doubt that even now NBC is doing better than breaking even on KOMU–TV, but never once have we heard a word of dissatisfaction from the network. If this is monopoly, it is certainly a benevolent one.

As was the case with many stations in 1953, because of our inability to secure equipment delivery, and for a variety of other reasons, KOMU–TV experienced a number of delays in getting on the air. During this rather hectic period, NBC showed unbelievable patience. Meanwhile, at NBC expense, the NBC station relations department sent a representative to Columbia to counsel us and to assist us with our numerous problems. The representative, recognizing the fact that many of our staff were without adequate television experience, offered us an opportunity to come to New York to study video with the NBC staff. Several of us were able to take advantage of this opportunity, and, in my own case, arrangements were made for me to attend the NBC-Hunter College television workshop at no cost. I was given free access to the network facilities, and network personnel were assigned to work with me during this indoctrination period.

In early 1954, shortly after our station went on the air, the Columbia Chamber of Commerce decided to make television their theme for the chamber's annual progress report dinner meeting. The banquet committee contacted KOMU–TV with the request that we ask our network to provide the evening's main speaker. NBC, again at network expense, sent Stockton Helfrich, the network's continuity acceptance director, to Columbia to deliver the featured address. This program, thanks to NBC, was a tremendous success, and I am sure it did much to make mid-Missouri businessmen aware of the high standards set by the network.

Before our set count was large enough to attract some of the advertisers sponsoring shows that we felt the area would like, NBC, too, was cognizant of the fact that our area should have these programs. In many instances the network made special arrangements for us to get the productions on a sustaining basis. For example, in the fall of 1954 the Hallmark Hall of Fame was presenting Macbeth over NBC. KOMU–TV had not been ordered for the series, but the network representatives, feeling that most certainly an area serving 2 universities and 9 colleges should have the program, contacted the sponsor and gained his permission for us to carry this cultural production. This year the client ordered our market. Another time the network made the very excellent Mr. Wizard series available to us. We were not "live," however, at the time the program was being shown. The network then offered to waive the customary kinescope fee so that we would be able to carry this educational program at no cost and at our own convenience.

During the past year, NBC has made arrangements with all of its optional stations whereby these stations, either through the commendable Program Service Plan and through the famous PEP plan, may present most of the outstanding programs on the NBC schedule.

Many of the blasts at present network structure are aimed at the so-called network option periods. These critics, it seems to me, fail to recognize that the option periods are as important to the participating stations as they are to the networks. The stations have reasonable assurance that their network will supply quality programs during these option times. Thus the program directors have a framework of audience-attracting programs around which they may plan their complete schedules. If the program caliber for some reason fails to measure up to expected standards, the affiliates soon make themselves heard through their affiliates' committees, and the offering is quickly changed. In most cases, the network staff already has observed the programing flaw and remedial steps have been taken.

Most important of all, from the affiliate's standpoint, is the fact that adjacencies to network programs are the most salable time periods the average television station has to offer. In most instances, even the sponsors buying first-class film properties will insist that their shows are adjacent to network programs. These adjacencies are the lifeblood of many television stations, and without them a large share of these stations would cease to exist.

These stations realize, too, that without option time the network will be unable to offer national sponsors assurance that their programs will be shown on a substantial number of outlets. Without this assurance, and despite the fact that a large number of stations would want the programs, the network sales staff would be working under an insurmountable handicap. It is my belief that if the networks are not permitted to continue with their present option arrangements, the entire structure of network television as we know it today is in jeopardy.

NBC has been most liberal with KOMU–TV with regard to option periods. In a number of instances, NBC sales service has offered us a program in network option time. In checking our availabilities, we have found the time period blocked by a regional sale. In some cases we have felt that the network program was so attractive that we have discussed the matter with the sponsor and have offered him an equally good spot at another time. If he has accepted the new time, we have moved him. Several times, however, we have felt that we might lose the account if we changed the client's time and we have so advised NBC. In each case, NBC has accepted a less desirable time on a delayed basis. In the case of one of their finest shows, Goodyear Playhouse, we ran into just such a situation, and the network took a much less preferable time, 10:30 at night. From the standpoint of good programing, we are eager to place that outstanding program in its live time once the spot becomes available. In no instance, however, has NBC ever forced us to move our clients in order to make way for one of the network shows.

Although KOMU–TV is sold optionally, I feel most definitely that NBC should be allowed to maintain its basic station lineup. The basic stations in the more populous areas are necessary to attract advertisers to the entire network. Without these advertisers there could be no Program Service Plan and no PEP plan. Much of the cost of the latter is borne by NBC, and these expenditures are made possible by the revenue received from the sale of network time in the larger, basic markets.

NBC pioneered network broadcasting nearly 30 years ago. One of the early books on broadcast history, This Thing Called Broadcasting, by Goldsmith and Lescarboura, commented, concerning network programing: "* * * the Nation at last could have a quick and awakening knowledge of the activities of the Government and of great national events."

Their prophecy was accurate but incomplete concerning the significant role chain broadcasts were destined to play in our lives. All of us remember most vividly how the late President Roosevelt instituted his famous fireside chats to bring courage and hope to a desperate, depression-burdened Nation. Network broadcasting kept us informed during the harried, hectic days of Munich, Warsaw, and Dunkirk, and united 140 million of us as one great family that dismal Sunday that was Pearl Harbor back in 1941. Network broadcasting, we all recall, played a tremendous part in the unification of our war effort.

Shortly after World War II, NBC began to pour money into the development of nationwide television. Despite heavy losses, this network continued all efforts to develop the infant industry. NBC was joined by the other networks, who saw in TV a tremendous potential for news, special events, entertainment, education, enlightenment, and culture. They brought us great political conventions, let us meet our world leaders face to face, permitted us to witness nuclear bomb blasts, gave us ringside seats at history-making events through such programs as Meeting at the Summit. They introduced us to Peter Pan, and The Devil's Disciple, showed us how charming opera and ballet can be, permitted us to sit in on interviews with personalities in the headlines, acquainted more of us with Shakespeare in one telecast of Richard III than had previously seen the Bard's plays in 350 years. They developed television in the United States into the greatest communications medium ever known to man.

I believe this great industry that plays such an important part in our national life today faces a crisis. In my estimation, the contemplated changes in network structure would destroy the networks as we now know them. Without networks our present system of transcontinental television would disappear. If this system disappears, large numbers of the Nation's TV stations would be obliged to close, and many of the 37 million viewers would face the prospect of darkened video screens.

Mr. LAMBERT. I will boil this down for you. Much of what I have to say has been——

Senator PASTORE. May we have quiet, please?

Mr. LAMBERT. Has already been covered.

KOMU-TV is owned by the University of Missouri. What I say today, however, is my own opinion and doesn't represent the university. I am general manager of that station, director of television for the university.

The station is an NBC primary affiliate sold on an optional basis, and we have ABC secondary. We have had fine relationships with all the networks, but today I want to speak mainly of NBC.

I think one thing that hasn't been brought out is the tremendous helping hand that has been given by the networks to stations of our size. We cover an area of 403,000 people, mid-Missouri; that area was never served before by television, or was fringe reception from Kansas City and St. Louis. But for the most part it was not served. Today it has fine signals from two stations—ours, and another station in Jefferson City on CBS. But from the very beginning NBC was extremely helpful to us and made it possible for us to get on the air with their helping hand. For example, there were about 18,000 sets in the area when NBC made it possible for us to have interconnected television. I am sure they went in there at a tremendous loss. They are just about breaking even today. They brought television to that area because they felt it should be there. I just want to say in passing here that it has been a tremendous thing for the people in that area. Some of the people in rural homes, and so forth, have been able to see things that they never envisioned that they would ever see in their lifetimes, I am sure.

Before our set count was large enough to attract advertisers sponsoring shows that we felt the area would like, NBC also was cognizant of the fact that the area should have these programs. And many times they made certain that we would have these shows. For example, in the fall of 1954, the Hall of Fame was presenting Macbeth. Being an educational area, they felt we should have that show, and they went to great length to get it for us and made it possible for us to have it. The next year the sponsor ordered the show. We have had many, many compliments on it.

As has been pointed out, I think it is extremely significant that NBC has made arrangements with all of its optional stations whereby these stations, either through the commendable Program Service Plan or through the famous PEP plan, may present most of the outstanding programs on the NBC schedule. No one has mentioned the fact that the PEP plan is presented largely at NBC expense. This does not cost the stations. They get the regular rate; the difference is made up by NBC. That ties in with everything else, the basic stations that make this possible. Without the basic stations to foot that share of the bill, the PEP plan would not be possible.

Many of the blasts at present network structure are aimed at the so-called network-option periods. These critics, it seems to me, fail to recognize that the option periods are as important to the participating stations as they are to the networks. The stations have reasonable assurance that their network will supply quality programs during these option times.

This has been stressed, but I do want to emphasize one thing about this, and that is that this network-option time is the framework around which we can build our programs. It is a real boon to the program director, because he has substantial structure there around which to plan the rest of his programing. Actually, I don't know what in the world he would do without it. Most important of all, from the affiliate's standpoint, is the importance of adjacencies to these network programs, the most salable time periods that the average television station has to offer. And also significant here: In most instances even the sponsors buying the first-class film properties will insist on network adjacencies. I want to emphasize that these adjacencies are the lifeblood of television stations, and without them a large share of the stations would cease to exist. And it has been emphasized, and I want to reiterate, that without the option time the network would be unable to offer national sponsors assurance that their programs would be shown on a substantial number of outlets.

KOMU-TV has been fortunate in that NBC has been liberal with us in regard to option periods· We recognize it is a two-way street. We try to clear—every time we possibly can, that is—but NBC in no instance has ever forced us to clear and made us jeopardize our clients.

I want to say, also, for the record here—it is in my presentation—that I do think that it is important to keep the basic station lineup. The basic stations in the more populous areas are necessary to attract advertisers to the entire network. That has been emphasized, but I do think it is important.

The thing that I do think, and this is generalizing here, that we must keep in mind that this television network structure, as we have it today, is in jeopardy if option time or the basic station structure is changed. And personally I feel that much of our national welfare is dependent upon our being one large family through these networks. And, even as it was back in the depression with raido networks, it is even more important in this day of the atomic age that we have immediate contact, and I see or feel that it woud not be possible without networks as we know them today.

Senator PASTORE. Thank you very much, sir.

Mr. COX. Will you supply us with the scheduling for your program?

Mr. LAMBERT. Sure, be glad to.[16]

[16] The program schedule was furnished later and is printed in the appendix at p. 3025.

Senator PASTORE. Mr. Wagstaff?

Mr. WAGSTAFF. I would like to read excerpts, Mr. Chairman, and I will be——

Senator PASTORE. The statement will be made part of the record and you can read whatever excerpts you think may be of interest to these two Senators.

(The complete statement of Mr. Wagstaff follows:)

STATEMENT OF WALTER E. WAGSTAFF, VICE PRESIDENT KIDO-TV, BOISE, IDAHO

Mr. Chairman, and members of the committee, my name is Walter E. Wagstaff, and I reside in Boise, Idaho. I am vice president, general manager, and part owner of radio station KIDO and television station KIDO-TV, Boise, Idaho. Station KIDO-TV has been on the air for approximately 3 years and is affiliated with the National Broadcasting Co. and the American Broadcasting Co.

I welcome the opportunity to appear before this distinguished committee, as I know that there are problems in network-affiliate relationships which are peculiar to those stations which are as yet noninterconnected, and which serve secondary markets. I believe that an exposition of these problems will be useful to the purposes of this committee.

Some 2 years ago I was elected by the noninterconnected stations affiliated with the National Broadcasting Co. to serve as their representatives on the NBC-TV Affiliates' Committee, and in that capacity I have met once with the officials of the National Broadcasting Co. and have had the thinking of many noninterconnected stations. Through this, I believe I have more than average knowledge of the problems peculiar to the noninterconnected stations in secondary markets. However, I appear today solely as a representative of KIDO-TV, and the content of my testimony has been neither suggested nor influenced by any group of stations or any network organization.

There has been testimony put before this committee which would indicate that the option time agreements, as they exist between networks and affiliated stations, tend to stifle or at least hamper the development of smaller-market television. There have been public utterances by government officials which would tend to support this premise. There have been official and semi-official opinions expressed that option time agreements between networks and affiliated stations make it difficult or impossible for local, regional, and national spot advertisers to secure desirable time for the release of their programs and that, as a consequence, many smaller markets which are now without television will continue to be without television because the non-network advertiser is withheld from participating in the development of smaller-market television.

My opinion, based on experience, is that the exact opposite is true. KIDO-TV serves an area in which reside approximately 68,000 families. Another station in Boise, KBOI-TV, serves approximately the same area. By the rule-of-thumb judgments which existed in the early days of television, it was thought that a market of this size could not support one television station, much less two. I speak for myself and the other owner in our company when I say that we would have been very hesitant indeed to undertake a television operation in Boise if there had not been strong hope of getting a network affiliation. I am sure that this is also true of our competitive station, which is affiliated with CBS. Network affiliations have fostered, rather than hampered, the development of television in the smaller markets.

As to the hypothesis that the network option-time agreements shut out the local, regional, or national sponsor who is seeking desirable program time, again the opposite is true in my opinion. KIDO-TV has many good syndicated film programs and live local programs on its schedule, sponsored by nonnetwork advertisers. So does KIDO-TV's competition, KBOI-TV. I know of no single advertiser wanting desirable program time in the Boise market who has been unable to secure it on one or both of the stations. On the other hand, I am certain that there are many nonnetwork advertisers sponsoring good programs in our market which would not be doing so if the stations had no network affiliations. The network programs have bolstered and strengthened the schedules of both stations so that these stations become desirable buys from the point of view of the advertiser. Without network programs, I am certain that we would have far less TV sets in the area and fewer of the nonnetwork advertisers which have sponsored, or are sponsoring, such programs as Victory at Sea, Corliss

Archer, Highway Patrol, Halls of Ivy, Badge 714, I Led Three Lives, Celebrity Playhouse, local news, and others too numerous to mention.

The option time arrangement is a very necessary part of this development. If the networks are to develop good programs and make them available to as many United States families as possible, they must have assurance of time clearances and must have established relationships with stations serving all parts of the country. If the networks did not have these relationships, established by contract, and had to "dicker" for time periods and outlets, they would soon be nothing more than time brokers and the vast reservoir of creative resources which the networks possess would soon be nonexistent.

I have read with considerable interest the testimony introduced by Mr. Richard Moore; I respect Mr. Moore as a sound thinker and a highly competent broadcaster but am at odds with some of the theories which he propounds, particularly his attack on option time agreements and must-buy stations. To remove these arrangements would be to compound the very evils that Mr. Moore seeks to correct. It would put American television largely at the mercy of the pick-and-choose advertiser.

Fears have been expressed that stations over the country might evade their local responsibilities by just "riding the network" and becoming nothing more than a network outlet. There is little danger of this in the smaller markets. To use KIDO–TV as an example, the basic rate at which our station is sold to a network advertiser is $200 per hour. KIDO–TV is compensated by NBC and ABC at 25 percent of this basic rate. In short, we receive $50 per hour for our time when we are carrying network progams. By actual computation, it costs us $104.50 per hour to operate. Obviously, just "riding the network" is the short path to financial suicide for the station located in the smaller market. Network revenue accounts for but 12.6 percent of KIDO–TV's income.

From the foregoing it will be seen that network commercial programs are important to the smaller-market station as a programing source, not as a source of revenue. However, it should be interjected here that the adjacencies to the better network shows are much sought after by advertisers, and thus network commercial programs are indirectly a source of additional station income. But it is as a program source, not as a revenue source, that networks play a vital role in the development of small-market TV. The networks can initiate certain types of programing that just simply can't be done on a scale to make it generally available by anyone else—news and special event coverage—the spectacular, etc.

In some cases, a single network production—a one-time shot, if you please—costs more in dollars and cents than many stations have as their total investment. Take away assurance of time clearances, and the Peter Pans and Amahls are taken away along with coverage of the national political conventions. We couldn't turn to the film companies for this type of programing. The film companies perform a vital service to television. Indeed it would be just about impossible for the average station to get along without them. But they serve in one area and the networks serve in another. Certainly there is room for both—in fact, neither could replace the other. So it seems absurd to argue about whether we should have one or the other. Deteriorate either one, and American television would shrink tragically in stature and power to serve.

As I have clearly indicated, I believe firmly that the networks must have established contractual relationships with local stations and must have option time if they are to continue to play the vital role in the maintenance and further development of American television that they are playing today. However, if the networks are to have these prerogatives, it seems to me that they have concomitant responsibilities. Unfortunately, too many fine network programs are distributed over the country in accordance with the needs of the advertisers rather than in accordance with the needs of the public. Programs such as Nightmare in Red, Peter Pan, King Rich III, Sadler's Wells Ballet should be available to every family which has a television set. It is a crying shame that in relationship to programs of such stature there are still many have-not areas of the country. The American people hunger for this type of programing and that hunger is just as acute in Squeedunk as in New York City, probably more so.

The point is made by the networks that their basic station lists cover 80 percent of the television homes of the country. In America, we do not confine education or the right to vote to 80 percent of the people. No more should the television programing of the type beyond the capacities of local stations be confined to 80 percent of the people. I hope the day is not far hence when there will be no longer any such thing as eligibility lists of American TV listeners. As it is now, the people get to see certain programs only if they happen to live in a market of over 100,000 sets, other programs only if they happen to live in a market of over 250,000 sets, and so forth.

Obviously, it is often impractical and uneconomic for a particular advertiser to buy every market in the country, but it seems to me essential that the network-advertiser relationship and network-affiliate relationship be worked out in such a way that the networks make these outstanding programs available to those areas which do not fit the advertiser's distribution pattern as well as to the areas which do. There are no legal compulsions on the advertiser, the network, or the station to bring the programs of the type I have mentioned to all of the American people. But there is a high moral responsibility; and, until the ways and means are found to bring the finest programs to everyone, rather than just those who by virute of geographical location are on the elibibility lists, those who hold stewardship of the airways will not be fully measuring up to their responsibilities to the public.

Some attempts have been made to provide certain commercial programs to areas not desired by the advertisers, but the programs so made available thus far have been a fractional percent of the whole, and have not included the great cultural efforts typified by some of the programs I have named.

The networks have done a monumental job of program production. There is a crying need for a better job of program distribution. Certainly, the elimination of affiliation contracts and option time is not the solution to this phase of our problem. The only fault that I can find with the must-buy list of stations is that it is too small. I often wish that KIDO–TV were on it. Probably it will never be practical for the networks to expand their must-buy lists to cover the entire Nation. Lacking this, it is vital that the way be found to eliminate the have-not areas which now exist in relationship to the finest network programing.

In conclusion, let me reaffirm my conviction that small-market television will develop faster and go further with the help of the networks than it could possibly do without the networks.

KIDO–TV, after only 3 years on the air, is now building a new transmitting plant to be operated on maximum power which will make television available to farmers and ranchers in the mountains and valleys of Idaho where a few years ago such service was unthinkable. Up to now, our profits could be described as microscopic, but we feel sure that eventually we shall receive a fair return on our effort and investment and that in the meantime we shall be rendering a service of incalculable value to our area.

Mr. Chairman and gentlemen of the committee, I again thank you for this opportunity to place these views before you.

Mr. WAGSTAFF. I represent a noninterconnected station.

My name is Walter E. Wagstaff. I reside in Boise, Idaho. I am vice president, general manager, and part owner of radio station KIDO and television station KIDO–TV, Boise, Idaho.

KIDO–TV serves an area in which reside approximately 68,000 families. Another station in Boise, KBOI–TV, serves approximately the same area. By the rule-of-thumb judgments which existed in the early days of television, it was thought that a market of this size could not support one television station—much less two. I speak for myself and the other owner in our company when I say that we would have been very hesitant indeed to undertake a television operation in Boise if there had not been strong hope of getting a network affiliation. I am sure that this is also true of our competitive station, which is affiliated with CBS. Network affiliations have fostered rather than hampered the development of television in the small markets.

I know of no single advertiser wanting desirable program time in the Boise market who has been unable to secure it on one or both stations. On the other hand, I am certain that there are many non-network advertisers sponsoring good programs in our market which would not be doing so if the stations had no network affiliations. The network programs have bolstered and strengthened the schedules of both stations so that these stations become desirable buys from the point of view of the advertiser.

Fears have been expressed that stations over the country might evade their local responsibilities by just "riding the network" and becoming nothing more than a network outlet. There is little danger of this in the smaller markets. To use KIDO–TV as an example, the basic rate at which our station is sold to a network advertiser is $200 per hour. KIDO–TV is compensated by NBC and ABC at 25 percent of this basic rate. In short, we receive $50 per hour for our time when we are carrying network programs. By actual computation, it costs us $104.50 per hour to operate. Obviously, just "riding the network" is the short path to financial suicide for the station located in the small market. Network revenue accounts for but 12.6 percent of KIDO–TV's income.

Mr. Cox. How much is accounted for by the spots which you sell adjacent to that?

Mr. Wagstaff. I haven't made an analysis of that. Approximately 40 percent of our income is national spot and these network adjacencies are very much sought after.

As is stated on the next page, it should be interjected here that the adjacencies to the better network shows are much sought after by advertisers, and thus network commercial programs are indirectly a source of additional station income.

As I have clearly indicated, I believe firmly that the networks must have established contractual relationships with local stations and must have option time if they are to continue to play the vital role in the maintenance and further development of American television that they are playing today. However, if the networks are to have these prerogatives, it seems to me that they have concomitant responsibilities.

Unfortunately, too many fine network programs are distributed over the country in accordance with the needs of the advertisers rather than in accordance with the needs of the public. Programs such as Nightmare In Red, Peter Pan, King Richard III, and Sadler's Wells Ballet should be available to every family which has a television set. It is a crying shame that in relationship to programs of such stature there are still many have-not areas of the country. The American people hunger for this type of programing, and that hunger is just as acute in Squeedunk as in New York City—probably more so.

The point is made by the networks that their basic station lists cover 80 percent of the television homes of the country. In America, we do not confine education or the right to vote to 80 percent of the people. The networks have done a monumental job of program production. There is a crying need for a better job of program distribution. Certainly, the elimination of affiliation contracts and option time is not the solution to this phase of our problem.

The only fault that I can find with the must-buy list of stations is that it is too small. I often wish that KIDO–TV were on it. Probably it will never be practical for the networks to expand their must-buy lists to cover the entire Nation. Lacking this, it is vital that the way be found to eliminate the have-not areas which now exist in relationship to the finest network programing.

In conclusion, let me reaffirm my conviction that small-market television will develop faster and go further with the help of the networks than it could possibly do without the networks.

Senator PASTORE. Senator Magnuson?

(Indicated no questions.)

Senator PASTORE. Senator Wofford?

(Indicated no questions.)

Senator PASTORE. Mr. Cox?

Mr. COX. Mr. Wagstaff, since you are not an interconnected station, all of the programs which you carry, even those from the networks, are made available to you either in film or kinescope form?

Mr. WAGSTAFF. Right.

Mr. COX. You therefore are able to place these programs in a completely different arrangement than they would have arrived to you if you were interconnected and to program in a way in which you think fits best the local viewing habits of the people in Boise?

Mr. WAGSTAFF. That is true.

Mr. COX. Now, when you are interconnected and receiving programing live from the networks, there will be a 2-hour differential between you and the source of origin of those shows, if they reach you from New York.

Mr. WAGSTAFF. Yes.

Mr. COX. Isn't it true that most of the stations in the mountain zone do broadcast on that 2-hour differential?

Mr. WAGSTAFF. Yes.

Mr. COX. Will not that possibly pose a problem by putting programs in undesirable times in your market unless, again, you make a kinescope and broadcast them on a delayed basis?

Mr. WAGSTAFF. Certain programs, yes, it will pose a very definite problem.

Mr. COX. Now, as I understand it, you have the choice, in your programing, among programs from NBC, ABC, and syndicated producers, plus your own local programing efforts?

Mr. WAGSTAFF. Yes.

Mr. COX. Now, would it be fair to say that among the top-rated shows which you carry on your station, about half is represented by the programs of the networks—the two with which you have affiliations—and the other half by syndicated programs?

Mr. WAGSTAFF. About half and half, yes.

Mr. COX. Thank you.

The CHAIRMAN. Just one question. Is anyone in the Boise area picking up your station with boosters?

Mr. WAGSTAFF. No.

The CHAIRMAN. You have answered my question.

Mr. WAGSTAFF. It has been suggested, but it hasn't been accomplished.

Mr. COX. Will you supply us with the program schedule data?

Mr. WAGSTAFF. Yes, sir.[17]

Senator PASTORE. Thank you. Mr. Thomas Gilchrist.

---

[17] The program schedule was provided later and is printed in the appendix at p. 3026.

STATEMENT OF T. S. GILCHRIST, JR., GENERAL MANAGER, WJHP AM-FM-TV, JACKSONVILLE, FLA.

Mr. GILCHRIST. Since December 1953, I have been operating WJHP-TV, a UHF television station owned by the Jacksonville Journal Co. I also supervise the operation of WJHP radio, Jacksonville; WTMC radio, Ocala, Fla.; and WESH-TV, a nonaffiliated TV station which went on the air June 11, 1956, in Daytona Beach, Fla.

WJHP-TV operates with visual power of 276,000 watts, channel 36. Our principal network affiliation is with NBC, with secondary affiliation with ABC.

A VHF station, which operates on channel 4 at maximum power, had been in operation several years before the start of our station, and until WJHP-TV was established, was the only television service between Miami and Atlanta. Its primary network is CBS and with first call on programs from ABC.

Our station claims coverage of some 9 northeast Florida and southeast Georgia counties within a radius of approximately 45 miles from Jacksonville. Channel 4 claims coverage over a radius some 4 times ours, in a rough circle that swings from Savannah, Ga., almost to Tampa, Fla.

While WJHP-TV is an optional buy on the NBC and ABC networks, NBC has given us the Today, Home, and Tonight programs on a must-buy basis, adding much to our program lineup.

Through the combined efforts of the station relations, sales, and sales service people in the networks and our own New York personnel, we have developed a very substantial program schedule which permits us to operate from 7 in the morning until 1 a. m., Monday through Friday, with somewhat shorter hours Saturdays and Sundays.

Although the two networks have been most cooperative—particularly NBC—and our program schedule is resplendent with excellent programs, we remain definitely the second station in a two-station market. In most instances, despite our 90 percent conversion, only a few of our programs have been able to compete with the ratings enjoyed by the channel 4 competitor. This is because we are UHF.

Even though our power is substantial—and has been since the start of our station—and the height and location of the towers of the two stations are similar, it is definitely more difficult to enjoy good reception on UHF. If the converter and UHF antenna are properly installed in exactly the right spot, and the badly overloaded UHF receiving tubes hold out, and the natural forces of wind and rain and season are just right, and the viewer has the patience and time and ability to tune his set exactly, he will receive a substantially superior picture on UHF.

Senator PASTORE. In other words, it is possible.

Mr. GILCHRIST. Sometimes, Senator.

Senator PASTORE. All right, sir.

Mr. GILCHRIST. So despite the fact that the American public will pay almost anything for something they want, while grumbling mightily over the price of something they need, they also prefer those things which are easier to operate, and grow impatient with the difficult—especially when the simple is available. For this reason, WJHP-TV and the networks have suffered lower ratings and lower revenues through their UHF venture, despite serious and sincere intent and effort.

If any affiliate has been at the mercy of the network, it most assuredly has been the UHF station. Yet I can offer only praise for the co-operation we have received. Many of the difficulties which may have been expressed by stations have stemmed solely from the clash of personalities and the method of approach and external problems.

During the recent political campaigns in Florida, for instance, we prempted a number of commercial network programs in option time to carry political talks. In all my years in radio and TV, I have never had a strenuous objection, or a threat, either real or implied, when we canceled a network program to make way for a football game or political address, or any other local program we considered to be of prime local importance. And our Ocala radio station is an NBC "bonus" station enjoying far less status than regular affiliates.

Although I have found the networks liberal in the matter of option hours, I feel that option hours are a necessary feature of an affiliation contract. This tenet also offers protection to the network when needed, strengthens the moral obligation of the affiliate, and at times would serve as a protection to the station when a network might want time out of option hours.

Our new TV station in Daytona Beach is presently not affiliated with any network. We are negotiating with both NBC and ABC and both have expressed some interest, although our present operating power on channel 2 is only 5,000 watts e. r. p. and channel 6 is but 50 or 60 miles distant with 100,000 watts. But, in the midst of all of the local enthusiasm over the new station in Daytona Beach, the No. 1 question on the lips of the people there is, "How soon do you begin to get the network programs?"

Our contracts with both networks contain 90-day cancellation clauses. When channel 12 is finalized there promises to be tremendous client pressure for a mass exodus of network and film shows from channel 36 to channel 12. Since NBC is the larger, it will probably go to the new station. ABC programs will fill out the schedules on both stations. And since more network advertisers will desire the Jacksonville market when peak period VHF time is available, there will be only moderate increase in the need for film and local programs, and not much change in rates.

However, if 3 VHF stations are established—as we hope will be—there will be 1 station for each network and substantial time and need for film and local live programing on all 3 stations.

Mr. Cox. That would involve the proposal of deintermixture that you have made?

Mr. Gilchrist. Yes, sir—the many proposals, sir.

As competition for advertising and audience increases, there will be a level off in rates—we now ask a national spot rate of $300 per hour while channel 4 charges $700. There will also be substantial improvement in program material and methods of operation.

I should like to say that much of what has been proposed to this committee is that you create some special privilege for special interests but that you maintain a regulated monopoly. This is contrary to the American way of free enterprise, and tends to stifle imagination, ambition, and ingenuity—the very forces upon which TV is built. Mr. Kintner has told you that his network has difficulty clearing peak viewing time in many cities. There have been statements by Mr. Moore and others that local and regional advertisers and film producers cannot find adequate time in many of the top markets. That may be so and, if true, it's simply because there are not enough equally competitive television stations in many cities. While our VHF competitor may have difficulty in finding a good half-hour period or even a 10-second availability, I know where prime class A time can be cleared quickly in Jacksonville.

The entire trouble with television today lies in one, and only one, place. There aren't enough equally competitive stations to go around. There is a sellers' market resulting in a monopoly, which if continued, with or without Government regulation, will result in a stale and decadent service which the American public will reject, just as it will reject pay-see television. Most of America's greatness can be attributed wholly to the American competitive spirit, kept as free as possible of external regulation.

There is really nothing or little wrong with the basic network operation, and nothing wrong with television in general, that immediate action in creating more stations with more equal opportunity of acceptance by the public will not solve.

Senator PASTORE. Thank you very much, Mr. Gilchrist. We have one more witness, Mr. Harold Stuart.

Mr. COX. You will send us the schedule, will you, Mr. Gilchrist?

Mr. GILCHRIST. Yes, I will.[18]

(The prepared statement of Mr. Gilchrist is as follows:)

STATEMENT OF T. S. GILCHRIST, JR., GENERAL MANAGER, STATION WJHP, AM-FM-TV, JACKSONVILLE, FLA.

Since December 1953 I have been operating WJHP-TV, a UHF television station owned by the Jacksonville Journal Co. I also supervise the operation of WJHP radio, Jacksonville; WTMC radio, Ocala, Fla.; and WESH-TV, a nonaffiliated TV station which went on the air June 11, 1956, in Daytona Beach, Fla.

WJHP-TV operates on channel 36 with visual power of 276,000 watts ERP. Our principal network affiliation is with NBC, with secondary affiliation with ABC.

A VHF station, which operates on channel 4 at maximum power, had been in operation several years before the start of our station, and until WJHP-TV was established, was the only television service between Miami and Atlanta. Its primary network is CBS, and it has first call on programs from ABC.

Our station claims coverage of some 9 northeast Florida and southeast Georgia counties within a radius of approximately 45 miles from Jacksonville. Channel 4 claims coverage over a radius some four times ours, in a rough circle that swings from Savannah, Ga., almost to Tampa, Fla.

We claim to have approximately 90 percent of the television homes in Duval County equipped to receive the UHF signal and a lesser percentage in the adjacent and outlying counties. We have attained this high percentage of conversion because our station started operation at substantial power, enjoyed strong publicity support from our radio and newspaper affiliates, were adequately financed to withstand the losses which resulted from full-time operation—and because we were able to offer the public programs they wanted. The programs they wanted most were network programs and to this day, audience surveys indicate that network programs are still the public preference, although some syndicated film programs have done quite well, especially when placed between, or adjacent to, complementary network fare.

From the beginning of operation, we enjoyed some programs from both NBC and ABC, although channel 4 had first call on both. Within the first year, NBC offered us first call on all of their programs, despite vigorous protests from some

[18] The program schedule was furnished later and is printed in the appendix at p. 3029.

of their clients who preferred delayed playbacks in less than peak audience periods on the VHF station to live periods on a UHF station. In the 1954 World Series, NBC was forced to bend to an exceedingly strong client, and outside pressures, and make the games available to both stations in Jacksonville. In the 1955 series, the network stood firmly, giving the telecast only to WJHP-TV, with the result that UHF conversions took a substantial upward swing.

While WJHP-TV is an optional buy on the NBC and ABC networks, NBC has given us the Today, Home, and Tonight programs on a must-buy basis, adding much to our program lineup.

Through the combined efforts of the station relations, sales and sales service people in the networks and our own New York personnel, we have developed a very substantial program schedule which permits us to operate from 7 until 1 a. m., Monday through Friday; with somewhat shorter hours Saturdays and Sundays.

Although the two networks have been most cooperative—particularly NBC—and our program schedule is resplendent with excellent programs, we remain definitely the second station in a two-station market. In most instances, despite our 90-percent conversion, only a few of our programs have been able to compete with the ratings enjoyed by the channel 4 competitor. This is because WJHP-TV is UHF.

Even though our power is substantial, and the height and location of the towers of the two stations are similar, it is definitely more difficult to enjoy good reception on UHF. If the converter and UHF antenna are properly installed in the exactly correct spot, and the badly overloaded UHF receiving tubes hold out, and the natural forces of wind and rain and season are just right, and the viewer has the patience and time and ability to tune his set exactly, he will receive a substantially superior picture on UHF.

So despite the fact that the American public will pay almost anything for something they want, while grumbling mightily over the price of something they need, they also prefer those things which are easier to operate, and grow impatient with the difficult—especially when the simple is available. For this reason, WJHP-TV and the networks have suffered lower ratings and lower revenues through their UHF venture, despite serious and sincere intent and effort.

If any affiliate has been at the mercy of the network, it most assuredly has been the UHF station. Yet I can offer only praise for the cooperation we have received. Many of the difficulties which may have been expressed by stations have stemmed solely from the clash of personalities—and the method of approach; and external problems.

I have never found the networks resorting to pressure, even to the degree to which we are all accustomed in normal business. For many months we have declined to carry the Tennessee Ernie program for NBC because one client has so far refused to order our station for his daily half hour of the program, and the technical problems of blanking out that client's commercials, as delivered by the star, are such that we feel it would look bad on WJHP-TV. The network has asked us about the carrying of the program on a number of occasions. We have always declined for the same reason, and the network people have always merely said that they hoped it could be worked out soon.

Network option hours have never been a serious problem to us. We have preempted network commercial program for local programs we considered more desirable to our viewers on numerous instances. Both networks have accepted delayed playback periods for programs when we declined to clear, without questioning why, or if our refusal was within the bounds of the contract. However, we generally try to clear the live time for a network program because network programs are our very best audience builders.

During the recent political campaigns in Florida, for instance, we preempted a number of commercial network programs in option time to carry political talks. In all my years in radio and TV, I have never had a strenuous objection, or a threat, either real or implied, when we canceled a network program to make way for a football game or political address, or any other local program we considered to be of prime local importance. And our Ocala radio station is a bonus station enjoying far less status than regular affiliates.

Although I have found the networks liberal in the matter of option hours, I feel that option hours are a necessary feature of an affiliation contract. This tenet also offers protection to the network when needed, strengthens the moral obligation of the affiliate—and at times would serve as a protection to the station when a network might want out of option time.

75589—57—pt. 4——85

Our new TV station in Daytona Beach is presently not affiliated with any network. We are negotiating with both NBC and ABC and both have expressed some interest, although our present operating power on channel 2 is only 5,000 watts ERP and channel 6 is but 50 or 60 miles distant with 100,000 watts ERP. There are some technical, and possibly some legal, problems to be worked out. but they are being negotiated. But in the midst of all of the local enthusiasm over the new station in Daytona Beach, the No. 1 question on the lips of the people there is "How soon will we begin to get the network programs." To the public today, the network is the leader, the best, and the most desirable in television. There are some good syndicated film shows that they enjoy very much, but even the best do not compare with the overall desirability of the network programs.

Our contracts with both networks contain 90-day cancellation clauses. When channel 12 is finalized there promises to be tremendous client pressure for a mass exodus of network and film shows from channel 36 to channel 12. Since NBC is the larger it will probably go to the new station. ABC programs will fill out the schedules on both stations. And since more network advertisers will desire the Jacksonville market when peak period VHF time is available, there will be only moderate increase in the need for film and local programs, and not much change in rates.

However, if 3 VHF stations are established, there will be 1 station for each network and substantial time and need for film and local live programing on all 3 stations. As competition for advertising and audience increases, there will be a level-off in rates—we now ask a national spot rate of $300 per hour while channel 4 charges $700. There will also be substantial improvement in program material and methods of operation.

I should like to say that much of what has been proposed to this committee is that you create some privilege for special interests but that you maintain a regulated monopoly. This is contrary to the American way of free enterprise, and tends to stifle imagination, ambition, and ingenuity—the very forces upon which TV is built. Mr. Kintner has told you that his network has difficulty clearing peak viewing time in many cities. There have been public statements that local and regional advertisers and film producers cannot find adequate time in many of the top markets. That may be so and if true it's simply because there are not enough equally competitive television stations in many cities. While our VHF competitor may have difficulty in finding a good half-hour period, or even a 10-second announcement period, I know where prime class A time can be cleared quickly in Jacksonville.

The entire trouble with television today lies in one, and only one, place. There aren't enough equally competitive stations to go around. There is a sellers' market resulting in a monopoly, which if continued, with or without Government regulation, will result in a stale and decadent service which the American public will reject, just as they will reject "Pay See" television. Most of America's greatness can be attributed wholly to the American competitive spirit, kept as free as possible of external regulation.

There is really little wrong with the basic network operation, and nothing wrong with television in general, that immediate action in creating more stations with more equal opportunity of acceptance by the public will not solve.

Senator PASTORE. Identify yourself for the record, please.

Mr. STUART. Yes, sir. I am Harold C. Stuart, executive vice president of KVOO radio and KVOO television, Tulsa, Okla. I asked the opportunity to appear and testify and was advised, because of the great number of witnesses, you wouldn't reach me today. Consequently, I do not have presently a written statement. I will prepare one and submit it for the record.

Senator PASTORE. We will keep the record open at this point for the insertion that you can send in.

(The statement of Mr. Stuart was submitted later and again ordered inserted in the record on July 17, 1956. It is as follows:)

STATEMENT OF HAROLD C. STUART, VICE PRESIDENT, KVOO-TV, TULSA, OKLA.

My name is Harold C. Stuart. I am presently executive vice president and director of KVOO-AM and KVOO-TV, Tulsa, Okla. On June 20, 1956, your committee invited me to submit a statement concerning KVOO–TV supplementing my brief oral statement.

I am a partner in the law firm Doerner, Rinehart & Stuart, in Tulsa, Okla., and Doerner, Rinehart, Stuart & Clammer, in Washington, D. C. From 1949 to 1951 I served as Assistant Secretary of the Air Force. Thereafter, I commenced the active practice of law in Washington, D. C.

I became interested in television in the fall of 1951, assisting in the preparation and presentation of the application, before the Federal Communications Commission, for KVOO–TV (Central Plains Enterprises, Inc.). After receiving the construction permit I became actively associated with this station as executive vice president and have returned to Tulsa to assume these duties.

The president of KVOO–AM and KVOO–TV is W. G. Skelly, president of Skelly Oil Co., who for 24 years was Republican national committeeman from Oklahoma. He has long been extremely active in all civic and community affairs and for nearly 30 years has been the owner and operater of the first radio station in Oklahoma (KVOO–AM).

Serving as the chairman of the board of directors is D. A. McGee, president of the Kerr-McGee interests. Other officers and other directors include Senator Robert A. Kerr, vice president and a director; Dr. Oliver Wilheim, president of Oklahoma A. and M. College, Stillwater, Okla., director; and Dr. C. I. Pontius, president of Tulsa University, a director.

We received our construction permit from the Federal Communications Commission in July 1954 and went on the air in December 1954, utilizing temporary studios and tower. Early in the spring of 1955, when the delivery of our equipment was completed, we commenced operating with maximum power.

From the outset, the stockholders determined to give to the viewing public the finest programs possible and to serve not only the metropolitan area of Tulsa but the rural and small community areas in eastern Oklahoma. With this in mind, and in order to secure the fullest cooperation of the universities and educational institutions in the area which we would serve, we donated stock to both Oklahoma A. and M. College and Tulsa University and elected the two presidents of these institutions to our board of directors. In addition, we formed a program planning board consisting of the following committees: Labor programing, area development programing, agricultural programing, youth activities programing, community welfare programing, health programing, civic and governmental programing, university programing, high-school and elementary school programing, religious programing, fine arts and music programing, and national affairs programing.

For the members of these committees we selected outstanding representatives in their respective fields of endeavor to serve and to advise, recommend and assist our manager and program staff in telecasting programs of the greatest public interest and need. These committees have actively assisted us in affording the listening public in our service area the best programs in the public interest. Our program department meets with these committees periodically and they recommend additions, deletions and modifications of our programs.

Prior to going on the air, we discussed with officials of ABC, CBS, Du Mont, and NBC the feasibility of affiliating with them. After receiving our construction permit we negotiated a contract with NBC. Both CBS and ABC have affiliates in the Tulsa area, both of which are VHF television stations operating at maximum ERP. Thus, Tulsa and eastern Oklahoma have three VHF television stations operating at maximum power who are affiliates of the three major networks.

Although we are a basic NBC affiliate and utilize most of the network programs available to us, there have been quite a few occasions when, in the local public interest, we have rejected network programs in favor of local originations. We have never had any problem or complaint from NBC in taking these actions. All of our relations with NBC have been in the spirit of cooperation and in our joint effort to afford the best programs in the public interest for our listening audience.

We have found the network invaluable in its advice, assistance and suggestions in television programing, promotion, sales technique, engineering, and especially has NBC been helpful to us in the designing of our new radio and television studio in Tulsa. We have had numerous conferences, telephone calls and correspondence concerning lighting, soundproofing and designing both the radio and television studios.

Some question has arisen in other parts of the country suggesting the networks limit their option time in order to provide more local or film programing during the evening hours. In our opinion this would not be in the public interest and certanly would not be as pleasing nor as enjoyable to the listening audience. It would seem inconceivable that a local station in the Midwest could afford to, or with the talent available, present program on a regular and continuous basis as enjoyable or as interesting as those that are afforded by the networks. Certainly our costs would be tremendously increased. It has always been, and will continue to be, our desire to serve our area and to afford for them the best balanced, high type programing that we can. We believe that this purpose can be achieved by having network programs available to us.

Some suggestions have been made that we should be put in the position in which we would be required to purchase more independent syndicated film. Our experience in purchasing film has not been too satisfactory. We do negotiate and purchase most all of our film from the independent producers, but we find that we frequently must take less desirable film in order to get those which we desire. We are already searching for good film programs and have clients desiring such programs, but we have been unable to buy a sufficient amount of suitable film at prices we can afford to pay.

We think there is a definite requirement and need for good quarter-hour and half-hour film productions and our station could satisfy the requirement of some of our advertisers if such were available. We do have on our station desirable time for the presentation of such film.

We are opposed to toll television. We believe that the listening audience has been getting splendid educational, entertainment, sports, and other programs of national and local interest made available through advertising at no cost. To change this concept and require the public to pay for television programs, would not only be distasteful but would eventually deprive these people of the high-quality programs which they now have free and which is theirs for the turning of a dial. If toll television were permitted, we are convinced that it would adversely affect the programing quality of every television station and it would be impossible, in our opinion, to continue the type programs we now have.

Opponents of the networks have made suggestions which would limit network programing and destroy many of the fine programs which the networks are presently affording. It would seem to me that the answer to these opponents would be for them to organize one or more additional networks and demonstrate, if possible, that their programs would be superior to the present network systems.

In conclusion, we favor good clean competition. We believe that the networks have a very sincere desire to make their affiliate in each city the finest station possible and that our entire experience with NBC has always indicated that desire. We have no reason to believe that it will be otherwise in the future.

Senator PASTORE. You can make any observation you want.

Mr. STUART. In Tulsa, there are three operating VHF stations—all three major networks. There are two construction permits for UHF stations—they are not now on the air.

We are very happy and pleased with our relations with NBC. Prior to going on the air we discussed contracts with all three of the networks. The point I want to make and emphasize here is, in addition to the network programing, they have been extremely helpful to us in all forms of telecasting and also radio broadcasting. We are in the present position of building new studios out there. Their staffs—the people have been very helpful to us in discussing the construction, what we should put in it, our programing, our sales promotion, and everything else, all phases of television. We think that that is a service that we would not be able to get otherwise, and I certainly want to commend them and appreciate that help.

Senator PASTORE. Thank you very much, sir.

Mr. COX. Will you include in your statement, then, the schedule for the week of April 1 to 7, showing your sources?

Mr. STUART. Yes, sir.[19]

Senator PASTORE. This is off the record.

(Discussion off the record.)

[19] The program schedule was furnished later and is printed in the appendix at p. 3032.

Senator PASTORE. Thank you very much.
Recess subject to the call of the Chair.
(Whereupon, at 12:59 p. m., the subcommittee recessed to reconvene at the call of the Chair.)
(On July 17, 1956, statements or letters on network practices submitted by the following were inserted in the record:

Robert W. Ferguson, WTRF-TV, Wheeling, W. Va.
Les Biederman, WPBN-TV, Traverse City, Mich.
Walter J. Damm, WTMJ-TV, Milwaukee, Wis.
Harold P. See, KRON-TV, San Francisco, Calif.
Douglas L. Manship, WBRZ-TV, Baton Rouge, La.
David M. Baltimore, WBRE-TV, Wilkes-Barre, Pa.
Nathan Lord, WAVE-TV, Louisville, Ky.
Ralph J. McElroy, KWWL-TV, Waterloo, Iowa.

(Since these stations are affiliated with NBC, the statements and letters are printed at this point.
(There is also printed here the statement of William J. Moyer of KARD-TV, Wichita, Kans., which was received at a later date in accordance with arrangements referred to at p. 2733.
(These letters and statements are as follows:)

LETTER OF ROBERT W. FERGUSON

WHEELING, W. VA., *May 28, 1956.*

Hon. WARREN G. MAGNUSON,
Chairman, United States Senate Committee on Interstate and Foreign Commerce, Washington, D. C.

DEAR SENATOR MAGNUSON: This letter is prompted by my reading in the trade press testimony made before your committee by those who are interested in reducing the scope, service, and effectiveness of present network television operations.

Some of the statements made by various individuals against the network system, and in one instance against NBC specifically, are in wide variance with my own experience with NBC.

We have had a primary affiliation with NBC for almost 3 years. While we are not a must-buy we do carry almost 100 percent of their nighttime commercial schedule and about 72 percent of the daytime. We try to carry all of NBC's sustaining programs. Never in our relationship have they dictated about clearances, rates, etc. On the contrary they have been most helpful and every single department has shown genuine interest and concern about local operating problems; more recognition of the Wheeling market, and all of the other phases that are essential to good relationships and understanding between network and affiliate. It is this climate of teamwork that enables us to operate the best under the very definite obligations and responsibilities of our FCC license.

We are very proud that we have had opportunities to have as an important part of our program schedule the great productions and TV "firsts" that NBC conceived and introduced. I know firsthand that these have been most enthusiastically received by the people in our service area.

I have had the good fortune to have had experience in the Wheeling region in local newspapers, radio, and now television for the past 16 years, with exception of 3 years away as a naval communications officer. I like to think that I have a pretty good understanding of this market and its potential. It was based on this knowledge that we mutually agreed with NBC about all affiliation details.

In my opinion, we have been treated most fairly and have made ourselves competitive with other mediums. Here, like in most markets, there is substantial competition among television stations, radio stations, newspapers, and billboards.

Prior to the time we went on the air in 1953 our home county had only 19 percent television set saturation. Last June, according to the Advertising Research Foundation, our home county had 83 percent television set saturation. This rapid growth, most certainly would not have been remotely possible if we had been limited to syndicated films, features, and local live shows, all of which we do carry. Today the people of America want a front-row seat in the events of America—not only in entertainment but in education, information, sports, and news. Only a free network system can completely fulfill this assignment.

I am grateful that I can be put on record as to my own opinions and experiences and submit that I will volunteer to appear before your committee and amplify these convictions.

Respectfully,

ROBERT W. FERGUSON,
Executive Vice President and General Manager.

LETTER OF LES BIEDERMAN

PAUL BUNYAN NETWORK,
MIDWESTERN BROADCASTING CO.,
Traverse City, Mich., June 11, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce,
Senate Office Building, Washington 25, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your letter of May 29, 1956, concerning the pending investigation into network practices by the Senate Interstate and Foreign Commerce Committee.

It is apparent from your letter that the session on June 20 will be a very busy one and I do not wish to consume the committee's time by making a formal appearance. In addition, my business activities make it extremely difficult for me to be in Washington at that time.

From information gathered in reading the various trade journals reporting your inquiry, I see a trend developing which indicates that the networks are not cooperating with television stations to the fullest extent in providing this country with good television program service. We are a small television station in the northern end of the Lower Peninsula of Michigan and I believe a brief recitation of our experience may be helpful in your evaluation of this situation. Our experience with the networks has been limited to NBC and I am pleased to say that this experience has been excellent. NBC has cooperated in every way and this cooperation dates back to our original planning for television during the so-called television freeze period.

During and since that time, NBC program personnel have spent many hours with our personnel in developing television programs for our area. Engineering personnel at NBC have supplied us with much valuable information and consultation which we have used in the establishment of our television facility. Their assistance dealt with all facets of television operation such as the economies of small market operation, construction of necessary buildings, the installation of technical equipment, studio lighting, and many other aspects of operation which were invaluable to us in evaluating and building our television facilities.

At no time did the people of NBC with whom I talked suggest that the purchase of RCA equipment may be helpful in securing an NBC affiliation. We later purchased RCA equipment but the decision to do so was based upon our judgment as to the quality and capability of the equipment and because of the technical service program carried on by RCA in order to keep the equipment in good operating condition.

Our dealings with the station relations department of NBC have always been very good. We have found them cooperative and sympathetic with our problems and this has been one of the very important factors contributing to our ability to supply high quality, live network programs to this small rural area in northern Michigan.

The above includes the thoughts which I would have expressed to the committee had I been able to appear personally. If you are so disposed I would appreciate it if you would incorporate this into the report of the proceedings of the committee.

Respectfully yours,

LES BIEDERMAN, *President.*

STATEMENT OF THE JOURNAL CO. (THE MILWAUKEE JOURNAL) WTMJ-TV, MILWAUKEE, WIS.

The Journal Co. (the Milwaukee Journal) became the licensee of station WTMJ on July 25, 1927. Prior to that date it had been associated for 2½ years with Marquette University in the joint operation of station WHAD. WTMJ became affiliated with NBC in 1927.

In 1934 the Journal Co. was issued a license for experimental broadcasting in high frequency amplitude modulation (Apex) and in 1934 and 1935 also experimented with facsimile broadcasting. In 1942 the company became the first licensee west of the Alleghanies of an FM station and operated such a station until 1950.

The company's first experience with television dates back to 1931 when it was licensed to operate experimental television station W9XD. On April 30, 1941, the Federal Communications Commission modified its television rules to permit full commercial television operation and on July 15, 1941, the Journal Co. filed the first application for a commercial television station. A construction permit was granted September 16, 1941, but the advent of World War II prevented any further development for the duration. Immediately after the war the company made new application for commercial television and on December 3, 1947, its station WTMJ-TV went on the air—the 10th independent commercial television station in the United States.

WTMJ-TV was one of the first stations in the United States to transmit color—transmitting the first network color show on December 20, 1953, and its first local live color show on July 18, 1954.

WTMJ-TV has been an affiliate of the National Broadcasting Co. since the station went on the air, and it was also affiliated with ABC, CBS and Du Mont. CBS canceled its agreement with WTMJ-TV in 1953 when it affiliated with WCAN-TV, and ABC and Du Mont canceled their affiliation agreements with WTMJ-TV in 1954 when they affiliated with WTVW.

The company's loss in operating WTMJ-TV through September 1949, was approximately $340,000. It was in October of 1949 that the station commenced profitable operation, and it was not until mid-January of 1951 that the accumulated losses had been recaptured.

The Journal Co. has carefully studied the statement of the National Broadcasting Co. filed with the Committee on May 25, 1956, and concurs fully with all of the facts as set forth therein.

There is attached hereto as exhibit A an analysis of commercial syndicated film shows carried by WTMJ-TV during the week of March 25 to 31, 1956, in class A time, which shows a total of 9¼ hours—of which 1½ hours were in network optional time.

The company's experience in the operation of WTMJ as a network affiliate before optional time became part of the contract between the National Broadcasting Co. and its affiliates proved conclusively that without optional time the network was seriously handicapped in selling network time. After interesting an advertiser and his agency in network radio advertising, and securing an order, it was then necessary for the network to contact each affiliate to find out whether the time was available. In many instances the stations which were able to accept the program were of such insufficient number that the advertiser lost interest. Optional time in our estimation is one of the fundamentals in the successful operation of a network. The same is true of the basic station principle of selling.

We believe that our more than a quarter of a century's experience in radio and television—and more particularly as a network affiliate for virtually the entire period in which networking has developed in this country—qualifies us to express judgments concerning the system and its worth to the American public. On the basis of that experience we unhesitatingly assert that the present system of network operation serves the greatest number of people with a program service of education, entertainment, religious, news, and public service—which could not be made possible under any other system.

Since we have succeeded in the operation of our stations under that system it may be said that by virtue of that fact we are partial and prejudiced. This we cannot deny. However, hastily we must add that such measure of success as we have enjoyed inevitably reflects the satisfaction and good will of the audiences we serve and their recognition of the benefits that they have received. It has long been our considered policy that enlightened rendition of public service results in economic success. It is our firm conviction that the proper and reasonable admixture of locally produced program subjects, feature and other film presentations together with network features of incomparable quality covering substantially all facets of national and local interest, have resulted in an overall service of great benefit and value to the public.

Obviously all those who would become a part of an industry do not all achieve the same or equivalent results. The reasons for this are so manifold and, in most respects, obvious that detailed discussion is not required. However, it is equally obvious that those who because of immature planning, lack of experience or economic or geographical obstacles, have failed to succeed to the maximum of expectations, frequently find it expedient to attack the prevailing system in order to bring about artificial readjustments in the hope of bettering their circumstance. It does not follow that such efforts are in harmony with genuine considerations of public interest.

We trust this committee will evaluate the views of these detractors with these considerations in mind. It is our company's view that the basic elements of the network arrangement that are in practice and have prevailed in this country for many years are necessary and essential to the type and character of network services which has thrust television into the great position it occupies today in the American home.

EXHIBIT A.—*WTMJ-TV Commercial Syndicated Film Shows, Mar. 25 to 31, 1956, 6:00–11:00 p. m.*

Sunday:
- 6 to 6:30 p. m.: Annie Oakley
- 10 to 10:30 p. m.: I Led Three Lives

Monday:
- 9:30 to 10: The Turning Point
- 10:05 to 10:20: Industry on Parade
- 10:30 to 11: Studio 57

Tuesday:
- 9:30 to 10: Blatz Triangle Theater
- 10:05 to 10:20: The World We Live In

Wednesday:
- 9:30 to 10: Mobil Theater
- 10:05 to 10:20: Patti Page
- 10:30 to 11: Great Gildersleeve

Thursday:
- 8 to 8:30: Secret Files of Dr. Hudson [1]
- 10:30 to 11: Highway Patrol

Friday:
- 7:30 to 8: Man Behind the Badge [1]
- 8 to 8:30: Blatz Triangle Theater [1]
- 9:50 to 10:05: Jungle Macabre
- 10:05 to 10:20: Patti Page Show
- 10:30 to 11: Science Fiction Theater

Saturday:
- 9:30 to 11: Schlitz Saturday Night Theater
- 11:07 to 11:36: Mr. District Attorney

Total, 9¼ hours

[1] Network option time: Total 1½ hours.

STATEMENT BY KRON–TV, THE CHRONICLE PUBLISHING CO., SAN FRANCISCO, CALIF.

This is a voluntary statement submitted by KRON–TV, the Chronicle Publishing Co., San Francisco, Calif. It is prompted by the contentions which have been made before your committee and before the Federal Communications Commission Network Study Committee that the option-time arrangement between networks and their affiliated stations constitutes a restraint of trade, causes hardship to certain syndicators of film in placing their product in the market place, unreasonably denies regional and local advertisers access to television-broadcasting facilities, and is not in the interest of the television-viewing public.

The protagonists of this viewpoint would seek remedy for the ills which they allege through rule change or legislation to place further restrictions on the amount of station time which may be devoted to the broadcasting of network programs, in addition to those limitations already contained in the chain broadcasting regulations adopted by the Federal Communications Commission in 1941.

It appears from these contentions and pleas for remedial action that some distributors of film used by television stations, and more particularly those who syndicate 30-minute programs produced primarily for television use, consider themselves victims of understandings, arrangements, or practices between and among the affiliated stations and their networks which have the effect of denying them their rightful place in the television broadcasting industry. It is not our purpose, nor are we qualified, to offer opinion on such general, or abstract questions as monopoly or what is or is not a restraint of trade.

Our purpose is to show the relationship between television networks and their affiliated stations from the viewpoint of our own extensive experience both as a primary affiliate and as one of the leading buyers of film. We hope that this presentation will thus provide the committee a view of the facts pertinent to its inquiry which might otherwise not be available to it.

The three San Francisco stations which are licensed on channels 4, 5, and 7 broadcast an approximate total of 1,520 hours of television programing during the month of March 1956. March is considered to be an average month during which a representative cross-section of programing may be considered to exist. More than one-quarter of this broadcast time, or actually 27 percent, was accounted for by feature and syndicated half-hour films not originated by a network. This does not take into account cartoons and 15-minute films.

Station KRON-TV, during the average week of 1956 between January and May, used 16 features and 27 syndicated half-hour subjects having a weekly dollar value of $19,631. This figure represents income to film distributors. In addition, the station used 4 15-minute film properties and 14 cartoons with a weekly dollar value of $630. This $20,261 expenditure per week provides an income of approximately $1,054,000 per year to film distributors. KRON-TV pays approximately $800,000 and sponsors pay approximately $254,000 to the film distributors. This station has an outstanding contractual commitment of $1 million to distributors of feature and syndicated films for the year 1956. Twenty-three distributors are supplying 541 feature pictures through the means of 42 contracts, and 12 syndicators are supplying 13½ hours of programing per week through the use of 27 separate runs of half-hour subjects per week, or 1,404 per year.

Most of this film is used outside network-option time, but 8:00 p. m. and 10:00 p. m., Friday—which are periods lying within prime network-option time—have been programed by this station since November 1949, with little interruption or occupancy by the network except for a rare special event. Prior to August 1953, the 8:00 p. m. time period was programed on a local live basis. The 10:00 p. m. time period has been programed with syndicated 30-minute programs since early 1951.

During the week June 3–9, 1956, film organizations had weekly access, between 7:30 and 10:30 p. m., to only 1 hour of the 21 hours contained weekly in these time segments. This is 4.7 percent of the time available in this time segment; but between 6:00 p. m. and 12:30 a. m. they had 24 of the 45½ hours, or 52 percent. The rental fee for film does not customarily distinguish between broadcast-time periods. The film distributor, with rare exception, receives the same price whether it is used at 8:00 a. m. or 8:00 p. m. or at whatever hour. The time segments 6:00 to 7:30 p. m. are not considered prime time in the true sense of the term. Neither are the time periods 10:30 p. m. to 12:30 a. m., but these are valuable broadcast franchises and do not fall into the category of fringe time to which category the film distributors claim they have been generally relegated.

When we consider that syndicators supplied 4½ hours to the network during the period 7:30 to 10:30 p. m. in the week June 3 to 9, and we originated 1 hour of syndicated film in that time period, the syndicators supplied 26.2 percent of our programming during the so-called prime time of 7:30 to 10:30 p. m. During the week June 3–9, 1956, KRON–TV originated 36 percent of its broadcast hours through the medium of locally projected film of all types. Fifty-nine percent of its programing was accounted for by the network. During a week when this station devoted 58 percent of its broadcast time to network originations of all types and 36 percent to locally projected film, anywhere from 6½ to 8½ hours of half-hour syndicated film subjects were transmitted by the network. When this maximum number is added to the 42 hours, or 36 percent of locally originated film, the total use of film rises to 50½ hours or 43 percent of all

KRON–TV programing during subject week. Thus film distributors supplied 43 percent of the station's programing.

Those distributors who provide half-hour syndicated films, as distinguished from feature films, in the subject week account for 13 one-half hours of locally originated film and anywhere from 6½ to 8½ hours of network originations in a given broadcast week of 117 hours. Thus we may have a total of as much as 22 hours or 18 percent of the weekly schedule supplied by half-hour syndicators.

During the week of June 24, this station will transmit 60 half-hours live (or 3-hour-delayed kinescope) from the network; 28½ hours of feature films, 22 hours of syndicated films from all sources, and 6¼ hours from local live studios. In terms of percentage the broadcast week will consist of—

Network live	51.4
Local live	5.4
Feature film	24.4
Syndicated half-hours	18.8
Total	100.00

Film from all sources will constitute 43.2 percent of the weekly broadcast hours.

It is apparent from data supplied herein that the film distributors enjoy an excellent product placement at KRON–TV and other San Francisco stations.

The statistics provided herein clearly indicate that neither film distributors nor nonnetwork advertisers are eliminated from the 6:00 p. m. to midnight evening hours. These figures do support the contention that the majority of the hours between 7:30 and 10:30 p. m. (95.3 percent) are used by network advertisers, but the answer to the contention posed by certain parties before this committee does not lie in tearing down the network option-time structure. It lies in the provision of additional facilities upon which these time segments are available.

When channel 2 is operating in San Francisco many more opportunities will be available to film distributors and nonnetwork advertisers. This channel has not been granted since the Federal Communications Commission hearings were held in September 1954. The allocation of channel 2 to the San Francisco area was provided for in the sixth report and order issued by the Commission. In addition to the film material now being broadcast in San Francisco 42 more half-hour film subjects, or 21 more 1 hour length feature film subjects, can be shown between 7:30 p. m. and 10:30 p. m. in the San Francisco market when channel 2 is operating. Through the use of this material 42 sponsors will have half-hours available to them, or 126 advertisers may buy participations in these prime time programs.

It should not be forgotten that 49 additional advertisers may buy station-break announcements and an additional 49 advertisers may buy station-identification announcements.

The contentions made to this committee reflect a fear that syndicated half-hour film product may be depleted in volume and quality, or both, because the existence of network option time precludes volume sale of half-hour film properties in good broadcast time to a majority of television stations. Relief is sought from an alleged impending crisis by legislation or rule designed to limit the number of hours which a station may take from a network. It would appear to be the opinion of the critics of network option time that, for example, the designation of the time periods 8 to 9 p. m. daily as time free from option agreements, would provide some magic open sesame for half-hour film product.

This station does not necessarily agree that these hours would even then be devoted to half-hour films made for television. On the contrary there is some evidence to indicate that it may be in the best interest of stations, advertisers, and viewers to program such a hypothetical open period with feature films of fairly recent vintage which have become available to the television broadcasting industry rather suddenly during the past 9 months. Some stations may consider that the total cost of the 60 or 90 minutes for the first, and subsequent, runs of feature films, would provide a broadcast vehicle more economical than the use of 2 or 3 syndicated half-hours in the same time segments. The management of this station knows of no recent network or station practices which should suddenly cause alarm to the syndicated half-hour people, in the San Francisco market.

This station commenced operation in 1949 using network kinescope material. It was not connected to the network by microwave until September 1951. The changes in program schedules to accommodate network programs for broadcast in their proper time segments, either by the quick kinescope or live method, came about slowly during the latter part of 1951 and the first 6 months of 1952. KRON–TV did not always clear network programs on kinescopes during these years.

Prior to early 1952 it was common to receive both telephone and mail inquiries and complaints from the viewing public with respect to the lack of network programing on this station. The most common complaint was that many programs of national interest, appearing regularly in other parts of the country, were not being seen in San Francisco because of the lack of network interconnection. Such programs included seasonal sports, national news and special events, and the live appearance of national leaders and name stars in the entertainment field.

Although some of these programs were later made available on kinescope, public interest had usually subsided. Public familiarity with such programs was apparently gained by reading national magazines and the actual viewing of such programs when these local residents visited other cities. This reaction testified to the efficacy of national network distribution of programs supplying the entertainment, cultural and educational needs of the American people.

The increase of the gross national product from $285 billion in 1950 to $387 billion in 1955 was due, in no small part, to the role played by the television broadcasting industry during those years. The national increase in the demand for goods and services as reflected by the gross product must have been stimulated, in part, by the activity of an industry which superimposed the dollar value of 37 million receivers, over 400 new and completely equipped television stations, the vast sums expended by the telephone company primarily for network television connections, and the secondary and accessory equipments and services attendant to this industry, upon the American economy in the short space of 6 years.

In our opinion this rapid evolution and its contribution to business growth could not have been achieved on an uncoordinated, piecemeal basis. It required the integration and comprehensive scope of network program resources. It also needed the economic strength which resulted from public interest in such programing.

In short, the network system was the mainspring of this growth. The aggregation of television facilities so developed will, in our opinion, achieve its own growth potential, and fully use its capacity to further stimulate business by nationally proclaiming the merits of other goods and services, in a national network system of advertising.

Summary: The information in this report shows that film distributors and regional and local advertisers have access to a substantial portion of television broadcast time in a market containing three television stations and could easily have free access to the television broadcast market place when a fourth channel is added.

This statement has provided the committee with data showing that the option time relationship between networks and their affiliates in a three-station market has not materially deprived film distributors from leasing a substantial portion of their product and receiving substantial revenue in return. We assume that an examination of the program schedules and use of film in larger markets and many smaller markets must also provide similar data.

Statement of Douglas L. Manship, President, Louisiana Television Broadcasting Corp., Baton Rouge, La.

My name is Douglas L. Manship of Baton Rouge, La. I am the president of television station WBRZ, which operates on channel 2 at Baton Rouge, and is an affiliate of the National Broadcasting Co. and the American Broadcasting Co.

I have followed with considerable interest the activities of this committee, with particular reference to its current study of the relationships between the networks and the affiliated stations. I view your inquiry as of the greatest importance to the broadcast industry since you are now examining a fundamental concept which goes to the very heart of our system.

Some testimony has been presented by those who do not favor the existing system of network relationships, and who believe that the best interests of the public will be served by making radical changes. I do not agree.

I am not here to tell you that our present system is perfect; in fact, I do not believe that any system that has ever been devised is perfect. Inevitably, there will be disagreements between networks and affiliated stations, just as there are disagreements between Senators and Congressmen. These disagreements do not mean that our political party system is bad and must be scrapped; rather, these differences of opinion illustrate the strength of the system, since honest disagreements of opinion are the basis of a democratic form of government. With strict analogy, the difference between networks and affiliates does not mean that the present system of network broadcasting should be abandoned; we should try to strengthen and improve the present pattern of broadcasting and not attempt at this time to experiment with a system which has developed the finest broadcasting service known throughout the world.

I want to explain to you in my own way what the network affiliation means to a station, such as ours, in a relatively small market. Although Baton Rouge is the capital of Louisiana and the center of a very important rapidly developing industrial area, the 1950 census discloses a population of only 125,000. This is a far cry from the metropolitan centers, such as Los Angeles, New York, Chicago, or Philadelphia, with their many millions. But please keep in mind that throughout this country there are more towns like Baton Rouge than there are metropolitan communities such as Los Angeles.

At the present time, we have in Baton Rouge two successfully operated television stations—ours, which operates on channel 2, affiliated with the National Broadcasting Co. and the American Broadcasting Co., and a UHF station, WAFB-TV, affiliated with the Columbia Broadcasting System. Unlike most communities about which you have heard, Baton Rouge has supported the UHF station. There has been a very substantial number of sets converted to the UHF and this station is on the air with a full schedule of programs. In addition, a new application has just been filed by a group interested in establishing another UHF station here. Therefore, we may soon have three operating stations.

In a market of our size, none of the stations could exist without the benefit of the network programs. This conclusion can readily be fortified by a few simple observations on the economics of broadcasting. In order to show you how important network programing is to an affiliate in a market such as Baton Rouge, I have prepared a memorandum illustrating the value of network programs and the amount of money which we would have to spend to purchase film to replace 1 hour per day of network programing. This memorandum is attached as exhibit No. 1.

Similarly, I have made a study of what it would cost us to substitute local live programs for 1 hour per day, instead of a network show. This study revealed that the additional local-level programs would necessitate the hiring of additional personnel, and incur production costs of such magnitude that we would incur a substantial operating loss.

In connection with both observations, I want to state categorically that we have no local, regional, or national advertisers standing in line to buy time on our station between the hours of 6 and 10:30 p. m. All local merchants who want time can be accommodated in our existing and available time periods. Further, at the present time we are running on a sustaining basis some of the top film programs available to the industry, simply because we cannot find sponsors for them. These are the simple economic facts for stations located in towns like Baton Rouge.

In large metropolitan areas like Los Angeles and New York, it is possible that advertisers are being deprived of the right to purchase prime evening time because of network affiliation agreements. However, that condition is not true in the vast majority of television markets in this country. If markets like Baton Rouge are unable to rely upon network programing as a source of revenue and programs during prime evening hours, we are certainly not going to be able to continue to provide the public with the extended program service which we have been able to do under present conditions.

I am not an apologist for the networks, but I do understand their problems. Although I would like to get more money for my time, I feel very strongly that I will not benefit by the adoption of the suggestions that have been made for the radical changes in the present pattern of network programing.

These changes will not yield me a greater profit, nor better programs; rather, they may destroy the fine program service which I have been able to build up around the core of network features. I want to point out to you that we do a substantial amount of local programing, and that we satisfy all of our community needs. Our network programs do not hinder us in carrying out this responsibility, and if the occasion should arise when a local program should be carried during an option hour, you can be assured that as an affiliate I will exercise my right to substitute that local program.

In conclusion, I want to point out to you that the attacks on the networks by the big-city operators from Los Angeles or New York do not reflect the views of the average affiliate. It is possible that several stations may benefit if the changes suggested are adopted; but it is more likely that if such changes are adopted, the house will tumbel down on stations like ours.

EXHIBIT NO. 1

WBRZ feels that the replacement of 1 hour of network programing with 1 hour of film programing each night would not be in the best interest of the public, the station, and the television industry.

First, 1 hour each night for 7 nights a week adds up to 14 half-hour programs. (We are discussing half-hour programs because the film industry at present is not producing any high-quality 1-hour programs to local stations.) In our negotiations with the various film companies and through examination of their productions, we are of the firm belief that the television film industry is not in a position to supply adequately the needs of our station if an additional 14 half-hour programs were to be purchased. And when consideration is given to the Baton Rouge market being a two-station market, the problem of buying quality film programs appears even more acute.

At present, we try to be discriminating in our selection of television film programs. However, if we are forced to buy 14 more half-hour programs each week, this discrimination of selection would be at an end. And for all practical purposes, we and the other stations in this market would be at the mercy of the film companies. Our station would thus be placed in an untenable position, much the same as many of the stations which are no longer in business. The shortage of supply and the inability of film companies to supply satisfactory products for so many additional hours per week do, therefore, command us to believe that the addition of 1-hour film programing each night would be disastrous.

Second, through experience, we have found that film programs which are available to local stations do not compare favorably with network programs which are available during comparable hours. It is not necessary to enumerate these programs as examples, but for the record, here are a few:

Pulse local ratings for March 1956

City	Program	Rating
Portland, Oreg	Disneyland (net)	44.6
Do	The Whistler (film)	21.5
St. Louis, Mo	Groucho Marx (net)	36.7
Do	Follow That Man (film)	27.0
Washington, D. C	Groucho Marx (net)	36.5
Do	Highway Patrol (film)	14.9
Cleveland, Ohio	Perry Como (net)	34.3
Do	Dr. Hudson (film)	17.9

Furthermore, a comparison of network and film ratings for the same month in all cities listed in Pulse local ratings shows that the 15th ranked program enjoys a higher audience rating than any No. 1 ranked film program.

Any competent television man in the country will testify to the fact, as a rule, network programs furnish greater audience ratings. Programs such as those listed above prove this point. Therefore, since our ratings would drop with the suggested increase of film programing during premium hours, it seems clear that our service to the public would be lessened. Of course, ratings mean more advertisers, and more advertisers mean better service to the public. Conversely, low ratings mean fewer advertisers and poor service, because of the burden of financial pressure.

Third, the cost of such a project would be a matter to be considered seriously. It goes without saying that all of the 14 additional film programs we are discussing here would not be sold every night of every year. As a matter of fact, in the opinion of our salespeople and others who have been closely associated with our market, there would not be enough advertisers to go around for 14 half hours, much less 28 half hours, when both stations in the market are included. The cost of those programs not sold would be borne by the station.

WBRZ has been faced with this problem. During the first year of WBRZ's operation, the station purchased and ran on a sustaining basis—absorbing all costs of film—approximately 400 half hours of film programs at an average cost of $60 per subject, totaling approximately $24,000. Even at present, we are running sustaining one half hour in our best time on Wednesday night with one of the better programs offered by the film industry. For film, these facts paint a dark picture. If a burden of 14 additional half hours per week were placed on the station—and subsequently on sales—the outlook for television stations in markets the size of Baton Rouge would be bleak. Therefore, we must conclude that the cost of adding 1 hour of film programing nightly would be prohibitive.

Fourth, in our opinion the responsibility for the development of the television industry lies largely with the networks. Without proper attractions every night of the week, few people would watch television. High-quality network programs afford WBRZ entertainment which can be obtained from no other source than the networks. (Since we are affiliated with NBC and ABC we will mention programs of those networks.) We anchor our programing plans on such shows as the Alcoa-Goodyear dramas, on Sunday; Robert Montgomery Presents, on Monday; Fireside Theatre, on Tuesday; Disneyland, on Wednesday; Lux Video Theatre, on Thursday; This Is Your Life, on Friday; and Playwright Hour, on Saturday.

Remove these option-time shows from our schedule and WBRZ's program structure would be weak. During the hours of WBRZ's operations each day we make time available to the various public service agencies and to advertisers of the Baton Rouge area. After meeting these obligations, WBRZ is interested in taking as much network time at all hours of the day as possible. We feel that the networks have built widely viewed shows; we have agreed to run these shows at specified hours; and we are happy with the situation as it stands.

Fifth, it is the opinion of the WBRZ program department that we do not have in our employ a sufficient number of people to accommodate the additional programs involved in this discussion. Although much of the personnel angle is covered in another report, this department foresees administrative confusion if an increase of personnel were to be required over a short period.

In summary, we feel that if WBRZ were to replace an hour of network programing each night with one hour of film programing, the competitive position of the station in the eyes of the public would be jeopardized. A move of this sort would restrict the audience growth of the station's program services and, therefore, would bring about a serious drop in billings, which in turn would cause a cutback in program expenditures. Such a cutback would mean fewer desirable programs, less money spent on them, fewer viewers and less billings, etc. This cycle is never-ending, because audience and billings cannot be separated from each other. Similarly, the program service to the public is improved only when audience and billings are in good shape.

It follows that when this condition exists, the cycle mentioned earlier is reversed, and the viewing audience receives better television programs, whereas the same audience suffers through inferior entertainment under the former conditions.

When those of us who are familiar with the local television structure and the television film industry examine closely this matter, we find that:

(*a*) The film industry could not supply the increased demand of such additional programing.

(*b*) Our ratings would be lower.

(*c*) The cost of such a project would be prohibitive.

(*d*) Networks are largely responsible for the development of the television industry.

(*e*) Additional personnel would be required.

We must conclude that the idea of replacing an hour of network programing with an hour of film programing each night would be a poor idea and such a plan would serve no interest except that of the film companies, who already are selling all of the good shows they can produce.

COMMENTS BY DAVID M. BALTIMORE, WBRE-TV, WILKES-BARRE

The experience in our market, the Wilkes-Barre-Scranton market, may serve as outstanding evidence that the claims of those who would change the basis of network-station affiliation are neither well founded, nor are the changes in any way desirable. Whereas most of the claims are based upon such premises as "option time precludes the use of prime time by local or spot advertisers," or "option time and network controls preclude the use of film product in grade A times," or "network control of station prime time, and dominance of the television networks by a few advertisers has prevented true competitive television operations," the facts of operation in the Scranton-Wilkes-Barre market show that such claims are indeed far from being practical accusations.

Wilkes-Barre-Scranton originally were allocated a total of five television channels—all UHF. In addition, coverage was provided to part of the over-all service areas of the local stations by a station from Binghamton, a VHF station. WBRE–TV was among the first UHF stations to go into commercial operation in the Nation. Despite the VHF competition from without, television was an overnight success in the northeastern Pennsylvania area.

With good quality picture, and with strong network program support, set circulation and conversion rose rapidly to astounding figures. In 6 months, the second station went on the air, and provided additional network service. In 14 months there were 5 stations in operation in the area; there was 1 NBC affiliate; there was 1 CBS affiliate; there were 2 ABC affiliates, and there was 1 independent. Needless to say, Wilkes-Barre-Scranton had more television stations per capita than any area in the country.

This was more than Philadelphia, which covered a population over three times as large. This was more than Chicago, and more than any other city in the country except New York and Los Angeles. Indeed, the true competitive spirit was in full play. With each network getting full representation, and with independent operations available, the network advertiser was able to take advantage of his network's option time periods to get clearance for his program on the market. Furthermore, he had a choice of taking the market or leaving it, since all the network affiliates were optionals. Despite this freedom of choice, the network advertisers, for the most part, took the choice of adding the market to the list. Today there is hardly a network advertiser who does not use the market. Since that time also, WBRE–TV has been made a basic NBC affiliate in recognition of the work it had done as a pioneer UHF television operation.

The vendor of old feature films has had his field day in the Wilkes-Barre-Scranton market. With five stations to play against each other, and with large periods of time needing programing, the price of his film has largely been what the market would bear. And third, fourth, and fifth reruns of films have not been, and still are not, uncommon. Furthermore, when film packages have been offered, the film sellers have often been wont to talk about the "great names" available in their packages, ignoring the deadwood, the real "oldies," the so-called bottles of rum which had to be sold in order to get the scotch. Contrariwise, we have had no such problems with network film vendors, and we have bought from all network film subsidiaries. They have been cooperative, straightforward, and realistic in their relations with the stations. As of this moment, there is scarcely a half-hour film that has not played the market, and but for the choice of using reruns again and again, there is really a scarcity of new material in the market because of this intense competition to buy the film vendors' product.

In the feature-film field, the price is definitely what the traffic will bear, and because of the obvious legal inability to agree with other stations on price limits for a product, the stations are played against each other to make the prices higher and higher. The Wilkes-Barre-Scranton market has therefore provided the film producer and the network advertiser, both, full freedom of opportunity and choice in his selection of station, time and product.

What has this fiercely competitive picture meant, then, to the stations? And to the public? What has this allegedly dominant network control done to the stations and to the public?

To go back to the beginning, briefly, WBRE–TV started on the air with over half the nighttime sponsored, high-rated programs as part of its initial offering. This great program fare attracted more television viewers, whose boxcar numbers helped to attract more network sponsored programs. During the first year there were pitifully few sales of a program on a spot basis to a client, locally, regionally, or even nationally, because they were unwilling to put their money in a new, untried UHF market. There was not the tremendous clamor from the local advertisers to go on TV because it "cost too much money." And we might add here, parenthetically, that the intense local radio competition has taught local advertisers to play the stations against each other, too, looking for the rate break, the deal, the cheap buy. It was therefore, the network, and its national network sponsors who first supported WBRE–TV, when it was alone in the market. It was the national spot advertisers who bought "only network adjacencies" who paid the initial way of the station. It was the network and the national net advertiser who put the second station on the air and kept it there.

As I stated earlier, our Wilkes-Barre-Scranton market had five television stations in operation within 14 months after WBRE–TV went on the air. There is no greater mystery about competition in television than in any other field, and it is therefore no great surprise that 1 of those 5, an independently operated station, went off the air. It is perfectly obvious to anyone with business experience and a working knowledge of supply and demand that the results experienced in the market are in all respects normal. There is no warrant to look for "villains" for none are involved. Free competition was at work—and the market with the highest TV station count per capita in the world was suffering from, if it be possible, too much competition.

What has the public gained, then? It has had the greatest choice of programs available to any population group in the country. It has had the benefit of all the network programing available to anyone in the country, plus the greatest array of nonnetwork live and film fare that could be put together. It has made the area so TV conscious that our citizenry rely upon television in ever-increasing measure for their programing of religious programs produced on a local level. WBRE–TV was the first station to present a Catholic Mass as performed in a parish in the United States. It had the benefit of programs from the colleges, the high schools, the fraternal and civic groups. It had regional coverage of its news events as never provided before by any one medium, or by one unit of a medium. It had children's programs, and operas, and conventions, and nationwide news coverage, available only through live network facilities, never before available to it. It has sports, live; and news, live; and Peter Pan, live—Broadway, live. TV is a living medium. It has brought the world into the living room—much of it live, as only a national network facility can do it—and it has had its own area brought into its living room as it had never before had a chance to see it.

All of the foregoing comment can lead to only these conclusions. It is not networks who are to blame for the problems of the have-nots—those who tried and failed, those who were underfinanced, too inexperienced, too late, those for whom there still is no room. The most fundamental cause is still one of channel allocations. This problem is of such magnitude that it is probably beyond the scope of any man of lesser wisdom than King Solomon. The problem of allocations is also complicated by the problems of economics. In 1944, radio had only eight hundred-odd stations, after 20 years of operation. A short 10 years later it had multiplied to 3,000 stations. Television is young, comparatively. Given time to grow, along with the economic and population growth of the country, it too may support 3,000 stations or television's equivalent. In the meantime, it is no ticket to freedom from social-security dependency, and while many have prospered, and more will prosper, many will also fail. Their failure cannot be blamed on the very system which, more than anything else, has accounted for the greatness of present-day television.

I recommend, therefore, that the system of network operation which now exists, and which, almost singlehandedly, is responsible for the art of television as the public knows and benefits from it today, and for the developments which will make it bigger and more influential in the future, be left intact and encouraged to grow; and that the standards of coverage, affiliation determination, advertiser choice or requirement with respect to station selection, option time, network-station affiliation policy be encouraged, unregulated, and, most important of all—understood.

Statement of Nathan Lord, WAVE–TV, Louisville, Ky.

I am Nathan Lord. I am vice president and manager of WAVE, Inc., Louisville, Ky., which owns and operates radio station WAVE and television station WAVE–TV. Our radio station has been on the air since December 30, 1933, and our television station since November 28, 1948. Both are affiliated with the National Broadcasting Co.

At the onset I would like to point out that the only reason we are affiliated with any network is because we believe that networks are the best source for superior programs at a price to affiliates which they can afford, and we further believe that the furnishing of superior programs to the listening audience in our community is an inherent obligation imposed on us by our license to operate in the best public interest.

At one time our television station was affiliated with four networks—NBC, CBS, ABC, and Du Mont. The affiliation with CBS ended on March 31, 1950, when WHAS-TV, Louisville, Ky., took to the air. The affiliation with ABC stopped when our affiliation agreement expired by its own terms on December 31, 1954, and ABC told me it did not wish to renew it. The affiliation ended with Du Mont when that network ceased operations.

This committee has heard testimony concerning the relationship of stations and networks. Because some of the statements regarding the relationship between affiliates and networks infer practices allegedly not in the public interest, I wish to have this statement included in the record:

(1) There is no agreement existing between WAVE, Inc., and the National Broadcasting Co. classifying either of our stations as a must-buy station.

(2) There is nothing in our agreement with the National Broadcasting Co. concerning either of our stations that prevents us from accepting programs from other networks and sources.

(3) There is nothing in our contract with the National Broadcasting Co. in which we give this network options on 12 hours of time daily.

We operate our television approximately 17 hours a day and we option 9 television hours daily to the National Broadcasting Co.

No other hours are optioned to any other network, but other networks are free to offer us their programs in these same option hours, and if we accept their program first in these option hours, NBC has no contractual right to ask us to displace that program.

(4) There is nothing in our agreement with the National Broadcasting Co. which gives it exclusive access to our so-called best hours. At night we are not required to carry network programs later than 9:30 p. m., thus leaving free the time of 9:30 to 11 p. m. for nonnetwork advertisers.

At this point I would like to state that it is not always correct to characterize night hours as "best hours." It is generally true that more people are available to look or listen at night, and, therefore, as a generalization these hours are best for adult and child audiences. They are not best, however, for children's audience programs or women's audience programs, nor other programs for specialized audiences; nor are they best in which to telecast events which already have occurred, such as athletic contests, and other newsworthy matters.

So much for our contractual relationship with our network. There are a few additional observations I have which I hope will be useful to this committee.

(1) Film programs have a useful place in our television operations, but the people living in the area we serve did not really begin to buy television receivers in substantial quantities until we received our programing via the cable at the time the Louisville stations were connected to networks by cable in the early fall of 1950. Prior to that time our programing consisted of local live programs and network and other forms of programs on film and kinescope.

(2) Popularity rating statistics should not be the sole standards on which programs are judged, because if this were true then some of our best programs, and most of which originate on the network, would not have been seen. A network program originating live has a quality of particular value to the affiliate because of its prestige and identification with worthwhile matters in the fields of entertainment, education, and information. Contrarily, a film program is almost always a rented source of program material, and while a film is exclusive to the station during the period of the lease, it has no long-term asset value to the station.

(3) We have successfully operated under the present number of option hours and for the life of us we can see no reason for a change. Certainly there has been no pressure from the two groups that the station operator must always keep in mind, namely, (*a*) his audience, and (*b*) his customers.

At this point it might be well to explore the thought that a film syndicator could become a network if he so chose. To qualify as a network he would have to show a program simultaneously on two or more stations. Then to be successful, I presume he would have to provide an overall program service to affiliates, would have to sell this service to advertisers, and would have to guarantee the payments to affiliates. I know of no rule or regulation that would foreclose this opportunity to any film maker.

It is not correct to allege that three network presidents in New York possess and exercise the power to determine what television programs the American public may watch and what programs they may not watch during the prime viewing hours. This determination is made by network presidents, network program personnel, and hundreds of people at the network; and, additionally, by the operators of the individual television stations, and finally, and exclusively, by the television audience. It is not correct to state that the time option "becomes a device that enables the network companies to sell time for inferior programs." First, we do not concede, and I am sure our audience and our sponsors do not concede, that network programs are "inferior." We believe them generally to be the finest source of programs in the world. Secondly, the time option is a device which enables a network which operates a national service to deliver national circulation to concerns that desire to advertise their products and services nationally.

(5) As I have stated, film programs, including feature films made originally for showing in theaters and films made particularly for showing on television stations, are now, and I am sure will continue to be, a useful form of television programing. But there are certain features of renting film which are not always entirely satisfactory to the station operator, but the problems are not so great as to work against the use of film. I refer to the fact that frequently if a station wants 52 programs, he rents 39 programs and a repeat use of 13 of these 39 programs to make the 52. In the rental arrangement of feature films made originally for theater showing, there are occasions where it is necessary to accept certain features of a lesser quality than others because the films come in packages. I think the committee will be interested in knowing that in our overall television operation we telecast 31 hours of syndicated and feature films a week, of which 14⅓ are telecast at night. This would not indicate that our network programing service excludes film. Incidentally, we carry network service from NBC, ABC, and CBS.

(6) In certain other testimony presented to this committee it seems to me that I have detected an implied recommendation that the committee should equalize station service either at (*a*) the program level, or (*b*) the service area level (that is, the area in which the station's signal is used by the television audience), by reducing both of these to a lower denominator.

The only way to equalize service and to be of benefit to the American public is to equalize it by raising it to the top denominator and not to a lower one. It may take time to do this, as it took time to develop radio. Unfortunately, in the process of developing radio, engineering standards were allowed to deteriorate and some of the economic problems that radio faces today are a direct result of the fact that an orderly plan of development was abandoned.

Television, of course, is a very young industry and has not had a reasonable and fair chance to develop, and it is my opinion that if an orderly plan of development is abandoned now at this very early stage, the real interests to suffer will be the public interest because overall service will decline. It is very difficult to retrieve a sound position once it is abandoned, and I hope that the public will not be the sufferer because pressures may be so applied that sound judgment may be adversely affected.

If there is any part of our industry that would possibly need help because of economic distress it would be found in radio and not television, but I do not detect that radio networks and stations who have had declines in their income are knocking at the doors of Government to ask for help. I do find that these networks and stations are developing new approaches and methods and services, and thus are bringing about a change for the betterment in the economic life of radio.

Thank you for allowing me to present this written statement.

LETTER OF RALPH J. MCELROY, BLACK HAWK BROADCASTING CO., WATERLOO, IOWA

HON. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce,
Washington, D. C.

DEAR SENATOR MAGNUSON: Realizing the difficulty your committee is experiencing in scheduling people who desire to give testimony, we are pleased to acknowledge your request and submit the following statement, which we understand you will incorporate into the record.

The Black Hawk Broadcasting Co. operates a television station in Waterloo, Iowa—KWWL-TV—which is affiliated with the NBC television network, and acts as management consultant for a television station in Austin, Minn.—KMMT–TV—which is affiliated with the ABC television network.

Inasmuch as your committee is investigating network practices, as they relate to telecasting, I will confine my remarks to the following:

1. Network revenue.
2. Network programing service.

The areas served by KWWL–TV and KMMT–TV are primarily farm areas. Our cities are small and some distance apart. We have no great center of population. According to the 1950 census, Waterloo's population was 65,198 and Austin's population was 26,900. Merchants in the small communities, if they have any advertising budget at all, find it is too limited to afford television advertising. We, therefore, must turn to the national advertiser, who can use the circulation of an area station, if we are to operate profitably and serve in the public interest.

There are two sources of national advertising available:

1. National network advertising revenue.
2. National spot announcement and program advertising revenue. (In most instances, these spot announcements or programs are bought adjacent to network programs, and consequently are an integral part of network advertising revenue.)

As a result of the income derived from these sources, as well as some local and regional revenue, KWWL–TV and KMMT–TV have been able to operate and develop a program service of its own, which, in addition to the program service of the network, has had great appeal to the people of this area, as evidenced by the fact that over 80 percent of the homes in this area own television sets.

Our people of eastern Iowa and southern Minnesota receive a vast number of specialized programs from the network in the fields of culture, entertainment, sports, religion, and public affairs. Some of these cultural features are the NBC Opera Theatre, the Sadler Wells Ballet, Shakespearean dramas, Peter Pan, etc.; great entertainment features include the Steve Allen Show, spectacular series, Ernie Kovacs Show, Bob Hope Show, This is Your Life, Hit Parade, Perry Como, George Gobel, Lux Video Theatre, Ford Theatre, Dragnet, Wide, Wide World, etc.; great sports features include NCAA football games, world series, all-star baseball game, all-star football game, national open golf tournament, Cavalcade of Sports, etc.; great religious features include Outlook, Frontiers of Faith, etc.; great public affair features include the Republican and Democratic National Convention coverage, addresses by the President to the people of the Nation, congressional hearings, Youth Wants to Know, American Forum, News Caravan, etc.

As you can readily see, a great variety of programs are offered through network programing service. These programs can be developed only by a national network and fed live, instantaneously, across this great country to the people of our area. The cost, not only of origination, but A. T. and T. facilities, which are used in the transmission of programs, is so great that it is doubtful that even a group of stations could develop a "pool" service that would be economically practical for a local station to afford. As we know telecasting today, it would appear to be impossible for an individual station to replace these major programing efforts that are developed by the network and made available to the people of this area.

The National Broadcasting Co. has established what is known as the Program Service Plan. Under this plan, we are allowed to carry various sponsored programs on our station by deleting the commercial announcements. This is of tremendous importance, because, if the advertiser does not order the station, we are still able to deliver these programs to the people of this area and their service is comparable to that of the people living in the metropolitan area cities.

In addition to the above, I would like to point out that both KWWL–TV and KMMT–TV are operating in what is known as a three-station VHF area. Individually, they are affiliated with only one network. They compete with the other stations that are affiliated with the other two networks, constantly and intensely, for the attention of the public. This competitive system has developed good television service in this area and will continue to develop an ever improved service in the years to come.

Any interference with the practices of the network which would result in destruction of, or minimize the effectiveneses of its programing service, would definitely affect the people of eastern Iowa and southern Minnesota and cause them to suffer a great loss of television service.

I deeply appreciate the opportunity of making this statement before your committee and sincerely hope that any actions arising from this report will be measured from the standpoint of public service to the people of the area we serve.

Respectfully submitted

BLACK HAWK BROADCASTING CO.,
R. J. MCELROY, *President*.

LETTER OF WILLIAM J. MOYER

JUNE 19, 1956.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
United States Senate, Capitol Building,
Washington, D. C.

GENTLEMEN: The Wichita Television Corp., Inc., which operates television broadcast station KARD–TV on channel 3 at Wichita, Kans., respectfully submits this statement to your committee to express its views in connection with your current study of the operation of television networks. We had hoped to be able to participate directly in your consideration of network television through my testimony as vice president and general manager of our corporation, but your committee advised me that you would be unable to hear my testimony and indicated that a written statement for the record would be acceptable. For that reason this statement is being submitted and we are anxious to have it considered.

As a brief background, station KARD–TV commenced commercial operation in temporary studios on September 1, 1955. The station had obtained its construction permit from the Federal Communications Commission in June 1955, after a prolonged competitive hearing commencing in October 1952. At that hearing the corporation had proposed programing based upon an NBC affiliation, and after 8 months of unaffiliated or independent operation, station KARD–TV commenced operation with NBC programing and is presently the regular NBC affiliate for the Wichita area.

Commercial television began in Wichita with the operation of KEDD–TV, on UHF channel 16, on August 15, 1953. This station was the regular NBC affiliate for the area until May 1, 1956. The first VHF station in Wichita, KAKE–TV, on channel 10, commenced operation on October 19, 1954, and has been the ABC affiliate since that time. CBS has undertaken to serve Wichita from station KTVH on channel 12 at Hutchinson, Kans., since June 22, 1953. KARD–TV on channel 3, carried no network programs from September 1, 1955, to May 1, 1956, except for NBC programs carried during short periods when KEDD–TV was off the air because of technical difficulties. Our network agreement with NBC was entered into some time before May 1, 1956, so that our personal experience with network television has been over a period of several months and our careful observation of network television has, of course, extended over a period of years.

With this information as background, we want very much to express our views on what we believe are the principal points in your committee's study about which we feel we have some knowledge—the questions of network must-buy practices and of option time.

The option-time arrangements in the normal network affiliation agreement are, based upon our experience and observation, necessary if a healthy television service of benefit to the public, the station, and the network is to be maintained and expanded. Under present option-hour arrangements, the network has the reasonable assurance of time clearance at the same hour by enough stations to permit it to present to the advertiser sufficient circulation to make his expenditure for top quality programs economically sound, rather than having the cost per viewer become prohibitive. We are well aware that our primary function is to serve the public interest, but the realities of our system of broadcasting compel a recognition that this system obtains its support from advertiser revenues. If a network is not in a position to have reasonable assurance of time clearances, we believe it could not afford the extensive costs of developing high quality programs for presentation to advertisers, where networks develop their own programs, and similarly high quality programs would not be developed by others for submission to advertisers and broadcasting over the network. In other words, there is often a direct correlation between circulation and the quality of commercial programs, and without clearances which the option time arrangement reasonably assures, the development of many quality programs would be prevented.

KARD-TV has clearly experienced a great increase in audiences with the advent of its network programing. This increase in audience has, of course, contributed materially to the station's financial well-being. In addition, it has rendered a major benefit to the public service groups of the Wichita area. From the outset our station has been keenly aware of its public service obligation and has programed to meet the area's needs. For example, in its first 3 months of operation from temporary studios and on a nonnetwork basis, KARD-TV developed sustaining educational programs for regular broadcast with the University of Wichita, Friends University, Southwestern University, and the public schools of the area. Similarly, it developed regular religious, fraternal, charitable, and other public service programs during that period, all on a sustaining basis. Sustaining special events programs of these public service groups have also been frequently broadcast. Upon becoming an NBC affiliate, Wichita Television Corp. was not only able to continue all of these programs particularly designed for its own service area, but was able to increase such programs and, when the station moves into its permanent, enlarged studios in the next few months, will further increase this local public service programing. The NBC network service, which we believe has obtained its quality and hence public appeal because of the reasonable assurance of circulation given by option hours, will be a major factor, if not the major factor, in our ability to expand and improve what we consider to be the already high quality of our local public service programing. The reason for this is that the network programing attracts a large audience. Much of that audience is now available for our local public service programing. And the network programing not only attracts network advertisers, but agencies to that programing bring national spot, regional, and local advertisers, all contributing to the revenue with which to improve the quality of our locally originated programing, as well as the syndicated and other film programs we acquire. Consequently, there is an interdependence among the quality of network programs, local public service programs, and nonnetwork film programs, and an essential ingredient in the upgrading of all of these programs is the audience attracted by the quality of the network programs. That quality, as we have attempted to point out, stems from the ability to develop such programs because of option-time arrangements.

Whether there should be a modification in present option hours, we cannot say with any real certainty. But we think not. The present option-hour arrangements, including 3 out of each 5 hours in the designated segments between 8 a. m. and 11 p. m. of the broadcast day with exceptions for locally important programs, have resulted in developing a sound balance between network and local programs. We feel that KARD-TV has been able, under the present option hour arrangement, completely to fulfill its local public service responsibility simultaneously with bringing the best in entertainment and other categories of network and commercial and sustaining programs to our audience. Since this balance is now working very successfully, there would seem to be no need to increase the option hours. We feel the networks are doing a sound job with the present number of hours. On the other hand, since there is presently adequate opportunity for full local self-expression within a balanced schedule meeting our area's needs, it would seem unsound to reduce the number of option hours and thereby jeopardize the teamwork between our station and the network from which the public benefits so materially in our opinion.

While we have a contract with the network giving it first refusal on our option hours, our experience has been that these option hours have in no way handicapped us in rendering a sound local public service. At no time has the network insisted on its contractual rights for any given time segment in option hours. The network has, instead, always demonstrated a complete spirit of cooperation when discussing the probabilities of our having to preempt a network show for local programing reasons.

The second point with which we wish briefly to deal is that of the must-buy status of certain stations. KARD-TV is not within that group, but hopes to be in the not too distant future, because of additional programing benefits that will accrue our viewing audience. We are convinced that a basic group of stations as a "must-buy" results in an overall advantage to the public in the United States generally and to our station and the public in our area particularly. Just as option hours give an advertiser assurance of adequate circulation, so does a basic group of stations give a stability to the network to assure that advertisers will not use what is essentially a national medium to pick and choose a few markets where the advertiser may feel he wants particularly to make an impact, with the result that the network renders a piecemeal service. Advertisers seeking this type of coverage have available to them national spot programs to serve their specialized requirements. The basic list of stations gives circulation assurance bringing about the same benefits to the public, KARD-TV and other affiliates, the network, and the advertiser as are achieved by circulation obtained from option hours.

The committee may wonder why KARD-TV feels that a basic list of stations is important although we are not on that list. The explanation of this is quite simple. KARD-TV benefits directly because many advertisers buying the basic list will also buy our station, making excellent programs and revenues available to us. KARD-TV benefits substantially even though not so directly in those cases where it is not ordered by an advertiser taking the basic list because the support obtained by the network from such a basic list keeps network broadcasting healthy, with the result that the network has available funds not only for the development of fine commercial programs but also can make available excellent sustaining programs which no individual station could ordinarily develop. Consequently, we feel that the so-called must-buy group of stations results in improving the national and local programs we are in a position to offer our audience.

Whether the basic list for NBC or any other network should be 50 to 60 markets, or more, or less, we are not in a position to evaluate. But since we feel convinced that the principle of having such a basic list is sound, it would seem to us that the question of how many stations should be on such a list should be left to the evolutionary development which has brought it about.

In summary, these views have been submitted for whatever help they may be to your committee. Because we share with you the desire to have television broadcasting in the United States render the finest public service and recognize the obligation incumbent on all broadcasters to make whatever contributions they can to achieve that end, I would be glad at any time to appear before your committee to support this statement and give whatever additional information or views I may have which you feel might be useful in your present study of network television operations.

Respectfully,

WICHITA TELEVISION CORP., INC. (KARD-TV),
By WILLIAM J. MOYER,
Vice President and General Manager.

(COMMITTEE NOTE.—Additional witnesses were heard on July 17 and 18, 1956. but their testimony related primarily to allocations matters and is therefore printed in the second volume on the UHF-VHF allocation problem.

(However, during the appearance of the members of the Federal Communications Commission on July 17, 1956, the following brief references to matters relating to network practices were made:)

Mr. COX. Now, it has, I suspect, been quite clear—both in your appearances before this committee and in your more recent appearances before certain of the House committees—that there is a good deal of concern over the question of the division of responsibility between the Commission and the Antitrust Division of the Department of Justice with respect to antitrust matters, in terms of primary jurisdiction and concurrent jurisdiction with respect to possible violations of the antitrust laws. You will recall that the committee wrote to the Commission and to the Department of Justice asking for comments upon testimony of Mr. Moore regarding his opinions as to the validity of certain network practices. The replies of both agencies were put into the record and indicate, still, a feeling on the part of each that perhaps this is something that the other one should be looking into. I think since that time the committee has again written to each of the agencies urging renewed efforts to try to mark out the divisions of responsibility. Is the Commission presently pursuing any course of discussion with the Department trying to achieve that end? Maybe Mr. Baker can answer that.

Mr. McCONNAUGHEY. General Counsel can answer that.

Mr. BAKER. I can answer that, in this sense: That as you know, Senator Magnuson wrote us a letter and we were in the process of replying to that. That reply is just about ready, but because of the fact that it only represents my viewpoint and has not yet been coordinated with the Chairman and the Commissioners, I can't tell you whether that is actually the view. I expect that it will be in your hands in the very near future.

Mr. COX. We will have it then for the record. Thank you.[20]

---

[20] This letter appears in the appendix at p. 3114, together with a further exchange on this subject between Senator Magnuson and Chairman McConnaughey.

APPENDIX

1. LETTER DATED AUGUST 10, 1956, FROM DR. FRANK STANTON, PRESIDENT OF CBS, INC., SUPPLYING CERTAIN INFORMATION REQUESTED DURING HIS TESTIMONY

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y. August 10, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington. D. C.

MY DEAR SENATOR MAGNUSON: In the course of my testimony before the Senate Interstate and Foreign Commerce Committee on June 12 and 13, 1956, you, Senator Bricker, and Mr. Cox requested that I supply certain additional information for the record.

In my letter of June 22, 1956, I submitted, in accordance with your request, our views on a number of bills on the subject of political time.

Mr. Cox requested our comments on the testimony of Dr. Alfred (sic) C. Parker, director of communication for the Congregational Christian Church (tr. 3226). A copy of our comments is enclosed as exhibit A.

In response to questions by Senator Bricker as to whether or not CBS has a policy of giving equal opportunity to competing companies, I volunteered to provide an analysis that would indicate that those who want to buy time have been taken care of—at least insofar os competing companies are concerned. I suggested that "we take a number of commodity groups—automotive and soap and cigarettes—broad groups of classification of groups that are advertising, and show how those balance" (tr. 3203). At my request, the CBS Television Research Department has prepared a compilation of the 1955 gross expenditures for network television time in each of the following product categories:

Automotive, automotive accessories and equipment
Beer, wine, and liquor
Confectionery and soft drinks
Drugs and remedies
Food and food products
Household equipment and supplies
Industrial materials
Office equipment, stationery, and writing supplies
Radio, television sets, phonographs, musical instruments and accessories
Tobacco, tobacco products, and smoking accessories
Toiletries and toilet goods
Soaps and cleansers

I am enclosing exhibit B which includes a table for each such product category. Each table lists the name of each advertiser who used network television during 1955 for advertising any product in the category to which that table applies, the gross 1955 billings to each such advertiser for CBS television network time charges for advertising products in such category, and the gross 1955 billings to each such advertiser for all television network time charges for advertising products in such category. The information contained in each such table was obtained from the 1955 reports of Publishers Information Bureau.

Mr. Cox also requested information concerning the coverage of CBS owned and operated television stations. He requested (tr. 3340) that this coverage data be computed on the same basis as was used in computing the 99.2 percent figure in our statement (pp. 4 and 8—Network Practices, memorandum supplementing the statement of Frank Stanton, president of Columbia Broadcasting Systme, Inc.) "that 99.2 percent of United States families live in areas which are within range of at least one television signal." It is not possible to furnish coverage data for the CBS owned television stations on a strictly comparable basis since the national figure is based upon the extent of set ownership in counties (to determine whether at least one service is received) while any individual station figure is, of necessity, based on an estimate of that station's coverage area. However, I am informed by the CBS Television Research Department that if the computation of coverage of CBS owned television stations is made on a basis as nearly comparable as possible to that used in the computation which resulted in the 99.2 percent figure, television stations owned by CBS would have an aggregate coverage which would include 22.1 percent of the families in the United States. Exhibit C, enclosed, is a statement of the basis on which such coverage was computed.

Mr. Cox requested information concerning the proportion of the aggregate of the gross card rates of all commercial television stations in the country, represented by the aggregate of the gross card rates of all television stations owned by CBS (tr. 3345).

The June 10, 1956, issue of Spot Television Rates and Data, published by Standard Rate & Data Service, Inc., lists rates for 443 continental United States television stations. The aggregate of the highest hourly rates as shown in such publication for each of such 443 stations is $275,157.65. The aggregate of the highest hourly card rates, as shown in such publication for the four television stations owned by CBS is $15,700, or 5.7 percent of the $275,157.65 figure.

Mr. Cox also asked for the "rate of clearance" for certain CBS television network programs. Clearance data with respect to those programs are set forth in the enclosed exhibit D.

Schedule I to exhibit D shows clearance data with respect to Studio One, broadcast from 10 to 11 p. m. (Central New York Time) on Mondays and of 20th Century-Fox Theater, broadcast from 10 to 11 p. m. (Central New York Time) on Wednesdays.

Schedule II to exhibit D shows clearance data with respect to programs broadcast over the CBS television network in the 10:30 to 11 p. m. (Central New York Time) period on Sundays, Tuesdays, Fridays, and Saturdays. (The program broadcast in this time period on Thursday of the week which was analyzed was not sponsored.)

Schedule III to exhibit D shows clearance data with respect to all half-hour programs broadcast over the CBS television network between 7:30 and 10:30 p. m. (Central New York Time).

Each of the schedules shows for each of the programs listed therein:

A. The total number of stations ordered for network option time, the number of such stations which cleared for the time ordered, the number which cleared for option time other than that ordered, and the number which cleared for nonoption time; and

B. The number of stations ordered for nonoption time, the number of such stations which cleared for the time ordered, the number which cleared for other nonoption time, and the number which cleared for network option time.

Each of the schedules shows the percentage of clearance within each of such categories. In each case, the percentage figure shown is the percentage of total stations ordered represented by clearance in the category to which the percentage applies.

The schedules reflect clearance data on those interconnected continental United States stations which carried the respective programs during the week ended May 19, 1956 (as agreed with Mr. Cox) and whose contracts provide for option time. Because of the effect of daylight saving time throughout parts of the country, which may cause a distortion of clearance information with respect to some stations for particular programs, the data for said programs are adjusted to reflect the clearance status for the week ended April 28, 1956, the last week before the institution of daylight saving time.

Sincerely yours,

FRANK STANTON, *President.*

EXHIBIT A TO LETTER DATED AUGUST 10, 1956 TO SENATOR MAGNUSON FROM FRANK STANTON

On June 11, 1956, in testimony before the Senate Committee on Interstate and Foreign Commerce, Dr. Everett C. Parker, director of the office of communication of the Congregational Christian Churches, made certain charges with respect to the quantity and character of religious programs offered by television networks. Dr. Parker also testified concerning children's programs. The committee has requested comment by CBS on Dr. Parker's testimony.

The substance of Dr. Parker's testimony concerning network religious programs is that they are inadequate in number, broadcast at inappropriate time periods, and based on an improper allocation of time among the various religious faiths. He further states that creative production and promotion of network religious programs are lacking. Many of the charges made by Dr. Parker are based, essentially, upon his particular viewpoint. Needless to say, the viewpoint of an individual whose chief concern is with religious matters will inevitably differ from those who have the responsibility of providing suitable balance in all areas of programing.

Each of the central arguments raised by Dr. Parker will be specifically discussed in this statement. At the outset, however, it is appropriate to describe the general policy of CBS in regard to religious programs and the manner in which they are treated. The policy of CBS, as applied to television programs, is not only to provide time for religious programs, but to assist religious groups in the production of programs. Because of the particular requirements of television production, in most cases an effective program requires the advice and close cooperation of personnel experienced in the techniques of television. For this reason, the development of each CBS television network program is a mutual undertaking on the part of religious agencies or leaders and network personnel.

Religious programs are not available for commercial sponsorship. The amount of time devoted to all religious programs is governed by a considered evaluation of what constitutes a balanced program structure. Because religion plays an important role at both the national and local level, it is expected that network and local religious programs will supplement each other. The amount of time devoted to particular faiths and denominations is determined in accordance with a policy of overall fairness. Allocation of network time is made in proportion to the memberships of the faiths and denominations, taking into consideration the composition of the audience of the medium and adjusted to allow somewhat less time to groups whose members are heavily concentrated in one area or region (with the result that, in practice, such groups receive greater consideration at the local level). This method of allocation was worked out for CBS Radio's Church of the Air series by its board of consultants, the group of religious leaders who serve as an advisory body for Church of the Air.[1]

This policy is administered for both CBS radio and CBS television by the CBS News and Public Affairs department. The director of educational and religious broadcasts of CBS News and Public Affairs, Dr. George Crothers, is charged with the immediate responsibility for religious programs. Dr. Crothers has had more than 8 years' experience in the field of religious programing for radio and television.

At the present time, the CBS television network offers two weekly half-hour religious programs: Look Up and Live, broadcast on Sunday from 10:30 to 11 a. m., New York time; and Lamp Unto my Feet, broadcast on Sunday from 10 to 10:30 a. m., New York time.

Look Up and Live is designed principally for young people between the ages of 13 and 20 years who do not regularly attend church services. The series presents popular entertainers and religious leaders who are specialists in youth problems. It is produced in cooperation with Protestant, Catholic, and Jewish agencies. Entertainers who have appeared on Look Up and Live include Dave Brubeck, Maria Tallchief, Marion McPartland, Lionel Hampton, Mahalia Jackson, Mitch Miller, and Ethel Waters. Among the many members of the clergy

[1] This group is referred to in Dr. Parker's testimony as the advisory committee. Dr. Parker is a member of this group. The other members of the board are: Fredrick Essex, director, press and publicity, American Baptists Convention; the Reverend Timothy Flynn, director of radio and television communications of the archdiocese of New York; Dewitt John, chief of the news and radio division, committee on publication, First Church of Christ, Scientist; David Wise, radio director of the Union of American Hebrew Congregations; Dr. Harold Hammond, director of public relations for the National Lutheran Council; Dr. Ralph Stoody, director of the office of Methodist information; Rev. Dr. Clayton Griswold, chairman of the department of radio and television of the Presbyterian Church, U. S. A.; Rev. Dr. James Hoffman, stated clerk of the Reformed Church in America; Rev. Paul M. Stevens, director of the radio and television commission of the Southern Baptist Convention; Elder Stephen Richards, member of the Council of Twelve of the Church of Jesus Christ of Latter Day Saints; Rev. Dana Forrest Kennedy, executive secretary of the National Council of Episcopal Churches; and Rev. Dr. Hampton Adams of the Park Avenue Christian Church, Disciples of Christ.

who have appeared are the Reverend Lawrence McMaster, of Oxford, Pa.; the Reverend Charles Templeton, formerly director of evangelism for the National Council of Churches of Christ, and secretary for evangelism of the Presbyterian Church, USA; the Very Reverend James Pike, dean of the Cathedral of St. John the Divine; Monsignor John Dougherty, of Darlington, N. J.; and Rabbi Arthur J. Lelyveld, national executive director of the B'nai B'rith Hillel foundations.

Lamp Unto My Feet, which has been broadcast on the CBS television network since November 1948, presents each week a short dramatization of moral and ethical problems of everyday life, followed by a discussion of various aspects of the problems by clergymen and other religious leaders. Particular programs have included Unto These My Brethren, presenting the television debut of Pauline Flanagan of the Ireland Gate Theatre and the Irish Players; No Pets Allowed, featuring Judith Evelyn; scenes from Good Friday by John Masefield; and The Other Cheek by Howard Rodman. Among the members of the clergy who have appeared are Dr. Philips Packer Elliott, minister of the First Presbyterian Church of Brooklyn, New York; Rabbi Samuel Penner, of Congregation Beth Israel, Philadelphia; Bishop John Wesley Lord, resident bishop of the Boston area of the Methodist Church; and Father Thurston Davis, associate editor of the Catholic weekly America. The program frequently departs from its usual format and has featured dramatic readings by Siobhan McKenna and Fritz Weaver and interviews with Premier U Nu, of Burma, on Buddhism and historian Arnold Toynbee.

THE CHARGES MADE BY DR. PARKER

1. Dr. Parker states that there is insufficient time devoted by television networks to religious programs (transcript, p. 3071–3072). In addition to its two regularly scheduled weekly programs, the CBS television network offers special religious programs for religious holidays such as Christmas and Easter services. Consistent with the belief that religious programs are, in part, the responsibility of local stations, all CBS owned stations, both radio and television, broadcast local religious programs.[2] Some of the local religious programs broadcast by the four CBS-owned television stations are described in appendix D of the document entitled "Network Practices, Memorandum Supplementing Statement of Frank Stanton, President, Columbia Broadcasting System, Inc." supplemental memorandum which was submitted to the committee on June 12, 1956, at the time Dr. Stanton testified.

In the judgment of CBS, its current practices with respect to the amount of time made available for religious programs more than adequately meets its responsibilities in this area. In the case of each of its owned television stations there is some religious programing—either network or local, or both—regularly scheduled on each day of the week.

2. Dr. Parker argues that religious programs are relegated to relatively poor listening periods and are usually broadcast on Sunday (transcript, p. 3092). The difficulty with this argument is that it ignores the fact that Sunday is generally the most suitable day of the week for most religious programs. While religious programs are not intended as a substitute for church attendance, in many cases, where for a variety of reasons persons are unable to attend church, they may in fact serve as a substitute. Furthermore, because of the inspirational and devotional nature of religious programs, it would seem clearly inappropriate to schedule them adjacent to programs of an entirely different character and purpose.

3. Dr. Parker criticizes the practice of allocating time to various faiths and denominations on a rotating basis. He states that the representation of faiths on CBS radio's Church of the Air is "arbitrarily determined by CBS" (transcript, p. 3074). He argues that "segmented scheduling" of religious broadcasts prevents the development of sustained audience interest (transcript, p. 3082).

As previously noted, the CBS policy of rotational representation of religious faiths was devised in consultation with members of the clergy. It is based on a formula concurred in by them and which has served satisfactorily for a num-

[2] Dr. Parker acknowledges that the "vast majority" of stations provide religious programs of a local nature (transcript, p. 3075).

ber of years for Church of the Air. In these circumstances, it is difficult to understand how it can be considered to be arbitrary.[3]

The arguments raised by Dr. Parker with respect to "segmented scheduling" ignores one fundamental factor which is basic in considering religion and broadcast media. A principal effort of a broadcaster in providing religious programs is the promotion of understanding of different faiths. One means of achieving this aim is to provide for the representation on a single religious program of various religious groups on a rotating basis. The wisdom of the conclusion that multidenominational programs are appropriate is borne out by the considerable volume of mail received from viewers and listeners which commends talks by clergymen representing faiths other than those of the letterwriters. It appears that, to a considerable degree, the audience for religious programs is composed of people who are looking for a general religious approach rather than their own denominational viewpoint.

In commenting on the representation of faiths on CBS television network religious programs, Dr. Parker leaves the impression that for a period of 23 weeks out of the year, Protestant groups were not represented (transcript p. 3071) Since Lamp Unto My Feet does not represent the effort of a particular religious group it is apparently discounted by Dr. Parker. As previously noted, Lamp Unto My Feet regularly presents ministers and other religious leaders. Accordingly, taking into consideration both of the CBS television network religious programs, during the 12-month period from June 1955 to June 1956, Protestantism was formally represented during 46 of the 52 weeks.

Dr. Parker refers to the "downgrading" of religion on network television (transcript p. 3076) and the reduction of religion on network television "to a position of less than one-third the importance it has held on radio * * *" (transcript p. 3074). In fact, the CBS radio network has for many years originated 2 weekly half-hour programs (Church of the Air), supplemented by the Salt Lake Tabernacle Choir, a weekly half-hour devoted principally to religious music. As previously noted, the CBS television network originates 2 weekly half-hour programs. This does not appear in any sense to constitute "downgrading" and certainly does not constitute a reduction "to a position of less than one-third the importance it has held on radio."

4. Dr. Parker makes a number of charges directed at the production and promotion of network religious programs.[4] Dr. Parker's statement that "In no network do the leading creative minds work on religious programs" (transcript p. 3085) is at variance with the facts. Dr. Crothers has had extensive experience in religious programing. He is a graduate of a church affiliated college and holds master of arts and doctor of philosophy degrees from Columbia University. Irving Gitlin, director of public affairs for CBS News and Public Affairs, who supervises the production of Lamp Unto My Feet and Look Up and Live is widely experienced not only in religious programing but in al phases of public affairs programing.[5] The producer of Lamp Unto My Feet is also an accomplished writer and actress. The director of Lamp Unto My Feet has recently returned to CBS News and Public Affairs after serving by invitation as director of the Little Theater in the Round in Dallas, Tex. for 6 months. The producer of Look Up and Live has been with CBS for 10 years and has served as a producer for CBS News and Public Affairs for the past 2 years. The director of Look Up and Live has been a CBS television director for 2 years and has been associated with several CBS television programs, including Toast of the Town. Among the writers whose work has been used on the CBS television religious programs are Horton Foote, Harold Rodman, Charles Norman, Clair Roskam, Jerome Coopersmith, Paul Tripp, and David Driscoll, all of whom are respected writers for television and other media. Clearly, under any reasonable interpretation of the term "leading creative minds" used by Dr. Parker, the individuals associated in the production of these programs would qualify.

Dr. Parker criticizes the use of a church service format for religious programs (transcript p. 3072). Without commenting upon the validity of this conclusion, it is sufficient to state that the CBS television network programs do not adhere

---

[3] On one occasion, in 1948, the number of programs of the Church of the Air series assigned to the Congregational churches, which Dr. Parker represents on the board of consultants, was reduced by one without previous consultation with him. This instance was a deviation from the normal practice.

[4] The appendix hereto contains excerpts from reviews of Lamp Unto My Feet and Look Up and Live which refute Dr. Parker's charges concerning the production qualities of these programs.

[5] Among the many programs for which Mr. Gitlin has been responsible is The Search, a public affairs series the production of which is described in Appendix B to the Supplemental Memorandum.

to a church service format and CBS radio's Church of the Air series, while containing some of the elements of some Protestant services (liturgical music, prayers, scripture readings, and a religious talk), does not in any sense conform to Jewish or Catholic services when those faiths are represented. The subject is one that has been frequently considered. As recently as May 1956, the Church of the Air board of consultants discussed a change of format at the suggestion of CBS, but the consensus was that the program should retain its sectarian values.[6]

Dr. Parker states that "Program costs of network religious programs typically are borne [sic] by the religious group to which the network allocates time" (transcript p. 3084). He admits, however, that "CBS pays a substantial share of the talent costs for Look Up and Live, and all expenses of its house-sponsored Lamp Unto My Feet" (Ibid.). As a matter of fact, CBS pays *all* costs for both programs.

Dr. Parker attributes the greater acceptance of series produced by church councils to "vigorous promotion" by those groups, an "advantage" which he asserts church groups do not enjoy on network programs (transcript p. 3083). On the contrary, there are numerous "promotional advantages" inherent in religious programs on the CBS television network. Each week, a descriptive press release for each program is distributed to approximately 1,200 publications. Picture coverage and feature material are supplied. In addition, a certain amount of on-the-air promotion is provided.

5. Dr. Parker also makes certain charges concerning the effect of television programs on children.[7] His remarks were not directed at specific programs, but dealt in general terms with allegations of excessive violence and emphasis on crime in dramatic programs. CBS is fully aware of its responsibilities in this area. It is the general policy of CBS not to schedule programs that are considered inappropriate for children during hours when children are likely to be watching television. Through its editing departments, close supervision is maintained over all programs to assure that excessive violence and emphasis in crime is avoided. It is rare indeed that violence "is slipped in because it is a quickly written script" (transcript, p. 3102).

In the final analysis, the positive evidence that CBS television is dealing appropriately with this problem is its schedule of programs and the content of those programs. Currently being broadcast in the early evening hours are such programs as Robin Hood, My Friend Flicka, Gene Autry, and CBS Cartoon Theater. Six hours of CBS television network time each week are devoted to Captain Kangaroo, a children's program that consciously and consistently avoids all suggestions of violence and crime.

In many respects the problems of appropriate program content for children go far beyond the matters raised by Dr. Parker. Thus, for example, programs that are pitched at a high moral level may be so realistic and intense as to invoke undesirable emotional reaction from small children. On the other hand, a traditional puppet show may have numerous villains and considerable violence yet result in no emotional disturbances whatsoever. These are problems that can be considered only in the light of specific situations. This is precisely the manner in which they are treated by CBS television.

Appendix to Exhibit A—Extracts From Reviews of Lamp Unto My Feet and Look Up and Live

LAMP UNTO MY FEET

"Lamp Unto My Feet, a CBS–TV Sunday afternoon presentation, symbolizes one of the primary missions of television itself—public service with no ax to grind. It has no commercial sponsorship, could hardly accept underwriting without sacrificing its objectivity, and is as much in the public interest as any program in TV or radio."—Variety, December 5, 1951.

[6] Dr. Parker characterizes the Church of the Air board of consultants as a "front" and states that it meets only once a year (transcript, p. 3073). Aside from the unfair implication cast upon the members of the board by Dr. Parker's characterization, the fact is that while the board meets formally only once a year, the producers of religious programs are frequently in touch with individual members of the board (either in person or by telephone) concerning the planning and production of particular programs and for discussion of overall aims of religious broadcasting.

[7] In this portion of Dr. Parker's testimony appears the statement that there is no network religious program for children (transcript, p. 3100). As stated previously, Look Up and Live is designed for young people between the ages of 13 and 20.

"* * * [T]he playlet had loads of dramatic zing. * * * This session had impact and followed a highly rewarding pattern of public service programing at CBS–TV, which rarely falls short of its goal in that regard."—Variety, February 9, 1955.

"* * * Lamp Unto My Feet (10 a. m.) is one of the handful of topnotch dramatic shows in TV. Its themes range from the Christian ethic in labor disputes to the ways in which psychiatry can complement religion in comforting troubled hearts."—Harriet Van Horne, New York World-Telegram and Sun, September 13, 1955.

LOOK UP AND LIVE

"With all forms of religion having taken a greater interest in youth and youth activities over the past decade Look Up and Live shapes as a natural facet of religious programing that should win plaudits all the way round—from church groups, lay organizations, parents, and from teen-agers themselves. The latter is the most important group, for they comprise the viewers CBS Director of Religious Programing Dr. George Grothers [sic] has fashioned the show with an eye toward. * * * Everything about the show smacks of smart programing, from the tele and from the religious standpoint. There's a maximum of entertainment and a minimum of moralizing. Show stresses what religion has to offer young people without making any demands upon them. In line with that, program presents an award every week to a young person who's been most active in his or her community. Initial scroll went to a girl from Manhasset who wrote, composed, and directed an operetta given in her parish. Program will devote itself to all three major faiths.

"On the technical side, Producer-Director William Workman brought it all off without a hitch. Camera work was smooth, other production values simple but good, and Workman succeeded in creating an atmosphere of informality that gives the show an aura of pleasantness that's lacking in most other religious stanzas."—Variety, January 13, 1954.

"Jazz turns up in the strangest places on TV. Last Sunday on CBS–TV's morning show, Look Up and Live, jazz was used as the text for a religious sermon which is about as far removed as one can get from its earthy beginnings in the Storeyville section of New Orleans. But despite the rather highsounding title of the show, 'The Theology of Jazz,' it was an excellent session of music as furnished by the standout modern jazz combo, the Dave Brubeck Quartet. There was also an intelligent interview of Brubeck by Rev. Lawrence McMaster, of the Oxford, Pa., Presbyterian Church, who used the jazz form as a parallel to religious ideas. The theology was neatly woven into the show as Brubeck's crew illustrated various fugal and rhythmic patterns typical of its style. The basic idea was to show that jazz, like religion, permitted man to express fully his individuality."—Variety, August 31, 1955.

Exhibit C to Letter Dated August 10, 1956, to
Frank Stanton

The basis of the computation of coverage of CBS-own
referred to in the above letter is as follows:

(a) For stations in operation in November 1953 (New York,
Angeles), a county was considered in the service area of a statio
either of two conditions:

(i) It was the home county of the station. (A "home county"
in which the station is located, except in the case of New York
the home county includes the five counties within New York City.)

(ii) The percentage of total families in the county which could
the station was at least one-quarter of the percentage of total famil
the home county which could receive the station, according to the spe
study done for CBS Television by the A. C. Nielsen Co. in November 19

(b) For the station not in operation in November 1953 (Milwaukee), a count
was considered in the service area of that station if more than half of the county's population fell within the estimated 1,600-microvolt contour of the station.

(c) If a county was considered in the service area of a station, it was assumed that all families within that county could receive service from that station.

(d) Total United States families and total families within the respective service areas of the stations are as of January 1, 1956, and are taken from the Sales Management Survey of Buying Power.

Exhibit D to Letter Dated August 10, 1956, to Senator Magnuson From Frank Stanton

Schedule I

Studio One—Monday, 10 to 11 p. m. CNYT

	Ordered	Cleared	Percentage

2. Letter Dated August 27, 1956, From Dr. Stanton Further Clarifying One Point Covered in the Letter of August 10 (See Preceding Item)

Columbia Broadcasting System, Inc.,
New York, N. Y., August 27, 1956.

Hon. Warren G. Magnuson,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

My Dear Senator Magnuson: This is written in response to your letter of August 17, 1956.

On the basis of total households in the United States having 1 or more television sets, CBS television research estimates that 25.4 percent of these households are within the range of the signals of CBS-owned television stations. This figure is based on the assumption that all of the television households within the coverage area of a station can receive that station, a situation which does not prevail in the case of our UHF station in Milwaukee, WXIX. Applying a UHF conversion factor in this area, the percentage of total television households in the United States within the range of a signal from CBS-owned television stations is reduced from 25.4 percent to 25.2 percent.

I trust this information answers the question raised in your August 17 letter. If you have any question about these figures or any other questions about the material we have supplied, please do not hesitate to get in touch with me.

Sincerely yours,

Frank Stanton, *President.*

3. Letter Dated June 27, 1956, From Dr. Stanton (Inserted in the Record on July 17, 1956) Elaborating on Certain Points in His Testimony

Columbia Broadcasting System, Inc.,
New York, N. Y., June 27, 1956.

Mr. Kenneth A. Cox,
Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

Dear Mr. Cox: During my testimony before the Senate Committee on Interstate and Foreign Commerce you raised a question, transcript, page 3365, concerning the termination by the CBS television network of its affiliation with KJEO–TV in Fresno and its affiliating instead with KFRE–TV in the same city. You referred to chart XVI (p. 69) of our supplemental memorandum entitled "Network Practices," and you asked whether we had not "created an overlap problem for [ourselves] by shifting" this affiliation. I replied that "We have increased the overlap in one direction, I would say. At the same time, however, we have filled in much more area than was served before by the UHF station, KJEO–TV * * * to the south." You then asked whether this area to the south was "not now covered by KERO, from Bakersfield." I responded, "Well, KERO is not the affiliate in Bakersfield according to this map." In answer to your question whether KERO–TV did not have a dual affiliation, I replied, "Well, it is a primary NBC affiliate. KBAK–TV is the affiliate that we are talking about."

I based this reply on a CBS television map which I had before me, rather than chart XVI. The map which I had before me designated KBAK–TV, rather than

KERO–TV, as the CBS television network affiliate in Bakersfield. I now find that this map was somewhat premature. The fact is that we were at the time of my testimony contemplating affiliating with KBAK–TV, the UHF station, since it fitted in very well with KFRE–TV, minimizing overlap. Subsequently, the CBS television network has made the formal determination to seek a primary affiliation with KBAK–TV.

In any event, I should note that the substance of my answer to you—that our affiliation with KFRE–TV "improves the service of the network"—remains true.

Station KERO–TV in Bakersfield is a VHF station which is a primary affiliate of the NBC television network and only a secondary affiliate of the CBS television network. While KERO–TV carries 8 hours per week of nighttime CBS television network programing and 14¾ hours of daytime, there are an additional 8 hours nighttime commercial programs per week and 7 daytime ordered by CBS television network advertisers for KERO–TV, which that station is not clearing.

Because KERO–TV is a primary affiliate of the NBC television network, the question of overlap of its coverage area by KFRE–TV's coverage area did not play a critical part in the determination to affiliate with KFRE–TV. The CBS television network does not normally take into account the question of overlap with stations which carry some of the network's programs but which are primary affiliates of another network.

Further, as our files relating to KFRE–TV, which you have examined, indicate, it was the opinion of both the research department and the engineering department of the CBS television network that KFRE–TV would considerably strengthen our coverage in the area. You will recall that in his testimony while I was on the stand, Mr. Lodge pointed out that measurement by whole counties minimizes the effect of the gain achieved by shifting to KFRE–TV. The research department estimated that KFRE–TV gives us coverage of an additional 77,100 families not covered by KJEO–TV. It was also the opinion of the research and engineering departments that there would be improved service rendered by KFRE–TV within KJEO–TV's accredited area—even within Fresno itself.

In summary, our decision to affiliate with KFRE–TV was based on our judgment that there would be improved service to more people without significantly increasing the problem of overlap with any existing primary CBS television network affiliate.

I trust that this clarifies the record.

With all good wishes.

Sincerely yours,

FRANK STANTON, *President.*

---

4. LETTER DATED JUNE 22, 1956, FROM DR. STANTON [INSERTED IN THE RECORD ON JULY 17, 1956], COMMENTING ON PENDING LEGISLATION RELATIVE TO POLITICAL BROADCASTING

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y., June 22, 1956.

HON. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

MY DEAR SENATOR MAGNUSON: In the course of my testimony before the Senate Committee on Interstate and Foreign Commerce on June 12, 1956, you referred (transcript p. 3324) to "this very timely and ticklish problem of political time" and you also referred to a number of bills on the subject. You requested that I submit our views in writing. I am glad to do so.

The bills are as follows: S. 771, S. 1208, S. 1909, S. 2306, .S 3308, and S. 3962. The latter three deal with the perplexing problem of equal time. Before turning to those three bills, I would like to discuss the first three bills which deal with more limited subjects.

1. S. 771: This bill proposes to withdraw the equal-time rights of section 315 (a) of the Communications Act of 1934 from any individual who has been convicted of subversive activities and from members of certain subversive organizations.

While CBS has no objections to the principle embodied in this bill, I call to your attention that the bill apparently places a difficult and heavy burden on the broadcaster since it seems to require him to determine in each case whether anyone claiming rights under section 315 has been convicted of subversion or, even more difficult of ascertainment, whether he is a member of certain subversive organizations. As you know, it is not often simple to determine the question of membership. Broadcasters have no investigative facilities which would permit them to assume this burden. I believe, therefore, that as drafted, the bill will be very difficult of administration by broadcasters.

2. S. 1208: This bill proposes to amend section 315 so as to relieve a licensee of liability on account of defamatory statements made in a broadcast by a political candidate unless the licensee participates in such broadcast with intent to defame. The purpose of this bill is to relieve broadcasters from the apparent dilemma of being required under section 315 to permit broadcasts by political candidates in certain circumstances, and also being forbidden to censor such broadcasts.

CBS supports the principle of S. 1208, although I would point out that (*a*) it is not clear that Federal legislation can exempt broadcasters from liability under State laws, and (*b*) the risk of suits for libel and defamation do not appear to be great. As a practical matter, CBS has had no serious difficulty and has not found the problem a grave one. Political candidates have almost invariably been cooperative and have voluntarily deleted statements which we thought might be defamatory or libelous, even though we have had no power to insist on such deletions.

3. S. 1909: This bill would amend section 315 by requiring that any political broadcast must "include an announcement of whether the speaker is speaking extemporaneously or from prepared material, and what facial makeup, if any, is being used by the speaker while making the broadcast."

We have no comment on this bill, since it does not seriously affect us as broadcasters. I would only point out that it would seem to be discriminatory against broadcast stations, since it would require a degree of candor for this medium which is not required for any other public appearance by a candidate.

I now turn to the bills which would deal with some of the aggravating and perplexing problems which have arisen under section 315 of the Communications Act. Section 315, as you know, now provides that if a broadcasting station permits "a legally qualified candidate for a public office" to use that station, it shall afford equal opportunities to all legally qualified candidates for the same office. While section 315 would appear to be rooted in the soundest principles of equity and fair play, I think it is indisputable that it has had unanticipated and extremely undesirable results. It has tended to stifle and suppress public information and knowledge, and its consequence has been to inhibit radio and television from fulfilling to the fullest potential their roles of informing the electorate.

CBS has for some time proposed amendment of section 315 in order to minimize some of these undesirable consequences. S. 2306, S. 3308, and S. 3962, each to a greater or lesser degree, improves the present situation. I will discuss them in order.

4. S. 2306: This bill proposes to amend section 315 by making the equal time requirements inapplicable to "any news, news interview, news documentary, panel discussion, debate, or similar type program where the format and production of the program and the participants therein are determined by the broadcasting station, or by the network in the case of a network program * * *."

In other words, as far as set campaign speeches or political rallies are concerned, section 315 remains just as it is. But in the instances specified in the bill, the broadcaster has leeway in the exercise of his journalistic function so that he can concentrate on the main issues and the main candidates without providing time in such programs for the candidates of splinter parties. And it is to be noted that in 1952 there were 18 different parties with presidential and vice-presidential candidates.

CBS supports S. 2306, which as a matter of fact was introduced at the request of CBS. A full discussion of the bill and the reasons which led CBS to support it are set forth in recent testimony of Richard S. Salant, CBS vice president, before the Subcommittee on Transportation and Communications of the House Committee on Interstate and Foreign Commerce. I am attaching a copy of Mr. Salant's testimony as exhibit A.

5. S. 3308: Title III of S. 3308 is a limited amendment to section 315. It leaves exactly as it is today the existing law governing the use of broadcast facilities by all legally qualified candidates for public offices except insofar as candidates for the offices of President or Vice President are concerned. For such candidates S. 3308 would apply the equal-time requirement only if (*a*) they are the nominees of a political party whose presidential candidate polled at

least 4 percent of the vote in the preceding presidential election, or (*b*) if their candidacy is supported by petitions numbering at least 1 percent of that vote.

Thus S. 3308 takes one very useful step forward: it relieves the broadcaster of the requirement that equal time be granted to presidential and vice presidential candidates of fringe parties.

CBS believes, however, that there are serious omissions in title III of S. 3308. It provides no relief in the case of candidates for the nomination for the Presidency, nor does it provide relief in cases of campaigns at any level other than the Presidency or Vice Presidency.

It is obscure candidates for the presidential nomination, even of major parties, who have given broadcasters some of their gravest difficulties. Some of the actual experiences on this score are set out on pages 5 to 8 of Mr. Salant's testimony attached as exhibit A. The short of it is that anybody who wants the presidential nomination of the Democratic or Republican parties today has equal right to President Eisenhower, if the Republican nomination is desired, or to Governors Stevenson and Harriman or Senator Kefauver, if the applicant claims he wants the Democratic nomination. There is no limit to the potential candidates. It seems to me in the circumstances that relief in respect of candidates for nomination is imperative.

I also point out that S. 3308 does not have the same limitations as S. 2306; the former applies even to set campaign speeches and political rallies. On the whole, we believe it more desirable to limit exemptions to the types of programs specified in S. 2306. If equal-time requirements are to be preserved at all, it is more desirable that when time is given free to candidates to use however they please, the equal-time requirements should apply to all competing candidates for the same office.

6. S. 3962: This bill proposes a comprehensive amendment to section 315. It embodies some important steps forward; but it also embodies one extremely disturbing proposal.

It would leave section 315 precisely as it is now but would add several new subsections, as follows:

Subsection (b) (1) of the bill deals only with nominees for President and Vice President and is substantially identical to title III of S. 3308. In effect, it applies the equal-time requirements only to presidential and vice presidential candidates nominated by major parties.

Subsection (b) (2), however, is in addition to what appears in title III of S. 3308 and represents an important improvement. It expressly applies to candidates for presidential and vice presidential nomination. First, it imposes equal-time requirements on candidates for such nomination only if the nomination is by a major political party. Second, subsection (b) (2) provides that the candidate for such nomination by a major political party is not entitled to the benefits of the equal-time requirements unless he (*a*) is the incumbent of any elective Federal or statewide elective office, or (*b*) has been nominated for President or Vice President at any prior convention of his party, or (*c*) is supported by petitions including at least 200,000 valid signatures.

Thus, subsection (b) (2) of S. 3962 would cure the defect I have noted above in connection with title III of S. 3308, since it would relieve broadcasters of the requirement of giving equal time to unknown or unsubstantial candidates for the Democratic or Republican presidential nomination.

I should note some reservations concerning subsection (b) (2). It appears to me that the definitions of eligibility are somewhat inflexible. Had these provisions been in effect in prior campaign years, we would have had to demand petitions with 200,000 signatures before General Eisenhower, Wendell Willkie, Herbert Hoover (in 1928), or John W. Davis could have qualified for a broadcast appearance as a candidate for presidential nomination of their respective parties, for none was an incumbent of any elective Federal or statewide elective office, and none had been nominated for President at any prior convention.

We think it more desirable to avoid embarrassing problems such as this by allowing the broadcaster some limited discretion in determining who is and who is not a substantial candidate for nomination of a major party. This could be done in terms of defining who could be presumed to be a substantial candidate, by using the three tests specified in subsection (b) (2) of S. 3962, but allowing broadcasters to go beyond that so as to take care of such situations as presented by Mr. Hoover in 1928, Mr. Willkie, General Eisenhower, and Mr. Davis.

The new subsection (c) of S. 3962 also embodies an important advance beyond title III of S. 3308. In contrast to S. 3308, subsection (c) of S. 3962 would provide some relief from the equal time requirements insofar as congressional candidates are concerned.

The new subsection (c) proposed by S. 3962 in effect applies the equal-time requirements only to major party nominees for a congressional office, as well as to candidates for election who may not be nominees of a major party but who file petitions with a number of signatures equal to 1 percent of the total votes cast for all candidates for that office in the preceding general congressional election. Subsection (c) therefore is an attempt to provide the broadcaster some relief from fringe party and unsubstantial candidates for a congressional office.

It is to be noted that Subsection (c) of S. 3962, however, unlike subsection (b), leaves the equal-time requirements where they are now insofar as candidates for congressional nomination are concerned. The relief provided by subsection (c) applies only to nominees and not to candidates for the nomination. The reason for this distinction between subsection (b) and subsection (c) is not immediately apparent to me, but I might say in all candor that insofar as network broadcasting is concerned, the matter is not of major significance. It may be of considerable importance, however, to individual stations, especially where there are vigorous campaigns for nomination for a congressional office. For example, I recall that a few years back there were a half a dozen or more candidates in Florida for the Democratic nomination for the Senate, and some of them were clearly unsubstantial.

Further, it should be noted that S. 3962 applies the equal-time requirements to set speeches and broadcasts wholly within the control of the candidate or his supporters. The exemptions are not limited to the types of programs specified in S. 2306, as we would prefer them to be.

The new subsection (f) of S. 3962 gives me the most concern. It places an affirmative obligation on each television network and each television station to make available to each candidate for the office of President of the United States, as defined in subsection (b), one half hour a week during October and 1 hour in November preceding election in any year in which a presidential election is being held. The subsection also apparently seeks to relieve networks and stations from "preemption" charges resulting from this requirement—that is, they apparently need not pay advertisers, advertising agencies, talent, or others for amounts which they would have been obligated to pay had it not been for the political broadcast.

CBS is opposed to this provision compelling broadcasters to grant free time. Such a requirement is wholly discriminatory and, I believe, raises serious problems of constitutionality. In 1954 CBS addressed itself to the same issue, which was then being considered by the Senate Subcommittee on Privileges and Elections. An excerpt from Mr. Salant's testimony before that subcommittee and dealing with this question is set out as exhibit B to this letter.

The reasons stated by Mr. Salant seem to be equally applicable today. Whatever the answers to the problems of financing political campaigning, I think it clear that the commandeering proposal of subsection (f) of S. 3962 is so unfair and of such doubtful constitutionality that it should be rejected.

In sum, CBS supports S. 2306. We believe that S. 3308, despite serious defects noted above, is a step forward. Except for subsection (f), S. 3962, while less desirable than S. 2306, is more desirable than S. 3308. In no circumstances, however, could we support S. 3962 so long as subsection (f) remains in the bill.

Further, in order to assist the committee and in order to take into the account some of the objections which we have noted to S. 3308 and S. 3962, we have prepared a redraft of an amendment to section 315 which embodies what we believe to be some of the best features of each of the bills. That draft is attached as exhibit C.

We urge that either S. 2306 or the attached exhibit C be enacted. Failing that, CBS supports S. 3962, provided subsection (f) is deleted. In the event that a more comprehensive solution along the lines suggested herein can be considered promptly at a later date, we would not oppose the enactment of S. 3308, although it is only a limited solution to the problem.

Finally, as I have previously announced, if any of these bills (except S. 3962 if it embodies subsection (f)) relieving us of requirements to satisfy the demands of fringe candidates are enacted in time for the present campaign, CBS proposes to offer free time, perhaps 2 hours, to the major party candidates for the Presidency to divide between them for some form of debate or discussion of the central issues of the campaign. We have already tentatively set aside class A nighttime periods during next fall for that purpose. I hope that legislation will be enacted which permits us to make that use of those time periods.

Sincerely yours,

FRANK STANTON,
President, Columbia Broadcasting System, Inc.

EXHIBIT A

STATEMENT OF RICHARD S. SALANT, VICE PRESIDENT, COLUMBIA BROADCASTING SYSTEM, INC., BEFORE THE SUBCOMMITTEE ON TRANSPORTATION AND COMMUNICATIONS OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. Chairman and members of the subcommittee; my name is Richard S. Salant. I am vice president of Columbia Broadcasting System, Inc. I am appearing today to record the Columbia Broadcasting System's support of H. R. 6810, which the chairman of this subcommittee has introduced at our request.

H. R. 6810 proposes to amend, in a manner which I shall specify in a moment, section 315 (a) of the Communications Act. Section 315 (a) provides that if a broadcasting station permits a "legally qualified candidate for any public office" to use that station, it shall afford equal opportunities to all other legally qualified candidates for the same office. Section 315 (a), it should be noted, does not require any station to make time available to any candidate; it provides only that if a station does make time available to a candidate, either on a free or on a paid basis, it must do the same, on the same basis, for all other candidates for the same office.

The only change in section 315 (a) which is proposed by H.R. 6810 is that its provisions be made inapplicable to "any news, news interview, news documentary, panel discussion, debate, or similar type program where the format and production of the program and the participants therein are determined by the broadcasting station, or by the network in the case of a network program * * * "

In other words, as far as set campaign speeches or political rallies are concerned, section 315 (a) remains just as it is, with no change. Then if a station or network makes its facilities available free for a speech by one party's candidate for office, it must do exactly the same for every other party's candidate for that office. But if, instead of a set appearance controlled by the candidate, the use of facilities is essentially in connection with the station's or network's exercise of its news-coverage function, produced under its own supervision and control and not the candidate's, then the broadcaster may exercise some discretion and, depending on the circumstances, need not necessarily do exactly the same for every other candidate for the same office.

Note that H.R. 6810 will not permit, and is not intended to permit, favoritism in granting free or paid time among candidates. Rather, its only purpose is to permit broadcasters, in the exercise of their news and journalistic functions, greater opportunity to inform the American public.

The fact is—and I believe that this is almost universally conceded—that while section 315 (a) is rooted in the soundest principles of fair play, it nevertheless has an inherent and fatal weakness. Put bluntly, section 315 (a) stifles and suppresses public information and knowledge; its consequence is to inhibit radio and television from fulfilling to the fullest potential their roles of informing the electorate. H.R. 6810 is designed only to reach these defects by providing an effective remedy while at the same time preserving the basic principles which we believe the Congress sought to achieve in enacting section 315 (a).

Over the years of operation under section 315 (a), we at CBS have become increasingly concerned with, and increasingly aware of, its suppressive effects. Broadcasting, and particularly in recent years television broadcasting, has come to play an increasingly important role in keeping the American people informed of the facts and issues which the people themselves ultimately determine in the voting booth. For in recent years there has unquestionably grown up a new and vital form of journalism—electronic journalism. More and more, the American people have turned to television for firsthand knowledge of the candidates—of what the candidates say and how the candidates look when they say what they have to say.

Thus, television has provided an unprecedented opportunity to the American people—an opportunity which has never before been available to them on so vast and immediate a scale. The people can see and hear the candidates directly; they can make up their own minds on the basis of firsthand direct information and impression.

There can, we believe, be no quarrel with the general proposition, therefore, that television and radio have given a new vitality to American democratic processes. They have permitted a more direct participation by American citizens in our democratic processes to a greater extent than has ever been possible before.

In 1858 the most famous series of American political debates took place between Abraham Lincoln and Stephen Douglas, Republican and Democratic candidates for the Senate from Illinois. Only some 75,000 people saw and heard Lincoln and Douglas engage in these historical debates. Today, television could make it possible for some 115 million people simultaneously to see and hear the presidential candidates debate; radio makes it possible for some 140 million people simultaneously to hear these debates.

But the fact which concerns us so deeply, and which led to our proposing H. R. 6810, is that if such debates could be arranged between the Republican and Democratic candidates next fall, section 315 (a) would, as a practical matter, bar us from broadcasting them. It is this sort of public disservice which H. R. 6810 would remedy. For fair as section 315 (a) may seem on its face, its practical result is to drop an iron curtain between voters and candidates.

This is so because whatever the voter may think and whatever may be the practical political fact, for broadcasters there is no such thing as a two-party system. For example, in 1952 there were 18 parties with presidential candidates who qualified in one or more States. As a consequence, if we could have arranged debates between General Eisenhower and Governor Stevenson in 1952, we would have been required to give the same amount of time to each of the other 16 parties with presidential candidates.

We cannot believe that any law which makes impossible so extremely dramatic and useful a method of informing the public and of contributing to the vitality of our democratic processes should remain on the books.

Preventing such debates is only one of the unfortunate consequences of section 315 (a). Section 315 (a) also tends to dilute broadcasters' efforts most effectively to present significant campaign issues. It tends to reduce broadcasters to third-class membership in the free press by precluding the electronic journalists from exercising the kind of news judgment which all other members of the press are constitutionally guaranteed. Let me illustrate how section 315 (a) has had these undesirable results of precluding broadcasters from achieving the full potentiality of their roles in electronic journalism, and thus depriving the public from all the information to which it is entitled.

For purposes of section 315 (a), a candidate for a public office is defined as any person who has publicly announced that he is a candidate for nomination or election and who meets the qualifications prescribed by the applicable laws to hold the office for which he is a candidate. It is enough that the candidate be eligible to be voted for by a writein—and a number of States permit writein candidates. Whether his campaign is merely for nomination or is for election, he need only be a bona fide candidate—which has been interpreted by the FCC to mean not that there need be the remotest chance that he be nominated or elected, but only that the candidate would, if nominated, accept the nomination or would, if elected, accept the office.

In 1952, we learned the hard way of the sweep of these provisions. There was a gentleman named William R. Schneider, a Missouri citizen. Prior to the period of presidential nominations in 1952, Mr. Schneider had made a number of requests to CBS to grant him time to expound his views on the air. He insisted that both Senator Taft and General Eisenhower were leftwing and only he represented true republicanism. We felt that there was not sufficient public interest in his views and that he was not sufficiently well known to warrant giving him time.

But Mr. Schneider learned what more and more persistent and perspicacious students of section 315 (a) are beginning to learn. He qualified himself under section 315 (a) simply by announcing that he was a candidate for the Republican nomination for President of the United States. He filed in the New Hampshire and Oregon primaries and thus in the opinion of the FCC qualified as a candidate for the Republican presidential nomination. After he announced his candidacy, and filed in these two primaries, he renewed his demand for time on CBS facilities, this time making his claim under section 315 (a). He pointed out that on a number of program series which we had carried preceding the conventions and dealing with the candidates for the Republican and Democratic presidential nominations we had broadcast interviews of Senator Taft, of spokesmen for General Eisenhower, and of other candidates for the Republican nomination. Mr. Schneider claimed as a result that section 315 (a) required us to give him equal opportunities on the CBS radio and television networks.

Mr. Schneider took us to court and to the Federal Communications Commission. The Commission ruled that Mr. Schneider was right and that he was entitled to the protection of section 315 (a). And so Mr. Schneider joined the ranks of General Eisenhower and Senator Taft and had himself two network half hours free.

As a footnote to this painful lesson which we learned, I may add that Mr. Schneider got only 230 votes in the New Hampshire primaries; we never did find out how many votes he got in Oregon. But we did discover that Mr. Schneider who, under section 315 (a), was thus held to be a qualified candidate for the Republican nomination was not, in the mind of the Republican Party, even qualified to be admitted to the Republican convention. He was unable to get a ticket to get into the convention hall.

The implications of our little adventure with Mr. Schneider are obvious and, as we look toward 1956, frightening. You can readily appreciate why in 1956 we are going to have to think twice before we provide as comprehensive coverage to candidates for the nominations as we did in 1952. For there is hardly any practical limit to the number of people who could do what Mr. Schneider did. All they have to be is 35 years old, American citizens, and willing to accept the nomination if it is tendered to them. A chance to appear before millions of people with no cost at all to themselves might well prove an enormous temptation to a great many soapbox orators and publicity seekers. As time goes on and Mr. Schneider's triumph becomes recognized, it is inevitable that we will have to cut down on our preconvention political coverage. One needs only a couple of dozen Mr. Schneiders for the air to be filled with little else. We will have to be very careful about presenting on our news panel, interview, and public-affairs programs well-known candidates for the nomination, because we know that by doing so we will place ourselves under the obligation under section 315 (a) to put a potentially unlimited number of people, in whom the public has no interest at all, on the air.

And the problem is the same even after the nominations are in. Although here the numbers of potential candidates get reduced from the hundreds of thousands or millions to the dozens, the number is still too large to be workable. For it is after the nominations are in that we find that the broadcaster cannot accept what all political commentators and historians accept—that ours is essentially a two-party system. Again, let us look at the 1952 record.

How many of you have ever heard of Homer A. Tomlinson, Fred C. Proehl, Don Du Mont, Edward Longstreet Bodin, or Ellen Linea W. Jensen? Each of these was a duly nominated candidate for President in 1952. They were the candidates of the 18 political parties which presented presidential nominees in the last campaign. There were presidential candidates presented not only by the Republican and Democratic Parties, but there were also presidential candidates of the American Party, the American Rally, the Christian Nationalist Party, Church of God Bible, Constitution Party, Greenback Party, Poor Man's Party, Progressive Party, Prohibition Party, Republimerican Party, Socialist Labor Party, Socialist Party, Socialist Workers Party, Spiritual Party, Vegetarian Party and Washington Peace Party.

No matter how obscure some of these parties may be, section 315 (a) allows us to make no distinction among them. We cannot, therefore, consider allowing the Republican and Democratic presidential candidates to appear on a press interview, forum, or panel program or a debate without taking into account the fact that under the law we would be required to do the same for the other 16 parties.

As a result, with a list of parties as formidable in numbers and as obscure in national interest as this list, we have in general been forced as a matter of simple common sense, in the interests of our own self-preservation, as well as the protection of our listeners, to adopt restrictive policies during campaign periods.

The problem is not limited to candidates for presidential nominations or elections. Let me give some further illustrations of our 1952 experiences where we found section 315 (a) limited us in serving the obvious public interest in clarifying and sharpening national issues.

During the 1952 campaign, the CBS radio and television networks carried a series of programs called Pick the Winner. The purpose of this series was to present each week a spokesman for the Democrats and a spokesman for the Republicans discussing face to face a different major issue of the campaign. We tried in each case to pick the most qualified leading spokesman. Often the most obvious choice of such a spokesman was a Congressman or a Senator or a Governor who had taken leading parts in the formulation, articulation or execution of the policies which were under discussion. But section 315 (a) precludes us from this obvious choice because every one of the Congressmen (except those who were retiring), one-third of the Senators, and 32 governors were running for reelection. Therefore, the FCC ruled they were "candidates" within the meaning of section 315 (a) and anyone who was running against them was entitled to equal time, at least in States or districts where the spokesman was running. Consequently, as a practical matter, almost all Congressmen and a substantial number of Senators and governors were barred from this important national program although they were often the best possible spokesmen for their parties on the issues under discussion. When almost all Congressmen and so many Senators and governors cannot as a practical matter be given time for debate on national issues in a national campaign, it seems clear that section 315 (a) is inconsistent with the objectives of public service and public enlightenment.

The 1952 campaign illustrated still another facet of the tendency of section 315 (a) to frustrate a broadcaster's achieving his full potentiality as an electronic journalist. A radio and television format which has proven particularly effective in bringing facts to the public firsthand is the press interview type of program—such as Face the Nation and Meet the Press. In these programs, leading political spokesmen are subjected to penetrating and searching questions by correspondents. These programs are useful in getting down to bedrock. James Reston of the New York Times has described them as important antidotes to one-way campaigns, tending to offset candidates' reliance on what he calls the "techniques of modern salesmanship" by which the candidates are encouraged to "put over their arguments without giving the people much chance to answer back."

Yet the FCC rules that even though these programs were in no way under the control of the candidates, a candidate's appearance on them falls within the reach of section 315 (a). Thus, if a candidate appears on Meet the Press or Face the Nation to answer news correspondents' questions, every other candidate for the same office must be afforded the same opportunity. I would venture to guess that even though the space in a newspaper may be rather less restricted by the forces of nature than the time in a broadcaster's day—a newspaper can go from 48 to 50 pages but a broadcaster can do nothing about inventing a 26-hour day—it is probable that a newspaper editor would lose his enthusiasm for press interviews if he were required to cover and give space to the press interviews of the Washington Peace Party's candidate or the Poor Man's Party's candidate equivalent to the coverage and space given to the interviews of President Eisenhower or Mr. Stevenson.

Here, again, section 315 (a) restricted a broadcaster's use of a most effective means of bringing information to the public during a campaign. And it was the public and its right to know which was the loser.

In short, by precluding debates between the candidates, by barring them from panel and press interview programs, and by limiting the spokesman who may appear in discussion programs, section 315 (a) has not worked out well in practice no matter how good it looks on paper. As has been stated by Jack Gould, radio-television editor of the New York Times (May 29, 1955):

"In practice the effect of section 315 is less a guaranty of fairness than a formidable barrier to adequate broadcasting of political opinion and controversy. The provision thwarts the conscientious broadcaster who wants to do a rounded job. It is a wonderful alibi for the broadcaster who doesn't * * *

"* * * It is time that section 315 were reexamined with a view to allowing the broadcaster to make his own journalistic decisions."

It is important to note that we are not alone in our deep concern about the hobbling effect of section 315 (a). Our proposal to modify that subsection in the manner embodied in H. R. 6810 has received general approval by those who have thoughtfully considered the problem. I am attaching to my statement editorials by the New York Daily News, the New York Post, the Milwaukee Journal, and the Des Moines Register, as well as articles by James Reston and Jack Gould, of the New York Times, and Roscoe Drummond, of the New York Herald Tribune. Each of these agrees that section 315 (a) has the undesirable consequences which I have discussed and each agrees that there should be modification. It is significant that editors and writers covering such a wide range of political views should be in agreement on this subject. I think it indicates that we at CBS are not regarding this from a purely parochial point of view—and that this is not so much a broadcaster's problem as it is the public's problem.

I recognize that some concern has been expressed that the proposal in H. R. 6810 raises the possibility of favoritism for one candidate over another. The unspoken premise of this criticism seems clearly to be that in handling news and public-affairs functions, a broadcaster, in his role as a part of the press, is so little to be trusted that he must be prevented from exercising any discretion.

This is a dangerous premise on which to base legislation—a premise that people licensed by the Federal Government to act in the public interest, convenience, and necessity are unworthy of trust. If a broadcaster is not deemed qualified to make its own journalistic decisions, even in this limited area, then it can only be asked by what standard did the FCC give him a license in the first place.

The fact is that there are other and far more powerful safeguards against the dangers of unfair play than a rule of enforced mathematical equality in these types of programs—equality which reduces service toward zero and thus deprives the public of facts and information to which it is entitled. The listener and viewer regard radio and television as a part of their personal lives. Our daily mail is vivid reminder of their quick reaction to anything which we do as broadcasters. If during the course of the campaign, or at any other time, a broadcaster were to be so flagrantly unfair as to favor one candidate over another, both the public and the political parties would be quick to react. For such favoritism cannot be exercised surreptitiously or invisibly. It would be there for all to see and hear and a broadcaster could not long survive the public ill will which such favoritism would justifiably create.

It seems to us, therefore, that public reaction is the surest safeguard against any dangers which might be thought to arise by this limited modification of section 315 (a). But there is still another safeguard. The basic ground rules of the Communications Act would remain—the requirement would continue that a broadcast licensee must operate in the public interest. We at CBS and, I believe, almost all other broadcasters, have always considered that one of the components of operating in the public interest is to air all significant viewpoints on any important public controversial issue. Whether that requirement is self-imposed or imposed by the Communications Act, it is one which broadcasters in general have embraced. It is applicable to all important public issues whether political or not, and it would remain during campaign periods and during the rest of the year, no matter how secton 315 (a) were modified. That there might be some difficult decisions to make is hardly a reason for not amending section 315 (a), if, as we believe, the public is being disserved by the subsection as it stands.

For these reasons, CBS has proposed that section 315 (a) be modified in the manner suggested by H. R. 6810. Enactment of the bill would, we believe, represent a long forward step in permitting this new form of journalism to fulfill its potentiality in bringing facts, faces, and issues to the public.

If section 315 (a) is modified in the manner proposed by H. R. 6810, CBS would invite the leading candidates on our panel discussion programs without charge, which we have been prevented from doing in the past. We would give greater coverage in news, news interview, news documentary, and similar types of programs to the leading candidates. And most important of all, CBS, with the approval of our affiliates to whom this question was submitted last spring, would provide free evening time during the campaign for the major presidential candidates to debate the main issues. We would propose to broadcast a modern-day electronic version of the Lincoln-Douglas debates in which both the Republican and Democratic presidential candidates would appear on the viewers' screen debating the great issues of the day. One way we might well do this would be to have a group of the country's leading newsmen, during the closing weeks of the campaign, designate the half-dozen or so chief issues as they have developed. In special live programs, CBS would invite the candidates to speak, wherever they are, one after the other, on these designated issues.

We strongly believe that if the law is amended to make programs such as these possible, the public will benefit, because television and radio with their enormous circulation and impact will be able to fulfill their roles in bringing the major candidates directly to the public. We believe that this would provide a significant contribution to our democracy.

We share the basic belief of our Founding Fathers that the citizen's opportunity to know and to judge for himself at firsthand will result in the best possible decisions in the polling booths.

By increasing the opportunity through radio and television for the major national candidates to face each other and at the same time to face the American citizen directly in the citizen's own home, we will have taken a long step forward in bringing radio and television to journalistic maturity and, even more important, in strengthening our democratic processes.

[From the New York Daily News, May 26, 1955]

EQUAL TIME FOR WHOM?

President Frank Stanton, of the Columbia Broadcasting System, has come out with a proposal which makes sense to us.

It concerns the Federal law requiring that, if a network gives free time to one candidate in a political campaign, it must give equal times to all other candidates for the same office.

The 1956 presidential campaign is coming up. Mr. Stanton recalls with visible shudders that in 1952 there were 18 candidates for President, most of them running mainly for laughs.

TV—LAW—CAMPAIGNS

Therefore, the CBS chief suggests, how about Congress amending the law so that the equal-time privileges will be extended only to major-party candidates? If Congress will do that, CBS for one will be glad to put on a series of TV debates next year between the two chief presidential nominees, along the lines of the famous Lincoln-Douglas debates of 1858.

We think Congress should consider amending the law in some such way. This is a two-party country, where third parties—to say nothing of eighth or eighteenth parties—never have amounted to much. Why not recognize that fact, and revise the law to fit it?

[From the New York Post, May 25, 1955]

TV DEBATE

The use of television as a political weapon may turn out to be one of the liveliest issues of the 1956 campaign. It has become increasingly apparent that the Republican strategists regard the TV blitz as the big political discovery of the century. Given a preponderance of financial assets, the GOP will undoubtedly try to blanket the country.

All of which sharply raises the question of free time for political oratory. On that subject Frank Stanton of the Columbia Broadcasting System has come up with some provocative thoughts. CBS, he says, is ready and eager to promote a series of "Lincoln-Douglas" debates and to invite the candidates of the major parties to participate in numerous panel discussions—again at no cost. But that can't be done, Stanton points out, unless the Federal Communications Commission amends section 315 of the FCC Act, which requires a TV or radio station to give equal time to all candidates if it extends free time to one.

In 1952, Stanton reminds us, there were 18 parties and 12 candidates in the presidential race. (Lest you have forgotten or never knew, General MacArthur was supported by three parties—America First, the Christian Nationalists and the Constitution Party; the Vegetarian Party ran Brig. Gen. Holdridge; the Church of God Bible Party backed Homer Tomlinson; the Greenback Party supported one Frederick Proehl; the Prohibition Party gave its all for Stuart Hamblen; the Socialist Labor Party was for Eric Hass; the Progressive Party for Vincent Hallinan—and there were others, too.) It would have made little sense to insist that television grant equal free time to all these nominees to match any time offered Eisenhower and Stevenson.

Surely, however, a series of debates between Eisenhower and Stevenson would have been lively TV fare even if the others were just allowed to sit on the platform.

What Stanton is proposing essentially is that TV be allowed to accept the reality that we live under a two-party system. If the year comes when a third party, through some historic convulsion, really assumes major dimensions, we have no doubt that some flexibility could be achieved. But by clinging to the fetish of free time for everyone, we are in fact denying free time to anyone; with the inequality of financial resources that now exists, we may well be getting "one party" TV before we are through.

Within the framework of Stanton's proposal there might well be some modified clause to assure some time for all minority parties. But no newspaper felt obliged to provide equal space for the views of the Greenback standard-bearer or the Vegetarian leader; Stanton has a case when he says TV ought to be allowed to inhabit the real world, too.

Anyway, his proposal warrants real study and debate.

[From the Milwaukee Journal, May 31, 1955]

Improved TV Use in Campaigns

The problem of television and its use and misuse in national election campaigns is a big one that requires long and serious study. One phase of it, however, could and should be corrected quickly—before the 1956 campaigns. Frank Stanton, president of the Columbia Broadcasting System, discussed this phase recently.

Under section 315 of the Federal Communications Act, a network of station which makes time available to one candidate must offer equal time to all others.

Stanton proposed this be amended so that leading candidates could participate in panel discussions, forums, or debates without networks or stations having to provide equal time for all minor candidates. He explained that CBS would like, for instance, to make 2 or 3 hours of evening time available free during the 1956 campaign for a "modern day electronic version of the Lincoln-Douglas debates between the Republican and Democratic presidential candidates."

Under section 315 as it now exists such free public-service programs would be impracticable, Stanton said. Every minor candidate could demand, and get, equal free time.

In the 1952 campaign, that would have meant 16 other candidates. Parties which offered candidates in one or another of the States included the Progressive, Prohibitionist, Vegetarian, Social Labor, Socialist Worker, Constitution and Christian Nationalist. There was a Poor Man's party with a presidential candidate who received 4,203 votes, all in New Jersey.

Basically, industry insistence that the opportunity of buying time be extended equally to all candidates is good and should be continued. Allowing networks and stations to limit to major candidates the free, public-service type of programs proposed by Stanton seems definitely in the general interest.

Safeguards should be written to provide inclusion of a major third party candidate when and if such appears. And it would probably be wise, for the time being, to limit the new freedom to presidential candidates. Injustice might be done in congressional, State, and municipal elections where serious third party and independent candidates can spring up quickly. They might be seriously handicapped by TV discrimination in favor of major parties.

[From the Des Moines (Iowa) Register, July 5, 1955]

Equal Time in Political Broadcasts

Some things that are wonderful in theory can turn out to be dismal failures in practice. The law on political broadcasting is an example.

The "theory" is contained in section 315 of the Communications Act of 1934. It declares:

"If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station."

In practice, networks and stations have been discouraged from giving any free public-service time to political candidates. In the 1952 election, 18 parties had candidates for president. The parties included the Vegetarian, the Church of God Bible, and the Greenback Parties. If the networks had given free time to Candidates Eisenhower and Stevenson, they also might have been required to give free time to every minor candidate—crackpot or otherwise—on the presidential ballot. The law has been carried to such extremes that in 1952 broadcasters found themselves obliged to give free coast-to-coast time to a William Schneider to "answer" Robert A. Taft and General Eisenhower because Schneider had entered two Republican primaries in the race for the G. O. P. nomination.

Discussion programs are similarly affected. Some broadcasters decline to invite candidates to discuss or debate issues during campaigns for fear of getting stuck with interminable requests for equal time.

The result is that candidates who want to use broadcast facilities have to pay for most of their time. The costs of television can be prohibitive—$50,000 to $60,000 for a half hour on a major network. The result of the equal-time provision is that "ability to pay" becomes the major consideration in use of broadcast facilities. The candidate hardpressed financially and most in need of help is the one hardest hit by section 315.

Broadcasters would like to provide more public-service programs during political campaigns. Dr. Frank Stanton, president of the Columbia Broadcasting System, talks about inviting the leading presidential candidates to appear on the network's panel discussion programs. He also has in mind making available 2 or 3 hours of the best evening television time during the 1956 campaign for "a modern-day electronic version of the Lincoln-Douglas debates. Both the Republican and Democratic presidential candidates would appear on the viewer's screen debating the great issues of the day."

But this is impossible without revision of the Communications Act. So Dr. Stanton has proposed to add the following to section 315:

"Appearance by a legally qualified candidate on any news, news interview, panel discussion, debate, or similar type program where the format and production of the program and the participants thereon are determined by the broadcasting station, or by the network in the case of a network program, shall not be deemed to be use of a broadcasting station within the meaning of this subsection."

Some such change as this is needed. It should be possible for stations and networks to perform greater public service in the broadcasting and televising of political talks and interviews.

[From the New York Times, May 26, 1955]

Radio, TV, and 1956

An Account of the New Difficulties Facing Broadcasters in the Campaign

(By James Reston)

Washington, May 25.—In about a year from now there will be approximately 50 million television sets in this country haranguing the populace with political oratory in what will, of course, be "the most important, the most decisive, and the most historic presidential election in American history."

The "man who * * * " speeches will all be approximately the same, and the issues, of course, will be peace and prosperity, but the noise will be worse, and the ground rules for television campaigning will be even more out of date than they were in 1952.

They will, that is, if something is not done about them fairly soon.

Fortunately, some people here and elsewhere are beginning to think about the problem, and the TV and radio broadcasters, in town this week for a few days' institutional soul-searching, are asking the politicians some pertinent questions.

"What is the attitude of the Federal Communications Commission," the broadcasters asked yesterday, "on the suggestion currently being studied by Congress that radio and television stations be required to give political candidates 'free' air time?"

Dr. Frank Stanton, the president of the Columbia Broadcasting System, in a communication from New York, was even more specific. Why not amend the Federal Communications Act, he proposed, so that CBS could put the two major presidential candidates on panel shows on a series of Lincoln-Douglas type of debates without having to give the same privilege to the Vegetarian, Prohibition, and all other such minor candidates?

Even though debaters of the quality of Messrs. Lincoln and Douglas vanished with the 19th century, these are good questions. The sad part about it is that nobody here seems to be able to agree how to deal with the problem.

The main part of the present Communications Act that seems to be causing most of the trouble is the following:

"If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station * * *."

The practical result of this regulation is that TV and radio stations seldom give any candidate for office free time because they would then be obliged to give all other candidates for the same office equal time. Thus, while many stations would no doubt have been willing to give time to General Eisenhower and Adlai E. Stevenson in the last election, they could not do so without having to give the same amount of time to the other "legally qualified candidates" representing minor parties or sects.

EDITORIAL JUDGMENT BARRED

In short, the TV and radio stations cannot exercise their editorial judgment to cover the speeches they think important and ignore the others, as the newspapers do. They are obliged under the fee rules to treat the candidates of the Socialist Party, the Communist Party, the American Vegetarian Party, the Greenback Party, and the Prohibition Party precisely as they treat the candidates of the Republican and Democratic Parties.

If one gets free time all must get free time, and while this is eminently fair in principle, the result in practice has been of course that the stations have allowed the problem to be settled on the basis of ability to pay.

Even in 1952, a half-hour single TV network broadcast could cost more than $30,000. That was when there were only 17 million TV sets in the country. Already the rates are higher and, by a year from next November, when there are expected to be more than 50 million sets, the bill will be much higher.

There is general agreement here that the ability-to-pay principle is not just in a democracy, and that the injustice is likely to increase in direct ratio to the rise in TV costs, but the problem cannot be solved merely by changing the rules to give the Democrats and Republicans free time and blocking out all others.

For while this might not produce injustice in national presidential elections, it could easily do so in State, congressional, and municipal elections. For example, Fiorella LaGuardia's successful Fusion Party campaign in New York City some years ago would have been handicapped by discrimination in favor of the major parties.

This is only one of the many new problems to rise with the popularity and power of nationwide TV.

Another is the increasing use of television by the executive branch of the Government. For example, President Eisenhower now puts on his weekly news conference before the TV cameras. Could he increase the number of news conferences during the campaign and thus be on a free TV national network 2 or 3 times a week while the Democrats had no such opportunity of equal time?

These are just a sample of the problems now facing and dividing the politicians and the Federal Communications Commission, and it is clear that the whole question will have to be carefully studied before long if an objective appraisal is to be conducted at all.

There are several ways in which this could be done by Congress, but perhaps the best way would be to have a presidential commission appointed, with representatives of the public, the broadcasting companies, the Federal Communications Commission, and the major parties.

Such a commission would still have time to explore the problem and come up with recommendations before the emotions of the campaign itself make all objective appraisal impossible.

[The New York Times, May 29, 1955]

Outmoded Broadcast Law

EQUAL TIME PROVISION SEEN AS BARRIER TO GOOD COVERAGE

By Jack Gould

In speaking before the convention of the Nation's broadcasters last week, President Eisenhower stressed television's role in helping keep the American public informed. In particular he urged the radio and TV men to insure that broadcasting be as free as other media.

If this goal is to be attained, however, the broadcasters cannot do it by themselves; the help of Congress is needed. In one of the most vital and crucial branches of news—politics—television is hobbled by a regulation that, if applied to newspapers, soon would make a hollow jest of a free press.

The regulation is known technically as section 315 of the Federal Communications Act and popularly as the equal time provision. It involves the attractive if naive notion that journalistic impartiality can be legislated on a mathematical basis.

In practice the effect of section 315 is less a guaranty of fairness than a formidable barrier to adequate broadcasting of political opinion and controversy. The provision thwarts the conscientious broadcaster who wants to do a rounded job. It is a wonderful alibi for the broadcaster who doesn't.

LANGUAGE OF LAW

Section 315 stipulates that if a broadcaster "permits any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station."

Under section 315 a candidate is defined as any person who announces his candidacy and "meets the qualifications prescribed by the applicable laws to hold the office for which he is a candidate."

The broadcaster's plight can be appreciated when it is realized that in 1952 there were not only General Eisenhower and Adlai E. Stevenson running for office. In addition, there were presidential candidates of the American Party, the American Rally, the Christian Nationalist Party, Church of God Bible Party, Constitution Party, Greenback Party, Poor Man's Party, Progressive Party, Prohibition Party, Republimerican Party, Socialist Labor Party, Socialist Party, Socialist Workers Party, Spiritual Party, Vegetarian Party and Washington Peace Party.

Under the law, is a broadcaster required to give all these candidates equal time? Strictly speaking, the answer would seem yes. In 1952 a man named William R. Schneider filed in two Republican primaries and then asked the Federal Communications Commission for equal time with General Eisenhower and the late Senator Robert A. Taft. The FCC directed that he receive such time and Mr. Schneider was heard from coast to coast.

In short, from a legal standpoint the broadcaster cannot focus his news attention merely on the candidates, whatever their number may be, in whom there is genuine public interest; he is legally subject to granting equal time to many unknowns.

To avoid this contingency most broadcasters simply do not give free time to any of the candidates once the formal campaign has started. The same policy seems certain to be extended to primary contests, which utilimately could mean virtually no meaningful political coverage that the politicians did not choose to finance. Manifestly, this is an unhealthy state of affairs both for TV as a journalistic medium and for the candidate who is not well off.

The ramifications of section 315 extend to many news and discussion programs. During a campaign it might seem fair for a Republican and a Democratic Senator, both running for reelection, to debate a national issue. But under section 315 their opponents back home theoretically could ask for equal time to give their views. Rather than run this risk, discussion shows often pass up politics during a political campaign.

NO NEWS

Even on spot news a strict mathematical interpretation of equal time can mean no news. During the last New York State conventions a television station wanted to cover the balloting contest, if one developed, between Averell Harriman and Franklin D. Roosevelt, Jr. Conceivably, this news event could run an hour or so on TV. The Republicans, with Senator Irving M. Ives unopposed for the gubernatorial nomination, had no ballot contest.

If the Democrats were to be on TV, however, the Republicans wanted to be on just as long, even if it meant filling in with speeches. But the Democrats said if the Republicans made speeches they wanted time to reply. The upshot of this seesawing nonsense was that the Democratic contest wasn't covered, even though it was real news. The TV public was not informed.

Section 315 imposes an impossible journalistic burden. News cannot be judged on a legalistic and statistical basis without leading to utter chaos. If a newspaper used the full text of the Republican and Democratic candidates, should it be compelled by law to run the full text of a dozen other candidates? Should a Democratic story be ignored because the Republicans weren't making news? Yet these absurd situations do prevail in TV.

The evil of trying to legislate fairness already is apparent. Senator Warren G. Magnuson, chairman of the powerful Senate Interstate and Foreign Commerce Committee, which has jurisdiction over broadcasting matters, suggested that perhaps broadcasters should be required to donate some fixed amount of time to qualified candidates. This is not unlike saying a newspaper should contribute its columns to the politicians with no voice in how those columns were used.

The remedy is not more legislation but less. Section 315 in substance contradicts another provision of the Communications Act, which prohibits Government meddling in program content. Political news is vital program content. It is time that section 315 were reexamined with a view to allowing the broadcaster to make his own journalistic decisions. If he is not deemed qualified to do so, then it can only be asked by what standard did the Federal Communications Commission give him a license in the first place.

[From the New York Herald Tribune, June 8, 1955]

Washington: TV, Campaign and Voters

(By Roscoe Drummond)

Washington.—Vice President Richard Nixon has reached some original and arresting conclusions concerning the use of television in political campaigns. He is convinced that a good deal of fresh thinking is needed if TV is to continue to be an effective instrument of campaigning, and as a beginning he offers the following judgments:

That the set speech of a Presidential nominee, showing him on the television screen haranguing a big rally or snugly reading his teleprompter in the studio, is on the way out.

That such performances won't any longer attract good audiences or hold them.

That only a major Presidential pronouncement or some very special circumstance such as the build up which preceded his explanation of the Nixon fund in the 1952 campaign, will produce and sustain the interest of an adequate TV audience in future campaigns.

That political telecasts will have to be far better produced than in the past and that there will have to be some form of audience participation—perhaps an adaptation of Secretary Dulles' recent foreign-policy report to the President plus running comment and questions in the presence of several members of the Cabinet.

Mr. Nixon is inclined to think that in future campaigns the nominees will have to take on the unrehearsed, off-the-cuff questioning if the candidates are to get the voters, in any large numbers, to stop, look and listen.

This makes a good deal of sense. Unless Mr. Nixon's advice is heeded, I suspect that set campaign speeches will attract smaller audiences than they did in 1952. Then television was still a relative novelty to many millions of viewers. Novelty will no longer be enough. Political performances on TV will need to have pace, movement and conflict.

This is why I am attracted to the suggestion recently made by Dr. Frank Stanton, president of the Columbia Broadcasting System. He says that CBS would provide free television time for a series of "Lincoln-Douglas" type debates between the two major 1956 Presidential candidates if Congress would amend the communications law to make it possible.

Dr. Stanton's suggestion has two advantages.

Its incidental advantage is that it would greatly reduce the costs of national campaigns by giving invaluable TV time to both sides—even as newspapers give thousands of columns of free space.

Its compelling advantage is that it would create political telecasts which would meet all of Vice President Nixon's tests—pace, movement and conflict.

The Lincoln-Douglas style of political debate would be pro-voter all the way. Some of its special values would be these:

It would galvanize public interest in the campaign issues as nothing else could.

It would clarify and sharpen the significant differences between the nominees.

It would put the Presidential candidates on the screen simultaneously and would greatly assist the voters in appraising their relative qualities and qualifications.

It would enable conflicting campaign arguments to catch up with each other much sooner and at once increase the hazard and reduce the temptation to rely on exaggerated campaign arguments.

I can't say that all Presidential nominees would like this type of campaigning. I am sure all the voters would like it, and I can't escape the conclusion that a campaign ought to be geared for what's good for the voters whether it is good for the candidates or not.

Exhibit B

Excerpt From Statement of Richard S. Salant Before Senate Subcommittee on Privileges and Elections

* * * Compelling broadcasters to give free time is not a fair or sensible remedy. The advantages of the candidate with generous contributors are advantages not limited to the candidate's use of radio and television. The fact that the current emphasis is on radio and television is a tribute to the impact and force of these media and is a recognition that they are perhaps the best and most direct way by which candidates can present themselves and their views to the people. But that is no reason to discriminate against radio and television, which after all are a vital part of the free press. It would be ironic to make radio and television victims of their own success by singling them out for condemnation proceedings.

After all, everything used in a political campaign costs money: train and plane travel, newspaper advertisements, sound trucks, auditoriums, campaign headquarters, buttons, car placards, mailing pieces, comic books, balloons, confetti, elephants, donkeys and pretty girls. At least some of these are just as necessary to a candidate, if not quite so effective, as radio and television. Yet nobody has suggested that the supplier of these items be required to give them away free to candidates. The imbalance of more elaborate headquarters, more plentiful confetti, a larger number of advertisements in newspapers, and more pretty girls, is dismissed as the natural and inevitable consequence of one candidate's having more financial contributions than the other.

The proposal to require broadcasters to provide free time can find no logical justification in the arguments that the broadcasters use the public's air and operate only by Government license, or that they have a "natural monopoly" arising out of limitations of air space available. Railroads and airlines also have natural monopolies and are licensed to operate by the Government. Yet there is no suggestion that they donate their services and facilities to candidates. Newspapers are afforded second-class mailing privileges under which their postal charges are considerably reduced. Yet no one entertains the fantastic notion that their second-class mailing privileges be revoked unless they carry a specified number of political speeches verbatim or a specified number of political advertisements free.

Nor can the suggestion that radio and television be treated differently from newspapers by requiring free donations from broadcasters be justified on the grounds of a special scarcity of broadcasting stations. The fact is that there are about 3,000 radio stations and 425 television stations in the United States and less than 2,000 daily newspapers. In New York City there are only 8 daily newspapers but there are 15 radio stations and 7 television stations. In Chicago there are 4 daily newspapers, 4 television stations and 16 radio stations. In Los Angeles there are 4 daily newspapers, 13 radio stations and 7 television stations.

While I am no expert in constitutional law, the proposal, wholly apart from its unfairness and unwisdom, also seems clearly to raise serious constitutional questions under the first amendment. Radio and television are a part of the press. Yet there is a tendency to make proposals to govern radio and television which no one would dream of making in respect of newspapers. A proposal to require newspapers to print verbatim a specified number of speeches of each political candidate during a political campaign would surely be universally condemned as an interference with the freedom of the press. For this is worse than censorship. This is telling a newspaper not what it may not print but what it must print. Yet the proposal for radio and television is precisely the same.

EXHIBIT C

SEC. 301. Section 315 of the Communications Act of 1934 (47 U. S. C. 315) is amended to read as follows:

"SEC. 315. (a) If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station.

"(b) Subsection 315 (a) shall not apply to any use of a broadcasting station by any legally qualified candidate for the offices of President or Vice President of the United States, or to any spokesman duly designated by such candidate for the office of President, if such use is an acceptance speech by such candidate at a nominating convention or is on a news, news interview, news documentary, panel discussion or debate program where the format and production of the program and the participants therein are determined by the broadcasting station or the network in the case of a network program: *Provided*, That the licensee shall afford equal opportunity in the same use of such broadcasting station to every other candidate for the office of President, or Vice President, as the case may be—

"(1) who, if a candidate for election as President or Vice President, is (i) the nominee of a political party whose candidate for such office in the preceding presidential election was supported by not fewer than four percent of the total votes cast, or (ii) whose candidacy is supported by petitions filed under the laws of the several States which in the aggregate bear a number of signatures equal to at least one percent of the total popular votes cast in the preceding election and which signatures are valid under the laws of the States in which they are filed; or

"(2) who is a substantial candidate for Presidential or Vice Presidential nomination by a political party whose candidate for such office in the preceding presidential election was supported by not fewer than four percent of the total popular votes cast.

"(3) For the purposes of Subsection (b) (2) of this Section 315, a candidate for Presidential or Vice Presidential nomination shall be presumed to be a 'substantial candidate' if—

"(i) he is an incumbent of any elective Federal or Statewide elective office; or

"(ii) he has been nominated for President or Vice President at any prior convention of his party; or

"(iii) his candidacy is supported by petitions filed under the laws of the several States which in the aggregate bear at least 200,000 signatures which are valid under the laws of the States in which they are filed.

"(c) Subsection 315 (a) shall not apply to the use of a broadcasting station by any legally qualified candidate for Congressional office if such use is on a news, news interview, news documentary, panel discussion or debate program where the format and production of the program and the participants therein are determined by the broadcasting station or the network in the case of a network program: *Provided*, That the licensee shall afford equal opportunity in the same use of such broadcasting station to every other candidate for the same Congressional office—

"(1) who if a candidate for election to Congressional office, is (i) the nominee of a political party whose candidate for the Congressional office sought by the legally qualified candidate received in the preceding general Congressional election not less than four percent of the total votes cast for all candidates for that office in such election, or (ii) whose candidacy is supported by petitions filed under applicable State law which in the aggregate bear a number of signatures, valid for the laws of the State, equal to at least one percent of the total votes cast for all candidates for that office in the preceding general Congressional election; or

"(2) who is a substantial candidate for nomination for the Congressional office by a political party whose candidate for such office in the preceding Presidential election was supported by not less than four percent of the total votes cast for all candidates for that office in such election.

"(3) For the purposes of subsection (b) (2) of this Section 315, a candidate for the nomination for Congressional office shall be presumed to be a 'substantial candidate' if

"(i) he is an incumbent of any elective Federal or State elective office; or

"(ii) he has been nominated by his party as a candidate for the same office; or

"(iii) his candidacy is supported by petitions filed under applicable State law which in the aggregate bear a number of signatures, valid under the laws of the State, equal to at least one percent of the total votes cast for all candidates for that office in the preceding general Congressional election.

for the purpose of this subsection, the term 'Congressional candidate' means a candidate for election as a Senator or Representative in, or Delegate or Resident Commissioner to, the Congress of the United States.

"(d) No licensee shall have any power of censorship over the material broadcast under the provisions of subsection (a), subsection (b), or subsection (c). No obligation is hereby imposed upon any licensee to allow the use of its station by any such candidate.

"(e) The charges made for the use of any broadcasting station for any of the purposes set forth in this section shall not exceed the charges made for comparable use of such station for other purposes.

"(f) The Commission shall—

"(1) prescribe appropriate rules and regulations to carry out the provisions of this section; and

"(2) determine, and upon request of any licensee notify such licensee concerning, the eligibility of any candidate to receive equal opportunity under subsection (b), or (c) in the use of any broadcasting station."

---

5. Letter Dated June 14, 1956, From Dr. Stanton [Inserted in the Record on July 17, 1956] Clarifying One Point in His Testimony of the Preceding Day

Columbia Broadcasting System, Inc.,
New York, N. Y., June 14, 1956.

Hon. Warren G. Magnuson,
Chairman, Senate Interstate and Foreign Commerce Committee,
Washington, D. C.

Dear Mr. Chairman: In the course of my testimony yesterday I referred (transcript, pp. 3460–3461) to the record of clearances in class A time for national spot programs as reported by Oliver Treyz, president of the Television Bureau of Advertising. I was referring to material appearing at pages 120–121 of the CBS supplemental memorandum entitled "Network Practices."

In response to a question by Mr. Cox (transcript, p. 3463) concerning whether the class A time was 7:30 to 10:30 p. m., I replied in the affirmative. I have since checked further and find that class A time as used by Mr. Treyz referred not to 7:30 to 10:30 p. m., but rather from 7 to 10:30 p. m., and that I was therefore in error by half an hour. I find further, however, that the great preponderance of programs did fall within the 7:30 to 10:30 p. m. time. For example, in the case of the Socony Mobil Theatre to which I referred, only 7 of the 56 markets which were ordered and cleared provided time between 7 and 7:30; the rest provided time between 7:30 and 10:30 p. m.

Further, I call to your attention the material on page 18 of the CBS memorandum concerning the statement of Richard A. Moore pointing out that 80 percent of the 54 stations recently cleared time for a new program called the Rosemary Clooney Show and carried the program between 7:30 and 10:30 p. m.

Sincerely,

Frank Stanton.

6. Letter Dated July 25, 1956, From Richard A. Moore, KTTV, Los Angeles, Calif., in Response to a Letter Dated May 25, 1956, From the National Broadcasting Co. to the Committee

KTTV,
Los Angeles, Calif., July 25, 1956.

Hon. Warren G. Magnuson,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

Dear Senator Magnuson: Under date of May 25, 1956, the National Broadcasting Co. filed with your committee a printed statement of facts, which contained allegations that KTTV's testimony on March 26 before your committee was actually presented on behalf of a group of film companies. In a letter to you dated May 31, 1956, I pointed out that the NBC allegations were incorrect.

We have since received a copy of Mr. Robert W. Sarnoff's letter to you dated June 11 on the same subject. I regret the necessity of burdening the record further on this irrelevant issue, but in view of the importance NBC seems to attach to it, I feel it necessary to reply to Mr. Sarnoff's letter.

I

In his letter of June 11, Mr. Sarnoff states that I had asked group approval of a portion of my testimony before your committee on March 26. In support of this allegation, Mr. Sarnoff quotes from a letter which I mailed to certain broadcasters and film distributors on January 19, 1956, a full copy of which I am attaching hereto. Once again NBC's allegation is incorrect. The facts are as follows:

1. The proposal contained in my letter of January 19 was made to the group at a time when we were considering the possibility of a joint presentation on behalf of the entire group either to the Network Study Committee of the FCC or to this committee. The suggestion had nothing to do with any individual position of KTTV. It was decided subsequently by the group that no such joint presentation would be made for the reason, among others, that the members of the group were not in agreement as to what changes in the regulations should be proposed. The joint activity of the members of the group was limited to a common research project, the results of which would be available to all, with each company reserving complete individual freedom of action.

2. The proposal mentioned in my letter of January 19, as the record will show, was never made by me in my Senate testimony on behalf of KTTV. Instead, I made a completely different proposal which represented the view of KTTV only, and for which I had received no approval or authorization of any kind from any other company or group.

3. The suggestion contained in my letter of January 19, was a clause whereby, during each segment of the broadcast day, the station would be required to reserve at least 1 hour for the presentation of programs other than programs furnished to it by a single network. However, in my testimony before this committee on March 26, I recommended a regulation providing that: "if during any 52-week period an average of more than 75 percent of a station's schedule during any of the 4 segments of the broadcast day consists of programs from a single outside source—and we are not limiting it to networks—or if during a 52-week period the station's schedule between 7:30 to 10:30 p. m. averages more than 75 percent of programs from any single outside source, this fact shall constitute prima facie evidence of exclusive dealing" (transcript 1653).

The differences between the proposal which Mr. Sarnoff says I made and the proposal which I did make are real and substantial:

(*a*) The proposal made by KTTV to the committee on March 26 was based on an average which would permit a station to broadcast 100 percent of its schedule from a network on some days if it balanced such network schedule with nonnetwork programing on other days.

(*b*) Departures from the 75 percent rule would not face a flat prohibition but would create a presumption of exclusive dealing rebuttable by the station.

(*c*) Most important, the 75 percent rule would relate not only to programs of a single network, but to programs from any single source. It would apply equally against programs of a network and programs of a film distributor—including those very film distributors who were members of our research group.

As I stated in my letter of May 31, my testimony was prepared and approved only by KTTV, and I spoke only for our station.

II

When NBC incorrectly alleged in its May 25 statement that KTTV was testifying on behalf of a "film group," we had assumed that the incorrect allegations were made as a result of NBC's ignorance of the actual facts. However, it now appears that NBC may have been in possession of my January 19 letter at the time it made these allegations.

My letter of January 19 showed on its face that the membership of our research group, in addition to KTTV, included WPIX, New York, and WGN-TV, Chicago, as well as four film companies and General Teleradio, Inc. While General Teleradio had recently acquired certain film properties, its principal interest and activities are in broadcasting, and it is owner or licensee of WGTH-TV, Hartford, Conn.; KHJ-TV, Los Angeles, Calif.; WEAT-TV, West Palm Beach, Fla.; WNAC-TV, Boston, Mass.; WOR-TV, New York, N. Y.; and WHBQ-TV, Memphis, Tenn.

Yet in listing the members of the group known to NBC, NBC omitted WPIX and WGN-TV, and mentioned only the four film companies and General Teleradio, Inc., which it described merely as "part of the RKO motion picture organization with principal interests in Hollywood film production." After stating that my testimony "was part of an organized campaign previously agreed upon and financed by a group of film syndicators and related interests," NBC continued to create the impression that I was spokesman for a film group by constant references to the "film group represented by Mr. Moore," "the film group's attack on the networks," "the film producers for whom Mr. Moore speaks," etc.

Membership in the group by important and representative television stations, which were seriously concerned with the effects of certain network practices engaged in by NBC, was utterly inconsistent with the allegations made to the committee by NBC. Only by omitting any reference to WPIX and WGN-TV, not to mention the misleading description of General Teleradio, Inc., could NBC have supported the incorrect allegations which it furnished to the committee.

A copy of this letter is being sent to Mr. Sarnoff.

Respectfully yours,

RICHARD A. MOORE, *President.*

Subject: Progress Report No. I.

Have just returned from a trip to Washington in connection with the project outlined in my memorandum of December 19, 1955, and I thought that each of you would be interested in a progress report to date.

1. I completed arrangements to retain the Washington firm of Cox, Langford, Stoddard & Cutler to make the study and prepare the report described in the December 19 memorandum. I'm enclosing two copies of my letter outlining the arrangements and you will note that the cost will be based on the firm's normal hourly charges for work of this kind. It appears that the total cost of the project will be well within the limits of our original fund. The member of the firm in charge of the matter is Lloyd N. Cutler. His partner, Marshall Hornblower and other lawyers in the firm will also work on the matter. They have already done considerable legal research and have prepared drafts of the more important sections of the report. They are moving ahead to complete the report at a rapid rate.

2. In the course of my Washington visit I had many meetings with Mr. Cutler and his associates which were very productive. I had also known that your respective Washington attorneys had been anxious to meet with Mr. Cutler, and those meetings have now all been held. It seems to me that we have reached an enthusiastic meeting of the minds among all the lawyers involved concerning the objectives of our joint project. Mr. Cutler will continue to work closely with each of your respective law firms. At this writing we understand that there are three contributing companies who do not have special counsel in

Washington, but if you have lawyers in New York or elsewhere with whom you would like to have Mr. Cutler confer, he will be happy to do so.

3. Since my memorandum of December 19, there have been two new developments which seem important. First, the Network Study Committee of the FCC, together with Dean Barrow and the various staff members, have had several days of meetings with CBS and NBC in New York. Dean Barrow told us they will also visit ABC. You doubtless read of these meetings in the trade press, and we can only assume that the network people presented a very full picture of their side of the case. The second development involves the Senate Committee on Interstate Commerce (the Magnuson committee) which has announced that it will initiate new hearings beginning January 26. Senator Magnuson has communicated with the FCC and has told the Commissioners that the Senate committee desires to have all seven Commissioners attend the hearings prepared to answer questions concerning the nature and progress of the FCC Network Study, among other things. It appears to us that the Magnuson hearings may have considerable effect on the FCC study and that, in a very real sense, the hearings of the Magnuson committee become almost as important to us as the proceedings of the FCC group. After all, one of the principal reasons for initiating the FCC study was to enable the Commission to obtain information needed in order to answer the questions asked of it by the Senate committee. It, therefore, seems fair to assume that the questions asked by the Senate committee in the forthcoming hearings will serve to bring more into focus the points upon which the FCC study should concentrate. The Senate hearings should also have an effect on the speed with which the FCC study will be conducted. It therefore seems, in connection with our project, that we should be concerned with the Senate hearings almost to the same degree that we are concerned with the FCC study.

4. During the past week, Mr. Cutler and I had several conferences with Mr. Kenneth Cox who has just been appointed by Senator Magnuson as special counsel to the Senate committee to conduct the broadcast hearings. We have also conferred with Mr. Zapple, staff counsel to the Communications Subcommittee of the Senate committee. We have also had a good meeting with Senator Magnuson. In addition, we have had two meetings with Dean Barrow and meetings with Commissioner Hyde and Commissioner Bartley. To our knowledge, all of the above men with the possible exception of Senator Magnuson had read the blue-covered memorandum and seemed genuinely interested in discussing the point of view of independent companies like ours. We feel that these meetings have been extremely valuable.

5. I have been much encouraged by recent conversations with several station operators, whose stations have basic affiliations with the major networks. Understandably, none of these individuals would expect to make any affirmative public statement or to become associated with our committee actively, but each one expressed the hope that our project would succeed in order that the station could recapture some of its broadcast time from network control.

6. As a result of all our conferences with your respective lawyers, with the Government people mentioned above and with typical affiliated stations, Mr. Cutler and I have come to the conclusion that the suggested changes in the regulations contained in the blue-covered memorandum are inadequate in one respect. If our suggested regulations were adopted, there is no practical reason why a network could not continue to occupy all the station time it desired on a so-called voluntary basis. In other words, without the benefit of option time, the network could still use its economic strength to persuade the station to carry all the programs the network wished to deliver. Accordingly, we feel we should suggest an additional clause whereby, during each segment of the broadcast day, the station would be required to reserve at least 1 hour for the presentation of programs other than programs furnished to it by a single network. This proposal would accomplish the following things:

(a) It would guarantee a minimum number of hours per day during which the licensee would be free to exercise its unfettered judgment concerning the program content of the station, free of economic pressure from a network.

(b) It would open at least 1 hour in each time segment to the free play of competition among program sources such as independent film producers. It appears that the encouragement of additional program sources is one of the objectives of the FCC study.

(c) It would reserve at least 1 hour in each time segment for free competition among advertisers whereby the local or regional advertisers, or smaller national advertisers, would have equal opportunity to purchase television time and television programs, whereas the choice of time periods is currently available only to the major national advertisers because of the option time and must-buy arrangements.

(*d*) The availability of time periods for independent programs of non-network advertisers would give the independent station an opportunity to acquire good programs and good advertising revenue on a basis more nearly competitive with networks.

(*e*) It would give to the public the normal benefits which result from the presence of free competition in any industry.

7. We will probably find it advisable to make a suggestion of this kind to the Barrow committee or the Magnuson committee in the very near future. While this amendment would implement the objectives outlined in the December 19 memorandum, the members of our group have never specifically considered and agreed upon this particular suggested regulation. If a majority of you are opposed to this suggestion, Mr. Cutler and I do not feel that we would be authorized to submit it. Therefore, if you have any objection to our doing so, I hope you will let me know at once.

The more we look into the entire question, the more convinced I am that we have the law and the merits on our side, and it seems more and more likely to me that we are going to accomplish some good, affirmative results.

RICHARD A. MOORE.

P. S. Please note again that this memorandum calls for a reply if you have any objection to the suggestion made in paragraphs 6 and 7.

R. A. M.

7. LETTER DATED AUGUST 9, 1956, FROM THOMAS E. ERVIN, OF NBC, SUPPLYING CERTAIN ADDITIONAL MATERIAL REQUESTED DURING THE TESTIMONY OF ROBERT SARNOFF

NATIONAL BROADCASTING CO., INC.,
New York, N. Y., August 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: During the appearance of Mr. Robert Sarnoff, president of NBC, before your committee on June 14, 1956, it was agreed that NBC would supply additional information on some of the points raised in his questioning. This letter contains such information. The page numbers referred to below are the pages of the transcript on which the request for information appears.

Pages 3539-3541: Attached as exhibit 1 are the figures requested with respect to the number and percent of television sets served by the NBC television network credited to the six NBC-owned television stations.

Page 3549: Our records show that for the June spectaculars the number of stations ordered by the advertisers and the number of stations which accepted the order and broadcast the spectaculars were as follows:

Date	Time	Spectacular	Number of stations ordered	Number of stations cleared
Saturday, June 9, 1956	9 to 10:30 p. m., EDST.	Max Liebman Presents	130	127
Sunday, June 17, 1956	7:30 to 9 p. m., EDST.	Sunday Spectacular	144	136
Monday, June 25, 1956	8 to 9:30 p. m., EDST.	Producers' Showcase	99	95

This is approximately the number of stations ordered and cleared during the previous months.

Page 3637: Attached as exhibit 2 are the figures requested with respect to the percent of the cost of buying the entire NBC television network which is represented by the rate of the six NBC-owned television stations.

Page 3668–A: To qualify the testimony with respect to the "quick kinescope" operation, we have indicated in exhibit 3 the programs which, at the beginning of July, were being broadcast on the west coast, and the time of their broadcast.

Page 3671: We have endeavored to calculate the percent of programs supplied by the NBC television network during the hours of 7:30 to 10:30 p. m. throughout the United States. We have assumed that all 431 television stations were operating during this time period, resulting in total station broadcast hours during this time period for the month of May (31 days) of 40,085. According to our calculations 10,255 station broadcast hours consisted of NBC television network programs, or a percentage of 25.58 of the total station broadcast hours.

Page 3691: Attached hereto as exhibit 4 are NBC's comments concerning religious programs.

Page 3696: Attached hereto as exhibit 5 are NBC's comments concerning staging services.

If there is any further information or material which you may desire, we would be happy to furnish it to you.

Very truly yours,

THOMAS E. ERVIN.

EXHIBIT 1

Estimated TV sets served by NBC television network, as of January 1, 1956	36,288,000
Estimated TV sets credited by the NBC television network to the 6 NBC-owned television stations, as of Jan. 1, 1956	[1] 9,730,000
Percent of sets served by the NBC television network credited to the 6 NBC-owned television stations, as of Jan. 1, 1956	[2] 26.8

[1] If the sets served by the New Britain, Conn., UHF station with respect to which NBC's application for transfer of ownership is now pending before the FCC, were added, the estimated number of sets would be 9,878,000.

[2] If the sets served by the New Britain, Conn., UHF station with respect to which NBC's application for transfer of ownership is now pending before the FCC, were added, this percent would be 27.2.

NOTE.—All figures are on an unduplicated basis.

EXHIBIT 2

Gross class A hour network rate for all the 196 stations of the NBC television network, as of June 1, 1956	$114,175
Gross class A hour network rate for the 6 NBC-owned televisions stations, as of June 1, 1956	[1] 20,500
Percent of the gross class A hour network rate of NBC television network represented by the 6 NBC-owned television stations, as of June 1, 1956	[2] 18

[1] If the rate for the New Britain, Conn., UHF station with respect to which NBC's application for transfer of ownership is now pending before the FCC, were added, this total would be $21,000.

[2] If the rate for the New Britain, Conn., UHF station with respect to which NBC's application for transfer of ownership is now pending before the FCC, were added, this percent would be 18.4.

EXHIBIT 3

Because of the time differential between the west coast and the east coast, NBC transmits its evening programs to the west coast via interconnection, records them by kinescope on the west coast, and broadcasts the recording on the west coast 3 hours later. The result is that the broadcast on the west coast is at the same clock-hour as the east coast broadcast; the recording is known as a quick kinescope or "quick kine."

All NBC television network nighttime programs are scheduled on the west coast on a clock-hour with the exception of color spectaculars, special event and sports programs, and a few other programs where the nature of the program content makes simultaneous transcontinental release desirable. NBC daytime programs are scheduled by a combination of simultaneous live broadcasts and clock-hour quick kinescope broadcasts. The daytime schedule at the commencement of July was as follows:

Program	New York time	West-coast time
Today (quick kine)	7 to 8 a. m.	7 to 8 a. m.
Home (live)	11 to 12 a. m.	8 to 9 a. m.
Feather Your Nest (live)	12 to 12:30 p. m.	9 to 9:30 a. m.
It Could Be You (live)	12:30 to 1 p. m.	9:30 to 10 a. m.
Ding Dong School (quick kine)	10 to 10:30 a. m.	10 to 10:30 a. m.
Regional Today for west coast (local live and quick kine).	8 to 9 a. m.	10:30 to 11:30 a. m.
Tennessee Ernie (live)	2:30 to 3 p. m.	11:30 to 12 noon.
Matinee (live)	3 to 4 p. m.	12 to 1 p. m.
Queen for a Day (live)	4 to 4:45 p. m.	1 to 1:45 p. m.
Modern Romances (live)	4:45 to 5 p. m.	1:45 to 2 p. m.
Comedy Time (live)	5 to 5:30 p. m.	2 to 2:30 p. m.
Tic Tack Dough (quick kine)	10:30 to 11 a. m.	2:30 to 3 p. m.

EXHIBIT 4

NBC STATEMENT CONCERNING RELIGIOUS PROGRAMING

NBC RELIGIOUS PROGRAMING

Since the earliest days of radio, NBC has been broadcasting religious programs on its networks and owned stations. The oldest network program series is National Radio Pulpit, a religious series which has been broadcast on the NBC radio network since that network was formed 30 years ago.

In addition to the 7 weekly series of sustaining religious programs and 4 weekly series of religious programs supported by various responsible religious groups, the NBC radio and television networks carry many programs of religious importance throughout the year.

As this committee's investigation is with respect to television, we will confine this statement to that sphere, but the large number of religious broadcasts on radio must also be taken into account in assessing the religious broadcast programing to which the American public has access.

The first telecast of a religious service in the history of television was presented on NBC's experimental station W2XBS (now WRCA–TV) in New York City on March 24, 1940. This was a telecast of a Protestant Easter service, later followed by a telecast of a Catholic Easter service.

Ever since that time, the NBC television network and NBC-owned television stations have included religious programs in their schedule. In addition, the independent stations affiliated with the NBC television network present religious programs of their own.

For the information of this committee, we will outline briefly the religious programs on the NBC television network and owned stations:

TELEVISION NETWORK REGULAR SERIES

Since October 1951, the NBC television network has been broadcasting its well-known Frontiers of Faith[1] program series on Sunday afternoons. Broadcast every week in the year, this series is divided among organizations representing the three main religious groups in the United States: Protestant, Catholic, and Jewish. In general, each of the faiths is given a series of 4 or more consecutive weeks, in rotation.

The content of each program or series of programs varies, depending upon the desires of each group. For example, programs have originated from churches in different cities, or have consisted of sermons, dramas based on the Bible, debates, discussions, or morality plays.

When this series first commenced, NBC allocated a budget of $1,700 per week to the production of this program. This budget has been increased from time to time, so that during 1956 the budget is $5,500 per week ($286,000 for the year). In the event one of the religious organizations does not use all the money

[1] When the programs of the Catholic group are telecast, the programs are called the Catholic Hour, the same title as the radio series which has been broadcast on the NBC radio network for more than 25 years.

allocated to the production of one program, it may accumulate the difference and apply it to other programs in the series. The NBC production staff assigned to this program series includes outstanding creative and technical people who are also responsible for the production of some of NBC's major entertainment programs.

The foregoing amount contributed by NBC is for production services and facilities, and compares favorably with similar budgets for other sustaining half hour series presented on the network. For example, the production budgets for Youth Wants to Know and American Forum, which are also half-hour program series presented on Sunday afternoon, approximate $1,250 in each case. In addition to NBC's contribution for production services and facilities, the television time for the presentation of the program series is furnished without charge to the three religious groups for the presentation of the program series. The series is carried by a lineup of over 100 affiliated stations, and the annual value of the television network time involved is in excess of $1,750,000 at existing rates.

The religious groups are in complete control of the format and contents of the programs allocated to them, and make the arrangements for and pay the writing and performing personnel. These costs for performers are generally very small or nonexistent, as many of the performers are ecclesiastical or lay persons associated with the particular group or church and are not paid, while professional performers are generally paid minimum union scale rates.

The quality of these programs is illustrated by the awards which have been conferred upon the series. For example, in 1955 the series received a certificate of merit from the National Conference of Christians and Jews (for outstanding contributions promoting the cause of good will and understanding among the people of our Nation), one of the first annual public service awards from the Protestant Council of the City of New York (in gratitude for sensitivity to spiritual needs and for cooperation in meeting these needs through programs of religion), and the first award of the Institute for Education by Radio-Television of Ohio State University and honorable mention in the Robert E. Sherwood awards.

In addition to this regularly scheduled religious series, and the types of programs mentioned below, are religious presentations from time to time on behalf of various nonaffiliated religious groups, such as the Southern Baptist Convention, with a program planned for this fall from this organization's television headquarters in Fort Worth.

TELEVISION NETWORK HOLIDAY PROGRAMS

In addition to the Frontiers of Faith series presented each week, the NBC television network regularly presents programs celebrating various religious holidays. Currently, programs are scheduled for the following occasions: Passover, Palm Sunday, Easter, Hanukah, and Christmas (2). These holiday programs have included Christmas midnight Mass telecast each year since 1948 from St. Patrick's Cathedral in New York, a special film dramatizing the death and resurrection of Christ, a dramatic-musical explanation of the meaning of the Passover Seder, and the exodus of the Jews from Egypt.

These programs vary in length from one-half to 2 hours. NBC generally bears the entire cost of the programs, although in some instances the scripts and performers are supplied by the religious group cooperating in the production of the program. NBC makes no charge for the broadcast time.

TELEVISION NETWORK SPECIAL RELIGIOUS PROGRAMS

Throughout the year, the NBC television network broadcasts special programs of a religious nature to mark important occasions. For example, we have telecast special programs on the occasions of the fifth anniversary of the first meeting of the World Council of Churches, the canonization of Pope Pius X, the American Jewish Trecentenary, and a nationwide campaign by Religion in American Life (a group emphasizing the importance of religion in community and personal life), the Back to God program presented in cooperation with the American Legion and including representatives of all three faith groups, as well as others.

These programs are generally produced and paid for by NBC, although in some instances the scripts and performers are supplied by the cooperating group. The broadcast time is furnished without charge by NBC.

INTEGRATION OF RELIGION INTO OTHER TELEVISION NETWORK PROGRAMS

NBC has long been of the opinion that by including informational, cultural, and religious themes in programs or series not devoted primarily to those themes, its viewers will be better served and enlightened. In this way, a broad public can become acquainted with matters of religious significance without the necessity of viewing a program or series totally devoted to religious matters.

The NBC television network has, therefore, been including matter of a religious nature in a number of its nonreligious programs. For example, the Conversations series has included programs devoted to conversations with Dr. Louis Finkelstein (chancellor of the Jewish Theological Seminary of America) and Paul J. Tillich (eminent Protestant theologian and professor at Harvard University); NBC commissioned Gian-Carlo Menotti to compose an opera which has been broadcast each Christmas in the NBC Opera Co.'s series and has become a Christmas classic, Amahl and the Night Visitors; the Today, Home, and Tonight programs have often included material of religious significance. A number of examples of the inclusion of such material are contained in exhibit 4A, attached thereto.

In addition, many NBC programs foster those attitudes and beliefs which will enable religion to flourish. Our program policies emphasize morality, brotherhood, respect for clergy, and other virtues which are part of the religious tradition of our civilization. NBC's practices in this respect have won public recognition, and a number of awards have been conferred by religious organizations upon individuals associated with programs telecast by NBC. Exhibit 4B contains a list of such awards.

LOCAL PROGRAMS

The network is not the only supplier of religious television programs. There are also syndicated and local programs devoted to religious matters.

In fact, because of the heterogeneous nature of the population of the United States, religious programs telecast to the entire Nation can only deal with the major religions and in the broadest way. Any appropriate local emphasis on religious programs must be made by each local station for its particular area.

The NBC-owned television stations broadcast a number of local programs of a religious nature in addition to the religious programs supplied by the NBC television network. The NBC-owned television stations each broadcast an average of about 2 hours and 15 minutes per week of locally originated religious programs,[3] including prayers and sermons at the commencement and termination of broadcast, as well as a variety of other types of religious programs. In addition, of course, many of the local programs not primarily devoted to religious matters include material of religious significance from time to time.

EXHIBIT 4-A

INTEGRATION OF RELIGION IN NBC TELEVISION PROGRAMS—SEPTEMBER 1954–MAY 1956

HOME PROGRAM SERIES

(WRCA-TV and network, 11 to 12 noon (sponsored segments).)

Each Friday the Home show closes with a prayer rendered by a guest clergyman.

October 22, 1954: Guests were the Minister's Chorus, of the Swedish Mission Covenant Church. The 40-voiced choir was on tour in the United States, and sang several selections. The chorus is composed of pastors and members of the Swedish Mission Covenant Church.

October 29, 1954: Guest Bishop G. Bromley Oxnam, bishop of the Methodist Church, in Washington, D. C., area—interviewed about his life's work and home * * * and films shown of him at work.

November 19, 1954: Guests were a Sunday-school class and two teachers from Westport, Conn. They demonstrated their activities, songs, etc., to show how religion becomes an interesting role in their lives.

December 13–24, 1954: The Life of the Bible—series with a daily discussion on the Bible, its history, etc * * * conducted by Howard Whitman, noted author, lecturer, etc.

[3] Except for WBUF-TV, which NBC acquired recently and which is not yet operating on a full schedule.

December 24, 1954: Mobile unit visit to the Mission Dolores, a Spanish mission in California, for a tour, and attending services there.

January 26, 1955: Dr. Norman Vincent Peale, pastor, Marble Collegiate Church, New York City—interviewed.

February 22, 1955: Dr. Ralph W. Sockman, pastor, Christ Church, Methodist, New York City—interviewed.

March 28–April 8, 1955: Exploring Our Beliefs—several daily segments of this series were concerned with religion in everyday life: prayer, the meaning of God in the atomic age, etc.

May 17, 1955: Rev. James A. Pike, dean of the Cathedral of St. John the Divine, New York City—interviewed.

July 4, 1955: Discussion by Esther Tufty, Washington, D. C., newswoman and commentator, on increased interest in religion throughout the country, more church attendance, reading books on religion.

July 25, 28, 1955: Report in two parts on the work of modern missionaries all over the world; helping instill a democratic way of thought in underprivileged countries, etc.

September 16, 1955: Observance of Jewish high holy days—Rabbi Samuel M. Silver, director of public relations, Union of American Hebrew Congregations, intrepreted pantomime scenes of a Jewish family at home participating in ceremonies of the holy days, and then interpreted a portrayal of rituals as observed in synagogue.

October 14, 1955: Rabbi Abba Hillel Silver, of the Temple, Cleveland, and past president of the Central Council of American Rabbis, was interviewed during Home program's origination from that city.

December 19–23, 1955: Inside the Bible—daily series of discussions by Howard Whitman on various aspects of the Bible.

February 29, 1956: India Centenary choir and orchestra—guests on program were 18 young people from India; organized to commemorate the 100th year of Methodist missionary work in India and Pakistan. Dr. Donald F. Ebright, Methodist missionary at Lucknow, India, pointed out that the group will study for a year at an American university on completion of their tour. The different instruments were described by Victor C. Sherring, director of music and teacher of religion in the Methodist School of Mathura, in India, and the group performed several selections. Two classical dances were also performed.

March 26, 1956: A scene typical of the Passover scene that will take place in many homes tonight was portrayed. The family of Rabbi Morris N. Kertzer, secretary of the New York Board of Rabbis, was seated around the table. Rabbi Kertzer read from the Bible and explained the various symbols on the table. Mrs. Kertzer lit the festival candles and the service continued. As it concluded Cantor Avery assisted in the singing of some of the pertinent melodies which help tell the Passover story, and Rabbi Kertzer closed the services with a prayer.

TONIGHT PROGRAM SERIES

(Monday through Friday, 11:30 p. m. to 1 a. m. (sponsored segments).)

March 1, 1956: Lew Ayres, actor and student of religion, discussed the color films of 10 different religious ceremonies which he took while traveling around the world. Film clips were shown from the religious rites of a country in the Far East, with Ayres telling of its significance, and how the films were obtained.

TODAY PROGRAM SERIES

(WRCA–TV and network 7 to 9 a. m. (sponsored segments).)

December 22, 23, 1954: Mobile-unit visits to the homes of two clergymen for their views on the true meaning of Christmas: Archbishop Edwin V. O'Hara, bishop of Kansas City, Mo., and Rev. Dr. Theodore Ferris, pastor of Trinity Church, Boston, Mass.

March 8, 1955: Father Georges Bissonette, the only Catholic priest in Moscow who a few days earlier was ousted from Russia, was interviewed about religion in Russia and the reasons for his dismissal.

April 6, 1955: Mobile-unit visit to Jewish Museum of Jewish Theological Seminary, to see preparations for a Passover seder—significance of the rituals, etc.—with Rabbi Joel E. Geffin presiding.

August 15, 1955: Rev. Walter L. Flaherty, director of radio and television apostolate for Boston archdiocese, was guest—told of a TV workshop for nuns now operating in Boston, including films of the project in operation.

October 21, 1955: National Bible Week was commemorated—Garroway exhibited a velvet-bound Bible presented to Abraham Lincoln by, as the inscription reads, "the loyal colored people of Baltimore as a token of respect and gratitude." Spot closed with Garroway reading Lincoln's favorite Bible passage: Sermon on the Mount.

December 19–23, 1955: Each day this week Today visits a church of a different denomination, going to cities all over the country. At each church the pastor is interviewed, music is provided by the choir, and the type of architecture is noted.

February 21, 1956: Lew Ayres, famous actor, was interviewed about an extracurricular interest which has accounted for vast changes in his life—religion. He has made a vast study of the world's major religions and prepared a series of nine films on religion. Portion of one on Buddhism was shown today. Ayres commented on how these films will be used and spoke of his own career and future plans.

February 29, 1956: 100th anniversary of Methodist Church in India and Pakistan was highlighted by special guests, the India Centenary choir and orchestra. The group is on a world tour—its members are missionaries. Dr. Donald F. Ebright, who organized the tour, explained their activities, the relationship between music and teaching religion in India, and the group performed throughout program.

March 23, 1956: Special films of a model Passover Seder held at Mount Sinai Hospital in New York, under the direction of Rabbi I. Fred Hollander. Jack Lescoulie narrated, explaining the traditional rituals of this Jewish feast. He remarked on the significance of the Passover holiday for both Christians and Jews—for the Last Supper, which Christians commemorated this week, was a Passover Seder.

March 30, 1956: Special films taken by Today camera crew at St. Thomas More Church in New York showing the celebration of Mass on the evening of Holy Thursday for the first time in over a thousand years. This evening church Mass is a return to a practice of the early Christian Church, and was renewed by the Pope so that more people might benefit from Holy Week services.

MEET THE PRESS

WRCA–TV and network, 6 to 6:30 p. m., Sundays (alternate weeks sponsored by Pan American Airways and Johns-Manville).)

March 6, 1955, August 7, 1955: Billy Graham, evangelist, interviewed—discussing his European trips.

April 1, 1956: Dr. Eugene Carson Blake, stated clerk of Presbyterian General Assembly; and president, National Council of Churches of Christ in USA, interviewed about his trip to Russia with other Protestant clergymen.

THIS IS YOUR LIFE

(WRCA–TV and network, 10 to 10:30 p. m., Wednesday (alternate week sponsored by Hazel Bishop and Procter & Gamble).)

November 17, 1954: Honored guest Dr. Norman Vincent Peale, pastor, Marble Collegiate Church, New York, N. Y.

January 12, 1955: Honored guest Rev. Robert Richards, pastor of First Church of the Brethren in Long Beach, Calif. Reverend Richards is also an Olympic champion pole vaulter.

BETTY WHITE SHOW

WRCA–TV and network, 4:30 to 5 p. m. (sponsored segments), effective September 13, 1954, 12 to 12:30 p. m.)

March 26–December 31, 1954: The Reverend Dr. Ernest C. Wilson, minister of the Los Angeles Unity Church, Los Angeles, Calif., appeared each Friday to deliver a prayer and discuss a philosophy for good living.

THE WORLD OF MR. SWEENEY

(WRCA–TV and network, 4:30 to 4:45 p. m. (sponsored days).)

March 7, 1955: In this episode of the "situation comedy" series, Cicero, philosopher-storeowner around whom the story revolves, settled an argument between two boys of different religion. Each felt his own religion to be the best, and Cicero explained that though their churches were different, the belief in something eternal and beyond is the same.

THE WORLD AT HOME

(WRCA–TV and network, 10:45 to 11 a. m. (sustaining).)
August 31, 1955: Guest interviewed, Billy Graham, evangelist.

THE PERRY COMO SHOW

(WRCA–TV and network, 8 to 9 p. m., Saturdays (sponsored segments).)
September 24, 1955: The Jewish holiday of Yom Kippur was observed by Perry Como singing "Kol Nidre" the traditional chant of the evening preceding the Day of Atonement.

PEOPLE

(WRCA–TV and network, 4 to 4:30 p. m., Sundays (sustaining).)
October 9, 1955: Filmed profile sketch presented of Rev. Dr. Joseph Jackson, president of the National Baptist Convention, who was recently a visiting preacher in Russia. He reported during the interview on Russian rseponse to his sermons, etc.

NBC MATINEE THEATER

(Monday through Friday, 3 to 4 p. m.; live dramatic series in color; produced in Hollywood (sponsored segments).)
December 23, 1955: The Unwelcomed (in color) a Christmas story by Gladys Schmitt. Philip, a motherless little crippled boy, unwanted by his father, and cared for by his ailing grandmother, was grieved over the illness of his lamb, his only friend and companion. Hearing of a shepherd who had the power of healing, Philip pleaded to be taken to the shepherd. He was ridiculed by his father and a Roman centurion, but his grandmother gave him courage to seek out the shepherd. He started out alone with the lamb, and eventually found the shepherd, and his lamb was healed. The shepherd told the child how an angel of the host of God had come to him and told him of the coming of the Messiah and how upon touching the foot of the Babe, the shepherd had been given the power of healing. Though the lamb had been cured, no one gave credence to the story except the grandmother. The Three Wise Men, hearing of the child's story, sought out Philip for having been one of the first believers, and he was taken with them to Bethlehem.
March 30, 1956: The Book of Ruth, by Howard Rodman, a biblical story in observance of Good Friday. Naomi, an Israelite woman living in the Land of Moab, decides after the death of her two sons to return to her home in Bethlehem. Her loyal and loving daughter-in-law, Ruth, insists upon going with her. In Bethlehem they live in a small house which is the only property remaining to Naomi, and Ruth gleans in the fields, following the reapers as they harvest the corn. Boaz, owner of the fields and kinsman of Naomi, meets Ruth and thanks her for her kindness to Naomi—and he tells his workers to purposely drop sheaves of corn so that the two women will be well provided for. A young and arrogant kinsman, Michael, pays them a visit and makes it known that he is there only because of family duty. After he leaves, Naomi tells Ruth that they are to lose their home for lack of tax money and she sends Ruth to Boaz for help. As Ruth talks with Boaz she learns of an old custom—if a kinsman redeems property for a widow, he has the right to take her in marriage—and then Boaz declares his love for Ruth. There is only one thing standing in the way of their happiness—since Michael is a closer kinsman; and if he wishes to redeem the property he will have the right to marry Ruth. Boaz meets Michael at the market and confronts him with the situation but Michael refuses the offer, for he would lose his inheritance by marrying the foreign woman . . . Boaz and Ruth are wed and Naomi once more has a family to love and cherish.
A series of 6 programs, 1 a month, are being presented in cooperation with the Lutheran Television Associates which represent 4 Lutheran Church bodies, the American, the Augustina, the Evangelical, and the United Lutheran Churches. Lutheran Television Associates view this as a new approach to religious television, combining dramatic programing with the Lutheran Church's basic concern for man's spiritual growth.
April 2, 1956: Singer in the Valley adapted by Helen Hanff from a short story by Dorothy Rood Stewart. This drama is the first in a series of 6 programs, 1 a month, being presented in cooperation with the Lutheran Television Associates which represent 4 Lutheran Church bodies, the American, the Augustina, the Evangelical and the United Lutheran Churches. Lissa Hoffman has come

to a small Oregon community to teach and save money to continue her vocal studies. However, she soon finds herself deeply involved in the problems of the people, and especially of the two Metzer children whose mother is dead and whose father berates and terrorizes them. The younger child, Franz, has lost his speech through fright and ill-treatment at home, and his older brother, a warm hearted child, stole his father's shotgun to buy another poor little girl a dress so she could be a lady like her loved teacher. Over a period of time she helps the small youngster to regain his speech, and she donates her savings to the older boy so that he can start out in the world on his own. Lissa has given up the thought of a singing career, realizing that her happiness is in this little community where she is needed and can contribute so much to humanity.

May 7, 1956: The Twenty-Fifth Hour, by James Blumgarten, adapted by Dorothy Tyler. A young matron, happily married and blessed with two young sons, finds that as a result of her conscientiousness, her days are filled with tasks she feels she must do, leaving no time for music or books which she enjoys so much. On learning she is to have another child, she collapses completely—she tries to pray but finds she cannot. For the first time, the father and sons realize what she has been going through—they are aghast at the heavy workload she has organized for herself, including not only household chores but community work as well. Her husband talks over the situation with her and makes her realize that she has been so busy saving the community and her home that her own life has suffered. She must respect her own needs as an individual for solitude, reflection, outside interests and relief from household and community chores.

HIS WAY, HIS WORD

Sponsored by Goodyear Tire & Rubber Co.

January 29, 1956 (WRCA–TV and network, 2:30 to 3 p. m.): The Prodigal Son, the first of three special religious dramas to be presented once a month on Sundays via film. This is the story of the Prodigal Son as found in the Gospel according to St. Luke. As in the Gospel, the parable is told by the Master to a group of Pharisees who berate Him for breaking bread with sinners.

February 26, 1956 (WRCA–TV and network, 2:30 to 3 p. m.): Where Your Treasure Is, the second in a special series of three religious dramas. The story is about an abandoned little girl who is placed in the care of the town elder. The elder temporarily places the child in the home of a wealthy merchant and his wife who have no children of their own. Though the wife's impulse is to give the child care and affection, her husband looks upon the girl as an outlet for his pride and as a recipient of all the luxuries he can lavish on her. When the child fails to respond, the merchant requests the elder to take the child back. The elder suspects the difficulty and takes the merchant to hear the Master teach. After a series of dramatic incidents, the merchant learns that the child needs affection, care, and understanding, rather than the luxuries and material things he has given her.

March 25, 1956 (WRCA–TV and network, 2:30 to 3 p. m.): The Fruitless Fig Tree, the last of a special series of three filmed religious dramas. A story inspired by the parable which appears in St. Luke, Chapter 13, when a vineyard owner insists that a fig tree be cut down because it has not yielded fruit for several years, the vineyard dresser pleads to be allowed to give the tree special care and attention and promises to cut down the tree himself if no results are obtained. To illustrate the parable dramatically, the film tells the story of a bitter and unforgiving father, a vineyard grower, who goes to town with his wife to visit their young son who has gotten into trouble and is in prison. They hear the Master speak the parable of the fruitless fig tree—and the father, struck by the similarity between what the Master says and what has actually happened on his own farm, learns a lesson in forgiveness.

EXHIBIT 4–B

Christophers Awards (for outstanding achievement, given to "individuals whose work reflects positive values and shows how a person can use his God-given talent for the benefit of all"):

Robert Montgomery, Norman Felton, and Doris Folliott for Great Expectations (on Robert Montgomery Presents).

Frank Wisbar and Michael Foster for Crusade Without Conscience (on Fireside Theater).

Fred Clark Jones, and Sumner Locke Elliott for Peter Pan (on Producers' Showcase).

Tom Lewis, Harry Keller, and Marian Thompson for Something About Love (on Loretta Young Show).

Kraft Television Theater for drama entitled Judge Contain's Hotel, by William Mourne.

Armstrong Circle Theater for drama entitled The Narrow Man, by Anne Howard Bailey.

Love and Marriage song written especially for Producers' Showcase telecast of Our Town, by Sammy Cahn and James Van Heusen.

David A. Englander and Alan Neuman for A Conversation with Herbert Hoover.

Lee Cooley, Guy Lockwood, Mitchell Ayres, Goodman Ace, Jay Burton, George Foster, Mort Green for the Perry Como Show of March 17, 1956.

C. Maurice Holland, George Ray Hill, Duane McKinney for A Night to Remember (on Kraft Television Theater).

Jewish Chautauqua Society to Ben Grauer, NBC's veteran radio and television commentator ("for the contributions of your unequaled talent to our common cause of brotherhood * * *").

Jewish War Veterans of the United States to the sponsors of This Is Your Life for furthering the cause of brotherhood through sponsorship of the program.

National Conference of Christians and Jews Brotherhood Awards (for outstanding contributions to the cause of brotherhood):

A Man Is Ten Feet Tall (on Television Playhouse).

A Stone For His Son (on Robert Montgomery Presents).

American Baptist Convention award to the Home program (for being "sensitive to the need for an understanding of human relations which includes within its broad scope of features, telling examples of practical Christianity").

Exhibit 5

NBC Statement Concerning Staging Services

WHY NBC PROVIDES STAGING SERVICES

Contrary to the impression which was sought to be created by individuals who testified before this committee concerning staging services, NBC has supplied staging services in connection with programs since the early days of television. In fact, NBC opened its first scenery supply shop in the RCA Building in New York in April 1946.

Since the establishment of that first shop, NBC has given extensive consideration from time to time to proposals that it abandon its staging services operation so that it and independent program producers would be forced to rely completely upon outside suppliers of staging services. Each time it has considered the problem NBC has come to the conclusion that it must remain in the business of providing staging services for the reasons set forth below.

The outside suppliers in New York comprise a closely knit group of a few people or firms (only five, according to the testimony of Mrs. Ashworth) which use methods basically derived from serving the legitimate theater. The traditional methods involved in staging services for the legitimate theater proved to be unsuitable for television. NBC found that it had to develop new techniques geared to the tempo and electronic requirements of television. NBC made substantial investments of time, money, and effort in the development of simplified construction and painting methods, the use of new materials, of plastics, of modular stock scenery (both hard and canvas) for quick repainting and reuse and of special effects such as rear-screen projection, novel lenses, camera techniques, and graphics which have diminished the need for traditional scenery construction. Had NBC not entered this field, many of the advances in these areas would never have been devised, and their benefits would have been lost to the public, to the producers and advertisers, and to other staging services suppliers.

Similarly, the pioneering and development of new techniques in staging services for color-television programs had to go hand-in-hand with the pioneering and development of color-television programing itself. NBC has expended vast sums of money in discovering and meeting the problems caused by the optical effects of various kinds and colors of scenery on the color-television camera and receiving set. No outside scenery supplier would have—or could have—expended such sums to pioneer in this new field.

In the event NBC were removed as a competitive factor, less expensive programs and local programs would be especially hard hit by high prices and lower quality. The few outside staging services suppliers in New York would be able to charge what the traffic would bear, with the result that a disproportionate amount of program production budgets would have to be allocated to staging services. The continued development of new techniques would be stifled, since these outside operators would be reluctant to abandon traditional scenic methods which give them a profit, in order to develop new and better techniques which might require expenditures of time, money, and effort.

In addition, other values resulting from NBC's operation of staging services would be lost were NBC to abandon this service. NBC has always operated on the basic principle of getting the show produced despite the stringent time requirements of television, and has geared its staging services operation to meet emergency demands. Advertising agencies and program producers who obtain their scenic requirements from other organizations constantly turn to NBC for last-minute emergency services which NBC alone has been able to provide. Thus only by continuing its general services in this area can NBC be equipped to take on these important last-minute emergency functions.

NBC'S POLICY WITH RESPECT TO PROGRAMS SUPPLIED BY ADVERTISERS

NBC welcomes competition in staging services. NBC has never required NBC advertisers who produce their own programs to use NBC's staging operations. Neither NBC's contracts for the sale of time nor NBC's policies with respect to time sales has ever included the condition that advertisers use NBC's staging services in connection with programs produced by advertisers, their agencies, or their program producers.

Advertisers who produce their own programs may use NBC's staging services for their programs or may, at their own choice, obtain the services of outside suppliers. Furthermore, NBC's staging services may be used for the entertainment portion of the program and the services of outside operators may be employed by the advertiser for the commercial portion of the program, or vice versa.

NBC's charges for staging services are standard, both for NBC-produced shows and for the shows of independent program producers or advertisers, and there is no discrimination between them.

TESTIMONY OF SCENERY SUPPLIERS

The New York scenery suppliers who appeared before this committee on May 14, 1956, sought to create the impression that their loss of business in the last few years was attributable solely to the operation of staging services shops by the networks. Insofar as such testimony related to NBC, it should be noted that of the 18 shows broadcast on NBC which were listed by Mr. Peter J. Rotondo as having been served by him since 1949, 14 are no longer being broadcast on NBC, 1 now originates in Hollywood, 1 still obtains its services from Mr. Rotondo, and only 2 obtain their staging services from NBC. In the case of these last 2, both shows are now entirely produced by NBC, including talent and other production elements as well as the staging services.

Similarly, of the 8 shows broadcast on NBC which were listed by Mr. Steinberg as customers of his, 6 are no longer broadcast on NBC and the other 2 are now entirely produced by NBC.

And of the two NBC shows mentioned by Mrs. Ashworth, one continues to be serviced by her employer. NBC has supplied the staging services for the other ever since the program moved to NBC from CBS.

Attached hereto is a list of the shows referred to, showing the various categories described.

We would also like to comment on other specific allegations made by these witnesses with respect to NBC:

1. Mr. Rotondo testified that NBC discriminated against independent scenery suppliers by requiring them to remove scenery from NBC studios at times where in similar instances such removal was not required if NBC supplied the scenery. Mr. Rotondo used as his case in point the Hit Parade program. He stated:

"We must haul the Hit Parade out on a Saturday night directly after the show; that is, at their convenience, because they have what they call a setup crew, at which time they will go in there and tear the show down and get it ready to ship it out.

"Well, of course, they do that at their own convenience, but our trucks are waiting out there and the night haul costs us $110 per load. Now, I don't believe it creates too much of a problem with the networks to have that stuff remain there until the following morning or until a Monday morning, but I guess it is their property and they insist upon it."

Unfortunately, Mr. Rotondo's facts are incorrect. The studio in question, Studio 8-H is used so frequently that it is necessary to remove scenery quickly after each show. NBC clears the studio of the prior show's scenery on Friday night so that the Hit Parade scenery may be set up Saturday morning, and in turn requires that the Hit Parade clear the studio Saturday evening so that the Sunday night show, the Alcoa-Goodyear Hour, will be able to set up its scenery on Sunday morning. The Hit Parade scenery cannot be left standing until Monday.

This same requirement applies to all shows where lack of studio facilities and storage areas necessitate such removal. It is in no sense a discriminatory practice directed againt outside scenery suppliers, but a necessary expedient to permit the maximum use of studio space.

2. Mr. Rotondo testified that he submitted identical bids of $2,800 each for the basic set for The Big Surprise (called by him The $100,000 Question) and for the weekly scenery for Justice. He testified that he was not awarded the bid even though he was told that NBC's bid on the former show was $4,800 and that NBC's charges on the latter show were over $3,800 weekly. Mr. Rotondo says he "was told" that NBC insisted on doing the scenery for these shows.

NBC has never insisted on supplying the staging services for shows merely because the shows are televised on the NBC television network. NBC competes for the business of advertisers, agencies, and their producers along with any other staging services suppliers who wish to submit a bid. It is up to the customer to choose who should supply the staging services. Price is not the only criterion for the choice, with quality and promptness being equally important.

In 1 of the 2 cases cited by Mr. Rotondo, NBC's actual charges have averaged approximately $1,000 a week less than Mr. Rotondo's alleged bid, whereas on the onetime construction of the basic set, the charge was approximately $1,000 more.

3. Mr. Rotondo charged in his testimony that NBC's trucking charges were "hidden." This, also, is incorrect. The cost of operating all trucking in connection with NBC's staging services is charged directly against this operation. Advertisers are billed directly for all trucking in connection with staging services from and to all points with the exception of trucking from NBC's 18th Street scenic shop to and from the RCA Building, the Hudson Theater, and the 106th Street studio. These latter three areas are not billed because staging services competitors instituted a practice of not billing for trucking in similar situations. However, trucking from and to any other points is billed to the advertiser.

4. Mr. Rotondo testified that NBC engaged in unfair bidding practices in that the bids submitted by NBC were estimates "usually with a 10 percent differential clause." Mr. Rotondo is incorrect. NBC bids for staging services are in the form either of a "flat fee" or of an "estimated bid" clearly labeled as being subject to revision in the light of actual requirements. These types of bids are in accordance with the well-known practice of bidding in this field. When NBC submits a "flat fee" bid, it performs the services required and receives the agreed sum irrespective of the fact that experience shows that the bid may have been computed adversely to NBC. In the event NBC submits an "estimated bid" it is clearly labeled an estimate and is subject to revision as the actual charges are incurred in performing the required services.

NBC PROGRAMS MENTIONED BY ROTONDO IN TESTIMONY AND THEIR PRESENT STATUS

Currently broadcast (3):
- Hit Parade (Rotondo)
- Milton Berle Show (Hollywood)
- Coke Time (NBC)

No longer broadcast by NBC (14):
- Manhunt
- Show Business
- These Two
- Faye Emerson Show
- Morton Downey
- Bride and Groom
- Jack Carter Show
- Babes in Toyland
- Ed Wynn
- Richard Rodgers
- Anything Goes
- Fred Allen Show
- Scott Music Hall
- On Your Account

NBC PROGRAMS MENTIONED BY STEINBERG IN TESTIMONY AND THEIR PRESENT STATUS

Currently broadcast (1):
- Paul Winchell Show (NBC) [1]

No longer broadcast by NBC (6):
- Comedy Hour and Motorola
- Curtain Call
- Joe DiMaggio Show
- Fair Meadows U. S. A.
- Revlon Theater
- Eye Witness Show

NBC PROGRAMS MENTIONED BY ASHWORTH IN TESTIMONY AND THEIR PRESENT STATUS

Currently broadcast (2):
- Armstrong Circle Theater commercials (supplied by Rakeman)
- Perry Como Show (always NBC supplied)

---

8. Statement of Peter J. Rotondo, New York City, in Reply to NBC's Memorandum on Staging Services Attached to Its Letter of August 9, 1956 (See Preceding Item)

Statement by Peter J. Rotondo of Peter Rotondo Co. Concerning National Broadcasting Co. Staging Services

The National Broadcasting Co., in its statement on staging services to the committee, endeavored to create the impression that since the advent of television it has been attempting to supply its own staging services and has always been determined to continue that practice under any and all circumstances.

The facts are that the National Broadcasting Co. (NBC) did create an experimental scenery supply shop in the RCA Building in 1946, staffed solely by three men who were paid less than the union scale because of the experimental nature of the shop. From that date until the middle of 1954, the NBC management conducted conversations with my organization relative to the subcontracting of all scenery work.

It has only been in the last few years that a final decision was arrived at to have NBC control all facets of TV production as well as broadcast time in order to advance their monopolistic control of the industry.

In a similar vein of half-truths, NBC has told the committee that it alone has developed the new techniques needed for the new medium of black and white television, and that similar pioneering of new staging techniques for color television had to go "hand in hand with the pioneering and development of color television programing itself."

The facts are that NBC was reluctant to go forward in the presentation of color television shows and that the most successful first in color shows was the

[1] Steinberg supplied some scenery for one show on June 3, 1954.

musical color show Your Hit Parade of January 16, 1954, staged in its entirety then (and now) by my company in a package deal which included designing, painting, and construction of scenery and the supplying of costumes and props.

The whole question of pioneering, of competence, and of overall ability in the field of staging services for both black and white and color TV can very well be summed up in this paragraph from the review of that show in the New York Times of Monday, January 18, 1954:

"As black-an-white program, Your Hit Parade always has reflected perhaps the most imaginative stagecraft of any TV show, and this know-how was magnificently translated to color."

The rest of the NBC statement is a similar collection of half-truths used to rationalize their present monopolistic position. No one knows better than they, for instance, that both NBC and CBS require 10 days advance notice on scenery requirements while independent contractors such as myself supply shows with almost no notice, working round the clock to do so. Yet they blandly claim that only by maintaining their "general services can (they be) equipped to take on these important last-minute functions."

As far as NBC welcoming competition in its staging services, the record proves this to be the best kept secret of our generation. The facts are that independent scenery suppliers have been steadily eliminated and whenever a replacement succeeded an independently supplied show, or such a show received a longer or more favorable time slot, NBC grabbed the scenery supplying and staging services almost without exception.

Nor does the question of cost justify their monolithic domination of all aspects of TV. The facts are that Your Hit Parade, one of the most elaborately staged shows on television has a most economical budget by comparison with any similar production.

Furthermore, there is little or no truth in their contention that advertiser produced shows may have NBC staging services or outside suppliers either for the main show or the commercial portion of the program or vice versa. The facts are that outside of a handful of shows, the networks dominate all staging services and the independent is fortunate if he can contract for the commercial portion of any of them.

Again, as to trucking charges, the same half-truths apply. NBC does bill to all other points for trucking save the three mentioned. However, it so happens that most of NBC's live shows emanate from these three points and my organization, as the leading independent, bills for trucking to these and all points.

Similar half-truths characterize NBC's answer to their control of the Justice show despite my lower bid. My bid was a package deal, which included designing, construction, hauling, and setting up of scenery as well as the supplying of props. Their bid or charge described as $1,000 a week less than my "alleged bid" was for supplying of scenery alone with set-up time, props, etc., billed separately or as different items.

Lastly, their statement that they submit "estimated" bids and "flat" bids as an answer to our charge is another half-truth. For while this is true theoretically, in practice all or almost all of their bids are of the "estimated" nature and only when they are pushed to the wall will they submit a flat bid.

In conclusion, let me state the following:

I and my organization are presently supplying scenery to Your Hit Parade and Omnibus. Both of them are "tight" budget shows, while demanding the highest in artistic requirements for their very individual types of shows. So much for the cost angle.

On the artistic side, objective evaluations such as the enclosed New York Times review, have hailed our work in this field. It is my opinion, therefore, that only an unfair monopoly on the part of the networks prevents myself and other independents from doing more of this work in TV. If ever small businesses needed protection from a giant monopoly, we in the scenery supply industry feel we do and we look forward confidently to your committee report and ensuing action by the United States Senate.

Television in Review: Hit Parade

SATURDAY NIGHT GLOWS AS TUNEFUL PROGRAM IS GIVEN IN COLOR—SONG, DANCE, PRETTY GIRLS AND COSTUMES COMBINE TO SHOW OFF MEDIUM

(By Jack Gould)

The National Broadcasting Co. played its ace in color television on Saturday night—a presentation of Your Hit Parade in natural tints. In its visual attractiveness the program was a joy, a panorama of shadings and hues that was altogether captivating. The Broadway musical comedy stage had better start worrying: color TV is going to be stiff competition.

The color broadcast of Your Hit Parade long had been awaited because the program is a readymade subject for the electronic palette. With song, dance, pretty girls, and superb production and costuming, the weekly dramatization of popular tunes contains all the requirements for an exciting display of the new medium.

The advance hopes were thoroughly justified. From the opening glimpse of Dorothy Collins in her familiar blouse, which turned out to be a beguilingly soft pink, Your Hit Parade was a tasteful, gay, and subdued reflection of the rainbow's wonders. It was probably the most impressive color TV show thus far.

With color, Your Hit Parade acquired a veritable Ziegfeld opulence. The introduction of lovely pastels complemented the mood of the romantic ballads and the more vivid hues imparted a new gaiety to the livelier selections. To television's existing artistic tools of melody and movement, there was added before a viewer's eyes the third emotional dimension of color. The addition spelled the difference between "live" television and living theater.

As a black-and-white program Your Hit Parade always has reflected perhaps the most imaginative stagecraft of any TV show, and this know-how was magnificently translated to color.

For the number entitled "Changing Partners" the setting was a large ballroom. As the couples swirled around the floor, the delicate blues, salmon pinks, and fragile lavenders of the ladies' gowns made their own symphony for the eye. The long white gloves and contrasting hair tints of the girls, set against the black and white of the men's formal attire, were straight out of a picture book.

In another selection a red devil dancer bounded on stage; it was the color alone that made him an exciting menace. The story of the clown in "Oh, Mein Papa" was told in a way that in black and white could not have had the same meaning. In the foreground the soloist was shown in closeup; in the background there was a small figure in full clown regalia entertaining an off-stage audience. Thanks to color, the clown was not lost in a gray haze but was seen in definition and detail.

Giselle McKenzie is eyeful enough in black and white but in a silver lamé gown, brilliant lipstick and recognizable flesh tones she made a torch ballad seem to say more than ever. For the No. 1 song on the parade, Stranger in Paradise, the setting was borrowed from Madame Butterfly. The contrast between the Navy officer's dress-whites worn by Snooky Lanson, and the lush kimona worn by oriental vis-a-vis gave a truly wonderland credibility to the rather trite lyrics.

Your Hit Parade is never going to seem quite the same again in black and white.

On another color television front, Dr. Allen B. Du Mont, head of the Du Mont network and manufacturing company, and Kenneth B. Wilson, president of the National Better Business Bureau, were heard Thursday night in a special panel discussion on the future of color TV. The program dealt one-sidedly with color TV's technical and economic problems and never came to grips with the importance of the end product from the public's standpoint—what seeing a show in color means.

The discussion, especially in the loaded questions of John K. M. McCaffrey, the moderator, was obviously designed to stimulate black-and-white set sales. It reflected what is now almost a state of mind among many manufacturers and retailers—that color TV should go away and stop bothering them. After Your Hit Parade that seems like a forlorn hope.

[For further comment on the quality of the independent designers' work see Item 31 below.]

9. Statement of Rev. Everett C. Parker, Congregational Christian Churches, in Reply to Testimony of the Network Presidents With Respect to Religious Programing

Statement of Rev. Everett C. Parker, Director, Offices of Communication of the Congregational Churches

Thank you for giving me another opportunity upon behalf of the Office of Communication of the Congregational Christian Churches to express my views about religious broadcasting. I have read with interest and concern the opinions of Dr. Frank Stanton and Mr. Robert Sarnoff, resulting from the testimony I made to your committee on this subject on June 11, 1956. I have the following comments on their arguments.

Neither Dr. Stanton nor Mr. Sarnoff apparently is willing to meet squarely the basic facts I brought to the attention of your committee; namely:

(1) That religion—not my viewpoint or some particular sectarian viewpoint as Mr. Stanton charges—but the totality of national religious broadcasting by the major faith groups, Protestant, Roman Catholic, and Jew, has been reduced on television to less than one-third of the program time devoted to religion on network radio.

(2) That the network policy—widely copied by local TV stations—of forcing the major faith groups—Protestant, Roman Catholic, and Jew—to share a single time period in sequence denies to each group the possibility of attracting a continuing audience. Since the purpose of religious broadcasting is to instruct, requiring repetitive contact with audience, the effectiveness of religious programs is nullified by this network practice.

(3) That the practice of networks—especially the Columbia Broadcasting System—of assigning religious programs to the least desirable time periods, when only minimal audience is available—i. e. Sunday morning and early Sunday afternoon—further restricts the scope and effectiveness of religion on television.

(4) That the commercialization of religion through the sale of time by networks and stations for such broadcasting, thus equating religious expression with the ability to pay for time or to sell a product, is a threat to the free expression of religious views on the air and a major abrogation of the public-service responsibilities of the networks and stations that engage in the practice. (The National Broadcasting Co. now sells time for religion on radio, as does the Mutual Broadcasting System. The American Broadcasting Co. sells time on both its television and radio networks. Only the Columbia Broadcasting System does not sell time for religion.)

I know you and the members of your committee are aware that the aspect of television that is of ultimate importance is the kind of programs that are broadcast into the homes. The way in which the networks handle religion is indicative of their attitude toward public service in general; and makes it doubtful that they are ever going to fulfill the fearful responsibility they have to serve the public interest.

My views on this matter of public-service broadcasting were presented fully and at length to your committee in my oral testimony. Nowhere in their statements in reply to my testimony do Messrs. Stanton or Sarnoff take issue with what I have said. Instead, they offer various discussions of their activities, explanations, and in some instances excuses for the present sorry state of religious programing.

It is noteworthy, for example, that Dr. Stanton in commenting on my testimony on scheduling flatly states, without supporting evidence, that "Sunday is generally the most suitable day of the week for most religious programs;" and "it would seem clearly inappropriate to schedule them adjacent to programs of an entirely different character and purpose." Dr. Stanton does not cite audience-availability figures—nor actual program audiences—for the early morning hours on Sunday when CBS schedules religion. As I pointed out in my testimony, some 60 percent of the households in a city such as New Haven, Conn., regularly use religious programs, but are limited in their viewing by a dearth of programs at times when they usually watch TV. The audience availability of Sunday morning time can best be judged by the value placed upon such time by Dr. Stanton's own organization. The CBS January 1, 1956, rate card lists the cost of a 30-minute period of class A time on the 107-station basic television network as $55,431. Class C time, which includes the Sunday morning period in which all regularly scheduled religious programs occur, sells for $27,715.50 per half hour.

Furthermore, in his concern for adjacency scheduling of religious programs, Dr. Stanton ignores the fact that the religious program with the largest audience, that of Bishop Fulton J. Sheen, is broadcast in class A time and surrounded and opposed by supposedly first-class entertainment programs.

Religious programs can reach the majority audience that desires them only if the networks schedule them when that audience is available. Network programs stand or fall on the basis of audience. Audience ratings are almost the sole criterion of success. Therefore, it is significant that neither Dr. Stanton nor Mr. Sarnoff in their claims about the adequacy of religious programs on their networks ever once mention the audience for these programs.

The issue between the public and the networks on the network handling of public-service broadcasting does not turn on how much money the network spends per program (although the published figures for religious programs listed in the briefs are pitifully small in relation to budgets for commercial programs) ; nor on program planning and participation; nor on awards and mentions in the trade press. It hinges on adequacy of presentation and on presentation of programs at a time when the chosen audience is available. It is the obligation of the network to produce—and pay for—a good program that draws a demonstrable audience. If it fails in that, then the network has failed in its public responsibility. I am applying here only the yardstick of measurement by audience that the networks have willingly and eagerly accepted as the basis for judging the success of their commercial programs.

In the case of religion, no network has demonstrated by means of audience figures that it is providing an adequate broadcast service.

It seems apparent from the statements of Messrs. Stanton and Sarnoff that religious broadcasters, and all others in the public-service field, cannot expect to receive treatment from the networks commensurate with the importance of their presentations in the public view. Complacency and indifference are the keynotes of these statements from the network policymakers. It is understandable from them why the public comes to your committee for aid.

---

10. Letter Dated August 2, 1956, From Mr. Ervin, Commenting on Pending Legislation on Political Broadcasting

National Broadcasting Co., Inc.,
New York, N. Y., August 2, 1956.

Hon. Warren G. Magnuson,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

Dear Senator Magnuson: During the course of the hearings relating to television before the Committee on Interstate and Foreign Commerce last month, you requested that the networks submit written statements with respect to the bills under consideraion by the committee concerning political broadcasts. We appreciate this opportunity and I am pleased to present the views of the National Broadcasting Co.

My understanding is that at this time there are seven such bills: S. 771, S. 1208, S. 1909, S. 2306, S. 3308, S. 3962, and S. 4250 before the committee which are designed in some manner to amend section 315 of the Communications Act. This section deals with the subject of broadcast facilities for candidates for public office. Most of the bills have as their principal purpose a more workable, realistic and equitable law. We are fully in accord with this objective and we commend you and the committee for undertaking this worthwhile task.

For the purpose of convenience I shall discuss the bills in the order in which they were introduced in the Senate. This, of course, does not in any way constitute an evaluation of their relative importance.

S. 771

The present law requires a broadcaster to afford equal opportunity to all legally qualified candidates.

S. 771 would exclude from the equal opportunity privilege an individual who is a legally qualified candidate but who has been convicted under the United States Criminal Code of espionage, sabotage, treason, sedition, or other subversive activities. It would also exclude a person who is a member of any organization proscribed by section 3 of the Communist Control Act of 1954 or any organization registered under the Subversive Activities Control Act of 1950 as a Communist-action, -front or -infiltrated organization or finally determined to be a Communist-action, -front or -infiltrated organization.

It is our view that this bill reflects a sentiment consistent with national policy and legislation along this line would be beneficial if it could be drafted in proper form.

The bill in its present form, however, requires a broadcaster to be investigator, judge, and jury. It is apparent from the nature of his business that the broadcaster is not equipped to discharge this heavy responsibility without assistance.

We, therefore, suggest that an amendment be added which requires an applicant for time under section 315 to furnish (1) the secretary of the Federal Communications Commission, (2) the United States attorney in the district where he resides, and (3) the broadcaster to whom application is made for time with identical statements under oath in a form satisfactory to all that he is a legally qualified candidate for the public office involved and that he is not within the classes proscribed by S. 771. False affidavits would subject the affiant to the existing penal sanctions of the Criminal Code or a further provision could be added to this bill incorporating a specific penalty for false statements.

We also recommend that a provision be added exempting a broadcast licensee from liability in the event he refuses a candidate time on the ground that such candidate falls within the proscribed classes specified in S. 771 and the broadcaster has reasonable cause for his action.

S. 1208

The present law provides that a broadcaster shall have no power of censorship over broadcasts by legally qualified candidates for public office pursuant to section 315 of the Communications Act. This has been construed to prohibit the rejection or censorship of defamatory material in a political broadcast. *Port Huron Broadcasting Co.* (4 Pike and Fisher RR 1 (1948)). In its decision the Commission warned that a broadcaster who violated section 315 by deleting defamatory material might lose his license. The Commission made clear that in its opinion the licensee is relieved of liability under State law for the broadcast of defamation in political speeches.

This latter opinion, however, is cold comfort to the broadcaster confronted with decisions of State courts holding to the contrary and to the effect that it is no defense in a defamation action for a broadcaster to plead that the defamation occurred in a political speech. *Sorenson* v. *Wood* (123 Neb. 384, 243 N. W. 82 (1932), appeal dismissed, 290 U. S. 599 (1933)), *Daniell* v. *Voice of New Hampshire, Inc.* (10 Pike and Fisher RR 2045 (1954)).

Thus, the broadcaster is confronted with a dilemma. On the one hand, under the Communications Act he is powerless to delete defamatory material without placing his broadcasting authorization in jeopardy. On the other hand, if he fails to censor the defamatory material he may be held liable for the resulting defamation.

We, at NBC, have no quarrel with a congressional policy which denies a broadcaster censorship power over political broadcasts but we feel that the Congress should expressly exempt from liability the same broadcaster it has rendered powerless.[1] For this reason we believe that S. 1208 is basically sound and NBC favors the bill.

The bill in its present form, however, is somewhat ambiguous. It provides immunity unless the licensee or his agents or employees participates in such broadcasts. It might be argued that participation occurs by mere operation of the station over which the speech is made. Such an interpretation would clearly defeat the purpose of the amendment. It is suggested that in order to avoid this possibility the amendment be made more specific. One way to do this is to change the proviso to read "unless such licensee, or such agent or employee, directly engaged in the preparation of such defamatory statement willfully, knowingly, and with intent to defame."

Finally, it is recommended that the exemption be made applicable to both civil and criminal defamation.

[1] Although approximately two-thirds of the States have enacted legislation which in some degree lessens the liability of a broadcaster for material broadcast over his facilities which he is powerless to prevent, much of this legislation is inadequate. There are 12 States in which there is no statutory protection. In any event, it would appear that the Federal Government has occupied the field and the legislative exemption should come from the Congress which imposed the restriction.

S. 1090

This bill would require an announcement in any political television broadcast as to whether the candidate or his spokeman is speaking extemporaneously or from prepared material and what facial makeup, if any, is being used.

Although this bill is of minor significance, NBC opposes it because it is discriminatory. It imposes requirements upon one medium of expression—television—which are not imposed on any other medium.

S.2306

Section 315 (a) of the Communications Act now provides that if a broadcast licensee permits "a legally qualified candidate" for a public office to use the facilities of his station, the broadcaster must afford equal opportunity to use the station to all other legally qualified candidates for the same office. The present act does not compel any station to make time available to political candidates. However, if under any circumstances a single candidate is afforded time, a chain reaction commences whereby the broadcaster must furnish equal opportunity to all qualified candidates for the same office.

S. 2306 provides a limited exception to the all-encompassing scope of the present section 315 (a). It is made inapplicable to:

"* * * any news, news interview, news documentary, panel discussion, debate, or similar type program where the format and production of the program and the participants therein are determined by the broadcasting station, or by the network in the case of a network program."

A weighing of all considerations leads us to conclude that on balance the bill is sound in principle. It recognizes that we live in an era of electronic journalism and that the literal application of the equal time provision tends to defeat itself. It also would remove to a degree an existing discrimination. In no other field of programing is the broadcaster so mistrusted that there is a statutory imposition of equal time for all contenders. We believe that the handling of controversial issues by the broadcasting industry has shown that on the whole broadcasters are a responsible group capable of performing their function fairly.

In order to encourage this type of programing and in the interest of affording full play to freedom of expression by candidates, it is also recommended that S. 1208—which exempts broadcasters from liability for defamation—be made applicable to the type of programs covered by S. 2306 as well as those which are strictly within the purview of section 315.

S. 3308

This is an omnibus bill to amend the Federal elections laws. Only title III is concerned with the matter of political broadcasts.

Title III proposes a limited amendment to section 315. The proposal is to require a broadcaster to afford equal facilities to all legally qualified candidates for President and Vice President of the United States only (i) if they are the nominees of a political party whose presidential candidate polled at least 4 percent of the vote in the preceding election, or (ii) if their candidacy is supported by petitions filed under State laws which in the aggregate have a number of signatures equal to 1 percent or more of the total popular votes cast in the preceding election.

This is constructive legislation and NBC favors it. One of the most unworkable aspects of the present law is the application of absolute equality among all political candidates—even those fringe groups which have little popular support. For example, there were over 15 parties supporting presidential candidates in the 1952 election—and the total aggregate vote for all of these parties amounted to far less than 4 percent of the total popular vote. This large number of aspirants makes it extremely hazardous, if not impossible, for the broadcaster to offer major candidates television exposure.

This bill, however, would remedy this situation in large measure during the election period by limiting the equal facilities privilege to those candidates who have substantial support.

It is recommended that the bill be revised to afford some protection with respect to candidates for nomination as well as candidates for election. The period before nomination is a particularly troublesome one because nearly anyone may claim to be a contender for his party's nomination for high office. A dozen or more self-proclaimed candidates could do 1 of 2 things: (1) They could seriously interfere with a national program service; or (2) their very existence could result in no television coverage of the nomination contest. Either consequence is undesirable and remedial legislation seems to be required.

S. 3962

NBC is unalterably opposed to this bill. It would compel each television network and each television station to make available without charge as many as 8½ hours during September, October, and November upon requisition.

This proposal to appropriate the facilities of broadcasters for partisan political ends has no logical or reasonable justification. Political campaigns are expensive—campaign headquarters, handout literature, direct mail pieces, travel, hotel accommodations, newspaper advertisements, billboards, placards, buttons, and the multitude of other items that comprise the elements of campaigning—all cost money. To date there has never been legislation proposed to force the supplier to make his product available to the candidates free. Yet, that is precisely the proposal embodied in this bill.

Why is the broadcaster singled out? Occasionally, one hears the contention that the airlanes belong to the people and, therefore, the political parties are entitled to requisition them for their aspirants. But airlines are licensed and use Federal airlanes; railroads are regulated by the Government; newspapers enjoy mailing privileges which are less than compensatory to the Government—yet, it is never suggested that their licenses or privileges be revoked unless a minimum number of hours of travel for candidates is provided or verbatim accounts of a specified minimum lineage is printed.

While some of the other sections of this bill might be beneficial, the clear departure from our American tradition marked by the section which would appropriate for partisan ends the product of a broadcaster leads us to oppose this bill in its entirety.

S. 4250

This bill is similar to title III of S. 3308 in that it would limit the applicability of the equal facilities requirement to legally nominated candidates for President and Vice President of the United States only (i) if they are the nominees of a party whose presidential candidates polled at least 4 percent of the vote in the preceding election, or (ii) if their candidacy is supported by petitions filed under State laws having an aggregate number of valid signatures equal to 1 percent of the total votes cast in the preceding election. NBC favors this bill for the same reasons enumerated above in connection with S. 3308. NBC also recommends that it be amended to extend to the prenomination period for the reasons specified above.

Very truly yours,

THOMAS E. ERVIN.

11. MEMORANDUM SUBMITTED BY RICHARD A. MOORE, COMMENTS OF KTTV ON THE TESTIMONY OF DR. FRANK STANTON CONCERNING THE STATEMENT OF RICHARD A. MOORE

In his appearance before the Committee on Interstate and Foreign Commerce on June 12 and 13, 1956, Dr. Frank Stanton, president of Columbia Broadcasting System, Inc., incorporated by reference as part of his testimony, 4 printed documents, 1 of which was entitled "Memorandum Concerning the Statement of Richard A. Moore" (hereinafter called the CBS memorandum). Mr. Moore's statement, to which the CBS memorandum referred, had been delivered before the committee on March 26, 1956, on behalf of KTTV, Inc., and is hereinafter called the KTTV statement.

Since the CBS memorandum is entirely and specifically directed to the KTTV statement, it seems appropriate for KTTV to make a separate and specific reply.

The CBS memorandum describes the KTTV statement as inaccurate and misleading and uses other words like "irresponsible," "unsubstantiated," and "false." KTTV's testimony was presented in good faith; it was accurate in all material respects. We regret the necessity of burdening the committee with a comprehensive and detailed reply to the CBS memorandum. But in view of its nature, we feel that a full reply is needed so that the committee can properly assess the validity of the KTTV position.

ARGUMENTATIVE TECHNIQUE OF CBS MEMORANDUM

As part of its introduction, the CBS memorandum contains the following statement (p. 1):

"It should be noted at the outset, however, that although the [KTTV] statement is lengthy, it deals primarily in argumentative conclusions and assumptions, rather than in primary facts. There is in general a noticeable absence of supporting data. On the relatively few occasions when the statement did deal with facts, they were often wrong. And, when the statement's facts were technically correct, the inferences which were drawn from them and the multiple assumptions which were built upon them were equally inaccurate or misleading."

Despite this opening comment, CBS's specific allegations of inaccuracy are relatively few. Most of those which can be considered specific allegations involve a technique whereby CBS first paraphrases the KTTV statement, changes its meaning, and then attempts to refute the changed version.

KTTV will reply herein to each allegation of inaccuracy made by CBS. In certain instances, this will require correction of the CBS version of the KTTV testimony before dealing with the merits of the particular CBS contention.

1. CBS memorandum, pages 2 and 3:

"This [CBS] memorandum will consider in turn the contentions that as a result of network option time, television-network affiliates become mere mechanical conduits and (1) broadcast an unreasonably large amount of network programs and (2) do not exercise a free choice in the selection of programs during option time, thus abrogating their responsibility as licensees."

KTTV reply:

KTTV never stated that television-network affiliates become mere mechanical conduits. However, this would appear to be a reasonably accurate paraphrase of what Dr. Stanton said in his testimony before the committee in 1954, quoted by KTTV in the current hearings (tr. 1588):

"Certainly it takes more work for a station which does not rely on a network. It is far easier to patch in the network and have a full day and night's programing. I do not blame stations for preferring that course of life. I would myself. In fact, we try our best to make this an attractive way of life."

KTTV never stated that television network affiliates "broadcast an unreasonably large amount of network programs." Not only did KTTV make no such statement, but, to the contrary, KTTV made a specific proposal that the FCC Regulations be amended in a manner which would permit affiliated stations to carry considerably more programs from their respective networks than they do now. For instance, our proposal would permit an affiliated station to carry 75 percent of its total schedule from a single network (tr. 1652, 1653) whereas according to a survey cited to the committee by CBS, network programs currently make up only 55.8 percent of the program schedule of the average interconnected affiliate. (See Network Practices Memorandum Supplementing Statement of Frank Stanton, President, Columbia Broadcasting System, Inc., hereinafter called CBS supplemental memorandum, p. 121.)

Actually, it does not appear that the networks desire more time even though the KTTV proposal would permit them to occupy almost half again as much as they are occupying now. As Dr. Stanton testified (tr. 3313):

"I don't expect that we will sell a lot more time. You say we will make our programs better. I hope we do. They are a lot better now than they were a year ago. They will be better next year. But this doesn't mean we are selling more time. This means that the programs we are now selling will be better. You couldn't get much more time in the nighttime schedule of the two leading networks if you used a crowbar, because there is no time to get in there."

KTTV, however, did take exception to the network grip on the public's most convenient viewing hours, the time which CBS chose because, as Dr. Stanton testified (tr. 3497), it is "the best time span." These are the public's most convenient viewing hours—indeed the only hours—when many citizens can watch television at all. Yet these are the hours in which, in markets with 1, 2, or 3 stations, the networks have transformed television into a purely national medium, into which you could not get more network programs "with a crowbar," let alone nonnetwork programs. This is the factor which excludes from first-class television citizenship the local program, the local advertiser, and the advertiser who is not big enough to buy a national must-buy network program.

The KTTV proposal would permit more network programs, not less, but would make possible a more equitable distribution of "the best time" among all creative program sources and among all advertisers, large and small.

2. CBS memorandum, page 3:

KTTV is alleged to have been incorrect in stating that "in order for stations to carry high-quality network programs, they must agree to carry network programs offered during the 12 hours of option time each day (tr. 1596)."

KTTV reply:

The KTTV statement was incorrect, since the current practice involves agreement to carry network programs during 9 hours of the broadcast day, not 12 hours. The FCC Re[gula]tions permit a station to option 3 hours of its time to a network during ea[ch of] 4 segments of the broadcast day, a total of 12 hours. We now learn th[at as] a matter of practice, the networks require options only during the mo[rning,] afternoon, and the prime evening hours and not between 11 p. m. a[nd ...] when most of the public is asleep and unavailable. The network[s ... m]ay require options in these late night or early morning hours, [but cu]rrently limit their options to the public's more convenient [hours as] indicated above. While we regret this inaccuracy, it is hardly ... [Th]e entire discussion before the committee relates primarily to ... [eveni]ng hours, so that the failure to option 3 hours between 11 p. m. ... [has] no bearing on the issue.

... [me]morandum, page 3:

... [s]aid that since many hour-long network programs are broadcast ... [with]in and partly outside of—and thus straddle—network option time, ... [netwo]rks effectively add an additional half-hour of option time (tr. 1593–1594)."

"It is and has been the position of the CBS television network that if a station is ordered for a program which straddles network option time, the option provisions in the affiliation agreement are inapplicable. Thus, this practice, rather than increasing the number of hours subject to the network option, has actually reduced that time."

KTTV reply:

KTTV did not allege that a half-hour of option time was added by this "straddle" device, but did testify that it is a device whereby "the networks take an additional half-hour away from the station quite consistently" (tr. 1594). KTTV further testified that "the networks are not only saturating their own network time, but are steadily moving more and more into station time" (tr. 1594). These KTTV statements, as actually made, were not denied by CBS, nor have they been denied by any other witness.

However, since CBS could not deny that the straddle program have the true effect of enabling the network to occupy an additional half-hour of station time, over and above the regular network option time, CBS has made reference to an internal policy whereby time periods cleared by a station for a straddle program are deemed by CBS not to be subject to the network option. Apparently NBC does not follow this policy (tr. 3550–3551), and there is no testimony indicating whether ABC follows this policy or not.

In any event, this particular CBS policy vividly illustrates and fortifies the very core of the KTTV argument: That a high-quality network program will win clearance without the artificial help of options, that options are necessary only to win clearance for programs which are not capable of winning acceptance on the basis of quality alone.

As of the date of Dr. Stanton's testimony, under this CBS policy, four of the most important and expensive programs on the CBS network were apparently operating without benefit of network time options. These were: Studio One, 10 to 11 p. m. Monday night, sponsored by Westinghouse; U. S. Steel Theatre, 10 to 11 p. m. alternate Wednesdays; 20th Century-Fox Hour, 10 to 11 p. m. alternate Wednesdays, sponsored by General Motors; Ford Star Jubilee, 9:30 to 11 p. m., every fourth Saturday, sponsored by the Ford Motor Co.

These programs are among the most costly on the air, yet even without the help of time options, they have been sold to leading advertisers and satisfactory clearance has apparently been obtained. Indeed, in the case of Studio One, the clearance is so satisfactory that CBS is able each week to obtain full network time charges, plus the full program cost, plus a profit to CBS on the program itself in addition to the time charges (tr. 3332).

We take it, furthermore, that station acceptance of Studio One, which has been broadcast regularly for more than half of a decade, has steadily increased. Certainly it has not suffered the "erosion" which Dr. Stanton anticipates for CBS programs if they do not have the compulsive assistance of time options (see tr. 3489, 3499).

Again we say that if the quality of a program is such that it will "erode" when faced with competition from other programs, it should not be protected against such competition. If the program does not "erode" in the face of competition, it does not need the protection of time options—as proved so conclusively by Studio One and, presumably, by the other CBS programs mentioned above.

As a further proof of this proposition, CBS has recently initiated one of the most costly weekly programs yet to be presented on television, Playhouse 90.

The genesis of this program is fully described in Dr. S 3403 et seq.). Under the CBS interpretation of option ti straddle program (9:30 to 11 p. m. Thursdays) is not su tions, and apparently CBS believes that it can compete with clearance on the basis of program quality alone. We are gla options was not deemed a detriment in this instance, and we healthy competitive approach would stimulate improvement in pro it were applied to all time periods.

4. CBS memorandum, pages 3, 4:

"But the statement seeks to find its main support for the content option time results in network affiliates carrying an unreasonably large a of network programing in a study of 40 cities in all of which the NBC and television networks each has a basic required affiliate. The study purpor to show that during evening network option time network programs occupied 96.3 percent of the time on the 80 CBS anad NBC affiliates in those markets (tr. 1590–1592)—and was later used to imply that this percentage applied to all network affiliates (tr. 1601, 1627)."

KTTV reply:

The CBS memorandum repeats its incorrect statement that KTTV has stated that network affiliates carry "an unreasonably large amount of network programing." By repeating this incorrect statement, the CBS memorandum again attempts to shift the emphasis away from the public's prime viewing hours and gives the incorrect impression that KTTV objects to the amount of network programing cleared by the network during any hours.

Moreover, in referring to the statistics supplied by KTTV, the CBS memorandum says they "purported" to show 96.3 percent network saturation of evening option time in the 40 markets where both NBC and CBS had basic affiliates. Yet despite CBS' use of the work "purported," a careful reading will reveal that CBS did not dispute the validity of these statistics, and the record further shows that no other network witness challenged the correctness of these figures. In that connection the following testimony by Dr. Stanton is of interest (tr. 3450–3451):

"Mr. Cox. Now, you have made certain comments in your reply to Mr. Moore's testimony with respect to the nature of the sample, and so on, but insofar as you know, are these figures accurate? That is, do they represent the actual record of clearance for the 40 cities involved?

"Mr. Stanton. I haven't tried to verify those figures, Mr. Cox."

Actually the CBS memorandum, together with the CBS testimony and related papers, reflects a most studious and thorough checking of all other facts and figures in the KTTV statement, with the notable exception of this statistical core of the KTTV case. However, Dr. Stanton's testimony indicates only that he personally did not attempt to verify the figures. It seems hardly conceivable that no one at all at CBS made any attempt to verify these figures.

5. CBS memorandum, page 4:

"CBS has been unable to understand the significance of the data derived from this study—done as it was in a carefully selected group of cities for carefully selected hours of the day."

KTTV reply:

This is a most deceptive statement in that it seeks to imply that the selection was made by KTTV on an arbitrary basis. It is true that it was a "carefully selected group of cities," but the group was carefully selected not by KTTV, but by CBS and NBC, each of which decided that each of the 40 cities was important enough for the network to designate it as part of the must-buy list. Moreover, the "carefully selected hours of the day" were the hours which were carefully selected, not by KTTV, but by CBS and NBC for the network option time. As Dr. Stanton testified, these hours were selected by CBS because they are "the best time" (tr. 3497).

6. CBS memorandum, page 4:

Referring to the 40-market clearance figures the CBS memorandum says:

"In any event, the facts negate the implications of the study. That option time has no such results as the statement apparently seeks to establish appears from the following facts derived from an analysis of the CBS television network's program clearances during the week of May 19, 1956:

"On all CBS television network affiliates—

"58.1 percent of all hours subject to network option are available to non-network programing.

"47.4 percent of all evening hours subject to network option are available to nonnetwork programing.

"On all CBS television network basic-required affiliates——

"38.4 percent of all hours subject to network option are available to nonnetwork programing.

"30.4 percent of all evening hours subject to network option are available to nonnetwork programing."

KTTV reply:

The information supplied by KTTV illustrating the extent to which the 2 major networks effectively control the program schedules of the respective network affiliates in the 40 markets during evening option hours was clear and unequivocal. This information, based on the published program schedules, showed that 96.3 percent of evening option hours were actually occupied by programs of the primary network, and that only 3.7 percent of these prime hours were occupied by programs from all other sources including other networks.

CBS is in possession of its actual clearance figures for the week in February described by KTTV. It would have been a simple matter for CBS to reveal those figures to indicate whether it does achieve this degree of saturation of "the best time" or not. CBS has not done so. Instead, CBS has selected a week in May and has supplied percentage figures describing a concept which CBS calls a "percent of all evening hours subject to network option" which "are available to nonnetwork programing."

The significance of these percentage figures is questionable at best; upon analysis, they appear to be affirmatively misleading.

For instance, under questioning by committee counsel, Dr. Stanton revealed the surprising information that hours which CBS described to the committee as "available to nonnetwork programing" included hours currently occupied by CBS network programs and regularly broadcast by the station at the time ordered by CBS. This information is rendered all the more surprising by the fact that such hours are considered by CBS to be "available to nonnetwork programing" only because they have been ordered and are filled by CBS network programs. These are the so-called straddle programs, an example of which is Studio One broadcast by the CBS network from 10 to 11 p. m. eastern time on Monday nights.

If CBS had offered some other half-hour program between 10 and 10:30 p. m., this half hour would clearly not be available to nonnetwork programs. But when CBS actually offers a full hour program, Studio One, from 10 to 11 p. m., and the station carries Studio One at the time ordered, the time period 10 to 10:30 p. m. is then described by CBS as "available to nonnetwork programs." The same approach is taken with programs like 20th Century-Fox Hour, United States Steel Theatre and Ford Star Jubilee.

CBS' reliance upon this strange concept becomes even more questionable in the light of the testimony before this committee indicating that the CBS interpretation had apparently not been communicated to all of its affiliates. When asked whether CBS had given its affiliated stations written advice of this policy, Dr. Stanton stated only "our affiliates are aware of it" (tr. 3456). However, when the committee questioned W. D. Rogers, president and general manager of KDUB–TV, Lubbock, Tex., on this subject, his testimony was as follows (tr. 3960):

"Mr. Cox. Is it your understanding that CBS' option does not apply to a program like Studio One, which starts in option time but extends into station time?

"Mr. Jennes. Ten to 11 o'clock.

"Mr. Rogers. I would say that option time would apply.

"Mr. Cox. You would think it would?

"Mr. Rogers. Of course, it carries over into station time.

"Mr. Cox. CBS has never formally advised you that you could refuse this program because option time does not apply to any part of it?

"Mr. Rogers. No, sir."

CBS claims that 30.4 percent of evening option hours on the basic required affiliates are "available" to nonnetwork programing. The straddle programs, of course, involve clearance by the station as ordered by the network just as much as any program in evening option hours, and since a station cannot transmit two programs simultaneously, the time is not "available" for nonnetwork programs. Even assuming some validity to the straddle concept of availability, the 2 regular weekly straddle programs (Monday and Wednesday) would account for 4.8 of the 30.4 percent. Every fourth week when Ford Star Jubilee is broadcast, there would be an additional hour of straddle programing in option time.

In such a week, the straddle figure would be 9.6 of the 30.4 percent. On an average basis for any 4 consecutive weeks 24.4 percent of evening network option time would be "available" for some reason other than the straddle theory.

In view of Dr. Stanton's testimony that "you couldn't get much more time in the nighttime schedule of the two leading networks with a crowbar," what is the explanation of this "availability" for nonnetwork programs of 24.4 percent of network option time on the 52 basic-required stations? The answer should be contained in the first footnote on page 5 of the CBS memorandum, which purports to explain the reasons why normal option hours were not subject to option by the network during the sample week. This footnote explains the unilateral CBS policy on straddle programs, and further states that option time is inapplicable where the program offered by the network is unsponsored. We believe this subsequent statement is incorrect in that option time does apply to such a time period but, in the instance of one network program (Brave Eagle), the option had not been exercised by the network. Thus, the half hour in which Brave Eagle had been offered was available for nonnetwork programing only so long as CBS refrained from exercising its option. But even if this half hour could be considered not subject to option by the network, it would account for only 2.4 percent of network option time which was "available to nonnetwork programing."

The answer, then, must lie in the third clause in the footnote which states that certain hours were not subject to network option "because of difference in time zones, no network program was offered during the period." Failure to offer a sponsored network program does not exclude a time period from option time, but in any event difference in time zones has never prevented a network from offering its full complement of network programs. The answer then may lie in the fact that CBS, in attempting to counteract the significance of the KTTV statistics, has selected a week in May, which it described as typical, instead of a week in February as did KTTV.

In February, the entire Nation observes standard time, but May is a month when daylight saving time is observed in many CBS cities and standard time is observed in others. Specifically, daylight saving time is observed in New York, but 35 of the 52 cities of the CBS basic-required network continue to observe standard time.

During the season when daylight saving time is observed in New York, we understand that it is general CBS practice to continue to occupy the same local clock hours in the standard time cities of the central time zone, for instance, as it does during the balance of the year. A second network feed for these standard time cities is made by the network in the case of some programs, and the CBS programs in such cities may, therefore, be carried in different sequence during the daylight saving season. However, the station generally continues to carry the full CBS schedule at the time ordered by CBS during the same local hours.

Although the operating situation remains the same in this respect, we note that the CBS affiliation contracts specify that network evening option time in the eastern and central time zones shall be 7:30 to 10:30 p. m. "expressed in New York time current on the date of broadcast;" in the mountain and Pacific time zone, network evening option time is 7:30 to 10:30 p. m. "expressed in local time of station current on date of broadcast."

In other words, the printed form affiliation contract is apparently based on the normal conditions of standard time. While agreements are apparently reached between CBS and its affiliates to adjust their schedules to the CBS convenience during the daylight saving season, it may not have been found necessary to reduce these arrangements to a formal amendment of the actual affiliation contract.

Of the 19 basic CBS affiliates in the central time zone, 3 observe daylight saving time, and 16 observe standard time: of the 8 CBS basic affiliates in the mountain and Pacific zones, 4 observe daylight saving time, and 4 observe standard time.

The literal effect of this language in the affiliation contract would mean that during the daylight saving season, evening option time in a city in the central zone which observes standard time would be 5:30 to 8:30 p. m. local time (7:30 to 10:30 p. m. when expressed in New York daylight saving time).

Despite the fact that such a station customarily continues to carry CBS network programs at the time ordered by the network between 6:30 and 9:30 p. m. local time (the normal evening option hours in that city), the hour of 8:30 to 9:30 p. m. would technically not be network option time. Instead the hour of

5:30 to 6:30 p. m. would technically be subject to network option, but the network does not feed its programs to such station in that hour, retaining instead its regular period of 8:30 to 9:30 p. m.

KTTV wishes to emphasize that CBS continues to arrange clearance of its evening network programs in time periods selected by the network with the same degree of saturation and control in cities which observe standard time as in cities which observe daylight saving time. The implications of the KTTV figures, therefore, concerning network saturation are not affected either in kind or degree by daylight saving time. Nevertheless, by selecting and describing as typical a week during the daylight saving season, and by making no reference to the accidental effect of daylight saving time when construed under the literal language of the affiliation agreements, CBS was apparently able to contrive a percentage figure indicating considerable network option time in the 52 basic markets was "available to nonnetwork programing." Thus, CBS gave the impression that the clearance picture was different in substance from the picture presented by KTTV, and apparently did so with the knowledge that the substantive picture was not different at all.

Lest there be any question about the actual degree of saturation of network option time by CBS, we submit as exhibit A a tabulation of actual clearance in evening option hours during the truly normal week of February 19–25, 1956, in all 52 of the CBS basic-required cities. These figures were derived from published schedules of the individual stations. If there is any information which would show a greater degree of availability to nonnetwork programing that exhibit A indicates, CBS which is in possession of the official clearance records can undoubtedly supply it.

That exhibit A is entirely or substantially correct, is supported by certain information contained at page 24 of the opinion of counsel submitted to the committee by Dr. Stanton. That page contains a tabulation of certain information concerning program clearance during a week in May 1956, which CBS states, "is believed to be typical." That chart indicates that during this week in May, the 52 CBS basic-required cities carried 1,247 hours of CBS network programs during the evening hours of 6 to 11 p. m. local station time. The total of 1,247 hours may include those rare situations where a CBS program is carried on a nonaffiliate in a basic-required city. These cases would not materially alter the significance of the figure. Contractually, these stations placed under option to CBS a total of 1,092 hours per week between 6 and 11 p. m. local station time. Despite the fact that CBS has indicated that 30.4 percent of network evening option hours on these stations was "available to nonnetwork programing" the CBS total of 1,247 hours indicates that the number of hours of CBS network programs actually carried by these stations between 6 and 11 p. m., was equal to 114 percent of the number of hours which were subject to network option in this time segment.

It is also significant that the total of 1,247 hours for the 52 stations represents an average clearance of CBS network programs of 24 hours per station per week during evening time. This weekly total per station is exactly equivalent to the full contractual commitment of 21 hours of evening option time plus 3 additional hours (or 6 additional half hours) of station time. In this latter connection it should be noted that CBS originates 6 commercial half hours per week between 10:30 and 11 p. m., which is station time. This fact may serve to explain the average clearance by the basic stations of 6 half hours over and above the total number of 42 half hours under option.

We submit that these CBS figures are the most conclusive proof of all that access to the public's most convenient viewing hours is effectively barred by the networks to local and nonnetwork program sources, and local and nonnetwork advertisers; and that the choice of what the American public may see during these most convenient hours is effectively determined by unilateral decisions at the network headquarters in New York.

7. CBS memorandum, page 5:

"The assertion of the statement (tr. 1584) that the right of an affiliated station to refuse to broadcast a network program is a mere technicality is squarely in error. It is a broad and practical right. It is effectively and not infrequently invoked."

KTTV reply:

What Mr. Moore said was (tr. 1584):

"Technically, there are certain exceptions to the station's legal obligations, but these are rarely invoked and have little practical effect."

The infrequency with which the exceptions are invoked by the stations could not be more thoroughly demonstrated than by the figures submitted by CBS and discussed by us in the preceding section. Since the CBS tabulation indicates that stations regularly clear more than a total of 21 hours of CBS network programs during class A time, it would appear that the evening options are not only effective but are up to 114 percent effective. The essential fact is that the block booking aspect of the network option (involving as it does the station's desire for a renewal of the CBS affiliation) effectively achieves clearance of even more program hours in class A time than the network options contemplate.

8. CBS memorandum, pages 5, 6:

The KTTV statement "appears to urge that in general, the selection by affiliates of network programs in option time must be the result of compulsion since syndicated film programs, it asserts (tr. 1601), are more popular. Thus, it contends, time options 'protect inferior network programs against the better programs produced by other program sources (tr. 1631).'

"However, even assuming that program popularity is the test of a station's programing responsibility network programs are more popular than syndicated films."

KTTV reply:

CBS seems to assume that KTTV argues that all nonnetwork programs are capable of winning more audience than any network program. KTTV, of course, made no such contention. KTTV did argue that some nonnetwork programs have more appeal to the audience than some network programs. Yet, in most such cases, the network program will win clearance, thanks to option time, rather than a nonnetwork program which might be superior but which does not have the benefit of options. (See tr. 1631.)

A central theme of the KTTV position is that all programs should be allowed to compete for public acceptance on the basis of program merit alone. If the network program is better, it will win greater favor; if the nonnetwork program is better, it is the one which will win favor. Indeed, the fact that some nonnetwork programs are capable of winning more audience than some network programs is the root of the CBS advocacy of option time. Dr. Stanton (tr. 3489, 3499) testified that he fears erosion of the network program structure if CBS programs are not given the benefit of options. That erosion could only come where a competing program wins acceptance from stations and the public, as compared to a CBS program. There is no other source of such erosion except superior competitive programing. But the time options are designed to keep competitive programing from reaching the air during "the best time."

In support of its view that some nonnetwork programs are capable of winning more public acceptance than some network programs, KTTV supplied examples from three markets where one or more unaffiliated stations is located, Chicago, Seattle-Tacoma, and Los Angeles. In comparison to the audience rating for all evening network programs in these markets, KTTV offered the following examples of public preference for a nonnetwork program where that program had a fair opportunity to be judged by the audience during prime viewing hours (tr. 1599–1600):

Chicago.—There were 129 evening network programs during the sample week. The nonnetwork program, Dr. Hudson's Secret Journal, had a larger audience than 101 of the evening network programs; Science Fiction Theater had a larger audience than 90 of the 129 evening network programs; Cisco Kid had a larger audience than 80; Superman had a larger audience than 63.

Seattle-Tacoma.—Death Valley Days and I Search for Adventure each had a larger audience than 108 of the 118 evening network programs. Highway Patrol had a larger audience than 104 of the evening network programs. All told, 8 syndicated programs had a larger audience than any of 79 network programs.

Los Angeles.—There were 128 evening network programs. Confidential File had a larger audience than 95 of the evening network programs, and 7 other nonnetwork programs had larger audiences than 93, 87, 82, 75, 74, 73, and 69 evening network shows, respectively.

With reference to these examples, Mr. Moore stated (tr. 1600):

"Generally speaking, these desirable nonnetwork programs are on film and are available to the network-affiliated stations in most of the major markets * * * Yet, almost invariably the affiliated station accepts a network program instead of the superior nonnetwork program."

In reply to this portion of the KTTV statement, the CBS memorandum states that the figures are "so carefully selected as to be entirely misleading." But the only specific comment offered by CBS in support of this allegation is that, of the 10 nonnetwork programs named as examples by Mr. Moore, one, Confidential File, is not a syndicated film. This is entirely beside the point, since the purpose of the examples was to show that some nonnetwork programs (of which Confidential File is one) are capable of winning more audience acceptance than most network programs, if they are given a fair opportunity to be exposed in a convenient time period (see tr. 1598–A).

9. CBS memorandum, pages 8–9:

In these pages the CBS memorandum takes issue with KTTV's conclusions concerning the late hour at which the program Disneyland is scheduled by certain affiliated stations in compliance with the network request.

KTTV reply:

The ABC network, in the Pacific time zone, regularly schedules Disneyland from 8 to 9 p. m. or later, and KTTV expressed the view that reasonable broadcasters would agree that this hour is too late on a school night for a program which appeals to children from 3 years of age up.

A careful reading of the CBS comment reveals no error in fact on the part of KTTV. The lesson of the Disneyland case is simple: in every city where the station rejected the network request for this late broadcast, and where the station presented Disneyland at a more appropriate early hour, the station was a free agent which was not dependent upon renewal of the ABC affiliation as a source of program service. Thus, each of these stations was better able to serve the convenience of its community because it was not necessary to accommodate the station's schedule to the absentee decision of a network. Even according to the CBS figures, about two-thirds of all stations which carry Disneyland at the ordered time are stations which have optioned this time to ABC.

10. CBS memorandum, page 9:

With reference to the phrase "blind selling" contained in Mr. Moore's statement (tr. 1597), the CBS memorandum states "network programs are not sold to affiliated stations."

KTTV reply:

It is true that except for certain instances where a station pays for kinescope or line charges, and without examining the question whether the free-hour arrangement constitutes payment for programs, a network program is not "sold" to the station, since no payment is made by the station specifically for the program. While, as Dr. Stanton testified (tr. 3386) "* * * we try to persuade them to think that our program is superior to the program they might be taking," it is correct that this effort to persuade the station is not "selling" by dictionary definiion. Accordingly KTTV would be glad to change the phrase to read "blind offer and acceptance."

As to the degree to which the offer and acceptance may be "blind," the record contains considerable testimony concerning the extent to which the network regularly advises the affiliate of the content of a forthcoming program. KTTV has nothing to add to this testimony. However, in reviewing the record, we do recognize certain practical difficulties which would serve to prevent complete review of all network programs in advance by the affiliate.

11. CBS memorandum, page 11:

"Finally, the [KTTV] statement relies heavily on allegations of fact purporting to establish KTTV's programing superiority (tr. 1572–1575). The purpose of this recital, apparently, is to lend weight to the contention that a network affiliate, allegedly burdened by option time, cannot operate to serve the public or the interests of the local viewers while an unaffiliated station, with no such 'burden,' can and does do so."

KTTV reply:

The CBS interpretation of KTTV's "apparent" purpose in reciting certain facts concerning its operation is incorrect. The purpose, as the record will show, was stated as follows (tr. 1575):

"We cite facts like these, not to pat ourselves on the back, but to indicate that a television station, by itself, can render the best possible service to the community so long as it has equal access to good sources of film programing. We now see the immediate prospect that this source of high-quality film programs will shrink and disappear, and that independent television stations like KTTV will be unable to obtain access to the few high-quality films that may still be produced. If independent stations cannot obtain access to such programs, the stations' potential for service to their communities will be destroyed."

KTTV did not intend to comment unfavorably on any other Los Angeles stations, network or independent, and did not do so. In fact Mr. Moore said (tr.

1681–1682), "of course we compete in Los Angeles with the 3 network-owned stations, and I think the networks run fine stations."

12. CBS memorandum, pages 11–12:

On these pages the CBS memorandum presents a summary of the sources of programs broadcast by KTTV and by KNXT, the owned and operated outlet of CBS in Los Angeles, during the week ending April 7, 1956.

KTTV reply:

KTTV regards KNXT as a fine television station and has no wish to comment on the KNXT operation. With regard to the adverse comments of CBS on KTTV's operation, however, we desire to point out that all facts stated in this tabulation by CBS concerning KTTV programs (except the one notation that KTTV broadcast no network programs) are wrong.

This is shown by the following table:

	Facts of KTTV program sources as stated in CBS memorandum (p 12)	Actual facts of KTTV program sources for same week
Network	None	None.
Film, including features and rerun syndicated film with off-camera announcer.	63 hours 15 minutes	32 hours 30 minutes.
Film as above with on-camera announcer	39 hours 30 minutes	70 hours 30 minutes.
First-run syndicated film	5 hours	7 hours 30 minutes.
Local live	21 hours 20 minutes	23 hours 30 minutes

On page 12, in its qualitative analysis, the CBS memorandum states that KTTV broadcast 2 hours and 30 minutes of news whereas the facts are that KTTV broadcast 4 hours and 15 minutes of news, and does so each week.

13. CBS memorandum, pages 12–13:

In these pages the CBS memorandum takes issue with certain statements of KTTV concerning its relative audience position in the market with particular reference to KTTV's relative position as compared to the three network outlets.

KTTV reply:

KTTV does not feel that the comparative audience of KTTV and the three network stations is a matter which is relevant to the central issues before the committee. However, since CBS has seen fit to devote considerable analysis to this subject, we are glad to supply the following information to clarify the record:

As a basis for its comments, CBS has selected the American Research Bureau report for February 1956. While all research reports differ among themselves and from month to month, KTTV is happy to comment on the report selected by CBS.

As the best possible indication of general audience position of KTTV and each of the 3 network stations, we make reference to the audience report for each quarter hour for the 7 days in the week in the survey selected by CBS.

During the sample week, KTTV and KNXT (CBS) were both on the air at the same time for a total of 507 quarter hours. KTTV had more audience than KNXT during 274 of these quarter hours; KNXT had more audience than KTTV during 209 of these quarter hours. The 2 stations had the same audience rating during 24 of these quarter hours.

KTTV and KRCA (NBC) were both on the air at the same time for 482 quarter hours. KTTV had more audience than KRCA during 325 of these quarter hours; KRCA had more audience than KTTV during 147 of these quarter hours. The two stations had the same audience rating during 10 of these quarter hours.

KTTV and KABC (ABC) were both on the air at the same time for 435 quarter hours. KTTV had more audience than KABC during 329 of these quarter hours; KABC had more audience than KTTV during 98 of these quarter hours. The 2 stations had the same audience rating during 8 of these quarter hours.

14. CBS memorandum, pages 15–16:

"The statement contends (tr. 1627–1628, 1635) that networks 'tie-in' the sale of network-produced programs with the sale of desirable network time periods. This activity is allegedly motivated by the profits networks make on the production of programs (tr. 1629, 1635)."

KTTV reply:

A careful reading of the CBS memorandum will reveal that CBS does not deny that it engages in a "tie-in" practice. Indeed, CBS acknowledges (see p. 88, footnote 1, in supplementary memorandum) that tie-ins of time and programs by CBS television do occur, "to a greater or lesser degree," in the case of certain programs which include the Jack Benny Show, the Ed Sullivan Show, Arthur Godfrey's Talent Scouts, I Love Lucy, Studio One, the Phil Silvers Show, the Red Skelton Show, the $64,000 Question, Climax, The Lineup, and The Jackie Gleason Show.

The list furnished by CBS states that such examples "include" the above programs but does not state what other programs, if any, are also included in this practice. The footnote further states that 4 of the 11 programs "are not CBS-television produced." Apparently, therefore, 7 of the 11 tie-in programs are produced by CBS. CBS has not disclosed the extent of CBS ownership or financial interest in these tie-in programs, although it would appear that in addition to probable ownership of the seven CBS-produced programs CBS may also have financial interest in others. For instance, I Love Lucy is not "CBS-television produced," yet we understand that CBS has a 24 percent interest in Desilu, Inc., which produces I Love Lucy, and a 40 percent interest in profits of the program itself.

The tie-in sale of Playhouse 90 in the time period of 9:30–11 p. m. Thursday, of course, had been fully discussed before the committee. This was a clear case where current advertisers were told by CBS that if they wished to retain the time period, they could do so only by purchasing this new CBS program in place of their own show. In discussing the alternatives open to the sponsors who currently occupied the time period, Dr. Stanton said (tr. 3429): "CBS television had decided this must be the show for the time period."

Concerning the question whether CBS may make a profit on the sale of one of its own programs in a particular time period, over and above the time charges, CBS offers no specific information. The CBS memorandum merely states that the CBS television network does not profit on its total program production operation, but suffers substantial losses. CBS television, of course, is a profitable operation. Whether this total profit is rendered greater or less by undertaking program production is irrelevant to this discussion. Undoubtedly CBS undertakes program production because it believes the overall profit of the CBS network will be greater if it does so than if it does not. And, the record does show that in a case like Studio One, which is tied by CBS to a particular time period, CBS does make a profit on the program itself (tr. 3332), which it presumably would not make if the program were sold directly to an advertiser by an outside producer. Dr. Stanton did not indicate what other CBS programs involve a specific program profit to the network.

15. CBS memorandum, page 17:

"The fact is that the CBS television network acquires a financial interest in an independently produced (or, more often, a not yet produced but conceived) program only when the outsider submits an idea or a pilot and, to bring the program to completion, the CBS television network incurs financial obligations in respect to the program's development and production.

"In no case has CBS or the CBS television network ever imposed as a condition of acceptance of a program, or of making time available for it, a requirement that it be granted a financial interest."

KTTV reply:

As Mr. Moore indicated to the committee (tr. 1608) the arrangements between a network and program producers are not a matter of direct knowledge by KTTV, and Mr. Moore did not single out CBS or any particular network. Instead, Mr. Moore suggested that information on this subject could best be obtained from those concerned with such transactions. We understand from the reports of the hearings of the subcommittee of the House Judiciary Committee that certain independent film producers have given information on this subject to the Network Study Committee of the FCC and to the House subcommittee. (See House transcript September 13, 1956, p. 739, relating to ABC's negotiations for the time period following Disneyland.)

Quite apart from any information supplied by others, KTTV believes that it is relevant to point out that many independent program producers are solvent companies, with adequate resources, who do not need financial assistance to complete a pilot film or to bring a prospective program to completion. Regardless of financial resources, however, one thing an independent program producer does need is an acceptable network time period for his program. To the degree already indicated, the networks control the air time which the independent producer needs in order to release his program. Therefore, the availability of a good network time period, which only a network can give, is far more valuable to the producer than financial assistance in connection with a pilot film. Indeed, it is virtually the essential element which the producer needs if his program is to have any value.

Although the CBS memorandum (p. 16) states that a majority of the programs broadcast over the CBS television network are not "produced" by it, it appears from Dr. Stanton's testimony before the House subcommittee that CBS, nevertheless, either owns or has acquired a financial interest in, a majority of the programs which will be broadcast by CBS this fall—specifically, 57.6 percent, including 50.5 percent of the evening programs. (House transcript, September 25, 1956, p. 1984.)

KTTV has no information concerning the motivation which led the owners of these programs to grant an interest to CBS. We, therefore, cannot comment whether the only inducement was some financial contribution by CBS in connection with the production of a pilot, or whether the principal inducement was CBS' willingness to supply the crucial time period on its own stations and on stations owned by others. But since CBS has absolute control over the time, and the independent producer is acutely aware of this fact, it seems doubtful whether any CBS request for a profit participation, no matter how carefully phrased, can ever be "untied" in the mind of the producer from the availability of the time.

16. CBS memorandum, pages 17–23:

The CBS memorandum describes as a "fallacy" the "contention that network practices are harmful to syndicated film distributors in their relations with the networks."

This CBS contention is based on three arguments which can be summarized as follows:

(*a*) There is sufficient class A time to furnish an adequate market for syndicated films.

(*b*) Classes B and C time provides sufficient incentive for program production.

(*c*) Syndicated films do accomplish wide distribution.

Each of these arguments will be discussed separately.

KTTV reply:

(*a*) In this section, despite the virtual saturation of network option time, plus considerable time outside of network option hours, in markets serving upward of 80 percent of the Nation's television homes, CBS argues that there is sufficient desirable time available for nonnetwork programs.

The CBS supplementary memorandum (p. 120) and the CBS memorandum (p. 18) rely on specific examples, 8 syndicated programs which, among them, cleared a half hour between 7 and 10: 30 p. m. in a total of 237 station half hours. The total clearance of these 8 examples, accomplished over a period of months, is less than the average clearance of 2 network evening programs.

While these examples actually serve to illustrate the great contrast between the massive clearance of network programs and the occasional clearance of nonnetwork programs, the significance of the figures is made questionable by the following facts:

1. The term "ordered" has a different meaning when applied to the placement of a national spot program than when applied to the placement of a network program. In each of the examples the CBS memorandum compares the number of stations cleared between 7 and 10: 30 p. m. and the number of stations ordered. In the case of a network, the stations are normally ordered before the station has given indication of clearance. This order is given to the network which in turn communicates with each station, requesting clearance of the time ordered.

In the case of spot placement of programs, requests for time availabilities are normally made by the advertiser to one or all stations in the desired market. If a station submits a time period which is satisfactory to the sponsor, only then is the station ordered. Accordingly, in the case of the examples supplied by Dr. Stanton, we have no way of knowing how many markets were desired by the advertiser but not ordered because there was no satisfactory time period offered.

2. Even assuming in each case that the advertiser cleared every station that he desired, the figures supplied by CBS ignore the all-important problem of clearance in the large- and medium-sized markets where network saturation is so complete, and where clearance for the nonnetwork program or advertiser is so vital.

The examples used by Dr. Stanton were taken from an address by Oliver Treyz, president, Television Bureau of Advertising, delivered in Chicago April 18, 1956 (supplemental memorandum, p. 120, footnote 2). At that meeting the

Television Bureau distributed a pamphlet which repeated in great detail some of the material contained in the speech, but only one list of actual clearances was supplied, Socony Mobil Theatre. The pamphlet states that the first station order by Socony went out in October 1955, and it then lists the actual clearances in terms of stations and time periods which had been achieved as of April 1956. The entire list is attached hereto as exhibit B.

Socony Mobil distributes its products in 43 States (all but the 5 Southeastern States), and it seems fair to assume that the advertiser would want to cover a correspondingly extensive number of markets with Socony Mobil Theatre, if suitable time periods were available. Yet, analyzing this clearance list, we find that only 56 markets were cleared; only 14 clearances were obtained on a CBS or NBC primary affiliate in the top 100 markets of the United States; and only 3 of these were in network option time. Only 20 of the top 100 markets were cleared at all. Of the 36 remaining markets cleared, 16 were in cities ranking between 101 and 200 in size. Ten ranked between 201 and 260. As defined by the Bureau of the Census, there are only 260 metropolitan areas in the United States. Ten of the markets cleared were in communities ranking in size below these top 260.

In the case of the Rosemary Clooney Show which indicates clearance for the advertiser on 54 stations between 6 and 11 p. m. (CBS memorandum, p. 18), KTTV understands that the list of clearances was in accordance with the list contained in exhibit C, which specifies 51 markets cleared.

It will be noted that these markets in terms of size are as follows:

In the top 100 markets	22
In the markets 101 to 200	12
In the markets 201 to 260	5
In the markets 261 or lower	12
Total	51

Moreover, we have no way of knowing the extent to which the stations in the smaller markets were available because they were not otherwise ordered by network advertisers. Since the average nighttime network program is carried on 121 stations (Opinion of counsel, p. 10), it appears that there are many station half-hours within network option time which are not filled by the network because they were not ordered by the advertiser in markets below the top 100. Any such half-hours in network option time, however, would be subject to preemption under the network option if and when ordered by a network advertiser.

(*b*) CBS states (p. 20), "Clearly, therefore, as the experience of the CBS television network itself establishes, hours outside 7:30 to 10:30 p. m. provide sufficient incentive for program production."

This statement by CBS seems completely consistent with the KTTV recommendation that both network and independent program sources can prosper if some of the time now occupied by networks between 7:30 and 10:30 p. m. is made available to nonnetwork sources. Conversely a greater amount of the time outside of 7:30 to 10:30 p. m., which CBS itself deems satisfactory, would be made available for network programs. The networks, under this proposal, could originate more network programs than they do now.

Any other interpretation of this CBS argument would mean that hours outside of 7:30 to 10:30 p. m. are good enough for all other program broadcasters and are good enough for all nonnetwork advertisers, but not good enough for CBS and the CBS network advertisers.

(*c*) In support of its contention that there is a good market for syndicated films, CBS lists 32 syndicated programs (pp. 20, 21) and indicates the number of markets in which each program is currently broadcast. The short answer to this CBS evidence of successful syndication is that further production of at least 19 of these 32 series has been abandoned. Three of those where production is continuing are being produced first for network use, so that recovery of the investment is not primarily dependent upon syndication. The CBS tabulation, moreover, does not reveal the size of the markets or the time periods in which the programs are broadcast. Revenues received by the syndicator depend very largely on the size of the market and availability of a good time period.

With respect to the clearances listed by CBS, we find an average clearance per program of 89 markets. In this calculation we are assuming that, in those cases where CBS has estimated a number of markets as "more than" a certain number, the actual number is at least a third again as high. A large portion of these clearances are outside of the prime evening hours. And the number of stations cleared contracts sharply with the average clearance of network programs on CBS during network evening option time (the best time) which is 121 markets per program. Since the average CBS clearance includes the 52 rich must-buy markets, the sorry comparison between the clearance opportunity of the syndicator and the clearance which can be assured via the network is all too clear.

17. CBS memorandum, pages 21–22:

"Network affiliated stations with option time make greater use of first-run syndicated film series than do unaffiliated stations (where, of course, no option time obtains)."

KTTV reply:

In support of the above contention the CBS memorandum sets forth a list of network affiliated stations and indicatse the number of first-run syndicated film series broadcast during an unspecified week by each of the stations. It also gives the same information for independent stations in Los Angeles and New York. This information fails to support the CBS contention for two basic reasons:

(1) At a time when many syndicated film series have been blocked from clearance in network-affiliated markets by reason of option time, and may have ceased new production for that very reason, an independent station like KTTV may long since have consumed the first run of such series, and will be looking for more episodes or for new series which nowadays are rarely forthcoming. Thus a series which eventually obtains clearance for "first-run" in a network market may not only be out of production, but may be in its second, third, or subsequent runs on a station like KTTV.

(2) The information supplied by CBS gives no indication as to the desirability of the time periods in which the syndicated films have obtained clearance on the network stations.

The significance of the above two factors is illustrated by the February program schedules of KSBW–TV, Salinas, and WCAU–TV, Philadelphia, the two leading examples listed by CBS to illustrate the comparative opportunity for syndicated films on network affiliates:

> While KSBW–TV was carrying 25 half-hours of syndicated films, KTTV was carrying a total of over 90 half-hours including 40 different regular series. Eleven of the series carried by KSBW–TV had already completed their first run in Los Angeles and were being carried as subsequent runs.
>
> WCAU–TV was carrying a total of 23 half-hours of syndicated films, 10 of which were series which had already completed their first run in Los Angeles and were being carried as subsequent runs. Moreover, it is worth noting that at least 5 of these series, most or all of which appear to be first run in Philadelphia, were carried by WCAU–TV between 11:30 p. m. and midnight.

Actually, this material supplied by CBS merely underscores the barrier of option time, which has resulted in the decline of syndicated films as set forth in detail in the following section of this memorandum.

18. CBS memorandum, page 23:

"The KTTV statement contends that one of the sources of programing (syndicated film) of the nonaffiliated station will be cut off or sharply restricted as a result of the network practices complained of (tr. 1575). The statement is here attempting to project into the future. As has been indicated earlier in this memorandum (pp. 20–23) and more fully detailed in the supplemental memorandum (pp. 113–118) there is no likelihood of a drying up of the production of syndicated films. All the available evidence of the past poionts to an increase in this product in the future. The pessimistic speculations of the statement have no sound basis."

In support of the above statements, the CBS supplemental memorandum (pp. 113–118) quotes certain facts and figures derived from industry trade publications which led CBS to the conclusion that the supply of nonnetwork programs is "larger and increasing."

KTTV reply:

KTTV's attempt to "project into the future" has proved to be all too accurate, and the CBS prediction of an increase in production of nonnetwork programing has proved to be unfounded and incorrect. The facts and figures which CBS cited in support of this prediction were either incorrect or failed to support the conclusions which CBS attempted to draw from them.

Before discussing the CBS reply in detail, it may be helpful to clarify again the situation which confronts the producer of films for sale on a nonnetwork basis, that is, films for syndication.

Like a network, such producer must find salable time periods in which to expose his film if he is to recoup the negative cost and make a profit. With respect to a network program, Dr. Stanton has clearly stated that a network needs assured clearance in the large markets in order to be able to afford to produce the program and furnish it to the smaller markets. Discussing the case of a city like Bangor, Dr. Stanton said (tr. 3493): "if we can't sell it [network program] in the big markets, then we can't afford to furnish the service to him in Bangor."

Just like Dr. Stanton, the independent film producer cannot afford to produce the program for the Bangors of the country unless he can sell the program at a good price in big cities like Boston, San Francisco, Louisville, Philadelphia, Baltimore, and Cleveland, to name only a few. But as we have seen, "the best time" available in such markets is almost completely saturated with network programing, cleared by the network to the exclusion of opportunity for nonnetwork programs. As shown above, this is true even when the nonnetwork program is of a quality which would win more popular acceptance than most of the network programs which are being cleared.

As Mr. Moore stated (tr. 1604):

"Today, the only means by which a film producer can be assured of time periods in a sufficient number of markets is to sell the program to a network or to an advertiser who is able to place the program on the network. Without such a guaranteed release, the film producer or syndicator can now seldom afford to produce a series.

"It is true that a number of the fine syndicated films have been produced for nonnetwork use and have been sold in many markets, but the number is steadily dwindling because of the restraints imposed by time options. It is no answer to say that independent films can obtain class B or class C time, since the competitive network programs have automatic control of the really valuable class A time."

Attempting to refute this aspect of the KTTV statement, Dr. Stanton made reference (supplement memo pp. 115–117) to the reported prosperity of certain prominent companies engaged in production of films for television. Let us take these examples one by one.

CBS example (p. 115):

"The production budget of Screen Gems, Inc., one of the leading producers of syndicated film for television, rose from $100,000 in 1951 to $10 million in 1955. Its gross sales rose from $6 million in its 1954 fiscal year to $11 million in its 1955 fiscal year; and it expects to gross $15 million in 1956."

The facts:

Prior to 1956 Screen Gems had produced or offered only two new series for syndication, Jungle Jim and Celebrity Playhouse. It has terminated production of both these series. During 1956, Screen Gems has produced or offered no new series for syndication. Dramatically illustrating the contention that the independent producer must look to the network, is the fact that all of Screen Gems' new production in 1956 is for network broadcast. This includes two new half-hour series, Circus Boy and Bengal Lancers, which have recently begun network broadcast on NBC; a series of 90-minute films for Playhouse 90 (in which CBS will have a profit participation); The Mystery Writers Theater which will be available only for network broadcast. Screen Gems is also continuing new production for regular network broadcast of the following series: Fort Theater (ABC), Father Knows Best (NBC), and Rin Tin Tin (ABC). Three Screen Gems series, formerly produced for network broadcast—Captain Midnight, Tales of the Texas Rangers, and Damon Runyon Theater are not continuing this year on the network, and production of any new episodes in all of these series has been discontinued.

CBS example (p. 115):

"Guild Films Co., Inc., another producer of television films, almost doubled its sales and tripled its earnings in 1954, and, without network distribution, was able to place its programs on as many as 178 television stations in the United States, including many primary and basic required network affiliates. Its programs were sponsored by almost 400 companies."

The facts:

Prior to 1956, Guild Films had produced or distributed for syndication Liberace, Life with Elizabeth, Confidential File, I Spy, The Goldbergs, The Frankie

Laine Show, and Florian Zabach. As of 1956, production of all of these programs had been discontinued. During 1956, Guild has produced or offered no new programs for syndication. We understand that Guild has one projected program to be ready for 1957, but had none in 1956.

CBS example (p. 116):

"National Telefilm Associates, Inc., a distributor of syndicated feature film for television, increased its sales from $350,000 for the year ending July 31, 1954, to $870,000 for the 8 months ending March 31, 1955, and to $1.5 million for the 6 months ending January 31, 1956. Its programs were broadcast by 313 stations during the 16-months period ending April 30, 1955. Forty of its films were recently being broadcast in 96 different markets."

The facts:

All of the sales cited by CBS involve motion pictures and short subjects originally produced for theatrical exhibition. In 1956 NTA is offering only one new series produced specifically for television syndication, Sheriff of Cochise, plus a series of 39 dramatic half hours, most of which were produced prior to 1956 for British television.

CBS example (p. 116): "Television Programs of America, Inc., has a reported budget of $10 million."

The facts:

Prior to 1956 TPA had produced or distributed five new series for syndication, Ramar of the Jungle, Ellery Queen, Stage 7, Count of Monte Cristo, and Science in Action. (KTTV has testified how it sought to purchase rights to two other TPA productions, Halls of Ivy and Captain Gallant of the Foreign Legion, but the sale to KTTV was blocked by the need for network clearance, tr. 1619, 1623). In 1956, TPA is producing or offering no new programs for syndication and it has discontinued production of all five series which it had previously offered. TPA has announced one new program to be released for syndication in 1957, although there is no way of knowing whether, if that program has an opportunity to go on a network (as was the case in Halls of Ivy and Captain Gallant), it may be withdrawn from syndication. The only new production by TPA for 1956, is limited to its two programs which have network release, and are not available except for network broadcast, Lassie (CBS), Captain Gallant (NBC).

CBS example (p. 116): "Hal Roach has a production budget of 9 to 13 million."

The facts:

Prior to 1956, Hal Roach had produced, or participated in the production of, the following programs: My Little Margie, Trouble With Father, Racket Squad, Public Defender—production of all of which was predicated upon a network release. Network broadcasts of all these programs had been discontinued, and production of new episodes was forthwith discontinued in every case. In 1956, Hal Roach is producing, or participating in the production of, only one program for syndication, Code 3, which was purchased in advance for certain markets by Rheingold, in cities which include the major markets of New York and Los Angeles. It is being offered for syndication in markets not purchased by the original sponsor. However, Hal Roach is producing, or participating in the production of, two new series in 1956 for network broadcast: Oh, Susanna, on CBS, and Telephone Time, on CBS.

There were reports in the press that Hal Roach had planned production of a new series for 1956, Blondie, which was to be sold to national advertisers for nonnetwork clearance. We understand that this project has been abandoned.

In addition to the companies cited by Dr. Stanton there are certain other companies which have been active in the past in offering new films for syndication.

Prior to 1956, Ziv Television Programs, Inc., had apparently made it a practice to produce and release at least three new programs per year for syndication. These have included Mr. District Attorney, I Led 3 Lives, Corliss Archer, Eddie Cantor Comedy Theater, Favorite Story, The Unexpected, Boston Blackie, The Man Called X, Science Fiction Theater, Highway Patrol, and The Cisco Kid. In 1956, Ziv has offered only 1, instead of 3 new programs for syndication, Dr. Christian. A second program, Men of Annapolis, is offered for release in 1957. Significantly, for the first time in 1956 a new Ziv program, The West Point Story, was not offered for syndication but, instead, was sold for broadcast on a network—8 p. m. Friday on CBS. Meanwhile, Ziv has discontinued production of all its existing series except Highway Patrol, Science Fiction Theater and Studio 57.

Prior to 1956, the first-run properties offered for syndication by MCA TV, Ltd., included Waterfront; Abbott and Costello; Biff Baker, U. S. A.; Dr. Hudson's

Secret Journal; I Am the Law; Rocky Jones; The Lone Wolf; Kit Carson; Mayor of the Town; The Ken Murray Show; City Detective; The Guy Lombardo Show; Man Behind the Badge; Studio 57; and Soldiers of Fortune. In 1956, MCA is offering only two new programs, The Rosemary Clooney Show and State Trouper. Of all of the above series, MCA is continuing new production only for Dr. Hudson's Secret Journal and Studio 57.

MCA, however, is engaged in production for 1956 of one new series for network broadcast, On Trial, on NBC. It is also engaging in new production of the following series, but only for broadcast on the network: Alfred Hitchcock Presents (CBS), The Crusader (CBS), Jane Wyman Theater (NBC), General Electric Theater (CBS), Schlitz Playhouse (CBS).

Prior to 1956, Official Films, Inc., produced or offered for syndication the following new series: The Scarlet Pimpernel, Colonel March of Scotland Yard, Secret File U. S. A., and This Is Your Music. In 1955, Official acquired the rights to the series Robin Hood, acquisition of which by KTTV was blocked because Official needed a network release, and the program was placed on CBS. (See tr. 1624, 1625.) Official has had two new programs to offer in 1956: The Buccaneers and Sir Lancelot, both of which are receiving network release on CBS and NBC, respectively. Official is offering no new programs for syndication for 1956 and has discontinued further production of programs previously produced and offered for syndication.

Hollywood Television Service, a subsidiary of Republic Pictures, prior to 1956 had produced one full series for television, the Academy Award winning Stories of the Century. Having had 2 years in which to achieve distribution of these 39 episodes, Hollywood Television Service is now producing one new series for 1956, Frontier Doctor. Through the pattern of buying regional rights for this new series, over and above its own needs (see tr. 1622, 1623) KTTV was able to acquire rights to this series, and it was placed in syndication rather than being offered for network production as was the original intention.

Finally, it is relevant to mention Motion Pictures for Television, Inc., (MPTV), which, prior to 1956 had produced or distributed for syndication the new series, Paris Precinct, Sherlock Holmes, Duffy's Tavern, Flash Gordon, and Janet Dean, R. N. MPTV has long since abandoned further production of all these series and is offering no new programs for syndication.

KTTV understands that there will be 3 or 4 additional series offered for syndication in 1956 from various sources including 1 or 2 series produced in England, but we do not believe these series reflect the budget or quality appropriate for prime evening prcgraming.

While the above indicates the state of independent syndication, perhaps the most revealing evidence of the declining production of films for syndication is found in the syndication divisions of the three network companies themselves.

Prior to 1956 the syndication division of CBS had produced for syndication or distributed The Gene Autry Show (syndicated in cities outside a limited CBS network), The Whistler, Range Rider, Annie Oakley, Long John Silver, Cases of Eddie Drake, Buffalo Bill, Jr., Files of Jeffery Jones, Fabin of Scotland Yard, Gloria Swanson Theater and, after cancellation on the network, Amos and Andy.

To our knowledge the CBS film syndication division is producing or distributing no new programs for syndication in 1956, and production of all the series mentioned above has been discontinued with the possible exception of Buffalo Bill, Jr., and Annie Oakley of which a limited number of new half hours may be made this year.

The CBS film division has announced one new syndicated series for 1957, but none for 1956. With reference to this series, as an indication of the difficulty of clearing good time on individual stations, we understand that it will be offered with a must-buy requirement whereby the minimum order would involve the purchase of rights for an entire State.

Prior to 1956 the NBC film syndication division had produced for syndication or distributed Inner Sanctum, Dangerous Assignment, Crunch and Des, Hopalong Cassidy, Western Marshal, The Great Gildersleeve, His Honor, Homer Bell, Adventures of the Falcon. Like CBS, the NBC film division is offering no new series for syndication in 1956 and had discontinued production of all the above series.

Prior to 1956, the syndication division of ABC had produced for syndication or distributed the following programs: Passport to Danger, Three Musketeers, and Sheena of the Jungle. Further production of all three of these series has been discontinued, and the ABC film syndication division is producing or offering no new programs for syndication in 1956, except that early in the year we understand that it undertook film syndication of the Hal Roach property, Code 3, in all markets except those taken by Rheingold under the original arrangement with Hal Roach. In this, the only instance of even partial syndication of a new program by any of the 3 network divisions, it is important to note that production of the series was predicated on a major commitment by the sponsor in the 2 most lucrative markets, New York and Los Angeles, where clearance of a network affiliate in prime time is not necessary.

This then is the sad state of television film syndication brought about by the effects of option time. It is exactly in accord with predictions given to the committee by KTTV, which were described by Dr. Stanton as "pessimistic speculations" which had "no sound basis."

That KTTV is not the only station which is feeling the shortage of new syndicated film is confirmed by the testimony of a network affiliate. Jack Harris, vice president and general manager of the NBC basic-required affiliate, KPRC–TV, in Houston, Tex., and a member of the NBC affiliate's executive committee, testified in favor of existing network practices. The following excerpts from the testimony are relevant to the syndication question (tr. 4514–4518):

"We are constantly seeking better and more varied program fare from the film syndicators, and yet fewer and fewer quality shows are being offered for local syndication.

"The syndicators are generally following the practice of making their programs available to the networks or to the national networks client and then offering them as syndication reruns after they have had network exposure.

"I have personally discussed this problem with several syndicators who have stated frankly that the one sale to the network advertiser had the advantage to them of eliminating a great deal of risk from their venture, plus eliminating the cost of trying to make individual sales. Consequently, it was to be preferred over multiple-station sales.

* * * * * * *

"Senator MAGNUSON. How is it we see these films running 2 and 3 times?

"Mr. HARRIS. You are getting them on the reruns. You are getting the shopworn commodity that they offer to the local stations. Thus I am somewhat baffled as a station operator to read of testimony before this committee wherein film syndicators are seeking to limit network option time, in order, they say, to open more and better periods for them to sell their product to the stations. My own experience is that we have a difficult time in finding suitable first-rate, first-run film material for us to use in the periods we already have available.

* * * * * * *

"Mr. HARRIS. I might say parenthetically that at the moment we have four class A half-hours that are sold to local sponsors that we are trying to find good first-rate, first-run products for next fall. So far there is only one film syndicator, to my knowledge, who has come up with a show that is not a rerun of a network—that is, a new product—that is available next fall."

KPRC–TV, as a network affiliate, has consistently demonstrated an unusual flexibility in providing prime evening time for nonnetwork programs and nonnetwork advertisers. The shortage of new first-rate syndicated films in Houston is no fault of Mr. Harris'. It stems directly from the shortage of good time periods in other important markets where the best time is saturated by the networks. As a result, companies like the four local sponsors in Houston are typical of the second-class citizens of television to whom the local broadcaster offers only shopworn programs which have had one or more previous showings on behalf of the network sponsor.

19. CBS memorandum, pages 24, 25:

"The fallacy of the contention that the nonaffiliated stations suffer economic loss as a result of network practices.

"Such loss, it is claimed, occurs in two ways: first, the basic-required practice of the networks prevents the network advertiser from placing his program on nonaffiliated stations in the basic-required markets (tr. 1616–1617), and second, the networks are charged with exerting improper pressure on advertisers to transfer to network affiliates network programs previously placed on nonaffiliated stations (tr. 1617–1619)."

The CBS memorandum then attempts to demonstrate that neither of these contentions is correct.

KTTV reply:

In dealing with the first contention, CBS does not contradict the facts presented by KTTV, and merely presents legal and economic arguments attempting to justify the validity of the must-buy practice. These arguments have been fully dealt with in the KTTV statement and the memoranda submitted by KTTV's counsel, and need not be answered again here.

With respect to the second contention, CBS disagrees with KTTV's interpretation of the facts relating to the program, Captain Midnight. Captain Midnight is a film series controlled by an advertiser. The advertiser placed the program on the CBS network throughout the country but, in Los Angeles, decided to place it on KTTV instead of the CBS-owned affiliate, KNXT. Subsequently, CBS attempted to obtain the program for its own Los Angeles station, and was successful under the circumstances described below.

In commenting on this particular incident, the CBS memorandum sets forth the text of a letter from Mr. George A. Bolas, director, media activities, Tatham-Laird, Inc., the advertising agency which had placed Captain Midnight on KTTV. Mr. Bolas' letter does not deny Mr. Moore's statement concerning the pressure placed upon him by the network to move the show to KNXT prior to an ultimate telephone call from Mr. Bolas to Mr. Moore discussed at transcript pages 1618–1619. With reference to that telephone call, Mr. Moore testified:

"Finally, on the telephone, the agency informed KTTV that the network had now told the agency that unless they moved Captain Midnight to the network station in Los Angeles, the network would not make available a time period then under discussion for another program, Tales of the Texas Rangers, to be placed on behalf of a different advertiser by the same advertising agency."

In this connection the CBS memorandum quotes the following paragraph from Mr. Bolas' letter:

"We were never threatened or informed in any way by CBS that we were jeopardizing the possible time period clearance of Tales of the Texas Rangers unless we moved Captain Midnight to the CBS network station in Los Angeles. We can also state that we did not inform Mr. Moore that such was the case."

KTTV, of course, cannot testify concerning conversations between Mr. Bolas and CBS, and we accept Mr. Bolas' statement on that point. Regarding Mr. Bolas' phone call to Mr. Moore, however, Mr. Moore's recollection of that phone call is different from that of Mr. Bolas. We believe this is merely an honest difference in recollection of the contents of a phone call made many months earlier. Knowing Mr. Bolas, we are sure that his statement in the letter honestly reflects his recollection and we have complete faith in his truthfulness and integrity.

However, although Mr. Moore's recollection differs from that of Mr. Bolas, the significant fact is that other portions of Mr. Bolas' letter confirm the main point of the KTTV testimony, namely, that the advertiser's decision as between KTTV and the CBS outlet in Los Angeles was influenced by the advertiser's desire to retain CBS network distribution for Captain Midnight in other cities, as well as to place Tales of the Texas Rangers on the CBS network.

Mr. Bolas' letter and subsequent events confirm the following:

(1) Tatham-Laird placed its program Captain Midnight on KTTV. Despite the must-buy rules it was free to do so at the time because the particular CBS affiliate, KNXT, had not cleared for Tatham-Laird the clock time which Tatham-Laird had ordered on the network.

(2) As Mr. Moore testified, Mr. Bolas did telephone Mr. Moore, and in that conversation Mr. Bolas made reference to the unrelated program, Tales of the Texas Rangers. Mr. Bolas "pointed out that we [Tatham-Laird] had no desire to create an unfavorable climate for our negotiations on Tales of the Texas Rangers by insisting on a continued dparture from the published, and agreed upon, network clearance policies of CBS."

(3) Thereafter Tatham-Laird did move the program Captain Midnight to the CBS station in Los Angeles, KNXT.

(4) Tatham-Laird successfully concluded its negotiations with CBS for clearance of network time for Tales of the Texas Rangers, and that program duly went on the CBS Network and KNXT.

Thus, based on the statement of facts contained in Mr. Bolas' letter, the following points are clear:

(1) Under the operation of the must-buy policy, the program Captain Midnight was switched to the CBS station KNXT; thus KTTV lost a program because, as Mr. Bolas stated, "It was obvious to me that any new

contract would automatically include a requirement for our client to order all basic CBS stations including Los Angeles."

(2) Mr. Bolas, a skilled and seasoned buyer of television time, who represents major companies which make large expenditures for advertising on television, apparently felt that further insistence upon a departure from the "must-buy" policy in the case of Captain Midnight could "create an unfavorable climate for our negotiations on Tales of the Texas Rangers." Thus, an experienced advertising agency executive was concerned about a possible relationship between the apparently unrelated situations, despite the fact that Tatham-Laird was "never threatened or informed in any way by CBS" that "we were jeopardizing the possible time-period clearance of Tales of the Texas Rangers unless we moved Captain Midnight to the CBS network station in Los Angeles."

Good television time on the CBS network is scarce. The degree to which CBS and NBC control good advertising time, nationally, has already been demonstrated. The fact that a representative of major television advertisers, in the position of buyer not seller, saw the need for avoiding an "unfavorable climate" with the network in connection with placement of two unrelated programs on CBS, is the essence of KTTV's point. We do not know how many other advertising executives are similarly concerned about a possible "unfavorable climate" in situations like this.

In the days of certain memorable shortages, the best means by which a prospective purchaser could avoid an "unfavorable climate" for the purchase of a bottle of good Kentucky bourbon was to make a simultaneous purchase of inferior rum.

Incidentally, as of October 1956, the Captain Midnight program is no longer placed by Tatham-Laird on the CBS network, but rather is scheduled on a national spot basis in a number of markets. It is interesting to note that the program under theses circumstances has in Los Angeles been moved off KNXT, the CBS outlet, and has been returned to KTTV. As a significant footnote to this entire incident, this ultimate decision by the sponsor clearly spells out the following conclusion:

The sponsor of the Captain Midnight program, freed of the compulsive "must-buy" restrictions, is enabled to choose his Los Angeles station solely on his and his agency's appraisal of the particular circumstances in that market, without conditioning his Los Angeles station choice upon what stations he uses in other markets.

20. CBS memorandum, page 28:

The KTTV statement "alleges that network practices make the nonnetwork advertiser a second-class citizen, prevent medium seized and small advertisers from using television, and result in the networks' having undue control over the advertiser's choice of programs and station outlets."

KTTV reply:

1. The CBS memorandum points out that many large companies refrain from using television as a matter of choice and that many other large advertisers, as a matter of free choice, prefer to use national spot television rather than network television.

The KTTV statement, of course, was not concerned with those advertisers who elect to use no television or no network television as a matter of free choice. The KTTV statement was concerned with those many advertisers who would like to use television, and for whom the use of television might be vital to the success of their respective businesses, but who are restricted to the second-class use of television because of the network practices. Among these would be the type of company referred to by Mr. Sylvester Weaver when he said (tr. 1615):

"If television were limited, for instance, in the soap field only to the big three, other companies would go out of business, literally go out of business. They could not compete without television, in terms of selling."

The essence of the KTTV argument on this point, on which CBS has virtually refrained from commenting, is as follows: The network evening option hours represent "the best time" for television viewing. These are the hours when the advertiser can reach most consumers and the only time in which he can reach many consumers. (See discussion by Dr. Stanton, tr. 3497).

In connection with his description of these hours as "the best time," Dr. Stanton testified (tr. 3496):

"I think that is determined pretty much by what the public does. There are more people to a television set after dinner than there would be in the afternoon."

Those "more people" obviously include such prospective purchasers of goods as the workingman who has been at his job all day and the housewife who has been busy with her chores. The hours between dinner and bedtime are the hours when these potential customers can conveniently collect around the family television set. Yet, these are the hours when the programs selected at network headquarters in New York, and sold almost exclusively to national advertisers, thoroughly saturate the program schedules of the affiliated stations serving the local communities of the land.

With rare exceptions, therefore, only the advertiser who, through merger or otherwise, has grown large enough to buy a network program and a minimum basic-required network can sponsor a program in these first-class hours. And where a local advertiser does succeed in obtaining a single half hour in a single community, he proceeds under the continuing threat of being dispossessed by a network program. Ironically, the network advertiser might even be one of his large competitors.

2. For the reasons described above, even where a nonnetwork advertiser can obtain a half hour of prime time on a local station, he is confronted with the diminishing supply of quality programs with which to compete for audience against network programs. Examples of these are the four local advertisers described by Mr. Harris of KPRC–TV, Houston.

More than most network affiliates, KPRC has made it a practice to reserve some prime time for nonnetwork advertisers, but as Mr. Harris testified (tr. 4518):

"At the moment we have four class A half hours that are sold to local sponsors that we are trying to find good first-rate, first-run productions for next fall. So far there is only one film syndicator, to my knowledge, who has come up with a show that is not a rerun of a network."

In this instance, the advertisers had obtained the time, but apparently all that was available to them for programing was what Mr. Harris described as "the shopworn commodity" that is offered to local stations.

Thus, from a standpoint of equivalent times and equivalent programs, the nonnetwork advertiser is indeed effectively rendered a second-class citizen in terms of access to television advertising.

CONCLUSION

In simple terms, the principal recommendations submitted by KTTV would eliminate the "must-buy" requirement and would limit a concentration of programs from a single program source to not more than 75 percent of any of the four established segments of the broadcast day and of the nighttime period of 7:30 to 10:30 p. m.

The wholesome effects which would follow from a proposal like this need not be a matter of guesswork. Actual examples of what happens when some prime time is made available for nonnetwork use are found in the record in the instances of KLIX–TV, Twin Falls, Idaho, and KDKA–TV, Pittsburgh, Pa.

The story of KLIX–TV, as told by its vice president and general manager, Mr. Frank C. McIntyre, is set forth in Dr. Stanton's testimony (tr. 3261–3268). Mr. McIntyre's narrative dealt with the benefits that resulted for his station from extended program service from the networks, but his story is of paricular interest as a picture of what can happen for the benefit of the local advertiser, the local community, the local station, and the independent program producer when the network saturation of prime time is not complete.

KLIX–TV serves a market of only 6,300 families and is not ordered by all network advertisers. Thus, some prime time is open for nonnetwork use, and some of the results of that situation, according to Mr. McIntyre, are as follows:

1. Having started with nothing but debts, the station is operating in the black and is in sound financial condition.

2. Products advertised on KLIX–TV, by means of national network programs, started cutting into the sales of nonadvertised products. To counteract the pressure of network advertising in the area, the station has been able to obtain advertising revenues from other national, regional, and local advertisers.

3. Local business concerns are able to buy top syndicated programs like I Led Three Lives and Highway Patrol in good time periods just like the network sponsors of Jack Benny and Ed Sullivan.

The key to this happy situation is that KLIX–TV is able to make equal television opportunity available to small advertisers as well as large, nonnetwork as well as network, because its prime time is not saturated by network programs.

Even if a station were ordered for all programs of a particular network, it could continue to accommodate both network and nonnetwork programs in the KLIX–TV manner, simply by an equitable apportionment of hours within and outside the 7: 30 to 10: 30 period as between network and nonnetwork programs and advertisers.

In the large city of Pittsburgh, there is only one VHF station—KDKA–TV. As a result, good time on television in Pittsburgh is a particularly rare and precious commodity to both the program producer and the advertiser.

It appears from the transcript that approximately 18 half-hours between 7: 30 and 10: 30 p. m. are made available by KDKA–TV to nonnetwork programs and nonnetwork advertisers. In that connection, the testimony of Mr. Donald H. McGannon, president of Westinghouse Broadcasting Co., Inc., licensee of KDKA–TV, is relevenant (tr. 4182–4183):

"Mr. Cox. And you clear for these independent and local programs because you consider them superior programing for the people of the community, even over the offerings of all three networks?

"Mr. McGannon. Yes. In light of the fact that we have such a basic limitation of local hours due to only one facility in town. So we think it is important to have in prime time, since there are no other facilities available, an opportunity to have some local programs aired for local advertisers as well as for local programing purposes.

"Mr. Cox. Now do you think that the film programs that you present in that prime period are high-quality programing, in terms of entertainment and other values, which are in the interest of the public in Pittsburgh?

"Mr. McGannon. In general I do; yes.

"Mr. Cox. Now, do you think that the producers of these programs might have some difficulty in getting access for these programs in other areas of 3 or 4 stations where the stations in the market are subject to option time for the period 7: 30 to 10: 30?

"Mr. McGannon. Insofar as live clearance on a local basis in the individual option hours? Yes, obviously, the time is optioned to the network."

The enlightened approach of KDKA–TV could be followed by stations everywhere if the KTTV proposals were adopted, at least to the extent of assuring 10 half-hours per week in the 7: 30–10: 30 period for nonnetwork programs and nonnetwork advertisers. At the same time, on the basis of average existing clearance in major markets, a network like CBS could clear 4 more half hours on its affiliates between 6 p. m. and 11 p. m. (class A time) than it does now. All that is needed is a simple reallocation by the station of some of the time periods which are respectively assigned to network and nonnetwork programs. As a practical matter, the network programs thus affected (by being moved to the 6–7: 30 time or 10: 30–11 time) would be film programs for which simultaneous transmission in all markets is unnecessary. Such a plan need not interfere with any requirements of the network for simultaneous transmission of live programs.

The result of such an approach would restore to the television medium two principles which are basic to the American concept of free broadcasting.

1. The station licensee would indeed be the judge of its own program schedule, and the more desirable programs would inevitably find their way into the time periods which best suit the wishes of the local public.

2. A degree of equality of opportunity would be created for nonnetwork program producers and the nonnetwork advertisers, just as happened in Twin Falls. Moreover, in those cities where the spectrum does permit more than three stations, the independent station would have an opportunity to acquire new high-quality programs, because such programs would have a fair opportunity to clear good time in all other markets. If the independent station does not have a source of quality programs, then for economic reasons the public may find itself without a fourth station even in those markets where the spectrum would make such a station possible.

The voluminous testimony and related papers presented by CBS, like the testimony and supporting papers of all witnesses representing networks and network affiliates, contain not a single suggestion for any change whatever in the status quo, as represented by the chain broadcasting regulations which were transplanted from radio in 1945.

Conditions which serve to restrict freedom of competition and equality of opportunity in any medium of communications and information are particularly repugnant. Television, the most dynamic medium of all, already suffers from the severe restrictions imposed by the spectrum itself. It is therefore doubly important that it be freed of any curable factors which further compress competitive opportunity.

KTTV believes that the status quo in television can be improved. To that end we have made suggestions in good faith. We hope others will do so. And we respectfully urge that the committee give serious consideration to affirmative solutions which will improve and enhance the use and the potential of the American television medium on a free competitive basis.

Respectfully submitted,

KTTV, Inc.

Los Angeles, Calif., *October 29, 1956.*

Shreveport	2V	42	41	22	53.7	52.4	47.6	91	152,831

[1] These percentage figures relate to time periods actually unoccupied by network programs during the sample week. Pursuant to the affiliation agreements such time periods nevertheless remain subject to network option for a network-sponsored program on 56 days' notice, even though currently occupied by a nonnetwork program.

[2] Market rank and the number of TV homes are supplied in order to indicate the degree to which network saturation exists in areas where the greater numbers of TV homes are located.

[3] Detroit also covered by CKLW-TV, Windsor (V).

[4] San Diego also covered by XETV, Tijuana (V).

Cases on 1 or more stations in the mountain or Pacific time zones where the station clears for the network on a simultaneous basis and the local release falls outside contractual option time (e. g., $64,000 Question, broadcast 10 to 10:30 p. m., e. s. t. and released on the Pacific coast 7 to 7:30 p. m., p. s. t., Tuesdays) are treated as clearances within option time in the sense that the station surrenders a half hour of station time in exchange for a half hour of network option time.

Tallahassee, Fla	WCTV	9:30 to 10 p. m., Sunday.
Tampa, Fla	WFLA-TV	9:30 to 10 p. m., Monday.

12. "Memorandum Concerning Time Options, the Must-Buy Practice and the Public Interest" Submitted by Mr. Moore

Memorandum Concerning Time Options, the Must-Buy Practice and the Public Interest

On March 26, 1956, KTTV presented testimony before the committee and recommended certain changes in the chain broadcasting regulations of the Federal Communications Commission. Subsequently, the president of each of the three television networks and representatives of certain stations affiliated with those networks presented testimony uniformly opposing the recommendations made by KTTV. None of the witnesses made any affirmative suggestion for pertinent change in these regulations which, in their present form, were made applicable to television network broadcasting in 1945.

The testimony of the three network presidents and the network affiliated stations was voluminous and detailed. In the opinion of KTTV, the most detailed reply was contained in the testimony and related documents presented by Dr. Frank Stanton, president of Columbia Broadcasting System, Inc. KTTV has filed a separate memorandum commenting on the CBS testimony and documents insofar as they relate to the issues discussed by KTTV. With respect to the information supplied by other network witnesses, KTTV believes that its comments on the CBS presentation sufficiently indicate the KTTV position.

The purpose of this memorandum is to make certain brief observations in response to the following highly relevant comment made during the hearings by Senator Pastore (tr. 3491, 3492):

"Senator PASTORE. May I interject again here? Let's assume we take this 3-hour option time; let's say we cut it down to 2 hours. Where is the public service being served either one way or the other?

"I wish that would be expounded on somewhat; even if the counsel has some ideas on it, I would like to hear them. I mean what do we do, what do we accomplish, what do we have to do. I am not interested in CBS as such. I am not interested in the independent producers as such. My job here is to protect the people of the United States and to see they get the best kind of service in every particular where the United States Government is interested as such.

"I am interested in the public interest here.

"Now, how do we better serve the public interest with or without option time, or by cutting it down or expanding it? Can I get some elaboration on that? Let's think of Mr. Average American here."

In an effort to answer Senator Pastore's question, KTTV makes two major points:

1. Network practices have transformed television into a purely national medium during the public's most convenient viewing hours. The KTTV proposals will restore the potential of television as a local medium without impairing its national service.

2. Network practices have vested in three companies the absolute power to decide what the American public shall and shall not see during its most convenient viewing hours. The KTTV proposals will give greater freedom of choice to the American public by opening the television medium to all creative sources.

I. TELEVISION AS A NATIONAL MEDIUM

The purely national nature of network television was unequivocally stated to the committee by the network presidents themselves:

CBS

"Dr. STANTON. A network renders its service to nothing else, and nothing smaller, than the national American public" (tr. 3125).

* * * * * * *

"Well, I am driving at the point that we are talking here about—networks—and our public is a national public rather than a local public" (tr. 3131).

NBC

"Mr. SARNOFF. The network service is national in character. Its operation is distinctive in that it furnishes a program service for simultaneous national broadcast" (tr. 3527).

* * * * * * *

"It may be useful, however, to repeat here in capsule form what NBC does.

"Its business is to conduct a *national* advertising service through television. In order to do this, it does the following: (1) For the benefit of advertisers, NBC provides for the simultaneous exposure of programs over affiliated stations throughout the country by taking options on the time of these stations in minimum packages of three 3-hour intervals a day, under contracts voluntarily made by individual stations. (2) In order that NBC may be a *national* network, advertisers are required to buy national circulation during this option time in the form of a minimum basic network of 56 stations. (3) In order to maintain a national network of stations with broad circulation, NBC prepares and presents a full program service to its affiliated stations, whether sponsored or not." [Emphasis is NBC's] (NBC Memorandum of Law, p. 6.)

ABC

"Mr. KINTNER. Basically networks are national program services requiring millions of dollars of investment in overhead in order to supply programing on a national basis" (tr. 3758).

The essential national nature of the network to both the public and advertiser could not be pictured more bluntly or more frankly than by the constant references of the network witnesses to a supposed comparison between a television network and a national magazine like Life or the Saturday Evening Post.

While the analogy is appropriate in the sense that the networks have turned the prime time on the television airwaves into a sort of Life magazine or a Saturday Evening Post of the air, it was introduced by the networks for a different purpose: To justify two perogatives which they enjoy:

(*a*) Just as the publishers of Life and the Saturday Evening Post determine what the public may read in their magazines in all parts of the country, the network officials determine what the public may see on their networks in all parts of the country.

(*b*) Just as Life and the Saturday Evening Post require that an advertiser's message be uniformly reproduced and distributed in all parts of the country, the networks require that an advertiser uniformly place his message on the entire basic-required network throughout the country.

These comparisons are appropriate only in that the practices are similar in both cases. To make the analogy real, in terms of the effect upon the American people, we must assume certain additional facts, which would truly make a national network comparable to a Life or a Saturday Evening Post

A. With respect to editorial content, let us assume:

1. That the printing press involved a scarcity factor, so that there could be only 2 or 3 magazines in existence, as there are only 2 or 3 networks.

2. That during the most convenient leisure hours of the evening (7:30 to 10:30 p. m.) the average American citizen were required to read either Life or the Saturday Evening Post (in some cities he might also read Collier's) or not read at all.

3. That if a citizen wished to read a local newspaper, a book, a farm journal, or any other publication, he could generally do so only late at night, or during a brief period surrounding the supper hours, or during the daytime except for 6 hours which were optioned by the Saturday Evening Post, Life magazine, or Collier's.

If these seemingly fantastic conditions were real, then the analogy to Life or the Saturday Evening Post would be valid because these are precisely the conditions which apply in the public and scarce and vital medium of television.

Only by presenting this analogy in its true nature can we access the control which networks exert. For we can readily see that if these conditions applied in the magazine publishing field, the public would effectively be denied the fruits of all literary creativity except what pleased the editors of 2 or 3 publications. It is such stultifying effects on creativity in television which KTTV seeks to remove for the ultimate benefit of all of the public.

B With respect to the field of advertising, we must not only assume the above conditions, but we must assume:

1. That Life or the Saturday Evening Post were actually made up of 52 separately owned local newspapers in 52 different communities.

2. That in all but a few American communities a scarcity factor pre-empted the existence of all but 1 or 2 or 3 such local newspapers.

3. That each of these local newspapers needed the service provided by Life or the Saturday Evening Post as a matter of economic survival.

4. That each of these local newspapers agreed to publish only material provided by Life or the Saturday Evening Post on the first three pages of the newspaper.

5. That the local newspaper had limited discretion to reject items so provided, but that a high rate of rejection might jeopardize the continuance of its association with Life or the Saturday Evening Post, and that in such event the newspaper could anticipate, at best, the biweekly service of a Collier's.

6. That an advertiser could not buy competitive advertising space in any one of these local newspapers without buying similar space in all.

7. That an advertiser (large or small, national, or local) who, dealing directly with the local newspaper, might occasionally obtain desirable space on the pages reserved for Life or Saturday Evening Post clients, could be evicted from that space in favor of an advertiser provided by Life or the Saturday Evening Post, and relegated to the back pages.

If these seemingly fantastic conditions were real, in the magazine publishing field—and if a magazine were as scarce and as powerful an advertising factor as television—then we can readily see the restrictive effects upon American competition which would inevitably result. Yet these are the conditions which actually do exist in television and which the KTTV proposals seek to remove thereby resulting in inevitable benefit to the public.

II. NETWORK CONTROL OF PROGRAM CHOICE

KTTV's testimony and reply memoranda have shown that affiliated stations, serving up to 80 percent of the Nation's television homes, carry those programs selected by the network at the time ordered by the network during the prime evening hours.

No matter how benevolent the chief executives of the three networks may be, network practices vest in them an arbitrary control which would be fearful and wrong even if their program decisions, by some magic, were always right.

The KTTV proposals are designed to provide full opportunity for the public to select the best possible programs. They would accomplish this by opening the prime viewing hours for programs from all sources, rather than the programs preselected by three individuals. The inevitable result would be a wider choice of opportunity for public decision, and the gradual evolution of the best programs into the best time periods, whatever their source.

There is no one qualified to speak in advance for the public taste. This proposition is self-evident, but we cite one example to prove it is true.

Recently KTTV acquired television rights in Los Angeles to the great motion pictures of Metro-Goldwyn-Mayer. It presented the first such picture (Thirty Seconds Over Tokyo), to the Los Angeles audience the evening of Friday, October 12, 1956, from 8 p. m. to approximately 10:30 p. m. During this same time 12 regularly scheduled network programs were broadcast on the 3 network stations in Los Angeles. These were the programs which each of the networks thought would please the public most.

Almost twice as many Los Angeles homes preferred to watch, and did watch, Thirty Seconds Over Tokyo on KTTV as watched the competing programs on all three network stations put together.

The American Research Bureau conducted an extensive telephone coincidental survey (a thoroughly accepted form of audience research) during the time this motion picture was being broadcast. The following is a tabulation of the results indicating that the size of the audience watching KTTV and each of the competing network stations, respectively. The figures, based upon an accepted sampling technique, indicate the percentage of the approximately 2 million television homes in the Los Angeles community watching each station at the time indicated.

8 to 8:30 p. m.:	
KNXT (CBS): West Point Story	6.4
KRCA (NBC): Crunch and Des	6.4
KABC (ABC): Jim Bowie	8.1
KTTV: Thirty Seconds Over Tokyo	26.0
8:30 to 9 p. m.	
KNXT (CBS): Zane Grey Theater	5.2
KRCA (NBC): Walter Winchell	8.8
KABC (ABC): Crossroads	5.5
KTTV: Thirty Seconds over Tokyo	29.0
9 to 9:30 p. m.:	
KNXT (CBS): The Crusader	12.7
KRCA (NBC): Political	8.3
KABC (ABC): Treasure Hunt	1.7
KTTV: Thirty Seconds Over Tokyo	29.0
9:30 to 10 p. m.:	
KNXT (CBS): Playhouse of Stars	7.4
KRCA (NBC): The Big Story	4.3
KABC (ABC): The Vise	1.1
KTTV: Thirty Seconds Over Tokyo	37.6
10 to 10:30 p. m.:	
KNXT (CBS): The Lineup	5.4
KRCA (NBC): Juke Box Jury	4.0
KABC (ABC): Ray Anthony Show	2.3
KTTV: Thirty Seconds Over Tokyo	32.4

The MGM pictures represent some of the finest entertainment ever produced by American craftsmen. We understand that rights to these programs were offered to the networks. Whether the networks' decision not to acquire the programs for network broadcast was based upon price or upon judgment of the entertainment values, we do not know. But the result is that the public in cities relying on network service will be given a choice on Friday night only of those programs which the Los Angeles public so overwhelmingly rejected when given a free choice of something else. If the option time requirements were limited then other stations in other markets could present programs which the public also might deem preferable to network programs. The networks, under the spur of such competition, would be required to improve their programs or yield their audience because the public did not agree that what the networks offered them was necessarily the best.

Incidentally, the MGM pictures include classics like David Copperfield, Treasure Island, Huckleberry Finn, Mrs. Miniver, Mutiny on the Bounty, Northwest Passage and many more which will appeal to all the family. But it may be assumed that families in cities like Providence, Louisville, Omaha, and others will have little or no opportunity of gathering around the television set and sharing the enjoyment of such classic entertainment. Unknowingly, these families are missing such an experience as a result of option-time conditions.

The judgment of the networks will differ from judgment of others not only in connection with entertainment programs. In its direct testimony, KTTV related an occasion where KTTV judged the Salk polio conference to be worthy of televising, and the networks did not. As a result, the network audience in the East was deprived of that great event on television, which was watched by countless thousands on the coast. We cite this as an example of the inherent fallacy of entrusting the decisions of what the public will see to 3 companies or 3 men.

Today, October 31, the New York Times published a commentary[1] by its television editor, Mr. Jack Gould, discussing the failure of any of the networks to present television coverage of the crucial session of the United Nations Security Council dealing with the Egyptian crisis. In this case, apparently, none of the three networks deemed the event worthy of live television coverage. Only WPIX, a New York independent station, covered the proceedings on television.

While Mr. Gould's language is strongly condemnatory of the three networks, and laudatory of WPIX, KTTV finds it unnecessary to agree or disagree with Mr. Gould. The point is that, whether the decision of the three networks was good or bad, the power to make the decision lay solely with them.

With automatic control through option time there is no competitive pressure on the network to get there first with the most. By relieving the existing controls, judgments like that of WPIX could be made felt and the networks would have to respond ot public taste or suffer the results which accompany such failure in any competitive field. We are certain they would respond affirmatively to the competitive incentive if it were there.

The networks have many times justified the status quo on the ground that the present network practices make it economically possible for networks to maintain the organizations, the program facilities, and the costly interconnection arrangements which are necessary in order to bring to the Nation simultaneous coverage of just such events as the Salk vaccine announcement and United Nations telecasts. Yet these two significant incidents serve to illustrate that the judgment of the networks with regard to public service is not invariably in accord with the best judgment of others.

Dr. Stanton told the committee (tr. 3285):

"For television, the public is the ultimate monitor—the monitor in chief. What it persistently turns off, cannot be turned on again by any group of network executives, let me assure you."

Dr. Stanton overlooks the fact that what the networks do not turn on, the monitor in chief cannot turn off. The monitor in chief can only make a passive and limited selection among or between those program offerings preselected for him by the 3 or 2 networks.

The direct answer to Senator Pastore's excellent question is this:

If the KTTV proposal—or similar proposals—are adopted, then the public almost overnight will receive the benefits which American competition brings to everything it touches. In terms of programing service—which is the essence of television—the public will be able to choose from among the creative abilities, judgments, energies, and skills of all Americans, not just from the offerings preselected by the chief officers of three particular companies.

Respectfully submitted.

KTTV, Inc.

Los Angeles, Calif., *October 31, 1956*.

ANNEX A

[The New York Times, October 31, 1956]

RADIO-TV: DISGRACE OF THE NETWORKS

CHAINS IGNORE SESSION AT UNITED NATIONS—ONLY WPIX AND WNYC AID PUBLIC INTEREST

By Jack Gould

The gigantic network broadcasting industry—radio and television—disgraced itself yesterday.

Neither the National Broadcasting Co., the Columbia Broadcasting System nor the American Broadcasting Co., with the facilities to enlighten a nation in its own home, carried the crucial late afternoon and evening session of the United Nations Security Council.

On the network television outlets it was the usual run of soap opera, giveaway, movies and commercials; on radio, it was disk jockeys, etc. In short, the national electronic communications system made an absolute mockery of its obligation to serve the public interest. It was stupid, selfish, and irresponsible. When the chips were down, the networks lived in their narrow, narrow world.

In television there was one notable local exception, WPIX, the outlet owned by The Daily News. It carried live the heart of the discussion at the U. N. It did a tremendous job, marred only by its failure to cover adequately the evening session, including the British and French veto of the American resolution.

On radio there was only one local exception—the ever-reliable WNYC, owned by the city of New York. It carried everything from start to finish. If ever there was justification for the tax-supported municipal outlet, it came yesterday. Commercial broadcasting cannot be relied upon.

The value of the WPIX telecast cannot be exaggerated. It was a dramatic, instructive and frightening primer in one of the most complex turning points in history. To the viewer fortunate enough to see the coverage on channel 11 the involved issues, the points of view of large and small powers and the contrasting personalities of the Council delegates were made vividly and comprehensively clear.

Before one's own eyes there occurred the hard-to-believe chain of events that found the Soviet Union and the United States on the same side, Britain and France defending their ultimatum to put troops along the Suez, the brilliant exposition of the Israeli position and the Egyptian appeal for action against Britain and France. The world suddenly seemed to have gone topsy-turvy; thanks to WPIX, a viewer could see it happen. Or, in the case of WNYC, hear it happen.

The WPIX telecast was one that should have been broadcast from coast-to-coast; here was a situation—man's own struggle to avoid a holocaust—which the electronic medium was designed to cover. Here was a chance to report history in closeup, to enable every citizen, old and young alike, to see destiny unfold.

David Sarnoff, chairman of the Radio Corporation of America, NBC's corporate parent; William S. Paley, chairman of the CBS, and Leonard Goldenson, ABC president, are the men who should search their consciences this morning.

Of what use are this country's superb communication facilities if they are not put to work in behalf of the people who own the airwaves? How is a nation to appreciate fully the gravity of world affairs if nothing is allowed to interfere with broadcasting's subservience to the middle commercial? How can the President of the United States impress the world with our concern if we ourselves sit benumbed at home in front of old movies?

Television broadcasters always excuse their inaction on the basis of the cost; it is time they stopped whimpering and acted as grownups. Every journalistic medium has high costs when an emergency occurs; it is part of the overhead that goes with the privilege of having access to the country's minds.

If television economics are in such deplorable state that the networks cannot properly play their part in a crisis, it is time the leaders of broadcasting had a long, hard look at their operations. If television is to be only a parlor carnival, let it say so and stop its pompous proclamations about being in the field of communications. If television does want to be a branch of the Fourth Estate, let it act that way.

P. S.: In erecting its headquarters, the United Nations thought of television and installed the necessary equipment for use by broadcasters. These facilities were available yesterday. The networks simply don't have an excuse for their behavior.

---

13. Reply Memorandum of Law Submitted by KTTV, Inc., In Answer to the Memorandum of Laws Filed by NBC and CBS on Applicability of Antitrust Laws to Activities and Practices of Television Networks

(Lloyd N. Cutler, Marshall Hornblower, Samuel A. Stern, Donald F. Turner, Cambridge, Mass., Cox, Langford, Stoddard & Cutler, Washington, D. C., of counsel; October 29, 1956.)

INTRODUCTORY STATEMENT

Under date of March 26, 1956, KTTV, Inc., filed with the committee a brief prepared by its counsel entitled "Memorandum Concerning the Need for Amending the FCC's Chain Broadcasting Regulations to Prevent Violations of Antitrust Law in the Television Industry."

Under date of May 25, 1956, National Broadcasting Co., Inc. (NBC), filed with the committee a brief prepared by its counsel entitled "Memorandum of Law on the Applicability of the Antitrust Laws to Option Time and the 'Basic Network' Sales Policy of Television Networks."

Under date of June 4, 1956, Columbia Broadcasting System, Inc. (CBS), filed with the committee a brief prepared by its counsel entitled "Opinion of Counsel and Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc."

The KTTV brief charged that certain practices of the network companies violate the antitrust laws, and should be prohibited by appropriate amendments of the FCC chain broadcasting regulations.

The particular practices so attacked are:

(1) The block booking of network programs under the option time provisions of the agreements between the network companies and their affiliated stations; and

(2) The must-buy policy of the network companies, adopted with the knowledge and approval of the affiliated stations concerned, under which advertisers are required to purchase time on approximately 50 or more named stations throughout the country as a condition of purchasing network option time on any one or more of these stations.

The NBC and CBS briefs contend that that no antitrust law violations result from either of the practices alleged. This memorandum replies to the contentions made in the NBC and CBS briefs.[1]

I. BLOCK BOOKING OF NETWORK PROGRAMS UNDER THE OPTION TIME PROVISIONS OF AFFILIATION AGREEMENTS IS A PER SE VIOLATION OF THE ANTITRUST LAWS

A. The question whether the block booking of network programs violates the antitrust laws is not affected by the provision of the FCC chain broadcasting regulations permitting limited use of option time clauses, or by the Supreme Court decision upholding the regulations against network attack.

In May 1941 the Federal Communications Commission issued a Report on Chain Broadcasting. In this report the Commission concluded that time options in radio broadcasting operated against the public interest, and proposed new regulations forbidding their use. In October 1941, however, after the Mutual Broadcasting System had urged that option time be authorized to a limited extent, the Commission issued a supplemental report amending its proposed regulations so as to contain the present provisions permitting a limited degree of option time, and promulgated the regulations as so amended. Thereupon, NBC and CBS brought suits to enjoin enforcement of the regulations as arbitrary and beyond the FCC's power. In February 1943, the Supreme Court rejected the network contentions. *National Broadcasting Co.* v. *United States* (319 U. S. 190 (1943)).

---

[1] The CBS brief also defends the network companies against other allegations of antitrust law violations not advanced in the KTTV brief, and therefore not dealt with in this reply memorandum.

The NBC brief appears to argue that this action by the FCC in the field of radio broadcasting, subsequently validated by the Supreme Court, shields the block booking of television network programs under the time option clause from any finding of illegality under the antitrust laws. Any such contention fails on the following counts:

1. Section 313 of the Federal Communications Act makes the antitrust laws specifically applicable to persons engaged in radio communications. The act does not authorize the FCC, by regulation or otherwise, to sanction any act that is illegal under the antitrust laws. As FCC Chairman McConnaughey agreed in recent testimony, the Commission "not only has the obligation * * * to maintain a system of broadcast compatible with the antitrust laws, but it also must assure that none of its regulatory activities immunize practices which otherwise violate the antitrust laws" (transcript of hearings before special subcommittee of the House Judiciary Committee, June 27, 1956, p. 17). Nor does the Commission consider that action by it can make antitrust prosecution impossible (id. at p. 100).

2. When the Supreme Court upheld the validity of the chain broadcasting regulations in the National Broadcasting Co. case, it held only that the Commission had power to issue regulations prohibiting certain provisions in agreements between network companies and licensed radio stations, and that the Commission had not exercised this power arbitrarily. The legality of time options under the antitrust laws was not in issue; it was neither argued nor decided in that case.

3. Nothing to the contrary appears in *Federal Broadcasting System* v. *American Broadcasting Company* (167 F. 2d 349 (2d Cir. 1948), cert. den., 335 U. S. 821 (1948)), cited by NBC. The only issue decided in that case was that plaintiff was not entitled to a preliminary injunction to compel the continuation of special nonaffiliate agreements between plaintiff station and two defendant networks, which had simultaneously cancelled their agreements. Plaintiff alleged that the cancellations were pursuant to a conspiracy. The court of appeals held merely that an insufficient showing of conspiracy had been made out to warrant extraordinary relief. Plaintiff urged incidentally that agreements between the defendant networks and new affiliates contained features violating the antitrust laws.

In rejecting this argument as a basis for the preliminary injunction before trial of the merits, the court observed that the FCC had specifically sanctioned many provisions of the affiliation contracts. The court did not rule on the merits of plaintiff's contention that these conracts contained features violating the antitrust laws, nor did the court state that, if any such violations were found to exist, they would be shielded from attack because of the FCC's regulations. No allegation as to the block booking of television programs was made in the complaint, and the question was not considered by the court.

4. Finally, the chain broadcasting regulations cannot be interpreted as a judgment by the FCC that, although the block booking of feature-film programs is illegal under the antitrust laws, this principle of law is inapplicable to the facts of the television industry. At the time the chain broadcasting regulations for radio were issued in 1941, the latest lower court opinion on the subject of film licensing had found block booking legal under the Sherman Act. *Federal Trade Commission* v. *Paramount Famous-Lasky Corporation* (57 F. 2d 152 (2d Cir. 1932)).[2] The chain broadcasting regulations were made applicable to television in 1945. The Supreme Court's decision in the Paramount case, outlawing block booking as a per se violation of the Sherman Act, did not come down until 1948 (*United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131 (1948)).

B. There is no significant difference between the block booking of network programs under the time option clause and the block booking of feature films held illegal in the Paramount case.

1. It is immaterial that the option time clause in network affiliation agreements does not specifically state that the use of one program is conditional upon the acceptance of another program, since there was a similar absence of

[2] As shown in appendix A to this memorandum, Judge Manton's opinion for the court in this 1932 case justifies the block booking of feature films on almost the identical grounds now advanced by the network companies to justify the block booking of television programs. In the subsequent Paramount case, the three-judge district court said in 1946 it was "not inclined to follow" Judge Manton's earlier opinion (*United States* v. *Paramount Pictures, Inc.*, 66 F. Supp. 323, 349 (S. D. N. Y. 1946)). The Supreme Court subsequently affirmed the Paramount decision, thus in effect overruling Judge Manton's earlier holding.

a specific contract condition in the block-booking agreements held illegal in the Paramount case.

Both the NBC and CBS briefs point out that the block booking held illegal by the Supreme Court in the Paramount case was defined as the "licensing, or offering for license, one feature or group of features on condition that the exhibitor will also license another feature or group of features released by the distributors during a given period" (334 U. S. at 156). They argue that since no such condition appears in the option time clause of a network affiliation agreement, the block-booking doctrine does not apply.

In fact, there was no such specific condition in the contracts between distributors and theater owners involved in the Paramount case. The court was not striking down the provisions of a contract. The court was condemning a practice of negotiating a contract—namely, the practice of refusing to make a contract covering one picture or group of pictures unless the theater owner agreed to accept another picture or group of pictures. Once this condition was accepted by the theaters, there was no need for including it as an explicit condition in the contracts. These contracts simply stated that the distributor agreed to furnish, and the theater agreed to accept, a certain number of features offered by the distributor during the contract period.[3]

The affiliation agreements between network companies and stations contain similar provisions. In the case of CBS, for example, the affiliation agreements obligate the station to accept "all network sponsored programs offered and furnished to it by CBS television during 'network option time.'" As in the case of film-block booking, this contract is signed as the result of negotiations in which the network company offers to make a particular program or group of programs available only if the station signs an affiliation agreement obligating it to carry all network programs offered during option time.

That this is the actual pattern of the negotiations is clearly indicated by the record before this committee. Thus, Mr. John Hayes, of WTOP-TV, Washington, D. C., a CBS affiliate, answered the questions of committee counsel as follows:

"Mr. Cox. Now, your reason for desiring the affiliation is to get the network programing service featuring principally these highly popular programs; isn't it?

"Mr. Hayes. Yes, sir.

"Mr. Cox. And in order to get that plus its facilities for bringing you live on the spot events as they occur and certain sustaining programs, you option your time and agree to take the other programs in the schedule which are not perhaps so popular as I Love Lucy and Studio One and some of the other outstanding features, your express yourself as being willing in general to clear the time on your station for these other programs which you consider good although they are not as good as the top programs of the network?

"Mr. Hayes. Yes, Mr. Cox" (tr. 3842).

Similarly, the testimony of the network companies before this committee shows that what the network companies offer to their affiliates is not a choice of disconnected individual programs, but a "balanced program service"; that in order to prevent the "erosion" of this service it is necessary for affiliated stations to accept substantially all of the programs offered during option time; and that if the station fails to do so, the affiliation agreement will not be continued. The following excerpts are illustrative:

Robert Kintner, president of ABC

"What we are saying to the affiliates in network option time: that we collectively will program this period. You will have the final decision [as] the affiliate, but as the fair partner to ABC as a network you will go along with us to a reasonable degree. When that disappears, I believe the relationship disappears" (tr. 3781).

Frank Stanton, president of CBS

"Networks supply a balanced program schedule on an effective nationwide basis which dovetails with the local schedule of the independently owned and operated stations comprising the network" (tr. 3206).

* * * * * * *

[3] The contracts are summarized in the appendix to the Supreme Court brief of the United States in the Paramount case.

"While [option time] is not a rigid right, it is vital to the network and to the affiliates because it is the mechanism by which the network has some reasonable assurance of general clearance by stations" (tr. 3273).

Robert Sarnoff, president of NBC

"The network service is based on a planned schedule. It is not just a random assortment of different programs, but an organized structure of programing—similar to the makeup of a national magazine, but of greater scope and variety than any single magazine" (tr. 3527).

* * * * * * *

"It is based on that experience. It is also based on the fact that we have option time which works to clear national lineups for us.

"Senator PASTORE. Well, it is also predicated upon the fact that there is a feeling on the part of the broadcasting station unless they play ball with you, you are not going to play ball with them when renewal time comes around. I mean, let's face it. Isn't that an important element involved?

"Mr. SARNOFF. Well——

"Senator PASTORE. I mean at the time the station ties itself up as an affiliate with you, it knows it has certain responsibility that it has to meet certain of your requirements and requests in order to keep affiliated with you?

"Mr. SARNOFF. Well, let me put it this way, Senator. The station affiliates with us because it wants our service. We affiliate a station because it plays an important role in filling out the market coverage for our advertisers. If we do not provide the service that satisfies the station, then he won't want our service and he won't want the affiliation.

"If he is unable or unwilling to carry our programs so that we are unable to deliver to the advertiser that market he is of no value to us. It is as simple as that" (tr. 3663–3664).

* * * * * * *

"Mr. COX. As a matter of actual practice, isn't your ultimate recourse in the event a station operator for whatever reason, whether he believes it in the interest of his local public or whether he is simply interested in the additional revenues he may get, if he refuses to clear systematically for the network, your final recourse is not legal action but to seek another affiliation arrangement?

"Mr. SARNOFF. That is right" (tr. 3660).

The testimony of the affiliated stations before this committee shows that they also understand the network is providing them not with individual programs from which they may select freely, but with a block of programs, and that the duty of a good affiliate is to accept substantially all of the programs offered. For example:

John Hayes, WTOP, Washington, D. C. (CBS)

"Senator PASTORE. I am not trying to connote anything evil in this, because after all, let's realize the fact that we have to look at this whole picture realistically. But in the community of Washington, if you exercised your exemption to this option on prime time too often would there be any question in your mind that CBS would be looking for another channel in this community, rather than yours?

"Mr. HAYES. Well, I would think, Senator Pastore, if we did that, we would question in our own mind whether we would remain an affiliate.

"Senator PASTORE. They would ask themselves the same question, whether they ought to keep you as an affiliate?

"Mr. HAYES. Yes, sir. I think if you start from the premise we are working partners with each other, we would each by questioning what is going on" (tr. 3831–3832).

* * * * * * *

"Mr. COX. Are you saying that without the option in some way there would be an increased tendency on the part of affiliates to fail to clear network programs?

"Mr. HAYES. Yes, sir" (tr. 3859).

* * * * * * *

"Mr. COX. Well, that is, in other words, you think that the option as it presently works [serves] to effect clearance for a program that would not have made it on its own merits.

"Mr. HAYES. No, sir; I don't think that at all. I think that—we are talking about, not about a specific program, we are talking about an overall comprehensive program schedule. When you start talking about overall program planning,

it is very difficult to pull this one program out of that particular place on the schedule and say this is acceptable, this is not quite as acceptable, this is less acceptable.

"It belongs in a particular place, and at that particular place it is probably more acceptable than it would be elsewhere" (tr. 3860).

Harold Essex, WSJS-TV, Winston-Salem, N. C. (NBC)

"Option time merely amounts to giving to the executive head of the group of stations or its central organization or the independent company performing the programing and sales functions for the group first call on about half of each station's daily time on the air" (tr. 4287).

Owen L. Saddler, KMTV, Omaha, Nebr. (NBC)

"The thing is that option time does work directly to that because a network will program within its option time. It will not program normally within—to a great extent within station time. Therefore, *they are block programing* and are seeing that we do have an overall qualitative type program which you have said" (tr., pp. 4381–4382). [Emphasis supplied.]

The foregoing testimony shows that in television networking today, there is at least an implied requirement that the affiliated station use more than one network program, and a refusal by the network to furnish one or more programs unless other programs are accepted. This negotiating pattern for the block booking of television programs clearly falls within the following language of the Paramount case:

"We do not suggest that films may not be sold in blocks or groups, *when there is no requirement, express or implied, for the purchase of more than one film*. All we hold to be illegal is a refusal to license one or more copyrights unless another copyright is accepted" (*United States* v. *Paramount Pictures, Inc.*, 334 U. S. at 159). [Emphasis supplied.]

Perhaps the clearest evidence of the close parallel between block booking in television and block booking in the film industry is found in the testimony presented to this committee by Mr. Joe Floyd of KELO–TV, Sioux Falls, S. Dak., and KDLO–TV, Florence, N. Dak., both NBC affiliates. Mr. Floyd is a motion-picture theater operator as well as the operator of two television stations. He told the committee that ever since the Supreme Court's decision in the Paramount case, the film producers no longer:

"* * * program or furnish pictures day in and day out to the major theaters they formerly owned or were affiliated with. * * * All television stations should learn by this experience * * *." (tr., pp. 4361–4362).

2. It is immaterial that the option time clause gives the station the right to reject programs which it reasonably believes to be unsatisfactory, unsuitable or contrary to the public interest, since a similar right of rejection was included in many of the very block-booking agreements held illegal in the Paramount case.

Both the NBC and CBS briefs argue that the block-booking doctrine does not apply to network affiliation agreements because these agreements expressly grant the stations the right to reject programs for stated reasons. The NBC and CBS briefs contend that these provisions have been liberally construed by the network companies, and that even during prime evening option time, a substantial percentage of network programs are rejected by the station. Thus, President Frank Stanton of CBS testified that even on the 52 CBS must-buy stations, a total of 91 ordered hours were not cleared as ordered in 1 week during prime evening option time (tr., p. 3385). Since CBS ordered 815 hours on the 52 stations in evening option time during this week, the percentage of rejections was only 11 percent (CBS brief, p. 24).[4]

This fact does not distinguish the block booking of television programs from the Paramount case; rather it makes the parallel closer. The district court opinion in the Paramount case specifically states that many of the block-booking agreements between distributors and theaters included a right on the part of the theater to reject a percentage of the feature films covered by the contract, and that the defendant distributors were liberal in permitting theaters to exercise this right. Judge Hand said:

"In many cases licenses for all the films had to be accepted in order to obtain any, though sometimes the exhibitor was given a right of subsequent cancella-

[4] The true percentage of rejection was even lower, since the CBS statistics (CBS brief, p. 24) do not include the number of hours cleared in evening option time although not at the exact time ordered.

tion for a certain number of pictures * * *. The * * * distributors have retained up to the present time their previous methods of licensing in blocks, but have allowed their customers considerable freedom to cancel the license as to a percentage of the pictures contracted for" (66 F. Supp. at 348).

Nevertheless, Judge Hand found for the three-judge district court that the block-booking agreements were illegal restraints of trade under section 1 of the Sherman Act.

In their briefs before the Supreme Court, two of the Paramount case defendants, Universal and Columbia, argued (just as NBC and CBS argue today) that block booking should be sanctioned because their practice had been to allow the theaters a specific contractual right of rejection. Columbia pointed out that of the 44 pictures it sold annually, the average number accepted by each theater customer under Columbia's block-booking contracts was only 32 (Columbia brief in the Supreme Court, *United States* v. *Paramount Pictures, Inc.*, p. 25). Columbia thus showed a nonclearance percentage of 25 percent, more than twice the percentage claimed by Dr. Stanton for CBS. Although the contractual right of rejection and its liberal interpretation by the distributors were specifically called to the Supreme Court's attention, the Supreme Court affirmed the district court's finding that the practice of block booking was illegal even when the block-booking contracts contained a specific right of rejection.

Furthermore, the station's right of rejection under the time-option clause of an affiliation agreement is far from complete. The clause specifically obligates the station to accept "all" network programs offered during network option time. The clause then states, several lines later, that "nothing herein" shall prevent the station from rejecting or refusing network programs which the station "reasonably believes to be unsatisfactory or unsuitable."[5] Reading this clause literally, the station must have reasonable grounds to believe that the network program is affirmatively "unsatisfactory or unsuitable." This language does not specifically authorize a station to reject a network program which is satisfactory or suitable in the abstract, but which the station believes is inferior to or less desirable than some other program which happens to be available for broadcast at the same time. At least one station operator testified that as he interpreted the option he had no such right.[6]

This right of rejection is much more limited than the station's right to accept or refuse programs in nonoption time—a fact which the time-option clause of the CBS affiliation agreement appears to recognize when it states that:

"Station may, of course, *at its election*, accept and broadcast network sponsored programs which CBS television may offer within hours other than network option time." [Emphasis supplied.]

Thus the station appears to enjoy a right of "election" to accept or reject network programs in nonoption time which is different from and broader than its right to accept or reject network programs during option time.

The limited nature of the station's right of rejection in option time is well illustrated by the testimony of network affiliates before this committee. Several affiliates testified that the right of rejection did not apply when the network program was as good as an available outside program. For example:

John Hayes, WTOP-TV, Washington, D. C. (CBS)

"Third, the affiliate determines that both the network program and the nonnetwork program are satisfactory and are essentially of the same quality. Here, under the affiliate-network partnership arrangement and the regulations of the FCC, the option will indeed operate to the advantage of the network program" (tr., p. 3865).

W. D. Rogers, Jr., KDUB-TV, Lubbock, Tex. (CBS)

"If the program the network requests us to clear is suitable and acceptable in comparison with the program we are carrying, I don't see a thing wrong in preferring the network program * * *. We are merely acting in good faith to keep up our end of the working partnership with the network" (tr., p. 3939).

---

[5] This is the basic rejection right. The station may also reject a network program considered to be contrary to the public interest or a program for which the station has a substitute of "outstanding importance."

[6] Testimony of William L. Putnam, WWLP, Springfield, Mass. (NBC affiliate), tr. pp. 4388–4389.

H. Moody McElveen, Jr., WNOK-TV, Columbia, S. C. (CBS)

"If, on the other hand, CBS offers us a program that we feel is as good as what we now have in the period or what we could obtain to put in the period, we would still accept it.

"Now, we feel that is where the network has the advantage because of the option. We feel they are entitled to that advantage. That is what actually they get from us, that is, our giving part of this agreement" (tr., p. 4013).

Thus, it appears that an affiliate may not reject a network program that is inferior to an available nonnetwork program, so long as it cannot reasonably be said to be unsuitable or undesirable. But even if this is not so, the right of rejection under the time-option clause clearly cannot be invoked when the network program is of the same quality as an available nonnetwork program. And this limitation upon the right of rejection is enough to make the practice an unlawful restraint under the rule of *International Salt Co.* v. *United States* (332 U. S. 392 (1947)). In that case, the Supreme Court specifically ruled that an illegal tying agreement (obliging the user of the defendant's patented machine to purchase the defendant's unpatented salt) was not saved by giving the buyer a right to reject the defendant's salt if he could purchase salt from another seller at a lower price, but not if the competing product is available at the same price. The Court said that such a provision—

"* * * does not avoid the stifling effect of the agreement on competition. The appellant had at all times a priority on the business at equal prices. A competitor would have to undercut appellant's price to have any hope of capturing the market, while appellant could hold that market by merely meeting competition. We do not think this concession relieves the contract of being a restraint of trade, albeit a less harsh one than would result in the absence of such a provision" (332 U. S. at 397).

In a recent case, on motion for summary judgment, a similar tying agreement was held per se illegal. *United States* v. *Northern Pacific R. Co.* (W. D. Wash., June 23, 1956; CCH Trade Reg. Rep., sec. 68.401). Northern Pacific sold or leased land subject to a requirement that "the grantee or lessee * * * route via NP railway shipments of commodities produced by or on the land sold or leased, provided neither a lower rate nor better service be available from a competing line." This requirement was found to "prohibit grantees and lessees of NP lands from a free choice in the selection of transportation routing," and to result from market control of a particular commodity, the land. As such, it was held unreasonable per se under International Salt, supra, and allied cases. The Court found the practice clearly within the rationale of the tying cases expounded in *Times-Picayune Publishing Co.* v. *United States* (345 U. S. 594, 605–606 (1953)).

3. It is immaterial that the film block-booking agreements involved licenses of films by distributors to theaters, while the option-time agreements involve purchases of station time by network companies to broadcast-sponsored network programs which are not technically licensed to the station.

The NBC brief seeks to distinguish its option-time arrangements with affiliated stations from the film block-booking practice condemned in the Paramount case, on the ground that (NBC brief, p. 15):

"NBC does not license or sell anything to its affiliated stations during option time. It obtains time from them on a minimum option basis; and during that time, subject to their veto, it presents the programs which generate the circulation it sells to its advertisers."

This difference, however, is merely a difference of form. Both the movie theaters and the television stations are in the business of showing programs to the public for a profit. Both the theaters and the stations obtain their programs from a supplier, the theater from a film distributor, and the station from a network company. In both cases, the supplier agrees to furnish the programs only on a block basis.[7] The effect on competition between program sources and between theaters or stations in seeking programs, is exactly the same, regardless of the legal form under which the programs are supplied.

In *Federal Trade Commission* v. *Motion Picture Advertising Service Co.* (344 U. S. 392 (1953)), the Supreme Court held that section 1 of the Sherman Act was violated by exclusive agreements between motion-picture theaters and the defendant producer of commercial advertising film, requiring the theaters to use

[7] The CBS affiliation agreement provides that the network offers and furnishes programs to the station which accepts and broadcasts them.

only the commercial films produced by defendant. The Court said that its conclusion was not affected by whether these agreements should properly be interpreted as agency agreements or as some other form of distribution arrangement. The Court said:

"The vice of the exclusive contract in this particular field is in its tendency to restrain competition and to develop a monopoly in violation of the Sherman Act. And when the Sherman Act is involved the crucial fact is the impact of the particular practice on competition, not the label that it carries." (See *United States* v. *Masonite Corp.* 316 U. S. 265, 280; 344 U. S. at 397.)

4. The necessary monopoly control over the tying product is the same in the block booking of television programs under the time option clause as in the block booking of feature films; the monopoly arises both from the legal copyright of the program and from its inherent uniqueness.

In the Paramount case, the Supreme Court ruled that block booking of feature films was illegal because each film was the subject of a separate copyright, and because by insisting on furnishing the films in blocks, the copyright owner

"* * * 'adds to the monopoly of a single copyrighted picture that of another copyrighted picture which must be taken and exhibited in order to secure the first.' That enlargement of the monopoly of the copyright was condemned below in reliance on the principle which forbids the owner of a patent to condition its use on the purchase or use of patented or unpatented materials * * *. We approve that restriction" (334 U. S. at 157–58).

In the furnishing of television programs, the situation is identical. As shown at page 16 of the KTTV brief, during prime evening option time approximately 50 percent of the programs offered by the 3 major networks are on film. Most of these film programs are copyrighted. The copyrighted film programs include many of the most popular and desirable programs on the air, such as I Love Lucy, You'll Never Get Rich (Sergeant Bilko), Lassie, Disneyland, and many others. Even in the case of live shows, many of the scripts are copyrighted.[8] Thus, by refusing to offer these copyrighted programs to stations unless the station enter into affiliation agreements, obliging them to accept substantially all of the copyrighted or uncopyrighted programs offered by the network during option time, the networks are illegally "add[ing] to the monopoly of a single copyrighted [program] that of another copyrighted [program] which must be taken and exhibited in order to secure the first."

The CBS and NBC briefs deal with this issue in different ways. The NBC brief (p. 15) admits that its programs "may contain copyrighted program material," but contends that this is irrelevant since "such material is not being licensed to the stations." The NBC brief argues that for this reason "there is no exploitation of the copyright and consequently no possibility of an unlawful extension of a copyright monopoly."

This is pure legal formalism. When NBC sold the right to an advertiser to sponsor Dragnet, which is copyrighted and on film, over 143 affiliated stations in 1955, for more than $50,000 per half hour per week, NBC was exploiting the copyrighted program. If it was exploiting the copyrighted program, it was exploiting the copyright. The only reason for taking out the copyright in the first place is to protect the creator's legal monopoly over the program.

The CBS brief wisely ignores the point that many of its network programs are copyrighted. Instead, CBS contends that it "has no monopolistic leverage or dominance in the program field [since] CBS controls only a small percentage of the total programs available for or broadcast on television" (CBS Brief, pp. 57–58).

The short answer to this contention is that each television program is a unique work,[9] very similar to the unique dress designs considered in *Fashion Originators Guild* v. *Federal Trade Commission* (114 F. 2d 80 (2d Cir. 1940), affirmed, 312 U. S. 457 (1941)). In that case, the courts condemned an agreement among companies producing original "exclusive" dresses not to sell their products to other companies identified as "style pirates." The court rejected an argument that the agreement was lawful because the members of the guild controlled only a small percentage of the total number of dresses produced. The court said:

---

[8] And where, as is frequent on the west coast, network program are kinescoped for rebroadcast, the kinescope film can be copyrighted.

[9] An Arthur Godfrey program or a Jack Benny program has an inherent uniqueness. It can be imitated, but it cannot be reproduced. The best recognition of its unique quality is the practice of the network companies in signing its greatest stars to long-term exclusive service contracts, extending as much as 20 years. (See testimony of Mr. Sarnoff, transcript, p. 3651.)

"Finally, it is of no consequence that the guild does not supply the whole market for women's dresses; it aims at a monopoly however small its share of total sales. The reason is as follows. Although all dresses made after one design are fungibles, the different designs themselves are not fungibles. Each has its own attraction for buyers; each is unique, however trifling the basis for preferring it may be. Hence to attempt to gather to oneself all possible reproductions of a given design is to attempt to create a monopoly, as at once appears from the fact that a copyright for it—and a fortiori a design patent upon it—would be ranked as a monopoly. It is true that the sanction of that monopoly may be very weak; it depends upon the design's attractions above other designs, often not a very important margin of advantage. But the same is true of nearly all monopolies, for there are substitutes for most goods" (114 F. 2d at 85).

The same approach was taken recently in *United States* v. *Northern Pacific R. Co.*, supra. Northern Pacific contended that the Government had failed to show that the land Northern Pacific sold or leased subject to the tying requirement (use of its line for shipment of the products of the land) bore a dominant proportion to the total amount of land in the area. The court answered:

"This contention ignores the plain language of the [Supreme Court tying] decisions, providing that market dominance of 'the tying commodity' is required. The tying commodity need only be the particular property or product to which forced purchase of the second commodity is tied; certainly it does not necessarily include all of the similar and competing commodities which may be in the market. Restraints of trade to be illegal under section 1 of the Sherman Act must necessarily tend to monopoly but need not fully or substantially achieve it * * *.

"The tying commodity in the present case is the land presently or formerly owned by NP. Unrestricted fee simple title to land vests in the owner absolute domination of the market in such land. By the ownership of the lands and resulting dominance in the market therefor defendants were able to impose the traffic clauses in question in the grantees and lessees of the land."

Curiously, the argument advanced here by CBS was made unsuccessfully, by Universal Pictures in the Paramount case. Universal contended before the Supreme Court, in defense of block booking, that a film distributor does not have monopoly power over his copyrighted film product because:

"The number of such products which may be created is unlimited. He is in the same position as is an owner of particular chattels, who necessarily has a monopoly over the particular chattels, but not over the production and sale of any other chattels of like kind" (Universal brief in the Supreme Court, *United States* v. *Paramount Pictures, Inc.*, p. 92).

C. Block booking, whether of feature films or of television programs, is clearly illegal per se under section 1 of the Sherman Act.

The NBC brief (pp. 12–13) attempts to cast doubt on the contention of the KTTV brief that, in the Paramount case, the Supreme Court ruled that block booking of feature films was illegal per se.

The CBS brief does not raise any such question. At page 54, the CBS brief refers to a "second category of acts said to be illegal per se" and says that "It is in this category of cases that the socalled tie in rule discussed below * * * [has] been evolved." At pages 55 and 56, the CBS brief states that in the Paramount case the Supreme Court considered the "tie-in practice referred to as 'block booking,'" and "found the practice to be illegal." Thus, the CBS brief appears to concede that in the Paramount case the Supreme Court found block booking to be an illegal tie-in and that illegal tie-ins fall within the class of restraints regarded as illegal per se.

This concession by CBS is nothing more than the truth. In the Paramount case the courts clearly banned block booking as illegal per se. This fact readily appears from the opinions of the Supreme Court and the lower court in the Paramount case, from the briefs in the Paramount case, and from a subsequent opinion of the Supreme Court referring to Paramount.

1. Supreme Court opinion in the Paramount case

The Supreme Court in the Paramount case stated that the condenmation of block booking copyrighted pictures was based "on the principle which forbids the owner of a patent to condition its use on the purchase or use of patented or unpatented materials" (334 U. S. at 157).

In *United States* v. *Columbia Steel Company* (334 U. S. 495 (1948)), decided at the same term as the Paramount case, the court listed as an example of the "class of restraints that are illegal per se," cases where the defendants "have licensed a patented device on condition that unpatented materials be employed in conjunction with the patented device" (334 U. S. at 522).

Moreover, the Supreme Court in the Paramount case was affirming a decision of the three-judge district court holding block booking illegal. As shown below, the district court clearly found that block booking was illegal per se.

2. Opinion of the district court in the Paramount case

That the district court found block booking to be illegal per se is clearly shown by the following extract from its opinion:

"The plaintiff argues that the Sherman Act forbids blockbooking in toto * * *. In our opinion this contention is sound, and any form of blockbooking is illegal by which an exhibitor, in order to obtain a license for one or more films, must accept a license for one or more other films" (66 F. Supp. at 348).

The district court's conclusions of law also contained the flat statement that "Block booking, as hereinabove defined, violates the Sherman Act" (Conclusion of Law No. 11, 70 F. Supp. at 72).

The preceding conclusion of law No. 10 stated that—

"* * * franchises [agreements giving a theater rights on the films of a particular distributor for more than one season] have tended to restrain trade and violate section 1 of the Sherman Act" (70 F. Supp. at 72).

This conclusion as to franchises was reversed by the same Supreme Court opinion which affirmed the finding on block booking. The Supreme Court said:

"But we cannot say on this record that franchises are illegal per se when extended to any theater or circuit no matter how small * * *. Hence we set aside the findings on franchises * * *" (334 U. S. at 156).

If conclusion of law No. 10 quoted above, reversed by the Supreme Court, was interpreted by the Court as a ruling the franchises were illegal per se, there can be no doubt that conclusion of law No. 11, affirmed by the Supreme Court, is a categorical ruling that block booking is illegal per se.

3. Briefs of the parties in the Paramount case

When the Paramount case was appealed to the Supreme Court, only two of the defendants, Universal and Columbia, urged reversal of the district court finding on block booking. The Columbia brief describes the district court ruling as follows:

"* * * The district court held that block booking per se was an illegal practice because in essence it amounted to a 'tie-in' or conditioning" (Columbia brief in the Supreme Court, *United States* v. *Paramount Pictures, Inc.*, p. 33.)

4. Subsequent Supreme Court opinion citing the Paramount case

In *Times-Picayune Publishing Co.* v. *United States* (345 U. S. 594 (1953)), the Supreme Court referred to the block-booking ruling in the Paramount case in language that can only be interpreted as a reaffirmation that block booking is illegal per se. The Court said:

"And since the Court [in the *International Salt Co.* case, 322 U. S. 392] deemed it 'unreasonable, per se, to foreclose competitors from any substantial market,' neither could the tying arrangements survive section 1 of the Sherman Act (332 U. S. at 396). That principle underpinned the decisions in the movie cases, holding unlawful the 'block booking' of copyrighted films by lessors, *United States* v. *Paramount Pictures* (334 U. S. 131, 156–159 (1948)), as well as a buyer's wielding of lawful monopoly power in one market to coerce concessions that handicapped competition facing him in another. *United States* v. *Griffith* (334 U. S. 100, 106–108 (1948))" (345 U. S. at 608).

Thus, the Court in the Times-Picayune case did nothing to undermine the force of the per se rule in situations like Paramount i. e., the use of monopolistic leverage in a unique product, like a copyrighted movie or television program, to restrain commerce in a tried product, like other movie or television programs.

D. The block booking of television programs between a single network company and a single affiliated station is illegal per se regardless of the existence of a conspiracy among television networks or among television stations.

Both the NBC and CBS briefs attempt to avoid the conclusion that the block booking of television programs is illegal per se by pointing out that in the Paramount case conspiracies were found to exist among the defendant companies in the distribution of feature films and the ownership of theaters, and that no such conspiracies exist among the television networks or among the owners of television stations. The CBS brief states that conspiracy was "the basic fact" found in the Paramount case (CBS brief, p. IX). The NBC brief says that "the bulk of the [Paramount] opinion is a finding of conspiracy" and that the effect of this finding on the Court's approach to block booking "is, of course, impossible to say" (NBC brief, p. 13).

It is, of course, true that in the Paramount case both the district court and the Supreme Court found that the defendants had engaged in an unlawful conspiracy. But wholly apart from whether or not a similar conspiracy exists in the television industry, it is plain that the Paramount ruling as to the illegality of block booking did not rest in any way on the finding that the defendants had illegally conspired with one another in other fields.

Thus, the district court in the Paramount case held, in conclusions of law Nos. 7, 8, and 9, that the defendants had unreasonably restrained trade and commerce in several enumerated ways, each described in a separate subparagraph. Several of these subparagraphs begin with the word "conspiring." For example, paragraph 7 (b) speaks of "conspiring with each other to maintain a nationwide system of runs and clearances." Paragraph 8 (a) speaks of "conspiring with each other to maintain a nationwide system of fixed minimum motion picture theater admission prices" (70 F. Supp. at 72).

Paragraph 8 (g), however, dealing with block booking, holds merely that the defendants have restrained trade by—

"(g) *Individually* conditioning the offer of a license for 1 or more copyrighted films upon the acceptance by the licensee of 1 or more other copyrighted films, except in the case of the United Artists Corp.;" [Italic added.] 70 F. Supp. at 72.

Furthermore, conclusion of law No. 11 states, without reference to conspiracy, that: "11. Block booking as hereinabove defined violates the Sherman Act."

It is equally plain that the Supreme Court's conclusion on the illegality of block booking did not rest in any way on the existence of a conspiracy among the defendants. Block booking is discussed in a separate numbered section of the Supreme Court's opinion, extending over 4 pages (334 U. S. 156–160). In these 4 pages, there is not a single reference to conspiracy.

E. Since the block booking of television programs under the time-option clause of the affiliation agreements is illegal per se because of its inherently restrictive character, the alleged absence of proof of actual adverse effects, even if true, is irrelevant.

The NBC and CBS briefs lay great stress upon the claim that, contrary to the evidence as presented in sections V and VII of the KTTV brief, block booking of television programs under the network time-option clause does not unduly hinder the operations of independent television stations, independent program producers, and small- and medium-sized advertisers.

The principal factual evidence advanced in support of these arguments is contained in the tables which appear on pages 24 and 25 of the CBS brief. These tables were referred to frequently in the other memoranda submitted by CBS and in the testimony of Dr. Frank Stanton. The tables analyze the programs carried by CBS affiliates during a week in May of 1956 "which is believed to be typical" (CBS brief, p. 23), and purport to show that during the 21 hours of evening option time in this week on each of the 52 basic CBS affiliates, 30.4 percent of the time was available to nonnetwork programs.

This computation rests on two basic fallacies. First, it considers as available for nonnetwork programs prime evening option time which is actually occupied by CBS network programs which straddle both option time and station time. Second, by selecting a week in May of 1956, during the daylight saving time period, CBS achieves a distortion of the actual clearance and availability picture which would not appear if CBS had selected a week when standard time prevailed throughout the country.

These two basic fallacies on which the figures relied upon by CBS rest are explained in detail in the KTTV memorandum, filed with the committee, accompanying this brief, dated October 29, 1956, entitled "Comments on the Testimony of Dr. Frank Stanton Concerning the Statement of Richard A. Moore."

But even if the contentions of the networks, to the effect that block booking has not had adverse effects, were correct, they would be irrelevant. As has been shown above, the block booking of television programs is illegal per se under section 1 of the Sherman Act. This means that it is one of the offenses which, in the words of the report of the Attorney General's National Committee To Study the Antitrust Laws, is "conclusively presumed unreasonably to restrain competition (the so-called unreasonable per se offenses)" and as the report states (p. 12):

"* * * where such restraints are established, in purpose or in effect, inquiry under the rule of reason ends."

Block-booking practices are illegal per se because, like the bylaws in the Associated Press case,

"* * * on their face, *and without regard to their past effect*, [they] constitute restraints of trade" (326 U. S. at 12). (Emphasis supplied.)

And, like the bylaws in the Associated Press case, block booking is "* * * a course of conduct which will necessarily restrain or monopolize a part of trade or commerce." (326 U. S. at 12.)

Even if it were true that 30.4 percent of evening option time was available for nonnetwork programs, the existence of the time option makes such availability depend on the whim of the network; and whenever the option is exercised, the network program prevails, regardless of quality or price.

The conclusion that block booking is illegal per se because of its inherently restrictive effect therefore puts an end to any inquiry as to what the actual past effect may have been. Such a practice is presumed to be unduly restrictive of competition, regardless of past effect.

F. Even if block booking of television programs under the time option clause were not illegal per se, the alleged business necessity or justification for the practice, if any, would be irrelevant in the face of proof that the practice unduly restrains competitors.

The bulk of the NBC and CBS briefs consists of an attempt to establish that under the rule of reason the supplying of a television block program service under the time-option clause of network-station affiliation agreements is either necessary to carry on the business of networking, or, at least reasonable under the special economic facts of the television industry.

This attempted justification rests on a misconception of the scope of the rule of reason. Even if the block booking of television programs were not a per se violation of the antitrust laws, the discretion of the courts under the rule of reason remains a limited one. Business justification may be utilized to illuminate ambiguous intent, *Times-Picayune* v. *United States* (345 U. S. at 623), or to help predict consequencies where the consequences are uncertain, *Chicago Board of Trade* v. *United States* (246 U. S. 231, 239 (1918)), but it becomes irrelevant where the restraint is clear.

"[The court's] discretion is confined to consideration of whether in each case the conduct being reviewed under the [Sherman] Act constitutes an undue restraint of competitive conditions, or a monopolization, or an attempt to monopolize. This standard permits the courts to decide whether conduct is significantly and unreasonably anticompetitive in character or effect; it makes obsolete once prevalent arguments, such as, whether monopoly arrangements would be socially preferable to competition in a particular industry, because, for example, of high fixed costs or the risks of 'cut-throat' competition or other similar unusual conditions." Report of the Attorney General's National Committee to Study the Antitrust Laws, page 12 (1955).

The only difference between a per se case and an unreasonable restraint case is that in the former, the unreasonableness of the restraint is presumed from its inherent character, while in the latter the unreasonable effects must be shown Thus, the court's disposition of the economic-convenience arguments in the Paramount case was appropriate even if the court had not deemed block booking to be illegal per se.

The rule of reason arguments made by NBC and CBS are virtually the same as those made in the Paramount case by the two defendant film distributors, Columbia and Universal, who unsuccessfully appealed from that portion of the district court decision holding block booking illegal per se. Columbia and Universal, in their briefs before the Supreme Court, made the following points:

1. "Economic necessity for licensing a season's product at one time finds its roots in the limited capital of the smaller companies like appellants" (Columbia brief, p. 14).

2. "[Columbia] needs block booking because it has to have some assurance of a market in order to hazard its capital in producing many pictures at a substantial cost. * * * If Columbia were not able to sell its season's product at one time it could not operate profitably" (Columbia brief, p. 18).

3. "If [Columbia were] compelled to sell picture by picture, there would practically be as many [sales] campaigns as pictures" (Columbia brief, p. 20).

"[Universal's] business reasons for endeavoring to license its season's product as a block, before production, are obvious since the licensing of [average] pictures one by one after production, would be exorbitantly expensive and highly speculative" (Universal brief, p. 91).

4. "The exhibitors * * * want [block booking]. It gives them an assurance of product" and avoids the necessity of separate arrangements for each picture (Columbia brief, p. 20).

"[Universal's] customers [want] to stock up for an entire season so that they will not run short of pictures" (Universal brief, p. 90).

5. "The exhibitor * * * is given a liberal right of selection—the right to reject a certain number of pictures" (Columbia brief, p. 23). "[T]he average selectivity on all contracts made by [Columbia] was 32 pictures out of 44" (id., p. 25).

In the Paramount case, the Supreme Court disposed of Columbia's arguments in terms that apply equally well to the similar current arguments of NBC and CBS:

"Columbia Pictures makes an earnest argument that enforcement of the restriction as to block booking will be very disadvantageous to it and will greatly impair its ability to operate profitably. But the policy of the antitrust laws is not qualified or conditioned by the convenience of those whose conduct is regulated. Nor can a vested interest in a practice which contravenes the policy of the antitrust laws receive judicial sanction (334 U. S. at 159).

II. THE MUST-BUY POLICY IS A PER SE VIOLATION OF THE ANTITRUST LAWS

The NBC and CBS briefs contend that the must-buy policy does not violate the antitrust laws for two reasons:

A. The policy is said to be decided by the network company, without the participation of the affiliated stations. The policy is therefore said to be outside the rule which brands collective refusals to deal as illegal per se.

B. Considered as an individual refusal to deal by the network company, the must-buy policy is said to be lawful because none of the stations offered only on a package basis has a monopoly in its own market, and the policy is not intended to affect, and has no substantial effect on, competition.

As shown below, neither of these defenses holds water.

A. The bold contention that the must-buy policy is an individual action of the network company, in which the affiliated stations do not participate, cannot stand against facts which establish a collective refusal to deal that is per se illegal.

1. CBS admits that in the case of one affiliated station, the affiliation agreement contains an express provision obligating the network to include the station on the must-buy list (CBS memorandum entitled "Network Practices," June 1956, p. 127).[10] In fact, in later testimony CBS's president admitted that "there may be 1 or 2 cases where it is a matter of contract," and that "this may have been a factor of some importance in the very early days."[11]

2. Affiliated stations continually urge the network companies to include them on the must-buy lists (testimony of Mr. Robert Sarnoff, transcript, p. 3693).

3. The inclusion of a station on the must-buy list is published by the network on its rate card and is known to the station.

4. Virtually all NBC and CBS must-buy stations themselves publicize the fact that they are included in the NBC or CBS must-buy list. They do so in their own rate cards, in the data they prepare for publication in the Standard Rate and Data Guide, and in the advertisements they publish in the trade press.

5. By optioning time to its network with knowledge that the network sells this time to advertisers only on an all-or-none basis, each must-buy station clearly consents to its inclusion in the must-buy package, and takes the essential action that is required for the must-buy policy to be effective.

6. The must-buy station, acting individually by signing an affiliation agreement including option time, and subsequently by clearing virtually all network programs offered during option time, places itself, by its own affirmative

[10] The record does not disclose whether NBC has any similar agreements with any of its affiliates.

[11] Hearings before special subcommittee of House Judiciary Committee, September 26, 1956, transcript, pp. 2200–2201.

action, in a position where it must and does refuse to deal with advertisers seeking to buy the same station time that is being cleared for a network program on a must-buy basis.

The courts have never required proof of formal agreements spelling out the precise conduct of each party in order to establish the existence of a conspiracy in restraint of trade. The courts are prepared to infer the existence of the conspiracy from the actions of the parties, taken with knowledge of the consequences. As the Supreme Court said in *Interstate Circuit, Inc.* v. *United States* (306 U. S. 208, at 226–227 (1939)):

"It was enough that, knowing that concerted action was contemplated and invited, the distributors gave their adherence to the scheme and participated in it. Each distributor was advised that the others were asked to participate; each knew that cooperation was essential to successful operation of the plan. They knew that the plan, if carried out, would result in a restraint of commerce, which, we will presently point out, was unreasonable within the meaning of the Sherman Act and, knowing it, all participated in the plan. The evidence is persuasive that each distributor early became aware that the others had joined. With that knowledge they renewed the arrangement and carried it into effect for the 2 successive years.

"It is elementary that an unlawful conspiracy may be and often is formed without simultaneous action or agreement on the part of the conspirators. * * * Acceptance by competitors, without previous agreement, of an invitation to participate in a plan, the necessary consequence of which, if carried out, is restraint of interstate commerce, is sufficient to establish an unlawful conspiracy under the Sherman Act."

As the Supreme Court said in *United States* v. *Masonite Corp.* (316 U. S. 265 (1942)), dealing with a resale price-fixing plan under the guise of del credere agency:

"It is not clear at what precise point of time each appellee became aware of the fact that its contract was not an isolated transaction but part of a larger arrangement. But it is clear that, as the arrangement continued, each became familiar with its purpose and scope" (316 U. S. 275).

Nor is the existence of the collective agreement disproved by the mere fact, emphasized in the NBC and CBS briefs, that NBC and CBS each reserves the sole right to decide whether a particular station will be included on its must-buy list. At best, this means only that the collective agreement as to the inclusion of any particular station on the list cannot come into effect until the network company has agreed.

The Supreme Court dealt with a similar argument in *United States* v. *Masonite Corp.*, supra, involving license agreements between Masonite and its competitors in manufacturing cardboard under Masonite patents, under which the competitors sold as del credere agents of Masonite at prices fixed by the latter. The defendants argued that since Masonite alone fixed the prices, there was no collective price-fixing agreement among them. The court found that all of the defendants were parties to a single price-fixing conspiracy, and gave the following reasons:

"Nor can the fact that Masonite alone fixed the prices, and that the other appellees never consulted with Masonite concerning them, make the combination any the less illegal. Prices are fixed when they are agreed upon (*United States* v. *Socony-Vacuum Oil Co.*, supra (p. 222)). The fixing of prices by one member of a group, pursuant to express delegation, acquiescence, or understanding, is just as illegal as the fixing of prices by direct, joint action" (316 U. S. 275–276).

The CBS brief (pp. 65–66) attempts to demonstrate that collective refusals to deal have not been held to be illegal per se. Even *Associated Press* v. *United States* (326 U. S. 1 (1945)) is swept aside with the statement that "none of the several opinions in the case suggested that such a refusal was illegal per se" (CBS brief, p. 66). But this is a patently erroneous reading of the cases. In *United States* v. *Columbia Steel Co.* (334 U. S. 495, 522–523 (1948)), the Supreme Court said:

"A restraint may be unreasonable either because a restraint otherwise reasonable is accompanied with a specific intent to accomplish a forbidden restraint or because it falls within the class of restraints that are illegal per se. For example, where a complaint charges that the defendants have engaged in price fixing, *or have concertedly refused to deal with nonmembers of an association*, or have licensed a patent device on condition that unpatented materials be employed in conjunction with the patented device, then the amount of commerce involved is immaterial because such restraints are illegal per se." [Emphasis added.]

The Court then cites *Associated Press* v. *United States*, supra, as authority for the per se illegality of group refusals. At best, the CBS position is a nonjudicial dissent from the Supreme Court's own appraisal of its own opinions, including Associated Press.

Later opinions of the Supreme Court confirm that collective refusals to deal are illegal per se. In *Kiefer-Stewart Co.* v. *Seagram & Sons* (340 U. S. 211 (1951)), Justice Black held for a unanimous Court that the concerted refusal of the two defendants to sell to plaintiff was within the prohibitions of the Sherman Act. At the trial the judge had instructed the jury that any evidence as to illegal acts of the plaintiff "was no defense to the present cause of action." The Court upheld this ruling:

"We hold that the instruction was correct. Seagram and Calvert, acting individually perhaps, might have refused to deal with petitioner or with any or all of the Indiana wholesalers. *But the Sherman Act makes it an offense for respondents to agree among themselves to stop selling to particular customers*" (340 U. S. 214). [Emphasis added.]

This from a four-page opinion in which the "rule of reason" is not even mentioned, much less applied.

As recently as 1952 the Court reaffirmed this position. In *Times-Picayune Publishing Co.* v. *United States* (345 U. S. 594 (1953)), Justice Clark said for the majority:

"Refusals to sell, without more, do not violate the law [but] group boycotts, or concerted refusals to deal, clearly run afoul of section 1, *Kiefer-Stewart Co.* v. *Seagram & Sons* (340 U. S. 211, 214 (1951)); *Associated Press* v. *United States* (326 U. S. 1 (1945)); see *United States* v. *Columbia Steel Co.* (324 U. S. 495, 522 (1948)) * * *" (345 U. S. at 625).

It is interesting to note that the CBS brief cites no case in which group refusals to deal have been upheld by the Supreme Court. And even the lone court of appeals case cited by CBS as involving a situation parallel to the network must-buy practices, *Prairie Farmer Pub. Co.* v. *Indiana Farmer's Guide Pub. Co.* (88 F. 2d 979 (7th Cir., 1937)), did not involve a refusal to deal, concerted or individual. The defendant papers, through their advertising agency, offered a group rate which made it more economical to deal with all of them as a group, rather than to combine advertising in some of them with advertising in plaintiff's paper. But there is no indication that an advertiser willing to pay the increased cost of a split advertising program would have been refused space in papers of group members (as results under the must-buy policy for television option time), merely because he purchased space in plaintiff's paper instead of the competing paper which was a member of the group.

In any event, the Farmer's Guide case is of the same vintage as Judge Manton's now discredited opinion in Paramount Famous-Lasky Corporation upholding the block booking of motion pictures (see p. 5, above) and seems equally invalid as a modern precedent. For example, it was heavily relied upon by the defendants in the Associated Press case [12] and was cited by Justice Roberts in his dissent (326 U. S. 1, 33) as supporting the legality of the bylaws there in question, but was disregarded by the majority.

B. If, as the network companies argue, the must-buy policy is the action of the network alone, it is still a type of individual refusal to deal that clearly violates the antitrust laws.

Each station on the must-buy list is a monopoly to a degree. Even in 7- or 4-station markets, each station is given by the FCC allocation and license a monopoly on a particular channel free of threat that any competitior can obtain the same channel in the same market and free of threat of competitors on other channels except the limited number allocated by the Commission. The network, in its must-buy practice, is thus using its control of time on one monopoly station to force advertisers to buy time on other stations in the chain.

The monopolistic leverage inherent in the must-buy practice is accentuated by the fact that, according to the current must-buy lists of NBC and CBS, there are at least 10 markets in which there are only 2 stations, 1 of which is an NBC affiliate included in the NBC must-buy list and the other is a CBS affiliate included in the CBS must-buy list.

By their parallel option time practices, the two networks together control the prime time in these markets on a completely closed basis. By their paral-

---

[12] Associated Press brief in the Supreme Court, pp. 71–72; Associated Press reply brief in the Supreme Court, pp. 13–14, 23–24.

lel must-buy practices, they refuse to deal with advertisers for time in these closed markets unless the advertisers purchase time on the other stations on the must-buy lists, located in open markets where competing non-NBC and non-CBS stations exist. Each network uses its strategic position in the limited-station markets to force the advertiser to buy time on the network affiliates, rather than the competitors of these affiliates.

In *United States* v. *Griffith* (334 U. S. 100 (1948)), the Supreme Court held that a motion picture exhibitor, controlling a circuit of theaters in one-theater and multitheater towns, could not use the buying power of the entire circuit to negotiate films for competitive as well as closed towns. This was so even if the exhibitor made no threat to withhold the business of the one-theater towns unless exclusive rights were granted in competitive towns. This was so whether 1 circuit made the bargain with the distributor or whether 2 or more lumped their buying power. This was so even though the exhibitor had no patent or copyright monopoly, and even though there was no governmental limitation on the opening of competing theaters in the monopoly towns.

In *United States* v. *Paramount Pictures, Inc.* (334 U. S. 131 (1948)), the Supreme Court considered two types of agreements under which theater circuits pooled the bargaining power of the theaters in the circuit: (1) Formula deals, in which the theater circuit's license fee for a given feature film was measured by a specified percentage of the film's national gross and the circuit was allowed to allocate playing time and film rentals among its various theaters; and (2) master agreements covering the exhibition of features in a number of theaters, with the exhibitor permitted to allocate film rentals and playing time among the theaters. The Court gave two reasons for holding each of these practices to be an illegal restraint of trade (334 U. S. at 154–155):

"In the first place, they eliminate the possibility of bidding for films theater by theater. In that way they eliminated the opportunity for the small competitor to obtain the choice first runs, and put a premium on the size of the circuit. They are, therefore, devices for stifling competition and diverting the cream of the business to the large operators. In the second place, the pooling of the purchasing power of an entire circuit in bidding for films is a misuse of monopoly power insofar as it combines the theaters in closed towns with competitive situations. The reasons have been stated in *United States* v. *Griffith* (ante, p. 100), and *Schine Chain Theatre, Inc.* v. *United States* (ante, p. 110), and need not be repeated here. It is hardly necessary to add that distributors who join in such arrangements by exhibitors are active participants in effectuating a restraint of trade and a monopolistic practice."

Thus, there were two grounds in the Paramount case for holding these arrangements illegal. The Court did not rely solely on the Griffith situation of using monopoly towns to obtain advantage in nonmonopoly towns. Whether or not monopoly towns existed, the purchase of films for an entire circuit, by eliminating the opportunity of the small competitor to bid for films on a theater-by-theater basis, was in itself sufficient to constitute a violation of law.

In the television industry, the networks' must-buy lists combine monopoly and limited monopoly stations. Control of broadcast time in closed or relatively closed markets is used to control time in other markets whether closed or relatively open. In open markets the must-buy practice prevents a competing station in the same market as a member of the must-buy group from obtaining a national advertiser's order in prime viewing time, even when the advertiser, and not the network, owns the program. Even if this competing station is closed out by the individual action of the network company, rather than concerted action with its affilates (who proudly regard each other, for other purposes, as "partners" [13] the absence of concerted action does not save the must-buy policy from the impact of the Sherman Act.

And the fact that the two network companies do not agree between themselves as to their must-buy policies, and the fact that neither by itself controls a majority of the television stations or has a majority share of United States television advertising revenues, are irrelevant for purposes of considering the cumulative effect of inherently anticompetitive practices in which they each engage.

The illegal market restraint of an anticompetitive practice can be established, under the antitrust laws, by considering the cumulative dominance in the market achieved by the companies that follow the same practice, without the necessity of showing that they combined or conspired. In *Federal Trade Commission* v. *Motion Picture Advertising Service Co., Inc.* (344 U. S. 392 (1953)), the

[13] As in the testimony quoted at pp. 9, 10, 11, and 17.

respondent, a producer and distributor of advertising films, entered into contracts with theater owners under which the theater owner agreed to display no advertising films other than respondent's. Respondent operated in only 27 States and had exclusive contracts with less than 40 percent of the theaters in its area of operations. However, three other companies in the same business followed the same practice. The four together had arrangements with about 75 percent of the theaters in the country which displayed advertising films. The Court held that the exclusive contracts were not merely "unfair methods of competition" under the Federal Trade Commission Act, but that they also violated the Sherman Act. The Court said (344 U. S. at 395):

"The [Federal Trade] Commission found in the present case that respondent's exclusive contracts unreasonably restrain competition and tend to monopoly. Those findings are supported by substantial evidence. This is not a situation where by the nature of the market there is room for newcomers, irrespective of the existing restrictive practices. The number of outlets for the films is quite limited. And due to the exclusive contracts, respondent and the 3 other major companies have foreclosed to competitors 75 percent of all available outlets for this business throughout the United States. It is, we think, plain from the Commission's findings that a device which has sewed up a market so tightly for the benefit of a few falls within the prohibitions of the Sherman Act. * * *"

The must-buy practices of NBC and CBS cover a total of 111 stations in 63 markets. In more than 40 of these markets, with over 70 percent of the television homes of the United States, NBC and CBS each have a must-buy affiliate. The must-buy policy prevents the advertiser from dealing with whatever non-NBC and non-CBS stations exist in those markets. And in at least 10 of these markets, the NBC and CBS affiliates are the only stations that exist. If an advertiser wishes to purchase prime time in these markets, he must obey the must-buy policy and take the NBC or CBS affiliates in the other markets where other stations exist. Even if each network company is considered to be following this practice independently of the other and without "concert" with its affiliates, each is violating the antitrust laws by simultaneously following a practice which requires the advertiser to purchase the time of their affiliates and shuts out each affiliate's local competitors.

The Motion Picture Advertising case shows that in an industry where the number of outlets is limited, restrictive practices are particularly subject to Sherman Act attack. Now that block booking of programs and theaters has been outlawed in the movie industry, where there is an economic opportunity for as many outlets as the public demands, the parallel block booking of television programs is patently intolerable in the television industry where each outlet operates under Government license, and there is an absolute ceiling on the number of outlets. Where there are inherent impediments to competition, as there are in the television industry by reason of the limited number of channels available, the courts are particularly careful to insure that the remaining possibilities of competition are protected against restraint. See *Sugar Institute* v. *United States* (297 U. S. 553, 600 (1936)). Congress, in section 313 of the Federal Communications Act, has given a clear mandate that the antitrust laws shall be applicable to television broadcasting. Thus, both the cases and the statute require that anticompetitive practices in the television industry be effectively prohibited.

CONCLUSION

The record before this committee establishes that, under present day conditions:

(*a*) Under the time-option clause of the network-affiliate contracts, most of prime evening time in most of the principal television markets with 1, 2, or 3 stations is now occupied by network-distributed programs.

(*b*) Because prime evening time on a national basis is controlled by the networks under their time options, independent program producers cannot produce first-class television shows for national distribution during prime evening time unless these shows are distributed over the networks.

(*c*) Because the only high quality shows the independent producers can afford to produce are those that are sold for network distribution, independent stations cannot purchase first-class television shows of a quality high enough to compete with network distributed shows in prime evening time.

(*d*) Because the independent stations do not have first-class shows to offer during prime evening time, and because the network affiliates sell their time only on a national must-buy basis, regional and local advertisers cannot sponsor first-class television shows during prime evening time.

(*e*) The great majority of the American public is therefore limited during prime viewing hours to a choice of programs selected by three network companies in New York.

The evidence before the committee clearly establishes that the root of these evils is the complete network control over prime time on affiliated stations. The evidence also shows that the warp and woof of this fabric of network control are the time-option and the must-buy agreements between the networks and their affiliates.

Agreements of this type between business associates have always been condemned as illegal restraints under section 1 of the Sherman Act, whenever their actual or potential effects on competitors have been of the types listed above. As the Supreme Court said in *Associated Press* v. *United States* (326 U. S. 1 (1945)):

"The Sherman Act was specifically intended to prohibit independent businesses from becoming 'associates' in a common plan which is bound to reduce their competitor's opportunity to buy or sell the things in which the groups compete. Victory of a member of such a combination over its business rivals achieved by such collective means cannot consistently with the Sherman Act or with practical, everyday knowledge be attributed to individual 'enterprise and sagacity'; such hampering of business rivals can only be attributed to that which really makes it possible—the collective power of an unlawful combination" (326 U. S. at p. 15).

Nor can the illegality of these restrictive network practices be wished away by the network contention that the time-option agreements, for example, are really not enforced by he neworks, that affiliated stations, as good partners acting in their own self-interest, usually clear network programs on their merits, and that the option functions merely as a "shield" to be used only when and if the rate of program rejection becomes so high as to threaten the "erosion" of the network schedule (Tr. pp. 3273–3274, 3489, 3499; CBS' memorandum entitled "Network Practices," June 1956, p. 110).

Unfortunately for the networks, the Sherman Act does not authorize contractual "shields" against the dangers of competition. The Sherman Act was intended to strike down such shields, even though they are not actually being used and are merely being held in reserve. To quote again from the Supreme Court's opinion in Associated Press:

"The [lower] court also found that AP's restrictive bylaws had hindered and impeded the growth of competing newspapers. This latter finding, as to the past effect of the restrictions, is challenged. We are inclined to think that it is supported by undisputed evidence, but we do not stop to labor the point. For the court below found, and we think correctly, that the bylaws on their face, and without regard to their past effect, constitute restraints of trade. Combinations are no less unlawful because they have not as yet resulted in restraint. An agreement or combination to follow a course of conduct which will necessarily restrain or monopolize a part of trade or commerce may violate the Sherman Act, whether it be 'wholly nascent or abortive on the one hand, or successful on the other' " (326 U. S. 1, at 11–12).

The "erosion" argument is the heart of the network case, and the issue can well be joined at this precise point. By "erosion," the network companies mean a wearing away of their program schedules as the result of competition—in the form of free and direct dealings between affiliated stations, independent program producers, and advertisers in the sale and programing of prime evening time, rather than dealings channeled through the network company as intermediary. The network companies may legitimately seek to preserve their role as intermediary by offering a better service at a lower price. But they may not, consistent with the Sherman Act, "shield" their role as intermediary by restrictive contractual arrangements with their affiliates, under which the network service is accepted, and competitors are excluded, regardless of quality or prcie.

The businessman's desire for a "shield" against "erosion" is precisely what the Sherman Act is about and why it exists. The act enunciates a public policy that favors "erosion" by the natural process of competition, and opposes "shields" against competition.

If the principles of the Sherman Act are valid for every other industry in the country, including the newspapers, the theater, the movies, why should television be an exception? Congress considered this question when it passed the Communications Act, and decided that no exception should be made.

Surely the great national television companies have sufficient economic strength, sufficient creative and administrative talent, and sufficient devotion to the basic principles of a free economy, to be able to lay down their contractual shields and compete.

If the network companies do compete on a fair and equal basis with the hundreds of other business organizations in the television industry—stations, program producers and advertisers—the entire history of this Nation indicates that all of the most efficient elements in the industry will flourish, quality will improve, creative innovations will appear, and both the industry and the public will gain.

Appendix A. Parallel Between Block-Booking Defense of Television Network Companies and Arguments in Overruled Paramount Famous-Lasky Case

In *United States* v. *Paramount Pictures, Inc.* (334 U. S. 131 (1948)), the Supreme Court affirmed the three-judge district court's holding that block booking of movie films by distributors was illegal under the Sherman Act. The district court, in arriving at its holding as to block booking (*United States* v. *Paramount Pictures, Inc.*, 66 F. Supp. 323, 348–350 (S. D. N. Y. 1946)) expressly disapproved an earlier decision (*Federal Trade Commission* v. *Paramount Famous-Lasky Corp.*, 57 F. 2d 152 (2d Cir. 1932)) in which it was held that block booking was not an unfair method of competition under section 5 of the Federal Trade Commission Act. The opinion of the district court in the Paramount Pictures case was written by Judge Augustus Hand, who had previously concurred in the Paramount Famous-Lasky decision.

In the Paramount Famous-Lasky case, the court described the block booking practice as follows (57 F. 2d at 155):

"A block is a group of films offered as a unit, containing a number of individual motion pictures which are available for lease by exhibitors for 3 months or for 1 year. Such blocks contain 13 or 26 films, or 52 or 104 films, according to whether the theater changes films once or twice a week. The individual films in blocks being offered are not always identical. The blocks offered to an exhibitor contain certain films which the exhibitor may not want to lease, but he must lease all or none. He may not select some of the individual films and reject others contained in the block unless he exercises the option to pay prices found by the Commission to be arbitrarily fixed from 50 to 75 percent higher than the estimated prices of such films as part of the block. If the exhibitor declines to take all, the block is successively offered to his competitors until a lease is made. Only if all competitors refuse the block are the individual films offered to exhibitors upon some other basis arrived at by negotiation between the producer and exhibitors."

The Federal Trade Commission's position was stated as follows: (ibid):

"The Commission determined this method of distribution to be unfair, and that the purpose and effect of the alternative offer is to coerce and intimidate an exhibitor into surrendering his free choice in the leasing of films, and into leasing films in blocks as offered, thereby denying to such exhibitor the opportunity and profit of leasing and exhibiting certain other films of higher qualities and which such exhibitor's patrons demand and which such exhibitor desires to exhibit. It is thus concluded by the Commission that this distribution policy lessens competition and tends to create a monopoly in the motion-picture industry by tending to exclude from the market and industry independent producers and distributors of films, and denies to the exhibitors freedom of choice in leasing films."

The only relevant difference between the block-booking practice involved in the 1932 Paramount Famous-Lasky case and the block-booking practice involved in the 1946–48 Paramount case is that in the latter the exhibitor could reject a percentage of the block of films he had been required to lease. Yet this right of rejection did not save the practice from being held illegal.

There is a striking similarity between the arguments advanced in the opinion of Judge Manton in the Paramount Famous-Lasky case to uphold the legality of block-booking feature films, and the arguments advanced in the NBC and CBS briefs to defend the legality of block-booking television programs. The closeness of the parallel is shown by the following table:

PARAMOUNT FAMOUS-LASKY OPINION	NBC AND CBS BRIEFS
The court said there were 7 other major and some minor producers competing with the defendant; there was free competition among producers and distributors; there was a lack of monopolization by the defendant and lack of ability to achieve monopolization.	The television network companies allege that there is competition among the three networks; that there is no monopolization.
The court said there was no effective or destructive injury to theaters, as shown by the fact that three-fourths of those showing defendant's pictures had shown less than 25% thereof.	The television network companies allege that some of their affiliates have not carried some of the block-booked network programs.
The court said that defendant's block booking had not been shown to have had any effect on the smaller producers; that all producers had been able successfully to distribute.	The television network companies allege that their booking practices have not and do not affect competing independent producers.
The court said defendant's block booking had not been shown to have injured theaters.	The television network companies allege that stations are not injured by their booking practices.
The court said that the theater had the choice of two alternatives—to take the block and forestall any competitors, or to refuse and, if competitors also refuse, to pay a higher price per individual film; that these were ordinary incidents of bargaining and selling between seller and buyer.	The television network companies allege that stations enter into affiliation agreements and accept option-time block booking voluntarily.
The court said that since there was no evidence of combination between defendant and other large producers, the fact that defendant's block booking tended to exclude independent producers was insufficient to constitute a violation of law.	The television network companies allege that there is no combination among themselves, so that their booking practices are not illegal.
The court said that defendant's block booking was not "inherently unlawful and unfair," so that its legality depended upon its effect.	The television network companies argue, despite the ruling in the *Paramount* case (overruling the *Paramount Famous-Lasky* case) that block booking is illegal *per se*, that their booking practices are not inherently unlawful, so that their legality depends upon their effect.
The court said that only a small percentage of contracts actually made were for blocks; that most were for a few pictures only.	The television network companies argue that their blocking practices apply only in a fraction of the broadcast hours.
The court said that no illegal tying contract was involved because the leasing of pictures in blocks was not tying them together; defendant's pictures were not indispensable to any exhibitor; defendant had no monopoly; and the fact that the films were copyrighted did not create the monopoly necessary for an illegal tying contract.	The television network companies allege that their practice of offering programs is not tying them together; that their programs are not indispensable to any station; that they have no monopoly; that the fact that each of their programs is unique and is or can be copyrighted does not create the monopoly necessary for an illegal tying contract.

14. PROGRAM SCHEDULES FOR A SAMPLE WEEK IN APRIL 1956, SUBMITTED BY THE FOLLOWING NETWORK AFFILIATED STATIONS WHO APPEARED BEFORE THE COMMITTEE

A. ABC AFFILIATES:
WMAL-TV, WASHINGTON, D. C.
WTTV, BLOOMINGTON, IND.
WBAP-TV, FORT WORTH, TEX.

Program schedule, WMAL-TV, Washington, D. C., week of Apr. 1-7, 1956

Time	Program	Source
Sunday:		
11:45 a. m.	Big Picture	Local film.[1]
12:15 p. m.	Japan Hour	Local film.
12:30 p. m.	Christopher Program	Do.
1 p. m.	This We Believe	Local live.
1:30 p. m.	Dean Pike	ABC.[2]
2 p. m.	Celebrity Parade	Local live and local film.
2:30 p. m.	All Star Theater	Local film.
3 p. m.	Sunday Matinee	Do.

15. Standard Form of Affiliation Agreements Employed by the Three Networks

ABC

In its response to the committee's network questionnaire, ABC answered question 11 pertaining to affiliation standards and agreements as follows:

11 a. Have there been any changes in the criteria which you use in selecting affiliates since the preparation of the memorandums which you submitted to the Interstate and Foreign Commerce Committee in response to Senator Bricker's letter of October 19, 1954? If so, please describe in detail.

Answer: No.

b. Please attach examples of the forms of affiliation agreements currently used by you, including any per program agreements.

Answer: Examples (a)-(j) attached.

c. Please explain the nature of any special provisions that are normally or frequently added to these forms.

Answer:

Rider No. 1, attached (g), and self-explanatory.

Rider No. 2, attached (h), and self-explanatory.

Attached (i), which is a 90-day mutual right of cancellation. This on occasion is modified to provide for a mutual cancellation privilege of 6 months or 12 months.

On occasion, a special provision is inserted whereby the ABC service is delivered to the A. T. & T. test board in the city rather than to the controls of the station involved.

d. Do you require an affiliate which owns an AM station to maintain affiliation with your radio network?

Answer: No.

The forms attached as exhibits are as follows:

(A) Noninterconnected Contract—First Call—25-Percent Rate

American Broadcasting Company,
7 West 66th Street, New York 23, N. Y.

Television Station ----------.

Gentlemen: We are proposing in this letter the following plan of network cooperation between this Company and your Television Station ----------.

I. Network Affiliation and Program Service

In order that your station may continue to serve the public interest, convenience and necessity by broadcasting programs of a quality and character generally beyond the reach of individual stations, we will offer your station the first call for television broadcasting in the community in which your studios are located upon all our network television programs scheduled to be broadcast by a television station in that community. The program service we are offering will be as follows:

1. Sustaining Programs

a. The network sustaining programs (film recorded) which we will offer to you may not be sold by your station for commercial sponsorship or interrupted for commercial announcements or used for any purpose other than sustaining broadcasting without our prior written consent. The charge to you for such sustaining programs will be $100 per clock hour prorated for shorter periods.

b. We will from time to time offer you film recorded programs identified as cooperative, spot sustaining and syndicated programs. You may carry the cooperative or spot sustaining programs on the same basis as regular sustaining programs or you may offer them for commercial sponsorship on the terms and conditions specified by us at the time such programs are offered to you. Syndicated programs may be broadcast only pursuant to the terms offered.

2. Commercial Programs

a. We will offer you all ABC television network sponsored programs for which advertisers may request broadcasting by your station.

b. You will receive compensation for the network sponsored programs broadcast by your station in accordance with the provision of Part II hereof.

c. You agree to broadcast the network sponsored programs which you accept without interruption for local announcements of any kind unless otherwise directed by us.

3. General Provisions Relating to Program Service

a. The programs we will offer to you will be live and/or on film, and you agree to accept or reject each offer within seventy-two (72) hours after receipt thereof. Unless we receive notice of acceptance from you within the period specified, we shall have the right to offer the programs to other stations in your community.

b. Each of us shall endeavor to give the other three (3) weeks' notice of discontinuance of a sustaining program. The period of notice of discontinuance of cooperative, spot sustaining and/or syndicated programs will be specified in each instance when the offer for such program is made. We will give you at least twenty-eight (28) days' advance notice of the discontinuance of any scheduled series of network commercial programs, failing which we will pay you the compensation you would have received if the series had continued for twenty-eight (28) days following the receipt by you of notice of discontinuance except that you will not be entitled to compensation for any discontinued programs for which we substitute another network commercial program.

c. The offering of film recorded programs is contingent upon our ability to make arrangements satisfactory to us for the recordings necessary to deliver the programs to you. Positive prints of recorded programs will be shipped by us, shipping charges prepaid, and you agree to return to us or to forward to such television station as we designate, shipping charges prepaid, each print or copy received by you hereunder, together with the reels and containers furnished therewith. You will return all prints in the same condition as received by you, ordinary wear and tear excepted, immediately after a single TV broadcast thereof over your station unless otherwise specified by us. In the event you damage a print of any program which we deliver to you, you agree to pay the cost of replacing the complete print at the rate of $1.25 per minute of running time for the full length of the print.

II. STATION COMPENSATION

Approximately twenty (20) days after the close of each month we will pay you in accordance with the following provisions for broadcasting our sponsored television network programs on the station during each month:

1. The network station rate of your station shall be determined in accordance with the table which is attached hereto and made a part thereof.

2. For the broadcasting of television network sponsored programs by your station we will pay you a sum equal to 25 percent of the total gross amount billed to the advertisers by us at the rates for your station shown on the attached table.

3. We reserve the right to change at any time your network station rate to advertisers from that set forth in the attached table. In the event of such change, the station compensation due you will be adjusted as follows:

a. If we increase your network station rate to advertisers above that set forth in the attached table, such increased rate shall be used in computing the station compensation due you on business actually sold by us at such increased rate, all in accordance with ABC's regular rate protection policies.

b. If we decrease your network station rate to advertisers below that set forth in the attached table, such decreased rate shall be used in computing the station compensation due you, provided we have given you six (6) months' written notice of our intention to so decrease your station compensation. In the event of such decrease in your station compensation, you may terminate this agreement as of the effective date of such station compensation decrease by giving us written notification within ninety (90) days after the receipt of our notice to you to so reduce your compensation.

4. You agree to maintain for your television station such licenses, including performing rights licenses, as now or hereafter may be in general use by television broadcasting stations and necessary for you to broadcast the television programs which we furnish to you hereunder. We will clear at the source all music in the repertory of ASCAP and of BMI used on our network programs, thereby licensing the broadcasting of such music on such programs over your station. In return for such clearance at the source you agree to pay us a sum equal to 4.225 percent of the compensation due you from us for the broadcasting of our network programs. In view of the fact that we pay ASCAP and BMI no royalties on certain network television commercial programs, the sum which you agree to pay us for each accounting period, as calculated in the foregoing sentence, shall be reduced by the ratio of the gross charges which we make to advertisers for your station for network programs on which we pay no royalties, to the gross charges which we make to advertisers for your station for all network programs for such accounting period.

5. If you should be unable, for any reason, to broadcast any sponsored program and we thereby rebate all or part of the time charge to any advertisers, your compensation from us for that month shall be proportionately reduced.

6. An advertiser (or advertisers controlled by the same person, firm, or corporation) using a block of time, even though it be broken into two or more contiguous periods for the purpose of advertising separate products, may be entitled to the benefit of the rate applicable to the entire block of time, in which event the rate for your station for such entire block of time will be used in computing the compensation due you.

III. NETWORK OPTIONAL TIME

1. Insofar as the regulations of the Federal Communications Commission will permit, you hereby option to us the hours designated below as network optional time for the broadcasting of the network commercial programs which we furnish to you.

2. Because of the public responsibility of the network and its associated stations, we may at any time substitute for any scheduled network program a network program which involves a special event of public interest or importance. No compensation will be paid for the cancelled program or for the substituted program unless the substituted program is commercially sponsored.

3. Because of your public responsibility, your station may reject any network program which you reasonably believe to be unsatisfactory or unsuitable or the broadcasting of which would in your opinion not be in the public interest or be less in the public interest than a program of outstanding national or local importance which you wish to substitute therefor, all in accordance with the regulations of the Federal Communications Commission.

IV. CUT-IN ANNOUNCEMENT SERVICES

1. You agree to supply upon order from us the services of such personnel and the use of such equipment as may be necessary to broadcast, either from your station alone or from your station and to a network of stations, any announcements (except live video) we may request on any network commercial program broadcast by your station, provided such order is received by you not less than twenty-four (20) hours in advance of the program on which the announcement is to be made.

2. Either simultaneously with the placing of such order by us, or as soon thereafter as possible, we agree to supply you with the text of such announcements, or a recording of such announcements, or the film or slides, together with the necessary instructions as to the time and place in our network program during which we desire such announcements to be broadcast, and you agree to make such announcements, with or without local voice, in accordance with out instructions. It is understood, of course, that you may refuse to broadcast any announcements, the broadcasting of which would not, in your opinion, be in the public interest, convenience and necessity.

3. We may cancel any such order for announcements, without liability on our part, provided we do so upon not less than twenty-four (24) hours' notice to you, failing which we will pay you the compensation you would have received if the announcements had continued as scheduled for twenty-four (24) hours following receipt by you of such notice of cancellation.

4. For each program during which these announcement services are performed, we agree to pay you 7½ percent of your regular network hourly station rate applicable to the hour at your station during which such program was scheduled to start.

V. GENERAL

1. You will submit to us in writing such reports covering network programs broadcast by your station as we may request from time to time, upon forms provided by us for that purpose.

2. Neither you nor ourselves shall incur any liability hereunder because of our failure to deliver, or your failure to broadcast, any or all programs due to: (1) failure of facilities, (2) labor disputes, or (3) causes beyond the control of the party so failing to deliver or to broadcast.

3. In the event that the transmitter location, power, frequency, or hours of operation of your station are changed at any time so that your station is less valuable to us as a network outlet than it is at the time this offer is accepted by you, we will terminate this agreement upon thirty (30) days' written notice.

4. You agree not to assign or transfer any of the rights or privileges granted to you under this agreement without our consent in writing. You agree that if you transfer your station license or sell or otherwise dispose of all or any of your assets without which you would be unable to perform this agreement, you will make such sale or assignment subject to the obligation on the part of the purchaser to assume and perform this agreement.

5. You agree not to authorize, cause, permit or enable anything to be done whereby any program which we supply to you hereunder may be used for any purpose other than broadcasting by your station intended for reception by the general public in places to which no admission is charged.

6. You agree not to authorize, cause, permit or enable anything to be done without our consent, whereby a recording on film or otherwise is made or a recording is broadcast, of a program which has been, or is being, broadcast on our network.

7. No waiver by either of us of any breach of any provision of this agreement shall be deemed to be a waiver of any preceding or succeeding breach of the same or any other provision.

8. This agreement shall be construed in accordance with the laws of the State of New York.

9. Any arrangement with your station relates only to us and your station and is not related to any arrangement that exists or may later be made between us and any other station.

VI. TERM

The term of this agreement shall be from 3:00 a. m. NYT on the ____ day of __________, 19__, to 3:00 a. m. NYT on the ____ day of __________, 19__. At such time as coaxial cable, radio relays or other suitable circuit becomes regularly available connecting your station with our network, this agreement shall terminate and we agree at the time to undertake to negotiate a new affiliation contract suited to such changed conditions.

Very sincerely yours,

AMERICAN BROADCASTING COMPANY,
A Division of American Broadcasting-Paramount Theatres, Inc.
By ______________________________

Accepted this ____ day of ______________, 19__.

TELEVISION STATION
By ____________________________

(b) NONINTERCONNECTED CONTRACT—NO FIRST CALL—25-PERCENT RATE

"We are proposing in this letter the following plan of network cooperation between this Company and your Television Station __________.

"I. NETWORK AFFILIATION AND PROGRAM SERVICE

"In order that your station may continue to serve the public interest. convenience and necessity by broadcasting programs of a quality and character generally beyond the reach of individual stations, we will offer your station programs of wide variety including musical, sports, educational entertainment, religious, and special events. The program service we are offering will be as follows:"

[The balance of this contract contains exactly the same provisions as form (a).]

(c) INTERCONNECTED CONTRACT—NO FIRST CALL—25-PERCENT RATE

"We are proposing in this letter the following plan of network cooperation between this Company and your Television Station __________.

"I. NETWORK AFFILIATION AND PROGRAM SERVICE

"In order that your station may continue to serve the public interest, convenience, and necessity by broadcasting programs of a quality and character generally beyond the reach of individual stations, we will at our own expense arrange for our programs to be delivered to your control board at your main studios. It is understood that ABC shall have the right to the use of the local loop and connection facilities between the local A. T. & T. test board and your main studios and that each month you will bill us and we will pay you an amount for the use of these facilities which shall have the same proportionate relationship to the total monthly cost of said facilities as the total amount of ABC live programs carried by your station during the months bears to the total amount of live programs carried from all networks including ABC. The program service we are offering will be as follows:

"1. Sustaining programs

"a. The network-sustaining programs (live or film recorded) which we will offer to you may not be sold by your station for commercial sponsorship or interrupted for commercial announcements or used for any purpose other than sustaining broadcasting without our prior written consent. The charge to you for such sustaining programs will be $100 per clock-hour prorated for shorter periods."

[The balance of this contract contains exactly the same provisions as form (a) except that the paragraph following the provision as to term of the agreement is changed to read as follows:

"If, after examination, you find that the arrangement herein proposed is satisfactory to you, please indicate your acceptance on the copy of this letter enclosed for that purpose and return that copy to us."]

(D) INTERCONNECTED CONTRACT—FIRST CALL—25 PERCENT RATE

"We are proposing in this letter the following plan of network cooperation between this Company and your Television Station.

"I. NETWORK AFFILIATION AND PROGRAM SERVICE

"In order that your station may continue to serve the public interest, concenience, and necessity by broadcasting programs of a quality and character generally beyond the reach of individual stations, we will at our own expense ar- arrange for our programs to be delivered to your control board at your main studios. It is understood that ABC shall have the right to the use of the local loop and connection facilities between the local A. T. & T. test board and your main studios and that each month you will bill us and we will pay you an amount for the use of these facilities which shall have the same proportionate relationship to the total monthly cost of said facilities as the total amount of ABC live programs carried by your station during the month bears to the total amount of live programs carried from all networks including ABC. We will offer your station the first call for television broadcasting in the community in which those studios are located upon all our network television programs scheduled to be broadcast by a television station in that community. The program service we are offering will be as follows:"

[The balance of this contract contains exactly the same provisions as form (c).]

(E) ALTERNATE PAGE TO SPECIFY 30 PERCENT RATE IN CONTRACTS (A) TO (D)

This page is the same as the corresponding page in forms (a) to (d) except that "30 percent" is substituted for "25 percent" in paragraph 2 of part II on Station Compensation.

(F) INTERCONNECTED CONTRACT—FIRST CALL—22 FREE HOURS, 30 PERCENT RATE

"We are proposing in this letter the following plan of network cooperation between this Company and your Television Station __________.

"I. NETWORK AFFILIATION AND PROGRAM SERVICE

"In order that your station may continue to serve the public interest, convience, and necessity by broadcasting programs of a quality and character generally beyond the reach of individual stations, we will at our own expense arrange for our programs to be delivered to your control board at your main studios. It is understood that ABC shall be the customer for the local loop and connection facilities between the local A. T. & T. test board and your main studios and that each month we will bill you, and you will pay us for the use of these facilities when used for all other than ABC live service an amount which shall have the same proportionate relationship to the total monthly cost of said facilities as the total amount of such live programs other than ABC carried by your station during the month bears to the total amount of live programs carried for all purposes including ABC. We will offer your station the first call for television broadcasting in the community in which those studios are located upon all our network television programs scheduled to be broadcast by a television station in that community.

"In return for the network affiliation, including any live sustaining program service which we may offer to you, you will waive compensation for 22 unit hours of our network commercial programs broadcast by your station during each calendar month.

"The program service we are offering will be as follows:"

[The balance of this contract contains exactly the same provisions as form (c) except that:

(1) Paragraphs 1 and 2 of part II on Station Compensation are changed to read as follows:

"1. Your compensation for broadcasting our network commercial programs under this arrangement will be based upon an average unit hour rate computed for each calendar month by dividing the total value, at the network rate for your station, of the network commercial programs broadcast from your station by the total number of unit hours of such programs during that month.

"2. The network station rate of your station shall be determined in accordance with the table which is attached hereto and made a part hereof.

"a. For all unit hours in excess of 22 unit hours, we will pay you at the rate of 30% of your average unit hour rate for the calendar month."

(2) In paragraph 1 of part III on Network Optional Time the following is inserted:

"Network optional time will be as follows:

"Weekdays and Sundays (New York City Time):

"9:30 a. m. to 12:30 p. m.

"3:00 p. m. to 6:00 p. m.

"3:30 p. m. to 6:00 p. m.

(g) Rider No. 1

"(a) You agree to reimburse us each month in part for the cost of maintaining our network service, an amount computed according to the following table:

COLUMN I *Unit hours of commercial programs*	COLUMN II *Payment to ABC*
0	
1	
2

"(b) It is understood and agreed, however, that in the event the cost to us of the A. T. & T. facilities involved in our delivering our network programs to your station should change at any time, the figures appearing in column II above shall be adjusted accordingly."

(h) Rider No. 2

"1. We shall have the right to sell up to four participations per day in a specific half-hour daytime network program broadcast Monday through Friday, to be designated by us, on the basis that the station will be compensated at 25 percent of the applicable half-hour rate for each such participation. The four participations will be scheduled in the first 25 minutes of the program and we will make available, without charge to the station, a fifth spot for local sale by the station within the final 5 minutes of the network program.

"2. We shall have the right to sell to two different advertisers as cosponsors specific quarter-hour evening programs designated by us, with compensation to the station at 50 percent of the applicable quarter-hour rate for each sponsor. We shall have the right to sell to three different advertisers as cosponsors specific half-hour evening programs designated by us, with compensation to the station at 33⅓ percent of the applicable half-hour rate for each sponsor.

"3. Contiguous rates shall apply to noncontiguous programs during the same day provided the advertiser buys a minimum of two quarter-hours per day on two different days per week, Monday through Friday, prior to 6 p. m. local time."

(i) PAGE 6—MUTUAL 90-DAY RIGHT OF CANCELLATION

[This modifies part VI as to term in the following way:

"This agreement shall become effective at 3:00 A. M., NYT, on the ____ day of __________, 19__, and it shall continue until 3:00 a. m., NYT, on the ____ day of __________, 19__. It is understood and agreed, however, that this agreement may be terminated by either party upon giving the other party ninety (90) days' advance written notice of its intention so to do. This 90-day option to terminate may be put into effect at any time beginning with the acceptance date indicated below."

ABC advises that this is modified, on occasion, to provide for a mutual cancellation privilege of 6 months or 12 months.]

(J) PER PROGRAM AGREEMENT

"In accordance with our understanding, from time to time we may be in a position to offer to you for broadcast over Television Station __________ certain ABC television network sponsored programs in accordance with our program, sales, and operating policies.

"We shall pay you as compensation for such broadcasting by you of any network sponsored programs furnished by us, 25 percent of the gross time charges actually received by us from the sponsor of such network programs for such broadcasting by you, after deducting from the monies payable to you the total of our then current ASCAP and BMI percentages, which now total 4.225 percent.

"If any such program is offered to you on a live basis, we shall outline to you the terms and conditions under which any such live program will be made available to the control board of your station. If any such program is offered to you on a recorded basis, you shall return such recording to us after a single television broadcast thereof over your station, at such place as we designate, shipping charges prepaid, in the same condition as received by you, ordinary wear and tear excepted, together with any reels and containers furnished by us. In the event you damage any program which we deliver to you, you agree to pay the cost of replacing the complete print at the rate of $1.25 per minute of running time for the full length of the print. You agree to observe all limitations placed by us on the broadcast and use of all programs.

"You agree to supply upon order from us the services of such personnel and the use of such equipment as may be necessary to broadcast any announcements (except live viedo), we may request on any network commercial program broadcast by your station, provided such order is received by you not less than twenty-four (24) hours in advance of the program on which the announcement is to be made. We may cancel any such order for announcements, without liability on our part, provided we do so upon not less than twenty-four (24) hours notice to you, failing which we will pay you the compensation you would have received if the announcements had continued as scheduled for twenty-four (24) hours following receipt by you of such notice of cancellation. For each program during which these announcement services are performed, we agree to pay you 7½ percent of your regular network hourly station rate applicable to the hour at your station during which such program was scheduled to start.

"An advertiser (or advertisers controlled by the same person, firm, or corporation) using a block of time, even though it be broken into two or more contiguous periods for the purpose of advertising separate products, may be entitled to the benefit of the rate applicable to the entire block of time, in which event the rate for your station for such entire block of time will be used in computing the compensation due you. Contiguous rates shall apply to noncontiguous programs during the same day provided the advertiser buys a minimum of two quarter-hours, prior to 6 p. m. local time, Monday through Friday.

"You agree to maintain for your television station such licenses, including performing rights licenses, as now are or hereafter may be in general use by television broadcasting stations and necessary for you to broadcast the television programs which we may furnish to you hereunder. You shall submit to us in writing reports covering broadcasts by you as we may request from time to time.

"Neither you nor we shall incur any liability because of our failure to deliver, or your failure to broadcast, any or all programs due to: (1) failure of facilities, (2) labor disputes, (3) causes beyond the control of the party so failing to deliver or to broadcast, or (4) preemption due to an event or program of public interest or importance.

"You and we shall each have the right to terminate this agreement, or any ABC program or programs broadcast by you, at any time by giving the other not less than four (4) weeks prior written notice. Nothing contained herein shall be deemed to be a commitment by us for the furnishing to you of ABC television programming service.

"Will you kindly confirm your agreement to the foregoing by signing a copy of this letter in the space indicated therefor and returning the same to us.

"Very sincerely yours,

"AMERICAN BROADCASTING COMPANY,
"*A Division of American Broadcasting-Paramount Theatres, Inc.*

CBS

In its reply to the committee's network questionnaire, CBS supplied the following information with respect to affiliation and affiliation agreements:

Question 11:

a. Have there been any changes in the criteria which you use in selecting affiliates since the preparation of the memoranda which you submitted to the Interstate and Foreign Commerce Committee in response to Senator Bricker's letter of October 19, 1954? If so, please describe in detail.

b. Please attach examples of the forms of affiliation agreements currently used by you, including any per-program agreements.

c. Please explain the nature of any special provisions that are normally or frequently added to these forms.

d. Do you require an affiliate which owns an AM station to maintain affiliation with your radio network?

Answer:

The response to question 11a is contained in appendix C, pages X–XXXIII, of the supplemental memorandum. The answer to question 11d is that the CBS television network does not require an affiliate which owns an AM station to maintain affiliation with the CBS radio network. The response to question 11b and 11c is as follows:

Exhibits I through III attached hereto are, respectfully, copies of CBS television's standard forms of primary, scondary, and extended market plan affiliation agreements. Exhibit IV is a copy of the extended program service plan agreement which is in effect a modification of the affiliation agreement of each station participating in the plan. From time to time, as the result of negotiations between the parties, certain provisions may be added to the standard forms and, from time to time, certain deletions may be made therefrom.

Exhibits V through IX, attached hereto, are examples of provisions which may be so added to the standard forms of affiliation agreements. The nature of each of such provisions is set forth on each such exhibit.

As of June 7, 1956, a provision substantially the same as that set forth in exhibit V appeared in 6 affiliation agreements; a provision substantially the same as that set forth in exhibit VI appeared in 6 affiliation agreements; a provision substantially the same as that set forth in exhibit VII appeared either as a part of or as an amendment to 6 affiliation agreements; a provision substantially the same as that set forth in exhibit VIII appeared either as part of or as an amendment to 3 affiliation agreements; and a provision substantially the same as that set forth in exhibit IX appeared in 2 affiliation agreements and as an amendment to 26 others. Deletions may be made from the standard form from time to time. As of June 7, 1956, the automatic renewal provisions had been deleted from 6 affiliation agreements; the provision governing termination by notice during the term had been deleted from 20 affiliation agreements, and, in 33 others, the period required for notice of such termination had been changed; provisions relating to sustaining programs had been deleted from 3 affiliation agreements; and the provision requiring recordings to be returned transportation prepaid had been deleted from 4 affiliation agreements.

Exhibit X, attached hereto, represents the usual form of agreement with "per-program stations." Per-program stations are not regarded as affiliates by CBS television. Agreements with per-program stations cover the amount payable to them with respect to network sponsored programs which they may carry under the conditions set forth in the section entitled "Per-Program Stations," pages XXXII–XXXIII of appendix C of the supplemental memorandum.

The forms of agreement attached as exhibits are as follows:

CBS Exhibit I

1. Primary Affiliation Agreement

CBS Television, a division of Columbia Broadcasting System, Inc., Television Affiliation Agreement:

Agreement made this ---- day of ----------, 19 --, by and between CBS Television, a division of Columbia Broadcasting System, Inc., 485 Madison Avenue, New York 22, New York (herein called "CBS Television") and

----

(herein called "Station") licensed to operate television station ---------- at -------------------- full time on a frequency of ---------- on Channel number --.

CBS Television is engaged in operating a television broadcasting network and in furnishing programs to affiliated television stations. Some of such programs, herein called "sponsored programs", are sold by CBS Television for sponsorship by its client-advertisers. All nonsponsored programs are herein called "sustaining programs." "Network sustaining programs," "network sponsored programs," and "network programs" as used herein mean network television programs. Station and CBS Television recognize that the regular audience of Station will be increased, to their mutual benefit, if CBS Television provides Station with television programs not otherwise locally available.

Accordingly, it is mutually agreed as follows:

1. CBS Television will offer to Station for broadcasting by Station network sustaining programs as hereinafter provided, without charge, and CBS Television network sponsored programs for which clients may request broadcasting by Station and which are consistent with CBS Television's sales and program policies. Network sustaining programs made available by CBS Television are for sustaining use only and may not be sold for local sponsorship or used for any other purpose without the written consent of CBS Television in each instance.

Station shall have a "first refusal" of each network sponsored program and each network sustaining program which is to be offered to any television station licensed to operate in the community in which Station is licensed to operate. Station may exercise its "first refusal" with respect to any network program by notifying CBS Television within 72 hours (exclusive of Saturdays, Sundays and holidays) after CBS Television shall have offered the program to Station that Station will accept and broadcast such program in the time period and commencing on the date specified by CBS Television in its offer of such program to Station. In the event that Station shall not so notify CBS Television with respect to any such program, Station shall not thereafter have any right to broadcast such program.

2. (a) Station, as an independent contractor, will accept and broadcast all network-sponsored programs offered and furnished to it by CBS Television during "network-option time" (as hereinafter defined); provided, however, that Station shall be under no obligation to accept or broadcast any such network-sponsored program (i) on less than 56 days' notice, or (ii) for broadcasting during a period in which Station is obligated by contract to broadcast a program of another network. Station may, of course, at its election, accept and broadcast network-sponsored programs which CBS Television may offer within hours other than network-option time.

(b) As used herein, the term "network-option time" shall mean the following hours:

(i) if Station is in the Eastern or Central Time Zone, daily, including Sunday, 10:00 a. m. to 1:00 p. m., 2:00 p. m. to 5:00 p. m. and 7:30 p. m. to 10:30 p. m. (expressed in New York time current on the date of broadcast);

(ii) if Station is in the Mountain or Pacific Time Zone, daily, including Sunday, 10:00 a. m. to 1:00 p. m., 2:00 p. m. to 5:00 p. m. and 7:30 p. m. to 10:30 p. m. (expressed in local time of Station current on the date of broadcast).

3. Nothing herein shall be construed (i) with respect to network programs offered pursuant hereto, to prevent or hinder Station from rejecting or refusing network programs which Station reasonably believes to be unsatisfactory or unsuitable, or (ii) with respect to network programs so offered or already contracted for, (A) to prevent Station from rejecting or refusing any program which, in its opinion, is contrary to the public interest, or (B) from substituting a program of outstanding local or national importance. CBS Television may, also, substitute for one or more of the programs offered hereunder other programs, sponsored or sustaining, of outstanding local or national importance, without any obligation to make any payment on account thereof (other than for the substitute program, if the substitute program is sponsored). In the event of any such rejection, refusal, or substitution by either party, it will notify the other by private wire or telegram thereof as soon as practicable.

4. Station will not make either aural or visual commercial spot announcements in the "break" occurring in the course of a single network program or between contiguous network-sponsored programs for the same sponsor where the usual station break does not occur.

5. CBS Television will pay Station for broadcasting network-sponsored programs furnished by CBS Television as specified in Schedule A, attached hereto and hereby in all respects made a part hereof. Payment to Station will be made by CBS Television for network-sponsored programs broadcast over Station within twenty (20) days following the termination of CBS Television's four or five week fiscal period, as the case may be, during which such sponsored programs were broadcast.

6. CBS Television will offer to Station for broadcasting such network-sustaining programs as CBS Television is able to cause to be delivered to Station over coaxial cable or radio-relay program transmission lines under arrangement satisfactory to CBS Television. CBS Television shall not be obligated to offer, or make available to Station hereunder, such network-sustaining programs as it may have available in the form of TV recordings, unless CBS Television has the right so to do and Station shall agree to pay CBS Television's charges therefor.

7. When, in the opinion of CBS Television, the transmission of network-sponsored programs over coaxial cable or radio relay program transmission lines is, for any reason, impractical or undesirable, CBS Television reserves the right to deliver any such program to Station in the form of TV recordings, or otherwise.

8. Station agrees to observe any limitations CBS Television may place on the use of TV recordings and to return to CBS Television, transportation prepaid by Station, immediately following a single broadcast thereof, at such place as CBS Television may direct, and in the same condition as received by Station, ordinary wear and tear excepted, each print or copy of the TV recording of any network program, together with the reels and containers furnished therewith. Each such TV recording shall be used by Station only for the purpose herein contemplated.

9. Neither party hereto shall be liable to the other for claims by third parties, or for failure to operate facilities or supply programs for broadcasting if such failure is due to failure of equipment or action or claims by network clients, labor dispute, or any similar or different cause or reason beyond the party's control.

10. The obligations of the parties hereunder are subject to all applicable laws, rules, and regulations, present and future, especially including rules and regulations of the Federal Communications Commission.

11. Station shall notify CBS Television forthwith if any application is made to the Federal Communications Commission relating to the transfer of any interest in Station (or in the television station to which this Agreement relates), and CBS Television may terminate this Agreement, effective as of the effective date of such transfer, by giving not less than ten days' prior notice to Station. If CBS Television does not so terminate this Agreement, Station will procure the agreement of the proposed transferee that, upon the consummation of the transfer, the transferee will assume and perform this Agreement.

12. All notices required, or permitted, to be given hereunder, shall be given in writing, either by personal delivery or by mail or by telegram or by private wire (except as otherwise expressly herein provided), at the respective addresses of the parties hereto set forth above, or at such other addresses as may be designated in writing by registered mail by either party. Notice given by mail shall be deemed given on the date of mailing thereof. Notice given by telegram shall be deemed given on delivery of such telegram to a telegraph office, charges prepaid or to be billed. Notice given by private wire shall be deemed given on the sending thereof.

13. This Agreement shall be construed in accordance with the laws of the State of New York applicable to contracts fully to be performed therein, and cannot be changed or terminated orally.

14. Neither party shall be or be deemed to be or hold itself out as the agent of the other hereunder.

15. As of the beginning of the term hereof, this Agreement takes the place of, and is substituted for, any and all television-affiliation agreements heretofore existing between the parties hereto concerning the market area to which this Agreement relates, subject only to the fulfillment of any accrued obligations thereunder.

16. The term of this Agreement shall begin on ____________________ and shall continue for a period of two (2) years from such date; provided, however, that unless either party shall send notice to the other at least six months prior to the expiration of the then current two-year period that the party sending such notice does not wish to have the term extended beyond such two-year period, the term of this Agreement shall be automatically extended upon the expiration of the original term and each subsequent extension thereof for an additional period of two years; and provided, further, that this Agreement may be terminated effective at any time by either party by sending notice to the other at least twelve months prior to the effective date of termination specified therein.

In witness whereof, the parties hereto have executed this Agreement as of the day and year first above written.

CBS TELEVISION,
a Division of Columbia Broadcasting System, Inc.

SCHEDULE A

(Attached to and forming part of the agreement between CBS Television and ---------------------. This Schedule A contains provisions supplementary to said agreement, and in case of any conflict therewith the provisions of this Schedule A shall govern.)

I. CBS Television will pay Station for broadcasting network-sponsored programs furnished by CBS Television during each week of the term hereof, thirty percent (30%) of the gross time charges for such week, less the "converted hour" deduction and the ASCAP and BMI deduction.

II. The "converted hour" deduction for any week shall be one hundred fifty percent (150%) of the amount obtained by dividing the gross time charges for such week by the number of "converted hours" (as hereinafter defined) in such week.

III. The ASCAP and BMI deduction for any week shall be the amount obtained by (i) deducting the "converted hour" deduction for such week from thirty percent (30%) of the gross time charges for such week, and (ii) multiplying the remainder by the ASCAP and BMI percentage.

IV. As used herein, the term "gross time charges" for any week shall mean the aggregate of the gross card rates charged and received by CBS Television for broadcasting time over Station for all network-sponsored programs broadcast by Station during such week at the request of CBS Television.

V. As used herein, the term "converted hour" means an aggregate period of one hour during which there shall be broadcast over Station one or more network-sponsored programs for which CBS Television shall charge and receive its Class A timecard rate for broadcasting time over Station. An aggregate period of one hour during which there shall be broadcast over Station one or more network-sponsored programs for which CBS Television shall charge and receive a percentage of its Class A timecard rate, such as its Class B timecard rate, shall be the equivalent of the same percentage of a converted hour. Fractions of an hour shall be treated for all purposes as their fractional proportions of a full hour within the same time classification.

VI. CBS Television shall not have the right to reduce Station's gross hourly card rates for network-sponsored programs except in connection with a reevaluation of the gross hourly card rates for network-sponsored programs of a substantial number of its affiliated stations. CBS Television shall give Station at least thirty days' prior notice of any reduction in Station's then current gross hourly card rates for network-sponsored programs, and Station may terminate this Agreement, effective as of the effective date of any such reduction, on not less than fifteen days' prior notice to CBS Television.

VII. As used herein, the term "ASCP and BMI percentage" shall mean the aggregate of the percentages of CBS Television's "net receipts from sponsors after deductions" and of CBS Television's net receipts from advertisers after deductions" paid or payable, respectively, to American Society of Composers, Authors, and Publishers (ASCAP) and Broadcast Music, Inc. (BMI) under CBS Television's network blanket license agreements with ASCAP and BMI. (Currently such percentages are 3.025 and 1.2, respectively.)

VIII. In the event that CBS Television shall have license agreements with ASCAP or BMI which shall provide for the payment of license fees computed on a basis other than a percentage of CBS Television's "net receipts from sponsors after deductions" or "net receipts from advertisers after deductions," as the case may be, CBS Television shall deduct from each payment to Station, in lieu of the ASCAP and BMI deduction, the proportionate share of music license fees paid or payable by CBS Television which is properly allocable to such payment.

IX. The obligations of CBS Television hereunder are contingent upon its ability to make arrangements satisfactory to it for facilities for transmitting CBS Television network programs to the control board of Station.

IX. Anything contained herein to the contrary notwithstanding, until such time as Station becomes interconnected by coaxial cable or radio relay programs transmission lines.

(i) CBS Television shall not be obligated to offer network sustaining programs to Station, except such programs as CBS Television has available in the form of TV recordings (and for which Station agrees to pay CBS Television's charges) ; and

(ii) network sponsored programs shall be delivered in the form of TV recordings; and

(iii) in lieu of the compensation specified in paragraph I of this Schedule A, CBS Television will pay Station for broadcasting network sponsored programs furnished by CBS Television during each week of the term hereof, thirty percent (30%) of the gross time charges for such week, less the ASCAP and BMI deduction (and the ASCAP and BMI deduction for such week shall be the amount obtained by multiplying thirty percent (30 %) of the gross time charges for such week by the ASCAP and BMI percentage).

SCHEDULE A

(Attached to and forming part of the agreement between CBS Television and ____________________. This Schedule A contains provisions supplementary to said agreement and in case of any conflict therewith, the provisions of this Schedule A shall govern.)

I. CBS Television will pay Station for broadcasting network sponsored programs furnished by CBS Television during each week of the term hereof, the following respective percentages of "average gross time charges per converted hour" (as hereinafter defined): ____

____

less the ASCAP and BMI deduction.

II. The ASCAP and BMI deduction for any week shall be the amount obtained by multiplying the sums paid to Station pursuant to paragraph I of this Schedule A for such week by the ASCAP and BMI percentage.

III. As used herein, the term "gross time charges" for any week shall mean the aggregate of the gross card rates charged and received by CBS Television for broadcasting time over Station for all network sponsored programs broadcast by Station during such week at the request of CBS Television, and the term "average gross time charges per converted hour" for any week shall mean the amount obtained by dividing the gross time charges for such week by the number of "converted hours" in such week.

IV. As used herein, the term "converted hour" means an aggregate period of one hour during which there shall be broadcast over Station one or more network sponsored programs for which CBS Television shall charge and receive its Class A timecard rate for broadcasting time over Station. An aggregate period of one hour during which there shall be broadcast over Station one or more network sponsored programs for which CBS Television shall charge and receive a percentage of its Class A timecard rate, such as its Class B timecard rate, shall be the equivalent of the same percentage of a converted hour. Fractions of an hour shall be treated for all purposes as their fractional proportions of a full hour within the same time classification.

V. As used herein, the term "ASCAP and BMI percentage" shall mean the aggregate of the percentages of CBS Television's "net receipts from sponsors after deductions" and of CBS Television's "net receipts from advertisers after deductions" paid or payable, respectively, to American Society of Composers, Authors, and Publishers (ASCAP) and Broadcast Music, Inc. (BMI) under CBS Television's network blanket license agrements with ASCAP and BMI. (Currently such percentages are 3.025 and 1.2, respectively.)

VI. In the event that CBS Television shall have license agreements with ASCAP or BIM which shall provide for the payment of license fees computed on a basis other than a percentage of CBS Television's "net receipts from sponsors after deductions" or "net receipts from advertisers after deduction," as the case may be, CBS Television shall deduct from each payment to Station, in lieu of the ASCAP and BMI deduction, the proportionate share of music license fees paid or payable by CBS Television which is properly allocable to such payment.

VII. CBS Television shall not have the right to reduce Station's gross hourly card rates for network sponsored programs except in connection with a reevaluation of the gross hourly card rates for network sponsored programs of a substantial number of its affiliated stations. CBS Television shall give Station at least thirty days' prior notice of any reduction in Station's then current gross hourly card rates for network sponsored programs and Station may terminate this Agreement, effective as of the effective date of any such reduction, on not less than fifteen days' prior notice to CBS Television.

VIII. The obligations of CBS Television hereunder are contingent upon its ability to make arrangements satisfactory to it for facilities for transmitting CBS Television network programs to the control board of Station.

CBS Exhibit II

2. Secondary Affiliation Agreement

The provisions of this form of agreement are identical to those of Form 1, except as follows:

(a) Paragraph 2 is altered to read:

"2. This Agreement does not provide for, and CBS Television has no understanding, express or implied, with Station for, option time within the purview of subparagraph (d) of Section 3.658 of the Federal Communications Commission rules and regulations. Subject to Station's right to reject network programs as provided in subparagraph (e) of Section 3.658 and subject to all other applicable sections of the rules and regulations of the Federal Communications Commission, Station, as an independent contractor, agrees to accept and broadcast television network sponsored programs offered and furnished to Station by CBS Television in time periods to be mutually agreed upon between the parties. If any network sponsored program is accepted by Station for broadcast in a specified time period, Station agrees that such program will continue to be broadcast by Station at the same hour of the day on the same day of the week for the duration of the term of this Agreement, or for the duration of CBS Television's agreement with the sponsor and all renewals thereof, whichever may be the shorter, except as otherwise herein provided."

(b) Paragraph 16 is altered to read:

"16. The term of this Agreement shall begin on ____________________ and shall continue for a period of two (2) years from such date: *Provided, however*, That this Agrement may be terminated effective at any time by either party by sending notice to the other at least six months prior to the effective date of termination specified therein."

(c) Schedule A is altered to read:

"SCHEDULE A

"(Attached to and forming part of the Agreement between CBS Television and ______________________. This Schedule A contains provisions supplementary to said Agreement and in case of any conflict therewith, the provisions of this Schedule A shall govern.)

"I. CBS Television will pay Station for broadcasting network sponsored programs furnished by CBS Television during each week of the term hereof, thirty percent (30 percent) of the gross time charges for such week, less the ASCAP and BMI deduction.

"II. The ASCAP and BMI deduction for any week shall be the amount obtained by multiplying thirty percent (30 percent) of the gross time charges for such week by the ASCAP and BMI percentage.

"III. As used herein, the term 'gross time charges' for any week shall mean the aggregate of the gross card rates charged and received by CBS Television for broadcasting time over Station for all network sponsored programs broadcast by Station during such week at the request of CBS Television.

"IV. As used herein, the term 'ASCAP and BMI percentage' shall mean the aggregate of the percentages of CBS Television's 'net receipts from sponsors after deductions' and of CBS Television's 'net receipts from advertisers after deductions' paid or payable, respectively, to American Society of Composers, Authors and Publishers (ASCAP) and Broadcast Music, Inc. (BMI) under CBS Television's network blanket license agreements with ASCAP and BMI. (Currently such percentages are 3.025 and 1.2 respectively.)

"V. In the event that CBS Television shall have license agreements with ASCAP or BMI which shall provide for the payment of license fees computed on a basis other than a percentage of CBS Television's 'net receipts from sponsors after deductions' or 'net receipts from advertisers after deductions,' as the case may be, CBS Television shall deduct from each payment to Station, in lieu of the ASCAP and BMI deduction, the proportionate share of music license fees paid or payable by CBS Television which is properly allocable to such payment.

"VI. CBS Television shall not have the right to reduce Station's gross hourly card rates for network sponsored programs except in connection with a reevaluation of the gross hourly card rates for network sponsored programs of a substantial number of its affiliated stations. CBS Television shall give Station at least thirty days' prior notice of any reduction in Station's then current gross hourly card rates for network sponsored programs and Station may terminate this Agreement, effective as of the effective date of any such reduction, on not less than fifteen days' prior notice to CBS Television.

"VII. The obligations of CBS Television hereunder are contingent upon its ability to make arrangements satisfactory to it for facilities for transmitting CBS Television network programs to the control board of Station."

(End of Schedule A.)

CBS EXHIBIT III

3. EXTENDED MARKET PLAN AFFILIATION AGREEMENT

The provisions of this form of agreement are identical to those of form 2, except as follows:

(a) The first portion of paragraph 1 is altered to read:

"1. CBS Television will offer to Station for broadcasting by Station network sustaining programs as hereinafter provided, and network sponsored programs for which clients may request broadcasting by Station and which are consistent with CBS Television's sales and program policies. Network sustaining programs made available by CBS Television are for sustaining use only and may not be sold for local sponsorship or used for any other purpose without the written consent of CBS Television in each instance."

(b) Paragraph 3 is altered by the insertion of the word "network" after the fifteenth word of the second sentence, to make it read "* * * other network programs, sponsored or unsponsored * * *"

(c) Paragraph 5 is altered by deleting the phrase "in all respects" from the first sentence.

(d) Paragraph 6 is altered to read:

"6. The network programs to be offered to Station hereunder will be made available in the form of TV recordings, or, if Station so elects and transmission arrangements satisfactory to CBS Television can be effected, such programs will be made available over coaxial cable or microwave relay transmission lines. Anything contained herein to the contrary notwithstanding, CBS Television shall not be obligated to offer any programs to Station in the form of TV recordings unless CBS Television has the right so to do and shall have made TV recordings for broadcast on stations other than stations affiliated with CBS Television on an Extended Market basis."

(e) Paragraph 7 is deleted, so that the paragraph numbered 7 in this form is equivalent to paragraph 8 in form 2.

(f) Two new paragraphs, numbered 8 and 9, are inserted, reading as follows:

"8. Station shall pay CBS Television, as a service fee, the sum of Five Dollars ($5.00) for each program (of whatever length) furnished to Station hereunder by means of TV recording. CBS Television shall have the right from time to time to increase and/or decrease the service fee by giving Station at least four (4) weeks' notice to such effect, provided, that in the event of any increase in the service fee, Station may terminate this Agreement, effective on or before the effective date of such increase, by giving CBS Television at least two (2) weeks' notice to such effect. Payment of service fees for programs furnished to Station for broadcast during each of the fiscal periods referred to in paragraph 5 hereof shall be made within thirty (30) days following termination of such fiscal period. CBS Television may deduct the aggregate amount of such service fees from sums due Station pursuant to paragraph 5 hereof.

"9. Station shall pay all interconnection and transmission charges in connection with the transmission to Station of network programs furnished to Station by coaxial cable and/or mirowave relay transmission lines."

(g) The provision of Paragraphs 9 to 15 inclusive of Form 2 are found in the same language in Paragraphs 10 to 16 of this form

(h) The provision as to term of the agreement (found in Paragraph 16 of Form 2) is here set forth in Paragraph 17 as follows:

"17. The term of this Agreement shall begin on ____________________ and shall continue for a period of two (2) years from such date; provided, however, that unless either party shall send notice to the other at least six (6) months prior to the expiration of the then current two-year period that the party sending such notice does not wish to have the term extended beyond such two-year period, the term of this Agreement shall be automatically extended upon the expiration of the original term and each subsequent extension thereof for an additional period of two years; and provided, further, that this Agreement may be terminated effective at any time by either party by sending notice to the other at least six (6) months prior to the effective date of termination specified therein."

(i) Schedule A is altered by deleting Paragraph VII.

CBS Exhibit IV

4. Extended Program Service Plan Agreement

[This is, in effect, a modification of the affiliation agreement of each station. It sets forth the basis upon which CBS Television will make available to an affiliated station, for sustaining use only, various sponsored programs not otherwise available to such station.]

We refer to our affiliation agreement with you dated ____________________ relating to Station ___________. It is hereby agreed that, effective ___________ ___________ said agreement is amended and supplemented as follows:

1. From time to time we will, subject to the approval of the network sponsor thereof, offer to you television programs which have been included in our Extended Program Service plan and, subject to the conditions hereinafter set forth, you shall have the right to broadcast such programs by giving us written notice of your acceptance thereof not later than ten days after your receipt of our offer thereof, it being understood that you shall be under no obligation to accept or broadcast any such programs.

2. All programs offered pursuant to the terms hereof are for sustaining use only and you agree that you will not permit any aural or visual announcement to be made, either in the course of such programs or otherwise which may directly or indirectly imply the sponsorship thereof by any sponsor, provided, however, that you may, of course, insert public service messages and/or program promotion announcements in such programs in those places wherein the commercial message has been deleted.

3. Programs accepted by you hereunder may be delivered by us over coaxial cable or radio relay transmission lines or in the form of TV recordings, as we may from time to time elect.

4. You shall have the right to broadcast the programs accepted by you hereunder only on the days and at the time specified in our offer thereof, and you agree to make no other use thereof.

5. You agree to return to us, or forward as per our instructions, shipping expenses prepaid, immediately following a single broadcast thereof, to such place as we may direct, and in the same condition as received by you, ordinary wear and tear excepted, each print or copy of TV recordings furnished hereunder, together with the reels and containers furnished therewith.

6. You agree to pay us, with respect to each program accepted hereunder which is—

(a) delivered over coaxial cable or radio relay transmission lines, such costs, if any, as we may be required to pay to interconnect your station for the broadcast thereof at the time specified by us,

(b) delivered in the form of a TV recording, the sum of Ten Dollars ($10) per recording.

7. With respect to offers of TV recordings accepted by you hereunder,

(a) you agree that your acceptance shall be for a minimum of four consecutive weeks, payment to be made for each recording delivered whether broadcast or not as outlined in Paragraph 6 (b) above, and

(b) we agree that such acceptance may be cancelled effective after such fourth consecutive week on not less than 14 days' prior notice given by letter, telegram, or telephone.

8. We may recapture, on not less than ten days' prior notice to you, any program accepted by you hereunder and may terminate—

(a) said affiliation agreement forthwith upon any breach of paragraph 2 or 4 hereof by you, or

(b) this amendment on not less than ten days' prior written notice.

9. We shall not be liable to you for failure to deliver any program accepted by you hereunder if such failure is due to—

(a) causes beyond our control, or

(b) the substitution for such program of a program of outstanding local or national importance, if such substituted program is not available under our Extended Program Service plan.

Unless sooner terminated, this amendment shall automatically terminate effective as of the effective date of any expiration or termination of said affiliation agreement.

As herein amended and supplemented, said affiliation agreement is in all respects ratified and affirmed.

5. EXAMPLES OF PROVISIONS WHICH MAY BE ADDED TO THE STANDARD FORMS OF AFFILIATION AGREEMENTS AS THE RESULT OF NEGOTIATIONS BETWEEN THE PARTIES

CBS EXHIBIT V

(a) *Provision used where CBS Television enters into an affiliation agreement with a station prior to its commercial starting date*

"The term of this Agreement shall commence on the effective date on which (Licensee) commences to operate Station XXXX at City, State and shall continue until the earlier of

"(a) two (2) years from such date, or

"(b) two (2) years and six (6) months from the date hereof,

"provided that, unless either party shall send notice to the other at least six (6) months prior to the expiration of the then current period of the term hereof that the party sending such notice does not wish to have the term extended beyond such period, the term of this Agreement shall be automatically extended upon the expiration of the original term and each subsequent extension thereof for an additional period of two (2) years; and provided further that this Agreement may be terminated effective at any time by either party sending written notice to the other at least twelve (12) months prior to the effective date of termination specified therein. This Agreement shall be null and void and of no effect if the term hereof shall not have commenced on or before (date)."

CBS EXHIBIT VI

(b) *Provision used where there is an existing affiliation agreement with another station in the same city*

"Notwithstanding anything contained elsewhere herein, prior to (date),[1]

"(i) CBS Television shall be under no obligation to offer to Station any network sustaining program or any network sponsored program unless and until such program shall be offered to and rejected by Station YYYY at City, State; and

"(ii) Station shall not be obligated to accept or broadcast any network program."

CBS EXHIBIT VII

(c) *Provision used in granting permission to an affiliated station to rebroadcast network programs on a booster station*

"GENTLEMEN: You have advised us that, effective (date), television station x at ____________________, operating on a frequency of ____ MC. on Channel ____, will, during its entire period of operation, broadcast simultaneously with

[1] The date inserted is the date on which CBS Television's affiliation with the other station ceases.

television station Y, all programs (including commercial announcements) broadcast by Y.

"This will constitute our agreement that, effective (date), and continuing so long as X, during its entire period of operation, broadcasts simultaneously with Y all programs (including commercial announcements) broadcast by Y, you will cause X to broadcast, simultaneously with Y, all CBS Television programs (including commercial announcements) broadcast by Y; it being understood that:

"(a) all costs caused by or resulting from such simultaneous broadcast by X shall be borne by you;

"(b) we shall not be obligated to make any payments to X in respect of such simultaneous broadcast by X; and

"(c) such simultaneous broadcast by X shall not increase your station payments under the television affiliation agreement dated ____________________ relating to Y.

"Either you or we may terminate this agreement, without terminating the television affiliation agreement referred to in (c) above on not less than thirty (30) days prior written notice to the other and this agreement will terminate simultaneously with any expiration or termination of the television affiliation agreement referred to in (c) above."

CBS Exhibit VIII

(d) *Provision used in cases where the affiliated station provides its own local interconnection facilities*

"Anything herein to the contrary notwithstanding, Station shall pay for all coaxial, cable, microwave, relay or local loop facilities necessary to transmit programs to the control board of Station, and Station hereby agrees to obtain such facilities for interconnection.' '

CBS Exhibit IX

(e) ***Provision used to allow off-the-air pickup of CBS Television programs as requested by an affiliated station where such pickup would be less expensive than cable inconnection***

"Gentlemen: We have been advised that Station X ____________________ has requested permission to make 'off-the-air' pickup of CBS Television network sustaining and commercial programs broadcast over the facilities of Station Y, ____________________ and make a simultaneous rebroadcast of such programs over the facilities of X.

"We hereby authorize you to grant such permission to Station X effective (date), provided that

"(i) such permission shall be related to programs actually broadcast on Y;

"(ii) in respect of network commercial programs, such permission shall be limited to programs, the sponsor of which has ordered X; and

"(iii) this permission shall terminate simultaneously with any expiration or termination of the television affiliation agreement between us dated ____________________ relating to Y."

CBS Exhibit X

6. Per Program Agreement

[Per program stations are not regarded as affiliates by CBS Television. Agreements with per program stations cover the amount payable to them with respect to network sponsored programs which they may carry under the conditions set forth in the section entitled "Per Program Stations" in Appendix C to the Supplemental Memorandum inserted in the record in connection with Dr. Stanton's testimony — see page —.]

Gentlemen: In accordance with recent discussions, it is contemplated that, from time to time hereafter, you may broadcast over television Station ____________________ certain CBS Television network programs for which one of our advertiser-clients requests such broadcasting and which are consistent with our sales and program policies.

We shall pay you for such broadcasting by you of a network sponsored program furnished by us to you, thirty percent (30 percent) of the gross time charges actually received by us from said advertiser-client in connection with such broadcasting by you, less an amount obtained by multiplying said thirty percent (30 percent) of said time charges by the aggregate of the then current ASCAP and BMI percentages payable by us (said percentages now being 3.025 percent and 1.2 percent, respectively).

You will pay, or reimburse us for payment of all costs in connection with the delivery (other than by TV recording) to Station ----------, from the A. T. & T. test board in --------------------, of programs furnished by us to you hereunder.

You will observe any limitations we may place on the use of TV recordings furnished you hereunder and will, immediately following a single broadcast thereof, return to us at such place as we shall direct, with transportation thereof paid by you, and in the same condition as received by you, ordinary wear and tear excepted, each print or copy of each such TV recording, together with the reels and containers furnished therewith.

Nothing herein contained shall, of course, be or be deemed to be any commitment by us that we shall furnish any CBS Television programs to you for broadcasting by said station: and you and we shall each have the right to terminate this arrangement at any time by giving the other at least two weeks' prior written notice thereof.

If the foregoing accords with your understanding, please sign below to indicate your agreement with and acceptance of the same.

Very truly yours,

CBS TELEVISION,
A Division of Columbia Broadcasting System, Inc.

NBC

In its reply to the committee's network questionnaire, NBC made the following response to question 11 concerning affiliation arrangements:

11 a. Have there been any changes in the criteria which you use in selecting affiliates since the preparation of the memoranda which you submitted to the Interstate and Foreign Commerce Committee in response to Senator Bricker's letter of October 19, 1954? If so, please describe in detail.

No.

b. Please attach samples of the forms of affiliation agreements currently used by you, including any per program agreements.

The following forms of television affiliation agreements are attached hereto:

Exhibit 3: Interconnected "effective hour"
Exhibit 4: Interconnected "equivalent hour"
Exhibit 5: Noninterconnected "equivalent hour"
Exhibit 6: Per program

c. Please explain the nature of any special provisions that are normally or frequently added to these forms.

Special provisions normally or frequently added to these forms include provisions for a mutual right of cancellation prior to expiration of term, variations in conventional compensation provisions, and amendments or supplements to the agreements similar to those attached hereto as exhibit 7.

d. Do you require an affiliate which owns an AM station to maintain affiliation with your radio network?

No.

The attached forms are as follows:

NBC EXHIBIT 3

1. Interconnected "effective hour

1. INTERCONNECTED "EFFECTIVE HOUR"

NATIONAL BROADCASTING COMPANY, INC.,
New York, N. Y.

GENTLEMEN: The following shall comprise the agreement between us for affiliation of your television broadcasting station (herein called "Station") with the NBC Television Network:

1. NBC will offer to the Station for television broadcasting a variety of NBC Television Network programs, sponsored or unsponsored, or both. In order to furnish such programs to the Station, NBC, as soon and for so long as it deem it practicable on both engineering and economic grounds, will order common carrier facilities (either program transmission lines or radio relay circuits), including local loops and connections, to be extended to the control board at the main studios of the Station. Pending extension of common carrier facilities to the Station, NBC may use non-common-carrier radio relay links connecting the Station with the NBC Television Network for the delivery of NBC Television Network programs. Where, in the opinion of NBC, the transmission over program transmission lines or radio relay links of a network television program to be broadcast by the Station is for any reason impractical or undesirable, NBC may deliver such program to the Station in the form of motion picture film or other recorded version, as set forth in Paragraph 3 below. NBC will pay all charges for providing interconnection facilities except nonrecurring charges (whether installation or other charges), if any, assessed upon the initial connection of the Station with the NBC Television Network, such nonrecurring charges to be paid by the Station. NBC will pay all costs of providing NBC Television Network sponsored programs to the Station by motion picture film or other recorded version.

2. You shall have the right of first refusal good for 72 hours, as against any other television station located in the same community as the Station, upon the NBC Television Network programs referred to in Paragraph 1.

3. In those cases where the NBC Television Network programs offered to the Station are not transmitted to the Station over program transmission lines or radio relay links, NBC may deliver to you, transportation prepaid, a positive print or copy of a motion picture film or other recorded version of any such program in sufficient time for you to broadcast such program over the Station at the time scheduled. You agree to comply with NBC's instructions concerning the disposition to be made of each such print or copy received by you hereunder, together with the reels and containers furnished therewith, by returning to NBC or forwarding the same to others transportation prepaid, or by making such other disposition thereof as NBC may otherwise direct, in as good condition as when received, ordinary wear and tear excepted. NBC will reimburse you for your out-of-pocket cost of any such transportation prepaid by you on the next accounting date following receipt of your invoice therefor. Each such print or copy is to be returned to NBC immediately after a single television broadcast thereof has been made over the Station, unless otherwise specified by NBC.

4. Upon not less than 56 days' notice from NBC you will cause to be broadcast over the Station any sponsored program offered to the Station hereunder which NBC requests the Station to broadcast within the hours hereinafter designated as "network optional time," except that the Station shall not be obligated to broadcast any such program at a time during which the Station is already obligated to broadcast the program of another network. "Network optional time," as used herein, consists of the following hours of each day (expressed in New York City time current on the date of the broadcast):

Daily except Saturday and Sunday:
10:00 a. m. to 1:00 p. m.
2:30 p. m. to 5:30 p. m.
7:30 p. m. to 10:30 p. m.

Saturday and Sunday:
10:00 a. m. to 1:00 p. m.
3:00 p. m. to 6:00 p. m.
7:30 p. m. to 10:30 p. m.

5. From time to time you may desire to sell specific periods of time, during hours other than those designated as network optional time, for the broadcasting of one or more NBC Television Network sponsored programs. In the event such sale is consummated it is understood and agree that, subject to NBC's 28-day right of cancellation provided in Paragraph 6, you shall broadcast such programs for the duration of NBC's commitment to deliver your Station to the sponsor but in no instance shall you be so obligated for more than 52 weeks. NBC shall advise you of the expiration date of its initial commitment and of each renewal commitment subsequently made for the Station to the sponsor and you shall notify NBC at least 35 days prior to each date in the event you do not desire to broadcast a continuation of such programs.

In the event you fail to so notify NBC, NBC shall consider the Station to be available for the immediately following renewal term of not more than 52 weeks should the sponsor elect to continue such programs over the Station. Except as expressly provided to the contrary in this paragraph, your use and the broadcasting of such programs shall be subject to all the terms and conditions of this agreement.

6. NBC will give you at least 28 days' advance notice of the cancellation or discontinuance of any scheduled series of NBC Television Network sponsored programs, failing which NBC will pay to you the compensation you would have received for any broadcast in such series which would have taken place except for such cancellation or discontinuance during the 28 days following the receipt by you of notice of cancellation or discontinuance, except that you will not be entitled to compensation for any canceled or discontinued program which was scheduled for broadcast during a period in which another sponsored program is broadcast. Nothing in this paragraph shall entitle you to compensation as a result of NBC's changing a network program within 28 days' advance notice to a time in network optional time for which the Station is not already committed to carry a sponsored broadcast.

7. Nothing herein contained shall: (a) prevent or hinder the Station from rejecting or refusing any program offered hereunder which it reasonably believes to be unsatisfactory or unsuitable, or (b) prevent the Station from rejecting or refusing any program offered to or previously accepted by it which in its opinion is contrary to the public interest, or (c) prevent the Station from substituting therefor a program of outstanding local or national importance.

8. NBC may at any time substitute for any scheduled NBC Television Network program another program which in its judgment involves a special event of outstanding local or national importance. No compensation will be paid for the canceled program or the substituted program unless the substituted program is commercially sponsored, in which event the regular compensation will be paid for it.

9. The following shall be the financial arrangement between NBC and you for the NBC Television Network programs and other services which NBC will supply to the Station and for the time which the Station will make available for NBC Television Network programs. Settlements will be made approximately 20 days after the close of each month.

(a) The Network Station Rate of the Station shall be \$-------- per hour for full-rate periods; \$-------- per hour for three-quarter-rate periods; and \$------ per hour for half-rate periods. Full-rate periods shall be from 5:00 p. m. to 11:00 p. m. Sundays and from 6:00 p. m. to 11:00 p. m. Mondays through Saturdays; three-quarter-rate periods shall be from 1:00 p. m. to 5:00 p. m. Sundays and from 5:30 p. m. to 6:00 p. m. Mondays through Fridays; and from 5:00 p. m. to 6:00 p. m. Saturdays; all other periods shall be half-rate periods. The time brackets in the preceding sentence are expressed in local time at the Station. The rates for programs of less than one hour in duration shall be changed proportionately.

(b) As a means of sharing the cost to NBC of providing network service, including, among other things, the cost of interconnection facilities and of unsponsored broadcasting over the Station at the effective rate for NBC Television therefor, you will waive to NBC each month compensation on 24 hours of network sponsored broadcast over the Station at the effective rate for NBC Television Network sponsored programs carried on the Station in the full-rate periods during such month. The amount of such compensation shall be determined in the following manner: The gross receipts of NBC in each month from the sale of time on the Station during the full-rate periods specified in subparagraph (a) above prior to the allowance of any discounts, rebates, or agency commissions shall be determined. Such gross amount shall be divided by the total number of clock hours or fractions thereof of such full-rate periods during which NBC Television Network sponsored programs are broadcast by the Station in such month to obtain the effective rate per hour for such hours. The result of such division shall be multiplied by 24 and the result of such multiplication shall be the amount of revenue upon which you will waive to NBC compensation for such month. In the event that in any month the revenue from sponsored NBC Television Network programs broadcast on the Station shall be less than the amount of revenue upon which you waive compensation to NBC hereunder you will not be obligated to make up such deficit.

(c) As to all NBC Television Network sponsored programs broadcast over the Station during each month in excess of the 24 hours upon which compensation is waived under subparagraph (b) above, NBC will pay to you a sum equal to 33⅓ percent of the total gross amount billed by NBC therefor at the rates specified in subparagraph (a) above (or at such other rates as may be applicable under the rate protection policy of the NBC Television Network) prior to the allowance of any discounts, rebates or agency commissions.

(d) You will pay to NBC each month for NBC Television Network unsponsored programs which NBC delivers to the Station during the month upon your order in the form of motion-picture film or other recorded version an amount equal to the number of hours or fractions thereof of such unsponsored programs multiplied by $75.00. NBC shall have the right to change the charge specified in this subparagraph (d) at any time upon two weeks written notice to the Station; provided, however, that if the charge is increased, the Station may at its option cancel any existing orders for such programs by giving written notice to NBC of such cancellation before the effective date of the increase.

You shall have the right to cancel an order for an unsponsored program covered by this subparagraph (d) at any time by giving written notice thereof to NBC, provided that if such cancellation shall be for a reason other than a reason stated in clauses (a) and (b) of Paragraph 7 or in the immediately preceding sentence of this subparagraph (d) you shall reimburse NBC for the cost to it of each print of such program which has been made prior to the receipt by NBC of such cancellation notice for use by the Station.

(e) NBC may grant to an advertiser using a block of time, even though it be broken into fractional contiguous periods, the benefit of the rate applicable to the entire block of time, in which event the Network Station Rate of the Station for such entire block of time will be used in computing the compensation due you.

(f) NBC may grant to an advertiser using two or more noncontiguous periods of time in network optional time on any one day (Saturdays and Sundays excluded) the benefit of the rate for such periods of time which said advertiser would have paid had such periods of time been contiguous, provided:

(i) All such programs are scheduled for original broadcast prior to 6:00 p. m. (New York City time); and

(ii) In the event the original broadcast of any such program is not scheduled on the Station but instead a repeat or delayed broadcast is scheduled, such repeat or delayed broadcast occurs prior to 6:00 p. m. local time at your Station.

(iii) If the separate time periods occur in different time classifications (e. g., if one time period is a half-rate period and the other is a three-quarter-rate-period) the charge for the period in each classification will be in the proportion that the amount of time in such classification bears to the total amount of time.

(g) Advertisers under the common control of the same person, firm or corporation may be entitled to the rate to which the controlling party would have been entitled if such controlling party had been the advertiser.

(h) NBC reserves the right to change at any time the Network Station Rate of the Station from that set forth in subparagraph (a) above. If NBC increases the Network Station Rate of the Station from that set forth in subparagraph (a) above, such increased rate shall be used in computing the compensation due you on business actually sold by NBC at such increased rate. If NBC decreases the Network Station Rate of the Station below that set forth in subparagraph (a) above, such decreased rate shall be used in computing the compensation due you provided NBC has given you at least 90 days' written notice of its intention so to decrease such rate.

In the event of such decrease in the Network Station Rate of the Station you may terminate this agreement as of the effective date of such decrease by giving NBC written notice within 30 days after the receipt of NBC's notice to you of such reduction.

10. The Station will make available to NBC for broadcasting on the NBC Television Network all unsponsored television programs produced by the Station, without charge to NBC except that NBC shall reimburse the Station for additional expenses, if any, incurred by the Station as a result of the use of such programs as NBC Television Network programs.

11. You shall not be obligated to continue to broadcast nor shall NBC be obligated to continue to furnish, subsequent to the termination of this agreement, any programs which NBC may have offered and which you may have accepted during the term hereof.

12. You agree that you will not without NBC's consent make any deletions from or additions to, or broadcast any commercial or other announcements from the Station during, any program furnished to you hereunder or sell for commercial sponsorship the NBC Television Network unsponsored programs which we furnish to the Station hereunder. You agree to broadcast over the Station the NBC identification including the NBC Chimes when and as it is given at the conclusion of each NBC Television Network program which you broadcast.

13. In the event the Station is unable to broadcast an NBC Television Network program offered for transmission to the Station by means of coaxial cable or radio relay at the time such program is transmitted over facilities interconnecting the Station and the NBC Television Network, and in the event each of us desires a delayed broadcast of such program to be made by the Station from a motion picture film or other recorded version, such delayed broadcast shall be made as follows.

(a) At the time of each delayed broadcast, the Station will broadcast an appropriate announcement stating that the program is a film or other recorded version of a program presented earlier over the NBC Television Network.

(b) The Station will use each such film or other recorded version only for the purpose herein contemplated, will broadcast it only at the time agreed upon, and will comply with NBC's instructions concerning its disposition.

(c) NBC reserves the right to discontinue, upon twenty-four hours notice to you, any arrangements with you with respect to any or all delayed broadcasts of television programs.

(d) You shall be compensated for any such delayed broadcast of a sponsored television program as if it had been carried directly over interconnections from the network at the time the delayed broadcast is made; provided that if such delayed broadcast occurs after the expiration of the period of protection under NBC's Rate Protection Policy and the original broadcast over the interconnected network occurred prior to the expiration of such period, the Network Station Rate upon which compensation is based shall be the rate applicable prior to the expiration of such period.

14. You agree to maintain for the Station such licenses, including performing rights licenses, as now are or hereafter may be in general use by television broadcasting stations and necessary for you to broadcast the programs which NBC furnishes to you hereunder. NBC will endeavor to enter into appropriate arrangements to clear at the source all music in the repertory of ASCAP and of BMI used in NBC Television Network programs thereby licensing the broadcasting of such music on such programs over the Station. In return for such clearance at the source you agree to pay NBC, at the time of settlement with you for each monthly accounting period, a sum equal to 4.225 percent of the compensation due you from NBC, for the broadcasting of NBC Television Network programs during such accounting period. Of such percentage rate, 3,025 percent is applicable to payment for use of ASCAP music and 1.2 percent for use of BMI music. In the event either or both of the percentage rates specified in the preceding sentence shall be increased or decreased, a corresponding increase or decrease shall be made in the percentage rate which you are required to pay to NBC, effective as of the date upon which such increase or decrease becomes effective. Under the current ASCAP Blanket Television Network License the fee to be paid by NBC to ASCAP may be a rate less than 3.025 percent for a calendar year. Whether the rate will be less than 3.025 percent and the specific amount of such rate, if any, cannot be determined until the end of the year by reason of provisions in the License for annual adjustments in fees which may be required to be made within sixty (60) days after the end of the year. If the rate thus deter-

mined is less than 3.025 percent per calendar year, NBC will make a corresponding reduction in the amount of the Station's compensation withheld hereunder for such calendar year. In view of the fact that NBC pays ASCAP and BMI no royaltites on certain network sponsored programs the sum which you agree to pay NBC hereunder for each accounting period, as caculated above, shall be reduced by the ratio of the gross charges which we make to advertisers for the Station for NBC Television Network programs on which no royalties are payable, to the gross charges which we make to advertisers for the Station for all network programs for such accounting period.

15. Neither you nor NBC shall incur any liability hereunder because of NBC's failure to deliver or the failure of the Station to broadcast any or all programs due to failure of facilities, labor disputes, government regulations or causes beyond the control of the party so failing to deliver or to broadcast. Without limiting the generality of the foregoing, our failure to deliver a program for the following reasons shall be deemed to be for causes beyond our control: cancellation of a program because of the death or illness of a star or principal performer thereon or because of such person's failure to conduct himself with due regard to social conventions and public morals and decency or such person's commission of any act or involvement in any situation or occurrence tending to degrade him in society or bringing him into public disrepute, contempt, scandal or ridicule, or tending to shock, insult or offend the community or which tends to reflect unfavorably upon NBC or the program sponsor.

16. You will submit to NBC in writing, upon forms provided by NBC such reports as NBC may request covering the broadcast by the Station of NBC Television Network programs furnished to you hereunder.

17. In the event that the transmitter location, power, frequency or hours or manner of operation of the Station are changed at any time so that the Station is less valuable to NBC as a network outlet than it is at the time this offer is accepted by you, NBC shall have the right to terminate this agreement by giving at least 30 days written notice to you.

18. You agree to keep the operation of the broadcasting equipment of your Station entirely under your control for the period during which you are licensed to operate your Station. You agree not to assign your Station license unless such assignment expressly states that the assignee assumes all your obligations contained in this agreement and unless written notice of such assignment is given to us on or before the effective date thereof. In the event of such an assignment, we shall have the right to terminate this agreement within 60 days after receipt of notice of the assignment by giving written notice to the assignee of such termination specifying the effective date of such termination which date shall be the last date of a month.

19. You agree that you will not authorize, cause, permit or enable anything to be done without NBC's consent whereby any television program, motion-picture film, recording or other material furnished to you hereunder may be recorded, duplicated, or otherwise used for any purpose other than broadcasting by the Station as provided herein.

20. This constitutes the entire agreement between you and us, all prior understandings being merged herein. All questions with respect to this agreement shall be determined in accordance with the internal laws of the State of New York. This agreement may not be changed, modified, renewed, extended or discharged, except as specifically provided herein or by an agreement in writing signed by the parties hereto.

21. Any notices hereunder shall be in writing and shall be given by postpaid mail or prepaid telegram addressed to the respective address stated on the first page of this agreement or at such other address as may be specified in writing by the party to whom the notice is given. When a notice is given by mail or by telegram the date of mailing or the date of delivery to the telegraph office shall be deemed the date of giving the notice.

22. A waiver by either of us of a breach of any provision of this agreement shall not be deemed to constitute a waiver of any preceding or subsequent breach of the same provision or any other provision.

23. This agreement shall become effective at 3:00 a. m., New York City time on the ---- day of ----------, 19--, and, unless sooner terminated as hereinabove provided, it shall remain in effect for a period of two years thereafter. It shall then be renewed on the same terms and conditions for a further period of two years and so on for successive further periods of two years each, unless and until either party shall, at least 180 days prior to the expiration of the then

current term, give the other party written notice that it does not desire to have the contract renewed for a further period.

If this is in accordance with your understanding, will you please indicate your acceptance on the copy of this letter enclosed for that purpose and return that copy to NBC.

Very truly yours,

NATIONAL BROADCASTING COMPANY, INC.

NBC EXHIBIT 4

2. INTERCONNECTED "EQUIVALENT HOUR"

The provisions of Form 1 are found in exactly the same language in Form 2, except that:

(a) Paragraph 9 is changed to read:

"9. The following shall be the financial arrangement between NBC and you for the NBC Television Network programs and other services which NBC will supply to the Station and for the time which the Station will make available for NBC Television Network programs. Settlements will be made approximately 20 days after the close of each month.

"(a) The Network Station Rate of the Station shall be $________ per hour for full-rate periods $________ per hour for three-quarter-rate periods; and $________ per hour for half-rate periods. Full-rate periods shall be from 5:00 p. m. to 11:00 p. m. Sundays and from 6:00 p. m. to 11:00 p. m. Mondays through Saturdays; three-quarter-rate periods shall be from 1:00 p. m. to 5:00 p. m. Sundays and from 5:30 p. m. to 6:00 p. m. Mondays through Fridays and from 5:00 p. m. to 6:00 p. m. Saturdays; all other periods shall be half-rate periods. The time brackets in preceding sentence are expressed in local time at the Station.

"(b) Compensation for NBC Television Network sponsored programs broadcast by the Station will be computed as follows:

"(i) The number of hours and fractions thereof of sponsored programs broadcast by the Station during the month will first be stated in terms of equivalent hours. Each hour of programs broadcast during full-rate periods shall be equal to one equivalent hour. Each hour of programs broadcast in three-quarter-rate periods shall be equal to three-fourths of an equivalent hour. Each hour of programs broadcast during half-rate periods shall be equal to half of an equivalent hour. Fractions of an hour shall for all purposes be treated as their fractional proportions of full hours in the same rate classification.

"(ii) As a means of sharing the cost to NBC of providing network service, including, among other things, the cost of interconnected facilities and of unsponsored programs furnished to the Station by interconnection without charge therefor, you will waive to NBC each month compensation on ____ equivalent hours.

"(iii) Each equivalent hour or fraction thereof in excess of the ____ hours upon which compensation is waived will then be multiplied by the Network Station Rate of the Station for full-rate periods. NBC will pay to you ____ of the result of such multiplication.

"(c) You will pay to NBC each month for NBC Television Network unsponsored programs on film or other recorded version which NBC delivers to the Station during the month upon your order an amount equal to the number of hours or fractions thereof of such unsponsored programs multiplied by $75.00. NBC shall have the right to change the charge specified in this subparagraph (c) at any time upon two weeks written notice to the station; provided, however, that if the charge is increased, the Station may at its option cancel any existing orders for such programs by giving written notice to NBC of such cancellation before the effective date of the increase.

"You shall have the right to cancel an order for an unsponsored program covered by this subparagraph (c) at any time by giving written notice thereof to NBC, provided that if such cancellation shall be for a reason other than a reason stated in clauses (a) and (b) of Paragraph (7) or in the immediately preceding sentence of this subparagraph (c) you shall reimburse NBC for the cost to it of each print of such program which has been made prior to the receipt of NBC of such cancellation notice for use by the Station.

"(d) If the Station for any reason excusable at law, other than a reason stated in clauses (a) and (b) of Paragraph 7, fails to broadcast a sponsored NBC Television Network program which it is otherwise committed to broadcast, you shall reimburse NBC for the cost to it of each print of such program which has been made for use by the Station and for the cost, if any, of transporting the print to and from the Station.

"(e) NBC reserves the right to change at any time the Network Station Rate of the Station from that set forth in subparagraph (a) above. If NBC increases the Network Station Rate of the Station from that set forth in subparagraph (a) above, such increased rate shall be used in computing the compensation due you on business actually sold by NBC at such increased rate. If NBC decreases the Network Station Rate of the Station below that set forth in subparagraph (a) above, such decreased rate shall be used in computing the compensation due you provided NBC has given you at least 90 days written notice of its intention so to decrease such rate.

"In the event of such decrease in the Network Station Rate of the Station you may terminate this agreement as of the effective date of such decrease by giving NBC written notice within 30 days after the receipt of NBC's notice to you of such reduction."

(b) The last sentence of Paragraph 14 is changed to read:

"In view of the fact that NBC pays ASCAP and BMI no royalties on certain network sponsored programs the sum which you agree to pay NBC hereunder for each month, as calculated above shall be reduced by the ratio of the number of equivalent hours broadcast by your Station of network programs on which no royalties are payable to the number of equivalent hours broadcast by your Station of all network programs for such month."

NBC Exhibit 5

3. Noninterconnected "Equivalent Hour"

The provisions of Form 2 are found in exactly the same language in Form 3, except that:

(a) Paragraph 1 is changed to read:

"1. NBC will offer to the Station for television broadcasting NBC Television Network programs, sponsored or unsponsored or both, in 16 mm. motion picture film or other 16 mm. recorded version, and as to which NBC has the right to make the same available for broadcasting by the Station."

(b) The first sentence of Paragraph 3 is changed to read:

"NBC agrees to deliver to you, transportation prepaid, a positive print or copy of a motion picture film or other recorded version of any program referred to in Paragraph 1 above, in sufficient time for you to broadcast such program over the Station at the time scheduled."

(c) The second sentence of Paragraph 4 is changed to read:

" 'Network optional time,' as used herein, consists of the following hours of each day (expressed in local time current on the date of the broadcast):"

(d) The last sentence of Paragraph 6, contains the phrase "within 28 days' advance notice" whereas in Form 2 this read "without 28 days' advance notice." However, this variation may have been inadvertent.

(e) Subparagraph (ii) of Paragraph 9 (b) is deleted, so that the provisions of Subparagraph (iii) in Form 2 are designated as (ii) in Form 3.

(f) Paragraph 10 is deleted, so that the material in Paragraph 11 in Form 2 is found in Paragraph 10 of Form 3.

(g) The second sentence of Paragraph 12 is deleted, the remainder of the paragraph appearing as Paragraph 11 in Form 3.

(h) Paragraph 13 is deleted.

(i) New material is added, designated Paragraph 12, as follows:

"12. In the event that any recorded version of a program furnished to the Station hereunder is a recorded version of a live NBC Television Network program broadcast by NBC, the Station at the time of each broadcast made by means of such recorded version will if we so request, broadcast an appropriate announcement stating that the program is a recorded verision of a program presented earlier over the NBC Television Network."

(j) The provisions of Paragraphs 14 to 23, inclusive, in Form 2 are set forth in the same language in Paragraphs 13 to 22, inclusive, of Form 3.

4. Per Program

[NBC set forth two forms of per program agreement. However, these are identical except that Paragraph 1 varies depending on whether the station is interconnected or not. The form of agreement, with the two variant forms of Paragraph 1, is as follows:]

GENTLEMEN: The following shall comprise the agreement between us for the affiliation of Station -------- with the NBC Television Network for the program series --------------------- only.

1. We will deliver to the Station each week during the term of this agreement a motion picture or other recorded version of the ---------- television program series --------------------- sponsored by ---------------------. You will broadcast such programs over your station on ---------- at -------- local time, or at such other time as shall have been agreed to by us in writing.

or—

1. We will deliver to the A. T. & T. test board in each week during the term of this agreement the ---------- television program series --------------------- sponsored by ---------------------. It is understood and agreed that you will order and pay for local loops and connections. You will broadcast such programs on -------- at -------- or at such other time as shall have been agreed to by us in writing.

2. We will pay you as your compensation $-------- for each broadcast. Settlements will be made to you on a calendar month basis approximately 15 days after the close of such period. We shall be entitled to deduct from the amounts due you a sum equal to 4.225 percent thereof for clearance at the source of ASCAP and BMI music.

3. This agreement shall become effective as of --------------------- (or as soon thereafter as that station begins operation) and will continue in effect until ---------------------. Each of us may terminate the agreement at any time upon giving the other party at least 28 days' prior written notice of such termination.

4. Nothing herein contained shall be construed to prevent or hinder you from rejecting or refusing any program delivered hereunder which you reasonably believe to be unsatisfactory or unsuitable, or from rejecting or refusing any program delivered hereunder which, in your opinion, is contrary to the public interest, or from substituting for any program delivered hereunder a program of outstanding local or national importance.

5. We may at any time cancel a program to be delivered hereunder for the purpose of broadcasting a network program which involves a special event of public importance at the time scheduled for the canceled program. No compensation will be paid you for the canceled program and we shall be under no obligation to deliver the substituted program to you.

6. Neither you nor ourselves shall incur any liability hereunder because of our failure to deliver or your failure to broadcast due to: (a) failure of facilities, (b) labor disputes, or (c) causes beyond the control of the parties so failing to deliver or broadcast. It is understood that in the event of interruption of service it may be necessary to make appropriate adjustments in the charges to sponsors and that in such event corresponding adjustments may be made in the compensation payable to you.

7. You will not authorize, cause, permit, or enable anything to be done whereby the programs supplied to you hereunder may be used for any purpose other than broadcasting by your station. After one broadcast of each program, in the event the program is on film or other recorded version, you will return the film or other recorded version of the same together with reels and containers, to NBC, 30 Rockefeller Plaza, New York 20, New York, transportation prepaid by you.

If this is in accordance with your understanding, will you please indicate your acceptance on the copy of this letter enclosed for that purpose and return that copy to NBC.

Very truly yours,

NATIONAL BROADCASTING COMPANY, INC.

NBC EXHIBIT 7

5. TYPICAL AMENDMENTS OR SUPPLEMENTS TO AFFILIATION AGREEMENTS

(a)

GENTLEMEN: This letter when signed by each of us will constitute an agreement between us with respect to the reciprocal advertising campaign outlined below.

The NBC Television Network will make arrangements with the publishers of important national magazines by which advertising space in such magazines will be exchanged for one-minute announcements in any NBC Television Network participation programs including but not limited to Today, Home, and Tonight. The exchange will be made on a dollar-for-dollar basis according to the rate cards of the respective media.

The NBS Television Network will utilize the advertising space so obtained for advertising and promoting NBC Television Network programs. The national magazines will use the one-minute announcements for advertisements promoting the sale of the magazines to readers. NBC will not permit national magazines to use the announcements for an appeal to advertisers to buy space in such magazines.

The reciprocal announcements will be scheduled during the period from December 1, 1955, to December 31, 1956, inclusive, and will not exceed a total of 312 per calendar year.

NBC will pay all of the expenses incurred in preparation of the advertising to be used in the magazines and agency commissions as required. If your station is broadcasting NBC Television Network participation programs at the time such reciprocal announcements are scheduled, you will broadcast such announcements and waive all station compensation for them. Under our agreements with ASCAP and BMI it may be necessary for NBC to pay usual music license fees on the reciprocal announcements exchanged for space in the magazines. You agree to pay your share of these music license fees on the same basis as if the reciprocal announcements were sold in the normal way to network advertisers.

If the above is in accordance with your understanding please sign and return one copy of this agreement to us.

Very truly yours,

NATIONAL BROADCASTING COMPANY, INC.,
By --

Agreed:

Call Letters of Station -------------
Date --------------------------------

(b)

[Amendment to agreement with respect to the reciprocal advertising plan:]

GENTLEMEN: This letter constitutes an amendment to the agreement between you and us with respect to the reciprocal advertising plan.

Effective at 3:00 a. m., New York Time, April 1, 1956, the provisions of such agreement relating to music license fee payments by you on reciprocal announcements shall be deleted and shall be of no further force and effect.

Very truly yours,

NATIONAL BROADCASTING COMPANY, INC.,
By --

(c)

GENTLEMEN: Reference is made to the agreement between us for the affiliation of your television station with the NBC Television Network. This letter, when signed by each of us, will constitute an amendment to such agreement.

Effective April 1, 1956, the provision in your affiliation agreement with regard to the granting to advertisers the rate applicable to contiguous periods for certain periods of time which are noncontiguous shall be amended as follows:

NBC may grant to an advertiser ordering two or more noncontiguous periods of time in network optional time on any one day (Sundays excluded) the benefit of the rate for such periods of time which said advertiser would have paid had such periods of time been contiguous, provided:

(i) All such programs are scheduled for original broadcast prior to 6:00 p.m. (New York City time); and

(ii) In the event the original broadcast of any such program is not scheduled on the Station but instead a repeat or delayed broadcast is scheduled; such repeat or delayed broadcast occurs prior to 6:00 p.m. local time at your Station.

(iii) If the separate time periods occur in different time classifications (e. g., if one time period is a half-rate period and the other is a three-quarter rate period) the charge for the period in each classification will be in the proportion that the amount of time in such classification bears to the total amount of time.

Very truly yours,

NATIONAL BROADCASTING COMPANY, INC.,

16. SAMPLE LETTERS OF INQUIRY ADDRESSED BY THE CHAIRMAN OF THE COMMITTEE TO CERTAIN FILM SYNDICATION ORGANIZATIONS

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
July 30, 1956.

Mr. REUBEN KAUFMAN,
Guild Films Co., Inc., New York, N. Y.

DEAR MR. KAUFMAN: As you may know, a great deal of testimony has been received during the course of the television inquiry being conducted by the Senate Interstate and Foreign Commerce Committee relative to the problems of independent suppliers of film programs for television. In an effort to determine some of the relevant facts in this connection, I am writing to a number of film producers.

In the first place, I would like to have you submit answers to the following questions:

1. What, if any, first-run film series produced and/or distributed by your company have been sold for network broadcast starting in the fall of 1956?

On what day of the week and at what hour are these scheduled for broadcast?

2. What, if any, first-run film series is your company offering exclusively for syndication for next fall?

(a) Are these in production, or, are you trying to make sales on the basis of a pilot film or films?

(b) On what stations do you have clearance for each series? Please show day of the week and hour cleared in each case.

3. If you have film series in both categories, how do the per-picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

4. How many first-run film series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning September 1955?

5. Do the option rights of the networks, in conjunction with their must-buy policies, operate to exclude your syndicated programs from the most desirable broadcast times in key markets?

Please explain in detail.

6. As a result of difficulties occasioned by these practices, has your company tended to concentrate on the production of pictures for national sale, reducing the number of programs to be offered strictly on a syndicated basis?

We have been advised that your company is offering a new first-run program called Here Comes Tobor, for syndication next fall. Is this a correct statement? Of course, if you have already covered this in your answer above, you may ignore this direct inquiry.

Can you tell me whether you know of any first-run, grade A film series which are being offered for syndication, as distinguished from network broadcast, by other companies for the season starting next fall?

We are keeping the record in our inquiry open until September 15, 1956. I would very greatly appreciate it if you could furnish the answers to the above questions by that date.

Very truly yours,

WARREN G. MAGNUSON, *Chairman.*

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
July 30, 1956.

Mr. ARMAND SCHAEFER,
Flying A Enterprises, Hollywood, Calif.

DEAR MR. SCHAEFER: As you may know, a great deal of testimony has been received during the course of the television inquiry being conducted by the Senate Interstate and Foreign Commerce Committee relative to the problems of independent suppliers of film programs for television. In an effort to determine some of the relevant facts in this connection, I am writing to a number of film producers.

We have been advised that your company is offering a new first-run program called Red Ryder for syndication next fall. Is this acorrect statement?

We are keeping the record in our inquiry open until September 15, 1956. I would very greatly appreciate it if you could furnish the answer to the above question by that date.

Very truly yours,
WARREN G. MAGNUSON, *Chairman.*

Senator WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: Thank you for your good letter of July 30. In reply I am pleased to advise you as follows:

Re your question No. 1: None as of this date.

Re your question No. 2: The only completely first-run film series which we are offering exclusively for syndication this fall is our Kingdom of the Sea, of which we have a total of 39 films "in the can" or in the process of being completed.

This series has just gone into syndication and as of this moment, no arrangements have been completed with regard to time clearance over any stations.

In addition to the above completely first-run film series which we are offering for syndication, we are also continuing the sale of 11 other series previously produced by us. While many of these particular films have already run at least once, they still are first-run for some markets where we failed to make sales in the past.

Re your question No. 3: Although none of the film series which we have heretofore made has ever been sold for use over a network, we feel that to a limited extent this may have been due to the series themselves, even though many of our series have been extremely successful in syndication. Examples of this are our Liberace program, our Confidential File series, our I Spy series, our Life With Elizabeth series, and others. This year we have determined to make an all-out effort to sell some of our series now currently in production for network telecast, and it will be quite interesting to see whether we succeed. Among other things we are upgrading the quality of our shows to a point where we feel no objection of any kind whatsoever can be found with the writing, production, or entertainment values. This has necessitated increasing production budget per-film is a series from figures in the neighborhood of $25,000 per film to $50,000 per film, the amount we are now spending on production of our Jack London-Captain David Grief series which is being shot in color on location in the South Seas. The budget for 39 films in this series has been set at $1,912,000. We also have set several other series for this type of production. For your information, it is our experience that it is practically impossible to recoup the cost of such a high-budgeted series from syndication alone, and if we fail to obtain network sponsors of this type of series, we shall be compelled to stop making them.

Re your question No. 4: We offered four first-run film series for syndication in the broadcast year beginning September 1954. For the broadcast year beginning September 1955 we offered three first-run film series.

Re your question No. 5: We firmly believe that the answer to this question is in the affirmative. The reason is quite simple as the networks' option rights cover the most desirable broadcast times in the key markets. Since a syndication program must run into high production cost if it is to be of a quality which will attract a maximum number of viewers, it therefore must be broadcast at a time when a maximum number of viewers can watch it. Consequently, when a film of even the highest quality is broadcast at a time when a maximum number of viewers are not likely to be watching it, it becomes a virtual impossibility for that film to pay off. The effect of this situation is to gradually eliminate the likelihood of producing top-quality films for syndication, and ultimately production of films for syndication will be reduced to an absolute minimum or completely stopped, and fringe times will be left to rerun properties from the networks or to cast off feature films from the feature film studios. It isn't a pretty picture for syndicators to contemplate.

Re your question No. 6: The answer to this question is definitely in the affirmative, I regret to say.

Regarding Here Comes Tobor we are not offering this program for syndication. This program is too costly to produce in the hope that we will recoup our investment and perhaps make a profit from syndication sales. We made a pilot which we used in an effort to conclude a national sale. Although we found a great deal of interest, we failed to make a national sale and therefore decided not to proceed with further production.

I do not presently know of any grade A film series which are being offered for syndication.

Our company has been fairly successful in the field of syndication, but the problems which face all syndicators have compelled us to change somewhat the character of our operation and to diversify the sources of our income. Among other things, we recently contracted for the purchase of a television station and a radio station, both NBC affiliates, transfer of which has been approved recently by the FCC. We plan to acquire and operate more television stations. While not completely giving up the producing and distribution of films for television syndication, we are now following a policy of producing the finest quality film series for primary offering to network sponsors under theory that if a program is really good enough it cannot be kept off the networks. Under present conditions syndication business is indeed in a sad plight. Fortunately, for us, we have the resources to do something about the situation, but this does not apply to some of the other syndicators who should have had an opportunity to help develop this industry.

The most ridiculous nonsense which I've yet heard is the proposal by the FCC that it might favor extending the right of ownership of TV stations to include ownership by a single person or organization of as many stations as will cover 25 percent of the total audience of the United States. If this should become a fact television will surely become a monopoly in the United States.

Very kindest regards to you, Senator, and I wish you every success in the work you have undertaken. America needs your kind of people.

Sincerely yours,

REUBEN R. KAUFMAN, *President.*

BERNARD L. SCHUBERT, INC.,
New York, August 6, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: In answer to your letter of July 30, 1956, I will attempt to answer some of the questions you posed.

1. We have had a renewal on a first-run film series we produced entitled, "Crossroads." The first 39 films in this series had been sold to the Chevrolet Motor Car Co. in 1955 and were shown over the American Broadcasting Co. Thirty-nine new films have been ordered for the 1956–57 season.

The films are broadcast on Friday from 8:30 to 9 p. m. over the American Broadcasting Co.

2. We are not offering any first-run film series exclusively for syndication next fall.

3. To answer this question, we are not planning any first-run film series to be offered for syndication because, economically, it is impossible for us to gross enough money on local or syndicated sales to justify such a venture. Our average budget for a first-run network, half-hour TV picture runs around $32,000. In our opinion, in order to make any money from a first-run syndicated film, the budget for each film should not exceed a maximum of $20,000 per subject. Based on current costs, this is almost impossible.

4. In 1954 we offered 1 series of 39 first-run films for syndication. In September 1955 we offered none.

5. Since we are not offering any first-run product in syndicated markets, we are not in a position to answer this question.

6. As a result of the difficulties already mentioned, our company will only concentrate on the production of pictures for national sale and, at the conclusion of the national run, these programs will be offered for syndication. Judging from the number of new shows being produced for syndication, it appears that most of our competitors have experienced the same difficulties.

To my knowledge there are only two new series being offered for first-run syndication. These are Dr. Christian and Dr. Hudson's Secret Journal.

Very truly yours,

BERNARD L. SCHUBERT, *President.*

STUART REYNOLDS PRODUCTIONS,
Los Angeles, Calif, August 7, 1956.

WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR MR. MAGNUSON: We have your letter of July 30 and will be glad to cooperate in answering the questions therein.

1. We have not produced and/or distributed any first-run series to start in the fall of 1956.

2. We are not offering any first-run series exclusively for syndication for next fall.

3. Based on above—therefore, no budget figures available.

4. We did not offer any first-run series for syndication in September 1954 or September 1955.

5. No; as we have not produced any programs for syndication.

6. We have produced pictures for national sale only, on orders received in advance of production.

We do have several first-run series in the preproduction stage, but do not plan to go into active production unless an order for a national sale is received.

We read in Radio Daily yesterday (August 3 issue) that Gross-Krasne are producing a grade A film series for syndication to start this fall, entitled "O. Henry Playhouse." This is the only series specifically for syndication that we know of.

If we can be of any further help to you, please let us know.

Sincerely,

STUART REYNOLDS.

DESILU PRODUCTIONS, INC.,
Hollywood, Calif., August 13, 1956.

Senator WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: In reference to your letter of July 30, 1956, in connection with those items related to therein and in which we have been connected, the following are our answers:

1. The first-run film series produced by our company and sold for network broadcast starting in the fall of 1956 are: I Love Lucy and December Bride.

   I Love Lucy is broadcast on Monday at 9 p. m.; December Bride on Monday at 9: 30 p. m.

2. We are offering, in cooperation with National Telefilm Associates, Inc., the program entitled "Sheriff of Cochise."

   (*a*) This program goes into production tomorrow, and sales were made by NTA on the basis of a pilot film.

   (*b*) Approximately 100 stations have been cleared; the exact clearance for which I would like to refer you to NTA.

3. The per-picture budgets for series offered for syndication compare favorably with those for series to be broadcast on the networks.

4. Our company offered 2 programs for syndication beginning in September 1954, and 1 beginning September 1955.

5. On the limited scale with which we have been engaged in syndicated programing, or endeavoring to engage in same, we can only express opinion as to the effect of the network must-buy policies which would operate to exclude our syndicated programs from the most desirable broadcast times in key markets, since up to the present time we are not actively engaged in syndication ourselves.

6. Our company has definitely tended to concentrate on the production of pictures for national sale reducing the number of programs to be offered strictly on a syndicated basis, but cannot ascribe the total reasons for this action to the difficulty of obtaining desirable broadcast times in key markets.

It is my understanding the ZIV and Revue Productions are offering first-run, grade A film series for syndication, as distinguished from network broadcast.

Sincerely yours,

MARTIN N. LEEDS,
Executive Vice President.

OFFICIAL FILMS, INC.,
New York, N. Y., August 14, 1956.

Senator WARREN G. MAGNUSON,
United States Senate, Committee on Interstate and Foreign Commerce,
Washington, D. C.

DEAR SENATOR MAGNUSON: The following will answer the questions of your letter of July 30:

Question No. 1

What, if any, first-run film series produced and/or distributed by your company have been sold for network broadcast starting in the fall of 1956?

On what day of the week and at what hour are these scheduled for broadcast?

Answer No. 1

For the fall of 1956, Official Films is distributing 3 programs that will be telecast over the 2 major networks. They are as follows:

Robin Hood: Its second consecutive year sponsored by Johnson & Johnson Products, and Wildroot Cream Oil, over the CBS network, 7: 30 to 8 p. m. (e. s. t.) Monday night.

The Adventures of Sir Lancelot: A new series which we have sold directly to NBC, and scheduled to be telecast Monday nights 8 to 8: 30 p. m. (e. s. t.) 3 out of every 4 weeks. NBC has arranged for Lever Bros. and Whitehall Pharmaceuticals to sponsor this series.

The Buccaneers: A new series which will be sponsored by the Sylvania Electric Co. over the CBS network, 7:30 to 8 p. m. (e. s. t.) Saturday nights.

Question No. 2

What, if any, first-run film series is your company offering exclusively for syndication for next fall?

(*a*) Are these in production, or are you trying to make sales on the basis of a pilot of film or films?

(*b*) On what stations do you have clearance for each series? Please show day of the week and hour cleared in such cases.

Answer No. 2

As of this date, we have no plans for the release of any first-run film series for syndication. We do, at this time, maintain an option on a series of 26 first-run programs being produced in England.

We are currently attempting to sell this series, The Adventures of Mitch to national sponsors. We are at the end of our selling season and are therefore giving consideration to a few large regional sponsors who are still looking for a new series and who have time in local markets.

In the next 30 days, should the market conditions look favorable, more favorable than they have this past year, we might exercise our option, in which event we will be distributing 26 first-run shows. Since we have not released them as yet, we have no stations or time clearance to report.

Question No. 3

If you have film series in both categories, how do the per-picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

Answer No. 3

Our national programs are budgeted at $25,000 to $30,000. On our syndicated programs, should we have them, they will not exceed a budget of $20,000. The reason for the low-budget program in syndication is obvious and has been discussed in our Barrow committee presentation.

Question No. 4

How many first-run films series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning September 1955?

Answer No. 4

Official Films released two first-run, half-hour series for syndication in 1954. These series were The Star and the Story, consisting of 39 half-hour films, and This Is Your Music, with 26 films.

In the year 1955, we released one first-run product for syndication: The Adventures of the Scarlet Pimpernel, consisting of only 18 films.

Question No. 5

Do the option rights of the networks, in conjunction with their must-buy policies, operate to exclude your syndicated programs from the most desirable broadcast times in key markets?

Please explain in detail.

Answer No. 5

Yes. To answer this question in detail would take many pages and a great deal of time. The simple and most direct answer is "Yes." The reasons, problems, etc., are all outlined in the Barrow committee presentation.

Question No. 6

As a result of difficulties occasioned by these practices, has your company tended to concentrate on the production of pictures for national sale, reducing the number of programs to be offered strictly on a syndicated basis?

As you no doubt know, the National Broadcasting Corp., in a document filed with our committee, quoted trade press reports that: "The biggest batch of new offerings during the past year came out from Official Films, which brought 11 half-hour series into syndication."

Will you please comment on this statement in the context in which it was quoted by NBC; namely, to establish that film syndicators are doing a record business.

Can you tell me whether you know of any first-run, grade A film series which are being offered by syndication, as distinguished from network broadcast, by other companies for the season starting with next fall?

Answer No. 6

As a result of difficulties that we encounter due to the problems in the industry, the only plans we have for syndication products will be rerun films after the network sponsors have already telecast them.

In regard to the NBC document filed with Senate committee that states: "The biggest batch of new offerings during the past year came out from Official Films, which brought 11 half-hour series into syndication," my only comment is this is the first time any intelligent group, such as NBC, has relied upon publicity releases to trade papers, gossip, and rumor as being authentic. There is no truth to the statement that we released 11 half-hour series into syndication in 1955. The following series are those that we did release, and each one was a network rerun, not first run: My Little Margie, 126 programs; The Stu Erwin Show, 130 programs; Willy, 39 programs; Foreign Intrigue, 156 programs. As you can see, there are only 4 series, not 11.

This year, 1956, we have released the following reruns only: Four Star Playhouse, 153 programs; the American Legend, 39 programs.

In my personal opinion, I do not know of any first-run, grade A series of network caliber, being released for syndication by any of the other companies, although there are a number of first-run shows being discussed. For your information, they are: Sheriff of Cochise, Frontier Doctor, Annapolis.

Trust this will be helpful to you in compiling an answer on behalf of our fine association.

Very truly yours,

HERMAN RUSH.

MITCHELL J. HAMILBURG AGENCY,
Hollywood, Calif., August 20, 1956.

Mr. WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

DEAR SIR: I am in receipt of your letter of July 30 addressed to Mr. Armand Schaefer, of Flying A Enterprises, and since he is away on vacation, I am writing to give you the information you requested about our company.

We have at the present time the following series:

Gene Autry: Syndicated through CBS–TV.

Range Rider: Film Sales, Inc.

Annie Oakley: Sold to Carnation Co. and Continental Baking Co.

Buffalo Bill, Jr.: Sold to Mars Candy Co. and Brown Shoe Co.

We have for offer this fall a new program called Red Ryder. This is open for syndication or national sale. We also have Adventures of Champion, 26 pictures made for national sale, all through CBS Television Film Sales, Inc.

Trusting this information is what you wanted.

Sincerely yours,

MITCHELL J. HAMILBURG.

HOLLYWOOD TELEVISION SERVICE, INC.,
North Hollywood, Calif., August 21, 1956.

Senator WARREN G. MAGNUSON,
Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This will acknowledge your letter of July 30.

1. Please be advised that we have not sold any show for network broadcast which is to be started in the fall of 1956.

2. We are currently offering the Adventures of Dr. Fu Manchu, Commando Cody, and Frontier Doctor exclusively for syndication sales.

(*a*) Frontier Doctor is in production. The other two series have been completed.

(*b*) It is impossible to give you the exact stations as for the most part we sell advertising agencies and they clear time in the various markets.

3. The budget would be the same for either network or syndication sales. It just happens we could not make a network sale on previous product.

4. Stories of the Century was being sold for syndication in the fall of 1954. In the year 1955, the Adventures of Dr. Fu Manchu was offered for sale.

5. It is true that one reason we have been unable to complete a network deal is the fact of time clearances. We could not secure enough open time at the proper hours to negotiate a satisfactory deal on a network basis.

6. It is the opinion of the writer that we should concentrate only on film for national sale during the months and years ahead. It is becoming harder and harder to recoup your original investment on straight syndicated sales.

There are several first-run grade A film series which are now being offered for syndication, such as, Dr. Christian, Code 3, Sheriff of Cochise, Highway Patrol, Passport to Danger, Sheena Queen of the Jungle, and many more.

I certainly hope that the above will answer satisfactorily the inquiries in your letter.

Very truly yours,

EARL R. COLLINS.

NBC TELEVISION FILMS,
A DIVISION OF CALIFORNIA NATIONAL PRODUCTIONS, INC.,
A SUBSIDIARY OF NATIONAL BROADCASTING CO., INC.,
New York, N. Y., August 28, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your letter of July 30, setting forth various questions on which you asked that data be submitted prior to September 15, in connection with the television inquiry being conducted by the Senate Committee on Interstate and Foreign Commerce. These questions are restated for convenience of reference, and the answers are set forth below each question. Where a question refers to first-run film series, we understand from Mr. Cox that this means a program which has not been previously broadcast on a network basis or any other basis, and the answers are in accordance with that understanding. The NBC Film Division has recently been renamed NBC Television Films, and it is now part of California National Productions, Inc., a wholly owned subsidiary of the National Broadcasting Co.; the references to "your company" in the questions are answered in terms of NBC Television Films.

1. What, if any, first-run film series produced and/or distributed by your company have been sold for network broadcast starting in the fall of 1956?

Answer. None.

2. What, if any, first-run film series is your company offering exclusively for syndication next fall?

Answer. NBC Television Films is offering for syndication first-run episodes of Life of Riley in markets where the Gulf Oil Co. does not sponsor the series on a network basis. (See Exhibit A.)

2(a). Are these in production or are you trying to make sales on the basis of a pilot film or films?

Answer. The Life of Riley films which will be concurrently broadcast this fall in some markets on a network basis and in other markets on a syndicated basis are currently in production.

2. (b) On what stations do you have clearance for each series? Please show day of week and hour cleared in each case.

Answer. The syndication sales of Life of Riley are made both to advertisers, who place the films on stations of their choice, and directly to stations. The stations carrying the films sold on either of these bases determine the broadcast period available for them. Exhibit A sets forth information on the stations carrying the films sold on a syndication basis, the periods in which they are carried (to the extent known to us), and the advertisers sponsoring them.

3. If you have film series in both categories, how do the per-picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

Answer. We do not have film series in both categories, since we have no first-run series which we have sold for network broadcast starting in the fall of 1956.

4. How many first-run series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning in September 1955?

Answer. We offered 3 first-run film series for syndication during the 1954–55 broadcast season and 4 such series during the 1955–56 broadcast season, as follows:

1954–55 broadcast season:

Adventures of the Falcon (release date, June 1954)
Life of Riley (release date, September 1954)
His Honor, Homer Bell (release date, December 1954)

1955–56 broadcast season:

Steve Donovan (release date, April 1955)
Great Gildersleeve (release date, July 1955)
Life of Riley (release date, September 1955)
Crunch and Des (release date, December 1955)

5. Do the option rights of the networks in conjunction with their must-buy policy operate to exclude your syndicated programs from the most desirable broadcast times in key markets?

Answer. There is a high percentage of clearance by network-affiliated stations for network programs in network-option time, and to the extent that such a station decides to schedule a network program in such a period, the period is not available for our syndicated films. Similarly, to the extent that a station decides to schedule programs of other nonnetwork organizations in any period, such period is not available for our syndicated films. However, in a number of cases, network-affiliated stations have scheduled our syndicated films in network-option time periods. Exhibit B shows examples where this has occurred in recent months, and also shows examples where our syndicated films have been scheduled by network-affiliated stations in time periods between 6 to 11 p. m., other than network-option time. This list is limited to stations whose time of broadcast of the films in question is known to us.

6. As a result of difficulties occasioned by these practices, has your company tended to concentrate on the production of pictures for national sale, reducing the number of programs to be offered strictly on a syndicated basis?

Answer. There has been no change in network-affiliate arrangements which would lead NBC Television Films to concentrate on the production of films for national sale (to a national advertiser or a network) as distinguished from sales directly to stations on a market-by-market basis. A national sale, however, has financial attractions as compared with market-by-market syndication sales, because it involves less risk and assures a known income within a designated time; whereas the recovery of production costs through sales to stations or advertisers on a market-by-market basis is a long-drawn-out process, in which the variable price, starting dates, and continued popularity of the program increase the risk. NBC Television Films has offered series both for market-by-market syndication and for national sale, and in some cases, where market-by-market syndication would entail excessive risks in view of the projected costs of the series, we have offered a series only for national sale on the basis of a pilot film.

You have asked whether or not NBC Television Films is offering the Bob Mathias Show and Badge 714 for syndication next fall as first-run programs, and whether the Badge 714 programs have not been previously broadcast on a network basis under the Dragnet title. We are currently offering the Bob Mathias series, on the basis of a pilot, to advertisers for national spot or network broadcasts, but are not offering it to stations or advertisers on a market-by-market basis. With regard to Badge 714, each series offered for broadcast beginning in October of each year has not previously been offered on a syndicated basis, but has been broadcast during the preceding year on a network basis under the Dragnet title; accordingly it is first-run in the sense referred to in your letter (i. e., no previous broadcast on a network or any other basis) only in those markets where it was not carried on a network basis during the preceding year.

You also ask for information available to us with regard to any first-run, grade A film series which other companies are offering for syndication for the season beginning in the coming fall. On the basis of trade reports, and without vouching for the caliber of the programs or the accuracy or completeness of the information, we understand that examples of first-run series being offered for syndication include the following: Dr. Christian, Blondie, State Trooper, Frontier Doctor, Dr. Hudson's Secret Journal, Highway Patrol, Last of the Mohicans, Sheriff of Cochise, O'Henry Playhouse, and Foreign Legion.

Yours sincerely,

CARL M. STANTON, *Vice President.*

[1] Based on network option time periods of ABC, CBS, or NBC as applicable; time periods shown in terms of local time of broadcast.

NOTE.—Limited to those cases where we have information as to the period the program is scheduled by the station.

TELEVISION PROGRAMS OF AMERICA, INC.,
New York, September 5, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: Permit me to thank you for your letter of July 30. In answer to the questions contained therein, I am happy to furnish the following material on behalf of Television Programs of America, Inc.:

1. Question. What, if any, first-run film series produced and/or distributed by your company have been sold for network broadcast starting in the fall of 1956?

On what day of the week and at what hour are these scheduled for broadcast?

Answer. Television Programs of America has made no new domestic network sale for a fall start. Renewals have been obtained on the four TPA national network properties currently on the air:

Lassie: CBS network, Sundays 7 to 7:30 p. m., sponsored by the Campbell Soup Co.

Private Secretary: CBS network, Sundays 7:30 to 8 p. m., sponsored by the American Tobacco Co.

Captain Gallant of the Foreign Legion: NBC network, Sundays 5:30 to 6 p. m., sponsored by the H. J. Heinz Co.

Fury: NBC network, Saturdays 11 to 11:30 a. m., sponsored jointly by General Foods Corp. and the Borden Co.

2. Question. What, if any, first-run film series is your company offering exclusively for syndication for next fall?

(*a*) Are these in production, or, are you trying to make sales on the basis of a pilot film or films?

(*b*) On what stations do you have clearance for each series? Please show day of the week and hour cleared in each case.

Answer. TPA has not, as yet, decided on a new first-run filmed series exclusively for syndication to be offered this fall. We are still in the process of completing sales on two first-run series in as yet unsold markets, the campaigns for which were begun late last year and early this spring. They are The Count of Monte Cristo and Stage 7.

3. Question. If you have film series in both categories, how do the per picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

Answer. The per picture budgets for different series depend, of course, on the quality of the productions and vary from series to series. In general, however, the budgets for national network shows are higher than those offered for syndication. This follows from the shortage of prime viewing time available for syndication and the greater risks involved in satisfying local and regional advertisers within this narrow framework.

4. Question. How many first-run film series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning September 1955?

Answer. Of the 5 first-run syndicated properties produced and/or distributed by TPA, 2 (Ramar of the Jungle and Ellery Queen) were first offered for syndicated sale prior to September 1954; 1 series (Science in Action) was first offered in the broadcast year beginning September 1954; 2 (Count of Monte Cristo and Stage 7) were first offered during the broadcast year beginning September 1955.

5. Question. Do the option rights of the networks, in conjunction with their must-buy policies, operate to exclude your syndicated programs from the most desirable broadcast time in key markets?

Please explain in detail.

Answer. Yes.

TPA's syndicated programs are designed for top-level audience appeal and are of necessity priced for exhibition in time periods when large audiences are available. Network evening option time is between 7:30 and 10:30 p. m., New York time, the period of highest sets in use. With rare exceptions, these most valuable telecasting hours are occupied by network programs on network-affiliated stations.

To illustrate the situation, consider the 40 cities in which NBC and CBS each have basic affiliates:

New York	Kansas City	Sacramento
Chicago	Seattle	Nashville
Los Angeles	Atlanta	Norfolk
Philadelphia	Portland, Oreg.	Providence
Detroit	Dallas	Salt Lake City
Boston	San Diego	Tulsa
San Francisco	Denver	Davenport
St. Louis	Louisville	Columbus
Washington	San Antonio	Dayton
Baltimore	Tampa	Cincinnati
Minneapolis	Rochester	Cleveland
Buffalo	Omaha	Birmingham
Houston	Syracuse	
Milwaukee	Oklahoma City	

These cities contain more than 70 percent of the TV sets in the country. The 3 hours nightly of peak viewing time (7:30 to 10:30 p. m.) multiplied by 7 nights per week, multiplied by the 80 CBS and NBC basic affiliates, equals 1,680 hours weekly. This amounts to 3,360 half hours, the usual program time period.

Taking the typical week of February 19–25, 1956, CBS and NBC network programs were carried during 3,150 out of the 3,360 available half-hour periods of peak viewing time, or 93.7 percent of the total. This left 6.3 percent available for all other programs—syndicated film, local live programs, and programs of the ABC network.

To round out the picture, it is vital to remember that there are only 7 markets in the entire United States which have 4 or more VHF outlets. Since all 3 existing networks employ option time (with its preemption powers), there are only 7 important markets where nonnetwork advertisers can be assured of continuity in sponsoring a program during prime evening time.

6. Question. As a result of difficulties occasioned by these practices, has your company tended to concentrate on the production of pictures for national sale, reducing the number of programs to be offered strictly on a syndicated basis?

Answer. Yes. In view of the limited peak viewing time available locally for the quality product which TPA produces, we have had to gear our production to the quantity of syndicated programs that our sales force around the country can place for exhibition within the time periods available.

7. Question. As you no doubt know, the National Broadcasting Corp., in a document filed with our committee, quoted a statement issued by your company as follows:

"TPA's own growth illustrates the TV film industry's progress. When TPA started, less than 3 years ago (September 1953), the company had 1 half-hour series. Today there are 10 TPA shows on the air and 6 more—Tugboat Annie; Last of the Mohicans; Captain Kidd; New York Confidential; Mr. Digby, based on the Saturday Evening Post series of the same name; and Shark Malone, in various stages of production. * * *

"In 1955 Hollywood produced 2,835,000 feet, or 500 hours, of theatrical (feature) films. TV production for the same year was 10,538,000 feet, or almost 2,000 hours of entertainment."

Will you please comment on this statement in the context in which it was quoted by NBC, namely, to establish that film syndicators are doing a record business.

Answer. This statement, apparently quoted from the trade press, should be judged in context—that of a talk I gave as TPA's executive vice president before the National Association of Radio and Television Broadcasters' convention in April 1956. I was addressing myself to the importance of film programing in television as a part of the film producers' and distributors' continuing drive to develop their share of the market. Of the 6 new series listed as "in various stages of production" as of April 1956, only 1, The Last of the Mohicans, is actually now in the shooting stage. TPA is investing over a million dollars in these films without as yet a single sponsor in the United States and with no assurance of obtaining suitable broadcast time either nationally or on a station-by-station basis.

8. Question. We have been advised that your company is offering new first-run programs called Hawkeye, New York Confidential, Tugboat Annie for syndication next fall. Is this a correct statement? Of course, if you have already covered this in your answer above, you may ignore this direct inquiry.

Answer. The statement that TPA is offering Hawkeye, New York Confidential, and Tugboat Annie for syndication next fall is wholly inaccurate. It is possible that one of them may be offered for syndication later on this year or early next year, but this decision has not yet been made.

9. Question. Can you tell me whether you know of any first-run grade A film series which are being offered for syndication, as distinguished from network broadcast, by other companies for the season starting next fall?

Answer. We have heard in the trade of other companies offering such programs, but have no direct knowledge on this question.

I hope that this information will be helpful to you and to the committee.

Sincerely,

MICHAEL M. SILLERMAN.

ZIV TELEVISION PROGRAMS,
New York, N. Y., September 10, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce,
Washington, D. C.

DEAR SENATOR MAGNUSON: The following material is respectfully furnished in reply to your letter of July 30, 1956. The numbers of the paragraphs refer to the questions you have propounded having the same numbers.

1. (*a*) West Point, sold to General Foods for broadcast over CBS. (*b*) Fridays at 8 p. m.
2. Dr. Christian.
   (*a*) In production.
   (*b*) To date, this program has been leased for telecast on 125 stations. We do not now know the day and hour of all these telecasts.
3. Method of exhibition is not determinative of per picture budgets. The kind of time period during which the series will be telecast, whether network or syndication, is, however, a most important factor. It is possible, therefore, that some syndicated series that are fortunate enough to obtain good time periods will have higher budgets than some network shows, and vice versa.
4. New first-run film series offered for syndication in—
   (*a*) Year beginning September 1954, 3 series: Meet Corliss Archer, Eddie Cantor Comedy Theater, Science Fiction Theater.
   (*b*) Year beginning September 1955, 2 series: Highway Patrol, Man Called X.
5. (*a*) Answer: Yes. (*b*) Explanation: Most important television stations are either owned by or are affiliated with the networks. By means of option-time contracts, the networks preempt the most desirable time segments, so that they are generally (with few exceptions) not available for local or regional programing and sponsorship.
6. Yes.

With reference to the quoted report issued by our company, this is the paraphrase of a release to the trade press. We do not understand how it can "establish that film syndicators are doing a record business." It was simply the expression of a hope that we, as an individual company, would do a good business.

In reply to your final question, we do not know of our personal knowledge of any "first-run, grade A film series which are being offered for syndication * * * by other companies for the season starting next fall." We have been informed of 2 or 3 series being offered by other companies, but whether or not they were first offered earlier in the year, whether they are offered entirely on a syndicated basis, and whether to classify them as grade A or otherwise, would take us into the realm of speculation.

If we can be of further service to you, please let us know.

Sincerely,

John L. Sinn, *President.*

MCA TV, Ltd,
New York, September 11, 1956.

Senator Warren G. Magnuson,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

My Dear Senator Magnuson: This is in reply to your letter to us dated July 30, 1956. The numbers preceding our answers below correspond to the questions bearing the same numbers in your letter.

(1) Of the first-run films that we distribute, the following have been sold for network broadcast for the fall of 1956:

Program, day, and time:
Millionaire—Wednesday, 9 p. m.
General Electric Theater—Sunday, 9 p. m.
Alfred Hitchcock Presents—Sunday, 9:30 p. m.
On Trial—Friday, 9 p. m.
Crusader (canceled as of December 28, 1956)—Friday, 9 p. m.

(2) The following first-run film series have been or are being offered by us exclusively for syndication for the fall of 1956:
State Trooper
Rosemary Clooney Show
Dr. Hudson's Secret Journal, series II
Soldiers of Fortune
Heinz Studio 57

All of the above-mentioned programs in this paragraph are either presently in production or have already been partially produced. The clearances of these programs with stations are contracted for by our purchasers and therefore the information as to actual clearances are received by us from them. We have been informed to date by the purchasers that the stations that have actually been cleared for such programs are as listed in exhibit A attached. We also have attached exhibit B, which indicates that the programs mentioned in such exhibit have already been committed for the markets there specified and that to date we have not received any information from the purchasers as to what stations in those markets have actually been cleared for these programs.

(3) Our information is that there is no consistent pattern. While series first sold for network exhibition seemingly have a higher budget than syndicated shows, there are some instances where the syndicated shows have a higher budget than some network shows.

(4) We offered five series for syndication during the broadcast year beginning in September 1954. We offered five series for syndication during the broadcast year beginning in September 1955.

(5) and (6) The acquisition of broadcast times for programs which we distribute is contracted for by our purchasers and not by us. Our own experience has been that option rights of the networks, in conjunction with their must-buy policies, generally do not operate to exclude our syndicated programs from the most desirable broadcast times in key markets.

We understand from articles in trade periodicals that a large number of grade A film series, including feature films, are being offered for syndication by other companies for the season starting fall 1956.

Very truly yours,

DAVID SUTTON.

HAL ROACH STUDIOS,
Culver City, Calif., September 11, 1956.

Hon. WARREN G. MAGNUSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your recent letter requesting information pertinent to the television inquiry being conducted by the Senate Interstate and Foreign Commerce Committee. The following facts are related to the questions raised in your letter.

1. Only one new television series has been sold by our company for network broadcast starting in the fall of 1956.

This show was purchased by the Nestle Co. to be broadcast on CBS network, Saturday at 9 p. m.

2. Hal Roach Studies does not operate a national syndication selling organization. However, we do produce television series for syndication by contractual arrangement with several of the leading national syndication organizations.

Our company is not offering any first-run film series exclusively for syndication next fall.

(*a*) Our studios have completed production on 10 pilot films, any one of which could be produced as a series for any film syndication company or advertiser that is prepared to share the financial responsibility.

(*b*) At the present time, we have no station clearances for any of the above-mentioned pilot films.

3. The per picture budgets for series offered for syndication as a general rule run approximately one-third less than those for series to be broadcast on the networks. This is due primarily to the considerably reduced gross sales potential when selling on a syndication basis, which in turn is related to the unavailability of acceptable time clearances.

4. Hal Roach Studios produced two new first-run film series for syndication in the broadcast year beginning September 1954. In the year beginning September 1955 we produced one new first-run series exclusively for syndication.

5. The option rights of the networks in conjunction with their must-buy provisions, represent the greatest single sales handicap to exclude syndicated programs from the most desirable broadcast times in key markets.

On many occasions, through our own sales organization or through our national syndication representatives, we have had substantial contracts offered to us subject to our securing acceptable time periods in specific markets and we have had to forego such contracts due to the unavailability of suitable time periods.

6. As a result of difficulties occasioned by these practices, our company is concentrating primarily on production of television series for national sale. It is the general policy of this company at the present time not to undertake the production of a new series for syndication unless a substantial percentage of the total investment is committed for in advance by either a national syndication company or a national advertiser.

It is impractical for me to attempt to answer your question on the first-run grade A film series which are being offered for syndication by other companies for the coming season. However, it is our general observation that the number of such series has been considerably reduced during the past few years. This is particularly true when you specify grade A pictures. It is possible that the reduction in grade A pictures being offered in syndication has been more than offset by the production of grade B or C television series which are more economically feasible for the class B and C time periods which are most generally available today for syndicated shows.

I sincerely trust this provides the information desired by your committee. If we can be of any further assistance to you or your associates, I shall be most pleased to hear from you.

Very truly yours,

HAL ROACH, Jr., *President.*

ABC FILM SYNDICATION, INC.,
New York, N. Y., September 12, 1956.

Senator WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: We acknowledge receipt of your letter dated July 30, 1956, and will endeavor to answer the questions posed by you to the best of our ability and knowledge.

1. We have offered, on the basis of a pilot film, one film series, first run, for network telecast starting in the fall of 1956. At the present writing we have not been successful in selling this series, but we are continuing our sales effort in regard thereto.

2. We are offering code 3, a first-run film series, in syndication this fall.

(*a*) A series of 39 films is presently in production, with approximately 30 in which shooting has been completed at this time.

(*b*) Attached hereto, marked "Exhibit A," is a list showing stations, day of week and time slots which have been cleared for this series as of the close of business on September 8, 1956.

The series has also been licensed for telecasting on the station shown in list attached, marked "Exhibit B," starting in the fall of 1956, but neither day of the week nor time slot has been set as of this writing.

3. The budget, on a per picture averaging basis, for the series which we are offering for network sale has not yet been determined to any degree of exactness. For this reason it is impossible to make a realistic comparison. It is anticipated, however, that the budget for the series being offered for network telecasting, if produced, would be from 10 to 15 percent higher than that for code 3.

4. This company offered 1 series of 39 first-run pictures for syndication around the late summer of 1954. We offered 2 series of 26 first-run pictures each and 1 series of 117 first-run pictures during the summer and fall of 1955.

5. Inasmuch as a television station operates only during certain hours of each 24, the option rights of the networks, in conjunction with their must-buy policies, do operate to reduce the number of certain prime time periods which might be available for syndicated shows. In the 1- and 2-station markets in the eastern time zone this is more pronounced than in markets with a larger number of stations, and it has less effect in other time zones than in the eastern zone due to the difference in time in the city taking the feed from the networks as contrasted to the time at the point of origination.

6. We do not believe that the option rights or must-buy policies of the networks have caused us to concentrate on the production of pictures for national sale.

7. Our only sources of information relating to the plans of other syndicators are the trade press and the information our salesmen pick up from stations, agency people, and sponsors. We are informed that several first-run film series are being currently offered by our competitors, but we are unable to make any comment with regard to their quality.

Respectfully yours,

GEORGE T. SHUPERT.

INTERSTATE TELEVISION CORP.,
Hollywood, Calif., September 25, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This will acknowledge your letter of the 18th, and I will attempt to answer the questions in the order of their sequence.

1. Interstate has no first run series, produced or distributed, that have been sold to the network for the fall of 1956.

2. Interstate has no first run subjects which we are offering exclusively for syndication for next fall.
3. Need not be answered, as per the above.
4. We did not offer any first run series for syndication broadcasting in the year of 1954 or in the year of 1955.
5. We do not know.
6. We will only produce subjects for national sale, for at this time we do not believe syndication will return the costs of half-hour subjects.

We are also concerned as to what the great number of feature pictures will do to the half-hour syndication market.

Very truly yours,

G. RALPH BRANTON.

ALLIED ARTISTS PICTURES CORP.,
New York, N. Y., September 27, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: With reference to your letter of July 30, which I have not been able to answer until now due to vacations and being out of town, I wish to advise you as follows:

We have not produced any first-run TV series in recent years and we have no first-run film series to offer for distribution next fall.

With reference to your paragraph 4, we have not had any first-run film series in either September 1954 or September 1955.

With reference to paragraphs 5 and 6, Interstate Television, which is a wholly owned subsidiary of Allied Artists Pictures Corp., concentrates in the selling of old Monogram Pictures Corp. features and westerns (Monogram is the predecessor of Allied Artists Pictures Corp.)

We are releasing a half-hour TV series on Public Defender but these are not first-run shows as they were originally shown over the CBS network and we acquired the rerun rights to these series.

With reference to the Little Rascals, these are shorts which were made many years ago and titled for theatrical distribution as the Our Gang Comedies. We have been releasing Little Rascals for several years now.

I trust that this information has been helpful to you.

Sincerely,

LLOYD L. LIND.

CBS TELEVISION FILM SALES, INC.,
New York, N. Y., October 4, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I am happy to provide herewith the answers to the questions raised in your letter of July 30, 1956, concerning the production and distribution operations of CBS Television Film Sales, Inc.:

Question 1. What, if any, first-run series produced and/or distributed by your company have been sold for network broadcasting starting in the fall of 1956?

On what day of the week and at what hour are these scheduled for broadcast?

Answer. The only first-run film series produced and/or distributed by CBS Television Film Sales, Inc., which has been sold for a network broadcast in the fall of 1956 is Navy Log which has been sold to a sponsor for broadcast over the ABC television network on Wednesdays, 8:30 to 9 p. m., commencing October 10, 1956.

Question 2. What, if any, first-run film series is your company offering exclusively for syndication for next fall?

(*a*) Are these in production, or, are you trying to make sales on the basis of a pilot film or films?

(*b*) On what stations do you have clearance for each series?

Please show day of the week and hour cleared in each case.

Answer. The answer to this question is provided on two bases:

(1) If the term "first-run film series" is interpreted as meaning films which have not been broadcast on a syndicated basis over any television station in

the United States, the answer is that no such series is being offered exclusively for syndication since the only "first-run film series" being produced and/or distributed by CBS Television Film Sales, Inc., for the fall of 1956 is Navy Log, which has been sold for broadcast over the ABC television network as stated in response to question 1.

(2) If the term "first-run film series" is interpreted as meaning films which have not been broadcast on a syndicated basis in all markets and are, therefore, "first-run" with respect to some markets, the answer is that all film series currently being distributed by CBS Television Film Sales, Inc., with the exception of Navy Log, are available exclusively for syndication.

Exhibit I hereto contains data sheets for all film series currently being distributed by CBS Television Film Sales, Inc., showing with respect to each such series the markets in which they have not been shown, the markets (with station call letters) in which they are scheduled (as of September 1, 1956) to be shown in the fall of 1956, and the day of the week and time period cleared in each such market, where such information is available. None of the sales made for the fall of 1956 and indicated in exhibit I was made on the basis of a pilot film. All of the series had been produced prior to offering and sales were made on the basis of episodes of the produced series.

Question 3. If you have film series in both categories, how do the per picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

Answer. The only film series produced by CBS Television Film Sales, Inc., or by CBS Television Film Sales, Inc., in association with outside producers, and currently being distributed by it are: Navy Log, which is scheduled for fall broadcast on the ABC television network; The Whistler; part of the Amos 'n' Andy series; Gene Autry; Range Rider; Adventures of Eddie Drake; and Files of Jeffrey Jones. All of these series are in episodes of 30 minutes each. A comparison of the average per-episode budgets of these syndicated series with the average per-episode budget of Navy Log and the dates of production of the syndicated series are shown in the following table:

Series	Production dates	Comparison with Navy Log
Adventures of Eddie Drake	1951	Approximately 65 percent less.
Amos 'n' Andy	1955	Approximately the same.
Files of Jeffrey Jones	1952	Approximately 50 percent less.
Gene Autry	1950–53	Approximately 43 percent less.
Range Rider	1951–53	Approximately 38 percent less.
The Whistler	1955	Approximately 18 percent less.

It should be noted that budget figures for these series and Navy Log are not comparable in many respects. Production costs—particularly union costs, studio and technical facilities and talent payments—have increased appreciably since 1950. Differences in type of program account for considerable variation in budgets. Furthermore, our experience has indicated that the growth of television generally, the increase in the number of producers of syndicated film, the greater availability of better quality feature film, and the demand by many advertisers for improved quality in syndicated film have reduced substantially the cost differential between syndicated series and series released for network broadcast.

Question 4. How many first-run film series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning September 1955?

Answer. The answer to this question is provided on two bases:

(1) If the term "first-run film series" is interpreted as meaning films which have not been broadcast on a syndicated basis over any television station in the United States, the answer is that 7 series were offered by CBS Television Film Sales, Inc., for syndication in the broadcast year beginning September 1954, and that 4 series were offered for syndication in the year beginning September 1955. These figures include new episodes of series which had been offered in prior years.

(2) If the term "first-run film series" is interpreted as meaning films which have not been shown in all markets and are, therefore, "first-run with respect to some markets the answer is that 12 series were offered by CBS Television Film

Sales, Inc., for syndication in the year beginning September 1954, and 16[1] series for syndication in the year beginning September 1955.

Question 5. Do the option rights of the networks, in conjunction with their must-buy policies, operate to exclude your syndicated programs from the most desirable broadcast times in key markets?

Answer. It has been our experience that the provisions in network affiliation contracts concerning option time and so-called must-buy policies do not exclude syndicated programs from the most desirable broadcast times in key markets. Thus an analysis of programs broadcast by representative CBS television-network affiliates, more than half of which are basic required and all of which have option-time provisions in their affiliation contracts, and stations not affiliated with any network shows that first-run syndicated film series broadcast by affiliated stations exceeded the number of first-run syndicated film series broadcast by nonaffiliated stations. See Memorandum Concerning the Statement of Richard A. Moore Prepared for the Senate Committee on Interstate and Foreign Commerce by Columbia Broadcasting System, Inc., June 1956, pages 17–23, and in particular, the table on page 22. Our experience with respect to the desirability of the time cleared by stations for syndicated programs is borne out by the statement by Oliver Treyz, president, Television Bureau of Advertising, in a speech delivered April 18, 1956, at the annual convention of the National Association of Radio and Television Broadcasters:

"Man Behind the Badge, sponsored by Ohio Oil and ordered in 11 stations was cleared on 10 of these in the supposedly difficult class A time. Great Gildersleeve, for Lucky Lager Beer, was ordered in 26 stations and achieved 100 percent class A clearance—26 class A clearances in 26 markets. Steve Donovan, for Langendorf Bakeries, ordered into 13 stations, cleared in class A time in 11 of them. Racket Squad, for Heilman Brewing Co., ordered in 9 markets, 100 percent class A clearance—9 markets cleared in class A time. The Turning Point, a new program for General Electric, ordered into 68 markets and 66 markets with class A clearance. Dr. Hudson's Secret Journal for Bowman Biscuit Co.—12 markets ordered, class A clearance in all 12. Socony Mobil Theatre, for Socony Mobil-Oil, primarily a central division order, 56 markets ordered, 56 markets cleared in class A time. * * * This is a clear-cut demonstration that there are excellent availabilities in time and that these times can be claimed and can be staked out as franchises for syndicated film programs."

Question 6. As a result of difficulties occasioned by these practices, has your company tended to concentrate on the production of pictures for national sale, reducing the number of programs to be offered strictly on a syndicated basis?

Answer. As stated in response to question 5, it has been our experience that the practices referred to do not operate to exclude syndicated programs from the most desirable broadcast time in key markets. CBS Television Film Sales, Inc., has never made a market distinction between programs produced by it and intended for network release and programs produced by it for syndicated release.

Your letter also raised a question as to syndication by CBS Television Film Sales, Inc., of Long John Silver. As indicated in the response to question 2, Long John Silver is currently being offered by CBS Television Film Sales, Inc.

In the penultimate paragraph of your letter you raised a question as to the practice of other companies engaged in film syndication. We do not have specific information in response to this question but we are enclosing a copy of Standard Rate and Data Service, Films for Television, a listing of current offerings by most film syndication companies, which may be of help to you.

Very truly yours,

LESLIE HARRIS.

---

[1] Standard Rate and Data Service, Films For Television lists 19 film series as being offered by CBS Television Film Sales, Inc. Of these, Holiday in Paris has been withdrawn; Newsfilm is a special service offered by CBS Television Film Sales, Inc.; and Adventures of Champion is available only on a national or regional sponsorship basis.

[1] In all markets other than those for which data are shown, this series is available on a first-run syndicated basis.

[2] Question 1: "Has series been broadcast in this market prior to fall 1956?"

[3] Question 2: "Is series cleared for broadcast in the fall of 1956?"

[4] See other market or markets listed for exposure in this multiple market.

SCREEN GEMS, INC.,
TELEVISION SUBSIDIARY OF COLUMBIA PICTURES CORP.,
New York, November 13, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate Commerce,
Washington, D. C.

DEAR SENATOR MAGNUSON: The following is in reply to your letter of July 30, 1956, requesting certain information. Please excuse the long delay in sending this reply to you. Many of the persons who have the information requested have been on vacation. We hope the delay has not inconvenienced the work of your committee.

Question 1: What, if any, first-run film series produced and/or distributed by your company have been sold for network broadcast starting in the fall of 1956?

On what day of the week and at what hour are these scheduled for broadcast?

Answer to question 1:

1. Adventures of Rin Tin Tin, ABC, Friday, 7:30 to 8 p. m.
2. Cowboy Theater, NBC, Saturday, noon to 1 p. m.
3. Playhouse 90, CBS, Thursday, 9 to 10:30 p. m. (every fourth week).
4. Ford Theater, ABC, Thursday, 9:30 to 10 p. m.
5. 77th Bengal Lancers, NBC, Sunday, 7 to 7:30 p. m.
6. Circus Boy, NBC, Sunday, 7:30 to 8 p. m.
7. Father Knows Best, NBC, Wednesday, 8:30 to 9 p. m.
8. Tales of the Texas Rangers, CBS, Saturday, 11:30 a. m. to noon.

Question 2: What, if any, first-run film series is your company offering exclusively for syndication for next fall:

(*a*) Are these in production, or are you trying to make sales on the basis of a pilot film or films?

(*b*) On what stations do you have clearance for each series?

Please show day of the week and hour cleared in such case.

Answer to question 2: Screen Gems, Inc., is offering no new first-run film series exclusively for syndication for the fall of 1956. However, Screen Gems, Inc., has two series, Celebrity Playhouse and Jungle Jim, which are carryover series from 1955 which are still being offered for first-run telecasting in many markets.

Question 3: If you have film series in both categories, how do the per picture budgets for series offered for syndication compare with those for series to be broadcast on the networks?

Answer to question 3: The Celebrity Playhouse and Jungle Jim series referred to above, which are being offered in syndication for first-run telecasting, have substantially the same negative cost as network programs produced and/or distributed by Screen Gems, Inc., in the same entertainment category; that is, the negative cost of Celebrity Playhouse, which is an anthology series, is substantially the same as the negative cost of Ford Theater, also an anthology series being telecast on a network basis, and the negative cost of Jungle Jim, a children's adventure series, is substantially the same as the negative cost of one of its children's adventure series being broadcast on a network basis, such as the Adventures of Rin Tin Tin and higher than another such program, Tales of the Texas Rangers.

Question 4: How many first-run film series did your company offer for syndication in the broadcast year beginning in September 1954? How many in the year beginning September 1955?

Answer to question 4: No first-run film series was offered by Screen Gems for syndication in the broadcast year beginning September 1954. Two such series (Celebrity Playhouse and Jungle Jim) were offered in the year beginning September 1955.

The above data make available to you all the factual information requested by your letter. The remaining questions call for opinions on subjects which were, we think, comprehensively covered by the detailed memorandum submitted to the Network Study Committee of the Federal Communications Commission by the Association of Television Film Distributors, of which Screen Gems, Inc., is a member. Copies of this memorandum were supplied to counsel for your committee at their request. Under the circumstances we do not feel it necessary or helpful at this time to attempt a summary of the observations made to the Network Study Committee, nor do we at this time have anything to add to what was said at that time.

If we can be of any further service, please call upon us.

Sincerely yours,

RALPH M. COHN, *Vice President.*

SCREEN GEMS, INC.,
TELEVISION SUBSIDIARY OF COLUMBIA PICTURES CORP.,
New York, N. Y., December 12, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate Commerce,
Washington, D. C.

DEAR SENATOR MAGNUSON: We acknowledge receipt of your letter of November 13 and are pleased to note your continued interest in the problems of independent suppliers of filmed television programs, such as ourselves.

Your assumption that our current production plans "center largely around production for network broadcast rather than around syndication activities" is quite correct. We have found from experience that there is insufficient broadcasting time available in local television markets for syndicated film programs produced and distributed by independent producers such as ourselves. The lack of available time is an artificial scarcity resulting from the great shortage of stations—the overwhelming majority of television cities in this country have but 1 or 2 stations—and this shortage is aggravated by network option time which preempts the peak viewing periods on most local stations.

Manifestly, we cannot sell our programs locally, either to local advertisers or to the stations themselves, if there is no time on the local station which can be made available for the broadcasting of the program. At best, we find that our programs are relegated to fringe time which means that for an advertiser to afford our program in terms of the industry yardstick of cost per thousand viewers, we must be content to take a very much lower price for our programs than we could get if they could be broadcast at times when more people generally were watching television.

In the face of the difficulty of obtaining adequate financial returns from the syndication of our filmed programs, we are, obviously, hesitant about investing substantial sums in films designed exclusively or even primarily for the syndication market. Even if we are careful about keeping our production costs down on such programs, and regardless of the quality and public appeal of any particular program, we have something less than confidence that even this reduced investment can be recouped and some margin of profit realized.

Accordingly, we are constrained to concentrate on producing programs for national broadcast primarily, either by a national advertiser or a network, who will pay us a license fee which will approach and perhaps even exceed our cost of production. In such cases we reserve the right to syndicate the program after the expiration of the exclusive national broadcasting license and we rely on such subsequent exploitation for our profits, if any.

In line with this policy, of the 12 new programs planned for the 1957–58 broadcasting season, only 2 are designed primarily for syndication exploitation.

We further note your inquiry concerning the present status of five proposed program series with respect to which you have received reports from others. The present status of these programs is as follows:

You Can't Take It With You: Resumption of production of this series has been delayed because of difficulties we have had in solving the unusual casting problems involved. We hope, however, to find suitable performers for this series in the near future at which time we will produce a new pilot film which will be offered for sale in accordance with our usual procedure which we have described above.

Criminal Code: Production of this series has been tabled for the time being in favor of other programs with respect to which we expect to have pilots for presentation to our clients early next spring.

Mystery Writers Theatre: The title of this program has been changed to the George Sanders Mystery Theatre and it has been sold to the National Broadcasting Co. for national network broadcasting commencing on a date to be selected by NBC.

The Web: We are in the process of reediting two pilot films which have been produced in this series and we expect to have these ready for presentation early next spring in accordance with our usual procedure.

Emergency: Production of a pilot film of this series under a different title is planned for this winter and we expect to be able to offer this series also sometime in the early spring in accordance with our usual procedure.

We hope that the foregoing gives you the information requested and if we can be of further assistance, please do not hesitate to call upon us.

Sincerely yours,

RALPH M. COHN, *Vice President.*

FOUR STAR FILMS, INC.,
Beverly Hills, Calif., December 3, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I apologize for this delay in answering your letter of July 30, 1956, addressed to Four Star Productions, Inc. That letter did not come to my attention until your followup letter of November 30 reached me.

Four Star Productions, Inc., was dissolved on March 15, 1956, as a result of a merger of that corporation into Official Films, Inc., a television distribution company of New York. Four Star Films, Inc., is continuing as an active producer of television film programs, and is owned by the same individuals who owned the earlier corporation. The answers that I will give in this letter to your questions relate to both of these Four Star corporations without distinction as to whether the first or the second of them was involved at the times referred to.

In answer to the questions set forth in your July 30 letter, I can state the following:

1. We are producing two new film series for initial network broadcast during the 1956–57 season. These are the Zane Grey Theater, being sponsored by General Foods through Benton & Bowles, Inc., and broadcast on CBS at 8:30 on Fridays, and Hey, Jeannie, sponsored by Proctor & Gamble through Compton Agency, and broadcast on Saturdays at 9:30 on CBS.

We are also producing as a contractor for CBS and Bridget Productions, a series entitled "Mr. Adams and Eve," featuring Ida Lupino and Howard Duff which, we understand, will be broadcast commencing in January 1957.

2. The only film series we have been producing for initial broadcast in syndication this year is called Stage 7. It has been released in 1956 on behalf of Standard Oil Company of Califorina in the Western States under the title "Chevron Hall of Stars." In addition to the western regional sale to the Standard Oil, the series has been sold on a regional basis to American Home Products Co., in New York and the New England States, and to another advertiser for broadcast commencing in the near future in Chicago and several other midwestern markets.

The distribution of this series is being handled for us by Television Programs of America, Inc., which organization could give you a more detailed report of the actual stations carrying the programs of this series. We do not have that information in complete form.

3. The films made for the series initially released in syndication are budgeted to cost from 60 to 75 percent of the budgeted cost of the films produced for the series to be initially broadcast on a national network basis.

4. Prior to the series mentioned above, the only series we have produced for initial release insyndication was called The Star and the Story, which went on the air in the latter part of 1954. With respect to that series, however, the project was undertaken only after a very substantial regional sale had been made for the New York area and the western markets. We then made syndication sales throughout the rest of the country in other areas. All of our other production activities have been on films for series to be released initially on a national network basis.

5. We cannot reasonably evaluate the effect of network option rights upon our syndicated programs. All syndication sales have been handled for us by Official Films, Inc., or by Television Programs of America, Inc., either of which would be in a better position to describe the effect of such option rights.

As a matter of policy, we have attempted to sell our product initially for release on a national network, with the expectation of thereafter licensing these films for syndication release in their second and subsequent showings.

In this way, we have believed that the greatest return might be realized from the films produced by us. Production of films for initial syndication release has seemed unwise to us, generally, because of the greater financial investment required in such an undertaking, the greater expense incurred in local or regional distribution, and the loss of the larger initial price obtainable by us from a network release.

6. As a result of the considerations I have mentioned above, our company has concentrated on the production of films for national sale, rather than films to be offered strictly on the syndicated basis.

Apart from 1 or 2 series that the being produced by or for National Telefilm Associates, for syndication release, I do not know of any grade A film series now being produced for syndication.

We shall be happy to furnish any other information that might be requested by you and to cooperate in your investigation in any way.

Very truly yours,

WM. A. CRUIKSHANK, Jr.

McCADDEN CORP.,
Hollywood, Calif., December 18, 1956.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: In reply to your letters of July 30 and November 30, we can only advise you that we have little knowledge or information with respect to the business of producing films for syndication inasmuch as our business is solely that of producing films for network broadcast pursuant to agreement with a sponsor or sponsors thereof.

However, the answer to the first question in your letter of July 30 follows:

The Burns and Allen Show. Monday evening 8 p. m. over CBS.
The Bob Cummings Show. Thursday evening 8 p. m. over CBS.
The People's Choice. Thursday evening 9 p. m. over NBC.

Very truly yours,

McCADDEN CORPORATION,
MAURICE R. MORTON,
Vice President.

NATIONAL TELEFILM ASSOCIATES, INC.,
New York, N. Y., December 26, 1956.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

DEAR SENATOR MAGNUSON: We regret very much the delay which ensued in responding to your letter of July 30, 1956, requesting certain information. All of us have been under considerable pressure throughout the past few months. We hope that the information contained herein may still be of some assistance to you.

In response to the items of your letter, we are pleased to submit the following:

(1) We have had no first-run film series produced or distributed by us which has been sold for network broadcast starting in the fall of 1956.

(2) We have had two first-run film series which we offered for syndication commencing Otcober 1, 1956. The first was entitled "Theatre With Lilli Palmer" and consisted of a series of 39 one-half hour filmed television programs, and the second was The Sheriff of Cochise, which likewise consisted of 39 such programs. The Sheriff has been sold regionally as well as on a syndication basis.

(a) The Lilli Palmer package was completed with the exception of three programs which will probably be acquired shortly and the Sheriff of Cochise package is in production and will be completed by Desilu Productions, Inc. The Lilli Palmers have been sold on the basis of completed films and the Sheriff has been sold through the medium of a pilot film.

(b) We do not clear time in the sense in which you employ that term. So far as our Lilli Palmers are concerned, they have thus far been sold in a number of individual markets, and the station may assign to them any time slot which they may desire. So far as the Sheriff of Cochise series is concerned, our arrangements have been made with advertising agencies who represent a number of sponsors, such agencies clearing the date and time directly with stations or networks.

(3) Since we do not have any film series sold for network broadcasts, we have no basis for comparison, but we do not believe that the budgets for a series offered for syndication would compare unfavorably with those offered for network broadcasts.

(4) During the year beginning September 1954 we offered for syndication 4 first-run film series and during the year beginning September 1955 we offered an additional 4.

(5) The option practices of the networks obviously have an important effect uopn the saleability of syndicated programs in desirable broadcast time in many markets. It is difficult, however, to admeasure the precise degree of such influence.

(6) The national sale of a series is, of course, always the goal for which we strive, and if such a sale cannot be accomplished, or if the equally satisfactory device of a regional sale cannot be achieved, then, of course, the marketing of the programs on a syndicated basis is indicated. It must be observed that we would not, in all probability, produce a complete motion-picture series without firm assurance that such series is destined for national or regional sale. Our present method of operation, as exemplified by our series Sheriff of Cochise, is to have the pilot produced and sell the series on the basis of the pilot rather than produce an entire series initially.

We were aware, as of the date of your letter, that various companies were offering first-run grade A film series for syndication for the fall of 1956. We assume that as of this date the titles of such series are known to you.

If we may furnish you with other information, please do not hesitate to call upon us.

Thank you for your cooperation.

Very truly yours,

ELY LANDAU, *President.*

---

18. LETTER DATED JULY 20, 1956, FROM CHAIRMAN MCCONNAUGHEY OF THE FCC TO THE CHAIRMAN OF THE COMMITTEE; SENATOR MAGNUSON'S REPLY DATED JULY 26, 1956; AND MR. MCCONNAUGHEY'S FURTHER RESPONSE DATED JANUARY 3, 1957, ALL CONCERNED WITH THE ANTITRUST LAWS AND THE ENFORCEMENT ROLES OF THE FCC AND THE DEPARTMENT OF JUSTICE

[For an earlier letter of Mr. McConnaughey on this subject, see p. 1674.]

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I have your letter of June 22, 1956, in further reference to the testimony before your committee of Mr. Richard A. Moore, and the legal memorandum concerning network option time and must-buy requirement which he filed with the committee. You ask whether I can provide you with an evaluation of the legality of the practices described by Mr. Moore and clarification of the Commission's understanding with the Department of Justice as to our respective roles in dealing with conditions in the communications field which may also involve possible violations of the antitrust laws.

I am, of course, aware of the operation of the network option system discussed by Mr. Moore as well as of the must-buy practice employed by television networks in selling their network facilities to potential advertisers. In 1941 the Commission, after a lengthy proceeding, adopted a rule limiting option time provisions of contracts between networks and their affiliates. I have assumed up to the present time that practices in compliance with option time rules are not violations of the antitrust laws or any other laws. Determination of their continuing legality would appear to depend upon an evaluation which I believe can only be made by the Commission as a result of the type of exhaustive, impartial study of the entire industry framework as is presently being conducted by the Commission. In this study we are concerned not only with minimum legality but also, and primarily, with determining whether option time provisions are in the public interest. Until the study is completed, I do not see how we can determine whether the extent and type of option time which the Commission found to be in the public interest with respect to radio networks in 1941 is or is not in the public interest today.

The must-buy selling technique of the networks presents, I am inclined to believe, a somewhat different regulatory problem. Here the Commission's role may be less direct since the arrangements are between a network and a sponsor or advertising agency rather than with a station licensed by this Commission. This practice is not covered in any manner by our existing chain broadcasting regulations nor was it the subject of any considerable discussion in the reports of the 1938–41 network investigation. Like option time, must-buy, too, is being subjected to study and under the circumstances, I believe it would be particularly premature for me to express any opinion as to the legal status of such practices.

I do not think there is anything basically inconsistent between the comments of the Commission and the Department of Justice with respect to our several but necessarily overlapping roles. As I pointed out in my previous letter, the primary responsibility for enforcement of the antitrust laws rests with the Antitrust Division of the Department of Justice, rather than with this Commission. This does not, of course, mean that in our analysis of the network picture to determine what additional rulemaking action within our competence may be required in the public interest, we can ignore the national policy embodied in the antitrust laws and expressly made applicable to interstate and foreign communications in the Communications Act. Similarly, I can recognize the validity of Assistant Attorney General Barnes' position that the Department of Justice in deciding the most appropriate areas on which to focus its attention might well wish to consider the fact that the Commission had instituted a network study which was already examining into some communications problems having substantial antitrust implications and decide to defer action or the expression of any opinion until it could have the benefits of the study's work.

Inevitably the Commission and the Department must maintain close liaison in this field to avoid needless duplication of effort and unnecessary inconvenience to the private interests concerned. There must be—and in fact is—a continuing exchange of information back and forth between the two agencies. I do not think, however, it would be either possble or useful for us to attempt in advance to draw rigid lines of priority or spheres of interest. We may recognize that certain matters, such as considerations of option time are, in the light of the Commission's existing rules thereon, peculiarly proper for study and investigation by the Commission. On the other hand such questions as price maintenance agreements between stations, of the type allegedly engaged in by a number of Philadelphia AM stations, are clearly matters with which the Department of Justice has the primary responsibility to deal, even though they may be technically also within the Commission's licensing jurisdiction. But beyond this, I seriously doubt whether attempts at demarkation would be of any real value as a substitute for ad hoc determinations based upon previous interagency liaison.

If you have any further questions, please do not hesitate to write.

Sincerely yours,

George C. McConnaughey, *Chairman.*

July 26, 1956.

Hon. George C. McConnaughey,
Chairman, Federal Communications Commission,
Washington, D. C.

Dear Mr. Chairman: Thank you for your letter of July 20, 1956, in further reference to the testimony of Mr. Richard A. Moore and to the problem of division of responsibility in the antitrust field between the Commission and the Department of Justice. I very greatly appreciate your comment with respect to the matters of option time and must-buy.

With respect to the difficult question of antitrust enforcement, I would like to direct the following additional questions to the Commission:

1. When the Commission or its staff, in considering an application for a license, transfer of a license, or for any other action requiring Commission approval, feels that an issue under the antitrust laws is or may be involved, at what stage in its proceedings is information regarding the matter forwarded to the Antitrust Division of the Department of Justice?

2. Is your liaison with the Department of Justice set up in such a way that members of the Commission staff, without prior Commission action, are permitted and instructed to alert the Department whenever an antitrust issue is encountered?

3. After the Antitrust Division has been advised of the pendency of a matter before the Commission which may possibly involve antitrust questions, what

procedures does the Commission follow to ascertain the ultimate position of the Department before the Commission takes final action on the matter?

4. Does the Commission feel it would be good policy, in cases where the Department of Justice is conducting a separate investigation, to require hearings before taking any formal Commission action?

5. In taking action in these matters, after advising the Department of Justice of the presence of antitrust elements, does the Commission give careful consideration to the possibility that action by the Commission may insulate the transaction from later enforcement of the antitrust laws?

6. Would it be desirable for the Commission and the Department of Justice to work out a statement of policy, to be given public dissemination, to the effect that antitrust jurisdiction in the communications field shall be concurrent as between them, so that, on the one hand, the Commission may refuse to take action which, in its opinion, may involve violation of the antitrust laws because of time and personnel problems, but, on the other hand, its approval of an application on its taking of other action shall in no way impair the authority of the Department (after the more thorough inquiry it alone is qualified to make), to challenge the actions as violative of the antitrust laws? If legislation is needed to accomplish this objective, indicate changes that should be made.

I would appreciate your comment with respect to the above matters, since I am still somewhat concerned about the possibility that the antitrust laws may not be fully and effectively enforced in the communications field because of division of responsibility between the Commission and the Department of Justice.

Sincerely yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., January 3, 1957.

Hon. WARREN G. MAGNUSON,
United States Senate,
Washington 25, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your letter of July 26, 1956, in further reference to the dual responsibilities of this agency and the Department of Justice with respect to antitrust questions involving the communications field. In your letter you express a concern about the possibility that antitrust laws may not be fully enforced in the communications field because of the division of responsibilities between the Commission and the Department of Justice and direct certain specific questions to this Commisson relatng to the problem.

In vew of the importance of the questions which you have raised, I have presented the matter to the Commission for its consideration. The following represents the views of the Commission as a whole with the exception of Commissioner Doerfer, who was absent, and Commissioner Bartley, who was unable to approve this letter.

We should like to state at the beginning of our reply that we recognize the possibility of overlapping areas of responsibility which both this Commission and the Department of Justice have with respect to antitrust and other concentration of control questions in the communications field. We do not believe, however, that this situation, assuming a proper liaison exists between the two agencies, should have the result of impairing either enforcement of the antitrust laws by the Department of Justice or the proper consideration of antitrust questions by the Commission as an element of its public interest determinations. On the contrary, with the proper coordination of our efforts (and we think it fair to say that we have made great strides toward such coordination in recent years) the dual responsibilities of the two agencies should be able to be more fully carried out than if the entire responsibility is to be centered either in the Department or in this Commisison. For as was pointed out in our previous letter of July 20, 1956, there are certan problems which lend themselves better to handling by the Commission and others with which the Department of Justice can more efficaciously deal.

We should like to answer your questions 1 and 2 together since they both relate to the Commission's policy with respect to advising the Department of Justice that an antitrust problem appears to have arisen during the course of some Commission proceeding. Continuing liaison between the two agencies is maintained between members of the General Counsel's staff and members of the Antitrust Division of the Department of Justice. Through this liaison members of the Antitrust Division's staff are enabled to determine, without first referring the matter to the Commission, what information relating to matters of interest to them may be already in the possession of the Commission. But we do not authorize members of the Commission's staff, including those members of the General Counsel's Office who have these liaison responsibilities, to advise the Department of Justice that a particular Commission proceeding appears to present antitrust questions until the matter has first been presented to the Commission for evaluation and consideration. However, once liaison has been established with the Department with respect to a particular proceeding, the staff will keep the Department advised of future developments in that proceeding as they occur and without reference back to the Commission for its additional approval. It is impossible to make any definite statement as to the exact stage in any Commission proceeding in which information regarding significant antitrust questions is made available to the Department of Justice. It can be said, however, that every effort is made to provide the Department with this information a a sufficiently early stage so that it could take the necessary action to intervene in the Commission proceeding should the Department so decide.

At the time the Commission advises the Department of Justice that a possible antitrust question has been raised in a proceeding pending before the Commission, we also advise the Department of the status of the Commission proceeding and whether or not any hearing has been designated with respect to the matter by the Commission itself. We also make clear to the Department its rights to intervene or otherwise participate in any Commission proceeding which has been initiated or to make a formal request that the Commission initiate such a proceeding. In the absence of some formal request or other statement by the Department of Justice, however, the Commission does not believe that the fact that it has advised the Department of a possible antitrust question is grounds for deferring action by the Commission in accordance with those statutory responsibilities any more than we would have the right to ask the Department to defer any investigation or court action which it might believe appropriate pending the outcome of a Commission proceeding.

While it is not possible to answer your fourth question with any degree of absoluteness in view of the varying situations which may arise, we believe in general that the fact that the Department of Justice is conducting a separate investigation does not necessarily make advisable the holding of a hearing by the Commission before it takes any formal action in any adjudicatory proceeding. This is particularly true where the Department of Justice's investigation relates to conduct by a proposed or existing licensee of this agency which is not directly related to their operation as a licensee of this Commission but which might have a significant relationship to their character and other qualifications to be a Commission licensee. But even where the problems involved in the Department's investigation are more directly related to the communications field we do not believe that a separate Commission hearing is always necessary or even appropriate.

Thus, the Department of Justice has recently instituted civil antitrust proceedings alleging a conspiracy between the National Broadcasting Co., a licensee of this Commission, and the Radio Corporation of America, which is not a Commission licensee, aimed at securing station licenses in 5 of 8 largest markets in the country through the exercise of what the Department believes is improper economic control and pressures. The Department investigation which led to this antitrust action stemmed from certain information which was originally made available to the Department by the Commission. Shortly after the initiation of this antitrust action the Commission was faced with a situation in which the National Broadcasting Co. was seeking to purchase an additional UHF station in New Britain, Conn., and the question arose as to what action, if any, the Commission should take in the light of the antitrust action which had been filed by the Department of Justice. The Commission determined in this situation that a grant, which would help in strengthening the UHF situation with which you are familiar, would serve the public interest and that nothing would be gained by having the Commission either conduct a hearing on its own in the antitrust questions which would duplicate the proceedings more appropriately heard by the district court, or in deferring Commission approval of the transfer until the antitrust questions had been resolved. The Commission made clear, however, in granting its approval to the transfer that it was doing so without prejudice to any action arising out of the antitrust case. The Commission has taken a similar position with respect to the pending antitrust action against the Kansas City Star which is also a licensee of this agency. Your attention should be called to the converse situation which existed at the time of the promulgation of the Commission's network rules in 1941. At that time the Department of Justice brought an antitrust action against the major networks but deferred action therein and subsequently withdrew the suits upon the judicial approval of the Commission's chain broadcasting regulations.

In adopting the policies set forth above, the Commission has, of course, given consideration to the possibility that action by the Commission might be claimed to insulate a particular transaction from later enforcement by the Department of Justice under the antitrust laws. In the common carrier field it is clear that certain actions of the Commission do provide immunity from subsequent prosecution under the antitrust laws. Thus, section 221 (a) of the act provides, where the Commission authorizes a consolidation of the properties of one or more telephone companies or the acquisition of one by the other, that "thereupon any act or acts of Congress making the proposed transaction unlawful shall not apply." A similar provision with respect to telegraph merger is contained in section 222 of the act. No such provisions, however, are contained in the radio licensing provisions of title III of the Communications Act. On the contrary, section 313 of the act expressly provides that all laws of the United States "relating to unlawful restraints and monopolies and to combinations, contracts, or agreements in restraint of trade are hereby declared to be applicable * * * in state or foreign radio communications." In the light of the provisions of the act, the Commission has taken the position that an action by it in an adjudicatory proceeding finding a particular grant of a license to be in the public interest cannot and does not insulate that transaction from further challenge by the Department under the antitrust laws. On the other hand, the Commission does recognize that where it exercises its rulemaking powers, pursuant to the provisions of section 303 of the act, to expressly authorize certain types of activities by its licensees, such action, while not precluding the Department of Justice from adopting a contrary position in an action under the antitrust laws, might make the successful prosecution of such an action more difficult. Consequently, in this rulemaking area the Commission has always been particularly careful to seek and consider the advice of the Department of Justice, as well as other interested Government agencies, before taking definitive action.

If the positions outlined above are sound, as we believe they are, we do not believe that any necessity exists for working out or publishing a definitive statement or policy with respect to these matters between the Commission and the Department. Nor do we believe that any legislation is required. We have no objection to the publication of this letter and, as indicated before, have publicly stated similar positions on a number of occasions. We are inclined to believe, however, that the danger of attempting to formulate in any one document the entire and necessarily complex interrelationships of this agency and the Department of Justice in the antitrust and related fields would not be wise. The ever-present risk that certain problems might be inadvertently overlooked or that specific situations might subsequently develop which do not fit within any of the preconceived categories would more than outweigh any advantages which might be achieved by such an effort. Thus, in the absence of any controlling judicial opinion to the contrary, we believe that it would be best to adhere to the status quo with respect to the handling of these problems while endeavoring, of course, constantly to improve our liaison with the Department of Justice.

By direction of the Commission:

GEORGE C. McCONNAUGHEY, *Chairman.*

19. LETTER DATED JULY 20, 1956, FROM SENATOR MAGNUSON TO JUDGE HANSEN OF THE ANTITRUST DIVISION OF THE DEPARTMENT OF JUSTICE AND THE LATTER'S REPLY DATED SEPTEMBER 12, 1956, RELATING TO THE DIVISION OF RESPONSIBILITY FOR ENFORCEMENT OF THE ANTITRUST LAWS AS BETWEEN THE DEPARTMENT AND THE FCC

[For an earlier letter from the Department of Justice on this subject see page 1673.]

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
July 20, 1956.

Judge VICTOR R. HANSEN,
Assistant Attorney General, Antitrust Division,
Department of Justice, Washington, D. C.

DEAR JUDGE HANSEN: On June 22, 1956, I wrote to Judge Barnes expressing my continued concern over the lack of clarity as to division of responsibility between the Department of Justice and the Federal Communications Commission with respect to enforcement of the antitrust laws in the television field.

On July 17, 1956, the members of the FCC appeared again before the Senate Interstate and Foreign Commerce Committee. We again raised this question with the Commissioners and are advised that they are preparing a letter setting forth their views on the matter. I would appreciate it if you would do the same with respect to the position of the Department of Justice, if possible, after some consultation with the Commission to see if some more definite division of responsibility can be worked out.

We have now concluded our presently scheduled hearings, but are keeping the record open for the filing of additional statements until September 15, 1956. I would appreciate it if you would submit your comments by that date.

Very truly yours,

WARREN G. MAGNUSON, *Chairman.*

DEPARTMENT OF JUSTICE,
Washington, September 12, 1956.

HON. WARREN G. MAGNUSON,
United States Senate,
Washington, D. C.

MY DEAR SENATOR MAGNUSON: This is in reply to your letter of July 20, 1956, in which you expressed your "continued concern over the lack of clarity as to division of responsibility" in antitrust law enforcement in the television field between the Department of Justice and the Federal Communications Commission. You asked that, by September 15, 1956, I submit my comments concerning "some more definite division of responsibility" in this area.

At the outset, clearly set by Congress are the antitrust enforcement responsibilities of this Department and the Federal Communications Commission. Section 4 of the Sherman Act obliges the Attorney General to enforce that law. And section 15 of the Clayton Act imposes a similar responsibility on the Attorney General for that act. The Federal Communications Commission, in contrast, has no power to enforce the Sherman Act and only limited authority, never thus far exercised, to enforce Clayton Act section 7 against "common carriers engaged in wire or radio communication or radio transmission of energy" (15 U. S. C. 21).

More broadly, however, the Commission is required to "encourage the larger and more effective use of radio in the public interest" (47 U. S. C. sec. 303 (g)). Implicit in the duty to protect the public interest is the necessity of giving proper consideration to the national economic policy expressed in the antitrust laws. In complying with this duty it is directed to refuse a license to anyone whose license has been revoked by a court as a penalty for violation of the antitrust laws (47 U. S. C. sec. 311). Beyond that, the Federal Communications Commission has no power to grant a broadcasting licensee any antitrust immunity.[1] Finally, section 313 of the Communications Act of 1934 provides in pertinent part:

---

[1] The limited authority granted to the Commission to exempt a consolidation or merger of wire communication common carriers (47 U. S. C. sec. 222 (c) (1)) from the operations of sec. 7 of the Clayton Act and other antitrust laws is not pertinent to our present area of interest.

"All laws of the United States relating to unlawful restraints and monopolies and to combinations, contracts, or agreements in restraint of trade are hereby declared to be applicable to * * * interstate and foreign radio communications."

As you know, however, entry into the business of broadcasting requires the issuance of a license by the Federal Communications Commission. In addition to controlling entry, the Commission has authority to and does regulate many broadcasting activities. Consequently, if the licensee has shaped his action to conform with rules of the Commission, one court at least, in a private antitrust suit, has deemed "it improper to grant a preliminary injunction * * * where the Federal Communications Commission, after protracted hearings * * * has specifically sanctioned many of the important terms of the affiliation contracts" there challenged. *Federal Broadcasting System* v. *American Broadcasting Company* (167 F. 2d 349, 352 (2d Cir. 1948)). (Compare *United States* v. *Far Eastern Conference, et al.*, 342 U. S. 570, 574–575 (1952); *Seatrain Lines, Inc.* v. *Pennsylpany* (167 F. 2d 349, 352 (2d Cir. 1949)). (Compare *United States* v. *Far Eastern* with *S. S. W. Inc.* v. *Air Transport Ass'n of America*, 191 F. 2d 658, 662 (D. C. Cir. 1951).) In light of such uncertainty regarding the timing and extent of judicial scrutiny under the antitrust laws, the Department of Justice must proceed with caution before challenging certain business activities of broadcasting licensees.

You may rest assured, however, that the Antitrust Division will continue its several pending investigations into alleged violations of the antitrust laws by various radio and television broadcasters and by networks. We can do no less if we are to fulfill the responsibilities expressly imposed by Congress on the Attorney General in the Sherman and Clayton Acts.

Meanwhile, I am confident that close and continuous liaison work by the legal staff of the Commission with the Antitrust Division will help to avoid any possibility that the Sherman and Clayton Acts are not being properly enforced in the broadcasting field. All communications matters having antitrust implications that are referred to the Department of Justice by the Commission will continue to receive our prompt attention and investigation. In turn, when the Antitrust Division receives complaints, or on its own initiative institutes an investigation of alleged antitrust violations by Commission licensees, it will keep the Commission informed of its actions.

In order to maintain the type of cooperation between the two agencies that we all desire, we have furnished copies of this letter to appropriate members of the legal staff of the Federal Communications Commission for their information and comment.

Sincerely yours,

VICTOR R. HANSEN,
Assistant Attorney General,
Antitrust Division.

---

20. EXCHANGE OF CORRESPONDENCE BETWEEN SENATOR MAGNUSON AND CHAIRMAN McCONNAUGHEY REGARDING CERTAIN FINANCIAL DATA FOR THE TELEVISION INDUSTRY IN 1955

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., June 6, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I am enclosing an exchange of correspondence between Senator Bricker and myself concerning his request for certain financial data for the television industry in 1955.

In view of the fact that the requested information brings up to date a large part of the television financial data previously requested by your committee, and supplied by me under letter dated January 3, 1956, I am enclosing a copy of the 1955 data which we are sending at this time to Senator Bricker.

The Commission will be pleased to furnish additional information or assistance if you so desire.

Sincerely yours,

GEORGE C. McCONNAUGHEY, *Chairman.*

SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
July 16, 1956.

Hon. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR MR. MCCONNAUGHEY: This will acknowledge, rather belatedly I am afraid, your letter of June 6, 1956, enclosing exchange of correspondence between Senator Bricker and yourself, together with a copy of certain financial data for 1955 which you forwarded to Senator Bricker.

In accordance with your comment in your letter of that date to Senator Bricker, we have to this date kept this information confidential. However, I am advised that this information has now been made a part of the record before the Antimonopoly Subcommittee of the House Judiciary Committee. Will you please advise me whether this is the case, since, if it is, there would be no need in our continuing to give confidential treatment to the information.

Thank you for your courtesy in furnishing this information to me.

Sincerely yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., August 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your letter of July 16, 1956, which refers to my letter of June 6, 1956, to you, in which was enclosed an exchange of correspondence between Senator Bricker and myself, together with a copy of certain financial data for 1955.

This same information was submitted to Congressman Celler on the same basis as that on which it was furnished to you, for his use in connection with hearings before the Antimonopoly Subcommittee of the House Judiciary Committee. You have been correctly informed that it has now been made a part of the record before that subcommittee.

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman.*

21. STATEMENT OF NATIONAL WOMAN'S CHRISTIAN TEMPERANCE UNION IN SUPPORT OF S. 825, TO REGULATE RADIO AND TELEVISION NETWORKS (THIS WAS INSERTED IN THE RECORD ON JULY 18, 1956)

STATEMENT OF NATIONAL WOMAN'S CHRISTIAN TEMPERANCE UNION

This statement is filed on behalf of the National Woman's Christian Temperance Union. Our bureau of legislation is at 144 Constitution Avenue NE., Washington, D. C.

The National Woman's Christian Temperance Union is interested in the problems of children and youth. We have two youth organizations: Children from 7 to 14, and young people 15 to 25.

Television, a development of the new age, is peculiarly interesting to children who sit in absorbed silence hour after hour watching the figures perform on the screen. Like all audiovisual communications it has a profound influence on their unformed minds, and also on the thinking of young people seeking to adjust to the world outside home and school, and sensitive to suggestions.

It is obvious from the present makeup of presentations on the screen that a proper adjustment to the requirements of a healthy social community cannot be left to the mercies of self-regulation. As was the case with the motion-picture industry, a certain type of mind that cannot be convinced that the best road to financial success does not lie along the path of cheap sensationalism and appeals to morbid curiosity inevitably shows up in positions of power in the entertainment field. Consequently, the Congress in its wisdom has seen fit to provide Government agencies empowered to control the communications industry, including radio and television. So far, so good.

But this control is now exercised over the individual stations which must from time to time come up for a review of their activities, when applying for a renewal of their licenses, and are subject to complaints.

From the fruit of bitter experience, we have learned that the individual motion-picture exhibitor, the individual newsstand owner in this day of big-business combination is not left to exercise his own judgment in the matter of selection of materials for his own public. Complaints made to these individuals brought out the existence of a pressure type of contract under which a motion-picture exhibitor was compelled to buy a blind package of inferior pictures in order to obtain 1 or 2 worthwhile films.

It was testified at House hearings on obscene literature that in order to get the Curtis publications newsstand operators had to accept a quantity of smutty books.

Here we are finding the pattern again. Local stations in order to obtain network programs are obliged to accept programs and ads obnoxious to their own listeners. In their efforts to stay afloat they will accept the risk of censure by the Federal Communications Commission, whose problems become multiplied by these industry conditions.

We believe it is highly desirable that the chains themselves be subject to the supervision of the Federal Communications Commission and hold their licenses under the same conditions as the stations. In this way Congress through its agency, the Federal Communications Commission, will be able to exercise some wholesome supervision over such activities and to have better control of the stations.

We also believe that program content should be subject to Federal regulation.

We cannot have a sound economy when chains are allowed to become monopolies and completely dominate the life of the local stations. Nor should there be one law for the network and another for the station.

We recommend the passage of S. 825.

Respectfully submitted.

ELIZABETH A. SMART
(For National Woman's Christian Temperance Union).

---

22. LETTER FROM LEONARD H. GOLDENSON, PRESIDENT OF AMERICAN BROADCASTING-PARAMOUNT THEATRES, INC., DATED NOVEMBER 16, 1956, REAFFIRMING THE POSITION OF ABC WITH RESPECT TO THE NEED FOR ADDITIONAL TELEVISION STATIONS

AMERICAN BROADCASTING-PARAMOUNT THEATRES, INC.,
New York, N. Y., November 16, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce, United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: Because of an informal inquiry by one of your staff members, I should like to state unequivocally that the position of the American Broadcasting Co. with respect to the need for additional television stations to properly serve the public interest remains unchanged.

Your committe staff member has made some reference to the articles which appeared in some newspapers and trade periodicals which ascribed to ABC the concept that better programing would solve our station scarcity problems. This position wa sattributed to Oliver Treyz, our vice preseident in charge of the ABC television network. It should be noted that Mr. Treyz reiterated the position was attributed to Oliver Treyz, our vice president in charge of the outlets in markets where adequate competitive facilities have been allocated but not granted such as Boston, Pittsburgh, St. Louis, and Miami. In addition, ABC again urged that early consideration be given to its allocation plan previously submitted to the Commission which would, if implemented, provide at least three competitive facilities, all UHF or all VHF, in markets such as New Orleans, Louisville, and Fresno.

The import of Mr. Treyz's position was that, with these additional outlets, the ABC programing structure, which is constantly being improved, would afford us better opportunity to compete effectively.

I hope to see you next time I am in Washington.

Sincerely,

LEONARD H. GOLDENSON.

23. LETTER DATED JULY 13, 1956, FROM GEORGE WESTHOFF OF PHILADELPHIA, PA., COMMENTING ON CENTRALIZATION OF CONTROL OF TELEVISION

PHILADELPHIA, PA., *July 13, 1956.*

WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee,
Washington, D. C.

MY DEAR SENATOR: I appreciate your kind offer allowing me to submit my views about television programing to be placed in the official record of the hearings. I have many ideas to improve television and I will try to list the ones I consider the most important for the general welfare of all concerned.

Believing that since I helped develop television, it has fallen and is being controlled by too few in the United States and believe that many more should have an opportunity to take part in and expand this great industry. What I am trying to say is that large newspapers now have television stations and their reporters and commentators now have the enviable positions of master of ceremonies on our larger shows. In other words they have about five good jobs and seem to get the pick of the programs constantly now for several years and I would like to point out in show business the people seeing the same entertainers for too long a period get tired of the best, so it is necessary for these broadcasting companies to develop more leaders in this field constantly. We have too many news programs. They keep repeating the same thing from morning to night. They should know by now that the American people get tired of hearing the same thing over and over again. For an example at 11 o'clock at night when you would like to see a good movie or show, these newscasters are on all the stations at the same time and keep giving you the same news as heard earlier in the evening and if they have one of their pet subjects such as a public figure who is in the limelight they really kill this subject by repeating it over and over from Monday to Sunday. When we have a good civic problem on that is important to the community or the Government they rush the speakers and guest so fast that they never allow a good finish of a debate because of the shortness of the time allowed yet when it is all over the next program is usually one of those ancient cowboy stories that we have probably seen a half-dozen times before and repeat programs is really a bad defect because when I see a show more than twice I am tired of it for the rest of my life. It appears when these foreign personalities come to the United States they rush them to a television station as soon as they get off the boat but many of our fine citizens will never see the inside of a television station. Let us give our own this fine opportunity. Hoping for many programs that benefit the sick through charity and educate the people to cure themselves of many diseases with education and help us solve our many crimes that has increased in this country.

Sincerely yours,

GEORGE WESTHOFF.

24. LETTER DATED JANUARY 3, 1957, FROM GEORGE C. MCCONNAUGHEY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION, RELATIVE TO TESTIMONY OF J. W. BOLER RE: TARIFF RATES AND REGULATIONS OF A. T. & T., ETC.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., January 3, 1957.

Hon. WARREN G. MAGNUSON,
Senate Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This is in further reference to your letter of July 19, 1956, relative to the testimony of Mr. J. W. Boler, president of the North Dakota Broadcasting Co., before the Senate Interstate and Foreign Commerce Committee, regarding the regulations and policies of the Commission with respect to licensing television broadcasters to construct and operate their own radio relay facilities, and tariff rates and regulations of the American Telephone & Telegraph Co. applicable to television transmission services and facilities.

For the most part, Mr. Boler's testimony before your committee is directed to the general question as to whether broadcasters should be authorized to provide their own relay facilities regardless of the availability of common-carrier facilities. As you know, there has been pending before the Commission a general rulemaking proceeding (Docket No. 11164) designed to explore this question.

The arguments advanced by Mr. Boler with respect to the alleged inequities and deficiencies of the existing rules and policies of the Commission and the deterrent effects thereof on the development of television service in the smaller communities of the Nation have all been presented to the Commission by the pleadings filed by Mr. Boler and others in the proceeding.

The Commission has not been unmindful of the various considerations raised by Mr. Boler and, accordingly, for some time past, has been granting applications filed by television broadcasters for authority to construct and operate their own radio-relay systems in cases where common-carrier facilities would have to be constructed in order to serve the broadcaster, and where it has been shown that the broadcaster can more quickly provide such facilities for himself. Such authorizations have been granted in cases involving nonavailability of common-carrier facilities, and the effect has been to provide the means by which many small stations have been able to obtain network programs and service on an economical basis. The Commission intends to continue to make such authorizations on a case-by-case evaluation pending the outcome of the proceedings in Docket No. 11164.

With respect to Mr. Boler's alleged difficulties in dealing with representatives of A. T. & T. in connection with his application to this Commission for an authorization for a private relay system from Minneapolis to Fargo, we have, of course, no first-hand knowledge of the conversations or dealings to which he refers in his testimony. As Mr. Boler states, the Commission's rules presently contemplate the authorization of such private systems only in cases where common carrier facilities are not available. In pursuance of this provision of the rules, the Commission's staff has customarily requested the applicants for private relay authorizations to furnish a statement from the common carrier operating in the area involved as to the availability or nonavailability of common-carrier facilities. However, under the present policy, failure to obtain such a statement does not preclude grant of an authorization.

Insofar as the charges of A. T. & T. for television transmission service are concerned, as you know, the company, at the request of the Commission, has made a series of studies designed to show its investment, expenses and return on investment attributable to the rendition of such service. Based upon our reviews and analyses of these studies and the level of earnings indicated thereby, we have concluded that we would not be warranted at this time in instituting formal action on our own motion looking toward downward adjustments in the overall level of rates applicable to the service. However, we are giving continuing consideration and study to the rates and rate structure involved, and we shall take appropriate action to effect such adjustments therein as our studies show to be desirable.

By direction of the Commission:

GEORGE C. MCCONNAUGHEY, *Chairman.*

25. LETTER DATED DECEMBER 12, 1956, FROM THOMAS E. ERVIN, VICE PRESIDENT, NATIONAL BROADCASTING COMPANY, SUPPLYING INFORMATION REQUESTED DURING TESTIMONY OF ROBERT SARNOFF

NATIONAL BROADCASTING CO., INC.,
New York, N. Y., December 12, 1956.

KENNETH A. COX, Esq.,
Special Counsel, United States Senate Committee on Interstate and Foreign Commerce, United States Courthouse Building, Seattle 4, Wash.

DEAR KEN: Here is the information requested in your letter of November 19, 1956:

We have worked up the percentage of television network broadcast time which was unsponsored during the composite week, and it comes to approximately 43 percent of our network schedule. This includes the sustaining portions of such programs as Ding Dong School, Today, Home, and Tonight, which were available for sponsorship but which were either completely or partially unsponsored during the composite week. It also includes such programs as American Forum, Frontiers of Faith, and The NBC Opera.

We did not include among these unsponsored programs such programs as Meet the Press or NBC News, as these programs were sponsored during the composite week. However, you will recall that the members of the committee indicated that they might classify these as "public service" programs. Because of the problem of defining "public service," in computing the above percentage we have used the standard of whether a program or a portion of it is unsponsored.

I hope that this will answer any questions you may have. If it does not, please feel free to call upon me for additional information.

Sincerely,

THOMAS E. ERVIN.

26. EXCERPT FROM TESTIMONY OF BILL HOOVER, MANAGER OF STATION KTEN, ADA, OKLA.

Bill Hoover, of Ada, Okla., appeared before the committee on May 14, 1956. Since most of his testimony referred to allocations it will be found in full beginning at page 873 in the second volume on the UHF–VHF allocations problem. However, one brief passage relates to network-affiliate relations and is therefore again set forth at this point, as follows:

"Mr. HOOVER. * * *

"Now with regard to the networks and their attitude concerning satellite operations. I believe it has been conclusively proved by this committee that the networks are dedicated to the proposition of covering the United States with as few stations as possible. If there is some sparsely populated area which does not receive service, then that area will just have to struggle along without service.

"Mr. COX. What of their argument, Mr. Hoover, that it is necessary to attempt to get this coverage from a few powerful stations in order to make television a competitive medium, as far as advertising generally is concerned?

"Mr. HOOVER. What is wrong with having competition out in the sparsely settled areas, just as well as having competition in the metropolitan areas? It doesn't add up that competition can only exist in just the metropolitan areas, sir.

"Mr. COX. I think the point they try to make is that the cost per thousand goes up in a more sparsely populated area, and that this renders television competitively unequal, as far as magazine, newspaper, or radio is concerned; and that it is, therefore, impossible to develop a television service on as broad a basis, for instance, as we now have radio service.

"Mr. HOOVER. I would like to answer that a little bit later when I get into coverages, because I will show how, if each station is paid for its actual coverage, then there will be some left for the fringe area. I would like to get into that in the second phase, if you don't mind.

"Mr. COX. Fine.

"Mr. HOOVER. Since the basic station in the metropolitan area is such a lucrative property for the network, the network, rather than offend its affiliate, will readily agree to allow the affiliate to feed its fine programs to the newly born satellite, in the public interest, convenience, and necessity. In doing so, the network knows full well that the actual profit and coverage of the satellite will ultimately accrue to the basic network station, which will enable the network to maintain its principle of 'coverage of the United States with as few stations as possible,' because the 2 then are considered as 1, as you see.

"Of course, the local station, which had been knocking on the doors of the networks for months and months and months, requesting affiliation as a legitimate local service to the citizens of the area in question, can be told: 'We don't need you; we have coverage in that area,' and the big squeeze is on.

"Mr. COX. Now is it the current practice of the networks to regard satellites as additional affiliates of the network, or do they——

"Mr. HOOVER. Well, it can be molded into the coverage of the basic station. It is a lump, if you please; or filling out a hollow spot. There is one thing I would like to point out right here in favor of the networks right along this line, and that is that I sincerely believe that in many instances the networks would prefer to affiliate the local or area independent station in preference to a satellite station, if it were not for the tremendous pressure applied to the network by the basic affiliate, and particularly by a basic affiliate in a city where there are less than three VHF outlets.

"A network, you know, must get along with its affiliates in the principal cities, or the affiliate in a principal city where there are less than three VHF outlets can reject the network's programing in favor of another network which is anxiously waiting just to get his programing into the market. So all of the ills of the satellite problem cannot honestly be laid at the door of the networks.

In fact, if the proposals that I will present here later were adopted, the networks would seldom be put in the awkward position described above. And they are definitely put in a very awkward position."

27. LETTER FROM RICHARD S. SALANT, VICE PRESIDENT, COLUMBIA BROADCASTING SYSTEM, INC., NEW YORK, N. Y., DATED JANUARY 23, 1957, RE AVERAGE WORKING CAPITAL DEVOTED TO TELEVISION NETWORKING

COLUMBIA BROADCASTING SYSTEM, INC.,
New York, N. Y., January 23, 1957.

Mr. KENNETH A. COX,
Special Counsel, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR KEN: This is in reference to your letter of December 11, 1956, concerning information you have requested from us.

The information you requested on the average working capital (excess of current assets over current liabilities) devoted to television networking is, for the fiscal years 1951–56, as follows:

End of fiscal year—	*Amount (rounded to nearest $100,000)*
1951	$8,000,000
1952	10,700,000
1953	14,500,000
1954	22,500,000
1955	30,500,000
1956	33,000,000

The above figures for 1951–55 are estimates based on review, analysis, and allocation. The figure for 1956 has been estimated without such review, analysis, or allocation.

Sincerely,

RICHARD S. SALANT, *Vice President.*

28. CORRESPONDENCE FROM SENATOR WARREN G. MAGNUSON TO TELEVISION BUREAU OF ADVERTISING AND OTHERS REGARDING CLASS A CLEARANCES FOR SYNDICATED FILMS REFERRED TO IN TESTIMONY OF DR. FRANK STANTON, PRESIDENT OF CBS

SEATTLE 4, WASH., *November 13, 1956.*

Mr. NORMAN E. CASH,
Television Bureau of Advertising, Inc.,
New York 22, N. Y.

DEAR MR. CASH: During his testimony before the Senate Committee on Interstate and Foreign Commerce on June 13, 1956, at page 3460, Dr. Frank Stanton, of CBS, quoted from a speech made by Mr. Treyz on April 18, 1956, before the convention of the National Association of Radio and Television Broadcasters. In this quotation reference was made to a number of advertisers who had succeded in obtaining satisfactory clearances in class A time. In addition, two others are listed in a brochure published by TVB. I wish to get in touch with these advertisers or their agencies with respect to this matter and would appreciate it if you could advise me as to the names and addresses of the persons from whom your organization obtained the information underlying Mr. Treyz's speech.

The advertisers and the programs in question are as follows:

Advertisers	*Programs*
Ohio Oil Co	Man Behind the Badge.
Lucky Lager Beer	Great Gildersleeve.
Langendorf Bakeries	Steve Donovan.
Heileman Brewing Co	Racket Squad.
General Electric	The Turning Point.
Bowman Biscuit Co	Dr. Hudson's Secret Journal.
Socony Mobil-Oil	Socony Mobil Theater.
Colonial Stores	Great Gildersleeve.
Carter Products	Mr. District Attorney.

It may be that you yourself can supply me with some of the information which I would like to have. I have seen a copy of the very interesting presentation which you published entitled "Advertising's All-Purpose Working Tool." This matter is covered at what would apparently be pages 26 and 27 of this brochure.

In addition to listing the programs and clearances obtained you give the actual clearances for the Socony-Mobil Theater, market by market, showing the hour and the day on which clearance was obtained. I wonder whether you could furnish me similar information with respect to the other eight programs referred to in your brochure.

Thank you for your attention to this matter. May I have the names and addresses requested at your earliest convenience so that I can get in touch with the individuals concerned in the near future?

With kind regards, I am,

Very truly yours,

WARREN G. MAGNUSON, *Chairman.*

TELEVISION BUREAU OF ADVERTISING, INC.,
New York, N. Y., November 20, 1956.

Senator WARREN G. MAGNUSON,
United States Courthouse Building,
Seattle, Wash.

DEAR SENATOR MAGNUSON: In reply to your letter of November 13, TVB is happy to supply you with the names of our contacts who furnished us the information on clearances of syndicated programs, as subsequently referred to by (*a*) Mr. Oliver Treyz in an address to the convention of the National Association of Radio & Television Broadcasters in Chicago on April 18, (*b*) Dr. Frank Stanton, of CBS, in testimony before your committee on June 13, and (*c*) as listed in our presentation, Advertising's All-Purpose Working Tool.

As you will note from the list below covering the eight program-sponsor situations, we did not, in most cases, go to the advertising agency for information on clearances, but rather to the vendor of the film, i. e., the program syndicator.

Here, for your information, is a list of the individuals from whom we obtained the clearance information:

Advertiser	Program	Source of information
Carter Products	Mr. District Attorney	Mr. Eugene Moss, CBS TV Film Sales, Inc., 485 Madison Ave., New York, N. Y.
Ohio Oil Co	Man Behind the Badge	
Bowman Biscuit Co	Dr. Hudson's Secret Journal	
Heileman Brewing Co	Racket Squad	
Lucky Lager Beer	Great Gildersleeve	
General Electric	Turning Point [1]	Mr. Thomas Lynch, Young & Rubicam, Inc., 285 Madison Ave., New York, N. Y.
Colonial Stores	Great Gildersleeve	Mr. H. Weller Keever, NBC Television Films, 663 5th Ave., New York, N. Y.
Langendorf Bakeries	Steve Donovan	

[1] Reanalysis following presentation reduces number of class A clearances from 66 to 62.

In all cases we did not obtain the precise details for the program's clearance as was done in our case history of Socony Mobil Theater. For that reason I have supplied, as requested in your letter, the names of our sources of information from which stemmed Mr. Treyz' statement of April of this year.

Best wishes.

Very truly yours,

NORMAN E. CASH.

NOVEMBER 29, 1956.

Mr. EUGENE MOSS,
CBS Television Film Sales, Inc.,
New York, N. Y.

DEAR MR. MOSS: When Dr. Stanton, of CBS, appeared before the Senate Interstate and Foreign Commerce Committee last June, he made reference to the successful clearance on a spot basis of certain syndicated film programs. This information was based upon studies made by the Television Bureau of Advertising.

I recently have been advised by Mr. Cash of that organization that you were the source of the information upon which Mr. Treyz based his address to the convention of the National Association of Radio & Television Broadcasters with respect to certain of these programs. According to this information, you supplied the data with respect to the clearance for Carter Products for Mr. District Attorney, Ohio Oil Co., for Man Behind the Badge, Bowman Biscuit Co., for Dr. Hudson's Secret Journal, Hielman Brewing Co. for Racket Squad, and Lucky Lager Beer, for Great Gildersleeve.

I am wondering if you could provide me with a list of the stations on which clearance for each of these programs was extended together with the time and date at which they were broadcast in each market. In addition, I would appreciate it if you could tell me whether or not these advertisers desired clearance in other markets in addition to those for which formal orders were placed. As stated by Mr. Treyz in his speech, and in TV–B's brochure entitled "Advertising's All-Purpose Working Tool," it would appear that nearly 100 percent clearance was obtained in class A time in all the markets ordered. It has been suggested to the committee by Mr. Moore of KTTV in a reply memorandum to the testimony of Dr. Stanton, that advertisers placing programs on a spot basis usually do not order a station until they have already had some advance indication that a desirable time period is available. He indicates that this is in distinction to the ordering practices of the network where the stations order without advance check simply on the basis of the option arrangements.

What I am, therefore, getting at with regard to this latest point is the possibility that your records may show that these advertisers would like to have had broader clearances but never placed orders for additional markets because they had no reason to believe that satisfactory time was available. For instance, did Carter Products initially seek placement for Mr. District Attorney in more than 23 markets? If so, I would appreciate it if you could tell me approximately how many additional markets were investigated, and if your records indicate this I would like to know what these other markets are?

I am sorry to impose on you with regard to this matter, but I would like to get this question cleared up as fully as possible for our records.

Very truly yours,

WARREN G. MAGNUSON,
United States Senator.

CBS TELEVISION FILM SALES, INC.,
New York, N. Y., December 7, 1956.

Senator WARREN G. MAGNUSON,
United States Courthouse Building,
Seattle, Wash.

DEAR SENATOR MAGNUSON: The information which I supplied to the Television Bureau of Advertising was based on the published report issued by the N. C. Rorabaugh Co., dated January 25, 1956.

This is a report on spot television indicating the market-by-market television advertising of sponsors of television programs. This is a standard, authoritative, published record of spot television; it is issued quarterly.

It does not provide the sort of information which you have requested in your letter to me dated November 29. It is entirely possible that there are additional markets, with class A nighttime clearance, besides those reported in the Rorabaugh study. This study does not purport to be exhaustive; in fact, it can't be since not all stations in all markets are willing to submit their schedules and sponsor list to Rorabaugh. Nevertheless, the study is the most complete and thorough report on spot television that is available.

For complete, exhaustive information on any specific client, it would be necessary to go directly to the client or to his advertising agency. This is information which is neither mine nor to which I have access. I am submitting the information that I obtained from Rorabaugh. And, as I have mentioned, the complete information could be supplied by the clients or their agencies.

Very truly yours,

EUGENE W. MOSS,
Sales Promotion Manager.

NOVEMBER 29, 1956.

Mr. THOMAS LYNCH,
Young & Rubicam, Inc.,
New York, N. Y.

DEAR MR. LYNCH: When Dr. Stanton of CBS appeared before the Senate Interstate and Foreign Commerce Committee last June he made reference to the successful clearance on a spot basis of certain syndicated film programs. This information was based upon studies made by the Television Bureau of Advertising.

I recently have been advised by Mr. Cash of that organization that you were the source of the information upon which Mr. Treyz based his address to the convention of the National Association of Radio and Television Broadcasters with respect to certain of these programs. According to this information, you supplied the data with respect to the clearance for General Electric for Turning Point.

I am wondering if you could provide me with a list of the stations on which clearance for this program was extended together with the date and time at which it was broadcast in each market. In addition, I would appreciate it if you could tell me whether or not this advertiser desired clearance in other markets in addition to those for which formal orders were placed. As stated by Mr. Treyz in his speech, and in TvB's brochure entitled "Advertising's All-Purpose Working Tool," it would appear that nearly 100 percent clearance was obtained in class A time in all the markets ordered. It has been suggested to the committee by Mr. Moore of KTTV in a reply memorandum to the testimony of Dr. Stanton, that advertisers placing programs on a spot basis usually do not order a station until they have already had some advance indication that a desirable time period is available. He indicates that this is in distinction to the ordering practices of the network where the stations order without advance check simply on the basis of the option arrangements.

What I am, therefore, getting at with regard to this latest point is the possibility that your records may show that this advertiser would like to have had broader clearance but never placed orders for additional markets because he had no reason to believe that satisfactory time was available. Did General Electric desire clearance in more than 77 markets? If so, I would appreciate it if you could tell me approximately how many additional markets were investigated, and if your records indicate this I would like to know what these other markets are.

I am sorry to impose on you with regard to this matter but I would like to get this question cleared up as fully as possible for our records.

Very truly yours,

WARREN G. MAGNUSON,
United States Senator.

YOUNG & RUBICAM, INC.,
New York, N. Y., December 17, 1956.

Senator WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

DEAR SENATOR: I am sorry that the reply to your letter of November 29 has been a little delayed but I have been out of town on business and was not able to give it my attention until now.

As requested we are enclosing a complete list showing the day, time, and starting date for all markets used on the Turning Point.

The procedure followed on this program for General Electric was:

(1) To determine the markets to be used, and

(2) Requesting half-hour availabilities from all stations in all markets for a starting date of week of March 5.

As stated by Mr. Treyz we were able to clear nearly 100 percent of the required markets (only Lancaster, Pa., was unable to supply satisfactory time). However, by looking over this list you will note that 100 percent are not in class A time, many periods being before 7 p. m. and after 10:30 p. m.

I believe that the above information has covered all your questions but if any additional information is required I am sure that we can satisfactorily supply it.

Very truly yours,

THOMAS J. LYNCH.

[2] Effective June 2.

NOVEMBER 29, 1956.

Mr. H. WELLER KEEVER,
NBC Television Films, New York, N. Y.

DEAR MR. KEEVER: When Dr. Stanton of CBS appeared before the Senate Interstate and Foreign Commerce Committee last June, he made reefrence to the successful clearance on a spot basis of certain syndicated firm programs. This information was based upon studies made by the Television Bureau of Advertising.

I recently have been advised by Mr. Cash of that organization that you were the source of that information upon which Mr. Treyz based his address to the Convention of the National Association of Radio & Television Broadcasters with respect to certain of these programs. According to this information, you supplied the data with respect to the clearance for Colonial Stores for Great Gildersleeve, and Langendorf Bakeries for Steve Donovan.

I am wondering if you could provide me with a list of the stations on which clearance for each of these programs was extended together with the date and time at which they were broadcast in each market. In addition, I would appreciate it if you could tell me whether or not these advertisers desired clearance in other markets in addition to those for which formal orders were placed. As stated by Mr. Treyz in his speech, and in TvB's brochure entitled "Advertising's All-Purpose Working Tool," it would appear that nearly 100 percent clearance was obtained in class A time in all the markets ordered. It has been suggested to the committee by Mr. Moore of KTTV in a reply memorandum to the testimony of Dr. Stanton, that advertisers placing programs on a spot basis usually do not order a station until they have already had some advance indication that a desirable time period is available. He indicates that this is in distinction to the ordering practices of the network where the stations order without advance check simply on the basis of the option arrangements.

What I am, therefore, getting at with regard to this latest point is the possibility that your records may show that these advertisers would like to have had broader clearances but never placed orders for additional markets because they had no reason to believe that satisfactory time was available. For instance, did Colonial Stores want clearance in more than 13 markets for the Great Gildersleeve? If so, I would appreciate it if you could tell me approximately how many additional markets were investigated, and if your records indicate this I would like to know what these other markets are.

I am sorry to impose on you with regard to this matter, but I would like to get this question cleared up as fully as possible for our records.

Very truly yours,

WARREN G. MAGNUSON,
United States Senator.

CALIFORNIA NATIONAL PRODUCTIONS, INC.,
New York, N. Y., January 14, 1957.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This is in reply to your letter of November 29, 1956, to Mr. H. Weller Keever. We have endeavored to check our records and the memories of our personnel in an effort to answer your letter as completely and accurately as possible.

Attached hereto are lists of stations on which clearance was obtained on behalf of Colonial Stores for the Great Gildersleeve and for Langendorf Bakeries for Steve Donovan. In some instances the day and time of broadcast may have changed after the commencement of the series, but such change would most likely have been to a day or time more acceptable to the sponsor.

In addition to these two series with respect to which you requested information, we supplied information to the Television Bureau of Advertising, Inc., on the sponsorship of the Great Gildersleeve on behalf of Lucky Lager Beer, and assumed that you would be interested in the same information in connection with that sale and we attach it hereto.

To the best of our knowledge, no additional markets were wanted by any of these three clients.

None of the clients expressed a desire to clear stations in additional markets for any time period.

Very truly yours,

ROBERT D. LEVITT, *President.*

Colonial Stores—The Great Gildersleeve

Station	Market	Starting date	Day	Original time cleared

29. Reply to Comments of KTTV, Dated October 29, 1956

(Prepared for the Senate Committee on Interstate and Foreign Commerce by Columbia Broadcasting System, Inc., January 1957)

Reply to Comments of KTTV, Dated October 29, 1956

On March 26, 1956, Richard A. Moore, president of KTTV, Inc., made a statement (hereinafter referred to as the statement) before this committee on behalf of KTTV. The chairman requested the networks to respond to the statement. When Dr. Frank Stanton, president, Columbia Broadcasting System, Inc., testified before the committee on June 12 and 13, 1956, he submitted, along with other documents, a memorandum concerning the statement of Richard A. Moore (hereinafter referred to as the memorandum) dealing specifically with the statement.

Under date of October 29, 1956, KTTV filed its comments (hereinafter referred to as the comments) on the memorandum. The comments purport to be a "comprehensive and detailed reply" to the memorandum, enabling the committee to "properly assess the validity of the KTTV position" (comments, p. 1).

In the comments, KTTV objects to the CBS characterization of the statement as "inaccurate" and "misleading," and its use of other terms like "irresponsible," "unsubstantiated," and "false" with respect to portions of the statement. KTTV further asserts that CBS' specific allegations of inaccuracy were relatively few[1] and that they involved a technique whereby CBS, after paraphrasing the KTTV statement and changing its meaning, attempted to refute the changed version. In 20 serially numbered sections KTTV purports to reply to each allegation of inaccuracy made by CBS after first "correcting," where necessary, the CBS version of the KTTV statement. In the process, it questions the significance of some of the data submitted by CBS in the memorandum and reiterates and reargues many of the principal contentions contained in its statement. It also supplies additional data in support of its contentions.

While recognizing the desirability of putting an end to the cross-talk between KTTV and CBS, we believe it is not only appropriate to examine whether CBS has misinterpreted the statement, but that a responsibility rests upon CBS to examine into the manner and extent to which KTTV has dealt with the matters raised in the CBS memorandum and to answer new allegations made by KTTV in its latest comments.

For convenience, this reply will consider the principal points made by KTTV in 20 serially numbered sections to correspond with those in the comments. Unless otherwise indicated, all page references will be to the comments.

1

KTTV denies having alleged that television network affiliates become mere mechanical conduits (p. 2). KTTV did not use that exact phrase. But this, in part, is what it did say:

"As an illustration of how completely the affiliated stations have been required to surrender their responsibility for program selection to the networks * * *" (Tr. 1590).[2]

"* * * we find there was only 3.7 percent of the time when the station might have bought some program other than dictated by the network" (Tr. 1592).

"Now as a further and specific example of how the stations have been required to abandon their local responsibility and simply have patched in what the network offers * * *" (Tr. 1594).

We are satisfied to leave it to the committee whether the meaning KTTV intended to convey was fairly paraphrased.

KTTV denies further that it alleged that television network affiliates "broadcast an unreasonably large amount of network programs" (p. 3) and suggests that CBS miscited KTTV in order to shift emphasis away from the evening viewing hours, which were the main concern of KTTV (p. 8). The statement was made by CBS in connection with its discussion of the alleged effect of network option time (memorandum, pp. 2, 3), and it was specifically related to KTTV's study of program occupancy during evening network option time in 40 cities in which NBC and CBS both had basic-required affiliates (memorandum, pp. 3, 4). Thus, it clearly had reference to evening hours and it is erroneous to charge that CBS was here attempting to mislead or distract the committee. It should be noted in any event that if as it says, KTTV's sole concern is with the prime evening hours, no reason would exist for its proposal to limit the access of networks to its affiliates to 75 percent of all segments of the broadcast day.

KTTV's statement (p. 4) that its proposal would permit more network programs, not less, is patently untrue. At present there is no legal limitation on the amount of network programs a station may carry. Under the KTTV proposal, there would be such a limitation. Hence it obviously would not permit more than is now permitted.

2

KTTV admits that it was incorrect in stating that network affiliates must agree to carry network programs offered during the 12 hours of option time each day, since, as it concedes, the affiliation contracts call for only 9 such hours (p. 4). This erroneous inflation of 33⅓ percent of the amount of time under option to the networks is glossed over by KTTV as being unimportant. But it remains, particularly in light of the ease with which the truth could have been

---

[1] It may be that CBS' specific allegations of inaccuracy were relatively few, considering the length of the statement, but, as was pointed out in the memorandum, the statement was singularly deficient in the utilization of factual supporting data. Accordingly, the statement did not lend itself to refutation in specific terms.

[2] Tr. references are to the transcript of hearings of this Committee on Television Inquiry, 1956.

ascertained, as evidence of KTTV's carelessness, engendered by its eager advocacy.

3

KTTV denies that it stated that one-half hour of option time was "added" by the "straddle" device of broadcasting hour-long network programs partly within and partly outside network option time (p. 5). It admits, however, that it did state that it is a device whereby "the networks take an additional half hour away from the station quite consistently" (pp. 5, 6). But, in fact, KTTV said more. In discussing "straddling," it stated (Tr. 1953, 1954):

"* * * the station which is obliged to clear for the first half of the program either has to surrender station time or cut the prizefight off in the middle or cut off in the middle of a dramatic show and this is a way whereby the networks gain an additional half hour away from the station quite consistently."

If this statement has any meaning, it is that the device of "straddling" hour-long programs over option and nonoption time had the effect of adding one-half hour to the time controlled by the networks by reason of network option time. This is clearly incorrect.

KTTV also alleges that CBS was unable to deny that the "straddle" programs have the effect of enabling the network to occupy an additional half hour of station time (p. 6). This also is untrue. CBS can and in fact did enter such a denial (memorandum p. 3, supplemental memorandum p. 104). Option time does not require a station to carry the programs straddling option time.

KTTV suggests that the record of station acceptances of four specific programs negates the "erosion" argument advanced by Dr. Stanton (p. 7). In light of the elaboration of Dr. Stanton's argument at pages 107–110 of the CBS supplemental memorandum, it would be superfluous to say more than that Dr. Stanton's comments were premised on the gradual defection from the network of key stations in major markets during various broadcast time periods, wherefore the clearance history of four programs during a period of expanding advertising expenditures simply is not in point.

4

KTTV points out that CBS did not dispute the validity of the KTTV statistics relative to the clearance of network programs by the CBS and NBC affiliated stations in 40 markets which are or were basic-required by both networks (p. 9). These figures merely reflected the degree of station clearance of network programs on certain CBS and NBC affiliated stations during the evening option hours. They did not show the extent to which this clearance was granted by compulsion of option-time requirement, which CBS then understood to be the principal focus of KTTV. Hence, the figures showed only the extent to which network programs were in fact carried in these particular 40 markets on affiliates of CBS and NBC during the period specified, and, therefore, they do not demonstrate the effect of option time—the only material question.

5

KTTV decries CBS' statement—that it could not understand the significance of the KTTV data derived from the 40-market study, done as it was in a carefully selected group of cities during carefully selected hours of the day—as implying that KTTV's selection of stations was arbitrary. The implication which KTTV finds in CBS' statement is a fair one, for, so far as is revealed in any of KTTV's memorandums, the selection of stations was arbitrary. No relevant reason appears for KTTV's selection of these particular markets and hours from among the hundreds of markets available for study and from among all the option and nonoption hours of a broadcast day. The inescapable inference is that the basis of the selection was to reach a preconceived result, i. e., a very large percentage figure from which the conclusion would be implied that the high percentage was of general application. (See the general application by KTTV of the figure at transcript 1601 and 1627.)

The objections to the validity of the KTTV study are twofold: First, as stated above under point 4, the study shows nothing concerning the extent to which clearance was granted during evening option hours by reason of option time; second, the limited scope of the study deprives it of any probative value. These 40 markets did not constitute all the markets in which CBS television affiliates existed. They did not constitute all the markets in which there were CBS television affiliates with which CBS television had option-time agreements. They did not constitute all the markets in which CBS television basic-required affiliates existed, nor did they constitute all the markets in which CBS and NBC each had basic-required affiliates. The 40-market study is further limited to the evening network option-time hours and hence there is a failure to consider KTTV's complaint concerning option time with regards to all option-time hours or its effect during the entire broadcast day. Thus, even if one were to assume that the clearance of network programs was always by virtue of the option-time provision, the study of 40 markets during 3 particular option-time hours is so limited in scope as to constitute neither a valid sampling nor a meaningful universe.

In short, the study serves no valid purpose.

6

KTTV refers to the clearance figures for the week of May 19, 1956, set forth on page 4 of the memorandum and states that they purported to represent a concept, the significance of which is questionable and misleading (p. 11). We believe the figures are both significant and straightforward. They were presented only to show the extent to which there were clearances during that week on all CBS television network affiliates and on all CBS television network basic-required affiliates in periods when option time was actually applicable. To the extent that any clearances were for time periods to which the contractual option provisions were inapplicable, the time period in question was, of course, equally available, so far as option time rights are concerned, to nonnetwork programing sources.

KTTV also asserts that the CBS statement that the time option is inapplicable when the network offers an unsponsored program is incorrect (p. 14). In fact, our statement is correct. Our affiliation agreements are clear on this. Time may be claimed under the option provision only as to "all network-sponsored programs offered and furnished to it by CBS television during network option time" (supplemental memorandum, p. 103).

7

KTTV reiterates its view that the exceptions to the option-time requirement contained in the affiliation agreement are rarely invoked and have little practical effect (p. 19) and cites in support the figures submitted by CBS (memorandum, p. 4). But these figures do not support KTTV. They reflect the availability of network-option hours to nonnetwork-program sources; nor does KTTV dispute that the figures establish that during 1 week more than 500 option hours were not cleared as ordered (memorandum, p. 5).

8

KTTV denies that it contended, as "CBS seems to assume," that all nonnetwork programs are capable of winning more audience that any network program (p. 21). KTTV states that all it argued is that some nonnetwork programs have more appeal to the audience than some network programs (p. 21).

But KTTV went further in its testimony than it now contends. KTTV stated, with reference to nonnetwork programs (transcript 1601): "yet we have seen how superior they [nonnetwork programs] are in the eyes of the public when the public is given an opportunity to judge them."

9

KTTV takes issue with CBS on the significance of the clearance data relating to the Disneyland program (pp. 24, 25). Its clearance pattern was alleged by KTTV to illustrate how stations have been required to abandon their local responsibility and patch in the network (transcript 1594). Its conclusions were based on its view that reasonable broadcasters would agree that the hour during which the ABC network regularly schedules Disneyland in the Pacific time zone is too late for a children's program (p. 24) and that accordingly it was or must have been under the compulsion of option time that stations carried the programs during that time period. In reply, CBS showed that several stations carried this program during that time period despite the fact (not denied by KTTV) that ABC had no option on the time of those stations. Thus, the scheduling of the program by stations for the time period in question shows that broadcasters may and do differ with KTTV as to the suitability of the time period. That program may not properly be used, as was attempted by KTTV, to establish the alleged adverse effect of option time on the proper exercise by local stations of their programing responsibilities.

10

KTTV admits that it may have been ill-advised in using the phrase "blind selling" to describe the relationship between networks and their affiliates with regard to the programs carried by the stations and substitutes the phrase "blind offer and acceptance" (p. 25). With respect to whether such "offer and acceptance" is in fact "blind," KTTV acknowledges the considerable testimony concerning the extent to which the CBS television network regularly advises its affiliates of the contents of a forthcoming program (p. 25). Typically, KTTV adds that it recognizes certain practical (but nonspecified) difficulties which would serve to prevent complete review of all network programs in advance by the affiliates (p. 25). Of course, CBS never maintained that there would or could be complete review in advance by the affiliates of all network programs any more than there is or could be complete review of all programs for the first run of a syndicated film series. KTTV fails to comment on the comparison set forth in the memorandum (pp. 9–11) as to the degree and effectiveness of the initial review and the subsequent right to reject after viewing in the case of network programs on the one hand and syndicated film series on the other.

11

KTTV states that the CBS interpretation of KTTV's purpose in reciting facts showing that station's allegedly superior operation is incorrect (p. 26). CBS had assumed that the testimony relating to KTTV's alleged programing superiority (transcript 1572–1575) had some connection with its contention concerning the effect of option time on the service rendered the community by the station. KTTV now states that its purpose was simply to indicate what could be done by an independent station as long as there is an available supply of good programs. The question as to whether the supply is in fact declining and, if so, the cause, is considered below.

12–13

The comparison, by sources of programs, between the operations of KTTV and KNXT, set out on pages 11 and 12 of the memorandum, was made to refute what CBS understood to be the purport of KTTV's statement, namely, that KTTV operated a superior station because it was nonnetwork. Since KTTV does not now claim superiority over KNXT or the other network-owned stations in Los Angeles (pp. 26–27), the matter need not be considered further. For the same reason, there is no point in debating which type of analysis—quarter hour "wins" or average ratings—best reflects the audience position or popularity of stations (pp. 28–29; memorandum pp. 12, 13).

14

In the memorandum, CBS took issue with KTTV's contention that networks "tie-in" the sale of network-produced programs with the sale of desirable network time periods, allegedly motivated by the profits made by networks in program production (memorandum, pp. 15, 16). In the comments, KTTV makes no more effort to substantiate this charge (pp. 30, 31) than was made during the course of its testimony (transcript 1635). It notes only that the CBS television network's operations are profitable and that a profit is made in the production of Studio One (p. 31).

KTTV also makes the surprising comment that it is irrelevant whether a profit is made by the network in the program production field (p. 31). Having made an unsupportable accusation, KTTV should not be permitted to dismiss its own charge as being irrelevant in any event.

KTTV attempts to camouflage its error by referring to CBS' testimony that CBS does insist on the placement of certain programs in certain time periods (pp. 29–30). This, of course, is quite different from "tying-in" because of profit made from production of the program. The reason for requiring the broadcast of certain programs at specific times is detailed in footnote 1, page 88, supplement memorandum, and will not be elaborated here. It should be noted, however, that KTTV has failed to make any comment or even reference to this explanation.

15

In reply to the categorical denial by CBS of the implication in KTTV's testimony (transcript 1606–1608) that CBS has imposed as a condition of its acceptance of a program, or of its making time available for it, a requirement that CBS be granted a financial interest, KTTV states that the agreements between networks and program producers are not a matter of direct knowledge by KTTV and that KTTV did not single out CBS or any particular network (p. 32). But KTTV was not that careful in its earlier testimony (transcript 1607):

"I think you will find that the networks have partial ownership or partial interest in the film properties which have come to them from independent producers which they have either bought or sold to sponsors. * * * I have had the usual luncheon date complaints from film producers that you can't get on the air unless you want to cut the network in. I have heard specific oral conversations referred to but I cannot assert that that is the fact."

Despite its disavowal of any direct knowledge and in spite of its suggestion that information on the subject could best be obtained from the parties concerned,[3] KTTV does not hesitate to suggest that networks acquire financial interests in independently produced programs largely because they have control over broadcast time (pp. 32, 33). Such a gratuitous suggestion, unsupported as it is, is further justification for the CBS characterization of KTTV's testimony. It is nothing more than a self-serving assumption that the networks necessarily would, if they could, use their alleged power in this manner, and is not entitled to any weight as evidence before this committee.

16

In the memorandum, CBS carefully refuted KTTV's contention that network practices are harmful to syndicated film distributors in their relations with stations. In the course of the presentation, CBS factually demonstrated (a) that syndicated film programs are able to clear class A time in substantial numbers of markets, (b) that class B and class C times are also adequate for syndicated film as well as networks, and (c) that stations are not prevented from buying the product of syndicated film distributors. KTTV purports to answer CBS with respect to each of these points (pp. 30–39).

(*a*) In support of its first point CBS referred to some of the syndicated film programs which have cleared class A time in a substantial number of markets, listed by Oliver Treyz, then president of the Television Bureau of Advertising (memorandum, p. 18). KTTV seems to consider this proof inadequate for two reasons—first, because the 8 syndicated film programs listed, among them, cleared between 7 and 10: 30 p. m. a number of station half-hours less (actually, only slightly less) than the average clearance of 2 network evening programs (p. 34), and second, because there is no way of knowing how many more stations the sponsors of the films unsuccessfully tried to clear. But it is not necessary to establish either that syndicated films obtain as much clearance as network programs or that they clear 10 percent; the important fact is that what evidence there is at least proves substantial clearance of nonnetwork programs during class A time. It should be noted, too, that the clearance record indicated by the data is not complete for the particular syndicated films listed. For the clearances cited were only those sought and obtained for the programs by the specific sponsors named. The same programs, sponsored by other advertisers, had substantial clearances in other markets, some in the 7–10: 30 time period. Doctor Hudson's Secret Journal, for example, was broadcast in approximately 105 markets in contrast to the 12 mentioned by Mr. Treyz.

KTTV also finds fault with the Treyz report[4] because it does not show clearance in the large- and medium-sized markets where the network saturation is so complete and where clearance is so vital (p. 35). It then attempts to refute that report by analyzing the clearance record of Socony Mobil Theater and the Rosemary Clooney Show.

---

[3] KTTV did casually refer to the negotiations between Screen Gems and ABC described by the vice president of Screen Gems when he testified before the subcommittee of the House Judiciary Committee. However, KTTV admitted that it had no direct knowledge of those negotiations and, of course, neither has CBS.

[4] After setting forth the excellent clearance records of several syndicated film programs during class A time, Mr. Treyz concluded that "This is a clear-cut demonstration that there are excellent availabilities in time and that these times can be claimed and can be staked out as franchises for syndicated film programs" (supplemental memorandum, pp. 120–121).

With respect to the Socony Mobil program, KTTV states that Socony Mobil distributes its products in 43 States and "it seems fair to assume that the advertiser would want to cover a correspondingly extensive number of markets with Socony Mobil Theater, if suitable time periods were available" (p. 36). But this is not a fair assumption at all. Attached hereto as appendix A is a map showing the markets cleared by the advertiser for Socony Mobil Theater.[5] Also attached as appendix B is a map showing the markets cleared by the advertiser on the Rosemary Clooney Show. Both maps show a pattern which should have given KTTV pause before assuming that the advertiser sought nationwide coverage. KTTV's attacks on the clearance records of those programs are without meaning unless they are accompanied by a showing of markets which the advertisers actually desired but in which they were unable to clear time. KTTV has not furnished the results of any such investigations, although the correct information with respect to the desired coverage was certainly available to KTTV. Can this be characterized as anything but "irresponsible" and "misleading"? In the light of these fundamental errors, KTTV's analyses of the clearance data for the programs in terms of the size of markets cleared (p. 36) is meaningless. It certainly does not establish, as KTTV would have the committee believe, that the two programs were unsuccessful in clearing large- and medium-sized markets desired by the respective sponsors.

(*b*) Not only did CBS show that there was class A time available for syndicated film programs, it also showed that there were large audiences available during class B and class C time periods, audiences large enough to provide incentive for the production of syndicated film series. KTTV did not even attempt to refute the facts with respect to the value of class B and class C time. Indeed, it apparently took pains to avoid quoting the following sentence which appeared in the CBS memorandum immediately following what KTTV does quote:

"It is also to be noted that more than 50 percent of the time revenues the CBS Television Network derives from the sale of time on basic-required stations is from time sold outside 7:30–10:30 p. m." (p. 20, memorandum).

Instead, KTTV "interpreted" the fact that incentive for syndicated film production was not impaired by time options to mean that "hours outside of 7:30 to 10:30 p. m. are good enough for [others], but not good enough CBS. * * *" That has never been CBS's position, and we respectfully suggest that no argument or explanation made by CBS with respect to option time could itself to any such interpretation.

(c) CBS supported its showing that stations are not prevented from buying the product of independent film producers by listing some current syndicated films with the approximate number of cities in which each is broadcast. In reply, KTTV states that further production of some of these programs has been abandoned and others are now being produced for network use (p. 38). This is discussed below (section 18).

In additon, KTTV points out that the number of stations cleared contrasts sharply with the average clearance of network programs on CBS during evening option hours. That may be so, but the material fact remains that there is substantial clearance for nonnetwork programs.

17

KTTV responds to the point that network-affiliated stations with option time make greater use of first-run syndicated film series than do unaffiliated stations by claiming (a) that many series which are first-run on a network affiliated station may be second, third or subsequent run (and, in fact, may be out of production) on an independent station like KTTV, and (b) that the data supplied by CBS indicating the number of first-run syndicated film series broadcast during the week by affiliated and nonaffiliated stations give no indication of the desirability of the time periods in which the films have obtained clearance on the network-affiliated stations (p. 40). Neither of those claims alter the fact that network-affiliated stations do carry a considerable amount of first-run syndicated film despite the existence of option time. As to (b), since the programs are carried by the station and purchased by the sponsor, the time period during which they are shown is apparently satisfactory to both, and neither would be satisfied if there were not an adequate audience.

[5] See also the speech of Mr. Treyz, quoted on pp. 120–121, supplemental memorandum, in which in listing the programs, he said: "Socony Mobil Theater, for Socony Mobile-Oil, *primarily a central division order*, 56 markets ordered, 56 markets cleared in class 'A' time" (emphasis supplied).

KTTV contends that the CBS prediction of an increase in production of nonnetwork programs has proved to be unfounded and incorrect and that the facts and figures cited by CBS (pp. 2–23; supplemental memorandum, 113–118) were either incorrect or failed to support the conclusions drawn from them by CBS (p. 40).

It is always arguable whether facts and figures support a prediction as to the future, and there is always room for debate as to the proper inferences to be drawn from certain facts. But it should not be too difficult to demonstrate whether cited facts and figures are correct or not. In any event, no charge should be made that they are incorrect unless accompanied by at least some offer of proof. Examination of the material submitted by KTTV (pp. 42–53) following its general charge of inaccuracy on the part of CBS reveals not an iota of proof as to such inaccuracy. Not only is proof lacking, but nowhere is there any particularization as to which of the cited facts and figures are incorrect. Rather, KTTV itemizes several of the examples of reported prosperity of the prominent companies engaged in the production of films for television mentioned by CBS and purports to show that they are either not as prosperous as the figures cited by CBS would indicate or that such prosperity is not due to their syndicated film production. The figures given by CBS for each of the companies are not disputed.

KTTV, on the other hand, has not been so careful. Some of the facts and figures cited by it with respect to the production of syndicated films by various of the companies are either erroneous or, at the least, misleading (pp. 44 et seq.). Here are some examples:

(i) With respect to Screen Gems, KTTV mentions three shows formerly produced for network broadcast which "are not continuing this year on the network, and production of any new episodes in all of these series has been discontinued" (p. 45). In fact, 1 of those programs is still on the CBS Television Network, as well as in syndication, and the other 2 are being syndicated. Contrary to the implication that Screen Gems will not produce any new programs for syndication, it has recently been announced that Screen Gems intends to produce 18 new film series, without specifying that any will be available only to the networks.

(ii) With respect to Guild Films, KTTV states that during 1956 Guild has produced or offered no new programs for syndication (p. 45). This is incorrect. It is offering two new shows currently, Captain David Grief and Kingdom of the Sea, both of which have already been sold in some markets.

(iii) With respect to National Television Associates, Inc., KTTV states that it is presently offering only one new series produced specifically for television syndication (p. 46). This, too, is incorrect. It is offering three such series—Sheriff of Cochise, Lili Palmer Theater, and Combat Sergeant. A recent announcement notes that NTA intends to produce 10 new series without specifying that any will be available only to the networks.

(iv) With respect to Television Programs of America, Inc., KTTV states that it is producing or offering no new programs for syndication p. 46). This is incorrect. It is currently offering Hawkeye and the Last of the Mohicans, which has already been sold to some west-coast stations. A recent announcement notes that TPA intends to produce 5 new film series, 1 of which, it is reported, is likely to be put into syndication and the others of which TPA has not specified will be offered only for network broadcast.

(v) KTTV refers to reports in the press that Hal Roach had planned production of a new series for 1956, Blondie, which was to be sold to national advertisers for nonnetwork clearance. It adds, "we understand that this project has been abandoned" (p. 48). KTTV thus implies that it was abandoned because of the time-clearance problems. KTTV offers no evidence to this effect. Wesson Oil and Sunkist had ordered time on a number of stations for Blondie. Of the 12 markets where CBS Television Spot Sales then represented stations, 9 offered time; 2 were not on the Wesson-Sunkist list; and only 1 (a single-station market) did not offer availabilities. Four were ordered and four others lost the business to competitive stations. The ninth was still in doubt. After time had been cleared, Spot Sales was advised in identical wires by the advertising agencies for Wesson Oil and Sunkist that they were unable to conclude an agreement with Hal Roach and that they had no "further interest in the availabilities." At no time was Spot Sales advised that the transaction failed through lack of clearance.

(vi) Contrary to the implication that ZIV is ceasing to produce programs for syndication (p. 48), it has been announced that it intends to produce 10 new series, without specifying that any will be available only to the networks.

(vii) Contrary to the implication that Official Films will produce no new programs for syndication (p. 49) it has been announced that it intends to produce two new series without specifying that either will be available only to the networks.

(viii) KTTV's assertion that CBS Television Film Sales, Inc., released no programs for syndication in 1956 is in error (pp. 50–51). In fact, 4 film series were released for syndication and 1 for national spot for the first time in 1956. In 1957, two new series have already ben released, and others are presently being planned.

After reviewing the syndicated film production record of the companies listed by CBS, and others selected by KTTV, KTTV states "this, then, is the sad state of television-film syndication brought about by the effects of option time" (p. 52). But television-film syndication is not in a "sad state." The figures and data supplied by CBS in the memorandum and the supplemental memorandum, referred to above, negate this conclusion. Further, according to the latest figures, there were 16 new syndicated series released in 1956 as compared with 15 in 1955, and, according to Television magazine, the total number of half-hour series in syndication in 1956 was 240 as against 170 in 1955. These figures do not include those which have gone into syndication following a network run, which may well be included because they are among the top in popularity in the syndicated field.

It should be noted, too, that KTTV limited its remarks to a selected group of companies. Other companies not mentioned by it are producing and offering new shows for sale. Gross-Krasne has reportedly closed contracts for more than $1 million in 65 markets on the O. Henry Playhouse. Walter Schwimmer reports a 40-market sale of the Eddie Arnold Show and the release early in 1957 of All Star Golf, in which $600,000 will be invested in 26 shows. It has been announced that MCA–TV's State Trooper was recently sold in 5 markets to 1 advertiser with 100 percent class A time clearance, and to another advertiser in 71 markets with 91 percent clearance in class A time. Another new program is The Tracer, produced by Minot TV, which premiered in the New York market in October 1956. Also, General Teleradio has announced three new properties for syndication—Aggie, Sailors of Fortune, and The Big Idea.

This brief recital of facts belies the alleged "sad state of television-film syndication brought about by the effects of option time." Furthermore, KTTV has overlooked a number of factors which might cause a particular producer or syndicator to discontinue production of an existing series, none of which is related to the option-time provision. In the first place, the poor series, which were not sold for that reason, die automatically. Syndicated series have had a higher fatality rate because many were not up to the standard of competitive programs—many, for instance, had previously been offered but not sold to a network or a national sponsor. Thus the syndicated film field has had a high percentage of inferior shows which would have failed regardless of time clearance. As to the good programs, they generally sell more than once in the same market. Producers depend on the residual value of the reruns to obtain the maximum profit from a series. When new shows are added to the series it is more difficult to sell the old ones and they face higher costs in producing the new ones than the old ones. It is profit to the producer or syndicator which is the deciding factor—not network option time.

As was stated in pages 117–118 of the supplemental memorandum, to the extent that there is any uncertainty on the part of syndicated-film producers and distributors concerning the future salability of their products, it is in large part attributable to the existence in the market of the film inventories of the major motion-picture studios which are being made available for television use. During 1956 the pre-1949 libraries of some of the big motion-picture companies have been released in whole or in part to television. There were between 2,000 and 2,500 different features released to television in 1956, representing 3,000 to 4,000 hours of programing. At the 3,000-hour figure, this is the equivalent of 115 series of 52 half-hour shows. As KTTV stated on page 9 of its memorandum concerning time options, much of this is very good product. There are other libraries yet to come and they will be followed by the post-1948 features. In the face of this evidence, it is farfetched to attribute to option time such unwillingness as there may be on the part of syndicated-film producers to embark on new product.

19

In the memorandum, CBS sharply disputed KTTV's contention (Tr. 1616–1619) that the nonaffiliated stations suffer economic loss as a result of network practices—first, because the basic-required practice of the networks prevents the network advertisers from placing their programs on nonaffiliated stations in the basic-required markets; and, second, because the networks exert improper pressure on advertisers to transfer to network affiliates network programs previously placed on nonaffiliated stations. In the comments, with respect to the first point, KTTV states only that CBS did not contradict the facts presented by KTTV but merely gave legal and economic arguments attempting to justify the validity of the "must-buy" practice (p. 54). But the only facts presented by KTTV to establish the first proposition was the so-called history of the Captain Midnight case. It was clearly shown by the letter of George A. Bolas, attached as appendix A to the memorandum, that there was no relationship between the placing of that program on KNXT, rather than on KTTV, and the basic-required practice.

CBS, in fact, did more than present legal and economic arguments. It listed numerous nationally advertised products which were advertised on network stations in Los Angeles and which were also advertised on KTTV during the period March 3–9, 1956 (memorandum, pp. 24–25). KTTV makes no reference to this or to the obvious proposition set forth in the memorandum (p. 25) that it is not the basic-required practice, but the fact of affiliation, which determines which station in a particular market will carry the network program.

Confronted as it is by the aforesaid letter of George A. Bolas, KTTV can no longer use the Captain Midnight case to prove its contention that networks exert improper pressure on advertisers to transfer programs from nonaffiliates to affiliates.[6] It now asserts that its main point was that the advertiser's decision as between KTTV and KNXT was influenced by the advertiser's desire to retain the CBS network distribution for Captain Midnight in other cities, as well as to place Tales of the Texas Rangers on the CBS network (p. 56). Again, no evidence of a tie-in by CBS of the two programs is offered. Again, KTTV is indulging in conjecture.

20

KTTV reiterates its claim that there are many advertisers who would like to use television, and for whom television might be vital to the success of their businesses, but who are restricted to the second class use of television because of network practices (p. 60). It offers no proof in addition to that of the KTTV testimony (Tr. 1611–1612). Hence we rest on our reply thereto in the memorandum (pp. 29, 30). Significantly, KTTV failed to comment on the report of the Television Bureau of Advertising for the first quarter of 1956 described in the memorandum (p. 30) which shows that no network advertisers have access to television during all hours of the broadcast day.

KTTV cites the experience of KPRC-TV, Houston, to establish that even where a nonnetwork advertiser can obtain prime time on a local station, it is confronted with a diminishing supply of quality programs (p. 62). It then refers to the record of KLIX-TV, Twin Falls and KDKA-TV, Pittsburgh, taken from the hearings before this committee, to show what a fine programing job can be done by a network-affiliated station when it makes prime time available to nonnetwork programing (pp. 63–64). We conclude therefrom that the experience described by KPRC-TV is not typical and that ample nonnetwork programing is not only available but gains access to the best viewing hours on network-affiliated stations.

30. Memorandum on Behalf of Columbia Broadcasting System, Inc., in Reply to the Reply Memorandum of Law Submitted by KTTV, Inc.

INTRODUCTORY STATEMENT

Under date of October 29, 1956, KTTV, Inc., submitted to the Committee a memorandum of law purportedly replying to the opinion of counsel for CBS and

[6] It states, in part: "We were never threatened or informed in any way by CBS that we were jeopardizing the possible time period clearance of Tales of the Texas Rangers unless we moved Captain Midnight to the CBS network station in Los Angeles. We can also state that we did not inform Mr. Moore that such was the case."

the brief by counsel for NBC with respect to the legality under the antitrust laws of

(1) the option-time provisions in the Networks' contracts with their affiliated stations; and

(2) the "basic required" practices of the Networks in selling to advetisers a minimum network composed of, in the case of CBS, 52 stations.

In view of the prior memoranda submitted by CBS, this memorandum is offered, not to elaborate the entire context of fact and law required to appreciate the full merit of CBS's position, but, rather, only to correct the more plangent misconception of fact and law which KTTV's brief attempts to impart to this Committee.

I. OPTION TIME

KTTV's entire attack on the option time provisions in the Network's contracts with their affiliated television stations is built as a deceptively simple classic syllogism:

(1) block-booking is illegal *per se;*

(2) option time is factually equivalent to block-booking;

(3) therefore, option time is illegal *per se.*

As might be expected of so easy a disposition of the problem, the fault in the conclusion is that the basic premise requires serious qualification and the minor premise is not in accord with reality.

A. The movie case ruling that block-booking of movies was illegal is not determinative of television option-time practices.

Resolution of the argument postulated by KTTV turns in part upon a complete understanding of the Supreme Court's ruling with respect to block-booking in *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131 (1948). To begin with, it is not particularly helpful to inquire into what were the arguments of counsel in the *Paramount* case. Counsel for Columbia Pictures did argue, as the KTTV brief accusingly points out, that the ruling of the District Court appeared to hold, in effect, that block-booking was illegal *per se.* But, just as plainly, the Government argued that the ruling below was based upon substantial evidence that the extensive tying of film copyrights had an unreasonable purpose and effect. See Brief for the United States in Case Nos. 80–86, pp. 43–44 and 61–62. And upon the oral argument, Justices Reed and Rutledge pointed out that the decree ordered with respect to block-booking may have been justified by Columbia's participation in the overall conspiracy found by the District Court. In this setting, it is as important to note what the Court did not decide as what it did decide—how careful the Court was to state as the basis of its decision only that block-booking of copyrighted movies had the result of "add[ing] to the monopoly of the copyright in violation of the principle of the patent cases involving tying clauses" [334 U. S. at 158]. Nor did the Court, in its passing reference in *United States* v. *Columbia Steel Company*, 334 U. S. 495 (1948), to restraints that are illegal *per se*, cite the *Paramount* case, despite the fact that other portions of the *Columbia Steel* opinion discussed the *Paramount* decision at length.

But we are not left to utter speculation in interpreting the present state of the law. The Supreme Court only recently has had occasion, in *Times-Picayune Publishing Co.* v. *United States*, 345 U. S. 594 (1953) explicitly to hold that in some circumstances sales in block are not only not illegal *per se*, but are, indeed, entirely reasonable and, therefore, lawful restraints upon trade. In that case, the proprietor of the only morning newspaper in town insisted on selling advertising space only in block for both its morning newspaper (the Times-Picayune) and its afternoon newspaper (the States). The Court, nevertheless, reversed a District Court ruling in favor of the Government, inquired itself into the reasonableness of the restraint in the peculiar setting of the New Orleans newspaper field and found for the defendant. (Moreover, the Court's opinion makes its decision very nearly a controlling precedent in this case. Prior cases, including the *Paramount* case, were amply distinguished on the grounds that (a) the Times-Picayune was not dominant in the advertising market—its sales constituted but 40% of the general and classified lineage sold by the city's three newspapers; and (b) in any event, the product sold by both the Times-Picayune and the States was "fungible customer potential," so that the product of neither could be a dominant tying product. (See Section I B. *infra.*)

Thus faced with a direct contradiction of KTTV's sweeping major premise, the question is, what are the determinative factors in judging whether block sales are permissible or not. The answer is not to be found in any single word or phrase from the opinions of the Court, employed by others as a substitute for analysis of and reflection upon particulars—still less by any doctrine such as is suggested by the *per se* rule, which deems inquiry unnecessary where the conduct proscribed so reeks with evil upon its mere presentment that a court must assume the foulness of its subject. The answer, rather, must be discerned from a careful examination of the whole of the cases themselves.

For such an inquiry it is helpful to begin with one case which the Supreme Court carefully and deliberately distinguished in the *Times-Picayune* case, *Lorain Journal* v. *United States*, 342 U. S. 143 (1951). In that case a monopolistically situated newspaper's refusal to sell space to advertisers unless they forwent advertising over the local radio station was held to be an attempt to monopolize in violation of Section 2 of the Sherman Act. The monopolistic position of the newspaper cannot have been the solely determinative factor distinguishing that case from the *Times-Picayune* case, for, as the Court noted in the latter case, "* * * advertising space in the Times-Picayune, as the sole morning daily, was doubtless essential to blanket coverage of the local newspaper readership. * * *" [345 U. S. at 613.] The circumstances inevitably suggest, instead, that the fact of importance was that the Lorain Journal could advance not a single business justification for its conduct, except the desirability to it of eliminating competition from the radio station for the advertisers' dollars. The peril to the station flowed not from natural business consequences or "economic inevitability," but from manifestly "predatory commercial behavior." *Cf. Tuttle* v. *Buck*, 107 Minn. 145, 119 N. W. 946 (1909). In contrast, in the *Times-Picayune* case, despite the similar economic impact upon the competing afternoon newspaper, the Court found no "remotely comparable charge." It may be concluded, then, that there is a line to be drawn between those business practices which are designed to exclude competitors unnecessarily and those which, although they may also tend to imperil competitors, stem from fairly motivated "business requirements" and are not unreasonably designed to fit the circumstance.

That this is a fair reading of what the Court has done may be confirmed by analysis of the very cases upon which KTTV relies in its brief: *Federal Trade Commission* v. *Motion Picture Advertising Service Co.*, 334 U. S. 392 (1953); *Associated Press* v. *United States*, 326 U. S. 1 (1945); *United States* v. *Northern Pacific R. Co.*, CCH Trade Reg. Rep. para. 68,401 (W. D. Wash. June 23, 1956).

In the *Motion Picture Advertising* case, the respondent had contracted with a great number of theatre owners for the display of advertising films and bargained for the inclusion of contractual provisions that the theatre owner would display only advertising films furnished by the respondent—thus purposefully excluding the display of films by others in those theatres. The Federal Trade Commission forbade such contracts for more than one year's duration, and the Supreme Court upheld the Commission's ruling. Of course, some foreclosure of the market to competitors must result from any kind of contract the respondent might make with a theatre, in that the theatre would make room only for a certain number of advertising films. Moreover, the contracts which the Commission and the Court determined to permit would *completely* exclude *all* others for a limited period of time. What was determined unlawful then, was the complete exclusion of all competitors for an unreasonable period of time.

In the *Associated Press* case, the Government attacked the By-laws of the Association, which (1) prohibited the member newspaper publishers from selling their spontaneous news or AP news to anyone other than the Association, and (2) erected virtually insuperable obstacles to the admission to membership of any newspaper in competition with a member of the Association. The Court held that the entire design of the By-laws was to impede or destroy competition—unnecessarily and unfairly to exclude non-member publishers from the unique benefits of the AP service.

In the *Northern Pacific* case, defendants sold or leased many acres (perhaps millions of acres) of land, originally granted to it by Congress, subject to an obligation that the grantee or lessee would route by defendant's railroad railway shipments of commodities produced by or on the land. Such provisions, except in industrial leases (which the Court said might make the land an integral part of defendant's transportation business) were held to violate Section 1 of the Sherman Act. Again, the distinguishing feature of the case may be seen as the purposeful exclusion of competitors in the course of dealings entirely extracurricular to the competitive business restrained.

What emerges from a careful consideration of the decisions, then, is far from the sweeping, qualified assertion of KTTV. In fact, our courts have viewed block-booking or selling with that degree of "robust common sense" heralded in the common law, adopted as the "rule of reason" in antitrust cases and required to make of the Sherman Act a practical charter of freedom and progress. If it were otherwise, it would be illegal for a theatre to refuse to sell a separate ticket for each act or playlet in an evening's performance; for the Metropolitan Opera to refuse to sell certain seats except on a season ticket basis; for a magazine to refuse to sell less than a quarter of a page for an advertisement; for a building owner to refuse to sell less than a full floor of his building; or for a candy bar manufacturer to refuse to sell less than a 10-cent package when it consisted of two bars.

In short, neither authority nor reason supports KTTV's major premise that block-booking of any kind is illegal *per se*.

B. The movie case ruling that block-booking of movies was illegal is not applicable to television option time practices.

KTTV's brief takes a few of the lesser, but still vital, differences between the sale of movies in block and the securing of option time by television networks, looks at each of them separately and concludes that the networks' business is just like the movie industry. But that is not the fact.

First, KTTV has attempted to recast the business of the network (which, it will be remembered, sells nothing to affiliated stations, but instead sells its composite network service, including the time and facilities made available by stations for the broadcast of network programs, to advertisers) to make it appear as a mere supplier of programs—just like movie distributors, the brief says. But, of course, to movie distributors, the licensing of films is a complete, self-contained business function, their entire business reason for being. In contrast, programming is only a part—an unprofitable part, it should be noted—of CBS's service, emanating from its interest in large audiences as an attraction to advertisers. High quality, balanced programing, CBS believes, stimulates television viewing and thus adds inducement to advertisers to purchase national television advertising, ultimately to CBS's benefit. It is upon this belief that CBS has acted in engaging in programming; what CBS seeks from its investment in programming is, not immediate return, but the creation and maintenance of a capital asset, audiences, upon which may be founded an advertising business. Thus, the supplying of programs—however important, as CBS believes it is, to the attraction and maintenance of a television audience—is but a concomitancy of CBS's unique function, which is to make the many complex, large-scale arrangements required for national chain telecasting, including the engagement of simultaneous time over many stations comprising a national chain and the support of central broadcasting and national interconnection facilities. Its business is to sell the fused result as a national advertising medium to national advertisers.

In accordance with its business interest, CBS does not think of blocking programs. It thinks of securing enough time—a single block of substance—to sell to enough advertisers to render its operations economically feasible. An evenings' time, for instance, is parceled out to several advertisers only because one or two would not pay the requisite cost. The time usually is used for various programs only because, in the past, the several advertisers preferred it that way, while the network, acting in the stations' interest, could thereby insure balanced variety programing. But, businesswise, CBS is interested in individual programs only as a generative force to attain large audiences which will attract advertisers. Unlike the defendants in the *Paramount* case, it does not sell programs to its affiliated stations, not because of whimsey, but because its ultimate business is, not programing for stations, but formulating a national advertising medium for advertisers. To this business, optioned time is indigenous and essential. If analogy is required, CBS's position is not unlike that of a prospective magazine publisher who engages upon reasonable terms the services of writers, printers, and distributors so that he may be assured of a product in which to sell advertising space. As one article cannot launch a magazine, so 1 hour cannot make a network attempting to maintain or continuously use, in the public interest, national central broadcasting and interconnecting facilities.

Thus it is that the construct which KTTV blithely passes off as a mere matter of form in reality propounds differences of such substance as to pose a case entirely different from the movie case. Instead, precisely within the terms of the *Time-Picayune* case, CBS has no monopoly of means of reaching "fungible customer potential," and there is nothing in CBS's business unlawfully tied to the sale of anything else.

Apart from the precise ruling of the *Times-Picayune* decision, however, there is to be considered the unique justification of option time provisions in the television industry.

Optioned time is the only contractual consideration granted to CBS by any of its affiliated stations. Without a reasonable amount of such time, there would be at the outset no inducement to CBS to enter into affiliation agreements, and, correspondingly, no occasion for CBS to provide the manifold services it now renders to its affiliates, services which they transmit to the public. Certainly, without a reasonable block of contiguous optioned time, CBS could not satisfy the want of station operators for assistance in presenting the best available, balanced, most profitable (to the stations), continuous programing, during non-option as well as option time. Indeed, it is most uncertain whether CBS could maintain even its central broadcasting facilities and the interconnection services for which it presently contracts. It is, of course, by the preservation of these facilities for continuous television use that affiliated stations and viewers are afforded opportunities to view popular programs broadcast from the centers of the entertainment world and events of great public interest, such as a Presidential address, as and when they occur—again during nonoption as well as option time.

In the last analysis, the primary fact is that contracting for options in block is the natural corollary of contracting with a single station in an individual community. Contracting with one station in a community, in turn, is (a) practically compelled by the increased complexity that would be incurred by switching from one grouping of stations to another at frequent intervals, and (b) the natural, sensible business course for two parties each interested in the other's service on a continuous basis.

Viewing the whole, then, what movie producer or other supplier ever had this complex physical, definitional, natural justification for contracting in block? There was no problem in the movie case of serving national advertisers; of arranging for simultaneous showing of the same program across the country; of national interconnection facilities desired by all on a continuous basis; of balanced programming in the public interest required of stations; of affiliations compelled by practicalities. In truth, the optioned time for which CBS contracts is designed to grant only reasonable assurance that a network as the television industry has come to know it—and perhaps even the industry as the public has come to know it—can exist. No law, we submit, has yet been interpreted to outlaw existence.

Turning next to the reasonableness of the option time provisions themselves, again KTTV has aimed wide of the significant facts.

First, the most crucial fact—totally ignored in KTTV's brief, is that the option does not operate against contracts by CBS affiliated stations with other networks. Since a network by definition is an organizational means by which occurs simultaneous broadcasting of an identical program by even two interconnected stations [cf. § 3 (p) of the Federal Communications Act, 48 Stat. 1066 (1934), as amended, 47 U. S. C. § 153 (p) (Supp. 1955)], and thus may include even regional network organizations [see F. C. C. Report on Chain Broadcasting, Chapter VII J; 47 Fed. Regs. § 3.23], this fact is of great practical business moment. See Cravath, Swaine & Moore *Opinion and Memorandum*, p. 49. Thus far, no case, we think, has held unlawful a contractual provision having so minimal an effect upon competitors.

Second, even as against the station, the provisions are so cautiously drafted that, in the light of the high purposes to be achieved, they cannot be deemed anything but *eminently* reasonable. In addition to the complete freedom of the station to contract with other networks, the following limitations on option time deserve to be restated. (1) The option applies only to *sponsored* programs, thus at once eliminating any suspicion that the time contracted for is unrelated to the requirements of advertisers. (2) Any program offered by CBS which the station "reasonably believes to be unsatisfactory or unsuitable" may be rejected or refused. (3) Any program offered or even already contracted for which, in the station's "opinion", is contrary to the public interest may be rejected or refused. (4) A program may also be rejected or refused, when offered or even when already contracted for, when the station wishes to substitute a program of outstanding local or national importance. (5)

In addition, the option does not apply to any program offered on less than 56 days' notice. One may search the annuals of reported cases or the files of any industry, we believe, without finding a contractual provision so mild in protecting one party and so yielding in protecting the other.

To all this, KTTV can answer only that the provision must mean something, emphasizing that network sponsored programs offered during nonoption time may be broadcast by the station "at its election". Of course, the option time provisions mean something. But that does not mean that they are exclusionary, or tie any program to another or are in the least tainted with illegality. What the network protects itself against is the utter caprice or bad faith of the individual station operator. When it is appreciated that some assurance of time is essential to the creation and operation of a network, so little hardly can be said to be too much.

The attempt to draw a pattern of similarity, then, between this case and the movie case comes down to the mere distortion or slighting of significant differing facts and the exploitation of a word, "block-booking", which came from the movie industry. Quite simply, this is not the movie industry; this is not the movie case.

II. BASIC REQUIRED STATIONS

KTTV's attack on CBS's rule that a CBS advertiser use at least 52 stations within the network is equally an attempt to strip the meat from the bones of the television industry and pass off the skeleton as some other case which better serves KTTV's argument.

In the point of fact, KTTV is right about only one thing, and that is that the option-time provisions and the basic required rule are related parts of the network organism. As station-time options are required to compose a network, a minimum network-purchase rule is necessary to insure use of the synthesis devised, which, in the case of CBS, is a nationwide network. This is compelled by both congenital business and physical considerations.

The CBS Television Network, it bears repeating, is a *national* advertising medium. It avails itself of *national* interconnection facilities on a continuous basis and otherwise has geared its business to attract and service *national* advertisers. Such advertisers are charged a minimum amount commensurate with the service thus made available, which amount provides the viewership of 52 "basic" stations as the basic network unit. To charge less, to provide less, would be so to retrench the business as to disable the network from continuing its many nationally scaled commitments. For the basic physical fact is that once interconnecting, transmission lines have been committed to one program, *they cannot be used to transmit another program during the same time*. Moreover, due to the limited number of transmission lines which may be available to one network at a given time or over a period of time, in some circumstances, depending on the location of the stations receiving the first program, the telecast of a second program by CBS over separate transmission lines to stations not receiving the first program would be impossible. In any event, probably in many cases, the relative cost (in terms of the audience reached) to an advertiser of such a second program would be prohibitive. Thus, if a number of advertisers chose to utilize the CBS network to reach audiences only in 10 or 20 cities of their selection—choosing, for instance, the 20 stations reaching the largest audiences or stations in cities where the advertiser desired special sales promotion—the rest of the country much of the time might well be cut off from any live CBS network program. In result, to force CBS to telecast any advertiser's program over his selection of stations, however few in number or arbitrary in choice, would effect the Balkanization and virtual destruction of a nationwide communications medium.

Nevertheless, KTTV insists that the minimum network must fall beneath the wooden application of per se doctrines condemning "refusals to deal," concerted or otherwise. As might be expected, however, upon analysis, the law is not so impervious to reason.

It would serve little purpose to recite the obvious conecrning the refusal to deal cases and quotations put together in KTTV's brief. Together with the other leading decisions, they are sufficiently treated in the recent opinion of the District Court in *Interborough News Co.* v. *The Curtis Publishing Co.*, 127 F. Supp. 286, 300, n. 13 (S. D. N. Y. 1954), aff'd, 225 F. 2d 289 (2d Cir. 1955), holding that even group refusals to deal are not illegal per se. See also *United States* v. *Insurance Board of Cleveland*, 144 F. Supp. 684, 697–698 (N. D. Ohio

1956). It should suffice here to repeat Judge Sugarman's carefully drawn conclusion that:

"On analysis, it seems that the boycott itself was not condemned as an unreasonable restraint of trade in each of those cases, but rather the Court condemned either what was sought to be accomplished by the concerted refusals to deal or what was the necessary result thereof." [127 F. Supp. at 300.]

Or, in other words,

"An examination of the cases cited * * * reveals that in all of them the vice of illegality was inherent in the unlawful objectives of the combination and in the means employed to accomplish their purposes * * *." [*United States* v. *Insurance Board of Cleveland, supra.*]

There is not in the case of CBS, as there was in *Kiefer-Stewart Co.* v. *Seagram & Sons*, 340 U. S. 211 (1951), any unlawful ultimate purpose (e. g., price fixing) in CBS's decision to define its medium nationally in terms of basic required stations. There is not, as there was in *Fashion Originators Guild* v. *Federal Trade Commission*, 312 U. S. 457 (1941), any agreement with competitors to regulate competition among them and totally preclude other competitors from selling to the conspirators' customers. There is not, as there was in *Associated Press* v. *United States*, 326 U. S. 1 (1945), any agreement among competitors designedly to totally exclude some, unnecessarily, from the benefits of a vital service. There is merely the decision to engage in one's business, nationwide network broadcasting, in the manner which the nature of the business orders.

Perhaps recognizing the absence of all such earmarks of suspect conduct, KTTV has confined itself to finding exclusion of, or monopoly "closed town" leverage against, advertisers as the consequence of "affiliation agreement[s] including option time * * *." Thus KTTV is brought back full circle to its original misunderstanding and exaggeration of option time.

In fact, option time excludes no one from either network or local station advertising and gives CBS no monopoly of time on any station with which to "force advertisers to buy time on other stations in the chain." So far as an advertiser who wishes to reach the audience of more than one station but less than 52 is concerned, he can avail himself of other networks of any size which presently exist or might be created, for an hour, or a year, without any option time barrier to including CBS affiliates within his network. See p. 10, *supra*. Or he may agree with another advertiser or other advertisers and CBS to split the CBS Television 52 station network, each advertiser taking a convenient segment of the whole. An advertiser who wishes only a local audience reached by one CBS affiliated station, of course, has available to him (i) all the non-option time during the station's broadcasting day; (ii) all the spot announcement time during all hours, including time adjacent to or interspering network programs sponsored by national advertisers; and (iii) the very real opportunity to persuade the local station to accept his program in lieu of the network program [see pp. 10–11, *supra*]. In substance, all that is forbidden to any advertiser is the use of the CBS network facilities for less than they are. In the sense of the cases, this is not at all a refusal to deal.

In this analysis which lends special pertinence to KTTV's counsel's conclusion that *Prairie Farmer Publishing Co.* v. *Indiana Farmer's Guide Publishing Co.*, 88 F. 2d 979 (7th Cir. 1937), *cert. denied*, 301 U. S. 696 (1937), *rehearing denied*, 302 U. S. 773 (1937), "did not involve a refusal to deal, concerted or individual." In this they are right, for no advertiser was excluded from advertising in any of defendant's publications. It was rather that no advertiser was permitted to force upon the publishers a grouping of publications for joint advertising rates not of the publishers' choosing. So concededly distinguished from the true "refusal to deal" cases, this ruling remains convincing authority, cited approvingly as recently as 1954 [*Interborough News Co.* v. *The Curtis Publishing Co.*, *supra*, 127 F. Supp. at 300, n. 14]. What must then be conceded is that the *Prairie Farmer* case is the network case in the extreme. Exactly as in the *Prairie Farmer* case no television advertiser is precluded from advertising over any station individually or through any network, except as a station, in its own unfettered judgment, prefers to commit certain time to others and has some minimal obligation to the network during certain hours for certain programs. It is rather that, by the dictates of legitimate business choice, economic sense, physical necessity and fairness to viewers, an advertiser is not permitted to so abuse the use of the national television medium as to accomplish its destruction. That, reason suggests and authority confirms, cannot be deemed unlawful.

CONCLUSION

For the foregoing reasons it is submitted that KTTV's memorandum does not fairly present the facts or represent the law by which the legality of CBS's business practices must be judged. Both the option time contractual provisions and the minimum network rule are so rooted in the peculiar necessities of the industry that they cannot be understood, let alone judged, apart from the industry. When such understanding is supplied the Committee might well ask, could it be otherwise? The answer may be hard to come by—which, in a sense, is a justification in itself of the practices which the industry developed as natural to it. Beyond that the answer, we suggest, is to be found in the artistic and economic growth of all those engaged in various endeavors within the industry. It is a fitting admonition that—

> "* * * We must not forget that the law is a living dynamic force at all times responsive to the needs of society, and not a mere game in the playing of which judges move about quotations from earlier cases as one would shift kings and queens on a chessboard." [*United States* v. *Morgan*, 118 F. Supp. 621, 688 (S. D. N. Y. 1953).]

In their setting we urge again that neither the option time provisions nor the minimum network rule violates any of the antitrust laws.

January 28, 1957.

Respectfully submitted.

31. LETTER FROM GEORGE R. DONAHUE REGARDING THE QUALITY OF THE WORK OF INDEPENDENT SUPPLIERS OF SCENERY AND SETS

NEW YORK, N. Y., *January 31, 1957.*

Senator WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: Last year your committee was gracious enough to hear the complaints of my clients, members of the Scenery Suppliers Association, relative to the domination of the scenery supply aspects of television production in the New York area by the three giant networks.

Subsequent to the presentation of our written statements and oral testimony before the committee the networks submitted statements concerning staging services and their policies and practices re the procurement of scenery.

All of these statements stress the networks greater capacity to develop new techniques and methods geared to the electronic and color requirements of television. I would like now to specifically call your attention to the one remaining show which is produced, staged, and serviced by factors completely independent of the networks.

This show is called Your Hit Parade, and is produced by Batten, Barton, Durstine, and Osborn through producers, directors, and the independent scenery supply company of Peter J. Rotondo, one of the principal witnesses before your committee, all hired by that agency. Mr. Rotondo's organization not only supplies the scenery but contracts to supply the costumes and other staging effects needed for this production.

My point in calling your attention to this show is that its production has been hailed as the most imaginative black and white program, and when it has been presented in color as the outstanding example of a true artistic use of the new color medium.

In support of this I am submitting to you with this letter photostatic copies of three columns written by the Nation's outstanding reviewer, Jack Gould, of the New York Times, covering a period from January 18, 1954, which not only describe the artistic quality of this show but deal with the whole problem of color vis-a-vis black and white using this independently produced show as a criteria for proper development in both media.

I sincerely hope that the committee takes judicial notice of these facts, and in the light of them evaluates the networks' contention that they are justified in being in the scenery supply and staging services business because they alone are competent to develop the techniques necessary for television. To the members of the Scenery Suppliers Association and people connected with the industry this claim has long been considered an obvious tongue-in-cheek assertion to justify network domination of all aspects of television broadcasting.

It is our hope that your committee will see through this sham and urge needed relief to the traditional small businesses connected with the American theater who face the threat of extinction by virtue of the grave monopoly trend within the television industry.

Please accept my personal thanks and best wishes for your cooperation and interest in this matter.

Sincerely yours,

GEORGE R. DONAHUE, *Consultant.*

TELEVISION IN REVIEW HIT PARADE

SATURDAY NIGHT GLOWS AS TUNEFUL PROGRAM IS GIVEN IN COLOR—SONG, DANCE PRETTY GIRLS AND COSTUMES COMBINE TO SHOW OFF MEDIUM

By Jack Gould

The National Broadcasting Co. played its ace in color television on Saturday night—a presentation of Your Hit Parade in natural tints. In its visual attractiveness the program was a joy, a panorama of shadings and hues that was altogether captivating. The Broadway musical comedy stage had better start worrying; color TV is going to be stiff competition.

The color broadcast of Your Hit Parade long had been awaited because the program is a readymade subject for the electronic palette. With song, dance, pretty girls and superb production and costuming, the weekly dramatization of popular tunes contains all the requirements for an exciting display of the new medium.

The advance hopes were thoroughly justified. From the opening glimpse of Dorothy Collins in her familiar blouse, which turned out to be a beguilingly soft pink, Your Hit Parade was a tasteful, gay, and subdued reflection of the rainbow's wonders. It was probably the most impressive color TV shown thus far.

With color, Your Hit Parade acquired a veritable Ziegfeld opulence. The introduction of lovely pastels complemented the mood of the romantic ballads and the more vivid hues imparted a new gaiety to the livelier selection. To television's existing artistic tools of melody and movement, there was added before a viewer's eyes the third emotional dimension of color. The addition spelled the difference betwen "live" television and living theater.

As a black-and-white program, Your Hit Parade always has reflected perhaps the most imaginative stagecraft of any TV show, and this know-how was magnificently translated to color.

For the number entitled "Changing Partners" the setting was a large ballroom. As the couples swirled around the floor, the delicate blues, salmon pinks, and fragile lavenders of the ladies' gowns made their own symphony for the eye. The long white gloves and the contrasting hair tints of the girls, set against the black and white of the men's formal attire, were straight out of a picture book.

In another selection a red devil dancer bounded on stage; it was the color alone that made him an exciting menace. The story of the clown in Oh, Mein Papa was told in a way that in black and white could not have had the same meaning. In the foreground the solosit was shown in closeup; in the background there was a small figure in full clown regalia entertaining an off-stage audience. Thanks to color, the clown was not lost in a gray haze but was seen in definition and detail.

Giselle McKenzie is eyeful enough in black and white but in a silver lame gown, brilliant lipstick and recognizable flesh tones she made a torch ballad seem to say more than ever. For the No. 1 song on the parade, Stranger in Paradise, the setting was borrowed from Madame Butterfly. The contrast between the Navy officer's dress-whites worn by Snooky Lanson, and the lush kimono worn by his oriental vis-a-vis gave a truly wonderland creditability to the rather trite lyrics.

Your Hit Parade is never going to seem quite the same again in black and white.

On another color television front, Dr. Allen B. Du Mont, head of the Du Mont network and manufacturing company, and Kenneth B. Wilson, president of the National Better Business Bureau, were heard Thursday night in a special panel discussion on the future of color TV. The program dealt onesidedly with color TV's technical and economic problems and never came to grips with the importance of the end product from the public's standpoint—what seeing a show in color means.

The discussion, especially in the loaded questions of John K. M. McCaffrey, the moderator, was obviously designed to stimulate black-and-white set sales. It reflected what is now almost a state of mind among many manufacturers and retailers—that color TV should go away and stop bothering them. After Your Hit Parade that seems like a forlorn hope.

[From the New York Times, December 17, 1956]

TV: Color as it Should be

YOUR HIT PARADE SOLVES MAJOR PROBLEMS BY USING TASTE AND IMAGINATION

By Jack Gould

While the National Broadcasting Co.s nabobs and trained seals were vacationing in Miami over the weekend, they may have missed a major development on their own color television front.

Saturday night's presentation of Your Hit Parade over channel 4 was far and away the most exciting color yet seen. It was vivid proof that most of color television's problems now originate in the studio, not in the modern color receiver.

The staff of Your Hit Parade—Dan Lounsbery, producer; William Hobin, director; Ernest Flatt, choreographer; Phil Hymes, lighting specialist; Paul Barnes, scenic designer; and Sal Anthony, costume designer—follow a major credo in color; simplicity. On Saturday the color was employed sparingly but with exquisite taste and imagination.

For once the screen was not cluttered with coarse pigments, but alive with real beauty and striking lines. The great feat was the merciful liberation from the two hues that have thus far almost stopped color video in its tracks: the dominant and immensely irritating neon blue and neon red.

Part of the answer was that Your Hit Parade was not afraid to make generous use of white in settings and costumes. Normally, white is scorned in color programing because it allegedly shows up poorly on black and white receivers. But Your Hit Parade showed that white can be employed to magnificent effect, framing facial complexions, setting off other colors and lending reality and visual cleanness to the whole scene. Further, Your Hit Parade obviously employed color to speak for itself, as an added instrument of expression.

Particularly significant Saturday night was the fact that the color set could be adjusted once and then left alone: the color composition on the screen was both so natural and balanced that there was no need to commute between the set and viewing chair.

If the Sarnoffs, pere and fils, really want to get color off the ground, the staff of Your Hit Parade is their answer. On Saturday a viewer at last saw a true artistic use of the new color medium; it has been a long time in coming.

[From the New York Times, December 30, 1956]

Color TV Marks Time

IT HAS A LONG WAY TO GO TO PUBLIC ACCEPTANCE

(By Jack Gould)

Color television obviously still faces a long uphill fight before it enjoys significant public acceptance. The new medium has not come along as quickly as many persons had hoped and its immediate future course now must be reexamined. Economically and artistically, color TV has many problems that would appear to preclude further overly optimistic predictions. Very probably it will be some years yet before color video achieves the status of a mass service.

In a refreshingly candid statement David Sarnoff, chairman of the Radio Corporation of America, which has waged the color battle single-handedly, acknowledged Wednesday that in the last year 102,000 color sets were sold, roughly half of what had been expected. In contrast with the estimated 39 million black-and-white receivers reportedly in use, the statistical importance of color is indeed small.

Some of RCA's rivals in the manufacturing field have rather gleefully noted the slow progress in color and others have suggested that tinted TV is one of the industrial failures of the year. That these concerns have done nothing themselves to aid the cause of color is one major reason for the disappointing showing. But it is also evident that color has not yet generated the excitement RCA understandably believed would be forthcoming. Several hard facts must be faced.

First, there is the cost of the television receiver itself. Some years ago it was widely assumed that if the cost of sets dropped to the $500 mark the so-called Cadillac trade would become interested and give color the initial push essential to assembly-line production. This goal has been reached, in itself an accomplishment of no small magnitude, but the economic premise itself may be now out of date.

PREMIUM

Realistically, it must be questioned whether the public will pay any substantial premium for color. With the manufacture of television receivers, a violently competitive and even cutthroat operation, the day may come when it will be necessary to think of color merely as an added sales appeal. In short, the color receiver must become truly competitive with the black-and-white receiver, which means it must drop down in cost to $200 or $250.

When the consumer can get a combined color and black-and-white receiver for the same price as color alone, then the new medium will get off the ground on a large scale. If RCA perseveres in its efforts to attain that objective, its very real color losses at the moment—some $6,900,000 last year—could be quickly erased by a whopping competitive advantage in the future. Manifestly, that is what lies behind Mr. Sarnoff's current thinking.

But before Mr. Sarnoff can hope to realize that ambition it may be necessary that both RCA and its corporate subsidiary, the National Broadcasting Co., take a fresh look at the color they are putting on the air. As one who has had color in his home for several years, this viewer is of the opinion that perhaps Mr. Sarnoff has erred in increasing the volume of color programing, as he has done very substantially this year, without due thought to the quality of the tints being shown the public.

The whole history of color has revolved primarily around the word "compatibility." It has been used in the technical sense of meaning that a program transmitted in color could be seen on black-and-white on sets currently in use.

But now the greater problem is "compatibility" in the artistic sense. Does the color program appear on the color set in natural and beguiling tints while at the same time giving a satisfactory image on black-and-white receivers? It can, but by no means often enough.

COMPROMISE

Strangers to color TV frequently watch a program in various hues and come away disappointed; there is something a little unreal and unappealing about the colors. When the volume of this type of programing is indiscriminately increased, it must be asked whether the cause of color is not actually being harmed rather than helped.

The difficulty lies in artistic pursuit of compromise between the color and monochrome images. Shadings that may make the best images in black and white often are not the best for the color screen. And since 39 million homes are watching in black and white and only some 102,000 in color, the emphasis is naturally on satisfying the former.

The upshot is that a great deal of today's color is not what it should be. Because blue reproduces so satisfactorily in black and white, it receives inordinate use in color programing. So, too, does red.

Here economics plays a major part. Unless production budgets are increased fabulously, which no sponsor wants to encourage, a costume designer for a spectacular, for instance, must make use of the gowns that are available in the rental costume houses. The inventory of these houses naturally has been built up for the needs of black-and-white television. In turn, the costume availability may dictate the coloring of scenery. A chain of events is set in motion that precludes a choice of colors for the sake of color alone.

There is a solution but cost has prevented its widespread adoption. This is the design of entirely new costumes for the color medium. Your Hit Parade, which can amortize the cost of clothes over several weekly programs, is in a position to do this; this is one major reason why its few color programs have been so strikingly impressive yet also excellent on black-and-white sets. The same tasteful and beguiling use of color shows up in the gowns of Dinah Shore.

But where color for its own sake is not the first consideration there are the visual distortions of seeing a Christmas tree in blue, a Southern mansion in blue or Greer Garson, in the somber final act of The Little Foxes, attired in a discordant brilliant blue dress.

COMMENDATION

In the long run, therefore, RCA and NBC would seem well advised to reexamine their expenditures on color. Too many of their current presentations are just shows intended for black and white upon which a color camera has been focused; these could be curtailed without any great loss. With the money thus saved there could be more experimentation in doing shows in terms of color alone, with costumes, scenery and lighting all planned for their value in tints.

For those who have seen color at its finest—and its sheer visual beauty can add enormously to the pleasure of viewing—the efforts of RCA must be commended; those concerns that propose merely to sit around and cash in after RCA has coped with the economic headaches of pioneering are hardly adding to their own stature.

But, having staked both his reputation and his company's resources on color, Mr. Sarnoff must proceed judiciously. Color that isn't truly natural will only lessen enthusiasm for the new medium and drive prospective customers away. Unlike black-and-white television the color medium will not be popularized by its novelty; only sustained quality will tell the story.
