I want to summarize briefly our contention that pay-to-see television will, in fact, establish a monopolistic situation in the broadcast industry which is staggering in its scope. As of today, a telecaster does not have to have an RCA transmitter to transmit an NBC program, nor does a viewer have to have an RCA receiving set in order to receive an NBC program. With pay-as-you-see television—and assuming for the sake of the illustration, it is the Zenith proposal which is adopted—Zenith will manufacture the equipment, which will code, encode, make the picture scrambled for the telecaster. Zenith will manufacture this equipment which you have to lease and put on your set in order to get what program, the program that is supplied to the station by TECO—Television Entertainment Co., which is an affiliated company of Zenith. Now, there have been no comments, either on Monday or Tuesday, about where TECO fits into this whole picture. But if you will look at the corporation of TECO and its relationship to Zenith; you will find that TECO was organized by the stockholders of Zenith, and the principal officers and stockholders and directors are all interrelated between the two, and according to the stock offering agreement of TECO, and its publicity—and it is a matter of common knowledge—it will be TECO who will set the price which the public will pay for its pay-as-you-see television.

There was a statement made here yesterday and on Monday, by representatives of the various companies, that the telecaster would set the price that is to be paid by the public. That is not what the agreement between TECO and Zenith provides for. It provides that TECO, being an affiliated company of Zenith, fixes the prices that the public will have to pay for its programs.

Senator PASTORE. Is that an existing written agreement?

Mr. COHN. Yes, sir.

Senator PASTORE. Do you have it there?

Mr. COHN. I have the statement—the offering of the TECO stock to the Zenith stockholders—where for every 5 shares of Zenith stock, you are permitted to buy 1 share of TECO stock, TECO having been organized by the officers of Zenith Corp. And in stating the purposes, and how the two organizations are to operate, it is clearly set forth that one of the obligations of TECO will be, "Fixing of the fees to be charged users of television service who subscribe for programs broadcast by means of Phonevision"—Phonevision being the type of pay-as-you-see.

Mr. COX. Would that be the fee for the decoder or the fee for the program?

Mr. COHN. I assume it is the program, because they talk about the program throughout this, and in the representations to the Commission there is no hiding of the rọle of TECO. As a matter of fact, TECO is a party in the proceedings before the Commission, but what you have here in my judgment——

Senator PASTORE. But that agreement, of course, is before the Commission.

Mr. COHN. The agreement, itself, is not. It is before the Securities and Exchange Commission, and approval of the Securities and Exchange Commission was received.

Senator PASTORE. But you are familiar with the proceedings that took place before the Commission on this matter?

Mr. COHN. Yes, sir.

Senator PASTORE. Do you have any knowledge as to whether or not that agreement was introduced?

Mr. COHN. I have no recollection. I do not think that the agreement itself was introduced. I don't think it was called for. I think description of the functioning between the two corporations was described in the Zenith and TECO pleadings.

Senator PASTORE. Without commenting on that, inasmuch as you raised it and I suppose there would be some rebuttal to it, would you mind if we placed it in the record, in our files, and then gave it back to you?

Mr. COHN. Not at all. It is a public document on file with the Securities and Exchange Commission.

Senator PASTORE. If you don't mind leaving it, we would like to have it referred to in our record because that will be discussed by people in interest.[2]

---

[2] The document was furnished by Mr. Cohn on April 27, 1956, and ordered inserted in the record at that time. It is printed at p. 1450 below.

Mr. COHN. I don't mean to imply, in what I said, that this was not a matter of public information and that Zenith has hidden this in any kind of way.

Senator PASTORE. No; we understand the point that you are making.

Mr. COHN. But the only point I am making is in terms of a perpendicular monopoly. The proponents will manufacture and sell, or lease, the encoding and decoding equipment, and in addition to that they also will provide the programing—be the agent for providing the programing—to the telecaster and set the rate at which the public will pay for the programs.

As far as Skiatron is concerned, it also suggested in its pleadings before the Commission that there be only 1 of the 3 systems for any one city, which would mean that you would not only have the perpendicular kind of monopoly that I referred to, but you would have an exclusivity kind of monopoly where there wouldn't be the competition of the 3 systems between one another in any one locality. I assume, Senator, that the entire statement will be in the record.

Senator PASTORE. The entire statement will be made a part of the record, including the part where you discuss the legal aspect of this. We want to thank you very much, Mr. Cohn, for appearing here.

(The remainder of Mr. Cohn's prepared statement, including one portion which was touched on but not completely covered, follows:)

Because the proponents of pay-to-see TV have not released any definite figures which would indicate what they expect to charge the public there is no way of estimating, with exactitude, how much the public will have to pay to see their programs. However, utilizing the Zenith estimates of probable average price per program, we have calculated that it would cost the average viewer $1,156 a year to continue to watch television at his present rate of just under 5 hours per day. That figure becomes very significant when we remember that 60 percent of the television sets now in the hands of the public were purchased by families with annual income of less than $5,000, and that 60 percent of 40 million sets were bought on the installment plan. As of April 1955 the unpaid balance on sets which were sold on the installment plan was $700 million.

Television has, in fact, become the primary entertainment and cultural medium for the lower income groups, and it is precisely those groups that will be most directly affected by any pay-to-see television scheme. In this connection I would like to quote from an article by Elmo Roper in the August 14, 1955, issue of the Saturday Review of Literature where he was commenting on the fact that the majority of the readers of that literary magazine favored pay-to-see TV:

"It is a truism that an important function of the democratic system is to accommodate minority needs. However, just as integral a part is to make certain that in meeting the needs of the more articulate, more privileged minority we do not risk the chance of the majority to find cultural outlets within the economic limits they can afford."

The position of the major television networks makes this point clear. While now opposing any form of pay-to-see TV, they have stated to the Commission that the two systems cannot live side by side and, if the Commission authorizes any type of pay-to-see TV, they will be forced, in the long run, to abandon their present system of programing and adopt the pay-to-see system.

As I previously pointed out, the consumer public has invested over $10 billion in television receiving sets, antenna, and repairs on the representation of the Government and manufacturers that there would be no charge for the programs it would receive. If the public were ever told that they will have to pay for their television programs, the Boston Tea Party will fade into an insignificant private skirmish.

During the past several months the principal thrust of the proponents has been the cry: "Give us a chance; let us experiment; what harm can there be in experimentation? Let the public decide." Such a plea generally strikes a responsible chord in America, because we are a nation of pioneers and experimenters.

However, the proponents do not really desire to be pioneers. What they desire to do is to take an established market which was created by the pioneering efforts of others—television stations, networks, and receiving-set manufacturers—and to convert this market to their own selfish purposes. Their plea is tantamount to someone crying "experimentation" and "pioneering" in order to attempt to sell Congress an idea whereby he would be enabled to charge for the use of the existing drinking fountains in Rock Creek Park or the Smithsonian Museum.

The proponents have compared themselves to the Wright brothers. I think the analogy is misplaced. The Wright brothers did, in fact, invent something new and gave us an additional—and not a substitute—means of transportation. They did not come up with a system whereby they would install and control turnstiles on all the highways and roads.

If the proponents were really sincere, what they ought to do is to inaugurate a type of community antenna system whereby additional channels and additional programing would be made available to the public. Here they could test out whether the public would pay to see the allegedly new type of programing which they proposed.

The danger of the type of experimentation which the proponents propose lies in the basic fact that free and fee television cannot exist side by side and if the experimentation works, then free television is doomed. It is one thing to experiment and to pioneer where the public benefits; it is another thing to experiment in a field where, if the experiment works, the public must suffer. It is at this very point that the Government has an obligation to preclude such type of experimentation.

IV. PAY-TO-SEE TV WILL NOT SOLVE THE UHF PROBLEM

As this committee knows only too well, many of the television stations in the UHF band are now facing a severe crisis. Obviously some action must be taken and taken immediately. Pay-to-see TV, however, is not the answer.

At the heart of the UHF problem lies the fact that most television receivers are capable of receiving only VHF channels. This has meant that in order to receive UHF transmission television set owners have had to purchase a converter—a device to enable him to pick up the signal of the UHF station.

Pay-as-you-see TV would compound the conversion problem; they propose to solve the UHF problem by adding 2 rather than 1 converter to each receiving set.

In order for a set owner to view a pay-to-see television program, he must install a new gadget: A decorder, so that upon payment of the required fee the television set will make a complete picture out of what had been a jumbled mess. We are now asked to believe that by superimposing the conversion problems of pay-to-see television upon the conversion problems of UHF stations, we can solve the UHF conversion problem.

Zenith, the most vocal of the pay-to-see television proponents, until recently, also looked askance at any proposal which would limit the system to UHF stations. On November 29, 1954, Zenith (and its subsidiary, TECO) filed a petition with the Federal Communications Commission entitled "Joint Substitute Petition Concerning Subscription Television," requesting the Commission to authorize subscription television. At pages 11–12 of that petition it stated:

> Petitioners do not suggest restricting subscription television to either UHF or VHF and in fact believe that proposals that subscription television be limited to UHF are impractical and dangerous. We believe that subscription television should be made available, without discrimination, to all television broadcasters, UHF and VHF * * *
>
> * * * * * * *
>
> Subscription television is even more of an infant than UHF. Like UHF it will also have the tremendous problem of set conversion * * * It appears undesirable to compound the problems of the embryonic subscription television by adding the conversion problems of UHF * * *

The substance of these remarks was repeated by Zenith in the comments which it filed with the Commission on June 9, 1955. The current emphasis on pay-to-see television as the panacea for the problems now facing UHF stations is an attempt by the proponents of subscription television to capitalize, for their own private benefit, upon the public interest in and sympathy with these current problems. And, even assuming that pay-to-see TV would aid some UHF broadcasters, that aid must be weighed on the scales of public interest. The mere fact that some book publishers lose money each year is no reason why a pay-to-read system should be inaugurated by public libraries.

As Zenith has admitted, in its pleadings before the Commission, the proponents of pay-to-see TV will be primarily interested in the larger markets in the United States. In order to stimulate the flow of investment capital, subscription television must demonstrate its profit potential, and this means the establishment of the system where there is the largest audience at the lowest per capita cost—New York, Chicago, San Francisco, Los Angeles. The profit and loss statements from New York and the other top markets will provide the capital for the subsequent expansion of the system.

However, there is actually very little, if any, UHF problem in large metropolitan areas such as New York, Los Angeles, and San Francisco. That Zenith is aware of this is attested to by the fact that it has not, in its recent pleading filed before the Commission, suggested that subscription television actually be limited to UHF stations only, but rather phrased its request in terms of making subscription television available to those stations that can demonstrate a need for additional revenues.

Ostensibly, this limitation is intended to cover the UHF problem. However, when read in the light of Zenith's prior statements in connection with UHF and with Zenith's analyses of how it expects subscription television to develop, it is apparent that the language is well conceived. The purpose is to insure to Zenith the availability of the major metropolitan areas, most of which do not have existing UHF stations. At any given time, at least 1 of the 7 VHF stations in New York will be able to demonstrate that under the rather loose standards suggested by Zenith, it has a need for additional revenue.

The subscription television proponents have not indicated how long it would take to establish a system of toll television. It does appear, however, that they expect it will take at least a year to develop a system, in even a trial market. It is inconceivable that a nationwide system of subscription television could be developed in less than 3 to 5 years. The UHF problem needs an answer now. To refrain from taking any positive action now to help the UHF, on the theory that subscription television will solve the problem in the future, is to do another injustice to the UHF.

But even assuming that pay-to-see TV offered a possible solution to the current UHF problem, this advantage must be weighed against the disadvantages to the public at large. It will not be sufficient to tell a Detroit baseball fan that the reason he has to pay to see the world series on television is because Congress or the Commission wanted to help a man in Illinois who owned a UHF television station.

V. PAY-TO-SEE TV AND MONOPOLY

The advocates of pay-to-see TV have, time to time, intimated or suggested that the adoption of their systems affords the answer to certain alleged monopolistic industry practices. This argument—just as the UHF argument—is another attempt to offer a panacea—at the expense of the public—for whatever industry problems (real or imagined) do exist. Parenthetically, it should be noted that Zenith has not only offered its system as the panacea of all industry problems, but has also argued that its system would increase newspaper circulation and display advertising, increase magazine advertising, increase attendance at motion-picture theaters, and make the operation of radio stations more profitable.

The proponents of pay-to-see TV envisage a plan of operation which cannot help but result in the worst type of monoply. Skiatron proposes that the Commission adopt specific standards under which a single pay-equipment organization might reasonably expect to develop its business in a community, unhindered by rivalry from other systems. The determination of what programs will be transmitted will be made by Skiatron. Skiatron will establish the price to be charged to the public and the basis for compensating the broadcast stations for transmitting programs. The monopolistic pattern is clear.

Zenith's proposal is essentially the same, except that it would permit more than one system to be utilized. Paramount, the parent of the third subscription-television proponent, International Telemeter, has infused its offspring with more caution. The memories of the various antitrust prosecutions apparently are still sharp—and so Telemeter has been more noncommittal as to the role it expects to play if pay-to-see TV is authorized.

Most important of all, however, is the fact that nowhere have any of the proponents even suggested that there be any regulation of the amount which they—and their allied television stations—will be able to charge the public. It is one thing for stations to be free to charge commercial advertisers what the traffic will bear; it is altogether another thing for stations to charge the viewing public what the traffic will bear in order to see the telecast of political conventions, the World Series, Jackie Gleason, and Peter Pan, which is just exactly what the proponents propose to do.

VI. THE COMMUNICATIONS ACT AND PAY-TO-SEE TV

There is a very serious question as to (*a*) whether or not the Commission has the authority under the Communications Act of 1934, as amended, to permit subscription television; and (*b*) assuming (1) that some form of subscription television were found to be in the public interest; and (2) that the present Communications Act could be tortured into a construction that would permit the authorization of subscription television, whether or not that statute is adequate to insure that the public interest would be protected and continuously served by the authorization of subscription television.

In our written comments before the Commission, I think we have demonstrated that the Commission does not now have the authority to permit subscription television. The act is clearly devoid of any specific authorization. The Communications Act contemplates only two types of commercial usages—a "broadcast" use and a "common-carrier" use. Subscription television is neither and, yet, both. Broadcasting is, by definition, a service for all the public, and not for that segment of the public that can afford to pay. Common carriage has become a word of art to describe such operation as the American Telephone Co. and Western Union. A common carrier is one who provides a facility, rather than a program service which is transmitted over the facility.

It is our position that this act which was passed and amended in the light of the existing broadcast industry—an advertiser-supported industry—cannot and should not be construed to permit the authorization of a new concept of broadcasting, which clearly could not have been in the minds of the legislators at the time the act was passed and amended.

The proponents of subscription television look for support to the legislative history, and in this case the legislative history goes back to 1927. What they find is pathetic. We are shown words of individual legislators taken completely out of context. I do not intend to duplicate here what we did in the formal pleadings in this matter filed with the Commission; namely, to reinsert the words back into their historical context. I can only say to you, gentlemen, that any attempt to contort a statute to permit the usurpation of authoriy in an area that was clearly not within the contemplation of Congress, that depends upon ancient history of a dubious sort—individual remarks of Congressmen and Senators on the floor of the House and Senate—is pathetically weak.

I suggest to you that a regulatory statute has meaning only in light of the structure of the industry that it was intended to regulate and that, in the absence of specific authority, the Commission does not have the power to authorize subscription television.

Even assuming for a moment that the statute could be contorted to permit a subscription-television authorization, is the present Communications Act the proper vehicle for this purpose? Is this statute, enacted to regulate a broadcast industry which provided a service without charge to the public, a sufficient basis to insure that the public interest will be served by a broadcast industry that depends for its support upon a direct charge to the public and involves a direct and personal contact with the home viewer?

Let me mention just one problem. The Communications Act required that the Commission give detailed and careful scrutiny to the qualifications of prospective licensees. In the present industry, the product, and not the broadcaster itself, comes into your living room. Subscription television contemplates the issuing of franchises in every community for the installation and maintaining of its equipment, the billing to and collection from listeners, and the making of all the necessary local arrangements for the transmission of programs. This is a direct and immediate contact with the broadcaster and the home viewer. Yet, although the broadcaster is licensed by the Commission, the Communications Act does not appear to permit or require the licensing of these franchise dealers.

What about the rates that the home viewer will be charged? Should the subscription-television promoter be able to levy whatever toll he desires? Every enterprise that I can think of that utilizes the public domain for private profit and involves a direct charge to the listener carries with its operating privileges a duty to charge reasonable rates, and this duty is enforced by statutory rate regulation. I suggest to you that it is doubtful whether the Commission now has the authority to regulate television subscription rates. The Communications Act does not have a clear answer. In fact, these questions are questions of basic policy which it is the function of this Congress, the elected representatives of the people, to determine, rather than properly within the administrative discretion of the Commission. If there is ever to be any kind of a subscription-television operation, that determination should be made by the Congress, and the Congress should provide the administrative agency with sufficient powers to enforce the congressional mandate. Legislation is required. The present Communications Act is insufficient for this purpose.

Senator PASTORE. Are you through?

Mr. COHN. I am.

Mr. COX. You indicated, Mr. Cohn, that you felt subscription would be forced to make a mass appeal for audiences and, in order to deliver on this proposal, that they could not appeal to specialized audiences by providing entertainment which would not have the same breadth of appeal as free television. Now, that, of course, is something that only time could demonstrate. Isn't it true that it would be mechanically possible, and economically possible, for a subscription programer to provide a program of more limited appeal and still make the same return by increasing the charge made for the program, as long as the public was willing to pay for it?

Mr. COHN. That is theoretically possible, but as a practical matter I still suggest that the astute businessmen who operate the three companies will always seek the greatest amount of money—for which I don't blame them—on their programing, and inevitably it comes back to the most popular programing.

Mr. COX. The point I am making is this: If this is possible, this is different from sponsored programs, because there the sponsor is impelled by economics to offer the mass-appeal type of program.

Mr. COHN. That is generally true. Of course, all I was going to say is that you have programs such as Omnibus; you have programs which don't necessarily appeal to the greatest mass of audience, which are a part of the operations of every free television station that we have today, both those associated with networks where they get either their network programs of that type, or those not associated with networks which do programing of their own of that type—and, of course, those associated with networks do some of their own of that type, too.

Mr. Cox. You make the point that only one program can be offered by a particular station at one time and that therefore, a subscription program will be a substitution for, rather than an addition to, existing programing. The point I would like to ask is: What is the situation where a station now on the air, and therefore offering programs, is in financial difficulties and perhaps going to leave the air? Now, if it could stay on by raising revenue from subscription service, where it has been unable to get it through advertising support, that programing would be in addition to what the public would eventually get if the present economic forces are permitted to play.

Mr. Cohn. That is obviously true, in the same sense as if you were going to establish a new station and that new station was going to be pay-as-you-see television; it would be an additional service. But you should bear in mind and take cognizance of the fact of what kind of programing is this new station going to put on, which raises in turn the question of whether or not we might be creating a situation whereby the establishment of a new station which does not exist today, or is in financial trouble—you are creating a problem for those existing stations which are today not in financial trouble, but face serious financial trouble by having pay-as-you-see television.

Mr. Cox. Do you think if Mr. Kohn got a pay-as-you-see television station in Easton, thus remedying his economic difficulties, this would in any way imperil the economics of the Philadelphia stations which are blanketing his area now with network programs?

Mr. Cohn. If I had, on my new station that you are talking about, the world series, Jackie Gleason, I Love Lucy—go down the line on all of these—the answer to your question is "Yes"; I could very easily cause very serious financial difficulties as far as—not the station in Philadelphia, because you gave me the Easton-Allentown situation—but the two stations in Bethlehem and Easton which are existing today. Mr. Ray Kohn spoke of the fact that his station in Allentown had trouble, and that he was competing with Philadelphia and Lancaster. But there are 2 stations there today, 1 in Easton and 1 in Bethlehem, in that area, and you permit a new station, or a revived station, to go on the air and put subscription on, what you might end up doing is killing off the 2 existing stations in Easton and Bethlehem.

Mr. Cox. Do you know whether those two stations are presently making money so they will be there 3 or 4 years from now?

Mr. Cohn. I don't know, except what I bear, and I hear one of them is having difficulty.

Mr. Cox. Now, you suggested, I believe, that if they were serious about this proposal of increasing service, they should offer to exclude themselves from the top 100 markets.

Mr. Cohn. That is right.

Mr. Cox. Now, in the top 100 markets, with 11 exceptions, there are 3 or fewer services, so that the existing stations in those markets are affiliated with the 3 networks. How do you suppose a subscription programer would, in the initial stages of inaugurating such service, get time on any one of those stations in evening hours?

Mr. COHN. You are talking about the top hundred markets?

Mr. COX. Yes.

Mr. COHN. Well, in those cities where there are stations other than network stations, I assume your question doesn't apply.

Mr. COX. Quite obviously the four extra stations in New York would be available to him there.

Mr. COHN. One of the ways would be to negotiate with the particular station involved and attempt to demonstrate to the station that the station could make more money by being affiliated with them—at the expense of the public, I might add.

Mr. COX. In other words, you would suppose that any one of the operators of these existing stations could be persuaded that an affiliation with a still unborn network to provide a still untried type of service—could persuade any one of those broadcasters to cancel his affiliation with 1 of the 3 existing networks?

Mr. COHN. As of today, no; but certainly in the future.

Mr. COX. We are talking about how they are going to get started.

Mr. COHN. I would assume they would start, Mr. Cox, with the unaffiliated stations in those major markets, which there are in places like New York, Los Angeles, Chicago.

Mr. COX. Of course, the larger the market they start in, the more substantial the investment required on the part of the local franchise holder to get the situation underway; isn't that true?

Mr. COHN. You mean because there are more people in these particular things?

Mr. COX. Yes; because it would cost much more to equip 50 percent of the homes in New York with decoders than the fairly substantial figure given for equipping 50 percent of the television homes in Washington.

Mr. COHN. Right.

Mr. COX. Is it your position that they are going to start in these major markets, make this investment, before they have had an actual experience with public acceptance of their product?

Mr. COHN. That is what they have said.

Mr. COX. In your closing argument about UHF you said they are going to the large cities and they will not help UHF because there are VHF stations there. If they made a success in larger cities, would they not be required by the FCC to make this same system available—the same programs and the same decoding equipment—in any area with UHF allocations where a local franchise holder was willing to make the necessary investment?

Mr. COHN. Probably, when I was younger, I would have been able, because I had more intelligence then, to prognosticate as to what the Commission was going to do in any given situation. As I grow older, I find myself less able to do that and consequently, what you are really asking me is what would the Commission do under a given set of circumstances and, frankly, I can't tell you.

Mr. COX. No; I am just asking you, based on your experience with the Commission, whether you think it is conceivable that the Commission would authorize a service of this kind and would not require anyone authorized to furnish this service to furnish it to all comers on equal terms?

Mr. COHN. Generally speaking, I would agree with that.

Mr. COX. That is all I have.

Senator PASTORE. Thank you very much, Mr. Cohn.

Mr. Abe Stark.

Mr. STARK. Mr. Stavisky is assisting me.

Senator PASTORE. You may bring anyone you like.

STATEMENT OF ABE STARK, PRESIDENT, NEW YORK CITY COUNCIL; ACCOMPANIED BY LEONARD P. STAVISKY, ASSISTANT TO THE PRESIDENT, NEW YORK CITY COUNCIL

Mr. STARK. Mr. Chairman, and gentlemen, first I would like to place on the record a resolution calling upon the Federal Communications Commission to protect the public against any threat to free television viewing which was passed, 19 to 3—there were 3 abstaining from voting and 19 completely against pay-as-you-see television—by the City Council of New York

Senator PASTORE. Without objection, the resolution will be made a part of the record at this point.

Mr. STARK. Thank you very much.

(The document above referred to is as follows:)

MARCH 1, 1955.

THE COUNCIL RESOLUTION NO. 410—RESOLUTION CALLING UPON THE FEDERAL COMMUNICATIONS COMMISSION TO PROTECT THE PUBLIC AGAINST ANY THREAT TO FREE TELEVISION VIEWING

By the president (Mr. Stark)—

Whereas applications have been filed with the Federal Communications Commission for approval of pay-as-you-watch television in violation of the right of the American people to free access to the air waves; and

Whereas the Federal Communications Commission has asked for written comments as to the advisability of adopting subscription television; and

Whereas there are 4,290,000 television sets in New York City and 34 million sets throughout the Nation which will be directly affected by any threat to free television viewing, and

Whereas there is danger that better programs will be purchased by subscription syndicates and limited to families who can afford to pay for this service; and

Whereas there are countless families of moderate means who will be unable to afford subscription television and will have little more than mediocre shows and antiquated movies available to them without charge; and

Whereas many of these families bought television sets with the belief that the tradition of free access to broadcasting channels would be held inviolate; and

Whereas coin-box television is a violation of the spirit and intent of section 303 (g) of the Communications Act of 1934 which directed the FCC to encourage the larger and more effective use of broadcasting in the public interest; and

Whereas the tradition of free broadcasting must not be lightly cast aside or threatened with extinction by the unfair competition of well-financed syndicates: Now, therefore, be it

Resolved, That the Council of the City of New York call upon the Federal Communications Commission to withhold approval of pay-as-you-watch television on the grounds that it will create hardship for many families; and be it further

Resolved, That this resolution be in no way construed to interfere with prompt approval of limited audience television designed to transmit police lineups, medical operations, and related community services, provided they are regulated in the public interest; and be it further

Resolved, That the Council of the City of New York transmit a copy of this resolution to the members of the Federal Communications Commission.

Referred to the committee on rules, privileges, and elections.

Mr. STARK. I appreciate this opportunity to appear before this committee of the United States Senate on the subject of subscription television. The issue before us not only involves the public interest, it also represent a flagrant attempt to usurp powers which rightfully belong to Congress.

Over two-thirds of all American households now have one or more television sets. These families look to Congress for protection of their natural and legal rights to uninterrupted access to their own property. Although the Nation's airwaves have always been free, today there is conspiracy in the air. By influence and affluence, a powerful and self-seeking syndicate is bent upon destroying free television as we know it in this country.

Free television is the best form of low-cost entertainment available to the average American family in the average American home. Free television represents a public investment of more than $10 billion. It affects 37 million American families. It concerns over 100 million American people. This tremendous public investment must not be sacrificed to benefit the selfish interests of any syndicate.

There is a clique of monopolists in this country now seeking to destroy free public access to the airwaves. I accuse them of violating the spirit and intent of the Communications Act of 1934. I accuse them of attempting an unwarranted invasion into the privacy of the American home. I accuse them of supporting a system which borders on illegal confiscation of private property. And I accuse them of ignoring the hardship to millions of low-income families who cannot afford the cost of luxury entertainment and who would suffer most from the inroads of pay-as-you-see television.

It is time that someone told the people the truth about toll TV, and unmasked it completely and openly. Its advocates have promised all sorts of inducements—plays, movies, sports events, forums, variety shows, and even the opera. But all of these are available now, free of charge, under existing commercial and foundation sponsorship. Pay-as-you-see television would give the public nothing new, except a bill at the end of the month. No monopolist and no syndicate should be permited to charge people for the privilege of watching their own television sets.

Mr. Cox. If they don't offer anything new, Mr. Stark, who will then subscribe to the service they are offering?

Mr. Stark. I think that could be very easily overcome by these companies, unfortunately, through promotion, publicity, selling the families the ideas that they are giving them something better than they are getting on free television. It can be brought about terrifically at tremendous expense to the average family, by the children, themselves, at home, who might be told of a certain program, where there may be stories that appear in some of the comic books that should be banned; many other ways such as that, where the children will be continuously begging their parents for the additional pennies to pay for that kind of program which they cannot afford, and the parents as usual have no alternative but to give them the program they want.

Then, again, even among the adults, through promotion, most anything in this world—and it has been proven time and again—can be sold, and I think that can be sold.

Mr. Cox. You assume, then, in effect, a campaign of deceptive advertising as to the content and value of the programs?

Mr. Stark. We don't have to be deceptive. It may be, and there is plenty of deceptive advertising right now on programs on the air which should be stopped, but it can be done in such a way to make this particular picture look better than that picture that we get free, some such way as that. It is very easily done.

Thirty-seven million American families are involved in this issue. In many instances these are poor people, people who had to scrimp and save in order to buy their television sets. Many are still paying installments. They bought these sets with the clear understanding that there would be no interference with the principle of free television viewing. In New York City alone there is a public investment of $1½ billion, involving 4½ million set owners. Almost 1 set for every 2 people in the city of New York.

In a single year the average family spends approximately $87 on servicing and amortizing the cost of existing television sets. Toll TV would cost an estimated 66 cents an hour, which means that each family would be required to pay an additional $100 a year in order to watch 3 hours of pay-as-you-see programs a week. Since the average television set is in use 4 hours a day, the cost of toll TV might, in some cases, be as much as $1,100 a year.

Mr. Cox. I take it that that is the same calculation that Mr. Cohn is talking about, which assumes complete displacement of free television?

Mr. Stark. Yes. We have gotten the figures from the various agencies.

Let me cite the example of New York City. Our average family income is only $3,500 a year. We have three-quarters of a million New Yorkers over 65 years of age. We have 1 million 60 years and over, one-eighth of our population. Seventy-four percent of these aged men and women have incomes of less than $1,000 a year, and half of them have no income at all. Furthermore, children, housewives, hospitalized servicemen, shut-ins, and other disabled persons have come to rely upon free television as an essential form of recreation and entertainment. They have no other means of getting it, these people in these brackets. They canont afford to pay for luxury entertainment, and that is why they bought television sets, probably deprived themselves quite often of things that they need so that they have that little entertainment within their own home.

I would like to quote a newspaper, just 1 day of programs on the air free. This took place on January 15 of this year.

The reason I have this paper is because at some time thereabouts we started to talk about the resolution that was introduced in the city of New York.

Here are some of the programs:

Seven o'clock in the morning, arthritis and rheumatism benefit show with stars of stage and screen, and so forth. I am sure none of those monopolies would want to do that.

Another one, Lamp Unto My Feet, a tribute to the missions of the Lutheran Church.

"Look Up and Live;" "Nothing to Do," by Harold Fonder—cause and effect theme on juvenile delinquency; "Camera Three"—final episode of "Crime and Punishment"; "Let Us Take a Trip to a Seminole Indian Vilage" with Sonny Fox; "The American Foreman;" "What is Ahead for the New Congress"; "The Catholic Hour"; "Communist Materialism"; "Youth Wants To Know"—Senator Carl Mundt interviewed; "Dr. Spock"—pediatrics, talks about differences in training of single children as opposed to twins.

Here is a program that was on for 2 hours that day, 3:30 to 5:30, NBC Opera Theatre, Mozart, "The Magic Flute." "Front Row

Center"; "Strange Suspicion"; "College Press Conference"—Secretary of the Army Wilber Brucker will be interviewed; "Ominbus"; "The Great Forgery"; "Super Circus"; "Meet the Press"—Senator William Knowland; "You Are There"—V-J Day; the New York Times Youth Program, "How Should Political Campaigns Be Conducted"; Governor Meyner of New Jersey discusses the Armed Forces Reserves; the Ed Sullivan Show—a tremendous show; a play, "The Ballad of Mender McClure"; "Alfred Hitchcock Presents"; "You Have Got To Have Luck."

This is 1 day, I am sure by taking away, and it will have to come some day, free television, much of this will be lost to the public who cannot pay.

Gentlemen, no other issue in recent years strikes so directly into the American home. Unlike any other form of entertainment, broadcasting was conceived and developed within a framework of free access to the airwaves. That tradition must not be lightly cast aside. Pay-as-you-see television is like the camel at the tent. Once it is admitted in principle it will destroy free broadcasting as we know it in this country, usurping the best programs, the best channels, and the best available hours.

Congress established the principle of free broadcasting under the Communications Act of 1934. But what you and your predecessors have guaranteed by just law is now being undermined by influence peddling and undue pressure. The advocates of toll TV are spending vast amounts of money on costly propaganda distributed on a nationwide basis. They are printing thousands of advertisements, leaflets and brochures advocating immediate approval of pay television without further authorization from Congress. And what is more deadly, they have their friends in "court;" they have their advocates in Washington; they have their own propagandist now sitting as a member of the Federal Communications Commission, the agency which is pledged to uphold the principles of free broadcasting in this country.

I maintain that it is impossible for the Federal Communications Commission to render a just decision on toll TV so long as one of its members, Robert E. Lee, is permitted to serve in an official capacity. In a speech delivered on February 21, 1956, and in an article prepared for the March 20, 1956, issue of Look magazine, he has prejudged the issue. He has expressed himself in favor of subscription television, even though the matter is still pending before the FCC and no public hearing has yet been held.

Mr. Cox. On that point, Mr. Stark, isn't it true that in many of the proceedings before the Commission in quasi-legislative matters, where rules are proposed or changes in rules are proposed as here, that the Commission may or may not hold a public hearing at their discretion?

Mr. Stark. I agree with you, that is so, but when we stop to think that 25,000 communications have been sent to the FCC—I think it is the largest on record—do we not owe it to the people to have hearings?

Mr. Cox. Well, now, as I understand it, a number of the parties have requested hearings, and that is something still being considered by the Commission, but it is true, as I understand it, that as of this date the record in this matter is closed. All comments are in, and when the Commission was before this committee they indicated that they were now giving consideration to these comments, and to the question of whether they could reach a decision or whether hearings would be required.

Mr. STARK. Well, I am not too sure whether a decision hasn't been reached, but I know this much: There is no reason in the world why that had to be done and why it is even too late now to have hearings that are demanded, and why it was necessary for Robert E. Lee to write an article and to speak on behalf of doing away with the hearings and to go right through it and give it the O.K. And evidently the decision in his mind has been reached, if in no one else's.

Senator PASTORE. Now, in justice to Mr. Lee—we disagree on many points with Mr. Lee—you don't see anything illegal in that?

Mr. STARK. Let us not call it illegal. It is certainly improper.

Senator PASTORE. Many of us in public life have opinions that we formulate on the facts that are available to us. I haven't read the article of which you speak, but did he go so far as to say "Let us do away with hearings and let us have this thing?"

Mr. STARK. He asked for immediate approval. It is right here. We will show it to you.

Senator PASTORE. Will you leave that for the record?

Mr. STARK. Yes, we will.[3]

Mr. COX. The point I would raise along the same line is this: Isn't it a practice in legislative proceedings—in the city council, in the Congress, at all levels—for members of these bodies to express their views on controversial questions pending before the agency before a vote is reached?

Mr. STARK. It is so in bodies like your own, in bodies like the one I serve on, but not in the FCC, in my opinion, for him to prejudge, no more than we would expect any judge in a court to prejudge a case such as this.

Mr. COX. Don't we have to maintain a clear distinction between the function of the Federal Communications Commission in a quasi-judicial proceeding in which it is considering arguments presented to it by many parties as to changes in rules?

Mr. STARK. I would consider this definitely was judicial, and in my opinion that should never have taken place; and now that he has declared himself, which I will explain further——

Senator PASTORE. Then I think it preferable that you proceed, Mr. Stark.

Mr. STARK. Thank you very much.

Gentlemen, there is need for public confirmation or denial of reports that Commissioner Lee has received substantial payment for that magazine article. As enacted by Congress, the Communications Act of 1934 clearly states that "no Commissioner shall participate in any hearing or proceeding in which he has a pecuniary interest." Furthermore, the FCC is considered to be a quasi-judicial body and, under law, judges are traditionally required to disqualify themselves on matters in which they have previously testified. In spite of this, Mr. Lee has become an avowed propagandist for pay-as-you-see television while holding quasi-judicial office.

A man can either advocate or judge a case. He should not serve in both capacities. I question the wisdom of allowing Commissioner

---

[3] The article in question is printed at the conclusion of Mr. Stark's testimony, beginning at p. 1259.

Lee to have any further responsibility in the proceedings over coinbox television. In the interests of justice, Congress should undertake an immediate investigation to determine whether any Federal laws have been violated by Mr. Lee's ill-conceived action in prejudging the case and propagandizing for a cause.

Mr. Cox. You don't suggest any specific law that in your opinion has been violated?

Mr. STARK. The law of 1934, section 154.

Mr. Cox. Is it this reference to interest?

Mr. STARK. That is right.

Mr. Cox. Is it your view that a man who received pay for the preparation of an article has an interest in the outcome of the proceeding on which he comments? Wouldn't that require that he own an interest—ownership in some one of the parties to the proceeding—before he could be held to have an interest in the eventual outcome?

Mr. STARK. Well, not necessarily. He doesn't have to own an interest in the companies, and I am not making any accusations against Robert Lee in that sense, or in any other sense; but for many reasons, there may be reasons for a man taking a position like that, and certainly there was no necessity, at a time like this, when there were 25,000 communications within that body, for him or anyone else associated with that body to speak about that in a speech, and to write about it in a magazine.

Senator PASTORE. Well, now, let me ask you this question, Mr. Stark: I hope that this doesn't tend to confuse our record, because I think you are making a very sincere and serious presentation here, and there are many people who agree with you as to what effect this pay as you see might have on free entertainment, and that is the serious question that the Congress has to decide.

Mr. STARK. And that is what I am hoping for, may I say.

Senator PASTORE. In other words, whether we are giving the public a little more in addition to what we are already receiving, or whether this may be an instrumentality by which we may weaken his existing privilege of free entertainment. That is the serious question involved.

But now once all of the facts have been presented to the FCC, and one of the Commissioners sees fit to go on a public forum and state his opinion as he looks at the problem, and even though he receives, let us say, an honorarium for that, would you say that he committed an act of impropriety, or that he committed an illegal act in violation of an existing law, because he expressed his opinion?

Mr. STARK. Senator, in my opinion, I would say "Yes." He could have his opinion if he wanted to, but he should keep it to himself and not go out making speeches. No one would permit a judge to do that, in my opinion.

Senator PASTORE. Well, is this exactly that? Is this the situation of a judge who is deciding issues between two people, or is this a matter that actually plays into the public interest that has to be determined?

Now, this is not a case. This is a rulemaking proceeding. And I think our record ought to be clear on that because, after all, it is our function to see that these administrative officers carry out their responsibility, consistent with law. But you have said here, and you make the blank arguments, and I hope that you would consider that, that no Commissioner shall participate in any hearing or proceeding in which he has a pecuniary interest.

Now, do you take the position that that is what he did when he expressed his opinion on a rulemaking procedure? Having heard all of the sides, he got up and he said "I think this is a good thing," like I might go out of this room now and say "I think this is a good thing." I can't represent clients in matters that involve Federal agencies under the Constitution, and statutory provisions, but I can state my opinion on a matter of this kind that comes before us, and so can you as a member of the council. You can't represent a client in any business before the City Council of the City of New York, but if a matter comes before you on the changing of an ordinance, and you get up in a public forum and you say that you feel it is a good thing, and ought to be done, that is no pecuniary interest because you stated an opinion.

Mr. STARK. Senator, in the first place——

Senator PASTORE. If we are wrong about that, we want to be corrected. But you are actually making an accusation here that Commissioner Lee has actually taken money for an opinion.

Mr. STARK. Well, he has expressed an opinion, and bear this in mind: He has not only expressed this opinion, but he has expressed this opinion without permitting the right of hearing of 25,000 groups or individuals. And he has expressed that opinion and in my opinion that is certainly far more serious than even if he would be involved in the company itself.

Senator PASTORE. Well, you can disagree with it, but the serious question is whether or not he violated a law—whether or not he had a pecuniary interest.

Mr. STARK. That is not up to me to decide, and you may be completely right. I don't know. I am just giving you my opinion. But I do believe that your committee should check into that seriously.

Senator PASTORE. Well, I want to read this to you, because after all, you see, the Congress of the United States has been alert to all of these situations, and naturally we want the record to be abundantly clear in view of the strong presentation that you make here.

I am reading from section 4, subsection (b) of the Communications Act of 1934, as amended.

> Such Commissioners shall not engage in any other business, vocation, profession, or employment; but this shall not apply to the presentation or delivery of publications or papers for which a reasonable honorarium or compensation may be accepted.

Mr. STAVISKY. May I comment on that?

Senator PASTORE. Yes; I want you to.

Mr. STAVISKY. I think though it is proper for a man serving on the Federal Communications Commission to be permitted to write magazine articles, I do not think it proper for him to be permitted to write magazine articles about a matter still pending before the FCC, and on which the FCC has not arrived at a decision.

Furthermore——

Senator PASTORE. You mean he has no right to express his decision?

Mr. STAVISKY. Before the decision is handed down, I think it is improper.

Senator PASTORE. Would you say it is illegal? You are saying here it is illegal and should be investigated.

Mr. STAVISKY. If it is still pending before the FCC, sir.

Senator PASTORE. Well, how do you construe this section I have just read?

Mr. STAVISKY. In the sense that it permits him to write magazine articles on general subjects, but not necessarily on a matter still current. In other words, he may write something about the FCC which has already been decided, but not a matter which is still current, in my opinion.

Senator PASTORE. Well, I am not going to quarrel about it.

Mr. STAVISKY. Furthermore, could I make this observation: It is standard practice for Look magazine to pay all contributors of magazine articles, exclusive of their own staff members, for any article published by Look magazine. We have charged Commissioner Lee with receiving an honorarium and payment for this magazine article. He has refused comment on that accusation, which we made a month ago. I believe he should be asked publicly by the United States Senate—by this committee, if in your opinion it is proper—to confirm or deny reports that he has received a substantial payment for the publication of that magazine article.

Senator PASTORE. Well, let us assume that he has received compensation, or an honorarium. The question before us is, Is that a violation of the law, and I have just read the law to you?

Mr. STAVISKY. I believe that if you check——

Senator PASTORE. In view of the temerity of your accusation—he could say, "Admitting what you say is true, I have done nothing wrong."

Mr. STAVISKY. Of course, he can say that.

Senator PASTORE. I know. When I say "I have done nothing wrong," I am putting it rather graphically. He could say he didn't violate the law: "Admitting what you say to be true, I didn't violate the law."

Mr. STAVISKY. Reading section 154 (j), the one on pecuniary interest, I think it is subject to further interpretation and clarification by this committee—section 154 (j), which declares that no Commissioner shall participate in any hearing or proceeding in which he has a pecuniary interest.

Senator PASTORE. No Commissioner shall participate in a hearing or proceeding in which he has a pecuniary interest. Now, the mere fact that a man expresses an opinion, and is paid for an article, is that a pecuniary interest?

Mr. STAVISKY. I think it is something this committee might look into, sir.

Senator PASTORE. All right.

Mr. Stark, you may proceed.

Mr. STARK. You know, he even goes further in this magazine article——

Senator PASTORE. I want the record clear. I may be diametrically opposed to the opinion stated by Mr. Lee. Maybe I am.

Mr. STARK. Yes, you have been very fair. You have said that to the previous speaker.

Senator PASTORE. We are discussing another problem here. And I don't think that anything ought to happen, short of violating a law, that ought to circumscribe the expression of opinions and ideas, because that is the reason why we hold these public hearings. If a man is paid to do something that is inconsistent, incompatible, and inimical to his public trust, that is one thing; but if a man expresses an opinion, honestly and fairly—whether or not I agree with it—and the law says that he can do it and receive an honorarium—if he appears in public to make that speech or receives compensation if he writes an article in the expression of that opinion—if the law permits it, we certainly shouldn't accuse the man of having violated the law. That is the only point I make.

Mr. STARK. Well, Senator, I would say he would have the right to say all that, and more, if he wants to, and whatever he would want to say, in voting on a matter after it is over—give his reasons why he is voting for it, or against it.

Senator PASTORE. But it would have been in better taste if the Commission itself had decided the issue; is that correct?

Mr. STARK. Correct, absolutely.

Senator PASTORE. Now we are talking about better taste. Now we are getting into another field. We are not talking about congressional investigations, no more than I think anyone should ridicule you for expressing your opinion as you see it, because I applaud you for it, Mr. Stark. You have every right to come here as an American citizen and express your opinion.

Mr. STARK. And I wouldn't come here unless I felt that way.

Senator PASTORE. Very well.

Mr. STARK. He goes further and suggests approval of subscription television on a "broad basis, leaving to the promoter the choice of the system he wishes." He further suggested that if the early tests indicate public acceptance, we could perhaps remove all restrictions and let the buyer beware.

I don't think it is up to a member of that Commission to make statements of that kind prior to this thing having a hearing.

Senator PASTORE. Well, I want you to know that Mr. Lee is a Republican, and I am a Democrat. But I still want you to know that I seriously feel we ought to be rather cautious, and if there are any circumstances far beyond what is already presented here—but if it is merely a publicly written article of this type and the expression of an opinion, I think we ought to go rather slowly in characterizing the man's reputation.

Mr. STARK. I personally would go still further than that if it were possible, and I would say this:

It makes no difference whether one like you and myself are Democrats or Republicans. This is something, in my humble opinion, and strong opinion, that should be completely nonpartisan, as free as the air we breathe.

Senator PASTORE. I say "Amen" to that.

Mr. STARK. And so this concept of letting the buyer beware is a total denial of the need for Government regulation of utilities and a return to the jungle theory of dog eat dog in business dealings with the public. His idea is a senseless repudiation of the spirit and intent of the Communications Act of 1934 which directed the FCC to regulate broadcasting in the public interest.

If Commissioner Lee has his way, 37 million American families will be brushed aside without a hearing in order to satisfy a handful of monopoly-minded syndicates. A public investment of over $10 billion will be sacrificed without reason. Congress has an obligation to the American people to answer this challenge and demonstrate to all concerned that our Government is guided by just law rather than impulsive fiat.

I urge you to——

Senator PASTORE. Well, go ahead and say it.

Mr. STARK. I do not want to be antagonistic. I don't know your opinion for or against pay TV. I have expressed my opinion here strongly, and in the city council where we had hearings on that—we permitted hearings on that—and not a single person—it is unbelievable—not a single person appeared before the city of New York speaking on behalf of it. Everyone was against it. Even they, themselves, their representative who was supposed to be there, at the last moment somehow boycotted this thing by sending a statement to the mayor of the city of New York attacking me for going through with this without giving him sufficient time to appear at the hearing. He had 3 weeks' time, but the very next day he said that he urged the FCC to vote on it immediately. For that he was in a hurry, but to appear before us, he had no time.

These are the actual facts, and so, my friends, I urge you to summon Commissioner Lee before this committee of the Senate to answer charges, if you want to call it that, of conduct unbecoming a public official, and to investigate the underground movement which is now being waged to destroy free television viewing in the United States.

Senator PASTORE. Well, I want to say to you, Mr. Stark, and Mr. Stavisky, that we appreciate your coming forward here, especially because of the fact that you are president of the city council of the largest city in the world, that embodies the destinies, the hopes and aspirations, and the dreams of maybe 8 million people, which is a very very large part of our entire American population. And I am one of those who might have to make the self-serving statement that I am intensely interested in the consumer interest in every cause, and our responsibility here, of course, is to protect the public interest.

Fundamentally, you feel strongly about this matter because you feel that somehow pay-as-you-go television will injure the privilege and the opportunity that people now have in free entertainment by the use of television. You seriously believe that, and I have the highest regard and respect for your belief. Now, there are some other people who maybe look at it differently, and they will appear here also. Our job is to hear both sides of the question, and to protect the public interest.

Naturally, a man who comes here representing a large metropolitan area such as you do, with so many people, carries a tremendous amount of weight as to his opinions on these subjects, and the record is clear. It is an open record. People who don't agree with you can come here and rebut or refute any statements that you have made. I am not here to protect or defend Mr. Lee.

Mr. STARK. I know that.

Senator PASTORE. On the other hand, I think that for the maintenance of orderly process, it was necessary for me to point out that according to everything that is presented here so far, I don't see the harm in the situation, although I do see the fact that you people could very seriously disagree with him. The chances are that he spoke about it before an official decision was made, but that was not a controversy, as I understand it, between two conflicting interests. They are trying to make a rule at the FCC to determine, first of all, whether they have the authority under the law to do this thing, and if they do have the authority, whether or not it should be done at all.

I think Congress will play a very important part in the decision that is ultimately made.

Mr. STARK. I am glad to hear that.

Senator PASTORE. Maybe sometimes some of us become so enthusiastic or imbued with our own point of view that we would like to go around telling everybody about it. I don't think for 1 minute that Mr. Lee is the kind of man who would take compensation to make up his mind. He might take compensation, or an honorarium, as he is permitted to do under the law, possibly to write an article expressing his opinion. Whether or not that opinion is influenced for compensation, I doubt that very very much.

You people have your point of view, and naturally I have mine. I somewhat resisted the appointment of Mr. Lee when it was made at the time. However, since he has become a member of the Commission, I have found him to be a very honorable person, dedicated to public service. He said here in this room precisely what he said in this article. He said it to us, and it was no secret to me when you revealed what the article was all about.

As a matter of fact, talking about expressing an opinion, let me say this: Maybe I am just as much at fault as the rest, because I asked him his opinion when he came here.

Mr. STARK . That is all right.

Senator PASTORE. But I want to thank you, Mr. Stark, for coming here, because I realize that you come here and present your views on this issue on behalf of the people of your city.

Mr. STARK. I would just like to say this, Senator, in closing. In my opinion, in fact, I have never expressed anything here that I said he has taken compensation outside of for writing the article, which is only hearsay. I don't know that for a fact——

The CHAIRMAN. He might have been paid. I don't know.

Mr. STARK. But I cannot get myself to feel different about the entire setup due to the fact, whether he has legally a right or legally no right to do what he has done. The fact that he sits on that Commission, as an American, in decency to every person in our country, he should not have done it. That is my opinion.

I go further; I say this too: As far as the three companies involved, in my opinion, too, there this is nothing but cold hard business of the toughest kind, and I am sure when it will come down to dollars and cents on this problem, of giving choice to a pamphlet or to a comic book—a pamphlet that may bring them in $10,000 or a comic book that may bring them in millions—the comic book will win out. And being elected as a representative of the city of New York, outside of my own personal feeling toward that, which I have fought on behalf of voluntary organizations for 35 years of my life—if I must mention just one thing, I am president of the largest boys' club in America, the Brownsville Boys Club in the Borough of Brooklyn, where besides the boys club we are building a golden age center for men and women over 60 years of age who need recreation and have no place to go. I am concerned about those children and those old people, and if I have to put a bite or a tax in the city of New York, or put a bite or a tax in the city of Washington, you feel the same about it, on behalf of the people that have sets, I know much better places to put that bite than on this.

Thank you very much.

Senator PASTORE. Mr. Stark, I haven't had the privilege of having met you before, but I have heard a lot about you, and if you weren't the kind of man you are, you never would have been the president of the city council.

Mr. STARK. That is very kind of you. Thank you very much.

Senator PASTORE. I only want to say this in conclusion. This was a hearing on a rulemaking procedure, and the questions that he answered in that article, we ourselves on the committee asked him questions about it because we were interested to know how they might feel about these things.

Now, I will admit to you, there are situations that the FCC deals with that do tend to be quasi-judicial or strictly judicial, where you have two conflicting interests, and it is up before them to decide the rights of various people.

Now, if before a decision was made they went out and talked about it, that would be completely wrong, but this was an opinion on a rule-making procedure.

Mr. STARK. I accept that. Thank you very much.

Senator PASTORE. Nice to have seen you, too, Mr. Stavisky.

Mr. STAVISKY. Thank you very much.

(The article referred to by Mr. Stark, which appeared at pp. 104 to 108 of the March 20, 1956, issue of Look magazine, is as follows:)

LET'S GIVE THE PUBLIC A CHANCE AT PAID TV

By Robert E. Lee, member, Federal Communications Commission

When I was a boy, my father advised me to stay out of needless controversy. "Never argue about religion or baseball teams," he said. "There is no point in arguing when there is no hope of changing opinion." If my father were living today, I have no doubt that he would add subscription television to the list of topics that should not be argued.

"Subscription television"—more simply known as paid TV—is the name applied to all systems by which TV viewers can select a program being broadcast in garbled form and, through a code furnished to them for a fee, unscramble the program and see it. Those who pay can see the program; those who do not pay cannot see it.

Various systems have been proposed for subscription television, and it is not my purpose, here, to argue the relative merits or demerits of one system over the other. The fact is that these systems have been perfected and can provide a reasonably foolproof method for viewers who might want to pay for programs they wished to see, in preference to, or in addition to, programs they now get free.

Since subscription television is now pending before the Federal Communications Commission, I hasten to remind the reader that the views expressed here are my own and do not reflect the opinion of the Commission. Nor do they indicate what action, if any, the Commission will ultimately take.

Subscription television has been argued at length before the Commission. The record is now closed. Nearly 24,000 individual comments have been received—the most ever received by the Commission on any proposal. These proposals and counterproposals fill 69 volumes, each 3 or 4 inches thick. If placed in a pile, these volumes would reach a height of more than 18 feet.

I have labored through this testimony and found nothing that I did not know before the Commission asked for it. The pros are still for and the cons against. Neither side, it seems to me, has presented anything new or novel. I am convinced that endless legal procedures, hearings, and studies will never answer the questions: Does the public want subscription television? Will the public support it? I submit that the only way to answer these questions is to let the public answer them. Experts on what the public wants, or what the public will do, have been wrong too often. Nor can a Government commission, despite all the hearings in the world, determine the public's wishes. I believe the only way to learn the public's desire is to give paid TV a trial—in the tradition of our free American system. If investors are willing to gamble the huge sums that paid TV will require, why not let them make the attempt and put a lot of people to work? Six months might give us the answer. In any case, I feel that the issue can be settled only by putting the show on the road and letting the box office tell the tale.

Is subscription TV consistent with the public interest? I believe it may very well be. Don't let anyone kid you about this being a contest between something you now receive free and something you will pay for under these proposals. Broadcasting is not now literally free. Your investment in your set is a cost to you. In a sense, the products you buy include the cost of the advertising which pays for the programs you see. But I do not dispute the argument that this "cost" for advertising actually lowers the final price to the consumer by insuring mass markets, mass production, and therefore lower prices. As I see it, this argument over "cost" is irrelevant. Under a free system, people should be free to pay for goods they want—including television entertainment.

My contention, simply, is that the public may not only wish to view the free programs they now see. The public may also be glad to pay for the pleasure of seeing programs they do not now receive—current Broadway plays, major sporting events, superior film productions, and the like.

It is true that many paid TV programs would be beamed at only relatively small segments of our population which have a particular interest in some subject, for example, the Metropolitan Opera. However, a small segment of our 37,500,000 receivers would support such programs at modest fees, and indeed contribute to our cultural requirements—an objective devoutly to be desired.

Consider, too, the educational applications: correspondence courses by air. I saw a film exhibited by one of the proponents of subscription TV in New York City illustrating this point. This particular film was a half-hour portrayal of an actual surgical operation demonstrating a new technique for heart surgery. With the exception of perhaps 2 minutes, the film was palatable and instructive to the lay audience. At the point of the actual incision, the picture was scrambled so that only the subscribers could see the surgical technique.

TRIAL-AND-ERROR METHOD HAS WORKED

I am told there are approximately 20,000 doctors in the Greater New York area. No medical arena could hold more than a handful, yet all of them could view such an operation on their sets at home or in the office. What a boon to medicine. Imagine the value of such a program on a national hookup to doctors around the country. Medical education could be advanced broadly overnight and many lives might be saved. Certainly any system so potentially valuable is worth a trial.

American enterprise has prospered through trial and error, and there is no reason why television should not benefit from that ages-old method. The advent of television gave a terrific impetus to our economy. The TV peak has passed, however, and the industry is beginning a settling process that is squeezing more and more TV stations off the air for lack of financial support. One of the major networks recently issued a study indicating that the economy of the country could not support more than 600 TV stations in the foreseeable future, despite the fact that there are still 1,200 possible stations available for assignment.

TV stations, like radio stations, have to be assigned by the Federal Communications Commission, just as airplanes have to be assigned to certain routes and altitudes to keep them from flying into each other. In the case of radio and TV, these assignments are made to prevent overlapping of signals between two or more stations in a given area. In TV, particularly, this presents a problem. Imagine the available radio spectrum as a very long vertical ruler whose markings are the frequencies to which various users of the spectrum are assigned. Since the number of users of the spectrum grew like Topsy, and since the ruler is not tall enough to accommodate all who want the best parts of it, assignments have been made all up and down it.

Now it is a scientific fact that the lower you are on the ruler the better signal you have. Those stations on the upper part (UHF or ultrahigh frequency) have difficulty competing with the better signals on the lower part of the ruler or spectrum (VHF or very high frequency). Since there is a scarcity of space on the lower part, it has been necessary for the Commission to assign television stations on the higher part (channels 14 through 83), in addition to the relatively few channels in the lower frequency (channels 2 through 13), in an attempt to provide a nationwide, competitive system.

As these channels have come on the air, the stronger signal characteristics of the lower channels have compelled the programing sources (mainly networks) to prefer them, leaving broadcasters on the higher channels at a serious disadvantage in coping with their competitors. Naturally, the national advertiser (the primary financial support of TV) wants his program on these lower channels. To compound the problem, the manufacturers of TV receiving sets are loath to make sets which will receive all channels. Since the better programs and coverage are principally on the lower channels, there is little demand for an all-channel receiver. Moreover, an all-channel receiver is more expensive to make. This higher cost and smaller demand mean that the manufacturer with a more expensive set that has little market cannot meet his competition.

LOCAL STATIONS HANDICAPPED

The result is that if a citizen wants to receive the higher signals, he must first buy a set, then buy a separate converter for the same set and a special outdoor antenna. Since the programing on the higher channels is less attractive (being poorly financed), there is no incentive for the citizen to make the costly conversion. Hence, for the most part, those stations on the higher channels are in dire straits. I say "for the most part" because I do not want to create the impression that the higher-channel service is a complete failure. It is doing very well in a few markets where good programing is available.

Good TV programs cost money, and the cost of first-rate entertainment is well beyond the resources of local independent stations which have to rely on local advertisers who cannot afford to use network TV shows that are seeking a mass market for products. A 10-second spot announcement in a major market can cost an advertiser $600 to $1,200.

Thus the high-channel station not only suffers the handicap of a poorer signal, it also suffers the handicap of a smaller sales potential and, consequently, a much more modest program budget. Even in those cases where a local station has been able to develop a hit show, that station soon loses its talent to the lure of Broadway and Hollywood. Recently, local stations have benefited from a change in movie producers' opposition to the release of good films for television. The Walt Disney productions, Million Dollar Movie, and other similar programs are on the march. But the promise of adequate programing in the future, from other than networks, is small solace right now to the station operating in the red.

This is not a healthy situation, since it tends to centralize the control of programing in relatively few hands. While I believe the years ahead may correct whatever evil lies herein, a more immediate solution may be within our grasp if we seriously consider paid TV. Subscription TV could be a boon to the independent station. More stations mean more competition and encouragement of local outlets.

An equally compelling reason for more TV stations is the American tradition of competition and freedom in the field of public opinion. I believe that TV cameras do mold public opinion through their treatment of current events, political personalities, and campaigns. The persuasive voice and compelling personality leave a mark on the public mind. There is a public interest, therefore, in fostering the utmost possible competition in TV to make sure that all viewpoints have an outlet.

At present, a Senate committee is examining the problems of TV stations whose demise is imminent in many, many communities. The problems of these stations can be traced directly to lack of revenue—an inevitable result of poorer signals, smaller audiences, smaller markets and, therefore, insufficient income. Subscription TV, it seems to me, provides a great possibility for exploration, since it would, if successful, provide an additional source of revenue. Again, I say if successful. Paid TV would, of course, fail if the public does not want it. It will have to be very good to compete with some of the fine free TV that is now available. I do not believe the public will pay for what it now gets free.

FOUR-POINT PROGRAM OFFERED

Therefore, I suggest a program be initiated by the Federal Communications Commission, under which the Nation and its television stations and viewers may test the public acceptability of paid TV. I leave open the question as to whether or not congressional action is necessary. While I personally believe it is not, the Congress can provide it if needed. I suggest the Commission:

1. Approve subscription TV on a broad basis, leaving to the entrepreneur the choice of the system he wishes to use.

2. Apply some temporary restrictions until we know where we are going. For example, we might consider limiting it, in the intial statges, to the UHF portion of the band, with perhaps some further restrictions on the amount of time which could be charged for, in order to protect free broadcasting. If the early tests indicate public acceptance, we could perhaps remove all restrictions and "let the buyer beware," as he must in any other purchase.

3. Permit this test of paid TV to continue for a period long enough to truly test public reaction, give stations and programing facilities time to work out the necessary changes in their operations and test public reaction to a variety of paid programs.

4. Permit stations to drop paid TV if they find to their own satisfaction that it does not fill a market need in their own area. If subscription television has all the drawbacks that its detractors say it has, the public will reject it and no further action will be necessary by the Federal Government to dispense with it. On the other hand, if it fills a public need, and the public shows by its patronage that it wants paid TV, then permanent Government approval in the form of a Commission ruling or legislation should be enacted to formalize what the public has already shown it desires.

The television industry—in the manufacturing and sale of TV receivers, in the vast operations of programing, broadcasting, and advertising—is too big and too important to the economic and cultural welfare of the American people to be limited, unnecessarily, to a system subsidized solely by advertising. The industry, and the country, would benefit, I believe, by a fair trial of paid TV. Such a trial would be in the tradition of our free system in which customers are free to choose in the open market. I would like to see our television audiences given the opportunity to cast their vote for or against paid TV.

(Short recess taken.)

Senator PASTORE. Mr. Fellows, we are ready if you are.

Mr. FELLOWS. Fine, Senator.

STATEMENT OF HAROLD E. FELLOWS, PRESIDENT AND CHAIRMAN OF THE BOARD, NATIONAL ASSOCIATION OF RADIO AND TELEVISION BROADCASTERS

Mr. FELLOWS. My name is Harold E. Fellows. I am president and chairman of the board of directors of the National Association of Radio and Television Broadcasters, the business association of the broadcasting industry whose membership is composed of radio and television broadcasting licensees and networks. We have in the membership of the association 305 television stations. All of the three television networks are members of the association.

I appear here today to present the opposition of the association to the utilization within the television broadcasting bands of a pay-as-you-see, or pay-to-see television system. I appear here pursuant to a resolution adopted April 12, 1955, by the association's television board of directors, directing the management of the association to "appear and participate in all hearings and proceedings and take any and all necessary and proper steps to preserve unlimited public reception within the television broadcast bands." The complete text of the resolution is attached as an appendix.

The National Association of Radio and Television Broadcasters is opposed to any form of pay television which, through the use of channels allocated for free television, will jeopardize the right of the public to receive a full, free service.

I appreciate the opportunity afforded to me today to present the association's views on this subject for you have wisely, it seems to me, made available to both opponents and proponents of pay television the proper forum in which the decision should be made as to whether this new system should be authorized.

Obviously, I am not here today to suggest to the Congress that it has no authority to authorize this new system of communication. I am here, however, to urge, with all sincerity, that you, the elected representatives of the people, are the only ones who should make the judgment.

We hear a lot these days about "free" and "fee" (or subscription) television. These 2 words, "free" and "fee" sharply delineate the gulf between the 2 systems of communication. I shall not attempt to go into the legislative history which led to the present Communications Act, other than to stress the fact that we firmly believe it quite clear that Congress founded our present broadcast regulatory system in the clear context of free reception of programs by American listeners and viewers. You, as well as I, know that our people own this great national asset, our airwaves, and that from the inception of broadcasting in this country, radio reception has been rendered free to the people. Moreover, this same principle has always applied to television. This has been done on a mutual basis, that is, the people have licensed stations to use their airwaves (by virtue of which many have made money and many have lost it), and in turn the industry has made available to the listeners and viewers, at no charge, the finest programing fare of its kind in the world. This has been done in the traditional American pattern of free and open competition. We have succeeded or failed as in any other free enterprise—but never, either in success or failure, has our industry levied 1 cent of tribute from the American people to see or hear our broadcast performances. The only thing required of the American listener or viewer is that he own a receiving set.

The point-to-point system of pay television now proposed is one which is diametrically opposed in concept to the present system of free broadcasting. The basic premise of the proposed system is that if the American public does not put a coin in its television set, it will receive no television. Its justification for this new concept is based on the fallacious promise that, through the revenues accruing to the system, the American public will receive a type of programing superior to that which it now receives free.

Let me, at this juncture, make one point clear: Do not assume that if pay television is authorized and is successful, that the broadcasting industry, which I represent, will be standoffish. As businessmen, we would be foolish to turn our backs on a successful business venture. I make this point for the simple reason that I do not want you to be under the impression that I am here under false pretenses, for, if this system is authorized and should succeed, the free broadcaster, whether he desires to or not, will be forced to jump on the bandwagon.

Mr. Cox. Is it your position that if subscription television were authorized and became successful for the stations which first initiated it, the entire industry would, to whatever extent might be permitted by the FCC, also offer subscription programing?

Mr. Fellows. If pay television, Mr. Cox, it is our belief, became successful financially, it would do so at the expense of free television, very much in the manner of some of the testimony which has been given here today. It would quite quickly usurp the major attractions that are on the air, leaving very little for free television, and those already established in the television business—stations and networks—would be, as I said, forced to jump on the bandwagon, because they would have to transfer their business activities to that point where there was a better opportunity to make a success of it economically.

Mr. Cox. So this shift would not be occasioned by the mere fact that it would be more remunerative but because it was the only choice open to them.

Mr. Fellows. Fundamentally it would be because it would be more remunerative, because if you bring it to that point there would be little chance to stay alive without the major talents and the big events that free television is now offering and which are being sponsored by advertisers.

Senator Pastore. And because you are not ready to commit econonic suicide.

Mr. Fellows. Yes; that is a very good way of putting it, Senator.

Just what does this mean? It means simply this: That, in the overall, the members of the broadcasting industry will become an important component of this new pay-television system and in this respect will derive financial sustenance from direct levy on the American listener and viewer. No longer, however, will they be broadcasters, and no longer will they be fulfilling what we conceive to be their prime purpose, namely rendition, in the public interest, of a free service. A paying minority of the public will be able to outbid—and thus deprive—the vast majority of the American public of those programs which hitherto had been made available to all the people at no cost.

If, therefore, this system is authorized, and even though it ultimately might financially benefit our industry, it would set up an unfair and divisive force among the American people which I believe is completely incompatible with our traditional democratic system. Millions upon millions of Americans, because of their economic condition, would be foreclosed from viewing. The shattering fact which lies beneath this whole matter is that these people would literally be deprived from utilizing that which is legally theirs, namely, the air waves.

Let me illustrate what I mean: It is estimated that some 65 million people recently watched the fine performance, Peter Pan. It did not cost them a cent. Let us examine this situation in the light of pay television. Commander McDonald, of Zenith, has stated:

> On subscription television, and with the same audience paying only 25 cents per set to watch the attraction at home, the box office would have amounted to $5 million for division among producers, distributors, and broadcasters.

If we assume an outstanding program such as this as costing an advertiser anywhere from $200,000 to $400,000, the buying potential of pay television is an amazing thing to envision. A free program of this caliber can be expected to have an audience of 40 to 60 million. This audience would view the program on an estimated 15 to 20 million sets. The owners of 400,000 sets under pay television, who would be willing to pay $1 per set for the privilege of viewing, could equal the entire cost of the production under free television, and thereby preclude the rest of the public from watching the show free.

Mr. Cox. Wouldn't sound business judgment require that if you were going to put on programs of this kind, which have the potentiality of pleasing a large portion of the public—require you to so price it that you could get that maximum coverage and therefore possibly make available to the public more shows of similar caliber at the 25-cent charge?

Mr. FELLOWS. In other words, follow the philosophy that the right price is that which brings in most.

Mr. COX. You find the price that will be paid by that increasing number.

Mr. FELLOWS. If we start at a dollar which 400,000 people pay and we get up to 4 times that, or 1,600,000, which are paying 25 cents, we are still taking the same amount of money from the public pocket for something they are getting for free.

Mr. COX. The question I am asking is would this provision of means of raising revenue for broadcasting permit the presentation of 20 such shows in a year, rather than the 2 appearances of Peter Pan?

Mr. FELLOWS. Yes; for 400,000 people at a dollar or for 1,600,000 people at 25 cents, leaving the other 35 million people out in the cold.

Mr. COX. Well, is it your calculated judgment that not more than 1,600,000 people would be willing to pay 25 cents for a production of the caliber of Peter Pan?

Mr. FELLOWS. The more people who are willing to pay, whether or not they can afford it, the more who do pay, the faster and the greater rapidity, the top shows, the top things that we are talking about, like Peter Pan, like these various events, will go to pay television and go away from free television, and the public is not going to get anything of any consequence for nothing, for free, as we know it.

Mr. COX. Now isn't it true that not all of these large sums that are mentioned as box office—$5 million here for instance—would actually represent a net return to anyone? In other words, there are expenses incidental to the operation of a fee system.

Mr. FELLOWS. Certainly. The $5 million would have to be distributed. Part of it goes to the program source. Part of it goes, as now, to the facility or station or combination of stations which are carrying it; and part of it, of course, must go to the organization which operates, installs, and from there on operates the so-called pay television system.

Mr. COX. That takes care of amortization of their equipment, collection costs, administrative charges?

Mr. FELLOWS. Yes; the public has to finance this whole business in the first place, and then has to pay for it after it has financed it.

Senator PASTORE. Are you ready to admit that pay television could render a better quality of program than now, sir?

Mr. FELLOWS. No, sir; I am not at all ready to admit that.

Senator PASTORE. What would be the alternative to you if such were the case—that you would either have to increase the quality of your show and compete against those who are charging for it, or you would have to go to pay-as-you-see yourself?

Mr. FELLOWS. I think you would have to go to pay-as-you-see by the time it got to the point where the major attractions had gone to pay-as-you-see, the top talent had been able to quadruple its income by moving over to pay TV and serving a small audience.

Senator PASTORE. What is your reaction, sir, to the argument that has been made here—and of course, all we are trying to do here is develop a record as I have said before—what is your reaction to the argument made here that after all this is a specialized thing, and it is something that the public is not now getting and it would be something in addition to what they are now receiving free, and would not be an infringement upon free entertainment. What is your reaction to that?

Mr. FELLOWS. We believe that it is a complete infringement, if it is done over what we now term "free television facilities." I say later if it were done by closed circuit, if it would be attempted in something other than the broadcast band, over which we are now getting free television, we would not be here sir, because we would have no contention with that regard. If the great minority wants to be served, or if a small minority wants to be served, then there must be a way to serve 5 percent of them, but not at the expense of the other 95 percent. That is the basis of our argument, sir. If I may be permitted this intrusion, you made basically what to my mind was the essence of this whole project, or the whole dicussion. Is it in the public's interest, in the public service? It either is or it isn't. In other words, it is either all good or all bad, and we believe it is all bad.

Mr. COX. Do you think that by a limitation as to the type of programing to be offered, in terms of something for which the public is already accustomed to be paying, and in terms of limitation on the maximum hours that any station could be permitted to offer subscription programing, that you could reach a reasonable balance between the two types of service?

Mr. FELLOWS. Not within the structure of free television as we know it, Mr. Cox. I do not believe that you can appeal, with pay television, to limited audiences and make it pay economically. I doubt that it is possible to do that. It is bound to be a pretty expensive proposition to get underway. I think it would be necessary to move into the fields of pretty popular entertainment, and I do not think that would work. I think because of the economics and the necessity of getting the thing off the road and then attempting to get it as large as you can, that they are bound to move into the peak evening hours of 7 to 10 when the greatest portion of our population in this country is dependent upon free television for entertainment, information, and sometimes education in their own homes. Therefore, the encroachment, if I may term it that, is likely to be, and probably will be, from the first, in such a place in the day's programing that it makes the greatest infringement upon the free rights of the television viewer. It will take from him some facilities, some stations, some program service which he enjoys the most, at the time when he is best able to listen. So it constitutes a very deep infringement, in our opinion.

Now we had the example of 400,000 sets. The owners of 1 million receiving sets, by paying the same figure of $1 each, could more than double the return to producers, distributors, and stations. Thus, they could very easily deny the opportunity to the owners of the other 35 to 36 million sets of the privilege of watching such a production on a free basis.

Thus, it is not difficult to understand why many promoters of sporting events, outstanding entertainers and producers of stage and screen shows are extolling the virtues of pay television. They are able to envision a bigger pot of gold at the end of the rainbow, realizing that even if only a small percentage of the number of people who regularly watch an outstanding program paid for the privilege on pay television, the total gross receipts from the presentation would surpass by far the present cost to an advertiser.

The fact that somebody would stand to benefit monetarily should not be of any relevance whatsoever in one's analysis of the pay television proposals. The sole criterion, I submit, is the interest of the public.

The interests of the public—and I am talking about all of the public—cannot be benefited by a system requiring them to pay for programing at a "cashbox" in their home—programing which by the very economics of our system would be, for all practical purposes, the same as now comes to them free.

At this point, I want to make it eminently clear that I am a deep and firm believer in the basic principles of free and open competition. If this system were being initiated on a wire-line system, we, of course, would not be here, because there would be no encroachment on broadcast channels and there would be no necessity for this hearing.

The proponents of pay television propose to utilize frequencies already allocated to a free broadcasting service and convert them to a point-to-point service. In so doing, they realize that the roadway and the vehicles are already there—the roadway being the public's channels and the vehicle the public's investment of over $15 billion in 37 million television receivers. They realize that by placing pay television on these channels, the free channels are partially or wholly blacked out, and the television receiver would no longer pick up a free program on these channels. The free highway would be converted to a toll road.

As we have seen, the proponents of pay television are seeking the authority to use that portion of the spectrum already allocated to free television broadcasting for what in reality is a point-to-point service. The signal they propose to send is one that will be unintelligible on a normal television set, and one that will remain unintelligible—a hodgepodge of scrambled images and sound—until the owner of the set inserts his tribute in the coinbox (or has made some other arrangement for payment to the authorized individual to receive same). The sender of that signal agrees to unscramble the signal only for those who pay for that service. In the sense of payment for service, it is not unlike one's payments to the telephone company. If you pay the telephone company at the end of the month for your local and long-distance telephone service, you may then use your telephone for the ensuing time period.

Mr. Cox. Now, Mr. Fellows, you have several times used this concept of a point-to-point service. Isn't the typical case of point-to-point service the microwave service of the telephone company, that is a beamed signal which goes from one fixed point to another?

Mr. Fellows. That is right.

Mr. Cox. Now, in the subscription systems proposed, even though the signal may be capable of reception by less than the total number of sets in the area, nonetheless, it will be a signal which is broadcast in a very literal sense of the word, going out to large numbers of receiving points?

Mr. Fellows. Making it available to those who will pay. The parallel, if there be a parallel, with regard to microwave service, is simply that that becomes the vehicle and again you can't use it without paying for it, and the pay television use of a free television facility is, I think in very much of the same concept of a point-to-point service, in that you have got to pay for it to get it through.

Mr. Cox. It is the payment that is critical, not the lessening of the ability of reception?

Mr. Fellows. That is quite fundamental, but there is a second angle on the point to point which I shall bring up shortly.

Mr. Cox. All right.

Mr. Fellows. The service also is similar in some respects to a taxicab dispatching service. The message in the latter case is directed to and intended only for designated individuals. Pay television is directed to and intended for only designated individuals—namely, those who will pay.

Nor is pay television dissimilar from radio communication in the industrial services. These services are utilized for traffic control, shipping instructions, inplant communications, pipeline operations, and a myriad of other functions. The messages transmitted on these frequencies are not directed to nor intended for each and every member of the public—nor is the message on pay television.

These other services, however, all have their particular allocation of frequencies in the spectrum at places other than that reserved for broadcasting—an allocation made because of the public interest surrounding their operation. Pay television, like these other services, is nothing more nor less than a point-to-point communication service. Yet, pay television is seeking authority for its point-to-point operation in the broadcast band. I believe it is general knowledge that all the other radio services (safety and special services, industrial, and so forth) are expanding at a tremendous rate, and everybody concerned is looking around for additional usable space.

To allow one point-to-point communication service to operate in the broadcast band undoubtedly would supply reason for others to seek frequency space in those bands. To allow the utilization of this point-to-point pay television service in the broadcast band would, therefore, create an unfortunate precedent for further attempted inroads into a band presently set aside for the public's free enjoyment.

This is a band the extent of whose ultimate utilization is impossible to predict. I realize that this committee is concerned with the problem of television, but I do not believe that we should ever overlook the fact that in the overall, they are "growing pains." By so categorizing them I do not intend to underemphasize in the slightest the importance of this hearing, and the questions here propounded. Television, however, is still in its infancy, and the extent of its ultimate growth under a free system of free reception is a matter on which I could not hazard a guess.

I do know, though, that television is destined to expand. At the moment, commercial television may be regarded as no more than 10 years old. At the comparable age in the life of radio (1932), there were 601 AM stations on the air. As of March 31, 1956, there were 2,858 commercial AM stations on the air, and in addition, 536 commercial FM stations. In 1932—10 years after the inauguration of radio broadcasting—it would have been regarded as economic suicide to start a station where some two-thirds of them now operate. It was regarded as impossible for a small town to support a local station. And as we look back on those days, we realize now that even the most ardent dreamer never contemplated the magnitude of the commercial radio broadcasting industry of today. Yet, today, small towns do support radio stations, and the reason, I believe, lies more than just in our continuously expanding economy.

As a result, we now have more than three times the number of radio stations in the country that we had prior to World War II.

I am firmly convinced that our economy and this dynamic business of broadcasting will result in a similar expansion of television. For that reason, if nothing more, we contend that a point-to-point system of pay television should not be allowed to encroach, and to establish a precedent for other encroachment, on the free broadcasting bands.

I have noted before that pay television will without doubt engender a divisive force among the American people. And I mean by that simply that the economically well-to-do will be enabled to control a public asset. Imagine an overwhelming majority of the American people approaching their television set, having to accept whatever free programing may be left after the flight to pay television. It is only commonsense to recognize the fact that the moneys accruing to pay television will, naturally, siphon off the talent, programs, authors, and producers who have hitherto been available with our present free system of broadcasting. Perhaps such a situation might be deemed proper and merely symptomatic of changing business conditions. Perhaps the situation might be likened to the fact that anyone can take in a Broadway show if he has $4.40. But how many of our citizenry, relatively, ever pay $4.40 for a show, or for that matter, $3 or $2? We all know that the proportion of the American people who can afford this kind of entertainment is meager. However, I must say that this is a pattern that American economic life has followed since its inception, namely: If you can make the money, well and good; if you cannot make it, you simply cannot enjoy the things that your next-door neighbor, who can make it, does.

There is a vast difference, however, between this economic pattern of American life and that which would result from the proposals of the pay television proponents. In the former, the Government has only a passive interest, but in the latter, the Government, if pay television were authorized, would be responsible for the taking of the public's air waves, and regulation of their utilization for the private entertainment of a privileged few.

In this connection, various polls conducted by newspapers on the question of whether or not the public desires pay television are highly illuminating. The published results of these surveys show, for example, that, according to the Minneapolis Star and Tribune, 72 percent of those polled opposed pay television. The New York Herald Tribune's poll showed 76 percent in opposition, while the Houston Post poll showed 88 percent against pay television. The El Paso Herald-Post showed 94 percent opposition, and the Cincinnati Post, 98 percent. The Knoxville News-Sentinel hit a high of 99 percent.

Mr. Cox. Do you know in what form the questions answered were stated?

Mr. Fellows. I do not exactly know. The results are available and we would be very glad to furnish them to the committee, Mr. Cox. We will do so.[4]

[4] The materials referred to were furnished by Mr. Fellows at a later date and inserted in the record on June 11, 1956. As directed at that time (in the volume on "Network practices") they are set forth at the conclusion of Mr. Fellows' testimony, at p. 1273.

Free television brings to the American viewing public the world series; it brings great Shakespearean drama, musicals, symphonies; it brings the world's most outstanding performers into the American home. Its record of achievement in a decade is, I believe, unmatched by any other industry. Television will continue to bring the best in entertainment to the American people and, at the same time, provide the educational, informational, and cultural programs for which it is famous. New horizons in programing will be reached. Indeed, it would be illogical to assume otherwise because television today is in its infancy.

Programing material which today may be unavailable to free television will be available tomorrow, if free television is allowed to continue its present expansion and serve the interests of the public. Obviously, the public will be the beneficiaries—I am convinced that that same public will be the losers if pay television is authorized, for under such an authorization I firmly believe that the sources of programing for free television will quickly wither. Under pay television, I am convinced, there will be no more free world series, dramas, musicals, and so forth—and the only loser will be the public.

I have spoken at length as a representative of the television industry. We have attempted to demonstrate to you that despite the financial gain which might accrue to us under pay television, we wish no part of it within the free television bands. Let me, however, quote a spokesman. A Florida woman viewer, who in writing to the Federal Communications Commission to protest pay television, spoke, I think, for America when she said:

> I am writing to strongly protest the idea of having to pay to see television. It simply means that the poor man will be forced off the air entirely, and I am very sure that if all the people really had an opportunity to express their feelings there would be no doubt of the outcome. As it now stands hordes of people to whom money is no object claim they have already won at the ratio of 6 to 1. Now I submit that your Commission is fully aware that if the entire voice of the people could be heard, the result would be reversed in favor of free air; as if it were not enough to have to pay out hundreds of dollars for a set, without having to be forced to pay extra millions into the coffers of the al eady well to do. Again I say you are well aware that the poor owners of television sets are strictly against any plan of forced payments for the privilege of viewing television. These poor people will be forced to sell their sets at a loss to them as they will all stand firm in refusing to allow their sets to be converted to slot machines.
>
> Thanking you for your cooperation in the matter, I am,
>
> Very truly yours.

Thank you, sir.

Senator PASTORE. Mr. Fellows, thank you very much. I asked you questions during the time you were reading. I have no further questions.

Mr. COX. I have just a couple. You stated, Mr. Fellows, that in your view television was expanding and, you thought, would continue to expand.

Mr. FELLOWS. Yes, sir.

Mr. COX. Now this is true, certainly, in the terms of revenues being received, their share of the advertising budgets, and so on. It is equally true, is it not, that that is not clearly the picture as far as the development of additional stations is concerned?

Mr. FELLOWS. Well, certainly not for the time being, Mr. Cox. I think we should take into account the fact that you folks, your committee, and the Commission are both engaged in attempting to solve the big problem of VHF–UHF. I think they are going pretty exhaustively into the whole thing. And I think we should remember that something like only 10 percent of our Nation is not served with at least one good signal, and this is only after 10 years of engineering and development and the other things that bring this about.

Now that development is likely to come rapidly, both with regard to VHF and UHF, once you come out of these present hearings and investigations. And I think it is not unbecoming to remind you that Ampex film was introduced just 10 days ago, which completely revolutionizes the small-market problem. Also, not too long ago one of the big electric companies announced a $50,000 packaged transmitter—that you could go into the television business for $50,000. These things can happen overnight and I don't believe that we should discuss or, rather, contemplate the breaking up of an allocation system utilizing any facilities which were originally allocated for free television, by abruptly putting them into something else, until there has been an opportunity to find out how much further television can go under the present system.

Mr. Cox. Are you familiar with the study that was made by Dr. Sidney Alexander for CBS?

Mr. Fellows. No; I am not, sir.

Mr. Cox. There has been testimony about it. He came to the conclusion that even if all of the channels allocated were VHF, so that you did not have the compatibility problem—the converter problem—advertising support at the present time would be sufficient, in his view, to maintain something like 588 stations in 217 markets.

Mr. Fellows. In the first place, I personally doubt, and it is the opinion of many broadcasters, that you can't do it all with VHF. That there has to be UHF to have a nationwide, coast-to-coast, free competitive system. I imagine that I am not as much of an authority as the good doctor, but I believe, and am on record as stating so publicly, that it is quite possible that there would be at least a thousand television stations in this country in the next 5 years. That is what I believe. I believe that the development is going to be such that television will move successfully in its present form into much smaller markets than it has been able to do at the present time. I believe that the manufacturing interests are going faster and more and more toward the business of an all-purpose set which will take both UHF and VHF. I believe we are closer to some of these solutions than we may seem to have been. Because I know the extent to which the Commission is working on it, and perhaps you have noticed, or did not notice, that the Chairman of the Commission, in his speech at the convention, asked for a pretty thorough survey with regard to the UHF survey—asked that people get behind seeing if they couldn't get the solution to it, and come out with how we could utilize UHF throughout the country.

I think it is inevitable that the smaller markets are going to get television. I cannot say how quickly, because we have been at it about 9 years at the present time, and we already have service up to within 10 percent of the population. And with American science, as we know it, it won't be too long before anybody in the country—whether he be in a small cabin in the Rockies, or 500 miles from Phoenix, Ariz., on a ranch—will have a television set in his home on a free basis, if that idea is not intruded on by the business of people having an opportunity to pay for it.

Mr. Cox. You indicated these newspaper surveys show an overwhelming resistance to pay-as-you-see television. If this truly represents the attitude of the public, what is there to fear, as far as free television is concerned, from the introduction of such a system? How can you persuade the 99 percent of the people in Houston who are opposed to it to spend money—first of all to buy a decoder, and, second, to pay for programs—if they seem at this stage to feel that that is against their interest?

Mr. Fellows. I think if I were the average citizen my decision to do that would depend entirely on what I was told I would get if I did it. If I were told I was going to get the world series and heavens knows how many other great productions; if I had set myself up for $40 or $50 in order to be able to put a quarter or a half-dollar in the slot, I think that would interest me, particularly if I didn't find myself strapped or starving, or anything like that, and I think I might very well succumb to the business of putting money in a coinbox.

Mr. Cox. Then you think that these people have not been advised as to the kind of programing that the proponents of subscription television at least claim they would furnish?

Mr. Fellows. That is right. I think it is very debatable whether or not pay television would start out and propose programs specifically. I think there has been a great amount of generality in all of the proposals that they have made.

Mr. Cox. Well, they would have to become reasonably specific in order to induce people to part with any money.

Mr. Fellows. Yes. For some people they wouldn't have to be very specific. I think if the question were asked whether you wanted television free or to have to pay for it you would get a pretty pointed answer.

Mr. Cox. In that form, yes.

Mr. Fellows. And I think if you were a Congressman running for reelection, and you had to take the position of whether you stood for free television or pay television, that broadly, you wouldn't have a hard time deciding which you would say without any more explanation than we have had up to this point.

Senator Pastore. Do you want this resolution included in the record, Mr. Fellows?

Mr. Fellows. Yes.

Senator Pastore. It will be included in the record.

(The resolution is as follows:)

RESOLUTION OF THE TELEVISION BOARD OF THE NATIONAL ASSOCIATION OF RADIO AND TELEVISION BROADCASTERS

(Adopted April 12, 1955)

Whereas, FCC Public Notice Docket No. 11279 invited comments with regard to the petitions on behalf of certain subscription of pay-as-you-see television proponents seeking the establishment of rules and standards for the introduction of a service limited to subscription or pay-as-you-see within the television broadcast bands; and

Whereas the television broadcast bands and channels therein are presently allocated and assigned exclusively for unlimited television broadcast; and

Whereas the American public (including the owners of 34 million television sets) is not now subject to governmental or private assessment for television reception within the television broadcast bands; and

Whereas the ability of the present system of free television to bring the finest in diversified programing, including news, public events, and entertainment to all of the public is hereby reaffirmed; and

Whereas is is our belief that the legislative history of its enabling legislation does not clearly extend to the Federal Communications Commission the authority and guidance sufficient to allocate or assign any portion of the television broadcast bands to the limited purpose sought by the proponents; and

Whereas the proposal as made, if adopted, would necessarily diminish and encumber unlimited free reception by the public in order to provide this limited use; and

Whereas subscription television could be provided by other means without detriment to unlimited public reception of the present system of free television: Therefore be it

Resolved, That the proposals as made are opposed as contrary to the public interest; and further

Resolved, That the management of the NARTB record by appropriate comments this resolution, appear and participate in all hearings and proceedings and take any and all necessary and proper steps to preserve unlimited public reception within the television broadcast bands.

(The materials furnished later by Mr. Fellows (see p. 1269 above) are as follows:)

NATIONAL ASSOCIATION OF RADIO AND TELEVISION BROADCASTERS,
Washington, D. C., May 16, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: During testimony by Harold E. Fellows before your committee in opposition to pay television, he referenced various newspaper-conducted polls on the question of pay television. At that time, Mr. Cox requested that the committee be supplied with these polls.

I am including, herewith, the newspapers' stories as they appeared in the Minneapolis Star and Tribune, Houston Post, Cincinnati Post, and Knoxville News-Sentinel. Our copy of the El Paso Herald Post story has been misplaced, and although we have attempted diligently to obtain another copy, we have been unable to do so as yet. As soon as we do obtain a copy from that paper, we will supply it to the committee.

Also, in order to complete the record of these proceedings, there is enclosed a copy of a letter from Mr. Fred Houwink, general manager, station WMAL-TV, Washington, D. C., to the Chairman of the Federal Communications Commission, reporting on his observations on the experimental Zenith phonevision system for pay television conducted by WMAL-TV during the period May 25, 1955, through June 24, 1955. This letter was mentioned during the course of the hearing before the committee, but was not produced for the record. In order that it be available to the committee, the enclosed document, which is in the files of the FCC, is respectfully submitted.

Sincerely,

VINCENT T. WASILEWSKI,

SEPTEMBER 9, 1955.

Hon. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR SIR: Your records reflect the fact that the Evening Star Broadcasting Co. recently made nonstandard television transmissions that employed the Zenith Radio Corp. phonevision system. These transmissions were made during the period May 25 through June 24, 1955, in accordance with the special temporary authority granted to us in your telegram dated May 18, 1955.

It is the purpose of this letter to give you our observations on these transmissions. These are presented as an explanation of our objectives in making these transmissions and as our conclusions reached after their completion.

The Evening Star Broadcasting Co. petitioned you for this special grant and undertook these nonstandard television transmissions for four reasons:

1. We wished to give the Federal Communications Commission, and interested Members of Congress an opportunity to view a typical "fee TV" coded and decoded signal in the convenience of their own homes. We felt this to be particularly desirable because certain members of the Commission and of the Congress either had not had an opportunity to witness the previous experimental transmissions of this type or had not previously had the special interest in such television signals that they do today.

2. We wished to give the developers of coding and decoding apparatus such as that used in fee TV an opportunity to demonstrate such a system here in Washington. We made transmissions of the phonevision system because the Zenith Radio Corp. asked our cooperation in making such transmission, because Zenith provided certain apparatus essential for such transmissions and because we felt that the phonevision signal is typical of those utilized in fee TV systems.

3. We wished to give the broadcasting industry an opportunity to observe typical fee TV transmissions when the National Association of Radio and Television Broadcasters convened in Washington during the last week of May 1955.

4. We wanted to determine at firsthand what our own course should be with regard to fee TV. This company's television station, WMAL-TV, needs more high quality programing. This condition prevails because our network affiliate, the American Broadcasting Co., does not provide as many hours of network service as do its competitive television networks, Columbia and National. As a result, fee TV appeared to offer possibilities for acquisition of additional programs at a profit as opposed to our own provision of programs at considerable expense.

It is our sincere hope that our experimental transmissions have been of assistance to you and Members of Congress, to the developers of fee TV systems and to the broadcasting industry. We have found that they were of considerable benefit to us in clarifying our own views on fee TV.

After careful consideration, we have concluded that fee TV is completely incompatible with the operation of a regular broadcasting station. We have taken adequate time to reach this conclusion. We have waited out the storm of claims and counterclaims that broke during our experimental transmissions.

Our conclusion that fee TV is incompatible within regular broadcasting station operation is not based upon technical nor economical grounds, but upon philosophical and ethical grounds:

1. Both the theoretical and the practical technical problems of fee TV are either already solved or clearly solvable.

2. There do not appear to be any economical barriers to fee TV, either from the standpoint of the equipment, of the program distributor or of the transmitting station. In fact, the transmitting station stands to make more money than could be made by regular broadcasting. The only requirement for fee TV transmission is a television transmitter. There is no need for studios or other local station program sources. This condition would create opportunities for large economies and resultant increased profit.

3. Regular television broadcasting stations cannot intermingle fee TV in their present programing because this would create a conflict of purpose that would make it impossible to operate equitably in the public interest, convenience, and necessity.

It would be impossible for us, as a station, to operate in the public interest, convenience, and necessity, as between regular broadcasting and fee TV, even if our income from time sales were the same per hour for both types of transmission. This is so because our acceptance of a fee TV program would deny service to those people who either did not have a decoding device or could not afford the fee. We could not restore this preempted service at acceptable times of the day.

Our difficulties with fee TV would increase enormously when fee TV outbids others for our air time. It is clear that this condition would develop quickly. There are approximately 750,000 television receivers in the Washington area. A good fee TV program would capture at least one-third of this audience and ring up a gate of from $125,000 at 50 cents per home to as much as $500,000 at $2 per home. The fee TV distributor could easily outbid all others for station time, even after paying handsome royalties to the program producer and after retaining an adequate margin for himself. The rates charged by the Evening Star Broadcasting Co. for prime evening time are a matter of published record:

WMAL–TV rate card—7:30 to 10:30 p. m.

Class of service:	*Rate for 1 hour*
Local retail	$600
National spot	900
Network	1,100

A fee TV distributor would be able to pay many times these rates, and still make huge profits. In fact, fee TV's potential profits are so enormous that fee TV could outbid present sponsors for both time and programs. We, as a station, would be unable to resist the economic and competitive pressure that would be brought to bear under such circumstances. We would have no choice but to accept a substantial volume of fee TV programing. This could hardly be considered as operating in the public interest, convenience, and necessity.

Our conclusions are predicated upon the assumption that fee TV would be intermingled with our regular broadcasting on our assigned channel 7. These conclusions would not prevail if we were assigned an additional channel for fee TV transmissions.

We consider it a privilege to have been permitted to make these experimental television transmissions in your behalf. We shall be available for your questions if there is any particular in which you desire additional information.

Yours very truly,

F. S. HOUWINK, *General Manager.*

[Minneapolis Star and Tribune, June 19, 1955]

THROUGHOUT MINNESOTA—MAJORITY OPPOSED TO TOLL TV

People throughout Minnesota who have television sets in their homes are opposed to subscription or toll TV in the United States in more than 7 out of every 10 cases.

A Minnesota poll study of TV householders in cities and towns and on farms throughout the State shows strong opposition to the pay-as-you-see proposal.

The Federal Communications Commission is considering the requests of several firms for authority to establish toll television. The idea has created a major furor in the television industry, and the FCC has been receiving large amounts of mail from the public on the subject.

In Minnesota homes with TV sets, poll interviewers asked this question:

"Several companies want to start subscription, or pay-as-you-see, television in the United States. They think many people would pay 50 cents or a dollar to see a new movie, a play, a big sports event, or some other type of attraction on their TV sets at home. Those who did not pay would not be able to see that particular event on their sets.

"Are you in favor of some sort of subscription TV system in the United States, or are you against it?"

The answers:

[Percent]

	All adults	City people	Town people	Farm people
In favor of it	22	23	20	17
Against it	72	70	70	83
Qualified	2	3	4	
No opinion	4	4	6	
Total	100	100	100	100

These are the explanations people give for their stands:

In favor: "I'd be willing to pay for better programs; that's the only way programs will improve; I'm tired of old movies; that would be cheaper than attending the events in person—we wouldn't have to pay babysitters, for example."

Against: "The initial cost and upkeep of the TV set are expensive, and it's unfair to buy a set and then have to pay to see programs on it; I'm satisfied with present program selections; we couldn't afford subscription TV; I'd rather go to the event in person if I had to pay; the present method is fine—I'm willing to look at commercials; that plan would lead to further controls."

Ranged against the 30 percent of the college-educated Minnesotans who favor subscription TV are 61 percent who oppose it and 9 percent who give other answers or are undecided.

The toll TV idea has a little more appeal to younger adults than it does to older people, but in all age groups the opponents far outnumber the proponents.

[Houston Post, June 11, 1956]

Sound-Off—Post Readers Express Themselves Vividly on Free-or-Fee TV Question

(The Post recently polled its readers on the free TV or subscription TV question. Many sent in letters with their votes. Sound-Off today devotes its space to a few of those letters:)

THERE'S NOT GOING TO BE A JUKE BOX IN THE HOWELL HOUSE

To the Houston Post:

* * * I would like to say to you, as I have said to the FCC in Washington, that no one is going to make a jukebox out of the TV in my home. * * *

L. D. Howell, *Baytown.*

PAY TV WOULD BE BLOW TO OLD FOLKS, SAYS EMMA COPPINGER

To the Houston Post:

Pay TV programs would deprive thousands of old people (mostly pensioners) of the pleasure they get from TV, as they could not afford to pay for TV programs. Let those who can afford to pay have their special programs if they wish and pay for them.

Emma J. Coppinger, *Pearland.*

EARL D. KRANNIG MAKES AN OFFER

To the Houston Post:

If we do get subscription TV you can have my set. Couldn't sell it. There will be no market.

Earl D. Krannig, *Houston.*

ADVERTISING DOESN'T BOTHER MRS. TENBERG

To the Houston Post:

* * * It would turn me back to radio, which I still enjoy during the daytime. Advertising does not especially bother me. In fact, I've learned of many good products by it. Have you ever noticed how children enjoy the TV commercials? My niece, at 2½ years of age, could pick the coffee brands off the shelf and parrot the commercial. * * *

Mrs. B. E. Tenberg.

MRS. HAINES O. K.'S PAY SYSTEM BUT WITH DIFFERENT CHANNELS

To the Houston Post:

I feel it is all right to have pay TV if the pay system uses their own channels, but would not like them to use regular network channels and then leave the public nothing at all to watch free.

Mrs. Harry Haines.

MR. VANECEK ASKS SOME QUESTIONS ABOUT PAY TV

To the Houston Post:

* * * How would they fix the TV's now owned? * * * It would be a lot of trouble to do this * * *.

Who would get the money from this?

Michael T. Vanecek, *Pasadena.*

MR. WILLIAMS ADVOCATES A COMBINATION SYSTEM

To the Houston Post:

* * * I have often thought that it would be nice to have closed-circuit TV if it were to offer high-quality programs. I would like to see the Metropolitan Opera and other musical and dramatic shows. It would be very nice and worth a substantial fee to be able to see a Broadway play or to see an Alley Theater play (or one from another of our local houses). I would even be willing to pay a small price to see a first-run movie. It would have to be borne in mind in setting the fee on first-run movies that the TV performance would not have a wide screen and (for the present at least) would not be in color.

I would like to add that I would not under any circumstances favor the doing away with the free commercial TV. This is not because I like to see the commercials but because there are many programs which we like to watch occasionally for relaxation, but which we could not afford to pay to see * * *.

E. R. WILLIAMS, Jr., *Houston.*

IT'S ALREADY PAY TV, CONTENDS MRS. SAWYER

To the Houston Post:

In regards to the pay-as-you-see TV, why the people already pay to see TV * * * the set * * * the expense of keeping it up and so on * * *.

Mrs. LOUISE SAWYER, *Glenflora.*

YOU CAN PUT THE SCOTT FAMILY DOWN AS VOTING "NO"

To the Houston Post:

My family and I are very much against subscription TV. My 3-year-old brother has been sick most of his life and Mom and Dad very seldom ever get to go anywhere and TV is about the only way they have of getting any entertainment. So, I feel that subscription TV is very unfair * * *.

MYRNA JEANETTE SCOTT, *Huffman.*

THE RUSSELLS EXPLAIN THE SITUATION QUITE CLEARLY

To the Houston Post:

Please don't change TV. For if you do I will have to let my set go back, as I don't make enough salary to meet the notes on the set and pay to see it, too * * *.

NAOMI AND JESSIE RUSSELL, *Humble.*

PAY-AS-YOU-GO TV WOULD SAVE MR. LEE MONEY

To the Houston Post:

I do not own a TV at the present time but plan to do so in the near future as it is very enjoyable for the home.

If they start pay-as-you-go TV, then they will save me money, because I will not buy one but will stick with radio.

JOHN C. LEE.

EVERYTHING'S BACKWARD, COMPLAINS MR. KILLI

To the Houston Post:

Pay for watching TV? I've been misinformed. I thought we were going to be paid for watching almost any of them. So few are worth a person's time, let alone their money.

ALBERT KILLI, *Houston.*

IT WOULD COST TO TURN IT OFF, MR. RUST LAMENTS

To the Houston Post:

I'm strictly against pay TV, because if you have pay TV and deposit your money for a show, you might not like it and then to turn it off your money would be thrown away * * *

R. A. RUST.

MRS. ABSHIER DOESN'T BELIEVE IT'D HELP QUALITY

To the Houston Post:

* * * I don't believe pay TV would make much difference in the quality of TV fare * * *

PATRICIA ABSHIER.

THE POYES FIND THE COMMERCIALS EDUCATIONAL

To the Houston Post:

* * * We have no objections to commercials—we learn much from them * * *

Mr. and Mrs. CHARLIE POYE AND FAMILY, *Hemphill.*

MRS. WHITESIDE, A MOVIE FAN, CONSIDERS AND RECONSIDERS

To the Houston Post:

Being an avid movie fan, I was quick to mark "yes" in agreeing to pay for first-run films on TV, but after further thought I know this isn't true. The theater screen size, color, and sound are such today that TV cannot compete with us, on movies * * * We want to pay for things we have no other means of seeing: sports, theater, opera.

Mrs. G. C. WHITESIDE.

COMMERCIALS BECOMING MORE OBNOXIOUS, BRIGGSES SAY

To the Houston Post:

We believe the combination as we know it and subscription TV should be given a trial. Some, or I should say many, commercials have become (and are becoming more so) downright obnoxious and nauseating to say the least * * *

Mr. and Mrs. A. O. BRIGGS AND ROSE,
Highlands.

OUTRAGEOUS, MONEY-MAD, PROTESTS MRS. BENNETT

To the Houston Post:

This scheme of paying for your own television is the most outrageous, money-mad stunt I have ever heard of * * *

Mrs. R. P. BENNETT, *Bellaire.*

RECEPTION IS AWFUL AT NAVASOTA, SAYS MR. IVEY

To the Houston Post:

I want to state that the reception on TV received here at Navasota, Tex., from 4 to 9 p. m., is something awful * * * I still like my radio, and I may discard the TV and stay with the radio * * *

J. T. IVEY, *Navasota.*

MR. EVANS NEVER HEARD OF ANYTHING SO RIDICULOUS

To the Houston Post:

* * * pay television * * * I have never heard of anything so ridiculous in my life!

JERRY EVANS, *Houston.*

MRS. MARSH OF PASADENA WILL GO TO THE MOVIES

To the Houston Post:

When it comes to paying to watch my own TV, I'll junk it and go to the movies.

Mrs. ROBERT F. MARSH, *Pasadena.*

SOME WOULD PAY WELL—PUBLIC VOTES 856 TO 115 AGAINST FEE TV PROGRAMS

Eleven hundred people in Houston and neighboring towns and cities have expressed their opinions on the subject of subscription TV.

The consensus is a resounding "No" to the question, "Would you prefer a combination of TV as we now know it and subscription TV which would offer attractions now unavailable?"

Of 1,092 questionnaires received in the Post's informal survey (a few arrived after the answers were tabulated and were not processed), 856 said "No" to this question, 115 said "Yes." Apparently indifferent to the whole subject were 121 individuals who, nevertheless, wanted to say a few words about TV in general if not about subscription TV in particular.

This indicates that Post subscribers are against subscription TV by about 7.5 to 1. Those opposing subscription TV watch television an average of 32 hours a week. Those in favor of it watch an average of 28 hours a week. Those who can take it or leave it watch a little less—23 hours.

One of the most interesting developments of the poll was an indication that those in favor of subscription TV generally are willing to pay well for it. While 41 respondents in favor of pay TV did not indicate how much they would be willing to spend a week, only 9 of the 74 who did make an estimate set the figure at less than $1 and 32 of them were willing to pay from $2.50 to $10 a week for TV shows in their homes.

As for the types of shows the prosubscription TV fans want to see for pay, first-run movies lead the pack. Eighty of them said they would pay to see such films. Next came dramatic productions, with 61, then sports, with 55, and last, opera with 37.

More than half of those in favor of subscription TV said they would not be willing to pay for attractions now available on TV minus the commercials.

[The Cincinnati Post, July 6, 1955]

MARY WOOD'S VIEWS ON TV AND RADIO—2,132 POST READERS AGAINST PAY TV; 68 FOR

Judging from the latest tabulation of the votes on pay-as-you-see TV—yes or no—Greater Cincinnati viewers are overwhelmingly against "buy" television programs.

The results were: against pay TV, 2,132; for, 68.

Here are a few quotes from some letters which accompanied many of the ballots:

From Wilbur G. Kellis: "This is a brainstorm that someone thought up to make life just a little more miserable for the low-income class. We are taxed to death now. Why more? I have $450 invested in my TV set already. I think it is time the public fought back."

From Mrs. J. B.: "I think it is awful that they want to make us pay to see TV after we paid good money for our sets. What will they think of next?"

From Mrs. G. Jones: "Here's hoping we never have pay TV."

From Mrs. Ralph Grogg: "If pay TV comes we'll turn our TV set to the wall and go back to the good old radio, which has never asked us to put in a coin to hear."

From Tony Fries: "I am 15 years old, and I haven't the money to pay to see TV program. It would be a shame to deprive children and poor people of their only enjoyment."

From Verna M. Van Ness: "What will happen to the many retired folk who have managed to get a TV set and whose income does not keep growing as prices do?"

From Mrs. L. B. Shaw: "No, I don't want pay TV. When I have to pay to see something, I want to go some place. I stay at home enough the way it is. The only time I get to go out is when I go to the movies, and if pay TV comes out I'll have to sit at home, along with a million other housewives."

From Ida M. Erb: "It seems a shame that the public has never had a voice in the deciding factor 'to pay or not to pay to see TV.' If it goes to the affirmative, soon all the good shows will be on the pay list instead of free, as they are now.

"Mary, I remember when TV was a new-born baby, and many a time I read in your column that TV was the best thing since running water and how you wished everyone had a set. I could hardly wait to get one, and I'm so glad we did, 'way back in 1950. It is a source of constant joy to me. * * * What a shame if we had to pay to see our favorite programs. And what about the poor (and there are thousands and thousands of us) who could not afford to pay? Would their sets just sit there dark, or would there be junk to see?

"Let's keep TV free and all of us help to make it better."

From John Meyer: "I think the idea of pay TV is one of the most selfish outrages ever heard of. What money-mad monopolist is trying to put it over? The next move will be to charge the public for the air they breathe."

From Mrs. B. D. B.: "A few weeks ago, when I saw the See It Now program on pay-TV, I wanted to write you my opinion but I heard we wouldn't have too much to say about it. I have my TV set on for about 12 hours a day, but I think the average home would have a lot less TV if the pay system should come into being. If it were up to me. I would keep it just as it is."

From C. E. Hathaway: "If these private industry thieves get control of TV and I have to pay to watch my own set, you'll hear a war whoop from me. What robbery. Even Jesse James wasn't that bad."

From James D. Johnson: "The very idea of pay-as-you-see television violates the American concept of freedom to look and listen. If we allow this monster to get a beachhead on the free airways, it will degrade or even destroy our present system by outbidding our advertisers who have given us high standards of entertainment, information, religion, and cultural programs for many years without charge.

"On the surface it might appear harmless, but within a year or two it would have such a stronghold on the American purse that we would be paying exorbitant fees and could do absolutely nothing about it."

[Knoxville News-Sentinel]

814 OF 820 ASSAIL TOLL TV AS UNJUST

OVERWHELMING PROTESTS LABEL SLOT-MACHINE PAYMENTS AS TOO COSTLY AND MONOPOLISTIC

The idea of slot-machine payment for premium television programs (toll TV) has been assailed overwhelmingly by News-Sentinel readers who wrote their opinions on free TV versus toll TV.

Of 820 comments, 814 scored toll TV as too costly, un-American, smacking of business monopoly or ruinous to TV set manufacturers.

"If toll TV is passed, I think my 21-inch Zenith will make a good hen nest," wrote one irate viewer. (Zenith Radio Corp. and Teco Inc. petitioned the Federal Communications Commission last February for approval to operate pay-to-see television.)

ANOTHER JUICY PLUM

Said a toll-TV opponent at Pressmen's Home: "Is this another juicy plum the present administration is trying to throw to its friends, Big Business? * * * I do not object to commercials, I find some educational."

Toll TV's advocates say its special programs would take away annoying commercials and offer such telecasts as Broadway plays, opera and more cultural events not ordinarily afforded TV viewers.

"As for commercials," says a woman opponent, "we rather like them and the children love them. My little girl will watch commercials when she won't look at a program * * * The companies can afford the commercials but we sure can't (afford) the toll. We have a free country; let's keep it that way."

SEES SALES DECLINE

Volume sales of TV sets would be damaged by toll TV, says one man, and it would indirectly hurt TV manufacturers.

"There wouldn't be nearly as many people buying TV sets if they knew they would have to pay extra to see the programs. Also, if the volume sales of TV sets were reduced over the country, that would mean more unemployed people * * * laid off from the TV manufacturing plants, TV service shops and TV sales stores."

The added cost is a frequent reason cited for opposition to toll TV. "I have a large family and cannot afford to pay tolls," says a Heiskell housewife.

"I bought a TV set I could ill afford, to give my children entertainment at home, to keep them off the streets * * * If I am asked to pay a toll, I can soon junk it, because TV repairs are costly enough.

"I'LL PLAY CHECKERS, FIRST

"I want my children to have entertainment at home," she continues, "but I won't pay a toll to give entertainment. I'll set my TV set aside first and play checkers with the children."

Another argument runs thus: "These toll TV companies state that only special event programs would appeal on toll TV * * * but there is still a possibility that toll TV would eventually monopolize all the good programs we now see free."

"Un-American hijacking which a few greedy hoodlums are attempting to cram down our throats," writes a railroad official. "If a deal like this was ever placed upon the people of free America, we need never shoot off our heads about democracy or individual freedom.

"KEEP THEM FREE

"The big business of this Nation has done a good job of furnishing us with good TV programs. Let's keep them at it * * *. Don't let this hijacking outfit survive. Let them sell this idea to Russia where no one can speak his own mind."

A comment signed by "One that has lived on both sides of the fence": "Why in ——— should people who are not able to buy necessities of life help pay for programs for people that are able to buy $400 and $500 TV sets? Have we lost all sense of justice?"

But an Oak Ridge scientist who lives here says he feels the News-Sentinel poll was worded incorrectly.

"The ballot is set up on the basis of an either-or proposition. This is not necessarily the case.

"PREFER BOTH

"I prefer to have both free TV and toll TV. Why not have 2 or 3 free TV channels then a toll TV channel for special programs?"

A female reader agrees. "The choice is between free TV as we now have it and free TV plus the privilege of choosing to see other TV shows for which we would be willing to pay.

"Few people would say, 'I prefer toll TV to free TV.' But I think a great many would prefer to have a choice between the two, based on the programs being offered at a given time."

[New York Herald Tribune, June 26, 1955]

READERS REPLY TO QUESTIONNAIRE: 24 PERCENT SAY YES, 76 PERCENT NO TO PAY-SEE TELEVISION

Seventy-six percent of persons who responded to the questionnaire printed June 12 in the Herald Tribune TV and Radio magazine have declared their unwillingness to pay for special television programs while 24 percent said that they would be willing to pay.

Most of the 24 percent, however, attached qualifications to their willingness and by far the most recurring of these was the demand that commercial announcements would have to be abolished. All told 1,650 ballots were cast.

When it came to the question of how much money people offered to budget in a week for pay-as-you-see television, there was great divergence among those who signified willingness to pay. The lowest figure was 25 cents and the highest was $35. The average was $2.46.

A number of viewers who were opposed to subscription television said, nevertheless, that they might be willing to pay and suggested fees from 25 cents up to $5 a week.

The Herald Tribune TV and Radio magazine, which printed the questionnaire, is included in all copies of the Sunday paper distributed in areas within the radius of the New York and New Haven television stations.

On many aspects of matters raised by the questionnaire, the viewers who responded showed considerable emotion, through letters attached to the questionnaire or through marginal jottings.

"An outrageous idea!" exclaimed J. F. Harris, of Cranford, N. J., in announcing opposition to any paying to watch television in his own home on his own set. And Frank Morris, of Paterson, N. J., wrote, "When I pay, the set goes out."

One of the most repeated thoughts offered by those in opposition raised the problem of shut-ins, the aged, and persons living on pensions who, it appears, have become widely addicted to television as their principal diversion and entertainment. Many responders in these groups said that their economic position was marginal and that if they had to pay for television, they would have to give it up.

A few viewers said they would be willing to pay for better programs but a note from the Hollwitz family, of Brooklyn, was typical of those who would like to pay to get rid of commercials. On the question of pay-as-you-see, the letter said, "Yes, yes, a thousand times yes," and then after citing commercials, went on to say, "There are times when I have all I can do to prevent myself from hurling an ashtray * * * straight through the TV tube."

SOME LIKE THEM

Several viewers, on the other hand, said that they actually liked commercials and then there was a fair-sized school which thought as did Mrs. Allen P. Thurston, of 605 West 111th Street:

"Most TV commercials are completely bearable, certainly a fair way to pay for the entertainment they accompany. * * * If I have a choice among several products, all of which I like, and find useful, I choose the one that may be represented on one of my favorite TV shows."

The questionnaires, which constituted a survey throwing considerable light on the television habits and attitudes of the metropolitan area population, presented the viewer with eight questions.

TWENTY-SEVEN-HOUR AVERAGE

The first question asked how many hours a week the family television set is in use. The average proved to be 27 hours with normal extremes running from 10 hours to 92 hours. There were, however, exceptional extremes of one-half hour to well over 100 hours.

The second asked about willingness to pay for special TV broadcasts. This produced the ratio of 76 percent opposed and 24 percent giving qualified approval.

The third asked how much a viewer thought he might budget a week for such shows. Here was the average of $2.35 for those answering the second question affirmatively.

The fourth asked about willingness to pay for specially selected children's programs. It appeared that having settled the principle of the issue by their replies to the second question, the viewers did not want to go into refinements because while 9 percent responded in the affirmative, 91 percent were negative or gave no answer.

TYPES OF SHOWS

The fifth asked what types of shows viewers might be willing to pay to see. A total of 70 percent refused to specify, but the following categories were mentioned by the following percentages of viewers: sports, 15; theater, 28; opera, 15; first-run films, 25. Sixty-four percent of questionnaires did not specify any of these categories.

The sixth asked what would be a fair fee for one of these shows. Among those who had expressed in question No. 2 a willingness to pay, the following amounts were stipulated by the following percentages of viewers: Up to 25 cents, 31; 50 cents, 32; 75 cents, 12; $1.21; and $2 or more, 4.

Some who replied in the negative to question No. 2 nevertheless submitted amounts for question No. 6 and these were stipulated by the following percentage of viewers: up to 25 cents, 70; 50 cents, 21; 75 cents, 4; $1, 3; and $2 or more, 2 percent.

COMBINATION CHOICE

The seventh asked if viewers would prefer a combination of TV as it is now and as it would be under subscription. The result, in a finding that does not appear to dovetail perfectly with the answer to the second question, showed 27 percent replying affirmative and 73 percent negative or not giving an answer.

The eighth question asked whether viewers would be willing to pay for current attractions without commercials. Eleven percent of responders said "Yes" and 89 percent said "No" or gave no answer.

Among those who replied to the questionnaire, 42 percent were men and 44 percent women; 14 percent were from Mr. and Mrs. By origin, the replies came from New York City, 34 percent; elsewhere in New York State, 27 percent; New Jersey, 30 percent; Connecticut, 8 percent; Pennsylvania, one-half percent; and elsewhere, one-half percent.

FADEOUT PROBLEM

An unusual problem was presented by Elaine Grey. She has good reception in her summer home on Bellmore, Long Island, but in the winter when she lives on the east coast of Florida, she is in a fringe area and programs often fade out. Over the country, many are in the same plight, she said, and asked, "Do you think these millions of people will pay when they have no way of knowing if they will be able to get the show?"

A recurring theme among viewers opposed to pay-as-you-see TV seemed to be just plain downright indignation. They spend several hundred dollars for a television set, they say. They install it in their own house and now somebody has the nerve to suggest that they have to start putting coins into it in order to watch it.

Senator Pastore. Now, our next session will be tomorrow morning at 10 o'clock in the caucus room of the Senate Office Building, room 318.

(Whereupon, at 5:50 p. m., the committee adjourned until Thursday, April 26, 1956, at 10 a. m.)

TELEVISION INQUIRY

THURSDAY, APRIL 26, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., in room 318, Senate Office Building, Hon. John O. Pastore, presiding.

Present: Senators Pastore and Schoeppel.

Senator PASTORE. Just so that we may be able to better gage our time for this hearing, I should like to ask Mr. Richard S. Salant how long he expects to be?

Mr. SALANT. About 30 minutes, sir.

Senator PASTORE. Is Mr. Lawrence H. Rogers in this room?

Mr. ROGERS. Yes, sir.

Senator PASTORE. How long do you expect to be, Mr. Rogers?

Mr. ROGERS. Perhaps 25 minutes.

Senator PASTORE. Is Mr. Biemiller here?

(No response.)

Senator PASTORE. Is Mr. Farr here?

Mr. FARR. Yes.

Senator PASTORE. How long do you expect to take?

Mr. FARR. Less than 15 minutes.

Senator PASTORE. Is Mr. Tibbetts here?

(No response.)

Senator PASTORE. Is Mr. Radford here?

Mr. RADFORD. I would like to speak less than 15 minutes; about 10 or 15 minutes.

Senator PASTORE. All right, Mr. Salant.

STATEMENT OF RICHARD S. SALANT, VICE PRESIDENT, COLUMBIA BROADCASTING SYSTEM, INC.

Mr. SALANT. My name is Richard S. Salant, vice president of Columbia Broadcasting System, Inc. I am appearing today to report the position of CBS in favor of free television. And because of the incompatibility of the two, since we are for free television, we are against pay television.

I shall try to state the case for free television, and against pay television, as we see it, as briefly as possible. I would like permission to submit for the files a memorandum, which I think you have before you, which deals a little more comprehensively with the issues.

Senator PASTORE. The memorandum [1] will be printed in the record, and will also be filed with the committee.

Mr. SALANT. Thank you, sir. Also for the files of the committee, I would like to submit the comments [1] and reply comments [1] which we filed with the FCC, which deal with these issues very comprehensively.

Senator PASTORE. They will be identified in the record, and referred to in the record, and held in our files.

Mr. SALANT. Thank you, sir.

In this statement I shall cover in broad strokes four points: (1) What free television is today; (2) how pay television threatens this free service; (3) the fallacies of the claims that pay television will be additive, either in terms of programing or in terms of more television stations; and (4) the illusory and unsound nature of the proposal that the issue of pay television could be resolved by an alleged trial in the public market place.

1. A PROFILE OF FREE TELEVISION

First, let me turn to what we are fighting for, free television.

The public itself has decided that free television is worth preserving. Over 34 million families, 7 out of 10 United States families, have invested more than $16 billion in television receivers. Today, 99.2 percent of American families live in areas within range of at least 1 free television signal, and about 9 out of 10 television families have the free choice of 3 or more stations. The average family now watches free television about 6 hours a day. If ever any industry has had an explicit and direct public stamp of approval, it is the free television industry. There can be only one explanation for its growth and the public's devotion to it—the quality and diversity of its programing.

In order to give some idea of the range of what free television is giving to the American people, we have prepared an appendix entitled "Some Highlights of the Current Television Season—September 1955 to June 1956." [2]

That is attached to my statement. That appendix shows that in a single season, free television has provided the viewing audience with a large selection of the best of the plays originally produced for theater audiences, a selection far exceeding in number a full season of Broadway hits. As Newsweek recently pointed out in an article on the influence of television on the Broadway theater, before television, a Broadway hit was an experience inaccessible to most Americans; but now television is attracting the leading playwrights, producers, and directors, and 90 million people have a chance to see outstanding stars in the greatest plays ranging from Shakespeare to the works of current playwrights.

But, as the appendix shows, television drama has done more than just borrow from Broadway; it has created its own plays, some of them so excellent—like the prize-winning Marty—that they have

---

[1] The memorandum referred to is set forth at the conclusion of Mr. Salant's testimony starting at p. 1313. The comments and reply comments of CBS in F. C. C. Docket No. 11279, having been filed with the Commission, are incorporated in this record by this reference and have been retained in the committee files.

[2] The appendix referred to is set forth beginning at p.1308.

broken the bonds of the medium for which they have been created and have been adapted for showing in motion-picture theaters and on the stage. As John Crosby has stated:

> As far as plays go, I feel strongly that television has had more worthwhile dramatic material on it than Broadway has.

The appendix shows, too, that television is already presenting an impressive flow of feature motion pictures, and is getting more and more of them sooner and sooner. In the last 6 months alone major film companies have released to the television market almost 2,000 feature pictures and 6,000 cartoons and shorts.

Mr. Cox. What was the approximate date of the production of those films, Mr. Salant?

Mr. Salant. It varies, Mr. Cox; the English pictures are recent, in the fifties, many of them; the American pictures, with a few exceptions, are pre-1948.

The New York Times recently commented on this trend in this way:

> As newer films reach the home without charge, the toll television advocates are going to sound very forlorn urging viewers to pay for them. Pay-as-you-see had a stronger case 5 years ago than it has today.

The appendix also shows the great range of sports events which free television has brought to the public—leading football games, boxing, baseball, horse racing, tennis, basketball, bowling, and golf. In the current season, no less than 860 major league baseball games will be broadcast on television free. This is an increase of 45 games over last season.

And, as appears in the appendix, free television has presented not only drama, motion pictures, and sports, but also a wide range of programs in the field of public affairs and the arts, music and ballet, poetry and painting, education and religion, past and current history.

Mr. Cox. If I could, at this point, Mr. Salant, I would like to ask you a number of questions about this appendix. In relation to the plays and musicals you listed there, which appeared at the rate of three a month, were these broadcast at full length or were they adapted and cut down for television purposes?

Mr. Salant. Each of them was adapted in the sense that they are different media, and you just cannot transfer them intact and have a meaningful performance. They were——

Mr. Cox. Are most of these 90-minute or 1-hour features, or do you know what the time periods were?

Mr. Salant. Most of them were 90 minutes, as my eye runs over them: The Skin of Our Teeth, Our Town, Heidi were 90 minutes. Time Out for Ginger was an hour. The Cain Mutiny Courtmartial, The Devil's Disciple, She Stoops To Conquer were an hour and a half, as was Salome; Peter Pan, I believe, was 2 hours.

Mr. Cox. I notice, running down the networks, that none of these were produced by ABC. Would this be because its difficulty in procuring time in the major markets has made the cost per homes tuned in too high for it for this kind of entertainment?

Mr. Salant. I doubt that, Mr. Cox. The press reports are that ABC will have a series of hour and a half programs next year—actually 2 series, 1 of drama and 1 Omnibus.

Mr. Cox. Now, I notice in the list of movies that you give, beginning on page 4, that all but 2 of these were shown over ABC. Now, isn't this the group of English movies that ABC is showing on Sunday afternoon in an effort to build viewers during that period?

Mr. SALANT. I don't know whether these are the Sunday afternoon pictures. They also have a Monday series, as I recall it, in the evening.

Mr. COX. Now, except for Richard III, I take it, although these were recent movies they were not first-run movies?

Mr. SALANT. The Constant Husband is also first run. I don't know whether Davy Crockett is listed here. Of course that was released to television, and then later to the theaters.

Senator PASTORE. A strong impression has been left here with the committee—and I should hope to have your observation on this impression—that much of this improvement of which you speak was used merely as a propaganda vehicle against this new drive on the part of pay-as-you-see television. No, I would like to get your impression on the record.

Mr. SALANT. Senator, I can only answer for CBS. In our program, pay television has played no part at all. Our programing has developed, and will continue to develop, because that is the way we think is the best way.

As to our schedule, we want it to be the best possible, and it is not designed for any other purpose; and our program people—our program board—have not devised their schedule as a counterirritant to pay television at all.

I would be reasonably sure that is so in NBC and ABC, too, but I cannot speak for them.

Mr. COX. Go ahead.

Mr. SALANT. It is always a little embarrassing and unpersuasive for a spokesman of a company or an industry to talk of its accomplishments. But outside observers are just as emphatic. There was, for example, an article in the April issue of Harper's magazine, entitled "Out Where the Tall Antennas Grow," by William K. Zinsser, motion picture critic of the New York Herald Tribune. Mr. Zinsser does not own a television set. Recently he visited friends in Iowa who had a set. He tells how he felt left out of the conversation which covered matters which his friends had learned from television—from the story of the filming of Moby Dick to how a Bach fugue was assembled. The New York Times Sunday Magazine put it this way a few weeks ago in analyzing television programing:

> The economic and geographical barriers that once separated the mass from the arts have simply been taken down.

I do not mean to suggest that we who are in free television are satisfied or that we can rest with what has been accomplished. Rather, I suggest only that there has been a constant broadening and improvement in free television's program content—beyond the prophecies not only of its pessimistic foes but also of its optimistic friends. And free television's frontiers have not yet been reached.

2. PAY TELEVISION'S THREAT AGAINST FREE TELEVISION

Pay television would, however, interrupt this progress. It is not invention: It is disinvention. It proposes to take that which is intelligible to all and to make it unintelligible. It is not adding; it is taking away. It proposes to introduce the turnstile into the American living room, blocking off free access to the best that television offers.

We believe that pay television will gravely hurt, if not destroy, free television as we know it. It will do this by (1) the blackout; and (2) the siphon.

That pay television proposes a blackout seems indisputable. As I will discuss more fully later, pay television does not propose to confine itself to new or unused portions of the spectrum; it proposes, rather, to use the portion of the spectrum now dedicated to, and used by, free television. It is a simple fact of today's electronics that a television station cannot broadcast two programs at the same time. Therefore, the moment a station broadcasts pay television's scrambled signal, that station is blacked out for the free viewer, for that period of time.

Senator PASTORE. Do you take the position, sir, that some of the best performances that the public is now enjoying on a free basis—that those performances will, of necessity, go on the auction block as between advertisers and pay-as-you-see television?

Mr. SALANT. Yes, sir; we do. I will develop that a little more fully as we go along.

Senator PASTORE. Well, I think that that is a very, very significant point, and should not be slid over too lightly, because I think that there we have the crux of the entire matter. You say that you are going to cover it fully in your presentation?

Mr. SALANT. Yes; as you say, it is the crux of the matter.

Pay television has, for that period of time, blacked out free television.

Mr. COX. Now, what would be the case, Mr. Salant, if the station showing subscription programing were one that, at this point in time, is just hanging on in the hopes that something will develop which will permit to to conduct a profitable operation, and it seemed to its managers that subscription television was the solution? If such a program would keep this station on the air, even though portions of its time would be devoted to programing which could be viewed only if the viewer made a payment, would not there be a net addition to even the free programing that would be available in that market?

Mr. SALANT. For that station, for that market, for that period of time, there would be an addition. For all stations, and for all homes, there would be a very large net loss.

Mr. COX. Now, you suggest, I think, at a later point, that the subscription television proponents have indicated that they wish to start in the major markets—New York, Los Angeles, Chicago. Now, clearly, in the case of New York, with 7 stations on the air, at least 2 of which are reportedly operating at a loss, if 1 of these stations, or even 2 of them, were to devote 15 percent of their time, or 20 percent of their time, to subscription programing, there would still remain a greater selection of television fare than is offered to people of any other part of the country, wouldn't there, on a free basis?

Mr. SALANT. I would doubt it. I would think that if 1 or 2 stations were permitted to go to subscription television in New York there would be 2 consequences. One, it couldn't be contained in terms of stations. There couldn't be a restriction to 1 station or 2 stations.

Mr. COX. Well, the three stations carrying network programing in New York are owned and operated by the networks, and I presume in view of your statements here that you would not, except in extremities, devote your facilities to subscription television?

Mr. SALANT. I don't know how we could answer to the stockholders if you can make $32 million in Allentown. [Laughter.]

Mr. Cox. That is very attractive?

Mr. SALANT. It is.

Senator PASTORE. But more important than all this—and taking Mr. Cox's hypothetical question—let us assume that in his case the program that went on pay-as-you-see happened to be I Love Lucy, there would be a deprivation on the part of the free viewer to see I Love Lucy.

Mr. SALANT. That is correct.

Senator PASTORE. It is taking something out of the free market and putting it into the pay market.

Mr. SALANT. That was the second part of the answer.

Senator PASTORE. Now, the reason why I am saying this here is because we have representatives of both sides of this issue who are appearing before us, and I say this in order to provoke their rebuttal on these arguments that we are raising, if they can be rebutted. Because as I am beginning to get the impression now, and I think that these people who are appearing here—inasmuch as I happen to be the only member of the committee here now, the impression I am beginning to get is that the best quality will drift to pay-as-you-see. The free public will be left with what is left.

Now, that is an important question that somehow someone will have to answer for the people of this country. If we are going to make it so attractive on pay-as-you-see that they are going to siphon off all of the good programs, then what will be left to the public in free entertainment? That is the important question that I hope, in these papers that are rather voluminous—and I sit here patiently listening to them all—that somehow we would get at the crux of these issues and pinpoint the important parts of the issue.

I don't mind sitting here, but I have been doing it now for weeks, and there are long speeches here—17 and 18 pages long—and this, to me, is a very simple issue. I think we ought to get to the meat of the whole question and talk about that, and not all of this window dressing that more or less submerges the real issue.

Mr. SALANT. Senator, I deal with precisely that issue at this point, of what we think will be left, and what we think will be taken away by pay television.

Not only will this blackout operate, but pay television will take away programs and talent which the public now enjoys free and which will then be available only on payment by the viewer.

The proponents of pay television themselves have conceded that they would take away free programs. Some time ago Zenith sent out an estimate of what it would have been able to make from "Peter Pan"—$5 million, Zenith said, at 25 cents a receiver—if pay television had only been in existence. Skiatron, too, has admitted that pay television would bid against free television for talent and programs. Telemeter has said that it will seek any free television program for which it can induce the public to pay. And the New York Times reported:

> An official of one pay-as-you-see system said competition would force a toll operator to shop around anywhere he could for stellar attractions, including existing television shows.

All of the proponents have been frank in stating their desire to move sports events from free to pay television. How concrete these siphoning plans are in the field of sports is illustrated by the statements of the sports promoters. The president of the Brooklyn Dodgers announced that he intends to move the Dodger ball games to pay television as soon as he can; he says he will get 50 cents per receiver for each Dodger ball game.

The president of the Madison Square Garden Corp. has listed the sports events which he expects to be on pay television—in a filing with the Commission he listed these events: Boxing championships, the world series, hockey, basketball, the Westminster Kennel Club Show, track meets, the Army-Navy game, professional football, tennis, and horseraces. As our appendix shows, precisely these events are now on free television.

Senator PASTORE. Now are you saying this—I think you inferred it, but I would like to get it on the record categorically. That game you are talking about is now coming over free television?

Mr. SALANT. That is right, as the appendix shows precisely these events are on free television, every one of them.

Senator PASTORE. And the likelihood is that those programs will go to pay-as-you-see?

Mr. SALANT. The pay-as-you-see promoters so state.

Mr. COX. Isn't it true that in your listing of sports events you listed 6 football games, 4 of which occurred on the same day, the others being the Army-Navy game and the professional championship game. You list a number of championship fights not including the rarely held heavyweight fights?

Mr. SALANT. Were there any in 1955? I don't know.

Mr. COX. I wouldn't know myself. But in other words, these sports were available. The question is whether they would be available to a greater degree on a more regular basis if a charge could be made for furnishing them to the public—a direct charge?

Mr. SALANT. Mr. Cox, in examining this appendix, I think it ought to be kept in mind that my recollection is that there were football games on every Saturday and there were also professional football games Saturday nights or Sundays—I am not quite sure when they played.

Mr. COX. I see. All right.

Mr. SALANT. Most of these events are also on free radio, and I cannot refrain from pointing out that radio also would be deprived of them. It is not reasonable to assume that the box-office operator will endanger his gate receipts by permitting people to have the alternative of listening for free or watching for pay.

Mr. Kohn, testifying for Penn-Allen included in his schedule the New York Philharmonic as pay television. As you know, the New York Philharmonic is carried by the CBS radio network every Sunday and has been for many, many years. I would think it unlikely if the New York Philharmonic were ever taken over to pay television that the audience would be afforded the opportunity, the alternative, of listening to it on radio where it now is free, and in the same home having to pay for it. The only way they could be driven to pay for it would be to shut it off radio.

A little exercise in economics and arithmetic demonstrates that pay television can implement its desire to siphon with a clear power to do so. Indeed, the entire basis of the proposal before us is that pay television could spend more money for programs than is being paid now.

I shall use the Ed Sullivan Show to illustrate this power to siphon programs.

If only one-tenth of the 17 million families who now watch the program free each week were willing to pay 50 cents to be able to continue to see it, the gross revenues would be $850,000, as compared to the $150,000 which the advertiser now pays for it. After paying the networks and stations for their time and facilities, and even after pocketing half of the balance for their own profits and expenses, the pay television promoters could still offer to the performers and talent on the Ed Sullivan Show more than six times as much money for each show as they are now getting—and nine-tenths of the present audience will be deprived of the program.

Mr. Cox. Now in that connection, Mr. Salant, is it your suggestion that this 1,700,000 people would not only pay 50 cents to see the Ed Sullivan Show as a novelty the first time but that they would pay it 52 times a year, totaling some $44 million for the privilege of watching Ed Sullivan on television?

Mr. Salant. Every piece of evidence we have so indicates. I will take that up. The indications are that the public, which has come to enjoy this—has come to expect it on Sunday nights—if they must, some of them will pay to keep on seeing it.

You are a father, I am sure, and you know what happens when you give a lollypop to a child, or a child gets a lollypop. It is much harder to take it away after it has a few licks than it is not to give it in the first place.

Mr. Cox. I assume, of course, if you are ever going to get these 1,700,000 paid viewers in one or more markets that that would require that there be substantially more than that number of decoders in use?

Mr. Salant. Mr. Cox, it is 1,700,000 families, not viewers. It is more viewers than that.

Mr. Cox. But that would be the number of decoders, one per family.

Mr. Salant. Correct.

Mr. Cox. And let's assume it would require 2 million decoders to get that number of homes tuned in at 50 cents. That would represent, on the basis of $50 a decoder, something in the neighborhood of $100 million which someone would have to invest, either the public or the franchise holders of subscription service. In addition to this there would, of course, be investments in terms of promotion, administrative expense, and things of that kind. Now, is it your view that people are going to invest that kind of money only on the supposition that their first offering—and the mainstay of their offering to the public—will be a charge for something the public has been getting free?

Mr. Salant. It is difficult to predict the pattern which this will follow. I think that it could happen in either 1 or 2 ways. The public can be forced to make these expenditures when things disappear from free television and they hear that they are going to turn up on pay. Or, more likely, I would suppose, at the outset the pay television people would begin with a few recent movies, and whatever the then equivalent of The Pajama Game may be. That will be the cart in front of the donkey.

Senator Pastore. Here is another question that I throw out to you; I hope the other side is listening and will give us an answer on it.

Can you imagine a situation where, insofar as quality of programing is concerned, there will not be an element of competition between free and pay? Do I make my question clear?

Mr. SALANT. I think so.

Senator PASTORE. In other words, can free television survive if all of the best is on pay-as-you-see, any more than pay-as-you-see can survive if all the best is on free television? How do you separate these two competing forces for the best quality of television, and what will be the ultimate consequences? Is my question clear?

Mr. SALANT. Yes. I think that there is no way of devising any set of rules or regulations which can be enforced which will parcel out this for free and this for pay. You cannot do it in terms of program concepts, and you certainly cannot do it in terms of talent.

It would be impossible to say to Ed Sullivan, to Jackie Gleason, to George Gobel, or to anyone else: "You have been on free; therefore, you are blacklisted; you can never go on pay." Or take the talent of the future. How are you going to say: "Wherever he is developed, he goes to free, he goes to pay. Wherever he starts, he cannot go to the other." You cannot do that. You cannot predict as of today what free television might put on tomorrow. If anybody had predicted 3 years ago that free television would be putting on some of the programs it is putting on today, they would have been laughed out of the industry.

Senator PASTORE. Can free television survive, in the long run, predicated upon the assumption that they can get away with an inferior program only because it happens to be free; or will they have to compete in the market to raise the quality of their program even to match the pay-as-you-see, even though you pay for the latter?

Mr. SALANT. They would be obliged, of course, to compete to try to increase their quality. Yet at the same time that you created that obligation, which already exists, you are hobbling by making it impossible to compete, because free television will no longer have the ability—the audiences will be taken away, the prime time will be taken away, the talent and programs will be taken away. At the very moment when they must try to compete with these programs which are being talked about, for which such huge sums can be paid, free television will have less money.

Senator PASTORE. Can you give us some kind of observation as to why the professional championship fights are not on free entertainment? Why is that happening? Why does it seem that about everything but that comes on?

Mr. SALANT. It is only the heavyweight fights which are blocked.

Senator PASTORE. Yes. Why is that above American advertising ingenuity to bring that to the public?

Mr. SALANT. Sir, I do not think it is above the ingenuity. I think that, once you put pay television to bed and put it away, things we are not getting now, we will get. It is no accident that the things that we are not getting, we are not getting from sources who are hopeful——

Senator PASTORE. I would not want it as a result of diplomatic blackmail. I do not want you to "put anything to bed" to bring something to the public that is good. I am just asking you why hasn't it come to the public? What has been the stumbling block? I know a lot of people are dissatisfied about that.

Mr. SALANT. It originally was on free television. Then the heavyweight championship fights were blacked out. I think it was in part because the promoters felt they could make more money out of theater television. I do not think that has been successful. Nothing is scheduled in theater television this year. I think that if theater television disappears as a means of distributing those programs, the likelihood is that much greater that it is coming back to free. We want it back on free. We will do everything we can to get it back on free.

Senator PASTORE. Well, what if that happens to baseball—the world series—then where are we?

Mr. SALANT. I think that it is very unlikely that we are going to lose the world series. There have been some witnesses here who have read things in the trade press which are simply not justified. The world series will be on free television.

Senator PASTORE. Well, I hope you could say the same thing about the championship heavyweight fights, too.

Mr. SALANT. Well, we will do our best, Senator. I do not know where the next fight is coming from, from what I read in the paper.

Mr. COX. You indicate that you think that subscription television would take away from free television prime time. Now this would be impossible in the 50 top markets in the country except for stations which are not affiliated with networks, isn't that true?

Mr. SALANT. No, sir.

Mr. COX. That is, you are assuming that one—either the elimination of option time, or complete termination of the affiliation relationship because of the attractions of subscription television?

Mr. SALANT. No, sir; I am not assuming either. I assume that if pay television operates with these great programs which must have nationwide distribution, the programs—particularly the sports programs—have to originate from one source. To originate from one source and to be carried nationwide there must be a network to carry them, if it is to be carried simultaneously at all. If it is a network, somebody is going to have to invent one for pay television. Option time does not apply.

Mr. COX. In other words, you would feel that the exclusionary provisions in the option-time rules would permit that network, newly created for this service, to displace your present rights to control that time?

Mr. SALANT. I would suppose so, Mr. Cox; and the second answer is even if the option-time provision applies—which is something we have not faced, and my guess is it does not—if it is this profitable to the station and our affiliates want to carry it, nothing in the world that we could do, legal rights or no legal rights, could hold them.

Mr. COX. Well, I am interested and bothered by this factor. It is quite clear, I think, from the testimony of everyone that subscription television could not come into existence on a nationwide basis overnight, or even over a period of many years.

I think it was stated by 1 witness that it would take 2 years to get 6 stations on the air, in 3 markets. Now it is this factor which, it seems to me, makes it unlikely that top talent and top draw shows on free television can be attracted to the new medium. In other words, you are suggesting, it seems to me, that for the supposed increased monetary return, Ed Sullivan would, in effect, terminate his relations with his sponsor—that he would prefer to present himself and the talent that he offers in 3 markets, before 1,700,000 people, rather than in the top 100 markets before 17 million people; and that his only motivation in this would be monetary, and that he would accept this on faith, in effect, before it is even demonstrated that pay television is ever going to come into existence, or if it does, that it is going to last?

Mr. SALANT. Perhaps what you are suggesting is a chicken and egg argument. We believe that there is a reasonable chance that pay television will never get off the ground. Our analysis of what will happen is on the assumption of success. We do not have to worry about pay television at all if it fails, but I assume that it is being brought here on the assumption that it will succeed—otherwise why bother? If we accept the assumption of success, then these are the consequences.

Mr. COX. Then, is there a possibility that it might succeed to a degree, but not succeed to the degree that you seem to fear?

Mr. SALANT. Mr. Cox, if it succeeds only to a degree, that degree being less than the degree necessary to perform the siphoning function, it won't succeed at all, because it cannot put on the things that they are saying they will put on. If they can put on first-run movies, if they can put on the heavyweight boxing championships, they can take Jackie Gleason, who wants to go; they can take Ed Sullivan, and they can take anybody else.

Mr. COX. They could, perhaps, if this were a matured system which had succeeded in getting outlets in all of the markets of the country, but that, of course, is a thing that is going to require years. It is my understanding, from the filings of the proponents, that they expect to have to subsidize programing, at least in the initial stages, in order to persuade people to buy, or permit the installation of, decoders—and the point I am making is that it seems to me unlikely that all of a sudden this thing is going to catch hold so completely that all of the people who for years have had satisfactory relations with free television are going to desert it, and turn to this new and untried intruder into the industry.

Mr. SALANT. You are quite right, Mr. Cox. I am not talking about what is going to happen overnight. We are considering pay television; the Commission and the Congress must consider pay television for the long run. I do not think that free television is going to die the day after tomorrow or 2 days after pay television starts.

Mr. COX. Do you think if, as time went on, it began to appear that these dangers which you foresee are coming about—do you conceive for a minute that the FCC and the Congress would not step in at that point and prevent that happening?

Mr. SALANT. I certainly assume that the Commission and the Congress would want to step in. I cannot see how they can step in effectively. I do not know how you could devise rules that can contain this. There aren't enough people in the world to sit here in Washington and say "This kind of program would not have been on free television, so it can go to pay."

You have to make predictions that are impossible to make. You have to make analyses, program by program, performer by performer, idea by idea. Zenith took a shot at it, and they are competent people. They made a proposal before the Commission on how to contain the program flow.

Well, you can drive through that proposal with a truckload of seven Commissioners. It is meaningless. You could adopt that regulation and nothing which is on free television would be prevented from flowing to pay television without violating the regulation.

Mr. Cox. Well, I have heard your analysis of their proposal, and it seems to me that on two points you are quite likely right. But it seems to me that there could be defined a concept of "box office attraction" which could be applied and limit subscription television to the sort of programing that its proponents say they really want to offer.

Mr. Salant. But Mr. Cox, if you draft that today, you are assuming that the frontiers of free television have been reached. If anybody tried to draft a regulation 3 years ago which was based on what was not on free television, there were many things that have come on since then.

Mr. Cox. This would be a restriction only on the subscription television operator. It would not be a proscription on what free television itself might do in the future, and I would assume, to the extent that free television could duplicate what is offered on subscription television, that you would have a competitive advantage.

Mr. Salant. In order to duplicate what might be on pay television takes money.

Mr. Cox. Well, I take it even if you pay $650,000 for the Ed Sullivan show you are not going to cram 5 times as much talent into it as the sponsor gets for $150,000. Money only buys so much talent and so much time.

Mr. Salant. You are quite right.

Mr. Cox. Therefore, because they get higher revenues doesn't mean their quality is going to be out of reach of free television.

Mr. Salant. I do not think it will be out of the reach of free television, but I think there will be enough money for the talent in pay television that they won't have to bother with free television. If you can make all of that money out of pay television, you can go to Los Vegas for the rest of the year.

It is clear that, with this economic power accumulated from the money of the public, free television's programs and talent will be siphoned to pay television. It is not likely that, in contrast to almost all other human beings, the producers, writers, and performers, the owners of motion pictures, or the promoters of sports events, will turn down more money in favor of less. As the New York Times pointed out last year:

> The stars would switch from free television to pay television just as they switched to television from radio.

The proponents of pay television fall back on the speculative argument that they could not siphon because the public would not be willing to pay for the same thing that it is now getting free. This argument is contradicted by their announced plans to take away some of the very programs now offered by free television. But in any event, all the available evidence indicates that enough people would pay to see those programs which pay television siphons away if that became the only way they could continue to see them.

A recent study prepared for major league baseball owners showed that if baseball fans could no longer see a game on free television, and had to pay 25 to 50 cents for the game on pay television, almost 40 percent would pay rather than do without. A Gallup study found that 31 percent of the people interviewed said that they would pay to watch the Ed Sullivan show if they could not see it free. A third survey, one conducted at our request by Elmo Roper in Columbus, Ohio, reaches the same result. The Roper survey showed the interviewees a hypothetical schedule of the three television stations in Columbus. One station's schedule was devoted to popular first-run motion pictures and similar programs for which the hypothetical charge ranged from 50 cents to $1. The schedules of the other two stations were the actual current CBS and NBC television network schedules—except that there was a charge of 25 cents a half-hour and 50 cents an hour. Enough people said that they would be willing to pay to see the programs on the CBS and NBC schedules—even against the competition of the first station—to provide a sufficient return to pay television promoters to make it economically worthwhile for them to put on pay television those programs which are now free.

Mr. Cox. I assume in that instance, though, they were given the choice only between one pay program and another pay program; that they were not given the choice between a pay program and a free program?

Mr. Salant. That is correct. There were various stages of questioning. In some cases there was a free program, in some cases a pay program.

If you like, I will submit that study for the record. It is a series of 18 or 19 possible schedules.

Mr. Cox. We would like to have it.

Mr. Salant. The pay television promoters' own statements and the public's direct answers establish, therefore, that if the public were ever required to make the unhappy choice, enough of a minority would pay for what it is now getting free to make it profitable for the pay-television promoters.

The cost to the public of retaining what it is now getting free will be enormous. A family would either have to buy an unscrambler for at least $40, or rent one for at least $20 a year. Then it will have to pay for each separate program. The pay television promoters have said that they would like to collect program charges of $2 or more each week from the average family. That is about three times as much as the average American family now pays for admission charges to all movies, theaters, sports, and other events.

Pay television will thus be doing a real disservice to this Nation. Free television has been a cohesive force, within the reach of almost every person. Everyone with a television set can, without any further payment, enjoy what every other set owner enjoys. But where free television is cohesive, to the same extent pay television is divisive. For the first time, the present unified television audience will be divided along economic lines. For the first time, the wealthy or the extravagant family will see programs which the average American family will not be able to see. In free television there are no second-class citizens; in pay television there will be.

Mr. Cox. Isn't it true, of course, that in other fields of entertainment this divisiveness already exists in that many people cannot afford first-run movies, Broadway plays, and so forth?

Mr. Salant. You are quite right.

Mr. Cox. So if subscription television could bring these programs to the public at a charge of 25 or 50 cents, then in that area there would be a reduction of this divisiveness of which you speak?

Mr. SALANT. What you mean is that more people will be divided than were before.

Mr. Cox. No; what I mean is that although you might establish a class of people who had been receiving free television and were unable to pay for pay, you would also, in the area of those who could pay for subscription television, have people who would be getting programing that at least hypothetically they have been unable to get because of the higher charges at the present sources of that kind of program.

Mr. SALANT. Yes, that is true; but in return for that, you are for the first time dividing the television audience which has never been divided before.

Mr. Cox. Although, by hypothesis, it is divided from that portion of the population that cannot even afford a receiver?

Mr. SALANT. The indications are that there are not many. We should ont talk in terms of "afford." Apparently everybody can get one.

THE ILLUSORY PROMISES OF PAY TELEVISION

Those are the evils of pay television. But sometimes there may be a balance; sometimes the bad may be outweighed by the good. We think that is clearly not the case with pay television.

The advocates of pay television contend that their service will be additive, not subtractive. We believe they are wrong. Pay television is certainly subtractive in its inevitable creation of a blackout, in its siphoning away free programs, and in its exclusion from its audience of those who cannot pay. But the pay television advocates promise in return that they will add new programs and new stations. We don't think they will. Let me show you why we think that.

A. The promise of new programs

The proponents of pay television have promised Broadway plays, major sports events, and feature films.

Free television, itself, as we have seen, has already carried such programing beyond the stage of promise and into actuality. Broadway plays, major sports events, feature films—that is precisely what free television is providing now.

I suspect that the pay television proponents themselves have recognized that their promises of what pay television will bring in these areas have already been matched by what free television has actually brought. That recognition may underlie the shift in their emphasis to additional cultural and educational programs—for pay, of course.

But we doubt that pay television's promise of more educational and cultural programing will be kept. Nothing in the history of those mass entertainment media which are dependent for their revenues on direct payment by the public supports the likelihood of more culture and more education. One need only look at the history of Hollywood and its motion pictures.

Exactly the same factor of the economic necessity for mass audiences are operative in pay television, which will be dependent on obtaining the most dollars directly from the largest possible audience. As Zenith itself has stated:

> Can there be any possible doubt that the subscription television broadcaster and his program supplier can logically have any other business purpose, desire, or hope than to obtain as widespread public reception of their programs as is practically possible?

The unlikelihood of the pay television promoters presenting programs for minority tastes is accentuated by the suggestion of the pay television proponents that they operate either for 15 percent of the broadcast day, or for 35 hours a week. Such limitations would restrict the time available to the pay television promoter to amortize his investment and make his profits. It seems unlikely that the pay-television promoter will devote very much of this limited time to chamber music and courses in differential calculus.

Mr. Cox. Now isn't it true, of course, that the content of programing, both in free and in pay time, would be determined by the broadcast licensee himself, and that he would continue to have the same responsibility for balanced programing that he has now?

Mr. Salant. That is true. I think that the understanding, though, is that the pay-television promoters do not propose themselves to present an overall schedule. They would leave the balance to come from free.

Mr. Cox. And the profit to come from pay?

Mr. Salant. That is correct.

This is particularly true since the proponents have conceded that, in these limited hours, they will have to repeat performances of some of their expensive mass-audience programs in order to realize their full economic potential. Zenith, for example, has stated that Hollywood motion pictures would be a bulwark of their program offerings, and that it would have to show each motion picture more than three times on a station. Such repeats would leave little time and less incentive for minority programs; for if the showing of a motion picture could produce $500,000 and a course in foreign languages could produce $5,000, it isn't hard to predict which program pay television would broadcast.

Even if pay television's promise of cultural and educational programs were likely of fulfillment, I doubt that it would be a good thing. It is even more important that education be free than that entertainment be free. If a public-library system does not have enough readers, charging admission to the library and rental for each book provides no remedy. The vital function of free television in these areas is to stimulate and awaken interest in viewers who might not otherwise be exposed to education and culture, and not to charge those who are already interested and who can afford to pay.

Mr. Cox. Now educational television cannot, in a final sense, be free any more than sponsored television is. The expenses must be paid by someone, and as I understand it, since an educational station is now prevented from making any charge for selling time, the only source of revenue up to this point has been public funds, public subscription, and things of that sort. Now isn't it true that a subscription service, if offered on a broad enough basis—and obviously it could not be confined to educational stations—but if it became successful the presence of decoders in the homes of the public might give educational stations the chance to attract revenues from those who would be willing to pay no more than they must now pay for a course of any particular kind?

Mr. SALANT. There is no question about that. I doubt whether that is a desirable use of free air waves.

Mr. COX. Your view is that if the man wants it, he must go to a classroom?

Mr. SALANT. Or get it free by staying in his home. There are other ways. If the audience is so limited, as is suggested by Skiatron—so limited that you not only have to scramble the free signal but you have to scramble the scrambled signal and limit it to doctors and other people, that is a misuse of the air waves. There comes a point of diminishing returns and it really does become point to point.

Millions of people probably had their first exposure to a Shakespearian play when Richard III was broadcast by NBC. As long as the show was free, these viewers were encouraged to shop around on their dials and to have a look at something which many of them never had seen before. But if it had cost a dollar to tune in on the program, it is probable that only a small fraction of the people would have been exposed to Richard III—and most of those would have been the very people who had already developed an appetite for Shakespeare's plays. It is only human nature that more people will try something for the first time when it is free than when they have to pay for it even before they know whether they will like it.

We are convinced, in sum, that pay television will make no significant addition to the programing now available free and that there will be less education and culture for fewer people instead of more for more people.

B. The promise of more station service

The proponents of pay television are flexible in their arguments. Perhaps conscious of how much ground has been cut out from under them by the record of free television's programing performance, the pay-television proponents now stress it as a nostrum to cure the allocations and the UHF problems.

I do not think that the proponents themselves believe this. This claim of aid to UHF has been effectively analyzed and I would like to quote that analysis at some length:

Limiting subscription television to UHF stations would also practically eliminate subscription television from the top 50 markets in the United States as there are only 22 UHF stations operating in the top 50 markets in the United States and only 6 UHF stations operating in the top 20 markets. Confining subscription television solely to secondary markets could make subscription television economically unsound * * *

Taking New York as an illustration, * * * It is doubtful that the most optimistic UHF operator would, under present conditions, attempt to go into competition with the six existing VHF stations, even though he was given a monopoly on subscription television. Such an UHF operator would have the dual problem of getting the New York public to convert their sets to UHF and to acquire subscription-television attachments, and he would be further confronted with the limitations on substantial quantities of program product suitable for subscription television * * * It appears undesirable to compound the problems of embryonic subscription television by adding the conversion problem of UHF.

In short, according to that analysis, pay television will not add UHF stations to the major markets, and pay television cannot add them to the secondary markets.

Or let me quote this conclusion:

Any attempt to limit subscription television to UHF stations would be impractical and dangerous * * *

In our opinion, to restrict subscription television to UHF only, at least during the early stages of subscription television development, would place an unreasonable and almost impossible burden upon the infant subscription television industry.

The first analysis which I have quoted comes from the joint substitute petition concerning subscription television filed by Zenith with the FCC in 1954. The second quotation comes from Zenith's FCC comments, June 9, 1955.

Zenith has thus forcefully stated in the past that to restrict pay television to UHF would be fatal to pay television, which, therefore, would do UHF no good. In fact, it is difficult seriously to expect that any artificial rules which would limit pay television to one class of stations and deny it to others would be either effective or permanent. It is not reasonable to expect that the most expensive and desirable programs will be consistently channeled over a long period of time through one group of needy stations, which will then become less needy, so that a new group can be created who will in turn press for relief.

As a matter of fact, if the actual proposals of Telemeter, Zenith, and Skiatron are analyzed, it becomes immediately apparent that they do not propose a limitation of pay television to UHF at all. Telemeter insists that pay television be authorized for all stations, and its witness at these hearings testified that it would seek to broadcast its programs on VHF stations. Actually, even Zenith's and Skiatron's purported succor to UHF is form, not substance. For they do not urge that pay television should be confined only to UHF stations. Their proposal, rather, is to limit pay television temporarily—for 2 or 3 years—to UHF stations, and to what they call needy VHF stations.

The interim nature of the limitation and the open door to needy VHF stations are two large loopholes indeed. The proponents have said that they expect to start pay television in, and, in fact, to limit it for a period of years to, the larger markets. By coincidence, in New York City, Chicago, and Los Angeles—the three largest markets—there are no operating UHF stations but there are VHF stations which come within their definition of "needy." And it is these very VHF's—not nonoperating UHF's—which Zenith, as just noted, proposes to use. And Skiatron's plan is similarly to begin with VHF. That company has reported to its stockholders that it has a 99-year contract with Mr. Matthew Fox under which he is obligated to begin operations in New York City and "to get a VHF television station to initiate the necessary applications before the FCC" in that area.

So, just as they have always proposed, the proponents of pay television could get started where they would have started in any event—on VHF's in major markets—and as they have said, it would take some time before they could move on to other markets. By then, again by strange coincidence, the time limitation would have expired and pay television could go right ahead, as the proponents have scheduled it, without limitations.

And if the limitations to UHF are not complete and permanent, exactly the same facts of economics will operate against UHF in pay television as operate in free television. We believe it demonstrable that pay television offers no solution to the problem of unutilized channels. Let us see what these unutilized channels are.

Less than 100 of the 1,200 unutilized channels are in areas—in which less than 1 percent of the population lives—not now receiving television service. The problem of this less than 1 percent of our population will much more likely be solved by boosters and satellites than by pay television, which is unlikely to be of any help because of the difficulty of operating it in such thinly settled areas.

Almost all of the remaining unutilized channels are UHF which have been unable to compete with local or nearby VHF stations either because (1) many of the television sets in their areas have not been converted, or (2) their coverage is not so great as that of VHF stations, or (3) they are in the shadow of the signals of stations from larger markets—or almost always a combination of two or more of these situations.

Mr. Cox. All right, let us take the case of Allentown, which Mr. Kohn talked about. This is a station now off the air. If anything could be done to put it back on the air, it would add programing, unless another station was eliminated. It is overshadowed by the Philadelphia area. It cannot compete with them programwise, and may have had difficulty in getting conversion. Now, if it can offer a high quality of programing through subscription service, of the sort which you say at least would be dangerous competitively to the network service, would it not give this station a chance to exist under circumstances where, apparently, it has not been able to do so today?

Mr. Salant. No, sir; I do not think so. My explicit assumption is that it will not be limited to UHF because nobody has proposed it.

Mr. Cox. I am just assuming that Mr. Kohn can make arrangements with one of the proponents that they would install this service in Allentown, which is not an insignificant market, although clearly not as large as your market.

Mr. Salant. I understand that, but the proposals of the proponents is to take VHF stations in the major markets wherever they can get them.

Mr. Cox. When they have taken those, do you think they will stop?

Mr. Salant. I think if they get a V in Philadelphia, and put pay programs on a V in Philadelphia, Mr. Kohn will be in precisely the same situation he is in now.

Mr. Cox. This is on your assumption that subscription television will displace presently operating network stations, which are apparently satisfied with their present circumstances—one of which is a station owned and operated by NBC.

Mr. Salant. If pay television is a success, pay television programs will come from Philadelphia, and not Allentown, yes.

Thus the competitive position of these channels will be no better under pay television. For the probable events will constitute an act of singular cruelty to UHF. Under an illusory cover of protection, the hope will be held out that it will have something which others will not. The already large investments in UHF could be multiplied many times if it seeks the cure of pay television. After 2 or 3 years, UHF will be deprived of its theoretical advantages, and its problems will have been compounded, because their investments will have been so much larger, and—3 or 4 years from now—they, plus some new ones, will be back in this hearing room again.

Mr. Cox, when I say affiliates in the larger markets will not hold still if pay television is thus successful, I would like to refer you to a filing with the Commission by station WMAL here in Washington, a station owned by the Evening Star, an ABC affiliate. It conducted 30-day experiments with subscription television. It filed with the Commission, stating that it believed that this was a bad service, but that if ever authorized, and it ever took hold, much as they disliked it the economic pressures would force them to go over to pay television.

Mr. Cox. Now, in this general connection, I take it that you, perhaps unlike Mr. Fellows, have read Dr. Alexander's study and are, therefore, familiar with the fact that he concludes that there is a maximum possible support from advertising revenues, in the foreseeable future, for only 588 stations operating in 217 markets?

Mr. Salant. Yes; I have read that.

Mr. Cox. Now, if this analysis is correct, then is it your position that there is no hope at all in the additional revenue that might be derived from this source—to permit a broadening of the base of our broadcasting system beyond the limits which Dr. Alexander sees there?

Mr. Salant. No hope at all is a little bit too much for me to say. There may be a few extra stations, but at the cost of less service, and less entertainment and education in the average home, and in most places.

But let me address myself to Dr. Alexander's study. I would like to make two comments on that. Dr. Alexander is our economist. This is his economic study, and we accept his conclusions. It is our job to prove that Dr. Alexander is wrong.

Mr. Cox. However, your engineers, in their testimony on allocations, come up with a system that produces even less stations—isn't that so?

Mr. Salant. No, sir; most certainly not. The allocations proposed by our engineers propose more allocations than the present FCC allocations.

Mr. Cox. In markets which can support them?

Mr. Salant. Nationwide. That allocation did not put channels only in markets where Dr. Alexander thought they could be supported. There are allocations in hundreds and hundreds and hundreds of other places.

Mr. Cox. You left the FCC allocations in the markets which, to date, have been unable to support stations, and which, according to Dr. Alexander's analysis, will not be able to support stations.

Mr. Salant. Let me address myself to that, because I ought to get that out of the way. I have read the Alexander report, and on page 1 it says: "in the long-run future, of course, the economics of the industry may, and indeed probably will, change so that a larger number of stations can eventually be supported. The minimum cost of running a station may decline, and increased advertising revenues, particularly from local sources, will undoubtedly be forthcoming. Such was the history of radio broadcasting, and a similar development may be expected in television."

This was written on October 5, 1955. Those developments have almost come.

Mr. Cox. You are referring to the Ampex tape recorder, and things of that sort?

Mr. Salant. And the automation; the $50,000 package.

As I say, it isn't an economist's job to invent, to push to new frontiers. That is the job of the industry, and we are going to do that.

Mr. Cox. I certainly hope so.

Mr. Salant. In sum, pay television will not be additive in terms either of programs or of stations. But even if perhaps there might be a few new stations, the price of loss of free television is far too high for the limited good that might be accomplished. What the pay television proponents suggest requires the more than 99 percent of the American people who are now receiving television service (almost 9 out of 10 of whom get a choice of 3 or more signals) to sacrifice all of the benefits of the free television system. Even those persons in areas where the few wholly hypothetical new services might be created would get less service rather than more. Clearly a family gets less television service when it must pay for programs during the most desirable hours of the viewing day.

Upon analysis, it develops that pay television would add neither new programs nor new service. It is simply what its name implies, a system for extracting pay.

4. THE FALLACY OF THE PUBLIC TRIAL

Failing all other arguments, the pay television proponents have urged that there be an end to this discussion and that the decision be left to the public by trial of pay television in the market place. In substance, they say that the Congress and the Commission should stop bothering about the question whether it is in the public interest to use the air waves to black out free television. They want nothing more than a victory in advance, without hearing or decision.

At first glance, the proposal to let the public decide has a surface attraction. Its attraction dissolves on analysis. None of the advocates of this concept of a public trial has ever specified just what they are proposing to test, what the public is supposed to choose between, and how much of the public will make the decision. What are the ground rules, and how is it proposed to tell whether pay television has won or lost?

Actually, the proposal does not involve a trial at all of whether the American people would rather pay or not pay to see television. We know the answer to that one in advance. If the public is given the choice of seeing any program free or paying for it, it will choose to see it free. But this so-called trial of subscription television does not propose to give the people that choice at all. It will give them only the choice of paying for the program or not seeing it. And we have seen there are many programs now being offered free which some of the public would pay for rather than go without them. Surely that does not mean that the public prefers to pay for them rather than get them free.

At this point, the lesson in economics which I went through before becomes so relevant again. We have seen how if one-tenth of the families now watching the Ed Sullivan show paid 50 cents for it, the program would be lost to free television and 90 percent of the viewing families would be deprived of it. We have estimated that, generally, if one-twentieth of the people who watch a popular half-hour show were willing to pay 25 cents to keep on seeing it rather than losing it altogether, the revenues from that one-twentieth would be enough to take it away from the remaining nineteen-twentieths.

All such a test in the market place would prove, therefore, is that pay television promoters can succeed economically on the money that a small minority of the people will pay—because they must to keep on seeing what they are now seeing free.

Mr. Cox. You presuppose that you cannot devise or discover any other offered entertainment which would win their support, particularly on the basis of the differential in cost. That is, I assume, if subscription television went on the air in Chicago, New York, and Los Angeles, that neither CBS nor the other networks would go out of business just because Ed Sullivan might have been lured away, and that you would do your best to discover new talent, to shift talent you already have available, and to compete on a program-for-program basis at that time in those markets?

Mr. Salant. Of course, Ed Sullivan is generic. I don't mean just Ed Sullivan. Again, this is long run. I would think that if this test were to be run you could satisfy the proponents of pay television—and I don't blame them—only if you gave them a long enough time to get into enough markets to create the opportunity to get a large enough audience so that they could give you the kind of programs they are talking about. Once that happens your siphon is there.

I don't think that you can test whether the public wants it or doesn't want it by taking 1 or 2 markets, because they could say "This isn't a fair test. We don't have a large enough audience here. What pay television has to be tested by, and on, is on a nationwide basis."

Mr. Cox. I take it advertisers have found television a very effective medium, and they would not wish to lose the advantages they get from its use merely because of the development of subscription service. And if they were excluded from advertising on subscription stations by the FCC they would be willing to pay what they now pay, and perhaps a little more, to back you up in your efforts to continue to provide free program service that would continue to attract the great majority of the viewers in the country to whom they want to sell their products?

Mr. Salant. I would hope so, Mr. Cox, but I have no confidence in that. You have your audiences fractionalized to begin with. You have enough money. I don't think that advertising, with $150,000 that it spends now, will up that budget to $850,000 in order to compete. Even advertisers have a limit on their purses, I am afraid.

Mr. Cox. But this, again, presupposes, it seems to me, that Ed Sullivan is irreplaceable.

Mr. Salant. That is why I make Ed Sullivan generic. Of course he is not irreplaceable, but in the public mind there are stars, and there are always stars who cannot be matched. They may disappear 4 years from now, or 5 years from now. But at the moment they are irreplaceable, and those irreplaceable ones who give you the primary attraction—the thing that brings people to turn on their sets, the thing that gets people to buy television sets in the first place—those you must have to survive.

This proposal is, in fact, wholly antithetical to our traditions of free choice by the majority. The proposed public trial does nothing more than give the pay television promoters a chance to get rich and one wealthy televiewer a chance to take away a program from 19 of his neighbors.

Such a public trial would not measure the usefulness of pay television in the public interest at all. It would measure only the economic power of the pay television promoter to deprive the American public of an attraction which it wants. I would suppose that if a coin attachment were to be put on public water fountains during a hot day in July, so that it would cost a nickel to get a glass of water, some proportion of the public would put nickels in the slot. This would not prove that putting a coin slot on public water fountains is in the public interest. It would only prove that some people are so thirsty that they would pay for the water if they could not get it free. In that sense, pay television will be "successful"—that is, profitable—in the precise measure that it deprives the public of television programs that, except for pay television, they would have enjoyed free.

CONCLUSION

Because CBS is in favor of free television, we are against pay television. We are for the best entertainment, and the greatest amount of information, education, and enlightenment for the most people. This objective can best be attained through free television; it will be wholly frustrated by pay television.

Perhaps the networks, which have been most successful in providing the kind of home entertainment and information which people want, could make a fortune out of pay television. We do not know. We do know that free television has provided an important service to the people, and that we owe it our fullest support. Whether or not our business judgment is correct, it does seem that our moral judgment is impeccable and that our position lies most clearly on the side of the public interest. We see no justification for taking a great natural public resource and limiting its enjoyment to those who can pay.

So far, pay television has largely been an abstract issue to much of the public; it is only a cloud no bigger than a man's hand.

The more the people learn about pay television, the less they think of it. We are persuaded that if the people are ever confronted with pay television as a reality, if they are ever faced with the choice of not watching programs and stations or paying for the privilege of using their television sets in their own living rooms, there will be an enormous resentment. If the people are ever faced with the necessity of attaching a gadget to their television sets at their own expense and then paying for each program that they want to see, their hopes, expectations, and their rights would be betrayed. We believe that families have made their investment in their television sets on the reasonable assumption that they would be able to enjoy without further payment whatever signals are within range of that set.

The Government would be breaking faith with the public if it deprived them of the realization of that expectation.

Mr. Cox. Would you agree with Mr. Fellows in his testimony yesterday that this would not be objectionable if subscription service were offered by a cable?

Mr. SALANT. We could have no objection to that.

Mr. Cox. That, however, would still raise the possibility that if it were extensively enough installed it would siphon away your programs and dilute your audiences?

Mr. SALANT. You are quite right. We can only object, and do object, to using the free waves for performing this undesirable consequence.

Mr. Cox. Isn't there also a possible distinction—as is pointed out in your comments in the proceedings before the Commission—that you do not regard it as feasible to install it on cable, because of the expense?

Mr. SALANT. We are confused by that, Mr. Cox. We have reached no conclusion. It has been impossible to study it thoroughly. Mr. Shapp says that it is more economical. We take no position because Mr. Alexander has been too busy.

Mr. Cox. Isn't it true that some three hundred or four hundred thousand families are now paying from \$3.50 to \$7.50 per month for television service, not on a program basis, but through the use of community antenna facilities?

Mr. SALANT. I don't know the figures, but I will accept that for the purposes of discussion. Yes, there are undoubtedly many families who are paying to get their signals through community antennas because that is the only way they can get them. It is our hope, and it is our expectation, that boosters, satellites, new inventions, will wither away the community antenna so that people who are now paying for that service will get it free.

Mr. Cox. But it does indicate a willingness to pay in order to get the programing that is now being offered?

Mr. SALANT. You are quite right. That is a basic assumption I make: That they are willing to pay, and our own poll showed that they will pay—a minority of them pay—enough of them to make a go of it.

Senator SCHOEPPEL (presiding). Thank you, sir.

(The appendix and the supplemental memorandum referred to earlier in Mr. Salant's testimony are as follows:)

APPENDIX

Some Highlights of the Current Television Season, September 1955 to June 1956

Plays and musicals

ORIGINALLY PRODUCED FOR THEATER AUDIENCES

Production	Cast	Network	Date
The Skin of Our Teeth	Helen Hayes, Mary Martin, George Abbott, Florence Reed.	NBC	Sept. 11, 1955
Our Town (musical adaptation)	Frank Sinatra, Eva Marie Saint	NBC	Sept. 19, 1955
Heidi	Jeannie Carson, Wally Cox, Bill and Cora Baird.	NBC	Oct. 1, 1955
Time Out For Ginger	Jack Benny, Ruth Hussey	CBS	Oct. 6, 1955
Cyrano de Bergerac	Jose Ferrer, Claire Bloom	NBC	Oct 17, 1955
Alice in Wonderland	Eva Le Gallienne, Martyn Green	NBC	Oct. 23, 1955

Memorandum Supplementing Statement of Richard S. Salant, Vice President, Columbia Broadcasting System, Inc., on Pay Television

Prepared for the
Senate Committee on Interstate and Foreign Commerce, April 26, 1956

INTRODUCTION

Three groups—Zenith Radio Corp. and Teco Inc., Skiatron Electronics & Television Corp. and Skiatron TV, Inc., and International Telemeter Corp.—have requested the Federal Communications Commission to authorize subscription television operations.[1] The arguments which those parties urged before the Commission, they now urge before this committee. Those arguments are in part self-contradictory, and in many points they are in conflict with each other. All of the arguments, however, make it clear that any system of pay television would spell the destruction of the best values of free television.

We shall show (point I) that pay television is inherently adverse to the public interest because it would blackout free channels, divide the viewing audience along economic lines, and siphon program material away from free television and radio.

The pay television promoters attempt to overcome those adverse consequences by claiming that their systems would: (*a*) Offer programs not presently available on free television; and (*b*) provide a solution to the problem of unutilized channels which now faces this committee and the Commission. We shall demonstrate (point II) that pay television would not accomplish either of its purported objectives. We shall also show that one of the proponents, Zenith, apparently recognizes that free television's growth has made obsolete its promise of new programs, and that it is now attempting to bolster the contention that pay television would be a panacea for the allocation problem by making claims for its system which it branded as unsound only a short while ago.

We shall also deal with the proponents' argument that pay television should be given a trial in the market place so that the American public can decide whether

[1] Those requests have been made in the pending rulemaking proceedings *In the Matter of Amendment of Part 3 of the Commission's Rules and Regulations (Radio Broadcast Service) to provide for Subscription Television Service*, docket No. 11279, hereinafter referred to as the "pay television proceeding." The proponents will hereinafter be referred to as Zenith, Skiatron, and Telemeter.

it wants such a system. We shall show (point III) that the commercial success of a pay television trial would not prove that the majority of American families wanted a pay system; it would merely prove that a small minority, presumably those in the upper income bracket, would pay enough for the most popular programs, if they were no longer available free, to deprive the rest of the public of those attractions.

I. PAY TELEVISION WOULD INEVITABLY HAVE EFFECTS ADVERSE TO THE PUBLIC INTEREST

Pay television would have three consequences which are clearly adverse to the public interest: (1) A blackout of channels dedicated to free broadcasting; (2) A division of the viewing audience along economic lines; and (3) A siphoning of present and prospective program material from free television and radio.

(1) The blackout of free channels

The pay television promoters propose to use channels now allocated to free broadcasting. While any station was carrying one of their programs, it would be blacked out for all those viewers who lacked decoders and for all equipped set owners who were unable or unwilling to pay for the program. Under the Zenith and Skiatron system, the viewer would receive a garbled picture and unintelligible sound. Under the Telemeter system, he would receive a "billboard" and "barker" informing him what program he could view if he were able and willing to pay.

If pay television were instituted in one-station markets, there would be a total blackout of free service while pay programs were being offered. In multistation markets, it is also likely that the blackout would be complete since all stations would strive to offer pay programs at the same time—during the evening hours when most people want to watch television.[2] Those hours would offer the greatest opportunities for profit. Even if initially only one station were to carry pay programs, there would still be blackouts ranging from 50 percent to 33⅓ percent of the channels in all 2- and 3-station markets.

The promoters of pay television have attempted to dismiss the seriousness of the blackout by arguing that they would use only a small portion of the broadcast day and that free service would be available at all other times.[3] That claim assumes that all viewing hours are alike as far as the public is concerned. The proponents apparently consider it immaterial that pay television would preempt peak-viewing periods and leave for free television those hours when working people are away from home or sleeping.

(2) The division of the audience along economic lines

Today, any family that has purchased a television receiver can watch any and all available programs. The taxi driver can view the same programs as the millionaire, and he does. Pay television would change this. Ability to watch would, for the first time, depend on ability to pay. Those who had sufficient money and were willing to pay would be able to see any programs that they desired. Those less fortunate—those families in the lower income groups who are most dependent on television—would become second-class citizens so far as television was concerned. If they lived in a market where pay television blacked out all free service during the prime evening hours, they would be forced to go without television service during those hours. If there were free service available from some station in their community, they would have to watch the less desirable programs left to free television after the cream had been skimmed off by pay television. Thus, pay television would divide the American viewing public along economic lines and destroy the democratic and unifying influence of our present system which serves rich and poor alike.

The extent to which pay television would divide the viewing audience is shown by a consideration of the prices which the proponents would seek. To watch

---

[2] Telemeter, stating that its system would not "be limited to a single broadcasting station in a city," adds that "it might be expected that several Telemetered programs over different stations might be presented during an evening." Questions and answers about Telemeter, the only pay-as-you-see TV system. Skiatron has also admitted that "favorite times for commercially sponsored programs" would be affected by its proposal (principal comments in pay television proceeding, p. 65), and a sample weekly program schedule distributed by that company listed 5 of the 7 programs during prime evening hours.

[3] In its principal comments in the pay television proceeding, Zenith suggests that the Federal Communications Commission limit the hours of pay broadcasting to 15 percent of a station's annual broadcast time (p. 49) while Skiatron proposes a 35-hour-per-week restriction (pp. 13–14, 65). Telemeter does not propose a time limitation but predicts that pay programs would occupy a "small percentage of the time on television stations" (reply comments, p. 13).

pay programs, a family would first have to buy a decoder for $50 or more, or rent one for $20 or more a year.[4] A separate fee would then have to be paid for each program, with charges running as high as $1 or $2 per show.[5] The pay television promoters have stated that they expect to collect $2 or more per week, or more than $100 per year, in program charges from the average television family.[6] This is almost three times as much as the average family spent for admission charges to movies, theaters, and sports events in 1954.[7]

The proponents' cost estimates are accompanied by assertions that the forces of the market place would always protect the public from unfair charges. Those assertions do not withstand analysis. It is clear that normal economic factors would keep any family from buying or renting more than one decoding device to attach to its receiver. If more than one system operated in any community, therefore, each family could get some programs but not others—one family could get the ball games but not the plays, another could get the plays but not the ball games. The natural and inevitable consequence would be that in each community only one system would function. Set owners, station licensees and program suppliers would all be forced to yield to the demands of the operator of that system in order to participate in pay television. Monopoly is a built-in feature of a pay system.

(3) The siphoning of free programs

The pay television promoters would inevitably seek to appropriate the most popular programs now presented on television as well as the outstanding attractions that would otherwise come to television.

Economic forces would drive pay television to seek free programs.—A consideration of the economic forces which must of necessity prevail demonstrates that the box-office operators of pay television would seek the most attractive programs of free television. The proponents have staked their case on the ability of pay television to extract from the public more money than advertisers spend for programs.[8] They have conceded that the huge revenues which they envisage can be obtained only by selling programs to mass audiences.[9] And they have asserted that there is a scarcity of attractive mass-audience programs.[10] Free television, however, offers a rich store of programs with built-in mass audiences. The programing of free television has induced 35 million families to purchase receivers and they watch that programing on an average of about 6 hours a day. It would be impossible to build a system of pay television which did not utilize the same types of programs.

The proponents have admitted that they want to take programs from free television for their systems.—The proponents have admitted that they will seek such programs. An analysis of their program promises (pp. 16–28, infra) shows that they plan to offer the same type of attractions for pay as are now available to the American public without cost.

All the proponents frankly admit that they would attempt to appropriate the most popular sports programs now presented on free television. For example, Matthew Fox, president of Skiatron TV, is reported to have said: "The only thing we want that's now on free television are the top sports events—and the

[4] Skiatron proposes that decoders be sold and estimates that the initial retail price would be about $40 or $50; that price does not include the cost of installation or of an installed UHF antenna. The other proponents intend to rent decoders to the public. Zenith states that monthly rental rates might be between $1 and $2, while Telemeter indicates that the rental would probably be a percentage of the receipts in a viewer's coinbox. Principal comments in pay television proceeding: Skiatron, pp. 26–27; Zenith, p. 36; Telemeter, p. 31.

[5] Principal comments in pay television proceeding: Skiatron, p. 27; Zenith, p. 37; Telemeter, pp. 26–28.

[6] Telemeter's principal comments in pay television proceeding, p. 29; statement by the president of Skiatron Electronics, the New York Times, June 9, 1953, p. 35; Millard C. Faught, economic consultant to Zenith, address before the National Press Club, April 14, 1955.

[7] The average expenditure on admissions was $35.60, based on total expenditures on admissions in United States, U. S. Department of Commerce, O. B. E., Survey of Current Business, July 1955, p. 19, divided by average of sales management estimates of total United States families, interpolated to mid-1954.

[8] Principal comments in pay television proceeding: Zenith, pp. 44–43, 56; Skiatron, pp. 41–43, 48; Telemeter, pp. 23–24, 29. Telemeter estimates that television advertising revenues will reach $1,450 million in 1960 and about $1,850 million in 1965. For the same 2 years it forecasts possible revenues from pay television exceeding $5 billion and $6 billion, respectively. (Id., p. 29.)

[9] See p. 27, infra [p. 1325].

[10] Pay television proceeding: Zenith's principal comments, pp. 4, 49; Skiatron's reply comments, p. 19; Telemeter's reply comments, p. 13.

sports promoters agree with us on this." [11] Paul MacNamara, Telemeter vice president is quoted as having said: "The first programs we'll offer will be sports. Big-league baseball, NCAA football, the International Boxing Club—they've all committed themselves to come in at the beginning." [12] Zenith has promised the world series,[13] and the Rose Bowl and Army-Navy games,[14] all of which are available on free television; and it has stated that the "promoters of fights, football, baseball, and other top sports attractions are urging us to get going." [15]

The proponents have conceded, however, that they desire more than just the top sports attractions now shown on free television. Skiatron does not limit itself to sports events when it concedes that "subscription television will compete with the networks for talent." [16] Similarly, Telemeter has stated: [17]

"The third objection which is voiced against pay-as-you-see television is that it will siphon desirable programs away from free television. The answer is that pay-as-you-see television will siphon programs only if it gives customers their money's worth. And free television will be doing its utmost to keep its viewers and programs. Again competition will determine who is able to attract the best programs."

Telemeter here clearly admits that it would "siphon programs" if it could (1) give "customers their money's worth" and (2) successfully compete with free television for those programs. Both conditions would be met. We shall show (pp. 9–10, 12, *infra*) that a sufficient number of customers would be willing to pay for programs if they were not otherwise available. As for the second condition, Telemeter and the other proponents have repeatedly boasted that they would be able to spend more for programs than advertisers; consequetly, free television would lose its best programs.

Zenith is less indirect than Telemeter about its desire to appropriate the most popular programs of free television. For example, the president of Zenith made the following wistful estimate of what the American public would have paid to see Peter Pan if pay television had been able to bid it away from free television.[18]

"Approximately 20 million television receivers were tuned to this program. with the same show on subscription television, and the same audience paying 25 cents per set to watch the attraction at home, the box office would have received $5 million to be divided between the producer, the distributors, and the broadcasting stations."

If Zenith admits that it wants programs like Peter Pan, it is clear that it would also try to appropriate programs like the following attractions which were seen on free television during the past year:

The Caine Mutiny Court-Martial (with Lloyd Nolan, Barry Sullivan, and Frank Lovejoy)
The Mary Martin-Noel Coward Show.
Blithe Spirit (with Noel Coward, Claudette Colbert, and Lauren Bacall)
Richard III (starring Sir Laurence Olivier, Sir Ralph Richardson, Sir John Gielgud, Sir Cedric Hardwicke, Claire Bloom, and Pamela Brown)
The Judy Garland Show
The Maurice Chevalier Show
Heidi (with Jeannie Carson and Wally Cox)
Our Town (with Frank Sinatra and Eva Marie-Saint)
Cyrao de Bergerac (starring Jose Ferrer and Claire Bloom)
Babes in Toyland (with Wally Cox, Dennis Day, and Jeannie Carson)
Caesar and Cleopatra (with Sir Cedric Hardwicke, Claire Bloom, Judith Anderson, and Jack Hawkins)
The Taming of the Shrew (with Maurice Evans and Lilli Palmer)
The Skin of Our Teeth (with Helen Hayes, Mary Martin, George Abbott, and Florence Reed)
Salome (starring Eartha Kitt)
Sleeping Beauty Ballet (with Sadlers Wells Ballet)

Time Out for Ginger (starring Jack Benny and Ruth Hussey)
The Lavender Hill Mob (with Alec Guinness)
The Red Shoes (with Moira Shearer)
Odd Man Out (with James Mason)
Stairway to Heaven (with David Niven and Kim Hunter)

It is also clear that the promoters of pay television would seek to appropriate some of free television's favorite regular programs and performers like The Ed Sullivan Show, I Love Lucy, the Phil Silvers Show, Disneyland, Jackie Gleason, and Jack Benny. These regular features generally attract larger audiences than television's special events and they hold those audiences on a weekly basis.

The proponents would have the power to take programs away from free television.—There is no doubt that pay television would have the economic power to bid those programs and stars away from f ee television. The promoters of pay television continually flaunt the fact that the money which they would receive from the public would enable them to spend more money for programs than advertisers do.

A simple illustration demonstrates how the pay television promoters could take away free programs. At the present time, the total cost of the Ed Sullivan Show is about $150,000 a program and the show is seen in 17 million homes. If one-tenth of the families who now watch The Ed Sullivan Show were willing and able to pay 50 cents to see it if it were no longer available on a free basis, the amount collected would be about $850,000. If all the money that the network and stations receive for their time and the use of their facilities is subtracted from that amount and if it is assumed that the promoters of pay television pocket half of what remains for their profits and expenses, pay television would still have more than six times as much money to bid for the attraction as is paid by free television. The same arithmetic could be applied to any other popular show.

It is significant to note that a small minority could pay enough to deprive the majority of families of programs now available free.[19] This will be discussed below (pp. 35–36, infra) in connection with the proponents' argument that pay television should be given a trial in the market place so that the American public can decide whether it wants pay television.

The top stars and the owners of the most popular attractions have admitted that they would switch from free to fee television.—It is obvious that free television's most popular stars and those controlling many of its top attractions would not be able to resist the rich rewards of pay television. Jack Gould, of the New York Times, noted:[20]

"Some of the big television stars already are casting envious glances at toll TV. If toll TV can bring in fabulous grosses, the stars are going to switch to that medium, just as they switched to TV from radio. And, as businessmen, the toll operators certainly are not going to turn them away.

"This prospect is no idle theory. An official of one pay-as-you-see system said competition would force a toll operator to shop around anywhere he could for stellar attractions, including existing television shows."

---

[19] The proponents concede that they can make money if only a small portion of the audience is willing to pay for programs. Joseph Wright, vice president and general counsel of Zenith, is reported to have said that pay television could afford the greatest shows in history even if those attractions get one of TV's lowest ratings—say, a 3—that means that 1 million people will be looking in. Collier's, September 16, 1955, p. 52. Ted Leitzell, public relations director for Zenith, stated: "Revenue per viewer to the broadcaster will be far greater from subscription than from sponsored TV. It is therefore axiomatic that subscription TV can operate profitably with a much smaller audience than can sponsored TV." Address before the Minneapolis Advertising Club, November 23, 1955. James M. Landis, counsel for Skiatron, has also stated that "our audiences would be naturally smaller than the free-television audiences." Debate before Eastern Annual Conference of the American Association of Advertising Agencies, October 19, 1955.

[20] The New York Times, May 8, 1955, sec. II, p. 11.

One of the "envious glances" has apparently been cast by Jackie Gleason, who is quoted as having said: "There's a future in this business for anyone who's had any time in television * * * I don't think there'll be any other kind of television." [21]

The promoters of the most popular sports events—of baseball games, prize fights, basketball games and the like—have openly admitted that they want to switch to pay television.[22] They have made no secret of the enormous revenue which they expect to derive by selling the sports events that are now available on a free basis.

The effect of the siphon would be felt by radio as well as television.—The serious consequences of pay television would extend to radio as well as free television. For example, if the pay television operators acquired the rights to baseball games, prize fights or operas, they would certainly insist on eliminating competition to their box office which would be created by the free radio broadcasts of those same events. Surely, some of the people who are interested in a prize fight would rather listen to the radio free than pay for the privilege of watching it on television. Even if pay television were to offer the 1 or 2 heavyweight championship fights a year that are not now available on free television, the number of people for whom those unique events would be added to television would be a small fraction of the number who would be deprived of radio coverage.

The proponents unsuccessfully attempt to allay the fears that pay television would appropriate free programs.—The proponents recognize that an attempt to charge American families for program material now available free would be contrary to the public interest and would arouse violent public reaction. That is clear from the repeated emphasis which they all place on the claim that their systems would merely supplement existing program fare. Zenith makes this explicit when it says that "Sound business *as well as public policy* requires that subscription television be limited to supplementing and augmenting existing program fare of the advertising type with new and unique program product which is primarily box office in nature." [23] The proponents have, therefore, attempted to allay the fears that they would take over free programs.

Their most persistent argument is that they would not do this because the public would not pay for the type of programs which it now receives free.[24] But, people would pay if these programs were not available on a free basis. The proponents' argument is completely refuted by their own promises to present programs and talent now available on free television. Aside from this inconsistency, however, it requires no elaborate argument to show that people are more likely to pay to see a program for which they have developed an affection than to see a relatively unknown attraction. If proof were needed, it is provided by a Gallup poll of last summer which showed that 40 percent of those interviewed would pay to see a world series game and over 30 percent would pay for the Ed Sullivan show if those programs were not telecast free.[25] A study prepared for the major league baseball owners last summer revealed similar results—it showed that almost 40 percent of the fans interviewed would pay 25 to 50 cents to see a baseball game.[26]

The proponents apparently recognize the fallacious nature of their claim that the public would not pay for many of the popular programs now available free. Accordingly, they have suggested certain so-called safeguards to prevent pay television from appropriating those programs. There would be no need for those suggestions if the proponents really believed that the public would not pay.

In the pay-television proceeding pending before the Federal Communications Commission, Zenith suggested that a pay system be limited to programs (1) of "the box-office type," (2) "which will supplement existing types of program fare," and (3) "which, except for subscription television, would otherwise be unavailable to the public on a regular or unrestricted basis." [27] We demonstrated, in that proceeding, that each of the elements of Zenith's test involves a wholly unworkable standard.[28] It is inconceivable that the Commission could

be expected to undertake a watchdog operation to make sure that programs appearing on pay television were only of the "box office" type.

Any effort to administer Zenith's proposed "limitation" would require predictions as to (*a*) whether particular programs now available on free television would have remained available if pay television had not been authorized and (*b*) whether particular new attractions would have come to television if a pay system had not been approved. If there were any doubt about the impossibility of making such predictions, it would be dispelled by viewing, from the standpoint of only 5 years ago, such a list of programs as that appearing on pages 7–9, *supra*. Moreover, even if such predictions could be made, a limitation on programs alone would not prevent the operation of the siphon. Programs are people. Even if it were decided that The Ed Sullivan Show could not be put on pay television, the elements of that program—Ed Sullivan, the orchestra, the producer, the director, the various acts, etc.—could not be ruled out of pay television without creating a blacklist of people who have worked on free television. The loss of the top talent on free television would spell the demise of the medium's most popular programs.

We pointed out, in the pay-television proceeding, that Zenith's own statements indicated that it lacked confidence in the effectiveness of the safeguard which it had proposed.[29] The passage of time has apparently not restored Zenith's confidence—if, indeed, such confidence ever existed. In the comments that it recently filed in the Commission's general allocation proceeding, Zenith made no mention of its "box office" safeguard. Instead, it merely claimed that pay television could be prevented from siphoning programs if the Commission (1) limited the amount of time that broadcasters could devote to pay operations and (2) temporarily restricted the right to conduct such operations to "needy" stations.[30] Skiatron has made similar suggestions.[31] Such restrictions, however, are no restrictions at all—they give the proponents everything that they want and do not impair their ability to appropriate free television's most popular programs.

Zenith proposes that pay operations be limited to 15 percent of a station's annual broadcasting time, while Skiatron suggests that no station be permitted to broadcast on a pay basis for more than 35 hours per week.[32] Under Zenith's proposal, pay television could preempt the air waves between 7:30 p. m. and 10:30 p. m. almost every night of the week; and under Skiatron's proposal, that could be done every night, with time to spare. These "limitations" would allow the proponents to operate at the times they most want, the choice evening hours when television viewing is most popular.[33] They would not weaken pay television's ability to bid the most popular programs away from free television. They would merely mean that the outbidding would be restricted to the hours when most people want to watch television.

The so-called station limitations would be equally ineffective. Skiatron suggests that, for an initial period of 3 years, the right to transmit pay programs be restricted to UHF stations and those VHF stations which can show special need.[34] Zenith proposes a 2-year limitation under which both UHF and VHF stations would have to establish special need; the fact that a station carries less than 7½ hours of commercial network programing per week would constitute a prima facie showing of such need.[35] It should be noted that these restrictions would last for only 2 or 3 years—after that period all stations could operate on a pay basis. Thus, these restrictions would not affect pay television's ability to siphon after the temporary limitation period had expired.

Nor would they prevent the operation of the siphon even during that period. The pay-television promoters have indicated that they intend to concentrate their initial efforts in the largest markets.[36] Under their so-called limitations, they

[36] The president of Zenith is quoted as having stated that subscription television can start in two "big markets" within a year after Commission approval. Newsweek, February 28, 1955, p. 72. This view was repeated in the Zenith release Some Capsule Facts About Phonevision and Subscription TV, p. 1. Skiatron TV, Inc., is required to meet a stipulated schedule calling for 500,000 installations in New York City to fulfill its agreement with Skiatron Electronics & Television Corp., Variety, April 27, 1955, p. 16. Paul MacNamara, Telemeter vice president, is reported to have said, "We'll concentrate our initial efforts in New York, Chicago, and Los Angeles." Collier's, September 1955, p. 55. He

could place pay programs on VHF stations in New York, Los Angeles and Chicago, stations which reach 26 percent of all United States television homes. Those stations alone would give the promoters the power to appropriate free television's most popular attractions. If only 20 percent of the present viewers of the Ed Sullivan show in those markets were willing and able to pay 50 cents to see that program, $450,000 would be collected. If the stations' time charges were deducted and the promoters kept half of the balance for expenses and profits, about three times as much money would be available as is now paid for talent and production on that program. Thus, pay television could make enough money from a small minority in just those three markets to outbid advertisers for the most popular programs which they now sponsor.

Pay television would split the American viewing audience along economic lines and destroy the democratic and unifying influence of our present system. It would take away the most popular programs from free television and black out free channels at the hours when most people wanted to watch. The American public has invested more than $16 billion in television receivers and service. Members of the public were justified in believing, when they purchased sets, that they could receive the signal of any station in their areas without the expense of additional equipment and a program-by-program charge. They were justified in believing that they could receive—without additional expense—the very attractions which the pay television promoters openly covet. The appropriation of free channels and free programs by pay television would thwart the public's justifiable expectations and depreciate its huge investment in television receivers.

II. PURPORTED JUSTIFICATION FOR PAY TELEVISION

We have shown that pay television's basic influence would be adverse to the public interest. What do the proponents offer to compensate for those adverse consequences? They promise (1) new and better programs and (2) an increased utilization of television channels. Even if the proponents could keep those promises, that would not compensate the American public for the adverse effects which pay television would impose. We shall show, however, that the proponents could not keep those promises—that there is grave doubt that they even intend to do so.

(1) Program promises

The proponents repeatedly describe pay television as offering a "supplemental" program service. In determining what is supplemental, however, it is necessary to have a frame of reference—to determine what it is that is to be supplemented. A supplemental diet is one thing to a man who has lived on stale bread for a month; it is another thing to one who has had caviar and steak.

The basic fallacy of the promise of supplemental service is its premise that free television has offered nothing but stale bread. Zenith has described the program fare of free television as a "continuous stream of 20-year-old horse operas and other hackneyed programs that now fill in most of the short spaces between the long commercials." [37] The president of Skiatron TV is quoted as having said: "Except for an occasional moment like Peter Pan, everything on TV is second-rate." [38]

No group of reasonably intelligent and unbiased citizens familiar with free television could honestly conclude that those descriptions of present programing are fair or accurate. Even a cursory examination of the programs presented on television during the past season, some of which are listed in this memorandum,[39] demonstrates that those descriptions are based on willful blindness or deliberate misrepresentation.

We turn now to an examination of the proponents' vague promises about the programing that a pay system would provide. Those promises fall into four categories: motion pictures, Broadway plays, sports, and cultural and educational programs. We shall show that, in each of those categories, pay television would not furnish any significant addition to what the public is now receiving free; that, on the contrary, it would siphon most of the popular attractions now available without cost.

(*a*) *Motion pictures.*—The proponents intend to begin their operations with feature films that have already been distributed to theaters. First-run pictures,

has singled New York out as the logical place for Telemeter to begin operations. The New York Times, April 29, 1953, p. 19.

[37] Zenith press release, dated June 6, 1955.

[38] Collier's, September 16, 1955, p. 52.

[39] See pp. 7–9, 23, 24, 26, 27 [pp. 1316–1317, 1323, 1324–1325].

they indicate, may become available some time in the distant future depending upon the growth and success of pay television. Skiatron, for example, promises to seek the release of producers' "inventories of feature films" and their libraries of pictures, many of which were outstanding productions." [40] It cautiously states: As the capacity of subscription television to pay becomes established, it may well be able to compete with theaters for motion pictures of the type that can be shown equally well on television as on a theater screen." [41] Similarly, Zenith promises "first-class," not first-run features, "in the interim period while the service is growing and before it has become fully established." [42] Telemeter also talks of "older good pictures," claiming that "the dam will break when we get up to 2 million sets," that "until then, the movie producers will be afraid to antagonize the theater owners." [43]

Free television, however, is now offering a rich variety of recent motion pictures which have already had theatrical runs. In the past 6 months, Hollywood producers have placed an unprecedented amount of product on the television market—almost 2,000 features and 6,000 short subjects and cartoons.[44] Warner Bros. and RKO have sold backlogs of 850 and 740 feature films for $21 million and $12 million, respectively.[45] And there are reports that other major producers are preparing to release sizable blocks of additional films.[46] Attorney General Herbert Brownell, Jr., recently announced that the Department of Justice would not appeal the judgment in *U. S.* v. *Twentieth Century-Fox Film Corp. et al.*, holding that the motion-picture producer-distributors had not conspired to restrain the distribution of 16-millimeter feature films to television. He stated that continuation of the litigation would serve no practical purpose inasmuch as a substantial flow of feature motion pictures to television had started.[47]

This deluge of feature films has been described as causing "the virtual scuttling of pay-as-you-see television" by Jack Gould, TV-radio critic of the New York Times, who stated: [48]

"The favorite argument of the eager champions of toll TV has been that a home box office would mean new feature-length pictures. But it is becoming obvious that, while toll TV has become ensnarled in all sorts of legal, technical, and economic complications, advertising-sponsored TV is going to move ahead and satisfy the viewer's appetite for better film fare. As newer films reach the home without charge, the toll advocates are going to sound very forlorn urging viewers to pay for them. Pay-as-you-see had a stronger case 5 years ago than it has today."

In a similar vein Abel Green of Variety wrote: [49]

"Television's sights on 'the public will be delighted to pay for good product' seems to have been eclipsed by this unleashing of a wealth of Hollywood backlog product for sponsored video programs."

As far as first-run films are concerned, while the proponents make vague statements about the possibility of presenting such attractions some time in the distant future after pay television has matured, free television has already taken the initiative. Three films, Richard III, The Constant Husband, and Adventures of Davy Crockett, have been shown on television prior to their release to American theaters. Zenith has quoted a statement by a "motion picture authority" to the effect that the showing of a feature on pay television might increase its audience at the theater box office.[50] This possibility is just as real under free television as under pay television. If it is demonstrated that the

telecasting of a motion picture would increase its subsequent theater run, motion picture producers and exhibitors would agree to have "openings" on television, and there would be no necessity for charging the public to see them on television.

(*b*) *Broadway plays.*—While Zenith has sometimes promised to present the opening nights of Broadway plays on pay television,[51] the other proponents realistically promise those productions only after they have been presented on Broadway and only after they have been adapted to the unique requirements of television. The president of Skiatron TV, Matthew Fox, is reported to have stated:[52]

"It's unrealistic to think in terms of Broadway opening nights, not only because of the technical problems but because you never know if a show is a hit until after it opens."

Similarly, Telemeter, in promising Broadway attractions after their theatrical runs, recognizes the problems of "adapting a Broadway show to television * * * whether the telecast can be shot from the theater and whether it is necessary to redesign and build new sets."[53]

The impracticability of televising opening nights has also been recognized by newspaper critics.[54] The views of those critics were affirmed last summer when officials of the Metropolitan Opera announced that its opening night production would not be televised because a normal operatic production is marred by television trappings and is not suitable for television unless specially staged.[55]

Thus, it is highly unlikely that Zenith would keep its sometime promise to present "opening nights" of Broadway plays. Like Telemeter and Skiatron, it would offer those plays after they had completed their Broadway runs and been adapted for television. This, however, is just the type of product now being offered on free television. Pay television would put an end to this; the Peter Pans and Caine Mutinys of the future would not be seen free but only for pay.

A recent article in Newsweek described the current relationship between Broadway and television in the following manner:[56]

"Broadway artists, thanks to the all but insatiable needs of television, had never been busier. The Broadway theater, flourishing under the same well-heeled influence, was at the same time undergoing a transformation that might shortly affect a multitude of other stages across the country and was already being seen in millions of American living rooms.

"Before TV, the Broadway hit was an experience inaccessible to most Americans; at best, they had to settle for a Holywood mutilation—or copy of the original. Now, the full-length Broadway play is becoming a standard (if still infrequent) feature on TV channels and seems certain to become much more.

"* * * What is not generally known is that television is financing Broadway productions. The industry has become a big backer on Broadway simply to secure for itself the rights to hits—that is, in order to beat Hollywood moviemakers to the punch. What this means for TV audiences is the chance to see, regularly, Broadway productions little altered from their original form, played by the original Broadway casts, and played live, rather than filmed. By introducing large numbers of people to the special excitement of watching

---

[51] Zenith Annual Report for 1955, p. 20; Joint Substitute Petition Concerning Subscription Television, p. 9. No such promise, however, is made in Zenith's principal comments in the pay television proceeding. There, Zenith merely stated that pay television would supply any program for which the public would pay and that a 1951 survey showed that a portion of the public would pay for "legitimate theater, Broadway plays, musicals, etc." (p. 56).

[52] Collier's, September 16, 1955, p. 52.

[53] Principal comments in pay television proceeding, p. 27.

[54] For example, Jo Coppola of Newsday, branding the promise of first nights as "ridiculous," asked: "What first night audience is going to buy tickets just for the privilege of viewing the rear anatomy of a cameraman?" Newsday, May 11, 1955, p. 87. John McClain, drama critic of the New York Journal-American, reacted to the promise to televise opening nights with a plea for recognition of "the fact that the two media are diametrically opposed." He wrote (New York Journal-American, June 3, 1955, p. 21):

"In the first place, how many plays currently on Broadway could be safely brought into the living room? Would you, as a parent with your children grouped around you, have enjoyed an unexpurgated showing of Cat on a Hot Tin Roof, Tea and Sympathy, Bus Stop, House of Flowers, or Lunatics and Lovers? And what author or producer would submit to an opening-night censorship to satisfy the TV audience? Their months of effort in creating a live theatrical production would go down the drain to comply with a code which has no relation to the Broadway theater.

"Technically the problems of televising an opening night would seem to me to be insurmountable. It took weeks of special rehearsal, an army of TV technicians, special sets and lighting, and enough equipment to fill half a theater to televise Peter Pan, for instance. And this was a show that had completed a successful run."

[55] Broadcasting-Telecasting, July 25, 1955, p. 5.

[56] Newsweek, February 27, 1956, p. 84.

successful dramas being played out on the spot by topnotch actors, TV may well change the present extent of the American stage. It will, in the view of some experts, create a new and unprecedented large demand for live theater, thereby reviving the somnolent road business."

Television's increasing use of Broadway productions and talent has been acclaimed by other critics. For example, Jack O'Brian, of the New York Journal-American, recently wrote:[57]

"* * * Talents from Shakespeare and Shaw to Herman Wouk and Maxwell Anderson, Thornton Wilder and William Saroyan to Sir James M. Barrie and Paddy Chayevsky, have given our TV air distinction, satisfaction and diversion. * * * There are all manner of fine TV moments to choose from; too darned many is the problem, TV's a hungry electronic beast, so it's eaten everything in sight whether prepared just for it (such as Patterns and the Catered Affair), borrowed from the stage (Caine Mutiny, Peter Pan, Skin of Our Teeth, Cyrano), or warmed over with new gravies in the way of musical scores (Our Town and High Tor)."

In addition to presenting Broadway productions and plays written for the living theater, free television has been developing a rich store of dramatic material especially fashioned for its unique requirements. Critics have acclaimed these dramatic productions as equal, if not superior, to the best plays of Broadway. John Crosby, for example, stated: "As far as plays go, I feel strongly that TV has had more worthwhile dramatic material on it than Broadway has."[58] Producers of motion pictures and Broadway plays are turning increasingly to television for dramatic material. Variety recently reported that 45 television plays had been acquired by these producers.[59] Among those plays was Marty by Paddy Chayefsky which was made into a motion picture that won the Academy Award and the Grand Prix at the Cannes International Film Festival.

(*c*) *Sports.*—The American public now views a wide variety of sports events on free television. In the coming season, it will see 860 major league baseball games—abount 45 more than last year.[60] It can watch three prizefights almost every week on the networks alone, and in the past year it has seen exciting championship fights between Ray Robinson and Bobo Olson, Carmen Basilio and Tony DeMarco, Jimmy Carter and Wallace "Bud" Smith, Carmen Basilio and Johnny Saxton, and Archie Moore, and Bobo Olson. Top horseraces, including the Kentucky Derby, Preakness, and Belmont stakes, are presented. Football, hockey, and basketball are seen in many cities. During the past year, free television has offered, in addition to its regular schedule of sports events, the Davis Cup matches, the national tennis singles championship, the dream race between Swaps and Nashua, the all-star baseball game, the world series, the masters golf tournament, the football bowl games, the Army-Navy game, the professional football championship game, the College All-Star–Cleveland Browns football game, and the national invitation basketball tournament.

The extensive sports coverage of free television leaves little for the proponents to add. When they promise to present events not now available, they generally mention heavyweight championship fights, which take place once or twice a year, and a limited number of football games. The proponents readily admit, however, that the promise of those infrequent events carries with it the price tag of payment for all of free television's popular sports attractions.[61] Nor have the promoters of those attractions attempted to conceal their desire to switch from free to fee television. Ford Frick, commissioner of baseball, is reported to have announced that he favors pay broadcasts of major league games.[62] Frank Lane, when general manager of the Chicago White Sox,[63] and Walter O'Malley, president of the Brooklyn Dodgers,[64] have also come out in support of pay television. Mr. O'Malley stated that 50 cents is "a good square fee that I'm sure no fan would object to paying." He added that he favors advertising on pay television "because I think that would help to bring the price down to the average viewer."[65]

John Reed Kilpatrick, president of Madison Square Garden Corp., stated:[66]

"The type of show that the public could be expected to pay for will always

be somewhat limited, such as, for example, boxing championships; the baseball world series; hockey playoffs; basketball championships; the Westminster Kennel Club championships; the national horse show; the great indoor and outdoor track meets; the Olympic games; football features such as the Army-Navy game and the various postseason bowl games; the professional football championships and all-star games; the Davis Cup and Forest Hills championships; the Derby and other great horseraces—a list of events of national and international importance that may be expanded."

Of the events mentioned by Mr. Kilpatrick, all but heavyweight championship fights (and the Olympic games, which have not taken place in this country since television was introduced) are now brought to the public by free television.

Nor would the siphoning of sports attractions be limited to national events. The proponents have admitted that they would also seek sports programs of local and regional interest.[67]

Two arguments have been advanced to justify charging the public for sports events which are now seen free. The first is that pay television would furnish economic support to sports promoters.[68] But it is patently not in the public interest to tax the Nation's viewers for all the entertainment now available free in order to subsidize fight promoters or baseball clubs. The proponents' second argument is that theater television threatens to appropriate free television's most popular sports attractions and that pay television offers the only hope of keeping those events in the American home.[69] This is simply not true. The threat of theater television exists in the proponents' minds, nowhere else. In more than 5 years, theater television has presented only 29 sports events—12 in 1951, 2 in 1952, 6 in 1953, 4 in 1954, 5 in 1955, and none so far in 1956. And theater television interests have indicated that it is not likely that they will expand their sports coverage in the future.[70] It is on such defiance of the facts that the proponents attempt to justify their proposal to charge viewers for the popular sports attractions now seen on television on a free basis.

(*d*) *Cultural and educational programs.*—In promising to present more than free television now offers of cultural and educational programs, the proponents have deliberately ignored the accomplishments of free television. In less than a decade, television has opened vast new vistas of education and culture to the Nation's millions of viewers. A recent New York Times' review of television's growth concluded:[71]

"Quietly but steadily, television has wiped out 'the sticks' and 'the road' from show business. The erstwhile hayseed is looking at the same things as the supposedly more sophisticated resident of Park Avenue. The economic and geographical barriers that once separated the mass from the arts have simply been taken down."

During the past season alone, television has presented outstanding programs in the field of music and dance like Madam Butterfly, The Magic Flute, The Messiah, The Nutcracker Suite, Amahl and the Night Visitors, The Mikado, Swan Lake, Tales of Hoffmann, The Red Shoes, The Sleeping Beauty with the Sadlers Wells Ballet Company, the Azuma Kabuki Dancers, the world premiere of the operas Griffelkin and The Trial at Rouen which were written specially for television, the history of the ballet narrated by Agnes de Mille, and the history of music from Beethoven to jazz narrated by Leonard Bernstein. Viewers have been offered readings of the poetry of Walt Whitman, Emily Dickinson, and Dylan Thomas; and performances of classics like Shakespeare's Richard III and The Taming of the Shrew, Shaw's The Devil's Disciple and Caesar and Cleopatra, Dickens' Great Expectations, and The Christmas Carol, Thornton Wilder's The Skin of Our Teeth, Rostand's Cyrano de Bergerac, Oliver Goldsmith's She Stoops To Conquer, and Dostoevsky's Crime and Punishment. Television has also presented a wide variety of public affairs and informational programs, including special studies dealing with the Israel-Egypt crisis, the farm problem, the institution of the vice presidency, the Nation's schools, India, life in Russia today,

[70] Nathan Halpern, president of Theatre Network Television, 1 of the 2 firms active in this field, has stated that there are few sports events that can be presented profitably on theater television. Broadcasting-Telecasting, November 7, 1955, p. 105; Variety, November 9, 1955, p. 23. Notre Dame's Father Edmund Joyce is reported to have stated that his school "barely broke even" on last season's closed-circuit telecasts of three football games. TV Digest, January 14, 1956, p. 7.

[71] April 8, 1956, magazine section, pp. 12, 38.

the rise of communism, the United States Constitution, the history of Adolf Hitler, the Renaissance, Harvard University, the universe and the solar system, the American West, waters of the world, the search for oil, mental health, the cure of narcotic addiction, the treatment of infectious diseases, multiple sclerosis, and the human body and its functions.

The proponents ignore what free television has done in the field of education and culture. They refuse to see what they do not care to see. Moreover, it is clear that they would have little interest in presenting educational and cultural programs which cater to minority tastes. The box-office operator would seek big audiences and big profits, not small audiences and small profits. Zenith quite frankly states, "Can there be any possible doubt that the subscription television broadcaster and his program supplier can logically have any other business purpose, desire, or hope than to obtain as widespread public reception of their programs as is practically possible?" [72] Zenith adds that "it will always be more profitable for the program producers and television broadcasters to have 5 million subscribers viewing a program at 50 cents than to have 2 million view the same program at a dollar." [73] Telemeter also concedes that "it is through the mass market that the maximum potential can be obtained." [74]

The possibility of cultural and educational programs on pay television is further reduced by the fact that the proponents all propose operations for only a small portion of the broadcast day.[75] During such limited periods, huge investments would have to be amortized. It is hardly likely that those scarce and valuable hours would be used for chamber music and courses in literature rather than for programs of mass audience appeal. The unlikelihood of pay television catering to minority audiences is further accentuated by the proponents' admissions that—in the limited number of hours during which pay programs could be broadcast—they would be forced to give repeat performances of the most costly programs, like motion pictures, in order to realize their full economic potential.[76] Thus it seems clear that the box-office operators of pay television would not provide a substantial amount of cultural programs.

Moreover, even the limited programing of this type that they might present would not fulfill the vital educational function of television. That function is to stimulate and awaken interest in viewers who are apathetic about education. As long as television is free, those viewers are encouraged to experiment—to twist the dial and sample new and different programs and, perhaps, to become interested in cultural material to which they had not previously been exposed. This is shown strikingly by the recent telecast of Sir Laurence Olivier's Richard III. Between 40 and 50 million viewers—almost one-third of the American population—tuned in that program.[77] Certainly many people with no previous interest in Shakespeare watched part of that performance, and some undoubtedly became interested enough to watch the entire presentation. Few of those viewers would have tuned in Richard III if it cost $1 or $2 to discover whether they would enjoy that program. On pay television, Richard III would have played to a much smaller audience, and an audience composed largely of those who had already developed an appetite for programs of that type.

(2) *Promise of increased utilization of television channels*

(*A*) *Zenith's change of position.*—The dynamic growth of free television—the enormous strides being made in the quality and quantity of its programing—have given a hollow ring to the proponent's promises to present new and different programs. Zenith apparently recognizes this, for it has recently been changing the emphasis which it gives to the purported justifications for pay television. It talks less and less of bright new program prospects and falls back more and more on the claim that pay television would be a panacea for the economic ills besetting the television industry. The extent to which Zenith has been forced to fall back on that claim is shown by the fact that it now makes proposals and promises which it recently rejected as unsound. These changes in Zenith's position have occurred in three areas: (1) The desirability of making pay television

[72] Principal comments in pay-television proceeding, p. 17.
[73] Id., p. 38.
[74] Principal comments in pay-television proceeding, p. 32.
[75] See footnote 3, supra.
[76] In reporting on its Phonevision test in Chicago in 1951, Zenith stated that the full potential of a motion picture would not be realized by only 3 showings. Some Significant Highlights of the Phonevision Test, April 23, 1951. Telemeter has raised the possibility of showing the same motion picture anywhere from 3 to 7 times. Principal comments in pay television proceeding, p. 26.
[77] New York Times, March 18, 1956, sec. II, p. 11.

available to all stations; (2) the ability of pay television to help UHF; and (3) the pattern of growth of pay television if it is authorized.

Desirability of making pay television available to all stations: When Zenith asked the Commission for immediate authorization of pay television in November 1954, it stated, "The proper encouragement and development of subscription television requires that it be made available immediately to all VHF and UHF licensees without discrimination."[78] It adhered to that position in the comments which it submitted to the Commission in the pay television rulemaking proceeding in June and September 1955.[79] But 3 months later, in the general allocation proceeding pending before the Commission, Zenith proposed that pay television be limited, for an initial period of 2 years, to stations that could show special need. In that short period of time, Zenith apparently changed its ideas about "discrimination" and about what was required for "the proper encouragement and development of subscription television."

The ability of pay television to help UHF: An even more drastic change has taken place in Zenith's attitude about pay television's ability to help UHF stations. In November 1954 Zenith took the position that pay television would not lead to the growth of stations on unutilized UHF channels in the Nation's large markets. It stated:[80]

"Limiting subscription television to UHF stations would also practically eliminate subscription television from the top 50 markets in the United States as there are only 22 UHF stations operating in the top 50 markets and only 6 UHF stations operating in the top 20 markets. Confining subscription television solely to secondary markets could make subscription television economically unsound.

"New York, Chicago, Los Angeles, Philadelphia, Detroit, and Boston, the Nation's top six markets have no operating UHF stations. The elimination of these six major markets would not only deprive a substantial portion of the public of subscription service, but it would also deprive subscription television of its major economic potential and sources of program product.

"Taking New York as an illustration, there are 6 VHF stations operating, 2 of which have no network affiliation and are in need of additional economic and program resources. It is doubtful that the most optimistic UHF operator would, under present conditions, attempt to go into competition with the six existing VHF stations, even though he was given a monopoly on subscription television. Such a UHF operator would have the dual problem of getting the New York public to convert their sets to UHF and to acquire subscription television attachments and he would be further confronted with the limitations on substantial quantities of program product suitable for subscription television."

In the pay television proceeding in June 1955, Zenith took an equally dismal view of the potential of its system to build UHF stations in major markets.[81]

But less than 6 months later, it sent one of its representatives into 2 large markets—markets falling within "the top 50 markets" to which it had referred—and promised that pay television would put stations on the unutilized UHF channels in those areas. Ted Leitzell, director of public relations for Zenith, told an audience in Philadelphia, one of the cities specifically named by Zenith:[82]

"Right here in Philadelphia there are 3 stations on the air, but there are 4 channels vacant, including 1 educational. [The three noneducational channels are UHF.] The networks say that these vacant channels cannot be occupied for economic reasons. They are right, so far as present economics is concerned. But, with the addition of subscription television, these stations could operate profitably, and Philadelphia would have an abundance of new sponsored and sustaining programs. The same situation exists throughout the State of Pennsylvania, and all over the nation."

In Minneapolis, Mr. Leitzell made the following promise:[83]

"Right here in Minneapolis you have 4 stations on the air, plus 2 vacant channels, which Mr. Salant said cannot be operated because of economic reasons. [There are 2 vacant UHF channels and 1 vacant VHF educational channel in Minneapolis.] He is right, so far as present economics are concerned. But with the addition of subscription TV these stations could operate profitably, which would give an abundance of new sponsored and sustaining programs to Minneapolis."

[81] Principal comments, p. 66.
[82] Address before Poor Richard Club, November 29, 1955.
[83] Address before Minneapolis Advertising Club, November 23, 1955.

Thus, in a matter of months, Zenith has radically altered its view about the likelihood of its system fostering the growth of UHF stations in major markets.

The pattern of growth of pay television: The third basic change in Zenith's attitude is just as drastic—and its motives are just as transparent. In the past, Zenith has consistently stated that it inends to commence pay television operations in two big markets,[84] and that it does not intend to expand to other areas until about 2 years thereafter.[85] Yet in the Commission's general allocation proceeding, Zenith recently claimed that its suggestion to limit pay television to needy stations for an initial period of 2 years would help hundreds of stations and bring service to small markets.[86]

(*B*) *Fallacy of promise of more television service.*—It is in the light of these conflicting claims—of this transparent effort by Zenith to bolster its case as free television makes its program promises obsolete—that we must judge Zenith's contentions about the potential of its system to foster increased utilization of television channels. The other proponents have made similar promises about increased television service. All the proponents point to the disparity between the number of channels authorized and the number being used; and they claim that the cause of the problem is economic, that lack of sufficient revenue is the only reason that channels remain vacant.

An analysis of the characteristics of the unused channels, however, will show that the same factors which make those channels unattractive economically under our present system would also make them unattractive under pay operations.

About 160 of the unutilized channels are in areas not now receiving television service. Those areas, which now include less than 1 percent of the population, have been unable to support stations because they are thinly settled. Pay television, by its very nature, could operate in those areas only with great difficulty and expense. The proponents have admitted, moreover, that they are interested in large markets and mass audiences.[87] Thus, pay television offers little hope of activating unused channels in areas that are now without television service.[88]

The remaining unutilized channels, almost 1,100, are in areas now being served or about to be served. Almost all are UHF channels. Those channels are the heart of the allocation problem now facing this committee and the Commission. Pay television offers no solution for this problem: it would not promote the utilization of UHF. The same factors which make UHF channels unattractive to advertisers make them unattractive to pay television promoters. Zenith has admitted that this is so. It has stated:[89]

"Subscription television is even more of an infant than UHF. Like UHF it will also have the tremendous problem of set conversion. * * * It appears undesirable to compound the problems of embryonic subscription television by adding the conversion problem of UHF."

The promoters of pay television, searching for maximum profits, would seek out large-market VHF stations. In such markets, they would certainly not attempt to activate dormant UHF channels.

Skiatron and Zenith, recognizing that general adoption of pay television offers little hope of solving the allocation problem, have suggested certain restrictive measures purportedly designed to accomplish that objective. Skiatron

---

[84] See footnote 36, supra.

[85] In its principal comments in the pay-television proceeding (pp. 49–50), Zenith indicated that it would take 6 months after Commission authorization of pay television to start actual production of necessary equipment; that thereafer it would "commence operations in several markets," and that, "after approximately 1 year's operation in several markets, expansion into the remaining markets could be made as rapidly as circumstances require." In its pamphlet Phonevision and the Broadcaster, Zenith stated (p. 9) that in the event of FCC approval, "* * * we intend to organize a few pilot operations which can serve as proving grounds for the business organizations and problems we have discussed. We feel confident that the results of these initial operations will show the feasibility and desirability of the service so that it can be expanded within a few years on a national basis."

Telemeter has made similar predictions about the growth pattern of pay television. Paul MacNamara, Telemeter vice president, is quoted as having said: "It won't be an overnight revolution. We need a year of pumping to attract viewers and capital. We'll concentrate our initial effort in New York, Chicago, and Los Angeles, where there are some 9 million TV sets. We can probably only manufacture 250,000 coin boxes in that first year, but as soon as we place them in homes, we're in business." Collier's, September 16, 1955, p. 55.

[86] Principal comments in general allocation proceeding, pp. 11–12.

[87] See footnote 36 and p. 27, supra.

[88] The more realistic prospect for the extension of television to those areas lies in the further development of low-power stations, booster and satellite stations, and community antenna systems. The use of such techniques will bring service to the less than 1 percent of the population presently not served and will not affect the present free service being received by the more than 99 percent of the population.

[89] Joint substitute petition concerning subscription television, pp. 11–12.

proposes that, for an initial period of 3 years, the right to transmit pay programs be restricted to UHF stations and those VHF stations which can make a showing of special need. Zenith suggests a 2-year limitation and proposes that both UHF and VHF stations be required to show special need. Such need would be established prima facie by the fact that a station carries less than 7½ hours of commercial network programing.

The suggested limitations offer little hope of solving the allocation problem. It is clear that economic forces would drive the proponents to utilize existing VHF stations in the largest markets. The 2- and 3-year restrictions to needy stations fit their plans perfectly. They would be able to find, in leading markets, existing VHF stations that met their test of special need, and they do not intend to expand service beyond those markets for a few years. Under the Zenith test—stations carrying less than 7½ hours of commercial network programs—pay television operations could be established on existing VHF stations in New York, Los Angeles, and Chicago. While Skiatron has been less precise than Zenith about what a station must show to establish special need, there is little doubt that it could also find existing VHF stations in leading markets that would qualify under its vague standard.

Even if it be assumed, however, that pay television would encourage the construction of a few new UHF stations in the large markets during the limitation period, that would not solve the allocation problem; it would aggravate it. At the end of the temporary limitation period in which those UHF stations had been artificially protected, they would be faced with competition from VHF stations which could offer larger audiences for pay programs. The proponents would then turn their backs on the UHF operators whom they had induced to go on the air and transfer their programs to VHF stations.

More important, even if pay television were to result in the establishment of a few new stations during the limitation period or afterwards, that would not mean more service for viewers; it would mean less. It would be small consolation to the viewer that he could receive the signals of an additional station if the cost to him were that he had to pay for the most popular programs on all of the stations from which he had previously received free service. To attempt to create a few new stations at such enormous cost to the American public is clearly not in the public interest.

III. THE PUBLIC CHOICE

The proponents make the superficially attractive argument that pay television should be given a trial in the market place so that the public may have a free choice between pay television and free television.

What is the choice that would face the public under that trial? It would not be a choice between (1) viewing for pay new channels and new programs and (2) watching without charge the channels and programs that were formerly available. The public could have such a choice only if both the channels used for free television and the program carried on those channels would be left unaffected by pay television. We have demonstrated, however, that pay television would not be a supplemental service, that it would encroach upon existing channels and would draw away the best of free programs. Thus, American families would have the choice of paying to watch programs that they now see free or of not seeing them. This is no choice at all.

But even if some people could be coerced into paying enough money to make pay television profitable, that would not prove that a pay system was in the public interest. All that it would prove is that a small minority could make pay television profitable for its promoters.

As we have pointed out, and as the proponents themselves readily concede,[90] pay television could be successful if only a small portion of the present television audience were able and willing to pay for programs. For example, if only 10 percent of the families who now watch the Ed Sullivan show were willing to pay 50 cents to see that program if it were no longer available free, the promoters of pay television would make a handsome profit and could black out the show to the other 90 percent of the viewers. Thus, success in the market place would merely prove that a minority, presumably composed of those in the higher income brackets, was willing to pay for programs that were no longer available on a free basis. That minority would pay enough to deprive the majority of American families of the programs and channels upon which it now depends for free service. That is the democratic test of the market place which the proponents seek.

[90] See footnote 19, supra.

Senator SCHOEPPEL. Mr. Rogers is our next witness. You may proceed, sir.

I note you have a written statement here?

Mr. ROGERS. Yes, sir.

Senator SCHOEPPEL. You may proceed in your own way.

Mr. ROGERS. Very well, sir.

STATEMENT OF LAWRENCE H. ROGERS II, VICE PRESIDENT AND GENERAL MANAGER, WSAZ, INC.

Senator Schoeppel, gentlemen, I have a prepared statement which has been distributed to you, and I would prefer to save the time of the committee in reading this entire statement and instead address myself to some of the highlights of it in order to tell you who I am and why I am here and answer perhaps some of the questions that were specifically brought up by Senator Pastore earlier.

Senator SCHOEPPEL. That will be quite all right, and we will let the record show that your entire statement will be printed in the record as though you had read it.

Mr. ROGERS. I appreciate that, sir.

(Mr. Rogers' prepared statement is as follows—his oral testimony begins on p. 1338:)

Mr. Chairman, distinguished Senators, my name is Lawrence H. Rogers, and I am vice president and general manager of WSAZ, Inc., Huntington, W. Va., licensee of television station WSAZ–TV and radio station WSAZ, a position I have held since 1951. I am also president of radio station WGKV, in Charleston. I am under 35 years of age and a combat veteran of World War II, in which I attained the rank of captain of armored field artillery.

I have been engaged in broadcasting sales and management for the entire 10 years since I left the armed service. I have been station manager of WSAZ–TV since before it was built in 1949. I am sincerely grateful for the opportunity to address remarks to this great body and am somewhat overawed by this display of representative government in action. I presume to offer this personal background because I am speaking as an individual broadcaster on a subject of vital concern to all who are daily a part of television broadcasting—most important of all, the nearly 40 million families whose television receivers are of no earthly use to them except through the reception of programs from stations such as I represent. While I cannot speak for the operators or licensees of any other TV stations, I feel certain that what I have to say must necessarily be reflective of the station licensee's point of view.

What I have to say here today springs from deep conviction and is neither motivated nor contributed by any outside agency or the selfish interests of any pressure group. I feel that this is of paramount importance because the preponderance of the attacks made on the established patterns of free American broadcasting, whether in this action or dozens of others, spring from the hope of personal or corporate gains on the part of those who can see a fertile field for profit and self-aggrandizement in attaching themselves parasitically to a phenomenon that has captured the hearts and imagination of the whole American people. In almost every case the proponents of toll television and the defenders of free broadcasting are engaged in a tug of war over the cash registers of the Nation's four-hundred-odd TV-station transmitters. I think it is a safe assumption that those of us who like to be called professional broadcasters could as easily make a comfortable living off any system of TV-program distribution.

THE ISSUES

The issues, then, can be pared down to the very substance of the licensing and operation of broadcasting stations, namely, the public interest, convenience, and necessity. If it can be shown that free broadcasting is not fulfilling this basic charge of the Communications Act, or, conversely, that a system of toll television can do so in a more efficient manner consistent with the rights and prerogatives of the whole public, then fee TV should, indeed, be substituted for free TV.

No one, not even the proponents of toll television, has seriously undertaken to challenge this statement by David Sarnoff: "The American people now receive, free, the best television service available anywhere in the world. There are more television broadcast stations in the United States than in all the rest of the world combined. There are more television receivers in the United States than in all the rest of the world combined. American television stations offer the American people more television programs and a wider choice of television programing than ony other television service in the world." (David Sarnoff, chairman, NBC, Inc., June 6, 1955, before FCC, docket No. 11279.)

It is noteworthy that this statement stands as an apparent fact for all to see in spite of the cries of doom of all the principal proponents of toll TV, notably Eugene F. MacDonald, the high priest of Phonevision. Of his many tirades against free broadcasting of television, this is perhaps the classic because it was written by Mr. MacDonald immediately before the miracle decade of free television's development began in 1946: "There is nothing wrong with television that money won't cure * * * the sooner we can convince televisionaries that the advertisers haven't sufficient money to pay for the type of continuous programs that will be necessary to make the public buy television receivers by the millions, the sooner the industry will start applying its brains to a technical solution to obtain a box office." (Television Will Cost Big Money, by E. F. MacDonald, Jr., Colliers, June 29, 1946.)

A complete answer to this prediction is contained, somewhat frivolously, in this little booklet prepared by the Television Bureau of Advertising—of which I have the honor to be treasurer and member of the board of directors. It purports to show, through statistics arrived at by the United States Bureau of the Census on television receiver ownership and by the TV Department of Eugenic Statistics, that not even rabbits, with their prodigious ability to multiply under optimum conditions, could equal the rapidity with which United States television homes have mutiplied in the short space of 8 years. (Even Rabbits Couldn't Do This Well, Television Bureau of Advertising, 1955. This booklet has been retained in committee's files.) It is interesting to note that the figure of 32 million television homes—as against a mere 24,078,402 rabbits in the same length of time—has since been undated to a figure approaching 40 million television-equipped United States homes.

DEFINITIONS AND SCOPE OF TOLL TV

What is this toll TV that its proponents claim is so necessary to our way of life? Since you are already fully qualified to answer this question by virtue of a complete presentation by its proponents, I shall limit myself to a few of the salient features mentioned prominently by all the various members of the coin-box brigade.[1]

1. Toll TV should be put into operation by and presumably at the cost of the existing licensed stations under standards set forth by the FCC.
2. As a slight variation to No. 1, the suggestion has come forward that the toll TV licenses be restricted to UHF licensees as a stimulus to broadcasting in the upper reaches of the spectrum.
3. Hours of operation should be a portion of the present schedules—perhaps the "not more than 20 hours a week between 6 and 11 p. m." being typical.
4. Broadcasters' license responsibilities to remain unchanged.
5. Equipment to make toll systems possible to be leased by proponents.
6. Programs to cost viewer estimated 25 cents to $2.
7. Service to be complementary to advertiser-supported free TV and in no sense a replacement.
8. Programs to be presented for pay to include current motion pictures, dramatic and musical stage shows, educational and cultural programs, sporting events, operas, Broadway hits, programs to specialized groups only—technical, medical programs, etc.—not designed for general public consumption.

---

[1] This compendium is drawn from the proposals of the three major proponents of toll TV as filed with the FCC, June 9, 1955: International Telemeter Corp., Skiatron TV, Inc., and Zenith Radio Corp.

1. TOLL AS STATION RESPONSIBILITY

That the proponents of toll TV should suggest that the more than 400 television stations of the Nation embrace this idea and install the system themselves is as ingenious a technique as has been seen since the monkey in Aesop's Fables talked the cat into burning his paws by reaching into the fire after hot chestnuts. If anyone's hair is to be singed it is most assuredly not that of Zenith, Skiatron, or Telemeter. The really surprising part of this is that these people—adult and successful businessmen—should believe the Nation's broadcasters to be so incredibly naive.

In the short space of 7 years my company has explored, developed, installed, rejected, experimented with, and operated every development in the television equipment, transmission, and programing field that has been made available to the local television broadcasting art. We take some perhaps pardonable pride in an overall investment in facilities in the neighborhood of $2 million in a city of 100,000 population, where by Mr. MacDonald's myopic standards advertising revenues were not available and could not become available to underwrite a project of this magnitude, much less program it in such a way as to attract a major audience. The entire project has been conceived and executed under the single broad policy of providing the greatest possible television service to the greatest possible number of people, with a single rallying point in the admonition of our license from the FCC to operate in the public interest, convenience, and necessity. If you will forgive a minor digression, I believe it is germane to outline our operations.

WSAZ–TV began operations in 1949 in a Sahara of television, opening a small oasis in the form of a station fully equipped to provide local live, film, and remote programs since there was no source of network. The Zenith view that this was impossible did not dampen our enthusiasm for providing programing. It is true that the circulation base was not broad enough to attract major advertising money. Accordingly, we lost nearly a quarter of a million dollars in a year's time. We adopted two avenues of attack: One was to provide the network service, the other to provide the maximum geographical coverage that FCC standards and our engineering brains would permit.

In the absence of common-carrier facilities we invested an additional $150,000 to build our own microwave relay system from Cincinnati to Huntington in 1950. Our faith in the future was rewarded by a contract with the National Broadcasting Co. which assured us of sufficient revenues to amortize the relay investment while providing a program base, in addition to our heavy local schedules, to attract a great audience. As soon as new FCC standards were announced, we became the first station in the United States to install and operate maximum effective radiated power. It developed that this was still far from sufficient to bring adequate reception to the vast areas of West Virginia, eastern Kentucky, southern Ohio, and western Virginia, where the need for TV service is underscored by great separation from modern city advantages, and terrain conditions which make transportation facilities almost primitive. Thus we went to the next most logical step. This involved the erection at fearful cost of an entirely new transmitter installation and a giant tower 1,100 feet in height which could send a viewable picture to the very depths of the mountain country just described as well as to the vast, but remote, industrial complex of the Ohio and Kanawha River Valleys. I will spare further details in reaching my major premise.

What has been the reaction of the public to these efforts to bring them a superior service? Over half a million families in nearly 100 counties have responded by making an estimated $150 million investment in TV receivers alone. The boom in the area served by this station, when contemplating sales, service, and allied employment attributable to the coming of television, amounts to a quarter billion dollars—equal to the total retail sales of our home city in a year.

Has this miracle been made possible by a second-rate program service that needs to be replaced by a coin-operated jukebox, the output of which is neither the concern nor the responsibility of the operator? The question is so obviously ridiculous as to supply its own answer.

Do any of the toll TV proponents know what free broadcast television means to people of this segment of the United States? Certainly not. If they did they would be embarrassed to suggest asking them to trade it for their shoddy promise of better programs on a pay-as-you-look basis. The people of our great Middle South mountain areas are not second-class citizens, even if they do have second-class comforts in point of travel, entertainment availability, educational facilities, and all the modern conveniences of urban life. Thus, when the living TV screen invaded these territories in such awesome numbers, it was because the people were for the first time on a par with their big-city brethren in watching the world go by and choosing what part of it is for them. For the first time in America's history all citizens everywhere, including the West Virginia-Kentucky mountaineers, have a front-row seat for the great events of the Nation and the world. Their enlightenment, and, therefore, their participation in the processes of democracy, is no further from them than the switch on their television sets.

What does this mean to a mountaineer? Let me give you one firsthand example: I visited 2 years ago the home of a coal-mine foreman in the Buffalo Creek area of Logan County, W. Va. A graduate of an eastern engineering college, this man lives with his wife and two boys in a modest frame house literally hung from a steep mountainside. The center of their home life is their television set—on which, incidentally, the reception is more nearly perfect than any of thousands I have seen in the homes of city dwellers, my own friends included. Their home is reached by a mud road which most of the year is passable only by jeep and, when Buffalo Creek is up, is not passable at all. When I asked for the location of his TV antenna, this man showed me proudly a firebreak he and his sons had hacked 4,000 feet up the side of the adjacent mountain to install an open-wire transmission line for a mountaintop receiving location. A junction box on his back fence fed a signal also to the TV sets of his two nearest neighbors. This technique is in common use in hundreds of communities in this region. The measure of the importance of free TV to this young American family was graphically underscored by the grisly exhibit hanging on the back fence with the line amplifier. There were the skins of 27 rattlesnakes killed by this citizen and his son while erecting their antenna.

Who will explain to this man the necessity for having his nightly TV service blacked out unless he chooses to pay 25 cents to $2 per program? Who will explain to these half million, indeed, to the Nation's nearly 40 million set owners that they made a grievous error in buying a TV set which can only be rectified by paying a program-by-program tribute to the barons of toll TV?

2. TOLL TV ONLY ON UHF

The proposal of some of the toll TV proponents that UHF be exclusively reserved for this purpose suggests that they acknowledge their utter disregard for the public. Since the crux of the so-called UHF dilemma is the inability to date of most UHF stations to provide an adequate coverage base, the very fact of limiting toll TV to these frequencies presupposes excluding the overwhelming majority of the Nation from participation. It sounds suspiciously as if Skiatron believes there may be some political popularity in a thinly veiled proposal to "help UHF." Once, again, we see that approach of the pressure group, rather than the serious public servant.

3. HOURS OF OPERATION

Naivete rides again in the hours of operations proposals. All of them might be boiled down to this thesis on the part of the box-office boys: "Since we are only concerned with those shows we have been able to lure away from the broadcasters, and which will bring us the biggest bonanza, heaven forbid we should be responsible for programing these odious little transmitters during the other 70 to 85 percent of the work they are required to operate them." Concern for the public presupposes having a worthwhile service available at any time it can be reasonably expected that there will be an audience. Concern with only the peak 15 percent viewing times bespeaks concern only for the click of the turnstile and the click of coins.

4. BROADCASTERS' RESPONSIBILITIES

It is fitting that any such proposals as have been advanced by the proponents here be accompanied by a disclaimer for any responsibility to account for the welfare of the public. In short, the proponents of toll TV have said to us broadcasters that if we like this responsibility to operate in the public interest, we are welcome to it. They are only asking for a comfortable seat by the cash drawer.

5. EQUIPMENT LEASED BY PROPONENTS

The leasing of Phonevision decoders or other toll TV devices for collecting money is another example of the generosity that is common to the proponents while they are dividing the spoils of free broadcasting television. It has perhaps occurred to all of them that even their suggested minimum figures like $2 per month collected from all the TV families of the Nation amounts to a staggering $9 billion per year—a very creditable figure for "feecasters" who have yet to produce their first television program for the public interest, or for the interest of anyone else, for that matter. Additional revenues derived from the broadcasters for transmitter conversion and terminal equipment will add to the haul, of course. It is inconceivable to a broadcaster that serious consideration may be given to a requirement that he make further investments in equipment designed to reverse the very accomplishment of the past 7 years, to eliminate the ability of thousands of families to view TV except under special, and paid, conditions.

6. PROGRAM COST TO VIEWERS

Of course, the proposals, running from 25 cents to $2 per program for toll TV viewing, are as variable as the winds of March. The one fact that is certain is that if the American public wanted to pay so much as a thin dime above its present equipment investment it would have expressed itself through reluctance to buy and use television receivers in such staggering quantities. The well-known research firm of Elmo Roper & Associates prepared a comprehensive study on this subject entitled "A Study of People's Attitudes Toward Subscription Television in Columbus, Ohio," in May 1955. Inte views were conducted in 504 homes, selected with most careful consideration to reflect an economic and cultural cross-section of the community. Of these, 449 were television-equipped homes. In the final question, when people were asked how they would vote on the question of whether or not to authorize the system (subscription television) the answers were 13 percent in favor, 65 percent against, 12 percent with reservations, and 10 percent just didn't know what they would do.

The Television Bureau of Advertising in recent research in Chicago, comparing television use with newspaper reading, found that the average of 7,000 Chicago families use its TV set for nearly 70 hours per week. Translating this average in terms of the proposed minimum of 25 cents per toll program, we are talking about $17.50 per week. This is a very sizable amount of the average American family's food budget, and is way beyond proportion of anything it could or would contemplate for entertainment, on or off of television. It is apparent that only the "haul" is of any concern to those who would charge for TV.

7. TOLL TV ONLY COMPLEMENTARY

The claim that toll TV is an additional service and will not replace free broadcasting, is probably the most preposterous of all. On the contrary, it is my belief that the proposals to authorize toll TV on existing broadcasting channels is a calculated attempt to supplant the existing nationwide free TV service. Contrary to the assertions of the proponents, peaceful coexistence between free TV and fee TV is like companionship with the Comintern. The long-range goal of both is to devour the world. The two systems are economically incompatible, since they are directly competitive for program sources, talent, and audience. If indeed toll TV were as successful as its proponents claim it would be, free TV could not compete. The vast sums of money that could be realized from a direct tax upon all the public as against the indirect support provided broadcasting by everyone through use of the sponsor's products would supply the fee TV operators with a war chest against which no broadcasters or advertisers could hope to compete. The result would be merely to charge the public for what it now receives free. President Walter O'Malley of the Brooklyn Dodgers tore the mask off the pious claims of the toll proponents that they do not intend to disturb the present free program structure. Dissatisfied with the revenue the Dodgers now receive from free television, he stated that if toll TV were authorized by the FCC he would sell his club's ballgames on the TV coinboxes at 50 cents a game. While he envisioned as much as $50,000 from a single game via subscription TV,[2] he did not point out that an audience of 100,000 sets is but a small fraction of the number who now watch such events free. In any such case the yardstick is not the service to the whole public, it is the size of the box office return.

As for promises that new and wonderful educational programs will be aimed by toll TV at small minorities, this is merely perfume sprayed at the United States Senate, the FCC, and the public to prevent a careful scrutiny of the most gigantic raid on the public pocketbook ever conceived under free enterprise The promises are made by patent holders who have said they will only lease equipment, while the station operator must remain responsible for program choices and station operations. If, as you have stated, installation of toll TV in a single major city will cost tens of millions of dollars, this money can only be recovered by putting on shows which will attract the largest audiences, not educational features for small minorities.

8. PROPOSED TOLL TV PROGRAMING

It is at this point that the whole toll TV house of cards must collapse, since it has been built over the years on the contention that only through toll TV, with the viewer footing the bill, can television bring worthwhile programing to the air. One of the original aces in the hole of the Hollywood motion picture industry when TV came along was the hope that fee TV would provide a new market for vaults loaded with grade A pictures never seen on TV.

Hollywood's ace has become a deuce according to an editorial in its important trade publication Film Daily. Commenting on the network spectaculars and other 60- and 90-minute special programs, Film Daily shouted:

"Toll TV is here now—for free—mark this down in your book. The TV competition that was only to come with the advent of the pay-as-you-see variety is actually here—for the mere twisting of the dial, and no charge." [3]

After a complete résumé of the program plans of all three networks, the movie trade paper examined ABC's plans for hour-and-a-half and 2-hour filmed dramas next season with these comments:

"Do you have to be told that to all intents and purposes, these will be new motion pictures? And, of course, for free—

"The advent of the 90-minute dramatic show—and the looming 2-hour dramatic telefilm later—suggests a highly interesting question: What happens now to the value of the major studio libraries?" [4]

The crux of the entire controversy over toll TV must in the final analysis rest on the public interest; that in turn must be articulated in the form of programing available to the public. Not the wildest dreams of the toll proponents could have envisioned either the quality or the frequency of really great television as it is today, much less the ability of the dynamic American market place to provide a solid financial base for it. The fact is, it is time for us operators, if this toll nonsense is not soon turned off, to assume the attack instead of the defensive.

As a recent case in point, the National Broadcasting Co. bought Laurence Olivier's 3-hour epic film of Shakespeare's Richard III for $500,000 and showed it free, to the largest television audience ever to see a daytime feature. Not only did it receive critical acclaim from press and audience alike, but it was also sponsored. No more clearcut answer is needed to the cries of Zenith Radio Corp. that the FCC should authorize subscription television "premised upon the public need for programs of true box-office caliber to supplement existing types of programs." [5]

I will not extend these already lengthy remarks by citing for you all the splendid programs that form a daily increasing panorama on the screens of America's free TV sets. You are as familiar with them as I. However, I should like to point out an article in a recent issue of Newsweek, entitled "TV, Big Hearted Angel, Makes Broadway Bloom"—as if chiding the toll TV soothsayers, Newsweek says "Broadway artists, thanks to the all but insatiable needs of television, had never been busier, the Broadway theater, flourishing under the same well-heeled influence, was at the same time undergoing a transformation that might shortly affect a multitude of other stages across the country and was already being seen in millions of living rooms.

[2] Radio Daily, March 5, 1955.
[3] Film Daily, November 22, 1955.
[4] Film Daily, November 23, 1955.
[5] Zenith Radio Corp. press release, June 9, 1955.

"Before TV, the Broadway hit was an experience inaccessible to most Americans; at best they had to settle for a Hollywood multilation—or copy of the original. Now, the full-length Broadway play is becoming a standard (if still infrequent) feature on TV channels and seems certain to become much more." [6]

Thus it will be easily seen that the effort of the Zenith Radio Corp. and others to differentiate between what they describe as box-office programs and advertising programs falls apart of its own weight. I will readily admit that 2 or more years ago it was impossible to get the producers of many major events to permit them to be shown over television, just as it was impossible to secure sufficient advertising support for them. Both the former facts were attributable to a lack of sufficient circulation to make the showing either desirable for the producer or profitable for the advertiser. The rabbitlike multiplication of free TV's audience has solved both these problems together. Now that the toll titans have irrevocably lost this major phase of the battle their tactic has changed. They now loudly petition the FCC to set up standards for a so-called experimental operation in one major city, and they have unfortunately received some support within the Commission. This experimental arrangement with cost running into tens of millions reminds one of the ancient Moslem fable of the camel allowed to have his nose in the tent. And the proponents know perfectly well that their experiment will be merely a bridgehead from which to launch a full-scale attack on free American television.

Mr. MacDonald and his cohorts have said that Broadway, opera, and features movies could not be brought to free TV. Mr. Weaver, of NBC, and others, have proved him wrong. Taking the one example of Richard III as a premise, let us see what would happen with a subscription TV experiment. The price is $500,000 for one showing. This we know because we have already done it.

But let us suppose the people did not have the opportunity to see it free and that the FCC has authorized Washington, D. C., as the city of experiment for a toll TV installaion. There are nearly three-quarter million families who depend upon the TV service of Washington's four stations.[7] Let us suppose that the subscription crew can succeed in installing coinboxes, meters, or telephone paystation lines on a third of them (which in itself is preposterous). Then let us say that the day Richard III is shown for these 250,000 cash-register set owners that we succeed in getting the unheard-of total of half of them tuned in for the whole show. This means that 125,000 viewing homes will have to pay $4 each (or double the maximum suggested by the proponents) just to defray the one-half million-dollar cost of the film alone, before one penny is applied to amortizing the staggering installation expense at the homes and the television station, not to mention the operating expense of the station whose service has been denied the other half-million families in the interim. Most important of all, this does not include the royalty of the patent and license holder nor the rental of the equipment. How much then—$10 per show; $15 for Richard III? We gave it to our audience free.

But now the camel inches into the tent. Mr. MacDonald and his friends will cry "Unfair. If we had not been limited to Washington, D. C., with its measly quarter-million coinboxes, we could have reduced the price and raised the take. Just let us add Philadelphia, Milwaukee, Denver, St. Louis, and yes, even Huntington, W. Va., then we'll make it pay."

Surely I need not labor further the classic gambit of boring from within.

The greatest object of fear of Mr. MacDonald and the coinbox brigade has constantly been the networks, upon which the whole foundation of television's creative programing structure rests. That the networks were a just object of terror is well demonstrated by the massive array of so-called box-office attractions that daily and nightly parade through the living rooms of America free through the program ingenuity and total advertising effectiveness of ABC, CBS, and NBC. Despite the huge investment in local facilities and the forty-odd hours a week of local interest programing undertaken by WSAZ-TV (of which, incidentally, almost half is now being presented locally in compatible color), I would be the last in the world to suggest that this would be possible without a dynamic and competitive network structure. It is no wonder that the toll proponents have seized eagerly on the allies it can find in the fields of Hollywood motion pictures, syndicated films, and their spokesmen, to join them in their frontal assault on networks and their operating principles. Mr. MacDonald pleaded in his last

[6] Newsweek, February 27. 1956.
[7] Television Age set count, April 1956, p. 135.

petition to the FCC for recognition of what he called a two-network monopoly over the programs and revenue of the broadcast industry.[8]

Taking these points in order, the Television Bureau of Advertising has just released new research showing that network television is only half the picture. Network programs provide only 53 percent of total telecast hours on the stations of the Nation, the remaining 47 percent being local and syndicated film originations.[9] Similarly, local and national spot revenues account for more than half the advertising revenues of the stations. These are facts, so newly arrived at that the source material is not yet in general distribution.

Since we know the network monopoly charge to be a myth, let us examine the two-network monopoly fiction. Here, Zenith uses the popular technique of attacking the presumably rich and powerful in the hope that the traditional American sympathy for the underdog will help him to divide and conquer. It is not to be denied that until the past year the law of supply and demand for TV station facilities has made an exceedingly difficult time for the American Broadcasting Co. and its television network. Did ABC join the throng in attacking networks, in the hope of improving its position? Most emphatically not. Instead it has embarked on a bold venture into new and imaginative programing that has drawn acclaim from viewers and widespread acceptance of its programing by stations. There there is a truly competitive race between three networks with consequent gains to all the public is amply testified to by the recent award (April 18, 1956) by Variety, the magazine of show business, to Robert E. Kintner, ABC president.

With your indulgence, I should like to make the Annual Variety Show Management Award for 1956 a part of this record:

"Little more than 3 years ago, Robert E. Kintner was in the position of a captain going down with his sinking ship in an ocean of calm. The ship was the ABC network, and the sea was a peaceful ocean of expanding prosperity for television. Nobody should have been sinking, but the network was like a steamer that needed repairs but couldn't afford to have them made. Things had gone from bad to impossible.

"In February of 1953, the FCC approved the merger of ABC and United Paramount Theatres. In the past year, the regeneration of ABC has become a fact. Its television billings rose to $50 million; radio held its own as much as the other networks. It was nudging the powerfully entrenched NBC and CBS in traditionally tough time periods; it was actually pushing them in others, and it was well out in front and on its own in a selected few. If anyone had dreamed 3 years ago that ABC programing would be the cause of cancellations on NBC and CBS, or that brand-new afternoon programing on ABC would be giving years-old CBS and NBC shows a run for their money, he wouldn't have admitted it to his psychiatrist.

"But that's the picture today, and with a base to work from, ABC can go nowhere but up. With ever-increasing resources at its command, with a black-ink operation on its hands, with a pioneer relationship with Hollywood's holdouts to its advantage, and with dozens of attractive adjacencies for exposure-hungry sponsors, the network's future seems assured.

"It's relevant to note that for better or for worse, ABC is fundamentally a one-man operation. In spite of the Paramount Theatres relationship, in spite of an expanding staff and workload, Kintner is still running the show and running it himself. When there are mistakes to be made, they are usually Kintner's mistakes. When there are bows to be taken, they belong to Bob Kintner.

"That the mistakes are rarities and the bows are frequent is a tribute to Kintner's astuteness as an all-round broadcaster—as Kintner the programer, the salesman, the administrator, the planner (and, incidentally, this year's NARTB keynoter). It is difficult to visuadize ABC's remarkable progress as the work of one man, but essentially it is. The bold step into contracts with Disney, Warner Bros., and Metro, the 7:30 cross the board kidstripping, the emphasis on feature films, and particularly the b. o.-poison British pictures—all may have been suggested and put into work by his aides, but the responsibilities, the risks, and the final payoffs all belong to Kintner.

"For accomplishing the Herculean task of building a hard-pressed network, in a literal sense as well as in the figurative areas of programing, affiliates, and sales, into a powerful competitive force with all that such competition means for

[8] Comments of Zenith Radio Corp. and Teco, Inc., before the FCC, docket No. 11270, June 9, 1955.

viewers, advertisers, and stations, Bob Kintner is the outstanding choice as show manager of the year." [10]

CONTEMPORARY COMMENTS

Your own colleagues, past and present, in the Congress of the United States have called to mind some of the accomplishments of television. The late Senator Charles Tobey said in November 1952, "Certainly the Nation's radio and television broadcasters went beyond the call of duty in serving the public interest. They gave unstintingly of their facilities to sell an ideal—that of good citizenship—and the record vote is a testimonial to both the responsibility of American broadcasters and the impact of their media."

What is the position of the telecaster in political campaigns if he is programing for the coin boxes? Will he still be able to sell good citizenship to a citizenry that has to pay extra for it?

What of the public servant who wants to run for office and is advised that he can buy time if he wants to, but his constituents will have to pay to see him and hear what he says? Is this so farfetched? Not at all, unless you believe that this industry—or any industry—can endure half-fee and half-free. I maintain that it cannot, that a house divided against itself cannot stand now any more than it could when President Abraham Lincoln first immortalized those words.

The Honorable Edwin Johnson, himself a member of this body during his many years in the Senate, said on June 16, 1954, "Television is the most remarkable, and certainly the most widely appreciated of the handmaidens of electronics * * *. In my judgment it will have a far greater impact on the way we live than any other invention or development of modern times. It has restored the home to its rightful place as the center of family entertainment and pleasure. * * * Any institution that makes the American home more than a place to eat and sleep is precious to national welfare and life generally." Could Senator Johnson have made these remarks about a machine which, once installed, would eat constantly and insidiously into the family pocketbook? Gentlemen, I maintain he could not—that the greatest glory of American broadcasting is that its fruit is available to rich and poor alike without discrimination save by the viewer's choice. To degrade, indeed destroy, this magnificent machinery for the public good to the benefit of a few holders of patents and licenses would be a crime against the Nation and the people.

SUMMARY

The proponents of toll TV played no part in the development of a national television service through investment in programing, facilities, and stations—all the things that provide a national circulation base of nearly 40 million television-equipped homes, covering over 96 percent of the entire continental United States. This communications system having been already created by others, the proponents of toll TV, like other elements in the industry—for example the Hollywood motion-picture industry and the film syndicators—would seize upon the system already developed for free service to all the public in order to find a substitute for the theater box office serving but a small fraction of that same public—and on a paid basis. More significantly, because of its effect upon the public interest, in doing so they would destroy the ability of the free TV service to meet the interests of the entire public.

A perfect biological parallel exists in the example of the parasite which attaches itself to the body of a living organism. The parasite grows fat and happy, but in so doing invariably and inevitably destroys its host.

I have already enumerated the accomplishments and creations of the free TV system, predicated upon its foundation of network broadcasting. It is significant, indeed the crux of the entire matter, that the proponents of toll TV have created nothing, nor do they intend to create anything, except a captive market for sales and royalties from techniques of distribution and marketable mechanical contrivances for which they hold patents and upon which they intend to maintain a monopoly. That these techniques and devices will be installed at a cost of billions to a national public already enjoying the fruits of the free system; that they have neither made nor intend to make a contribution to the development of the art of television programing; that they have been mysteriously silent on the subject of assuming any of the licensee responsibilities to the public

[10] Variety, April 18, 1956, p. 26.

of the broadcasters; these and many other evidences point to the clear-cut conclusion that the proponents of toll TV are both prepared to and intend to enlist the aid of the Congress of the United States in crippling the greatest force for enlightenment, entertainment, and through free choice of free programing for safeguarding our constitutional government, that has ever been conceived by the mind of man. It is my conviction that this committee will bring such an effort to an immediate halt.

Thank you, gentlemen, for your patience, and for extending me this opportunity to appear before you.

Senator SCHOEPPEL. Now you may address yourself to whatever phases of your statement you desire to, and discuss whatever matters you choose.

Mr. ROGERS. Thank you. My name is Lawrence H. Rogers, and I am the vice president and general manager of WSAZ and WSAZ-TV, and I have held this position since 1951. I am also president of radio station WGKV in Charleston.

Mr. COX. This is a VHF station?

Mr. ROGERS. Yes, sir.

Mr. COX. Is it affiliated with a network?

Mr. ROGERS. It was put on the air first in 1949, and it is affiliated with the National Broadcasting Co.

Mr. COX. How many stations are in the Huntington market?

Mr. ROGERS. There are 3 stations serving our market; 2 of the stations' main studios are located in Huntington, 1 in Charleston. They are affiliates of all three networks.

I have been engaged in the broadcasting, sales, and management business for the entire 10 years since I left the Armed Forces, and I supervised the construction and have been the manager of WSAZ since before it was built, in 1948.

I am grateful for this opportunity to address these remarks to this body and I appreciate the display of representative government here. I want to give you some personal background only because I am speaking in the role of an individual broadcaster and operator on a subject which is of concern to all of us who are in the television operation picture daily, most important the public of nearly 40 million families whose television receivers are of no earthly use to them except for the reception of programs from stations such as I represent.

Obviously, I cannot speak for any other stations. I feel, however, that what I say is reflective of the station licensee's point of view. I am speaking from personal conviction and I am neither motivated by, nor have my remarks been contributed by, any outside agency. That this is important I think is testified to by the fact that I am part of that body of professional broadcasters. Regardless of what system of distribution of programing might be adopted in the public interest and designated by Congress, I feel no question but that I and others in my position will be able to obtain a livelihood in that distribution. It is my personal feeling that the proposals to turn television over to a pay-as-you-see system would probably result in greater economic benefit to a person such as myself, rather than lesser. Therefore, I have no ax to grind as far as the present system is concerned from a percentage standpoint.

I feel that the issues in this question can be pared down to the substance of our license, namely, the public convenience and necessity. If it can be shown that free broadcasting is not fulfilling its basic charge of the Communications Act, or conversely that toll television can do so in a more efficient manner consistent with the rights and prerogatives of the whole public, then I will agree that fee TV should be substituted for free TV. It has been stated here, and no one connected with either side of the question has undertaken to challenge the statement of David Sarnoff, that the American people now receive free the best television service available anywhere in the world.

In spite of this statement and in spite of no denials, Mr. MacDonald, the high priest of phonevision, has written many articles to the contrary, a notable one in which he said:

> The advertisers haven't sufficient money to pay for the type of continuous programs that will be necessary to make the public buy television receivers by the millions * * *.

I would like to answer this statement by Mr. MacDonald, somewhat frivolously, with a little booklet which I have here which was prepared by the Television Bureau of Advertising. I happen to be the treasurer and a member of the board of directors of this organization, which is an all-industry business league to promote the sale of advertising through television. This little fantasy is called Even Rabbits Couldn't Do This Well, and it takes the supposition that a handsome buck rabbit set up housekeeping with a young doe rabbit in 1947. It says you could count on the patter of little feet—average litter, four rabbits. I will precede this a little bit—if they are half males, half females, all romantically inclined, they will produce 4 to 8 litters. We will have to assume that they all survive in the best of health. Neither hassenpfeffer nor shotguns have been invented yet. All of the rabbits mate at the normal age of 6 months. Their new litters arrive in 11 weeks. We give these little creatures every break that might send their production to new heights. The outcome would be an awful lot of rabbits.

After a few years millions and millions, and yet even with their prodigious ability to multiply, even under optimum conditions, they still couldn't begin to equal the rapidity with which the total of United States television homes has been accomplished. The best rabbit crop that might be accomplished during the 8 years from 1947 to 1955 is a total crop of some 24 million flopsies, mopsies, and cottontails. In the same period of time the fantastic growth of television homes has actually zoomed from a few thousand in 1947 to over 32 million in mid-1955. This is based on statistics of the United States Bureau of the Census, and this figure has been updated since that time to a figure approaching 40 million.

The Bureau goes on to say, "Nothing has ever grown so big so fast." With this cute little demonstration [indicating], I would attempt here to analyze for a moment why this is happening. How did it get so big so fast, and how did we get nearly 40 million television receivers in the hands of the American public?

I would presume to give you some of the background of my own station's experience in reaching this conclusion. In these same 7 years, my company, supported entirely by advertising revenue in a town of a hundred thousand or less, has explored, developed, installed, rejected, experimented with, and operated every development in the television-transmission field that has been made available to the local television art. We have made an investment totaling some $2 million to date, in an area where, by Mr. MacDonald's myopic standards, advertising revenues were not available and could not become available to underwrite a project of this magnitude, much less program it in such a way as to attract a major audience.

This entire project has been conceived and executed under the single broad policy of providing the greatest possible television service to the greatest number of people, with one single rallying point—to operate in the public interest, convenience, and necessity. I might interject, at this point, that it has been the concept of our operation with WSAZ-TV that the public interest, convenience, and necessity, are synonymous with successful commercial operation.

WSAZ began in 1949 in a Sahara of television, opening a small oasis in the form of a small station fully equipped to present local live, filmed, and remote programs, since there was no network source available. Zenith viewed this as impossible, but that did not dampen our enthusiasm, though it was true that the base was not broad enough to attract major advertising money—by actual count we had only 154 sets in our area at that time. We lost nearly a quarter of a million dollars in a year's time, and adopted two avenues of attack. One was to provide the network service we felt necessary for the base of our program, and the other was the maximum geographical coverage that FCC standards and our engineering brains would permit.

There were no common carrier facilities and we were advised that there would be none, so we invested an additional $150,000 in 1950 to build our own microwave relay system from Cincinnati to Huntington. Our faith in the future was rewarded by a contract with the National Broadcasting Co. This assured us of only enough revenues to amortize the relay investment, but it provided a program base in addition to our heavy local schedules with which we could attract a great audience.

As soon as new FCC standards were announced, we became the first station in the United States to install and operate maximum effective radiated power. This was still far from sufficient to bring adequate reception to vast areas in West Virginia, eastern Kentucky, southern Ohio, and western Virginia, where the need for television service is underscored by the great separation from modern city advantages, with terrain conditions which make transportation facilities almost primitive. Thus we went to the next most logical step. This involved the erection, at fearful cost, last year of an entirely new transmitter installation and a giant tower 1,100 feet in height which could send a viewable picture to the very depths of the mountain country just described, as well as to the industrial complex of the Ohio and Kanawha River Valleys. What has been the reaction of the public to these efforts to bring this superior service? Over a half million families in nearly 100 counties have responded by making an estimated $150 million investment in TV receivers alone.

I might point out that this investment is in addition to complicated antennas which were referred to by Mr. Cox a moment ago, some of which are on a community or group basis, so that people pay a service charge in some instances of $3.50 a month to receive service.

As an example—and I hope in answer to your question, Mr. Cox—this $3.50 a month that some people in some of these areas pay for a community or group antenna service is actually less, in substanace, than what the city dweller pays to have his antenna put up and repaired and recurrent calls of servicemen. In one little town in our area alone—Williamson, W. Va.—where most of the viewing is done with group antennas, there are 5 free television services being received, the 5 being the stations in Huntington, Charleston, Oakville, and Bluefield. These people pay only a service charge which their city brothers would have to pay as well to keep their sets in proper repair, but they can switch the dial and get five competitive services.

The boom in our area served by this station—when contemplating sales, service, and allied employment attributable to the coming of television—amounts to a quarter-billion dollars, which is greater than the total retail sales of our home city in a year. Has this miracle been made possible by a second-rate program service that needs to be replaced by a coin-operated jukebox, the output of which is neither the concern nor the responsibility of the operator? The question is so obviously ridiculous as to supply it own answer.

I wonder if the proponents of toll television know what free television means to the people in these areas.

Senator SCHOEPPEL. Might I ask a question? In these hearings you are talking about free, free, free all the time. Certainly you do not assume that the man who buys a television set or the man who buys the product of the advertisers—whether it is automobiles, refrigerators, or what you might buy—he certainly shouldn't be left under the delusion that he isn't paying for this advertising that goes out and is collected for by one means or another. Has there been any emphasis put on that? I don't think so. Why? These people aren't getting free service; they are paying for it by increasing the commodity price; aren't they?

Mr. ROGERS. Yes, sir; I think that that is a justifiable point and I think that everyone pays for every service he receives.

Senator SCHOEPPEL. That is correct. Now we are getting to the point where we are even paying for parking spaces in all of the city streets of any consequence, for checking accounts, and everything else, and the public is not running completely away from it. They are getting pretty good service. But this illusion of everything being free as against something that you pay for, I do not think has been put in proper perspective, and I would like to hear some analysis made of that sometime down the line.

Mr. ROGERS. Yes, sir, I think I can answer your question. There is no question but that the public contributes with this money to the cost of this television system that we have. I would be foolish to say otherwise.

However, the impact of television on upwards of 40 million homes in the Nation now, through a system which reaches in excess of 96 percent of the area, and the fantastic impact of this medium as an informational, educational, cultural, entertainment, and advertising sales medium, is such that the average advertiser is able to distribute fantastically greater quantities of goods at less price than he was ever able to do before the development of the concept of advertising under the free-enterprise system.

Senator SCHOEPPEL. That is correct, and it is one of the finest things that has happened to this country. It has made more employment, more genius has gone into the competitive channels, and better products have come out and it shows that the American people are willing to pay for it. But they are not getting this thing free. It is tacked onto the bill some place, and they are willing to assume it.

Mr. ROGERS. It is tacked onto the bill in the sense that they are buying the products and expressing their appreciation to the manufacturers of the products for the entertainment they have brought, but in this process they are paying less for these products than they would otherwise have to pay were this method of distribution and preselling not available to them.

In short, I believe a point that is not contained in my statement—and I haven't seen it in other statements—is that the total service of television to the total public includes this tremendous marketing ability, this preselling, if you will, that makes the broadest problem of American industry now that of marketing, in much the same that the broadest problem of American industry in the first half of the century was that of manufacturing and distribution.

I believe that television in its present form is vital to the ability of American manufacturing genius to get these tremendous quantities of goods out to the American people by acquainting them with them.

I believe that it is on the point to suggest that no attack has ever been made upon the free press of the United States or the magazine industry, wherein a very large percentage, in fact a majority, of the printed pages that are distributed by the magazines and newspapers is advertising content. An average daily newspaper will have a 70–30 ratio. It will present its editorial content on the ability to print pages having been supported by 70 percent of the pages in a given day of advertising, so that they can devote 30 percent of the pages that day to editorial content. If they get a double-truck ad they can add another three-quarters of a page editorial content to that paper. I am not attacking the newspapers, but I am suggesting that the reasons the great daily newspapers of the United States reach most of the people in most of the cities is the fact that the housewife, in particular, looks upon the advertising content of the paper as its principal program attraction, and I maintain that the same thing is true of television.

That this is true of television is underscored by the fact that in most consumer products, the distributor organizations and retail organizations—and drug and grocery stores particularly—will not stock an item that does not have television support, because they know people will bypass the items that are not familiar to them on television in order to buy the ones that are familiar.

I hope that goes somewhat to the point of the question.

Senator SCHOEPPEL. I am glad to get some of this in the record so we do not say it is for free all of the time, because it is paid for in the end product and the price, but it does show a great expansion of the industry of this country, and the people of this country are willing to pay for it.

Mr. ROGERS. Yes, the people of the country are willing to pay for it and our contention, as an opponent of subscription television, is that a subscription television system will destroy what we know as free programing, by substituting a system where they have to pay per individual program unit.

Further, in my prepared statement—and I was not intending to read this part of it—I make a short analysis of what the per program cost is likely to be. The proponents have made comments about it being $4, $5, or $20 a month, but our Television Bureau of Advertising, as I have stated a little bit later has done some recent research in which they find in the city of Chicago, for example, the average family views its television set—this is based on a 7,000-family sample; it is not shotgun research—the average family in Chicago spends something like 69 hours a week with its television set.

Obviously the service programs that go on all day outside of these cream hours we are talking about, to put the toll programs in, are of interest to them, because they look at them 69 hours a week. If we were to apply the principles that have been presented by even the most modest proponents of toll television to, say, a cost of 25 cents an hour for programing—much less $2 a show—this would build up, at the rate of 70 hours a week or 69 hours a week, to about $17.50 a week worth of paid entertainment. This $17.50 is over and above any prices that these people are paying for commodities which are currently bringing them the same programs on television.

It is our contention that these same programs will not be brought to the public by advertisers simply because of the fact that they will be siphoned off by toll television, where fantastically greater amounts of money can be realized by the program producers, or more importantly the box manufacturers, from a very much smaller segment of the public. The question has been asked—and I am way off my statement now, Senator Schoeppel—the question has been asked this morning, do we think we can survive with advertising-supported television as against toll or subscription television, and I say unequivocally, no, we cannot survive, because if we decide to give the 15 percent heaviest viewing time of our station over, or if a competing station gives 15 percent of its heaviest viewing time over, to toll programing, we will necessarily have to follow the same course.

If, conversely, this 15 percent of our cream time—or, say, the 3 hours from 7 to 10 p. m.—were subtracted from our station, we would be completely unable to provide the round-the-clock service that we now provide. We would be completely unable to support a news operation, for example, that covers largely this hundred-county territory that I am talking about, which involves a field-stringer force of some 25 people feeding film and story material to us. We would be completely unable to carry on the forty-odd hours a week of local programing which we carry on, largely outside of this 7-to-10 period, because all of this is, if you examine it on a program-for-program basis, a loss operation. My board of directors would be out of its mind if they allowed me to do the programing that we do if we were not making a profit from our 7 to 11 p. m. period. Possibly 60 percent of our revenue, for operations, will be derived from the prime evening hours.

This means that a show like Current that we do from 1 to 2 o'clock every day across the board, which involves local personalities and local feature stories from all over our area—and which, incidentally, is done every day of the week in color television now—this program couldn't conceivably support itself on our low daytime advertising rate structure. But it is an important part of our function to make our station a necessity for the people of this area, and it is made that way; it is made possible by the revenues that we derive from the three evening hours of top-audience programs.

Mr. Cox. Is it my understanding, Mr. Rogers, then, that you suggest if one of your competitors instituted subscription programing in these prime hours in the evening, even if you did not do likewise, that you would be unable to derive any significant part of the present revenues you get from advertising in those hours?

Mr. ROGERS. In the long run, Mr. Cox, that is exactly what I imply. Immediately, of course, no; this would not be the case. But if one of my competitors were to run from 7 to 10 p. m. every night with subscription programs, this presupposes that the Congress has seen fit to call this in the public interest and that all stations throughout the country would be permitted to do the same thing. If this were the case, the attractions which now make the backbone of our audience schedule—the schedule which promotes the biggest audience—would necessarily be siphoned off into these other pay operations.

The only way we could conceivably compete would be to go into the same pay-as-you-see system.

Mr. COX. I gather from what you say that you would then derive as much, or more, revenue as you now get and you could, therefore, carry on these public-service, less-profitable programs.

Mr. ROGERS. Presumably, but I would like to steer ourselves back to the public interest. I am not concerned with my interest at the moment. We would be drawing this increased revenue from a greatly decreased audience simply because of the fact that the technical problem of installing machinery that will work this half million homes audience base will take time, and during that time the major attractions that will be transferred to toll will be removed from the nonpay variety, and in the final analysis, if you give a man a choice of paying for what he is now receiving free, a lesser number of them, obviously, are going to see these programs. Let me take the case of the fights, for example.

The question has been asked, "Why don't we have the heavyweight championship fights on free, advertising-supported television at the moment?" The answer is very simple. It is because a very small crowd at $4 a head will provide very much more money than the Gillette Safety Razor Co. or any other sponsor would be able to pay for the same attraction. The question was asked, "Will we lose the world series?" I do not have any question in the world but that we would lose the world series, for the simple reason that even a minimum of people at $1 a head, again, would provide so much more money than is presently able to be supplied to buy this feature that it would dry up and disappear from advertiser-supported, free-for-the-flick-of-a-switch television. I might also point out, in reference to Senator Schoeppel's earlier question, that the sixty-odd million people who are reputed to have seen the world series the last couple of times on television, include large numbers of women and children, who do not pay a penny for Gillette safety razors and blades. However, the Gillette Safety Razor Corp. is able to make this attraction available on the basis of selling these products to a lesser number of people. Everyone gets the benefit. I think everyone will be the loser if we take this away from them and make them pay on a per program basis.

In the matter of what this service now means to people in our area, we are not talking so much of the public in New York and Washington now. We are talking about the West Virginia and Kentucky mountaineers—an area of the country that I think would be well for most of the people in this room to get a look at some day. The people in this great middle-south mountain area are not second-class citizens but they do have second-class comforts in point of travel, entertainment, availability, educational facilities, and all of the modern conveniences of urban life.

When the living television screen invaded these areas in such awesome numbers it was because these people were, for the first time, on a par with their big city brethren in watching the world go by. For the first time in America's history, all citizens have a front-row seat for the great events in the Nation and the world, events that are brought to them because of their purchase of daily necessities, not which are brought to them because they pay extra for them. Their enlightenment, and therefore their participation in the processes of democracy, is no further from them than the switch on their television sets.

I would like to tell you what this means to a mountaineer in the case of a single example. I visited a place called Buffalo Creek in Logan County, W. Va., and Buffalo Creek is exactly what the name implies. It is a deep canyon, a sort of miniature version of the Royal Gorge of the Arkansas River, with steep mountains on each side, but this is where the coal resides from which the whole economy of the central Ohio Valley is drawn.

In a little shack—you would call it a shack—it is a modest frame house that looks dirty only because of the fact that if it is painted on Tuesday, it is covered with coal dust on Saturday, so you assume it is dirty, it really isn't, it is literally hung from the side of the hill. There lives there a mine foreman, a graduate of MIT, strange to say, and he moved to this area with his wife, a little Boston girl, and they have 2 children, 2 boys. The center of their home life is television, and it was the difference between night and day to this family when this television set became available to them.

Let me tell you how it became available to them. This man and his two sons took a camping expedition on the side of the mountain in back of their home that took an entire summer. He hacked a path through the woods—4,000 feet up the side of this mountain, which has an average angle of better than 45° at this particular point—and installed, in this fire break in the woods that he hacked out, an open-wire transmission line—two pieces of copper connected together with a bobby winkler so as to minimize the possibility of the destruction of the insulation on a piece of ordinary antenna lead, and therefore it is much more durable for heavy weather. He runs this line 4,000 feet from an ordinary housetop antenna, which is fastened in the top of a tree on the top of the mountain, down to his home; and because of the fact that this means so much to all of the neighbors, he has a distribution amplifier hanging on his back fence and he feeds the signal from his own household current, which runs the distribution amplifier, to 2 or 3 families on each side of his house so they, too, get television.

I might point out that when I first saw him he had a channel 3 directional antenna which picked up only our station. I am pleased, for the record, but unhappy for the permanent connection, that he now has a fancy array with a channel 8 antenna aiming at one station and a channel 13 antenna aimed at another station, and still the old one—and all you do to operate this thing with the 3 antennas is flip a switch on the front of the set. His reception is perfect because he labors to get perfect reception. He doesn't just buy a television set like a city dweller does, and put it in his room and plug it in like a waffle iron, and when it doesn't work, kick it. He has studied circuitry so it works, and he is typical of these people.

Let me get to the point: Hanging on the back fence with the line amplifier is grim testimony of what this means. There were 27 rattlesnakes on the back fence—skins of snakes he and his sons killed putting up the antenna. I have heard friends in big cities complaining about grumpy landlords, because of the fact they wanted to put up a television antenna. This man went to more trouble than that.

I, for one, Senator, don't want to have to explain to this man the necessity of paying anywhere from 25 cents to $2 to receive each program he is now receiving free from my station. I don't think anybody wants the job of explaining it to all of the other people in the country.

I had a recent experience in a restaurant where a waiter who knew I was in television asked this question: "I hear some fellows come in talking about this pay-as-you-go stuff. Now, as far as I am concerned, I don't know anything about television except that it is the center of my homelife. When I come home at night, the wife and kids, we gather around the set, and this is what we do—this is how we save money on going places we used to go. Places we couldn't go because we didn't have the money. When something comes on the air—whether it is a commercial or whether it is part of a program, whether it is a whole program sequence—that we don't want our children to see, we merely flip the switch; maybe the children have become so selective"—he didn't say it quite that way—"that they flip the switch for us and pick out a lot of programs we wouldn't otherwise see."

He says, "What happens if I come home and we have this new system, and all of a sudden in the middle of a big dramatic sequence we have some delicate family quarrel going on that leads to a subject that we don't want the kids to hear about, how can I go and switch this thing off when I already have a 75-cent investment in this particular show; I can't get my money back."

The suggestion that the hours of operation for toll television be limited to 15 percent, I think, is a very naive one. It presupposes that the toll television people say: "We are only concerned with the top shows that we have been able to lure away from the broadcaster, which will bring us the biggest bonanza. We certainly don't want to be responsible for operating those transmitters for the other 70 or 85 percent of the time." Our concern for the public presupposes that we have a worthwhile service available any time of day or night when there is some part of the public to watch it.

This concern with only the peak 15 percent viewing time bespeaks a concern for the economics of the turnstile and the clink of coins. They have said we should keep all responsibilities for operating the station, and I think, in light of the spirit that these proposals have been made as regards the public, that it is fitting that the toll proponents should disclaim responsibility to account for the welfare of the public. The proponents of toll TV have said to us broadcasters, in effect, that if we like this responsibility to operate in the public interest we are welcome to it. They only want a comfortable seat by the cash drawer.

As for the leasing of equipment and the installation of equipment at stations to scramble a picture, with the brief background on our station, and the development and cost of it, to me and to any broadcaster, it is inconceivable that we should make an additional investment the accomplishment of which is for the specific purpose of eliminating the ability of thousands of families to view our programs except under special conditions.

I don't want to go into the cost per program too much or many of the other things that other speakers are more qualified to talk about and have talked to you about; but I think the crux of this thing is in the claim that toll television is only complementary, and it is my opinion that the claim that toll TV will not displace existing television is the most preposterous claim of all.

As a matter of fact, this is a calculated attempt to supplant the existing nationwide service. Contrary to the assertions of the proponents, peaceful coexistence between free and fee TV is like companionship with the Comintern. The long-range goal of each of the systems is to devour the world. They are incompatible because they are in direct competition for program sources and talent.

If toll television were to be as successful as its proponents claim, free TV could not compete. Free operators could not hope to compete.

I will digress here on a question asked about Ed Sullivan—an experiment in three markets. I believe the figure used earlier was that 1,700,000 people could be reached by an Ed Sullivan show in 3 markets and, therefore, this would not be a worthwhile experiment, so why should we worry about losing Ed Sullivan. Let me point out that 1,700,000 homes at $1 a head for 1 show will pay Ed Sullivan more money than he now gets for 52 shows aimed at the 30 million people per week. The result of any such thing would mean merely to charge the public for what it now receives free.

There has been a reference to President O'Malley of the Brooklyn Dodgers. He actually made the statement that he was dissatisfied with the roughly half a million dollars that the Dodgers get from advertiser-supported television now, and that if toll TV were authorized he will sell his club's ball games on TV coin boxes at 50 cents a game. He envisioned as much as $50,000 from a game at this rate. Now, examine, please, $50,000 a game at 50 cents a head, and I think you will arrive at the conclusion that he is talking about serving 100,000 homes. This is only a small fraction of the number of people who now see these games because the Liggett & Myers Tobacco Co. buys them over WOR—and certainly not everybody buys Chesterfield cigarettes. The yardstick in this case is not service to the whole public. It is the size of the box-office return and only the size of the box-office return.

As for promises that new and wonderful educational programs will be aimed by toll TV at small minorities, this is merely perfume sprayed at the Senate, the FCC, and the public to prevent careful scrutiny of the most gigantic raid on the public pocketbook that has ever been conceived under the free-enterprise system. These promises are made by patent holders who have said they will only lease or draw royalties from equipment, but the station operator is to remain responsible for the program choices.

It has been stated that installation of toll TV in a single major city will cost tens of millions of dollars. This money can only be recovered by putting on shows which will attract the largest audiences, not educational features for small minorities.

I think it is time for the operators of the stations to get on the offensive and off the defensive. I think that the same thing is true of statements that have been made that there is a limit to the number of stations that can be supported by advertising-paid television. I think it shortsighted to say that 588 stations, or any other number of stations, is the limit. If someone had asked me 7 years ago whether I might expect to reach as many as 588,000 television homes on a given opportunity I would have told him he was crazy. If someone had asked me 7 years ago if we could have made the whole thing work at all I would have only had to give him a vague answer based on fate.

I think the parallel in the radio business is an excellent one. If somebody asked you 25 years ago whether we would have in excess of 2,000 radio stations serving the public and making a profit he would have said you are out of your head; it couldn't be done. But it has been done. I believe we are only on the threshold of the development of this business.

I might digress again, in our own operation here, the development in the past couple of weeks of a usable video tape recorder opens a whole new vista of operational possibilities to the television stations in the United States and, therefore, to the public. It means, for example, that no longer will the small-town station have to stand the onerous cost of tremendously expensive film operations in order to cover local events of one kind or another, or, more important, in order to record programs for later playback. Many times when dignitaries come through our hometown they come through by plane or train in the middle of the day, and we will interview them on our daily programs.

I might point out that we operate a microwave relay system between our 2 principal cities, Huntington and Charleston, whereby we are enabled to give daily live programing from 2 cities, because there is admittedly a scarcity of stations covering these areas, so we give local interest live programing daily from both places. With a video tape recorder, for example, if we have a delegation of visiting dignitaries we can put this at a midday spot, tape-record it at ridiculously low cost, and play it back in the evening when the maximum audience is available. We are already doing that with sound film, but it is tremendously expensive, and something that is made possible only by large advertising revenues from national advertisers who want to reach a huge audience.

The video tape development will make it possible to do that exactly the same as the 250-watt community radio station now uses a magnetic tape which is a relatively modest cost. It will enable us in the future to see television stations and communities which are unheard of today but which will never be developed if the principal program attractions are siphoned off and put on fee television.

Mr. Cox. But can that tape development, in and of itself, make possible the existence of a station, overshadowed by your station presenting network programing, when it can offer only what film series trickle down on a syndicated basis?

Mr. Rogers. Yes; I believe that without any question.

Mr. Cox. It is not being done now, and you would attribute that solely to lack of equipment to do it?

Mr. Rogers. Yes, sir. I would attribute that to the same situation which applied when I went to WSAZ as a radio salesman in 1946 when we had very little in the way of daily local programing of a community-interest nature, and we had very little local live news in a regional sense of the word. The reason was our area was adequately covered by 50-kilowatt radio stations from outside on sky wave.

For a long period of time—as a matter of fact between 1946 and 1948—I can recall having gone to elaborate lengths to listen to stations like WSM in Nashville, and even WSB in Atlanta, literally hundreds of miles away, because the economic development of radio at a local level, even 7 or 8 years ago, had not reached its present state.

Now, I am not trying to derogate the job these big stations have done. It has been tremendous, but it is the technical development. It is like the application of automation to the local area that has enabled 250-watt stations in towns of two and three thousand to operate with a significant service. In radio, of course, you had the ability to take a clever young man and a stack of records, and fill a lot of time. It is not surprising that the public will not look at that kind of thing on television, because you can close your eyes and possibly dream up something better than the average young disc jockey wondering what to do with himself in a television studio. This is an evolutionary process, and somebody is trying to force us into revolution; but they are trying to force us into revolution for their own personal profit, and, again, not for the benefit of the public.

Mr. Cox. Well, they would recognize such a profit just as a station operator hopes or does recognize a profit from the use of the air waves, and just as the advertiser does recognize a profit, or he discontinues the advertising.

Mr. Rogers. That is correct.

Mr. Cox. The question is whether they would, in so doing, provide a program service that the public would be willing to pay for and which perhaps they are not now getting, and whether it would provide revenue for a class of stations which are not now able to support operations on sponsored programing alone.

Mr. Rogers. Mr. Cox, if I may, I think I would like to take issue with you a little bit on that. I don't think that that is the basic question. At least it isn't the basic question that I understood when I came here. The basic quesion is whether this technique would provide a greater service to the public than is now being provided. I don't feel that any of the things that you just outlined to me will.

Mr. Cox. One of the arguments that they advance to establish that this is in the public good is the contention, as was made by former Senator Johnson, that this would provide a source of revenue for new stations in the Rocky Mountain area, in regions where local advertising is not sufficient alone to support stations, and where national advertisers are not interested because they reach a point of diminishing returns in something from 60 to 65 of the top markets.

Mr. Rogers. Yes, sir; I think the answer to that is contained in the proposal to establish boosters and satellites. Our station has had some minor experience with that kind of thing, including one installation of a booster station that was put in in our area for the purpose of finding out how people in this particular community could get better service from our station due to a low antenna height and lower power at that time. The problem was solved at that time through the increase in power and increase in antenna height on the part of our own station, plus the erection of 2 or 3 stations closer to this community so that they now get an adequate service.

Nevertheless, while the problem was being solved, this community actually did receive a service that was totally impossible, through the use of a low-cost, low-power repeater station, which created no objectionable interference to WSAZ-TV.

Mr. Cox. But the use of satellites or boosters will not bring a local station serving the local area.

Mr. Rogers. Yes, sir; it most certainly can be developed. I feel that there is no question but that we have to apply the principles of walking before running to this as to other developments, and if you were to install, let us say, for the purposes of example—if you were to install a low-power UHF transmitter station in a small town 100 to 150 miles away from a major town, you would then be providing the initial service upon which the circulation base will be built, as a result of which, with the fantastic new developments that are coming along right now, you have only the problem of buying a single generator and a switching system to feed a local signal into this same transmitter.

The fact of the matter is today it would cost something in the neighborhood of maybe $15,000 at the outside to buy a portable sending generator, a film chain, and projection equipment, as a result of which you could originate a local signal from a satellite operation, through which you could sell local area merchants low-cost advertising over this satellite station.

As far as I know, there is nothing even contemplated in the proposed rules to the Commission for the authorization of booster and satellites that would prevent this. Certainly in terms of what those of us who have been through, and have seen this thing develop over the past 8 years, that is a very modest cost and one which could be realistically applied to small towns.

Mr. Cox. But in something approaching 2 years, under authorization from the Commission, something less than a dozen, I think, satellite stations have been established, and those mostly in cities of fairly substantial size; and the Commission has not yet decided whether it is going to authorize boosters, and, in fact, in testimony before this committee has indicated that they are greatly concerned about the problems of interference that they present. So that it would appear that with satellites available there still remains a limiting factor, not only in terms of the cost of operation but in terms of revenues that could be derived from that operation, and I think it is at this point, of course, that the proponents of subscription television direct the argument that they could furnish this basis of economic support which would make possible the development of stations which, they contend, advertising has not and cannot support.

Mr. Rogers. Well, they contend that they have not and cannot only on the basis of past performance, but 7 years is a mighty small development period for an entire industry.

However, not to beg your question, it seems to me that this proposal is ridiculous on its face when you consider that you are talking about the very communities where you have the least earning power, the least amount of potential audience with which to support these so-called toll program attractions. Therefore, we get back into the matter of experiments, and somewhere in this torn-up statement I have a reference to experiments, and I think an example that answers your question.

It seems to me that in essence the matter of experimental operation of toll television in underprivileged areas, if you will—it reminds me of the old Moslem fable of the camel getting his nose in the tent. The proponents know perfectly well that the experiment is merely a bridgehead from which to launch a full-scale attack, and get this thing established elsewhere.

I took an example here of not a little town, but let me give you this example and see if it answers the question. It has been said that Broadway, opera, feature movies, cannot be brought to free television. Mr. Weaver and others have proved this is wrong. They have been and are continually doing it. Suppose we take the popular example of Richard III as a premise, and see what would happen with a TV experiment in Washington.

The price of the film was $500,000. We know that because that is what we had to pay for it. Let us suppose the people did not have the opportunity to see it as free as the General Motors advertising that supported it allowed it to be, and that the FCC has authorized Washington as a city of experiment. There are nearly three-quarters of a million families who depend upon the TV service of the Washington stations. Let us suppose that the subscription people succeeded in installing coinboxes, meters, telephone pay-station lines, or decoders, on a third of these 750,000, for example.

Let us say that the day Richard III is showing for what I referred to as 250,000 cash-register set owners, that we succeed in getting half of them tuned in for the whole show, that we get even bigger attendance for the paid version than we did for the advertising supported version. This means we would have 125,000 viewing homes that would have to pay $4 each for this show, or double the maximum I have heard suggested so far, just to defray the half-million-dollar cost of the film alone. This is before one penny is applied to amortization of the staggering installation expense in the homes or the television station, not to mention the operating expense of the station whose service has been denied the other half million families. Most important, this does not include the royalty of the patent and license holder nor the rental of the equipment, so follow it from there. How much do we charge for this show—$10, $20?

Mr. Cox. Well, this is based on the assumption you showed it only in one city?

Mr. Rogers. Right, so this is the experiment.

Now, the camel starts to inch his way into the tent, and Mr. MacDonald and his friends yell: "This is unfair. We were limited to Washington, D. C. We only had a quarter of a million seats, and it wouldn't pay the freight. So our interest has been hurt. I don't know the public has been hurt the least bit, other than that half million dollars they had to pay to get the film, but our interest has been hurt, so let us add Philadelphia, Denver, St. Louis, Milwaukee, and even Huntington, W. Va., and this thing will pay."

But who is it paying? It is paying them, not the public.

Mr. Cox. Is it your view they would have had to pay $500,000 for limited exhibition rights in this 1 market?

Mr. Rogers. That is problematical. I think they will have to pay whatever the traffic will bear.

Mr. Cox. But that price was attached to showing this on a nationwide basis, wasn't it?

Mr. ROGERS. Yes, and it was paid.

I would like to go into one more item here, and that is the matter of these low audience and cultural shows that we are talking about, and an area where television has perhaps reached its finest hour, and that is the coverage of the national political scene, the importance of television as a campaign medium to candidates for public office.

It is well known to any operator that the Jackie Gleasons and the Groucho Marxes attract many millions more people than do the so-called cultural, informational, and uplift shows. I believe members of this committee, in fact virtually all of Congress, have appeared regularly on shows like "Youth Wants to Know," "American Forum of the Air," "Meet the Press," "Face the Nation."

I would like to ask the question as to how many people are going to pay to see the great figures of our Nation on programs of this kind when it is a well-known fact that a minority of people, as it is, will watch them even though they are coming free. This inevitably leads into the question of what happens to the candidate for public office who wants to go on television to tell his story for election in the cream program times, only to find that this is the time when the audience has to pay for it. There is a good deal of good-natured banter about political broadcasting already, and some that is not so very good natured. I think that we might examine the question of how many people are going to pay for the privilege of listening to somebody say why he should be voted for.

The matter of enlightening the citizenry through television brings up the matter of whether the citizenry is going to want to pay for the privilege of being enlightened every time it happens. I think that the rest of the material that I have here in sufficiently in line with what has been presented that I would not like to take your time with it.

I would like to suggest one further thought, that in this overall umbrella of attacks on the advertising-supported television system, one thing that has bothered me a great deal is the whipping boys that are made out of the networks. Mr. MacDonald always refers to a network monopoly. Again, referring to our new research and sales organization, we did some research in an effort to help sell what we call national spot television. We found, incidentally, that surveying the buyer nation at the present time, the people of the United States are watching 53 percent network programs and 47 percent local and syndicated film originations; in other words, network is only half the picture of American television. It isn't all of the picture.

Mr. Cox. What percentage is it in the hours 7 to 10 p. m. or 7:30 to 10:30?

Mr. ROGERS. I cannot give you an educated answer on the breakdown as for all stations; some of them being nonaffiliated and some of them having a greater or lesser amount of network traffic.

In the case of our own station, substantially 100 percent of the service from 7:30 to 10:30 is NBC network service, except during those periods when we feel there is something that needs to go in there to reach our people, as a result of which we preempt under the public-service provisions of our contract.

Mr. Cox. Those are the hours, though, in which the largest audience is watching, and from which you derive the major part of your revenues?

Mr. Rogers. Yes, sir; from which we derive the greatest part of our revenue—but strange to say, from the national spot advertiser not from the national advertiser. Our research goes further and shows that local and national spot revenues account for 50.5 percent of the revenue, more than half. I cannot hand you the research data on this because it hasn't been circulated, but it will be directly.

The fact is that the network monopoly charge is a myth. They move on to the two-network monopoly charge, and they say CBS and NBC run this thing, terrorize the stations. There is no question, because of the law of supply and demand of stations, that ABC has had a rough time over the past few years, but did they join the throng and attack the other networks? No; they didn't. They did just the opposite. They embarked on a bold venture in new programing and they have drawn acclaim and revenue from the public and the advertisers alike. They have attractions as famous as Disneyland and Mickey Mouse. They took United States Steel away from one of the other networks. Just last week we were notified that our network was unsuccessful in outbidding ABC for Omnibus, which was moved over from CBS, and I have on my desk at home now notice that the Eastman Kodak show has been moved from our network to the ABC network.

Mr. Cox. Did they take it away, or was it evicted—was it unable to get what it considered desirable time on the network with which it was then connected?

Mr. Rogers. I think this question presupposes some background on the free competitive enterprise system. I don't know that there was any eviction, and I don't know that there was any ability, the point is that competition does exist, and that ABC was able to pull this thing off.

Mr. Cox. Does ABC have more evening time available than NBC?

Mr. Rogers. Well, this will always be true in any given situation where you have competition. As soon as ABC has all of its evening or daytime hours sold out, one presumes that maybe a fourth entrepreneur will come along and suddenly scream that he doesn't have as much. I think it is a normal condition.

Insofar as what network has meant to building of these sets, it is best exemplified by what we are doing this week. We originated yesterday and the day before the entire NBC Today show, live remote, on an Ohio River steamboat moving up and down the Ohio Valley—a development which harks back to 1949 when Pat Weaver stated that he wanted this network to reflect all of America, and all of its activities, to all the rest of America. When I say we originated this, I mean that our station's technicians, program people, and production people put these two 3-hour programs together complete, using only the network talent. This was done, as far as I know, for the first time on any network, but it was only made possible because of this network development, and the coequal status of the network and its affiliates in developing these things.

I invite your attention to a followup on that next Sunday afternoon. We are going to hold what may well be the last race in the history of the oldtime stern-wheel Mississippi steamboats. We are going to have two of these things, with cameras and crews aboard each one, racing on the Ohio River in front of Huntington. Now, there are only 10 of them left in existence that I know of, and they are dwindling fast, and this thing will be part of the Wide, Wide World feature. We thought of it. We got the boys to go out and put on the race. We think it is a priceless bit of Americana, but only the network system and the networks' ability to foot the bill for this kind of thing makes it possible.

Nobody terrorized anybody. We think it is a great thing.

I would like to summarize and wind up, Mr. Cox and Senator Schoeppel, with this thought: This toll television attack against the present system has a perfect biological parallel in the example of the parasite that attaches itself to the body of a living organism. The parasite grows fat and happy, but inevitably destroys the host.

I have enumerated the accomplishments and creations of what we call a free system predicated upon its foundation of network broadcasting. It is significant—indeed, the crux of this entire matter—that the proponents of toll TV have created nothing, nor do they intend to create anything except a captive market for the sales and royalties from the techniques and distribution of marketable mechanical marvels and contrivances.

These contrivances will be installed at a cost of billions to a national public already enjoying the fruits of the free system; that they have neither made nor intend to make a contribution to the development of the art of television programing; that they have been mysteriously silent on the subject of assuming any of the licensee responsibilities to the public of the broadcasters; these and many other evidences point to the clear-cut conclusion that the proponents of toll TV are both prepared to, and intend to, enlist the aid of the Congress of the United States in crippling the greatest force for enlightenment, entertainment, and through free choice of free programing for safeguarding our constitutional government, that has ever been conceived by the mind of man. It is my conviction that this committee will bring such an effort to an immediate halt. Thank you, sir.

Senator SCHOEPPEL. Thank you, Mr. Rogers.

Mr. Biemiller, how long will you take?

Mr. BIEMILLER. I think I can be through in 10 or 12 minutes unless there are some problems the committee would be interested in.

Senator SCHOEPPEL. We are trying to figure out our schedule, too, and want to hear all of these people, naturally, in the record. If you can finish by 12:30, because the gavel goes down at 12:30, you will have to put the rest of your statement in the record. We will stay that long, because we have some floor work over there and other matters to take care of.

STATEMENT OF ANDREW J. BIEMILLER, LEGISLATIVE REPRESENTATIVE, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. BIEMILLER. Mr. Chairman, my name is Andrew J. Biemiller. I am a legislative representative for the American Federation of Labor and Congress of Industrial Organizations, with offices at 815 16th Street NW., Washington, D. C. I appreciate this opportunity to appear before this committee to present the views of the AFL-CIO regarding the problems raised by the proposal to introduce a system of paid television.

We do not appear here as experts in the technical or engineering aspects of television. Rather, we appear here today as representatives of the workers employed in the great entertainment industry and of the over 35 million Americans who have bought sets, and inivested over $16 billion in them, and are continuing to buy them at the rate of 580,000 a month at the present time. The more than 15 million members of unions affiliated with the AFL-CIO represent a major cross section of the television viewing public.

The proposals for paid television that have been put before this committee would have a profound effect on the television habits of our members. In effect, paid television would require the viewer to contribute a specific sum for the privilege of enjoying certain television programs. Estimates of the cost of paid television to the viewer run from a minimum of $100 a year to over $1,100.

Certainly, this drastic proposal runs directly contrary to the basic tenets of the American system of broadcasting. At no time has the American public, whose investment in television sets has reached $16 billion, been told it would have to pay for the privilege of watching television programs.

The introduction of this new concept would have serious repercussions on the employment of workers throughout the entertainment industry. It would drastically change the present system of competitive programs. Instead of having many programs to select from each night, we would have only 1 or 2 at a time. The advent of this new form of television would also undoubtedly deal a further blow at the already hard hit independent, community movie theaters throughout the country.

In any debate over the merits of this proposal, the burden of proof must lie with the proponents of this plan. I would like to examine a few of the arguments that the proponents have used in order to determine whether they have developed a plausible case for their proposals.

Perhaps the primary emphasis in the proponents' arguments has been that paid television would supply vastly improved programs over those now available. Howeer, despite the many obvious faults of today's television programs, there is serious question concerning what specific improvement paid television could bring. For example, in the world of sport, virtually every major event, with the exception of a once-a-year heavyweight championship bout, is now telecast without charge over a coast-to-coast network. Daily baseball game broadcasts are available in most cities. In terms of entertainment, the recent series of "spectaculars" have added immeasurably to the program fare now offered to television viewers. It even seems that Shakespeare, ballet, and serious music have now become commercially acceptable television fare.

What might happen under a paid television system is that certain types of programs which are now offered free of charge would be transferred to the new system which would require payments from viewers. In effect, this would seem to be transferring the cost of the television programs from the commercial advertisers to the viewing public. Certainly the 35 million set owners in America would not accept this drastic shift without protest.

Although there may be many faults in the present system of television programing, these are not faults that can be corrected by paid television. They are faults that must be corrected by an alert public which makes its views known to the television industry. They can be corrected by an alert congressional committee which carries on investigations as you are now doing, Mr. Chairman. They can be corrected by the Federal Communications Commission if it is diligent in looking after viewers' interests.

The second argument used by the proponents of this plan is that paid television might be a method for helping new stations get started in areas where television broadcasting has so far been limited only to 1 or 2 stations. However, in this case it is hard to say how paid television would operate. In areas where only 1 or 2 stations are now broadcasting, the introduction of a new station operating under the paid system would serve to deprive existing stations of the available programs that they now carry. This seems to be simply robbing Peter to pay Paul. Moreover, the proponents have not made clear how such a system could operate alongside the presently operating system of network and individual station programing.

The same point could be made even if the new paid television system were confined to UHF channels. It is true that a problem now exists in a number of localities of gaining acceptance for newly organized UHF stations. There is a natural reluctance by owners of VHF receivers to purchase the necessary equipment to permit conversion to UHF. The expenditure of $50 or more to convert present sets to UHF, either with or without a paid television gimmick, will not meet with great favor. The answer to this problem is not to introduce a new television gimmick to subsidize new UHF stations.

It seems clear to us that the best interests of the public lies in the continuance and improvement of the present system of free television. It is true that the paid television scheme might benefit a few stations and a few promoters. It would, however, at the same time add a costly burden to the expenses of owning a television set for the dubious pleasure of watching certain programs which, in effect, are not likely to vary in content from the programs now being offered to the American public. If every set were to be converted the cost would exceed $1½ billion.

It is for these reasons that the First Constitutional Convention of the AFL–CIO adopted the following resolution:

> There are now pending before the Federal Communications Commission certain applications which would provide for and permit the granting by that Commission to specified interests, exclusive licenses to broadcast, and charge for, television programs which are now being received without charge in the private homes of America.
>
> It is our sincere belief that such a plan known as pay television would constitute and become an infringement on the property right now enjoyed by the general public on a no-fee basis. Such a plan would be an intrusion into and a violation of the privacy of the home, and would curtail greatly the free use of a medium which has become a part of the American home: Now, therefore, be it
>
> *Resolved,* That the AFL–CIO opposes the granting by the Federal Communications Commission of licenses permitting pay television and request the officers of the AFL–CIO to make known to the members of the Federal Communications Commission and to the Members of the Congress of the United States the position expressed in this resolution.

This resolution, originated by the California State Theatrical Federation, was given careful attention by the resolutions committee and on their recommendation unanimously adopted by the delegates.

We trust this committee will concur with our views and recommend that the FCC does not license any system of paid television.

Senator SCHOEPPEL. Thank you, Mr. Biemiller.

Mr. BIEMILLER. Thank you, Mr. Chairman.

Senator SCHOEPPEL. This committee will recess until 2:30 this afternoon.

(Whereupon, at 12:30 p. m., the committee recessed, to reconvene at 2:30 p. m. the same day.)

AFTERNOON SESSION

Senator SCHOEPPEL. Is Mr. Conaway here, and Miss Falkenburg, and Lawrence Tibbett?

If you folks will all come up, and please be seated. Mr. Conaway, I understand that you desire to be the first witness, this afternoon.

Mr. CONAWAY. Yes, Mr. Chairman.

Senator SCHOEPPEL. You may proceed in any way you desire. We would be glad to hear you.

Mr. CONAWAY. I would like, Mr. Chairman, if I may, to read a prepared statement.

Senator SCHOEPPEL. That is quite all right.

STATEMENT OF DONALD F. CONAWAY, NATIONAL EXECUTIVE SECRETARY OF THE AMERICAN FEDERATION OF TELEVISION AND RADIO ARTISTS

Mr. CONAWAY. The American Federation of Television and Radio Artists, popularly known as AFTRA, was formed September 20, 1952, as a result of a merger between the American Federation of Radio Artists and Television Authority. AFTRA is a branch of the Associated Actors and Artists of America, its international parent organization, which is affiliated with the American Federation of Labor-Congress of Industrial Organizations.

AFTRA is composed of 32 locals and 7 chapters extending throughout the entire United States and with a membership totaling approximately 20,000 performers, that is, actors, announcers, singers, dancers, specialty acts, sportscasters, walk-ons and extras. Its national headquarters are located at 15 West 44th Street, New York City.

AFTRA has officially opposed pay-television since its national convention in July 1955, believing among other things that employment opportunities of our members will be reduced, that not only the members of AFTRA but members of the entire entertainment industry will be adversely affected, such as the American Guild of Variety Artists, American Guild of Musical Artists, Screen Actors Guild, not to mention the unions representing stagehands, scenic designers, engineers, and others. Upon what grounds does AFTRA believe that employment opportunities for our members will be reduced, is a question which should be of concern to all members of this committee.

Briefly, it has been reported that there are approximately 38 million television sets in American homes, representing an investment of some $16 to $17 billion, and these owners are entertained or educated by free programs received on their screens, done in whole or in part by members of AFTRA. Both the industry and AFTRA have dedicated themselves to bringing the best available entertainment and programs into the American home, and with 1 or 2 rare exceptions, every national event, be it sports, politics, or otherwise, has been made available through the combined efforts of AFTRA members and the industry.

With pay-television, some of the free time presently underwritten by a sponsor would be siphoned off by a paid program. For instance, the Ed Sullivan show, if on a paid program consisting of only 10 percent of its present audience paying 50 cents, would amount to some $800,000, or approximately six times what the sponsor now pays. The net result would be that pay television, supported by a very small minority of viewers, in contrast to the total number of potential viewers, would drive from the screens free programs and in turn decrease the employment of AFTRA members, since it follows, as does the day the night, that a program wherein a million families were willing to pay $1 to see its performance, as opposed to a larger number of viewers not willing to pay, the smaller number would not only command that particular program, but it would be prohibitive for a sponsor to compete economically against that paid program.

Another reason that AFTRA feels that employment of its members will be reduced is the fact that the concept of pay television, in AFTRA's opinion, will make every American living room a miniature theater in which the present distributive cost factor of motion pictures would, to a large extent, be eliminated, and consequently the problem of producer-distributor would be solved and greater profits would inure to the producing companies. And a corollary of distribution cost factor, increased profit to producing companies would mean less and less sponsored programs on free television, and consequently the industry, as it is now known, could no longer exist in that climate and jobs would be eliminated.

Much has been said concerning the choice which should be made available to the general public; yet, in the surveys known to me, they clearly demonstrate that, if the general public are forced to, enough of a minority to make pay television economically visible would pay, despite the fact that a great majority of the American television-set owners would be opposed to paying to see a program, and in many instances would be unable to afford the luxury, especially when it is considered that the average American family watches television on an average of 5 hours per day.

Aside from AFTRA's interest in pay television, aside from the interest of promoters of pay television, aside from the industry interest in this problem, I believe that the real concern of everyone should be the public interest. Television has brought to the American home a tremendous sociological impact, not only in changing the habits of most of us but in bringing entertainment, national events, and literally the world, to the average American home.

These American citizens, many at great financial hardship, purchased sets with the complete and full expectation that they would enjoy them without any additional charge to be made. A quick trip around the country will reveal that the familiar TV antenna is in the main the only entertainment which can be afforded.

And it is in the public interest that I would urge this committee to act, because in the final analysis the rights of the American public should be respected and, wherever possible, protected to the fullest extent. Adequate supervision of air communications exists and will, from time to time, with technological changes, be amended or altered, but the right of the individual to enjoy his freedom and general welfare should never be restricted by promoters seeking to invade that which exists as free and available to all. Pay television, in my opinion, is comparable to placing a turnstile on a public library or granting a 99-year lease to a promoter to control the admission and enjoyment of national parks or monuments.

And, finally, pay television would create an unequal and discriminatory problem, since it would be available only to those who could afford to pay, while endangering the programing of public events and items of national interest.

I feel confident, as the public learns more and more about the basic threat of pay television, that they, acting in their God-given commonsense, will become increasingly vocal against it and will demand that the public interest be maintained by free choice of television programing.

Mr. Cox. Mr. Conway, wouldn't you expect that there would be the same total number of hours of entertainment provided over television under a system making some limited use of subscription television programing as there is now provided at the present time?

Mr. Conway. Initially at the outset I would say yes, but I think that, as the pay television continued, the economics of both concepts would force one or the other to extinction.

Mr. Cox. Well, even if the system became completely subscription, still the stations providing the service are required by the FCC to provide a minimum daily programing schedule. Someone is going to have to provide this entertainment. It is still not quite clear to me in what way there is going to be a loss of employment for members of your organization unless this entertainment is going to tap other sources, such as the movie industry, which I think you referred to in passing.

Mr. Conaway. Well, I believe that basically once pay television comes in under any of the various plans which I have read, that for that portion of the time that pay television is going in an area—in a viewable area—it will command a certain amount of the audience. If this were not so, then I see no reason to even propose pay television.

Then, on the basis of programing, anyone who is sponsoring a program at the same time would be unable to continue so that is what would happen. And again I think box-office appeal has to be somewhere in this picture of pay television. If it is going to be very dull and dreary subjects, I cannot visualize anyone paying a dime for it, if they can see dull and dreary things on certain types of programing now. Therefore, you would be in this area where many of our performers would not be in any type of sustaining programs or any type of the variety of programing that now exists in free television.

Mr. Cox. In other words, you would feel that there would be danger of an overall contraction of television service, the elimination of stations, so that there would be less programing available and less programing to offer employment to your members?

Mr. Conaway. I would feel with pay television, even on a trial basis, it will create a tremendous economic adjustment to be made. Now whether it takes the form of elimination of stations or some other form, my concern is it will reduce employment for our members.

Mr. Cox. But I would assume that quite probably the bulk of your members find employment in the network programing originated in New York or Los Angeles; is that correct?

Mr. CONAWAY. Well, let's say that a large majority does. However, we also have a considerable percentage of our some 20,000 members, and I think that I should say this to you: It is difficult in the entertainment unions to say at any one given moment that we have, per se, a fixed number of people, because there is, as you undoubtedly are aware, an interchangeability rule, so that if a particular form is at a moment attracting more work, the people, through the interchangeability, are there. But I believe that what would happen in many of these instances, the so-called free-lance person on other than a network would never be able to compete on a paid program utilizing, for example, some hour between 7:30 and 10:30. He simply would not be able to compete because there would be no employer to utilize his services.

Mr. Cox. The point I was trying to make is that at least as long as the networks maintain anything like the scope of the operations that they now conduct, that your members would find employment in the programs originating over the free networks or any others that might come into existence.

Mr. CONAWAY. That is right.

Mr. Cox. And it would only be (1) if subscription television resulted in the decrease in the number of stations and, therefore, a decrease in the total number of hours of programing necessary or (2) that your members were excluded in some way from participating in the programing service provided by subscription television, only in one or the other of those cases would there actually be a serious reduction in work availability for your members.

Mr. CONAWAY. Well, as I say, it would be facetious on my part to say that it is going to curtail stations, but whether it curtails new stations, the net result as far as AFTRA is concerned is a reduction in employment.

Senator SCHOEPPEL. Thank you very much. I appreciate your appearing here today.

Miss Falkenburg, I believe that you are listed next. You may proceed in any way that you desire. I notice that you have a written statement. We will be glad to hear from you.

Miss FALKENBURG. Well, I would like to have this written statement, which has been prepared as a performing member of AFTRA, included in the record, if that is all right, and I would like to add my own personal ad lib postscript.

Senator SCHOEPPEL. That will be quite all right, and it will be so indicated in the record.

STATEMENT OF JINX FALKENBURG ON BEHALF OF AFTRA

Miss FALKENBURG. As a performer and member of AFTRA, I would like to apprise the committee of my feelings for all of the performers in the television field. Too often performers in television are associated with astronomical salaries, and though I must confess this is most desirable, at least from the individual's standpoint, the facts are sadly to the contrary.

As you know, AFTRA concluded with the television industry a pension and welfare plan at its last negotiations, and the prime consideration for eligibility was for the performer to have earned at least $1,000 in television between November of 1954 and November 30, 1955. Based upon this criteria, there were 1,700 members from a total paid-up membership of approximately 5,000 eligible in New York; 560 eligible out of a paid-up membership of approximately 4,500 in Los Angeles; and 165 eligible out of a paid-up membership of approximately 600 in Chicago. In other words, based upon $1,000 earnings for a 12-month period, there were 2,425 members eligible out of a total of approximately 10,000.

It is my opinion, as a performer who has worked in both radio, television, and motion pictures, that pay television will decrease considerably the opportunities for the rank-and-file members in obtaining sufficient work to qualify in a $1,000 a year category. While it is true that stars will receive large sums of money for a single pay-television appearance, the vast number of performers in supporting or walk-on roles will have incomes even more meager than at the present time.

Mr. Conaway was talking about the work for performers—for the some 20,000 members of AFTRA—and as one of those, and as a performer on television regularly, 5 days a week, for what is known as a woman-type audience, I have the feeling that if there were pay-as-you-go television, and if we happened to be up against a pay-as-you-go television program which was carried network and which had a million dollars a week budget, nobody would tune into what happens to be channel 4 in New York, the NBC station, so we would lose our audience and lose the show, and lose the revenue.

The same thing would happen with the actors on competing programs, on a Sunday night opposite big pay-as-you-go network television shows, because as Mr. Conaway said, no sponsor would want to come on and sponsor a competing program, knowing that the audience would tune away to a million-dollar spectacular. I have gotten quite used to doing commercials. I enjoy doing them very much. Maybe there wouldn't be commercials with pay-as-you-go. There probably would not be. I would like to go on doing commercials and working and having an audience who are able to tune in and see it for nothing, except for from time to time buying the sponsor's product.

I would also not like to see a family that has saved and spent quite a lot of money on a television set have to decide, on certain nights of the week, what program what member of the family wants most to watch and how much money they can spend during an evening, or during a week, to watch that particular pay-as-you-go program.

I think they will have spent enough on the set, and maybe that is not paid for. I do not think they should have to pay to watch anything, and besides I think it was mentioned this morning, the best programs have been on through the past few years and they will continue to come: Peter Pan, Richard III, and political conventions and baseball games—and I do not know that they can do much better with pay as you go. I like it this way, as a performer, as a giver of commercials.

Mr. Cox. Well, we have had filed with the committee—on Tuesday, I believe—a brief statement by Mr. Ralph Bellamy, who is, as I understand, the president of the Actors Equity. He felt that since subscription television at least holds out the offer of possibly more stage-type entertainment, that this would offer added possibilities of employment.

Now, in other words, this again, I think, is the same sort of thing I was discussing with Mr. Conaway—that as long as stations are on the air and are providing a certain number of hours of entertainment, the entertainment must be furnished by someone, either the members of your organization or the members of Actors Equity, the members of musical unions connected with opera, ballet (if they have like organizations), or in the form of film entertainment, which would be covered by the unions in Hollywood.

So wouldn't it be fair to say that it is more or less a question of who is going to provide this entertainment and whether there would be a serious shift if subscription television were added to our present television system?

Miss Falkenburg. Well, I think they have already succeeded in televising plays that have either currently been running on Broadway or have just closed. That was the case of Peter Pan, and The Skin of Our Teeth. They were both tremendous successes on television.

I do not see that having a pay-as-you-go television having a play produced on television, and having the audience pay 10 cents or a quarter to see it that night would encourage the audience who has already seen it to go and see it if it were running on Broadway, and I think that is what Mr. Bellamy meant by saying that the actors would have a longer and more successful run and more revenue.

I still think it would be a one-shot deal, and the actor would just have to make what might have been a 40-week run on Broadway on that 1 appearance on television, and unless they paid him accordingly it would not be worth his while to be on just 1 night on pay-as-you-go.

Mr. Cox. I think he was looking for what we have had described, by both the proponents and opponents, as the actor's share in the tremendous income that could be derived from pay-as-you-go television, and that, added to the proceeds from the normal run plus some possible increased interest in the drama in remote areas, might provide employment in that particular area.

Mr. Conaway. Mr. Cox, Mr. Chairman, I would like to answer in part, too, this question, if I may, if it doesn't do violence with the rules here.

I am not familiar with whether Mr. Bellamy was testifying as an individual or whether he was testifying as the president of Actors' Equity. To my knowledge, Actors' Equity has never officially taken any position on pay television.

Mr. Cox. He simply recites that he is president.

Mr. Conaway. Yes; so I assume that he is speaking as an individual, and as an aside he is also a member of AFTRA and has appeared on numerous very popular 1-hour television shows.

In connection with what Miss Falkenburg has said, there probably is no doubt that the great-name star would command a sizable figure, but, based upon a union viewpoint, our members not only are comprised of the great-name stars but many of the so-called rank-and-file people; and when you say that you are going to take a Broadway production and put it on, you are in substance saying that the American people are going to assume the below-line cost as to whether this is a smash hit or not. Now, if it is absolutely dull and not interesting, someone has made some money to help the theater recoup.

Now, what happens to the road companies, what happens to the traveling-show versions, for example, of Inherit the Wind, and that type of thing? No one in Omaha or Dallas or Birmingham, Ala., is going to pay $4.80 or $5.60 or $6.60 to see this show if they have seen it a week or 2 weeks prior for a quarter or 50 cents, or whatever it might be on pay television.

Senator SCHOEPPEL. Thank you very much, Miss Falkenburg.

The next gentleman we have is Mr. Lawrence Tibbett. I might say on a number of occasions—a good many occasions—I have had the pleasure of being present when you were swinging out through the midsections of our great Nation. We are happy to have you here today. I know you have a written statement. You may proceed in your own way.

Mr. TIBBETT. Thank you, Mr. Chairman. My statement, unlike that of Mr. Bellamy, is an official statement. I shall read a copy of the unanimously passed resolution passed at the AFTRA convention last year, 1955.

STATEMENT OF LAWRENCE TIBBETT ON BEHALF OF AFTRA

Mr. TIBBETT. The resolution follows:

AFTRA is opposed to pay television because, in our judgment, it will reduce the employment opportunities of our members, will adversely affect the entire entertainment industry, and is not in the public interest.

Although pay television might benefit a limited group, AFTRA believes it would reduce both the number of performers employed and the average income of all performers.

If a fee is to be charged the set owner for the privilege of viewing important television programs broadcast during the choice evening hours, it follows that the total free television audience would be substantially reduced. Reduced audiences would result in less expenditure for sponsored programs and less money available for public service and sustaining programs. Such a reduction in the free-television audience would discourage national advertisers from attempting to reach the large markets now available to free-television stations. Pay television would not, in our opinion, make up for the loss of employment in free television which it would cause. Its promoters intend to concentrate on repetitious showings of motion pictures and on televising numerous sports events for pay.

In addition to the self-interest of our own members, we must view the effect of pay television on other branches of the entertainment world. The amount of money which its promoters say they expect to extract from American families in their own homes is greater than the entire amount presently spent for admission to all forms of entertainment in the United States. If, therefore, the expectations of the pay-television promoters were realized, every branch of the entertainment industry would suffer.

Finally, we have a duty as citizens to view the interests of the American people as a whole. Many millions of families have bought television sets in the reasonable expectation that they would thereby be able to enjoy television without having to pay further for the privilege of viewing programs. We have the best television service in the world. It is making good and constantly improving use of the performing talents of our country. It is now being proposed that many television stations should, during the evening viewing hours, be closed to everyone who is unwilling or unable to pay. We must oppose a proposal which threatens such an injustice not only to the members of our profession but to the general public as well.

That is the end of the AFTRA resolution.

Mr. Cox. I take it, then, that it is the position of your organization that this reduction in employment would result largely from displacement of existing types of programs in favor of this recurrent showing of films and reliance upon sports as it actually occurs?

Mr. Tibbett. That is true.

Senator Schoeppel. Thank you very much, Mr. Tibbett, and you folks for appearing here today.

The next witness we have is Mr. Mort Farr. We shall be glad to hear from you, sir. You may proceed, sir.

Mr. Farr. Thank you, Mr. Chairman, members of the committee.

Senator Schoeppel. If you desire to read your entire statement, that will be all right. If you desire to have it included in the record and elaborate on any part of it, that is all right; however you desire. The chair is yours.

Mr. Farr. Thank you, very much. It is not long. There may be a few things that are repetitive in here in view of the previous testimony, but I think that I have covered each of my points rather briefly. I would say that I am certainly no authority on the broadcasting end, but if there is any way that I might be of service in regard to the retailing of television and servicing, I would be pleased to answer any questions.

STATEMENT OF MORT FARR, CHAIRMAN OF THE BOARD, NATIONAL APPLIANCE AND RADIO-TV DEALERS ASSOCIATION

Mr. Farr. My name is Mort Farr. I am a retailer from Upper Darby, Pa., and have been in the radio and TV business for over 30 years, but I appear here today as chairman of the board of the National Appliance & Radio-TV Dealers Association, to represent over 100,000 TV dealers who employ hundreds of thousands of salesmen and servicemen.

I might say here why I am here. About a year ago, I had an attorney from Washington who was going to represent the proponents of subscription television call me in Philadelphia to see if he might enlist the support of myself and my organization in the furthering of subscription television. I told him that I would look into it. I told him that I would study it and see if it was in the interest of either our dealers or the public we serve, and after going into this question of subscription television and making a thorough inquiry and study, I concluded that it was not in the best interests of the dealers and, rather, that it would hurt the dealer.

I do a column for a leading trade publication and for the dealers every month, under my own byline, and I did this column, last July, Subscription Television Will Hurt the Dealer. I want to say, too, that I did not have a single letter or reply from any dealers across the country, from this national publication, differing with my views, so that I feel that I am expressing, certainly not the unanimous opinion, but the opinion of many retail dealers, because I think we dealers have an obligation to the 36 million people who have paid us over $15 billion for over 40 million TV sets, on the promise of free entertainment. These people bought these sets on the assumption that the service would be free and full.

When you look at it, it hardly seems right to charge someone for the privilege of looking at his own TV set in which he already has a sizable investment. It is almost like buying a washing machine and having to drop a coin in to make it work. It does not seem proper either to charge for the use of our skyways that belong to all the people.

We dealers did not go on record with the FCC in regard to toll TV, as we felt that that body in its wisdom would certainly agree and appreciate the fact that under our present system of free TV that we had an excellent record of progress. Our growth has been phenomenal and healthy and has been the result of natural evolution without need for legislation or congressional action. We now feel that our Congress should see to it that this system is maintained and that the best interest of all the people will be served by continuing to allow this system to progress.

It was so effective that it created a new industry in faster time than any known. Cars took 30 years to reach the same saturation as TV. Refrigerators, 25; radio, 25; and so forth, and so forth.

TV advertising is a new business. An industry that in 1946 had 10 stations and only 10,000 sets. In less than 10 years telecasting has leaped from nothing to over a billion dollars a year, most of which has been in addition to what had been spent on other media, and all of which gained, except radio, which was largely owned by TV interests, who had faith enough in TV to set up their own competition. Actually, it is the advertising industry's fastest growing baby. This advertising is having a terrific impact on our economy.

And, Senator, if I may just remark, you spoke about this word "free," and perhaps because of the advertising bill, that the public is paying more for products. Very forcibly it was brought to my attention just 2 weeks ago in Philadelphia when the Campbell Soup Co. received the Howard G. Ford award for advertising merit, and it was indicated in spite of the tremendous sums—and they have a very popular TV program—spent on advertising, that the cost per can of soup is almost infinitesimal, and that the people are still buying that popular soup for just about the same price they did 25 years ago—a very unusual thing.

And then when you find cigarettes—practically the only way they are sold is through this medium of advertising—that they keep the price down, and it requires no selling on anyone's part.

I, as a salesman, have told my salesmen that we would certainly not have the opportunity for profit in selling if our groups were presold as many of these things are, and yet it is only a small part. In fact, I think it has been well stated today that it keeps the price of these commodities down by the very quantities in which we can produce them.

With the coming of color TV, which should be this year, we have the perfect advertising media when we combine sight and sound with motion and demonstration—and then add the realism of natural color. The sale of these sets and their effect on the economy, both from the standpoint of new volume for manufacturers and dealers in the sets, and the additional impetus given to promoting other products could well take up the slack in business occasioned by a softening in the automobile market.

By 1960 it is predicted that TV advertising expenditures will reach $3 billion, and by 1965 we can expect they will top $5 billion. This should certainly provide viewers with a lot of entertainment.

At the rate of progress of the past 2 or 3 years, during which the networks have greatly improved the scope of their offerings—there is really no limit to the quality of entertainment which will be telecast free in years to come.

The toll proponents are attempting to devise a remedy for a disease which does not exist. They say there are bigger things in store for TV audiences which cannot be provided by the current system. They have yet to come up with anything beyond the stature of a cinemascope movie that will lose its chief virtue of big screen, color, and detail when it is televised.

What's wrong with a medium that has already provided us with entertainment and culture and education—news and sports?

What are these great shows we are to have on toll TV? What is more exciting than the Rose Bowl—the Tournament of Roses—the Army-Navy game—the world series—fights and local sporting events—fine news services—comedy and drama with the top stars of stage and screen? Culture such as the complete Macbeth, Richard the Third, and the Sadlers Wells Ballet.

What more could we ask for?

How toll TV works is getting to be pretty well understood. The hard economics of the entertainment world are less clearly understood, particularly in the role they would likely play in the pay as you see.

Pay as you see is going to be driven by the profit motive that is the same as present day TV. That will not change. Some of the big TV stars are already casting envious glances at toll TV. If toll TV can bring in the grosses they hear about, they are going to switch to that medium much as they switched from radio to TV.

Would a sponsor be able to outbid the toll boys for future Kentucky Derbies? Mr. Walter O'Malley, president of the Brooklyn Dodgers, gave the proponents of pay as you see considerable ammunition when he envisioned a 50-cent charge for every set tuning in on a Brooklyn game. It would not be hard to imagine the club receiving $50,000 a game for these home viewers alone. Likewise the world series could gross at least 5 or 6 million dollars a game, and in a 7-game series, it would make the million dollars now paid by a sponsor insignificant. Sports seem like an important part of TV programing but actually baseball and football consume relatively few hours out of the annual program time, and today there are few championship fights.

How about these Broadway plays we hear about? There are only a few hits per year and many times these hits could not be brought into our living rooms. The most recent Pulitzer prize winner of Tennessee Williams' Cat on a Hot Tin Roof is hardly fare for small fry.

We hear a lot about culture and the opera, but keeping in mind the profit motive—if a popular variety show would bring in $10 million at the home box office and the opera, ballet or the symphony would bring in $1 million, which would the toll operator bring to his audience? The same as our present system does with its mass medium, it will try to please most people most of the time, and after all a station can only put on one program at a time and there are only a few choice viewing hours in a day.

I believe that the public needs to be informed about the costs of subscription TV. First, there is the cost of the decoder and coin box which might well run around $50 per set, plus $30 installation, which would cost the 36 million present owners some $1,800 million which, whether bought or rented, will have to be paid for by the user. This may cost more with the complications of compatible color TV. Pay television promoters say they will be satisfied if they get $100 a year from the average family. This is only $2 per week, and would not provide much entertainment at the fees mentioned. However, on this basis, today's TV audience would pay some $3½ billion a year. This is three times the amount now being paid by the public for all spectator admissions. It is more than they pay for shoes, doctors, or electricity. This, for viewing far fewer programs than it now watches without charge.

Under the present system of American TV, no set owner is deprived of a program because he is not as prosperous as his neighbor, but once the turnstile is placed in his living room, the families who rely most on TV entertainment and information would be hit the hardest because they are the ones who for economic reasons would have to restrict their viewing most. TV would no longer belong to all the people all of the time.

We may have to further enlighten these customers about the true facts of pay-as-you-see systems. First, it is important that the shallow nature of the research that has been done be exposed. The polls and questionnaires have been weighted to favor toll TV in that they ask, "Would you be willing to pay $1 to see a first-run movie in your home on TV?" If this question was followed by something like this, if the ability to get and pay for first-run pictures on home TV also involved the loss of your privilege to see the Rose Bowl, world series, and Gleason shows free, would you still be willing to accept toll TV?—the answer would be vastly different. Toll TV advocates say that the public want it. Sure! Based on the first part of the question. The favorable reactions were obtained from biased groups and from people who could not possibly have any conception of toll TV as it would actually work by swallowing up the free competitive system.

These surveys which seem to prove that the public is quite willing to pay for television entertainment are weighted heavily toward upper income groups who need television the least. It is the poor man with no money to spare and lots of kids to provide for who relies on TV for nearly 100 percent of his entertainment. By being deprived of the choicest free events—the Rose Bowl, the world series, and spectaculars—he will be the greatest sufferer; while those who can afford an evening out, rely on TV to a lesser degree, are the ones who have expressed their willingness to pay.

There has been a great deal of talk about testing procedures for pay TV. The fatal flaw in these proposals is that none of the evils of this potential talent monopoly would become apparent in any limited test. Even with a test conducted on a very major scale—such as in all UHF markets, which might be available to one-third of all set owners, who would convert to UHF—it would not test the basic proposition.

It is reasonable to guess that such a test would prove there was a good bit of money to be made by Hollywood and baseball teams, but it would not prove or disprove whether or not every top audience attraction would ultimately be sucked into the new system.

There can be no adequate test short of a situation in which the promoters of the Rose Bowl football game, for example, would have a clear opportunity to charge the television set owners anything that the traffic will bear. With a price tag of $3 million or more on the world series telecasts, those promoters will not withhold the games from television, until the box-office potential amounts to over $3 million. This would not happen during the test nor immediately upon adoption of this system, but would be inevitable as the toll system grows.

In short, these limited tests would be Trojan horses and would falsely prove that the toll system is a harmless addition to the current one.

If toll TV is tried but is found unsuccessful, there would be a loss to the public. An immediate effect would be that nearly every major sports event would be withdrawn from the free system in order to get ready for the box office. Television producers with good show ideas, the best actors, comedians, and playrights would all make themselves comparatively unavailable for free TV. Even a highly restricted type of toll TV would have this effect because of anticipation of big profits.

Television the American way has been a wonderful disseminator of news. It is a great molder of public opinion. It is a positive force to combat subversives. Television provides a vast audience for the great leaders who shape the destiny of America—Congressmen, Senators, Presidents, doctors, scientists, clergymen, and candidates. Our future elections will probably be more influenced by the appearance on television of the candidates than by any other single factor.

I feel that toll TV will hurt the public and hurt the dealer. In a comparison between the ability of free TV and toll TV to sell sets, it would be hard to conceive of a greater success than has already been achieved. Do the proponents of toll TV presume that a subscription system could have sold over 40 million sets in less than 10 years?

Why kill the goose that is still laying golden eggs? With color TV coming, there is a large certain market ahead created by commercial advertising programs. Toll TV could only complicate this situation and would be a parasite upon the industry expenditures to develop color.

We dealers have an obligation to see to it that we do not create another sales slump like the one that followed the first publicity on color television. If this question of free versus fee continues, there will be much confusion in the minds of our customers.

Let's continue the good old American way—the free way.

Mr. Cox. Could you tell us, Mr. Farr, again, what was that figure you gave for the estimated cost of installation of a decoder and subscription service?

Mr. Farr. Yes.

Mr. Cox. I think your statement says $30. I thought you said $50.

Mr. Farr. I said about $50 a set for the decoder and as much as $30 for installation.

Mr. Cox. Now, upon what do you base that estimate for the installation charge? The description of the device, as it has been given here by the proponents, is that the installation simply involves affixing it to the set in some way, the removal of 4 to 6 tubes, the insertion of an adapter plug, and the reinsertion of the tubes; now, why would that involve a cost on the order that you have listed here?

Mr. Farr. Well, in the first place, I think that the subscription television people have now found, through the first flaws in the demonstrations of these decoding devices, that it was so easy to bootleg the programs, that the thing had to be made more foolproof. When it went to UHF frequencies, it was complicated still further; and now that we are approaching compatible color, it is more complicated yet, and it isn't quite as simple.

In other words, we may go in and install a decoder device for a customer whose set wasn't working too good when we did it, who may blame the installation of that for poor reception, and that will have to be corrected; or it may actually not work as good after they have hooked that up, and servicemen today, with the wages they are commanding, it is going to be a costly thing. It isn't the type of thing that consumers would be able to do themselves.

Mr. Cox. In other words, this figure would include perhaps more than the initial installation—further calls in order to get the thing actually working in an acceptable way?

Mr. Farr. That is right, and maintain it. I would say that that cost would include what it would take to maintain that device for a year.

Mr. Cox. Now, do you anticipate, as you suggest here, that there might well be disputes as between the subscription franchise holder, who either owns or has sold the decoder, and the set owner, as to what is responsible for any defects that develop?

Mr. Farr. In fact, our dealers are of the opinion that perhaps there will be disputes also between the persons servicing the decoder device and the set—one blaming it on the other—unless both were being serviced by the same serviceman. We already are experiencing, in our own service organizations, an antenna man saying it is the set, or the set serviceman blaming the antenna. When we get to this new device the dealers are a little apprehensive, if they wouldn't get the franchise for the decoding device, that they may eventually lose the service business also, because it might be in the public interest, or in the best interests of service, to have a single firm servicing both.

Mr. Cox. And you would assume that the franchise holder of the subscription system would control the service on the decoders, and that therefore might exclude present service organizations?

Mr. Farr. From servicing the sets.

Mr. Cox. Well, of course, he is going to have to have a reservoir of trained people. I would assume that it would be easier to train your servicemen to service his decoder than to go out and train a completely new body of people to do this?

Mr. Farr. I would say so, but I have been rather apprehensive about some of the remarks of Commander MacDonald—particularly one when someone asked him about the capital for this subscription television service. He indicated that these franchises would go to amusement people who knew something about amusements, and who had the capital to take a franchise for an area and go through with the installation and the rental or sale of these decoders. So far I haven't seen any evidence from any of the proponents indicating that this was a television dealer's province; that the business would come to him.

Mr. Cox. Are you apprehensive that if subscription service were started, and had some of the consequences that you suggest, that this would result in a lessened demand for additional television sets, and for replacement of television sets? Because certain programs no longer became available on a free basis, a certain part of the market would no longer be interested in television?

Mr. FARR. Most certainly. The fact of the matter is, people spend money for entertainment, and I believe they have spent, now, out of proportion to their income for television. But if they are going to have to spend it for the programing, it is going to be much longer before they can buy a new one; and I believe even some of the other money which should go into buying appliances, and other things that make the American way of life, would be put into that box office in the home.

I can conceive of men being so interested in sports that they would actually let their family go hungry to be sure to get the sporting events that they would be interested in.

Senator PASTORE. Well, now, that is going pretty far, isn't it?

Mr. FARR. Well, it isn't going a bit far when you recollect that I sold television sets in South Philadelphia during the early days, when the cheapest set was about $375, where a family sat on an orange crate to watch it; and where many times we have put $600 and $700 sets in a home where you didn't think the home was worth that, and they will do more so—you appeared to be a sports fan this morning. You indicated to me you would like championship fights on television, and I know men in Philadelphia, back in the days when workingmen made $30 a week, who spent a good portion of it to go out for fights because they were fight fans.

Senator PASTORE. I know, but it is rather ironical to argue against this and say this thing is so good people would cut out smoking to use the money to get subscription TV.

Mr. FARR. I didn't say smoking. [Laughter.]

Senator PASTORE. Or what have you.

Senator SCHOPPEL. I have no further questions.

Senator PASTORE. Now, let me ask you this question: You raised the subject of repair. I think you ought to clarify the record just a little bit on that. This mechanism, of course, is not too well understood by most people. You say that a situation may arise where the public interest may be injured, because a contest might arise between the set maker, or the set seller, and the decoder as to whose responsibility it is in the case of a breakdown.

Mr. FARR. No, sir, you misunderstood—between the retailer or the service department or a service organization who are servicing today—an existing set—and after this decoder is placed on it, if the set would fail—and it could, mathematically it could—or just coincidentally, or it might be due to something that was touched, then the set wouldn't be operating properly and the responsibility might be placed by the viewer. He would say, "It was the decoder"; and that man would come back and say, "No, that is your set; there was something wrong with the set." I am talking about who would accept the responsibility for the set not operating as it did previously on free programs, say, if we had part toll and part free; and if that was the case, it might be that the franchise operator of the devices might want also to service the set—to assume the entire responsibility, rather than split it.

Senator PASTORE. Mr. Farr, I am sorry I wasn't here at the beginning of your testimony. I was on the floor of the Senate at the time, but I have just picked up your manuscript and it says here that you appear here as the chairman of the board of the National Appliance and Radio-TV Dealers Association. Are they the ones opposed to this?

Mr. FARR. I also write an article each month about things that affect dealers. Last July I wrote this one on subscription TV hurting the dealer.

Senator PASTORE. Is that your personal opinion?

Mr. FARR. I clarified that. My first introduction of this was by an attorney in Washington asking me to have the dealers lend their support to subscription television, and I looked into it, studied it, talked to dealers, looked over the entire situation, then wrote this article, for which I haven't received a single dealer's comments indicating that my views were wrong. I don't say there aren't some dealers who might feel the other way, but no one wrote to me or communicated with me.

Senator PASTORE. I don't question you. I am just trying to get it on the record whether your appearance here is in an official capacity.

Mr. FARR. Oh, yes, sir.

Senator PASTORE. Speaking for all of the dealers in the association?

Mr. FARR. I suppose as much any anyone in an elective job. I am a past president of the association; I have represented our association in Washington on excise tax matters and all related matters for some years.

Senator PASTORE. I see. And did they pass any resolution to this effect?

Mr. FARR. No, we haven't passed any resolution. Also, in the beginning of my testimony, we kind of felt that the FCC would well take care of this. We didn't think that this thing could ever come.

Senator PASTORE. I don't want you to be apologetic. What I am trying to get on the record here, because it will be of interest to people who read this record, is whether or not this is a concerted action or merely an expression on your part, even though you may be a leader of the organization expressing your own opinion. I would like to have that on the record, whether there has been a concerted effort or an organized effort; whether this is the organized feeling of the association of dealers, because there are a lot of them in my State, and there are a lot of them in every State, and we would like to know whether this is an official action on the part of this association, or whether you are merely appearing here as an individual, while you may be the chairman of the board.

Mr. FARR. Well, of course, we are not very cohesive. We are coast to coast, but we have a few thousand members. Last July we put out a questionnaire on which, again, I didn't receive any comments which didn't agree with the statements that I have made; and I have many—I have a number of letters with me, from dealers who indicated that they felt that this attitude was the correct one as far as the dealer was concerned.

Senator PASTORE. In your manuscript you say, "I appear here today as chairman of the board of the National Appliance and Radio and TV Dealers Association to represent over 100,000 TV dealers who employ hundreds of thousands of salesmen and servicemen." Now, you realize, of course, that the opposition doesn't have the opportunity to cross-examine witnesses, and sometimes we have to conduct that ourselves—not expressing our own point of view, but merely to develop the record. Now, are you here today representing 100,000 dealers who feel that this is as you say?

Mr. FARR. Well, there is no other dealer organization. We speak for the dealer with the Federal Trade Commission in helping to promulgate rules. We did on excise tax matters and before the Federal Reserve Board. I wouldn't say it was unanimous. There might have been some dealers who wanted regulation W continued.

Mr. COX. I think what the Senator is getting at is that there has not been any formal action by a convention, by an official meeting of your board, or anything of that sort which has officially put the entire organization on record as opposed to pay-as-you-see television?

Mr. FARR. No, sir; except this questionnaire was sent to all of the board for comments and none came back adverse.

Mr. COX. That was sent to the members of the board rather than to the general members?

Mr. FARR. That is right. We have 22 members of the board. I would say that our dealers have been subjected to considerable material from proponents, of which I have many things here.

Senator PASTORE. Have you discussed this matter with many people who are interested in television?

Mr. FARR. It has been a matter of——

Senator PASTORE. Customers?

Mr. FARR. It has been a matter of considerable interest to me. It was a year ago that I got interested in it, and I have followed it and watched its progress—talked to customers, talked to dealers, and kept myself abreast of what was happening.

Senator PASTORE. I want to thank you, Mr. Farr.

Senator SCHOEPPEL. I would like to ask one question for the record. I notice what you had to say about some disputes or different points of view of the servicing organizations, and with reference to particular makes and types of sets. Don't you still have that very same situation prevalent today; haven't you run across that very same situation today?

Mr. FARR. You bet I have. I am just apprehensive that it may further complicate it.

Senator SCHOEPPEL. I can recall on three distinct occasions—I have a television set; I was told a tube went out; I called a service organization, a reputable one. They came out. They allegedly made some changes. I paid the bill. It flicked off, it didn't work. I said, "I would like to have those parts. I don't know anything about it, I am just curious about it, so let me keep them." I called another one. He came in and he said, "Well, what went on here?" He made it work. Then he said, "Well, it ought to be moved to another place in your apartment." It worked there all right before, and apparently the two of them there, allegedly as reputable as possible, didn't agree on the same thing. Well, now I have got it, and the public paid the bill—just 1 part of 164 million, part of the public, we paid the bill. So I can't quite envision too much difficulty developing that we already haven't some of us experienced in the ordinary run of things.

Mr. FARR. Senator, if I may remind you, this is the most complicated piece of apparatus in your home. I marvel. I am one of the pioneers. I was an old hand. I had a license issued to me in 1923, 3 M. E. And when we get into television and take a look at that chassis, we don't wonder it breaks down; we wonder it ever works.

There were over 2,000 components in the first television set, a lot of connections. I don't know how we have trained men to take care of them. Occasionally the man may be professional, he may do his best. After 6 weeks of work, I had a doctor ask me for a recall—he wanted me to fix it after that. If I go to a doctor today and next week develop pneumonia, I pay the fee; and if he makes a mistake he buries it.

Senator SCHOEPPEL. I agree that the scientists have done a phenomenal job. They tell us the same thing is going to happen in color television, much more complicated, but nobody is getting scared about trying to make it work. We make these things work in free enterprise America. We will whip that thing after awhile, and I rather envision that we will have some hearings—some of us will be around here, maybe I won't, but there will always be Senators here. We will be hearing again about something new and something different, and then we are going to look back on some of these records and say, "Well, the boys sure missed a bet back there, but it is this thing called evolution."

I believe that we have got to be realistic about this thing and we have to have the broadest gage approach on the record—the most practical approach based on experience. And we are getting a lot of conjecture in these hearings, because all phases of it have not been tried. I just rather envision that some rather obscure individuals, now today, in a few years will be the experts; and they will come up with something, and simplify a lot of these things and make it look awfully sick—what we were worrying about today, in the years to come. I hope that is the case. I believe it is the possibility. But, frankly, when you mentioned about this packing it on the set—maybe on the antenna and something else—we have that with us today. It may be aggravated and multiplied, I don't know. But if you can get away with that and get the perfection in this thing, you are going to be a miracle man.

I don't think we will ever get to that point with our appliances of any type or character. I just took my Buick automobile down; I have been having some trouble with brakes. I drive on stretches and under the speed limits, and then something goes wrong with the brakes. I take it down to a reputable dealer and he says, "You need this and that," and he gave me a bill for $65. I paid it. The same thing happened the next week. I take it to another one because I was caught, I couldn't go; and he said, "What the Sam Hill did they do?" He says, "Why, you've got a cylinder in each one of these wheels; that was your trouble." So we have disagreements and disputes as to who the experts are and what is the reason for a lot of these things. So we have to take it and smile. We don't like to pay these bills, but I guess we have to do that for experimentation, for progress. So I think you are a little farfetched when you say there is going to be a lot of difficulty develop there.

Mr. FARR. Senator, I am not afraid of progress, and I am a proponent of color television. I am probably, at the moment, the biggest retail dealer of color television in America, of which I am justly proud. I have had my men trained. I have learned what I can.

Senator PASTORE. Stop right there. What does a set really cost? My kiddies are getting after me. What does a color television set cost?

Mr. FARR. Senator, what is your address? [Laughter.] At the moment $695 will buy a very good 21-inch set, but I would say to you—I guess RCA wouldn't like me for this—by June it will be a hundred dollars less. So let the kids wait for Howdy Doody until June, and you will probably get it at $595. It is well worth it. It is perfected. It is beautiful. And I have no fear about that, Senator. The only thing I was worrying about was this divided responsibility for this decoder device—who would have the responsibility, my serviceman or the other one—and I think your explanations of this lack of responsibility, of acknowledging responsibility, as to who guessed right or what was really the trouble. A man diagnoses in all good faith, and you know sometimes a doctor's diagnosis looks identical with the last point, but that isn't what is wrong with it.

Senator SCHOEPPEL. I recognize that, but I just thought I would throw that in, because that is what happened to Andy Schoeppel. I regret having to leave, but there are matters on the floor of the Senate.

Senator PASTORE (presiding). All right, Mr. Farr. Our next witness is Mr. Radford.

STATEMENT OF WILTON D. RADFORD, NEW YORK CITY

Mr. RADFORD. Mr. Chairman, I have this brief statement I have written.

Mr. Chairman and gentlemen of this committee, as a preface to my remarks I wish to read the following statement:

I am one of the 38 million television set owners in this country who have an investment in television sets amounting to $13½ billion. Of course, I took those figures from expert testimony that I have read about.

At the present time I am retired. I have never been connected with radio or television, my business before retirement being connected with the building industry. I have watched television since December 1948, have enjoyed the many programs furnished, have enjoyed the programs on all public questions, have listened through television to both sides of all political questions, particularly enjoyed studying the personalities during the Army-McCarthy hearings—and drew my own personal conclusions: That if all of the public hearings, like this present one now being held, could be televised or broadcast, more voters would take interest and in time they would have the effect of a personal referendum.

As a private citizen, I recognize that this question of pay-as-you-see television is nonpartisan, and that both Democrats and Republicans are primarily interested in the people's side of this question.

I am somewhat amazed at the small amount of publicity which the press has given on this subject, and to the best of my humble ability I have alerted my friends and neighbors to get busy and ask their representatives where they stand on this important issue which affects their constitutional property rights and their rights of free press and free speech.

I was fortunate to have listened to Mr. Edward R. Murrow's broadcast on June 14 last covering the subject of free television viewing, and he gave the statements of the people who were advocating subscription television and those who were opposed to pay-as-you-see television. I requested a copy of this See It Now program, and my sentiments, and probably the sentiments of many more set owners, were best expressed by the words of Dr. Frank M. Stanton, president of Columbia Broadcasting System, Inc., who stated as follows, and I quote:

CBS opposes pay television because it would hijack the American public into paying for the privilege of looking at its own television sets. This is a betrayal of 34 million families who have already spent $13½ billion for their sets in the expectation that they would be able to use them as they wanted without paying for the prerogative of watching.

I would like to add a few remarks and observations to qualify my statement to this committee.

This vital issue will be settled by the people; this is my reason for appearing personally.

Mr. Chairman, I was fortunate in listening that night, because I have always listened very attentively to those speeches or those broadcasts of Mr. Murrow, and also all political speeches, and I want to say this: It was quite remarkable to me that after that McCarthy-Army hearing every man on the street that you met—or woman—regardless of their politics, thought that there was nobody like Hon. Carl Mundt for his fairness and his presiding qualifications. I mention that, because I think he deserves that compliment, and I am glad to say it in public.

Now, Mr. Chairman, I read—it was about a one-line publicity notice, the first part of February; I threw this aside and filed it—that there was going to be a resolution introduced by the president of the New York City Council about 2 days after I read this notice, and just by chance I got into it, and I don't know but I might be the only single set owner here today, and I am sure I was the only one at that meeting. It is surprising to me how little the public knows about this. I met a lady the other day—and a highly intelligent neighbor—and she said she wasn't opposed to pay-as-you-see television because "I am paying $6 and $7 a seat for a first-class Broadway show, and I understand that they are going to put a meter on my set and I will be able to put a dollar in the set and look at the show." I didn't argue with her, but before I——

Senator Pastore. You didn't argue with her, but did you agree or disagree?

Mr. Radford. I didn't want to make her feel that small, because those were not the facts. I just said, "I can't do anything about it." I treated it in an offhand way.

One of the presidents of a baseball club in this Murrow speech which I have quoted stated that baseball could not survive without television receipts, and he thought 50 cents a game would be a fair price.

Now, a great many of you honorable gentlemen of the Senate have been interested in a subject that I have been reading in the newspapers for the past 2 years—juvenile delinquency. And if by any chance pay television ever went over, there is one place where the youth who must see a game—and if their parents couldn't afford to put the 50 cents in—could go: Every tavern and bar in the land would have free television of baseball, and the bartender would drop in 50 cents. That is something I speak about.

That isn't going to win this case, and before I go too far, and so that you Senators and members of this committee will understand, that I don't take life too seriously, I don't think this will ever go over, because I think that there are men of both parties in Congress and in the Senate who have too much commonsense to upset this whole lineup. I think that the television people and the advertising people together have done a pretty good job, and it is quite significant to me that even in the last 48 hours before I left New York City one of the fine newspapers has an editorial about the terrible commercials, and the fact that the people are being fooled all of the time. Now, the people that would criticize the commercials the most would be the ones that would scream the loudest if pay-as-you-see television is ever put over.

Now, just the little that I have learned from this I have learned from experts, and I quoted—I wouldn't know these men that I quoted if I stumbled over them, and I don't know anybody in this room, but my good wife, whom I brought down with me—but I do think——

Senator PASTORE. Let me ask you, sir, because I am very much interested in this—and this to me, if what I am thinking is true, symbolizes the very efficacy and vitality of our system of government—Did you come down here on your own expense?

Mr. RADFORD. Yes, sir; definitely.

Senator PASTORE. Just representing yourself, out of your own pocket?

Mr. RADFORD. Representing myself, but I will tell you why I did that.

Senator PASTORE. I am not quarreling with you. I just wanted to find out.

Mr. RADFORD. I am going to tell you. You have asked me a question, and I don't want you to misunderstand this. This isn't self-praise. From the time of Theodore Roosevelt I became an independent thinker. I voted for both sides of the party. I happen to be an enrolled Democrat. I am going to mention this because you asked me a question.

Now, I have been interested, and I came down to hearings here on the Home Owners' Loan Corporation when a Senator introduced a resolution to turn it back to the very people that caused it to be created to save homes, and it finally qualified and the Government didn't lose a dollar.

Now, if you will let me stick on this subject a minute, I have read between the lines, and I may be wrong, but I think I am right. Every once in a while somebody knocks the Federal Housing Administration insurance end of mortgages. I was in the building-material business, and in Greater New York City and metropolitan Long Island, before that law was put on the statute books, the financing of individual homes was a highly organized racket. That is a strong statement, and I can prove it, for I was put out of business by it.

But every once in a while lately, if you read through the lines, some real-estate man will say—some of the mortgage companies stand up for it; they will say, "Well, you can do without this insurance; it isn't necessary any more." That is some of the second-mortgage fellows trying to get back in business.

Now, Mr. Chairman, I have given you a brief outline of why I came down here. I was in civics in the county of Queens, where I lived from 1913 to 1948, and I made this statement brief for two reasons: I don't think anybody will misunderstand what it is about, and when I leave here at my own leisure I am going to send one of these to all of the civic groups around the metropolitan district that I know of.

Senator PASTORE. Do you do this all out of your own pocket?

Mr. RADFORD. Yes, sir; but this didn't cost me a lot of money.

Senator PASTORE. I shouldn't think so; but it cost some money.

Mr. RADFORD. This statement that I got up I typewrote myself originally and paid about $4.50 to get a hundred copies.

Senator PASTORE. I just think it is marvelous; that is all. I think it exemplifies the spirit of America—an individual who becomes so intent on the problem that he actually writes out his own speech and comes down here as an independent citizen and is given the opportunity to express his opinion—and we are honored to listen to you.

Mr. RADFORD. I am not ashamed of the fact that I haven't too much of the worldly goods, but I am rich in spirit—I will put it that way.

Senator PASTORE. Well, no one can ever question that.

Mr. RADFORD. Now, I have 2 sons, and I have 4 fine grandchildren. They live in the suburbs. They cannot always take these children to a movie because they would have to get a babysitter for one of the children. Their greatest diversion is television.

As far as I am concerned, if the pay-as-you-see goes over, I will just pull the plug and it won't bother me a bit, although I am against it, but I think it is absurd.

Now, here is another thing: I think if the Commerce Committee of the Senate advocates fee television it will create unfair competition in restraint of trade, and I will tell you why I think that: Because just 1 expert said—and he named the television program—that I Love Lucy program costs today about $85,000 to put over. If one-third of the people listen to that they will take in three times the amount of money. Now, I would just like to see if I am reasoning along the right lines. Suppose if the pay-television people come along and say to the sponsors, "Look, you give us $85,000, and we will give you 5 percent of the monthly take." Well, if they are human, they will throw over the free end of I Love Lucy and take it.

Let us be practical and honest with ourselves. That would be business. I think it is economically unsound, and I think it will demoralize the entire industry and put many thousands out of jobs, and also demoralize advertising to some extent. There would be a curtailment of free speech and free press; and I say again, commercial TV has done a good job and commercial TV has improved since the day I started listening to them.

Now, one of the good Senators, and there is some publicity on this, a piece about that high [indicating] in the New York Times, quoted the Senator from Ohio——

Mr. COX. Senator Bricker?

Mr. RADFORD. No; that other Senator.

Mr. COX. Senator Bender?

Mr. RADFORD. No; you know his name. He was co-Senator with the late Senator Taft; he was Governor of Ohio—Senator Bricker—and he is afraid they will get too much political power.

My goodness, they have given all sides of the questions and it is marvelous. The reason I spoke about televising these meetings that you have, these hearings. I never knew him; everybody respected the late Senator Taft for one reason. When Mr. Taft was on television—and I observed it the first time I ever saw him on television—he never indulged in doubletalk. Senator Taft gave direct answers and everything was right to the point, and if he thought a question was foolish, he told the whole Meet the Press so.

I mention those things because I think it is important for you to know. Now——

Senator PASTORE. Well, I want to subscribe to that. He was on the other side of the political fence and I disagreed with him most often, but I will agree with you that he had the courage of his convictions and whatever he believed, he said.

Mr. RADFORD. He was never a doubletalker, and neither was Truman ever a doubletalker on television.

Senator PASTORE. Now we are all even. [Laughter.]

Mr. RADFORD. But, Mr. Chairman and members of this committee, I want to bring up the point what a wonderful thing it is to have all of these things televised. It is really marvelous, because you would be surprised that me in the living room, and you in your living room, see the fellow; you can tell in a minute. You could tell at that hearing I mentioned when somebody was trying to get over that side of the truth.

Mr. Chairman, I do not want to take up too much of your time. I have spoken briefly. There isn't a single question on the technical side of this question that I could answer. I know nothing about it, except that when in 1948 I bought a television and asked the chief engineer of the company to show me how to run it, I ran it for 8 years and spent $25 expense money to have it fixed, and it is still running. I cannot answer any questions technically, but I hope that I have left you some food for thought. And I thank you for your courtesy.

Senator PASTORE. All right, thank you very much. Now that is the last witness that we have and I understand that we will meet at G–16 tomorrow at 10 o'clock.

Thank you all for appearing.

(Whereupon, at 3:55 p. m., the committee adjourned to reconvene at 10 a. m. Friday, April 27, 1956.)

TELEVISION INQUIRY

FRIDAY, APRIL 27, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., in room G-16, the Capitol, Hon. Charles E. Potter, presiding.

Present: Senator Potter.

Also present: Wayne T. Geissinger, assistant chief counsel; Kenneth Cox, special counsel; Nicholas Zapple, staff communications counsel.

Senator POTTER. The Committee will come to order.

This is the continuation of the hearing on television, and this week it has been primarily on the question of subscription television. I would like to submit for the record a statement by ABC which will be made a part of the record at this point.

(The statement referred to is as follows:)

STATEMENT OF AMERICAN BROADCASTING CO.

American Broadcasting Co. welcomes the opportunity of submitting a statement to this distinguished committee on the question of pay television, particularly so because it is ABC's position that this question is one which Congress, rather than the Federal Communications Commission, should decide.

The pay-television proposals have provoked much argument about whether the FCC has authority, under existing legislation, to approve any form of subscription television and how, if pay television is authorized, this mechanical-electronic device, so fundamentally at odds with basic ideas concerning the permissible uses of the public domain in the radio spectrum, could be accommodated within the existing regulatory framework. Briefly, it is ABC's position that the Communications Act of 1934, as amended, does not give the FCC the authority to establish a subscription television system and that subscription television is a hybrid which defies classification within any of the categories of radio and television service recognized in the Communications Act.

THE CONGRESS SHOULD ASSERT ITS JURISDICTION OVER PAY TELEVISION

Pay television raises complex and difficult legal and policy questions. So far as the legal questions are concerned,[1] their difficulty arises in large part from the fact that in this area the intent and desire of the Congress has not been made clear. In the absence of a clear expression of national policy by the Congress, there exists, in effect, a legal vacuum. This is a field, therefore, in which the Congress should assert its jurisdiction whether or not the existing statutes can, by tortured construction, be interpreted as giving the Commission present authority.

Briefly, the legal arguments concerning the FCC's authority to establish a subscription television system center around the legislative history of the Federal Radio Act of 1927. At that time, radio broadcasting was in its infancy (television was only a laboratory dream) and its further development was a

[1] There are attached as appendix A, the memorandum of law submitted by ABC as part of its comments in the FCC's pay television rulemaking proceeding, docket No. 11279, and as appendix B, the further memorandum of law submitted by ABC with its reply comments in the same proceeding. (These appear beginning at pp. 1386 and 1393.)

matter of speculation. The congressional debates on the 1927 act included some comment on the possibility of a radio service in which a direct charge might be made to listeners. Some statements were made which can be construed as approving such a service; other statements clearly disapprove it.

At the time of the passage of the Communications Act in 1934, the pattern of the broadcasting industry as a free service to the American public was well established. It is not surprising, therefore, that the debates on the 1934 act contained no reference whatever to subscription radio, much less subscription television.

This meager legislative history has been subjected to extensive analysis. Elaborate legal theories have been erected with no basis other than casual comments by 1927 Senators and Congressmen and unexplained deletions from the 1927 act. No amount of legal theorizing can supply what is not there. The facts are clear that subscription radio and television is a subject on which the Congress has not spoken its mind for approximately 30 years, and then only in the most incidental and inconclusive manner.

The FCC in common with other similar agencies is an arm of Congress. The purpose of such agencies is not the making of national policy but its detailed application. The limitations on their functions are well recognized. A leading authority on administrative law has said, "The legislative process is especially qualified and the administrative process is especially unfit for the determination of major policies that depend more upon emotional bent and political instincts than upon investigation, hearing, and analysis" (Davis, Administrative Law (1951), p. 57). Mr. James M. Landis, who is counsel for Skiatron TV, Inc., one of the proponents of pay television, has written "The responsibility for fashioning a policy not only of great economic importance but also one that has divided the faiths and loyalties of classes of people cannot appropriately be entrusted to the administrative" (Landis, The Administrative Process (1938), p. 55).

No one can say that to abandon the very basis upon which our radio and television industries have, from their inception, been built would involve a major policy decision "of great economic importance." Nor can anyone deny that pay television is highly controversial. As Commissioner Lee points out in his article in Look magazine favoring pay television, the FCC subscription television processing has produced thus far nearly 24,000 individual comments, filling 69 volumes, or more than 18 feet of proposals, counterproposals, and controversy. No other proceeding which the Commission has ever conducted has produced anywhere near this volume of comments.

Thus pay television is precisely the type of question which, the authorities agree, should not be left to the administrative but requires resolution by the Congress. ABC urges that Congress assert its jurisdiction in the matter.

THE ACCOMPLISHMENTS OF FREE TELEVISION

The American system of free television, in the short space of 10 years, has provided the people of the United States with more television broadcast stations, more television receivers, and more television programs than are available to all other peoples in the world combined. Notwithstanding the 4-year "freeze" on new stations and the shackles imposed by unfortunate allocation errors which the FCC has failed to correct.[2]

Free television can be seen today by 90 percent of the American public, in approximately 35 million homes. This remarkable growth, which no other industry can claim in as brief a period of time, has been accomplished without a charge on the viewer—without a coin-grabbing gadget in the home. Those who have contended that television was doomed to failure without a box office have been proved false prophets.

Progress in television programing has kept pace with the expansion of television circulation. Television has brought the worlds of entertainment, sports, news, government and education visually into the American home. In the field of government, television has shown the American people the efforts of their elected representatives engaged in committee hearings on matters of national importance; the President's state of the Union and other messages to the people;

[2] ABC's plan for the correction of these errors has been discussed in earlier testimony before this committee by Ernest Lee Jahncke, Jr., vice president and assistant to the president of ABC. The adoption of this plan would make possible 3 or more television stations in practically all the first 100 markets in the country, as well as substantially increasing the possibilities for competitive television service in the smaller markets.

various addresses by leading personages in government; extensive pictorial reports of national, State, and local elections creating fuller understanding of this most important demonstration of democracy in action; day-by-day news coverage, both film and live, of the happenings which mark our times; weekly panel discussions in which the vital issues of both domestic and foreign policy are analytically presented to the forum of public opinion. Plans are presently being made for televising the political conventions which will take place during the summer of 1956. The American system of television has created better informed citizens with a greater awareness of their responsibilities.

Through television, the children of America have been awakened to the world outside. Carefully selected educational programs have exposed these growing minds to new and wondrous experiences previously unencountered within the narrow confines of a child's life. Through weekly programs, children are visually taken to the zoo, the science laboratory, historic points of interest; exposed to the fascination of books and music; stimulated to make toys and other playthings with their hands; and, of course, entertained. Entertainment of children occupies a substantial position in the American system of television, and efforts are constantly made to insure proper quality. Many children's programs have received commendations from groups throughout the country interested in child welfare and development. ABC's the Mickey Mouse Club indicates the type of presentation which satisfies a child's needs for entertainment in a constructive manner.

Television presents an extensive selection of dramatic programs weekly. During the course of its dramatic development, television has utilized material from the legitimate stage, classic, and current short stories and novels and material from an entirely new school of writers who have grown with the industry. Dramatic material written for and first presented on television may now be seen on the legitimate stage and in motion pictures. In like manner, television has developed new and refreshing talented actors and actresses who have carried their now recognized abilities successfully into other areas of entertainment. This is indeed an accomplishment for so young an industry and a major contribution to the dramatic arts.

Motion pictures and dramatic presentations of the legitimate stage, after realizing their theater potential, become available on free television. Other dramatic presentations are immediately available on films especially made for television. A perusal of the program schedules of ABC and the other networks shows that the American public is being furnished a countless number of successful dramatic plays as well as music and other entertainment.

American television has presented an impressive schedule of sports events from the time that remote telecasts first became feasible up to the present. During the past 2 years practically every phase of sports activity has been available on the television screen. Coverage ranged from the famous Bannister mile in Vancouver to the world series; from the Run for the Roses at the Kentucky Derby to the traditional bowl games on New Year's Day; from basketball to baseball to boxing with seven championship bouts during 1955. Each Saturday afternoon during the fall, network television has brought college football games into television homes.

It is not, of course, our position that there is no room for improvement in television programing. But the important fact is that improvement is taking place daily and this improvement will continue. There is no occasion to levy a tribute upon the American public in order to accomplish it.

The proponents of pay television would have you ignore this continuing improvement. They persist in comparing their grandiose plans with television programing, not as it is today, but as it was a few years ago. They also persist in asserting, in the face of overwhelming evidence to the contrary, that television must have a box office.

PAY TELEVISION WOULD ADD NOTHING BUT A PRICE TAG

What will pay television offer in the way of program fare that is not already available? Its proponents are in fact hard-pressed for an answer, but they speak glibly of first-run movies, Broadway plays, and championship fights.

As to movies, ABC is now providing three high-quality movie series, Afternoon Film Festival, Famous Film Festival, and Film Fair. Famous Film Festival has included such excellent films as The Red Shoes and The Cruel Sea. The audience ratings of ABC's film series indicate that they are eminently acceptable to the public. Recent developments in Hollywood have enlarged the number of first-quality movies available to free television.

So far as championship boxing is concerned, ABC's Wednesday night fights series included, on October 19, 1955, the lightweight championship fight between Wallace (Bud) Smith and Jimmy Carter, and on November 30, 1955, a welterweight championship fight between Carmen Basilio and Tony DeMarco. On March 14, 1956, Basilio and Johnny Saxton met in second welterweight championship match. Of the 11 championship bouts in 1955, 7 appeared on free television. As has been noted above, free television provides other sporting events in profusion.

In the field of drama, free television now provides several hour-long dramatic shows each week. In addition, there are frequent 90-minute shows. The people of the Nation now have the opportunity to see without charge many more plays in a year than a professional Broadway drama critic.

To obtain the support of the lovers of opera and ballet, and of those who decry the failure of television to make fuller use of its educational potentialities, the proponents of pay television cite these areas of programing with the implication that subscription television will result in more programs of these types. Because of the capital investment necessarily involved in attaching coin-grabbing gadgets to 35 million receivers, it is important to the success of pay television that the turnstiles be kept moving. If the proponents are sincere in their demand for only a limited number of hours on existing facilities, it will be vital to the success of their system that the garbled programs have mass appeal.

If a ballet will gross X dollars and a situation comedy 10 times that amount, it would be naive to suppose that the ballet would be presented by pay television in preference to the comedy. Consequently it is difficult to understand how cultural and educational programs will receive any attention from a system financially dependent on the number of viewers, if restricted to a few hours a week. There are also situations where many will watch for free but will not pay to see.

With a limitation on the amount of time in which subscription programs may be presented, only those with a mass appeal and thus a high revenue potential will be carried. Pay television, to keep the turnstiles clicking, must program for the largest possible audience. So long as more profitable material was available, pay television could not be expected to present such persons as 1955 Peabody Award-winning Quincy Howe of ABC, who won his award for a program series promoting international understanding, and Dr. Frank Baxter, who won his award for an educational series on Shakespearian drama.

Only when the last possible dollar was being wrung from mass audiences would pay television seek to till the less fertile fields of minority tastes. This would not occur until pay television had most of the broadcast day and existing facilities to itself. But when that day arrives there would be no free television.

Thus it is clear that pay television will add nothing, except a price tag, to what the public already enjoys.

TELEVISION NEEDS MORE OUTLETS TO PERMIT COMPETITIVE GROWTH, NOT A BOX OFFICE

Recent statistics of the television industry establish clearly that it is not more economic potential which television needs, but more outlets to permit television more adequately to realize the tremendous potential of advertising revenues that are already available. In the final quarter of 1955, national advertisers were buying television time at the rate of more than $880 million a year. By now that figure is undoubtedly considerably higher. And it does not include the sizable sum being spent for television advertising on the local level. These revenues of free television are being produced by a national system of only about 450 stations, with markets which could obviously support 3 or more stations still limited to only 2 and in some cases to only 1 station. (By the most conservative estimates, free television could now support more than 600 stations. It is only allocations, deficiencies, and delays which prevent this number of stations from being on the air today.)

The lack of an adequate number of outlets for nationwide distribution of programs is seriously handicapping ABC in its competitive struggle with CBS and NBC. ABC's accomplishments in the program field are not inconsiderable, as witness the fact that in the last 2 years, eight of the major awards by the Academy of Television Arts and Sciences, the so-called Emmy awards, went to ABC programs and talent. But good programs must have national audiences to justify their expense. ABC's inability to obtain a fully national audience limits its ability to produce programs and to retain the outstanding programs which it has already developed. That an increase in the competitive opportunities for ABC and for other program producers would result in more and better television programs is well recognized. Jack Gould, the television critic of the New York Times, had this to say in the April 8, 1956, issue of that newspaper:

"What is at the root of all the difficulty? Fundamentally, it is broadcasting's oldest problem: an inadequate number of desirable stations. The number of outlets capable of being received on present sets is subject to a technical limitation; in many cities there are still only two stations of consequence. The high hopes of providing a truly national TV service, with 3 or 4 networks reaching almost everywhere, as with radio, simply haven't been realized.

"It is the lack of additional good stations that has handicapped the American Broadcasting Co. Considering this technical problem, which it is powerless by itself to correct, ABC's progress in battling NBC and CBS is little short of miraculous. With the aid of Walt Disney and British movies it is giving the two titans some anxious moments and seems certain to go much further. *But if it were possible for ABC to have truly adequate outlets across the country, then the fur really would fly in the whole programing setup.*

* * * * * * *

"The long-range solution to assuring maximum competition in TV will come only when ABC and perhaps even regional networks can really give battle to CBS and NBC. The only way to do this is to fit in more stations within the existing channels, a difficult task but one that needs to be pressed with maximum vigor and engineering imagination." [Emphasis supplied.]

The proponents of pay television profess to be concerned with the lack of competition in the television field. Zenith Radio Corp. devoted the bulk of its reply comments filed with the FCC in docket No. 11279 to an attack on CBS and NBC. They would have the FCC and the public believe that pay television is the knight in shining armor which will slay the television monopoly dragon.

In actual fact, pay television would serve only to aggravate the existing shortage of television outlets and to worsen the position of ABC and other competitors of CBS and NBC. Every hour devoted to garbled transmissions during good viewing periods (which are equally essential to pay television) will render more acute the problem of obtaining clearances for nationwide programs and thereby further curtail the opportunity of ABC and other networks and program producers to compete for new outlets on a nationwide scale.

PAY TELEVISION WOULD DESTROY FREE TELEVISION

The promoters of pay television assert that they want free television to continue, that theirs will be a "supplementary service," and that the two systems can coexist on the same facilities. This is just to get the cuckoo's egg into the nest. Once the inevitable consequences of pay television, superimposed upon existing television stations, are fully appreciated, there is no choice but to reject the pay television proposals unless we are prepared to junk the American system of broadcasting as not being in the public interest. It requires no power of prophecy to foresee some of the inevitable consequences:

(*a*) *Partial blotting out of free television.*—The pay-television proponents ask that existing stations be permitted to discontinue broadcasting in the traditional American fashion [3] and to substitute a scrambled signal which would become usable only upon payment of a fee. In the 131 markets of the United States with only 1 station in operation, this means that during those hours, be they few or many, when scrambled signals are being transmitted, the public will not be able to receive free television. Similarly, in the 65 markets with only 2 television stations, inasmuch as it is not contemplated that all subscription programs will be the monopoly of a single entrepreneur, the same blot out will exist if both stations are permitted to carry subscription programs simultaneously. Even in multiple station markets, if as many competitive program sources are permitted to develop in the subscription field as there are in free television, all stations could be transmitting scrambled signals at the same time, with the result that free television would be blotted out during those periods.

(*b*) *Loss of programs and talent.*—If the click of the turnstile produces the bonanza which the proponents of pay television visualize, the effect on the programs and talent now furnished free to the viewer can hardly be exaggerated. The impact can be most clearly visualized in the field of sports. The proponents of pay television publicly admit that they could gross $25 million on the world series, 25 times what the sponsor paid for the television rights in 1954. If this

[3] Since pay television, even more than free television, would require large revenues which only substantial audiences could produce, it would not, as some suppose, encourage the establishment of small-city television stations.

is permitted, the American public will cease to have at no charge the "best seat in the park" for the world series or even for games presently provided free to the public throughout the baseball season. Other sporting events will be similarly lost to free radio and television—the Kentucky Derby, the football classics, etc.

Nor would such inroads be confined to sports. The profit motive being what it is, backed by the tolls assessed against the public, the proponents of pay television could outbid the television industry for talent and other programs presently viewable without charge by the American public. As good shows, with audience appeal, were developed on free television, their transfer to pay television would be only a matter of time. With the loss of sports, other outstanding programs and their star performers, the present programing on free television would soon deteriorate to the point that it would lose both advertising and audience appeal. The attendant loss of revenues will also have a deleterious effect on unsponsored public-service programing now furnished free by the networks—educational features, religious programs, public discussion, congressional hearings, Presidential addresses, and news. Without revenues from the sponsors of sports and entertainment feature with mass appeal, the public service thus provided by the networks would have to be substantially reduced.

(c) *Shifting of advertising revenue to subscription television.*—One need not be a cynic, whatever be the proponents' position today, to share the view that subscription television, if authorized, would not long forego the opportunity to tap a fertile source for additional revenue. Just as the Reader's Digest recently decided to carry advertising, in order to avoid charging the reader a higher price, so the pay-television entrepreneurs would contend that the charges which they exacted from the public for the world series, championship fights, and football games, could be reduced if advertising were carried on the programs. No administrative agency, confronted with such pressures, could long sustain a ban on the use of advertising on subscription programs. The public would then be paying to see commercials and the advertisers would be paying also. With the loss of its sole support, sponsored radio and television, furnished free to the public, would soon become a matter of history.

(d) *Gradual usurpation by pay television of time now utilized for free television.*—Unless regulated in minute detail by a Government agency, subscription television operators would utilize as much time as could profitably be used—as much as the traffic would bear. With clearance and other problems, the time left for free television would have less and less appeal to the advertising sponsor. As commercial advertising dropped off, the broadcaster would in turn be forced to rely more and more on subscription television for financial support. The hours left on broadcast stations for free television would be few and far between. To permit the first inroad on frequencies and facilities devoted to free television is to sow the first seed for destruction of the American way of broadcasting.

(e) *The effect on the American public.*—Today more than 90 percent of the American public is able to watch free television. In many areas they have access to a number of program services. The entertainment, educational, sports, and public-service programs now available to the American public on free television are unexcelled. No country, with a government-financed or any other system, has evolved a superior program service. The privilege of viewing these programs, transmitted over publicly owned airways, is not restricted to those who can afford the "per program" exactions which the proponents of pay television seek to levy on the natural right to hear and see what goes out over the air. Frequencies allocated to broadcast use should serve the general public, not merely those who can afford to pay the tolls imposed and determined by persons who may not even be accountable to the FCC. Little Johnny or Mary should not be precluded from seeing the Mickey Mouse Club, which would inevitably gravitate to pay television, because the family budget requires a choice between that program and the later evening movie. There are millions of families whose weekly budgets for entertainment are limited, and that fact cannot be overlooked in determining what decision in this proceeding will best serve the public interest.

For the foregoing reasons, ABC is firmly of the view that pay television and free television cannot coexist. The moment the problem of time clearance is aggravated, over what it is today, by reason of the loss of existing facilities during the hours garbled programs are transmitted, the downward spiral sets in. With the inability to clear time during good viewing hours (equally essential to pay television), free television loses advertising sponsorship. The resulting reduced revenues will affect programing. Pay television with its box office will siphon off sporting events of national interest. Better programs and better talent will gravitate to the medium with the larger checkbook. Free broadcasting, on airways owned by the public, would deteriorate if not disappear. If the American way of broadcasting were "just a business," its replacement by a new and better industry could not be criticized. But broadcasting has developed in the United States on the concept that the people own the airways, that they have a natural right to see whatever goes out over the air, and that this intelligence is available free of charge to all the public, and not simply those who have the ability to pay—as basic a concept as the American principle of free public schools, free libraries, free parks, and free playgrounds. Not even the proponents of pay television dare suggest that free television should be discontinued. Presented in that garb they know what the answer would be. But pay television superimposed upon frequencies and facilities now devoted to free broadcasting will have that precise result. Governmental regulation might postpone but not preclude the inevitable relegation of free broadcasting to the limbo of history.

THERE IS NO ROOM FOR AN ELECTRONIC BOX OFFICE IN THE RADIO SPECTRUM

Pay television, whatever its merits, cannot be considered a public service in the sense that broadcasting is. In essence it is merely a new and complex system of program distribution using, for private purposes, a part of the public domain which ought to be devoted to the benefit of the people as a whole, not just those with financial resources.

The increasingly severe shortage of space in the radio spectrum was recently highlighted by the announcement of the Office of Defense Mobilization that no additional VHF channels could be made available to television. Because of spectrum shortage, it has become a cardinal principle of allocation that persons seeking to use radio frequencies must show first that it is impractical to achieve their purpose without the use of radio. The proponents of pay television have made no such showing. Whether or not community antenna systems, as they now operate, are in the public interest, their success has proved that it is feasible to deliver television signals to individual homes by wire.

WE CANNOT AFFORD TO EXPERIMENT WITH PAY TELEVISION

Lately the cry has arisen: Let us end the controversy by the trial-and-error method; let pay television be authorized and let the public say whether it wants it or not. This has a deceptively alluring sound. Trial and error it is asserted is in the American tradition.

At the outset it may be said that our television system, already the finest in the world, is, with all its deficiencies, too valuable a national asset to risk its destruction by needless experimentation. It is not an incident of our system of free enterprise that advocates of all proposals have, as a matter of right, an opportunity to try them out. There is no concept in our theory of free enterprise which bestows a "right to try" any and all schemes for the exploitation of public property. Congress has declared that the ownership of the spectrum is vested in the people and held in trust for them and has directed the FCC to authorize only those uses which are consistent with the public interest. Contentions that their proposals must be approved or the proponents of pay television will be deprived of their right to compete under our system of free enterprise are unfounded.

Moreover there are situations where the trial-and-error method is not appropriate. Once 35 million television receivers (or even a substantial part of them) are equipped with pay television turnstiles at $50 or more apiece, pay television would be here to stay regardless of the consequences. Someone would have to pay for all that equipment, and the only way it could be paid for would be by continuing the pay-television authorization.

CONCLUSIONS

In conclusion, ABC calls attention once again to the more immediate and more important problem facing television, about which this committee has already heard so much, the problem of television allocations and unnecessary shortage of television outlets. This is a problem clearly within the FCC's jurisdiction—one on which it should have but has not acted. When that problem has been solved and free television has been given a full and fair opportunity to show what it can do, and if it fails to fulfill the public's need, then, and only then, will it be time to consider abandoning the traditional basis of our broadcast system. ABC suggests that the Congress so instruct the FCC.

APPENDIX A—MEMORANDUM OF LAW

In its notice of proposed rulemaking in the instant proceeding the Commission invited comments on the following questions of law:

(*a*) Whether the Commission has the authority under the Communications Act of 1934, as amended, to authorize and regulate subscription television operations.

(*b*) Whether subscription television constitutes "broadcasting" within the meaning of section 3 (o) of the Communications Act of 1934, as amended; and if it is not broadcasting, whether subscription television constitutes a common carrier or other type of service, and whether the Commission has the authority to permit subscription television to employ channels assigned to television broadcasting.

THE COMMISSION LACKS STATUTORY AUTHORITY TO AUTHORIZE SUBSCRIPTION TELEVISION OR REGULATE ITS OPERATIONS

Television broadcasting, as we know it today, and subscription television, as proposed by petitioners in this proceeding, were for the most part undeveloped arts at the time Congress adopted the Radio Act of 1927 and subsequently incorporated its principal provisions into the Communications Act of 1934. This fact alone does not place them beyond the purview of a basic statute designed to encourage new and more effective uses of radio, where such uses are "in the public interest" (Section 303 [g]). For example, FM, facsimile, and television, though not mentioned by name in either statute, are forms of "communication by radio" and thus embraced in the broad general language of these basic statutes. However, the Commission's authority over "radio communication" varies markedly, depending on the use to which the frequencies are put—whether for "broadcasting," "common carrier," or other purposes.

The legal questions posed by the Commission thus cannot be answered in the abstract. They must be considered in the light of petitioners' proposals. Petitioners ask that stations presently licensed in the television broadcast band be permitted, during unspecified portions of the day, to discontinue broadcasting in the traditional American fashion (advertising sponsorship with no charge to the viewers), and to substitute a schambled signal which becomes usable only upon payment of a fee. The adequacy of the Commission's existing authority over "radio communications" in general must be analyzed in the light of the problems (so far as they can be presently visualized) which this superimposed system presents, bearing in mind that if not adequately reuglated and if it possess the economic potential claimed by its proponents, subscription TV could replace free television.

The Communications Act itself neither expressly bans nor expressly authorizes a broadcasting system in which the listener or viewer is charged a fee for the program he receives. The act does contemplate the charging of fees for certain "common carrier services" employing radio frequencies. With the act largely silent on many of the legal problems posed by the instant petitions, resort must be had to various aids to statutory construction to answer the legal questions posed by the Commission in its notice in this proceeding.

The intent of Congress, if that intent can be ascertained, is of course controlling. But neither the courts nor administrative agencies, under the guise of statutory construction, have authority to legislate—to cover maters not reasonably embraced within the statute itself. In ascertaining the intent of Congress, recourse may be had to legislative history—to ascertain the overall purpose, of Congress, the reasons for the statute, the mischief to be prevented or remedied, and the meaning of particular provisions. In fact, in construing a statute a court or administrative agency "may with propriety recur to the history of the times when it was passed" (*Great Northern Ry. Co.* v. *United States*, 315 U. S. 262, 273 (1942)). We think that history is not without significance here.

Broadcasting, as we know it today, did not develop until after World War I. In 1919 broadcasts were classified as "limited commercial stations," licensed by the Department of Commerce. The growth of broadcasting during 1920 and 1921, and the resulting interference reached a point of 1922 that Secretary Hoover convened the First National Radio Conference in Washington to consider technical and social problems created by this new communications medium. In his opening address, Secretary Hoover called the Conference's attention to the following problem:

"One of the problems * * * is who is to support the sending stations. In certain countries the government has prohibited the use of receiving instruments except upon payment of a fee out of which are supported government sending stations. I believe that such a plan would most seriously limit the development of the art and its social possibilities. * * * There is in all this the necessity to establish public right over the ether roads. * * * There must be no national regret that we have parted with a great national asset."

At the third Conference, in October 1924, he made these statements:

"Radio has passed from the field of an adventure to that of a public utility. * * * I believe that the quickest way to kill broadcasting would be to use it for direct advertising. * * * To what extent it may be employed for what we now call indirect advertising I do not know, and only experience with the reaction of the listeners can tell. * * * Nor do I believe there is any practical method of payment from the listeners."

At the fourth Conference, in November 1925, Secretary Hoover was able to report:

"The decision that we should not imitate some of our foreign colleagues with governmentally controlled broadcasting supported by a tax upon the listener has secured for us a far greater variety of programs and excellence in service free of cost to the listener. * * *

"* * * The desire for publicity is the basic motive and the financial support for almost all the broadcasting in the country today. Publicity largely provides the cost of broadcasting which might otherwise fall upon the listeners, who now pay nothing, as the advertiser does in the case of the newspaper or magazine. * * *

"The ether is a public medium and its use must be for public benefit * * *."

It was in this atmosphere and with this background, after rulings that the Secretary of Commerce lacked authority to regulate radio broadcasting under the 1912 act (*Hoover* v. *Intercity Radio Co.*, 286 Fed. 1003 (App. D. C. 1923); *United States* v. *Zenith Radio Corporation*, 12 F. 2d 614 (CCA 7, 1926); 35 Op. A. G. 1926), that Congress undertook the task of enacting more effective legislation, which culminated in the Radio Act of 1927.

Paul Klugh, speaking for the National Association of Broadcasters in hearings on H. R. 7357 (68th Cong.) when asked whether his association was "committed to the policy that the public ought to be charged for the broadcasting service that goes into every home in the land," stated: "No, sir: I refer to making a charge for the use of the station broadcasting plant. * * * We see no method of getting support to continue broadcasting excepting through the type of advertising which will be listened to by the public, and advertising will pay * * * it is the only source * * * at the present time that money can actually be collected from to continue this broadcasting."

David Sarnoff, then vice president of RCA, stated at the hearings on H. R. 7357:

"In foreign countries the tendency has been toward licensing and taxing the owners of radio receiving sets. I am now, and have been from the beginning, opposed to any flareback in this country against the freedom of radio. I believe, frankly, in the freedom of broadcasting, and also in free speech from the broadcast studios.

"While I recognize that there may be perfectly honest differences of opinion on these two propositions: first, that anyone who owns a radio receiving set should be entitled to anything that comes through the air * * *

"It has been said by a great many people and a great many corporations, some very large and able, that broadcasting depends upon a solution of the problem whereby the consumer will pay for the entertainment which he receives. In other words, it has be said that unless some method is provided whereby a means is created for collecting revenues from the user of a broadcast receiver, that the whole industry is founded on sand, and that it is bound to collapse in time, because there will be no means of supporting it.

"I want to go on record very definitely today * * * in saying to you that it is my firm conviction that that sort of solution to the problem is not necessary, that broadcasting can be made commercially practicable without any means being found for collecting from the consumer, that the greatest advantage of radio lies in its universality, in its ability to reach everybody, everywhere, anywhere, in giving free entertainment, culture, instruction, and all the items which constitute a program, in doing what no other agency has yet been able to do, and it is up to us in radio art and industry, with intelligence and technique and broadness of spirit and vision as to the future, to preserve that most delightful element in the whole situation—freedom of radio.

"Just as soon as we destroy that freedom and universality of radio and confine it to only those who pay it—those who pay for the service, in other words—just as soon as we make of broadcasting 'narrowcasting' we destroy the fundamental of the whole situation. And, therefore, I believe very definitely that broadcasting as constituted today is commercially sound, and that it will remain so in the future, although there may be selective methods and narrowcast methods which will do no harm.

"I cannot help feeling that not only should the public be left free from the payment of any license fee to the Government or others for the privilege of listening on a broadcast receiver, but that it should also be free from fees or tolls of any kind in the field of broadcasting through space. Furthermore, I believe the expressions of educators and statesmen should reach them uncensored and uncontrolled. The air belongs to the people. It should be regulated by the will of a majority of the people. Its main highways should be maintained for the main travel. To collect a tax from the radio audience would be a reversion to the days of toll roads and bridges, to the days when schools were not public or free, and when public libraries were unknown.

" * * * I believe that the radio audience alone should be the final judge of interest in every radio program * * *

"I believe in freedom of that service without any charge to the consumer. In saying that, I do not mean that the consumer is not really paying for what he is getting, because he is paying partly in the purchase price of the apparatus. A part of the purchase price of the apparatus goes toward paying the cost of broadcasting.

"* * * We have no program in contemplation, no technical means I am familiar with, whereby the listener or purchaser of a broadcast receiver might be made to pay; and I have gone on record very definitely against that policy" (hearings on H. R. 7357, 68 Cong., 1st sess.).

During the hearings on S. 1754, 69th Congress (1926), Stephen B. Davis testified, in response to a question from the author of the bill (Senator Dill), as follows:

"I think the United States is perhaps the only important country where there is no direct contribution to broadcasting. In England, for instance, the broadcasting is financed through a tax on receiver sets. Every person who desires to operate a receiving set in Great Britain must pay an annual listener's tax of a certain amount. That money is then taken and a certain proportion of it, I think the bulk of it, perhaps all of it, goes to what is called the British Broadcasting Co., I think it is, which controls the station in Great Britain, and is used for the operation of those stations and for the obtaining of programs and matters of that sort.

"The same system exists in Germany and, I believe, in most other countries. In other words, as I said from the start, aside from the United States and Canada, broadcasting as a rule is supported by a direct tax on receiving sets; that is, a direct tax on the listener."

The Senate version of the bill which became the Radio Act of 1927 (H. R. 9971) contained the following provision:

"Section k. Regulate and control any and all methods of transmitting energy, communications, or signals by radio where a charge is made to the listeners by the use of any apparatus, device, or connection by wire, and prohibit all unjust and unreasonable charges to listeners."

Fearing that this provision would be construed as authorizing the broadcaster to charge the listener a fee (see 68 Congressional Record 2880–2881), Representative Bloom, of New York, introduced the following bill (H. R. 16867):

"*Be it enacted* * * *, That after the passage of this act no broadcasting station shall be used to broadcast any matter (a) that can be heard only by a receiving set equipped with a special device or attachment without which such matter cannot otherwise be heard; (b) for which a charge, fee subscription or penalty is made by such station to the public for the privilege of receiving such matter. Nor shall any broadcasting station either directly or indirectly charge or exact any fee or subscription from the operator of any receiving set for the right to receive matters broadcast from such stations."

Throughout the debates on the Radio Act, repeated references were made to the fact that radio was free in the United States—no license fee or charge to the listener (67 Congressional Record 5490–5491, 12335). Senator Walsh (of Massachusetts) and Senator Copeland queried Senator Dill at length whether a charge on receivers should not be prohibited (68 Congressional Record 2880–2881, 4149). Senator Dill opposed an absolute ban on listeners being charged a fee (68 Congressional Record 2880–2881). However, for economic reasons, he did not "think there is any probability of that being done" (ibid.).

The joint conference which considered the House and Senate versions of H. R. 9971 deleted section k, the section which would have authorized the Commission to regulate any charges imposed on listeners. With this deletion no further action was taken on Representative Bloom's separate bill banning the exaction of any charges from listeners, Representative White, of Maine, author of the House bill, having given assurance that the "legislation gives no such authority as he (Congressman Bloom) fears" (68 Congressional Record 2580).

Following the adoption of the Radio Act of 1927, bills were introduced in succeeding Congresses to consolidate all communications by radio in one agency. In the hearings on S. 6 (71st Cong.), Chairman Robinson, of the Radio Commission, testified as follows on whether or not broadcasting stations should be made "common carriers" or "public utilities":

"* * * It is fortunate in this country that people get this service free; it is a wonderful thing along some lines and very depreciating along some others, and sometimes I think the offset makes it about equal, the good with the bad. But the license is not issued for the receiving set * * * I am entitled, for instance, to hear what the chairman says here, not because he speaks by the aid of a transmitter, but within my hearing; and it is the same natural right of a man to hear what goes over the air."

In a message to the NAB in 1931, President Hoover, while S. 6 was under consideration by Congress, stated:

"As Secretary of Commerce I had the pleasure of wide acquaintance with the purposes of your association in the annual national radio conferences which were called at that time for the development of the national policies in relation to radio.

"The decisions reached at that early date have been of unending importance. The determination that radio channels were public property and should be controlled by the Government; the determination that we should not have governmental broadcasting supported by a tax upon the listener, but that we should give license to use of these channels under private enterprise where there would be no restraint upon programs, has secured for us far greater variety of programs and excellence of service without cost to the listener. This decision has avoided the pitfalls of political and social conflicts in the use of speech over the radio which would have been involved in Government broadcasting. It has preserved free speech to the country.

"These principles are now strongly imbedded in our law and in our entire public system" (Broadcasting Telecasting, May 23, 1955, p. 40).

In due course, with additional definitions and other changes, the basic provisions of the Radio Act of 1927 were incorporated in title III of the Communications Act of 1934. The act centralized in one Commission common-carrier jurisdiction over telephone and telegraph (whether by wire or radio), and non-common-carrier jurisdiction over broadcasting.

From the foregoing background facts the following conclusions emerge: By 1927, and even more convincingly, by 1934, broadcasting in the United States had taken on a definite pattern—with costs borne by the sponsor and with no charges levied on the public. That pattern, now denominated the American system of broadcasting, was fully known to Congress when it enacted the basic 1927 and 1934 statutes. It is clear that Congress was not enacting legislation designed to substitute a governmentally controlled broadcast system supported by a tax upon the listener for the one then prevailing—financed by the sponsor. Likewise, just as Churchill did not take office to preside over the dismemberment of the British Empire, neither did Congress establish the Radio Commission or the present Commission for the purpose of eliminating a pattern of broadcasting which (by 1925) had secured for the American people "a far greater variety of programs and excellence in service free of cost to the listeners" than had the tax supported and government controlled systems of Great Britain and other foreign countries. While Congress conferred on the Commission broad authority to "study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest" (sec. 303 [g]), this language cannot be construed as empowering the Commission to change the basic concepts of the American broadcasting system. If the Commission has authority to take away from the American public 2 hours between 6 and 11 p. m. for the showing of a first-run movie on pay TV (40 percent of these choice hours), it has the power to substitute pay TV for free TV during all hours of the broadcast day. This would mean that the Commission, under the guise of rulemaking, could wipe out the American system of broadcasting as we know it today, and as it was known to Congress in

1927 and 1934, and substitute a new system supported by direct charges levied on the American public. Congress did not confer, and had no intention of conferring, any such authority on the administrative agency which it thus established.

A number of legislators, taking their cues from other institutions indigenous to the American soil (e. g., free public schools and free libraries, free roads and free bridges), desired an express prohibition against the exaction of any fees or tolls from the listening (or viewing) public. They were assured by the sponsors of the 1927 act that such a prohibition was unnecessary: first, because it would not make economic sense for the broadcaster to limit the size of his audience by special gadgets and, secondly, because no technically feasible method of exacting and collecting a fee had been devised. A provision which would have authorized the Commission to regulate fees for radio service was deleted without official explanation. With no express authorization, and mindful of this deletion, the Commission should refer the matter to Congress for an expression of legislative policy and any necessary statutory clarification.

Administrative agencies have been criticized in the past for attempting to expand their basic statutes rather than seeking more specific legislation from Congress. When construing a dead man's will it is not possible to query the decedent as to his intent; the courts in such situations determine as best they can his intent. But with Congress in session almost continuously, doubts regarding an agency's authority can best be resolved, in line with traditions of a democracy, by requesting legislative clarification. It cannot be gainsaid that petitioners present proposal to superimpose subscription television on broadcast frequencies was not passed upon by Congress when it adopted the 1927 and 1934 basic statutes. Nor can it be denied that there was substantial opposition in Congress in 1927 to the levying of charges against the public when exercising their "natural right to hear what goes over the air"—on frequencies which the people themselves own.

Advocates of an express prohibition were assured that the question was academic. Now that the matter is apparently no longer academic, Congress should be afforded an opportunity of stating its views before irrevocable changes are made in the system which the Commission was established to foster and develop. The policy problems should be referred to the direct representatives of the people for resolution by appropriate legislation. This is true whether petitioners' system or systems of pay TV be deemed "broadcasting," "common carrier," or "other type" of operation—or a combination of all three.

SUBSCRIPTION TELEVISION IS A HYBRID NOT ENVISAGED BY CONGRESS

An attempt to label subscription television as "broadcasting," "common carrier," or "other service," in view of the vague and uncertain "pattern" of operation contemplated by its proponents, is a difficult one. "Broadcasting" was not defined in the 1927 act. In the hearings on S. 6 (71st Cong.), a forerunner of the 1934 act, Commissioner Eastman (in response to formal questions submitted by the Senate committee regarding the power of the Interstate Commerce Commission to regulate "rates of broadcasting stations"), replied as follows:

"* * * my understanding of the words 'broadcasting stations' as they are used in this question is that they refer to radio stations which transmit spoken words or music by wireless electric impulses to all within effective range of those impulses who possess and use suitable receiving apparatus, and which do not transmit messages from a definite sender to a definite receiver * * *. The question being so understood, I am of the opinion that there is now no power in the Interstate Commerce Commission to regulate rates of broadcasting stations or the so-called chains, for the reason that such station or chains are not engaged in the transmission of intelligence by wire or wireless as common carrier for hire."

Two provisions ultimately included in the 1934 act are highly significant in view of the opinion thus expressed by Commissioner Eastman. "Broadcasting" was defined in the 1934 act as "the dissemination of radio communications intended to be received by the public, directly or by the intermediary of relay systems" (sec. 3 (o)). The act further states that "a person engaged in radio broadcasting shall not, insofar as such person is so engaged, be deemed a common carrier" (sec. 3 (h)). A "broadcasting service" is defined in the Commission's rules (sec. 2.1) as "a radio-communication service of transmissions to be received directly by the general public."

Is it intended by petitioners that their proposed programs "be received by the general public" or is it intended that they be received only by those members of the public who are willing to pay a special fee for the program in question?

Clearly the latter is their intent. While broadcasting, under the traditional American system, requires the public to have a receiver, in order to hear or view the transmissions, the broadcaster intends his programs to be available to the general public—by anyone possessing a receiver. The proponents of pay TV would impose a further condition—not only that the person have equipment to translate the garbled signal into an intelligible communication, but that he pay a fee for each program he elects to view. Considering the system of broadcasting with which Congress was familiar in 1934, the type of program transmission proposed by petitioners does not meet the statutory definition.

That subscription programs designed only for those who pay, and not for each and every person otherwise willing to watch them, is not broadcasting is further borne out by early Commission decisions.

In *Scroggin & Co. Bank* (1 F. C. C. 194, 196 (1935)), the Commission noted that "broadcasting is by definition and essential characteristics a service for the general public. The use of a broadcast station for the point-to-point delivery of messages is inconsistent with the terms of the station license and the regulations under which licenses are issued." Likewise, in *Standard Cahill Co., Inc.* (1 F. C. C. 227, 230 (1935)), it was held that a series of programs sponsored by a horseracing publication and of special interest to its patrons "was point-to-point communication rather than broadcasting" since it would have "little general appeal for the listening public other than those who subscribed to the publication in question." See also *Adelaide Lillian Carrell* (7 F. C. C. 219, 222 (1939)). The transmission of television programs to persons who subscribe for such service (pay television) could well be construed as "the point-to-point delivery" of messages, differing only in degree from omnidirectional transmission of information by radio for cabs, police officials, mobile telephone users, etc. Scrambled signals, such as petitioners propose to transmit would have no appeal to the public "other than those who subscribed" to the decoding device (punch-cards, etc.).

In *Bremer Broadcasting Company* (2 F. C. C. 79, 83 (1935)), the Commission held that the use of "a code system in broadcasting horserace results," resulting in the intelligible reception thereof "to a particular group which had subscribed to a so-called scratch sheet containing interpretations of the code" was a violation of the station's license "which authorized dissemination to the general public and not particular individuals or classes thereof." The contemporaneous construction thus placed on a statute, by the agency charged with its administration, at a time when its provisions were untried and new, is especially persuasive (*Brewster* v. *Gage*, 280 U. S. 327, 336 (1930)).

Early contemporaneous precedents are more persuasive, in interpreting the language of a statute, than those of later vintage. Thus, broad statements uttered by the Commission in 1941 in *Muzak Corporation* (8 F. C. C. 581) are less significant than the more restricted interpretation adopted in the Bremer case almost contemporaneously with the enactment of the 1934 statute. In the Muzak case the Commission stated (pp. 581–582):

"The proposal advanced in this application is unique in the annals of radio broadcasting in this country. The applicant proposes to experiment with what may be termed a subscriber service, for the purpose of determining whether the public, or a sufficiently large proportion of the public to make the service feasible, would finance the broadcasting of programs by direct payment therefor. This is to be accomplished through the presentation of a diversified high-quality program service which will be available to the public generally upon subscription and payment therefor. The applicant will broadcast no commercially sponsored programs, and no advertising continuity whatever will be used. Special receiving equipment will be leased by the applicant to those who subscribe for its service. Reception by persons other than subscribers will be presented by means of the transmission of a discordant sound (referred to sometimes as a pig-squeal signal) which can be eliminated only by the use of such special receiving equipment.

"Inasmuch as the applicant's proposal is a marked departure from the usually accepted method of providing broadcast service in this country, a brief reference may be made to the definition and history of broadcast service. A broadcast station is defined, both by treaty and statute, as one licensed for the transmission by radiotelephone emissions primarily intended to be received by the general public. The first such stations licensed in this country were sought and obtained by individuals or organizations engaged in manufacturing or similar enterprises who desired either to advertise their own products or to promote good will in their own behalf. Licensees, in order to meet the increasing cost of providing broadcast programs, gradually entered into the practice of transmitting, for a fee, advertising matter for other persons. As the effectiveness of radio as an advertising medium developed, broadcasting became a business in its own right. Thus arose the practice in this country of public support of broadcast service, not through any direct charge, but through the purchase of articles and services advertised by radio. This is not true in all countries of the world.

"The service which this applicant proposed will be available to the general public; any member of the public, without discrimination, may lease the equipment to receive the service. The distinguishing feature will be that those receiving the programs will pay directly rather than indirectly therefor. Operation of a station in this manner is within the definition of broadcasting."

As the Commission officially pointed out to Congress in 1951 (98 Congressional Record 9030–9032), the above-quoted language must be read in the light of the facts there presented:

"* * * It is important to note, however, that in that case the decision pointed out that the frequency assigned, 117.35 megacycles, was in a part of the spectrum devoted to other than broadcast services and the Commission stated that '* * * if it should develop that a service of this nature is practicable, frequencies therefor would probably have to be allocated from other portions of the radio spectrum.' Accordingly, the grant was conditioned expressly that it 'is not to be construed as a finding by the Commission that the operation of the proposed station upon the frequency authorized is or will be in the public interest beyond the express terms of the grant,' and that it was on an experimental basis only and subject to change or cancellation without advance notice or hearing."

Aware of the conflict between the Bremer and Muzak cases, the Commission in this same communication advised Congress as follows: "The question whether a subscription service is 'broadcasting' as that term is presently defined in the Communications Act has not been finally determined." (Compare similar statement in Commission comments on the Henshaw bill (F. C. C. 54–601).) And in enacting the 1952 amendments to the Communications Act, to which the foregoing communication appertained, Congress made it clear that it was leaving the "law just exactly as it is" (98 Congressional Record 9051).

Any changes in the definition of "broadcasting," being a controversial matter, was to await subsequent congressional action. Certainly the dicta in the Muzak case, authorizing as it did experimentation on nonbroadcast frequencies, is not a holding that the superimposing of a fee system on stations, frequencies, and equipment presently devoted to free television, comes within the statutory definition of "broadcasting." The Muzak case must likewise be read in the light of the Commission's recent FM decision where it seems to revert more closely to its concept of "broadcasting" as enunciated in the Bremer case (docket No. 10832). There the Commission had before it a "simplex system" whereby all the intelligence broadcast by an FM station was receivable on an ordinary FM set, but special receivers could be purchased which would eliminate or accentuate portions thereof, depending on the desires of the subscriber. The Commission concluded that such operations were not "broadcasting" as defined by section 3 (o) of the Communications Act. In authorizing a "nonbroadcast" service on the FM broadcast band, limited to 1 year by "simplexing," the Commission was careful to add the following caveat:

"The rules here finalized do not contemplate subscription broadcast operations to the extent that such operations involve the transmission of entirely scrambled or coded programs which can only become intelligible through utilization of special unscrambling or decoding devices at the receiver. The nature and advisability of such operation as contrasted with operations in which a minor portion of the program is specially 'beeped' in or out—is expressly reserved for further consideration in connection with the pending proceeding to authorize such subscription program services."

If the addition of a "beep" at the transmitter, which in no way affects the normal receiver and in no way precludes the general public from enjoying the programs transmitted, is sufficient to render such operations "nonbroadcasting" in character, it would seem to follow that a garbled signal, unintelligible on the normal receiver and utilizable only by a person subscribing to a decoding device, is likewise not "broadcasting."

In short, subscription television is not "broadcasting" as Congress understood that term at the time it adopted section 3 (o) of the Communications Act of 1934. Although the service is available for a price to the public, it is not intended that the public shall receive such service unless and until they pay a specified toll or fee.

If subscription television is not "broadcasting," is it a "common carrier" service? If it were "broadcasting," it would, of course, not be a "common carrier" (sec. 3 (h)). The converse, however, is not necessarily true. A "common carrier" is defined in the Communications Act of 1934 as a "person engaged as a common carrier for hire, in interstate or foreign communication by wire or radio." The proponents are by no means certain of the precise pattern which subscription television, if sanctioned by the Commission, may take. Zenith contemplates a "transmission service" (existing TV broadcasters), a "reception service" (the installation and maintenance of decoding attachments to home receivers), an "administrative service" (an organization to supply punchcards and decoding data and to collect the tolls which are imposed upon the viewer), and a "program service" (an "entrepreneur" who will arrange for program material—prizefights, movies, et cetera). The proponents at this point are uncertain whether these 4 services would all be performed by 1 person (e. g., the broadcaster) or by 4 separate organizations, or by varying combinations thereof.

If all four of these functions were handled by the television station, it is certainly arguable that the transmission of subscription programs, the exacting of a fee for the intelligence thus submitted, and the making of such service available to anyone willing to pay the price would have "common carrier" aspects. While the proponents intend that the program service shall be available to all persons who are willing to pay the fees imposed, they are not suggesting that the broadcaster must accept all "subscription programs" tendered to him by various entrepreneurs. Therefore, if the "program service" is supplied by a separate entity, the television licensee would not be a traditional "common carrier" since he would not (presumably) be required to transmit all programs which are tendered. However, at the receiving end it would be contemplated that "all takers" would be entitled to the service—for a price. Just as a gas or electric utility is required to serve all its patrons, so the "scrambled picture" and decoding devices would presumably be made available to all persons expressing a desire for the service. In short, the system envisioned by the proponents of subscription television has "broadcasting" and "common carrier" aspects. It is a hybrid not envisaged by Congress when it enacted the 1934 statute. It defies classification—as either "broadcasting" or "common carrier" unless existing statutes are modified and special legislation enacted.

APPENDIX B—FURTHER MEMORANDUM OF LAW

In its notice of proposed rulemaking the Commission invited comments on the following questions of law: (*a*) whether the Commission has the authority under the Communications Act of 1934, as amended, to authorize and regulate subscription television operations; (*b*) whether subscription television constitutes "broadcasting" within the meaning of section 3 (o) of the Communications Act of 1934, as amended, and if it is not "broadcasting", whether subscription television constitutes a common carrier or other type of service, and whether the Commission has the authority to permit subscription television to employ channels assigned to television broadcasting. Most of the principal comments in this proceeding, those submitted by NARTB, ABC, CBS, the Joint Committee on Toll Television, Zenith, Skiatron and Telemeter, contain briefs or memorandums of law addressed to the foregoing questions. Without exception the opponents of pay television conclude that the Commission has no authority to authorize subscription television and that it is not broadcasting. The proponents of pay television, likewise without exception, conclude the opposite.

With respect to the Commission's authority to authorize and regulate subscription television, both sides have relied upon legislative history of the Communications Act and of the Radio Act of 1927. Since neither the committee reports nor the debates concerning the 1934 act contain any discussion whatever of the possibility of a subscription radio or television service, the proponents of pay television assume that the legislative history of the 1934 act may be disregarded and devote virtually their entire attention to the 1927 act. Since much of the 1934 act was by reenactment of provisions already appearing in the 1927 act, they assume that the 1934 act can be interpreted on the basis of statements made in the debates on the 1927 act. This, however, ignores significant differences between the 1934 and 1927 acts. The 1927 act contained no definition of broadcasting, whereas the 1934 act includes such a definition. The 1927 act gave the Commission no authority to regulate rates, whereas the 1934 act gives the Commission authority to regulate the rates of communications common carriers including radio carriers.

The proponents of pay television base almost their entire argument on statements made during the debates on the 1927 act, which indicate that some Congressmen and Senators viewed the act as permitting the Commission to authorize a radio service which would involve direct charges to listeners. As has been noted, the 1927 act contained no definition of broadcasting and for this and other reasons it is not clear what sort of service was envisaged by those speakers who conceded the possibility of a radio service which would make direct charges to its listeners. Moreover, it certainly cannot be said that there was any agreement as to whether the act would permit charges to listeners. Senator Dill, when questioned as to whether such charges were permissible, made it clear that he thought the question essentially academic.

The 1927 debates must be viewed in the light of the state of the radio art and the development of the broadcast industry as of that time. The radio broadcast service was then, as it is now, a free service to the listeners. No concrete proposal for a subscription service such as is now before the Commission had been put forward, and, in fact, the technical feasibility of such a service could then only be guessed at. The only type of broadcast service then known which in any way resembled a subscription service was that employed in England and elsewhere, which involved a Government tax rather than a listening fee. Congress made plain that it did not favor that type of service. Thus, the discussion of radio services which might possibly impose charges on their listeners was essentially academic and no firm conclusions can be based thereon.

Unlike the uncertainty concerning Congress' view of a hypothetical subscription radio service in 1927, its intent in other areas was made clear. First, Congress emphasized that the radio spectrum was a part of the public domain and that it should so remain. It set forth in section 301 of the act that its purpose was "to maintain the control of the United States over all the channels of interstate and foreign radio transmission; and to provide for the use of such channels, but not the ownership thereof, by persons for limited periods of time, under licenses granted by Federal authority, and no such license shall be construed to create any right, beyond the terms, conditions, and periods of the license."

It was also clear that Congress considered that all radio rates would be subject to Government regulation, under authority previously granted to the Interstate Commerce Commission. The Senate draft of the Radio Act contained a provision: "Section k. Regulate and control any and all methods of transmitting energy, communications, or signals by radio where a charge is made to the listeners by the use of any apapratus, device, or connection by wire, and prohibit all unjust and unreasonable charges to listeners." This provision was deleted in conference without explanation. Senator Dill made clear, however, that its deletion was insisted upon by the House, which desired that authority to regulate radio rates remain "lodged in the Interstate Commerce Commission."

At the time of the passage of the Communications Act of 1934, the pattern of the American broadcast industry, in which there are no direct charges to listeners and commercial broadcast stations are supported exclusively by advertising, had become established. No one at that time was giving any thought to a subcription service and the Congress had no occasion to consider or discuss such a service. Two actions taken by Congress at that time, however, clearly indicate that it was proceeding upon the assumption that the broadcast service would remain a free service to the public. In the 1934 act the Federal Communications Commission, unlike the Federal Radio Commission, was granted authority to regulate radio rates of common carriers. The act also contained a definition of broadcasting and a definition of common carrier which specifically excluded broadcast operations and thus exempted broadcasting from the Commission's rate jurisdiction.

There is general agreement that subscription television does not fall within the statutory definition of a common carrier communications service. That being the case, the Commission would have no jurisdiction over the rates charged in connection with a subscription service. Two types of radio service are now known in which the public is the consumer. One is broadcasting, which is not subject to rate regulation, and the other, common carrier, which is subject. There can be little doubt but that Congress' willingness to exclude broadcasting from rate regulation was based upon an assumption fully justified by the nature of the broadcast industry in 1934 that all broadcast transmissions would be available for public reception without charge. It seems inconceivable that Congress could have intended to authorize the use of a portion of the public's property for the direct benefit of the public without giving the public some protection against rate gouging. Certainly no such intent can be inferred from debates on an earlier act which did not purport to disturb existing law with respect to rate regulation.

We come now to the second question of whether subscription television would be a broadcast service, a common carrier service, or an "other type of service." The Communications Act defines broadcasting as "the dissemination of radio communications intended to be received by the public, directly or by the intermediary of relay stations." The key question is whether the words "intended to be received by the public" mean intended to be received by the public without direct charge therefor. There is strong indication that this was the congressional intent. At the time the definition was adopted no system of broadcasting other than free broadcasting was in existence or proposed to be established.

Presumably, Congress used the word "broadcasting" in its commonly accepted meaning and that meaning in the United States at that time included the concept of free reception. Surely Congress cannot be presumed to have excluded from the meaning of "broadcasting" one of the most significant elements of the American broadcasting industry as it then existed and still exists. Moreover, as has been noted, Congress excluded broadcasting from the rate regulating authority of the Commission. Surely if Congress had understood its definition of broadcasting to include a system making a direct charge upon the listener, the failure to provide for rate regulation and, even more, the exclusion of broadcasting from rate regulation, would at the least have occasioned some congressional comment.

The proponents of pay television argue that if the intent is that the public shall receive the broadcast, although it must pay a fee therefor, the definition is satisfied. Aside from the considerations set forth above, this leaves only insignificant content in the definition of broadcasting. All parties agree that the actual size or generality of the intended audience is not the test. A program designed to interest a very limited audience is still a broadcast, because it has no specific addressee or addressees and because the public generally is free to listen to it if it so desires. A subscription television service would meet neither requirement. It would be addressed to specific persons, albeit presumably a large group, those who have subscribed to the service, and the members of the public would be "free" to listen only if they take steps to become one of the multiple addressees.

The proponents of pay television would analogize the distinction between a broadcast and a nonbroadcast service to that between a private and a public performance. The analogy is faulty because of significant differences between dramatic or other performances and radio transmissions. The producer of any performance retains physical control by which he can limit attendance to an invited group (a private performance) or to those who pay admissions (a public performance in the sense that within limitation and under certain conditions, the public may attend). A radio transmission, however, like a speech made on a street corner, is necessarily public in that there is no way in which the transmitter operator or the speaker can designate the persons who will be able to hear the speech or receive the radio signals. Having abandoned any physical control of this transmission, the radio sender can rely only upon legal sanctions to prevent unauthorized listening or use. True, he can encode as the street-corner speaker can elect to orate in a foreign language, but in the absence of section 605 of the Communications Act, the public would be free to break the code if it could do so. Turning to section 605 of the act, we find that "any radio communication broadcast or transmitted by amateurs or others for the use of the general public" is specifically exempted from any protection against unauthorized use. This is clear indication that Congress intended that there be no let or hindrance upon the reception of broadcast transmissions. Subscription television, therefore, cannot consistently with the Communications Act be classified as a broadcast service.

With respect to whether subscription television could properly be classified as a common-carrier service, we find for the first time that the proponents and opponents of pay television are in agreement, that it could not. Very apparently, pay television's anxiety that it not be classified as a common carrier stems from its desire to avoid any possibility of rate regulation, but whatever the reason the agreement is there, and the question has been adequately covered in the comments originally filed. Assuming that subscription television could not be called a broadcast service and could not be called a common-carrier service, can it properly be classified as an other type of service? Obviously, if the term "other type of service" is defined solely by exclusion, as encompassing all services not broadcast or common carrier, subscription television would fall within this classification. This is far too simple a view, however, for it assumes that the Congress gave the Commission carte blanche to authorize any conceivable type of service.

The Communications Act defines the broadcasting, common carrier, and amateur radio services and also contains specific provisions relating to ship radio. No other type of service is defined in the act. The Commission has, under its mandate in section 303 (g) to "study new uses for radio * * * and generally encourage the larger and more effective use of radio in the public interest," established many different types of nonbroadcast and non-common-carrier services, all of which fall under the jurisdiction of the Commission's Safety and Special Services Bureau.

All these services have one thing in common, which clearly distinguishes them from both broadcasting and common carrier. They are all private communications systems with which the public is not directly concerned. Broadcasting and common carrier, on the other hand, are public services—common carrier because it offers its facilities to the public for hire and broadcasting because its transmissions are intended for public reception. Clearly, subscription television is also a public service which cannot be classified with other nonbroadcast and non-common-carrier services. But for reasons set forth above, it also cannot be classified as either broadcasting or a common-carrier service. It must therefore be considered a hybrid, partaking of both broadcast and common-carrier aspects, which does not fall into the regulatory framework of the Communications Act. This fact confirms the conclusions heretofore reached that Congress did not intend that the Commission should authorize a subscription radio or television service.

In summary, we find there is grave doubt that Congress has authorized the Commission to establish a pay-television service and would not be a common-carrier service, nor a broadcast service and yet would be more like both than like other types of services thus far established.

Whatever uncertainty there may be in these conclusions, stemming from rather misty congressional comment more than 20 years old, it seems clear that the question of the Commission's authority and of the proper classification and regulation is so clouded with doubt that the Commission should, as a matter of policy, consult Congress before proceeding.

Administrative agencies, insofar as they have legislative functions, are creatures of Congress, acting only within the sphere of authority delegated to them by Congress. Their function in rulemaking is to carry out the will of Congress.

Here the very least that can be said is that Congress' will is not clear. The solution is simplicity itself—the Commission should request Congress to make its will more explicit. In *FCC* v. *Pottsville Broadcasting Company* (309 U. S. 134 (1940)), Mr. Justice Frankfurter stated.

"* * * The present case makes timely the reminder that 'legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts.' * * * Congress which creates and sustains these agencies must be trusted to correct whatever defects experience may reveal" (309 U. S. at 146).

This admonition was even more forcibly stated by Judge Prettyman of the United States Court of Appeals for the District of Columbia Circuit in a case involving an attempt by the Federal Power Commission to extend its powers beyond the limits that it reasonably could be inferred Congress intended them to be exercised. In *Border Pipe Line Co.* v. *FPC* (84 U. S. App. D. C. 142, 171 F. 2d 149 (1948)), Judge Prettyman held that agencies should not rely on strained and complex assumptions and deductions to obtain desired authority, but, if they think that the real intent and purpose of a statute is broader or different from its terms, should ask Congress for an enlargement or clarification. His statement is hereinafter reproduced at length:

"We add a further word upon the subject, because the situation with which we are here confronted is of general importance. Questions such as the one presented in this case are properly for the Congress. The circumstances upon which they arise are familiar. Congress uses expressions of established meaning. It takes action of recognized implications; e. g., it strikes from a pending bill a clause of clear import. But the administrative body finds a sufficient penumbra of meaning to justify a claim to more authority than appears upon the face of its grant. It asserts the extended authority and thus forces the issue upon the courts. It asks the courts to divine an intent on the part of Congress and then to decree that the words of the statute spell that intent.

"Of course, if there be a plain intent, or purpose, or objective, the statute must be deemed to be in pursuit of it, and the courts will enforce that view. But where relatively plain language and congressional conduct of accepted implications point one way and the contrary appears only through strained and complex assumptions and deductions, questions which the administrators may have as to the full intent and desirable scope of the congressional action ought to be addressed to the Congress.

"The prime responsibility for making statutory meaning clear is on the Congress. It is bad from the viewpoint of sound government for the courts to twist strange results out of otherwise understood expressions of the legislature. If, perchance, the judiciary does not reach the objective at which the legislature aimed, there is a most undesirable confusion of functions of the two branches.

"Such practice by the judiciary is also bad from the viewpoint of the law generally.

"Words of established meaning are given an unnatural significance, and thereafter whenever they appear the law is uncertain. The interpretation of statutes is not like the interpretation of a will, where the person whose intent is to be ascertained no longer lives and some meaning must be given his expressions, however meaningless, or of a contract as to which the sole parties differ in their assertions of intent or meaning. In those situations in interpretation is the only available procedure, and once had is irretrievable. Not so in the case of a statute; the Congress is in frequent session, its doors open and its committees available. Its procedure is no more complicated than that of the courts. If an administrative agency thinks that the real intent and purpose of a statute is broader than or different from its terms, it needs only ask Congress for an enlargement or clarification. We are no longer in an age when such inquiry is impractical. The wise and sound course for the courts is to give to the terms of a statute their plain meaning, so long as the resultant effect is sensible and not in conflict with a discernible purpose" (84 U. S. App. D. C. at pp. 145–146).

And another statement on the same subject by Justice Frankfurter:

"* * * While the judicial function in construing legislation is not a mechanical process from which judgment is excluded, it is, nevertheless, very different from the legislative function. Construction is not legislation and must avoid 'that retrospective expansion of meaning which properly deserves the stigma of judicial legislation' (*A. B. Kirschbaum Co.* v. *Walling* (316 U. S. 517, 522, 86 L. Ed. 1638, 1646, 62 S. Ct. 1116)). To blur the distinctive functions of the legislative and judicial processes is not conducive to responsible legislation" (*Addison* v. *Holly Hill Fruit Products, Inc.* (322 U. S. 607, 618, (1944))). (See also *Federal Communications Commission* v. *American Broadcasting Company* (347 U. S. 284, 296–297 (1954)); *Federal Power Commission* v. *Panhandle Eastern Pipeline Co.* (337 U. S. 498, 515–516 (1949)); Task Force Report on Legal Service and Procedure, Commission on Organization of the Executive Branch of Government (1955), pp. 220–222).

There is a constant interchange between administrative agencies and Congress through which the agencies inform and advise Congress and Congress establishes for agency guidance the national policy. A review of the Commission's annual reports will show that in nearly every year of its existence the Commission has made recommendations to Congress for legislation and Congress has requested comments on numerous bills which might affect matters under the Commission's jurisdiction. This interchange between Congress and the administrative agencies is an important part of the administrative function, serving to keep the activity of the agencies closer in tune with the will of the people than would otherwise be possible.

In this process, the establishment of basic policies is the function of Congress. A leading authority on administrative law has said: "The legislative process is especially qualified and the administrative process is especially unfit for the determination of major policies that depend more upon emotional bent and political instincts than upon investigation, hearing, and analysis" (Davis, Administrative Law (1951), p. 57). James M. Landis, of counsel for Skiatron TV, Inc., has written: "The responsibility for fashioning a policy, not only of great economic importance, but also one that has divided the faiths and loyalties of classes of people, cannot appropriately be entrusted to the administrative" (Landis, The Administrative Process (1938), p. 55). It is clear that the question of the authorization of subscription television involves a major policy decision about a highly controversial matter and must in the long run be determined by political processes. (During the 84th Cong., 1st sess., several bills were introduced on the subject of pay television: H. R. 524 by Congressman Hinshaw, to classify subscription television as a common carrier service; H. R. 6899 by Congressman Celler to prohibit subscription television on broadcast frequencies; H. R. 6913 by Congressman Chelf to prohibit the Federal Communications Commission from making a decision on subscription television which would be contrary to the "express will and desire" of the public.) The orderly procedure to accomplish this end is for the Commission to seek the guidance of Congress.

There is ample precedent for such action. Aside from recommending special legislation and commenting on bills referred to it, the Commission has several times requested congressional guidance and advice.

In 1944, following an extensive investigation of the effect of newspaper ownership of radio stations, the Commission determined that because of "Grave legal and policy questions involved," the Commission would not adopt any general rule with respect to newspaper ownership of radio stations.

A summary of the evidence received in the Commission's investigation was, however, forwarded to the appropriate committees of the Senate and the House of Representatives for such consideration as the Congress might desire to give the matter. (See FCC Annual Report No. 10, p. 7 (1944).)

In its 11th annual report, the Commission noted that it had become concerned with the sale prices of radio stations which were far in excess of the value of the physical assets transferred and that in letters to the Senate Interstate Commerce Committee and the House Interstate and Foreign Commerce Committee the Commission had "called attention to this trend and requested congressional direction as to the policy it should follow in passing on the sale of radio stations where the sale prices are in excess of the going concern and physical property values." (See FCC Annual Report No. 11, pp. 12–13 (1945).) In its 19th annual report, the Commission stated that because of the uncertainty with respect to congressional intent in the enactment of section 112m of the Internal Revenue Code, it was presenting the question of the proper interpretation of that section to Congress, in connection with the overall study of the Internal Revenue Code. (See FCC Annual Report No. 19, p. 17 (1953).)

Congress also has on occasion requested the Commission to investigate and report to Congress or to withhold Commission action until the national policy had been clarified by Congress. Section 307 (c) of the Communications Act directed the Commission to "Study the proposal that Congress by statute allocate fixed percentages of radio broadcasting facilities to particular types or kinds of nonprofit radio programs or to persons identified with particular types or kinds of nonprofit activities" and to report thereon to Congress with recommendations and reasons for the same. And in its 15th annual report, the Commission reported that it had withheld action in the *Clear Channel* case (Docket 6741) at the request of the Senate Committee on Interstate and Foreign Commerce, which had had under consideration a bill providing for limitation of power to 50 kilowatts and duplicate operation on clear channels. (See FCC Annual Report No. 15, p. 37 (1949).)

As the expert agency in the radio and television field, the Commission has an important function to perform which will not infringe upon the congressional prerogative to establish national policy. Much information can be gathered to aid the Commission and Congress in satisfactorily resolving the questions raised by the proposal to establish a pay television service. This factfinding work can appropriately be done by the Commission.

For instance, as in the case of the newspaper investigation, the Commission might appoint a Board of Commissioners to conduct a full investigation, including an evidentiary hearing, into all aspects of the pay television question and to prepare findings to be transmitted to Congress. By this or a similar procedure, the difficult questions facing the Commission and the Congress performing their appropriate functions in the public interest.

AMERICAN BROADCASTING CO.,

Senator POTTER. The first witness will be Mr. Garfield.

Mr. GARFIELD. Good morning.

Senator POTTER. We are happy to have you here, Mr. Garfield. Will you identify yourself for the record?

STATEMENT OF ZALMON GARFIELD, ASSISTANT TO THE PRESIDENT, JERROLD ELECTRONICS CORP.

Mr. GARFIELD. My name is Zalmon Garfield; I am assistant to the president of Jerrold Electronics Corp., of Philadelphia. Let me thank you gentlemen for permission to appear before the committee on behalf of Mr. Milton J. Shapp, the president of Jerrold Electronics Corp., who deeply regrets his inability to appear in person because of longstanding previous business commitments on this date. The material which follows is the result of approximately 10 months of intensive study and development work by our company in the field of subscription television.

It is our purpose here today to present to this committee a report both of our progress and problems in establishing a sound subscription television service, and if I may, I would like to make very clear at the outset of this report what side of the fence we are on. It seems that in a sense we are a little bit in the middle, in that we strongly believe that the scrambled broadcast method is completely impractical, and I will develop that further in this report. We are, nonetheless, very much in favor of subscription television, and in that sense we are certainly very clearly in the group of proponents, and not opponents, of subscription television. I don't know how that affects my position on the agenda here.

Senator POTTER. You should be a politician. [Laughter.]

Mr. GARFIELD. I did want to make that point clear. We shall submit our opinion to the committee this morning as to the proper solution of the problems we have encountered. The subject matter covered will be as follows:

1. The Jerrold cable theater, a wired system for the distribution of television signals, is the only practical method of disseminating box office quality entertainment into the American home. With a low-cost theater built of cable and electronic equipment instead of steel and concrete, the consumer becomes the beneficiary of lowered prices per unit of entertainment.

2. Major forces in the entertainment industry, including motion picture exhibitors, network representatives and broadcasters, have been confused and alarmed by the utterly unrealistic proposals made

by Zenith, Telemeter, and Skiatron. Their scrambled broadcast transmission technique has been projected on a grandoise scale and founded on concepts which are technically impractical, economically unfeasible, and securitywise unsound. We have presented in the past and will briefly restate later in this testimony the essential logic back of these strong statements. It is our respectful proposal to this committee that the mythology of these scrambled broadcast proposals can once and for all be exploded only by submitting them to public tests at the earliest possible date.

Now, let me make clear what our intention is on this particular point. It is not our intention to recommend or suggest to the committee that there should be widespread scrambled broadcasting of subscription television throughout the country. It is, however, our feeling that these methods should be exposed to public test, and it is our further opinion that when they are so exposed, both the scrambled broadcasters and the public will see their defects as clearly as we believe they exist, and these proposals at that time will, in our opinion, fall of their own weight. We are not suggesting, and do not propose to suggest, to the committee that tests on such a scale as to disrupt any existing service or to create any public disinterest should be permitted. We do feel that testing is in point.

Senator POTTER. In other words, you believe that there should be a major public test of the scrambled system for subscription?

Mr. GARFIELD. On a controlled basis, Senator; yes.

Mr. COX. Mr. Kohn testified that he would be happy to have this conducted in Allentown, Pa. Would you feel that this would be a reasonable type of community in which to conduct experiments of this sort?

Mr. GARFIELD. Allentown is a fairly sizable market, and I would think a properly conducted test subject to the proper control conditions there would serve a useful purpose.

Mr. COX. I think the proponents generally have indicated that, even if authorization were granted, it would take them upward of 2 years to install systems in 6 markets; assuming that each of the proponents were entitled to conduct tests, this would give them 2 apiece. Would you feel that experiments over that length of time and in that number of markets would be disruptive or would be the sort of thing that you have in mind?

Mr. GARFIELD. It strikes me as a longer than necessary time and it bears on a point I will come to a little bit later with reference to the economics of the scrambled broadcast method versus the wired method. We have contended, and I will contend somewhat more elaborately in a few minutes, that the economics of the cable theater—the wired systems distribution method—using no broadcast facility at all, is far more economical, in addition to being sounder and more secure. Once we can obtain programing, and I will come to that, of a safe nature, we can be in test and have demonstrable results in considerably under 2 years, and I think that bears on the economics of this situation as well. I can't see why such a long period of time would be required, although I can understand that the problems encountered are going to take maybe 2 to 20 years to resolve, and I rather doubt that they will ever be resolved.

Mr. Cox. You would suggest, then, subject to this question of obtaining programing, that your proposals would be subjected to test during this same period, generally?

Mr. GARFIELD. For from opposing such tests, as I have interjected here, it is our earnest recommendation that if legislative enactment or FCC rulemaking is required, it be accomplished promptly. We are satisfied that once submitted to such tests, the proposals of Zenith, Telemeter, and Skiatron will fall of their own weight.

Gentlemen, it is our purpose here to be stating that we are speaking here of performance tests, essentially, ability to perform, both technically and businesswise. Public acceptance tests, I think, are required for any form of subscription television. We feel that the cable theater has proved itself in a number of ways already, as I will state, and has been said in not quite such flattering language, earlier, by the community antenna system, and I would like to comment on that at the end, if I may.

3. Such a clearing of the air will in our opinion open the way to the wedding of the cable theater technique with motion picture exhibitors and producers. Only then will this new medium be developed in the interest of the public as well as in the interest of the entertainment and sports world. In fact, major producers of film as well as major sports promoters with whom we have had numerous discussions are uniformly in favor of the cable theater public acceptance test. Film producers, however, have feared that their cooperation would jeopardize relations with their major customers, the motion picture exhibitors. The exhibitor has been intimidated by the apparent efforts of the scrambled broadcast proponents to dominate this vast new medium by controlling both the transmission facility and the entertainment merchandising itself.

We are convinced that with the scrambled broadcast wrangle out of the way, the large progressive elements among motion-picture exhibitors will become in fact the natural allies and supporters, not the opponents, for the development of cable theaters throughout the Nation.

4. In our presentation to the FCC last fall, Jerrold stated that it would be ready in the spring to wire up several communities for public acceptance tests of subscription television. Technically, we are ready. Construction could begin tomorrow. As a matter of fact, in February 1956, at the formal dedication of the new Jerrold Laboratory at Southampton, Pa., a public demonstration of the Jerrold cable theater was presented for the first time. Equipment such as I have here for your inspection—on my right and left [indicating]—was utilized in this demonstration. This equipment was a combination of facilities used in community antenna services, and has been adapted for subscription television service. It has been adapted specifically for this purpose.

Mr. Cox. Where would this equipment be installed—in a central studio from which service originates?

Mr. GARFIELD. No; this equipment, spread in a much different manner, would be located on a public-utility pole, and spread through the city, in much the same as a power company or telephone company covers a city. A portion of it is equipment that would be utilized right at the studio as the signal is fed into the cable.

Mr. Cox. This, then, is largely transmission and amplification equipment?

Mr. GARFIELD. That is precisely right. I would like, if I may, at this time, to invite the committee or their representatives, if they so desire, to be our guests at our laboratory where we can show you this equipment in performance and how it would work.

Senator POTTER. Where is your laboratory located?

Mr. GARFIELD. Southampton, Pa., just a few miles outside Philadelphia.

Senator POTTER. We thank you for your invitation. I am sure the committee or members of the staff, if time is available, would like to take you up on that offer.

Mr. GARFIELD. We would be pleased to have you do so. Unfortunately, the antagonism which I have just described has to date prevented us from obtaining the top-quality box-office entertainment of all sorts, including first-run motion-picture film, top sports events and other major special shows, necessary to conduct meaningful public acceptance tests. When such tests are held, and if they are positive as we expect them to be, a vast new industry will be launched.

Now, let us examine the facts behind the conclusions I have stated.

First, what is a cable theater?

A cable theater takes programing originating live or filmed in a studio, or received via microwave from a distant point, and distributes it by cable or wire to any population area—be it large or small. This wired system is then tapped and a thin cable or wire lead is taken directly to the television received in the subscriber's home.

I think the contrasts here are rather apparent in terms of the scrambled broadcast technique, and for brevity I am not drawing those comparisons with which I am sure wou are familiar. Security is guaranteed since the programing is available only in those homes into which the lead is brought. Unauthorized taps are readily detected and eliminated.

Mr. Cox. What connection with the set is necessary in this system?

Mr. GARFIELD. A coaxial cable lead is taken from the system itself, fed into the home in much the same ways as a telephone wire is brought in, and connected to the tuner terminals of the set. That is all.

Mr. Cox. Then this would be available by turning the tuner to a channel not otherwise occupied in the area?

Mr. GARFIELD. That is correct, and as we developed in our presentation to the FCC some time ago, we have developed two alternative methods: One which we have entitled the season ticket method, in which a consumer would pay a given rate per month or per year or per quarter and get all of the programing; the other, if it appeared desirable, a method by which program-by-program selection could be had by the consumer, whichever appeared more desirable.

Mr. Cox. How do you determine, under the later system, what programs have been used and therefore should be charged for?

Mr. GARFIELD. We have a recording device outside the home, measuring 500 or 1,000 homes. The consumer pushes a button in his home which feeds the signal into the receiver, and simultaneously a signal is fed back into the recording device, and at the end of a month or quarter or whatever billing period, it is fed into an IBM machine.

Mr. Cox. And with this arrangement he cannot tune in the program until he has punched the button.

Mr. GARFIELD. That is correct.

Because the signal carrying the entertainment is piped directly from the studio into the cable and is never transmitted through the air, there is no interference of any kind with presently authorized broadcast spectrum. No Federal Communications Commission allocations or new rules are required; no legislative enactment is necessary.

Mr. COX. It is your position, then, that you are lawfully entitled to install these systems at the present time; your only delay has been due to the difficulty in obtaining programing?

Mr. GARFIELD. That is correct.

The Jerrold cable theater with its specially designed electronic amplifying and distributing equipment is a direct evolution from the community antenna system principle, which our company pioneered. Jerrold has installed community antenna systems in more than 300 fringe area communities. In these systems, television signals are picked up by giant television antenna arrays, usually on nearby elevated points, and are delivered to the subscriber's home over coaxial cable. The techniques utilized in wiring these communities have been adapted and improved for application to the cable theater. This, then, is not an untried principle for signal distribution—and that, I might add, is true both technically and economically. It has been tested and proved in literally hundreds of communities.

Now, then, you may logically ask if Jerrold has developed its cable theater system; if this system requires no governmental license or authorization; if no legislative action is necessary; if it is economically feasible; why, then, is Jerrold here rather than out in the field building cable theaters? Permit me to repeat: to date, our efforts to obtain the proper quality, quantity, and variety of programing necessary for an effective cable theater public acceptance test has been handicapped by the tremendous confusion and opposition engendered by the unrealistic proposals of Zenith, Telemeter, and Skiatron.

It is not without reason that we have used such strong terms in describing these proposals as "impractical," "unfeasible," and "unrealistic."

Senator POTTER. So your programs have been all film programs?

Mr. GARFIELD. No, sir; they can be live. Also, they can be remote and delivered by microwave by some more distant point from the particular studio involved.

Senator POTTER. Have you made an effort at all to establish this system in any community?

Mr. GARFIELD. The cable theater subscription television?

Senator POTTER. Yes.

Mr. GARFIELD. We have not attempted actually to conduct these tests only because we have not been able to get programs.

Mr. COX. What efforts have you made, just in general terms, to obtain programs? Has it been primarily along the lines of trying to get feature pictures, or have you also explored the possibility of getting sports programing?

Mr. GARFIELD. Yes, sir, we have talked to several major producers of film, a number of exhibitor groups, interestingly enough, and also sports promoters, heads of ball clubs in some cases, and so forth.

The request of these individuals, because of what you probably know to be the somewhat controversial nature of this question, has been that we not refer to them by name. However, the responses, I can assure you, have been uniformly favorable. They would like to try it. It appears to them to be a medium which offers great promise for them.

Mr. Cox. Wouldn't you have the problem, in instigating a test of any such system that it would be uneconomic to furnish the kind of programing that you seem to feel is necessary unless you can get a very high degree of cooperation from these people, because you certainly would not be in the position to buy any of these entertainment features outright for offering in one or two small areas, would you?

Mr. Garfield. Well, it is a complex question, and doesn't permit of a direct yes or no answer. It would be expensive. Certainly no initial test operations covering, let us say, a twenty to thirty thousand population area in several parts of the country, and using a variety of cable theater techniques, would be profitable. That is certainly true. However, we would not expect them to be, and as in the development of any new project, you expect to make an investment in order to prove your point and be able to expand to a point where it becomes a commercially practical venture. We had exactly the same experience in the pioneering of the community antenna system industry about 5 years ago.

Mr. Cox. Now, is it Jerrold's purpose itself to capitalize the installation of these systems, or do you have there the same problem that Zenith, Telemeter, and Skiatron have, of locating some local entrepreneur who will actually provide the capital with which such a cable theater will be installed in a particular community, after you get beyond the test phase?

Mr. Garfield. It would be my expectation that this thing would develop in a variety of ways. It would also be our expectation—and I might as well develop it specifically here—that the most logical persons to develop this new theater form are the theater owners of America and the exhibitors today. They are the ones who know the theater business best, and it is our expectation that they might have logically been the persons to move ahead. Our position on this is quite flexible. We might attempt an installation or two ourselves. We will be happy to work with outside capital. We will be happy to work with local entrepreneurs, as you suggest.

Attached to this report this morning is a documented technical analysis of the critical deficiencies of these scrambled broadcast systems presented to the FCC on September 8, 1955.[1] Also, attached is an additional summary and presentation of facts[2] prepared by Mr. Shapp for presentation in a telethon debate on this issue with representatives of Zenith, Telemeter, and Skiatron recently held over station WCPO-TV, Cincinnati. Permit me to summarize these facts briefly, with some additional comments by the scrambled broadcasts proponents themselves, on the key question of code security.

I say the key question of code security, gentlemen, because very apparently if a service for which you propose to charge can be obtained free with rather great ease, the practicality of such a business venture is limited at best.

Scrambled broadcasting will never work, first and foremost, because each of the so-called encoding methods is completely insecure. They can be broken with ease. This can be likened to the investment

[1] Jerrold Electronic Corp.'s Reply Comments in FCC, docket No. 11279, dated September 8, 1955, are of public record with the Commission and have therefore simply been retained in the committee's files, and are incorporated herein by this reference.

[2] The summary referred to is set forth beginning at p. 1417.

of millions of dollars in theater properties followed by a mass distribution to the public of free-admission passes.

In September's Reply to Comments before the Federal Communications Commission, Jerrold issued an unequivocal challenge to the three scrambled broadcast proponents to participate in a public security test of their codes.

Mr. Cox. Now is it your position that these codes can be broken on an individual basis by the ordinary viewer, or is this something that requires electronic expertness to accomplish?

Mr. Garfield. It doesn't require electronic expertness. It does require a slight degree of knowledge, and the probability would be that servicemen—who by the way would be confronted, if these attachments of these devices were made to receivers all over the country, with the probability of a television service monopoly by the scrambled broadcasting operators—that they would be the most likely persons to develop the very simple methodology for decoding and sell it, give it away, do anything in order to protect their own business and their own future as TV servicemen throughout the country. That appears the most likely.

It is a little hard to predict in advance exactly what the avenues will be. We do know, and think we can demonstrate to the committee, to FCC engineers, and even to the scrambled broadcasters themselves—given the same conditions as any member of the public would have, once these methods were instituted and the decoding units installed—that we could very quickly show with what ease these things could be decoded.

Mr. Cox. As I understand your challenge, though, you propose to have this done by your engineers in your laboratory. That presupposes people with more knowledge and more equipment than even the average television repairman would have available for the purpose of trying to break one of these codes.

Mr. Garfield. Our only purpose in so suggesting was for the sake of expedition. It could be done just as readily by putting someone with the little bit of knowledge that would be required in an apartment in an area covered by the scrambled broadcasting, having attached to his receiver the same decoding device as any member of the public would get which chose to pick up the service, and with that and the scrambled signals in the air, that is all he would require to proceed to do the job.

Mr. Cox. Well, as I recall his testimony, I believe Mr. Landis who represented Skiatron indicated that they regarded it as possible that a person with a certain amount of knowledge could take apart one of their printed circuit cards and could determine what would be necessary to receive the signal on other sets without the use of cards, but that they felt that ample protection was afforded in the fact that in order to make this a serious enough problem for a Skiatron franchise holder or program distributor, that there would have to be an organized system of distribution which itself would be detectable and subject to legal regulation; wouldn't that be true essentially?

Mr. Garfield. On the question of legal regulation, I am not sure what the law would be in this regard, and I would not pretend to attempt to elaborate on that point. I can visualize a situation, however, where if there were legal protection against the doing of this sort of thing by the simple device of installing a policeman in every home in the area covered, it could be enforced. Other than that I would foresee, I think, a somewhat complex problem of enforcement on this question. As to the complexity of doing the job, I am not an expert in this field either.

However, the methods that we have utilized for approaching this situation are spelled out in detail in the FCC submission and the important point is that once done, unless the scrambled broadcaster is willing to engage in tremendous expense for a constant revolution of the fundamentals of the code, he is going to find great difficulty, because it does not have to be repeated each time—the decoding operation.

The devices for decoding purposes can be made widespread and if you will notice, if you have a chance to review that FCC submission, the contrast between the very elaborate 19-tube device suggested by Telemeter in their original submissions for decoding is stripped down to virtually nothing for attachment to the set, because here you are no longer now concerned with recording moneys and recording programs seen and so forth, you are simply supplying a decoding device which is very simple in construction and operation.

I can perceive or foresee the possibility of a rather thriving business for the servicemen of America in this field.

Mr. Cox. But this would be one that would have to be conducted strictly under cover, then, wouldn't it, in order to avoid involvement in claims of unfair business practices?

Mr. Garfield. I do not know what the situation would be. It strikes me that it might be somewhat complex. I do not know what the situation would be with reference to the legal right to do whatever you are able to do with a broadcast signal free in the air.

Senator Potter. With your own set, with an airwave which is public property.

Mr. Garfield. Yes, sir. I do not know the legal answer to that question.

Mr. Cox. Well, as I understand the proposal for breaking Zenith's code, it involves determining the combination which would have to be dialed into a Zenith decoder in order to get programs on a particular set, there being some 16,000 variations possible in the setting of a particular receiver. Now in this instance anyone using the code, having obtained it through other than lawful channels, would be actually using an item of property which Zenith is leasing to him for the purpose of defrauding the company. Now it might be different in Telemeter's case. As I understand it you would feel that someone would devise a substitute for the Telemeter decoder?

Mr. Garfield. It is true in all cases.

Mr. Cox. Which could be put on the back of the case and which could accomplish this result, with adjustments from month to month, without the necessity of having the additional electronic equipment that is required to set the price for a program, record the program accepted, and the various other items that are taken care of by this in addition to switching on the decoding mechanism.

Mr. Garfield. That is correct, and that generally is true of all three, Mr. Cox, not of Telemeter alone. Don't misunderstand me. We are not talking about utilizing the decoder of the company for the purposes of decoding. That would not be necessary. You would only need one decoder.

It is the same principle as is spelled out here in the service. Cryptanalysts regard a code as breakable once they have access to the signal, and that is why channels are changed all of the time for transmission of secret code of any kind. They regard the breaking of code as ridiculously easy, given the decoder and the signal. They can be broken with ease. I think I have made this point.

Senator POTTER. You give a man a safe and combination and tell him not to open the safe.

Mr. GARFIELD. That is exactly right.

This challenge, which was first submitted by Jerrold in the summer of 1955, did have one noticeable effect: it seems to have shaken at least the psychological security of Zenith, Skiatron, and Telemeter in their codes.

For in its replies to comments in September, Zenith doubts the security of the Telemeter and Skiatron systems (p. 46, Zenith reply to comments).

Skiatron infers (pp. 4 and 5) that only their decoder (using a printed circuit card for a key) would deter bootleggers.

Telemeter states in their reply to comments (p. 2) that the Zenith and Skiatron systems "fall short of these objectives" (code security).

Each of the scramblers thus agrees with Jerrold at least in regard to the "other two" systems that they lack security. We might well conclude, "that among men who know decoders best, its Jerrold 2 to 1," which puts the odds on our side, anyway.

In one sense, perhaps, listening further weaknesses of scrambled systems is superfluous since kidney ailment is not serious in the case of a patient who has died of a heart attack. However, any one or a combination of the following points might be fatal of itself:

1. The cost of a scrambled broadcast system is considerably higher than the cost of the Jerrold cable theater. This disparity increases as the number of subscribers increase for each method.

Senator POTTER. What would the cost of yours be per customer?

Mr. GARFIELD. Senator, that would vary considerably as the saturation of the system increases. That is referred to in the submission to the Communications Commission on page 14. There is a chart, which indicates the swing of cost versus number of subscribers and percentage of subscriber saturation.

Senator POTTER. Your dollars—is that cost per year or what?

Mr. GARFIELD. No, this is capital cost, Senator, presuming the connection to the home—to the subscriber's receiver—to be a part of the capital investment. The cost per mile of our system to installation, like the cost of a telephone company plant, is a static capital investment figure. As the cost of that plant is amortized over an increasingly large number of subscribers, obviously the cost per subscriber goes down, the capital investment. This is not true in the primary cost element in the scrambled broadcast method. Their primary cost capitalwise is that decoding unit in the home and obviously that, too, is a static figure, and increases exactly the same amount with the addition of each subscriber.

Mr. COX. What is the cost per mile figure that you use?

Mr. GARFIELD. Roughly speaking, on a single channel system for subscription television purposes alone, not associated with any other service, about $2,500 a mile, perhaps less. As in all cases in our industry, we have found that as we get more and more experience in the field we are in a position to reduce cost.

Mr. Cox. Now, does this presuppose hanging the cable from above ground utility poles?

Mr. Garfield. Either above ground or conduit below ground. The cost in conduit would vary widely from area to area, depending on the problems.

It has been suggested, for example, that New York City couldn't possibly be wired. There are a couple of companies with fairly good repute who have managed to accomplish that impossibility, and serve the people of New York with public utilities, telephone and wire. We have talked to them and it is entirely possible to wire New York. There would be problems in the concentrated areas, but you must always, in any kind of a distribution system, relate your problems and costs to the concentration of population per mile of system, because that per mile remains the same no matter how many people you have access to. And in New York, or any major metropolitan center, quite obviously the concentration you would have is enormously greater than the smaller towns that our company has wired for community antenna systems.

Senator Potter. It would be difficult to have this system in your rural communities, then, wouldn't it?

Mr. Garfield. In completely rural communities, if you are referring to farm country, Senator, it would. We have been cognizant of that problem for some time in our other areas of operation, and are working on developments right now, and, as a matter of fact, have submitted to the FCC one aspect of resolving that problem. Low-cost systems for rural service, much the same as rural television service, has reduced cost because of the areas covered. We think we are coming pretty close to an answer that is going to make it possible for us to render service into rural areas.

Senator Potter. I would assume that would be one of the major objections to your type of subscription television. It would be difficult for the Commission or the Congress to wholeheartedly support a system that couldn't be made as universally used as possible.

Mr. Garfield. As a matter of fact, when we get into the rural areas, because our cost can relate itself in the small urban communities directly to the size of the population, I think it is actually more feasible for us to render service in the more sparsely populated areas of the country than it would be for scrambled broadcasters. I rather suspect that if such a system as they propose were allowed to extend itself, its tendency would be to concentrate in the major metropolitan markets. I do not know that for a fact. That is my own judgment.

Senator Potter. From a technical standpoint, you could just as well have a scrambled set on a farm 10 miles from the community as you could in the community, with the possible exception of service?

Mr. Garfield. The probabilities here are there is considerable fringe area remaining in the country, and the probabilities are that this would require increasing the power of existing television facilities or building of new television facilities, and then the cost is going to get pretty darned high for the scrambled broadcasters who want to reach those rural broadcasters.

We have found ourselves—just taking the contrast between television broadcast facilities as they exist today and community antenna facilities—that we can afford to go in and wire up a community, picking up remote signals on a mountain top—and I will comment on the legitimacy of that business operation later, if I may, at the end of this, for just a moment. But we have found that we can do this in communities where television broadcasters cannot afford to install a broadcast facility.

Mr. Cox. But that is because they are outside the range of existing facilities. Theoretically I would assume that a scrambled broadcast would be available to anyone within the normal range of reception of that station, assuming that he, being either in the community at the center or someplace else, can acquire a decoder and get someone who can install it on the set.

Mr. Garfield. That is correct, Mr. Cox. The contrast I was attempting to draw is the desirability of the capital investment for broadcast facility in a community as opposed to its practicality as a community antenna system installation, which is in effect the wired system versus the broadcast system in economic terms.

In many small communities which cannot afford broadcast facilities they can sustain a wired system.

Mr. Cox. But whereas in a developed community—a metropolitan area—you argue that your costs go down per set in use as the number of sets increases, whereas that of the scrambled broadcaster remains constant; as you get out into rural areas, your costs would go back up while his are still remaining rather constant?

Mr. Garfield. There is that possibility, and that relates to the comment I made before in that we are working right now, and I hope very soon will be able to submit addenda to the committee's record and certainly to the FCC—a low cost method for reaching rural areas by wire. We are satisfied that it can be done.

Senator Potter. It would seem to me that is one of your major problems.

Mr. Garfield. It certainly would be for reaching the rural community.

Point No. 2, operating costs for servicing and maintaining a wired system are but a mere fraction of those required to maintain a scrambled broadcast system, and this once again is developed in the FCC submission, and I have refrained from doing it here. In addition, the scramblers must pay for broadcast time. The cable theater operator does not.

3. The billing and collection procedures proposed by Telemeter, Zenith, and Skiatron are obsolete and unworkable. There is a section, gentlemen, in this document, that develops in detail each of these points, and I therefore refrain from doing it here, to spare the committee's time.

Mr. Cox. Now, you argue, in this filing with the FCC, that there would be considerable difficulty and cost, and in effect credit loss, in any administration of a scrambled broadcast system, which is a cost that is less in your case because recording the amount of the bill, if you don't use a season ticket arrangement, is easier and because you can control it simply by cutting off the connection in order to enforce collection. But, on the other hand, don't you have additional costs in delivering your signal which are absent in the case of a scrambled broadcast, in that you have a continuing problem of maintaining miles of cable, and the thousands of amplifiers necessary to keep the signal of required intensity?

Mr. GARFIELD. Mr. Cox, I think a comparison of the cost of maintaining a cable system, particularly one of the type that we have developed for the cable theater—which is demonstrable, by the way, because there are several hundred of these installations around the country, with concrete cost figures that can be developed, and shown to you—is immeasurably lower than the cost of access to every single home that you serve where you have a device that uses vacuum tubes—up to 19 vacuum tubes; an average television set doesn't have many in excess of 21—in the home. To get access to that unit is a problem. After you get access to it, to get access at a time when the family is not using its television receiver, either for ordinary reception or for subscription reception, is a problem; to service it is quite a difficult problem; and the number of tubes, I believe we have developed in this submission as well, is immeasurably greater, in most cases, so that the maintenance costs are actually lower.

We have reduced maintenance costs in cable systems—using in part techniques we have developed ourselves, and in part the experience of other wired services throughout the country—to a rather fine science. We can service, for example, a community of about 30,000 to 40,000 people—and these figures are subject to some error—with approximately 4 or 5 technicians.

Now, if you have something on the order of 60 percent saturation in an area of that sort or, let us say 4,000 to 5,000 home subscribers, you are not going to be able to service units inside those homes with that number of technicians. Furthermore, you are going to have to be paying them peculiar wages, because their service is going to be mainly from about 1 o'clock, when TV service goes off until 6, when service goes back on. The family is not going to tolerate service on this decoding unit during the television hours.

Senator POTTER. It won't be conducive to good homelife for the repairmen. [Laughter.]

Mr. GARFIELD. I would not think so.

In addition to these and many other weaknesses, Zenith, Skiatron, and Telemeter have flaunted the American tradition of free air waves.

Sections of the public already have been intimidated by the reasonable fear that such a proposal for seizure of broadcast time or space would deprive them of television as they know it. They have missed the fact—and this is a fact that we would greatly appreciate the committee calling to their attention if they considered it proper—that the cable-theater technique would provide a wholesome competitive medium, with broadcasters and cable-theater operators vying for the viewer's attention. The public could only benefit by improved programing in both mediums from such competition.

The only argument I have heard directed against this point, if I may say so, is that the cable theater operator would be in such a powerful competitive position that he would be able to take all of the programing away from free television. There is something of a contradiction in terms—in terms of this point 1—about the economic problems of the cable theater and its powerful ability to outbid the major networks in the country on entertainment. I hardly think that is likely, and I think it is further an underestimation of the ability of the entertainment world, in this country in particular, to measure up to the requirements and demands for entertainment that the public is willing and able to pay for.

Senator POTTER. No one should fear competition for programs; is that it?

Mr. GARFIELD. I would certainly think not, Senator.

Senator POTTER. The public gains by that?

Mr. GARFIELD. That is exactly right.

I recall when television first came into being, I heard on many occasions the comment that this vast thing would just gobble up all of the entertainment in the world, and there would just be nothing left, except perhaps westerns of the Bill Hart era. In fact, I think probably the greatest stimulus to the development of entertainment in the country that the country has seen, certainly in my time, has been television—the development of new writers, new actors, new techniques, new media. I think that the cable theater will accomplish exactly that same purpose, and simply add to it.

Mr. COX. To the extent, though, that you acquired viewing audiences in any given market, you would, of course, have the same effect on dilution of audience on standard sponsored broadcasts that the presence of any new station or, in fact, any new entertainment medium, would have on that market, thus raising their costs. That is, if you have an audience, you subtracted it from their potential audience?

Mr. GARFIELD. Potentially that is so, and if there were to be any objection to that, then theoretically the motion pictures should want television to shut down, and television should want motion pictures to shut down, and both should want all of the ball parks to close, and none of those things seems very likely.

Millions of viewers—referring back now to this question of broadcast time and space—millions of viewers simply will not accept the fact that a channel they have been watching for years suddenly turns to jabber and meaningless patterns under the ministrations of the scrambled broadcasters.

This in a sense is the crux of the security problem. We do not question, as may be suggested, the honesty of the American public. We do question the ability of Zenith, Skiatron, Telemeter, or anyone to force collections for a service which has been traditionally free by a method so subject to ready violation.

I have deliberately hastened this examination of scrambled broadcast deficiencies so as not to repeat information set down in detail in the attached analysis by Mr. Shapp and in our comments to the FCC. Permit me to refer you once again to these accompanying documents for substantiation of what I have said.

Despite these apparent deficiencies, Zenith, Skiatron, and Telemeter are intent on testing their systems.

In the meanwhile, motion-picture exhibitors—who would cooperate with the Jerrold cable theater as evidenced by the following quote—will not do so while the scrambled broadcaster haunts the background. This at least has been the apparent result that we have obtained from our explorations.

The joint committee does not urge that subscription television per se is inevitably against the public interest. For example, it is conceivable that a subscription television proposal to use existing common carrier facilities, in a

closed-circuit type of operation, would supplement rather than supplant existing television service and might, therefore, reasonably be found to be in the public interest. (The Joint Committee on Toll Television, representing motion-picture exhibitors, in its comments filed with the FCC on June 9, 1955.)

Mr. Cox. Don't you suppose, though, that they are talking about a closed circuit system that ends up in projection on a screen in a movie theater?

Mr. Garfield. I don't think so. I would not be prepared to debate that, Mr. Cox; I think they were referring to a service that reached into the home, but I don't know the answer to that question specifically.

I might say, however, in discussion with one exhibitor group that comes to mind immediately, they have suggested as a hub point, or terminal point, for the cable theater, the local motion-picture theater, with simultaneous exposure—with exposure of one first and then the other—in order to test public reaction.

We rather think in certain markets the two might tend to stimulate each other's business. I think that has been demonstrated by commercial television to a degree.

Only last week TV Guide urged editorially that "the fee-television enthusiasts establish a station and pipe their expensive programs, without putting them over the air, into homes that have been especially wired to receive the pay-television programs." This very specifically is the cable theater, without question. "Subscribers could accept or reject as many programs as they like. Such a test would be fair to all of us. It could be conducted without disrupting, even temporarily, our present TV reception."

Now, I should like to underscore, at the end of this quote, our judgment with reference to the performance tests that we recommend for the scrambled broadcast method—and by performance I mean both technically and businesswise, their ability to perform. We certainly are not recommending any widespread licensing of this thing all over the country. We are suggesting that, having presented every argument on paper that we could, having called for public testing of the security of their codes, having achieved neither, except the recording of our opinions to date, that apparently the only way the scrambled broadcast proposal can be eliminated is by a public performance test of its ability to perform and do the job on any kind of a sound basis. If the committee could find any way to get the scrambled broadcasters out of the way, we would welcome it.

These opinions have been echoed with variations by Broadcasting-Telecasting magazine, the National Association of Radio and Television Broadcasters, the Columbia Broadcasting System, and others. In private discussions, even more affirmative positions have been taken, again and again—and this I can testify to personally—by producers, exhibitor groups, sports promoters, and others.

It is for this reason, gentlemen, that we say to you as vehemently as possible: They have asked for it, let them have it. Let the scrambled broadcasters have their performance test. Let them, and let the public, observe the results for themselves. We are satisfied that the scrambled broadcaster will thereby eliminate himself. The way will then be open for the motion picture exhibitors, the men most experienced in the field of mass entertainment, to join forces in supplying both the shows and the showmanship necessary for the development of soundly executed, constructed, and operated cable theaters throughout the Nation.

This will not happen at once, but will be done in an orderly, step-by-step fashion. First, initial tests; then extension of these tests; then expansion to many markets throughout the country. The motion-picture exhibitor, who already has a tremendous stake in bringing mass entertainment to the American public, is the proper group, both by experience and by reason of existing investment, to take this project forward, in our judgment. That is not to say, and let me make this clear, that we eliminate the possibility of anyone joining forces in the development of a medium which has such a mass potential for expansion if it is soundly based.

We offer our full facilities to the motion-picture exhibitor in building modern cable theaters to back their experiments anywhere in the country. I might add that we offer these same test facilities to Zenith, Skiatron, and Telemeter, if they choose to avail themselves.

Our company has exhaustively explored this field, including, I might add, the scrambled-broadcast technique which is, in fact, no novelty. We are satisfied that the implementation of a program such as we have respectfully submitted today will drive forward the development of the cable theater, with long-range incalculable benefits to all concerned, most particularly to the public in the form of low-cost, quality entertainment in the home, which is not continuously available by any other means.

Mr. Cox. Now, of course, the representatives who have appeared before this committee for existing sponsored broadcasts argue that there is no form of programing that any subscription television agency could make available to the public that is not now, or will soon be, available to them on a free basis.

Mr. Garfield. I have heard that argument presented, and I would want to make very clear that I personally, and my company in particular, has only the highest regard for the progress that has been made by commercial television networks and broadcasters. I think a tremendous job has been accomplished in a short period of time. However, I do think at the level of programing that we are thinking of, that the economics of commercial television, as we know it today, simply will not sustain it. Let us talk about the sports field, which has been discussed widely in terms of subscription television depriving the public of a free opportunity to view ball games, and so forth.

Now, it is simply a fact that a number of ball clubs—baseball clubs in particular—have already withheld all or a portion of their games from commercial television, and that is simply because the economics are such that the amount that they can get for the telecasting of the games—and this is as it is told to me; I don't have figures to verify this—is simply not adequate to overcome their losses at the box office, at the ball field.

Senator Potter. Mr. Garfield, is it your opinion that in order for the public to receive programs that are not now available, such as the ball games that you mentioned, that it will be necessary to have some type of subscription television, whether it be scrambled systems or the cable theater?

Mr. Garfield. In quantity; yes, sir. Practically only by means of the cable theater in our opinion.

Mr. Cox. Do you have any idea at all of the possible range of charges that would be made on a per-program basis?

Mr. GARFIELD. We have examined this question in some detail, Mr. Cox, and the only answer that I can give you is something like this: The charge that would be possible—and, obviously, if you are shooting at any mass medium you want to reduce the charge to its minimum in order to hit that market as hard as you can, particularly with us, as each new subscriber becomes a way of amortizing our investment; it depends on the percentage of saturation that the system achieves from the public.

If it has a 33⅓-percent saturation, then the charges it will have to make to survive will be considerably different than if it has a 66⅔-percent saturation, and likewise on up. Generally speaking, we think a very high quality of programing—and please don't hold me to these figures, because this is exactly why we want to get programing and get into the field, to establish the answer—but very high-type programing could be achieved in a major mass market for around $100 to $125 a year. I cite that figure for only one reason; I am not sure of it. This is speculation based on paperwork and not experience in the field. I cite it only because, in reviewing earlier comments, I saw such preposterous figures as $1,100 a year for a family to be able to get subscription television service, and so forth. I think those figures are utterly ridiculous, and have no relationship to reality or any kind of mass service, and in our opinion this is not a service for the elite. It is a mass service. It is not for any special section of the country, although its economics might, from time to time, permit a servicing of needs of smaller groups in the national community that could not be otherwise serviced by a mass media.

Mr. Cox. How many hours would be encompassed in programing reaching that total annual charge—or what would be the per-program charge?

Mr. GARFIELD. Well, the per program charge, if it were a per program service, Mr. Cox, would vary widely. A motion-picture film produced at one budget could be made available to the public, because of the charge that would be made to the operator, at a considerably lower cost than another film made with, let us say, a 2 or 3-million-dollar budget. It would be impossible to establish an accurate figure for you on that.

Mr. Cox. It would run at about $125 a year; that is about $10 a month, $2.50 a week.

Mr. GARFIELD. That is a best estimate, Mr. Cox. I wouldn't cite that as any kind of firm figure, but to the best of our judgment, trying to do paperwork on this thing and estimate cost, service of that type at about that charge is practical.

Mr. Cox. Now, what extent of programing would you propose to make available on such a system? Is this going to provide an 18-hour-a-day program availability, or are you going to concentrate on the evening hours, or the afternoon hours in the case of sports events, or what would be your proposal in the way of quantity?

Mr. GARFIELD. I would make this point: A cable theater, unlike a scrambled-broadcast facility, once installed there is no additional cost for the use of the facility, such as purchasing broadcast time which requires money. This would be nominal in its cost to use, only requiring studio personnel in order to implement it.

We have therefore thought in a variety of terms on this question—thinking in terms of a backlog of specialized children's programs perhaps in the afternoon; a variation in type of programing during various hours of the day, aimed at the housewives in some cases with programing available of a type they would be interested in; and being able to more or less equalize costs, with obviously your highest cost programing most likely to occur in the evening hours.

We would like to make a rather full use of this cable theater once we have it, and if our season-ticket concept is sound, and we believe it is, we could supply programs for a great many hours a day, and probably much more than any broadcast facility could supply.

Senator POTTER. Would you envision more than one cable-theater system in a community?

Mr. GARFIELD. It is entirely conceivable. It could happen.

I think, Senator, that would depend a great deal on how the economics of the industry shaped up, as to whether a community of a given size could sustain more than one.

Mr. Cox. Now, I take it, then, that it would not be feasible through such a system to furnish the public with public-service programing—with discussion of public issues—unless you found a format which would support the charge, and that therefore this does not have the possibility, claimed for scrambled broadcast, that the additional economic support to be derived from subscription service would permit the establishment of essentially new stations in small areas not now capable of supporting a television station; and that outside of the limited percentage of time devoted to subscription broadcasts, this station would be providing well-rounded, balanced programing, including sustaining programing as well as commercial programing.

Mr. GARFIELD. On the contrary, Mr. Cox, I can see no reason at all why public-service programs should not be made available via cable theater. As a matter of fact, it appear to me entirely feasible from an economic point of view. The theater is there. It exists, and it costs not one whit more for that theater if it is used or if it is not used, the only increased cost is the nominal cost of operating personnel, and that I expect the theater would require anyway to have on tap. So there is no reason at all why time could not be allocated to public-service programing, and on a considerably more feasible basis.

Actually, my guess is that a telecasting station is going to want to be commercial a good percentage of its time regardless of the circumstances with reference to subscription television. A cable theater has the theater right there, and can make it available to the public, to governmental agencies, to service agencies of various kinds very readily, and at very low cost.

Mr. Cox. Well, would it be free to the public? Could there be certain programs offered through this facility which could be borne by the operators of the cable theater and charged against the receipts taken in?

Mr. GARFIELD. That is entirely feasible. There is no reason at all why not, Mr. Cox.

Mr. Cox. So that, then, if this cable theater were superadded, say, to a community antenna system operating in a small community, it would be possible for it to put on a program plugging the local community-chest drive, to put on a local program featuring local people, and in some sense provide the function of a local television station.

Mr. GARFIELD. Absolutely.

Briefly, then, if I may summarize the essential points I have made:

No. 1, Jerrold is prepared technically today to launch construction of cable theaters anywhere in the United States.

2. We strongly recommend that this committee do everything in its power to immediately assure the privilege of performing test operations for Zenith, Telemeter, and Skiatron, along the lines which we have discussed. We are convinced that their scrambled broadcast proposals are impractical, and when subject to actual operation, will be strangled by their own excess of economic and technical deficiencies. This, then, will clear the air, in our opinion, for the orderly and practical development of the only feasible means for the distribution of high quality box-office entertainment to the home, namely, the cable theater.

3. We are convinced that the progressive motion-picture-theater operators of America are natural allies in the development of the cable theaters. We are happy to offer our full facilities in cooperation with any group or groups of motion picture exhibitors for the construction of a soundly conceived cable theater anywhere in America.

Finally, let me repeat that Jerrold is convinced of the soundness of its proposals for the cable theater. We are convinced that this concept and its ultimate scope is much too large to be clutched to the bosom of any one company or group of companies.

Mr. Cox. Are there other companies in the country capable of performing the same functions Jerrold would perform in connection with the development of such a system?

Mr. Garfield. There are other companies in the business of making distribution. I think we can do it best, and have done a great deal more work in specific development in the area of cable-theater applications.

We are satisfied that the ultimate decision on a matter of such substantial import to the public should not, and ultimately will not, be the property of Zenith, Telemeter, Skiatron, or Jerrold. Neither will it be the property of the Commission or even of this important Committee. The final decision will be made by the public in the public interest. The public will see to that. We are happy to submit our proposals to you and to them.

Gentlemen, if I may make one additional comment, I would like to address myself to some of the comments made with respect to the community antenna system, in which we have a substantial stake as well. The community antenna system is only germane to these hearings, as we see it, in terms of its establishing facilities for the reception of television signals on a strong basis. However, it has been said we have been pirating, in earlier comments.

I would like to address myself to that. Our service in the community antenna system field is in effect the leasing of an antenna facility for areas which could not otherwise get the signals as well, or at all, that we make available to them through this antenna facility. That is strictly all a community antenna system does. Unlike what we have been discussing here today, with reference to subscription television, it is not a programing service. It does not touch programing in any way. It does not merchandise programing. It merchandises an antenna facility. It leases an antenna facility.

Now, it has been said in earlier testimony—and perhaps more than once, I don't know—that this constitutes pirating of property. I really think that that indicates a complete lack of comprehension of what a community antenna system is; and, as a matter of fact, in the areas of eastern Pennsylvania which were referred to in particular, I would be happy to have the committee, or any of the witnesses during the course of these hearings, address themselves to any number of UHF stations in that area—one, I might add, is close to Allentown; it is Bethlehem, which is contiguous—and get their view of community antenna systems. Far from viewing them as pirating anything, they view them as making a free will gift of what is most important to any telecasting facility, namely, extension of coverage, which couldn't otherwise be had. And UHF in particular, with its problem of shadowed areas and holes in primary area coverage, has found it particularly desirable and we have the most cordial relations with any number of stations whose signals are made available to additional coverage of the population that they desire to serve by means of this antenna facility which is made available to people in these areas who cannot of their own afford the costs necessary to receive these signals, so I would like to set the record straight on this question of pirating.

If we are pirating it is amazing that there are apparently no laws against piracy, because we have been doing it very publicly for the past five years. Now, someone might suggest that there ought to be. I don't think so. I think community antenna systems provide a service which is extremely important to the television industry. Actually today, although we only serve something on the order of a million people—which is considerable of itself, but a small fraction of the population of the country—it is our opinion that ultimately the highest quality television reception is going to be extended much more widely than that and render a service to a much larger percentage of the public, and thereby benefit the television industry as a whole, of which we are very much a part, and whose overall health we are very much concerned with.

Senator POTTER. I wish to thank you for your testimony, Mr. Garfield. We have the documents you referred to in your testimony. The summary used by Mr. Shapp in the television debate you referred to will be made a part of the record at this point. The reply comments of your company in FCC Docket No. 11279, dated September 8, 1955, having been filed with the Commission, will be incorporated by this reference and retained in the committee's files.

(The first item referred to is as follows:)

A COMPARISON OF SCRAMBLED BROADCAST AND WIRED SYSTEMS FOR ESTABLISHING A SUBSCRIPTION TELEVISION INDUSTRY

Prepared for a panel discussion on WCPO–TV, Cincinnati, Ohio, by Milton J. Shapp, president, Jerrold Electronics Corp., Philadelphia, Pa., September 15, 1955

The concept of subscription television is soundly based upon two factors:

(1) The producers and promoters of box-office attractions are seeking a profitable method by which they can sell more tickets.

(2) The public desires to see top-quality sports and theatrical box-office events at the lowest possible prices, and in the most comfortable and convenient manner.

Thus, if a method can be found to place a turnstile in front of each television set, the largest possible mass audience can witness the great sporting and theatrical events right in their own living rooms, and these two objectives can be attained.

To reach this mass audience is more than just a desire on the part of promoters and producers. It is an economic necessity in order for them to survive. The rise of television in the past 7 years has created a competitive situation in the entertainment field that is keenly felt at their box offices. This coupled with traffic, parking, babysitting, and other problems has reduced box-office receipts in some fields to such an extent that many theaters and sporting arenas have already closed their doors, and many more are operating on a loss or marginal basis. Some promoters have allowed their events to be telecast with the sad result that, in most cases, the additional revenue received from television has been offset by further reductions in gate receipts. Thus many sporting events have either been taken from the air waves, or their promoters are planning to drastically limit or eliminate such broadcasting in the near future.

That subscription television will be the answer to their economic problems is evidenced by the success of theater television which is but one step in the direction of reaching the large mass audience. The further extension of theater television to make each television set a projection screen for exhibitors, will enlarge the audiences, and lower the prices to the public.

The television networks and broadcasters who are opposed to the Zenith, Skiatron, and Telemeter proposals for subscription television, with great unanimity, take a stand only against the use of scrambled broadcasting that would preempt spectrum or use broadcast time of television stations for an encoded subscription service. The joint committee on toll television (subtitled the committee against pay-as-you-see TV) in its comments filed with the FCC on June 9, 1955, states:

"The joint committee does not urge that subscription television per se is inevitably against the public interest. For example, it is conceivable that a subscription television proposal to use existing common carrier facilities, in a closed circuit type of operation, would supplement rather than supplant existing television service and might, therefore, reasonably be found to be in the public interest."

This opinion is echoed with variations by the NARTB, CBS network, Broadcasting Telecasting magazine, and others.

On the following pages, it is shown that not only is a wired (closed circuit) subscription television service feasible, but it is in fact the only practical way in which subscription television can be brought to the American public. Scrambled broadcasting is superior only in the amount of publicity that has been generated. The use of wired systems will in one fell swoop achieve the desired goal of the producers and promoters of box office events, serve the best interests of the public, and eliminate the major opposition that now exists to subscription television. Further, since no legislation of FCC rule changes are needed, installation of wired systems can be started without delay.

The supporting data to back up the conclusions presented herein is contained in the reply to comments submitted by Jerrold on September 8, 1955, to the Federal Communications Commission. A copy of this 40-page booklet may be had upon request.

1. CAPITAL REQUIREMENTS

The capital investment needed to wire a city for subscription television is less than the investment needed to provide a subscription service by means of scrambled broadcasting. Complete data substantiating this statement is contained on pages 10 to 15 of the Jerrold reply to comments to the FCC of September 8. The following factors are revealed:

(*a*) The average cost of installing a Zenith or Skiatron decoder will be a minimum of $85 to $100 with Telemeter considerably higher. When 40 percent subscriber saturation is reached in a city, the average cost per subscriber to a wired system is $83.50. The decoder installation cost per subscriber for the scramblers remains essentially constant, whereas the cost per subscriber for a wired system drops steadily as saturation increases.

(NOTE.—These figures are quite low compared to the cost of building a theater. For example, a prominent theater architect estimates the cost to build a 1,000-seat movie house is between $250,000 and $300,000 or $250–$300 per seat. A drive-in theater to hold 400 cars would cost approximately $125,000, plus land.)

(*b*) The operating costs for servicing and maintaining a wired system are but a mere fraction of that required for running a scrambled broadcast system (complete details contained in pages 16–28 Jerrold reply to comments, June 1955). In addition, scramblers will either have to buy expensive broadcast time or they'll have to invest in their own TV stations. Neither expenses would be incurred by wired system operators. Initial investment for establishing service must be sufficient to cover operating losses until there are sufficient subscribers to place system operation in the black. Thus these higher costs for service, maintenance, and broadcast time (although operating costs) will be reflected in the initial investment requirements.

2. SECURITY OF PROGRAMING

Each of the "encoding" methods proposed by the scramblers can be broken easily without payment. This can be likened to the investment of millions of dollars in theater properties followed by mass distribution to the public of free admission passes.

Zenith, Skiatron, and Telemeter all recognize that the economic basis for the operation of their proposed system is dependent upon code security. For this reason, they have spent many years of engineering research and many thousands of dollars in an attempt to develop what they consider foolproof systems.

In their comments filed with the FCC in June 1955, all three claimed that their codes could not be broken. In fact, Zenith stated (p. 34) that it was not practical to break their code even by cryptographic analysis. When Jerrold issued its first statement in June that it could easily break any broadcast television code, all three proponents scoffed at these claims.

However, what does one find in their replies to comments a scant 3 months later. Zenith now doubts the security of the Telemeter and Skiatron systems (p. 46, Zenith reply to comments). Further, Zenith states that only public tests will determine whether or not the public will try to sneak "their heads underneath the tents" to view the programs without paying. One might well wonder if this is not but fancy language indicating that Zenith now recognizes that their proposed system, too, has a security problem.

Telemeter states in their reply to comments (p. 2) that the Zenith and Skiatron systems "fall far short of these objectives" (code security). However, Telemeter still holds to its contention that the basis for success of their system hinges on code security.

Skiatron infers (pp. 4 and 5) that only their decoder (using a printed circuit card for a "key") would deter bootleggers. Skiatron then goes on to build up a case that their system is simpler, more economical, and apparently does not possess the multiplicity of codes that Zenith and Telemeter claim for their systems.

Each of the scramblers agrees with Jerrold that the "other two" systems lack security. We might well conclude that "among men who know decoders best it's Jerrold two-to-one."

It is all very confusing. To clarify matters, Jerrold has challenged all three of these companies to cooperate in FCC supervised tests and public demonstrations to determine security of their respective codes. To date, no indication has been received whether any of these proponents will accept this challenge.

The wired system proposed by Jerrold is secure because programs are available only by direct cable connection to the system. No coding of signals is necessary. As with telephone service, simple on-off switches or filter circuits separate those who pay for the service from those who do not. Even "meter jumping" in the home will not produce pictures because there is no signal in the cable leading to the subscriber's program selection switch until this switch is operated by the subscriber. Then, when this switch (or even a bootleg switch) is operated, an automatic record is made at the company's central office, and the subscriber is billed accordingly.

3. SERVICE, MAINTENANCE, AND OPERATIONAL PROBLEMS

The scramblers must install a decoder on the back of each subscriber's television set. This decoder, in a fashion similar to an octopus grasping its prey, sends tentaclelike adaptors under tubes into at least six places in the circuitry of the receiver itself. Thus a scrambled broadcast operator would make his major capital investment in devices physically attached to, and electrically integrated with, other people's private and easily removable property. The subscriber's television set would become half-owned, half-loaned, with a third party—the finance company—sometimes showing an interest.

Not only would this situation jeopardize the great investment of the system operator, but it would create tremendous service problems. Independent servicemen would be unable to fix just half of the subscriber's receiver. The scrambler, or his authorized service agency, would have to assume complete responsibility for servicing the receiver as well as the decoder. This would necessitate the building of a huge service organization and could lead to the establishment of a monopoly in the television service business that would threaten the existence of all independent television servicemen in his area.

Since all of the company's equipment (with the exception of the encoder) is located in subscribers' homes, no practical plan of preventive maintenance can be put into effect. All servicing of the equipment must be done on an individual call-for-service basis in a subscriber's home during hours that are convenient to the subscriber. This would not only increase the number of service personnel needed for maintenance purposes, but would greatly increase the size of the truck fleet required to transport this personnel and necessary test equipment. The problem is further complicated because scrambled pictures would be broadcast for only a short period during the day (limited by Zenith to 15 percent of the broadcast time) so that unless the serviceman calls at the time when coded air signals are available, he has no method of checking actual operations of decoders and sets.

The entire service operation is one of confusion. A scrambled system will be expensive to maintain. The overlapping and divided service responsibilities and the resultant customer relation problems will greatly increase the financial burden borne by the company.

With a wired system, none of the above problems exist. Installation of cable service to the subscriber's home is accomplished in a manner similar to telephone connection. A thin coaxial cable is brought into the house and terminated in a small terminal box on the baseboard or wall at the rear of the television set. A lead from this box connects the antenna terminals of the television receiver. No internal connections are made to the receiver.

Responsibility of the cable company ends at its wall terminal box. Responsibility of the television serviceman starts at this point. There is no overlap of responsibility. In case of doubt, a test receiver can be brought to the subscriber's home, connected across the terminal box to determine whether the quality of signals supplied by the cable operator is up to par. This is a method which is already in use in over 400 communities throughout the country now serving 300,000 subscribers to community antenna systems. It is a method that eliminates confusion, and permits a lower cost operation.

4. QUALITY OF SIGNAL DELIVERED TO SUBSCRIBERS

The scramblers would have no control whatsoever over the quality of signal received by their subscribers, since reception of signals is entirely dependent upon propagational factors, subscriber antenna conditions, and can be affected by many types of local interference to be found in the various areas of reception.

In Zenith's June comments to the FCC (appendix, p. 64 and 65), their engineering data reveals serious problems with dropouts of codes due to ghosts, interference, and possible airplane flutter. There is no practical way of overcoming these problems, even if the operator of the scrambled broadcast system undertook the expense of installing new antennas at each subscriber's receiver and then constantly replaced these antennas as they deteriorated. Like the well-known arrow, the scrambler's signals are shot out into the air. Quality of reception is completely outside of his control. It may be argued that this is no different than the problems faced by regular broadcasters of television programs, but it must be remembered that there is a vital difference. In this case the customer is now paying for the programs that he views and expects quality pictures as well as quality programs.

The operator of a wired subscription service has complete control of quality of signals delivered to his subscriber. The problems of propagation or external interference in an area are eliminated because signals are delivered by shielded cable directly to the subscriber's set. No antenna is required to pick up the subscription programs.

The quality of picture clarity can be guaranteed by the wired-system operator, since he has absolute control of signal quality right up to the subscriber's wall terminal box. All equipment carrying the signals to this terminal box are accessible outside the subscriber's home so that preventive maintenance schedules (similar to telephone-company procedures) can be employed to make certain that signal-distribution equipment is constantly operating at peak performance.

5. BILLING AND COLLECTING

Plans proposed by Telemeter, Zenith, and Skiatron for collecting their accounts receivable flaunt established business methods.

Telemter proposes to dispatch house-to-house collectors to empty out their coin boxes. Coin-operated devices were last seen in the American home many years ago. They were removed by the gas and telephone companies when they were found to be too cumbersome and expensive to service. Telemeter would even compound collection problems by having their coin collectors change code cards and handle decoder-service problems.

Under the Skiatron and Zenith proposals, the subscriber would punch a board or a card to indicate the number of programs viewed. Zenith and Skiatron would then depend upon the subscriber returning this record to them so that they could bill the subscriber for the programs viewed. This would be like a telephone company asking its subscribers to keep a record of all calls placed so that at the end of the month the subscriber could advise the telephone company how much he owes. If a card is not returned to the company, there is no simple way to collect for the programs viewed. Further, the chance for future revenue from the subscriber is lost because additional cards will not be sent out.

Methods of billing and collecting from wired-system subscribers are much simpler. There are two types of plans that could be put into operation:

(*a*) A season ticket plan can be utilized, whereby a customer would subscribe for a well-balanced package of entertainment including sports, movies, theatrical events, operas, etc. The customer would be billed on a monthly basis. This would do away with individual metering devices and reduce the cost of billing procedures. It would result in lower program charges to the public. Many facets of the season ticket plan are now being studied by Jerrold. A detailed report and analysis of the pros and cons of this plan is being prepared and will be issued within the near future.

(*b*) Program per program billing is accomplished by incorporating a switch in the wall terminal box behind the subscriber's television set. This switch operates a filter-amplifier device located outside of a subscriber's house that permits the program signal to pass into the subscriber's television set and at the same time sends another signal back along the company's cable to a centrally located meter that automatically records the exact time that any subscriber views the programs. The company maintains an accurate and permanent record at its central office from which to bill its subscribers. The subscriber cannot receive programs unless the selector switch is operated. When he operates this switch (or any bootleg switch) he automatically records the information for billing. No cards; no punchboards; no money collectors. Billing and collecting on a Jerrold wired system can be accomplished at a minimum cost with the least amount of confusion.

The important thing to note about the metering methods available to a wired subscription service is the fact that nothing new, novel, or untried is required. The time-proven methods, based upon years of experience of power, water, and telephone companies, can be readily adapted to the wired subscription service.

6. PROGRAMING TIME

The broadcasters have expressed fears that unlimited scrambled programing could undermine the broadcast industry. The scramblers are quite content to accept limitation of programing time as a necessary evil in order to coexist with the broadcasting industry.

Even Skiatron, who proposes the use of new UHF stations in many areas, bows to this concept. They state (p. 19, Skiatron reply to comments, September 1955): "Skiatron seeks only a limited number of hours a week. It could not now, nor in the long foreseeable future, use more."

Telemeter states (p. 13, reply to comments, September 1955): "The number of programs for which a direct charge can be made are relatively scarce; not nearly enough to utilize anything but a small percentage of the time on television stations."

Zenith would have the FCC limit by law the maximum time of subscription programing to 15 percent of the broadcast hours.

One wonders if any sound investor should agree to such a limitation of plant utilization, which could only result in higher charges to the public per program in order to amortize the heavy capital investment and high cost of system overhead. One wonders if Zenith would condone a law that restricted its manufacturing plant operation to only 15 percent of the working day; and if so, how much more its products would cost.

A wired system is available for programing 24 hours a day throughout the year. Once installed, its facilities are available around the clock without the additional financial burden of paying for broadcast time. Perhaps of even greater importance, the wired system operator is not compelled to negotiate to obtain desirable broadcast time for the operation of his cable theater. Instead his program timing can be molded at his discretion to suit the tastes of his subscribers.

The greatest potential audience is available between the hours of 7 p. m. to 10 p. m. Nevertheless, the income potential of less popular hours must not be ignored. Theater exhibitors are very much aware of this. It is only necessary to examine many existing ticket policies to understand how the less popular hours can be used to produce revenue. Most theaters charge more for evening shows than matinees; more for Saturday, Sunday, and holidays, than for weekdays.

A wired subscription system can employ the same ticket policies—repeating film performances at any hour of the day or night, in order to increase its gross income—thus permitting the lowest possible program prices to its subscribers. Only current sports events would be limited to a one-shot exploitation.

Could a theater long afford to stay in business if it limited itself to only one film showing each day?

7. PUBLIC RELATIONS

The public-relations problems faced by the scramblers will be enormous. The American mind is not conditioned to the concept of paying to view its television programs. Ever since the inception of broadcasting, it has been merely necessary to flip a switch and take a choice of all programs on the air. It will be very difficult for many thousands of people to understand why suddenly during certain hours when they tune to their favorite channel, they will only hear "jabber" and only see drifting meaningless patterns, unless they pay the scrambler a fee.

The scramblers would find it necessary to spend a considerable sum of money on a well-planned and well-coordinated public-relations program, otherwise they may well find that many of these people will not consider it an act of "dishonesty" to try to beat the game and witness the programs without paying for the so-called privilege. For in effect, it will be the scramblers, not the public, that will be flouting American traditions.

The enormity of this problem lies bared when it is considered that all the money spent to date by Zenith, Skiatron, and Telemeter to promote scrambled broadcasting has only served to create confusion within the television industry itself. It has hardly dented the minds of the public except to cause questioning as to what this is all about.

The operator of a wired system will not face this public-relations problem. Only when a person subscribes to the service will he be asked to pay for the programs he views. If he does not subscribe to the service, he can still see all his favorite programs broadcast by his regular stations. He does not tune to a channel to find that the program he would like to see is not there, and what is there he cannot see.

For years the American people have paid regularly for wired services supplied by the telephone and power companies. They are conditioned to the concept that they must pay for services that are delivered by wire.

8. LENGTH OF TIME TO ESTABLISH SERVICE

On page 54 of the September 16, 1955, edition of Collier's magazine, Bill Davidson sums up a study on scrambled broadcasting by stating "Most experts don't expect any final decision on toll TV until about 1960." This same delay factor is echoed in many newspaper and trade magazine accounts describing the situation.

Even if scramblers should succeed in obtaining FCC and congressional approval and even if they should succeed in establishing the legality of their service in the courts, it will be at least 5 years before they would be in a position to start making tests of public acceptance for their proposed form of subscription television.

A wired subscription television service can be started immediately. There are no rule changes necesasry. Operation of "cable theaters" is not within the jurisdiction of the Federal Communications Commission or any other governmental body.

Jerrold is now preparing to test public acceptance of subscription television on four of its community antenna systems located in different sections of the country. In early 1956, construction of multichannel community antenna systems (with a channel reserved for subscription television) will commence in 2 cities of over 100,000 population each. Preliminary engineering is now being done in a metropolitan area of approximately 1 million people leading to the wiring of this area for subscription television programing.

Actual installation of wired television systems is contracted to electrical construction companies who have equipment and trained personnel available to do this job on an economical basis. Average rate of construction is 1 mile a week per crew. Ten crews of five men can wire a city of approximately 600,000 population in about 2 years. Additional crews could increase the rate of construction. Thus, wired systems can be built and placed into operation in medium-sized cities and in metropolitan areas long before the scramblers can hope to float their first coded signal into the air.

The only requirements for starting and operating a wired subscription service is the availability of top-quality box-office attractions—theatricals, movies, sports, etc.—plus the necessary capital to erect the cable theaters.

Based upon all the information contained above, we should like to relate a business fable.

"There are two ways that a water company can deliver water into the homes of its customers:

"A. Install pipes from the water source into each home. Install pumps along the route to maintain proper pressure. Build filtration plants to insure purity of water delivered. Install valves in the pipes to control water flow. Install a meter at each subscriber location in order to bill customers accurately for water used.

"B. Install rain collecting tanks in each subscriber's home. Lease or sell float mechanisms to subscribers to measure amount of rainfall collected in each tank after each rain. Hire a rainmaker to bring rain. Ask subscribers to report each month on readings taken from float mechanisms in order to bill customers for water received and used. Assume no responsibility for purity of water delivered to customers. Request police assistance to force noncustomers to remove pots and pans from roofs and windows of their homes.

"Question: Which method is most widely used by water companies in America today?"

The answer to subscription television is equally clear. Exhibitors will soon build the largest, most economical theaters in history. Relatively inexpensive coaxial cables and electronic equipment will replace concrete and steel. No seats or projection screens will be needed. The public will sit on their own sofas and chairs and witness attractions on their own television sets. The great mass sale of tickets at low prices will create a tremendous market for the finest possible box-office events.

This is Jerrold's blueprint for the future of the about-to-be-born subscription television industry.

Senator Potter. Mrs. Cornelison, we are delighted to have you present your views to the committee. If you would like to identify yourself for the record, we would be happy to hear from you.

STATEMENT OF MRS. R. W. CORNELISON, SOMERVILLE, N. J.

Mrs. Cornelison. I am very grateful to the committee for giving me this opportunity to state the case for the present system of free-television programs.

To identify myself, I will tell you that I was the first chairman of the department of communications for the General Federation of Women's Clubs, and am presently a member of the policy committee of the general federation, which is the channel by which resolutions get to the floor of the convention and become the policy of our organization.

I am also chairman of media for the National Council of Women, and in that particular am very much interested and very much concerned with the problems of educational television. I am very sorry that Mrs. Hartz, who is chairman of legislation for the General Federation of Women's Clubs, is ill and unable to appear today, but she planed to file a statement, and if she has not already done so, I am sure she will.

Senator POTTER. We shall be happy to receive her statement,[3] and that will be made a part of the record.

Mrs. CORNELISON. Thank you very much. I am very sorry she can't be here because she would be able to make a very clear case for our viewpoint.

I am very much opposed to the pay-as-you-see television proposals because I believe them to be un-American and undemocratic for one thing and I think they are unfair. I believe that before long we will be able to agree that they are unfair, and I believe that before long we will be able to agree that they are unnecessary.

It seems that it is very unfortunate to give a company an opportunity to control information in this country. I am very much concerned about maintaining freedom of information, freedom of communications, and I feel that the freer we make television service in this country, the safer our fundamental freedoms are.

I am also concerned with the difficulties that will ensue in homes where they cannot afford the pay-as-you-see television programs. I think it will make a discrimination. Television has done such a remarkable job in this country under the present setup. It has had a very great influence on life in the home. It has been a matter of family interest, and has in many instances, we feel, been a deterrent to juvenile delinquency. Now I know you can answer and say that some of the television programs are not very desirable. That correction lies in public opinion, and it will take care of it, I am very sure, as has been proved in many instances. So I feel very strongly that we must preserve this medium of communication which is rendering such an invaluable service, both in education, in entertainment, and in uplift. And anything that threatens it, I think, is a very serious matter. I am very much opposed to the idea of pay-as-you-see television, because I think it is unfair to present set owners.

You do not have to travel far in this country to see apartment houses with regular forests of antennas on the roofs, and we know that those sets have been purchased by families, painfully paying a little down at the beginning and so much a week for the privilege of what they believe to be free entertainment and free information. It is to me a very serious threat to these viewers, and I believe very strongly that nothing should be done to interfere with their access to the very highest type of entertainment and information—the panel discussions, which are a liberal education; the very high type music programs which we have; the theater.

Now much has been made today about the motion-picture industry.

[3] No such statement has been received.

It is a very interesting development, I think, that the motion-picture industry which was afraid of television and felt that it was being injured by it is cooperating very enthusiastically at the present time with the broadcast networks. So, too, is the legitimate theater which felt that it was going to be very seriously interfered with and perhaps put out of business. They went through a period of slump. Now they know that with the development of programs on television that their business has increased. Actors are more in demand than ever before.

Motion pictures cooperate with the television companies in putting on magnificent productions, and it does not appeal to me to think that we can—by paying a fee of $125 a year or something—that we can have good programs.

We already have them. I am a fan of Dave Garroway. I listen every morning for nearly 2 hours to his program. It is a wonderful contribution to family life. So, too, is the Home program on the same network. So, too, are the spectaculars—Max Liebman's spectaculars—and what could be better than the productions of Richard III and the Taming of the Shrew, and the magnificent program that Edward R. Murrow put on discussing the problems of the Arabs and the Jews. He was on the spot, interviewed distinguished Israelites, and the man in the street. He interviewed the leaders of Arab thought and the men in the refugee camps, and he presented a picture of that critical problem which we could not have gotten in any other way.

These are only samples of what is being done by the great broadcasting companies, and their sustaining programs are a tremendous contribution to American life.

Therefore, anything that threatens the permanence of this system of television seems to me to be a threat to fundamentals in American living, and for that reason it seems to me that we should go very slowly indeed in approving any system that is a threat to this institution. I would like to say that I represent the two organizations I mentioned. I cannot legitimately say that because, under our bylaws, we haven't taken action on this proposal. It has come up too recently. But we do plan to present the matter to the floor of the general federation convention in mid-May, and I can assure you that an organization with a paid membership of over 750,000 women will have a body of public opinion which I think is worth listening to.

Senator POTTER. If any resolution should be adopted along this line, I know the committee would appreciate receiving a copy of it.

Mrs. CORNELISON. Well, I will see that you get it, of course.

Senator POTTER. We wish to thank you, Mrs. Cornelison for giving us the benefit of your views. The committee will certainly give full consideration to the remarks which you have made.

Mrs. CORNELISON. Thank you.

Senator POTTER. Is there a representative from the National Council of Negro Women here?

(No response.)

Then our next witness is Miss Hurley. We are delighted to have you before the committee, Miss Hurley. We are waiting with interest to hear your views on this subject. Will you identify yourself for the record, please.

Miss HURLEY. Thank you.

STATEMENT OF MARIE A. HURLEY, NATIONAL BOARD MEMBER AND NATIONAL CHAIRMAN OF LEGISLATION, NATIONAL FEDERATION OF MUSIC CLUBS

Miss HURLEY. Mr. Chairman, my name is Marie A. Hurley. I'm a native Washingtonian, an employee of the United States Government, and am affiliated with the National Federation of Music Clubs as a member of the board of directors and as national legislation chairman.

The National Federation of Music Clubs, founded in 1898, is a nonprofit organization with representation in all 48 States, the District of Columbia, and Mexico. Its membership totals approximately 600,000 in over 5,000 clubs—senior, junior, and student. It has as its primary goal the promotion of American art and American music, with the accent on American youth.

Today I have the privilege to represent the president, Mrs. Ronald A. Dougan, and the entire membership of the National Federation of Music Clubs.

On behalf of this philanthropic organization, I wish to register protest against pay television, and to enter a plea for the continuance of free television.

The National Federation of Music Clubs is opposed to pay television because of the unnecessary financial burden it would place on the American public, and because pay television would require that televiewers be charged for the programs they have been, and are now under the system of free television, enjoying free of charge. Further, the organization considers that pay television would be most discriminatory, since it would be available only to those televiewers who could afford to pay the required fee, and that pay television would in time jeopardize the scope and the quality of news and public service programing.

Because free television has provided, and is providing, valuable information and entertainment that socially and economically is within the reach of the average American through the best possible coverage of subjects, such as, politics, art, music, news, science and drama, the National Federation of Music Clubs favors the continuance of free television. And the federation realizes that the best in free television is yet to come.

The system of free television, under which every American can watch television as much as he wants free of charge, serves the best interests of the American public and thereby justifies its continuance and expansion. Not to be ignored is the significant influence free television will, as it gains in age and wisdom, exert in the promotion of the educational and cultural life of America.

In brief, the National Federation of Music Clubs wants free television in a free nation for a free people. Therefore, on behalf of that organization, I would ask that all of you, representatives of the American people in the Congress of the United States, support free television so that it may continue in the future, as in the past and present, at the free disposal of all Americans all of the time.

Thank you, gentlemen, for the privilege of being here today and for the opportunity to express the views of the organization I represent.

Senator POTTER. We wish to thank you, Miss Hurley, and I assume that the views that you represent are the views of your organization and not just individual views.

Miss HURLEY. That is correct.

Senator POTTER. We wish to thank you for your fine statement, and I am sure that the committee will give it every consideration.

Miss HURLEY. Thank you very much, Senator.

Senator POTTER. Now is there a representative of the American Mothers Committee here? If not——

Mrs. CORNELISON. Mr. Chairman, I am a member of the National Board of the American Mothers Committee.

Senator POTTER. And I assume that the statement that you would make would apply to that organization as well.

Mrs. CORNELISON. I am very sure of it.

Mr. COX. We have received a telegram from Mrs. Poling, who is the president of the committee, suggesting that some representative, not named, would like to be here, but we would be happy to accept your indication of your membership.

Mrs. CORNELISON. Thank you.

Senator POTTER. Mrs. Boute. We are delighted to have you here. Will you identify yourself?

STATEMENT OF MRS. MATHIEU BOUTE ON BEHALF OF THE ADVISORY BOARD OF THE NEW YORK STATE TRAINING SCHOOL FOR BOYS AND THE SOCIAL SERVICE AUXILIARY OF THE FRANCES DELAFIELD HOSPITAL

Mrs. BOUTE. I am Edna Boute, a native of Louisiana but now a New Yorker by choice.

I am a member of the advisory board of the New York State Training School for Boys, where I have served for 11 years and was recently reappointed for 7 more years. I will be an old lady. I am also the founder and the first official chairman of the social service auxiliary of the Frances Delafield Hospital, which is allied with medical center but whose work is altogether with cancer patients.

Those are the two organizations for which I am speaking officially, but I am also a member of the National Council of Women in the United States, and what the former speaker said also expresses my sentiment, and also the Allied Council of Women in the United States, and a member of the board of directors of the New York City Cancer Committee.

I cannot speak for the cancer committee, but only through the organizations with which I am working very directly. I am very happy to say that in the past year I have been made a member of the board of directors of one of the most exciting organizations in New York City, the Manhattanville community centers, and as a member of that board we have pledged ourselves to do all of the community organization work that will be involved in those magnificent houses that are being built in the process of rehabilitating Morningside Heights. Of course, as you know, that was backed by and spearheaded by Mr. David Rockefeller and some of the fine people connected with the 14 sponsoring institutions—Barnard College, the School of Music, Rockefeller's Church, Morningside, and a number of other fine institutions. So my interest in being here is because all of my life has been spent doing direct services to other people.

Senator POTTER. And from the many organizations that you are affiliated with, I can see that you have a pretty busy life, too.

Mrs. BOUTE. A very busy life. Professionally I am a medical social consultant and for several years was connected with the American Cancer Society, of which I am now a volunteer worker.

What was my profession, I do now as a volunteer worker. And professionally, I am also a pharmacist and am now my husband's business partner, so I have had an opportunity—I say this simply to point out that I speak out of interest, because I have never functioned in an ivory tower. I have met and worked with all ethnic groups and people of all economic levels, and what I say I say from the bottom of my heart because I know it to be a fact.

I am an opposer of pay television. Of course, the proponents of pay television start out by offering the criticism that commercials are boring. Hence the first thing they say they are going to do is to eliminate commercials. I hope if they succeed it will be one of the things that they have worked for. Opposers, however, of pay television recognize that there are commercials that are bad, but they are a necessary evil. Since American freedom must be balanced by American responsibilities, public opinion has been, and is still being, exercised progressively in raising standards and ethics in the industry to the extent that a recent study or survey by the ABC Research Department revealed that 88 percent of 750 viewers of free television, when questioned on what programs they saw and if they listened to commercials, reported that they had found commercials both informative and interesting.

Senator POTTER. As a matter of fact, I think there has been a great improvement in the industry in raising the standards for commercials.

Mrs. BOUTE. I think so, too.

The proponents claim that: Subscription television would present top quality box office and entertainment features not shown by sponsored television such as new theater quality movies, opening nights on Broadway, heavyweight championship fights, grand opera, in its entirety, by the world's great opera companies, college courses for credit, etc.

Of course, most of these are already being presented on free television, and certainly advances already made along these lines are only indications or preludes of future advances. For several years now, because of free television, Mr. and Mrs. America know what is going on throughout the world. Into their homes come the finest talents in all fields, not only of their country, but of foreign countries also. They can get all of the general information and scientific knowledge that television offers; the worthwhile and significant events of their Government and that of other countries; they hear and see the personalities that keep the wheels of Government going. They travel through the museums of art. They see the evidences of the advances in the world of science.

Subscription television would enable the privileged only to benefit and enjoy all of these things at the expense of the run-of-the-mill citizen who, because of status, would be obliged to accept and become accustomed to uninspired programs. Too, the propaganda and thought control potentialities of paid programs to a favored audience could well breed division, excluding, as it would, the stabilizing base of broad public coverage such as now exists.

I suppose in a democracy it is just as proper to have pay television as free television, provided laws and public acceptance are respected. But to my thinking and belief, advertisers make television possible, and the mass purchasing power of the so-called little man is where the volume is. So it is reasonable to hope and believe that due to practicalness we shall have free television for a long, long time; that there will be no interruption of the present system of communication which makes it possible for any owner of a television set to watch television to his heart's content.

Visual education is in its heyday. While television does not replace the teacher, it is a valuable new tool when properly used. It has great influence generally, and especially so in training schools for juvenile delinquents, the type with which I come in contact at the New York State Training School for Boys, ages 10 to 16. To dilute the program now being televised, as would happen for a number of years, at least, until pay television spent its force, would lessen the scope and quality now being viewed, and work adversely on our treatment program. We figure 70 percent of our boys become normal citizens through our treatment program.

Senator POTTER. That is a good record.

Mrs. BOUTE. From the psychololological aspect, the shut-ins should constitute a basic consideration. I am talking now particularly of that paradoxical disease that kills that on which it feeds, which is cancer.

Senator POTTER. Mrs. Boute, could I ask you this: Do you use television in your training school for boys as a therapeutic medium?

Mrs. BOUTE. Yes, that is right, and of course we also use it for recreation and education, and the programs are very carefully selected by the director of education. A donor has just made possible a special room where we shall have television, and I don't know that you know that the State training for boys at Warwick is one of the most beautiful plants. The State established it 25 years ago as a research center, and whatever difficulties we have in not realizing the things that we want are due to budgetary problems.

Senator POTTER. That is a common problem.

Mrs. BOUTE. Yes. The State gives what they can. We have beautiful buildings. We have the cottage system. We have 16 cottages. The ideal would be to have not more than 25 boys in a cottage, but pressures have made us take more and we are still under pressure. Last year the pressure became so great that the State board of social welfare had to take over Otisville, which was formerly a tuberculosis retreat, and we now use that for older boys, over 16.

Senator POTTER. I am particularly interested. I am an old social worker by profession.

Mrs. BOUTE. Fine, then we have something in common. Now, I said in the psychological aspect the shut-ins should constitute a basic consideration. Pay television would be a sorrowful invasion of their peace of mind, their tranquillity, their acceptance of a slow death. The proponents of pay television minimize, or fail completely to recognize, the disastrous effects of the loss of the privilege to enjoy free television—what it will mean not only to the chronically ill, the incurables, the handicapped, and the aged, but also the majority of viewers not able to pay.

Consider, if you will, the effect on human personality when once barriers are like a prison. May I inject here about television, for instance, at the boys' school? Those television sets were not provided by the State, but people who are interested in the work that we are doing have contributed a television set for every single cottage. Of course, these people—as my board of advisers say, the State would not pay to put in scrambled television, and the same thing holds true with the hospital.

Now, the Delafield Social Service Auxiliary last year provided four movable televisions for the patients that are not ambulatory and that cannot go to the solarium, where we have a television on each floor in each solarium which was given to us by Arthur Murray. Now, the city of New York feels that it has so many demands that it will never pay for televisions and somebody else has to do it, and certainly if they don't give us the televisions themselves, they would not pay for pay television. We would have to fork over the money or do without it.

The establishment of a pay system is contrary to the concept of free enterprise, as has been repeated many times. It is undemocratic. It will give to much to too few. It will be a disservice to millions of families of low and middle income groups. By the irony of progress, the rich will become richer, from the supposedly super educational, cultural, spiritual, and recreational values that pay television offers.

From the sociological aspect the largest minority group in this, our great country of great abundance, the Negro, will suffer an irreparable loss. The majority of this minority group are still on the lowest rung of the economic ladder. Great strides have been made. A few hold top positions, but many, many barriers are still there—low pay, lower grade jobs, substandard living in racial ghettos. Despite our economy of abundance, he still lives on a substandard scale. Discrimination and segregation deprive him of the chance to earn a decent living, a fair chance for all that America has to give. Pay television would be an added social injustice. Therefore, this I believe: There is no sound reason, with a 70 million audience potential, why any program should be paid for. Advertisers should pick up the tab and give free any program such as the proponents of pay television have in mind.

I thank you very much for this privilege, for more reasons than one, but primarily because in the early eighties my father, a French Creole, was for several years a member of the House of Representatives of the State of Louisiana.

Senator POTTER. That is wonderful.

Mrs. BOUTE. And you may know that segregation on the trains was instituted by the Louisiana State, and my father was the man who opposed the passage of that bill. I have here with me today a photostatic copy of the address which he made to the house when he opposed that bill. I have inherited my love for social justice from my parents, so I thank you very much.

Senator POTTER. Thank you, Mrs. Boute. The committee will recess until 2 o'clock this afternoon. I am sorry that I have another commitment; as a matter of fact, I am going back to Michigan, so I won't be here this afternoon, but the committee will resume at 2 o'clock this afternoon.

(Whereupon, at 12:05 p. m., the committee recessed to reconvene at 2 p. m., the same day.)

AFTERNOON SESSION

Senator BIBLE. The committee will come to order, and we will observe the courtroom admonition of being quiet.

Our first witness is Father Vizzard. We are very happy to have you with us, Father.

Father VIZZARD. Thank you, Senator.

Senator BIBLE. You may proceed.

STATEMENT OF FATHER JAMES VIZZARD, NATIONAL CATHOLIC RURAL LIFE CONFERENCE

Father VIZZARD. My name is Rev. Father James L. Vizzard, Society of Jesus, I am assistant to the executive director and eastern regional representative of the National Catholic Rural Life Conference. The national headquarters of the conference are at 3801 Grand Avenue, Des Moines, Iowa. I am also chairman of the policy committee of the conference. Before undertaking this position I was professor of economics at Santa Clara University, Santa Clara, Calif.

Senator BIBLE. When were you professor there, Father?

Father VIZZARD. Three periods in my life: 1940–42, 1948–49, and 1952–54.

I appear here today, therefore, in a triple capacity: As an economist, as a spokesman for a Catholic organization, and as a representative of the interests of rural people.

In all three capacities I am opposed to pay television. I propose, however, to limit my remarks to those reflecting the interests of the church and of rural people. I believe that the economic as well as technical and other aspects of this issue have been adequately covered in testimony already submitted and I do not feel that on these points I have anything to add.

In my concern for the problems and possibilities of television, I am following the lead of the head of our church, Pope Pius XII. In a number of talks with, and statements directed to, leaders of the radio and television industry, Pope Pius has often pointed out that a medium which can so deeply and powerfully affect the spiritual and cultural roots of whole peoples as well as of individuals is of legitimate interest to the church.

Only a few months ago, in an address to the delegates of the European Radio Union, he reminded them that, "The good and evil which can result at the moment of broadcast or after it are incalculable and unforeseen." And he admonished them: "Make absolutely sure, therefore, that television does not serve to spread error and evil. On the contrary, make it an instrument of information, formation, and transformation."

But there is reason for interest not only in the direct moral influence of television. Pope Pius also emphasized that educational, cultural, and spiritual advantages, as well as dangers, of this versatile new medium. He pointed out its power to present with unforgettable clarity the lessons of science, the facts of history, the beauties of art, the truths of religion. He addressed himself particularly to one of the beneficial effects television can have on the family.

Certainly he is to be praised who succeeds in holding at home both adults and little ones without requiring that they give up necessary and useful relaxation after days at work and study. * * * Television can contribute to this effect by reuniting the whole family around the set.

It might be unnecessary to add that Pope Pius also gave special attention to the contributions television can make to the spiritual welfare of peoples.

Television also can become a providential instrument for larger participation in the manifestations of religious life for all those who would be prevented from being actually present at them. The televising of liturgical ceremonies, the illustration of truths of the faith, the presentation of masterpieces of sacred art, and many other things will carry the word of God to homes, hospitals, prisons, the most remote centers of population.

For these reasons the Pope took the occasion to remind his audience that—

Television * * * ought to be helped continually to reach an increasing number of viewers. So make yourselves surmount economic and legal obstacles which encroach upon the extension of such a beneficent means. Study attentively all the administrative, legal, and technical provisions which increase your insight into it and consider above all the moral ends of the true welfare of men and families.

It is because I share Pope Pius' recognition of the actual and potential value of television that I am concerned by the changes which I believe would be wrought by pay-as-you-see plans.

I have read through much of the argument presented both at these hearings and elsewhere by the proponents of pay television as well as by the opponents. Having no ax of my own to grind, I have tried to think through and to weigh as objectively as possible the effects one might most reasonably expect pay TV to have on the quality, quantity, and variety of programing.

Against the background of some intimate knowledge of Hollywood, with some understanding of the economics of markets and media of communication, a study of the pros and cons has convinced me that pay television would inevitably restrict the quantity and variety and lower the quality of TV content. Not that I believe that TV is now as good as it could and should be. But I believe that the facts and the arguments already adduced by those opposed to pay television are conclusive to the effect that deterioration rather than improvement must be expected from the introduction of pay-as-you-see TV. Under such a system, television would not tend, as Pope Pius recommended, "continually to reach an increasing number of viewers"; nor, I believe, would it be able increasingly to contribute to the "moral ends of the true welfare of men and families."

Beyond this concern on general moral and religious grounds the National Catholic Rural Life Conference is interested in this issue because, as its very title indicates, it is concerned with the welfare of rural people. And although the point has not yet, to my knowledge, been brought out in these hearings, the interests of rural people are vitally involved in the problem of pay TV, perhaps more critically involved than any other major group of Americans. This belief is based on the following reasoning:

Pay television, as I understand it, predicates its success on the assumption that, in addition to their outlay for the set itself, families would be willing and able to spend about $2 a week, or $100 a year, to see these programs. I believe that it is obvious, however, that even in these days of general prosperity a considerable number of our American families, and particularly of our rural families, do not have that kind of money to spend for this purpose, especially when they now receive it free. Whereas now all who can afford a set can without further expense enjoy the same program whether they live in a Park Avenue penthouse or a Main Street bungalow, under a system of pay television millions of families might well be blacked out from what pay-as-you-see advocates readily admit would be the cream of the programs. Pay TV would create an elite whose willingness and ability to pay for the best would deny it to the rest. To allow that kind of class distinction to come into being where none exists, nor need exist, does not seem to me to be in accord with the American spirit or for the common welfare.

As I understand it, the great opportunity and challenge of television, which perhaps has not yet been fully appreciated and certainly has not yet been fully achieved but toward which important strides have been taken, is to bring the best in entertainment, information, art, education, science, and culture to all and thus to contribute to the recreation and growth of the mind and spirit. Such an objective clearly cannot be accomplished by restricting the opportunity to those who can afford it or by cutting down the variety and quality of programs. This, I believe, is precisely what pay television would do.

In this respect rural people are particularly vulnerable. I believe that it requires no proof that families in rural communities have fewer opportunities for spiritual and cultural enlargement than those living in major centers of population. They have more limited access to libraries, art galleries, museums, the legitimate theater, concerts, opera, and ballets, and all the other recreational, educational, and cultural opportunities which abound in the metropolitan areas.

It would be proper here, I believe, to quote from the 1956 Policies of the American Farm Bureau Federation (p. 59) the following resolution on radio and television:

> Radio and television broadcasting provides an invaluable service to rural areas and farmers. We strongly support the efforts made by the industry to expand and improve its coverage of news and farm affairs.
>
> We urge that the Federal Communications Commission give close scrutiny to the issuance of licenses and guard against any lowering of high standards of public service which might vitally affect programing and reception for farm families.
>
> We are firmly opposed to any Government regulations which might reduce, or threaten to reduce, service to rural listeners.

Farm and rural families, therefore, are more than usually dependent on the broadcast channels, both radio and television, which represent for them a major contact with the best of our current national life and of our cultural heritage. The extent to which television has been providing for this need is most perceptively and amusingly described by William Zinsser in the April issue of Harper's in an article entitled "Out Where the Tall Antennas Grow." With your leave, I would like at this time to enter this copy of the article in the record.

Senator BIBLE. It may be entered at this place in your statement, Father.

(The article referred to is as follows:)

Out Where the Tall Antennas Grow

By William K. Zinsser

When I went out to Iowa a year ago to get married, I wasn't even sure that there was a State called Iowa. I had seen the Nile, the Congo, and the Ganges, but not the Mississippi. Beyond that river lay a mysterious land of waving wheat and stampeding cattle. According to Oscar Hammerstein, the corn grew as high as an elephant's eye, and this seemed very high to someone who had seen corn only on the cob—and had never been able to look an elephant in the eye.

Whatever would I talk about with my new relatives? I am one of those New Yorkers who spurn the call of the suburbs, with all their robins and roses. I stay in the city because I like to see the new plays and films, operas and exhibits, and try to keep up with the arts. But a huge area of ignorance remains—television. I don't own a TV set. At the time of our wedding, this didn't matter. The folks in Iowa didn't have television either. So we talked about the weather and the cost of living, dogs and taxes, neighbors and politics.

Well, 1 year can make quite a difference in this coaxial age. When we went back to Iowa last fall, the house had changed. In a corner of the living room, where the dog used to sleep, a television set now stands. I tried to pretend that I didn't notice, but it was no use.

"Have you seen A View From the Bridge yet?" my mother-in-law asked, eager for word straight from Broadway. "We saw Arthur Miller on television the other day, and he made it sound absorbing. He explained how he tried to relate the tragedy of a Brooklyn family to the tragedies of Greece and Rome—you know with a chorus to comment on the action. The moderator compared the technique to Sophocles and Euripides."

My father-in-law asked if I had seen the world series. I confessed that it's almost impossible for New Yorkers to get tickets to a world series held in New York, but that I had glimpsed a few innings poorly by craning my neck around some beer drinkers at a local bar. "Too bad you missed it," he said.

"I'll be interested to hear how you like the movie of Moby Dick," my mother-in-law said. "We saw a wonderful interview with John Huston on Dave Garroway's show, and he told us how he filmed the whaling sequences off the Canary Islands, where the whalers still use the same phrases as the old New Bedford harpooners, like 'thar she blows!' He said he filmed it in a new process to make it look like those old whaling lithographs. He spoke about the symbolism of the white whale, and said that he used Melville's exact words in many passages."

I had missed Huston's interview, of course, and Moby Dick won't be released for months. Conversation swung to other celebrities. I gathered that every person who even carries a spear onto a Broadway stage appears soon afterward on Steve Allen's night show. Van Heflin, Ruth Gordon, Michael Redgrade, Julie Harris—every star of the new theater season has confided his secrets to people in Iowa and 47 other States, but not to me.

My mother-in-law got up to make dinner, and I commented that she was wearing a very chic dress.

"That's the Y line," she said. "We heard all about it on the Home Show. Arlene Francis had this designer from Dior's studio in Paris to explain the new line. I got my winter dresses out and sat at the sewing machine for 3 days, and now I'm all set—at least for this season. I just hope that Dior and Arlene Francis don't give us another new style too soon. Some of the ladies in town haven't reconverted yet, and, of course, they're quite embarrassed."

My wife's teen-age sister put a record on the phonograph. Her heroes are Stan Kenton and other apostles of "progressive jazz," so when she lowered the needle and raised the volume I braced myself for the old blast. But out of the phonograph came a Bach fugue. Its rhythm was not as perky as Kenton's, but its construction was trickier than anything the great Stan had put together, and Janet sighed with admiration.

"Jeepers, catch that contrapuntal bass," she purred.

I asked here where she got the record.

"We saw Leonard Bernstein on Omnibus," she said. "He took this Bach fugue and showed us how it was assembled. Quite a few of the kids saw the program, and everybody thought it was real crazy. I had saved up to buy a new Ray Anthony record—he played here at the Golden Goon a few weeks ago—but I bought this instead. Isn't it the most!"

Suddenly the lights went out, and my mother-in-law brought in dinner on a flaming sword. "Shashlik Escoffier flambe," she announced. "This is the way it's done in the best Continental restaurants. They demonstrated it on a cooking program on TV, and I wrote it all down. Last week we had fettucine al Alfredo, which was described on some program by a chef just off the plane from Rome—he even brought his own cheese—and then we had cherries jubilee for dessert. Tomorrow I'm making Stroganoff Tsar Nicholas, and I hope it works. The man who demonstrated it on TV fled from St. Petersburg just ahead of the Bolsheviks with all his recipes, and he made it look very easy."

On Saturday afternoon we watched a football game on television. I had always watched football from a chilly perch high in the stadium, where I got only a general idea of the action. I could follow the more obvious maneuvers, executed by the tiny figures far below—punts and passes and end runs from the plain old single-wing formation. Later, when the T formation came along, I never did know which player had the ball, and my interest lapsed.

Now, the TV camera took me right into the backfield as the Hawkeyes played the Badgers, or whoever they were. (Midwestern teams are always called by their nicknames; I never did learn what universities they represented.) The backs went through motions as intricate as a Watutsi dance, and they handled the ball with a legerdemain too fast for my eye. But they did not fool my father-in-law. He pointed out the spinners, fake handoffs, and buck laterals as if he had devised them himself.

We New Yorkers never regained the initiative. The folks had seen an archeology program and knew more about the solar boat than we did, though we had been to Egypt and seen the boat itself. They were excited about the new ballet season, since somebody (was it George Balanchine?) had told them about it on a TV show. They talked about the exhibits we would soon be seeing at the Metropolitan Museum of Art and they described the new opera productions.

The weekend left us demoralized, and we wondered if we should buy a television set so that we could keep up with the Iowans. But they have too much of a head start. I'm working on another plan. I have subscribed to Agricultural Digest and the Pig Breeders' Weekly. I went to a revival of State Fair and took notes. I'm reading Secretary Benson's speeches and boning up on the soil bank. I'm hoping that my in-laws will watch television so much that they'll forget all they ever knew about Iowa. That's when I'll go out and tell them a thing or or two about corn.

Father VIZZARD. This is what television is now doing and, in my judgment, is doing increasingly well. No longer are rural peoples denied the opportunities to share fully in the riches of our American life and heritage. These benefits come directly from programs professedly cultural or educational. But perhaps even more effectively they come indirectly through broad appeal entertainment programs. As a single example of this we may quote Charles Laughton's comments on the program The Day Lincoln Was Shot:

It is more than 90 minutes of entertainment. It is teaching without exercises or homework. It turns the home into an education center, which, after all, is what youth leaders and educators have been striving for for decades; isn't it?

If such opportunity for cultural and spiritual enlargement is important to all people, it is of far greater value to rural people.

On the basis, therefore, of our conviction that pay-as-you-see TV would surely diminish the effectiveness of the medium in performing this vital function the National Catholic Rural Life Conference stands opposed to any such fundamental change.

Senator BIBLE. Father Vizzard, thank you very, very much for your very able statement. We are happy to have you with us.

Do you have any questions, Mr. Cox?

Mr. COX. No; I do not.

Senator BIBLE. I think that is all. Thank you very much.

Our next witness is Mr. Pierson.

REBUTTAL STATEMENT OF W. THEODORE PIERSON, ZENITH RADIO CORP.

Mr. PIERSON. Mr. Chairman, the notice for this part of the hearing was for a selected representative of the proponents. The proponents as near as I can define them—though I am in some doubt after Mr. Garfield's testimony—are Telemeter, Skiatron, and Zenith. I have been asked by the other parties—since I represent Zenith Radio Corp.—I have been asked by them to give the rebuttal in their behalf. However, I am not certain that I will cover all of the points they intended. I would like to reserve some of the time I have for them in case there are any points they have.

Senator BIBLE. We are happy to proceed in that way. You may proceed.

Mr. PIERSON. There have been some similes used to describe the proponents of subscription television in the record here, and particularly what we were trying to do here. Some of them have been rather complimentary and one of them has been quite uncomplimentary. One of them is that our technique is a camel's-nose-under-the-tent technique, and in another one we are trying to get a foot in the door, and I believe Mr. Cohn referred to us as trying to get a toehold, which was a slight change in the simile. Now, I want to make clear that we do not plead guilty to these characterizations, because we claim far more. We are not a beast on the outside of the tent trying to get in where he doesn't belong, nor are we an unwanted peddler knocking at the front door attempting to get into a place where he doesn't belong. Because we think that it is a common, ordinary, American right, when you have developed a service or a product, to go to the market place and let the public decide whether you should succeed or fail on that product.

Up to this point our opposition has been somewhat varied in terms of the identification of the people who have opposed us and also to some extent varied in terms of the arguments that they have made. There are those whose private interest, they feel, will be substantially injured if we are given this opportunity to enter the market place, who I would say have carried the principal burden of the opposition against us. There are other dedicated independent witnesses who appeared here in behalf of important organizations of the public, and some of them in their own individual capacities, who have opposed us.

Now, running through all of the arguments of the public witnesses, whose positions and opinions I respect very much, is one postulate that furnishes the sole basis for their opposition to subscription television. This postulate is the one that our two principal opponents here—CBS and the motion-picture theaters—have not only pronounced here but far and wide through the country, and that is that we will not add to television service, we can but subtract from it. Therefore, it seems to me that the testimony of the independent witnesses stands or falls on the truth of this postulate that they have accepted from our opponents. It is pretty obvious, at this point, that as to those people we have not been as effective in persuading them of the truth of what we predict as compared to the truth of what our opponents predict. For that reason I would like to devote the major portion of my time, if not all of it, to that problem.

I have another reason for doing it. In the record yesterday Senator Pastore invited rebuttal on that point and said that he felt that, from a committee standpoint, it was a crucial point still to be resolved.

Now, after the testimony this morning I might say that a party who was listed as an opponent, who was confused himself as to whether he was a proponent or opponent, might have given all of the rebuttal that was necessary. I am referring to the testimony of Mr. Garfield in behalf of Jerrold. First, the claim of our opponents. They claim a phenomenon, which they call blackout and siphon, will operate to take all of the top television programs from free television over to subscription television. And they say that this will not happen if neither the Commission nor this Congress, or whoever has jurisdiction—with respect to which I am not uncertain, but it is arguable, I suppose—denies the right of subscription television to go to the market place.

Now, the reason that I say perhaps all of the rebuttal necessary was made this morning by Mr. Garfield is this: Mr. Garfield first claimed that our system is uneconomic; it will certainly fail, and all that you need to do to make it fail is to give it a chance against his wired system—what he calls a cable theater; and that the cable theater itself will be capable of furnishing to the people of this country all of the top programs that what he calls scrambled subscription television could do.

Now, Mr. Garfield is in a fortunate position. He doesn't have to go to any Government body to get permission to start, but he anticipated the question as to why he would be here by saying that because of the furor created by the proponents and opponents of subscription television, the owners of program production have been reluctant to release to his system the programs that he needs to make it work, and he was quite sure that if the Commission would either deny subscription or would give us a chance so that we could prove our failure and our folly, that his system then would blossom into a full-blown national system of subscription television carried by wire. Now, then, if that is true—if his system is better, if it is more economic, if it can provide the public the service that we claim we can provide, only cheaper and better, then the siphon which our opponents so bitterly fear is going to happen regardless of what happens to subscription television. In other words, we can't possibly be the cause of these things that these people fear if the Jerrold Electronics Co. is right, if Mr. Garfield is right. Now, I can't agree with him as to his reasons why he will defeat us in competition, but I can thoroughly agree with him that he should have the opportunity to do so, and furthermore that we should have the opportunity to compete against him.

Now, I would like to turn for a moment—or maybe quite a few moments—to the argument of CBS. As I stated before, the whole crux of their position is based upon a contention that this phenomenon of siphon and blackout will occur. Now, Mr. Salant presented their testimony and he said that this results from a "little exercise in economics," or a "lesson in economics." Well, now really I don't know how much weight to give to CBS lessons in economics or their exercises in economics. History may cast a little doubt—even contemporary events may cast a little doubt—upon how much weight should be given. I think all of those acquainted with the industry can recall that when the Government attempted, starting back in 1938 and finally succeeding in 1943, to impose regulations upon the network industry, CBS indulged in, not little exercises in economics, but tremendous exercises in economics to try to teach the Commission, the Congress, and the courts that certain ruin would occur if the proposed regulations went into effect. Now, they failed to teach that lesson, or persuade in any of the areas in which they were operating, and this was to their immense good fortune, because after the regulations went into effect, the most prosperous period of the industry occurred, including a great prosperity by CBS.

Now, to get a little bit more up to date on the trustworthiness of their lessons of economics, the Commission, a short time ago, was much concerned about the fate of UHF, and out of that concern started a procedure for the purpose of determining what changes, if any, in their allocation plan should be made in order to preserve a nationwide system of 2,000 stations in 1,260 communities. And they asked the large interests, and those who had means of going into this problem with research and with engineering technical ability, to make suggestions with respect to what should be done.

Assuming that everyone wants to save the industry and everyone wants to accomplish the objectives of the act and the objectives of the Commission's sixth report, it seems—and it is only a clear indication of the presentation that CBS finally made—that CBS decided that perhaps before we waste a lot of time in allocating many more stations than we will ever use, we should first determine how many stations we can conceivably use, and that our allocation plans should be based upon that requirement, not some unsupported requirement for just a fanciful number of stations. So they used the services of a very eminent economist, Dr. Alexander.

Now, I assume, in view of their resources and their intelligence, that he was among the best that they could possibly obtain for this purpose. Now, Dr. Alexander made a very careful study—one of the most authoritative that has been made in the industry—and Dr. Alexander concluded that, in the foreseeable future, advertising television would on its most optimistic basis support no more than 588 stations, and the probable figure was substantially lower than that. Now, this was a rather dismal prospect in terms of what had been projected, as a matter of hope in the sixth report, of nearly 2,000 stations in 1,260 communities—as compared to the 500 or 600 stations in 270 communities found to be economically possible by Dr. Alexander. Now, CBS realistically faced up to these facts and, in response to the request of the Commission to assist it in determining what it should do about its allocation plan, it prepared what it calls plans I and II, which were the successors of plans A and B, substantially similar.

They in effect said, "Why bother with allocating 2,000 stations in all of these markets when no matter what we do—providing you keep out subscription television—no matter what we do, we will never have any more than Dr. Alexander found." So they proposed a plan. Their allocation plan had as its major objective the accommodation of the network requirements in the first 100 markets. Their plan had as its purpose the accommodation of that objective with VHF facilities, and their plan substantially accomplished that purpose. The result is that there can't be any question but what they dumped UHF, because in order to get comparable facilities in those 100 markets, wherever they could they put in a VHF facility and succeeded in most instances, and their plan substantially reduced the major markets that would have UHF from that of the existing allocation plan, or even existing allocations.

Now, it is true that they said "Well, UHF can be reserved for future growth." You can't save for growth what has been killed now. All of the progress to date would have been lost. This was preserving one of the most effective blackouts that I have seen, and doing it in one of the most effective manners that it could be done. There is currently, today, a blackout of local expression in nearly 1,400 communities—in nearly a thousand communities. There are many, many stations projected by the Commission that are blacked out—75 percent of them.

It also had the value as a matter of regulation to keep this beautiful siphon that CBS now has in operation working. Now, I think they are somewhat experts in siphoning. The networks themselves, in 1954, siphoned into their own organizations 52 percent of all of the revenue that was received by the television industry. They have, by virtue of operation contracts and arrangements with the present stations in the country, siphoned up control of that program time to the networks. They have also siphoned into CBS the control of broadcast time—into CBS and NBC and ABC, the control of broadcast time as far as advertisers are concerned.

There was one other thing about their contention, besides the cloud it places over public aspirations, and that was it would eternally preclude, for any practical matter, subscription programs or independent producers of programs. This was a very careful study made by an eminent economist, upon which they soberly and sincerely applied to a Government body for a plan. This was what they proposed; this was its clear effect. But this became somewhat embarrassing to them when they came down here this week, because since the proponents of subscription television were arguing that we would take their rejects—we would take the stations that Dr. Alexander insisted they couldn't use—and by getting economic support from subscription television by using, say, 15 percent of its time, we would light up a lot of communities in terms of local expression. When Mr. Salant was asked about Dr. Alexander's report, he said, "Well he is only an economist," in effect, "and what we on the business side must do is to refute Dr. Alexander."

Mr. Salant said that the total basis of his statement supporting blackout and siphon was economics, and I didn't know Mr. Salant was an economist. Basically, what he wants is a chance to prove that his own economist is wrong, and he wants that chance by denying subscription television itself an opportunity to prove that it is right. Now, I submit that by their own statements, and by these circumstances, their economic predictions are not reliable.

I would like to get now to the question of blackout and siphon specifically—and I should say, before I get into that, that it is impossible for Mr. Salant, even if he reconciles his economics with Dr. Alexander, or for me to prove as a matter of final fact, on this record, what will in fact happen. And since that is true, the only way that it can ultimately be determined is for it to get its opportunity, under the controlled and supervised conditions that have previously been discussed in the record.

They say that subscription will be so successful, and will have such economic power, that it will siphon all of the best programs from advertising TV, and thus blackout viewers' screens for all but the poorest programs free. This is Mr. Salant's economics that will bring this about, not Dr. Alexander's. Now, I have no capacity to refute this simple lesson in economics. Therefore, in desperation I am left to what commonsense and simple logic I can command, and it may fall far short, but I would like to submit it to the committee.

I claim that the blackouts and siphoning that they predict will not occur, because they are based upon a priori assumption that are simply ridiculous, and it doesn't involve economics. Their assumptions are that all of the top talents in shows will move en masse to subscription, that none will remain on advertising television, nor will new ones come to advertising television. Now, the top television shows, if I can establish a predicate, are of various types, but each network tries to put forth the best that it can in each type, with the hope that it will corner the public taste for that type of program. A few examples will suffice.

Ed Sullivan's variety program is on CBS opposite Comedy Hour on NBC. This occurs at the same time. Robert Montgomery has his Studio One. Phil Silvers had Milton Berle. Howdy-Doody has Mickey Mouse. The $64,000 Question is in competition with the Big Surprise. Meet the Press, on NBC, is in competition with Face the Nation. Rin-Tin-Tin is in competition with My Friend Flicka. There is other competition. I am merely giving examples of programs of the same type. Playhouse of Stars competes with Star Stage, Danny Thomas with Jane Wyman, and Gleason with Como.

Now, in support of their prediction, they must establish, or we must be required to assume, that if one of these pairs moved to subscription television, both would. Now, I claim as a matter of commonsense and logic that that is the necessary postulate for their prediction: That if these programs, competing in the same type, if one of them moves—if a CBS show moves, or a NBC show moves, or an ABC show moves—the same type of show from all networks will move.

Now, let us take an example. Let us assume that Ed Sullivan moved to subscription. Now, the Comedy Hour would no longer be competing with Ed Sullivan for the free audience. Except for the Famous Film Festival that ABC puts on at about the same time, they would have the free audience for that type of variety show entirely to themselves. Now, it would seem to me that NBC, at that point, would decide in ordinary commonsense that all they need to do to capture the free audience for this type of show, and make sure that Sullivan would not get a thin dime, is to continue to try to produce as good or better shows than Sullivan. That is what they are trying to do now.

Now, what would this do to the advertising value of the Comedy Hour? If they could just get rid of Ed Sullivan—if Ed Sullivan could go over and require people, before they listen to him, to pay him money—what could you imagine would do more to increase the listenership of the Comedy Hour? And if their costs per listener economics—I am sorry if I transgress into the field of economics—operates, the advertisers would be standing in line for that program and willing to put much more money into it by reason of its increased listenership.

Now so much for NBC and their Comedy Hour. What of Sullivan? If the Comedy Hour remains with advertising television, which it seems to me in commonsense it would, Sullivan would be trying to sell the same thing that NBC is giving away. Now, I just don't think the public would be that stupid. Furthermore, Sullivan's problem is greater than that. We have referred before in the record to the fact, the obvious fact, that a family's budget for entertainment is limited, and therefore, in any given week or month, there is going to be a maximum amount that any family can spend for entertainment. It also means that everyone who is competing for the subscription-television dollar competes with everyone else for its share of that money that the family is going to spend. The most careful study of this indicates that the average family would spend about $1.50 a week.

Now, Sullivan's position, having moved to subscription is this: He must compete for this $1.50 average with first-run feature movies, with outstanding sports events, 2- and 3-hour Broadway plays, and a host of other programs which the public could not get without going to some turnstile now and paying for it. So the public has the choice, in deciding whether they would give Sullivan any part of their budget, that they can watch the Comedy Hour for free, but they can see a first-run movie out of that $1.50 budget, which is much cheaper than they can see it in the theaters or any place else.

Again, I would think the public, in commonsense, would make their selection to the very tremendous detriment of Sullivan. And it would seem to me quite possible that Mr. Sullivan would find, in a few short weeks, that he was meeting economic ruin, and he would be back on advertising TV promptly.

But how wonderful it would be for ABC if both Sullivan and the Comedy Hour did move. They would leave the advertising medium nationwide from 8 to 9 o'clock on Sunday night, the primest of prime hours, to ABC alone. I believe—again not as an economist, but just as an observer—it would be impossible for me to think of a single medium of advertising in this country that would be more valuable than the complete control of the free audience from 8 to 9 o'clock on Sunday night.

It seems to me, also, that any advertiser would pay a huge sum of money both for time and program—far more than he will spend on ABC now for programs—to get access to that great medium, and for the very reason that that is true, I hardly think that NBC and CBS would place ABC in that beautiful position.

Now, therefore, I say that in commonsense there is no way that this thing can happen that they predict—unless we assume that they are going to sit down and agree that when one of them puts one type of program on subscription the other will put its type on there, and not put any more of that type on advertising. It is hard for me to think that they would make that agreement, because their law departments are very well skilled in the knowledge of antitrust law, and I don't think they would do it; but I see no way, except by a conspiracy in violation of the laws, that this thing could happen. But even then I don't see how they could possibly keep anyone from taking over what they left, if they were silly enough to leave it.

Now, it seems to me that this demonstrates a simple but true proposition. No advertising show dares move to subscription unless it is assumed that all competing shows of the same type do, and unless new shows of a comparable type and quality are effectively blocked from advertising TV. And I don't see how it is possible for them legally, or as a physical matter, to affect that prior condition.

It also seems to me to indicate very clearly that subscription must succeed on box office type programs alone. It must succeed on that alone. And it will have no help, but the toughest conceivable kind of competition, from the advertising media—a competition that is tough because they are giving away something free that you are trying to get people to pay for, and you must demonstrate to the public that your quality is so far superior to theirs that the public should take your wares instead of theirs.

Now, I think CBS, as well as having problems with its economics, has problems with its plumbing. They did a beautiful job in constructing the siphon that now is bringing them millions of dollars every year from the broadcast industry, and I think it is working very well; but I think their plumbing techniques fell down a little when they referred to the siphon operation of subscription television—and if the siphon does not work, the blackouts will not occur.

Now, I could go on and give demonstrations of the same thing in a city such as Washington. I do not wish to impose any more upon the patience of the committee in that respect except to say this: The gross revenue of all of the stations in Washington in 1954 was $6½ million. That is four stations. That comes to a figure of about $126,000 a week. Now, if we assume that 50 percent of the television homes in Washington were made subscription television homes, and the average family would spend $1.50, there would be $450,000 gross revenue from the subscriber. But in order now to reduce—to determine what part of that would go to the television station—because this is the comparison that we started out with—we have to take off an amortization charge for the cost of the system, which would be between $15 and $20 million, and we have to pay the owner of the products, such as the motion-picture owner, his share.

Now, I think that it is conservative to say that at least 80 percent of the subscribers' take would have to go to those 2 sources, which would leave, in my opinion, a maximum for the television station of 20 percent. So there would be 20 percent of $450,000, or $90,000 available, per week, from subscription revenue in Washington.

Now, assume that we have the four VHF operations, and that a UHF comes into existence, if the Commission limits subscription to UHF. It just doesn't make sense to me that all 4 stations will all of a sudden give up this $126,000 a week revenue to move over to try to split up, among 5 stations, $90,000 of revenue. I rather think, if they are people who look at things from a rather simple but prudent point of view, that they would find means for the industry as a whole to preserve both sources of revenue.

Now, I submit that if these simple propositions are correct, the CBS propositions must be false, and all of the witnesses whose testimony was based upon these false propositions would undoubtedly correct their testimony if this truth were accepted. I submit, therefore, that subscription television can only succeed by adding to present program service, and if it tries to subtract it will surely fail.

Now, I have sought some independent opinion on this judgment as to how the advertisers would react, and this industry would react.

I didn't need to seek judgment from the networks because their views are rather widely published. Also I think it is important for me to cover this point because there have been several questions from the committee during the course of this hearing as to how the advertisers felt about this. After all, the advertisers are the ones who would be the most affected by destroying the value of this medium as an advertising medium.

Tide magazine has a panel which it calls the top leadership panel, composed of the leading advertisers in the country. It submitted this question to those advertisers, and published an article in Tide as to the result. I have furnished for the record a copy of the reprint and——

Senator BIBLE. It will be incorporated as part of the record, Mr. Pierson. You may highlight what you would like to draw attention to.

(The magazine article referred to is as follows:)

[From Tide, July 30, 1955]

UNITED STATES MARKETERS VOTE ON TOLL TV

TOP ADVERTISERS WOULD GIVE FEE TV A TRY

Tide leadership panel, by a commanding 7 to 3 majority, insists subscription television has the right to compete with commercial television for the viewers' interest.

Most panelists feel FCC, not Congress, should decide whether the air waves can rightfully be sold. In any event, it will be the viewer who decides whether fee TV stays or goes.

The men who sponsor commercial TV also believe the public will pay for what it wants to see. They claim, too, that fee TV's effect on commercial TV can only be beneficial.

If the fiercely controversial dispute over subscription television were left to the Nation's top advertisers—the men who now foot the bill for commercial television—pay-as-you-see TV would get a chance to show what it can do.

Such is the emphatic conclusion from a survey of the Tide leadership panel. These leading advertisers, agencymen and public-relations executives, who represent most of the companies which will invest some $950 million in television advertising this year, vote by a resounding 7 to 3 for at least a trial test of toll TV.

Exactly 70 percent of these top marketers, if they were a Federal Communications Commissioner or a Member of Congress, would vote tomorrow for subscription television. This is how they reason:

(1) Fee TV, like any new idea in a free-enterprise system, deserves a chance to meet commercial television in open competition. There, at least, it can stand or fall on its own merits.

(2) The public is gradually getting fed up with current commercial TV fare. These viewers—and every advertiser is also an individual viewer—deserve something better, which fee TV may offer.

(3) Subscription television would have little, if any, effect on commercial television, might even help it by forcing it to raise its standards and improve what the panel calls mediocre to idiotic programing.

Interestingly, these top advertisers seem little concerned with any effect fee TV might have on the size of commercial-TV audiences. Even the prominent agencymen—whose income in many cases comes mostly from commercial TV billing—feel fee TV should be allowed a tryout.

Many panelists believe that a trial period is necessary first to determine how fee TV would go over with the public and how much viewers would pay for what kind of shows. Some suggest pilot runs in test markets. But they insist most emphatically that ruling fee TV out before it has a chance to prove itself is contrary to free enterprise and the democratic, competitive principles that should govern all business.

In investigating how the country's leading marketers feel about subscription television, Tide asked the leadership panel four basic questions:

Who should decide whether the public can rightfully be "sold" programs carried over the air waves—FCC or Congress?

How much would the public pay for certain types of fee TV shows?

What effect would subscription TV have on commercial TV?

Would you vote for or against fee TV—and why?

Who should decide the airwaves issue, FCC or Congress? FCC, according to a slight majority (54 percent) of the panel. While 34 percent claim Congress must make the decision (with the remaining 12 percent offering other answers), the overwhelming majority make one important conclusion: No matter who makes such a decision, the public will be the final judge. Only the viewer, insists the panel, will settle whether the parlor paybox stays or goes.

"Neither (FCC nor Congress) should interfere. If someone has a legitimate service to sell and someone else wants to try it, why should the Government get into the act?" This opinion, voiced by president Ross Llewellyn of Ross Llewellyn, Inc., is shared by a significant number of panelists. "To heck with both their houses—FCC and Congress," adds McMahan-Horowitz partner Rollo Horowitz. "Permit fee TV's installation. Soon enough the law of supply and demand will decide its future."

One proponent of fee TV, Opinion Research Corp. vice president Dilman M. K. Smith, raises an interesting point: "This selling * * * the airwaves argument is silly. The telephone company and Western Union make charges for their services transmitted over airwaves. The opponents of subscription TV should come up with a better argument than this one."

Despite several recent surveys showing that the public isn't willing to pay for fee TV entertainment, Tide's leadership panel stoutly believes viewers would pay for what they want to see. For a first-run movie, for instance, the panel thinks viewers would fork up between 50 cents and $1. To see a hit Broadway play, the figure goes up—from $1 to $2 and even higher. For a major sports event, the panel expects the public might shell out from $1 to $2. And to lease decoding equipment to unscramble fee TV's picture, many panelists claim the public wouldn't be adverse to a $5 to $10 monthly bill.

This optimism about the public's willingness to pay is not shared by the entire panel: A significant 30 percent steadfastly maintain that viewers will not pay for what they've always gotten free. Quips James L. Barrick, national ad manager of the Kansas City Star: "Like the lady of easy virtue, you can't sell it if you give it away."

How would subscription television affect its commercial counterpart? Most panelists seem to feel that the two could exist quite healthily side by side. One of these is E. Bradford Hening, president of Hening & Co., who points out that the two have done just that in Australia for many years. Prevalent panel opinion is that fee TV might well do free TV more good than harm; many look for better programing, new talent, fewer objectionable commercials in order to meet subscription television's challenge.

E. B. Thompson, sales vice president of Torrington Co., is one who feels "the public can and will support both commercial and subscription television." H. J. Graham, assistant secretary for advertising and sales promotion of Hartford Accident & Indemnity Co., claim fee TV will probably force an improvement in free TV's "overall quality in order to compete for audience." Adds Reach, Yates & Mattoon president Charles Dallas Reach: Fee TV will spur commercial TV to develop new show techniques, new talent, force better marketing data, better merchandising, tighten up present loose, extravagant and questionable expense.

Fee TV would severely damage commercial TV. W. H. Long, executive vice president of Hutzler Advertising Agency, maintains fee TV would have the same effect that network TV has had on radio—"Consign it to the limbo of the lost. If subscription TV succeeds (and I don't think it can)," predicts Long, "it will push commercial TV off the map." Maytag Co. vice president Roy A. Brandt sees fee TV diluting the value of commercial television to the advertiser.

Diamond T Motor Car Co. ad manager W. S. Baldwin expects that "Overall quality of commercial shows will deteriorate and networks will suffer because the best shows will no longer command maximum interest and attention. * * *

On fee TV or not fee TV, the country's top marketing executives offered these diverse opinions:

George J. Allen, manager, J. P. McKinney & Son: "The public interest is best served when it has a choice. Subscription TV will force commercial TV to improve both quality of its programing and advertising if it is to continue healthy."

Kenneth B. Crawford, president, Whipple & Black Advertising: "(Subscription TV) seems a further encroachment on personal freedom of choice. And if you pay your quarter 'and the picture stinks, you're stuck.'"

Alvin Long, owner, Long Advertising Service: "I think that subscription television will make it possible to put on specific programs of high interest to specific groups, something that commercial television does not do."

William H. Horsely, president, Pacific National Advertising Agency: "Many millions have bought TV sets with the understanding that programs were to be free. With fee TV the air will no longer be free."

Dwight Schoeffler, promotion manager, Marketing Devices: "People who want faster travel use toll roads. People who want premium entertainment should be able to pay for it."

L. H. Rogers II, vice president, WSAZ–TV: "Essentially fee TV is not in the public interest, but in the interest of very few operators. * * *"

Jack R. Maguire, public-relations director, Texas Insurance Advisory Association: "I believe the viewing public has a right to escape from commercial TV's 'plug uglies' if it so desires. Only through subscription TV will advertisers be forced to use commonsense and good taste in their sponsored 'free' shows."

Nelson A. Miller, United States Department of Commerce: "Fee TV would kill a thriving industry which has contributed much to the gross national product and would raise the question, why not charge for radio programs?"

Kurt J. Mann, broad chairman, Mann-Ellis, Inc.: "Water costs nothing, still many people pay for other beverages to quench their thirst. Let subscription television, through better programs, force regular TV to improve theirs."

Miss Honor Gregory, president, Gregory & House: "Our high TV program standards are possible because of known available budgets. Who will gamble on high-cost shows under subscription TV? * * * networks won't."

William Shay, ad manager, Coast Fisheries: "I think toll TV would be the means of bringing a new high-quality entertainment to television and that this would have a salutary effect on commercial programs. It would force commercial programs to improve the quality of their offerings. I think commercial television should have a chance to prove what it can do."

Frank J. Reynolds, president, Albert Frank-Guenther Law: "This public has been educated to receive television free. If television had originally started charging the same, fee TV might have had a different reception."

L. C. Worden, ad manager, the Knox Co.: "What difference whether a sponsor pays with our money or we pay with our money?"

THESE MARKETERS ARE FOR TOLL TV

Donald C. Berry, vice president, McKesson & Robbins: "Subscription should be given an opportunity to prove itself. If the public doesn't like it, it will die of malnutrition."

Donald Lynch, public-relations director, Mutual Benefit Life Insurance Co.: "It deserves a fair trial. It's free enterprise; isn't it? We shouldn't protect the broadcasters from competition, just for the sake of protection. Perhaps some limitations can be placed on pay TV in the early stages, just to make sure all hell doesn't break loose and the whole TV business isn't thrown into hysteria."

Edward Whitney, ad director, Charles Pfizer & Co.: "I believe it in line with democratic principles and business rights to give new ideas a chance to prove themselves before throttling them. It's a part of our free-enterprise system."

Marvin Davis, ad manager, I. Miller & Sons: "I believe it will raise the intelligence value of television and increase its cultural possibilities for viewers."

Robert Waddell, public-relations director, Hamilton Watch Co.: "I think the public should decide—and how can it if it doesn't have the opportunity to accept or reject?"

H. F. Kemp, vice president, National Oats Co.: "It's an inalienable right—the same under which Americans buy books, phonograph records, newspapers and other news, cultural and entertainment services."

Murray Barnes, ad manager, Pan American World Airways: "You don't—or shouldn't—kill a competitor by lobbying the daylights out of him, but by clobbering him with a superior product. After all, movies came into business when we already had a perfectly good legitimate stage. * * *"

A. H. "Red" Motley, president and publisher, Parade: "Give the public the best break possible, even at a price."

Albert Carroll, ad manager, Merck & Co.: "It is my belief that every new idea should have a chance to prove itself in the market place."

Earl Benjamin Mix, ad manager, Lily-Tulip Cup Corp.: "The telecast of the show Peter Pan was seen by millions of people. To my mind and in the opinion of many critics it was television at its very finest. Paid TV could bring more such spectacles into the average home."

Samuel C. Pace, public-relations director, F. W. Dodge Corp.: "The people are entitled to have anything they will pay for; TV investors are entitled to have the opportunity to invest."

H. A. Hebbard, Jr., ad manager, Stokely-Van Camp: "In our free economy and democratic life we shouldn't construct barriers * * *."

Sidney Holt, ad manager, Aetna Fire Insurance group: "Anything of this nature should have a chance. In the end, it will be the public, not Congress or any other agency, that will make the decision."

E. A. McCabe, ad manager, Consolidated Vultee Aircraft Corp.: "Just because a man pays $50 to $500 for a box full of tubes and wires he has no right to expect advertisers—or anyone—to forever furnish him excellent no-cost entertainment."

THESE MARKETERS ARE AGAINST TOLL TV

Tad Jeffrey, ad and sales promotion manager, Kraft Foods Co.: "Commercial TV has proven itself successful at bringing to the public, without cost, programs of a generally high level of education."

W. A. Morgan, ad manager, Continental Oil Co.: "TV's greatest audience is the young low-salaried family. They have TV and don't want much other entertainment. They cannot afford to pay for TV programs."

H. S. Thompson, advertising consultant, Miles Laboratories: "Television, it seems to me, cannot exist half pay and half free. The cost of television to the advertiser today is fantastic. When we have a fairly good TV show that attracts a fair-sized audience, it seems to me totally unfair to put anything opposite it that will steal 25 to 75 percent of that audience. More than this, millions of TV sets are owned (or partially owned) by people who have all they can do to keep up the payments on those sets. They have bought them for entertainment. Is it fair to interfere in any way with the entertainment these people are now getting?"

Don Belding, executive committee chairman, Foote, Cone & Belding: "What's the matter with the way it's going now?"

Otto Furman, ad manager, Hat Corporation of America: "I think it will do great harm to the TV industry. Many people watch and enjoy boxing on TV but they will not go to the theater and pay for the privilege."

Harry Hahn, ad manager, Electrical Merchandising: "Let's improve (commercial TV), not kill it"

Richard H. Koehler, ad and publicity director, Westinghouse Air Brake Co.: "The present system is workable and satisfactory. In addition, it is representative of our unrestricted and liberal approach of allowing business to serve and entertain the public as desired. People now pay for the programs in the cost of the product. This is painless and spread over the broadest possible base."

G. S. McMillan, products division vice president, Bristol-Myers: "The people just don't want it. They do not want to pay for anything which they got free before and the endorsement of the FCC or their Congressmen won't change their minds. You are monkeying with their pocketboods. Don't do that, boy, I don't like it."

J. A. McIlnay, sales vice president, Ray-O-Vac Co.: "There is nothing wrong with free television now any more than there has been anything wrong with free radio all these years. Leave sleeping dogs lie."

Craig Smith, vice president, Gillette Safety Razor Co.: "I fear preempting of good shows, talent, and events, also monopolizing of channels."

Robert M. Bowes, II, ad and sales promotion vice president, Bowes Seal-Fast Corp.: "With the cost of TV sets what they are, I don't think the public should be expected to pay for the sets and then also pay for the right to use them."

A. W. Scott, advertising manager, Standard Pressed Steel Co.: "None of the firms promoting pay TV plan to build new stations. Therefore it would necessarily tie up facilities now devoted to free TV and, in effect, deprive present audiences of some of their services."

Mr. PIERSON. I would like to summarize briefly.

In the first place, 70 percent of these advertising leaders who were consulted said that pay TV would help advertising, not hurt. They were all uniformly of the opinion that, in the American tradition, it should be given a chance. I will not attempt to read all of their exact determinations, as stated, but I think my summary was fair.

I would like to quote, however, from some of those leaders who gave their opinion. One question was how would subscription television affect its commercial counterpart. Most panelists seem to feel that the two could exist quite healthily side by side; one of these, E. Bradford Henning, president of Henning & Co., points out that the two have done just that in Australia for many years. Prevalent opinion is that fee TV might well do free TV more good than harm. Many look for better programing, new talent, fewer objectionable commercials in order to meet subscription television's challenge.

Similar opinions were expressed by others. Murray Barnes, ad manager of Pan American World Airways, said as follows: "You don't—or shouldn't—kill a competitor by lobbying the daylights out of him, but by clobbering him with a superior product." He adds that "After all, movies came into business when we already had a perfectly good legitimate stage."

Mr. E. A. McCabe, ad manager for Consolidated Vultee Aircraft Corp., said as follows: "Just because a man pays $50 to $500 for a box full of tubes and wires he has no right to expect advertisers—or anyone—to forever furnish him excellent no-cost entertainment."

I submit that the very people who have to reach down into their pocket to support this system that CBS says will go to pot if subscription television is authorized very strongly and predominantly as a group disagree with CBS, and that made me rather more confident of the rather simple conclusions to which I had come.

Now, I would like to assume for the moment that, in spite of my argument up to this point, CBS is right and we are wrong. I think that leaves a very horrible and awful decision to govern. The Congress passed an act which instructed the Commission, in establishing communication facilities in broadcasting, to establish a fair, efficient, and equitable distribution of facilities. The Commission, in response to that mandate, adopted their sixth report. The first priority, as has often been stated here, was to get at least one service to every resident in the country, and the second priority—which was really the section 307(b) priority—was to get local expression and community stations in as many communities in the country as could possibly support them.

Now, in determining the requirements of that priority, and the requirements of section 307 (b), the Commission allocated facilities for in excess of 1,200 markets. Today we have 275, and Dr. Alexander says we will most likely end up with 217. Dr. Alexander's studies, bear in mind, were based solely on advertising economics, and did not include subscription television.

It seems, therefore, that we must decide, on the one hand, whether even the possible loss of some top programs that CBS predicts would happen, with which I thoroughly disagree—whether we will take that loss and try to establish 1,200 stations in the country instead of 217, whether we will try to establish facilities for local expression, whether we will try to establish some competition for the concentrated power over this industry in the networks, or whether we will live with Dr. Alexander's predictions, and with the current situation, and give up the requirements of 307 (b), and forget completely about the requirements of priority 2. We had just as well repeal priority 2, and Columbia's hundred-market plan is the awful result.

Now, I submit that the public is affected either way it goes, and there is no side of the angels in this question, as far as the public is concerned. If CBS's predictions are correct, I say this great medium is bound to suffer as much, if not more, if those awful predictions come true—I am talking now about Dr. Alexander's predictions—as they will if their predictions as to subscription television come true. So much for CBS.

NARTB appeared, which is a trade association of the industry. By and large they echoed the CBS line, which is to be expected. However, their original resolution was rather amazing to me: They suggested that subscription television could be done by another means rather than by use of television channels, and then referred to television channels as scarce; and this, they said, is why they opposed it. Later they incorporate the network arguments, but this was their initial resolution.

Now, the reason I was somewhat astounded at this statement, when less than 25 percent of the towns and stations in the country are in use, is that I don't see anything scarce about television facilities—and with respect to UHF they are the most plentiful thing in the world. You can buy a station, fully equipped, almost for the asking today.

Furthermore, I couldn't understand, when almost 50 percent of the industry was in economic distress, how this trade organization would suggest that the great revenues from subscription television go to some other industry—that it go to Mr. Jerrold's cable theater people, who would not build a television station that would render a service in addition to the subscription service that it rendered.

The theaters were here. I was only struck by their audacity. Here is an industry that has never given anything away free, and they come in and complain, or urge that their competitors, television, should be required to give something away free. Now, I can see in principle why they would want that done, but it seems a little late for them to pose as great defenders of television, in view of all that they have done to prevent production from getting to television up to date. They even have developed their own plan to set up a closed-circuit system, and freely predicted that it would take over practically all of what we now know as television fare as soon as it was established nationwide. And Mr. Garfield, this morning, made an earnest plea to them to join in his new gadget for the purpose of doing precisely the same thing.

Mr. Cohn did mention that the legislative history of the act clearly supported his position that Congress did not intend that anyone should be required to pay for a program. Now, I know that I may offend in this respect—that you cannot make a full judgment of legislative history by taking a few arguments, or a few statements, by people on the floor of either House and saying that this proves it. But I don't want his statement to go unchallenged, and I don't want to burden this committee——

Senator BIBLE. You go right ahead and put your answer in the record—what you think the legislative history shows.

Mr. PIERSON. When the Radio Act was being considered, Senator Dill, who was one of the managers of that act, was questioned by Senators Pittman and Walsh in the 68th Congress, at 2880 in the Record, as to whether or not the act, as drawn, would prohibit charges to listeners. Senator Dill said that it would not, and here is his quote:

> In my judgment, Congress should not pass a law that would prevent a broadcasting station from so equipping itself that people could not listen to its programs unless they had a certain kind of receiving set. In other words, if a broadcasting station wants to select its clients by selling a certain kind of receiving set or attachments for sets, I do not know any reason why the Congress of the United States should prevent it from engaging in that business any more than we would prevent a telephone company or a movie house from presenting something and not allowing anybody to enjoy it or hear it except by paying a fee.
>
> The facts of the matter are that a broadcasting station that intended to put on such a device would immediately so limit its listeners that it would lose its chief means of support, namely its advertisers, and even if it were to be done, have we reached a point in this country where we are going to forbid men to use radio as a means of business as well as other things? I do not think that if the danger existed, it would justify the passage of the legislation which the Representative from New York—

who was Representative Bloom—

> has offered.

Now, this colloquy on the floor of the Senate was not merely tangential, because Congressman Bloom had introduced such a bill in the House. It had passed. It went to conference and it was eliminated in the conference; and the queries of Senator Dill were what really happened to Representative Bloom's proposal. I can say that in some measure the legislative history supports our view that it was not intended to preclude subscription television.

Now, I would like to deal with the testimony this morning given by Mr. Garfield. I was very pleased with the fact that he urged that we get the only thing we have been requesting, namely, an opportunity to try this in the market place. I suppose that really to sum up my understanding of Mr. Garfield's testimony, it was that mass communication could be done better by wire than it can by radio communication. We don't believe him. We think that experience in the country so far proves the contrary.

Furthermore the estimates that we have obtained with respect to the cost of doing what he proposes are to the order of about 10 to 1 to what he has estimted—or rather 100 to 1 to what he has estimated. In any event, I don't believe that it is a point that it is necessary for the committee or for the Commission to decide, because he can put his money upon his own predictions and his own ability, and we want to put it on ourselves. If he can beat the pants off us and make us fail, I think he is entitled to that right, but he can't ever do that, unfortunately, unless the Government gives us the right to try—and that, I submit, is all that we are seeking.

Senator BIBLE. Thank you very much, Mr. Pierson. Mr. Cox, did you have any questions of Mr. Pierson?

Mr. Cox. No, sir.

Senator BIBLE. Thank you very much for your rebuttal testimony. Are there other witnesses to be heard in closing this phase of the television hearing on subscription television?

Mr. Cox. Mr. Cohn, did you have something further to say?

REBUTTAL STATEMENT OF MARCUS COHN, COUNSEL, COMMITTEE AGAINST PAY-TO-SEE TV

Mr. COHN. Mr. Chairman, on behalf of CBS and the Joint Committee Against Pay Television, we ask leave to submit a statement in reply to Mr. Pierson's statement, if that meets with the approval of the chairman, at some date that will be convenient for you and us.

Senator BIBLE. I have no objection as long as we don't keep replying indefinitely, ad infinitum.

Mr. COHN. No, sir.

Senator BIBLE. Is this the last reply that we get to the replies?

Mr. Cox. We would suggest, Mr. Cohn, that certainly you are entitled to do this as long as you limit further reply to what you regard as new matter contained in Mr. Pierson's statement. I don't know what you would have in mind in that connection since it seemed largely directed at arguments raised by the opponents, but subject only to such restriction, you, singly or jointly, may submit such a statement.

Mr. COHN. It wouldn't be my intention to reargue the entire matter, but to confine it to what would be surrebuttal.

Senator BIBLE. Well, direct your testimony and your statement directly to the rebuttal—what we would call surrebuttal—and that will be permissible.

Mr. WASILEWSKI. I just wanted to know, sir, if that permission extended to NARTB individually?

Senator BIBLE. I would think it would. You will have exactly 10 days to do it. The record will be kept open for 10 days for that purpose. Is there anything further? [4]

Mr. COHN. Mr. Chairman, there was one further thing and that was in connection with the statement which I made. Senator Pastore asked me to submit for the record a certain document to which I have referred. I have that document in my briefcase, and I will hand it to the reporter for the record.

Senator BIBLE. That will be inserted at this place in the record.

(The document referred to is as follows:)

SECURITIES IN CLASS "D": THESE ARE SPECULATIVE SECURITIES

PROSPECTUS

TECO, INC.

99,000 Shares Common Stock, Par Value $10 a Share, Together With Subscription Receipts Evidencing Conditional Subscriptions for Said Shares

These securities have not been approved or disapproved by the Securities and Exchange Commission, Nor has the Commission passed upon the accuracy or adequacy of this prospectus. Any representation to the contrary is a criminal offense.

---

[4] No further statements were received except as follows:

(a) A letter from Mr. Cohn furnishing the answer to a question asked by Senator Pastore, which is printed in the appendix to this volume at p. 1467.

(b) A supplemental statement of Zenith Radio Corp., and Teco, Inc., which is printed in the appendix to this volume at p. 1467.

As more fully set forth herein, the Company is offering to the shareholders of Zenith Radio Corporation of record on July 15, 1949, the privilege of subscribing at the Price to Public shown below for their pro rata part of 99,000 shares of the $10 Par Value Common Stock of Teco, Inc., at the rate of one-fifth (1/5) of a share of such stock for each one (1) share of the Common Stock of Zenith Radio Corporation then held. Subscription privileges will expire at 3 P. M. Central Daylight Time on May 9, 1950. Shares not subscribed for by the shareholders of Zenith Radio Corporation will be offered by the Company to such person or persons as may be interested in the purchase thereof. All Subscriptions are subject to the condition that on or before November 18, 1950, all unsubscribed shares will be sold. No certificates representing shares subscribed for will be issued unless and until this condition is fulfilled. In lieu thereof transferable Subscription Receipts will be issued by the Company evidencing conditional subscriptions that have been accepted. Holders of Subscription Receipts will not be considered shareholders of the Company and will have no rights or privileges as such.

In the event that all of the Company's authorized Common Stock consisting of 100,000 shares has not been subscribed for on or before November 18, 1950, the Company will refund to all holders of Subscription Receipts other than the Promoters the amount of the subscriptions evidenced thereby. The details of the offering in this as well as other respects are set forth under the heading "Offering to Shareholders of Zenith Radio Corporation" and under the heading "Obligations of Promoters."

Subscription price, $10 a share.

	Price To Public	Underwriting Discounts	Proceeds to Company*
Total	$990,000.00	None	$990,000.00
Per Unit	$10.00	None	$10.00

*The proceeds to the Company are stated before deduction of expenses payable by the Company. Unless all shares are sold prior to Nov. 18, 1950, these expenses will be paid exclusively out of funds received by the Company from subscriptions made by certain of the promoters as more fully explained under the heading "Obligations of Promoters" at p. 8 hereof.

This issue is not underwritten.

The date of this Prospectus is April 19, 1950.

No dealer, broker, salesman, or other person has been authorized to give any information or to make any representations not contained in this Prospectus in connection with the offer contained in this Prospectus and, if given or made, such information or representations must not be relied upon as having been authorized by the Company. Neither the delivery of this Prospectus nor any sale made hereunder shall, under any circumstance, create any implication that there has been no change in the affairs of the Company since the date hereof. This Prospectus does not constitute an offering in any state in which such offering may not lawfully be made.

THE REGISTRATION STATEMENT

Teco, Inc., has filed with the Securities and Exchange Commission, at Washington, D. C., a Registration Statement (Form S-2) under the Securities Act of 1933, as amended, with respect to 99,000 shares of Common Stock, par value $10 a share and such indeterminate number of Subscription Receipts evidencing conditional subscriptions received for said shares as may be issuable as a result of the exercise of subscription privileges being offered to the shareholders of Zenith Radio Corporation. For further information with respect to the securities offered, reference is made to the Registration Statement and amendments thereto, including the financial statements and exhibits filed as parts thereof.

TECO, INC.

99,000 Shares Common Stock (Par Value $10 a share) Together With Subscription Receipts Evidencing Conditional Subscriptions for Said Shares

Transfer Agent and Subscription Agent: The First National Bank of Chicago, Chicago, Illinois.

ORGANIZATION AND HISTORY OF BUSINESS

The shares of common stock covered by this Prospectus are offered by Teco, Inc. (meaning Television Entertainment Company, Incorporated), herein referred to as "the Company."

Teco, Inc., was organized under the laws of the State of Illinois on May 25, 1949. Its registered and only present office is located at Room 2067, 231 South LaSalle Street, Chicago 4, Illinois. Its organization was sponsored by the principal executive officers and by the directors of Zenith Radio Corporation of Chicago, Illinois, herein referred to as "Zenith." All of the Company's presently outstanding capital stock consisting of 1,000 Common Shares is owned by individuals who are either officers or directors of Zenith or both officers and directors of that corporation. Set forth below is a statement of the factors that prompted the sponsorship of the Company by this group.

For some time it has been the considered opinion of Zenith's management that unless some means were developed for providing revenue in sufficient amount to make possible the broadcasting of first-run movies and other expensive types of programs, television would never realize its full potentialities as a great, nationwide industry. It was and is the opinion of Zenith's management that advertisers who have supported radio broadcasting and are now partially paying for the present type of television programs cannot be expected to provide the very substantial revenue required to make possible the broadcasting of television programs that will be entirely acceptable to the public over the years.

Accordingly, Zenith has endeavored for a number of years to devise a means for providing such revenue for television broadcasting. It has now developed what is believed to be a practicable subscription television system known as "Phonevision" by which fees may be collected from users of television receivers for the privilege of satisfactorily receiving certain programs, such as first-run movies and other costly forms of entertainment. Certain technical features are still in the process of solution but Phonevision has been developed to a degree indicating that its commercial use is feasible. Zenith has pending several applications for patents covering Phonevision. In this connection reference is made to the heading "Patents" appearing on page 6 hereof. Zenith has publicly announced that it intends to license other manufacturers to manufacture and sell television receivers embodying Zenith's Phonevision invention. A description of the manner in which Phonevision operates follows:

Television receivers will be equipped with a special device whereby users, if they so desire, may satisfactorily receive programs for which a fee will be charged. These receivers also will be capable of receiving "free" programs satisfactorily. In the case of programs for which a fee is charged, only a portion of the frequencies on which the programs are being broadcast will be transmitted directly by the broadcasting stations to television receivers. The effect of this will be to make the picture or other signal on the receiver scrambled, indistinct, and otherwise unsatisfactory.

It is contemplated that a user of a television receiver equipped with the device embodying the feature referred to above who desires to see programs for which a fee is charged, by calling the telephone company serving him and requesting it, will receive over the telephone lines the missing frequencies. These additional frequencies will be transmitted to the television set through an appropriate connection with the telephone line and the picture which originally appeared on the television set in scrambled and indistinct form, immediately will be made clear and distinct. The user of the television receiver will be charged a fee for this service. Fees derived in this manner will be divided between the television broadcasters, the telephone companies, the producers of programs, and other interests entitled to participate therein on a basis to be agreed upon between them, thus furnishing funds for the production, broadcasting, distributing, and booking of programs.

The Company was organized for the purpose of promoting Phonevision and bringing about its general acceptance and use. When, as, and if Phonevision is put into commercial operation, it is proposed that the Company will act as the representative or agent of the various interests producing and transmitting the subscription programs, in the booking of such programs, the fixing of fees to be collected from users of television receivers adapted for Phonevision reception, arranging for the collection of all or a portion of such fees, the allocation of the same among the various interests entitled to participate therein, the negotiation of contracts between producers of programs, television broadcasters, telephone companies, and other interests involved and, in general, to supervise the functioning of the system after it has been established so far as the transmitting portion of the same is concerned. It is likely that the Company also will be obliged to render assistance to such interests in obtaining authority to put the system into effect from the Federal Communications Commission and possibly other regulatory bodies.

The Company as yet has not commenced the active operation of the proposed business in which it will engage as outlined above. It is still definitely in the formative and organizational stage. Its primary asset is a contract that it has entered into with Zenith Radio Corporation, the terms and provisions of which are described below.

CONTRACT BETWEEN TECO, INC. AND ZENITH RADIO CORPORATION

Under the date of July 26, 1949, the Company and Zenith entered into a contract providing, in substance, as follows:

1. Zenith grants to the Company the exclusive right to engage in promoting and endeavoring to bring about the acceptance and use of the transmitting portion of Phonevision by television broadcasting companies, organizations owning, operating, or controlling telephone lines or other conductor facilities or networks, motion-picture producers, distributors of motion-picture films, organizations engaged in the entertainment business, and other persons or organizations producing or making available for broadcasting, programs of various types. Such entities or organizations are hereafter collectively sometimes referred to as "Broadcasting Interests."

2. In order to enable the Company to accomplish the foregoing objectives, Zenith grants to the Company, without the payment of royalty, the nonassignable exclusive right, with the right to license others, to manufacture or to have manufactured and to use but not to sell transmitters and other equipment connected with the transmitting portion only of Phonevision under any and all inventions and applications for patents now owned or which may hereafter be acquired by Zenith while the contract with the Company is in effect and under any and all patents which may be issued on such applications covering the transmitting portion of Phonevision as well as similar rights under any patents not owned by Zenith but under which it has or may acquire the right to license others. If Zenith is required to pay royalty to any third parties under any agreements granting it rights under patents of such third parties, Zenith will license the Company under the claims pertaining exclusively to subscription television transmission under such patents only if the Company shall agree to pay, either to Zenith or to such parties, the proper proration of the royalties, if any, which Zenith is obligated to pay to such third parties. The rights granted to the Company are limited to the United States of America, its territories, and insular possessions, the Dominion of Canada, the United States of Mexico, the Island of Cuba, and the Island of Hispaniola, which is comprised of Haiti and the Dominican Republic.

3. Zenith does not grant any rights to the Company, nor will the Company be authorized to extend any rights, to television or radio manufacturers, television broadcasters, or any other persons or organizations to manufacture, use, or sell devices or apparatus embodying the receiving portion of Phonevision under any applications for patents or patents which may issue thereon now owned by Zenith or hereafter acquired, or under which it may have the right to license others, such rights being specifically reserved to Zenith.

4. In the event the Company is successful in its efforts to bring about the adoption and use of Phonevision by the various Broadcasting Interests above set forth, the Company will arrange for and book the programs to be broadcast by means of Phonevision and will act as the representative or agent of such interests in coordinating their operations. It will negotiate and make agreements with respect to the fixing of the fees to be charged users of television receivers who subscribe for programs broadcast by means of Phonevision and it will collect all or a portion of such fees and negotiate and make agreements with respect to the allocation of such fees between the various interests involved. The Company also will assist in obtaining the necessary authority from the Federal Communications Commission or any other governmental agency having jurisdiction of the matter to establish, put in use, and operate the transmitting portion of Phonevision.

5. The Company may grant to such interests participating in the transmission of programs by means of Phonevision the right to use the transmitting portion of such system on such terms as the Company sees fit.

6. Zenith will not grant to any person other than the Company any licenses or rights under the claims of Zenith's patents pertaining exclusively to subscription television transmission, or under similar claims of any patent under which it has the right to grant licenses to others, to manufacture or to have manufactured, or to use or permit the use of subscription television transmitting apparatus in

any portion of the area covered by the contract or to any person to sell such subscription television transmitting apparatus except with respect to any portion of the area covered by the contract which may be withdrawn by Zenith because of the failure of the Company to bring about the acceptance and use of Phonevision in any such withdrawn portion of said area, and except also that if any licensee of the Company shall, for any reason, cease to have use for subscription television transmitting apparatus, such licensee, with the consent of the Company, may sell it to another licensee of the Company subject to the terms of the proposed contract, or the Company itself may purchase the same and sell it to another of its licensees.

Zenith agrees not to itself manufacture or have manufactured subscription television transmitting apparatus during the term of the contract except for its own experimental purposes without the consent of the Company.

7. Zenith agrees that, on its own initiative or at the request of the Company, it will prosecute infringers of any of the claims of its patents pertaining to subscription television transmitting apparatus or, if the Comany shall so elect, it shall have the right to prosecute such infringers. In the event of any recovery of damages by the Company in any suit instituted by it, the Company will retain one-half the net amount of such damages and pay the remaining half to Zenith.

8. Zenith agrees that, if at any time during the term of the agreement it should sell or assign any of its patents relating to subscription television transmission, it will make such sale or conveyance subject to the terms of its agreement with the Company.

9. Zenith will not pay the Company any compensation for its services. Such income as the Company may receive will be derived from that portion of the fees paid to it by the users of television receivers who subscribe for the programs broadcast by means of Phonevision in accordance with the provisions of contracts negotiated by the Company and entered into with it by the various Broadcasting Interests or paid to it in such other manner as may be agreed upon by it and the Broadcasting Interests involved.

10. The Company agrees to pay to Zenith annually an amount equal to 33⅓% of the Company's net profits before payment of or provision for Federal or State income, excess profits or other taxes on income. This amount will not be deducted from profits in computing the payment due Zenith but will be deducted as an expense for the tax purposes indicated.

11. Zenith agrees to continue diligently the development and improvement of Phonevision and to cooperate with the Company in making all such developments and improvements available to the Broadcasting Interests. Zenith assumes and will pay the cost of all necessary demonstrations, experiments, and testing of Phonevision, including the cost of the necessary equipment therefor.

12. The Company agrees to devote its best efforts to the promotion of Phonevision in the territory above mentioned. If the Company shall not have been successful in effecting the adoption and use of Phonevision prior to July 26, 1959, in any metropolitan district of the United States as defined by the Bureau of Census or in any similar area outside the United States within the territory covered by the agreement, or within any other area within or without the United States not classified as a metropolitan district exceeding 100,000 square miles in extent, which is considered suitable for the practice of Phonevision, Zenith may terminate the contract with respect to any such area provided the Company, after receiving notice from Zenith, shall not have been able to bring about the adoption and use of Phonevision therein within one year from the date of such notice.

13. The Company has the right to terminate the agreement at any time after five years from its effective date on six months' notice to Zenith if the latter has not obtained patent rights covering Phonevision which are satisfactory to the Company.

14. The contract automatically terminates if the Company becomes bankrupt or is reorganized, or makes an arrangement with its creditors under the Bankruptcy laws, or if a receiver is appointed for the Company or its assets and is not removed within ninety days from the date of the appointment.

15. The Company is obligated to offer to shareholders of Zenith the right to subscribe for the Company's $10 par value common stock in proportion to the number of shares of Zenith stock held by such shareholders, as established by the stock records of Zenith at the close of business on July 15, 1949. Each owner of five (5) shares of Zenith stock will be entitled to subscribe to the purchase of one (1) share of the Company's stock at a purchase price of $10.00 a share. Any unit of Zenith stock less than five (5) shares owned by any share-

holder of that company will entitled such shareholder to subscribe proportionately for fractional shares of the Company's stock. The right of Zenith's shareholders to subscribe for the Company's stock will expire twenty (20) days after its offer for sale to them.

16. The contract will not become effective unless the Company shall obtain through the sale of its stock, either pursuant to the offer to be made to Zenith shareholders or otherwise, its entire authorized capital of $1,000,000.00 within seven (7) months after such stock shall have first been offered for sale. At the expiration of said period, the Company is obligated to advise Zenith whether or not it has obtained such fully paid-in capital. The contract further provides that in the event the Company is unable to procure its entire $1,000,000.00 capitalization within the period specified, it is obligated to return to all persons who have subscribed for and purchased its stock the amounts paid by them for the same, after deducting their proportionate share of the cost of organizing the Company and its other proper and necessary expenses, including, among others, the expenses incurred by it in procuring subscriptions for its stock. Under date of January 31, 1950, three of the promoters of the enterprise entered into a contract with the Company providing, among other things, that if the Company is unable to procure its entire capitalization within the stated period, all these expenses shall be paid out of funds received by the Company on subscriptions made by the promoters. Accordingly, in the event of the contingency referred to, all subscribers other than the Promoters will have returned to them the full amount of their subscriptions without any deductions. (See page 8 hereof under the heading "Obligations of Promoters".)

17. If the contract becomes effective, it will extend and remain in force during the life or terms of any United States patents which may be issued on the applications filed by or for Zenith on its Phonevision development and for five (5) years thereafter unless the same is terminated in whole or in part for any reason or in any manner provided for in the contract.

The foregoing consists in part of summaries of certain provisions of the contract between the Company and Zenith, a copy of which is filed as an exhibit to the Registration Statement and to which reference is made for a full statement of its terms and provisions. The description herein set forth is qualified by such reference.

PROSPECTIVE BUSINESS

No representations or predictions are or can be made as of the date of this Prospectus regarding the business prospects of the Company. It has not as yet engaged in any activities except those incident to its intitial organization and development. Further progress in this respect is dependent on the sale of all of the stock offered by this Prospectus at not less than the offering price within seven (7) months from the date of the initial offering to Zenith shareholders as provided in the contract between the Company and Zenith. As heretofore stated, the Company is required to refund the purchase price received on any shares that are sold to the purchasers thereof (other than the promotional interests) during this seven-month period, in the event it is unsuccessful in disposing of all of its authorized capital stock within such period. Accordingly, if the Company fails to fulfill this obligation, it will have insufficient funds with which to pursue its corporate objectives.

Another consequence of the Company's failure to sell all of the stock offered by this Prospectus within seven (7) months from the date thereof will be the cancellation of its contract with Zenith. Although no asset value is attached to this contract in the financial statements accompanying this Prospectus, it is apparent that the contract is the Company's present principal asset. Without the exclusive rights granted to the Company by Zenith, the Company would be in no position to engage in the contemplated enterprise. For the reasons stated, any business prospects that the Company may have are initially contingent upon its ability to dispose of all of its authorized stock.

It is estimated that the promotional and development stage of the Company's business will cover a period of several years. It also is estimated that the cost of this promotional and development work will aggregate close to $1,000,000.00. This accounts for the provision in the contract with Zenith that the Company must have a paid-in capitalization of $1,000,000.00 before the contract becomes effective.

Phonevision has from time to time been demonstrated to various motion-picture producers, broadcasting organizations, telephone companies, and others. While many of these organizations have indicated an interest in it, up to the present time none of them has agreed to participate in the adoption of the system for the purpose of putting it into operation. There are no commitments of this nature in existence.

The Company is informed that Illinois Bell Telephone Company has agreed to the use of certain of its facilities for the purpose of enabling Zenith to make the experimental Phonevision broadcasts in Chicago, referred to below. Illinois Bell Telephone Company has, however, made it clear that in permitting the use of its facilities for experimental Phonevision broadcasts, it does not enter into any commitment to provide such facilities for like broadcasts on a commercial basis. Furthermore, Illinois Bell Telephone Company has stated that it has no present intention of participating in other aspects of Phonevision, such as billing, collecting, or operating the switching of unlocking signals, or handling the orders therefor.

Efforts will be made to persuade Illinois Bell Telephone Company—and other companies in the Bell System—to recede from the position last stated. If such efforts are unsuccessful and that position is adhered to, the development of Teco's business will be seriously retarded—even though the tests referred to indicate a potential public demand for Phonevision. Other means would have to be developed to furnish the Phonevision subscriber with the missing frequencies heretofore mentioned.

It is apparent that the Company's business prospects will be directly dependent on the extent to which the public accepts and makes use of Phonevision. No means exists for measuring this demand and, accordingly, no representations are made with respect thereto. Competition from present sources of entertainment, possible technical problems and the necessity of procuring approval of regulatory bodies for the institution and use of Phonevision are other factors that may have an effect on the Company's business.

No technical problems exist that are considered vital. Equipment has been developed to handle what is believed will be a normal volume of traffic over telephone facilities in a thirty-minute interval of time immediately prior to a Phonevision broadcast. If present estimates in this respect prove to be inaccurate, other methods of controlling this traffic will have to be devised. This is possible mechanically but involves additional expense. Adaptation of the equipment to so-called four-party or more than four-party telephone lines may also be classified as a technical problem. The equipment can be so adapted but the expense involved probably will be more than the cost differential between a four-party telephone line and lines serving fewer than four parties. Other problems of a technical character not foreseen at this time may arise and reference to those indicated above must not be construed as a representation that there will be no others.

Permission to inaugurate a system by which fees may be collected from users of television receivers will have to be obtained from the Federal Communications Commission and possibly from other regulatory bodies. Applications for such permits may be the subject of public hearings lasting over an extended period of time, the duration of which cannot be estimated. Interests controlling present sources of entertainment may interpose objections to the issuance of any such permits for competitive reasons. It is impossible to forecast the effect of such opposition in obtaining required authorizations. These are other factors that may have an effect on the Company's business prospects. Refusal on the part of the aforesaid regulatory agencies to issue permits in all probability would force the Company to abandon the objectives for which it was created and would probably result in its liquidation.

The Company has been advised that the Federal Communications Commission has granted an application filed by Zenith for authority to make experimental Phonevision broadcasts in Chicago, Illinois. The purpose of these experimental broadcasts is to establish the feasibility and practical operation of Phonevision and its public acceptance. The order of the Federal Communications Commission granting this application by Zenith was issued subject to the following conditions, among others:

"This action shall not be construed as a determination or finding that the conduct of said experimental operations in the television broadcast band is or will be in the public interest beyond the express terms of this authorization. The Commission expressly reserves its determination as to what frequencies, if any, should be allocated to 'Phonevision' or to any system of subscription television."

* * * * * * *

"Zenith Radio Corporation shall avoid any action that might create the impression in the mind of any person or persons that 'Phonevision' has been or will be authorized on a regular basis or that the said authorization constitutes approval by the Commission of the principle of 'Phonevision' or subscription television. * * *"

While it is fully aware of the existence of the factors outlined above, the Company believes that there is a substantial need for some revenue-producing medium to defray the expense involved in providing acceptable television programs and, if such need remains unfulfilled, the management of the company shares the opinion expressed by the management of Zenith that the development of television into a great nationwide industry will be materially retarded. The Company believes that Phonevision affords the most satisfactory means of answering this need.

If this need exists, the Company also believes that there is a corresponding need for the services of a separate and independent organization to perform the various functions outlined above. Accordingly, if and when Phonevision is accepted and made operative, the Company believes that there will be a demand for the services it proposes to render.

The Company is not able at this time to predict with any degree of certainty the extent of its business prospects. At the present stage of its development it must be considered a speculative enterprise. Particularly is no representation made regarding prospective earnings. Any earnings of the Company are contingent upon the success of Phonevision and no substantial earnings are expected for a period of several years. Any earnings thereafter are at this time only a matter of conjecture.

It is contemplated that the Company's income will be derived largely from that portion of the fees paid to it by the users of television receivers who subscribe for the programs broadcast by means of Phonevision in accordance with the provisions of contracts negotiated by the Company if and when Phonevision becomes commercially operable. In this connection specific reference is made to the provision in the contract between the Company and Zenith that as long as the contract is in existence the Company must pay annually 33⅓% of its net profits to Zenith before the payment of or provision for federal or state income, excess profits, or other taxes on income.

DESCRIPTION OF PROPERTY

The Company owns no physical properties of any kind nor at this time does it contemplate the acquisition of any other than office furniture, fixtures, and equipment to be acquired as the need therefor arises after it has commenced the active transaction of business. The business of the Company as described above will be that of a so-called service industry so that office quarters and facilities only will be required in conducting its operations. The Company does not presently plan to engage in manufacturing operations of any kind. Its only present office is located in leased quarters in The Continental Illinois National Bank Building, 231 So. LaSalle Street, Chicago, Illinois.

PATENTS

The Company does not own any patents. Zenith Radio Corporation presently has pending in the United States Patent Office several applications for patents covering both the receiving and transmitting portions of Phonevision. The Company is advised that recently eighteen claims were allowed by the Patent Office under one of these applications, considered to be basic in nature, but no patent has been or will be issued thereon for a matter of several weeks. Under the contract between the Company and Zenith, the Company is granted, without the payment of royalty, exclusive rights with the right to license others, to manufacture or to have manufactured and to use, but not to sell, transmitters and other equipment connected with the transmitting portion only of Phonevision under any and all inventions and applications for patents now owned or which may hereafter be acquired by Zenith while the contract is in effect and under any and all patents which may be issued on such applications covering the transmitting portion of Phonevision as well as similar rights under any patents not owned by Zenith but under which it has or may acquire the right to license others. Attention is called to the fact that neither Zenith nor the Company will have any enforceable rights in the claims contained in the pending patent applications until patents issue. Thereafter such rights will be limited to the claims allowed in the patents as issued.

The Company believes that the foregoing rights will be of considerable value and of distinct advantage to it in the conduct of its business when and if the aforesaid patents are issued.

COMPETITION

The nature and extent of the competition from others that may engage in the same type of business as that contemplated by the Company cannot be foreseen with any degree of accuracy at this time. It is believed that at present there is no method similar to Phonevision for providing revenue to defray the cost of broadcasting expensive types of television programs. Consequently, there is no guide by means of which the Company can measure prospective competition and it makes no representations or predictions with respect thereto.

OFFERING TO SHAREHOLDERS OF ZENITH RADIO CORPORATION

As required by its contract with Zenith, the Company is offering on a pro rata basis to the shareholders of record of Zenith as of July 15, 1949, the shares covered by this Prospectus. The offering is made on the basis of one-fifth (1/5) of a share of Teco, Inc., $10 par value common stock for each share of Zenith stock held. The offering price, as stated on the cover page of the Prospectus, is at the rate of $10.00 a share. Fractional shares will be issued and Zenith shareholders may purchase all or any portion of the shares offered to which they may be entitled by virtue of their stock holdings in Zenith. The initial offering is made exclusively to the record shareholders of Zenith as of July 15, 1949, as shown by its stock transfer records and the subscription forms evidencing subscription privileges will not be assignable, tranferable, or negotiable in any manner.

The First National Bank of Chicago will act as Subscription Agent for the Company in connection with the offering to Zenith shareholders and all subscriptions will be subject to acceptance and confirmation at its offices in Chicago, Illinois. Subscription privileges may be exercised by surrender of subscript on forms to the Subscription Agent properly executed, together with full payment of the subscription price. The subscription price must be paid in the United States dollars and may be made in cash or by certified or cashier's check payable to the order of the Subscription Agent.

The privilege of Zenith shareholders to subscribe for the common stock offered hereunder will expire at 3 P. M. Central Daylight Time on May 9, 1950.

All subscriptions for stock are subject to the condition that on or before November 18, 1950, all stock of the Company offered hereunder will be subscribed for—either by exercise of the privileges herein offered or otherwise. No certificates representing shares subscribed for will be issued unless and until this condition is fulfilled. Pending fulfillment thereof all funds received by the Subscription Agent from subscribers other than certain of the promoters will be held in escrow by the Subscription Agent and will be returned to such subscribers in the manner stated below if said condition is not fulfilled.

As promptly as possible after the receipt of subscriptions (if received before the expiration date and time referred to above) the Company will issue to each Zenith shareholder who has submitted a properly executed subscription form, together with payment in full for all shares subscribed, a Subscription Receipt acknowledging receipt of such subscription and payment and stating the terms and conditions upon which it is issued as herein set forth. All Subscription Receipts will be issued in registered form and will be transferrable only on the books of the Subscription Agent subject to such reasonable regulations and charges as the Subscription Agent may prescribe. No transfer will be valid unless entered on the books of the Subscription Agent. The registered holder of any of said Subscription Receipts will be deemed the absolute owner thereof and neither the Company nor the Subscription Agent will be affected by any notice to the contrary.

If all of the Company's authorized Common Stock consisting of 100,000 shares has been subscribed for on or before November 18, 1950, and payment therefor has been received by the Company, notice to that effect will be mailed promptly to all holders of Subscription Receipts as shown by the records of the Subscription Agent. Such notice will direct holders of Subscription Receipts to surrender them to the Subscription Agent in exchange for stock certificates issued by the Company or its Transfer Agent in the name of the registered holder of the Subscription Receipt or his assignee evidencing ownership of fully paid and nonassessable shares of the Company in the number called for by the surrendered Subscription Receipt. Until the issuance of such stock certificates, holders of Subscription Receipts will not be considered shareholders of the Company and will not have voting rights or any other rights or privileges as such.

In the event 100,000 shares of the Company's stock have not been subscribed for on or before November 18, 1950, notice to that effect will be sent by the Subscription Agent to all holders of Subscription Receipts other than the Promoters. Said notice will direct holders of Subscription Receipts to surrender them to the Subscription Agent for cancellation. Upon surrender of each such Subscription Receipt, the Subscription Agent will pay to the registered holder thereof or his assignee the amount of the subscription evidenced by said receipt.

The Company is aware that it is, in effect, pioneering in an unexplored field. It believes that the potentialities are promising but the obstacles that must be overcome also cannot be ignored. The proposed enterprise may be successful or wholly unsuccessful. In the latter event the prospective investor may receive no return on his investment, capital or otherwise. There is presently no market for the Company's common stock or the Subscription Receipts described above.

The present shareholders of the Company are all directors and shareholders of Zenith. Because of their relationship to the Company on the one hand and to the shareholders of Zenith on the other, it was determined that the latter should have the first opportunity to acquire stock in the new enterprise if they so desire and before participation is offered to others. For this reason there was included in the contract between the Company and Zenith the provision requiring the Company to make this initial offer to Zenith shareholders.

PROMOTERS

The organization of the Company was initiated and sponsored by certain officers and directors of Zenith. They subscribed to all of the Company's presently outstanding capital stock issued at the time of its organization amounting to 1,000 shares and paid $10.00 a share therefor in cash. The names of the individuals participating in the manner indicated, together with a brief statement of their business experience and the number of shares of the Company for which they subscribed and subsequently purchased is set forth below:

Mr. E. F. McDonald, Jr., has been president and a director of Zenith since 1923 and is the principal executive officer of that corporation. He subscribed for and purchased 590 shares of the Company's common stock.

Mr. Hugh Robertson is executive vice president, treasurer, and a director of Zenith. He has occupied these positions for more than fifteen years. Mr. Robertson subscribed for and purchased 76 shares of the Company's common stock.

Mr. Irving Herriott is a practicing attorney, a partner of the law firm of Montgomery, Hart, Pritchard & Herriott, Chicago, Illinois, and has been general counsel for Zenith since its organization as a corporation in 1923. He has been a member of its board of directors since 1942. Mr. Herriott initially subscribed for and purchased 191 shares of the Company's common stock. Subsequently he acquired the 3 shares subscribed for by the incorporators of the Company.

Mr. Frank A. Miller is a partner in the firm of James E. Bennett & Co., Stock and Grain Brokers, Chicago, Illinois, and has been a director of Zenith since 1940. He subscribed for and purchased 100 shares of the Company's common stock.

Mr. Ralph Hubbart is president of Allied Products Corporation, manufacturers of automotive parts, and has been a director of Zenith since 1928. He subscribed for and purchased 20 shares of the Company's common stock.

Mr. Karl E. Hassel is assistant vice president, engineering executive, and a director of Zenith. He has been a director since 1934 and assistant vice president since 1943. He was a member of the partnership known as Chicago Radio Laboratory, predecessor of Zenith Radio Corporation. Mr. Hassel subscribed for and purchased 20 shares of the Company's common stock.

Reference is made to the following section under the heading "Obligations of Promoters" for the terms of certain commitments undertaken by Messrs. McDonald, Robertson, and Herriott, three of the above-named individuals, in connection with the offering.

OBLIGATIONS OF PROMOTERS

The shares offered hereunder have been qualified for sale in Illinois under the Illinois Securities Law. To effect this qualification and fulfill a requirement imposed on the promitional interests, Messrs. McDonald, Robertson, and Herriott, three of the promoters referred to above, have entered into a contract with the Company agreeing:

(a) to subscribe for and purchase at $10 a share all of the shares for which they will have the privilege of subscribing by virtue of their stock holdings in Zenith and, in addition, to purchase such further number of shares as may be necessary to make their aggregate subscriptions equal to not less than 15% of Teco's proposed paid-in capitaliaziton of $1,000,000.00; provided, however, that the obligation to purchase such further number of shares is subject to the condition that there are a sufficient number of shares not subscribed for by other shareholders of Zenith to enable the promoters to fulfill their commitments in this respect; and

(b) that in the event the proposed paid-in capitalization of $1,000,000.00 is not realized within seven (7) months of the initial offering to Zenith shareholders, all expenses relating to the incorporation of the Company, including its operating expenses since its incorporation and the expenses of this financing, shall be paid exclusively out of funds received by the Company on the promoters' subscriptions and shall not be paid out of funds received from other subscribers.

The agreement further provides that nothing therein contained shall be construed to prohibit the promoters, individually or as a group, from subscribing for shares aggregating more than 15% of the Company's proposed paid-in capitalization, although they are under no obligation to do so. A copy of the agreement is filed as an exhibit to the Registration Statement, to which reference is made for a full statement of its terms and provisions. The foregoing summary is qualified by such reference.

The promoters have advised the Company that no shares purchased by them, either in fulfillment of their obligations under the aforesaid contracts or other wise, are being purchased with a view to the further distribution thereof but are being purchased for personal investment purposes only. Accordingly, the Company does not believe the promoters are properly classified as "underwriters" as that term is defined in the Securities Act of 1933, as amended.

DISPOSITION OF UNSUBSCRIBED SHARES

Except as stated above, there are no commitments in existence for the purchase of shares not subscribed for by the shareholders of Zenith. The Company proposes to sell such shares by offering them to such person or persons as may be interested in the purchase thereof. Said shares will be offered under similar conditions and at the same price as the offering to Zenith shareholders. After the expiration of subscription privileges being offered to Zenith shareholders, the Company will file a supplemental Prospectus by post-effective amendment to the Registration Statement reflecting the result of such offering. It is contemplated that unsubscribed shares will be offered through the supplemental Prospectus.

CAPITALIZATION

The capitalization of the Company as of January 31, 1950, and as adjusted to give effect to the issuance of the shares offered by this Prospectus was as follows:

Title of Class: Common Stock, $10 Par Value
January 31, 1950:
  Authorized: 100,000 shares
  Outstanding: 1,000 shares
Adjusted As Above Stated:
  Authorized: 100,000 shares
  Outstanding: 100,000 shares

DESCRIPTION OF CAPITAL STOCK

All shares of the Company's $10 par value common stock are entitled to participate equally in dividends. All shares rank equally upon liquidation. Each shareholder has one vote for each share registered in his name, except that for the election of directors each holder is entitled to as many votes as shall be equal to the number of his shares of stock multiplied by the number of directors to be elected and each shareholder may cast all of his votes for a single director or may distribute his votes among the number to be voted for or among any two or more of them in accordance with his desires. The holders of the Company's common stock have preemptive rights as to additional issues of stock by the Company with such exceptions as exist under the statutes of the State of

Illinois. There is no limitation in the Company's Articles of Incorporation with respect to voting or dividend rights of holders of fractional shares. Accordingly they will possess such rights to the extent of their fractional share holdings.

DESCRIPTION OF SUBSCRIPTION RECEIPTS

The Subscription Receipts which the Company will issue to Zenith shareholders evidencing conditional subscriptions received for shares of its common stock are described under the heading "Offering To Shareholders of Zenith Radio Corporation." The only rights or interests that the holders thereof will have in the Company or its affairs will be (1) the right to receive the number of shares of the Company's $10 par value common stock called for by their Receipts when and if such stock is issued and (2) the right to receive a refund of the subscription evidenced by their Receipts in the event such stock is not issued. Holders of Subscription Receipts will have no right to participate in the management or operation of the Company and will have no voting rights of any kind. They will have no interest in the contract between the Company and Zenith Radio Corporation described above nor in any possible rights or privileges of the Company thereunder. They will not be entitled to participate in any liquidation of the Company prior to the issuance of certificates representing common stock subscribed for and will have no interest in any of the Company's assets. In addition, holders of Subscription Receipts will have no preemptive rights or rights of any other kind with respect to the disposition of shares not subscribed for by Zenith shareholders.

THE PURPOSE OF ISSUE AND APPLICATION OF PROCEEDS

In the event that all of the shares of the Company's $10 par value common stock offered hereunder are sold, the net proceeds received by the Company (after deducting expenses) will amount to approximately $950,000. Such proceeds will become the working capital of the Company and will be available for any proper corporate purpose. As heretofore indicated, the Company requires working capital for the purpose of promoting and endeavoring to bring about the acceptance and use of the transmitting portion of Phonevision by television broadcasting companies, organizations owning, operating or controlling telephone lines or other conductor facilities or networks, motion-picture producers, distributors of motion-picture films, organizations engaged in the entertainment business and other persons or organizations producing or making available for broadcasting, programs of various types. After accomplishing such objectives, working capital will be required for the establishment and operation of an entertainment booking agency. It is these activities in which the Company proposes to engage and it is impossible at this time to itemize with any degree of accuracy the actual purposes for which the proceeds will be used.

In the event the offering hereunder is completed and additional funds are needed to carry on its proposed business as herein described, the Company may obtain such additional funds from the proceeds of borrowings, the sale of additional stock, or other appropriate means. No such additional financing by the Company is now contemplated.

MANAGEMENT

The names and addresses of the officers and directors of the Company are as follows:

Name	Address	Office
S. I. Marks	343 South Dearborn St, Chicago 4, Ill.	President and director.
Thomas M. McNicholas	Room 2067, 231 South La Salle St., Chicago 4, Ill.	Vice president, treasurer, and director.
B. A. Massee	120 South La Salle St., Chicago 3, Ill.	Secretary and director.

The officers and directors of the Company are acting in a temporary capacity without compensation, with the exception of Mr. McNicholas. It is anticipated that when and if all of the common stock offered hereunder is sold and the contract between the Company and Zenith becomes effective so that the Company will be in a position to commence active operations, the then shareholders will elect a permanent board of directors, who in turn will elect the officers of the Company that are to be charged with its operation and management. As of the date of this prospectus, it is not known who these individuals will be. It is anticipated that Mr. McNicholas will remain associated with the Company in an executive capacty and possibly as a member of its board of directors.

Mr. S. I. Marks is a wholesale distributor of specialty products and has been engaged in this business for many years. He is the owner of Simarks Company, an individual proprietorship, with offices at 343 South Dearborn Street, Chicago, Illinois.

Mr. Thomas M. McNicholas is a graduate of the University of Notre Dame and for a number of years subsequent to his graduation in 1929 was associated with that institution in various administrative capacities. For more than five years immediately prior to his employment by the Company he was engaged in the newspaper business as secretary, treasurer, and a member of the board of directors of Tennessean Newspapers, Inc., newspaper publishers of Nashville, Tennessee.

Mr. B. A. Massee has been engaged in the insurance-brokerage business in Chicago, Illinois, since 1932 and is presently associated with R. N. Crawford & Company, 120 South La Salle Street, Chicago, Illinois.

REMUNERATION OF DIRECTORS AND OFFICERS

Mr. Thomas M. McNicholas, vice president, treasurer, and a director of the Company, is the only officer or director receiving any remuneration. In May 1949 he was employed by the Company at an annual salary of $10,000. It is assumed that when and if this financing is completed the Company will employ others in executive capacities and will compensate them commensurate with the nature of their duties and responsibilities. It also may pay reasonable fees to its directors for attendance at meetings. No commitments in this respect have been entered into by the Company as of the date of this prospectus.

The following tabulation sets forth on an accrual basis the remuneration for services to the directors and officers, directly or indirectly, by the Company from the date of its organization in May 1949 to January 31, 1950:

Directors' fees or salaries	None
Officers' salaries	$7,499.97
Other remuneration of directors and officers	None
Total	7,499.97

PRINCIPAL SECURITY HOLDERS

None of the officers or directors of the Company owns any of the Company's common stock. As heretofore stated, all of its outstanding stock is owned by individuals who are either officers or directors of Zenith Radio Corporation or both officers and directors of that company.

As of January 31, 1950, the following persons held, of record or beneficially, 10 percent or more of the Company's outstanding stock:

Name and address	Title of class	Type of ownership	Amount owned (shares)	Percent of class
E. F. McDonald, Jr., 5801 West Dickens Ave., Chicago, Ill.	Common stock	Of record and beneficially.	590	59
Irving Herriott, 120 South LaSalle St., Chicago, Ill.	do	do	194	19.4
Frank A. Miller, 141 West Jackson Blvd., Chicago, Ill.	do	do	100	10

NOTE.—The directors of Zenith, as a group, owned or controlled on July 15, 1949, 58,384 shares of Zenith. If they exercise the subscription privileges pertaining to said 58,384 shares (and if all the shares of the Company herein offered are issued), they will own or control 11,656⅘ shares, or slightly in excess of 11⅔ percent of the Company's outstanding stock. This computation does not include shares that the directors of Zenith may purchase in addition to those which they will have the privilege of purchasing as stated.

OPTIONS TO PURCHASE SECURITIES OF THE COMPANY

There are no outstanding options to purchase any of the Company's common stock except insofar as the obligation of the Company to first offer the shares covered by this Prospectus to the shareholders of Zenith may be considered an option. This obligation is imposed on the Company under the provisions of its contract with Zenith described above. The terms of the offering to Zenith shareholders are fully set forth at page 6 of the Prospectus.

EXPERTS

The financial statements, including the notes thereto, of the Company from May 25, 1949, the date of its incorporation, to January 31, 1950, included in the Registration Statement and this prospectus have been reviewed by Touche, Niven, Bailey & Smart, independent public accountants, as set forth in their report appearing in this Prospectus and have been so included in reliance upon the report and opinion of said firm as experts.

No member of the firm of Touche, Niven, Bailey & Smart is an officer or employee of the Company. The members of said firm have no substantial interest in the Company as a promoter, underwriter, voting trustee, director, officer or employee. It is contemplated that said firm will continue to act as independent auditors for the Company. It has not been employed on a contingent basis.

MISCELLANEOUS

The legality of the $10 par value common stock offered hereunder and all other legal matters relating thereto will be passed upon by Tenney, Sherman, Rogers & Guthrie, 120 South LaSalle Street, Chicago 3, Illinois, counsel for the Company

The Company is not a party to any pending legal proceedings nor are any such proceedings known to be contemplated.

TECO, INC., FINANCIAL STATEMENTS

The statement of other securities has been omitted since the Company has no securities other than those included in the statement of capital shares.

ACCOUNTANTS' REPORT

CHICAGO, ILLINOIS,
February 11, 1950.

BOARD OF DIRECTORS, TECO, INC.:

We have examined the statements of assets and capitalized expenses, liabilities, and capital shares of Teco, Inc., as of January 31, 1950, and the statement of cash receipts and disbursements for the period from May 25, 1949 (date of incorporation) to January 31, 1950. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the statements of assets and capitalized expenses, liabilities, and capital shares of Teco, Inc., present fairly the financial position of Teco, Inc., at January 31, 1950, and the accompanying statement of cash receipts and disbursements presents fairly the cash receipts and disbursements of the Company for the period from May 25, 1949, to January 31, 1950, in conformity with generally accepted accounting principles applied on a consistent basis.

TOUCHE, NIVEN, BAILEY & SMART,
Certified Public Accountants.

TECO, INC.

TECO, INC., NOTES TO FINANCIAL STATEMENTS

January 31, 1950

A. The Company has entered into a contract dated July 26, 1949, with Zenith Radio Corporation relating to the promotion, development and operation of Phonevision. Under this contract the Company is granted certain rights with respect to the transmitting portion of Phonevision. The terms and provisions of the contract are described in the Prospectus beginning on page 2.

As indicated therein, the contract will not become effective unless the Company obtains, through the sale of its stock, its entire authorized capital of $1,000,000.00 within seven months after the stock is first offered for sale. In the event the Company is unable to procure its entire $1,000,000.00 capitalization within the period specified, it is obligated to return to all persons who have subscribed for and purchased its stock the amounts paid by them for the same, after deducting their proportionate share of the cost of organizing the Company and its other proper and necessary expenses, including, among others, the expenses incurred by it in procuring subscriptions for its stock.

Under date of January 31, 1950, three of the promoters of the enterprise entered into a contract with the Company providing, among other things, that if the Company is unable to procure its entire capitalization within the stated period, all these expenses shall be paid out of funds received by the Company on subscriptions made by the promoters. Accordingly, in the event of the contingency referred to, all subscribers other than the Promoters will have returned to them the full amount of their subscriptions without any deductions.

B. All expenses incurred by the Company during the development stage in promoting Phonevision and endeavoring to bring about its acceptance and use are and will be capitalized. At the present time, the Company has not formulated a definite program of amortization of such accumulated costs.

C. No provision has been made in the accompanying statements for expenses in connection with the proposed sale of the common stock. It is estimated that said expenses will amount to $50,000.00.

D. All of the outstanding stock at January 31, 1950, was issued upon payment in full in cash. There were no underwriting discounts or commissions incurred in the sale of such stock.

E. There are no outstanding options or rights to purchase any of the Company's stock except insofar as the obligation of the Company, under the provisions of its contract with Zenith Radio Corporation dated July 26, 1949, to first offer the common shares to the shareholders of Zenith, may be considered an option or right to acquire the shares.

The Company is obligated to offer to shareholders of Zenith the right to subscribe to the $10.00 par value common stock in proportion to the number of shares of Zenith stock held by such shareholders, as established by the stock records of Zenith at the close of business July 15, 1949. Each owner of five shares of Zenith stock will be entitled to subscribe to the purchase of one share of the Company's stock at a price of $10.00 per share. Any unit of Zenith stock less than five shares owned by any shareholder of that company will entitle such shareholder to subscribe proportionately for fractional shares of the Company's stock. The right of Zenith's shareholders to subscribe for the Company's stock will expire twenty days after its offer for sale to them.

ADDITIONAL INFORMATION ON FILE WITH THE SECURITIES AND EXCHANGE COMMISSION

Further information with respect to these securities and their issuer is to be found in the Registration Statement on file with the Securities and Exchange Commission, Washington, D. C.

The Registration Statement may be inspected by anyone at the office of the Commission without charge and copies of all or any part of it may be obtained upon payment of the Commission's charge for copying.

Other information relating to the Company and various exhibits, such as, the Articles of Incorporation of the Company, its bylaws, opinions of counsel, forms of stock certificates, the subscription form to be submitted to shareholders of Zenith, the form of Subscription Receipt, the escrow agreement relating to the escrow of funds received from subscribers, an estimate of the expenses of the Company in connection with this issue and certain other agreements are included in such information on file with the Commission.

TECO, INC.,
By S. I. MARKS, *President.*

Senator BIBLE. Is there anything further to come before us?

Mr. PIERSON. Mr. Chairman, the document to which Mr. Cohn refers was the interpretation of some prospectus issued by TECO which he said tended to refute testimony that we gave here. Since he hadn't put it into the record up to the time I appeared, I didn't respond to it.

Senator BIBLE. You will have the opportunity of taking a look at it, and can have 10 days to take a look at it. Is there anything further to come before the hearing? If not, this phase of the television hearing on subscription television stands in recess subject to the call of the Chair.

(Whereupon, at 3:50 p. m., the committee recessed to reconvene at the call of the chairman.)

APPENDIX

Additional Materials on Subscription Television Inserted Into Record in Later Phases of Hearings

A number of letters and written statements relating to the question of subscription television were received by the committee and ordered inserted in the record during the later phases of the inquiry concerning network practices. They are printed in this appendix in order to bring them together with the other testimony and materials on subscription television.

These materials are set forth below in the order in which they were inserted in the record. In each case the date on which they were thus inserted is shown, so that reference can be made, if desired, to the point at which they were actually received.

One small portion of the testimony of Chairman McConnaughey, of the Federal Communications Commission, on July 17, 1956, pertained to subscription television. It is set forth at page 1473 below.

[Inserted May 15, 1956]

Cohn & Marks,
Washington, D. C., May 11, 1956.

Hon. Warren G. Magnuson,
Chairman, Senate Interstate and Foreign Commerce Committee,
Senate Office Building,
Washington, D. C.

Dear Senator Magnuson: When I appeared and testified before your committee on April 25, 1956, Senator Pastore asked me a question to which I did not know the answer. I asked permission to supply the information later for the record and this permission was granted me. The purpose of this letter is to supply that information.

In the course of my testimony I referred to the fact that the movie Richard III appeared on television before it was shown in the movies. Senator Pastore asked me whether there were any other movies which made their first appearance on television. The answer is that, among the more popular movies, The Constant Husband and Davey Crockett were first shown to the American public via television. Undoubtedly there were other less popular movies also.

Sincerely,

Marcus Cohn,

[Inserted May 15, 1956]

Supplemental Statement on Zenith Radio Corp. and Teco, Inc.

This supplemental statement is limited to answering certain erroneous assumptions made by Marcus Cohn, counsel for the Committee Against Pay-to-See TV, in connection with an interpretation of an agreement entered into by Zenith Radio Corp. and Teco, Inc., in 1949. Since the public document upon which Mr. Cohn based his charges was not submitted into this record until the close of the hearing on April 27, 1956, the chairman of this committee granted permission to Zenith and Teco to file a written reply within 10 days (tr. 2793).

During the course of his testimony, Mr. Cohn stated that under his interpretation of an existing agreement between Zenith and Teco (1) Teco will provide all programing to be carried by subscription broadcasts if the Zenith system is approved, and (2) Teco, rather than the broadcaster, will unilaterally set the rate at which the public will pay for subscription programs (tr. 2352–2355).

Mr. Cohn's assumptions were based upon his interpretation of the description of the agreement entered into by Zenith and Teco on July 26, 1949, as described in the prospectus of Teco, Inc., issued April 19, 1950 (inserted in the record at p. 2792), which was filed with the Securities and Exchange Commission. The pertinent language of the prospectus upon which Mr. Cohn based the above assumptions is as follows:

"4. In the event the company is successful in its efforts to bring about the adoption and use of phonevision by the various broadcasting interests above set forth, the company will arrange for and book the programs to be broadcast by means of phonevision and will act as the representative or agent of such interests in coordinating their operations. It will negotiate and make agreements with respect to the fixing of the fees to be charged users of television receivers who subscribe for programs broadcast by means of phonevision and it will collect all or a portion of such fees and negotiate and make agreements with respect to the allocation of such fees between the various interests involved. The company also will assist in obtaining the necessary authority from the Federal Communications Commission or any other governmental agency having jurisdiction of the matter to establish, put in use, and operate the transmitting portion of phonevision" (prospectus, p. 2).

In construing the above language, consideration must first be given to the circumstances existing at the time the agreement was written in 1949. At that time subscription television was in a laboratory stage of technical developmment and far removed from commercial operation. As a result, the above-quoted language may understandably lack specific detail as to business operations. Mr. Cohn, in the spirit of advocacy, has seized upon this particular lack of detail. But his charges are based solely upon his own self-serving interpretation of this language.

The description of the 1949 agreement set forth in the prospectus states: "The company [Teco] will arrange for and book the programs to be broadcast by means of phonevision and will act as the representative or agent of such interest in coordinating their operations." From this Mr. Cohn jumped to the unwarranted conclusions (1) that Teco will "tie in" the furnishing of programs with the use of the phonevision system, and (2) that no one else can or will provide subscription programs to the broadcaster.

Both Zenith and Teco are well aware that any attempt to require any broadcaster using phonevision equipment to obtain program product exclusively from Teco would be an illegal tie-in under the antitrust laws (*Cf. International Salt Co., Inc. v. United States*, 332 U. S. 392 (1947)). In view of this knowledge on the part of Zenith and Teco, it cannot be presumed that they would do what they know would be illegal.

Furthermore, it is an elementary rule of contract interpretation that the interpretation given by the parties themselves to a contract, as reflected by their actions and public declarations, is the best manifestation of their intentions. Therefore, we will specifically point out how Mr. Cohn's conclusions conflict with those various acts and public declarations of Zenith and Teco which constitute the only meaningful interpretation of the language in question.

Further, the parties to the agreement by public declaration have made clear that under the 1949 agreement, the broadcaster will not be restricted to broadcasting subscription programs obtained from Teco over the phonevision system. Thus, in comments jointly filed by Zenith and Teco with the Federal Communications Commission in June 1955 it was stated that—

"While Teco will do everything in its power to procure and distribute high quality program product for subscription broadcasts, *no broadcast station desiring to utilize the service of any local phonevision franchise holder will be required or obligated by such franchise holder to obtain its subscription program product from Teco.* Teco's distribution activities will give the broadcasters assurance that high quality programs will be available. *If the broadcasters can obtain high quality box-office programs from sources other than Teco, they may do so.* Teco, however, will offer an additional competitive source to those other sources which may have high quality product available for distribution to subscription television." [Emphasis added.] Comments of Zenith Radio Corp. and Teco, Inc. Before the Federal Communications Commission, Docket No. 11279, p. 8; see also p. 55.)

The above interpretation placed upon the contract by the parties themselves clearly repudiates the charge of Mr. Cohn that any broadcaster desiring to use the Zenith phonevision system must obtain its programs from Teco.

Mr. Cohn also misinterprets the 1949 agreement as providing that Teco and not the broadcaster will fix the ultimate fee which the public will pay for its subscription programs. He arrives at this position from the general language that Teco "will negotiate and make agreements with respect to the fixing of fees to be charged users of television receivers who subscribe for programs broadcast by means of phonevision * * *" and that Teco will collect the subscription fees. This language was not intended to, and does not, mean that either Teco or its franchise holder will enter contracts reserving to themselves the right to fix and establish the prices to the public—it obviously refers to the fact that contractual arrangements will undoubtedly be necessary between Teco and its franchise holders and between the franchise holders and the broadcasters for whom the service will be provided and that the latter contracts will necessarily contain a provision relating to the fees to be charged the public. It is obviously necessary that the franchise holder be notified of the price which the public is to be charged for a particular program so that this information can be supplied to prospective purchasers and so the proper amounts can be collected for each program. This is the type of agreement contemplated by the general language in question. From the language itself, it is clear that there was no intention that Teco itself fix these fees because no negotiation or agreement of the type referred to would be necessary if the fees would be fixed and collected by the same person. We wish to make it plain, so that there can be no doubt whatever, that it is not the intention of Teco that the franchise holders will have the right by contract or otherwise to dictate the fees to be charged for any particular program. The matter of program fees will be the primary responsibility of the broadcaster.

In conclusion, we call attention to our statements to the Federal Communications Commission in previously filed comments that "An inherent part of the phonevision plan is that the function and duty of the broadcaster in subscription television will be fundamentally no different than under current conditions. There will be no diminution of the licensee's control over his station or responsibility to the public. Subject to Commission regulations and the policy recommended herein that subscription broadcasters be limited to broadcasting programs which are of box-office quality, the broadcaster will select the subscription programs he believes to be in the public interest. Further, the broadcaster will determine the source, quantity, and time of his subscription broadcasts."

We have further stated that the local franchise holder's primary function will be to provide the equipment and necessary administrative service essential for subscription television to all authorized broadcasters in the community without discrimination. Once established, the local phonevision franchise service will be available to any broadcaster (commercial or educational) authorized and desiring to use it. Under the circumstances, it is clear that the plan of operation proposed by Zenith and Teco does not contemplate any perpendicular monopoly which takes the ultimate control of subscription television out of the hands of the broadcasters. Aside from the obvious fact that such control cannot be taken from the broadcasters as a matter of law, it is clear that no monopoly in subscription programing can result from the business methods outlined by Zenith and Teco in this proceeding and before the Federal Communications Commission. Indeed, the contrary is true, for Zenith and Teco propose that any local franchise holder must make the subscription system available to all broadcasters authorized by the Commission to carry subscription programs without discrimination, and also that the broadcaster shall be completely independent in selecting the source of any subscription program it may desire to broadcast. These proposals will clearly promote rather than restrict competition.

Respectfully submitted.

Hon WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

DEAR MR. SENATOR: Somehow, because of my extensive travels around the country, I did not realize that the hearings on toll TV had been scheduled for last week. Had I known, I would have asked for a few minutes to appear. However, I would like to submit the 3 letters I wrote to the Federal Communications Commission during 1955 so that you will have this information along with the other material you have received and the points that were made during the hearings.

I was particularly distressed with the comments by Senator Bricker and his charges of monopoly which, I think, were unfounded and unfair.

I feel sure that the deeper your committee and the FCC get into the subject of network regulation, the more they will realize that there is no need for such regulation and I am sure that the sound-thinking people who have to make these decisions will come up with the answer that is best for the people.

Sincerely,

EDGAR KOBAK.

P. S. I strongly urge that the subject of toll radio be a part of this study. Both radio and television are licensed and involve the airways and both should be subject to this study. If not, and a decision were to be made in favor of toll TV, there would be confusion.

E. K.

HICKORY HILL BROADCASTING CO.,

Re Toll TV.

FEDERAL COMMUNICATION COMMISSION,
New Post Office Building, Washington, D. C.

GENTLEMEN: The subject of toll TV as covered in the press and on radio and television, has interested me a great deal. It brings to my mind the early days of broadcasting at the time the Federal Radio Commission, predecessor of the FCC, had the responsibility of setting up the allocation plans and following out the will of the people concerning the public interest, convenience, and necessity.

At that time, I was with the McGraw-Hill Publishing Co. as publisher of their electrical and radio publications. One of our editors, Dr. Orestes H. Caldwell, was named a member of the Federal Radio Commission as one of its first Commissioners.

During those early days of broadcasting, I expressed the view that I thought that radio should be made available to the public on a pay basis, on a monthly charge, not per program. This thinking, undoubtedly, stemmed from my publishing experience where we charged subscribers a nominal sum per year to receive our magazines and the balance of our income came from the advertiser.

The idea, evidently, was not considered feasible and I was not running a crusade. I did realize and still do, that the listener makes an investment for sets, for maintenance, and pays an additional amount for the use of electricity. In other words, broadcasting is not free, although the network, station, and the program owner get no part of this money.

When television got into operation after World War II, the talk of toll TV came to the front. There is no question but that any new thought or idea deserves serious consideration. I am glad to know that this is being done. However, from what I have read and heard and seen to date, it doesn't seem to bring out enough points to help the general public understand the situation. There is much self-interest in the matter on the part of those who are pro toll TV as well as those who are against it. And, there is nothing wrong with self-interest in this country of free enterprise. And, the self-interest of the public is most important.

But, something is missing and perhaps the answers will come out at the hearings. I do not get particularly excited at the opportunity of paying for the opening of a new play on Broadway by seeing and hearing it in my living room. On the stage, as well as in radio and TV, many shows are flops; the same goes for first-run movies. I am having difficulty finding out just what it is that I will get which will be better and more in my interest than that which is available today.

What, for example, will happen to sports events such as the world series? If the world series goes toll TV, will it be taken away from me on radio? The same goes for the Metropolitan Opera and the great symphonies and other programs now available on radio. And, how about religious and educational programs? Also, should the long-line rates be on a higher scale?

I feel that the idea that was in my mind and the minds of others in the early days of radio was, possibly, sound—so I have no reason to be negative to toll TV. However, the approach as made today doesn't seem to answer the matter from the standpoint of public interest. And, one important element has been forgotten in this hard drive to get the listener and viewer to pay for certain programs—radio broadcasting is also licensed by the FCC and radio is as free as television. It is my feeling that any hearing held on toll TV should also include the subject of toll radio. Should one be free—the other paid?

It is hard for me to figure out whether we are going to have our radio and TV scrambled, poached, fried, hard, soft, or raw, and people can read what they want to into this list of the future of the egg. What kind of egg will be laid?

The biggest problem that is faced is that you will have difficulty taking away something that has been free for years and starting a charge account system. I don't envy you your jobs.

Very truly yours,

EDGAR KOBAK, *President.*

P. S. As chairman of the Freedom of Information Committee of the National Association of Radio and Television Broadcasters, I would like to suggest that these hearings be opened to radio and television broadcasting as well as to the press and photographers as these hearings are certainly in the public interest.

E. K.

HICKORY HILL BROADCASTING CO.,
Thomson, Ga., June 8, 1955.

Re toll TV.

Miss MARY JANE MORRIS,
Secretary, Federal Communications Commission,
New Post Office Building, Washington, D. C.

DEAR MISS MORRIS: On May 17 I wrote to the Federal Communications Commission on the subject of toll-TV. The following points are submitted for consideration by the Commission in its study of this matter which affects the public interest of the people today and far, far into the future:

1. Any deliberation of toll-TV must also include consideration of toll-radio—AM and FM broadcasting. One cannot be free and the other part pay, part free. Therefore, I ask that you enlarge the hearing to include all phases of broadcasting where licenses are involved.

2. All hearings should be open to microphones and television cameras as well as to the press and photographers to cover the hearings so that all listeners, readers, and viewers can get all sides of this vital subject which involves their freedom. This is truly public interest, convenience, and necessity.

3. If the people should be asked to pay for programs, examination should be made as to whether charges should be made per program or on the use of sets by day, month, or year. If broadcasting should be on a pay basis, should it be part free, part paid, or all free, or all paid. If it is to be paid in any form, examine the idea of metering any usage of sets as we now meter gas, electricity, and water.

4. If paid, who should get paid—the broadcasters—the people through their Government—or both?

5. If broadcasting goes paid, should the Government charge for licenses?

6. Review the rights of the set owner who invests in sets, set maintenance, electricity and batteries, and other costs which amount to very large sums annually.

7. Study the effect on a national emergency with a part-paid, part-free or all-paid system. Would a change in the present system handcuff our greatest means of mass communications?

As a pioneer in radio and broadcasting, my interest has been and still is the interest of the people. And that is your interest, too.

Very truly yours,

EDGAR KOBAK, *President.*

HICKORY HILL BROADCASTING CO.,
Thomson, Ga., September 8, 1955.

Re toll television.

Miss MARY JANE MORRIS,
Secretary, Federal Communications Commission,
New Post Office Building, Washington, D. C.

DEAR MISS MORRIS: This is my third letter addressed to you on the subject of toll TV. In the two previous letters I did not indicate my conclusion on this important subject. It was my intention to list points that deserved consideration, points which I have studied in some detail to help me arrive at a conclusion either for or against toll TV.

In the meantime, I have had an opportunity to study most of the presentations made to you by those for or against toll TV. With no direct personal financial interest in television but with a background of experience in broadcasting since its inception, I felt I could make an objective review and study of the subject.

My investigation of the subject has brought me to the conclusion that toll TV should not be approved either by the Federal Communications Commission or by Congress. Further, I wish to reiterate that toll radio must be included in any hearing on the subject of toll TV. Both radio and television are licensed by the FCC, and one cannot be considered without the other. I ask that the subject of toll radio be included in any hearing of toll TV.

The people must decide this matter and be given an opportunity to be heard. Congress is the representative of the people. Let us not have another situation where Congress is bypassed.

Little has been presented that indicates program responsibility in relationship to a station's license. The cost to the set owners is high now—the increased costs on most plans presented show a healthy income to a few—little consideration for the listeners' and viewers' pocketbook. The air belongs to the people; the people, through their Government, allow the licensee to use the air at no charge by the people. Public interest, convenience, and necessity cover a broad front; we must not forget their meanings, and I cannot see where the word "toll" fits in.

Briefness of this statement is caused by the fact that a current family illness emergency prevents a detailed statement. To meet your September 9 deadline, I submit this letter based on my objective study, and I hope for an opportunity to appear at any hearing held on this very fundamental subject.

Very truly yours,

EDGAR KOBAK, *President.*

[Inserted May 15, 1956]

STATEMENT OF AMERICAN CIVIL LIBERTIES UNION, NEW YORK, N. Y.

MEMORANDUM ON TOLL TELEVISION

The American Civil Liberties Union is a national nonpartisan organization organized to defend the civil liberties guaranteed to all Americans in our Bill of Rights. Since its founding in 1920, the ACLU has been especially alert to denial of or limitations on the right of free speech, which is protected by the first amendment. Our interest has not been confined to cases where Government officials have deprived an individual or group of this right. The union has actively encouraged the extension of free speech, the expression of opinion on all kinds of issues. This is predicated on its belief that our democratic society thrives—indeed exists—only so far as there is a free exchange in the market place of ideas. For this reason we have supported measures which would add to diversity of opinion in the mass communications field. From this diversity, this give and take of democratic debate, ideas are refined and the public can choose what solutions it wishes for a variety of social problems.

Because of this, the union naturally has a real interest in the whole problem of toll TV. We have followed carefully the debates on the subject by both the proponents and foes of this new television system. There are arguments that support diversity on both sides; for example, the pro-toll-TV advocates stress that their programs will offer events that free television cannot present; the opponents of toll TV counter with the argument that the new system would take up time on their channels and thus reduce the number of programs now offered to the public.

After full consideration of all arguments, the union believes that despite imperfections the toll-TV system should receive a trial, provided that important safeguards are included.

The following resolution adopted by our radio-TV panel on March 16, 1955, and approved by our board of directors on April 2, 1956, represents the union's opinion:

"The ACLU has carefully considered toll TV because of the possibility that it would increase diversity in TV programing. While the ACLU is concerned that the present toll-TV plans may not increase diversity, we favor its trial, but only upon the following conditions: (1) that there be no sponsors of toll-TV programs; (2) that toll TV should not be allowed in any city unless there are at least three other free channels broadcasting; (3) the experiment should be limited in time, whatever period is agreed upon; (4) toll-TV programers must give ample guarantees that the program content will add something not now available, if asked by the FCC. The ACLU should state it is opposed to the various toll-TV plans as they now stand, because of the absence of these safeguards—and perhaps other safeguards which have not occurred to us. However, we would approve of toll TV on an experimental basis if these safeguards are adopted together with any others that might seem appropriate in the public interest, as the public hearings may develop, or which may later occur to us."

Since the above statement, which emphasizes our concern about sponsored toll-TV programs, was adopted, we are pleased to note that one major toll-TV group, the Zenith Corp., has announced that its schedules would certainly allow for nonsponsored programs.

MAY 11, 1956.

(Hon. George C. McConnaughey, chairman of the Federal Communications Commission, appeared before the committee on July 17, 1956, accompanied by other members of the Commission and certain of its staff. Their testimony was principally concerned with allocations and is therefore printed in the second volume of the UHF-VHF Allocation Problem at p. 939. However, one passage concerned subscription television and is therefore printed here, as well as in connection with the full testimony above.)

Mr. COX. All right. With reference to the matter of subscription television, that is another proceeding which the Commission has had under consideration. Is there anything to report with respect to the status of that?

Mr. MCCONNAUGHEY. I think I can answer that very quickly by saying we have been devoting our time on this allocation matter practically all the staff, day and night, and I mean night, too, and we have not gotten any further on subscription television.

Mr. COX. I think, of course, the committee indicated they wanted the allocations matter treated with priority.

Mr. MCCONNAUGHEY. That is what your committee told us, and what we have tried to do.

Mr. COX. Am I correct in my understanding that while you have been, therefore, waiting to give further consideration to this issue, that petitions have been filed with the Commission for experimental use of a subscription service in connection with UHF stations now off the air, and that the Commission has denied those almost at the outset on the ground that they are premaure; is that correct?

Mr. MCCONNAUGHEY. That is correct, Mr. Cox.

Mr. COX. In other words, the Commission is of the opinion that not even experimental use of subscription television should be authorized until it has reached its final conclusion on the general soundness of the proposals that have been made?

Mr. MCCONNAUGHEY. I can only answer for myself in that regard, since this matter is before us I feel that possibly along the line that we should, personally speaking, consider permitting experimental subscription television operation some place. I say that is just my own thinking, offhand. I haven't studied it too much. I think we possibly should permit an experimental operation of subscription television. And I am not going to be tied to that, either.

TELEVISION INQUIRY

(Network Practices)

MONDAY, MARCH 26, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., in room 318, Senate Office Building, Washington, D. C., Senator Charles E. Potter, presiding.

Present: Senators Potter, Pastore, Schoeppel, and Bricker.

Senator POTTER. The committee will come to order. We are resuming our hearing this morning on the television allocation problem, although our first witness is going to discuss other matters. (Senator Potter then referred to the testimony taken earlier and read a number of items into the record. For these matters and the testimony heard on this day regarding allocations, see the volume on the "UHF–VHF Allocation Problem—Public and Industry Witnesses," beginning at p. 745.)

Senator POTTER. Our first witness this morning will be Mr. Richard A. Moore of station KTTV, Los Angeles, Calif., who will discuss, I understand, the matter of certain network practices as they affect the operation of independent stations and the public interest in general.

Mr. Moore, we are delighted to have you here and if you have a prepared statement—do you care to read your statement?

Mr. MOORE. I would like to very much, Mr. Chairman. We are eager to have this opportunity and if we can read it, we would like to do so.

Senator POTTER. Yes. Well, you may commence.

Mr. MOORE. Thank you.

STATEMENT OF RICHARD A. MOORE, PRESIDENT, KTTV, INC., LOS ANGELES, CALIF.

Mr. MOORE. Mr. Chairman and members of the committee: My name is Richard A. Moore. I reside in Flintridge, Calif., and I am president of KTTV Inc., licensee of television station KTTV, Los Angeles. I am a former president of the Television Broadcasters of Southern California and last week I retired as cochairman of the board of directors of the Television Bureau of Advertising, an all-industry business league whose membership includes the three major networks, most of the leading stations in the country, and station

---

NOTE.—Staff members assigned to this hearing: Kenneth A. Cox and Wayne T. Geissinger, special counsel; Nicholas Zapple, communications counsel.

representatives. I am still a director of this bureau, but I wish to make it clear that I am speaking only on behalf of KTTV and my views have no relationship to any opinions of the Television Bureau of Advertising or its members. I entered the broadcasting field in 1946 as an attorney for the American Broadcasting Co. and subsequently became director of television for their western division and general manager of their Los Angeles television station. I left ABC to accept my present post in 1951.

As an active member of the television broadcasting industry, KTTV has had a first hand experience with many of the problems with which this committee is concerned. We deeply appreciate your invitation to testify today, and if KTTV's statement should prove helpful in reaching conclusions which will achieve a truly competitive national television medium, we will be very happy indeed.

I will welcome questions during the statement and I would like to introduce some of my associates who have come with me from California to present our story.

Senator POTTER. Yes, please identify your associates.

Mr. MOORE. Mr. John J. O'Mara, our director of research, on my left; Prof. Donald F. Turner of Cambridge, Mass., who has given us some legal advice in this field; Mr. John R. Vrba, our vice president in charge of sales; and Mr. Lloyd N. Cutler, of Washington, D. C., who is representing us in connection with this hearing and related proceedings.

Senator POTTER. We are delighted to have you here, gentlemen, and if during the course of your statement, Mr. Moore, you care to elaborate on any point, feel free to do so, and call upon your associates to do so at any time.

Mr. MOORE. Thank you very much.

KTTV, which is 1 of 7 VHF stations licensed to serve the Los Angeles community, has been operating since January 1, 1949. All of the stock of KTTV, Inc., is owned by the Times-Mirror Co., publisher of the Los Angeles Times and the Los Angeles Mirror-News.[1] Virtually all of the stock of the Times-Mirror Co. is owned by residents of the Los Angeles area.

Originally 49 percent of the stock of KTTV, Inc., was owned by the Columbia Broadcasting System and the station had an affiliation agreement with the CBS network. In April of 1951 the Times-Mirror Co. purchased the stock owned by CBS, and CBS acquired 100 percent ownership of another television station in Los Angeles. KTTV's affiliation with the CBS network terminated at that time. Between April 1, 1951, and March 1954, KTTV had an informal affiliation agreement with the DuMont television network and carried a small number of DuMont network programs. That arrangement was terminated in March 1954, and since that time KTTV has operated as a completely independent television station without network affiliation of any kind.

As 1 of 7 VHF stations in Los Angeles, KTTV competes for audience and advertising revenues with 3 other unaffiliated stations as well as 3 flagship stations owned and operated by CBS, NBC, and ABC, respectively. Since audience and advertising revenues must be divided among seven stations the road to economic stability in Los

[1] Since Mr. Moore's appearance before the committee, Loew's, Inc., the parent company of Metro-Goldwyn-Mayer, has purchased a 25 percent interest in KTTV, Inc.

Angeles has been difficult. Like most pioneers in the television industry, KTTV incurred heavy losses before it reached the point of profitable operation. However, most prefreeze television broadcasters, including the two larger network companies, turned the corner after the first year or two, while KTTV's losses continued at an extremely heavy rate during its first 5 years of operation. Our first profitable year was 1954 and we have maintained an operating profit since that time.

But KTTV's financial curve did not begin to taken an upward course until there began to be available a supply of good programs on film which KTTV could acquire to supplement its local live programs. These good films enabled us to offer a balanced combination of programs that were competitive to network programs in terms of budget and entertainment values.

During the last 2 or 3 years, when good quality film programs have been available to KTTV, the station has been able to achieve a strong position in its market in competition with the three network-owned stations, as well as the independents.

KTTV is first in audience among all seven stations during the daytime hours. Its average audience for all broadcast hours substantially exceeds that of the ABC station and is closely competitive to the CBS and NBC stations even during the prime evening hours. Although it is an independent station, KTTV operates more hours per week than any other station in Los Angeles and it does more live remote telecasts than all six competing stations put together. Its news programs are by far the most popular in Los Angeles, network or local, and have won all the important awards for which a Los Angeles station is eligible.

Mr. Cox. If I could interrupt at that point, Mr. Moore, could you explain to us why KTTV has such a prime dominance in live remote programs. It this because time is not available on the network stations for providing that sort of programing?

Mr. Moore. I think it is a matter of necessity being the mother of invention, Mr. Cox. We have to develop fine programs or we can't survive. With only ourselves to rely on, we have had to develop local live programing, particularly local live remote programing, of interest to the people of our community. We also have to maintain quite a big newsreel staff to develop news that means something to our folks in Los Angeles, and this goes for the other independents, too.

Mr. Cox. This is an incentive lacking for the network affiliated stations?

Mr. Moore. The networks offer a substitute for ingenuity which we don't have. We have to serve the local community.

Senator Potter. How does your advertising rate compare with the network-owned stations?

Mr. Moore. It is about the same as the ABC station, but perhaps 50 or 60 percent of the NBC or CBS stations. Ours happens to be a little higher than any of the other three independents.

Mr. Cox. This, I take it, is not because of any difference in the coverage area which can be reached by your station, since all of these stations are VHF?

Mr. Moore. That is right, Mr. Cox, and additionally, Los Angeles is a good market to study, because everybody had the same transmitter site with one exception, from the start, atop Mount Wilson.

Generally we all have the same coverage, so the public can choose on the basis of programs and not signal.

Senator POTTER. I suppose most of your revenue is from local advertisers?

Mr. MOORE. No, sir; about 50 percent of our revenue comes from national advertisers and 50 percent from local advertisers. The national advertisers find—and this goes for all markets—that through the so-called national spot placement in TV advertising markets, where they have particular sales problems or ambitions, national advertising can be used effectively on a local television station. I think we have more of each type than any station in Los Angeles. It is about half local and half national.

KTTV has also been a leader in the field of children's programing and, over the years, has perhaps won more awards and more audience for its children's programs than any of its competitors.

We cite facts like these not to pat ourselves on the back but to indicate that a television station, by itself, can render the best possible service to the community so long as it has equal access to good sources of film programing.

We now see the immediate prospect that this source of high-quality film programs will shrink and disappear, and that independent television stations like KTTV will be unable to obtain access to the few high-quality films that may still be produced. If independent stations cannot obtain access to such programs, the stations' potential for service to their communities will be destroyed.

The reason lies in one fact. On the basis of 7 years of operating experience, we believe this one fact is the most fundamental problem facing our industry. It overshadows all of television's other economic or regulatory problems. The one fact is this:

The television broadcasting industry is not being conducted on normal principles of free competition. It is therefore not responding to the same basic economic forces which promote the development of other industries. The serious limitations on free competition are caused not merely by the scarcity of available stations, but, even more important, by certain restrictive agreements imposed by the network companies on the stations affiliated with them.

I intend today to describe these restrictive agreements, the harmful effect they are having on all segments of the television industry and on the public, the reasons why they are illegal and against the public interest, and the remedies that are necessary to restore competitive conditions in the industry.

The physical scarcity of available frequencies is, of course, a factor which limits the scope of free competition in television—all the more reason why we should be aware of all factors that limit competition. We are aware that the solution to this problem is a matter of serious concern to this committee and to the FCC. But the other limiting factors to which I refer are artificially created and are readily and immediately curable. They are within the scope of the FCC's own regulations governing the relations between network companies and affiliated stations, and they can be cured forthwith by simple amendments to those regulations, or, if necessary, by legislation. In other words, despite the physical scarcity of channels, we believe that a truly competitive television service can rapidly be achieved by simple regulatory or legislative action.

KTTV does not, in any way, suggest or recommend the elimination of networks and network services. We believe that interconnected network service will always play a most important part in the full realization of the television potential.

Mr. Cox. Would that be, Mr. Moore, because in your opinion there are always going to be certain matters which the networks can handle on a better basis—matters requiring live broadcast from multiple points during a short period of time or broadcasting of events of national significance such as political conventions and things of that kind?

Mr. MOORE. That has certainly been the pattern, Mr. Cox, and I am confident it will continue. The networks are equipped to provide this live national service, and under the stimulus of competition I would expect they would provide even more such live programs than they have in the past.

Mr. Cox. I would assume that independent stations could perhaps provide live network programing within a relatively limited area. Would that be true? Have you had any experience with that sort of thing?

Mr. MOORE. Yes, we have. Actually all you need for a live telecast of an event that is happening are really two things: You need a sponsor to pay the bills and you need the A. T. & T. There was an example which caused quite a bit of attention in the industry when we found that the great announcement of the results of the Salk vaccine test was to be made at Ann Arbor—we regarded it as one of the most solemn and happy moments in medical history—and nobody had made arrangements to telecast it to the public. So KTTV went 2,100 miles to Ann Arbor, Mich., leased the lines of A. T. & T., and broadcast the full 4 hours of that wonderful occasion. The interesting part of it is that other stations in California—one was owned by a network and the others were affiliated with networks—took the full 4 hours very happily. We did arrange for sponsorship by a fine oil company which gave institutional messages on conservation. One station which wasn't ordered, through an oversight, took it free, because they felt it would mean so much to so many mothers and families generally. So there will always be ingenious broadcasters who will give the public what it wants.

Senator POTTER. You say this wasn't carried by the networks?

Mr. MOORE. No, sir. I think they had network programs on at that time. I should say, in fairness, I do not know that they evaluated a 4-hour medical meeting as interesting enough. There was perhaps a difference of opinion. I do not mean to suggest that they would not cancel out commercials for fine public service. They do, but in this instance, there was a difference of opinion, and I think the opportunity to take advantage of differences of opinion that exist among broadcasters in program evaluation is what we are really striving for. Out of such differences of opinion you get the best results for the public.

Mr. Cox. The networks did have some news coverage of that, I assume.

Mr. MOORE. Yes. Mr. Murrow went out there that night and interviewed Dr. Salk and Dr. Francis, and it was a fine program. But we were intrigued by the fact that every affiliate to whom our full simultaneous coverage was offered jumped at the chance to carry it, and one called us and tried to get it without being paid by the sponsor.

Senator BRICKER. You mean the other affiliates in Los Angeles?

Mr. MOORE. No, sir, we fed it to the ABC-owned station in San Francisco, to a station in Sacramento which I believe was affiliated with 1 or 2 networks, to the CBS–ABC affiliate in San Diego, and to the Fresno station that called us up and joined voluntarily.

Senator BRICKER. Is that right? I can see the vital importance and great public interest in that program. Was that particular program broadcast by any other agency in any other section of the country like you did?

Mr. MOORE. No, sir; there was an arrangement with a network to cut in for a 5-minute interview after one of the speeches, but it ran past their scheduled time and they were starting the next show, so they did not carry it.

We had offered to feed that to them, but California was the only population in the country that heard first-hand what the real facts were about the Salk vaccine, and the point is——

Senator BRICKER. I begin to see why you are up toward the top.

Mr. MOORE. Thank you, Senator.

Senator POTTER. Senator Bricker made a comment, this would be an appropriate time for the story about the bird dogs and the house dogs.

Senator BRICKER. The kennel dogs and the field dogs. [Laughter.]

Mr. MOORE. Since I am engaged in public relations at the moment, I am not going to say anything about dogs.

We believe, as I say, that interconnected network service will be basic in our industry and always with us. But we believe our suggestions will bring about improvements in network service, just as healthy competition in any industry invariably serves to improve the product and to benefit the public. We anticipate that if the FCC or the Congress restores free competition in television broadcasting, the network companies will continue to prosper and flourish in exact proportion to their ingenuity and initiative, as compared to the ingenuity and initiative of competing producers and distributors of television programs.

RESTRICTIVE AGREEMENTS

The restrictive agreements with which KTTV is concerned are of two types:

The first is the agreement between a network company and the licensees of certain individual stations whereby each station agrees to withhold certain desirable time periods from sale to any advertiser unless the advertiser agrees to purchase equivalent time on all stations throughout the country who are parties to this agreement. These are the so-called must-buy agreements, utilized by CBS and NBC.

Mr. Cox. Well, now, are those formal agreements in those terms, or is this an agreement which you deduce exists from a practice which is observable?

Mr. MOORE. Well, Mr. Cox, we do not have access to the affiliation agreements. It may well be, as we understand it, that some of the agreements contain a provision that a station will be on the must-buy list and it is signed by both parties. In any event, the network rate card which is published—and the network is acting as sales agent for the stations—specifies that the advertiser may not buy unless he buys all 50 or 55. And as a matter of fact, most basic affiliates publish in their own rate card the fact that they are a basic affiliate. I think it is actually a formal agreement in many cases, but certainly it is spelled out in one way or another.

To my knowledge, these agreements have never been tested in any court and there is no reference to them in the regulations of the FCC. We were naturally interested, however, in the following excerpt from the recent testimony of Assistant Attorney General Barnes before this committee:

> Mr. Cox. There has been testimony that NBC and CBS follow a must-buy policy, under which an advertiser, to get on the network at all, must buy time on a minimum of 50 or 55 stations, whether he wants to advertise in all these markets or not. Is there a possibility that this practice might violate the antitrust laws?
>
> Mr. Barnes. Yes.

Senator Bricker. I would think from the mere statement of the facts that it would be more than a possibility.

Mr. Moore. Senator, I am a former lawyer and I won't comment. I think you can guess that I agree.

Senator Bricker. It certainly is a restriction that comes within the provisions of the antitrust laws.

Mr. Moore. It does have the inevitable consequences that come from all of these collective agreements to withhold services. As you will see later, I will develop that, because it hurts us very specifically, and hurts every independent.

Now the second type of agreement is one whereby each affiliated station agrees with the network company that it will not accept programs from any source other than the network during certain important time periods if the network elects to use that time for a network program. This is the so-called time option. It is couched in different words than I have used, but its legal and practical effect is a collective arrangement between a network company and the licensees of all its affiliated stations, whereby all affiliated stations are compelled to broadcast during certain periods whatever programs the network company offers, and only those programs. Technically, there are certain exceptions to the station's legal obligations, but these are rarely invoked and have little practical effect. In reality, these agreements amount to a collective refusal to deal with any other program source or advertiser whenever the network company desires the time, which, during the best viewing hours, is practically always. There is good reason to believe that these agreements constitute the kind of block booking or blind selling which was held unlawful by the United States Supreme Court in the motion-picture-industry cases, but the question has never been tested.

It is our opinion that these agreements are unlawful and contrary to the public interest because they enable the network companies:

1. To restrict the affiliated station from exercising its own judgment in programing and from discharging its nondelegable responsibility to serve the needs of its own community.

2. To restrict the opportunity of advertisers, large or small, to utilize television on a freely competitive basis and to derive the full benefit

of television's capacity for creating a demand for their goods and services.

3. To restrict the opportunity of American creative talent to present the results of their creative efforts upon television.

4. To restrict the opportunity of the unaffiliated television station to serve the public interest of its community by presenting the finest possible programing service.

As a result of these important restraints upon free competition, the American public is being denied its rightful opportunity to receive the widest possible choice of television programing. Instead, during the best viewing hours for the American public, three network presidents in New York decide what the American public shall be allowed to see and when they may see it. Worse yet, they decide what the American public shall not be allowed to see. These restraints upon free competition are denying to the public the benefits which traditionally and inevitably flow from the American system of free competitive enterprise.

Senator BRICKER. Not only that, they are able to say to one advertiser who is in competition with another: "You can have the time, and another man cannot have it."

Mr. MOORE. I understand that there has been some unhappiness among advertisers over that, Senator.

The FCC Network Study Committee has correctly stressed that all segments of the television industry are closely related, each having an effect on the other. In order to show the injury that is being done to the independent station and, most important of all, to the American public by the restraints I have described above, I would like to first show the effect of these restraints on the affiliated station, the advertiser, and the independent program producer.

THE AFFILIATED STATION

When the FCC grants a license to a television station it tries to select the applicant who will best serve the local community. The FCC stresses the financial resources of the applicant, its organization, and its relationship and identification with the community. When there are competing applicants, exhaustive hearings are held to determine these things. But the effect of the network time option is to transfer the power to select the best programs for the local community from the local station owner to the network company headquarters in New York.

Mr. Cox. And that, of course, Mr. Moore, would place it in the hands of people who have never been evaluated by the FCC with respect to such qualifications or closely examined in any way?

Mr. MOORE. That is right, they are not parties to the hearings and they are not even present. They may never have been in that town.

As the FCC said after very careful study of this matter in 1941:

> We conclude that national network time options have restricted the freedom of station licensees and hampered their efforts to broadcast local commercial programs, the programs of other national networks, and national spot transcriptions.

Now that is radio and, of course, in television we have national spot films which are parallel.

> We believe—

said the FCC—

that these considerations far outweigh any supposed advantages from "stability" of network operations under time options. We find that the optioning of time by licensee stations has operated against the public interest (Report on Chain Broadcasting, May 1941, p. 65).

Nevertheless, under great pressure from the network compaines, the FCC permitted limited use of time options in radio broadcasting, as a business convenience.

Mr. Cox. Now isn't it true that when the report of the FCC was originally published the language of its regulations did not permit time options at all, but that those were subsequently amended in October of the same year to permit optioning to the extent of 3 hours in each time period?

Mr. Moore. That is correct, Mr. Cox. The option time was abolished altogether in the report after the 3-year hearing. It was amended later after rehearing.

Now 15 years later, this old radio "business convenience" has now become the key instrument which enables the television network companies to exercise virtually complete control over what is broadcast throughout the country during the prime evening hours. In fact, the constant objective of the network companies is to persuade the individual affiliated station to surrender its responsibility for program selection and simply "patch in the network." In case you think I am exaggerating, I would like to quote from the statement of Dr. Frank Stanton, president of CBS, before this very committee 2 years ago. Dr. Stanton said:

Certainly it takes more work for a station which does not rely on a network. It is far easier to patch in the network and have a full day and a full night's programing. I do not blame stations for preferring that course of life. I would myself. In fact, we try our best to make this an attractive way of life. But it is well to emphasize that perhaps there is a substitute of self-reliance, good management, and plain hard work. (Senate Committee on Interstate and Foreign Commerce, hearings before Subcommittee on Communications on the Status of UHF Television Stations and S. 3095, 83d Cong., 2d sess., p. 1001.)

Mr. Cox. Would it be fair to say that, in addition to trying to make this an attractive way of life, they have through these amendments to the Chain Broadcasting Regulations made it possible for them to insist on a legal right, in their agreements, to a substantial portion of the time of the affiliate, making this a compulsory way of life for the affiliate?

Mr. Moore. We will see later it is at least 96 percent of that.

The contracts, as I said, have these certain exceptions but they are very limited. With the economic balance being what it is between a network and a station we find that the exceptions are very seldom invoked. Thus, the time option is used in a way that makes it pointless for the FCC to go to the trouble of selecting the applicant who has the best identity with the community and the greatest capacity for "self-reliance, good management, and plain hard work." If the successful applicant is simply going to "patch in the network," the licenses might just as well be awarded to the network companies themselves.

Mr. Cox. Then to the extent that the limitations imposed by the FCC on multiple-station ownership are designed to prevent a unified control of programing and the expression of opinion, rather than to limit the derivation of economic benefits from the ownership of stations, would you feel that option time permits a substantial evasion of that, at least to the extent of determining the programs?

Mr. MOORE. Yes. A transmitter has one function, to broadcast programs, and if someone else controls the programs, the license is illusory. It is a way of programing more than the limited number of stations allowed.

Mr. Cox. So the network dominates, as far as program control, many more stations than it is permitted to own, but the stations are held in separate ownership and the economic benefits thereof go off to other people?

Mr. MOORE. That is correct; the patch-in approach is what accomplishes that.

As an illustration of how completely the affiliated stations have been required to surrender their responsibility for program selection to the networks, let us look at the 40 cities where NBC and CBS each have an affiliate which an advertiser is required to use under the "must-buy" policies of the two networks.

These cities are: New York, Chicago, Los Angeles, Philadelphia, Detroit, Boston, San Francisco, St. Louis, Washington, Baltimore, Minneapolis, Buffalo, Houston, Syracuse, Oklahoma City, Sacramento, Nashville, Norfolk, Providence, Salt Lake City, Milwaukee, Kansas City, Seattle, Atlanta, Portland, Oreg., Dallas, San Diego, Denver, Louisville, San Antonio, Tampa, Rochester, Omaha, Tulsa, Davenport, Columbus, Dayton, Cincinnati, Cleveland, Birmingham.

These 40 cities contain 71.5 percent of all the television sets in the United States. In these 40 cities, there are 80 NBC or CBS affiliates. The 3 hours of network evening option time—the most desirable viewing time for the entire family and therefore for advertisers—include 6 half hours per night or 42 half hours per week. Multiplied by the 80 NBC and CBS stations, this amounts to 3,360 half hours per week.

In the typical week of February 19–25, 1956, during the 3 hours of network evening option time, NBC and CBS programs were carried at the time ordered by the network in 3,150 of the 3,360 half-hour periods. This is a network saturation of 93.7 percent, at the time indicated by the network. If we add the 85 half hours which were carried by the stations, but at times different from the ordered time, the rate of saturation rises to 96.3 percent. This left 3.7 percent of the time, or 7½ minutes per night, for programs produced by other networks, by the affiliated station itself, or by independent program producers.

Actually, I think the figures are even stronger, because at the moment I think CBS has one half hour of prime time unsold which is not being ordered, and if that were cleared it would be a little higher than 96.3 percent.

Mr. Cox. I presume when you say this leaves only this limited time for programs of independent producers, this means for programs produced by them and cleared by them. I presume some part of that 3,000 half hours would include programs produced by independent producers, but where it was necessary to rely on the networks to clear the programs.

Mr. MOORE. Yes, the network programs include programs of independent producers, but as far as the stations go, we find there was only 3.7 percent of the time when the station might have bought some program other than dictated by the network.

Senator POTTER. Who would be included in the group as independent producers?

Mr. MOORE. There are several categories, Mr. Chairman. One of the most important, increasingly so, is the film industry which produces programs which can either be syndicated or can be played on a network. Actually, outside producers produce many network programs like Dragnet, the Groucho Marx Show, I Love Lucy—I would say a good portion of the most popular programs currently on the networks are outside packages. Lassie is outside, Rin Tin Tin——

Senator POTTER. But those are sold directly to a network?

Mr. MOORE. Yes, to a network or a network sponsor.

Senator POTTER. Now I was questioning the amount of non-network time that you have cited here as one of the categories making up that 3.7 percent which was supplied by independent program producers. I assume probably that would be films, independently purchased.

Mr. MOORE. Numerically the greatest number would be films, Mr. Chairman. Now and then there might be local live shows—such as a local panel show. Generally the available programs are films, like the anti-Communist series called I Led Three Lives, or a program called Waterfront which is very good. These are produced by independent film companies in Hollywood who have a great many wonderful shows on their story boards that they cannot produce for lack of exhibition time.

Now, I am talking about the period—which in the East is 7:30 to 10:30 p. m.—of network option time. But furthermore many hour-long programs are started within this network time and overlap into nonoption time or station time. You are familiar with many of those shows—the Lux Video Theater, the prize fights, Twentieth Century Fox Theater, Studio One. The station which is obliged to clear for the first half of the program either has to surrender station time or cut the prize fight or drama off in the middle. This is a device whereby the networks take an additional half hour away from the station quite consistently, and each such half hour is over and above the 96 percent that I have mentioned. Then, of course, there are many other programs started at the fringe time, the edge of option time, at 10:30 at night particularly. The stations in many cases will carry these programs. Whether they carry them because they want to keep the network happy or because they think it is the best possible show they could have, I don't know. But I do know that the networks are not only saturating their own network time, but are steadily moving more and more into station time.

Now, as a further and specific example of how the stations have been required to abandon their local responsibility and simply have patched in what the network offers, take the case of Disneyland. A year and a half ago, Mr. Walt Disney turned his skills to television, to the delight of children of all ages throughout the land. The Disneyland program is on film. It can be played in each city at whatever time best suits the convenience of the young audience in the particular community. But because it is a network program it was arbitrarily placed in network option time, 7:30–8:30 p. m., in the eastern time zone.

This necessarily means that children, and we refer to those particularly between the ages of 3 and 9, sometimes younger, can enjoy Disneyland only if they are kept from their beds until 8:30 p. m. on a school night. We doubt strongly that this time period is the most suitable one in the honest judgment of each individual station licensee, if he were free to exercise that judgment.

On the west coast the Disneyland situation is even more acute. In order to accommodate a live network broadcast of the weekly Pabst Blue Ribbon prizefights, which reach Pacific time zones from 7 to 8 p. m. each Wednesday, the network pushed Disneyland back a half hour on the west coast, so that it plays from 8 to 9 p. m. in the West. Occasionally the prizefights run long, so that Disneyland starts late, and Snow White, Davy Crockett, and Donald Duck may be on the air until 9: 15 p. m. or later.

Throughout the country families must choose between children who are cross on Wednesday night because they are sent to bed before Disneyland is over, or children who are cross on Thursday because they stayed up too late on Wednesday night. This is how the decline of station responsibility under option time prevents a fine program like Disneyland from performing its proper public service in each community.

Now, a most revealing and significant fact is this: In a study of program schedules last month we find that Disneyland is carried on 15 network-affiliated stations in the Pacific time zone; 9 of these stations carry it in the time period dictated by the network, 8–9 p. m.; but Disneyland plays at 7 p. m. in Salinas and Santa Barbara; 4 p. m. Sunday in San Diego; 7: 30 p. m. in Eugene, Oreg.; 3 p. m. Sunday in Yakima, Wash.; and 5 p. m. Saturday in Chico, Calif. There can be no doubt that these earlier times are far more suitable for a children's audience. Certainly it is no coincidence that each of the six stations which demanded and obtained an earlier time is located in a city where there are so few stations that a refusal to respond to network pressure could not result in loss of network service. In every case where Disneyland is played at a suitable time it is where the station is a free agent.

Senator POTTER. That is, a one-station community?

Mr. MOORE. One or two; in San Diego, where the station plays it Sunday afternoon, they do have CBS service and presumably they are going to lose their ABC affiliations to the Mexican station, anyway.

Now there is another aspect of the time option which deserves the most careful study. If a station wishes to carry certain network programs of high quality, it can do so only by entering into an affiliation agreement whereby the station agrees to carry any network program offered during the 12 hours per day of option time. This is reminiscent of the time when a movie theater owner could not obtain the particular high-quality pictures he wanted from a major studio unless he agreed, on a blind basis, to accept a block of pictures which that studio had not yet even produced. It is a matter of the old days of the liquor shortages and taking the rum with the whisky.

The time option constitutes block booking in its elemental form. The time option also constitutes blind selling since the station licensee rarely sees the program before he broadcasts it, and, of course, is in no position to judge whether the program is in the public interest or whether it is less in the public interest than some other program he could obtain from another source.

Mr. Cox. Does he have any advance information as to this program—a summary of its contents?

Mr. MOORE. That varies, Mr. Cox. I think, yes; because of course there are all kinds of programs. He does have a description of the nature of it, such as a panel show, a variety show. This I think could be better answered by network representatives. The case of pilot films being sent to the station before a decision, I would say, is a rare case. I would say not once in many, many times does a station have a look at what they will put on the air before they broadcast it.

Now it cannot be demonstrated that the stations invariably accept the network program under a time option because they think the public would prefer the network program over any other program available at the same time. We would readily admit when affiliated stations accept network shows like I Love Lucy, The Ed Sullivan Show, Richard III, Omnibus, The $64,000 Question, Disneyland, Peter Pan, and the World Series, they are doing so in the sincere belief that the public would prefer these programs over any others available at the same time. But can the same be said of all network programs accepted by the affiliates, among which might be:

Two for the Money	Name That Tune	Chance of a Lifetime
People Are Funny	Penny to a Million	It's a Great Life
Break the Bank	Dollar a Second	Life Begins at 80
Beat the Clock	I've Got a Secret	Place the Face
Stop the Music	Masquerade Party	
Name's the Same	Truth or Consequences	

(A correction in this list and others throughout Mr. Moore's testimony were made pursuant to the following letter from his attorney:)

COX, LANGFORD, STODDARD & CUTLER,
Washington, D. C., April 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
The United States Senate, Washington 25, D. C.

DEAR SENATOR MAGNUSON: I refer to the reporter's transcript of the testimony of our client, Richard A. Moore, and of Prof. Donald F. Turner, who accompanied him, on March 26, 1956, before the Committee on Interstate and Foreign Commerce.

In addition to the typographical and grammatical corrections that we have submitted to the staff, we should very much appreciate the following corrections to reflect what was actually stated by the witness.

Page 1598: The program This Is Your Life was not included in the list of programs as read by Mr. Moore and should be deleted.

Page 1627, line 3: Change "rate" to "rare".

Page 1632, 5th line from the bottom, the paragraph should read as follows: "In Seattle, the ABC station ran an independent film instead of Chance of a Lifetime. Now, with the network program getting ratings of 6 to 11, an independent film, and it is a fine one, Death Valley Days, got a rating of 32.9, almost 5 times the average rating which the network program receives under similar competitive conditions."

Page 1634, line 1, change sentence to read as follows: "That is why we want to stimulate more competition."

Page 1655, line 5, change sentence to read as follows: "I think so, Mr. Cox, because bear in mind that along with the 75 percent limitation, the repeal of block booking or time option would become effective."

Page 1671, line 1: Change "section 1" to "section 2."

Page 1671, line 9: Insert "after agreements" the words "of this type."

Page 1676, 10th line from the bottom: Insert at the end of the sentence after "stations" the words "receiving the same network service."

Sincerely yours,

LLOYD N. CUTLER.

Mr. MOORE. Now I have mentioned these few programs here without attempting to criticize any particular program, but are these necessarily the best programs available out of the country's talent?

They are network programs winning station acceptance virtually wherever they are offered. I doubt that necessarily all of those programs are finer, better, or more acceptable to the public than perhaps some other program that might be available.

To prove that network programs are not always first in popular preference we need only point to those markets with more than three stations where nonnetwork programs receive a fair exposure to the public. The public reaction to these programs has repeatedly demonstrated that the great talent of the motion-picture industry in Hollywood is thoroughly capable of producing television programs which have great popular appeal.

Mr. Cox. Isn't it true that there are, at most, only 11 markets in the United States in which there are 4 or more stations, so that the network-affiliated stations face substantial commercial competition from an independent station?

Mr. Moore. That is right, there is that limited number of markets and it therefore makes fairly rare the case where these other programs get an opportunity to compete in the best time. What we are looking at are situations where very fine film programs are played in class A time, which would usually be a four-station market, or more. I would like to recite a few examples taken from audience surveys of the American Research Bureau for February 1956, whose reports are an accepted form of audience measurement. In these examples I shall compare the audience popularity of certain syndicated filmed programs as compared to the popularity of the evening network programs in the same city in the same week.

In Chicago, with 4 VHF stations, the nonnetwork film series based on Lloyd C. Douglas' book, Dr. Hudson's Secret Journal, has a larger audience than 101 of the 129 network programs broadcast that week. Science Fiction Theater has a larger audience than 90 of the 129 network programs. The Cisco Kid is more popular than 80 network shows, Long John Silver is more popular than 69, and Superman is more popular than 63. Apparently, there is a writer who escaped the networks. His name is Robert Louis Stevenson, and Long John Silver apparently is pretty good television material.

In Seattle-Tacoma, with 4 VHF stations, there were 118 evening network programs. Death Valley Days and I Search for Adventure were more popular than 108 of these shows. Highway Patrol was more popular than 104. All told, 8 syndicated programs had larger audiences than any of 79 network programs.

In Los Angeles, with 7 VHF stations, there were 128 network programs. Confidential File had an audience larger than 95 of these network programs. Amos and Andy was ahead of 93 and 6 others had larger audiences than 87, 82, 75, 74, 73, and 69 evening network shows, respectively.

So it is apparent that the public does not like a program just because it is a network program. They like the program on its merits, and this great country has plenty of talent.

Generally speaking, these desirable nonnetwork programs are on film and are available to the network-affiliated stations in most of the major markets. In most of these markets there is no independent station, and the distributor of the nonnetwork program undoubtedly would like to place it in that market on an affiliated station during prime viewing time. Moreover, the sponsor of the nonnetwork program will usually pay the full station rate, instead of the low percentage of the station rate (in the range of 30 percent) customarily paid by the networks. Yet almost invariably the affiliated station accepts the network program instead of the superior nonnetwork program.

Mr. Cox. If that is true, then, Mr. Moore, certainly the decision to carry this network program is one not dictated by the station owner's self-interest, since he could make more from a national spot program; and if there are available programs, as you indicate, which are perhaps more popular than the network program, it is also not dictated by the public interest—would that be your view?

Mr. Moore. That, to us, is so clear here; with 96 percent of the schedule in prime evening time being billed by network programs, this implies that the rest of the country couldn't develop more than 3 percent of programs that are superior. Yet we have seen how superior they are in the eyes of the public when the public is given an opportunity to judge them. So we can only conclude that the clearance is given for some reason other than the pure merit of the program.

Why is this so? The FCC opinions on NBC's recent purchase of the Westinghouse TV station in Philadelphia contain the answer. In the words of the explanatory statement issued by two of the Commissioners who were part of the majority approving the transfer:

> The expiration of the affiliation agreement triggered the negotiations which led to the transfer. * * * No law, rule, or regulation of the FCC required NBC to renew that affiliation contract. NBC was free to exercise its own business judgment to renew, affiliate with another, delay an affiliation until it negotiated with another station, or refuse any affiliation. * * * Westinghouse was free to refuse [to sell the Philadelphia station] or to negotiate with another television network * * * it concluded to do business with NBC * * *. We must take them [Westinghouse] upon their word that the transfer was based upon the exercise of a prudent business judgment. (FCC Report No. 2793, December 28, 1955.)

If threatened loss of an affiliation could bring about this exercise of "prudent business judgment," on the part of a licensee as strong in financial resources and management as Westinghouse, to sell its Philadelphia station—which actually was purchased quite recently at a record price—rather than lose the affiliation with NBC, to what extent can we expect an affiliate with "prudent business judgment" to resist a network's request for clearance of its programs within network option time, or in station time itself? To what extent can we expect station licensees to depend on their own "self-reliance, good management, and plain hard work," when the result of applying these honorable American virtues can be financial ruin, and when the network companies can pay such a handsome reward for patching in the network and abdicating station responsibility to them?

Mr. Cox. Wouldn't it appear, then, that quite possibly the pressure to take programs—except as to those stations in areas where they can afford to be somewhat independent because of lack of facilities—would exist whether you had this legally enforcible provision for option time actually written in the contract or not?

Mr. Moore. I think that is true, Mr. Cox. I don't think that the motion-picture studios have always had block-booking contracts, but when they came in to sell Gone With the Wind, or whatever a great picture was, they communicated to the fellow that he had to take the rest. I think network service is considered so important to an affiliated station, under our present structure, that even without the legal requirement he probably would clear. He does clear now on station time, which he doesn't have to do.

INDEPENDENT PROGRAM PRODUCERS

We come now to the independent film producers. Mr. Chairman, these are a group of fine companies with talented people who are in television and eager to play a larger part.

In order to defray the cost of producing a good television film program, experience has proven that the independent film producer or syndicator must be able to sell the program at a fair price in virtually all the important markets of the country. In order to sell the program in any particular market, a syndicator must find a sponsor, and there are many fine sponsors—national, regional, and local—who would like to buy a good syndicated show. If a sponsor pays a fair price for a high-quality program, he also wants a good time period.

But in most markets all the good time periods are under option to a network, and are generally already occupied by the network. Thus, the syndicator is blocked from selling his program because the sponsor cannot obtain a satisfactory time period. Even if a time period is not currently occupied by the network, the advertiser is still reluctant to buy the program because he may be dispossessed at any time by a network program. Ironically, he may even be dispossessed by a program sponsored by a larger competitor in his own business. And the station itself cannot afford to buy the syndicator's program, because the station cannot ordinarily obtain a sponsor for the program, since it cannot offer him a good time period which is guaranteed against network preemption.

Today, the only means by which a film producer can be assured of time periods in a sufficient number of markets is to sell the program to a network, or to an advertiser who is able to place the program on the network. Without such a guaranteed release, the film producer or syndicator can now seldom afford to produce a series.

It is true that a number of fine syndicated films have been produced for nonnetwork use and have been sold in many markets, but the number is steadily dwindling because of the restraints imposed by time options. It is no answer to say that independent films can obtain class B or class C time since the competitive network programs have automatic control of the really valuable class A time.

Mr. Cox. Mr. Moore, I noted yesterday in the television section of the Washington Post an article which contains this language:

> More than 200 TV pilot films are in circulation around New York's advertising agencies. This represents a speculative investment of over $6 million, and most of it will go down the drain.

Now would that be by reason of the factors that you are discussing here, in your opinion?

Mr. Moore. Precisely that situation. Good pilot films which would make a fine series, great actors, great directors, but no exhibition time. We actually have stages in our studios where there is, as a tenant, a very fine motion-picture producer. He has eight programs in the plans, which he can not bring to television. I would urge that the committee talk to some of these responsible and capable film companies to find out just what the state of their business is, because it is rather deplorable, and good product is being denied an outlet for no fault of its own.

The importance of desirable time periods is fundamental, and we need no elaborate statistics to prove that the most convenient viewing hours for the American public are in the middle of the evening. That is when the worker has returned from his job, the housewife has completed her daytime chores, and the whole family is together in the interlude between the supper hour and bedtime. This is so-called class A or class AA time when the rates are highest and when the network time options are exercised with the most consistent and telling effect. It is these hours when the television audience is at its peak, and when there is the greatest likelihood that the advertiser will pay a program fee which is sufficient to defray the cost of the show. Yet these are the very time periods which are covered by the network option, and from which the independent producer is almost completely excluded unless he sells his program for distribution over the very network company that is producing competing programs of its own, which it naturally prefers to use instead of an independently produced program.

The dilemma of the independent film producer is well put in an article that appears in the October 31, 1955, issue of Sponsor, an authoritative industry publication. This article, entitled "The Great Debate on Network Show Control," quotes from a series of interviews with independent program producers. It quotes one such producer as stating:

We used to have a large number of potential buyers. Now we have three, the networks. And most of the time, even if we should come up with a show they want, they'll cut themselves in and try to take over control.

Mr. Cox. How do they do that?

Mr. Moore. Well, I can't testify from direct conversations, Mr. Cox, but when the network controls the time on other people's stations, and a film producer wants to sell them a program, they are in a very strong bargaining position with that film producer, and I think you will find that the networks have partial ownership or partial interests in the film properties which have come to them from independent producers and which they have either bought, or sold to sponsors.

Mr. Cox. Well, would the situation be that a film producer has invested his time and capital in developing this show, and he has that to contribute, and the network contributes its time-clearance function only—which deals with the time of stations which the network does not own?

Mr. Moore. Well, I have a strong feeling that this is an area which the committee could well look into from other witnesses, since I don't have, in my position, this firsthand experience.

Senator Potter. Do you know of any illustration that would bear that out?

Mr. Moore. I have had numerous lunch-table complaints from film producers that you can't get on the air unless you want to cut the network in. I have heard specific oral conversations referred to, but I cannot assert that that is the fact. I think it would be worthwhile, though, to inquire as to the ownership, or profit arrangements, on some of the films since one of the considerations for acquiring any right in the film would be time on the affiliated station. If the network were acquiring a film, and I were an affiliate, I would want 30 percent of its interest in the film because it may be using my air time to obtain its interest in the property. So I have a feeling that the power is there, and therefore it might be a topic well worth looking into.

Mr. Cox. And you see evidence that results are produced which would be consistent?

Mr. MOORE. I didn't quite get that.

Mr. Cox. You see some evidence that perhaps the power is exercised because, for some reason or other, there are film programs released over the networks in which the networks own an interest?

Mr. MOORE. Yes, indeed. There seems to be a scream in the trade papers every so often that some independent film producer who has sold a high quality program to a sponsor, was then told that the network was putting its own show in because they deemed it better, or whatever the reasons. I think there have been instances where such network programs have ended up with the same sponsor that the independent producer had acquired in the first place.

Senator POTTER. Of course, it seems to me that the future of television would be in the wider use of film, and the difficulty that these independent film producers are having now would be a deterrent to the growth of the television industry.

Mr. MOORE. Mr. Chairman, that is almost the nub of the problem. You have an allocations problem in television, and the answer in the long run is going to be programs, because stations can only survive if they have programs and get audience. If we solve our allocation problem after all the independent film companies have either gone out of business or become hand maidens of the network organizations, we will have reached a cure and will not have any programs to supply the stations we have cured.

Today in Hollywood—I will put it this way—in the last 3 years in Hollywood there has been a great boom in production of films for television, but more and more they are being limited to the films that go on the network. If we take competitive opportunity away, that new, young industry is going to slow up very badly and will be the victim of the usual problem, as it was in the motion-picture industry, of lack of competition and therefore lack of quality.

So they need some help. They have a lot to contribute and all they ask—you won't find a film distributor who will say "Give me an option where I can kick a network show off"—he just wants an even break. He just wants an opportunity. If his program is better and the public likes it better, he feels he ought to have an opportunity to get it on the air. He doesn't say "I want the contractual right to preempt a network show."

Senator POTTER. He just wants to be able to compete with them?

Mr. MOORE. Yes; he just wants to be able to compete with them. Actually, KTTV knows of many additional programs which the independent film producers would like to produce but cannot because network option time denies them access to the market. We know that companies which previously had produced several new series a year for syndication are now reducing or discontinuing the production of new programs for syndication. I think it would be very helpful if the committee were to invite representative film producers and distributors to testify as to the effect of the time options upon their own prospects and plans. We believe it will present a sad story of talented and skilled craftsmen who are being arbitrarily precluded from an opportunity to bring their services and their skills to television.

The must-buy agreements also injure the independent film producer. They limit his opportunity to sell his programs for sponsorship by the many important advertisers who do not have complete national distribution for their products. There are other advertisers whose sales and advertising campaigns are seasonal in various parts of the country. There are many products which should not reasonably be advertised in Florida and Minnesota at the same time; suntan lotion and snow tires being two good examples.

As I will show in a moment, there are many advertisers who would like to buy a good film series for use in the markets where they have distribution, but who cannot afford to do so if the only means by which they could have it broadcast is to buy network time in cities where the advertiser's goods are not even sold. Hence, the must-buy agreement between the network company and its basic affiliates makes it impossible, in many cases, for the independent film producer to sell, or for the advertiser to buy, a program series which the producer is capable of delivering and the customer is anxious to acquire.

THE ADVERTISER

That brings us now to the advertiser, who is certainly an important part of our industry, since advertising revenues make possible fine television. In the year 1955, American advertisers spent more than a billion dollars on television. This enormous expenditure, in what is only the seventh year of TV's life, is the most persuasive evidence of the advertising and selling power of the TV medium. The importance of TV to any American business enterprise which is engaged in selling goods to consumers can hardly be overestimated. We have already reached the stage where network television is largely a seller's market with customers virtually standing in line to buy good TV time from the three network companies which have complete nationwide control over the good time.

The committee may be aware of the undercurrent of dissatisfaction among many leading American advertisers, resulting from the tight control which network companies exercise over the advertiser's opportunity to use TV. As one indication of that unrest, the magazine Advertising Age printed a page-one story on March 5 where it lists cases of advertisers who are dissatisfied with their treatment by network companies. Nineteen prominent American companies are mentioned in this article, including P. Lorillard Co., Liggett & Myers, American Tobacco, General Electric, Bendix, Longines-Wittnauer, Stokely-Van Camp, Hazel Bishop, Schick Razor, Sheaffer Pen, and Nestle's.

As is true for all other segments of the television industry, it is the must-buy and time-option policies of the network companies that are the root of the advertisers' problem.

The must-buy agreements

The NBC rate card specifies that the purchase of time on the NBC network requires a minimum purchase of time on 50 specified stations—

only 5 of which are owned by NBC and 45 of which are owned by independent companies. In addition, NBC requires that during the prime evening hours of 8 p. m. to 11 p. m. Monday through Friday and 7 p. m. to 11 p. m. on Saturday and Sunday, sponsors may not buy network time unless they also order at least 50 additional NBC affiliates over and above the must-buy list.

The CBS rate card provides that an advertiser may not purchase time on the CBS network unless he buys the same amount of time on 53 CBS stations, named by call letters, 4 of which are owned by CBS and 49 of which are owned by other companies.

ABC does not publish any must-buy policy. We do not know the reasons; but it could be because of doubts as to its legality or because ABC lacks the economic power to force the must-buy policy upon advertisers.

The Annual Data Book of Television Magazine has been published today, March 26, and it contains a complete tabulation of network advertisers and their expenditures for network time during 1955. The total expenditures were $407 million. That is apart from programs—time only. More than 50 percent of this total, some $205 million, was expended by the top 18 TV network advertisers. It goes without saying that the companies which expended these sums are of a size and scope sufficient to meet the network must-buy requirements. But what about the medium sized and smaller advertiser who cannot afford the vast expenditure involved in the must-buy lineup? And what about the advertiser (big or small) whose sales and distribution pattern does not cover the specific markets which he must purchase in order to acquire network time? The only answer for such advertisers—and they certainly represent the majority of American concerns—is either to give up TV or to use it other than on a network basis.

On a nonnetwork basis an advertiser may buy spot announcements between programs or participations within local programs. There are also certain NBC and CBS programs in class B and C time where he can also participate on a spot basis; but if, like his larger competitor, he wishes to present a program in a time period when most of the public is available to watch it, he must either pay for cities which he doesn't need or he must absorb a cost which would mean economic suicide.

Theoretically, an advertiser who cannot properly meet the must-buy requirement has the alternative of buying the program from a nonnetwork source and placing it in markets of his own choice by direct arrangements with the individual station in each market. Having been relegated to that alternative by the effect of the must-buy agreements, the advertiser then faces the effect of the time-option agreements.

Time-option agreements

We have pointed out that the prime evening hours are the most valuable for the purposes of TV advertising, and it is apparent that both major networks and the 18 top network advertisers agree with this conclusion. But those are exactly the hours which the station cannot sell to a local or regional advertiser, or to a national advertiser who has his own program, because that advertiser can be dispossessed at any time by a network advertiser pursuant to the time-option agreements. The inevitable and actual result is that the non-network advertiser is made a second-class citizen who, at the very most, can only find exposure on TV in less desirable time than his larger competitors.

This kind of distinction between first-class and second-class citizens would be wrong in any medium. But there is ample evidence that TV is a medium which means the difference between life or death for the average business concern. In that respect, it is unlike radio, where, if an advertiser were dispossessed by operation of the network time options, he could expect to sell his wares on a competitive basis by advertising in other media like newspapers and magazines. The clearest statement of this distinction was made by Mr. Sylvester Weaver, then president of the National Broadcasting Co. and now chairman of its board, in a recorded interview published in Broadcasting-Telecasting magazine on February 28, 1955. Mr. Weaver said:

> Television is so much more important than radio was that, while it really didn't matter if the big advertisers took over radio, they (referring to smaller advertisers) did have a way of selling their goods effectively. That's not true in television. If television were limited, for instance in the soap field, only to the Big Three, the other companies would go out of business, literally go out of business. They could not compete without television, in terms of selling. This is something that the other media may not believe, but I'm sure it's true and I am sure that most agency people would agree to it, too.

We believe that the NBC policy, for instance, where class A use of TV is limited to those who can buy 50 specified markets plus a total of 50 more, creates a situation where the majority of American advertisers are effectively denied the opportunity to make use of the TV medium. When coupled with the time-option agreements by which the medium sized and small advertiser are denied good time even in their nonnetwork use of TV, this network policy becomes violative of the most basic concept of American free competition. In short, the must-buy and the time-option agreements are discriminatory against all American advertisers except those who, by merger or otherwise, have grown large enough to meet the minimum requirements of the network companies.

THE INDEPENDENT STATION

As we have seen, the direct impact of the network must-buy and time-option policies falls on the affiliated station, the independent program producer, and the advertiser. But one important secondary result is the serious competitive injury done to the independent station.

The simplest way to illustrate the effect of the must-buy clause is to assume a situation where 50 separately owned newspapers, each in a different major city, enter into an agreement whereby each agrees not to sell certain desirable advertising space to any advertiser unless that advertiser buys equivalent space in each of the other 49 newspapers throughout the country.

We cannot imagine that an agreement of that kind would be tolerated from a legal standpoint for 15 minutes.

Since a television program, unlike a newspaper advertisement, is ordinarily placed on only one station in a market, the competitive disadvantage to a station which is the victim of such a boycott is readily apparent. KTTV is constantly confronted with situations where an advertiser has acquired the national rights to a television program and desires to have it broadcast in Los Angeles as well as in other cities throughout the country. In such instances, if KTTV desires the program, we consult with the advertiser or the advertising agency and offer him a time period for the program on our station.

It has been our experience, however, that regardless of whether KTTV offers a more desirable time period at a lower cost per thousand than a particular network station in Los Angeles, we are told by the advertiser or his agency that despite the fact that the KTTV proposal is more attractive, the advertiser must place the program on the network station in Los Angeles or he will be deprived of the opportunity of placing the program on stations affiliated with that network in other cities.

In one instance, KTTV actually secured an order from the advertiser for the film program Captain Midnight, owned by the advertiser and broadcast over network facilities in 40 other cities. We were able to do this because of an apparent slip-up whereby the advertiser was able to avoid temporarily the network's must-buy requirement in Los Angeles. We were told by the advertising agency that continued pressure was placed upon them by the network to move the show to the network station. Finally, on the telephone, the agency informed KTTV that the network had now told the agency that unless they moved Captain Midnight to the network station in Los Angeles, the network would not make available a time period then under discussion for another program, Tales of the Texas Rangers, to be placed on behalf of a different advertiser by the same advertising agency.

Mr. Cox. Well, that would be a tie-in, in effect, releasing time for another program only on the condition that favorable treatment is given to them in connection with a disassociated item of programing?

Mr. MOORE. As I heard it over the telephone, Mr. Cox, it did sound like a tie-in.

Mr. Cox. Have you ever reported that practice to the FCC?

Mr. MOORE. No, I haven't, sir.

Mr. Cox. Could you tell us what the network was?

Mr. MOORE. Do you want me to tell you in this meeting?

Mr. Cox. Yes.

Mr. MOORE. That program was transferred to the CBS station.

Shortly after that conversation, the agency elected not to renew Captain Midnight on KTTV and transferred it to the network station in Los Angeles. At about the same time, the network cleared time for the agency's other program, Tales of the Texas Rangers.

In another case, KTTV offered to buy a new program, Captain Gallant of the Foreign Legion, but was informed by the distributor that it was necessary for him first to offer the program to a possible national advertiser. The old story: he didn't think he could get a sale market-by-market. Subsequently, Captain Gallant was sold to a national advertiser who elected to place it on a network. Because of the difference in time zones, the program would be preempted from its regular time on the west coast every fourth week by a live network program, described as a "Spectacular," thus breaking up the weekly audience habit for the advertiser's program. And the weekly audience habit is a very valuable extra which the advertiser buys.

KTTV therefore communicated with stations in the principal cities on the coast, each of which offered a much more desirable time period on a regular weekly basis. The time charges for these periods were considerably lower than the charges at the network rate. KTTV met with the advertiser and demonstrated that the advertiser could receive a much larger audience at a lower cost, without interruption every fourth week, by placing the program on a market-by-market basis on the west coast. The advertiser stated in effect, that he agreed with our conclusions, but that he would be unable to accept such a proposal because the network's must-buy policy compelled him to buy time on the the network's west coast affiliate stations as a condition of obtaining time on the network affiliates in the remainder of the country.

We contend that these agreements, whereby stations and networks collectively agree to withhold time on any one station unless the advertiser buys time on all the stations, are contrary to the public interest and contrary to the antitrust laws. We know for a fact that these agreements are seriously damaging KTTV, and presumably any independent station and probably some affiliates.

Senator POTTER. It is like economic blackmail.

Mr. MOORE. Whatever it is, Mr. Chairman, it presents a problem.

Now, on the time-option agreement, which you would think need not affect an independent, it most certainly does.

Like a network company, an independent television station has one thing to sell the advertiser, and that is circulation for the advertiser's message. To achieve circulation, a station must have programs of sufficient entertainment value to attract the audience. As the television art progresses, it has become evident that most local programs, produced on a budget which a local market can support, cannot compete in terms of entertainment value with the high budgeted programs presented by the network companies, particularly in the evening hours. Network programs generally are supported by high budgets, ranging upward from $20,000 per program. These budgets are justifiable because the programs are exposed in good time periods in a great many cities. The pro rata cost per city is therefore low, although the total cost of the program may be high.

Generally speaking, if an independent station is to compete with network programs in the prime viewing hours, the programs must be supported by an equivalent budget. The answer to this dilemma has been found in the so-called syndicated film programs made by independent film producers, the budget for which is generally as high as comparable network programs. Since a syndicated program can be broadcast in many cities, the pro rata cost per city can be low, although the total budget may be high.

In logic, therefore, there should be no reason why an independent station, by using syndicated film, cannot present programing which is competitive to network programing. However, this seemingly logical answer is becoming more and more impractical because of the restrictive effect of time options.

Mr. COX. Would it be your opinion that if it were not for these restrictive effects, then, that if a sufficient number of programs continued to be produced of a quality now produced, and these were available to others than the networks, that you and the other independents would be able to compete in markets where there are network affiliates operating?

Mr. MOORE. Yes, indeed, that would give us an equal opportunity, only to bid. We again don't ask any rights. We just ask the privilege to bid. If we could bid on top shows, and if the producers could then produce them, that is all we would ask. We would then have an equal competitive opportunity.

As we have shown, the only means by which a film producer can be assured of time periods in a sufficient number of markets is to sell the program to a network or to an advertiser who is able to place the program on the network. Without such a guaranteed release, the film producer or syndicator can now seldom afford to produce a series. Therefore, despite the fact that a station like KTTV is ready and eager to buy new syndicated programs, few are forthcoming.

In its anxiety to acquire good programs, KTTV has even gone as far as to guarantee a certain assured revenue to the producer, over and above the fee for the Los Angeles rights. It has done this by signing contracts, or making firm offers in writing, whereby KTTV would acquire and pay for the rights to a series for the entire west coast, or even for the 11 Western States.

The reason for that is that if the producer is going to make a $25,000 film, he doesn't dare accept an offer from just one market, so we have gone into business and helped them get those programs off the storyboards.

Mr. Cox. So you have taken the full risk?

Mr. Moore. Yes, we have actually done that in 3 or 4 cases. Early in 1954, an independent film company announced production plans for the distinguished series Halls of Ivy starring Mr. Ronald Colman. We were told by the distributor that he could not afford to sell the program for Los Angeles only, but would need a larger commitment. KTTV, therefore, entered into an agreement to acquire the rights for the four Western States. However, at the request of the distributor, the agreement contained an escape clause to protect the distributor in the event the program could be sold to a national advertiser for network use. On the last effective date of the escape clause, the distributor notified KTTV that the program had been sold to two national advertisers who were able to clear time on the CBS network through the exercise of the network time options. Thus, KTTV lost the series.

In that example, I am not criticizing anyone; I am pointing out that despite the fact that we signed a contract at the highest price we ever paid as buyers, we couldn't get it, and the only thing that defeated us was the existence of the time options.

Mr. Cox. This was not because the advertiser would not have been satisfied with the coverage you could have given him in the Los Angeles market, but because he found he could not get similar coverage in enough other markets without dealing with a network.

Mr. Moore. That is the heart of the problem. If the networks control the time in enough important places, we never get the program because it is either not produced or not put on the market.

Mr. Cox. And there are not enough four-station markets so that he can get his investment back by selling film on the fourth station. He must find prime time on the affiliates and there is where he runs into the option.

Mr. Moore. That is where he is blocked.

Without going into details, we had a similar arrangement or a written offer at their asking price on Rin Tin Tin. It was bought by a sponsor, under the escape clause, and put on the network. We went to the advertiser urging him to use KTTV and presented a very fine proposal, we thought, but were told that the advertising agency did not want to disturb the network arrangement. So we were caught coming and going there.

KTTV was the first broadcaster to see the new series Robin Hood. We made a written offer to buy it for the entire west coast. This was agreed to but with the escape clause, and again the escape clause took effect. In short, after making the deal with us, the syndicator quite properly felt he should explore other sales on a national basis, and at all times was met with a need for a network clearance—so we got the usual telegram.

Senator BRICKER. You turned out to be a guinea pig as to whether a program would work.

Mr. MOORE. There is a lot of pride and gratification in that, Senator Bricker, but we can't take that forever.

THE PUBLIC

Now we come to the most important effect of these restrictive clauses. Their most harmful effect is on the American public. The great majority of the cities of the United States with television stations have three television stations or less. In 36 of the top 50 markets and in 80 of the top 100 markets all commercial television stations are affiliated with 1 or more of the network companies. Through the exercise of the time options, therefore, three network presidents in New York possess and exercise the power to determine what television programs the American public may watch—and what programs they may not watch—during the prime viewing hours. This is a concentration of control for which there is no parallel in any other American industry.

In the field of art, entertainment, and ideas, any collective agreements which cut off opportunity for any individual are particularly repugnant. America is filled with creative people whose talents may emerge from any direction or any source and, when they do, the public benefits from their particular art. In one such area, the great motion picture industry, there came a point where half a dozen companies, through block booking agreements very similar to the time option and must-buy practices of the networks, exercised the kind of control over the distribution and exhibition of motion pictures which the three network companies exercise in television today. It is generally agreed that the quality of motion pictures suffered during this noncompetitive period and that the ultimate victim was the public. The control of these companies was found illegal by the Supreme Court in the Paramount and Griffith cases, and free competition was restored. Since that time, the number of independently produced motion pictures has greatly increased, and the spur of competition has raised the quality of motion pictures generally.

In the movie industry in 1948, when the Supreme Court decided the Paramount and Griffith cases, the Court found it illegal for the 6 producing companies to control the release of films in approximately 3,000 of the 18,000 movie theaters in the country, or 16⅔ percent of the total. In the country today, there are only about 450 television stations, and the 3 network companies control the release of programs during prime viewing time on all but 32 of these 450 stations. They control the prime viewing time on over 90 percent of the stations, not 16⅔ percent.

With rare exceptions a new high-cost, high quality television program cannot reach the public today unless it is given release by 1 of 3 national network companies. Each of these network companies is producing programs of its own. With increasing frequency, the network companies decide that their own programs are the ones entitled to release, and that programs produced by the many other fine talents in America are to be barred from the Nation's homes. It cannot be argued that these three companies have the only creative talent in America. It cannot be argued that the judgment of the three particular heads of the network companies is infallible, nor can they be expected to be impartial when they choose between utilizing the time they control for one of their own programs or utilizing it for an independently produced program in which they have no financial interest.

Mr. Cox. In this instance then, Mr. Moore, the network is performing more than its basic and essential function of clearing time and is in effect competing for that time with the independent film industry with a product of its own—is that correct?

Mr. Moore. That is correct.

Mr. Cox. And since it controls the time, it is perhaps again in a position to insist on a tie between that time control and the purchase of the program to be released during the time?

Mr. Moore. It most certainly is in that position.

Mr. Cox. Now, would it be your position that there are cases where advertisers, if they were permitted to make a free choice between a network-produced show and one produced by an independent film producer, would have chosen the latter but have ended up buying what they regard as an inferior product because that is the only way they can get time clearance?

Mr. Moore. Mr. Cox, again, on information and belief, so to speak, I think there are several, if not many cases precisely of the kind you describe. Again, I think there is an opportunity for the taking of testimony of those engaged in any such negotiations and conversations that might be very enlightening and constructive.

Mr. Cox. Then at this point, through its control of the time, not only of its owned and operated stations but of its far more numerous affiliates, the network, in addition to its percentage of the card rates of its affiliates, also makes a profit on the sale of the program, doesn't it?

Mr. Moore. That is my understanding.

Mr. Cox. There would be no incentive for them to do this if there were not a profit?

Mr. Moore. I think it is a safe statement that on many programs the network makes a profit on the program itself as well as on the sale of the affiliates' time.

Senator Potter. What percentage of the prime time is utilized by the network for their own programs?

Mr. Moore. I am afraid I don't have that figure, Mr. Chairman.

Senator Potter. Is it a majority of the time?

Mr. Moore. I may have a pretty good answer to that right here. Perhaps it would be simpler, Mr. Chairman, if I submitted to the committee this exhibit from Sponsor magazine which indicates their information as to which programs are controlled by advertisers and which are controlled by the network companies.

Senator POTTER. Well, we will have that made a part of the record at this point.

(The article from the October 31, 1955, issue of Sponsor magazine is as follows:)

THE GREAT DEBATE ON NETWORK SHOW CONTROL

BEHIND SCENES THESE ARE THE ISSUES BEING ARGUED BY ADMEN, PACKAGERS, AND THE TELEVISION NETWORKS

One of the great revolutions of the television era has been the assumption of responsibility for creating and controlling a high proportion of their own programing by the television networks. This step gives the networks the opportunity to move fast when changes in the program lineup are necessary to meet competition. And, say the networks, it is a way of assuring that a balance of programing is maintained.

Advertisers and their agencies in recent years have accepted the new pattern, some enthusiastically and others reluctantly. Among the reluctant, debate continues with some expressing new hope that the advertiser who wants to bring in his own show will have more opportunity to do so now because of the stellar success of one independently produced package, $64,000 Question.

To provide a balanced report on the usually behind-scenes discussion of network programing control, Sponsor took two steps: (1) Got from the networks a breakdown on shows they control and outside shows. This appears at right. And (2) conducted a series of interviews with executives whose views reflect every shade of opinion. Presented in a sequence which frequently gives one side the opportunity to answer the other, the quotes below are the reader's ringside seat at the great television programing debate of 1955.

Debate starts with the question: Can an outside show get on the air today?

Network

"Definitely. We want good shows. You bring us a program that's an audience getter, and you've got no problem. A successful program is worth a lot to us, not only in its own timeslot, but as an audience builder in the adjacencies. We don't care who brings us such a program, or who controls it. We want it."

Sponsor

"The networks have surrounded themselves with a brick wall called Nielsen and we can't get through. We don't sell to everybody. Our product is bought by a select few and we need a program that will reach this group. We're looking for audience composition. But they block us."

Packager

"We've got three programs tailored to the needs of certain sponsors, and we've got sponsors who want them. But the networks won't make time to try them out. Consequently we can't sell the programs. If things don't change, we'll be out of business."

Network

"Any packager who's got a good property can come to us. We won't only listen to him. We'll spend money to put his show on film or kine and we'll go out of our way to try and find him a sponsor. We've bought more independent shows than those developed by our own people."

Packager

"There is bound to be a general reevaluation. Look at the ratings and reviews some of those network produced or controlled 60 and 90 minute wonders are getting. The audiences won't go along and neither will the sponsors. As soon as they find that 1 or 2 announcements stuck into a giant program don't sell their merchandise, they'll come back to us. They'll have to."

Sponsor

"I want a program to be identified with my product. I want the people to know that I'm paying for what they see. But what do I get for my $70,000? A minute and a half announcement in the middle of a big thing that's got no connection with me or my product."

Network

"A minute and a half in a spectacular costs the same as a color-center spread in Life. Have you ever seen anyone look for a minute and a half at a center-spread in Life? Even 20 seconds seems like an eternity. And they can't tell me that the readers of Life buy the product, because they reason that the ads pay for the magazine. Life gets bought by 6 million. Last Sunday's color spread reached 15 million homes. Even conservatively that means 45 million viewers. Which $70,000 do you think sold more merchandise?"

Agency

"It's supposed to be our function to kick around ideas with our clients. To come up with something that we feel will help sell his product and then to develop it and try it out. It used to be like that, but no more. Today all we can do is look at the lists of what the networks have to offer, and if we're lucky we can find a participating position somewhere."

Packager

"We used to have a large number of potential buyers. Now we have three, the networks. And most of the time, even if we should come up with a show they want, they'll cut themselves in and try to take over control."

Network

"It's all got to do with the fantastically high cost of television. Where an agency used to be able to cut audition transcriptions at a cost easily within its budget, the companies able and willing to spend some $30,000 for a pilot film or audition kinescope are few and far between. That leaves it up to us. Television is a growing medium. Things change all the time and it's our job to present top entertainment to the public. So we scout around for new programs. We try to keep our program schedule flexible to be able to present important special shows when the occasion arises."

Sponsor

"The worst thing is that, with the irregular network schedules, it's nearly impossible to count on regular weekly exposure of a program to our audiences."

Network

"There are still a large number of regular weekly positions. But the flexibility of our programs helps a lot of sponsors. When in the past could a chocolate manufacturer buy participation in a big show just once or twice a year, maybe before Christmas and Easter? The big boys have no problem. They can always find top-notch programs and buy the time for them. It's the little fellow and the one in between who profits by shows like Today, Home, Tonight, and by the spectaculars and the specials. Show me an agency that is willing to spend $400,000 for an hour-and-a-half program on speculation, only to then try and sell it to its clients. If there is one, our doors are wide open."

Packager

"I call what we're doing Operation Vulture. We develop programs and then we wait for an existing show to drop dead. Then we'll jump in and, with luck, we can sell one of ours."

Packager

"They're going to be in trouble—the networks, I mean. With control over programing and time, it's a clear-cut case of monopoly. Like with the major companies in Hollywood, the Government is going to step in one of these days. I don't know when, but they're going to. And then there's going to be another 'divorcement decree.' You can't have production, distribution, and exhibition all in the hands of 2 or 3 companies."

Network

"There is nothing even resembling monopoly. There's strong competition. Competition between the networks themselves, competition between the independent packagers and us, and even competition between the sponsors. All we really control is the time."

Agency

"It's a fight for supremacy between the networks. All they want is to kill the ratings of the other fellow. It makes no difference if we and our client like a program. If the other network gets a better rating, we know we're on our way out."

Network

"Certainly we want ratings. We would serve our sponsors very poorly if, for the sake of one who happens to like a weak program, we'd be willing to lose the audience for an entire night. All following sponsors would be hurt."

Agency

"The practice of dumping a sponsor is a vicious thing. We may have spent millions on developing a program and an audience and suddenly, when a competing show gets a better rating, we're out."

Network

"The term 'dumping' is unjustified. When we find that we have a weak program, we try and suggest a change or improvement in order to strengthen it. We are willing to work with the sponsor, to help him along. Only sponsors who are unwilling to see the necessity of protecting our program lineup will ever face a refusal to renew a franchise. We try to bend over backward to avoid such a situation. But sometimes it does happen."

WHO CONTROLS NETWORK TV PROGRAMING?

(Italic type: Programs networks control (though they may not be the actual producers). Roman type: Programs outside packager, agency, or client controls)

ABC

Network controlled hours	80
Outside controlled hours	70

CBS

Network controlled hours	174
Outside controlled hours	160

NBC

Network controlled hours	180½
Outside controlled hours	179½

(Sources: List was obtained from the nets themselves. Of 844 total network hours, a little over one-half—424½ hours—are network controlled. Client, agency, or packager control the remaining 419½ hours.)

ABC PROGRAM BREAKDOWN

Sunday:
- Faith for Today
- *College Press*
- *Dean Pike*
- *Super Circus*
- You Asked for It
- *Famous Film Festival*
- Chance of a Lifetime
- Ted Mack

Monday:
- *Mickey Mouse Club*
- Kukla, Fran, and Ollie
- *John Daly, news*
- *Topper*
- Reader's Digest
- Firestone Hour
- *Dotty Mack*
- Medic, Horizons

Tuesday:
- *Warner Bros. Presents*
- *Wyatt Earp*
- *Room for Daddy*
- Du Pont Cavalcade
- *Outside USA*

Wednesday:
- *Disneyland*
- *MGM Parade*
- Masquerade Party
- Break the Bank
- Wednesday Night Fights

Thursday:
- Lone Ranger
- Bishop Sheen
- Stop the Music
- Star Tonight
- Down You Go

Friday:
- Rin Tin Tin
- *Ozzie and Harriet*
- Crossroads
- Dollar a Second
- The Vise
- Ethel and Albert

Saturday:
- *Ozark Jubilee*
- Grand Ole Opry
- Lawrence Welk
- *Tomorrow's Careers*

Supplement:
- *Feature horserace*

CBS PROGRAM BREAKDOWN

Sunday:
- Wild Bill Hickok
- *Winky Dink and You*
- *Contest Carnival*
- *Let's Take a Trip*
- Now and Then
- *Face the Nation*
- Omnibus
- Lassie
- *Jack Benny*
- Private Secretary
- *Ed Sullivan*
- GE Theater
- Alfred Hitchcock Theater
- Opening Night
- *What's My Line?*

Monday:
- *Garry Moore*
- *Arthur Godfrey Time*
- Strike It Rich
- Valiant Lady
- Love of life
- Search for Tomorrow
- Guiding Light
- *Jack Paar*
- Welcome Travelers
- *Robert Q. Lewis*
- *Art Linkletter*
- Big Payoff
- *Bob Crosby*
- Brighter Day
- Secret Storm
- On Your Account
- *Douglas Edwards, News*
- *Robin Hood*
- *Burns and Allen*
- *Talent Scouts*
- *I Love Lucy*
- *December Bride*
- *Studio One*

Tuesday:
- Name that Tune
- *Navy Log*
- *You'll Never Get Rich*
- *Joe and Mabel*
- *Red Skelton*
- $64,000 Question
- *Favorite Husband*

Wednesday:
- Barker Bills Cartoons
- *Brave Eagle*
- *Arthur Godfrey and Friends*
- Millionaire
- *I've Got a Secret*
- 20th Century Fox Hour
- United States Steel

Thursday:
- Sergeant Preston
- Bob Cummings Show
- *Climax*
- Four Star Playhouse
- *Johnny Carson*
- Halls of Ivy

Friday:
- New Review
- *My Friend Flicka*
- *Mama*
- *Our Miss Brooks*
- Crusader
- Schlitz Playhouse of Stars
- *The Lineup*
- *Person to Person*

Saturday:
- Captain Midnight
- Tales of the Texas Rangers
- *Big Top*
- Lone Ranger
- Uncle Johnny Coons
- College Football
- Gene Autry
- *Beat the Clock*
- *Stage Show*
- *Honeymooners*
- Two for the Money
- It's Always Jan
- *Ford Star Jubilee*
- *Gunsmoke*
- Damon Runyon Theater

NBC PROGRAM BREAKDOWN

Sunday:
- Captain Hartz and Pets
- American Forum
- *Frontiers of Faith*
- American Inventory
- Youth Wants To Know
- *Dr. Spock*
- *NBC–TV Opera*
- *Zoo Parade*
- *Hallmark Hall of Fame*
- *Wide Wide World*
- Captain Gallant
- *It's a Great Life*
- *Frontier*
- Colgate Comedy Hour
- *Spectaculars*
- *TV Playhouse*
- *Loretta Young Show*
- Justice

Monday:
- *Ding Dong School*
- Search for Beauty
- *Home*
- Tennessee Ernie
- Feather Your Nest
- *Matinee*
- Way of the World
- First Love
- World of Mr. Sweeney
- Modern Romances
- *Pinky Lee*

Mr. MOORE. Now, coming to this question of competition, in previous statements made to this committee and elsewhere by various executives of the network companies, there has been the repeated assertion that each network welcomes competition from other networks. There has been the repeated acknowledgment that this type of competition creates an incentive for each network company to improve the quality of its programs. Now, the regulations of the FCC have long provided that one network's time option shall not be binding upon the station if the station prefers to broadcast a program of another network. A statement that one welcomes the competition that one is required by law to accept is not necessarily a concession. In fact, NBC and CBS strenuously opposed this feature of the chain broadcasting regulations, which would give equal competitive rights to another network, when they were first issued. Under the present regulations, however, a network has the power to dispossess a program from any source except another network, simply by exercising its time option. So far as we know, in no statement made to this committee by an official of any network has he indicated that his company would welcome an equal competitive opportunity for program sources other than networks.

Among those who would welcome an equal opportunity to present their programs on television are the many talented people of our great film industry who are not associated with a network. Hollywood houses countless actors, writers and directors of distinction, and there are many more throughout the country whose talents are yet unknown.

If the networks have confidence in their own programing ability, why are they unwilling to allow their programs to compete on a basis of merit alone with programs produced by these nonnetwork sources? We contend that the principal function of the time option is to protect inferior network programs against the better programs produced by other program sources that the station could choose if the option did not exist. If a network program is of high quality, it will win public acceptance and station clearance on its own right. But if a program is of inferior quality, the network company should not have the right to force that program upon the public, through its affiliated stations, in place of a program of better quality.

Each of these inferior network programs for which this compulsory option is so necessary, by dictation of a network company, prevents some other program, yet unproduced, from reaching the airwaves and the public.

To ascertain what might happen if more stations rejected network programs during prime viewing time and substituted an independent film, we have examined some of the rare cases where this has actually happened.

In the four-station market of Seattle-Tacoma at 9 p. m., on Sunday, CBS and NBC affiliates release the normally scheduled NBC and CBS programs just as is done in the other 4-station markets of Washington, Minneapolis-St. Paul, Chicago, Detroit, and Phoenix. In the latter five cities, the ABC affiliates play the regularly scheduled ABC program, Chance of a Lifetime. Against this NBC and CBS competition, the regular ABC program receives ratings in these cities ranging from 6.6 to 11.7. These are the American Research Bureau figures——

Mr. Cox. Is that a percentage?

Mr. Moore. It means that 6.6 percent of the television homes were turned to that program.

Senator Potter. Is that a pretty good rating?

Mr. Moore. No, that is not, Mr. Chairman, for a prime entertainment show. The highest rating a program ever receives, normally a top program may be in the sixties or fifties; 20 to 30 is very fine, but I think when it gets down below 10 there is a sign the public doesn't appreciate the program very much.

In Seattle, the ABC station ran an independent film instead of Chance of a Lifetime. Now, with the network program getting ratings of 6 to 11, an independent film, and it is a fine one, Death Valley Days, got a rating of 32.9, almost 5 times the average rating which the network program receives under similar competitive conditions.

In Dayton, Ohio, the CBS affiliate plays the program Highway Patrol at 9 p. m. Tuesday in place of the regularly scheduled CBS network program Meet Millie. The independent program Highway Patrol receives a rating of 39.9, almost double the average rating which Meet Millie receives against identical competition in several other 2-station markets.

In the case of the NBC program, Kraft Theater, at 8:30 Wednesday night, the rating of the independent film Waterfront which the NBC affiliate in Houston plays instead of Kraft Theater against the same competition which Kraft Theater faces in 17 other 3-station markets, is 32.8. This is higher than the Kraft Theater rating in 16 of the 17 similar markets, and is approximately double the average rating of Kraft Theater in these markets.

In other words, when we have a choice of 2 or 3 network programs which get pretty good ratings, we never know whether this is because the public likes them or it is a default rating for lack of anything better. Put in another show, and it often happens that the network rating is doubled or tripled on the basis of quality.

Senator POTTER. If you have 2 mediocre shows on the 2 network stations in a 2-station market, there isn't much competition.

Mr. MOORE. That is when pinochle comes back into vogue. [Laughter.] There are half hours during the week when I am surprised as many people watch television as they do. That is why we want to stimulate more competition.

As another indication of the great wealth of creative talent which lies outside the networks, consider the many programs which are broadcast on a network as a purely mechanical service. I refer to programs developed or owned by outside packagers or advertisers which go on the network simply because the networks control the best viewing time, and because the quality of these shows is so high that the network companies saw greater advantage in accepting them than in reserving the time for programs produced by the networks themselves. These include such programs as:

The $64,000 Question	Your Hit Parade
Lassie	Omnibus

Now, each of those programs, just 2 weeks ago, won the Emmy award of the Academy of Television Arts and Sciences as the finest program in its category. Not one of them is a network creation. Neither are:

Rin Tin Tin	United States Steel Hour
The World Series	Ford Theater
The Groucho Marx Show	The Lawrence Welk Show
Robin Hood	Wednesday night fights
Four Star Playhouse	

Programs like these are obviously successful despite the fact that they are created, produced, and owned by companies or individuals other than networks. Despite the success of programs like these, the trend of the network companies continues to be in the direction of insisting upon presenting programs which they own or produce. This insistence may be due to an honest network conviction that, as Dr. Frank Stanton told this committee 2 years ago:

> We have found by and large that the greatest assurance of * * * quality programing is for us to do it ourselves.

But with all respect to Dr. Stanton, and to the high quality of many network-owned shows, the network company has a large financial bias in favor of using its own programs, and may not be an impartial judge. And no matter how disinterested the network may be, is it better to vest this power of choice in the network company than to vest it in the American public?

To us it seems inescapable that much of the best entertainment which could come on television and win public favor is precluded from doing so because primary control of broadcast time is centered in three network companies. We believe that there are many programs currently on the air, thanks to the effect of the time options, which would be rejected by the public if they had a free opportunity to choose something else. By the same token, we contend that there are many programs not on the air which would win public favor if the public had a free opportunity to view the program and reach its own conclusions.

In that connection, we believe the case history of the Lawrence Welk Show is typical of what could happen if competition for time periods on the air were based on merit alone. The Lawrence Welk Show is a musical program which for 5 years was presented on KTLA, a fine independent station in Los Angeles. The huge Los Angeles audience took the program to its heart, and it was consistently one of the most popular programs on the air, network or local. There are three network headquarters in Los Angeles, none of which apparently deemed the Lawrence Welk Show to be worthy of network use. Eventually, however, a sponsor, the Dodge division of the Chrysler Corp. became convinced that the program would win quick popularity throughout the country if only it could obtain national release. Accordingly, the sponsor made direct arrangements with Mr. Welk to acquire national rights to the program and eventually received network approval to broadcast the program for 13 weeks as a summer replacement. The public response was immediate, and less than a year later the Lawrence Welk Show is the second most popular program on the ABC network, its audience exceeded only by the audience for Disneyland.

Mr. Cox. In that connection, Mr. Moore, apparently not only was there no inclination on the part of the local network agencies in Los Angeles, but some opposition in New York. In the television column in the Washington Post, Jack Minor, the general sales manager of Dodge, is quoted as follows:

> ABC didn't want the Welk show. The network said that orchestras and TV didn't mix. I insisted that Welk was an exception. ABC wouldn't budge. Finally, I threatened to cancel sponsorships of our other two shows, Danny Thomas, and Break the Bank. Things looked bad at first. The show had a low rating but it just kept going up and up.

Now, is this a case where there is too much influence and control by the network heads?

Mr. Moore. I have great respect for the network heads, but it is obvious from this situation that any system that places the viewing habits of the public in the hands of three network heads is completely inconsistent with the principles of this country. We cannot delegate this great television medium to three companies. Apparently the national public loves Lawrence Welk's music, but the public was deprived of this opportunity to see and hear this program until this past season because no network chose to present it. How many more Lawrence Welks would emerge if broadcast time were open to all comers instead of being open only to those who meet the approval of a network company?

If a network company presents programs of a quality which the public appreciates, there is ample evidence that such programs will win both clearance and audiences on their own merits. If a network company presents an inferior program, it is not entitled to compulsory clearance to drive out a program which the public might like better.

LACK OF JUSTIFICATION FOR THE TIME OPTION AND MUST-BUY

Now we come to the question of the economic aspect of a change in regulations governing time options.

Time options

The network companies will undoubtedly argue that any elimination of time options, or even a reduction in the number of hours subject to option, will not only destroy network broadcasting, but will destroy television broadcasting as we know it today.

Before dealing with this argument on its merits, it is pertinent to note that the networks made the same argument once before, and were proven wrong by subsequent events. The networks made the same argument against the limitations on the time option which the FCC imposed when it issued the present chain broadcasting regulations in 1941. These regulations made time options nonexclusive against other network companies, and required 56 days' notice of exercise instead of the 28 days' notice which was the practice at that time. The network companies sought court injunctions against the 1941 regulations, and the presidents of NBC and CBS submitted sworn affidavits in support of the injunction pleas.

President Trammell of NBC swore that the nonexclusive feature would result in "making it financially and physically impossible to handle a sufficient volume of business to support the existing programs of the network organization." He swore that the requirement of 56 days' notice "will have the practical effect of an absolute prohibition against network optional time." He swore that "the inevitable consequence" of the option-time restrictions "will be the destruction of nationwide network broadcasting to the irreparable injury of NBC."

President William S. Paley of CBS swore that making the option nonexclusive against other network companies "will make the clearing of time for the arrangement of a national network program an almost impossible task." He swore that the requirement of 56 days' notice would mean that "network broadcasting will be working under an unnecessary handicap which will weaken it in competition with other media and cause it to lose important business."

The history of radio and television network broadcasting since the 1941 regulations were issued shows how fallacious were these sworn predictions of doom. In radio, combined network time sales rose from $79,621,534 in 1941 to $126,737,727 in 1946. In television, as we have seen, NBC and CBS are still in business. They are still able to clear time, saturating a full 96 percent of the prime evening hours on their major affiliates. CBS has just reported the greatest profit in its history. Television is gaining advertising business, not losing it to other media, as Mr. Paley predicted in 1941. According to today's issue of Broadcasting-Telecasting, Mr. Paley and Dr. Stanton have just announced that CBS–TV is now "the largest advertising medium in the world."

I do think we should concede that these latest statements from NBC and CBS were made from factual information, while I think the earlier sworn statements were made on information and belief.

Now any new network company predictions as to the effect of abolishing or limiting option time should be viewed with corresponding skepticism, fully mindful of the predictions made in 1941 on exactly the same issue.

The primary network company argument in support of the time option is that programs must be simultaneously broadcast throughout the country. This is often necessary for live programs. But approximately half the network programs during prime viewing time are on film. And we feel there are sure signs that that percentage is growing. There is no practical need whatever to broadcast a film program simultaneously throughout the country. Moreover, with the advent of electronic tape, we can assume the same will be true with regard to live programs.

Mr. Cox. By that you mean they have the option of releasing them simultaneously or filming them, at the same time they go out over the air, for later release in other markets?

Mr. Moore. Yes, Mr. Cox; film has proved, for all but special events and very rare types of programs, a completely acceptable form of presenting the program. In fact, a little better. The top programs over the last few years have been on film. In the case of a live broadcast, the Kinescope recording, which is required for a delayed broadcast elsewhere, has not been quite as satisfactory as film. But magnetic tape may give us virtual live quality in the reproduction of a show, so then it could be scheduled to suit the convenience of any town. That, of course, would not be true of the political conventions or the World Series or programs of that type.

Where simultaneous broadcasting is necessary for a live program, or even for a film program, time can be effectively cleared by network companies without relying on time options. For example, a network company could enter into bilateral contracts with affiliated stations for firm periods, such as 13, 26, 39, or 52 weeks, covering a specified time period such as 9 p. m. Monday for a specified program such as I Love Lucy. While the network company would bind itself to furnish a particular program at the stated time and the station would bind itself to carry the program at the stated time, changes in programs could be made by mutual agreement, and the station would reserve its customary right to substitute an occasional special program of outstanding public importance.

The network company would continue, as it does now, to communicate in advance with its affiliated stations with respect to clearance of programs. There is not the slightest doubt but that affiliated stations throughout the country would accept high-quality or popular network programs for simultaneous broadcasting even if they were not under the compulsion of a time-option clause. Sporting events such as the World Series and public-interest events such as political conventions would win clearance on their merits, as they do now in nonoption time.

The great difference would be that the networks would no longer be the sole effective means of nationwide clearance. Advertisers and independent program producers would have alternative means for distributing programs. They could deal directly with the stations or with some central clearinghouse that could communicate with stations as effectively as a network company. It would be a simple matter of setting up a teletype headquarters in New York. The advertisers could enter into firm 13-, 26-, 39-, or 52-week contracts of their own for particular programs with affiliated or individual stations throughout the country, without fear that during the contract period the time could be taken away by exercise of a network option.

It is often argued that time options are necessary in order to enable network companies to assure advertisers that a program can be placed at a particular time so as to take advantage of the audience attracted by the preceding and following programs. This is the so-called audience-flow concept. Even if this concept were valid, it is questionable whether for particular advertisers or for advertisers as a whole, it outweighs the limitations on access to television stations that the time option system imposes. In fact, however, the audience-flow concept is a fiction. Audience ratings and independent surveys show that the American people watch the television programs they like and refrain from watching programs they dislike, regardless of what program follows or precedes. The public is not too lazy to turn the dial; in fact, it takes delight in doing so. Our problem is to give him something to choose from when he does turn the dial.

In October 1955, for example, the $64,000 Question on CBS was phenomenally popular. In New York, Los Angeles, Chicago, Seattle, Atlanta, Houston, Providence, and Dayton its ratings ranged from 44.5 (in Houston) to 59.5 (in Chicago). However, the preceding program, featuring Red Skelton, had ratings ranging from 32.4 (in Dayton) down to 14 (in Houston). The highest rating in any of these cities for the show which followed the $64,000 Question was achieved in Atlanta, not by a CBS network program but by an independently produced film program. In other words, the audience didn't go for the network show, but the station put in a program the public wanted to watch, and they had the audience. I think if we feel that the American public will stay with a show because they liked the show which preceded it, we are underestimating their intelligence severely.

Any survey of audience habits, whether based on ratings or on interviews of a cross section of the public, would show that the primary factors determining the number of people who watch a television program are (1) the quality of the program; (2) the quality of programs on other television channels at the same time; and (3) the quality of available nontelevision entertainment at the same time. Not what went before or what went after.

Even if there were any validity to the audience-flow argument of the network companies, it is a principle that is economically and legally indefensible. It is essentially an argument that a network company can assure to an advertiser a larger audience than the program itself would ordinarily merit because it can capitalize on a captive audience obtained by the quality of a preceding program. On this theory, the time option becomes a device that enables the network companies to sell time for inferior programs, and to give these inferior programs an unfair competitive advantage over other programs exhibited at the same time, which the inferior program could not obtain on its own merits.

The must-buy

The usual justification offered for the must-buy policy is that the network can only retain its affiliations with television stations, and obtain sufficient revenue to produce high-quality programs, if each network program is distributed to all of the affiliated stations on the must-buy list, and the advertising sponsor pays for time on all such stations.

The short answer to this argument is that the American Broadcasting Co., which does not follow the must-buy policy, is a successful, and increasingly successful, network. It is therefore clear that the must-buy policy is not essential to the success of a network

It may be true that ABC is not yet as strong a network as NBC and CBS. It may also be true that the must-buy policy adds to the profits of NBC and CBS. But, if these are the facts, they prove merely that the must-buy policy is an exercise of monopoly power by the dominant network companies. It is not a policy that must be followed to achieve network success, but it is a policy that can be used by a strong network company to compel advertisers to purchase station time on stations that the advertisers do not want.

If further proof is needed, consider the situation in radio. If the must-buy policy is essential to achieve network success in television, the same must be true to achieve network success in radio. For some time, the NBC and CBS radio networks did follow the must-buy policy. In recent years, however, the number of radio stations in all markets has increased to a point where some advertisers prefer to deal with unaffiliated stations rather than to buy the entire NBC or CBS must-buy network. As a result, NBC and CBS have recently abandoned the must-buy policy for their radio networks.

Mr. Cox. Well, isn't it true, though, that perhaps having abandoned must-buy in radio networking, they are not doing so well in radio at the present time as they are in television, from the standpoint of revenue?

Mr. Moore. They are not doing as well, but I think primarily the reasons relate to the advent of television. When they were not doing as well, they had to give up the must-buy because they did not have the economic monopoly power to enforce it.

It is our view that the must-buy arrangement can only be used when it can be forced upon the advertiser. When advertisers were standing in line to buy radio time, the major networks had a must-buy policy, but when the advertisers began to look around to buy other media instead of network radio, the networks said "No more must-buy; we will be reasonable."

Mr. Cox. Also the cost of network programing is much greater in television than in radio, I would assume?

Mr. Moore. Well, I am not sure I get the connection there. The cost of television, of course, is a great deal higher and the cost of time is higher, and the must-buy arrangement can be imposed apparently by a network when it is a seller's market, when the customers are fighting to get time. That is when the conditions can be fairly stiff. That was true in radio when radio network time was in great demand. As radio network time became less valuable to the advertiser, the radio networks were no longer able economically to impose the must-buy clause upon the advertiser; so they gave it up.

Mr. Cox. Well, you would feel, would you, that even with very expensive network programing, if the network produces a program of a truly desirable type it will have no difficulty either in finding a single advertiser who wishes to advertise in these many markets or in putting together a combination of advertisers who would be willing to pay to get this out to a sufficiently broad coverage?

Mr. Moore. I would think that within the framework of those 18 advertisers I mentioned who were the top advertisers—General Motors, the great soap companies—there are more than enough big advertisers who will readily buy at the minimum of the must-buy list and buy fine programs like the NBC program, Wide Wide World, a wonderful show sponsored by General Motors. I think General Motors puts the program into a great many more markets than the must-buy list. We are concerned with the medium-sized advertiser, who might want to buy a less expensive program which would not require that big a clearance to support it. Or there are other ways that the problem can be solved. There is an exception to the must-buy list on the NBC network today, the Life of Reilly. An eastern oil company sponsors it and it does not have distribution in the West, and in that case NBC has made arrangements not to enforce the must-buy. But it is a good program and they sell the program on a syndicated market-by-market basis in the West.

Senator POTTER. Of course with your must-buy policy you are freezing out advertisers that would use the medium of television to advertise their products. You tie up 50 main markets in the country with 1 advertiser, and a smaller advertiser that might want to localize his product in certain regions of the country is frozen out. That is not true in radio. In radio he has ample facilities by which to advertise his product.

Mr. MOORE. There is great flexibility in radio, Mr. Chairman. I think that is the point inherent in what Mr. Weaver said. Television is so vital a necessity for selling goods that if we have a system that precludes competitive use of television—equal access to television by the medium-sized and smaller companies, as he put it—they will go out of business, literally go out of business. The must-buy is one of the barriers to effective competitive use by medium-sized advertisers. Yet, within the ranks of the big advertisers, in my opinion, if the networks are stimulated to produce more and more Wide Wide Worlds and Richard III's, and Disneylands, there will be plenty of good sponsors to take the full exposure voluntarily.

Now, as far as the stations themselves are concerned, the must-buy lists of NBC and CBS cover only about one-third of the stations with which each network has affiliation agreements. Most of these stations have a strategic position in a major market. More often than not, they would probably be taken by the network advertiser regardless of any must-buy policy. When they are not taken, their strategic position would enable them to sell the time to some other sponsor for possibly a better program and at a net rate higher than the network compensation. Thus, the must-buy policy is not a necessity for the 100-odd CBS and NBC stations covered. Furthermore, many of the 100-odd affiliates of each network that are not included in must-buy lists are operating profitably, even though advertisers are not compelled to buy their time in order to get on the network.

THE TIME OPTION AND MUST-BUY VIOLATE THE ANTITRUST LAWS

We now come to the legal side of this problem and the relevance of the antitrust laws. I was trained as an attorney and did practice, but I have not practiced law for many years. However, KTTV has consulted qualified counsel with antitrust experience, including Prof. Donald F. Turner, of the Harvard Law School, who is sitting here with me. We have been advised by our attorneys that in their opinion the time option and must-buy arrangements of the network companies are per se violations of the antitrust laws.

Our counsel have prepared a legal memorandum in support of their view that the time option and must-buy arrangements are illegal and that the chain broadcasting regulations should be amended to forbid their use. We are submitting this memorandum to the Network Study Committee of the FCC. I am also submitting copies of the memorandum to this committee as a supplement to my statement. Professor Turner will briefly summarize the memorandum, after I have concluded my statement, and he will, naturally, be glad to answer any questions.

There can, of course, be differences of opinion among attorneys on the legality of particular practices, particularly in the antitrust field. The network companies have competent counsel, and they may believe that their practices do not violate the antitrust laws. I think it would be helpful and enlightening if your committe would give copies of our memorandum to the network companies and invite them to submit the views of their own counsel on these issues.

THE REMEDY

To correct the restrictive and limiting effect of certain network agreements, we propose a system where the station is free to accept or reject a program purely on the basis of the station's judgment of the program's merit. The station, in turn, will be quickly receptive to the wishes of the public.

This result can be accomplished by three simple amendments to the existing regulations, which we are proposing to the Network Study Committee of the FCC.

First: The regulations should be amended to provide that the placement of a program or the purchase of time on one station may not be made contingent on the placement of a program or the purchase of time on another station. The effect of this amendment would be to outlaw the must-buy practice and to eliminate its many harmful effects.

Senator Bricker. Do you think that is within the power of the Commission at the present time without amendment of the law?

Mr. Moore. Senator Bricker, it appears that the Commission has regulatory power over the kind of affiliation agreements a station may make. Those are pretty well covered in the existing regulations. I would think that if there was any agreement undertaken between a station and a network for this package deal, this must-buy deal, it would come within the discretion of the Commission to forbid that.

Senator Bricker. And the Commission is bound, of course, with full knowledge of the antitrust laws, to follow their provisions?

Mr. Moore. Yes, indeed, sir. As you know, the antitrust laws are made specifically applicable to broadcasting by the language of the act.

Second: The regulations should be amended to provide that no licensee may enter into any agreement or understanding, express or implied, whereby the broadcast of any program or series of programs is made contingent upon the broadcast of any other program or series of programs. The effect of this amendment would be to eliminate the time options and to outlaw the practices of block booking, blind selling, and exclusive dealing.

Third: In cases where a station fills a high proportion of its program schedule with programs of a single network source, it might be difficult from a practical standpoint to determine whether this schedule was a result of any exclusive dealing arrangement or understanding. To solve this problem, we suggest that a third amendment be added. This amendment would provide that, if during any 52-week period an average of more than 75 percent of a station's schedule during any of 4 segments of the broadcast day consists of programs from a single outside source—and we are not limiting it to networks—or if during a 52-week period the station's schedule between 7:30 p. m. to 10:30 p. m. averages more than 75 percent of programs from any single outside source, this fact shall constitute prima facie evidence of exclusive dealing. In such event, the station would be given an opportunity to rebut the presumption of exclusive dealing, and no penalty, such as suspension or revocation of the license, could be imposed until after hearing. The amendment could also be worded in a way which would afford appropriate exclusions for special events such as national political conventions, so the station would not be penalized by carrying that type of program.

We doubt that a network would assert the right to program a yearly average of more than 75 percent of the affiliated station's schedule during these particular time segments. Such a contention would not be consistent with the public interest and with the station's nondelegable responsibility to serve its own community. We also believe that a great many affiliated stations would welcome the opportunity to have 25 percent of their prime evening viewing time free of network-controlled programs, so that they could use this desirable time to carry local or syndicated programs sponsored by local, regional, or national advertisers—programs which the station itself felt were the programs it wanted to present to the area which it served.

I am attaching to my statement a brief summary of these three proposed amendments to the Chain Broadcasting Regulations.

Mr. Cox. I take it this third one of creating this presumption of exclusive dealing is to cover the situation where, with or without a legal basis for insisting upon time clearance, there might be a danger that a network would overpersuade its affiliates to carry its programs in any event?

Mr. Moore. Exactly, Mr. Cox. Theoretically, a station could argue that it just so happened that there wasn't a single other program other than a program of his network which he thought was suitable for his community. That becomes a matter of discretion. There is a point, though, where it sounds silly. We think 75 percent is a pretty good cutoff point. If he programs more than 75 percent, it is a fair inference that there must be some understanding that he accept that much or lose his affiliation. He could rebut it, though.

Senator Potter. Certainly if independent stations control 100 percent of their time, the affiliated stations could find programs for 25 percent of their time?

Mr. Moore. I couldn't agree with you more, Senator Potter. I think 25 percent is a very modest reservation, but it certainly gives the station, and all of the people I am talking about, including the friendly public, a better crack at seeing better television.

Mr. Cox. And you would feel, would you, that that would give enough incentive to the continued production of independent programs, that you would have competition with network programs, that there would be the possibility for independent stations to find suitable programing, and so on?

Mr. MOORE. I think so, Mr. Cox, because bear in mind that along with the 75 percent limitation, the repeal of block booking or time option would become effective. If a very fine nonnetwork program comes up, the network has an incentive to clear up to 75 percent, so they should do their darnedest to keep improving their programs and win clearance, because if they don't, other sources of talent may come in and the network could end up with less than 75 percent. So within that area we have a constant healthy competition where the only test is who delivers the best program, and I think that is a pretty fine way to run our industry.

Incidentally, I should point out that this is no straightjacket. It doesn't mean 75 percent every night. It is a yearly average. A station could be heavy on network programing on a particular night, if their programs were the best, and have local programing more than 25 percent on another night. It gives tremendous flexibility to the network, the station, and the advertiser, and more choice to the public.

CONCLUSION

Now, in conclusion, we believe that an independent television station can get along without any artificial aid if, as Dr. Stanton said, it possesses the capacity for "self-reliance, good management, and plain hard work." We do not come here seeking an arrangement whereby KTTV be given access to network programs. We do object, however, to restrictive agreements imposed by the network companies on their affiliated stations and on advertisers, which have the effect of preventing us from acquiring good nonnetwork programs.

Senator BRICKER. I would like to have Professor Turner give attention, when he presents his paper this afternoon, or when he does, to the question of the public utility aspects of the broadcasting business and the network operations. Certainly if there is anything in our country that ought to be charged with the public interest it is the television industry. They are, assuming that the local broadcasting stations are of a public character and charged with a public interest, and therefore subject to regulation.

They are dependent, I think, as has been shown here, upon the programing by the networks, by the overall power which they have, economically, over industry and over their subsidiary stations, affiliated stations, as well as indirectly over the independent stations. Now, if you are going to charge them with a public interest, I do not see why the ordinary public utility rules should not apply to that, just the same as it does to any other public utility. Here is something in the nature of a natural monopoly. They are using something of great public interest, the airwaves. They are dealing with public opinion also. They are dealing with the economic aspects of all industry of our country. They can make or break any industry. They can make or break any station. The power is so great that I think if ever there were a duty for the Government to exercise public utility regulation—and it is an essential responsibility of the Federal Government in this case because of crossing State lines—it should be in this industry. I can't see any other answer to it. You ought to have the same opportunity as any other station to get a network program.

I would like to have you give some consideration to that when you make your presentation.

Mr. TURNER. I would be happy to do so, sir.

Mr. MOORE. I would like to make one comment now, Senator Bricker. We thoroughly agree that the television industry is affected with a public interest. Since we have a scarcity medium, even with more channels, there will still be a limit on competitive opportunity. The essence, to me, of what the Government, whether it is Congress or an administrative body, should provide to this public industry is the absolute assurance that it is competitively open to all, and that no special monopoly controls it.

Senator BRICKER. That is certainly what I was driving at.

Mr. MOORE. Right. We believe that every segment of the television industry, including the network companies, will get along best if the industry is freed from restrictive agreements which compel stations to accept programs, and compel advertisers to accept station time, that might not be accepted on their own merit.

I am sure we all have enough faith in the resourcefulness and ability of the network companies to believe that they can hold their own under a system of free competition.

Senator BRICKER. If they can't, there is no place in our American society, if we are to remain a free society, for that kind of thing. Isn't that the protest?

Mr. MOORE. Yes, indeed. As long as we would permit agreements which allow one program to reach the people which might not be the best program, where the better program is prevented by those agreements from reaching the people, we have a situation which will never permit the true use of this medium, in my opinion, the true development of it. I guess we have learned by now that the way this country develops in all its areas of activity is by the stimulus and inventiveness of people who compete with each other to be there first and best, and that is what we at KTTV are looking for to come to our television industry.

We should also have enough faith in the principles of free competition to believe that if network programs and individually produced programs can compete fairly with each other, the quality of both will improve. As overall program quality improves, television's audiences, and advertising revenues which make great television possible, will both increase. The full play of competitive forces is bound to benefit the entire television industry and its most important customer, the American public.

Gentlemen, you have been very indulgent in permitting me to make this long statement. It represents a point of view to which we have given great thought for 7 years, and we from California so sincerely appreciate the time you have given us.

Senator POTTER. Mr. Moore, I want to commend you for your statement. I think it is one of the best statements that has been presented to the committee. It reflects a great deal of thoughtfulness on your part, and many of the points that you have raised here I know the committee will give serious consideration to. I believe at this time we will have Dr. Turner's brief inserted in the record, following your statement, and also your appendix A.

(The documents above referred to are as follows:)

Appendix A to Statement of Richard A. Moore

RELIEF NEEDED TO PROVIDE FAIR COMPETITIVE OPPORTUNITIES TO INDEPENDENT TELEVISION STATIONS AND INDEPENDENT PRODUCERS OF TELEVISION PROGRAMS

It is essential, in order that the television industry may be operated free of restraints that violate the antitrust laws and the competitive principles of the Communications Act, that television stations and program producers be given free and direct access to each other without being forced to deal through the network companies.

The first step in this direction is to provide the following items of relief:

1. Prohibit television stations from granting time options to network companies;
2. Abolish the must-buy policy followed by NBC and CBS; and
3. Require television stations not to accept programs exclusively from one network company or any other single program source, particularly during the prime viewing hours.

These forms of relief can be granted by amendments of the Federal Communications Commission chain-broadcasting regulations as follows:

1. Prohibition of time options

To abolish the time option, section 3.658 (d) of the regulations should be amended to forbid any form of option under which a station agrees in advance to clear time for a network program or in any way to permit a network company to clear time on terms more favorable than those granted or offered to any other source of programs.

The Commission's authority to issue such a regulation is clear. Language similar to that of section 3.104 of the regulations proposed in the May 1941 report on chain broadcasting would be appropriate. This language reads as follows:

"No license shall be granted to a [television] broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which prevents or hinders the station from scheduling programs before the network finally agrees to utilize the time during which such programs are scheduled, or which requires the station to clear time already scheduled when the network organization seeks to utilize the time."

2. Abolition of must-buy policy

To end the must-buy policy of CBS and NBC, a new subsection should be added to section 3.658 prohibiting a station from being a party to direct or indirect arrangements with other stations, or with an affiliated network company, under which the station, or the network company on its behalf, refuses to clear time for an advertiser unless the advertiser agrees to purchase time on one or more separately owned stations.

The Commission clearly has power to impose such a regulation. The Commission has authority to forbid the inclusion of particular terms in affiliation agreements between licensed stations and network companies, and has exercised this authority, in section 3.658 of the existing regulations, to prohibit six different types of provisions in affiliation agreements. The must-buy policies of NBC and CBS, as presently applied, are clearly based on an express or implied understanding between the network company and the affiliated stations of the must-buy list that forms a part of the affiliation arrangements between them. The making of such arrangements can therefore be prohibited by the Commission.

The proposed new subsection of section 3.658 might read as follows:

"No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied, with one or more other television broadcast stations or with a network organization, under which such station (or the network organization on such station's behalf) refuses to clear time for a sponsored television program unless the sponsor agrees to purchase time for the same program on one or more separately owned television broadcast stations."

3. Prevention of exclusive dealing with a single program source

To prohibit exclusive dealing relationships between a television station and any outside programing source, section 3.658 (a) of the regulations, which now forbids a station to enter into arrangements with one network company that directly or indirectly prevent the station from accepting programs of other network companies, should be expanded so as to forbid a station from entering into any direct or indirect exclusive dealing arrangement with any single outside program source. The section should also state that it is prima facie evidence of an exclusive dealing arrangement for a station, during any segment of the broadcast day, or during the prime viewing hours of 7: 30 to 10: 30 p. m., to devote more than 75 percent of its time to programs from a single program source.

In order to give the station flexibility in accepting unusually good or unusually important programs from a single outside source, the percentage could be computed on an average basis during each 52-week period, and special exceptions could be made for major public events such as political conventions.

The purpose of this regulation would be to assure reasonable access to the market for all program sources by preventing the existing economic power of the network companies, or the future economic power of any other outside program source, from being used to compel stations to accept programs on an exclusive dealing basis from a single outside source.

The 75-percent prima facie evidence test would be based on a presumption that when a station takes more than this percentage of programs from a single source over a 52-week period, it is responding to excessive economic pressure from this source and is abdicating its local responsibility for program selection. The presumption would be rebuttable, and the Commission would not have authority to suspend or revoke a station's license until after a full hearing, at which the station has the opportunity to prove that it is selecting each individual program on its competitive merits, as compared to the merits of other programs available for the same time period, and is not abdicating its local responsibility by entering into a direct or indirect exclusive dealing arrangement or course of conduct with a single outside program source.

There are a number of statutory and regulatory precedents for fixing a particular percentage point as the place where the burden of proof shifts from one party to the other. For example, section 9 of the Investment Company Act states that "control" shall be presumed when any person owns more than 25 percent of a company's voting securities, but that the presumption may be rebutted by evidence. And section 2 of the Public Utility Holding Company Act states in effect that ownership of 10 percent of the stock of a public-utility company shall make the owning company a "holding company," unless the owning company presents proof of other circumstances establishing that it is not a "holding company." And 75 percent appears to be a reasonable point at which to shift the burden of proof on exclusive dealing since there is good judicial authority that it constitutes exclusive dealing for a buyer to follow the practice of purchasing 80 percent of its requirements from a single supplier (*United States* v. *Richfield Oil Corp.*, 99 F. Supp. 280, 295 (S. D. Cal., 1951, affirmed 343 U. S. 922 (1952)).

The proposed amendment of section 3.658 (a) might read as follows:

"No license shall be granted to a television broadcast station having any exclusive contract, arrangement, or understanding, express or implied, with a network organization or other producer or distributor of programs under which the station is pevented or hindered from, or penalized for, broadcasting the programs of any network organization or other producer or distributor of programs. Proof that a station, during any segment of the broadcast day (8 a. m. to 1 p. m.; 1 p. m. to 6 p. m.; 6 p. m. to 11 p. m.; 11 p. m. to 8 a. m.) or during the period 7: 30 p. m. to 10: 30 p. m., has devoted an average of more than 75 percent of its time over a calendar year to broadcasting the programs of any network organization or other producer or distributor of programs shall be prima facie evidence of the existence of a contract, arrangement, or understanding, express or implied, prohibited by this subsection In computing this percentage no account shall be taken of time devoted to broadcasts of public events, news summaries, and major sports events, regardless of the identity of the program producer or distributor."

MEMORANDUM CONCERNING THE NEED FOR AMENDING THE FCC'S CHAIN BROADCASTING REGULATIONS TO PREVENT VIOLATIONS OF ANTITRUST LAW IN THE TELEVISION INDUSTRY

Supplement to statement of Richard A. Moore, president, KTTV, Inc., before Senate Committee on Interstate Commerce, March 26, 1956

INTRODUCTION

Summary of the problem

1. Television broadcasting is carried on under subpart E of the Federal Communications Commission's Rules Governing Radio Broadcast Services (47 C. F. R., ch. 1, pt. 3). These rules include sections known as the chain broadcasting regulations, which state that a station license or renewal will be denied if certain arrangements exist between the station and a network with which it is affiliated, but will not be denied because certain other arrangements exist between the station and the network.

2. The chain broadcasting regulations applicable to television (sec. 3.658) are the same as the chain broadcasting regulations applicable to AM radio broadcasting (secs. 3.101–3.108). These regulations for AM radio were issued by the FCC in 1941, long before television reached full development, and have been amended since then only in minor respects.

3. Radio stations in any area are plentiful, while TV stations in any area are scarce. Whereas a great many radio stations with substantial audiences throughout the country are not affiliated with networks, most of the TV stations with substantial audiences are affiliated with 1 or more of the 3 national television networks.

4. There is increasing evidence that under the mantle of the chain broadcasting regulations, the three national network companies have worked out contractual arrangements and understandings with separately owned affiliated stations under which the network companies select and distribute most of the TV programs broadcast by most of the separately owned TV stations during the prime viewing hours of the day and night.

5. This domination has had damaging and destructive effects on other segments of the industry, particularly on

(*a*) the independent producers of television programs, who can effectively achieve national or regional distribution of their programs only by dealing with the network companies, which produce programs of their own and usually give their own programs preference in the competition for advertising sponsorship;

(*b*) the advertisers, who can generally purchase prime station time on a national or regional basis only by dealing with a network company and therefore must buy the programs selected by the network company, at the times selected by the network company, over the stations selected by the network company, and consequently, even though they may prefer a different program at a different time over a different list of stations, have no way to make their economic choice effective;

(*c*) the independent stations not affiliated with any network, who, because the independent producers must distribute their programs through the networks to obtain national distribution, are restrained from buying the desirable programs and therefore restrained from selling program time to national and regional advertisers.

6. In short, the independent program producer must dispose of his output primarily through the very network companies that are competing with him in program production, the advertiser must buy TV advertising time primarily from the network companies, and the independent station, the independent program producer and the advertiser are deprived of any effective means of arranging national or regional distribution by dealing with each other.

7. As a further result, the public is steadily and increasingly being denied access during the prime viewing hours to any but network distributed programs, selected by the heads of the three network companies in New York.

Questions presented

1. Does the network dominance described above result from practices and agreements that are in restraint of trade and violate the Federal antitrust laws?

2. Does the network dominance achieved by these practices constitute an illegal attempt to monopolize in violation of the antitrust laws?

3. Do the 1941-model chain broadcasting regulations, originally designed for radio broadcasting, adequately protect against such violations?

4. Do the regulations otherwise adequately protect the public interest in free competition in television broadcasting in 1956?

5. If the answer to questions 3 or 4 is in the negative, what changes in the chain broadcasting regulations should be made?

Summary of conclusions

1. The Communications Act makes interstate radio and television communications specifically subject to all the antitrust laws; and in addition, free competition in radio and television is a basic objective of the act.

2. The structure and practices of the television broadcasting industry are similar in all essential respects to the former structure and practices of the motion-picture industry that the Supreme Court ruled in 1948 to violate the antitrust laws.

(*a*) Just as the major movie firms produced or controlled the bulk of feature motion pictures, the three major network companies produce or control the bulk of feature television programs.

(*b*) Just as the major movie firms owned or had affiliation agreements with the principal movie theaters throughout the country, the network companies own or have affiliation agreements with the principal TV stations throughout the country.

(*c*) Just as the movie firms pumped their pictures through the theaters on a block booking and blind selling basis (*United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131), the network companies block book and blind sell their programs through their affiliated stations under time option contracts requiring the stations to clear the prime viewing hours of the day for network programs only.

(*d*) Just as the strong motion picture theater chains illegally compelled independent distributors to book their weak theaters as a condition of booking their strong theaters, to the detriment of the independent competitors of the weak theaters in the chain (*United States* v. *Griffith*, 334 U. S. 100), the network companies illegally compel advertisers to purchase time on a must-buy list that includes both strong and weak stations, to the detriment of the independent stations competing with the weaker network stations, and of advertisers who cannot afford to pay for such a large package. Furthermore, the must-buy policy is a collective refusal to deal by the network company and its affiliates, and is illegal under the rule of *United States* v. *First National Pictures, Inc.* (282 U. S. 44).

(*e*) Just as the combined control of the major motion picture firms over movies and theaters deprived the independent movie producer and the independent theater owner of a fair opportunity to compete with the major producers and their affiliated theater chains (*United States* v. *Paramount Pictures, Inc, supra*), the combined network control over TV programs and stations deprives independent TV stations and independent TV program producers of a fair opportunity to compete with the major network companies and their affiliated stations.

3. No pertinent fact in the television industry saves the present TV network arrangements from violating the antitrust laws, in the same way that the former structure of the motion picture industry was held to violate the antitrust laws. The time-option and must-buy arrangements between network companies and affiliated stations are clearly illegal restraints of trade under section 1 of the Sherman Act. Through the use of these illegal practices, the network companies have achieved an illegal monopolization of trade or commerce under section 2 of the Sherman Act.

4. Whether or not these anticompetitive practices violate the antitrust laws, the Federal Communications Commission has the authority to prevent them in order to carry out its statutory duty to protect the public interest in competitive TV broadcasting.

5. Since the anticompetitive situation described above has grown up under the 1941 AM radio-type chain broadcasting regulations now applicable to TV stations, it is obvious that these regulations no longer protect the public interest, convenience, and necessity in free competitive television broadcasting. These regulations neither authorize nor forbid the illegal must-buy arrangements now in force. They specifically sanction an unreasonably extensive use of time-option agreements between network companies and their affiliates, and while they do not permit the option to be enforced against the programs of other

networks, they do permit it to be enforced against any producer, distributor, or sponsor of programs for national, regional, or local broadcasting.

6. The Federal Communications Commission should therefore terminate the anticompetitive practices described above, by issuing rules requiring network-owned and network-affiliated TV stations not to follow these practices, and by requiring such stations to follow other practices that will promote free competition in television broadcasting.

7. The remedies required to restore effective competition are essentially the same as those applied by the courts to the movie industry, namely:

(*a*) The elimination or restriction of all block booking and must-buy arrangements, such as option time provisions in network-station contracts and minimum lists of network stations that must be purchased by advertisers, and

(*b*) A prohibition of any type of exclusive dealing arrangement between a network company and independently owned affiliated stations that prevents the station from acquiring programs from other sources, particularly for showing during prime viewing time.

Proposed methods of applying these remedies appear in section VIII of this memorandum.

Discussion

I. STRUCTURE OF TELEVISION INDUSTRY

The television industry consists basically of four segments:

1. Stations which broadcast programs and sell to advertisers the right to intersperse commercials,
2. Producers of the programs,
3. Distributors of programs, and
4. Advertisers who pay for station time during or between television programs, so that their commercials can be seen and heard by the consuming public.

Some organizations engage in activities that cover more than one segment of the industry. The network companies, for example, are actively engaged in the operation of stations, the sale of time, and the production and distribution of programs.

In addition to the four basic segments, there are various types of middlemen who perform specialized liaison service among the basic segments, such as national spot representatives, syndicators, station representatives, advertising agencies, etc.

The commodity or service that a television station sells is its circulation—the people whom it persuades to tune their television sets to the channel on which the station is broadcasting. The size of the listening audience of a station depends ultimately on the station's ability to broadcast programs that interest the people who have access to television sets. The income of a television station depends on the station's ability to persuade advertisers that enough potential customers tune in to the station's signal, so that it is profitable for the advertisers to buy time on the station for sponsorship of a program or for a spot announcement.

The advertiser is interested in having his appeal to the consumer reach as many eyes and ears as possible at the lowest possible cost. One measurement of circulation is in terms of cost per thousand—the rate charged for time by the station divided by the number of television sets in the market area in which the station's signal is received. The effective circulation for a particular program is measured by the percentage of the total television sets in the reception area that are actually tuned in at the time the program is on the air. This percentage figure is known as a rating.

The greatest potential audience exists at certain hours—principally the prime viewing time beginning with the return of children from school, the return of the worker from his job, and the end of chores for the housekeeper, and ending with bedtime. But at all hours, the income of the station, derived from sale of time to advertisers, depends on the quality of its programs, compared with the quality of competing television programs and programs offered by competing media such as radio, motion pictures, and sports events.

Within the framework of these general marketing principles the television industry has developed a complex structure, much of it patterned on the pre-existing radio industry and some of it distorted by technical limitations, such as the shortage of broadcasting channels. The basic unit, both practically and legally, is the local station. Evaluation of television business practices and official regulations must begin with consideration of their effect on this basic unit and its ability to serve the public.

Television station

A television station consists fundamentally of physical facilities—studio, cameras, and transmission devices, and a staff consisting of technicians, program talent, program producers, sales representatives and executives.

Television stations may be owned by individuals, partnerships or corporations. They operate under licenses granted to their owners by the Federal Communications Commission for 3-year periods under section 307 of the Communications Act of 1934 (47 U. S. C, sec. 307). Each station operates on a 6 megacycle channel or wavelength. During the developmental period shortly before World War II and in the first few years after the end of the war, all stations were licensed to broadcast in the very-high-frequency (VHF) band of the radio spectrum. Beginning in 1952, licenses were granted for operation in the ultra-high-frequency (UHF) band. There are now 82 channels, of which 12 (Nos. 2–13) are in the VHF band and 70 (Nos. 14–83) are in the UHF band.

Licenses are granted for TV stations under an allocation of channels to particular areas made by the FCC in April 1952. At that time there were 108 television stations in operation, all of them VHF. As of November 5, 1955, there were 453 stations on the air, of which 346 were VHF stations and 107 were UHF stations: 437 were commercial and 16 were noncommercial.

It has been estimated that about 38 million homes in the United States have television sets, of which about 7,500,000 are equipped to receive UHF.

Under the Commission's allocation plan, New York and Los Angeles have 7 commercial VHF assignments and 1 or more UHF commercial assignments. Chicago, San Francisco-Oakland, Washington, Minneapolis-St. Paul, and Denver have 4 VHF and 1 or more UHF. Detroit (counting a channel in Windsor, Ontario), Dallas-Fort Worth, San Diego (counting 2 channels in Tia Juana, Mexico) and Phoenix (counting a channel in Mesa) also have 4 commercial VHF assignments. Of the top 100 markets, there are thus only 11 with 4 or more VHF assignments and 33 with 3 or more VHF assignments.

In areas where there are two or more VHF stations, UHF stations are finding it difficult to survive because the public is not buying UHF converters for existing VHF sets, or new television sets equipped for UHF reception. The result is that although VHF and UHF channels are technically available in sufficient quantity to permit a broad base of competitive stations, there are in practice severe limitations in many areas on the number of stations that the existing sets in the area are equipped to watch.

Most TV stations do not operate as tndependent units. Many are under common ownership, and most are affiliated by contract with one or more network organizations.

Television networks

The term "network" is not defined in the Communications Act of 1934 nor in the regulations of the Federal Communications Commission. The act uses the term "chain broadcasting" and defines it in section 3 (p) as the "simultaneous broadcasting of an identical program by two or more connected stations." The rules of the FCC use the term "network organization" (see, e. g., sec. 3.658), but do not define it except by reference to the Commission's 1941 report on chain broadcasting which, in turn, described but did not define "national" and "regional" "network organizations." The 1941 report was confined to radio network practices, because at that time television was still in the experimental stage. In proposed legislation intended to authorize the Commission to regulate networks directly (S. 825, 84th Cong., for example), the term "network" has been defined as "any person who operates a system which, for the purpose of simultaneous or delayed broadcasting of identical programs, in any way interconnects or affiliates any two or more broadcasting stations."

The term "network" or "network organization" is given meaning by description of the organizations generally recognized as being national network companies. In the television field there are three: National Broadcasting Co. (NBC), Columbia Broadcasting System (CBS), and American Broadcasting System-United Paramount (ABC). Each of these three also has a radio network. A fourth television network, Alan B. DuMont Laboratories, Inc., in effect ceased operations as a network in the summer of 1955.

NBC is a wholly owned subsidiary of Radio Corporation of America. It has operated a nationwide radio network since 1923, and owns and operates radio stations in New York, Chicago, San Francisco, Cleveland, and Washington. ABC, which has operated since 1943, when it took over NBC's "Blue" radio network, owns radio stations in New York, Chicago, San Francisco, Los Angeles, and Detroit. CBS also operates a nationwide radio network, and owns radio stations in New York, Chicago, Los Angeles, San Francisco, Boston, and St. Louis.

The FCC rules place a ceiling on the number of stations that may be owned, operated, or controlled by any one person. Section 3.636 of the FCC rules, as amended effective October 22, 1954, in effect permits common ownership of 7 TV stations of which not more than 5 may be in the VHF band. NBC owns and operates VHF television stations in New York, Chicago, Los Angeles, Philadelphia, and Washington, and a UHF station in Buffalo. CBS owns VHF stations in New York, Chicago, and Los Angeles, and a UHF station in Milwaukee. ABC owns VHF stations in New York, Chicago, Detroit, Los Angeles, and San Francisco. If pending applications are successful, the network companies will have the following additional owned and operated UHF stations: CBS in Hartford, Conn.; NBC in New Britain, Conn.

In addition to the stations it owns, each of the three TV network companies enters into affiliation agreements with separately owned stations throughout the country. The affiliation agreements differ in some respects depending on the network, the market in which the station is located, and other factors. In general, the affiliation agreements provide for the terms under which the network companies will furnish to the station and the station will broadcast programs originated by the network. In some cases, particularly in a community where there are less than 3 stations on the air, the station may have affiliation agreements with more than 1 network.

Each network has between 175 and 210 affiliates. About 70 stations are affiliated solely with NBC, 73 solely with CBS, and 57 solely with ABC.

Of the approximately 450 stations on the air, 32 are independent, that is, not affiliated with any of the 3 network companies. Of the 32 independent stations, 18 are in the VHF band and 14 are in the UHF band.

Program production and distribution

Television programs are broadcast either live or on film. If on film, the program is broadcast for a station's studio. If live, it may be broadcast from a studio or from a location away from the studio.

A program that is on film can be distributed by mail or express to a multiplicity of stations for simultaneous or nonsimultaneous broadcast. For simultaneous broadcast of a live program on a multiplicity of stations it is necessary to use interconnecting cable or microwave facilities leased from the American Telephone & Telegraph Co. A program on film can also be aired simultaneously over several stations by means of the cable. A print of a program originally broadcast live can be made by kinescope recording, for later broadcast over a network or part of a network or by individual stations.

At the local level, a station can, and does, produce programs. Such locally originated programs may be produced and broadcast either live or on film, but normally a program produced by the staff or a station is performed live. A station may also broadcast a program produced, either live or on film, at the local level by an independent producer, such as a local advertising agency or an independent program "packager."

At the national level, the chief sources of programs are the national network companies, the advertising agencies retained by national advertisers, the established motion-picture companies, and independent TV producers. Such programs are distributed either by the network companies or by the so-called syndicators or by the advertiser through its advertising agency.

Programs supplied by syndicators are usually on film and are distributed by mail or express to various stations for broadcast at a time or times mutually agreed upon, or at a time selected by the station. The syndicators usually deal in programs produced by themselves or by a film company with which they are affiliated. All three network companies also engage in syndication, although to a very minor degree as compared to their network activity.

Programs on film have become an increasingly important factor in television. In the developmental period, Hollywood films originally produced for motion-picture exhibition were used on television to keep the station on the air in the absence of specialized TV-program material. Such programs could be purchased for broadcast by networks or by the local stations themselves. As the industry developed, specialized television film-production companies prospered, each producing one or more series of programs, and marketing the product either to network companies or network advertisers, or through syndicators to regional and local advertisers or to local stations. In recent years, the established Hollywood motion-picture companies have begun to make available their quality films and have entered the field of producing specialized television film programs.

Television programs produced by the networks or by advertising agencies are usually performed live, originating in studios operated by the network, and are distributed to the network's other owned stations and affiliated stations by coaxial cable or microwave relay. But an increasing number of network programs are on film; in such cases the basic distribution over a multiplicity of stations by means of the interconnecting cable may be supplemented by delivery of prints to stations not connected to the cable. Programs originally performed live are distributed to some stations by a kinescope film, transmitted by cable or microwave or simply mailed to the station.

Aside from the use of kinescope recordings, the degree to which film programs are used on the networks and their affiliates is shown by a survey published in the November 21, 1955, issue of Broadcasting Telecasting. This survey shows that during the week of October 9–15, 1955, 22.3 percent of the network companies' total programing was on film. Of the total broadcast hours of interconnected network affiliates, 31 percent were devoted to nonnetwork film programs in addition to the substantial percentage of network film programs. An independent survey for the week ending March 24, 1956, shows that during the prime evening hours between 7:30 p. m. and 10:30 p. m., the programs originated by the three network companies, according to their schedules, divided themselves between film and live as follows:

[Percent]

Network	Film	Live
NBC	33	67
CBS	57	43
ABC	50	50

Statistics on the percentage of network-distributed programs which are produced or controlled by the networks, as against the percentage produced by independent program producers and not controlled by the network, are difficult to obtain. According to an article in the October 31, 1955 issue of Sponsor, somewhat over 50 percent of the programs distributed by each network are network produced or network controlled.

Whatever the source of a program and regardless of who controls it and whether it is broadcast over one station only or over many stations simultaneously or over many stations separately, it may be sustaining (unsponsored) or sponsored by one or more advertisers, or unsponsored but interrupted by spot advertising announcements.

Advertisers

Television advertisers fall into three general categories: Local, regional, and national. All of them are buying time on local television stations. Each kind of advertiser may purchase time for sponsorship of a program so that his advertising message is broadcast at the beginning, in the middle and at the end of the program, or may purchase time for spot announcements unassociated with any particular program. Each kind of advertiser may buy time to sponsor a program already being broadcast or already prepared for broadcast, or may buy the time only and supply his own program. He may buy the time or the program or both through a network or through a film syndicator or directly from the station. Where an advertiser buys time through a network, there has occurred a network sale. If a national advertiser buys time directly from the station or through a film syndicator and not through a network, either for a commercial or for a program, there has occurred a national spot sale.

Most stations have a sales staff for solicitation of advertisers at the local level. For solicitation of national sales, most stations employ national spot representatives. The networks act as national spot representatives for the stations they own and operate; CBS and NBC also act as national spot representatives for many of their affiliated stations.

In the case of a network sale, the network company is acting as sales agent for its affiliated stations, and is empowered by each station to sell the station's time at an agreed price.

An advertiser wishing to buy network time from NBC or CBS is required to buy time over the stations owned and operated by the network and a further group of so-called basic affiliates in the fifty-odd major markets in the country. The advertiser may, in addition, designate "optional affiliates" in other market areas. The basic network which an advertiser is required to take is often called the must-buy. ABC does not follow the must-buy policy.

Strategic position of networks

The three network companies own only 15 of the 450 TV stations in the country. They produce or control about 50 percent of the television programs they broadcast during the day. Yet they have achieved a strategic position of virtually complete control over the distribution and broadcasting of TV programs on a national basis during the prime viewing hours. Advertisers, program producers, and program distributors find it virtually impossible to achieve national distribution of a television program during the prime viewing hours except by dealing with 1 of the 3 network companies.

Evidence of the strength of the networks is shown by the extent to which prime evening viewing hours are devoted to network programs. The prime viewing hours, when the audience is greatest and advertisers can be charged the maximum rates, are 7:30 p. m. to 10:30 p. m. The two strongest networks, CBS and NBC, have virtually monopolized these hours on the stations which they own and operate or with which they are affiliated in the principal markets.

To demonstrate this network domination of prime viewing time, an independent survey was made of the programing, during the typical week of February 19, 1956, on the NBC and CBS stations in the following 40 principal markets:

New York	Kansas City	Sacramento
Chicago	Seattle	Nashville
Los Angeles	Atlanta	Norfolk
Philadelphia	Portland, Oreg.	Providence
Detroit	Dallas	Salt Lake City
Boston	San Diego	Tulsa
San Francisco	Denver	Davenport
St. Louis	Louisville	Columbus
Washington	San Antonio	Dayton
Baltimore	Tampa	Cincinnati
Minneapolis	Rochester	Cleveland
Buffalo	Omaha	Birmingham
Houston	Syracuse	
Milwaukee	Oklahoma City	

In each of these markets each CBS and NBC station is on the must-buy list of its network. The 40 cities are estimated to have 71.5 percent of all the television sets in the United States. There are 42 half hours per week in the time segment 7:30 p. m. to 10:30 p. m., eastern standard time. For the 80 CBS and NBC stations in the 40 principal markets, a total of 3,360 half hours per week are available in the 7:30 to 10:30 p. m. period. During the week of February 19, 1956, CBS and NBC programs were accepted in 3,150 of the 3,360 half hours at the time ordered by the network. This is a saturation of 93.7 percent. Adding 85 half hours of programs cleared on a delayed basis, the percentage of saturation rises to 96.3 percent. There were also 157 additional half hours representing the overlap of network programs into time before 7:30 p. m. or after 10:30 p. m. These figures do not include network programs which began and ended immediately prior to 7:30 p. m. or immediately after 10:30 p. m.

This saturation by the network companies of the prime evening hours on stations in the principal markets throughout the country is the best evidence of the strategic control by the network companies of the national television market. This strategic control is achieved by means of affiliation agreements between the network companies and the individual, separately owned stations throughout the country. Under these agreements, the individual affiliated stations obtain a first call on the right to broadcast a network-distributed program in the station's community. In exchange, the individual station surrenders its own freedom of action to sell broadcast time during the prime viewing hours, and gives the network company an irrevocable option to sell the individual station's broadcast time, subject to certain requirements of notice and the station's limited and rarely exercised right to reject a particular network-distributed program. And finally, by specific understanding between the major network companies and their affiliates, the two most powerful network companies sell the time of the principal affiliates on a must-buy basis, under which the networks and affiliates agree in effect that neither the network nor any station will deal with the advertiser unless the advertiser buys time on all fifty-odd stations in the basic affiliated group.

The legality of the restraints thus agreed on under network affiliation arrangements has never been considered by a court. However, the Federal Communications Commission has issued regulations stating that no license shall be granted to a television broadcast station which restricts its freedom of action by an agreement or understanding with a network that goes beyond certain specified limits. These limits are set forth in the so-called chain broadcasting regulations of the Commission.

II. THE CHAIN BROADCASTING REGULATIONS

The Federal Communications Commission has no direct control over a network as such, but only over the stations forming the network. It is authorized by the act (sec. 303 (i)) to make "special regulations applicable to radio stations engaged in chain broadcasting." Its control stems basically from its power to grant, withhold or revoke station licenses, and its chain broadcasting regulations take the form of rules it announces it will observe in station licensing.

Provisions of the regulations

The chain broadcasting regulations applicable to television, identical with those applicable to radio, appear in section 3.658 of the FCC Rules Governing Radio Broadcast Services. They provide that no license shall be granted to a television station which has any affiliation contract, arrangement, or understanding, express or implied, with a network organization under which—

1. The affiliate station is prevented or hindered from, or penalized for, broadcasting the programs of any other network organization;
2. Another station located in the same community is prevented or hindered from broadcasting the network's programs not taken by the affiliate, or another station located in a different community is prevented or hindered from broadcasting any program of the network, provided that an affiliate station may have the first call in its community on the network's program;
3. The term of affiliation is more than 2 years;
4. The station is hindered from scheduling programs before the network decides whether or not to utilize the time, or the station is required to clear time sought to be utilized by the network, provided that the station may grant an option to the network, subject to call on at least 56 days' notice, permitting a network program to displace any other program (except a program of another network), during a total of 3 hours within each of 4 segments (8 a. m. to 1 p. m.; 1 p. m. to 6 p. m.; 6 p. m. to 11 p. m.; 11 p. m. to 8 a. m.) of the broadcast day;
5. The station is prevented or hindered from refusing network programs that the station believes to be unsuitable or unsatisfactory or from rejecting a program that is considered contrary to the public interest or from substituting a program of outstanding local or national importance;
6. The station is prevented or hindered from, or penalized for, fixing or altering its rates for nonnetwork broadcast time.

The regulations also provide that no station license shall be granted to a network organization in a locality where conditions are such that competition would be substantially restrained by such licensing, and no license shall be granted to a station affiliated with a network organization maintaining more than one national network.

Effect of the regulations

The effect of the regulations becomes clearer if they are stated in terms of what may be made a matter of contract between a television station and a network.

Under the territorial exclusivity provision (sec. 3.658 (b)) the affiliate station is given the first call in its community upon network programs. There is no limit to the hours of network programs it may take. While the contract between the affiliate and the network may not provide for barring another station from taking the network's programs that are rejected by the affiliate, there is no requirement that the network offer such programs to another station.

In the option time provision (sec. 3.658 (d)) a station is free to bind itself to clear time on 56 days' notice, at the call of the network, during 12 hours of the broadcast day. Nothing precludes the station from clearing time for a network on less than 56 days' notice, from clearing time in hours other than the 12 designated in the contract as being subject to preemption by the network, or, in fact, from devoting its whole broadcasting time to the network's programs.

The regulations bar any contract precluding a station from broadcasting programs of another network or from selling to another network time previously optioned to, but not preempted by, its own network. But nothing prevents the station from voluntarily limiting itself to the programs of only one network and from refusing to sell optioned time to any other network.

The regulations provide that the network's right to preempt the time of the affiliated station on 56 days' notice may not be exercised so as to compel the station to displace a program of another network, although the station is free to do so if it wishes. But the regulations sanction the network's right to displace any other type of program, such as a local program or a program being distributed nationally or regionally by a film syndicator or advertiser or other nonnetwork organization. In this way, the chain broadcasting regulations appear to forbid the use of time options as an unfair method of competition between networks, but to permit the use of the time option as a permissible method of competition between a network and a nonnetwork organization.

The must-buy policy of NBC and CBS, under which advertisers are required to buy time on a minimum list of fifty-odd stations, is not specifically authorized or forbidden by the chain broadcasting regulations.

III. HISTORY OF CHAIN BROADCASTING REGULATIONS

As shown above, the FCC chain broadcasting regulations indirectly permit the TV networks to make affiliation agreements with stations severely limiting the freedom of both parties to deal with competing units in the market. These regulations were adopted in 1941, after a 3-year study. As originally promulgated, they applied only to radio. On November 28, 1945, they were made applicable to television in virtually the identical form without any new study of how well or badly they suited the television industry. They have not been reexamined in detail, as applicable either to radio or to television, for 15 years.

Furthermore, in the 3-year study on which the 1941 regulations were based, the Commission concluded that the key provision of affiliation agreements which limited the individual station's freedom of action—the option time provision—was against the public interest. The regulations as originally proposed by the FCC flatly prohibited option time provisions in network affiliation agreements. It was only after strong objection by the two major radio networks that the FCC amended its regulations to permit a limited amount of option time. This step was taken without changing the Commission's previous findings that option time provisions were against the public interest. The change was made solely on the ground that option time was a convenience which would help the third and weakest of the then existing networks—the Mutual Broadcasting system—to strengthen its competitive position vis-a-vis its two stronger rivals.

The history of the 1941 chain broadcasting regulations is summarized briefly below:

By 1938, the radio-broadcasting industry had become a major medium of advertising, and the radio networks had become an important factor in the industry. On March 18, 1938, the Commission authorized an investigation to determine what special regulations applicable to radio stations engaged in chain broadcasting were required in the public interest, convenience or necessity. A committee of three commissioners was appointed to supervise the investigation. hold hearings, and make a report. Hearings were held by the committee between November 14, 1938, and May 19, 1939. On June 12, 1940, the committee issued a report which included the following conclusions:

1. Network organizations held a dominant position in the field of radio broadcasting;
2. The networks had developed around their owned and controlled stations which had been operated largely for the benefit of the networks, and the interests of independent outlets had been subordinated;
3. There had been a trend toward concentration of ownership of radio stations;
4. The predominance of network organizations, evidenced by their disproportionate share of the income of the industry and their affiliation with the high-power clear channel and regional stations, presented inherent dangers to freedom of communication;

5. The affiliation contracts between network organizations and their outlet stations revealed many arbitrary and inequitable practices on the part of the networks; and such contracts were the "heart of the abuses of chain broadcasting."

Following the report of the committee, the full Commission received briefs and heard oral arguments on December 2–3, 1940. In May 1941, the Commission issued a comprehensive report on chain broadcasting accompanying the issuance of proposed new regulations covering chain broadcasting. In addition to prohibiting contracts tying stations to 1 network and contracts giving 1 station exclusive rights to the network's programs whether or not taken by the station, the Commission's proposed regulations prohibited any option-time agreement requiring the station to clear time for network programs.

In the May 1941 report the Commission, after reviewing the evidence as to time-option practices, came to the following conclusions (p. 65):

"A station licensee must retain sufficient freedom of action to supply the program and advertising needs of the local community. Local program service is a vital part of community life. A station should be ready, able, and willing to serve the needs of the local community by broadcasting such outstanding local events as community concerts, civic meetings, local sports events, and other programs of local consumer and social interest.

"We conclude that national network time options have restricted the freedom of station licensees and hampered their efforts to broadcast local commercial programs, the programs of other national networks, and national spot transcriptions. We believe that these considerations far outweigh any supposed advantages from stability of network operations under time options. We find that the optioning of time by licensee stations has operated against the public interest."

The major networks strongly protested this report and the proposed regulations. During June 1941 the Senate Committee on Interstate Commerce held hearings on the subject. During July and August 1941, the Commission itself conferred with representatives of the networks. On August 14, 1941, the Mutual Broadcasting System filed a petition requesting amendment of the regulations dealing with network option time and with the duration of affiliation contracts. After hearing oral argument, the Commission on October 11, 1941, issued a supplemental report on chain broadcasting, and amended the regulations in three respects:

1. It clarified the "territorial exclusivity" provision, making clear that an affiliate may be given the first call in its primary service area upon the programs of the network organization;
2. It extended from 1 year to 2 years the limit on the duration of affiliation contracts, in accordance with a decision to extend the terms of station licenses from 1 year to 2 years;
3. It abandoned the outright prohibition of option time in favor of a limitation formula (3 hours during each of 4 segments of the broadcast day, subject to a call period of at least 56 days), with the proviso that such options could not be exclusive against other networks and could not hinder the station from selling or optioning time to another network.

In the October 1941 supplemental report the Commission did not withdraw from the unequivocal findings of its May report. Its October justification for permitting the time options was that "some optioning of time" would "operate as a business convenience," would not interfere "too seriously" with the station's local program requirements and spot business, and would be "instrumental in fostering competition among networks." Thus, the basic finding that time options were against the public interest was left untouched, but yielded to a business convenience criterion.

In October 1941 CBS and NBC brought suits to enjoin enforcement of the regulations. In February 1943 the Supreme Court upheld the rules against the networks' objections. *National Broadcasting Co.* v. *United States* (319 U. S. 190 (1943)). The rules then went into effect. The rules were not challenged on the ground that they failed to promote competition, or that they in effect sanctioned violations of the antitrust laws.

On November 28, 1945, the Commission perfunctorily applied the same chain broadcasting regulations to television. Despite the application to a very different medium, there have been only minor changes in the regulations since 1941. No change whatsoever has been made in the option-time provision. The only change in the territorial-exclusivity provision was made in June 1955 when the Commission amended section 3.658 (b) so as to limit the geographic bonds in which a TV station may contract with a network for territorial exclusivity and first call, substituting the term "community" for the previously used "service area."

The provisions of the Federal Communications Act upon which the Commission relied to support its 1941 chain broadcasting regulations, and which the Supreme Court considered when it upheld their validity, remain in effect in substantially the same form today.

The Commission relied upon the following provisions of the act:

1. Section 1, which states the general objectives of the act, including that of making "available, so far as possible, to all the people of the United States a rapid, efficient, nationwide, and worldwide wire and radio communication service. * * *"
2. Section 303 (f) under which the Commission is directed to "make such regulations not inconsistent with law as it may deem necessary * * * to carry out the provisions of this act."
3. Section 303 (g) under which the Commission is required to "study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest."
4. Section 303 (i) under which the Commission is given "authority to make special regulations applicable to radio stations engaged in chain broadcasting."
5. Section 303 (r) giving the Commission authority to "make such rules and regulations and prescribe such restrictions and conditions, not inconsistent with law, as may be necessary to carry out the provisions of this act."
6. Sections 301 and 307–312, defining the Commission's function of licensing, in accordance with the general criterion of "public convenience, interest, and necessity." Section 307 is particularly relevant by virtue of its provision that in considering applications for licenses and renewals thereof, the Commission "shall make such distribution of licenses * * * as to provide a fair, efficient, and equitable distribution of radio services."
7. Sections interpreted by the Commission as requiring free competition in the radio field, including the following:
   (*a*) Section 3 (h) providing that a person engaged in radio broadcasting shall not be deemed a common carrier;
   (*b*) Section 313 making the antitrust laws applicable to persons engaged in radio communications and authorizing the courts to revoke the license of any person found guilty of violating the antitrust laws;
   (*c*) Section 311 directing the Commission to refuse a license to any person whose license has been revoked by a court and authorizing the Commission to refuse a license to any person found guilty by a Federal court of having violated the antitrust laws with respect to radio communication;
   (*d*) Section 314 forbidding persons engaged in radio communications from engaging in communication by wire, or vice versa, if the effect thereof is substantially to lessen competition or restrain commerce.

Of the foregoing sections of the Federal Communications Act, relevant amendments have been made since 1941 only in section 311. When the Commission issued its 1941 report on chain broadcasting, section 311 read as follows:

"The Commission is hereby directed to refuse a station licensee and/or the permit hereinafter required for the construction of a station to any person (or to any person directly or indirectly controlled by such person) whose license has been revoked by a court under section 313, and is hereby authorized to refuse such station license and/or permit to any other person (or to any person directly or indirectly controlled by such person) which has been finally adjudged guilty by a Federal court of unlawfully monopolizing or attempting unlawfully to monopolize radio communication, directly or indirectly, through the control of the manufacture or sale of radio apparatus, through exclusive traffic arrangements, or by any other means, or to have been using unfair methods of competition. The granting of a license shall not estop the United States or any person aggrieved from proceeding against such person for violating the law against unfair methods of competition or for a violation of the law against unlawful restraints and monopoly and/or combinations, contracts, or agreements in restraint of trade, or from instituting proceedings for the dissolution of such corporation."

By an act of July 16, 1952, section 311 was abbreviated to read as follows:

"The Commission is hereby directed to refuse a station license and/or the permit hereinafter required for the construction of a station to any person (or to any person directly or indirectly controlled by such person) whose license has been revoked by a court under section 313."

The conference report (H. Rept. 2426, 82d Cong.) on the bill (S. 658) made clear that no legal significance should be attached to the elimination of the provision that the granting of a license should not estop the United States or any private party from proceeding against a licensee or applicant for violation of the antitrust laws.

IV. CHANGES IN INDUSTRY SINCE ADOPTION OF REGULATIONS

The Federal Communications Commission formulated the chain broadcasting regulations in 1941, 15 years ago, on the basis of a record which relied to a large extent on statistics for 1938, 18 years ago. They were devised for the AM radio industry, at a time when television was still in the experimental stage. It is obvious that television broadcasting is different, in major relevant respects, from radio broadcasting. It would be an extraordinary coincidence if regulations devised for the 1941 radio industry were appropriate for the 1956 television industry. Aside from the obvious fact that rules designed for radio broadcasting are not necessarily appropriate for television broadcasting, it is clear that present conditions in television are sufficiently different from 1938–41 conditions in radio that an entirely fresh approach is needed.

Difference in relative strength of networks

In 1941 network radio broadcasting by competing chains had a history of only about 12 years. The existing networks varied widely in their competitive strength, and it was considered important to help the weaker networks compete with the stronger ones. The importance of fostering competition among networks apparently was a more significant consideration to the Commission than the need for sustaining the independence of radio stations. The leading networks had built up a commanding position through their affiliation agreements. But it was at least possible that drastic curbs on affiliation agreements might prevent the weaker networks from building up their own strength. The situation was thus ripe for compromise, and the regulations as finally issued reflected the spirit of compromise.

To a large extent the regulations were aimed at one network organization—NBC. Its ownership of two networks was a primary target of the Commission. Aside from the emphasis on making two separate networks out of the NBC twin organizations, the FCC's 1941 regulations were obviously framed to assist the weakest of the then existing networks—Mutual—to strengthen itself.

Today, both in radio and in television, no one network is itself dominant. But there has been no real increase in the number of networks. Despite the fact that the primary thrust of the regulations was to foster competition among networks, to support the weaker networks and to open the field to new networks, it is now evident that the practices sanctioned by the regulations do not expand the opportunities for new networks in proportion to the limitations on station responsibility and the restraints imposed on the competitive opportunities of independent stations and independent program producers.

Difference in outlets

The evidence on which the Commission relied when it formulated the chain broadcasting regulations showed dominance by the two major network companies of the powerful radio stations throughout the country. In its May 1941 Report on Chain Broadcasting, the Commission used this evidence to show the need for regulations to make it possible for other networks to compete and for network affiliates to have a measure of responsibility and independence. It neglected the need for regulations to permit independent unaffiliated stations to operate successfully. This narrow approach in 1941, culminating in regulations that actually helped the networks primarily and network affiliates only secondarily, may well be attributed to the fact that the Commission was dealing with a medium where the supply of frequencies was potentially great.

In television today, there are relatively few stations, particularly VHF stations with sizable audiences, that are not owned by or affiliated with the 3 existing networks, and among the 3 network companies, 2 of them, through ownership or affiliation agreements, have dominant control. In this respect, the situation is somewhat similar to the dominance of radio outlets by NBC and CBS that the Commission emphasized in 1941. The difference in conditions is that unlike radio in 1941, television in 1956 shows little or no promise of developing the multiplicity of outlets needed to provide competition for the networks that have acquired overwhelming economic power under the umbrella of the chain broadcasting regulations. Even if the magic solution can be found to make the more plentiful UHF channels competitive with the scarce VHF channels, the number of potential outlets in every community of the country cannot be expected to be equal to the outlets, actual and potential, in radio.

Difference in proportion of live programs

In 1938 and even in 1941, the use of electrical transcriptions for distribution of programs was a relatively minor factor in radio broadcasting. In fact, the major networks adhered to a policy against the use of electrical transcriptions. This policy of the networks, kept in effect until 1946 or 1947, may have been based in part on the inferior quality of recordings. It may also have been dictated by the consideration that the use of recordings, tapes, or transcriptions might have served to eliminate the need for interconnected transmission and, therefore, to reduce the need for the network function.

Whatever the reasons why recorded programs were not a part of network service in 1941, the significant point is that the chain broadcasting regulations were adopted against a background of simultaneous live transmission of radio programs. They were extended to television against a similar background.

In television broadcasting today, film is an important and an increasingly important means of distribution. Film can be distributed physically by mail or express to individual stations instead of being transmitted to the stations by cable or microwave relay.[1] The greater the use of film, the less need there is for networks, and the less justification there is for permitting networks to control station time. The more the networks rely on film, the more they become simply competitors of other program producers and distributors, but in a favored position because, under the regulations, they have the right to force their programs upon the affiliated stations.

Difference in cost of programing

The cost of producing a TV program today is far higher than the cost of producing a radio program in 1941. This cost can only be recouped by national distribution of the program paid for by advertisers. In radio, programs are not so expensive that national distribution is essential. In television, however, national distribution is essential, and during the prime evening viewing hours, under the present chain broadcasting regulations, it can only be achieved through the networks.

Difference in availability of talent and sources of programs

Because radio reaches its audience through the ear, it is a relatively limited medium in comparison with television. Similarly, the kind of talent and the kind of programs that are appropriate for radio are limited. In the 1938–41 period of radio, therefore, just as there did not exist the tremendous pressure on the part of advertisers for broadcast time, there did not exist the tremendous reservoir of talent and program sources that exist today.

Virtually every element of the entertainment industry looks upon television as an outlet for its talents. The availability of top quality programs and top quality talent, in a medium where they can be seen as well as heard, is as wide as the American creative power itself. There is no indication that when the chain broadcasting regulations were considered, the Commission felt that talent and program sources were being stifled for lack of outlets. The major consideration seemed to be that there was need for more networks and greater competition among networks, without regard to the effect of networking in general upon the performers and the independent producers. To perpetuate regulations which are designed to encourage networking and which in practice are fostering monopoly in networking disregards the fact that the potential supply of talent and programs is being denied release.

Difference in use of option time

In its supplemental report on chain broadcasting of October 1941, the Commission, while adhering to its position that time options restricted the freedom of licensee stations, interfered with their ability to serve local program needs,

---

[1] See the address of Thomas F. O'Neil, president of General Teleradio, to the Texas Association of Broadcasters, reported in Broadcasting Telecasting for November 21, 1955, pp. 30–31. Mr. O'Neil stated that the cost of distributing television film through the RKO film exchanges recently purchased by General Teleradio would be "substantially less than the amount that either CBS or NBC would pay for interconnection alone."

hampered their efforts to broadcast nonnetwork programs, and were not indispensable to network operations (as demonstrated by the fact that networks had successfully operated without option time), retreated to a position that "some optioning of time" would be permitted "as a business convenience." Before arriving at this rationalization, it observed that the networks used "only a fraction of the valuable broadcast hours which they placed under option."

The situation in television is far different today. The saturation of the prime evening hours under the option time provisions of the chain broadcasting regulations is almost complete. Even if it could be argued that the Commission contemplated such complete network saturation in radio, which is unlikely, it could not have approved it in the vastly more powerful television medium if it had foreseen the limited number of TV stations.

Crucial importance of television as an advertising medium

In 1938–41, radio had become not only a vital means of communication but also an important advertising medium. It was not, however, so powerful and so essential a selling tool that advertisers could not find other effective means of selling their products. The Commission's May 1941 Report on Chain Broadcasting did not concern itself with the position of radio among the available advertising media, or the extent to which network practices, existing and proposed, affected small, medium, and large businesses.

In 1956, however, it is apparent, and undoubtly can be demonstrated, that television is the most important medium of advertising. It is thus clear that if prime viewing time on television stations can be controlled by big advertisers, small- and medium-sized business are placed in an almost impossible competitive position. That such a situation exists today in television is shown below.[2] For example, Commissioner Hyde has recently testified that 25 advertisers control more than 50 percent of television commercial time. If a comparable situation had existed in 1941 and the Commission had taken it into consideration, it is inconceivable that the chain broadcasting regulations would have been written in precisely the way that they were written for radio.

Effect of the regulations on television's pattern of development

The fact that television broadcasting in 1956 may have acquired many of the patterns and practices of radio broadcasting in 1941 does not demonstrate that the two industries are comparable and therefore should be subject to the same regulations. Any such similarity of practices may well be due to the fact that television network broadcasting has been permitted to develop under the protective umbrella of the chain broadcasting regulations, so that the regulations themselves have directed television into the footsteps of radio.

V. EFFECT OF PRESENT NETWORK PRACTICES UPON VARIOUS SEGMENTS OF TELEVISION INDUSTRY

To some degree the strong position in national and regional television markets achieved by the networks may result from the free play of competitive forces. But, this strength has certainly not been achieved as a result of free competition alone. The network companies have employed two highly restrictive forms of agreements in restraint of trade, which restrict the separately owned affiliated stations from dealing with independent sources of programs and independent purchasers of station time. These same restrictive arrangements compel independent program producers and independent purchasers of station time to deal primarily through the network, and hamper competitive dealings with independent unaffiliated stations.

The two key restrictive practices are:

1. The option time provisions of network affiliation agreements, which are specifically sanctioned by the existing chain broadcasting regulations, and

2. The must-buy policy of two of the major networks, which is in no way authorized by the existing chain broadcasting regulations.

These restrictive practices, employed in conjunction, have effects that restrain competition at every level of the industry, and have enabled the networks to achieve dominant control over the national and regional television markets.

[2] Pp. 49–53.

Affiliated stations

In the May 1941 report on chain broadcasting, the Commission concluded that time options were against the public interest because they impaired the station's freedom to select programs of its own choice suited to the needs of the local community. Nevertheless, it permitted a limited degree of time optioning as a matter of business convenience, and to help build the strength of Mutual Broadcasting System to compare with that of the other networks.

In television 14 years later, it is still inescapable that time options restrict the freedom of the station licensees and hamper their efforts to broadcast, or dissuade them even from trying to broadcast, local commercial programs, national spot programs and the programs of other networks. Most important, they prevent the affiliated station from accepting programs of independent producers and distributors, and from selling sponsorship of such programs direct to advertisers, during the prime viewing hours covered by the option.

It is well recognized that radio and television advertising is unlikely to be effective until it has been on the air a considerable length of time. If a network station has a good independent program in time that is subject under its affiliation contract to preemption by the network company, any sale of that program and time to a local advertiser or to a national spot advertiser must of necessity be subject to termination on 56 days' notice. In many cases, the affiliate will sell time subject to termination on less than 56 days' notice. In contrast, the station is obligated to carry a network commercial program in option time for the entire period that it is carried by the network itself, subject only to the limited cancellation privileges specified in the regulations. Thus, a network company can assure an advertiser that individual stations will carry a program as long as it is on the network. Because affiliation with a network is presently the easiest and quickest way to financial success, the station is prone to take network programs even in nonnetwork option time and, therefore, to reserve strict termination rights in contracts with nonnetwork advertisers in order to be able to carry network programs.

The regulations state that a station must retain the right to reject network programs which the station believes to be unsatisfactory or unsuitable, the right to cancel network programs which it believes to be contrary to the public interest, and the right to substitute for a network program a program of outstanding local or national importance. These are in effect the only cancellation rights as to network commercial programs carried in option time.

Significantly, none of these rights permits the station to select an independently produced and distributed program for normal competitive reasons, such as the fact that the station thinks that the independent program is better than the network program, or the fact that the sponsor of the independent program will pay more money than the network. The very purpose of the time option is to restrain this type of competition. It is hard to conceive of a more coercive and unjustified restraint on the freedom of the affiliated station than this form of time option, unless it is the must-buy policy employed in direct conjunction with the time option.

Under the must-buy policy, the individual affiliated station agrees to abdicate its responsibility for selecting programs to an even greater degree. By affiliating with a network company which has the must-buy policy, an affiliated station in Louisville in effect agrees that it will not carry any program, no matter how desirable, unless the sponsor or owner of the program purchases time through the network company not only on the Louisville station but on the fifty-odd other stations throughout the country included on the network's must-buy list. It is difficult to see how such a naked tie-in agreement, which would be clearly illegal in any other industry,[3] is justified by the facts of the television broadcasting industry. It is difficult to see how the Louisville station is serving the public interest of its own community, when it in effect refuses to broadcast a desirable program in Louisville unless the owner or sponsor agrees to buy time for the same program on another station in Seattle.

The overall effect of the practices adopted by the networks under the umbrella of the regulations is to persuade the affiliate to take all of the network's programs throughout the broadcast day. During 12 hours of the broadcast day, the option binds the station to take what the network company offers. Since the station must accept network programs during the prime viewing hours when most of its

[3] See the discussion in sec. VI, below.

revenue is obtained, the station has little incentive to develop an organization of its own to produce or buy nonnetwork programs for the relatively nonlucrative portion of the broadcast day not covered by the network option. Even in nonoption time, the pressure that can be exerted by the network company, the convenience of broadcasting a program produced by someone else, and the risks of losing affiliation are so great that the station generally takes any program offered by the network company.

Abdication of the responsibility for program selection to the network company is the easy course for the station licensee and the natural goal sought by the networks. In testimony before the Senate Interstate Commerce Committee in 1954, Mr. Frank Stanton, president of CBS, put the matter as follows:

"Certainly it takes more work for a station which does not rely on a network. It is far easier to patch in the network and have a full day and a full night's programing. I do not blame stations for preferring that course of life. I would myself. In fact, we try our best to make this an attractive way of life. But it is well to emphasize that perhaps there is a substitute of self-reliance, good management, and plain hard work." (Senate Committee on Interstate and Foreign Commerce hearings before Subcommittee on Communications on the status of UHF television stations and S. 3095, 83d Cong., 2d sess., p. 1001.)

Whether the station licensee voluntarily or involuntarily accepts the network "substitute" for "self-reliance, good management, and plain hard work," station acceptance of the substitute is completely inconsistent with the general FCC policy of emphasizing the responsibility of the individual station licensee to operate in the public interest of his own community. The longer the station licensee continues to shirk the responsibility, the less chance there is that he can retain or recover the initiative to exercise independent judgment and to use the franchise in accordance with independent evaluation of the needs and desires of the community he serves.

As a flagrant example of how far TV stations have already gone in abdicating their responsibility to their own communities, consider the case of Disneyland. This is a film program distributed by the ABC network. No one can possibly dispute its desirability as a program, particularly for young children. Being on film, it can be shown by television stations in different cities at the most suitable time for each community. But, in fact, it is shown at a most unsuitable time on ABC network-affiliated stations, particularly in the Far West. The option time clause of the ABC affiliation agreements, and the abdication of station responsibility by the affiliated stations, are clearly to blame.

In the East, ABC elected to distribute the program during option time from 7:30 to 8:30 p. m. on Wednesday evening. All eastern affiliated stations accepted the program at this time, despite the obvious unsuitability of forcing small children either to miss Disneyland or to sit before the television set until 8:30 on a school night.

In the Far West, the situation is even worse. ABC distributes the Pabst prizefights live throughout the United States from 10 to 11 p. m. eastern time on Wednesday. This program is broadcast live over ABC affiliated stations in the Far West between 7 and 8 p. m. Pacific time, a period which falls within ABC's option time. For this reason, ABC distributed Disneyland to its Far West affiliates for showing between 8 and 9 p. m. Wednesday night, also within ABC's option time. As a result, the children in the Far West must stay up half an hour later than children in the East to see Disneyland.

Another sign of the decline of station responsibility for program selection is evident in the way NBC and CBS have virtually saturated the 3 hours of option time during the prime viewing hours of the evening.

As shown at page 19 of this memorandum, during the representative week of February 19, 1956, NBC and CBS saturated 93 to 96 percent of the prime time (7:30 to 10:30 p. m., eastern standard time) of their basic must-buy affiliated stations in the 40 markets where NBC and CBS each had a must-buy affiliate. These 40 markets contain 71.5 percent of all the television sets in the United States.

There is no justification for this network saturation of prime viewing time. It cannot be demonstrated that affiliated stations accept each of the network programs because it is the best program available. In fact, the opposite is often indicated. In markets with more than three stations, where there are independent stations offering nonnetwork programs, the nonnetwork programs frequently draw greater audiences than network programs offered by the affiliated stations at the same time. Typical examples in the Los Angeles area appear in the following table (based on the Audience Research Bureau rating for October 1955):

	Audience rating
Tuesday, 7:30–8 p. m.:	
Waterfront	17.5 (KTTV) (nonnetwork).
Warner Bros. Presents	11.2 (ABC).
My Favorite Husband	10.5 (CBS).
Dinah Shore and News Caravan	3.3 (NBC).
Tuesday, 8–8:30 p. m.:	
Science Fiction Theater	13.7 (KTTV) (nonnetwork).
Martha Raye	10.5 (NBC).
Warner Bros. Presents	10.4 (ABC).
Navy Log	7.9 (CBS).
Tuesday, 8:30–9 p. m.:	
Wyatt Earp	14.4 (ABC).
You'll Never Get Rich	11.2 (CBS).
Liberace	11.0 (KTTV) (nonnetwork).
Martha Raye	9.7 (NBC).
Friday, 9:30–10 p. m.:	
Playhouse of Stars	13.8 (CBS).
Confidential File	11.5 (KTTV) (nonnetwork).
Western Varieties	11.5 (KTLA) (nonnetwork).
Movie	10.8 (KHJ) (nonnetwork).
Star Stage	2.9 (NBC)
The Vise	2.1 (ABC).
Saturday, 8–8:30 p. m.:	
Susie	19.6 (KTTV) (nonnetwork).
Perry Como Show	15.1 (NBC).
Jackie Gleason Stage Show	12.6 (CBS).
Spade Cooley	12.4 (KTLA) (nonnetwork).
Sunday, 9–9:30 p. m.:	
GE Theater	15.4 (CBS).
Bandstand Revue	14.2 (KTLA) (nonnetwork).
Dr. Hudson's Secret Journal	12.1 (KTTV) (nonnetwork).
TV Playhouse	7.6 (NBC).
Chance of a Lifetime	3.8 (ABC).
Sunday, 9:30–10 p. m.:	
Confidential File	17.6 (KTTV) (nonnetwork).
Alfred Hitchcock Presents	13.3 (CBS).
Bandstand Revue	8.7 (KTLA) (nonnetwork).
TV Playhouse	7.4 (NBC).
Life Begins at 80	0.8 (ABS).

Generally speaking, these desirable nonnetwork programs are on film and are available to the network-affiliated stations in most of the major markets. In most of these markets there are no independent stations, and the distributor of the nonnetwork program undoubtedly would like to place it in that market on an affiliated station. Moreover, the distributor of the nonnetwork program will usually pay the full station rate, instead of the low percentage of the station rate (in the range of 30 percent) customarily paid by the networks. Yet almost invariably the affiliated station accepts the network program instead of the superior nonnetwork program.

The ultimate effects of inroads on station responsibility arising from the FCC-sanctioned network practices can be seen vividly in the radio industry, where NBC's monitored program blankets the NBC stations during the entire weekend. Regardless of Monitor's merits as a program, its very existence proves that when networks are given the opportunity to force network programs upon the stations during certain hours and to induce the stations to take network programs during all the other hours, nothing can prevent complete saturation of the air with network programs.

According to trade reports, Monitor was literally forced on many unwilling NBC radio affiliates by exerting pressure on NBC–TV affiliates owned by the same interests. If Monitor has already come to radio, how far off can it be for TV?

Independent producers

The great source of competition with the networks in production of programs lies in the advertising agencies, established movie studios, and independent producers.

To a considerable degree, these competitive sources of programs are subject to the dictates of the networks upon which they will be dependent for acceptance of the program and clearance of time for its broadcast.

The established motion-picture companies and the so-called independent producers can operate successfully only if they can find a purchaser ready, willing, and able to pay the high price that is necessary to cover the high costs of production. The only buyers in a position to pay this high price for a program are the network organizations, the advertising agencies representing national network advertisers and the national network advertisers themselves. In competing for a sale to a national advertiser or an advertising agency representing such an advertiser, the independent producer is competing with the network company itself. The power of the network company over the most desirable broadcast time gives it a decisive edge in dealing with a sponsor.

Moreover, the network company is frankly interested in selling the sponsor a network produced show in preference to an outside show. This network preference for network programs may rest on the honest conviction of the network executives that their programs are better, as suggested by Dr. Frank Stanton's statement that—

"We have found by and large that the greatest assurance of * * * quality programing is for us to do it ourselves" (hearings, supra, p. 990).

It is obvious that the network company is not the only entity capable of producing good programs. Many of the best and most popular TV programs, such as Disneyland, the Groucho Marx Show, The $64,000 Question, Screen Directors' Playhouse, and Ford Theater, are produced by independent firms. But it is also obvious that the network company has a clear financial interest in selling a sponsor the network show, which represents a substantial network investment that cannot be recovered unless the show is sold. Furthermore, the network company usually makes a profit in selling its own program over and above the profit it makes in selling the time on which either a network show or an independent show is broadcast.

Thus, the independent program producer finds himself in the following dilemma:

(*a*) He must distribute his program on a national scale during prime viewing time in order to recover the costs of production and a reasonable profit.

(*b*) Because of the time option provisions of network affiliation agreements, the must-buy policy, and the economic power of the network companies over the affiliated stations, prime viewing time on a national scale can today be cleared effectively only through the networks.

(*c*) The independent program producer, or the national advertiser who wants to sponsor his program, must therefore deal with the network company in order to obtain national distribution during prime viewing time.

(*d*) The network company, however, is producing its own programs and trying to sell its own programs to the same sponsor.

(*e*) As a result, the independent program producer can only sell through his own major competitor—the network company—and sales can be made only when the network is unable to persuade the advertising sponsor to take a network-controlled show instead.

Advertisers

Out of 2,378 national advertisers, only 123 have budgets of $1,500,000 and over, and only 58 have budgets in the range of $1,000,000 to $1,500,000. Over 75 percent have budgets of $250,000 a year or less. Yet, the time and program charges for a half-hour show over a national network during prime viewing time run between $50,000 and $100,000 per week, or $2,500,000 to $5,000,000 per year. A Federal Communications Commissioner recently stated that only 25 advertisers control more than 50 percent of commercial television time.[4]

With increasing frequency the big-budget advertiser is not interested in a network-produced program, but either produces its own film program, or purchases a film program created by an independent producer. However, the big-budget advertiser usually needs nationwide or at least regional coverage during the prime evening broadcast hours. The advertiser might want to distribute a program on stations of his own choice, including some network-affiliated stations and some independent stations, delivering the film to each station without using

[4] Senate Interstate Commerce Committee Hearings on Television Industry, February 21, 1956, transcript, p. 538.

the network transmission facilities. But under the time option provision in network affiliation agreements, the networks can control the prime hours on affiliated stations, and the big-budget advertiser must deal with the network to obtain national or regional coverage. And under the networks' coercive must-buy policy, the major advertiser must buy the time of network affiliates both in markets in which the advertiser is not interested and in markets where the advertiser would prefer a nonnetwork station. So long as this compulsion exists, the advertiser is forced either to purchase a program selected or produced by the network, or, at the very least, to accept the time and stations dictated by the network for any independently produced program he desires to sponsor.

The only trace of competition, insofar as the major national advertiser is concerned, is the competition among the network companies. And whichever network company the advertiser deals with, he continues to be subject to dictation as to time, market coverage, and program content. Thus, from the advertiser's viewpoint, the network practices reduce the opportunities for free selection of the timing, description, and content of the message to be put before the purchasing public.

Many big-budget national advertisers do, of course, continue to place announcements or even programs on a spot basis through national spot representatives of both network-affiliated and independent television stations. Even in this aspect of placement of advertising, however, the networks are permitted to engage in practices that restrain competition. The prime broadcasting hours are blanketed by network programs so that spot business is shunted to less desirable time. The threat of loss of network time acts to inhibit the advertiser from using the competing medium of spot advertising. Where the networks themselves act as spot representatives for affiliated stations, they are in a position to shift the interest of the advertiser back to network activity which is more profitable to the network and less profitable to the affiliated stations.

The restrictions on the activities of major national advertisers have a less serious effect upon the economy as a whole than the limitations imposed upon relatively small advertisers. The high cost of network television time in the prime hours and the paucity of million-dollar advertising budgets suggest that network advertising is a privilege of the few, that big companies can use it while little companies cannot, that companies which sell on a regional rather than a national basis are virtually excluded from network television advertising, and that the preservation of competition in fields where consumer advertising is a key to success requires the creation and maintenance of effective forms of competition with the networks.

The crucial importance of TV advertising as a competitive sales factor is well illustrated by the following statements of Sylvester Weaver, president of NBC, in a recorded interview published in the February 28, 1955, issue of Broadcasting-Telecasting magazine:

"The only thing is—the radio formula was a very restricted national advertising formula. In a large part, *purposely restricted by those of us who were in it because it was very effective for a top group of advertisers.* There wasn't any particular pressure to cut everybody else in on the melon.

"Question. Is there a reason why you are thinking along these terms? Do you need money?

"Answer. We need more money, certainly. There are two reasons. One is that you do want the money because you can then have a better service and a more vital medium. The other one is a question of equity.

"Television is so much more important than radio was that, *while it really didn't matter if the big advertisers took over radio,* they (referring to smaller advertisers) did have a way of selling their goods effectively. That's not true in television. *If television were limited, for instance in the soap field, only to the Big Three, the other companies would go out of business,* literally go out of business. They could not compete without television, in terms of selling. This is something the other media may not believe, but I'm sure it's true and I am sure that most agency people would agree to it, too.

"Question. It was also true in radio; wasn't it?

"Answer. It's true that the other brands, the smaller companies, did use radio in one way or another, but it wasn't vital.

"Question. The Alka-Seltzer Co. started from scratch and practically consumed the entire headache market; didn't it?

"Answer. Yes; I see what you mean. In certain lines that moved into radio, they did absolutely take the entire market with broadcast advertising. I thought you meant that radio insured the position of the top people. I think that is true, but television is just so much more powerful." [Emphasis added.]

The present television network practices, sanctioned by the chain broadcasting rules, help the giant companies through nationwide network television advertising to achieve even greater size and even greater domination in their own industries. In every field where advertising is a significant factor in mass-consumer sales, the companies that have already achieved bigness are those that can pay the heavy cost of network television advertising in the prime listening and viewing hours. They are the ones that can bid highest for programs. Once they establish themselves on a network program protected by option time, they can displace the nonnetwork programs of their smaller competitors, and foreclose them from access to national or regional television advertising during the prime viewing hours.

Independent stations

The immediate impact of the coercive time option and must-buy agreements falls on the affiliated stations, the independent program producers and the advertisers, as shown in detail above. But this impact is felt most severely of all by the independent stations which never have direct contact with the network.

Like the affiliated station, the independent station can make money only by selling time to advertisers. It can sell time to advertisers only if it can build a sufficient audience. It can build a sufficient audience only if it offers quality programs. In short, the independent station must obtain good programs and good sponsors to survive.

The independent station can produce some inexpensive live programs of its own. But it cannot afford to produce expensive live programs by itself, since it has no way to recover the costs by national or regional distribution. The individual station must, therefore, rely on outside sources for most of its programs.

The networks are a major source of programs, but these programs are not available to the independent station, since they are subject to the first call of the affiliated station in the same area. Independent producers of filmed programs are another major source, but this source is also becoming less and less available to independent stations. The reason, of course, is that the independent program producers can only recover their costs by national distribution, and because of the time option problem, national distribution can only be achieved through a network. Whenever the producer distributes his program through a network, it cannot be made available to the independent station that competes with the network affiliate.

Some concrete examples are listed below. They are drawn from the experience of KTTV, a successful independent station in Los Angeles, whose audience rating is second only to the Los Angeles CBS station, and is higher than the Los Angeles NBC and ABC stations.

1. Early in 1954 an independent film company, Television Pictures of America, Inc. (TPA), announced plans to produce a film series entitled "Halls of Ivy" starring Ronald Colman. KTTV tried to obtain the program for its station but was told by TPA that a commitment would be needed for a larger group of markets. Accordingly, KTTV entered into an agreement with TPA committing KTTV to buy the rights for California, Oregon, Washington, and Arizona, taking the risk that it would be able to sell the program to other stations in these States outside of Los Angeles. However, the agreement contained an escape clause requested by TPA, permitting TPA to cancel if it could sell the program to a national advertiser who preferred to distribute it through a network. On the last effective day of the escape clause, TPA exercised its right to cancel, since it had sold the program to two national advertisers who distributed the program on a national network during option time periods.

2. In August 1954 KTTV entered into similar discussions concerning the film series Rin-Tin-Tin being produced by Screen Gems, Inc., a wholly owned subsidiary of Columbia Pictures. Although KTTV was one of the first to negotiate for the series, the series was subsequently sold to a national advertiser who sponsored it during option time on a national network.

3. In May 1955 KTTV agreed with Official Films to purchase a new series entitled "The Adventures of Robin Hood" starring Richard Greene. As in the case of Halls of Ivy, KTTV agreed to buy the rights for the entire west coast. However, once again the producer insisted on an escape clause permitting the cancellation of the program if a national advertiser bought the program for network distribution. Within 2 days after the agreement was made, the series

was sold to a national advertiser for network distribution, and the escape clause was invoked.

4. KTTV made offers to buy or invited offers to sell the Los Angeles rights to the following programs, before they were sold on a national basis:

Captain Gallant of the Foreign Legion
Thunder (later retitled "Fury")
I Love Lucy (second run)
It's Always Jan

In each case, the distributor said the program was being held for national sale and would not be sold to an individual market. In each case the national sale was made, and all of the above programs are being broadcast by networks in network option time.

5. Similar conversations were had with the distributors representing properties entitled "Dr. Hudson's Secret Journal," "The Count of Monte Cristo," and "Jungle Jim." In such cases KTTV was advised that the programs were being held for national sale. Following the selling season of the spring and summer of 1955, none of these three properties had achieved a national sale and each was subsequently offered for sale on a syndicated basis. KTTV did acquire the Los Angeles rights to each of these properties and each is currently running on the station in class A time. In each of these instances, therefore, KTTV's ability to acquire the properties came about only after rejection by networks or network advertisers.

The independent station is injured not only by the restrictive time-option agreement between the network and its affiliates, but also by the must-buy agreements between the networks and their affiliates. The must-buy arrangements hurt the independent station in two ways:

(*a*) First, national advertisers are forced to buy network time on more stations than they would buy with full freedom of choice. As a result, in some must-buy markets all the available stations are occupied with network programs during the prime viewing hours, and are not available to participate in national syndications of nonnetwork programs along with independent stations in other cities.

(*b*) Second, the national advertisers who own their own film programs and merely desire to buy network time are forced to buy the time of a network affiliate in a city where the advertiser might prefer to deal independently with an independent station, without using network facilities at all. Thus, an advertiser might want to buy time in 30 selected cities from network affiliates through the network, but in the case of Los Angeles might prefer to deal independently with KTTV, mailing the film directly to KTTV without using the network organization. The advertiser cannot do this under the network must-buy policy, which compels him to use the network's Los Angeles station as a condition of using the network affiliates in other cities. Thus, KTTV's local competitor gets the program and the revenue not on its competitive merits in Los Angeles, but because it is tied into a must-buy package with stations in other cities.

VI. PARALLEL BETWEEN PRESENT POSITION AND PRACTICES OF THE TELEVISION NETWORKS AND THE ACTIVITIES OF MOTION-PICTURE PRODUCERS AND THEATER CHAINS HELD ILLEGAL BY THE SUPREME COURT

There is a striking parallel between the television industry and the motion-picture industry. Both industries are primarily engaged in producing entertainment for the public. Both consist primarily of units which produce programs and units which show the programs to the public. In fact, an increasingly large percentage of the programs used by the television industry consists of motion-picture films, many of them produced by established units in the motion-picture industry.

It therefore seems relevant to compare the structure of the television industry today with the structure of the motion-picture industry. It would be logical to expect that similar distribution practices were employed in both industries and that there would be similar struggles for market control. The inquiry becomes especially relevant because the structure of the motion-picture industry has been rigorously tested under the antitrust laws, in a series of cases decided by the United States Supreme Court.

The comparison shows that the structure and distribution practices of the television industry today are remarkably similar to the structure and distribution practices of the motion-picture industry that the Supreme Court held in 1948 to violate the antitrust laws.

In the motion-picture industry five major film-producing companies produced and distributed the bulk of the motion pictures. These companies also owned interests in many of the first-run motion-picture theaters in the United States, and they had long-term agreements with independent chains of first-run theaters. The major film-producing companies and the first-run theater chains engaged in the following distribution practices, among others:

(*a*) Block-booking and blind-selling agreements, under which the theater chains committed themselves to take a block of the producing company's films before they were produced, instead of selecting individual films on their merits. These agreements were the same in purpose and function as the time-option provisions of the television network-station affiliation agreements.

(*b*) Agreements between the independent theater chains and the film distributors, under which the distributor was compelled to give first-run rights to all of the theaters in the chain, as a condition of placing the film in any one theater of the chain. These agreements were the same in purpose and function as the must-buy feature of the television networks' agreements with sponsoring advertisers.

In a series of cases, the Supreme Court ruled that both types of agreements in the movie industry were unreasonable restraints of trade under section 1 of the Sherman Act, and were illegal per se. The Court fund that these agreements illegally deprived competing independent theaters of the opportunity to obtain the defendant producers' pictures individually on a first-run basis, and illegally deprived competing film distributors of the opportunity to have their films distributed in theaters controlled by the defendant theater chains. The Court also ruled that through the use of these unreasonable restraints the defendant companies were guilty of attempts to monopolize the business of motion-picture exhibition under section 2 of the Sherman Act. The Court approved decrees nullifying the illegal agreements and enjoining the making of similar agreements in the future. (See *United States* v. *Paramount Pictures, Inc.*, 334 U. S. 131 (1948); *United States* v. *Griffith*, 334 U. S. 100 (1948).)

There are only three major respects in which the structure of the movie industry found illegal so recently differs from the structure of the television industry today. One of these differences is irrelevant from an antitrust standpoint. The other two differences are hardly in favor of the network position. These differences are as follows:

1. In the motion-picture industry the income is ultimately derived from the sale of theater admissions to the public. In the television industry income is ultimately derived from the sale of program sponsorship to advertisers. In both cases, however, income depends directly upon the quality of the program and the number of people who can be persuaded to see it. From an antitrust standpoint, the difference is not significant.

2. There are many more motion-picture theaters in the United States, including many more first-run theaters, than there are television stations. At the time of the movie antitrust cases there were over 18,000 theaters, of which over 3,000 were first-run theaters. In contrast, there are only 450 commercial television stations in the United States. Thus, access to the market, the viewing public, is obtained through a much smaller number of individual units than in the motion-picture industry. This fact, of course, makes denial of access to the market a far more serious antitrust problem in the television industry than in the movie industry.

3. Although there are many more motion-picture theaters than television stations, the total television audience is far larger than the total movie audience, both in number of individual viewers and in number of daily or weekly viewing hours per individual. The combination of a larger audience accessible through a smaller number of outlets increases the competitive advantages to be obtained by controlling access to the market and increases the importance of preventing the use of illegal means to acquire that control.

The Supreme Court opinions in the movie cases are almost exact legal and factual precedents for determining whether the conduct of the networks and their affiliated stations amounts to illegal restraints of trade and attempts to monopolize the television industry. As shown below, these opinions clearly establish that the existing time-option provisions of the network affiliation agreements and the "must buy" policy of NBC and CBS are illegal restraints of trade under section 1 of the Sherman Act, and that the use of these restrictive arrangements constitutes an illegal attempt to monopolize under section 2.

The time option as a form of block booking

In the Paramount case, the Supreme Court defined block booking in the movie industry as follows:

"Block booking is the practice of licensing, or offering for license, one feature or group of features on condition that the exhibitor will also license another feature or group of features released by the distributors during a given period. The films are licensed in blocks before they are actually produced" (334 U. S. at 156).

This definition also fits the time-option practice in the TV industry. For the time option, the definition might be paraphrased as follows:

"The network time option is the network practice of agreeing or offering to transmit to a station one program or group of programs on condition that the station will also accept for broadcast another program or group of programs to be transmitted by the network at its option during specified periods of the broadcast day. The station grants the option and agrees to accept the programs during specified periods before the programs are actually produced."

The Supreme Court found that—

"Block booking prevents competitors from bidding for single features on their individual merits" (334 U. S. at 156).

Time options have the same result in the television industry.

The Court also found that block booking permits the film owner to use his monopoly of a desirable film to compel exhibitors to take less desirable films, thus giving these less desirable films an undeserved market advantage over films of competing producers. The Court said:

"Where a high-quality film greatly desired is licensed only if an inferior one is taken, the latter borrows quality from the former and strengthens its monopoly by drawing on the other. The practice tends to equalize rather than differentiate the reward for the individual copyrights. Even where all the films included in the package are of equal quality, the requirement that all be taken if one is desired increases the market for some. Each stands not on its own footing but in whole or in part on the appeal which another film may have. As the district court said, the result is to add to the monopoly of the copyright in violation of the principle of the patent cases involving tying clauses" (334 U. S. at 158).

The same reasoning, of course, applies with full force to television programs. The fact that affiliation agreements are not based on copyright licensing is irrelevant. Television programs on film are individually copyrighted, and scripts of live programs can be and often are covered by copyright. Furthermore, whether or not a program enjoys the monopoly of a copyright, every individual program itself enjoys an inherent economic monopoly. It can be imitated but not duplicated. There is only 1 Disneyland, 1 Arthur Godfrey, 1 George Gobel, 1 I Love Lucy, etc. These programs enjoy economic monopolies that are not materially affected by the existence or nonexistence of a legal copyright.

It also seems clear that the Supreme Court affirmed the finding of the district court that block booking was illegal per se and that the rule of reason was not applicable. *United States* v. *Paramount Pictures, Inc.* (66 F. Supp. 323, 348 (1946); 70 F. Supp. 53, 72 (1947) (conclusion of law No. 11)). This seems an inescapable inference from the fact that justification of block booking on grounds of convenience or necessity was specifically rejected as irrelevant by the Court, as follows:

"Columbia Pictures makes an earnest argument that enforcement of the restriction as to block-booking will be very disadvantageous to it and will greatly impair its ability to operate profitably. But the policy of the antitrust laws is not qualified or conditionad by the convenience of those whose conduct is regulated. Nor can a vested interest in a practice which contravenes the policy of the antitrust laws receive judicial sanction" (334 U. S. at 150).

And in *International Salt Co.* v. *United States* (332 U. S. 392 (1947)), the Court upheld summary judgment in a section 1 proceeding based on International's practice of requiring lessees of its patented machines to purchase its unpatented salt. The Court held that it was "unreasonable, per se, to foreclose competitors from any substantial market" and that proof of the alleged reasonableness of the practice need not be considered.

This is in striking contrast to the Federal Communications Commission's treatment of time options in 1941. It will be recalled that the Commission, after issuing chain broadcasting findings and proposed regulations in May 1941 that specifically condemned the time option as against the public interest and prohibited its further use, later modified these findings and regulations so as to permit limited use of the time option. The Commission explained its action on the ground that the use of time options was undoubtedly a "convenience,' and would help the weakest of the existing radio chains to strengthen its competitive position.

This action was taken 7 years before the Supreme Court issued its motion picture opinions in 1948. It seems most unlikely that the Commission would have taken such action if the Supreme Court opinions had been before it at the time.

Film master agreements and the networks' must-buy policy

In *United States* v. *Griffith* (334 U. S. 100 (1948)), the Supreme Court considered the legality of master agreements between independent theater chains and motion picture film distributors, under which the theater chain was licensed to exhibit the distributors' films on a first-run basis in all of the theaters in the chain. Some of the theaters were in single-theater towns, with no competition, while others were in multiple-theater towns where they competed with theaters owned by others.

The Supreme Court found that it was illegal per se for the theater chains to exact agreements from the distributors granting first run rights for all the theaters in the chain. The Court reasoned as follows:

"A man with a monopoly of theaters in any one town commands the entrance for all films into that area. If he uses that strategic position to acquire exclusive privileges in a city where he has competitors, he is employing his monopoly power as a trade weapon against his competitors. It may be a feeble, ineffective weapon where he has only one closed or monopoly town. But as those towns increase in number throughout a region, his monopoly power in them may be used with crushing effect on competitors in other places. He need not be as crass as the exhibtors in *United States* v. *Crescent Amusement Co., supra,* in order to make his monopoly power effective in his competitive situations. Though he makes no threat to withhold the business of his closed or monopoly towns unless the distributors give him the exclusive film rights in the towns where he has competitors, the effect is likely to be the same where the two are joined. When the buying power of the entire circuit is used to negotiate films for his competitive as well as his closed towns, he is using monopoly power to expand his empire. And even if we assume that a specific intent to accomplish that result is absent, he is chargeable in legal contemplation with that purpose since the end result is the necessary and direct consequence of what he did (*United States* v. *Patten, supra*, p. 543).

"The consequence of such a use of monopoly power is that films are licensed on a noncompetitive basis in what would otherwise be competitive situations. That is the effect whether 1 exhibitor makes the bargain with the distributor or whether 2 or more exhibitors lump together their buying power, as appellees did here. It is in either case a misuse of monopoly power under the Sherman Act. If monopoly power can be used to beget monopoly, the act becomes a feeble instrument indeed. Large-scale buying is not, of course, unlawful per se. It may yield price or other lawful advantages to the buyer. It may not, however, be used to monopolize or to attempt to monopolize interstate trade or commerce. Nor, as we hold in *United States* v. *Paramount Pictures, Inc.* (post, p. 131), may it be used to stifle competition by denying competitors less favorably situated access to the market" (334 U. S. at 107).

In the Paramount case, the Supreme Court considered master agreements covering all of the theaters in a particular chain from another aspect. As in Griffith, the Court found such agreements illegal insofar as they combined theaters in single theater towns with theaters in multiple theater towns. Before reaching this issue, however, the Court first found such master agreements illegal on a separate and independent ground, as follows:

"In the first place, they eliminate the possibility of bidding for films theater by theater. In that way they eliminate the opportunity for the small competitor to obtain the choice first runs, and put a premium on the size of the circuit. They are, therefore, devices for stifling competition and diverting the cream of the business to the large operators" (334 U. S. at 154).

The above language reads exactly on the must-buy policy of the two major television network companies. Each television station is a pro tanto monopoly granted by license of the Federal Government. In any market, the number of stations is limited by law. In some markets on the must-buy lists of both NBC and CBS, the stations affiliated with these network companies are the only stations in the market. Even when there are competing stations in the same market, the must-buy policies of the two network companies, in the words of the Paramount opinion, "eliminate the opportunity for the small competitor (independent television station) to obtain the choice first-runs (sponsored programs) and put a premium on the size of the circuit (network)."

Moreover, whereas the master agreements in Griffith were condemned even in the absence of threats to withhold access to the monopoly theaters unless the distributors granted exclusive rights to the chain's theaters in competitive towns, the network must-buy policy is clearly based on a most explicit threat not to sell time on the network's monopoly stations unless the advertiser also purchases time on the network's stations in competitive markets.

Finally, Griffith and Paramount both condemn a must-buy policy as illegal, even when interpreted as an individual refusal to deal. It is even more clear that a must-buy policy is illegal when, as in the case of the TV networks, it results from a collective refusal to deal under an explicit or implied agreement among a group of individual sellers. In *United States* v. *First National Pictures, Inc.* (282 U. S. 44 (1930)), the Supreme Court held it illegal for the dominant motion-picture distributors to agree on a standard form of licensing contract for dealing with exhibitors, and to refuse to deal with exhibitors who declined to sign this contract. In *Fashion Originators Guild of America* v. *Federal Trade Commission* (312 U. S. 457 (1941)), the Court applied the same doctrine to condemn an agreement among dress manufacturers to refuse to deal with purchasers who also bought dresses from so-called style pirates. The Court ruled that even if style piracy was a legal wrong, the defendant manufacturers had no right to prevent the wrong by a collective refusal to deal. Collective refusals to deal are illegal per se, and the alleged reasonableness of the refusal is irrelevant. *Columbia Steel Co.* v. *United States* (334 U. S. 495, 522 (1948)).

The network must-buy policy is plainly a collective refusal to deal. The network in effect agrees with its affiliates that it will not sell time to the sponsor for any one station on the must-buy list, unless the sponsor buys time on all the other stations on the list. Each affiliated station agrees with the network and the other affiliates that it will not sell time for the program of an advertising sponsor (even a program owned or produced by the sponsor) during option time unless the sponsor places the program on all the other affiliated stations in the network's must-buy list. While the affiliated station is technically free to accept the sponsor's program during option time if the network has not yet cleared another program, the station must displace the sponsor's program and refuse to deal with him as soon as the network exercises its option right.

Under the above cited cases, such collective refusals to deal are illegal per se under the Sherman Act, even when they have some higher motive than the elimination of competition, so long as the elimination of competition is the necessary result.

Monopoly in the motion-picture and television industries

In the motion-picture industry cases cited above, the Supreme Court ruled not only that the practices employed by the defendants were illegal restraints of trade under section 1 of the Sherman Act, but also that, through use of these restraints, the defendants had achieved, and in some cases had exercised, an illegal power to monopolize in violation of section 2 of the Sherman Act.

The same conclusion seems warranted in the television industry. Through the use of affiliation agreements containing time options and through the must-buy policy, the major network companies achieved and have exercised the power to monopolize the business of television broadcasting. In the words of the Paramount case, they have combined the individual monopoly power conferred by each of a large number of FCC station licenses to beget monopoly. They have clearly acted in collaboration with their affiliates to deny fair competitive opportunities to independent TV stations, to independent producers of television programs, and to the advertisers who employ the television medium. By the control of television station time in all the major markets—achieved through the time option and the must-buy policy—they have prevented the independent television station, the independent program producer, and the advertiser from dealing with each other so as to compete with the network companies in national or regional broadcasting of television programs.

Present validity of the motion-picture opinions

The principles laid down in the Paramount and Griffith cases have not been changed or questioned in subsequent opinions of the Supreme Court. The case of *Times-Picayune Publishing Co.* v. *United States* (345 U. S. 594 (1953)), sometimes cited as weakening these principles, does not in any way dilute the force of the Paramount and Griffith motion-picture cases as precedents establishing that the television network practices are violations of the antitrust laws.

In the Times-Picayune case, the charge was that a New Orleans newspaper company, owning the only morning newspaper and 1 of 2 evening newspapers in the city, required advertisers to purchase space in both of its newspapers as a condition of buying space in either newspaper. This was alleged to be an unreasonable restraint of trade under section 1 of the Sherman Act and an attempt to monopolize under section 2.

The Court, after reviewing the relevant precedents including the motion-picture cases, stated as a principle that a tying arrangement (where the sale of a product or service is conditional on the buyer's purchasing some other product or service) is a per se violation of section 1 of the Sherman Act where (1) the seller enjoys a monopolistic position in the market for the "tying" product and (2) a substantial volume of commerce in the "tied" product is restrained (345 U. S. 594 at 609). The Court then found that because the defendant's morning newspaper's advertising lineage hovered around 40 percent of lineage in all New Orleans dailies, it did not "in the absence of patent or copyright control" have "that market 'dominance' which, in conjunction with a 'not insubstantial' volume of trade in the 'tied' product, would result in a Sherman Act offense" (345 U. S. 594, 612–613). Furthermore, the Court held that there was no tying, because the two newspapers owned by one company were selling indistinguishable products to advertisers—the products were identical and the market the same (345 U. S. 594,614). It then found that there was insufficient evidence of deleterious effects on the defendant's competitors to show unreasonable restraint of trade (345 U. S. 594, 621–622). There was no illegal collective refusal to deal, because there was just one corporation and no group or concerted refusal (345 U. S. 594, 627). Nor was there an attempt to monopolize in violation of section 2 of the Sherman Act, because the acquisition of the two newspapers and the requirements that advertisers use both were motivated by legitimate business aims rather than specific intent to monopolize (345 U. S. 594, 627).

The Times-Picayune case involved facts so widely different from the facts in the motion-picture cases and the facts in the television industry as to be irrelevant. The acquittal in Times-Picayune was based on the absence of a showing of a monopoly of the tying product, which in the motion-picture cases, was inherent in the copyrights of the producers (*United States* v. *Paramount Pictures, supra*) and the one-theater towns of the theater circuits (*United States* v. *Griffith, supra*). The requisite monopoly in the television industry, on which the network company practices are based, is established not only by the copyright and inherent uniqueness of each program but also by the protected position of each station under a system where necessarily there can be only a limited number of stations. Furthermore, tying clearly exists in the television industry because the television programs block-booked under the time option differ from one another, and because the market varies from that covered by a single station to the combined markets of the 50 stations on the must-buy list or of the two hundred-odd affiliates comprising the entire network. And even if these obvious monopoly features are not sufficient to make illegal per se both the block-booking form of tying arrangement represented by the network option-time options and the concerted refusal to deal represented by the must-buy policy, it is clear that, unlike the New Orleans newspaper situation, the network companies have achieved dominance of the television advertising market, have restrained a substantial volume of commerce and have seriously and adversely injured the independent stations and independent program producers with whom they compete. Finally, the existence or nonexistence of an intent to monopolize is irrelevant under section 1, and since dominance has in fact been achieved, intent is equally irrelevant under section 2.

An essential difference in the Times-Picayune case is that it involved a single seller, not a group of sellers acting collectively. Collective agreements among separate business entities are repugnant to the antitrust laws, whether they occur in the movie industry, as in the Paramount and Griffith cases, in the television industry, as in the present situation, or in the newspaper industry involved in the Times-Picaynue case. In *Associated Press* v. *United States* (326 U. S. 1 (1945)), the Supreme Court struck down the provisions of the Associated Press bylaws which made it more difficult for a nonmember newspaper to join if it competed with an existing member, and which blocked "all newspaper nonmembers from any opportunity to buy news from AP or any of its publisher members."

The Court summarized the illegal effect of these bylaws as follows:

"The net effect is seriously to limit the opportunity of any new paper to enter these cities. Trade restraints of this character, aimed at the destruction of competition, tend to block the initiative which brings newcomers into a field of business and to frustrate the free-enterprise sysem which it was the purpose of the Sherman Act to protect" (326 U. S. 13–14).

* * * * * * *

"The Sherman Act was specifically intended to prohibit independent businesses from becoming 'associates' in a common plan which is bound to reduce their competitor's opportunity to buy or sell the things in which the groups compete" (326 U. S. 15).

The time option and must-buy arrangements between the network companies and the affiliated stations clearly have the same restrictive effects on independent television stations and independent program producers.

VII. THERE IS NO ADEQUATE ECONOMIC JUSTIFICATION FOR THE TIME OPTION AND MUST-BUY ARRANGEMENTS BETWEEN NETWORKS AND AFFILIATES

In antitrust litigation, the familiar defense has been that the monopoly or restraint is necessary and desirable in the economic and practical context of the particular industry. To some extent this plea has been recognized in the rule of reason—not every contract in restraint of trade is illegal. On the other hand, many restrictive trade practices are illegal per se, and no rationalization in the form of alleged beneficial results can legitimize them.

As shown in the preceding section, there are strong reasons for believing that under the rule of the Paramount and Griffith motion picture cases, the time option and must-buy arrangements between the network companies and the separately owned affiliates are per se unlawful restraints of trade under section 1 of the Sherman Act. Accordingly, neither the economic convenience or even alleged economic necessity of these arrangements nor their long period of use can justify their continuance. In the Paramount case, the Supreme Court specifically rejected a justification of block booking along these lines (334 U. S. at p. 159, quoted above).

In 1941, 7 years before the Supreme Court decided the Paramount and Griffith cases, the Federal Communications Commission, after finding time options to be against the public interest, nevertheless sanctioned their limited use on a business convenience basis. Today, the rule of the Paramount and Griffith cases prevents the Commission from permitting the continued use of time options and the must-buy policy, no matter how necessary or convenient these practices may be claimed to be for successful television operations in the public interest.

Nevertheless, the network companies will probably maintain that the time option and the must-buy policy are not illegal per se, but that they are reasonable and lawful restraints justified by some special economic circumstances of the television industry. Accordingly, it seems appropriate to consider whether there is any economic justification for continuing these restrictive practices.

Initially, it must be emphasized that the burden of proof is on the network companies and whatever affiliates may support them. The basic principle of our laws is that free competition ultimately best serves the public welfare. There is a presumption that whatever progress and success have been achieved under monopolistic conditions, greater progress and success could have been achieved if those conditions had not been permitted to exist and thrive, and greater progress and success can be achieved in the future if these conditions are arrested and their promoters deprived of the fruits of monopoly.

Against that background, it cannot be established, even if economic justification were a relevant factor, that the present time option and must-buy arrangements are necessary to the operation of the television industry.

Justification of time options

(*a*) *From the standpoint of the affiliated station.*—It is obvious that the continued use of time options is harmful to the affiliated station. It restricts the station's freedom of choice in selecting programs and sponsors. It insidiously saps the initiative of the station to broadcast what the station considers the best available program for the local community. If the time option did not exist, the affiliate would be free to carry the network program which it now carries during the time option period, or it could decide instead to accept some other program which it considered to be a better and more profitable program to carry. For each individual time period, the station would make its own free choice in the market. It could continue to negotiate for the right of first call in its area on the network program, but it would not be compelled to accept the network program. This would clearly be a much healthier state of affairs for the station and for its listening audience. The only conceivable way in which the affiliated station could benefit from the time option would be if the option enabled the network to offer the affiliate a better choice of programs than the station could obtain otherwise. As shown below, this is not the case.

(b) *From the standpoint of the network.*—The networks have argued that the time option is essential to permit the production of high quality network programs. The argument runs essentially as follows:

1. High quality programs are expensive to produce;
2. The costs of production can only be recouped by nationwide distribution and advertising sponsorship; and
3. Nationwide distribution can only be achieved through the use of the time option.

Points 1 and 2 of this argument can readily be conceded, but point 3 can clearly be refuted.

Before dealing with this argument on its merits, it is pertinent to note that the networks made the same argument against the limitations on the time option which the FCC imposed when it issued the present chain broadcasting regulations in 1941. These regulations made time options nonexclusive against other network companies, and required 56 days' notice of exercise instead of the 28 days' notice which was the practice at that time. The network companies sought court injunctions against the 1941 regulations, and the presidents of NBC and CBS submitted sworn affidavits in support of the injunction pleas.

President Trammell of NBC swore that the nonexclusive feature would result in "making it financially and physically impossible to handle a sufficient volume of business to support the existing programs of the network organization." He swore that the requirement of 56 days' notice "will have the practical effect of an absolute prohibition against network optional time." He swore that "the inevitable consequence" of the option time restrictions "will be the destruction of nationwide network broadcasting to the irreparable injury of NBC."

President William S. Paley of CBS swore that making the option nonexclusive against other network companies "will make the clearing of time for the arrangement of a national network program an almost impossible task." He swore that the requirement of 56 days' notice would mean that "network broadcasting will be working under an unnecessary handicap which will weaken it in competition with other media and cause it to lose important business."[5]

The history of radio and television network broadcasting since the 1941 regulations were issued shows how fallacious were these sworn predictions of doom. Any new network company predictions as to the effect of abolishing option time should be viewed with corresponding skepticism.

The primary network company argument in support of the time option is that it is essential to clear time for simultaneous broadcasting throughout the country. Simultaneous broadcasting is often necessary for live programs. But as shown earlier in this memorandum (p. 16), approximately half of the programs offered by the network companies during prime viewing time are on film. There is no practical need to broadcast a film program simultaneously at the same hour of the same night in every market throughout the country or throughout a region. Furthermore, reels of film can be delivered to individual stations throughout the country or a region less expensively than a show can be electronically transmitted to affiliated stations by a network.

Where simultaneous broadcasting is necessary for a live program or even for a film program, time can be effectively cleared by network companies without relying on time options. For example, a network company could enter into bilateral contracts with affiliated stations for firm periods, such as 13, 26, 39, or 52 weeks, covering a specified time period for a specified program or programs. While the network company would bind itself to furnish a particular program at the stated time and the station would bind itself to carry the program at the stated time, changes in programs could be made by mutual agreement, and the station would reserve its customary right to substitute an occasional special program of outstanding public importance.

---

[5] The complete texts of the pertinent portions of the Trammell and Paley affidavits appear in appendix A.

The network company would continue, as it does now, to communicate with its affiliated stations with respect to clearance of programs. There is not the slightest doubt but that affiliated stations throughout the country would accept high-quality or popular network programs for simultaneous broadcasting even if they were not under the compulsion of a time option clause. Sporting events such as the world series and public interest events such as political conventions would win clearance on their merits as they do now in nonoption time.

The great difference would be that the networks would no longer be the sole effective means of nationwide clearance. Advertisers and independent program producers would have alternative means for distributing programs, dealing directly with the stations or with some central clearinghouse that could communicate with stations as effectively as a network company.

At the present time, it is the inferior network shows—those which the affiliated station might reject in favor of a better independent program, if legally and economically free to do so—that the time option protects. For example, in the 7-station Los Angeles market, where the network companies must compete with independently produced programs offered by the 4 nonnetwork stations, audience ratings in October 1955 (American Research Bureau) showed that during prime evening option time there were 9 network programs [6] having ratings of 6.5 or less, placing them in 125th or lower place out of 247 evening programs, with 50 or more nonnetwork programs having higher ratings. It seems obvious that the affiliated stations in any community would not accept such inferior network shows if they were not compelled to do so by the time option and by the economic pressure of the network companies. Abolition of time options would help to end this protection of the inferior network programs against the competition of superior nonnetwork shows.

The network companies may conceivably argue that it is economically necessary for them to protect inferior shows and to be able to market the inferior product by compelling the affiliate stations to accept it. But the network companies have never made such an argument. The network companies are proud of the quality of their programs, and often with excellent reason. Elimination or reduction of time options would permit them to prove that their programs are good enough to be accepted on their own merits, in competition with independent programs, instead of being forced on the affiliates by compulsion.

(*c*) *From the standpoint of the advertiser.*—It has been argued that simultaneous broadcasting of a television program throughout the country is essential to the success of the advertising message, and that this can be achieved only through the time option.

It is very doubtful whether simultaneous broadcasting is essential to the advertiser. The country is separated into four different time belts, and many network shows that are broadcast in the eastern time zone at 8 are viewed in the Middle West at 7, in the mountain zone at 6, and in the Far West at 5, with apparently satisfactory results.

So long as a particular program and advertising message are regularly delivered at the same hour of the same day in each particular market, it should make no difference that the hour and day in one market are different from the hour and day in a completely separate market. Particular hours of particular days are better for a particular advertising message in some markets than in others. Thus, the winter evening viewing habits of people in New England are very different from those of the people in Florida and California.

[6] Note the following table:

Program	Rating	Rank among 247 evening programs	Nonnetwork programs with higher ratings
Life Begins at 80	0.8	238	137
Penny to a Million	1.6	226	126
Masquerade Party	3.3	191	89
Ozark Jubilee	3.4	179	88
Chance of a Lifetime	3.8	171	82
Name's the Same	4.5	160	74
Break the Bank	5.8	140	60
Dollar a Second	5.8	140	60
It's a Great Life	6.5	125	50

For particular local reasons, such as a locally televised sporting event or a competing nontelevised event, Monday evening in some markets may be better than Friday or Saturday evening, while the opposite may be true in other markets.

Accordingly, the only case in which an advertiser really needs simultaneous broadcasting of the program and advertising message throughout the country is the case of the live program. In the case of high-quality live programs, simultaneous clearance can be worked out without difficulty, without need of the time option. Clearance of poor-quality live programs may depend on time options, but poor-quality programs are of little interest to the advertiser; the only reason the advertiser sponsors them today is that the network company controls the prime viewing hours throughout the country, and will only sell these hours to the advertiser if the advertiser accepts the inferior program. In fact, there is good reason to believe that advertisers would be better able to obtain high-quality live and film programs and to clear them throughout the country on a simultaneous basis if time options did not stand in the way.

It is the mass circulation of inferior network programs, protected by the time option, that makes it difficult—and sometimes impossible—for an advertiser to clear time for a high-quality program produced by a nonnetwork source. The abolition or restriction of time options would give advertisers a much wider choice of programs from independent sources. These programs could be cleared for simultaneous broadcasting throughout the country on stations affiliated with networks, whenever the affiliated station can be convinced that a particular program is the best program available for the particular time period.

The clearance procedure could be the same as that projected above for the networks. Contracts could be made with the stations for firm periods such as 13, 26, 39, or 52 weeks covering a specified time period for a specified program. These contracts would be immune from encroachment by network companies. With prime viewing time opened up for nonnetwork programs, the economic incentive would exist for establishing improved methods of rapid communication with stations throughout the country, as, for example, through a clearinghouse.

It is often argued that time options are necessary in order to enable network companies to assure advertisers that a program can be placed at a particular time so as to take advantage of the audience attracted by the preceding and following programs. This is the so-called "audience-flow" concept. Even if this concept were valid, it is questionable whether for particular advertisers or for advertisers as a whole, it outweighs the limitations on access to television stations that the time option system imposes. In fact, however, the "audience-flow" concept is a fiction. Audience ratings and independent surveys show that the American people watch the television programs they like and refrain from watching programs they dislike, regardless of what program follows or precedes. The public is not too lazy to turn the dial; in fact, it takes delight in doing so. In October 1955, for example, the $64,000 Question on CBS was phenomenally popular. In New York, Los Angeles, Chicago, Seattle, Atlanta, Houston, Providence, and Dayton, its ratings ranged from 44.5 (in Houston) to 59.5 (in Chicago). The preceding program, featuring Red Skelton, had ratings ranging from 32.4 (in Dayton) to 14.0 (in Houston). The following program had ratings ranging from 7.1 (in Houston) to 27.7 (in Atlanta). The highest rating for the following show was achieved in Atlanta, not by a CBS network program but by an independently produced film program.

Any survey of audience habits, whether based on ratings or on interviews of a cross-section of the public, would show that the primary factors determining the number of people who watch a television program are the quality of the program, the quality of programs on other television channels at the same time, and the quality of available nontelevision entertainment at the same time.

Even if there were any validity to the audience-flow argument of the network companies, it is a principle that is economically and legally indefensible. It is essentially an argument that a network company can assure to an advertiser a larger audience than the program itself would ordinarily merit because it can capitalize on a captive audience obtained by the quality of a preceding program. On this theory, the time option becomes a device that enables the network companies to sell time for inferior programs, and to give these inferior programs an unfair competitive advantage over other programs exhibited at the same time, which the inferior program could not obtain on its own merits.

Justification of the must-buy policy

The usual justification offered for the must-buy policy is that the network can only retain its affiliations with television stations, and obtain sufficient revenue to produce high quality programs, if each network program is distributed to all of the affiliated stations on the must-buy list, and the advertising sponsor pays for time on all such stations.

The short answer to this argument is that the American Broadcasting Co., which does not follow the must-buy policy, is a successful and increasingly successful network. It is therefore clear that the must-buy policy is not essential to the success of a network. It may be true that ABC is not yet as strong a network as NBC or CBS. It may also be true that the must-buy policy adds to the profits of NBC and CBS. But if these are the facts, they prove merely that the must-buy policy is an exercise of monopoly power by the dominant network companies. It is not a policy that must be followed to achieve network success, but it is a policy that can be used by a strong network company to compel advertisers to purchase station time on stations that the advertisers do not want.

If further proof is needed, consider the situation in radio. If the must-buy policy is essential to achieve network success in television, the same must be true to achieve network success in radio. For some time, the NBC and CBS radio networks did follow the must-buy policy. In recent years, however, the number of radio stations in all markets has increased to a point where some advertisers prefer to deal with unaffiliated stations rather than to buy the entire NBC or CBS must-buy network. As a result, NBC and CBS have recently abandoned the must-buy policy for their radio networks.

Nothing could prove more clearly that the must-buy policy is an instrument of monopoly power, that its exercise proves the existence of monopoly power, and that it cannot be imposed on the networks' customers once the networks' monopoly has been ended.

So far as the stations themselves are concerned, the must-buy lists of NBC and CBS cover only about one-third of the stations with which each network has affiliation agreements. Most of these stations have a strategic position in a major market. More often than not, they would probably be taken by the network advertiser regardless of any must-buy policy. When they are not taken, their strategic position would enable them to sell the time to some other sponsor for possibly a better program and at a net rate higher than the network compensation. Thus, the must-buy policy is not a necessity for the one-hundred-odd CBS and NBC stations covered. Furthermore, many of the one-hundred-odd affiliates of each network that are not included in must-buy lists are operating profitably.

VIII. THE REMEDY

To remove the restraints on competition in the television industry, prompt and substantial amendments of the chain broadcasting regulations are necessary. This action is appropriate, whether the restraints are considered as violating the antitrust laws or as violating the Communications Act policy of free competitive broadcasting, with responsibility lodged in the station licensee.

The parallel between the television industry today and the movie industry that was forcibly reorganized under the Supreme Court's 1948 decision suggests that parallel remedies should be applied. In the motion-picture case block booking for the distribution of pictures and must-buy arrangements for the circuits of theaters were outlawed. In addition, in order to restore competitive conditions in the industry and to deprive the violators of the fruits of their illegal activities, the motion-picture producers were required to divest themselves of their ownership interest in motion-picture theaters. (*Paramount Pictures, Inc.* v. *United States*, 85 F. Supp. 881 (S. D. N. Y. 1949).) In effect, the Court prohibited one entity from producing motion pictures and at the same time owning, or having a long-term affiliation agreement with, the theaters in which the pictures were exhibited.

The essentially similar facts of the television industry might well justify the similar relief of divorcing the production function of the network companies from their distribution function and their ownership of stations. At the very least, it is essential to eliminate discriminatory time options, must-buys, and exclusive dealing relationships between television stations and network companies, so that independent television program producers and independent television stations can compete freely with network companies, network-owned stations and network-affiliated stations in the production and sale of television programs, and the sale of station time to nationwide, regional, and local advertisers, and so that the viewing public can enjoy the best programs available from any creative source.

At the minimum, the chain broadcasting regulations should, therefore, be amended as follows:

(*a*) To abolish the time option, section 3.658 (d) of the regulations should be amended to forbid any form of option under which a station agrees in advance to clear time for a network program or in any way to permit a network company to clear time on terms more favorable than those granted or offered to any other source of programs.

The Commission's authority to issue such a regulation is clear. Language similar to that of section 3.104 of the regulations proposed in the May 1941 Report on Chain Broadcasting would be appropriate. This language reads as follows:

"No license shall be granted to a [television] broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which prevents or hinders the station from scheduling programs before the network finally agrees to utilize the time during which such programs are scheduled, or which requires the station to clear time already scheduled when the network organization seeks to utilize the time."

(*b*) To end the must-buy policy of CBS and NBC, a new subsection should be added to section 3.658 prohibiting a station from being a party to direct or indirect arrangements with other stations, or with an affiliated network company, under which the station, or the network company on its behalf, refuses to clear time for an advertiser unless the advertiser agrees to purchase time on one or more separately owned stations.

The Commission clearly has power to impose such a regulation. The Commission has authority to forbid the inclusion of particular terms in affiliation agreements between licensed stations and network companies, and has exercised this authority, in section 3.658 of the existing regulations, to prohibit six different types of provisions in affiliation agreements. The must-buy policies of NBC and CBS, as presently applied, are clearly based on an express or implied understanding between the network company and the affiliated stations on the must-buy list, that forms a part of the affiliation arrangements between them. The making of such arrangements can therefore be prohibited by the Commission.

The proposed new subsection of section 3.658 might read as follows:

"No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied, with one or more other television broadcast stations or with a network organization, under which such station (or the network organization on such station's behalf) refuses to clear time for a sponsored television program unless the sponsor agrees to purchase time for the same program on one or more separately owned television broadcast stations."

(*c*) To prohibit exclusive dealing relationships between a television station and any outside programing source, section 3.658 (a) of the regulations, which now forbids a station to enter into arrangements with one network company that directly or indirectly prevent the station from accepting programs of other network companies, should be expanded so as to forbid a station from entering into any direct or indirect exclusive dealing arrangement with any single outside program source. The section should also state that it is prima facie evidence of an exclusive dealing arrangement for a station, during any segment of the broadcast day, or during the prime viewing hours of 7:30 to 10:30 p. m., to devote more than 75 percent of its time to programs from a single program source.

In order to give the station flexibility in accepting unusually good or unusually important programs from a single outside source, the percentage could be computed on an average basis during each 52-week period, and special exceptions could be made for major public events such as political conventions.

The purpose of this regulation would be to assure reasonable access to the market for all program sources by preventing the existing economic power of the network companies, or the future economic power of any other outside program source, from being used to compel stations to accept programs on an exclusive dealing basis from a single outside source.

Exclusive dealing has long been recognized as contrary to the public interest, in the chain-broadcasting field as in other fields, and there are several provisions of the existing chain broadcasting regulations specifically designed to prevent the growth of exclusivity. For example, section 3.658 (a) prevents any arrangements between a network company and a station under which the station is prevented or hindered from, or penalized for, broadcasting the programs of any other network organization. Similarly, section 3.658 (d) states that time options granted to one network company may not be exclusive as against other network companies, and may not prevent a station from optioning or selling any or all of its time to other network companies. The above proposal would simply extend the same principles of protection against exclusivity to programs of nonnetwork organizations.

The 75-percent prima facie evidence test would be based on a presumption that when a station takes more than this percentage of programs from a single source over a 52-week period, it is responding to excessive economic pressure from this source and is abdicating its local responsibility for program selection. The presumption would be rebuttable, and the Commission would not have authority to suspend or revoke a station's license until after a full hearing, at which the station has the opportunity to prove that it is selecting each individual program on its competitive merits, as compared to the merits of other programs available for the same time period, and is not abdicating its local responsibility by entering into a direct or indirect exclusive dealing arrangement or course of conduct with a single outside-program source.

There are a number of statutory and regulatory precedents for fixing a particular percentage point as the place where the burden of proof shifts from one party to the other. For example, section 9 of the Investment Company Act states that "control" shall be presumed when any person owns more than 25 percent of a company's voting securities, but that the presumption may be rebutted by evidence. And section 2 of the Public Utility Holding Company Act states in effect that ownership of 10 percent of the stock of a public-utility company shall make the owning company a "holding company," unless the owning company presents proof of other circumstances establishing that it is not a "holding company." [7] And 75 percent appears to be a reasonable point at which to shift the burden of proof on exclusive dealing since there is good judicial authority that it constitutes exclusive dealing for a buyer to follow the practice of purchasing 80 percent of its requirements from a single supplier. *United States* v. *Richfield Oil Corp.* (99 F. Supp. 280, 295 (S. D. Cal., 1951), aff'd 343 U. S. 922, 1952)).

The proposed amendment of section 3.658 (a) might read as follows:

"No license shall be granted to a television broadcast station having any exclusive contract, arrangement, or understanding, express or implied, with a network organization or other producer or distributor of programs under which the station is prevented or hindered from, or penalized for, broadcasting the programs of any network organization or other producer or distributor of programs. Proof that a station, during any segment of the broadcast day (8:00 a. m. to 1:00 p. m.; 1:00 p. m. to 6:00 p. m.; 6:00 p. m. to 11:00 p. m.; 11:00 p. m. to 8:00 a. m.) or during the period 7:30 p. m. to 10:30 p. m., has devoted an average of more than 75 percent of its time over a calendar year to broadcasting the programs of any network organization or other producer or distributor of programs shall be prima facie evidence of the existence of a contract, arrangement, or understanding, express or implied, prohibited by this subsection. In computing this percentage no account shall be taken of time devoted to broadcasts of public events, news summaries, and major sports events, regardless of the identity of the program producer or distributor."

Appendix A

National Broadcasting Company et al. v. United States of America, United States Supreme Court, October Term, 1942

CASE NO. 554

(Extract from affidavit of Niles Trammell, president, National Broadcasting Co., sworn to October 30, 1941, Record, pp. 239–242)

"Option time: At present NBC is able to sell network time for commercial programs to national advertisers on the basis of an assured national circulation for specified hours of the day by giving its affiliated stations 28 days' advance notice. NBC's ability to do this is basically dependent upon the time-option provision in its contracts with affiliated stations, as hereinabove described, which enables NBC to sell network programs within the optional [fol. 240] time period and enables the affiliated station to use the balance of the day for such local programs as it sees fit.

"As originally promulgated on May 2, 1941, paragraph 3.104 of the Commission's order, as stated in the verified complaint herein, prohibited the inclusion of any optional time provision in any contract of affiliation between a network organization and a standard broadcast station. As amended on October 11, 1941, said paragraph, as stated in said complaint, prohibits the inclusion of an optional time provision in any contract of affiliation valid as against any other network organization, national, or regional. Said paragraph, as amended, moreover, prohibits a station from agreeing to clear its time of nonnetwork programs for NBC upon less than 56 days' notice. The same paragraph prohibits any option provision in any such contract which may 'prevent or hinder the station from optioning or selling any or all of the time covered by the option, or other time, to other network organizations.'

"Said paragraph 3.104 divides the broadcast day into four segments (8 a. m. to 1 p. m.; 1 p. m. to 6 p. m.; 6 p. m. to 11 p. m.; 11 p. m. to 8 a. m.) and permits a station to agree to clear time of nonnetwork commitments upon 56 days' notice, so long as the time subject to call on this so-called option does not exceed a total of 3 hours within each of said four segments.

"The effect of the amended paragraph 3.104, like that of the original, will be destructive of nationwide network broadcasting, to the detriment of the other radio services supported thereby. The vice of this amended paragraph is its failure to recognize that national network organizations must be able to clear time on affiliated stations in order to render a nationwide service and that the identity or character of the organization which interferes with such clearance is immaterial. In addition to NBC there are at present two nationwide networks, one operated by Columbia Broadcasting System, Inc., and the other by Mutual Broadcasting System, Inc., as well as a number of regional networks, and each of these networks, whether national or regional, will be able to block an NBC network program under the amended order.

"In operating under the order, NBC would be forced to negotiate a sale of network time to a national advertiser, for example, on the blue network, upon an 'if, as, and [fol. 241] when' basis with respect to each of the 99 affiliated stations until all of the stations indicated that the particular time desired by the advertiser would be available.

"National network advertising contracts are customarily entered into for a period of 1 year, subject to the right of the advertiser to cancel at the end of any 13-week period. Under the Commission's order, before NBC could agree to enter into an advertising contract with an advertiser for a commercial program, it would first have to communicate with each station to determine whether such station had available the particular period of time desired.

"At the present time an advertiser using the red network during the valuable evening hours is required to contract for the use of a minimum of 50 stations, of which only 6 are operated by NBC itself. Consequently, if optional time is prohibited, each and every advertising contract negotiated for such hours on the red network would require negotiation by NBC with a minimum of 44 stations. In the normal course of its business, each of these stations would, under the Commission's amended order, be scheduling the programs of other networks. Despite these conflicting demands, therefore, NBC would have to obtain the unanimous consent of not less than 44 persons, firms, and corporation for each program scheduled.

"This problem is intensified in cases where the advertiser desires a lineup of 100 stations or more. The further fact must be considered that clearance must be accomplished for each of the many network programs broadcast. In order to save itself and its affiliated stations from damage, NBC would have to accomplish this feat a sufficient number of times annually to assure itself of a gross income of more than $17,900,000, which amount is spent in maintaining NBC's network and key-station broadcasting services inclusive of wire lines.

"Optional time is as necessary for the practical operation of network broadcasting as traffic lights are for the practical flow of vehicular traffic. The order is no more workable than an ordinance permitting each vehicle to operate the traffic lights to suit its own convenience, and the same chaos will result from its enforcement.

"Elimination of network optional time on a firm basis under the order of the Commission will cause irreparable [fol. 242] injury to NBC and its affiliated stations by making it financially and physically impossible to handle a sufficient volume of business to support the existing programs of the network organization. Abolition of such optional time will inevitably lead to increased expenses to NBC and its affiliated stations as well as a reduction in network revenue and a consequent diminution in the quality of programs, thus setting in motion a vicious descending spiral. Such injury will result from the Commission's order even though NBC and its affiliated stations take no action other than to amend their respective affiliation contracts so as to bring them into conformity with the Commission's order.

"The requirement that the station may agree to clear its time of nonnetwork programs only upon 56 days' notice will have the practical effect of an absolute prohibition against network optional time. It is a matter of common knowledge in the advertising business that national advertisers insist that a specific advertising program be placed before the public shortly after the contract is signed. This insistence is not peculiar to radio advertisers. For example, magazines having a national circulation have found it necessary to shorten the period between the deadline for advertising copy and publication.

"The 28-day notice required in existing option-time provisions was not determined theoretically, but is the result of an experienced balancing of the needs of the stations and needs of the advertisers, since the networks must satisfy the legitimate needs of both in order to exist. The 56-day period flagrantly disregards the practical necessities of the advertising business. National network organizations will have to satisfy the advertisers by clearing time on less than 56 days' notice under penalty of losing to competitive advertising media the revenues which support the existing broadcasting services. As a result, NBC will have to negotiate for time on its affiliated stations on the basis of the 28-day notice period which has resulted from experience and in so doing will be unable to clear such time as against local commercial programs, local sustaining programs and other nonnetwork programs, any one of which may defeat the scheduling of a network program.

"The inevitable consequence will be the destruction of nationwide network broadcasting to the irreparable injury of NBC."

COLUMBIA BROADCASTING SYSTEM, INC. *v.* UNITED STATES OF AMERICA, UNITED STATES SUPREME COURT, OCTOBER TERM, 1942

CASE NO. 555

(Extract from affidavit of William S. Paley, president, Columbia Broadcasting System, Inc., sworn to October 30, 1941, record pp. 238–241)

"THE PROHIBITION AGAINST EXCLUSIVE OPTIONS

"Rule 3.104 contained in the order of May 2, 1941, prohibited the station from granting the network an exclusive option upon a certain portion of the station's time. It read:

" '3.104. No license shall be granted to a standard broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which prevents or hinders the station from scheduling programs before the network finally agrees to utilize the the time during which such programs are scheduled, or which require the station to clear time already scheduled when the network organization seeks to utilize the time.'

"By the order of October 11, 1941, this rule was amended to read:

" '3.104. No license shall be granted to a standard broadcast station which options for network programs any time subject to call on less than 56 days' notice, or more time than a total of 3 hours within each of 4 segments of the broadcast day, as herein described. The broadcast day is divided into 4 segments, as follows: 8 a. m. to 1 p. m.; 1 p. m. to 6 p. m.; 6 p. m. to 11 p. m.; 11 p. m. to 8 a. m. Such options may not be exclusive as against other network organizations and may not prevent or hinder the station from optioning or selling any or all of the time covered, by the option, or other time, to other network organizations.'

"Rule 3.104 as amended continues the absolute prohibition against the giving by stations of exclusive options to networks, but provides that an option, not exclusive against other network organizations, may be given by a station to national or regional networks (all the rules are made applicable to regional networks as well) for the broadcasting of network programs during not more than 3 hours in each of the 4 segments into which the broadcast day is divided. The order defines an 'option' as—

" '[fol. 243] any contract, arrangement, or understanding, express or implied, between a station and a network organization which prevents or hinders the station from scheduling programs before the network agrees to utilize the time during which such programs are scheduled, or which requires the station to clear time already scheduled when the network organization seeks to utilize the time.'

"When a network's option upon the time of a station ceases to be 'exclusive as against other network organizations,' it ceases to be an option. It becomes a mere opportunity for the network to offer a program or program series to the stations and try to conclude a contract with enough stations in important markets to satisfy the advertiser. The Commission's October opinion on rehearing relates:

" 'The Commission is not convinced by the contention of NBC and CBS that the optioning of time by networks is indispensable to network operations, particularly since the chain broadcasting regulations, neither in their original form nor as herein amended, place any restrictions on the bona fide purchase of station time by networks. Networks have heretofore successfully operated without option time. However, it is clear that some optioning of time by networks in order to clear the same period of time over a number of stations for network programs will operate as a business convenience.'

"This 'nonexclusive option' will not enable networks 'to clear the same period of time over a number of stations for network programs.' If Columbia's option during the period from 8 to 10 p. m. on a Tuesday evening means that the time of the outlets is available for Columbia's sponsor provided that five other network organizations (national and regional) do not make the station contracts first, then Columbia must contract with its sponsor subject to a sheer gamble that the time can be cleared and the advertising contract performed.

"The prohibition of exclusive option time will make the clearing of time for the arrangement of a national network program an almost impossible task. Advertisers do not determine to use network broadcasting to sell their products only 24 hours prior to the time of the program. It sometimes takes months of planning, market study, and research [for. 244], program planning and negotiations before an advertiser decides whether or not to use network broadcasting and thereafter what stations and programs to utilize. The national advertiser must have nationwide coverage, both because he sells nationally and because he must give substantially the same support to the distributor and the retailer in all parts of his territory. Advertising efforts must be carefully and scientifically planned. Frequently they are related to an advertiser's whole manufacturing and merchandising operations as much as a year in advance. Under such circumstances it is practically impossible to sell an advertiser the use of networks, a program idea, program talent, and the like, when the network is not able to know and inform the advertiser in advance, what stations and what time the network has to offer; in short, what circulation he could get for the money he would spend. Under the rule in question, the network might spend months of effort in convincing the sponsor, in helping him select the territory in which to broadcast his program, the stations to utilize, the character of the program, and the talent, and then find itself unable to provide either the stations or the time desired by the advertiser in the markets which he desires to cover.

"It would be impossible in practice to operate a network such as that of CBS if CBS did not know in advance what circulation it could deliver, what stations it had to offer and what time on those stations was available for use by prospective advertisers. This is precisely the kind of assurance the visual media are able to provide and the kind of assurance which the advertiser requires before he is able to make any intelligent selection of his medium, before he does, in fact, select his medium.

"NOTICE TO AFFILIATES OF NETWORK COMMERCIAL COMMITMENTS

"Existing contracts provide that the affiliate may require not less than 28 days' notice from the network before the affiliate will be called upon to broadcast a network commercial program. Amended rule 3.104 provides that the period of notice shall be increased to 56 days, and the Commission explains (exhibit C to verified complaint, p. 8).

" 'This lengthening of the call period will give stations greater freedom in scheduling local and non-network national [fol. 245] programs during the hours of the broadcasting day which are subject to network option; for such programs, even though subject to be moved, may be assured of at least 8 weeks of continuous broadcasting. Nor does it seem that the increase in the call period will seriously affect national network business: for the national networks have pointed out that theirs is a long-range business and that large-scale national advertising network programs are usually planned and arranged for many months and even a year or two ahead of the actual commencement of the brodcasts. Under such circumstances, it does not appear that a 56-day call period will impose any serious hardship upon national network operations.'

"In the foregoing the Commission strikes a needless blow at the flexibility of the highly competitive network advertising business. I have already pointed out the frequent need for the ability to negotiate with advertisers well in advance with the assurance of being able to deliver if we make a sale. On the other hand, a variety of reasons in the industrial world will cause advertisers to desire to start an advertising campaign swiftly. Newspapers and magazines will continue to be able to accomomdate such advertisers, whereas network broadcasting will be working under an unnecessary handicap which will weaken it in competition with other media and cause it to lose important business."

Senator POTTER. We will recess until 2:30 this afternoon, and I believe it would be desirable if you and your colleagues could return at that time for any questions the committee might have.

Mr. MOORE. Thank you very much, Mr. Chairman, for your courtesy.

(Whereupon at 12:30 p. m., a recess was taken to 2:30 p. m.)

AFTERNOON SESSION

Senator POTTER. The committee will come to order.

Mr. Moore, as the committee recessed this morning, you had concluded your statement. Dr. Turner, I believe, was going to advise the committee as to certain legal matters—or at least give a summation of his brief. So Dr. Turner, if you care to do that now, and Mr. Moore, if you or your other colleagues care to add anything to Mr. Turner's summation, feel free to do so.

Mr. MOORE. Thank you very much, Mr. Chairman.

Senator POTTER. Dr. Turner.

STATEMENT OF DR. DONALD F. TURNER, COUNSEL, KTTV

Dr. TURNER. Mr. Chairman, I will first identify myself. My name is Donald F. Turner. I am on the faculty of the Harvard Law School where, among other things, I teach a course in antitrust law. I also, a year or two ago, served as a conferee of the Attorney General's Committee To Study the Antitrust Laws, the committee which subsequently issued a report.

I would like, before going further, to merely restate the obvious; first, the views that I express are my own and are no way attributable to the institution with which I work; and second, as Mr. Moore pointed out, that I was retained by him to consult on the antitrust aspects of the TV industry.

Senator POTTER. Have you done any legal work for the television industry or television personalities in the past?

Dr. TURNER. I have not, sir, up until this time.

I had intended to start off with a discussion of the point raised by Senator Bricker concerning the public utility aspects of the TV industry. Since he isn't here, I think I will wait.

Senator POTTER. I think it might be better to wait until Senator Bricker arrives.

Dr. TURNER. I won't further summarize the information and facts concerning the industry which Mr. Moore put before you this morning, as to the nature of the restraints in the TV industry and as to the adverse effects which these restraints have on such groups as independent stations, small advertisers and independent program producers.

In my opinion, the facts which Mr. Moore presented, if true, would lead me to say there are violations of the antitrust laws in these TV industry practices, and I would say so without having any particular need to cite specific cases.

However, in the supplement that we have submitted we have given a brief resume of the particular cases on the basis of which we conclude that the time option and the "must-buy" practices of the TV networks do violate the antitrust laws. In particular we have discussed what to us is a striking analogy, namely, the movie industry, where the legality of comparable practices has been thoroughly adjudicated and they have been held to be illegal.

Very briefly, the time option is virtually identical with block booking. And the "must-buy" policy adopted by the networks through an agreement, express or implied, with their stations, is very similar to the master or chain agreements negotiated between movie distributors and chains of movie theaters.

In the Paramount case and in the Griffith case, which we have cited in our discussion, the Supreme Court made it clear that the vice of both of these restrictive agreements—block-booking of pictures and master or chain agreements with independent theater chains—the vice of both of these is that they enable, in the one case a particular picture and in another case a particular theater, to prevail, not on its own merits, but on the back, so to speak, of other pictures or other theaters to which it is tied in.

Now we think it is fairly clear from a close reading of the Supreme Court opinion in the Paramount case that block-booking is simply illegal per se, under the Sherman Act. There is no need to inquire as to justification or business reasons or anything else. The kind of agreement where a person can get one picture of particular merit only on the condition that other pictures be taken with it is just simply illegal. Attempted justifications were made in these cases. Columbia Pictures, in the Paramount case, vigorously argued that block-booking should be left available to them because this was the only way that they could effectively compete. The Supreme Court's answer to that was that such a business justification could not prevail in the face of the Sherman Act's prohibitions on restraint of trade of this type.

Senator POTTER. Dr. Turner, do you have any ideas as to why time option and "must-buy" agreements have not been tested or challenged in the courts?

Dr. TURNER. I don't know for sure, Senator. I would guess that the Department of Justice has not moved against these practices because of the overhang of the chain broadcasting regulations, which purportedly justify the time option. The regulations do not mention as such, or have any reference to the "must buy," but I would gather—and I did make a quick reading of Judge Barnes' testimony of a few weeks ago—the Justice Department is not exactly sure as to its power to proceed initially against the TV industry without having these practices tested first before the Commission.

Mr. COX. That is, there is a problem as to who has primary jurisdiction?

Dr. TURNER. That is right. As to the applicability of the antitrust laws to the TV industry, some doubt has been raised as to that. In my opinion, without looking at it too closely, it seems to me clear from the statute, particularly in comparison with other regulatory statutes, that the application of the antitrust laws to broadcasting, radio and TV, is specifically reaffirmed in the act, so that in any event, it seems to me that it can be argued, to say the least, that the Federal Communications Commission itself has no power to ratify practices which the antitrust laws would prohibit. In other words, I think, in view of the legislation, they would exceed their powers in attempting to do so.

As to the next question, as to whether the Department of Justice could move independently, I am just not in a position to say. My offhand guess would be that this would be a case of what is called concurrent jurisdiction; that the Justice Department could, if it wanted to, proceed independently.

That may not be wise. It might be much better, in view of the fact that practices get woven into a web, which deeply involves a chain regulation, to work cooperatively with the Federal Communications Commission.

Senator POTTER. Dr. Turner, did you have any other points that you wanted to raise in your summation, or are you ready——

Dr. TURNER. I would like to make a few more points. One is in connection with the approval of the time option in the chain broadcasting regulations. I want to point out, as we do in our memorandum, that this was done 7 years before the decisions of the Supreme Court in the big movie cases, and we think there is considerable doubt that the Commission would have taken this step if it had had those decisions before it.

Now, in the memorandum we have submitted we have discussed the case largely in terms of the movie cases, which we think cover this situation like a blanket.

I might just suggest that the effects of these practices—the legality of the practices themselves, is extremely doubtful, to say the least, regardless of how you look at them. The effects, as Mr. Moore pointed out, of the time option are very similar to those of exclusive dealing arrangements, which are often practiced in industries in general, and the effect is to foreclose independent program producers and small advertisers from many markets in which they would otherwise be able to enter.

Now, exclusive dealing is specifically dealt with in section 3 of the Clayton Act. There is some doubt that the Clayton Act applies to the sale of advertising. It may be limited to goods. But in any event, a restraint which goes far enough would violate section 1 of the Sherman Act, even if you couldn't bring it within the terms of section 3, and where you have, as you do have here, virtually 95 percent foreclosure of prime TV time, it seems to me unquestionably that this would be held to be an undue restraint under section 1 of the Sherman Act.

Secondly, the "must-buy" arrangements, as Mr. Moore has very clearly pointed out, foreclose independent TV stations from access to programs, and again foreclose small advertisers from an opportunity to purchase prime television time. Again we would conclude that, even apart from the movie cases—I mean just on general antitrust principles—this would be clearly an unreasonable restraint of trade.

We believe that under the movie cases these practices would be unreasonable per se; as I said, no question of business justification would come in. I do not think, however, it is particularly important as to whether they are or are not per se violations of the antitrust laws. In any event, whenever you have a restrictive practice indulged in by groups wielding the economic power that the networks wield, even if you say, "Well, they are not illegal per se," under these circumstances where a group with great power is indulging in restrictive practices, they would be held to be unreasonable restrictions of trade even if not per se, even regardless of who was doing it.

In that connection I might just briefly discuss the so-called rule of reason. I want to express my own opinion, which I think the Attorney General Committee's report fully supports, that the rule of reason does not permit any arguments as to the benefits to be derived from the monopoly power or from restrictive practices—any arguments to the effect that the units involved have performed well. The courts have repeatedly said that the Congress and the antitrust laws did not permit good trusts and only strike down bad trusts. Congress struck down all trusts, and the only avenue of evidence, in my opinion, that the rule of reason opens up is not evidence as to whether the performance has been good, but evidence as to whether, in fact, the restraints that are being attacked are undue restraints.

Now the leading rule of reason cases, the old Chicago Board of Trade case and the Appalachian Coals case, in the depression, both really went on the ground, not that these were serious restraints which business justification would permit, but on the ground that they were not serious restraints.

In the Appalachian Coals case, for example, the Court said that they would permit the joint selling arrangement which the coal producers there entered into because the record showed that this joint selling effort would have no effect on price whatsoever because of the strength of remaining competition. Moreover, the Court directed the district court in that case to retain jurisdiction and see if in fact the arrangement that was there being attacked by the Government would have a substantial effect on price—the implication being that if it did, then it would be illegal, regardless of all of the cries that were raised that restrictions were necessary because of an acute depression condition.

Mr. Cox. Then you would feel no restraint that is 95 percent effective could be defended?

Dr. Turner. Absolutely not. As in any antitrust situation, you can always go back and extract bits and pieces from cases and attempt to build a defense. In my opinion, a defense of the practices that are involved here would be a fairly flimsy weapon.

In this discussion, of course, I mean our conclusions are all predicated on the assumption that the Federal Communication Commission lacks the authority under the act to protect practices which would otherwise violate the antitrust laws.

Senator POTTER. That they do not have the authority?

Dr. TURNER. That is right.

Senator POTTER. It was predicated on that basis?

Dr. TURNER. That is right.

Mr. COX. Except, of course, in common carrier instances.

Dr. TURNER. That is right, but it would not apply here.

That is as far as I care to go on the subject.

Mr. COX. Do you want to put into the record your answer as far as Senator Bricker is concerned?

Senator POTTER. I think it would be desirable, I know I would like to hear Dr. Turner discuss that question, too, and if you would care to discuss it now, and when Senator Bricker arrives, if he would care to have you discuss it later, I am sure you would like to do that.

Dr. TURNER. I would like to say one more thing that I forgot before I go further in connection with TV practices, and that is that it is extremely important to notice they are collective. That is, the power that the networks wield is not the power of a single individual, but the power based on the fact that a whole collection of TV outlets, namely, their stations, have aggregated together. In other words, it is a combination, and as cases like Associated Press make clear, it seems to me, it would not be necessary, to show violation of section 2 of the Sherman Act, to show that this group had monopoly power in the sense that they were the only unit in the industry. It is sufficient to show that they have substantial power, and it seems to me that that cannot be denied in the TV situation.

Collective restraints—collective practices which tend to foreclose competitors from a market—have in effect been ruled illegal per se by the Supreme Court. In the Columbia Steel case, the Court said as much; collective agreements of this type are simply illegal per se.

With regard to the question raised by Senator Bricker, he asked me to comment on the public utility aspects of networks and television and industry in general.

I would say this: First, there is clearly no doubt that the TV industry is clothed with a public interest or affected with a public interest, sufficient to warrant public utility type regulation, if that were deemed appropriate. Moreover, if the network claims, as I understand them, were taken at face value—namely, that restrictions and a high degree of market power is essential to the functioning of the TV industry—if these claims were taken at their face value, then it seems to me that the networks have simply made a case for public utility regulation.

Historically it seems to me the approach of the Congress has been this: That primary reliance shall be placed on competition. The Sherman Act and other antitrust laws are the fundamental part of our Federal economic regulation and express the hope that, in the vast majority of situations, if you preserve competition in industry, competition in the market place will take care of itself. It will prevent the arising of undue market power.

On the other hand, in situations where competition for one reason or another cannot work, as in the utility field—the gas, electric light, railroads—the Congress has taken the position that you cannot have competition if you cannot rely on it; then you must regulate it because high degrees of market power cannot be safely left in private hands.

To use a phrase that somebody has used a great many time, a monopoly cannot be allowed to be a judge in its own case.

One of the fundamental reasons for this is that where you do not have the economics of competition—the economics of the market place—there is no effective way of telling just how good the performance of the monopolist is. There is no measuring rod, in short, because you do not know how progressive the industry would have been, what the prices would have been, what the product improvements would have been, if there had been competition. There is no way of telling.

Senator POTTER. Doctor, could you regulate the networks without regulating the advertisers?

Dr. TURNER. Well, you are now raising or dipping into some of the reasons why, in my opinion, it would not be wise to rush pell mell into public utility regulation.

The point I was about to make was this: That utility regulation, as we all well know from the history of attempting to regulate railroad rates, electric utility rates, and so forth, is a rather unhappy alternative. It immerses the Government into the day-to-day operations of an industry. It requires more and more detailed regulations which may hamstring efficiency, remove incentives to efficiency. So long as you operate on the general principle that rates should be set to permit a profitable return, you diminish incentive to improve. In short, public utility regulation, or detailed regulation of that kind, is an alternative to be avoided whenever possible.

Our answer with respect to the TV industry is that it is extremely unlikely—at least it has not been proved—that restraints of trade, high degrees of market power, are essential to behavior of this industry in the public interest. There are a good many ways in which competition could be reintroduced in this industry, strengthened and improved. The prospect of satisfactory operation in the TV industry under these circumstances is sufficiently good that we believe this ought to be the course that Congress should take, because what we have now is a situation where there have been very serious restraints imposed and they are the kind of restraints that probably have the effect of a vicious circle. The greater the damage to independent producers, the less likely it is that new independent producers will come in and the more likely it is that independent sources of programs will dry up. This puts additional pressure on independent stations. It makes it even more important that stations having an affiliation retain that affiliation. In other words, the whole effect of these restraints is cumulative, and if allowed to go on, it would mean that 3, 4, 5 years from now you would probably have a much tighter, more controlled industry than you now have. We believe that if these restraints were removed they would have the effect of multiplying, over the course of time, the numbers of independent film and other program producers, that the increased sources of programs would enable independent stations to survive and improve, would make the importance of network affiliation considerably less, and to the extent that it make it possible for more and more advertisers to come in and sponsor programs, would probably make economic the creation of additional TV stations. That is, it would become then more profitable in areas which now have 1 or 2 stations, to put in an additional 1 or 2.

Senator POTTER. Is there a corollary between the Associated Press case where the courts forced the AP to make a service available to whoever could use the service? Is there a corollary between the Associated Press case and the distribution of network programs?

Dr. TURNER. There is a corollary to the Associated Press case, Senator, in terms of the situation, in several respects. First, you had in the Associated Press case, or in the newspaper industry, 2 or 3 news services. Access to one of those news services was almost essential. Access to AP, according to the findings of the court, if not indispensable at least was fairly important, and inability to purchase AP news would put a paper at a competitive disadvantage.

The effect of the bylaws in the Associated Press case which prevented nonmembers from dealing in AP news, and which restricted their membership, where they were competitors of existing members, was to put pressure on competing papers. Moreover, and the court stressed this very much, it made it much more difficult for newspapers to spring up.

As to what the court provided, the only part of the decree that is significant here is that AP was not required to take in everybody. They were, however, required to admit members without taking into consideration in any way the fact that they were or were not competitive with existing members. In other words, the court did not go to the extent of putting AP in a public-utility category.

Mr. COX. You have this distinction, don't you? In that case, of course, it was quite feasible for three newspapers in a market to publish stories based on AP service, whereas in the TV field the advertising would only be paid for once, and therefore, there is not equal policy reason for providing access on equal terms to this program by all stations.

Dr. TURNER. Yes. Not only that, you could always give AP service in a town with 3 papers and it would be hard for 1 town to have 3 TV stations receiving the same network service. As a matter of fact, there are many reasons why this would not be done.

Mr. COX. Is it your reasoning on this public-utility concept that, in the absence of some showing that restraints are necessary in order to permit a national system of television, it would be preferable to leave TV to unrestrained competition, rather than to seek to improve regulation of rates and other matters.

Dr. TURNER. Positive regulation, that is right. It seems to me, particularly in this field where you have an informational medium, you are walking on pretty dangerous ground when you start to set up fairly complete regulations. My feeling is that this should be avoided if at all possible—that competition should be tried. If it ultimately proves unfeasible, that is something else again, but regulations should not be tried until that time.

Senator POTTER. Do you have have any questions, Senator Pastore?

Senator PASTORE. No, sir.

Senator POTTER. Do you plan on staying for the balance of the afternoon, Mr. Moore, Dr. Turner?

Dr. TURNER. Yes; we can do that.

Senator POTTER. I know Senator Bricker has another committee meeting, but he does plan on returning this afternoon. I know he has some questions that he wants to discuss with you. So if you could stay I think Mr. Cox has a few more questions he would like to take up with Mr. Moore. If you have no further testimony to give, you could stand by. If Senator Bricker does come, I know he is very desirous of discussing some of these legal questions with you.

Mr. MOORE. We would be very happy, Mr. Chairman.

If it should be inconvenient this afternoon I would be glad to return tomorrow or the next day if the committee so wishes.

Mr. COX. I have one question for you, Mr. Moore, and that is, what you think would be the result of the proposed amendments that you suggest to the chain broadcasting regulations, in terms of the continued function of the network. That is, would the network continue to play an important time-clearance function, within the 75-percent limitation that you suggest—Would it continue to play a role in the producing of television programs?

Mr. MOORE. I think the networks most certainly would, Mr. Cox, within the limit of their 75 percent. I think they will continue to play a program role and a clearance role which would be successful—could be successful to the maximum of the 75 percent, and where it was less than that, it would be because there was a rival competing unit seeking the same clearance. Therefore, the networks, within that framework, have plenty of room to maintain their economic position, but we would expect that with the spur of program competition from other sources, that perhaps we could look toward improvement not only of network program service, but of the independent program service as well.

I think that in regard to clearance some mechanism would spring into being very quickly, which would make it convenient for advertisers to make inquiry for this competitive clearance through some kind of a central teletype headquarters in New York which could communicate with all stations in every market. You might find an advertiser who had a program who might prefer, in each market, to communicate with all stations, asking them to submit the best possible time schedule. At the same time, the network might be inquiring in that market of its affiliate for clearance of its show in perhaps the same time. Therefore, we would have a very simple and very effective form of competition, and to the extent the network programs are of high quality they would succeed, and I think we would have a very fine three-network service, or more.

Mr. COX. But this would be a situation in which the decision in each case was left to the station licensee as to what program, and what time for that program, he thought was best in his community?

Mr. MOORE. Exactly.

Mr. COX. One other question, either for you or Professor Turner. Do you think that indirect control of these matters, these practices, through FCC regulation simply of either network-owned and -operated stations or of the contractual arrangements entered into between independent licensees and the networks, is a sufficient protection of the public interest and a sufficient insurance of competition; or is there any chance that a more direct approach—authority to permit the FCC to regulate practices of the network in and of itself—would be appropriate?

Mr. MOORE. There is always the question of the administrative effectiveness of the regulation, but it would appear to me that the current framework within which the Commission operates would enable it to establish the regulations which would govern agreements between stations and network originating organizations, or even between stations and other originating organizations, in a way where the Commission could see to it that the licensee complied with the spirit and letter of the Commission's regulations and could see to it that the rules were complied with through its present control of the licensee. It may be, again, that in experience we would find that that was not sufficient.

I daresay that the extent of the network use of the option is greater today than the Commission thought it woud be when they approved present regulations, so we never know exactly what a set of regulations will bring about. But until experience proves the regulatory approach inadequate, I would think it should be tried.

Senator PASTORE. In a locality where you have two stations and each of them is owned by a network, how would you go to work?

Mr. MOORE. The network is a licensee of the station and as such it has the same responsibilities as any other licensee, which are, namely, to program that station in the public interest and convenience of the community.

I would think if we had a pattern, which actually we almost do now, where every station owned by a single licensee—in this case, a network—carried exactly the same programs at exactly the same time there would be a very strong inference that the schedule was determined on considerations other than the separate local interest of each community. The coincidence of each community, perhaps 3,000 miles apart, requiring exactly the same program schedule is almost too great a coincidence. Therefore, the network licensee, within the 25-percent limitation we have suggested, would operate like any other station in that it would accept the best programs it could obtain from nonnetwork sources. Within the 75 percent, where the network would be allowed to program its own programs, it would be subject only to the limitation that it truly present those programs for local reasons. If, as I said, 5 stations operated by a single network are all programed identically to a full 75 percent, I would think the Commission might consider that questions should be asked as to the identity of community interest in these 5 separate markets.

Senator PASTORE. Have you any opinion on how public policy is affected with relation to a network owning its own stations?

Mr. MOORE. Of course, we compete in Los Angeles with three network-owned stations, and I think the networks run fine stations.

Senator PASTORE. I realize that.

Mr. MOORE. But I do think this, that you will always have the question, in a case like that, as to which interest the station is serving. Is it serving the local community interest or is it serving the more general interest of the network? I think that is a line that should be watched, and it is one that has to be carefully drawn. As the owner of 1 station in 1 community, our company is in a position to make program and sales decisions purely with respect to that community. If we were mingling those decisions with business considerations that affected stations in other communities, we would be departing slightly from the pure responsibility to our own town. I think the network ownership of the station, therefore, should be subject, to boil it down, to the same kind of examination, periodically at renewal time, as any other licensee. The same standards for local programing and service to the local community should be applied to a network station like any other.

Senator PASTORE. You see nothing inimical to the public interest in allowing networks to operate their own stations?

Mr. MOORE. I see the potential, Senator Pastore. The actuality is one that would be the Commission's responsibility to determine.

Dr. TURNER. May I add something there?

It seems to me that it is inimical to the public interest if it goes too far. If, to take an extreme case, the networks were permitted, although they are not now, to own as many stations as they wanted to, and they took over all of their present affiliates, you would have precisely the same restraint that you now have via the medium of ownership rather than contract. This is one consideration. Second——

Senator PASTORE. But that is on a national level. Let's take it on a community level.

Dr. TURNER. Senator, with regard to the ownership of any single station it seems to me fairly important to examine what the nature of competition in that market is. If you have only one station in a particular area, then it seems to me it is very bad to have that owned by any one network because it is not subjected, in that market, to competition from anybody. In an area where you have a great many TV stations, the effect of network ownership of a single station is not so great.

Senator PASTORE. I am surprised to hear you say in communities where you have very many. There are only half a dozen communities that do.

Dr. TURNER. Precisely.

Mr. MOORE. Senator, I think the issue was well summed up years ago in a famous Variety headline which read, "Stix Nix Hix Pix," meaning the rural people didn't like pictures about rural communities, although they were popular in the cities. We find different tastes in different parts of the country. The same thing is true of a play that is a hit in one town and on the road it dies. Every station has a community to serve, and to the extent that one company would treat widely separated stations on a uniform pattern that would be, in my opinion, a departure from the responsibility imposed. To the extent that, on review, we find they are adapting their program schedule to the particular tastes and needs of the community, the multiple ownership by the network is not inimical. I think it is a matter of administration.

Senator POTTER. Mr. Moore, and Dr. Turner, I want to thank you for coming back this afternoon, and I hope you can stand by, in case Senator Bricker has further questions to discuss with you. Again, I want to thank you for a very comprehensive statement.

Mr. MOORE. Thank you.

(During the afternoon session testimony was heard from Mr. Ernest Lee Jahncke, Jr., vice president and assistant to the president of the American Broadcasting Co. His testimony, which related principally to allocations matters, is set forth in full in the volume on the

UHF-VHF Allocation Problem—Public and Industry Witnesses, commencing at page 752. However, he referred to Mr. Moore's testimony at two points. His comments in this connection were as follows:)

Mr. JAHNCKE. My name is Ernest Lee Jahncke, Jr.

I am vice president and assistant to the president of the American Broadcasting Co. ABC welcomes again the opportunity of testifying before this distinguished committee on the grave problem of television allocations.

In connection with the testimony of Mr. Moore, I would like to say that ABC would like to have the opportunity to speak to that testimony, and I understand we will have that opportunity at a later date when network practices are discussed.

Senator POTTER. That is correct.

Mr. JAHNCKE. However, I would like to make 1 or 2 observations at this time, if I may, as they relate to allocations, first of all, and they will all be made under the general point that I disagree completely with Mr. Moore's statement.

I think Mr. Moore has in great part presented the opinions of ABC, but he arrived at the wrong conclusions. I think everything he said is an effect, not a cause. I think it all stems from the economy of scarcity, of not enough outlets from the position of monopoly and duopoly that exists because we have not been able to have free access to the market place or enough TV stations to serve the public interest.

He cited that in radio you don't have these pressures only because the scarcity has been eliminated. I submit that the main concern of this committee is to eliminate that same scarcity. I submit that the various plans that have been proposed to solve this problem are not as different as has been suggested and that immediate action is absolutely essential.

Senator PASTORE. In other words, what you are saying, Mr. Jahncke, is that a lack of competition exists because of lack of facility rather than lack of regulation?

Mr. JAHNCKE. I think, Senator Pastore, that regulation stems from scarcity. You eliminate the scarcity, you eliminate the necessity for regulation—and free competition will act in the traditional American Government situation.

For example, ABC owns its own TV stations, but we operate only in markets that have at least three competitors, in addition to ourselves, and have since 1948. As a network operating individual TV stations we are just as concerned with our obligation to serve the public interest locally and nationally as any other licensee. We have competed in New York against 6 competitors; in Los Angeles against 6 competitors; in Chicago against 3; in San Francisco against 2, and now 3; and in Detroit originally against 2 and now 3.

Senator PASTORE. As contrasted with the situation in New York, what is your predicament in relation to localities where they only have 1 station or 2 stations?

Mr. JAHNCKE. We don't own any stations in such markets, sir; and we rarely if ever have the opportunity to have an affiliate in such a market.

Senator PASTORE. I am not speaking of affiliates. I mean insofar as your network activities are concerned.

Mr. JAHNCKE. Out network activity in respect to 1 or 2 station markets is a ceaseless activity, usually futile, to get access or persuade these duopoly markets to even schedule an ABC program.

I would like to refer to a couple of specifics in Mr. Moore's testimony. On page 11 of his testimony he listed 40 markets in discussing must-buy policies. I only mentiton it because I would like to read the 16 markets that are neither must-buys, nor any other buys on ABC. They are the 16 markets to which we don't even have access. They are Boston, St. Louis, San Diego, Louisville, San Antonio, Tampa, Rochester, Omaha, Syracuse, Oklahoma City, Sacramento, Norfolk, Providence, Davenport, Dayton, and Birmingham.

When we talk about competition—we don't compete in these places. We don't have equal access to these market places. I would like to refer to another part of Mr. Moore's testimony, on page 5, where he refers to his operation in connection with the Salk broadcast. I think KTTV's operation on that date was most commendable, but I make two observations: One, had it not been for the regular network use of A. T. & T. facilities, those facilities would not have been there, available and waiting, for Mr. Moore to buy them from Michigan to Los Angeles on that 1 particular occasion for 4 hours. A. T. & T. cannot maintain their lines for 4 hours a year. Secondly, I suggest that perhaps Mr. Moore's operation at that point was more in the nature of a temporary network, rather than as a poor lone independent station. We of ABC were happy to join in that network in both our Los Angeles and San Francisco stations, and, as my memory recalls, we did pay our proper share of the cost involved.

Senator PASTORE. With relation to these markets that you have just recited, including the city of Providence, how would that 75 percent rule that was suggested by Mr. Moore affect your network? Would it be bad, or wouldn't it have any effect at all?

Mr. JAHNCKE. Senator, I refer to that in my statement. I think any percentage figure is arbitrary. Mr. Moore chose 75 percent of 3 evening hours. Perhaps there are 4 or 5 or 6 evening hours, if we get 75 percent for 5 hours, perhaps it is more than any network is using today. I think, therefore, that any percentage figure subjects you to the arbitrary trap of substituting numerology for commonsense. As to whether—I don't think it is a question of whether the network uses too much. I think the network programs—I disagree with Mr. Moore, I don't think they are inferior. I think they are in the public interest.

I don't think that stations are fighting not to take network programs. Quite the reverse, as I understand it. Of course it is not my network, but stations find the privilege of being listed as a must-buy an important asset, which is another way of saying that they are very desirous and happy to take network programs. The very popularity of network programs seems to me suggests they are in the public interest.

Mr. COX. If they are listed as a must-buy, it relieves them of the obligation of selling their prime time, doesn't it, substantially—95 percent at least?

Mr. JAHNCKE. I didn't quite get that, Mr. Cox.

Mr. COX. If the individual affiliate is listed as a must buy, by either NBC or CBS, to the extent that Mr. Moore's statistics are reliable as to the percentage of time cleared, they have been relieved of the necessity of selling their prime time?

Mr. JAHNCKE. In my opinion it is not a question of being relieved of necessity. When a station affiliates with a network, part of that arrangement is that the network acts as the national sales agent. And to be listed as a must-buy is a device between the sales agent and the advertiser, saying that the advertiser has to order. The station reserves its regular right as a licensee to accept or reject a program, depending upon whether, in its opinion as licensee, it is in the public interest. The must-buy is a pressure on the advertiser, not on the affiliate, who merely is in a position to enjoy the advantages and benefits, if it so wishes, as a licensee.

Mr. COX. The right reserved to the affiliate to reject, however, is not just that he doesn't think this is the most in the public interest, but that he thinks it is affirmatively contrary to the public interest, or that there is some peculiar local occasion which he feels requires the displacement of the program. Wouldn't that be a better description of the extent to which he can reject programs in option time?

Mr. JAHNCKE. I don't think that any stations have ever been reluctant to eliminate any program, network or local, for a program that, in its opinion, is more in the public interest.

Senator PASTORE. Let's get these things in their proper perspective. What you are actually saying, Mr. Jahncke, is this: That this must-buy aspect of this situation affects relationship between the network and the advertiser insofar as it regulates the amount of money that the advertiser has to pay and the quality of the program that you can put on the air, as to the distribution you can make of that program?

Mr. JAHNCKE. Well, Senator Pastore, I think that you do have economics coming in here.

Senator PASTORE. That is what I mean.

Mr. JAHNCKE. In that the number of outlets needed to justify the cost of a program—the number of outlets which, may I hasten to point out, practically every advertiser wants, because he needs a distribution—all are factors in this situation, but I would like also to point out that we are discussing "must-buy," which is a practice that doesn't obtain on ABC. I feel perhaps I should retreat from this discussion.

One last comment on Mr. Moore's testimony. On page 39, he speaks about the Lawrence Welk Show, which we are very happy to have the privilege of broadcasting in the public interest, and he says he regrets the public was deprived of the opportunity to hear and see this program because of network reluctance to schedule it. We are happy to schedule it, and I only regret that the public is still deprived in a great many places of the privilege of seeing the Lawrence Welk Show because we do not have access to quite a few markets for that program, which even Mr. Moore admits is completely in the public interest.

If I may return to my prepared statement——

Senator POTTER. What percentage of your class A option time do you program? I mean, what percentage of a class A time on your affiliate stations do you provide?

Mr. JAHNCKE. We——

Senator POTTER. I notice the percentage in Mr. Moore's statement of the four networks. I was wondering if your network was using up all of its option time.

Mr. JAHNCKE. No, sir; we are not using all of the option time. I think class A time is limited to those 3 hours that are optioned by law to the network. There is nothing illegal about network option time. Both the FCC and Justice Department, as I understand it, have ruled this is a perfectly legal arrangement. May I say I think we are innocent until proved guilty in this respect. Of the 3 hours that are optioned to us, we are not using all of them. Perhaps we could use more, if we were able to compete more totally with the other two networks—and by "compete," I mean have access to the market place. For example, Senator Pastore, we do not have access to Providence, R. I., and Mr. Chairman, we do not have access, or at least equal access, to places like Lansing, Grand Rapids, or Kalamazoo, Mich. We do compete, for example, in the Detroit area.

Mr. Cox. Of the programing which you do provide in option time between 7:30 and 10:30 or 7 and 10 in the evening, what percentage of that programing is normally cleared for you by the ordinary affiliate?

Mr. Jahncke. I do not like to identify any affiliate as ordinary. We love them all. We only regret we do not have enough of them. [Laughter.]

Mr. Cox. By a typical affiliate—or aren't they typical, either?

Mr. Jahncke. Our clearance on affiliates where we have full access to the market place is good, and comparable to the other two networks. I think it is good only because we program in the public interest.

Mr. Cox. Do you think that you would clear as high a percentage of that program time if your affiliate had the option to replace the program you offer with one from another source which he happened to think was better?

Mr. Jahncke. I do not quite follow that, sir.

Mr. Cox. That is, suppose that instead of having a clause in your agreement which says that you can, subject to very minor restrictions, require the affiliate to accept the programing you offer during option time, you didn't have that; do you think that there is a real possibility that some of your affiliates might find programs from other sources which they thought would attract more viewers and would be more in the public interest—not as a general rule, but as against certain programs which you offer?

Mr. Jahncke. Any program schedule is an average of its best and its worst. Perhaps it is reasonable to assume that any one person might be able to develop a program better than the worse of a given list of programs, but I think we get back, basically, to allocations here. We are talking about the fact that we only use 6 hours a day, or only have 6 hours a day option in the practical area, afternoon and evening. This is far from 90 percent of the station's time. I mean, after all, most stations are on the air from 8 in the morning until midnight. It is against this projection of 16 hours that maybe we should talk about 6 hours, or even 9 hours. It is not that great a percentage of the station's time.

Mr. Cox. We will reserve other questions. You may go on to your statement now.

(At a later point, after enumerating 13 cities among the first 100 markets in which VHF channels are still ungranted, Mr. Jahncke said:)

Mr. Jahncke. There is a partial answer to Mr. Moore.

All of these stations, if they ever commence operation, will be looking for programing that film syndicators can provide in addition to networks. There is only one solution and that is to overcome the scarcity of stations. As long as you have 1- or 2-station markets around the country, how can any film packager expect them to need the same amount of program service as is necessary to supply the needs of a market like Los Angeles, which has seven stations that have to be programed. The mathematics of it are simple.

(At the conclusion of Mr. Jahncke's testimony, Senator Potter inserted into the record certain questions propounded by Senator Bricker, as follows:)

Senator POTTER. Senator Bricker has some questions that he wants to submit for the record, so that Mr. Moore and Dr. Turner may have the chance to look over the record and submit responses to these questions, as related to the testimony that was given this morning.

They will be placed in the record at this point.

(The questions referred to are as follows:)

QUESTIONS FOR KTTV'S WITNESSES

1. From January 1, 1949, until April 1951, when you were affiliated with CBS and CBS owned 49 percent of the stock of your company, did you clear time for CBS network programs on a live basis?
2. Were you in charge of clearing time of KTTV for CBS programs during this period January 1, 1949, to January 1, 1951?
3. Can you indicate the number of CBS network programs, half or one-quarter hours, per week during each time segment which you cleared for CBS, and the number of half or one-quarter hours which were either rejected or cleared in another class of time?
4. Were difficulties between KTTV management and CBS management concerning time clearances the cause of the sale of CBS's 49 percent interest in KTTV and the cancellation of the CBS affiliation agreement?
5. During the period 1949 to March 1951 were intercity relay facilities available for simultaneous or live broadcast of CBS network programs?
6. Insofar as intercity relay facilities were not available, were your relationships with CBS on a per program film clearance basis?
7. Can you give a table of the number of one-quarter or one-half hours of CBS programs which were available per week during the period?
8. Can you give a table showing the numbers of class A CBS originations which you actually cleared in (*a*) KTTV class A time, (*b*) in another time period, (*c*) in class A time period of another Los Angeles station, and (*d*) not cleared in any Los Angeles station?
9. Can you give copies of KTTV memoranda and copies of correspondence with CBS which will show your clearance relationship?
10. Can you give the total weekly number of hours of CBS network programs available and the number of programs carried by KTTV during the period?
11. (*a*) Were the principles regarding clearance of network programs during any given time slot (versus the selection of nonnetwork programs or local programs) the touchstone of your relationship with CBS from 1949 to 1951?
(*b*) Describe the development of the relationship and the termination.
12. Can you give a table showing the number of class A Du Mont originations which you actually cleared in (*a*) KTTV class A time, (*b*) in another time period, (*c*) in class A time period of another Los Angeles station, and (*d*) not cleared in any Los Angeles station?
13. Do all Los Angeles TV stations have comparable coverage?
14. If the coverage of the Los Angeles stations varies, can you give us a table of the populations residing within the brade B contour and any other contour which CBS, other networks and national spot agencies use for each station in Los Angeles?
15. Would you give a résumé of the relative bargaining position of CBS and KTTV and Du Mont and KTTV, respectively (even though they involved different time periods—1949–51; 1951–54)?
16. Did the 5 hours of Du Mont programing represent as much weekly income for Du Mont during the period as the weekly revenue of CBS on account of the time cleared by KTTV for their respective network programs?
17. Will you give a table showing for each Los Angeles TV station class A national spot and class A network rate from 1949 to date?

18. Was Du Mont's percentage of participation in KTTV's rates the same as that of CBS?
19. Would you say that because of the lower percentage of commissions to national spot representatives and commissions to local agencies that KTTV's revenues were higher than the three affiliated stations?
20. Would you say that since your station operates longer hours than any other independent stations its revenues were higher than any other independent station?
21. Would you say that your expenses were higher for every nonnetwork hour of operation than for comparable hour of network operation?
22. (*a*) Is it fair to assume that affiliated stations which clear 80 to 100 hours of network programs per week have more income before taxes than your independent station which operates more hours?
(b) Is there any doubt in your mind that the CBS and NBC affiliates each make more income than KTTV?
23. Is it fair to assume that the great majority of three or more station market TV stations would choose the status quo if their mind was on the balance-sheet motive rather than the public-service motive?
24. Does this account in part or major part for solid support of major (3 and 4 station) market affiliates' solid support of the status quo—which is no regulation of network operations?
25. Do you think this accounts in major part for a general impression that any attack upon option-hours clauses will destroy the television industry and/or the networks?
26. Have you given any consideration to the amount of billings of the television networks as to the dominance of CBS and NBC over ABC, and formerly over Du Mont?
27. Do I understand that the option-time provisions of network contracts are prevalent in all TV networks?
28. If your assumption is correct that the option-clause provisions are absolute is it not true that a network control of its primary affiliate's time is as complete as if it owned the station?
29. When a network bids for a producer's show then is it true that it bids on the basis of the profit it can make on the aggregate timecard of all its affiliates, since it can control the clearance of time on all stations?
30. From a practical standpoint, NBC and CBS can control time on affiliates in 7, 4, 3, and 2 station markets for the purpose of outbidding independent stations; can they not?
31. Insofar as TV networks control time on affiliated stations, they are the same as time brokers for the sale of station time on each of their affiliates, are they not?
32. Your objection is not only to the licensee abondoning his responsibility to select programs at any given hour, which would best meet his licensee responsibility under the law, but also that its licensee responsibility is delegated to a nonresident network executive hundreds or thousands of miles away?
33. In your opinion, is it not also true that the coupon-clipping motive of the network executive hundreds or thousands of miles away is the deciding factor in the quality of programs which a large number of stations carry in their class A hours?
34. Since networks (in their network operations) are not regulated and their programs are not tested by the touchstone of the public interest, is it your opinion that the programing of a vast majority of TV stations are operating on no standard of programing except the network's balance sheet?
35. Do the networks not only have the option clause provisions but also have control of the talent for the time slots selected by them for balance-sheet purposes?
36. In your opinion, what is the proper denomination of program sales to stations by networks or independent producers?
(*a*) A per time slot or individual program basis?
(*b*) A series basis.
(*c*) A monthly basis.
(*d*) A quarterly basis.
37. If the option clauses are made illegal is it your contention that advertising agencies will not tie up stations instead of the networks? Explain how private enterprise would work in this instance.

(Following this, the hearing was adjourned until 10 a. m., Tuesday, March 27, 1956.)

TELEVISION INQUIRY

(Network Practices)

TUESDAY, MARCH 27, 1956

United States Senate,
Committee on Interstate and Foreign Commerce,
Washington, D. C.

(The committee first heard extensive testimony on allocations by William B. Lodge, vice president in charge of engineering, CBS television, which is printed in the volume on UHF–VHF Allocation Problem—Public and Industry Witnesses, at p. 786. Senator Potter, who was presiding, then made the following reference to matters concerning network practices:)

Senator Potter. I understand Senator Bricker has some further questions he would like to have submitted for the record to be answered by Mr. Moore. They will be placed in the record at this time.

(The questions referred to, which are a continuation of those propounded by Senator Bricker on March 26, 1956, are as follows:)

38. Does not the profit motive of producers always result in their making sales to stations, groups of stations or stations and networks which can provide the greatest revenue?

39. You have described the programs that KTTV lost to networks, as I understand because they can outbid independent stations. In your case they outbid you even on the basis of your buying the rights for several Western States. In your opinion with the option provisions made illegal, can you envision groups of CBS and NBC and their respective basic affiliates having enough common interest in capturing particular programs and providing for uniform time clearances?

40. Is a prohibition also needed so that program sales shall be made on an individual station basis?

41. If stations within the same market are not competitive in the number of people, viewers, or families served, will the larger coverage station not always be able to outbid the smaller coverage station for any program—be it network programs or programs of independent producers?

42. Will cancellation of network option clauses still leave the smaller (coverage) station at a competitive disadvantage in procuring programs for any given market?

43. If UHF stations located in the same markets with VHF stations have smaller circulation of people, or smaller than 100 percent conversions, such UHF stations cannot bid on a competitive basis with VHF stations for either network or independently produced programs?

44. Is it true that the committee cannot rely upon the elimination of the option clauses in network contracts alone for solution of the UHF–VHF problem in intermixed UHF and VHF markets?

45. Even with the option clauses eliminated, if a station in a large market (with a lower unit cost per thousand circulation) overlaps a smaller market station (higher cost per thousand circulation) will not the smaller market station always be at a competitive disadvantage with the large market station in bidding for network programs or independently produced programs?

46. Insofar as operation of a VHF station in the second or third ranking market (like Los Angeles) is concerned you have proven that you can outsell the competitive network-owned or affiliated stations. Now, can you visualize smaller market situations where network programing is essential for successful operation?

47. Insofar as networks are able to choose the largest market affiliates and reject small market affiliates, and thus deny the benefits of this mass program buying power and mass selling power to the latter, there is no comparable full time source of programing available as a substitute. Is it not true that the small market unaffiliated station is in a much less advantageous position for independent operation than 1 of 7 VHF stations in Los Angeles?

48. Would you agree that there is also a need to enforce the spreading of affiliation benefits of network buying of programs and selling of broadcast time to small market stations so long as the present network trade practices are permitted, or so long as the equivalent of multiple market buying of programs and multiple market sale of advertising exists?

49. It has been intimated that any interference with the networks' freedom to affiliate or not affiliate, to furnish programs or not to furnish programs, will precipitate Government regulation of station rates. From a legal standpoint, you state that the option provisions (legalized by the Commission's chain broadcasting rules) are parallel to block booking in the movie industry, which has been stricken by the courts. Do you know of any movie situation resulting from the court's striking down block booking where rates were prescribed by the Government for distributnon or showing of films to theaters?

50. Do you see anything peculiar to the broadcasting industry practices which would justify an assumption that if network option clauses are stricken it is necessary for the Government to prescribe rates for individual stations?

(Whereupon, at 4. 32 p. m., the committee adjourned to reconvene Wednesday, March 28, 1956, at 10 a. m.)

(Mr. Moore's answers to Senator Bricker's questions were received under a covering letter dated May 11, 1956, and were inserted in the record on June 11, 1956, with directions that they be printed at this point in the record. See below.)

Cox, Langford, Stoddard & Cutler,
Washington, D. C., May 11, 1956.

Hon. Senator Warren G. Magnuson,
Chairman, Senate Interstate and Foreign Commerce Committee,
Washington, D. C.

Dear Senator Magnuson: You will recall that, in the course of the television hearings before the Senate Interstate and Foreign Commerce Committee, following the testimony of Richard A. Moore, president of KTTV, Inc., on March 26, 1956, certain written questions were presented by Senator Bricker for reply by KTTV. These questions appear in the reporter's transcript for March 26 and 27.

Enclosed are the answers to Senator Bricker's questions prepared by Mr. Moore.

Sincerely yours,

Lloyd N. Cutler.

Replies by Richard A. Moore, President, KTTV, Inc., to Written Questions Submitted by Senator Bricker With Reference to the KTTV Testimony Presented to the Committee on Interstate and Foreign Commerce, March 26, 1956

1. From January 1, 1949, until April 1951, when you were affiliated with CBS and CBS owned 49 percent of the stock of your company, did you clear time for CBS network programs on a live basis?

Answer. During this period there were no A. T. & T. facilities connecting Los Angeles with the East on a live basis. Therefore, KTTV clearance of CBS programs was entirely on a delayed basis by kinescope recording, with certain rare exceptions where a live program was originated by CBS in Los Angeles and fed to the rest of the country by kinescope recording.

2. Were you in charge of clearing time of KTTV for CBS programs during this period, January 1, 1949, to January 1, 1951?

Answer. I had no connection with KTTV until July 2, 1951, and, therefore, no responsibility for any of its activities.

3. Can you indicate the number of CBS network programs, half or one-quarter hours, per week during each time segment which you cleared for CBS, and the number of half or one-quarter hours which were either rejected or cleared in another class of time?

Answer. At the outset of the CBS affiliation agreement, KTTV was telecasting 5 days per week, being off the air on Wednesdays and Thursdays. Under the affiliation agreement the CBS network had option time in the morning, afternoon, and evening, but as a rule nearly all the time requested for clearance was during the option-time period of 7 to 10 p. m. daily. Our records show no case where a CBS program was rejected.

A representative week has been analyzed for each of the years 1949, 1950, and 1951. During the representative week in 1949 (March 6 through 12), of the 60 quarter hours of option time available to CBS under its affiliation agreement, 19 quarter hours were devoted to CBS network programs, all during network option time.

During a representative week in 1950 (February 12 through 18) at which time KTTV was on the air 7 days per week, of the 84 quarter hours of option time available, 36 quarter hours were devoted to CBS network programs, during network option time, and 7 quarter hours were cleared for CBS network programing in other than network option time.

During a representative week of 1951 (March 18 through 24), of the 84 quarter hours of option time available, 57 quarter hours were cleared for CBS network programing during network option time and 35 quarter hours were cleared in other than network option time.

4. Were difficulties between KTTV management and CBS management concerning time clearances the cause of the sale of CBS's 49 percent interest in KTTV and the cancellation of the CBS affiliation agreement?

Answer. The sale of CBS's 49 percent interest to KTTV and the cancellation of the CBS affiliation agreement were not caused by any difficulties concerning time clearance. To our knowledge, the direct reason was the desire of CBS to acquire outright ownership of a station of its own in Los Angeles.

5. During the period 1949 to March 1951 were intercity relay facilities available for simultaneous or live broadcast of CBS network programs?

Answer. During the period 1949 to March 1951, there were no intercity relay facilities available for simultaneous or live broadcast of CBS programs in Los Angeles, since the transcontinental link was not completed until September 1951.

6. Insofar as intercity relay facilities were not available, were your relationships with CBS on a per program film clearance basis?

Answer. Intercity relay facilities were not available at any time during the CBS–KTTV affiliation. Since almost all CBS network programs originated in New York, the arrangement with KTTV called for our carrying of these programs on a delayed basis by kinescope recordings. In 2 or 3 instances, CBS network programs originated in Los Angeles, in which cases KTTV carried the program live, and the balance of the network carried the program by kinescope recording. The affiliation agreement between KTTV and CBS was a normal affiliation agreement, containing the usual provisions for network option time, rather than so-called per program affiliation.

7. Can you give a table of the number of one-quarter or one-half hours of CBS programs which were available per week during the period?

Answer. During a representative week in 1949 (March 6 through 12) 19 quarter hours of CBS network programs were available.

During a representative week in 1950 (February 12 through 18) 43 quarter hours of CBS network programs wers available.

During a representative week in 1951 (March 18 through 24) 84 quarter hours of CBS network programs were available.

8. Can you give a table showing the numbers of class A CBS originations which you actually cleared in (*a*) KTTV class A time, (*b*) in another time period, (*c*) in class A time period of another Los Angeles station, and (*d*) not cleared in any Los Angeles station?

Answer. (*a*) In the 1949 representative week, all of the 19 quarter hours cleared by KTTV for CBS programs were in class A time.

In the 1950 representative week, all of the 43 quarter hours cleared were in class A time.

In the 1951 representative week, 67 of the quarter hours cleared were in class A time.

(*b*) In the 1949 and 1950 representative weeks, all of the CBS programing cleared were in class A time only. In the 1951 representative week, 17 quarter hours were cleared in other than class A time, in addition to the 67 quarter hours which were cleared in class A time.

(*c*) So far as we know, no CBS programs were cleared on any other Los Angeles station during the KTTV–CBS affiliation.

(*d*) We know of no case where a CBS program was offered to other Los Angeles stations during the CBS–KTTV affiliation.

9. Can you give copies of KTTV memorandums and copies of correspondence with CBS which will show your clearance relationship?

Answer. We are not able to locate any memorandums or other material from these early days of KTTV operation relating to KTTV–CBS clearance relationship. However, the recollection of those persons involved in the clearance of programs was that the relationship was one of regular clearance of CBS program offerings by the station. In this early phase of television, there was a shortage of program sources, and KTTV was glad to clear network programs offered by CBS.

10. Can you give the total weekly number of hours of CBS network programs available and the number of programs carried by KTTV during the period?

Answer. During the representative week in 1949 (March 6 through 12), 4¾ hours of CBS network programing were available and cleared by KTTV.

During the representative week in 1950 (February 12 through 18), 10¾ hours were available and cleared by KTTV.

During the representative week in 1951 (March 18 through 24), 21 hours of CBS network programing were available and cleared by KTTV.

11. (*a*) Were the principles regarding clearance of network programs during any given time slot (versus the selection of nonnetwork programs or local programs) the touchstone of your relationship with CBS from 1949 to 1951?

11. (*b*) Describe the development of the relationship and the termination.

Answer. (*a*) The relationship with CBS from 1949 to April 1951 involved no problem regarding clearance of network programs. As indicated above, there was a scarcity of good programing material during this period, and KTTV was glad to accept programs provided by the CBS network. There were occasional questions concerning the selection of a time period, particularly during the period when KTTV was off the air 2 days a week, but generally speaking clearance satisfactory to both parties was readily achieved.

(*b*) In 1947, after KTTV, Inc., had received a construction permit from the FCC, the Times-Mirror Co. was approached by CBS to discuss the possibility of joint ownership. In due course an agreement was worked out whereby CBS acquired 49 percent of the stock of KTTV, Inc. Certain key management positions, such as the general manager, sales manager, and program director, were originally filled by former employees of CBS who resigned from CBS to take their positions at KTTV. Prior to going on the air, KTTV entered into an affiliation agreement with CBS.

Three or four months after KTTV began operations, which was January 1, 1949, Mr. Don Thornburgh, vice president of CBS, advised the Times-Mirror Co. that CBS was anxious to acquire outright ownership of a station of its own in Los Angeles and was actively seeking such a station. On December 31, 1950, CBS did conclude arrangements to acquire channel 2. Prior to that time, arrangements had been worked out whereby the Times-Mirror Co. had an option to buy back the CBS stock in the event CBS elected to acquire a station of its own. This option was exercised on December 31, 1950, and 100 percent of the stock of KTTV, Inc., has been owned by the Times-Mirror Co. since that date.[1] The affiliation agreement continued for 3 months thereafter until CBS took title and began operation of its own station, KTSL, channel 2.

While KTTV was a CBS affiliate, KTTV, Inc., also had an agreement with CBS whereby the CBS spot sales division represented KTTV. This agreement was terminated effective December 31, 1950.

The relationship between KTTV and CBS was cordial and satisfactory. Its termination was due primarily to the decision made by CBS shortly after the jointly owned station, KTTV, had gone on the air, that they would prefer to

[1] See footnote on p. 1476.

operate a CBS affiliate in Los Angeles which was fully owned by them. At one point, CBS indicated a desire to discuss outright purchase of KTTV. The Times-Mirror Co., however, did not desire to sell the station and does not desire to sell today.

12. Can you give a table showing the number of class A Du Mont originations which you actually cleared in (*a*) KTTV class A time, (*b*) in another time period, (*c*) in class A time period of another Los Angeles station, and (*d*) not cleared in any Los Angeles station?

Answer. (*a*) During the representative week of October 21 through 27, 1951, 17 separate Du Mont network originations were cleared in class A time, totaling 8¾ hours.

During the representative week of March 2 through 8, 1952, eight separate Du Mont network originations were cleared in class A time, totaling 4½ hours.

During the representative week of February 8 through 14, 1953, six separate Du Mont network originations were cleared in class A time, totaling 3 hours.

During the representative week of February 7 through 13, 1954, six separate Du Mont network originations were cleared in class A time, totaling 3 hours.

(*b*) During the representative week of 1951, the last half-hour of a Du Mont program that commenced in class A time was cleared in class B time.

During the representative week of 1952, seven Du Mont programs were cleared in other than class A time, totaling 3¼ hours.

During the representative week of 1953, no Du Mont programs were cleared in other than class A time.

During the representative week of 1954, three Du Mont programs were cleared in other than class A time, totaling 1½ hours.

(*c*) During 1952 and 1953 Du Mont made network broadcasts of certain football games which, because of the difference in time zone, reached Los Angeles at a time when KTTV regularly presented a Sunday church service. KTTV, therefore, rejected clearance of the football games but did make arrangements on Du Mont's behalf for the football games to be carried on KHJ–TV. To our knowledge these were the only Du Mont network programs which were cleared on a station other than KTTV during the Du Mont-KTTV affiliation.

(*d*) We know of no case where a Du Mont program was offered to a station or stations other than KTTV and where Du Mont was unable to obtain clearance on any Los Angeles station.

13. Do all Los Angeles TV stations have comparable coverage?

Answer. The seven Los Angeles stations, all of whose transmitters are located on Mount Wilson, do have generally comparable coverage within the Los Angeles metropolitan area.

14. If the coverage of the Los Angeles stations varies, can you give a table of the population residing within the grade B contour and any other contour which CBS, other networks and national spot agencies use for each station in Los Angeles?

Answer. Not answered in view of answer to question 13.

15. Would you give a résumé of the relative bargaining position of CBS and KTTV and Du Mont and KTTV, respectively (even though they involved different time periods—1949–51; 1951–54)?

Answer. Because good programs were scarce in 1949–51, KTTV was glad to include in its schedule such programs as CBS was able to make available. Hence, the question of bargaining balance between station and network was academic.

The KTTV–Du Mont affiliation did continue into the period when good programs from nonnetwork sources were becoming available. During this time, many programs of other networks were presented on a live basis in Los Angeles, but Du Mont refrained from utilizing the A. T. & T. transcontinental facilities and its programs were delivered wholly by kinescope. Generally speaking, these kinescope programs were not competitive with the rival network programs. KTTV found it increasingly important to rely on good filmed programs or local live programs as its principal means of competing with the other network stations. With increasing frequency, therefore, KTTV exercised its prerogative of scheduling live local programs or filmed programs in the best time periods, since the kinescope recordings of the Du Mont programs became unable to win local acceptance.

Inasmuch as Du Mont needed a Los Angeles release for the purpose of making a national network sale, we would say KTTV was more valuable to Du Mont than the converse. In suggesting that the affiliation not be renewed in 1954, Du Mont indicated that the increasing success of KTTV in its use of film and live programs was rendering the Du Mont programs of secondary importance to the station. They stated frankly that they would prefer another affiliate which would place greater reliance upon the Du Mont programs and would more readily clear such programs in the time periods requested by Du Mont. Thus Du Mont and KTTV agreed not to renew their affiliation, and Du Mont affiliated with KHJ-TV.

16. Did the 5 hours of Du Mont programing represent as much weekly income for Du Mont during the period as the weekly revenue of CBS on account of the time cleared by KTTV for their respective network programs?

Answer. KTTV was compensated for its time by the network but has no knowledge as to what compensation either CBS or Du Mont received from the sponsor for the network programs telecast on KTTV. Therefore, we have no exact way of knowing whether the Du Mont programing on KTTV represented as much weekly income for Du Mont as the CBS programing represented for CBS. However, as shown from the representative weeks of 1949–51, the number of hours of CBS programing carried by KTTV ranged from 4¾ hours to 21 hours per week, while the number of hours of Du Mont programing carried by KTTV as shown from the representative weeks of 1951–54, ranged from 3 hours to 8¾ hours per week. It would seem probable, therefore, that CBS, at least in the later phase of its affiliation with KTTV, realized more revenue for the sale of time on KTTV in 1949–51 than did Du Mont in the later period.

17. Will you give a table showing for each Los Angeles TV station class A national spot and class A network rate from 1949 to date?

Answer. The requested information is contained in the table set forth below.

Los Angeles television network and national spot rates (class A, or highest, 1-hour, 1-time rate)

	KABC (was KECA-TV) ABC network	KNXT (was KTSL)	KRCA (was KNBH) NBC network	KTTV CBS network	KTLA	KHJ-TV (was KFI-TV)	KCOP (was KLAC-TV)
January 1949:							
Network	(1)	----	$900	$500	----	----	----
National spot	$500	(1)	750	500	$250	$400	$450
January 1950:							
Network	900	(1)	900	750	----	----	----
National spot	500	(1)	500	650	350	210	450
		Du Mont					
January 1951:							
Network	1,650	600	1,650	1,600	----	----	----
National spot	900	600	1,000	1,000	750	750	750
		CBS network		Du Mont			
January 1952:							
Network	2,000	2,000	2,000	1,600	----	----	----
National spot	1,200	1,500	1,250	1,000	1,250	750	1,000
January 1953:							
Network	2,000	2,000	2,200	1,600	----	----	----
National spot	1,200	1,500	1,500	1,200	1,250	1,000	1,250
January 1954:							
Network	2,000	2,250	2,500	1,600	----	----	----
National spot	1,200	1,750	2,000	1,400	1,250	1,000	1,250
				Independent			
January 1955:							
Network	2,000	2,700	2,750	----	----	----	----
National spot	1,500	2,700	2,500	1,400	1,250	1,000	900
January 1956:							
Network	2,000	3,200	3,500	----	----	----	----
National spot	1,750	3,200	3,600	1,750	1,500	1,200	1,250

[1] No information available.

Source: Standard Rate and Data Service.

18. Was Du Mont's percentage of participation in KTTV's rates the same as that of CBS?

Answer. The compensation arrangement with both Du Mont and CBS provided for payment to KTTV of 30 percent of the rate applicable to the particular time period. KTTV has no information as to the percentage of the KTTV card rate actually retained by the respective network, since KTTV has no knowledge as to what compensation the network received from the advertiser.

19. Would you say that because of the lower percentage of commissions to national spot representatives and commissions to local agencies KTTV's revenues were higher than the three affiliated stations?

Answer. Each of the three network affiliated stations in Los Angeles is actually owned by the respective network company, and KTTV has no knowledge as to what sums are credited by the network to its own station which carries a network program. Therefore, an answer to this question could only be obtained by access to the actual figures of the three individual network stations which, we understand, are on file with the FCC.

The relative position of KTTV revenues is certainly affected by the fact that the 15-percent commissions to a local advertising agency are less than the probable 70 percent paid by an affiliate to its network (although we do not know for a fact whether the 70-percent figure applies to the network-owned stations in Los Angeles). Another factor affecting the size of KTTV revenues is the fact that KTTV generally sells both program and time in the prime hours, whereas a network affiliate in these hours sells only time, the program being supplied by the network. Incidentally, the commission paid to national spot representatives is not a factor in computing gross revenues since this is calculated as a sales expense chargeable against gross revenues in determining net revenues.

20. Would you say that since your station operates longer hours than any other independent station its revenues were higher than any other independent station?

Answer. KTTV does not have access to the revenue figures of other stations, but we believe that KTTV revenues are substantially higher than those of any other independent station in Los Angeles. We also believe that KTTV revenues are higher than those of any other independent station anywhere else in the country. The fact that KTTV operates more hours per day than other Los Angeles independent stations is a factor in this estimate, but we believe our gross revenue is also higher on an hourly basis.

21. Would you say that your expenses were higher for every nonnetwork hour of operation than for every comparable hour of network operation?

Answer. We believe our expenses are substantially higher for any hour of nonnetwork operation than for any comparable hour of network operation by other stations. Generally speaking, an hour of network operation for an affiliate requires only the throwing of a switch or the operation of a projector, but nonnetwork hours of operation usually require live production crews and talent or the rental of expensive films, or both. The need for selling, promoting, and servicing every hour of operation also results in a greater administrative overhead per hour for a nonnetwork station than for a network station.

22. (*a*) Is it fair to assume that affiliated stations which clear 80 to 100 hours of network programs per week have more income before taxes than your independent station which operates more hours?

(*b*) Is there any doubt in your mind that the CBS and NBC affiliates each make more income than KTTV?

Answer. (*a*) All statistics available to us indicate that stations affiliated with the major networks, even in cities half the size of Los Angeles, have net income before taxes substantially higher than that of our independent station, even though KTTV may operate more hours per day. While the KTTV gross revenues are probably higher than those of such stations (see answer to question 19), we understand that the net revenue before taxes of affiliated stations in middle-sized and large cities is usually much greater than KTTV's.

(*b*) There is little doubt in our mind (particularly after noting the information contained in Senator Bricker's report entitled "The Network Monopoly") that the net income of the CBS and NBC affiliates in Los Angeles is very substantially higher than that of KTTV. Yet KTTV employs more people than either of these stations, performs more live and remote programs, and presents more hours of programing per day.

23. Is it fair to assume that the great majority of three or more station market TV stations would choose the status quo if their minds were on the balance-sheet motive rather than the public-service motive?

Answer. We believe that the great majority of television stations are very conscious of their public service obligation. To perform this obligation, the station must first be able to stay in business and earn a profit. For this reason, we believe that in any market of three stations or more, each station would eagerly seek an affiliation with either CBS or NBC. However, we are convinced from conversations with various affiliated stations that while they would like to continue receiving network programs, they are now being urged to take more network programs than they want and they respond to such urgings for fear of losing their affiliation. We believe many affiliated stations would welcome a change in the status quo which would prevent the network from occupying as much time on the station's schedule as it does now and which would prevent the increasing likelihood that the network will try to occupy even more station time.

24. Does this account in part or major part for major (3 and 4 station) market affiliates' solid support of the status quo—which is no regulation of network operations?

Answer. We believe there is no evidence of solid support among major market affiliates for that feature of the status quo which enables a network to occupy not only network option time but substantial segments of station time. A general regulation which would place an affirmative limit on the amount of time any station, regardless of the number of stations in its market, could accept from a network, or which a network could furnish to a station, has never before been publicly proposed or discussed. We believe it is possible, if not probable, that such a change in the status quo would win the solid support of major market affiliates, at least if they could express their views in a way that would protect them from the displeasure of the network companies.

25. Do you think this accounts in major part for a general impression that any attack upon option hours clauses will destroy the television industry and/or the networks?

Answer. We believe that any general impression that an attack on option hour clauses will destroy the television industry and/or the networks primarily echoes a point of view expressed by the network companies themselves. The same predictions were made in 1941 (and later proved false by experience) when the radio networks were faced with loss of exclusivity in their network option clauses.

It is certainly true that under the status quo, affiliated stations, program producers and many advertisers must depend primarily upon the favor of network companies for their economic prosperity or survival. It would be understandable, therefore, if persons in that position refrained from taking a public position contrary to the position expressed by the network companies, or if such persons publicly supported the position of the network companies. Until the recent emergence of the independent television station as a factor in the industry, there was virtually no one who had an interest in disputing this network contention. The premise upon which KTTV bases its case is very simple: A network can succeed without the option time privilege if it produces programs which are good enough to gain acceptance on the basis of program quality; the elimination of option time will hurt a network only if its programs are so inferior as to be unable to gain acceptance without benefit of the compulsory clearance required by the option time privilege.

As to the network notion that elimination of its option-time privilege would destroy the television industry, such a contention can only be based upon a lack of faith in the American competitive system itself, or a lack of faith by the network in its own ability to compete. We contend that free competition will stimulate the networks to produce constantly better programs, just as it will stimulate all creative elements in the Nation to contribute to the quality of television programs. But if the networks lack in faith in themselves, feel that they cannot measure up to a competitive challenge and will therefore fail, it is utterly presumptuous for them to assert that the industry itself will fail. The true answer is that the American competitive system knows no indispensable man or indispensable company, and others would step forward to give the American public the fine television service they deserve and demand. Actually, we believe the networks will thrive and prosper under the spur of wholesome competition.

26. Have you given any consideration to the amount of billings of the television networks as to the dominance of CBS and NBC over ABC and formerly over Du Mont?

Answer. We believe that, particularly in the last year or two, the dominance of CBS and NBC over ABC, and formerly over Du Mont, has been given important impetus by the block booking arrangements whereby CBS and NBC, through their control of the time on affiliated stations, have been able to preclude ABC and Du Mont programs from exposure in important markets, or from exposure in acceptable time periods in these markets, regardless of the relative quality of the ABC or Du Mont program.

In the last year or two ABC, primarily by drawing upon the nonnetwork sources of programs which exist in the motion-picture industry, has developed programs which are capable of winning greater public favor than many programs presented by CBS and NBC. Yet these programs are blocked from exhibition in good time periods in many important markets. This impairs the financial ability of ABC to compete with the two senior networks and effectively denies to the public the opportunity to indicate its favor of these high-quality programs.

It is true that CBS and NBC have been ready to make substantial investment in programing and facilities, more so in the past than ABC or Du Mont. But NBC and CBS have been aided by a vicious circle, because it was patently unwise for ABC or Du Mont to make comparable programing expenditures when, by reason of restrictive block-booking agreements, these expensive programs were barred from release in many important cities in the land. In any event, ABC appears ready today to make expenditures comparable to those of CBS and NBC, but ABC still occupies a subordinate position by reason of testimony of Mr. E. L. Jahncke before this committee on March 26, 1956, where Mr. Jahncke pointed out the persistent failure of ABC to accomplish clearance for its programs in markets with only two VHF stations, utterly regardless of program quality.)

27. Do I understand that the option-time provisions of network contracts are prevalent in all TV networks?

Answer. KTTV does not have access to copies of network affiliation agreements, which are on file with the FCC, but not available for public inspection, but it is our understanding that all or virtually all such contracts grant the customary time options to the network companies.

28. If your assumption is correct that the option-clause provisions are absolute, is it not true that a network control of its primary affiliate's time is as complete as if it owned the station?

Answer. One means of obtaining an answer to this question is to compare the program schedule of a station owned by a network with the program schedule of certain basic affiliated stations which are not owned by the network. To the extent that the scheduling of network programs on both classes of stations may be identical, or nearly identical, it would appear that the network's program control over a nonowned station is the same, or substantially the same, as its program control over an owned station.

By way of example, we have examined the schedule of WCBS–TV, the flagship station owned by CBS in New York, during evening network option hours. We have also examined the published schedules of CBS affiliated stations in Detroit, Philadelphia, and Houston-Galveston, each of which is owned by a different licensee, for the week of January 19 through 25, 1956.

WCBS–TV, New York, grants 100-percent clearance to the CBS network programs from 7:30 to 10:30 p. m., Sunday through Saturday, 7 nights a week. WJBK–TV, Detroit, grants 100-percent clearance of the CBS network programs on the same schedule as WCBS–TV, New York, Sunday, Monday, Tuesday, Thursday, and Saturday. The Wednesday evening schedule follows the WCBS–TV pattern, except from 7:30 to 8 p. m. In this half hour, WJBK–TV presents a nonnetwork program, but it should be noted that the CBS network does not have a sponsor for this half hour and therefore did not offer WJBK–TV a sponsored program for clearance. On Friday, WJBK–TV follows the WCBS–TV pattern except from 7:30 to 8 p. m., when it carries another CBS network program in lieu of the CBS network program regularly scheduled at that time. To the best of our information, however, the regularly scheduled network program which might have been offered to WJBK–TV was not sponsored at that time. Thus, like the network owned station in New York, this nonowned affiliate carries the complete CBS schedule except for the only two half hours where the network did not offer commercial programs.

WCAU–TV, Philadelphia, follows the WCBS–TV schedule 100 percent on Sunday, Monday, Thursday, and Saturday. On Tuesday it fails to clear one half hour of CBS network programing, but does clear for that program in a half hour within station time. On Wednesday and Friday WCAU–TV follows the WCBS–TV schedule 100 percent except for the same two half hours referred to in the case of WJBK–TV.

In Houston-Galveston KGUL–TV follows the WCBS–TV pattern 100 percent Sunday, Monday, Tuesday, Thursday, Friday, and Saturday. On Wednesdays it departs from WCBS–TV's schedule only for the unsponsored half hour referred to above.

Not all basic affiliates of CBS follow the WCBS–TV pattern quite as religiously as these three examples, but an enormously high degree of control appears to exist. These examples in Detroit, Philadelphia, and Houston-Galveston do indicate that despite the fact that the stations in these great communities are licensed to different individual licensees, the program control by CBS during the hours when it is most convenient for the public to watch television is virtually identical with the program control which CBS exerts over its own stations where CBS is the licensee.

Incidentally, the CBS-owned stations in Chicago, Los Angeles, and Milwaukee follow the WCBS–TV pattern with the exception, in Chicago and Milwaukee, of the half hour on Wednesday which is unsponsored. Thus we have here an immediate example of stations in seven major markets in the country whose prime program time is controlled by a single licensee, Columbia Broadcasting System, Inc. It is difficult to assume that public tastes and living habits in these widely separated markets are so identical as to justify identical programing service in each.

In the case of NBC we have examined the same week's published schedules of WNBT, the flagship station owned by NBC in New York and of KYW–TV, Cleveland, Ohio, WSB–TV, Atlanta, and WVEC–TV, Norfolk, all owned by separate licensees.

During the network option hours of 7:30 to 10:30 p. m., WNBT grants 100-percent clearance to the NBC network programs 7 nights a week. WSB–TV, Atlanta, follows the same schedule as WNBT, New York, on a 100-percent basis all 7 nights without exception of a single half hour. WVEC–TV, Norfolk, also follows the WNBT schedule 100 percent 7 nights per week without the exception of a single half hour. KYW–TV, Cleveland, also follows the WNBT schedule 100 percent 7 nights per week without the exception of a single half hour.

The identity of the program schedules on these nonowned stations during the most convenient viewing hours with that of the programs scheduled on the network-owned station is either a matter of control or of fantastic coincidence. To us it appears plain that a single licensee, National Broadcasting Co., controls the prime viewing schedule on far more stations than NBC itself is allowed to operate as a licensee, again with no regard for the usual differences in public tastes in various parts of the country.

In summary, during those viewing hours when the station truly has an opportunity to serve the population of its particular community, the network's control of the station's programing appears to be the same as if the network owned the station.

29. When a network bids for a producer's show, then is it true that it bids on the basis of the profit it can make on the aggregate timecard of all its affiliates, since it can control the clearance of time on all stations?

Answer. When a network bids for a producer's show, it normally does so on the assumption that the program can be sold to a network sponsor. In that event, the network receives the major percentage of the time charge of each affiliated station which carries the program. In view of the must-buy and time-option requirements, the network can buy the program confident that it can require purchase of time and compel clearance of time on a sufficiently high number of its affiliates to realize a substantial profit on the time sale. However, when a network buys a producer's program, it buys it at a price. It is the network which then sells the program rights to the sponsor (over and above the time sale). There is no reason why the network may not charge the sponsor a substantially higher price for the program than the network pays to the producer, and it is our understanding that this is a common practice.

Thus, the network by reason of its control of time on its affiliated station can realize a profit on the producer's program in addition to the profit on the time sale. Inasmuch as the very factor which puts the network in this position is its control of the time on the affiliated stations, it would appear in such cases that the profit margin on the program itself constitutes income to the network which was obtained as a result of the network's control of time on the stations owned by other people. Yet, as we understand it, the affiliate does not share in the profit on the program, even though the granting of the time clearance by the station was the very factor which enabled the network company to make a profit on the program. Under these circumstances it would be understandable why a network might prefer to purchase a program itself, and then sell it to a sponsor as a compulsory package of time-and-program, rather than sell its time alone for a program owned by the advertiser. In the latter case, the advertiser would deal directly with the program producer and there would be no opportunity for the network to make a profit on the program itself.

This is KTTV's opinion as to the proper answer to the question. We suggest that the most accurate and complete answer would come from the network companies themselves if they were asked to supply information as to the price which they pay for each program which they purchase from a producer and the price at which they sell that program to the advertiser.

30. From a practical standpoint, NBC and CBS can control time on affiliates in 7, 4, 3, and 2 station markets for the purpose of outbidding independent stations, can they not?

Answer. In markets of three equivalent stations or more, it is evident that the value of the NBC or CBS affiliation puts the network in a position of complete control over the station's time. Refusal by a station to accept such complete control could be expected to result in a shift or threatened shift of valuable affiliation to a competing station in the same market. Therefore, in these multistation markets, NBC and CBS can operate in the virtual knowledge that they can clear whatever programs they choose to offer.

The position of the independent station in these multistation markets is rendered difficult by the necessity of competing with the NBC or CBS schedule of high-budgeted programs. However, this already disadvantageous position of the independent station is even more drastically affected by the tight NBC–CBS control of important markets which have only 2 equivalent stations or even 3.

One theoretical source of good programs for the indepeudent station is the advertiser who acquires national rights to a fine independently produced program (Ford Theater, Rin Tin Tin, Lassie, Robin Hood, $64,000 Question, world series, the Millionaire, Fireside Theater, United States Steel Theater, General Electric Theater, Lux Video Theater, Damon Runyon Theater, etc.).

Advertisers like these, wishing to gain access for their program to good time periods in the CBS–NBC duopoly markets, have no alternative but to come to the network and deal with the network on its terms. That is the only passkey to rich areas which are economically vital to them. In granting the access to these tight markets, CBS and NBC impose the firm condition that the program be placed on the CBS or NBC station in the multistation market. Therefore, no matter how fine a job the independent station may be doing in its community, no matter whether it can give the advertiser a larger audience at less cost, it is foreclosed from doing business with that advertiser by reason of the network compulsion that the program arbitrarily be placed on the network affiliate.

The other source of programs for a station is the independent film producer from whom a station may buy the rights to a program for its own community. But such producer, in order to recover the cost of his film, must be able to sell the film in important markets like Boston, Pittsburgh, Louisville, Providence, Dayton, and many 2- and 3-station markets in the country. Yet in those markets the good exhibition time is controlled by CBS and NBC. Without a good time period, a sale cannot be made. Therefore, despite the fact that an independent station in a multistation market stands ready to outbid the network station in the same market for the rights to the program, the producer is unable to accept this higher bid because, by doing so, he forecloses himself from selling his program at a fair price in the NBC–CBS duopoly cities. Generally, the only means by which an independent filim producer can gain a release for his program is by dealing with his own competitor, the network, or by selling the program to a national sponsor who is able to obtain time clearance on the network. Therefore, the independent station either loses the program to a network (and, with it, the advertising revenue) despite his willingness to outbid the network station in his market, or the program is never made because the producer cannot obtain a release in the NBC–CBS duopoly cities.

31. Insofar as TV networks control time on affiliated stations, they are the same as time brokers for the sale of station time on each of their affiliates, are they not?

Answer. The network actually is a time broker for the sale of time on stations which they do not own. Incidentally, this authority to sell time on other stations carries with it, as a practical matter, the authority to determine what program will be placed in that time period on the individual licensee's station. In all cases, therefore, where the network sells time for an advertiser's program, its whole function is as a sales broker or agent for the affiliated stations. Its agent's commission, we understand, can be as high as 70 percent. Incidentally, the network companies also act as time brokers for the sale of nonnetwork time on many of their affiliated stations in that CBS and NBC each operates a spot sales division. In those instances, therefore, the time on someone else's station which is not sold by the network on a network basis is available for sale by the network on a nonnetwork basis.

32. Your objection is not only to the licensee abandoning his responsibility to select programs at any given hour, which would best meet his licensee responsibility under the law, but also that its licensee responsibility is delegated to a nonresident network executive hundreds or thousands of miles away?

Answer. We believe that the congressional mandate to the FCC which fixes program responsibility in the local licensee was based on the wholesome and proper premise that the local licensee is the best judge of the interest and needs of the community he is obligated to serve. This principle of local responsibility is fundamentally the same as the constitutional plan for a Senate and House of Representatives in which each Member represents the particular needs and wishes of his own State or district.

Although a Senator or a Congressman makes legislative decisions in Washington, which may be 3,000 miles away from his constituency, his decisions which affect the area he represents are based on intimate knowledge of the needs and habits of his area. He visits that area constantly and he is in touch with his home community by mail, telephone, and by constant visits from his constituents in his Washington office. And while Members of Congress are usually affiliated with a national political party, there are very few Senators or Congressmen who vote as recommended by the party leaders as consistently as affiliated stations accept the programs offered by the networks.

In determining the extent to which the responsibility of a licensee is delegated to a nonresident network executive hundreds or thousands of miles away, it might be helpful to obtain answers from the networks to questions like these:

(*a*) How many times has a network president or responsible network official in charge of programing visited the community of each of the network's affiliated stations and how long did he stay? During such visits, what did he do to obtain a firsthand familiarity with the tastes and needs of the community? As a result of any such visits, has he requested or approved a departure from the blanket network schedule for that particular area? Has such network official, as a result of such a visit, ever recommended a change in the blanket network schedule to meet the tastes or needs of a particular community?

(*b*) The acceptability of a program, or programs scheduled, in a particular community is often reflected by public reaction which can be ascertained from mail, phone calls, interviews, and other evidences of viewer approval or disapproval. With regard to the network schedule in each of its affiliated markets, does a network executive review such communications from the public of that area concerning the acceptability of the network schedule to the public of that particular area? Examples of such communications and replies by the network or memorandums of action taken might be helpful.

33. In your opinion, is it not also true that the coupon clipping motive of the network executive hundreds or thousands of miles away is the deciding factor in the quality of programs which a large number of stations carry in their class A hours?

Answer. Available information does indicate that the decisions of network executives hundreds or thousands of miles away are the controlling factors in the quality of programs which a large number of distant stations carry in their advertiser and station, and to that extent some of the effect is bound to be felt in a beneficial way in curable UHF situations.

42. Will cancellation of network-option clauses still leave the smaller (coverage) station at a competitive disadvantage in procuring programs for any given market?

Answer. We believe the answer to this question is covered in our answer to question 41 above. In general, we believe that the greatest program availability can only be helpful to the smaller coverage station.

43. If UHF stations located in the same markets with VHF stations have smaller circulation of people, or smaller than 100 percent conversions, such UHF stations cannot bid on a competitive basis with VHF stations for either network or independently produced programs?

Answer. Our answer to this question is also covered in our answer to question

41. Again, we believe that our proposals, while not a cure to the UHF problem, can only have a helpful effect.

44. Is it true that the committee cannot rely upon the elimination of the option clauses in network contracts alone for solution of the UHF-VHF problem in intermixed UHF and VHF markets?

Answer. We recognize that the committee cannot rely upon the elimination of the option clauses in network contracts alone for the solution of the UHF and VHF problems in intermixed markets. Yet we believe that an increased supply of high-quality programs is one of the important requirements for the solution of this problem. It is our view that the reasons previously stated, which are unrelated to the UHF or VHF problem, are sufficient to justify adoption of our proposals, but we are glad that our proposals will also have a helpful effect in assisting the UHF station.

45. Even with the option clauses eliminated, if a station in a large market (with a lower unit cost-per-thousand circulation) overlaps a smaller market station (higher cost-per-thousand circulation) will not the smaller market station always be at a competitive disadvantage with the large market station in bidding for network programs or independently produced programs?

Answer. It is true that a station in a small market which is overlapped by a station in a larger market is basically at a competitive disadvantage, but we do not believe his problem insoluble.

One direct and specific manner in which our proposal will benefit such a station is that many advertisers will be relieved of the necessity of dealing with a network on the network's terms. In most such situations currently the network does not affiliate with the overlapped station and, we understand, either does not encourage or does not permit the network advertiser to place his network program on this presumably competitive station. Those national advertisers who own their own programs and who place them, under our proposals, on a nonnetwork basis, will be completely free to place the program on the overlapped station, perhaps on a night different from the night it is shown on the larger station. Since the smaller station is no longer barred by network practice from an order for the program, the smaller station's salesmanship will come into play and he will have a legitimate opportunity to sell his time for a high-quality program on the basis of the size of his circulation and its cost per thousand. This could be a most important area of emancipation for the overlapped station.

Another example is this: In a market where the major city has 2 stations and there is a station in a nearby smaller city which is overlapped, it would be expected that the 2 major stations would be 75 percent saturated with network programing, and possibly would also carry programs from a different network in the remaining 25 percent of their time. Thus, the 2 major stations would not be in a position to bid for all of the good quality nonnetwork programs which might be available, and these would then be available to the smaller station, presumably at a better price than he could buy them at today, and with a wider selection of programs to choose from. With good programs at reasonable cost, he would be in a much better position to attract both national and local advertisers at rates commensurate with the circulation delivered in his market.

Even where a national advertiser places his program on a network, he would be free, as he is not today, to deal on a spot basis in any market where he desired to have his program, both on a major station and on the station which covers a neighboring community. In the must-buy cities, he is barred from doing this today because he must buy the network affiliate, and the network protects that affiliate from a competing exposure of the program in the neighboring community. With the repeal of the must-buy provision, the advertiser could deal on a spot basis in such markets. He could then buy both the major station and the smaller station if his distribution pattern warranted an advertising campaign in the community covered by the smaller station, which it probably would.

Finally, it is worth noting that many national advertisers rely heavily on the cooperation of local dealer groups in connection with their advertising campaigns. Where a city like San Jose, Calif., has an active Westinghouse or Ford dealership, it is probable that this dealer would be influential in persuading the factory to include his market on the list for the Westinghouse or Ford program either on a network or spot basis. Under our proposals, the advertiser would be free to do this, and the overlapped station could obtain both a fine program and important revenue. This one factor could accomplish a most significant improvement in the status of the overlapped station.

46. Insofar as operation of a VHF station is the second or third ranking market (like Los Angeles) is concerned you have proven that you can outsell the competitive network owned or affiliated stations. Now, can you visualize smaller market situations where network programing is essential for successful operation?

Answer. Under current conditions it seems probable that a station in a smaller market needs network programing in order to be successful. But that is because quality programs today must obtain a network release in order to survive, and therefore a station in a smaller market cannot obtain enough quality programs without an affiliation. If the regulations are amended in a way which will make it possible for a sufficient number of quality programs to gain a satisfactory release on a nonnetwork basis, then it may be possible for a station in a smaller market to survive without network programing.

47. Insofar as networks are able to choose the largest market affiliates and reject small market affiliates, and thus deny the benefits of this mass program buying power and mass selling power to the latter, there is no comparable full time source of programing available as a substitute. Is it not true that the small market unaffiliated station is in a much less advantageous position for independent operation than one of seven VHF stations in Los Angeles?

Answer. It is true that a market as large as Los Angeles is one for which the national advertiser is ready to appropriate money for television advertising, and that the smaller market does not win such ready acceptance in the appropriation of advertising budgets. In that sense an unaffiliated station in a market like Los Angeles has a more advantageous position than an unaffiliated station or, in some cases, than an affiliated station in a smaller market. Yet local newspapers survive in smaller markets because, while their share of national advertising is small, their operating costs are also small. The important fact is that a local newspaper can have access to much of the same news material as a great metropolitan paper and much of the same feature material, including columnists and comic strips. These are available at a cost to the local newspaper which is small compared to the cost to a newspaper in a larger city. If equal access to quality programing is available to a station in a smaller market at a cost which bears a proper ratio to the cost of programing in larger markets, it seems possible that the small market television station can develop local and national advertising revenue and rates which also bear a reasonable ratio to the rates in the larger markets. Thus, if the small market station can attain access to quality programing at a proportionately proper cost, it is reasonable to suppose that it can survive economically just as a newspaper can survive in a small community.

Carrying the newspaper analogy further, it is noteworthy that King Features Syndicate and the Associated Press do not dictate to the local newspaper as to the emphasis or location in the newspaper of the individual news items or features. The freedom to operate the newspaper in a manner which appeals to the interests and tastes of the local community gives the local newspaper an advantage which is not entirely available to a local television station whose schedule is dictated by the network headquarters. Thus, there is an additional reason why a local unaffiliated station, which enjoys the same programing freedom as the local newspaper, could actually be a more effective local station than its competitor who operates under a network affiliation agreement.

48. Would you agree that there is also a need to enforce the spreading of affiliation benefits of network buying of programs and selling of broadcast time to small market stations so long as the present network trade practices are permitted, or so long as the equivalent of multiple market buying of programs and multiple market sale of advertising exists?

Answer. So long as most quality programs are available only through the networks, it is apparent that any station which is ineligible to receive these programs from the networks suffers a most serious disadvantage through no fault of its own. We have been unable to envision any regulatory action which would require an advertiser to buy markets which he does not wish to buy or which would require a vendor of programs to sell a program in markets where he does not wish to sell it. That is why we have recommended regulations which would have the effect of making quality programs available through sources other than networks. If all program sources are eligible to compete in the distribution of their programs on an equal basis, free of must-buy and option-time restrictions, we believe that the existing denial of programs to certain stations will be effectively overcome. In that sense we believe our recommendations will serve to provide small market stations with a high degree of benefits equivalent to those which are now available only through network affiliation and delivery of network programs.

49. It has been intimated that any interference with the networks' freedom to affiliate or not affiliate, to furnish programs or not to furnish programs, will precipitate Government regulation of station rates. From a legal standpoint, you state that the option provisions (legalized by the Commission's chain broadcasting rules) are parallel to block booking in the movie industry which has been stricken by the courts. Do you know of any movie situation resulting from the court's striking down block booking where rates were prescribed by the Government for distribution or showing of films to theaters?

Answer. Before answering this question, we should like to point out that KTTV does not acknowledge that the chain broadcasting regulations necessarily legalize the option time agreements or, more particularly, the practices conducted by the network companies under cover of the option time agreements. To us it is doubtful whether a regulatory body like the Federal Communications Commission can legalize by regulation practices which are prohibited by congressional statute. If these practices do violate the antitrust laws, it seems doubtful they could be rendered legal by an administrative commission.

With regard to the question, we do not know of any movie situation resulting from the court's striking down block booking where rates were subsequently prescribed by the Government for distribution or showing of films. On the contrary, the result of the decrees abolishing block booking in the movie cases was that theaters now compete actively with each other for the films of all distributors, and distributors now compete actively with each other for the business of all theaters.

50. Do you see anything peculiar to the broadcasting industry practices which would justify an assumption that if network option clauses are stricken it is necessary for the Government to prescribe rates for individual stations?

Answer. As we understand it, rate regulation by the Government customarily occurs where protection from competition is granted. We see nothing peculiar to the broadcasting industry which would reverse this normal situation and which would make rate regulation probable if free competition were introduced. Under current conditions the network companies are protected from competition during the important option hours. Yet one of the most important determining factors in establishing rates or prices is the natural interplay of vigorous competition. It therefore seems obvious to us that any likelihood of Government rate regulations would exist in those areas where the network companies are protected from competitive pressures which customarily insure fair rates and fair prices. It seems equally obvious that to the extent free competition is introduced into those important time periods, where protection from competition now exists, the necessity or the justification of Government rate regulation would be eliminated rather than enhanced.

Details of the arrangement were disclosed yesterday by Alfred Levy and David Susskind, owners of Talent Associates. They said their company also would share with NBC any income from television plays produced by Talent Associates that later were adapted for motion pictures or the legitimate theater.

Talent Associates, established in 1948 produces Armstrong Circle Theater on the NBC network. Its other productions in the past included Goodyear Playhouse, Philco Playhouse, Justice, and Adventure. The company now is producing a motion picture financed by Metro-Goldwyn-Mayer and will produce in the fall a Broadway play starring Ezio Pinza. (New York Times, May 9, 1956, p. 67, col. 1.)

Mr. Cox. Now have these productions had independent set producers, such as yourself, provide the scenery in years past?

Mr. Rotondo. Yes. On the show Justice, I was recommended by Batten, Barton, Durstine & Osborne, which produced the show, because they feel the service is far better than network service. We entered into an agreement whereby I was to package the show at a certain fee.

Now that recommendation went to Talent Associates; and, of course, they blew hot and cold on it. Finally, the thing went to NBC. The same thing applied to the show Armstrong Circle Theatre. The agency also wanted me to do the show, and naturally that also went to NBC. Now I happen to know that on the show Justice, my bid on the show was $2,800. That is a flat fee base, on a weekly base. We supply all of the scenery, the properties, the designing, and everything for that fee. Now I happen to know that the network charges on this particular show have run over $3,800 per week on a weekly basis.

Mr. Cox. I take it that the agency that you have referred to here is the representative, in this transaction, of the advertiser who ultimately pays the bill?

Mr. Rotondo. That is right. You see, the agencies don't always have their own production departments, so they turn these shows over to a producing group to produce for them at a flat fee. But unfortunately, even if the agency recommends you and wants you to do the work, you see, with this kind of setup here this is only making this thing official. This actually was going on for several years prior to this announcement, but those are the conditions that we have to operate under.

Thus, another independent factor, the independent producing agency, is coming under the ownership and control of the networks.

Once again I would like to comment on that. I think there is only one independent producing agency left in the city of New York, and that is Goodson & Todman.

Last fall, as you gentlemen may be aware, Mr. Louis Cowan, head of Louis Cowan Productions, Inc., was hired by CBS-TV. Mr. Cowan is now a CBS-TV vice president. What influence this will have on the producing agency he founded I'll leave to your imagination.

A similar situation exists with the advertising agencies. They are no longer producing their own shows as in the early days of TV. They are, instead, offered network produced or controlled shows, and if they want the choice time spots, they take them.

However, even where a show is still produced by a producing group or an advertising agency, the networks still manage to exert enough pressure to get all the below-the-line services, such as scenery, props, and so forth.

Let me cite you a few examples. Late last year I was asked by the Louis G. Cowan producing group to bid on a new show called the $100,000 Question. Maurice Gordon, the designer, asked me to bid on that show, and I did. Later, the designer called me and said that NBC was insisting that if the show was to go out over their network, they would have to use all of the network's production facilities, including the supplying and painting of scenery. Now, on this particular unit I bid $2,800. I was told that the network bid was $4,800, and NBC did the show.

A similar situation existed with respect to the show called Justice. Bob Wade, as I have already explained, bid on behalf of Talent Associates, Ltd. I submitted a bid, was told that it was lower than NBC's estimate, but that the network insisted on doing the scenery work as the show was to go out over NBC facilities.

One thing I would like to point out here is the manifestly unfair bidding practices involved. For one thing, the networks actually submit an estimate usually with a 10-percent differential clause; that is, either above or below.

Nowhere in the bid is any evidence of the trucking charges for bringing the scenery from their shops to the broadcast studio. Where that item is hidden no one knows, and if all the costs go up after the first or second show, the sponsor is simply billed the additional costs and must pay.

Mr. Cox. You mean to say the network does not produce the sets on the studio location; that they must, in New York, pay trucking charges to get these sets in place?

Mr. Rotondo. That is right. We pay trucking charges—naturally we meet the union conditions—and they hide their charges somewhere in there. They actually don't show a trucking charge.

Much has been said by network officials, in conferences and in replies to our protests, about the limitations of the existing scenery-supply organizations. Actually, our group furnished the personnel to the networks for scenery supply work during the formative period of TV.

Senator Wofford. Let me interrupt you there. You left out one paragraph. Did you mean to omit that?

Mr. Rotondo. On the other hand, the independent scenery supplier submits a firm bid and gambles on it. In turn, the networks make his costs skyrocket by insisting on removal of the scenery immediately after the show, which in the case of an evening show means double-time trucking charges. That they do to us.

Mr. Cox. Do they do that in instances where it is not actually necessary to clear the set for immediate re-use the following day?

Mr. Rotondo. Well, let's take a case in point, the Hit Parade. We must haul the Hit Parade out on a Saturday night directly after the show—that is, at their convenience, because they have what they call a setup crew—at which time they will go in there and tear the show down and get it ready to ship it out. Well, of course, they do that at their own convenience, but our trucks are waiting out there and the night haul costs us $110 per load. Now, I don't believe it creates too much of a problem with the networks to have that stuff remain there until the following morning, or until a Monday morning; but I guess it is their property and they insist upon it.

All the knowledge of stage craft and all the basic techniques now in use on TV were taught to the network employees by our craftsmen, whose knowledge and skill is readily available and being used by us in our everyday operations.

Mr. Cox. Have the networks developed any completely new concepts in scenery design, and so on, which are more suitable for their operations than the theater concepts out of which your work has developed?

Mr. Rotondo. No. I will say we ourselves developed—where years ago we would require 5 to 6 weeks to do a musical show, of course, with the modern age of machines and things of that kind; but today I have done musical shows for the networks and for myself over a period of 24 hours. We have developed these techniques. We have made it possible.

Moreover, the combined square footage and trained personnel of the independent contractors compares most favorably, and in some instances exceeds those of the networks. It is pretty well established that, in an atmosphere of competitive bidding, the independent scenery contractors methods and materials will far exceed the run-of-the-mill network shop.

We are not alone in our judgment that there is a monopoly trend within the industry. In fact, that issue is one of the basic questions in the current campaign in New York Local 1, IATSE, where Arthur Harvey, one of the candidates for office, stated flatly that the network shops were a monopoly and in direct competition to our independent shops. It was, he adds, the intent of the network shops when they received a stencil from the union that this was for themselves and their own shows.

May I qualify that statement—when the stencil was originally issued to the networks, it was with the understanding that it was only to be used on stage shows, because the unions themselves didn't want direct monopoly from the networks to their own independent shop owners. But since then the networks have also become contractors and used the stencil for anything that they want.

Gentlemen, I don't want to burden you any further. I am attaching a compiled list of the shows I have done for TV over the past 7 or 8 years. That list will amply demonstrate that I am being squeezed out of TV as an independent scenery supply contractor.

I am not a lawyer nor a political scientist nor an economist. But I do recognize a monopoly when I see one, especially when it is literally breaking my back.

A television industry in which the most important market area stations are either owned by or affiliated with giant networks, which in turn control what is broadcast over such facilities by either the packaging of shows, the control or ownership of the producing agencies talent, and all other phases of production constitute a formidable economic bloc which will make impossible free competition.

If the designer or producer or producing agency expects to live in such a TV world, they'll take the staging facilities of the networks, come what may. And where the designer, producer or production agency is either employed by or partially owned by the network, the situation is even worse.

Networks should be divorced from the production of television, save when such production is for the purpose of a sustaining show for a time slot lacking a sponsor. Every encouragement should be given and other obstacles removed from the path of the independent designer, producer, scenery contractor, and customer. There was a time when the monopoly evils threatened the legitimate theater when theater owners tried to dominate the legitimate stage, insisting on their own facilities being used; and still later motion-picture production companies tried to dominate the exhibition of movies by block booking and other devices.

The evils which were eliminated from these two media are now threatening television. I am hopeful that you honorable gentlemen will recommend appropriate action to either Congress or pertinent Government agencies. Certainly small businesses have a claim to equal protection under the law. I am confident you gentlemen agree with that and will be guided by that.

Thank you.

(The compilation referred to above is as follows:)

COMPILATION OF WORK DONE FOR TELEVISION NETWORKS, ADVERTISING AGENCIES, AND TELEVISION PROGRAM PRODUCERS—PETER J. ROTONDO CO., 429 WEST 53D STREET, NEW YORK

1956

Hit Parade [1]—Batten, Barton, Durstine & Osborn, Inc.[2]

Mr. Cox. I take it, you don't object, then, Mr. Rotondo, to a network producing its sets for sustaining purposes, but you feel it should not be permitted to manufacture sets beyond that—even for shows they own themselves—if they are to be commercially sponsored; is that right?

Mr. Rotondo. That is right.

Mr. Cox. In other words, where the advertiser is ultimately going to bear the expense, you feel that outside scenery producers, such as yourself, should be free to compete among yourselves for that business?

Mr. Rotondo. That is right.

Mr. Cox. Now, isn't it true that if a network is going to maintain a shop for any purpose, it is impelled to find work to keep the shop busy on a steady basis to make it economical? So they might claim that they need some of the commercially sponsored business in order to sustain the expense of their sustaining shows?

Mr. Rotondo. Well, I think to answer your question, Du Mont proved conclusively, when they were operating, that they were getting far better service and operating far more economically through the independent shops. This I do know to be a fact—as far as the net-

[1] Indicates package deal.
[2] Indicates hired by advertising agency.
[3] Indicates hired by independent television producers.

work shops—they are a real Frankenstein to them. They are able to pass on costs to the sponsor or to the agency which they wouldn't acquire if we handled those same shows.

Now I think this is only part of their plan to eventually monopolize the entire business. I know back in 1935, or 1936 and 1937, when I was in radio, they made the same claim those days. They said the advertising agencies can't produce radio shows. But the FCC sat down on them in 1937 and made them disband a lot of their activities at that time, and the producing outfits that sprang up from that delivered far better shows than the networks ever were able to do.

Mr. Cox. Now, do you know whether the networks purport to make a profit on the production of sets for others, or whether they claim that they operate this simply on a break-even basis?

Mr. Rotondo. Well, in some instances they claim they are losing money. In other instances they tell you, "Well, we have got to make money, too."

Mr. Cox. They concede, in some instances at least, they seek to make a profit?

Mr. Rotondo. Oh, yes; definitely.

Mr. Cox. I take it that it is your feeling that if this matter were left open to competitive bidding, that your shop and others like it would be able to compete in this business and to continue to provide the service as you did in the early days of television?

Mr. Rotondo. Yes, sir.

Mr. Cox. To your knowledge, are your costs today competitive with any costs which could be developed by the networks for the production of sets?

Mr. Rotondo. Well, my own costs, I think, are anywhere from 20 to 33 percent under network costs, and I have a pretty good reputation in the industry. We have never failed to make a delivery, and we have time elements which sometimes break your back; but we turn out the job because we know it is necessary. They have got to have it, and we do it.

Mr. Cox. Have the networks ever criticized the quality of the sets you have produced for any show that went out over the networks?

Mr. Rotondo. No; there are individuals in the networks who may do that occasionally, but you take that with a grain of salt.

Senator Wofford. Thank you very much, Mr. Rotondo.

The next witness we have is Mr. David Steinberg, of New York City.

STATEMENT OF DAVID STEINBERG, PRESIDENT, IMPERIAL SCENIC STUDIOS, FORT LEE, N. J.

Mr. Steinberg. Gentlemen, I am David Steinberg, president of Imperial Scenic Studios of Fort Lee, N. J.

For over a quarter of a century I have been associated with the theater. My first job was with Producer Earl Carroll back in 1927. I stayed with him for 7 years absorbing everything I could about stagecraft from that noted showman.

During 1934 and 1935, I worked for Joseph Tishner and Frank Stevens, independent contractors supplying the legitimate theater. In late 1935, together with a partner, we formed the Kaj Velden Studios in New York City.

In 1948, we formed a similar company in New Jersey but after a disastrous fire in 1952, I bought out my principal partner's interest and renamed the company Imperial Scenic Studios.

During all these years, we have been supplying television, the stage, trade shows, and exhibitions with scenery. In 1949, at the infancy stage of television, we did a volume of $12,895.25.

By 1950, the demands by the networks, advertising agencies and TV production groups zoomed that figure up to $221,214.68. The next year that figure went even higher and our gross income from these sources reached $294,496.48.

During 1952 and 1953 we grossed $263,224.93 and $345,575.94, respectively. The year 1954 we started to notice a change, as the networks began to do all their own work and vie strongly for the nonnetwork produced shows. Our volume that year declined to $215,906.22; but the next year—1955—really told the tale.

Our gross business in TV last year declined to $71,437.99. For the first 4 months of this year the picture is no brighter as our figures indicate a total volume of $31,185.21 for the first four months, a good part of which came from closed-circuit shows and not from network sources.

Basically, Mr. Chairman and Senators, we independent scenery supply contractors have no chance to exist in TV at all as long as the networks are allowed to produce or buy control of shows, and then sell the show, the time slot, and the staging or production services to a sponsor as one package.

Under such a monopolistic setup, no one is even allowed in the door. That is what happened with the Jackie Gleason show. CBS controlled it, with the understanding that they—the network—would provide all the services and sell it to a sponsor or sponsors as a packaged deal.

Mr. Cox. Now was that an arrangement entered into between the networks and Mr. Gleason?

Mr. Steinberg. From what I understand, yes.

Somewhere along the line this monopolistic development has to be stopped or there will remain in television just a few giant networks which will control and sell broadcasting time as well as every bit of talent and designing, production, and staging services in one package.

Every unfair tactic possible is utilized by the networks to extend their control. Last year, for instance, I was asked to bid on the $64,000 Question by the Louis G. Cowan organization. That office told me I was the low bidder on the show but that the network had informed them that if an outside contractor did the show, he would have to remove the scenery after every performance, for an extra charge of $400 per week.

Mr. Cox. Was that such as to make it competitively impossible for you to provide the services?

Mr. Steinberg. That is right.

The network sets are stored or left in place until the stage or studio is needed again. But the independents are denied the privilege of paying for such storage, or of removal at a period when double-time trucking charges would not apply.

Mr. Cox. Have you offered to pay the networks for such storage of your sets?

Mr. STEINBERG. No, I didn't, because I personally never got a chance to negotiate with the networks. On the Cowan show I was just told it was on that basis.

More and more the networks are adopting a policy of not selling time slots to sponsors or their agencies but of selling them packaged shows with an allotted time slot all wrapped in one deal. Slowly but surely, this practice is diminishing the role of the advertising agency and the independent producer in the television field.

Seemingly the networks are satisfying these situations by making no move to eliminate the advertising agencies' commissions and by hiring executives of the independent production groups or buying into them.

This elimination of the truly independent factors in the production of TV shows will eventually make for a completely monolithic industry with sponsors allowed to pay for, and the set owners allowed to watch, what the TV network bigwigs decree.

In this sense the whole question becomes even greater than our interest as independent contractors. It seems to me of real public interest to prevent such domination in a field which plays such a large part in shaping public opinion about many questions of vital interest to our country.

However, from the viewpoint of a small-business man solely, I know that this is not simply a theoretical problem. I solemnly assure you gentlemen that unless the networks are pushed back into the business of TV broadcasting and the sale of broadcast time, every independent operator will be crushed under the weight of this growing gigantic monopoly.

No one today regulates the networks. Yet they are the possessors, either directly as TV station owners or indirectly through TV station affiliates, of a priceless privilege to use the airwaves of the Nation for whatever ends they desire.

Evidently the end they most immediately desire is the complete domination of television from the creation of an idea for TV broadcasting through its production, staging, and presentation phases, right up to the point where it appears on the TV screen.

Such a monopoly is in existence now and is destroying us independent scenery contractor. We sincerely hope you gentlemen will either use your legislative power or call on some law-enforcement body to change this shameful situation.

Mr. COX. Have you had any complaints from the networks or from advertisers as to the quality of the sets that your organization has produced for television?

Mr. STEINBERG. No; they always say that the quality of our sets are better.

Mr. COX. Than those produced by the network?

Mr. STEINBERG. That is right.

Mr. COX. Has there ever been an instance where you were unable to produce sets on time to take care of broadcast requirements?

Mr. STEINBERG. No. Only one time, I had a fire and it was burned down completely.

Mr. COX. You produced the sets and they were destroyed?

Mr. STEINBERG. That is right.

Mr. COX. Has any problem been created by the advent of color?

Mr. STEINBERG. No; we have always been producing in color for theaters.

Mr. COX. And you have no problems in connection with the photographing or televising of those color sets?

Mr. STEINBERG. No.

Mr. COX. Thank you.

(A tabulation attached to Mr. Steinberg's testimony is as follows:)

Imperial Scenic Studios, Inc., Fort Lee, N. J.

1949	
Du Mont television network, scenery	$3,150.00
Young and Rubicam, scenery	9,745.25
Year end total	12,895.25
1950	
National Broadcasting Co.:	
September through December 1950: 34 shows for Comedy Hour and Motorola starring Eddie Cantor, Bob Hope, Martin and Lewis, Fred Allen, Bobby Clark, Jack Carson, Danny Thomas, Jimmy Durante, Hartmans, Abbott and Costello	104,037.48
Rental of scenery during above period for other shows	2,798.50

MCA Corp. (Lombardo Show): Basic set and numbers, 6 shows	6,347.08
Total to date, May 1, 1956	31,185.21

Senator WOFFORD. Thank you very much.

Mrs. Lucille Ashworth is our next witness. Will you come around, please? You may proceed.

STATEMENT OF LUCILLE ASHWORTH, STUDIO MANAGER, CHESTER RAKEMAN SCENIC STUDIOS, NEW YORK CITY

Mrs. ASHWORTH. I am the studio manager of the Chester Rakeman Scenic Studios, 530 West 47th Street, New York City.

Our studio has been under its present name since 1950 when a merger of the Vail Construction Co. and the Bergman Studios took place.

Both of these organizations had been serving the legitimate theater, television, and all other media such as exhibitions, trade shows, ice shows, and so forth, since 1920. I, in turn, have been connected with the Bergman Studios since 1933.

With the advent of television broadcasting as a new form of visual entertainment, our people were called upon to give the benefits of their three decades of experience in the field of scenery construction and painting. We readily assented to this demand by this new industry, convinced as we were that by its very nature as an industry granted a public privilege to use the air waves for television broadcasting purposes, it would need the services and experience of people such as ourselves to carry out its functions.

We never, of course, dreamed that the day would arrive when this industry, operating through direct station ownership and affiliated networks, would not only control the sale of time for television broadcasting but literally maintain a stranglehold on all the attendant aspects such as the building, painting, and supply of scenery, the production and direction of the shows, the supplying of props, and so forth.

Yet this is exactly what has happened. Let me recite our own experience as an example. In 1949, we supplied scenery on a time-and-material basis to the Columbia Broadcasting System television network for a number of shows and a gross volume of $73,608.69. In 1950, this volume grew both in number of shows and actual income to $229,932.91. By 1951, this total reached $276,159.55. The next year, 1952, it fell off a bit to $225,713.73.

But by 1953 the trend began to evidence itself as CBS–TV went into the scenery business on a large scale, and our volume dropped to $134,402.41. In 1954, we hit rockbottom with a total business with this network of $3,263.07. Last year that total rose slightly to $9,061.69, only because the networks found themselves unable to fulfill time commitments on several shows. To date this year we have not been called on to supply any scenery to CBS–TV at all.

We have had unfortunate experiences with the National Broadcasting Co. television network as well. Last year, the Perry Como

Show was sold to NBC–TV. For almost 8 years we had supplied the scenery for Perry Como and his organization.

John Root, the designer, wanted us to continue. However, NBC not only demanded the scenery work for the show but insisted that the show's director, Lee Cooley, and the designer, John Root, join their organization. Cooley became an NBC employee but Root continued as an independent designer and our studio is presently building and painting the scenery he designs for Armstrong Circle Theater commercial.

Mr. Cox. Did that, however, terminate his relationship with Perry Como?

Mrs. Ashworth. It did.

We had a like experience with this monopoly trend on the Longine-Wittnauer holiday shows. In 1954, as had been our custom since 1951, we built and painted the scenery for the Longine-Wittnauer Thanksgiving show.

Again, as per our custom, the scenery was returned to our studio for alterations and additions for the Christmas show. However, shortly afterward, and before the Christmas show, Mr. Alan Cartoun, of the Longine organization, informed me that CBS–TV insisted that their scenery facilities be employed for the Christmas show.

Since then, Longine-Wittnauer has returned these two shows to our studio for the painting and supplying of scenery because they were disgruntled with the service and quality CBS–TV scenery services provided.

Last year we met with the leading executives of the networks after our organization, the Scenery Suppliers Association, Inc., complained through its consultant, Mr. George R. Donahue, of this growing monopolistic trend and of discriminatory practices.

ABC–TV officials very bluntly told us they always intended to do their scenery work, had been almost uniformly successful in so doing, and intended to continue the practice of excluding the independent scenery producer. In fact, they blithely suggested that since they had never given us a chance to exist on their network, our complaint of discriminatory practices should be lodged not against their network but rather against those networks which first tolerated and then rebuffed us.

Mr. Cox. You have never done any work for ABC?

Mrs. Ashworth. No, never.

This, of course, was much in keeping with the movie-industry practice, long since broken up by Government action, of controlling both the production and exhibition of motion pictures. In television broadcasting, however, the networks began by controlling the exhibition facilities in TV through ownership and affiliation, and then augmented this monopoly by gradually extending their control over production facilities. Paramount Pictures, a controlling factor in ABC–TV, really pioneered this now universal development in the industry.

NBC–TV and CBS–TV officials, however, were more tactful. They piously denied any monopoly intent or any discriminatory practices.

Instead, they suggested they had become involved in scenery production and supply because of three main factors: (1) The outside scenery supply organizations were not equal to the task of supplying the necessary scenery; (2) the time schedule of TV was beyond the capacity of independent scenery supply contractors to produce on short notice; (3) the color problems of TV color television were beyond the abilities of the outside studios.

None of these claims have any basis in fact. Actually, in 1952 our studio singlehandedly built and painted all CBS–TV scenery during a 3-month period while that network was changing the location of its scenery operations.

Mr. Cox. Were they then carrying on a level of programing roughly equal to what they are handling now?

Mrs. Ashworth. At that time I would say it was greater, because at that time all scenery had to be built new, and now they have a stock of scenery which can be used over again.

Mr. Cox. Has there been an increase in film programing which has reduced the overall need?

Mrs. Ashworth. Definitely, Mr. Cox; yes.

As to the time element, I can state flatly that in over 20 years of experience—I have to exclude Mr. Steinberg's fire—in this industry, I have never known of any independent scenery organization failing to meet its time schedule for a stage production, a television show, or any other type of production.

The last excuse of the networks for not using our facilities, that is the problem of color in television, is actually laughable. Color has always been part of our basic work in stage scenery. In fact, the overwhelming majority of the designers and scenic artists now working for the television networks came out of the legitimate theater and in many instances out of our studios.

I am attaching to this statement a record of our gross receipts as a supplier of scenery for the television industry. As you will readily see, it reflects a growth from a total of $88,079.43 in 1949 to a high of $367,150.59 in 1951 and $351,064.86 in 1952, and then a disastrous decline to $106,628.12 in 1955 and a total of $20,798.80 for the first 4 months of 1956.

What makes the situation even more frightening is the steady gobbling up, as well, of New York theater properties by the TV networks, thus delimiting our possibilities of work in the legitimate theater by eliminating more and more outlets for the presentation of the traditional dramatic audience-supported shows.

Mr. Cox. This is an occupation of these theaters as used for studios for broadcasts?

Mrs. Ashworth. Yes; every year they add 2 or 3 of the remaining Broadway theaters.

Nothing can, in my mind, justify these developments. Neither as an individual, a manager of an independent studio, or as secretary of the Scenery Suppliers Association, Inc., have I the power to expose or put a stop to this evident monopolistic growth of the TV networks. But somewhere in this country dedicated to freedom there should be a force strong enough to halt the TV networks, operating through TV stations with Government franchises, from using that public privilege to destroy any and all individuals and groups normally qualified to participate and contribute to staging and supplying of TV productions.

We hopefully look to your committee for aid and relief. If it is not forthcoming, slowly but surely a vital, independent and traditional

American type of small business with a high quality of artistic creativeness will be lost to the American scene and the American theatrical arts.

Mr. Cox. Could you tell us, Mrs. Ashworth, approximately how many independent scenery producers there are in the business in the New York area?

Mrs. Ashworth. There are really about 5, of whom 3 are represented here.

Mr. Cox. And there are two others of like stature?

Mrs. Ashworth. Yes; that is right.

Mr. Cox. Do you and your competitors continue to provide the sets for the theater, for nightclubs, and things of that sort?

Mrs. Ashworth. Yes; definitely. That is what we live on now.

Mr. Cox. Does the loss of revenues which you have in past years derived from television have any effect upon your continued ability to provide this service for the other agencies that use your sets?

Mrs. Ashworth. Well, I would say that the networks have gobbled up some of our best craftsmen; in fact, a great many of them.

Mr. Cox. So to that extent you are hampered?

Mrs. Ashworth. Yes; that is true.

Mr. Cox. Your feelings, then, I take it, is much like Mr. Rotondo's and Mr. Steinberg's, that the networks should be confined to the sale of time, and that the details of production, the supplying of sets, properties, drapes, and things of that sort, should be handled on an individual contract basis, with competition and bidding for lowest price and best quality determining who was to get the job.

Mrs. Ashworth. That would seem the fairest way to do it.

Senator Wofford. Thank you very much.

(The document referred to above is as follows:)

Chester Rakeman Scenic Studios, Inc., 530 West 47th St., New York, N. Y.

Senator WOFFORD. The committee will stand adjourned until 10 o'clock tomorrow morning in this same room.

(Whereupon, at 12:25 p. m., the committee adjourned to reconvene at 10 a. m., Tuesday, May 15, 1956.)

TELEVISION INQUIRY

(Network Practices)

TUESDAY, MAY 15, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to notice, at 10 a. m., in room G-16, the Capitol, Senator Frederick G. Payne presiding.

Present: Senators Payne, Pastore, and Duff.

Senator PAYNE. The committee will be in order.

In the last several weeks, the committee has received a number of statements and communications which should be inserted in the record. These are as follows:

A. Regarding subscription television:

1. Letter dated May 11, 1956, from Marcus Cohn supplying the answer to a question directed to him during his testimony before the committee on April 25, 1956.
2. Supplemental statement of Zenith Radio Corp. and Teco, Inc., regarding interpretation of the 1949 agreement between these two companies, which was referred to by Mr. Cohn in his testimony.
3. Letter from Edgar Kobak, of WTWA, Thomson, Ga., enclosing copies of three earlier communications to the Federal Communications Commission on this issue.
4. Statement of the American Civil Liberties Union urging that toll television be given a trial subject to certain enumerated safeguards.

(All four of the above items are set forth in the appendix to the volume on Subscription Television, at pp. 1467 to 1472.)

B. Regarding allocations and the UHF problem:

1. Statement of Helm Coal Co., and four others, permittees of UHF stations in Pennsylvania, urging deintermixture in their area by deletion of channel 8 from Lancaster, Pa.
2. Statement of Plains Television Corp., licensee of UHF station WICS, Springfield, Ill., urging deintermixture of that market by deleting channel 2 from Springfield and adding it in St. Louis and Terre Haute.
3. Statement of Telecasting, Inc., permittee of UHF station WENS, Pittsburgh, Pa., urging deintermixture in general and suggesting specifically that a fourth commercial VHF channel be added in Pittsburgh.
4. Statement of Charles W. Lamar, Jr., permittee of UHF station WPFA-TV, Pensacola, Fla., and KTAG Associates, per-

75589—57—pt. 4——10

mittee of UHF station KTAG-TV, Lake Charles, La., urging a comprehensive plan for deintermixture in the gulf coast area.

5. Statement of Carmen Macri, permittee of UHF station WQIK-TV, Jacksonville, Fla., urging a comprehensive plan of deintermixture for Florida and southern Georgia.

6. Letter from Senator Homer E. Capehart, of Indiana, together with 18 letters and telegrams received by him from constituents urging prompt action for the preservation of UHF broadcasting.

All of these will be inserted in the record at the conclusion of the testimony in the allocation phase of these hearings.

(All 6 of the above items are set forth in the appendix to the second volume on the UHF-VHF Allocation Problem, at pp. 1012, 1015, 1017, 1019, 1022, and 1024.)

C. Network practices:

1. Telegram dated April 14, 1956, from Richard A. Borel, secretary of CBS Television Affiliates Advisory Board, setting forth a resolution unanimously adopted that day by all 169 CBS television affiliates supporting option time and other network practices and requesting an opportunity for representatives of their group to testify before the committee regarding these matters. Pursuant to this telegram the original of the resolution, bearing the signatures of the 169 CBS affiliates, was later forwarded to the committee and will be preserved in the committee's files. The request to appear has been granted, as has a similar request from representatives of the affiliates of ABC.

2. Letter dated April 19, 1956, from John W. English, setting forth a copy of a resolution adopted by the UHF affiliates of CBS opposing regulation of the network and urging instead the provision of adequate competitive facilities, with action by the FCC on or before June 1, 1956.

3. Letter to Congressman Oren Harris, of Arkansas, from W. M. Bigley, South Arkansas Television Co., Inc., expressing complete satisfaction with KRBB's affiliation with NBC and opposing control of the networks.

4. Letter dated April 30, 1956, from Senator Homer E. Capehart, enclosing a letter from J. M. Higgins, WTHI, Terre Haute, Ind., expressing satisfaction with his station's relations to the networks and enclosing a copy of the CBS affiliates' resolution.

5. Telegram from Ely Landau, National Telefilm Associates, Inc., and letter of May 4, 1956, with enclosures, supporting the networks and stressing necessity for additional stations and networks.

All of this material will be placed in the record.

(The documents concerning network practices above referred to are as follows:)

CHICAGO, ILL., *April 14, 1956.*

Hon. WARREN MAGNUSON,
Senator from Washington,
Senate Office Building, Washington, D. C.:

In unanimous action today, all 169 affiliates of the Columbia Broadcasting System television network in attendance at the annual meeting of the affiliates' organization resolved that a representative cross section of the affiliates would respectfully seek an appearance before the Senate Interstate and Foreign Commerce Committee to bespeak their opinion with respect to network option time and related contractual arrangements between the network and its affiliates. The resolution was supported by a petition personally signed by each of the affiliates. Full copy of the resolution follows.

"Whereas the Senate Interstate and Foreign Commerce Committee of the United States Senate has recently heard testimony with respect to network option time and other network practices; and,

"Whereas it is the consensus of the affiliates of the CBS television network that option time or some similar business arrangement and other network practices are of fundamental importance to continued sound networking; and

"Whereas it is recognized that the economic health of the networks insures the preservation of vital public service on a national and international level; and

"Whereas it is the belief of the affiliates that there have been no seriously detrimental practices, and the relationship between the CBS television network and its affiliates is one of partnership in which each operates to the benefit of the public and each other: Now, be it and it is here

"*Resolved*, That the undersigned affiliates of the CBS television network request the opportunity to present a representative group of affiliates to said Senate committee to testify as to essentiality of option time or some similar business arrangement and other network practices."

The above information is sent to you at the direction of the affiliates in order that you may have immediate knowledge of the action. Original copy of resolution with appended signatures will be forwarded to you.

CBS TELEVISION AFILIATES ADVISORY BOARD,
By RICHARD A. BOREL, *Secretary*.

APRIL 19, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee, Washington, D. C.

MY DEAR SENATOR MAGNUSON: This is to advise you that a meeting of the UHF affiliates of the Columbia Broadcasting System was called by Mr. Humboldt J. Grieg, of WHUM-TV, Reading, Pa., on April 14, at the Conrad Hilton Hotel in Chicago.

The following resolution was moved, seconded, and unanimously approved:

"Whereas network regulation has been suggested as necessary for television in the United States: Now, therefore, be it

"*Resolved by the ultra-high-frequency affiliates of the Columbia Broadcasting System*, That television should be competitive and not regulated and that the real answer to television problems is not regulation of networks or network option time or the industry generally, but swift and intelligent availability of adequate competitive television facilities; and an answer should be made available to the industry by the Federal Communications Commission on the future of all-channel television on or before June 1, 1956."

Respectfully submitted.

JOHN W. ENGLISH,
WNAO-TV, Raleigh, N. C.; WSEE-TV, Erie, Pa.

Hon. OREN HARRIS,
House of Representatives, Washington, D. C.

DEAR SIR: This is an unsolicited letter, and you have our permission to quote from it.

After serving as general manager of KRBB-Television, El Dorado, Ark., for 4 months, I wish to express our complete satisfaction with our affiliation with the National Broadcasting Co.'s television network. We feel that this affiliation has been most fair and equitable to all parties concerned. We also feel it has been of great value in bringing to the audience in our area a greater variety and higher standard of programing and public service than we could possibly provide without it.

It is our sincere belief that undue or excessive restriction and control of network operations may very well result in lowered programing standards and a lessening of the individual affiliated station's ability to provide equally good service to their respective areas. We believe such restriction and control would benefit only minority groups in a limited number of situations.

As far as KRBB–Television is concerned we believe that the present criticism of network operations is unjustified in the light of the benefits we and our audience have enjoyed.

We hope that this information and our experience will aid you and your fellow members of the House Interstate Commerce Commission Committee in any consideration you might have regarding regulation or control of network operations.

Sincerely yours,

South Arkansas Television Co., Inc.,
W. M. Bigley, *General Manager.*

United States Senate,
Washington, D. C., April 30, 1956.

Hon. Warren G. Magnuson,
Chairman, Interstate and Foreign Commerce Committee,
United States Senate, Washington, D. C.

Dear Senator: Attached is a letter and enclosure received from Mr. J. M. Higgins, general manager of WTHI–TV in Terre Haute, Ind., which I believe you will find self-explanatory.

Since you will soon be considering testimony on network practices, I thought you might like to incorporate Mr. Higgins' letter in your study.

Regards.

Sincerely,

Homer E. Capehart.

Terre Haute, Ind., *April 27, 1956.*

Hon. Homer Capehart,
United States Senate, Washington, D. C.

Dear Senator: The television industry is being investigated from all angles. It seems fashionable to talk about the television industry. At the same time I feel confident that the practices by most station operators are healthy and in the interest of the public.

Attached is a resolution which was unanimously passed and signed by all the CBS–television affiliates in attendance at their annual meeting in Chicago, Ill., April 14, 1956.

I wanted to personally tell you that I feel the networks do not abuse their affiliates. We are affiliated with all three networks and our operation with them is most compatible.

For well over 17 months we had economic strife. There were moments when we felt the advertisers were not responding to the value of our property. It took a lot of hard work and constant reiteration of our story to the advertiser. It also meant imposing a lot of self-improvement in our daily operation. Together these factors developed an economic health. Now we are giving the public the best television that can possibly be given in our area. Many suggestions and much guidance were given to us by the networks.

Your support and endorsement that the networks are doing a good job will be appreciated by me.

Sincerely,

J. M. Higgins,
General Manager, Wabash Valley Broadcasting Corp.

The following resolution was passed unanimously and signed by all CBS television affiliates in attendance at the annual meeting in Chicago, Ill., on April 14, 1956:

"Whereas the Senate Interstate and Foreign Commerce Committee of the United States Senate has recently heard testimony with respect to network option time and other network practices; and

"Whereas it is the consensus of the affiliates of the CBS television network that option time or some similar business arrangement and other network practices are of fundamental importance to continued sound networking; and

"Whereas it is recognized that the economic health of the networks insures the preservation of vital public service on a national and international level; and

"Whereas it is the belief of the affiliates that there have been no seriously detrimental practices and the relationship between the CBS television network and its affiliates is one of partnership in which each operates to the benefit of the public and each other: Now, be it and it is here

"*Resolved*, That the undersigned affiliates of the CBS television network request the opportunity to present a representative group of affiliates to said Senate committee to testify as to the essentiality of option time or some similar business arrangement and other network practices."

CBS TELEVISION NETWORK AFFILIATES.

NEW YORK, N. Y., *May 14, 1956.*

Senator WARREN G. MAGNUSON,
United States Senate,
Committee on Interstate and Foreign Commerce, Washington, D. C.
(Attention Mr. Zapple)

As your office was advised, our annual stockholders meeting prevents my attending tomorrow. However, you are authorized to insert my letter and enclosure in the record of your proceedings. Will be pleased to cooperate with you in all respects. Regards,

ELY A. LANDAU,
President, National Telefilm Associates, Inc.

NATIONAL TELEFILM ASSOCIATES, INC.,
New York, N. Y., May 4, 1956.

Senator WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee,
Washington, D. C.

DEAR SENATOR MAGNUSON: Pursuant to a telephone conversation with your Mr. Nicholas Zapple and Mr. Harry Algus of our office, I am addressing this letter to you, relative to your committee's current television network hearings.

I am the president of National Telefilm Associates, Inc. (NTA), one of the major film-distribution organizations in the television industry. There has been much talk in our trade about the TV film distributors' attitude with regard to the network concept, and most of it seems to indicate that film distributors in general are definitely antinetwork both in philosophy and in practice. We, here at NTA, quite to the contrary, feel that there are many pluses to the network concept in the broadcast industry and that we owe ourselves and our industry an obligation to offer to you the thinking and the evaluations that emanate from the experience and position that we hold in this industry.

I believe that as a major television-service organization our thoughts in these matters could prove of value to you in reaching your ultimate conclusions. I am enclosing herewith a copy of a letter which I recently sent to heads of other major TV film-distribution companies which I feel might give you an insight to some of my views. Should you feel that I can be of some service to you and your committee, I would be most happy to extend my cooperation.

Respectfully,

ELY A. LANDAU, *President.*

NATIONAL TELEFILM ASSOCIATES, INC.,
New York, N. Y., May 3, 1956.

Mr. JOHN DOE,
Film Syndicator,
Main Street, U. S. A.

DEAR MR. DOE: Charges and countercharges about the control by networks of the broadcast industry are being made by many people and organizations both informed and uninformed.

As heads of leading television film distribution organizations I believe that both you and I have a decided interest in the current hearings being conducted by both the Senate Commerce Committee and the Barrow committee appointed by the FCC. It seems to me that we, and others who have a stake in this business of broadcasting have an obligation to ourselves and to the industry to make our stand crystal clear and public.

Our company, as you know, has basically not been a supplier of programs to the networks for network telecasting. Our prime function has been to supply television programs on film and theatrical feature films for use by the local station operator.

I have no banner to wave for the network as our customer. It is not.

However, I have been greatly disturbed in not seeing a clarified position taken by the distributors in relation to the networks, and it is toward that end that I'm taking this opportunity to offer our thinking here at NTA.

I feel that I must call upon you and the others to weigh the scales carefully. The expediencies of the moment can lead us to be extremely shortsighted. Let us not fail to see the forest because of the trees.

It is my conviction that you and I, and everyone concerned with the TV broadcast industry, should shout "Hurrah for the TV network, without which TV as we know it today would not exist."

We should say, Thanks to the networks which gave the TV industry an impetus that few other fields have ever gotten—especially so much in so little a span of time.

We should say, "Let's look at TV's growth picture." From a humble beginning in 1948 when the TV set count stood at 190,000 the figures show a tremendous rise. In 1949 there were 1 million sets. In 1950, 3,950,000. That figure rose to 10,549,500 in 1951, 21,234,000 in 1953 while today's figure stands at 36,900,000.

And then we should ask, "Where are the organizations that can claim and deserve as much credit for TV's amazing growth as the networks themselves?" It seems to me that those within the industry as well as those without, who are publicly or privately picking apart the networks today, have short memories indeed.

Without a network concept in the broadcast industry, what single station—or group of stations could or would have had the buying and organizational power to give to an infant TV industry such epic and industry-building projects as:

Championship sporting events—boxing, football, and the world series since 1947;

Political highlights including the presidential nominating conventions since 1948, and the presidential inaugurals since 1949;

International events such as the signing of the North Atlantic Treaty Pact, the Japanese Peace Treaty Conferences, and the Coronation of Queen Elizabeth in 1953;

Congressional hearings such as the Kefauver Crime Commission investigation of 1951 and the Army-McCarthy sessions in 1954;

Big-time variety entertainment since Milton Berle's first telecast in 1948—the Ed Sullivan Show, the dramatic big-timers Studio One, U. S. Steel Hour, and Kraft Theater;

The spectaculars since 1954 and, of course, colorcasting since 1954.

All of this, plus 25 years of laborious experimental work done at tremendous cost to the networks for a nonexistent and then embryonic TV industry. I am sure that many of those complaining bitterly about network profits today have completely forgotten the staggering network expenditures and losses of yesterday when it was the networks' faith in the medium that enabled them to progress so fast and so far.

To all this I then say: "There is nothing wrong with the network concept today—that has not been brought about by the TV economy itself—an economy not measured in terms of bigger and better programing nor measured in terms of bigger and better viewing audiences; nor in terms of bigger and better advertising dollars—but an economy of a stunted growth, brought about by a limited and entirely uncompetitive market situation.

I say that there is absolutely nothing wrong with the networks' role in the television broadcast industry that couldn't be cured by precise and concise governmental action that will allow for steady and stabilized expansion of the television market. I sincerely believe that our hue and our cry can only be addressed to those in Government who control the growth of our industry, calling on them to aim their sights in the right direction, that of increasing and stabilizing the TV station-allocation picture.

The network role in the television industry will then and only then become less a matter of monopoly—less a matter of arrogance—less a matter of high-handedness—than any other approach could ever bring about. The law of supply and demand operates in broadcasting just as it does in the grocery business. There's nothing wrong with network broadcasting than an increased supply of networks and stations couldn't cure.

The fundamentals behind all the fuss and fury are obvious. Network time is scarce; advertisers are standing by, ready to snatch up time availabilities. With the limited supply against a plentiful demand in the hands of so few—the basic "facts of life" are bound to prevail.

I know that you are well aware of the basic vicious cycle in our business—that of better programing, creating more viewers, attracting more advertisers with more advertising dollars, allowing for the creation, production, and/or acquisition of better programing—and so on around the cycle again and again. But we also know that the independent station operator must find the answer to the question of where that cycle begins for him.

You and I know that for the unaffiliated nonnetwork station it has been an almost impossible task. There is no start without outstanding programing, and the network concept of enabling independently owned stations all over the country to procure programing for their stations which they alone could not produce or acquire is one of the fundamental cornerstones of the TV industry.

Ask any station owner about the value of his network franchise. He'll say that he needs it desperately. If he's truthful, he'll say that. He needs his network, but he'd be much happier if he had the competitive leverage of other networks to vie for the use of his time.

Of the 67 stations which have gone off the air since 1952; all, at the time of their retirement, were nonnetwork basic affiliated stations. Ask the average station operator who is network affiliated what he would do without his network affiliation and have him analyze how different his battle for survival, let alone profits, will become.

The fact that there are only three networks is the only thing wrong with the network role in the TV broadcast industry, and particularly since one of them is still very, very much in the embryonic stage because of our limited station picture.

There should be more networks. There must be more stations before there can be more networks. There must be positive and sound Government action before there can be more stations.

I say let's concentrate on, call for, and create the means to give the industry more of them.

There has been much criticism and much comment about must buys and station option time. These facets undoubtedly have their flaws and drawbacks. But the basic underlying facts of life are that you can't put the world series on the air; you can't buy Richard III for onetime national showing; you can't produce Dragnet, Lucy, Omnibus, and the Perry Como Show unless, and this is the biggest unless of all, unless you have enough time cleared to induce the right sponsor to spend tremendous amounts of money to bring, in the ultimate, the best in home entertainment to the people of the United States. Unless the network can have such option time it cannot acquire or produce great programing. Unless they have their must buy they cannot defray enough of those costs and make a profit.

One is the chicken—the other is the egg. There could not be one without the other. There would not be this great televesion broadcast industry for the overwhelming majority of the United States to see and enjoy without both—and the network.

We must remember too that the stations' allegiance to the network is not contractual. It is entirely dictated by economics. Under a station's license from the Government it cannot be bound legally to program network shows nor give network time. We both know that stations do so because they want and need such a structure for the procurement and development of programing and the sale of their time nationally to sponsors.

It seems to me that Dean Roscoe L. Barrow, of the University of Cincinnati Law School, who heads up the special staff of the FCC's network investigating committee, summarized the issue succinctly when he said, "The network as an instrument in itself has no particular significance to us, it is the effect it has on broadcasting to the people, the effect on advertising, and all components of the industry." In an elaboration of his remarks, Dean Barrow further stated that among the questions he will seek answers to are, "Why it is that we have such a small number of networks and why in recent years no new ones have entered the field."

It is upon this point that we must and should raise our voices.

I believe that you and I and others within the framework of TV film programing can do much to clear the air and to present some of the basic facts that exist. I don't have to tell you the implications and the inferences that go with lack of information. I believe strongly that there is room and a prime need for the network in the TV economy. I believe that there should be more networks.

If we can induce those that have the power to do so to give us more stations, we'll have more networks tomorrow, in a freer, more competitive industry within which to work.

Sincerely,

ELY A. LANDAU, *President.*[1]

Senator PAYNE. The first witness we have this morning is Mr. Wilbur M. Havens, president of Havens & Martin, Inc., who are the licensees of WTVR, Richmond, Va.

Mr. Havens, I understand that you have a prepared statement. You may proceed in your own way. If you wish to read the statement, or the statement in its entirety will, of course, be made a part of the record in any event.

Mr. HAVENS. I would like to read it, Mr. Chairman. And I have with me several of my associates whom I would like to introduce. On my right is Mr. Walter Bowry, treasurer of Havens & Martin; Mr. Martin Hutchinson; and Mr. John Midlen, Washington counsel.

During the course of my statement, Mr. Chairman, I would be glad to answer any questions. However, I am hard of hearing, and you will have to ask your questions loud.

STATEMENT OF WILBUR M. HAVENS, RICHMOND, VA., PRESIDENT, HAVENS & MARTIN, INC., STATION WTVR

My name is Wilbur M. Havens. I am president of Havens & Martin, Inc., owners and operators of AM station WMBG, FM station WCOD, and television station WTVR, channel 6, all in Richmond, Va. Since 1925 I have been continuously engaged in the broadcasting industry in Richmond, Va.

WTVR was the first television station to begin operating in the South. We received our construction permit in 1946. We were one of the original seven interconnected stations on the first NBC television hookup, comprising the cities of Boston, Schenectady, New York, Philadelphia, Baltimore, Washington, and Richmond. At that time our AM radio station was also an NBC affiliate.

Our most recent NBC television affiliation agreement was terminated on June 1, 1955. NBC declined to renew this affiliation agreement with us, and instead affiliated with another station which had received its construction permit and was not yet on the air. My purpose here today is to tell this committee how and why NBC decided to cut off WTVR from the privileges of affiliation and what the consequences have been for our station.

I believe that NBC cut off our station for two principal reasons. First, because we insisted on exercising our own independent judgment as to what NBC programs we should carry on both our TV and radio stations, and occasionally rejected some NBC programs in favor of other programs. Second, because after we increased the power and coverage of our transmitting facilities, we insisted on increasing our station rate for network programs, to which NBC objected even though we were asking for less of an increase than we were entitled to under NBC's own rate formula as applied to the number of television sets in our service area.

So long as our station was the only station in the Richmond area, NBC was most anxious to retain us as an affiliate, despite our insistence on retaining some independence in selecting programs. But

[1] Mr. Landau appeared before the committee at a later date, his testimony appearing at p. 2690.

shortly after a second television station authorization was issued for the Richmond area, and, as I will show in a moment, perhaps in connection with the other station's deciding to switch its equipment purchases from Du Mont to RCA, NBC dropped us like a hot potato, and transferred the affiliation to the new station. A short time later, the NBC radio network affiliated with the Richmond radio station owned by the same interests. NBC took these actions suddenly and without prior notice to us, and has never since explained to us the reason for its decision.

Mr. Cox. Excuse me. Isn't that, however, what is required of you by the law—that you, in the exercise of your own judgment as a licensee, shall determine what programing is best in the interest of the viewers in your community?

Mr. Havens. That is my understanding of the rules and regulations—that the affiliate should determine what are the best programs it should carry.

But the reason was clear enough. Apparently, NBC does not care for affiliates who believe in putting the interests of their own communities ahead of the interests of NBC. I believe that NBC terminated our affiliation as an object lesson to show all of its other affiliates what would happen to a station that stands up to the network.

Unless you gentlemen of this committee, or the Federal Communications Commission, or the Department of Justice decide to do something about it, the object lesson will sink home in the minds of every affiliate, and the many hundreds of independently owned affiliates of the major networks will be independent in name only. They will serve the useful functions of supplying the necessary local capital and taking the necessary local business risks, but for all practical purposes, they will be controlled body and soul by the network companies.

I would now like to tell you our story.

EARLY NBC NETWORK OPERATION

As I have said, we built the first television station in the South, and were 1 of the 7 interconnected stations on the original NBC television hookup which began broadcasting regularly scheduled network programs on January 1, 1949. This was before either of the other network companies had entered the field of interconnected network programing.

In those days, NBC supplied 4 hours of programing per day, and we carried all of it. We also paid our proportionate share of the cost of the interconnected hookup, determined in accordance with a regular formula. We did not receive a penny in compensation from NBC during the entire year of 1949, which was the first year of regular network service. In other words, our station, along with NBC and the independently owned affiliates in Boston, Schenectady, Philadelphia, and Baltimore, helped to build and pay for the establishment of network services.

Shortly thereafter CBS and, a little later, ABC started their own interconnected television networks. This is when our troubles began with NBC. We were still the only TV station in Richmond, and both CBS and ABC were continuously urging us to carry some of their programs. While we had placed the prime evening viewing hours 7:30 to 10:30 under option to NBC under our affiliation agreement, the agreement provided, as the FCC's chain broadcasting regulations require, that the option could not be invoked to exclude a program offered by another network. The regulations also provided that a station could not enter into an arrangement or course of conduct with one network company under which the station agreed to carry the programs of that network exclusively. Furthermore, in November 1950, the FCC initiated its rulemaking proceeding, docket No. 9807, looking toward a proposed rule limiting the number of hours which any television station could take from a single network.

Mr. Cox. In that connection, Mr. Havens, is it your understanding that this proposed rulemaking of the FCC was designed to take care of the problem of markets in which there was only 1 or 2 television stations available, so that there were not facilities adequate to permit the release of the programs of all the networks?

Mr. Havens. I think very definitely so. I think that they were interested in determining why stations in 1 single station market—in cities where there is only 1 station—weren't carrying programs of other networks; or wanted to see that they were carrying programs of all the networks.

Mr. Cox. So that your decision to carry the programs of CBS and ABC, in some instances, was in line with that suggested policy, as well as with your determination that some of these programs were superior to those of NBC and, therefore, more in the interest of the people of Richmond?

Mr. Havens. Yes, I am sure that is true, sir.

NBC OBJECTIONS TO BROADCAST OF CBS AND ABC PROGRAMS

We took these FCC regulations and proposed rulemaking proceedings seriously. Moreover, we believed that, as the only television station in Richmond, we owed a duty to our audience to carry the best programs being offered by any source. While many of the NBC programs were of very high quality, we did not feel that every single one of the NBC programs offered during the prime evening hours was better than any competing programs being offered by CBS and ABC. Accordingly, notwithstanding our affiliation agreement with NBC, we accepted some CBS and ABC programs during prime evening hours.

We did not think we were being unfair to NBC. During the 28 prime evening hours per week between 7 and 11 o'clock, we carried 21 hours of NBC programs and only 7 hours for the other networks combined. Furthermore, we offered to carry on a delayed basis, by kinescope, those NBC programs which we were not accepting at their originating time.

But this did not satisfy NBC. The NBC station relations people complained about our action. In some cases they refused to accept delayed broadcast time for their programs, and would not send us the kinescopes. Rather than permit these programs to be broadcast on a delayed basis, they preferred to deny these programs to the people of the Richmond area. In other words, they decided that if Richmond was foolish enough to insist on seeing any single CBS or ABC program on its only station instead of an NBC program being offered at the same time, the people of Richmond were not going to be given a chance to see the NBC program at some other time. This was typical of NBC's dog-in-the-manger attitude, which continued even after NBC terminated its affiliation agreement with us.

VOICE OF FIRESTONE

Perhaps the most glaring example of NBC's attitude toward carrying the programs of other networks is the case of the Voice of Firestone. As the committee doubtless recalls, NBC decided that, beginning in September 1954, it would no longer carry the Voice of Firestone at 8:30 o'clock Monday evening, the time which Firestone had been purchasing from NBC radio for this program for over 20 years, and which Firestone had also been purchasing on NBC television in order to simulcast the program on radio and television at the same time. NBC offered Firestone a less desirable time which Firestone refused to accept. NBC thereupon insisted on evicting Firestone from its traditional time, and put on the Sid Caesar show instead. Firestone then moved its TV and radio programs to the ABC networks, at its traditional time of 8:30 o'clock on Monday night.

The Voice of Firestone is one of the fine musical programs on the air, and it was extremely popular in the Richmond area. Nevertheless, under great pressure from NBC, our station at first accepted the NBC replacement for this time period, Caesar's Hour. However, the Firestone people decided to take their case to the public. They published advertisements in the Richmond newspapers, stating that the Voice of Firestone could no longer be seen in the Richmond area because our station had decided to carry the new NBC program, and said that this state of affairs would continue unless the public took steps to advise our station that it preferred the Voice of Firestone. I have a copy of the advertisement here, and I am handing it to the reporter. It is dated September 20, 1954.[1]

Mr. Cox. I take it that in that advertisement, the criticism or blame for this change was directed against your station, rather than against any action of the network?

Mr. Havens. Yes, sir, it certainly was. The public didn't seem to understand that the action was not on the part of the station, but on the part of the network. It states as being the cause or reason for the loss of the Firestone program that we had taken it off.

Mr. Cox. You referred to pressure here to accept Caesar's Hour. Was that the normal pressure which was exerted by the network in connection with trying to get you to clear time for new programs, or was there anything exceptional about this incident?

Mr. Havens. Well, we felt all along that the Firestone program was entitled to stay on the station, because we had carried it on our AM station for 18 years. In fact, we didn't subscribe to the principle of taking Firestone's program off the network just simply because they didn't want to use some other program that the network wanted them to use, and then switching them to Sunday afternoon after they had been on the network for 25 years. And we were in favor of carrying it. However, Caesar's program was an hour program, not a half-

[1] This advertisement is set forth at the conclusion of Mr. Haven's testimony, on p. 1639.

hour program. Firestone was a half-hour program. And NBC called us a number of times about taking the Caesar program, instead of the Firestone program. So, we finally decided we would do it. But we never got on the air. Before it got on the air these advertisements were in. When these advertisements were in, then we were swamped with letters here—over 3,000 of them—which I would like to present for inspection.

Does that answer your question, Mr. Cox?

Mr. Cox. Yes. Proceed.

Mr. Havens. Within a few days after this advertisement was published, our station received over 3,000 letters from listeners who said they wanted to continue seeing the Voice of Firestone. I have these letters here, and I will be glad to submit them for the record.[2] Anyone who reads these letters will see that while they may have been prompted by the advertisement, they are sincere individual expressions of strong, personal preferences. We did not receive 3,000 letters, or even 3 letters, urging us to continue Caesar's Hour instead of the Voice of Firestone.

Now, as any advertiser or station operator or public opinion analyst will tell you, 3,000 letters is an enormous number of letters to receive in a city the size of Richmond about whether a single television program should be continued. I interpreted these letters as expressing a strong preference by our audience in favor of returning to the Voice of Firestone. I felt it was my duty as the licensee of the only television station in Richmond to respond to this preference. I therefore notified NBC that we would drop Caesar's Hour and that we would carry the Voice of Firestone on ABC in its place.

NBC did not like this decision at all. The NBC station relations people told me that the 3,000 letters were a pressure move inspired by a disgruntled advertiser, and that I should ignore them. To explain my action, I sent them the entire set of 3,000 letters. I sent them in this very box just as they were returned to us. They apparently made little impression on NBC, since they were returned with a letter from Mr. Paul Hancock of NBC's station relations, dated October 4, 1954, continuing to urge that we drop the Voice of Firestone in favor of Caesar's Hour. This letter said, and I quote:

> We ran into considerable difficulty last week, and we still may not hear the end of it. Several of the clients are complaining loudly. I sincerely hope that the time will come soon when you can clear Caesar live.

So long as WTVR was the only television station in Richmond, NBC could do nothing immediately about my decision. But 6 months later they transferred their affiliation to a second television station in Richmond, which had not yet even begun operating.

(On May 31, 1956, the chairman of the committee wrote to Mr. Harvey S. Firestone, Jr., with respect to the matter, receiving a reply from Mr. Firestone's secretary under date of June 16, 1956. These letters were inserted into the record on July 17, 1956, and are printed at this point to tie in with Mr. Haven's testimony:)

[2] These letters and cards were examined by the committee's staff and then returned to Mr. Havens. They are of the character indicated by him.

MAY 31, 1956.

Mr. HARVEY S. FIRESTONE, Jr.,
The Firestone Tire & Rubber Co., Akron, Ohio.

DEAR MR. FIRESTONE: As you may know, the Senate Interstate and Foreign Commerce Committee has been conducting hearings this session into certain phases of the television industry, including network practices. In that connection, the committee recently heard testimony from Mr. Wilbur Havens, the general manager of WTVR in Richmond, Va.

Included in Mr. Havens' testimony was a reference to the occasion when the National Broadcasting Co. canceled your company's broadcast time on Monday evening in order to make room for the Sid Caesar Show. Mr. Havens inserted in the record a copy of an advertisement which your company ran in the Richmond newspapers advising the public that your program was to be no longer heard in the Richmond area. He also brought before the committee more than 3,000 letters and post cards which he had received as a result of your advertisement, and he advised the committee that because of this expression of public interest his station had decided to carry the Firestone Hour over ABC and to reject NBC programing during this period.

I am writing to you at this time for two reasons: First, I would like to know whether your company placed advertisements in other areas and whether you know what the public response was. The committee is particularly interested in learning whether there may possibly have been a similar response in other communities where, however, the local station nonetheless disregarded the public's views and carried the new NBC program. Second, the committee would appreciate any details you can give us regarding your negotiations with NBC for continued use of your time period on Monday evening. We would be particularly interested in the reasons given by NBC for terminating your company's longstanding relationship with that network. If any of your negotiations were in the form of correspondence we would be happy to have copies if you feel you can supply them to us.

Thank you for your cooperation in this matter.

Sincerely yours,

WARREN MAGNUSON, *Chairman.*

THE FIRESTONE TIRE & RUBBER CO.

Harvey S. Firestone, Founder

AKRON, OHIO, *June 16, 1956.*

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

MY DEAR SENATOR: During Mr. Harvey S. Firestone, Jr.'s absence from the country his office has referred to me your letter of May 31, 1956.

After the National Broadcasting Co. informed us in April 1954, that it would no longer carry the Voice of Firestone in the 8:30 to 9 p. m. time spot on Mondays, which our program had occupied on the radio since 1928 and on television since 1949, we switched to the American Broadcasting Co. network. As you know, in many of the major markets of the United States there are, unfortunately, only 1 or 2 television stations, which means that 1 or both of them usually share affiliations with 2 or more networks.

The station in Richmond, Va., which had been carrying the Voice of Firestone on NBC also had an affiliation with ABC. When we switched from NBC to ABC we asked all the stations which had double affiliations to continue to carry the Voice of Firestone. The station in Richmond informed us that it would do so only if it felt that the public wanted the Voice of Firestone continued. We knew of no way to prove to the station that the public wanted to continue the Voice of Firestone except to insert an advertisement in the Richmond papers advising the public that the Voice of Firestone would not be heard in the Richmond area unless the station received enough letters requesting its continuance.

To answer your first question, a similar situation occurred in Roanoke, Va. In both cases the volume of mail which the stations received influenced them to continue the broadcasts of the Voice of Firestone. We did not publish our advertisement in any markets except these two because in the other markets the stations either accepted the Voice of Firestone or rejected it without any qualifications regarding the opinion of the public.

To answer your second question, as noted above, we were informed by the National Broadcasting Co. in April 1954, that it would not renew our contract for the 8:30 to 9 p. m. time spot on Mondays on the NBC television network, although NBC was willing to renew it for radio only. Since our program is a simulcast and since it would have cost considerably more money to broadcast it separately on radio and television, we felt that we had to have the same time spot on radio and television.

NBC offered us a choice of three time periods, none of which were in network-controlled time, which meant that we would have had to get the individual stations to give up their station-controlled time to carry the Voice of Firestone. NBC did, however, offer us for sponsorship all of or part of the Sid Caesar show, an NBC network package show, which it planned to put in our previously held time period on Monday night. Since we did not feel that we wanted to lend our name to this type of show, we refused this offer as well as the offer to try to line up a network of stations in one of the station-controlled time periods.

The reason given by the network for discontinuing our program was that it did not have a high enough rating. The network pointed out that although our program was of outstanding quality, the program preceding us had a higher rating than our show and that the program which followed us could not get high ratings because when our show came on, part of the audience tuned to other networks and did not return to NBC after our show was off the air.

This was somewhat surprising to us because in February 1951, our company asked the National Broadcasting Co. for its recommendations to provide Firestone with a more popular television and radio show. We emphasized that we were willing to consider any type of television and/or radio program which would maintain a quality format and be a sound investment of advertising dollars.

In that same month, Mr. Niles Trammell, who was then president of NBC, and a group of NBC representatives came to Akron and made a presentation in which they urged the continuance of the Voice of Firestone on both radio and television. The net of their presentation was that the Voice of Firestone was not only an excellent program for our company, but also a highly valued program for the National Broadcasting Co., and they showed us statistics which indicated that on a cost-per-listener basis it compared very favorably with other television and radio programs.

During this presentation they made certain recommendations for improving the Voice of Firestone, all of which were adopted by us.

Furthermore, on November 30, 1953, when we celebrated the 25th anniversary of the Voice of Firestone, just 4 months before NBC notified us that it would not renew our contract, Mr. David Sarnoff, chairman of the board of RCA, stated publicly on our simulcast:

"We at the National Broadcasting Co. have a deep sense of pride in being able to share in this anniversary observance with the Firestone Tire & Rubber Co. But our tribute must be to the leaders of that great company whose faith in the public's love for fine music has been fulfilled and renewed over the past 25 successful years. The acceptance and stability of the Voice of Firestone goes far beyond mere program duration. Many of its orchestra members have performed every Monday night for as many as 15 and 20 years. This is not an anniversary of endurance. It is an anniversary of gratitude to a company which for a quarter of a century has been bringing a fine and wholesome broadcast series to American homes."

We trust that we have answered your questions.

Very truly yours,

JOSEPH THOMAS, *Secretary.*

NBC RESISTANCE TO RATE INCREASE

Our second major problem with NBC concerned the station rate we charged for network programs. Our original facilities had power of 12.16 kilowatts and an antenna height of 430 feet above average terrain. With these facilities, our service area in September 1953, included approximately 175,000 television sets, and our station rate was $625 per hour. During 1952, we obtained FCC approval to increase our power to the maximum for a channel 6 station, 100 kilowatts, and we received local zoning approval to raise our antenna height to 1,049 feet above sea level. We believed that this would substantially increase our service area and the number of sets within our area, and would justify our charging a higher rate.

Earlier than that, we had become so disturbed over NBC's management policies and their complaints as to our carrying programs of other networks that we had notified NBC in June 1952, that we did not intend to renew our television-affiliation agreement on the same terms. Despite NBC urging, we adhered to this decision for approximately a year, although we continued to accept the same proportion of NBC programs as we had when formerly affiliated. During this period, NBC continued to list us as one of its affiliates.

During this period, NBC was very anxious to have us sign a new affiliation agreement, and courted us assiduously. On November 19, 1952, Mr. Paul Hancock of the NBC station relations department wrote me a letter which included the following complimentary remarks about our operation:

It is rarely that you find a station manager who is so well-informed about all the mechanics of station operation. Occasionally, one finds a station manager who has a good engineering background but no sales experience, or other times a salesman who has no engineering or programing background. I can truthfully say you are a rarity in the broadcasting business when it comes to combining engineering, programing, and sales ability.

It was a distinct pleasure being with you, and I am sure that your future plans for expanding the station will bring you great satisfaction.

Later in the same letter, Mr. Hancock said:

* * * I have complete confidence that we are working on a fairly firm foundation and that some of our differences can be resolved to the satisfaction of both parties. Your prestige and loyalty in this network is unquestioned, and the least I can hope is that we are reciprocating.

In June 1953, Mr. Paul Hancock came to Richmond and urged us to sign a new affiliation agreement. After some discussion we agreed, after receiving verbal assurance that our new facilities, then under construction, would be recognized for station coverage, out to the 100 microvolt per meter contour, provided we would have an engineering survey made by qualified consulting engineers to establish this line.

The new facilities were completed at the end of 1953, and the engineering survey was made in January, February, and March of 1954, at a cost of $8,000.

Mr. Cox. Can you tell us what was the firm of engineers that made that survey?

Mr. Havens. We employed the firm of Jim McNary. A copy of this survey I have here, which is entitled "Coverage Survey for WTVR, Richmond, Va., Channel 6, 100 Kilowatts, Effective Radiated Power, 890 Feet, AAT."

It states:

During February and March of 1954, a station wagon equipped with a recording field intensity measuring apparatus was driven approximately 8,000 miles in the area surrounding WTVR to collect data on distances from the station to the standard field intensity contours. Their volumes of data have been analyzed and are summarized in this report.

Now, these particular surveys and measurements were conducted in a truck with a collapsible antenna which could be elevated to various heights. And the field intensitv of the station was recorded on graph paper which was driven off the speedometer of the truck. In other words, every single inch of the way, the field measurements were recorded on this graph paper. Unfortunately, I don't seem to be able to put my finger immediately on that sample of the graph paper. But it is in here. So that the human element as to the field-intensity measurements of the station was completely removed and the measurements were shown on the graph paper from which these curves for the various radii were prepared.

Mr. Cox. And this indicated that, as you had expected, the service area of your installation had been tremendously increased by this increase in power and antenna height?

Mr. Havens. Very definitely so, Mr. Cox. And moreover, the survey proved that the station coverage exceeded the theoretical calculation, because the theoretical calculations cannot stand up in the face of direct measurements.

Our total investment in the new facilities was $659,000. On the basis of the survey and the need to obtain an adequate return on our investment, we raised our station rate for spot programs to $875 per hour, and asked NBC for a similar increase in our rate for network programs. Despite numerous requests by us, NBC did nothing until August 1954, 8 months after the new and more powerful facilities had been placed in operation.

Based on the independent engineering survey, we could show a set count of over 450,000 sets within our 100 microvolt contour, or approximately triple our previous set coverage. We received numerous letters telling us how well our signal was being received. Within the State of Virginia, we received many letters from cities as far as 70 to 110 miles away. Newspapers wrote from Raleigh and Durham, N. C.; Salisbury, Md.; and Charlottesville, Harrisburg, Lynchburg, Newport News, and Waynesboro, Va., asking us to send our program schedule so they could publish it for their readers.

Mr. Cox. Do you know, Mr. Havens, whether or not the service area which you established by this increase in power overlapped in any substantial measure the claimed service area of the owned-and-operated station of NBC in Washington, D. C.?

Mr. Havens. Well, NBC affiliated itself with a station in Norfolk. Now, at the time that this affiliation was made, Mr. Heffernan appeared before this committee and testified that they had affiliated with a ultra-high-frequency station in Norfolk; and at that time the station had no set coverage, because there were no ultra-high-frequecy receivers in Norfolk at this time. But there were some 150,000 very high frequency sets in the city of Norfolk. And Norfolk fell within the hundred microvolt per meter contour according to these measurements.

Mr. Cox. So, that you had overlapped, certainly, with WTAR in Norfolk, which had been their affiliate?

Mr. Havens. Well, WTAR was not then an NBC network at this time. Prior to that it was.

Mr. Cox. At that time you then did overlap the Norfolk market in which they had a UHF affiliate?

Mr. Havens. That is right. Of course, it might be remembered that the very high frequency sets in the Norfolk area would still have to depend upon WTVR for reception from NBC.

Mr. Cox. Do you know offhand what the airline distance is between Washington and Richmond?

Mr. HAVENS. Not accurately. I could approximate it. I would say less than 80 miles.

Mr. COX. In other words, if you were getting anything like the distances of 70 to 110 miles, your signal could be received in areas in northern Virginia?

Mr. HAVENS. Very definitely.

Mr. COX. They could also receive the signal of the Washington, D. C., owned and operated station, WRC; in other words, NBC then owned, and still does, a station of its own in Washington?

Mr. HAVENS. Yes, sir.

Mr. COX. And you had then, after this increase in power, some substantial overlap in service area with that station?

Mr. HAVENS. Between Washington and WTVR?

Mr. COX. Yes.

Mr. HAVENS. I would suspect it would be; yes, sir.

Under NBC's own 1953–55 TV rate table giving a formula for station rates based on set circulation, the proper rate for 450,000 sets is $1,250 per hour. This formula is attached to my statement.[3] And that is the first attachment to this statement, at the very end, which says:

> TV rate table, all stations, 1953–55, based on $100 for 15,000 circulation; $5,000 for 3 million circulation.

And it shows that the rate for 450,000 sets is $1,250. That is about midway in the sixth column.

Mr. COX. Now, Mr. Havens, wouldn't it be the policy of the network generally to agree to a rate which was determined only on the basis of unduplicated sets?

Mr. HAVENS. Yes; I think so.

Mr. COX. Did you ever have any discussion with NBC as to methods of determining how many of these 450,000 sets within your service area were not duplicated by other network coverage?

Mr. HAVENS. No, sir; I never did find out. I could never find out. We discussed the coverage of the station many times. But we were never given any definite information as to how many of their sets, that I can recall—do you have any information on that [turning to Mr. Bowry]?

Mr. BOWRY. No; I don't have any information. But I think that, as Mr. Havens will point out later in his testimony here, the method for setting the rate would be determined upon the hundred microvolt per meter line. That is set forth in the testimony here.

Mr. COX. Yes.

Mr. BOWRY. Informally in the agreement.

Mr. COX. Did NBC ever ask you to have surveys made by any of the commercial agencies to determine what the viewing habits were of the owners of these 450,000 sets; that is, whether they were actually watching WTVR, or watching the station in Norfolk, or watching the station in Washington?

Mr. HAVENS. I can't recall. But I would assume that viewers and listeners within the areas where the editors of the newspapers requested copies of the program schedule were certainly listening and looking, or they wouldn't have asked for them. In fact, they stated

[3] This statement is set forth at the end of Mr. Havens' testimony, on p. 1640.

in their letters that they needed them in order to give this program schedule to their readers.

Mr. Cox. But you never had any detailed discussions with NBC in an effort to pinpoint what part of these claimed sets couldn't be duplicated?

Mr. HAVENS. Not that I can recall; no, sir.

At that time, we were receiving exactly half this amount, $625 per hour. We were requesting an increase only up to $875 per hour, approximately two-thirds of the rate to which we were entitled on NBC's own formula.

Nevertheless, NBC did nothing about our request for an increase until 8 months after the new facilities had been placed in service. Finally, on August 11, 1954, Mr. Tom Knode, manager of NBC's station relations department, called me over the telephone and said that Mr. Sarnoff was sympathetic with our request for an increase, but that a $250 increase at one time was too much. He suggested a $175 increase beginning immediately (that is, September 1, 1954), which would mean a station rate of $800, plus a $75 increase 6 months later. I reluctantly agreed.

I would like to comment that we have been selling our station in the national spot field for $875 from April 1, 1954. And this is August. And they are still selling the station for $625.

Then, on August 19, to my great surprise, I received a teletype from Mr. Paul Hancock of NBC, an assistant of Mr. Knode, stating that our network rate would be increased from $625 to $800, but that the increase would be effective October 1 (rather than September 1 as I had previously understood), and that for a period of 6 months rate protection would be given to all current NBC advertisers. We could not compel NBC to pay any higher rate, since our affiliation agreement did not permit us to increase the NBC rate without NBC's consent.

Mr. Cox. Do you know whether that provision requiring their consent is standard in affiliation contracts with the network? Do you know whether it is standard practice of NBC to insist that no station on the network may raise its station rate without consent of the network?

Mr. HAVENS. Without what?

Mr. Cox. The consent of the network.

Mr. HAVENS. I still can't get your question.

Mr. Cox. This provision that was in your agreement—do you know of your own knowledge whether that is more or less standard for NBC affiliation contracts?

Mr. HAVENS. I haven't seen any other NBC contract, but I would assume that it was standard in all of their contracts. I was led to believe their contracts were all the same.

Mr. Cox. Is it customary practice—if you know—for the network to give this 6 months' protection to their advertisers when a rate increase is made?

Mr. HAVENS. Yes. Now that is true. It is customary to give an advertiser 6 months' rate protection. But in this case, Mr. Cox, each network advertiser using the facilities of NBC's network had already had 8 months' protection. NBC was notified on January 4 that this new station had been placed in operation and was then operating on 100 kilowatts, 1,040 feet above sea level. The actual usage of the station had already been given to the advertiser more than 6 months—8 months.

Mr. Cox. Was any notice of this proposed increase given to the advertisers? Did you publish any rate cards such—which showed a new proposed station rate?

Mr. HAVENS. They did nothing about the rate. So, I assume this advertiser was not advised. But it certainly wasn't due to my negligence that they weren't advised.

Mr. Cox. What is your current station rate at this time?

Mr. HAVENS. $875.

Mr. Cox. You have a basic affiliation with ABC?

Mr. HAVENS. Yes, sir; we are at this time affiliated with ABC.

As I have stated, NBC delayed 8 months before accepting any increase in our station rate for network programs. It then agreed to a partial increase effective October 1, 1954, to become effective for most advertisers 6 months later, or April 1, 1955. On April 18, 1955, 18 days after this modest increase had finally become effective for NBC programs, NBC switched its affiliation from WTVR to the second television station in the Richmond area, effective June 1. Thus, after stalling any rate increase for a period of 15 months, NBC left us 2 months to enjoy the benefits of the increase before the punishment for requesting it became effective.

NBC DISTORTION OF WTVR'S COVERAGE TO STALL RATE INCREASE

If further proof is needed to show how unfairly NBC treated our request to increase our station rate on network programs, I am attaching to my statement a document prepared by NBC's research department, which was placed in evidence as part of the deposition of an NBC witness during litigation in the United States Federal court in Richmond, Va., on January 5, 1956.

Mr. Cox. Do you happen to know the name of the case in which this deposition was taken?

Mr. HAVENS. Yes. It was in the suit between the Lehigh Structural Steel Co. and Havens & Martin, Inc. Now, that suit was brought by virtue of the fact that we purchased this tower from the Lehigh Structural Steel Co. at a cost of $101,000 for steel. The first contract provided for about $80,000 for the tower. However, the building commissioner for the city of Richmond declined to issue a building permit to erect a tower unless the tower was constructed with rib bolts rather than plain bolts. The Lehigh Structural Steel Co. then modified the first contract to show a cost of $101,000 including rib bolts, and justified that extra cost by virtue of saying that the tower would have to be matchmarked, subpunched and reamed, and it would require that much additional money.

Now, when the tower was finally supplied to us, much of the tower had not been subpunched, matchmarked or reamed. In fact, many pieces were without any holes at all. They themselves sent down more than 100 extra pieces to be installed in the tower. Yet, our agreement with our erector had set forth that we would supply him with a tower that was matchmarked, subpunched and reamed. Consequently, we could not perform our contract in accordance with what we had promised the erector to do. And it took him about twice as long to erect the tower, because much of the work had to be done in the air.

Now, then, we were advised by our counsel not to pay the final $17,000 that was due on the Lehigh tower. Lehigh brought suit. We in turn cross-suited. The case was finally settled, after about a year and a half of litigation, by Lehigh marking the notes paid, paying the $8,000 in cash as damages, and installing 100 extra pieces which they had sent down and which had not been covered.

This chart is entitled "NBC Estimates of TV sets (Data Chart) Unduplicated Areas of NBC Affiliates."[4] The rates which NBC approves for its affiliated stations are based primarily on the number of television sets in each station's service area. The chart shows a set count for WTVR Richmond, in January 1953, of 157,000 sets. The chart also shows the monthly set count for each month thereafter through June 1955, when NBC terminated our affiliation. This is a period of 30 months. For every single one of those 30 months, the NBC estimate remains constant at 157,000 sets.

Now, this is obviously preposterous. During this period WTVR was the only television station in the Richmond area. The NBC estimate, therefore, means that during the 30-month period from January 1953 through June 1955, the number of television sets in the Richmond area remained absolutely constant. Even if no consideration whatever is given to the tremendous increase in the area of our coverage when our new facilities began operating in January 1954, it is obvious that, during this 30-month period of tremendous television growth, many thousands of television sets must have been sold in the city of Richmond alone, and that the number of sets in the city must have been increasing constantly.

For example, the very same chart gives a set count for WTAR-TV and WVEC-TV in Norfolk. WTAR-TV, a VHF station, was the NBC affiliate from January through September 1953. In October 1953, it was replaced by WVEC-TV, a UHF station. For the 9 months of WTAR's affiliation (January to September 1953), the table shows an increase in set count from 152,000 to 178,000, or an increase of approximately 2 percent per month. This is an extremely conservative rate of increase. Even if this extremely conservative rate had been applied to WTVR during the 30 months of its affiliation shown on the table, from January 1953 through June 1955, the result would be an increase from 157,000 sets in January 1953 to approximately 250,000 sets in June of 1955. The fact is, Broadcasting-Telecasting magazine's issue of July 4, 1955, shows WTVR with a set count not of 250,000 sets, but with a set count of 491,627 sets.

I have already referred to NBC's own TV rate table for 1953–55, attached to my statement. This table shows NBC's calculation of the proper station rate for any set coverage, ranging from $100 per hour for a circulation of 15,000 sets to $5,000 per hour for a circulation of 3 million sets. This table shows that for a circulation of 490,000 sets, the applicable rate is $1,330. Yet NBC terminated our affiliation after we had insisted on obtaining an increase of our rate to only $800, effective 15 months after we had achieved the coverage which entitled us to an increase.

---

[4] This chart is set forth at the conclusion of Mr. Havens' testimony, at p. 1639.

WTVR'S POSITION ON RATES AND COVERAGE

The controversy with NBC as to WTVR's rates was a culmination of a long period of discussion as to the coverage of the station and the sets in use in the station's area. Even more important to us than the revenue involved was our interest in obtaining recognition by NBC of the proper coverage of WTVR's signal and the drawing power of our facilities. NBC's unreasonable discounting of our coverage and the sets in use in our area, which appeared in their published material, was a severe reflection upon the importance and prestige of our station in the Virginia area. It was completely inconsistent with the public response that we who were at the scene knew we were getting. Our requests for rate increases were primarily motivated by our desire for recognition of the viewing public whose loyalty we had obtained through technical improvements and the highest standard of programing.

NBC RELATION IN RADIO

I have described our problems with NBC in the television field. Our other problem with NBC concerned the NBC radio network affiliation with our AM station WMBG.

WMBG had been an NBC radio network affiliate for many years. After the advent of television, we began to find NBC's radio network service increasingly unsatisfactory. Finally, we decided to permit our radio affiliation agreement to lapse on the expiration of the then current affiliation agreement in the fall of 1954. Nevertheless, we continued to carry a substantial number of NBC radio programs as before, and without a written contract. Mr. Hancock, of NBC, told me that NBC had at least 20 "affiliated" stations without a contract at that time.

In the spring of 1955, however, NBC was preparing to launch its Monitor program for radio. Monitor is a program which runs for the entire weekend from early Saturday morning to late Sunday night. We did not think it was in the public interest, or our own interest, to devote the entire weekend to a single marathon program, which would reduce our station function to plugging in of the network early Saturday morning, reading an occasional local commercial, and pulling out the plug late Sunday night. We objected, and we still object, to the so-called magazine network programs, in which NBC, in effect, is selling spot announcements for which the affiliate's compensation is far less than the compensation for spot announcements sold directly.

On April 18, 1955, NBC switched its TV affiliation from WTVR to the second television station in the Richmond area, and shortly thereafter NBC signed a radio affiliation agreement with a Richmond station owned by the same interests. It is pertinent to note that this Richmond radio station carried the complete Monitor program from the time it began on Saturday morning until the time it ended on Sunday night.

Mr. Cox. Mr. Havens, I take it that your objection to this Monitor program was based both on a feeling that this was not sound programing, and also on the belief that this would cost your station revenue because of the different manner of selling the announcements in connection with it. Is that correct?

Mr. HAVENS. Yes; I am sure of it later. And the reason why I am sure is that I have seen the very same thing happen with Garroway and the program Today, in which NBC was selling anything from a hundred-word commercial up to an hour of programing, and compensating the station on its network compensation basis.

I have seen spot after spot account canceled with us and they would give as their reason that they were going over to network programing on Today. And if it had happened in Garroway, the television program and was being instituted in radio, there were reasons to think it would happen in radio, too.

Mr. COX. The shift was in revenue that your station had been receiving for announcements—from your pockets to the network?

Mr. HAVENS. Dropping our station and taking a spot in the program Today.

Mr. BOWRY. At a much reduced rate.

Mr. COX. At that time your national spot rate was $875. And their rate was—that, of course, means for an hour—and their rate was a much lower rate than that?

Mr. BOWRY. That is correct.

Mr. HAVENS. Of course, I know you understand the compensation which you receive from a network, as compared with what you receive from spot-announcement programs.

Mr. COX. You get a percentage of what they have received—normally in the neighborhood of 30 percent.

Mr. HAVENS. It calls for a percent of the total. And then they ask for 24 free hours in addition to time before it pays for it.

TERMINATION OF TELEVISION AFFILIATION BY NBC

I would now like to describe the backhand manner in which NBC terminated its television affiliation agreement with us. The current agreement had been signed in June 1953, and in accordance with applicable FCC regulations, was to terminate on June 1, 1955. The agreement provided that it would be automatically renewed unless either party gave notice to the contrary, at least 3 months before the expiration date.

On February 10, 1955, 3 months and 3 weeks before the agreement was due to expire, WTVR received a notice of intention not to renew from NBC. The notice was accompanied by a letter which I would like to read in full. The letter is as follows:

FEBRUARY 10, 1955.

Mr. WILBUR HAVENS,
President, TV Station WTVR,
Richmond, Va.

DEAR WILBUR: Our television affiliation contract with your station, WTVR, will expire on June 1, 1955. As provided in the contract, it will automatically renew on the same terms and conditions unless notice is given by either of the parties 3 months before the expiration date.

We would like an opportunity to consider revision of some of the terms and conditions of the present contract, and in order to provide time for such revision, we believe that the present contract should not be automatically renewed. In order to comply with the legal technicalities, I am attaching to this letter a formal notice of nonrenewal.

If our study should indicate the desirability of proposals for changes in any of the terms of the contract, we will, of course, discuss these proposals with you at the earliest opportunity so that we may formulate with you a mutually satisfactory basis for continuing the affiliation of your station with the NBC television network.

With warmest personal regards,

Sincerely,

HARRY BANNISTER.

Please note that the letter states the purpose of delivering the notice was not to switch NBC's affiliation to another station but to allow sufficient time to consider revision of some provisions of the present affiliation agreement and to formulate a mutually satisfactory basis for continuing the affiliation.

From February 10, 1955, until April 19, 1955, no representative of NBC made any suggestion to me, or any other official of WTVR, concerning a revision of the provisions of the affiliation agreement. April 19, 1955, was 3 days before a scheduled meeting of NBC affiliates at the Waldorf-Astoria in New York. Two days before WTVR had made hotel reservations and had paid our registration fee.

On April 19, Mr. Paul Hancock of NBC came to Richmond without advance notice. He telephoned from the airport to my assistant, Mr. Walter Bowry, and asked Mr. Bowry to meet him at a restaurant across the street from our studio. Mr. Bowry suggested that Mr. Hancock come to the office, that anything he said to him would be the same as saying it to me, and that I was in the office and that Mr. Hancock could see me.

Mr. Hancock then came to the office. He said that while he was in Greensboro, N. C., the day before, his superiors in New York had signed an affiliation agreement with the second station in the Richmond area, effective June 1, 1955. Mr. Hancock offered no reason for the switch, and said he was sorry.

Mr. COX. Did you ever receive any reports, through the press or otherwise, as to any reason that had ever been given by NBC to others to explain this action?

Mr. HAVENS. Yes, sir. An article appeared in Variety, several in the Richmond newspaper. But I believe more important than any other is one that appeared in Martin Codel's Television Digest: Now this is apparently the April issue, I assume. It is not dated here. But it states:

Richmond prefreeze WTVR channel 6 becomes ABC and CBS outlet June 1, when affiliation with NBC ended, and Owner Wilbur Havens took page ads in local newspapers to tell public that in 1954 at NBC compensation of $166.36 per hour, WTVR lost $118.16 every hour of NBC programs it carried. Network has stated it has had trouble clearing time on Havens' stations, hence terminated contract in favor of new affiliation, with Tom Tinsley's upcoming WXEX-TV, channel 8, due on the air next month.

Mr. COX. That tied in, then, with this matter of your clearance of programs for ABC and CBS?

Mr. HAVENS. That is what it means; yes.

I do not know whether the NBC letter of February 10, stating that the termination notice was being delivered as a legal technicality to provide time for working out a mutually satisfactory basis for continuing the affiliation was a blind, or whether something happened between February 10 and April 19 that decided NBC in favor of breaking off with our station and switching to the new TV licensee. NBC has never seen fit to tell me. Although we were 1 of the 7 original stations in the first NBC network, although we paid, ourselves, part of the cost of the first interconnected facilities, and although we carried NBC programs for 18 months before we received any payment from NBC, we were cut off without any advance notice and without any explanation of any kind.

REASONS FOR NBC TERMINATION OF AFFILIATION

As I have said, I believe the reason for NBC's action was to take reprisal for our independence in refusing to clear every NBC television and radio program and for our insisting on the rate increase which we deserved, not only because of our increased coverage but also in view of our increased investment. And there may also have been an additional reason, which I would now like to describe.

The second television station in the Richmond area is station WXEX-TV, which serves both Petersburg and Richmond, 20 miles apart, from a transmitter between the two cities. On September 21, 1953, the ultimately successful applicant for this station filed an application indicating that its principal transmitting equipment, including the tower, would be purchased from Du Mont at a cost of approximately $500,000. On September 29, 1954, the Commission approved this applicant. Presumably, the applicant began negotiations for a network affiliation agreement immediately thereafter. Then, on March 11, 1955, a month after NBC had delivered its letter of February 10 to us, the applicant applied for modification of its construction permit, showing that instead of using Du Mont equipment, it now intended to purchase approximately $700,000 worth of equipment from another manufacturer. You have undoubtedly guessed the name of the other manufacturer. It was the Radio Corporation of America, parent corporation of the National Broadcasting Co. The Commission approved this change on April 6, 1955. Approximately 2 weeks later, on April 18, 1955, NBC signed an affiliation agreement with the new station.

I think we have photostatic copies of these two applications, which show the change in equipment and material taken, from the files of the Federal Communications Commission.[5]

Was it simply a coincidence that WXEX-TV canceled its order for Du Mont equipment and placed an order for RCA equipment instead, just before obtaining its affiliation agreement with NBC? I do not know. But I think that this committee, or the Department of Justice, or the Federal Communications Commission could find out.

You might think that NBC would have wiped the slate clean with WTVR when it canceled our affiliation agreement effective June 1, 1955. However, this was unfortunately not the case.

NBC REFUSAL TO ALLOW USE OF LOOP

When we learned on April 19 that we would lose all of our NBC programs as soon as WXEX-TV began operations, we made arrangements with CBS to substitute whatever CBS programs that network's advertisers might desire to place on our station. Most of the CBS advertisers decided to put their programs on our station, beginning

[5] These two applications are set forth at the conclusion of Mr. Havens' testimony, at pp. 1641-1647.

June 1. In order to carry these programs, however, our agreement with CBS required us to arrange and pay for the use of the existing loop between the telephone company's office in Richmond, where the intercity relay was connected, to our studio. The loop was owned by the telephone company, but NBC, as the telephone company's customer, had control over its use.

We asked NBC to release the local circuit into our building, so that we could carry CBS programs over this loop after June 1, when NBC would no longer require it. NBC refused, and said WXEX-TV would not be able to go on the air until August. Accordingly, NBC wanted us to carry its network programs during June and July and wanted to use the loop in our building for this purpose.

We said we would be willing to carry NBC programs acceptable to us during June and July, but that we wanted freedom to carry CBS programs of our own choice as well, and desired, at our own expense, to use the loop from the telephone company office to our studio for this purpose.

But this was not good enough for NBC. NBC categorically refused to permit any CBS programs to go over the loop. The only possible reason could have been that NBC desired to exert its monopoly control over the use of the loop to compel us to accept NBC programs in place of CBS programs under all circumstances, even in cases where we would have preferred the CBS programs if we had a free choice. And NBC took this arbitrary position after it had terminated its affiliation agreement with us, and no longer had any legal basis whatever for urging us to take NBC programs in preference to CBS programs.

As a result, the telephone company was compelled to take the wasteful step of having a second duplicating loop built from the telephone company office to our studio, and to bring the equipment in from another city under tremendous time pressure. We managed to get this second loop finished 13 hours before our NBC affiliation expired, on June 1, 1955.

NBC'S ATTEMPT TO PREVENT NETWORK ADVERTISERS FROM USING WTVR

But NBC was not through with us yet. The day after our affiliation agreement expired, Mr. Frank Grady, of Young & Rubicam, called me and said NBC had told him we were refusing to carry the NBC program The Life of Riley sponsored by Gulf Oil Co., a Young & Rubicam client. We told Mr. Grady we would still be glad to carry his program, and that we had so advised NBC. Mr. Grady subsequently told us he then called NBC, who told him that this was true, but that we wanted too much money, namely our then current station rate of $875, which NBC had never been willing to accept. Mr. Grady said he told NBC that the question of whether this rate was too high was for the advertiser to decide and not for NBC. NBC then had to order the time for Mr. Grady's program and we carried it until WXEX-TV went on the air, August 15, 1955.

At this point, we lost The Life of Riley for good. Even though the advertiser might have preferred to continue it on our station, which we believe has superior coverage to WXEX-TV, WXEX-TV had become the must-buy station on the NBC rate card and all network advertisers were compelled to purchase it in preference to our station.

Mr. Cox. Do you know what the station rate for WXEX is?

Mr. HAVENS. Seven hundred dollars. It is the last published rate I saw.

Mr. COX. Seven hundred dollars?

Mr. HAVENS. Yes.

EFFECT OF MUST-BUY POLICY

When NBC switched its affiliation to WXEX, the NBC must-buy policy caused us to lose a large number of programs which the advertisers might well have preferred to keep on our station, instead of shifting to WXEX-TV.

Mr. COX. Do you know of any instances in which advertisers have indicated that directly to you, or is this just an assumption on your part—about the fact that they might have preferred to continue on your station?

Mr. HAVENS. I think we have some supporting documents here that will support that statement.

J. Walter Thompson: Lux, Ford, and Kraft would like to remain on, at least until Petersburg can get on the air.

Lennen & Newell called about Old Gold. Could not put on spot basis because of must-buy. Also the same thing as a matter of—the same condition existed with the Schlitz program. But that is a CBS show; that happened later on CBS, when CBS shifted.

Now, there is more supporting data here—I think the Ford Star Theater. We did actually carry that on a spot basis right up until WXEX went on the air, and then it switched to network.

Mr. COX. But you don't have any direct indications that after WXEX was on the air advertisers would have personally preferred to have continued to broadcast their programs over your station, but were required by their commitments to NBC to use the Petersburg station?

Mr. HAVENS. I believe I do. I think this is it: April 9, 1956, from Blair TV. It said it is true that Four Star Play House is not a CBS program. However, WTVR, is supposed to be a basic affiliate of CBS and, therefore, because both accounts have purchased a time period on the CBS network, they must buy all of the basic CBS stations when this live time period is made available to them. WTVR has made this live time period available—WRVA, rather.

Mr. COX. That refers to the appearance of the third station on the Richmond market, at which time your interim program basis for CBS was terminated and CBS advertisers were shifting from your station to WRVA?

Mr. HAVENS. This happened to be with the CBS network. But it is descriptive of what you just asked, of a case where an advertiser would like to stay but had to switch because of the must-buy policy. I would be perfectly willing to file that.

Mr. COX. All right.

Mr. HAVENS. Of the 37 NBC-network-originated programs which we were carrying between the hours of 7:30 and 11 p. m. each week when our affiliation agreement expired, several were on film and were controlled not by NBC, but by the advertiser. Prominent examples are Fireside Theatre, Ford Theatre, Dear Phoebe, and Texaco Star Theatre. The advertiser could readily have delivered this film to us by mail in a can, for broadcast by our station, instead of having it transmitted over the network wire from New York. But the NBC must-buy policy compelled the advertiser, as a condition of purchasing time on NBC affiliated stations in 50 other major markets throughout the country, to purchase time on the NBC affiliate in the Richmond area, WXEX–TV, instead of from us.

When we were told in April 1955, that our NBC affiliation would end on June 1, I talked with CBS about obtaining some of their programs. CBS agreed to place programs on WTVR on a per program basis, when requested by the advertiser, subject to 28 days' notice, with compensation at 30 percent of our regular rate, but with no free hours and with local loop charges at our expense.

As mentioned above, we arranged for the installation of a loop, to replace the facilities that NBC refused to allow us to use, shortly before June 1. We rebuilt our schedule with ABC and CBS programs. However, we are again faced with the problem of rebuilding our schedule because CBS has switched its programs to WRVA–TV which has just gone on the air on May 1.

Mr. Cox. However, in this interval you didn't have a formal affiliation arrangement with CBS which bound them to provide you——

Mr. Havens. We accepted their programs with that condition, that we would be given programs only when an advertiser wanted to purchase our station—and in CBS's opinion they were not getting coverage from without.

I know very well that some sponsors of CBS and NBC programs would prefer to continue to use WTVR as the outlet in Richmond. For example, certain CBS programs that we were carrying in April 1956 were on film, and controlled by the advertisers, and not controlled by CBS, so far as we know. Examples are: The Bob Cummings Show, It's Always Jan, The Millionaire, Four Star Playhouse, Damon Runyon Theater, and Schlitz Playhouse of Stars. If these advertisers had a free choice they might well prefer that these programs be released through WTVR, rather than through the new CBS affiliate. But the must-buy policies of the two networks prevent us from obtaining even these programs.

Mr. Cox, I feel that somewhere here I have a letter relating to one of these latter three programs—I am referring to Four Star Playhouse, Damon Runyon Theater, and Schlitz Playhouse of Stars—all of which we were carrying on a spot basis, even when we were carrying CBS programs. We had them before CBS started to put their programs on this station. The advertisers already had started to use the station and were paying for it on a spot basis.

Now, one of these programs—I have a memorandum from our local sales director which stated that he had talked with the local distributor of the Schlitz Brewing Co. in Richmond, Va., who stated that he was very disappointed that the program had to switch to WRVA–TV.

I don't know where to put my hands on that letter immediately. But if you want it, we will take time to find it.

Mr. Cox. If you find it, you can forward it to us by mail and we will insert it in the record. Is that perhaps the letter you have already put in the record?

Mr. Havens. It could have been.

Mr. Cox. If you find another letter, you can forward it to us, and it will be inserted.[6]

---

[6] No other letter was received.

CONCLUSIONS AND RECOMMENDATIONS

I sincerely appreciate the opportunity to come here today and present to this committee the experiences of WTVR. It is part of our American tradition that the doors of Congress are open to any citizen who has suffered injury at the hands of another. The injuries done to WTVR may seem relatively unimportant, but they are part of a growing concentration of power over the operation of the Nation's television stations, the production of television programs, and the right to decide what the American public shall see and what it shall not be permitted to see.

There are many attorneys who believe that existing network practices violate the antitrust laws. I am advised that memorandums to this effect have already been submitted to this committee and to the Federal Communications Commission. I understand from press reports that the Department of Justice is now conducting investigations into the subject.

But whether or not effective antitrust relief is available, I believe that this committee and the Federal Communications Commission have a duty to see that the existing economic power of a network company such as NBC is held within proper bounds, so that it cannot be used to compel complete subservience by theoretically independently owned affiliated stations in matters such as program selection and rate determination. It is obvious to me that the existence and exercises of this power is contrary to the public interest, and that it defeats the very purposes for which the Federal Communications Commission endeavors to select station licenses with the best capacity for serving the interests of their own local communities.

Specifically, I believe the Commission should consider adopting regulations which would—

(*a*) Prevent a network company from compelling an affiliated station licensee to accept all programs offered by the network company, on pain of losing its affiliation. This might best be done—

(i) By setting some maximum limit on the percentage of its programs which a station can accept from a single outside source; and

(ii) By preventing a network company from terminating an affiliation agreement, or allowing it to lapse, because of an affiliate's refusal to accept programs offered by the network company during option time (provided the programs refused do not exceed one-half hour of the commercial network programs offered during any one option-time segment) or because of the affiliate's refusal to accept any network program during nonoption time.

(*b*) Prevent a network company from requiring an affiliated station to accept a gross network station rate lower than the station's national gross rate on spot programs for the same class of time segment, provided such station rate does not exceed the rate table for cost per thousand customarily used by such network.

(*c*) Prevent a network company and its affiliated stations from applying their present must-buy policy, under which an advertiser, in order to obtain time on affiliated stations throughout the country, must place a program on the affiliated station in each of the must-buy markets, instead of some competing station in the same market which the advertiser might himself prefer.

I have told you the story of how television station WTVR was injured by NBC. In our own interest, the interest of the entire television industry, and the interest of the American public, I hope that this committee will see to it that NBC's action is not permitted to stand as an object lesson to affiliates which fail to obey network orders. I hope instead that this committee will see to it that NBC's action is turned into an object lesson to a network company which abuses its tremendous economic power.

FEDERAL COMMUNICATIONS COMMISSION

F. C. C. Form No. 351–B
Rev. July 1952.
File No. BPCT–1772
Call Letters W P R G

TELEVISION BROADCAST STATION CONSTRUCTION PERMIT

Subject to the provisions of the Communications Act of 1934, subsequent Acts, and Treaties, and Commission Rules made thereunder, and further subject to conditions set forth in this permit,[1] authority is hereby granted to Petersburg Television Corporation to construct a television broadcast station located and described as follows:

1. Station location: State, Virginia; City, Petersburg.
2. Transmitter location: State, Virginia; County, Chesterfield; City or Town, Near Chester.: Street and number, Hundred Road, 7.5 miles east of Chester. North Latitude: Degrees, 37; Minutes, 20; Seconds, 33. West Longitude: Degrees, 77; Minutes, 18; Seconds 17.
3. Main studio location: State, Virginia; County, ----------; City or Town, Petersburg; Street and number, 214 East Washington.
4. Transmitter: Visual, Make and Type, Dumont, 12000; Dumont, Aural, 12000; Rated power, 16.99 dbk (50 kw.) peak. Rated power 14.55 dbk (28.5 kw.).
5. Antenna: Make and Type RCA, TF–12AH, 12-section, superturnstile with 70/30 power division between upper and lower halves. Horizontal field pattern, Omnidirectional. Antenna supporting structure, 501-foot tower. Overall height about ground, 574 feet. Obstruction marking specifications: In accordance with paragraphs 1, 3, 4, 13, 21, and 22 of the attached FCC Form 715.
6. Operating assignment: Frequency, 180–186 Megacycles. (Channel No. 8). Carrier frequency: Visual, 181.25 Mc.; Aural, 185.75 Mc.; Effective radiated power, Visual 25 dbk (316 kw.) peak. Aural, 22 dbk (158 kw.). Transmitter output power: Visual 15.5 dbk (35.1 kw) peak. Aural, 12.4 dbk. (17.5 kw). Antenna height above average terrain 550 feet. Hours of operation—Unlimited.
7. Date of required commencement of construction, November 29, 1954.
8. Date of required completion of construction, May 29, 1955.
9. Equipment and program tests shall be conducted only pursuant to Sections 3.628 and 3.629 of the Commission Rules.

[1] This construction permit consists of this page and page 2.

10. This permit shall be automatically forfeited if the station is not ready for operation within the time specified or within such further time as the Commission may allow unless completion of the station is prevented by causes not under the control of the permittee. See Section 1.314 of the Commission Rules.

Dated this 29th day of September, 1954.

FEDERAL COMMUNICATIONS COMMISSION,

Call Letters WPRG

OBSTRUCTION MARKING ANTENNA TOWER(S) OR SUPPORTING STRUCTURE(S)

It is to be expressly understood that the issuance of these specifications is in no way to be considered as precluding additional or modified marking or lighting as may hereafter be required under the provisions of Section 303 (q) of the Communications Act of 1934, as amended.

1. Antenna structures shall be painted throughout their height with alternate bands of aviation surface orange and white, terminating with aviation surface orange bands at both top and bottom. The width of the bands shall be approximately one-seventh the height of the structure, provided however, that the bands shall not be more than 40 feet nor less than 1½ feet in width. All towers shall be cleaned or repainted as often as necessary to maintain good visibility.

2. There shall be installed at the top of the tower at least two 100- or 111-watt lamps (# 100 A21/TS or # 111 A21/TS, respectively) enclosed in aviation red obstruction light globes. The two lights shall burn simultaneously from sunset to sunrise and shall be positioned so as to insure unobstructed visibility of at least one of the lights from aircraft at any angle of approach. A light sensitive control device or an astronomic dial clock and time switch may be used to control the obstruction lighting in lieu of manual control. When a light sensitive device is used it should be adjusted so that the lights will be turned on at a north sky light intensity level of about thirty-five foot candles and turned off at a north sky light intensity level of about fifty-eight foot candles.

3. There shall be installed at the top of the structure one 300 m/m electric code beacon equipped with two 500- or 620-watt lamps (PS-40, Code Beacon type), both lamps to burn simultaneously, and equipped with aviation red color filters. Where a rod or other construction of not more than 20 feet in height and incapable of supporting this beacon is mounted on top of the structure and it is determined that this additional construction does not permit unobstructed visibility of the code beacon from aircraft at any angle of approach, there shall be installed two such beacons positioned so as to insure unobstructed visibility of at least one of the beacons from aircraft at any angle of approach. The beacons shall be equipped with a flashing mechanism producing not more than 40 flashes per minute nor less than 12 flashes per minute with a period of darkness equal to one-half of the luminous period.

4. At approximately one-half of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event this beacon cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

5. At approximately two-fifths of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event this beacon cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

6. On levels at approximately two-thirds and one-third of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed

in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

7. On levels at approximately four-sevenths and two-sevenths of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons, at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

8. On levels at approximately three-fourths, one-half, and one-fourth of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons, at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

9. On levels at approximately two-thirds, four-ninths, and two-ninths of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircaft at any angle of approach, there shall be installed two such beacons at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

10. On levels at approximately four-fifths, three-fifths, two-fifths, and one-fifth of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed heights.

11. At the approximate mid point of the overall height of the tower there shall be installed at least two 100- or 111-watt lamps (# 100 A21/TS or # 111 A21/TS, respectively) enclosed in aviation red obstruction light globes. Each light shall be mounted so as to insure unobstructed visibility of at least one light at each level from aircraft at any angle of approach.

12. On levels at approximately two-thirds and one-third of the overall height of the tower, there shall be installed at least two 100- or 111-watt lamps (# 100 A21/TS or # 111 A21/ TS, respectively) enclosed in aviation red obstruction light globes. Each light shall be mounted so as to insure unobstructed visibility of at least one light at each level from aircraft at any angle of approach.

13. On levels at approximately three-fourths and one-fourth of the overall height of the tower, at least one 100- or 111-watt lamp (# 100 A21/TS or # 111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

14. On levels at approximately four-fifths, three-fifths, and one-fifth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

15. On levels at approximately five-sixths, one-half, and one-sixth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

16. On levels at approximately six-sevenths, five-sevenths, three-sevenths, and one-seventh of the overall height of the tower at lease one 100- or 111-watt lamp

(#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the structure.

17. On levels at approximately seven-eighths, five-eighths, three-eights, and one-eighth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation and obstruction light globe shall be installed on each outside corner of the structure.

18. On levels at approximately eight-ninths, seven-ninths, five-ninths, one-third, and one-ninth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

19. On levels at approximately nine-tenths, seven-tenths, one-half, three-tenths, and one-tenth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

20. All lighting shall be exhibited from sunset to sunrise unless otherwise specified.

21. All lights shall burn continuously or shall be controlled by a light sensitive device adjusted so that the lights will be turned on at a north sky light intensity level of about 35-foot candles and turned off at a north sky light intensity level of about 58-foot candles.

22. During construction of an antenna structure, for which obstruction lighting is required, at least two 100- or 111-watt lamps (#100 A21/TS or #111 A21/TS, respectively) enclosed in aviation red obstruction light globes, shall be installed at the uppermost point of the structure. In addition, as the height of the structure exceeds each level at which permanent obstruction lights will be required, two similar lights shall be installed at each such level. These temporary warning lights shall be displayed nightly from sunset to sunrise until the permanent obstruction lights have been installed and placed in operation, and shall be positioned so as to insure unobstructed visibility of at least one of the lights at any angle of approach. In lieu of the above temporary warning lights, the permanent obstruction lighting fixtures may be installed and operated at each required level as each such level is exceeded in height during construction.

This form is a part of and shall be attached to the current instrument of authorization.

TELEVISION BROADCAST STATION CONSTRUCTION PERMIT

MODIFIED AS OF APRIL 6, 1955

Subject to the provisions of the Communications Act of 1934, subsequent Acts, and Treaties, and Commission Rules made thereunder, and further subject to conditions set forth in this permit,[1] authority is hereby granted to Petersburg Television Corporation to construct a television broadcast station located and described as follows:

1. Station location: State, Virginia. City, Petersburg.
2. Transmitter location: State, Virginia. County, Chesterfield. City or town, near Chester. Street and number, Hundred Road, 7.5 miles east of Chester. North latitude: Degrees, 37. Minutes, 20. Seconds, 33. West longitude: Degrees, 77. Minutes, 18. Seconds, 17.
3. Main studio location: State, Virginia. County, ———. City or town, Petersburg. Street and number, 124 West Tabb St.
4. Transmitter: Make and type: Visual, RCA, TT–50AH; Aural, RCA, TT–50AH. Rated power: 16.99 dbk (50 kw.) peak; 14.77 dbk (30 kw.).

---

[1] This construction permit consists of this page and pages 2 and 3.

5. Antenna: Make and type: RCA, TF–12BH, 12-section, Superturnstile, horizontal field pattern, omnidirectional.

Antenna supporting structure: 906-foot tower. Overall height above ground: 979 feet (including obstruction marking beacon). Obstruction marking specifications in accordance with paragraphs 1, 3, 7, 16, 21, and 22 of FCC Form 715, attached.

6. Operating assignment: Frequency, 180–186 megacycles. (Channel No. 8.)

Carrier frequency: Visual, 181.25 Mc. Aural, 185.75 Mc.

Effective radiated power: 25 dbk (316 kw.) peak, 22 dbk (158 kw.). Transmitter output power, 16.4 dbk (43.6 kw.) peak, 13.4 dbk (21.9 kw.). Antenna height above average terrain: 940 feet. Hours of operation: Unlimited.

7. Date of required commencement of construction: November 29, 1954.

8. Date of required completion of construction: October 6, 1955.

9. Equipment and program tests shall be conducted only pursuant to Sections 3.628 and 3.629 of the Commission Rules.

10. This permit shall be automatically forfeited if the station is not ready for operation within the time specified or within such further time as the Commission may allow unless completion of the station is prevented by causes not under the control of the permittee. See Section 1.314 of the Commission Rules.

Subject to the attached conditions on page 3.

Dated this 6th day of April 1955.

FEDERAL COMMUNICATIONS COMMISSION,
MARY JANE MORRIS, *Secretary.*

Call Letters WVAA

OBSTRUCTION MARKETING ANTENNA TOWER(S) OR SUPPORTING STRUCTURE(S)

It is to be expressly understood that the issuance of these specifications is in no way to be considered as precluding additional or modified marking or lighting as may hereafter be required under the provisions of Section 303 (q) of the Communications Act of 1934, as amended.

1. Antenna structures shall be painted throughout their height with alternate bands of aviation surface orange and white, terminating with aviation surface orange bands at both top and bottom. The width of the bands shall be approximately one-seventh the height of the structure, provided however, that the bands shall not be more than 40 feet nor less than 1½ feet in width. All towers shall be cleaned or repainted as often as necessary to maintain good visibility.

2. There shall be installed at the top of the tower at least two 100- or 111-watt lamps (#100 A21/TS or #111 A21/TS, respectively) enclosed in aviation red obstruction light globes. The two lights shall burn simultaneously from sunset to sunrise and shall be positioned so as to insure unobstructed visibility of at least one of the lights from aircraft at any angle of approach. A light sensitive control device or an astronomic dial clock and time switch may be used to control the obstruction lighting in lieu of manual control. When a light sensitive device is used it should be adjusted so that the lights will be turned on at a north sky light intensity level of about thirty-five foot candles and turned off at a north sky light intensity level of about fifty-eight foot candles.

3. There shall be installed at the top of the structure one 300 m/m electric code beacon equipped with two 500-or 620-watt lamps (PS–40, Code Beacon type), both lamps to burn simultaneously, and equipped with aviation red color filter. Where a rod or other construction of not more than 20 feet in height and incapable of supporting this beacon is mounted on top of the structure and it is determined that this additional construction does not permit unobstructed visibility of the code beacon from aircraft at any angle of approach, there shall be installed two such beacons positioned so as to insure unobstructed visibility of at least one of the beacons from aircraft at any angle of approach. The beacons shall be equipped with a flashing mechanism producing not more than 40 flashes per minute nor less than 12 flashes per minute with a period of darkness equal to one-half of the luminous period.

4. Approximately one-half of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event this beacon cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

5. At approximately two-fifth of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event this beacou cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

6. On levels at approximately two-thirds and one-third of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of it from aircraft at any angle of approach, there shall be installed two such beacons. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

7. On levels at approximately four-sevenths and two-sevenths of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons, at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

8. On levels at approximately three-fourths, one-half and one-fourth of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons, at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

9. On levels at approximately two-thirds, four-ninths and two-ninths of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed height.

10. On levels at approximately four-fifths, three-fifths, two-fifths, and one-fifth of the overall height of the tower one similar flashing 300 m/m electric code beacon shall be installed in such position within the tower proper that the structural members will not impair the visibility of this beacon from aircraft at any angle of approach. In the event these beacons cannot be installed in a manner to insure unobstructed visibility of the beacons from aircraft at any angle of approach, there shall be installed two such beacons at each level. Each beacon shall be mounted on the outside of diagonally opposite corners or opposite sides of the tower at the prescribed heights.

11. At the approximately midpoint of the overall height of the tower there shall be installed at least two 100- or 111-watt lamps (#100 A21/TS or #111 A21/TS, respectively) enclosed in aviation red obstruction light globes. Each light shall be mounted so as to insure unobstructed visibility of at least one light at each level from aircraft at any angle of approach.

12. On levels at approximately two-thirds and one-third of the overall height of the tower, there shall be installed at least two 100- or 111-watt lamps (#100

A21/TS or #111 A21/TS, respectively) enclosed in aviation red obstruction light globes. Each light shall be mounted so as to insure unobstructed visibility of at least one light at each level from aircraft at any angle of approach.

13. On levels at approximately three-fourths and one-fourth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

14. On levels at approximately four-fifths, three-fifths, and one-fifth of the overall height of the tower, at least one 100- or 111-watt lamps (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

15. On levels at approximately five-sixths, one-half, and one-sixth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

16. On levels at approximately six-sevenths, five-sevenths, three-sevenths, and one-seventh of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the structure.

17. On levels at approximately seven-eighths, five-eighths, three-eighths, and one-eighth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the structure.

18. On levels at approximately eight-ninths, seven-ninths, five-ninths, one-third, and one-ninth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

19. On levels at approximately nine-tenths, seven-tenths, one-half, three-tenths, and one-tenth of the overall height of the tower, at least one 100- or 111-watt lamp (#100 A21/TS or #111 A21/TS, respectively) enclosed in an aviation red obstruction light globe shall be installed on each outside corner of the tower at each level.

20. All lighting shall be exhibited from sunset to sunrise unless otherwise specified.

21. All lights shall burn continuously or shall be controlled by a light sensitive device adjusted so that the lights will be turned on at a north sky light intensity level of about 35 foot candles and turned off at a north sky light intensity level of about 58 foot candles.

22. During construction of an antenna structure, for which obstruction lighting is required, at least two 100- or 111-watt lamps (#100 A21/TS or #111 A21/TS, respectively) enclosed in aviation red obstruction light globes, shall be installed at the uppermost point of the structure. In addition, as the height of the structure exceeds each level at which permanent obstruction lights will be required, two similar lights shall be installed at each such level. These temporary warning lights shall be displayed nightly from sunset to sunrise until the permanent obstruction lights have been installed and placed in operation, and shall be positioned so as to insure unobstructed visibility of at least one of the lights at any angle of approach. In lieu of the above temporary warning lights, the permanent obstruction lighting fixtures may be installed and operated at each required level as each such level is exceeded in height during construction.

(This form is a part of and shall be attached to the current instrument of authorization.)

[Page 3]

Dated 4–6–55
File No. BMPCT–2957
Call Letter WVAA

CONDITIONS

1. That the grant is without prejudice to any action which the Commission may take pursuant to the court's decision in *Southside Virginia Telecasting Corp.* v. *F. C. C.*, United States Court of Appeals for the District of Columbia Circuit, Case No. 12546.

2. That the permittee shall comply with the following requirements:

(a) The height of the uppermost point of the antenna structure, including the required obstruction lighting and any other attachments, shall not exceed 1,049 feet above mean sea level.

(b) A benchmark shall be established on the tower base. The elevation above mean sea level of the benchmark shall be determined within one foot from a line of spirit levels from a Municipal, State, or Federal benchmark that is a part of the national level net.

(c) The horizontal position of the tower site shall be determined within ½ second of latitude and longitude by a ground survey tied to a Municipal, State, or Federal control point that has previously been connected to the national geodetic network.

(d) An affidavit signed by a registered or qualified engineer or surveyor shall be submitted with the license application setting forth the geographic coordinates of the structure and the overall height (which shall include the obstruction marking) above sea level of the completed structure, and describing the survey and the reference points upon which it is based, together with a plat of the antenna site and vertical plan sketch of the antenna structure portraying pertinent details.

Senator PAYNE. Thank you, Mr. Havens. I have just 2 or 3 questions here that I am interested in having the answers to in the record.

The first is: Did The Voice of Firestone contact you after WTVR decided to carry their program?

Mr. HAVENS. I never talked to anyone with the Firestone Corp. about it in my life.

Senator PAYNE. You did not contact them and they did not contact you?

Mr. HAVENS. That is right.

Senator PAYNE. Has WXEX ever indicated to you any reason for shifting over to RCA equipment?

Mr. HAVENS. They have not; no, sir.

Senator PAYNE. In other words, the only thing you have is the change that took place?

Mr. HAVENS. The coincidence that happened all around the same period of time.

Mr. COX. These documents do show, Mr. Havens, that the tower purchased from RCA was some three hundred and fifty or so feet higher than the one they would have purchased from Du Mont; is that correct?

Mr. HAVENS. I believe it does.

Senator PAYNE. Do you have any questions, Senator Duff?

Senator DUFF. No questions.

Senator PAYNE. Does any member of the staff have any other questions?

Mr. COX. No.

Senator PAYNE. We want to thank you. You have given a clear statement setting forth the problems you are faced with, and it is very helpful to the committee to have the information.

We will keep these letters and see that they are returned to you, Mr. Havens.

The next witness scheduled is from my own State. I am very happy to have with us this morning Mr. Murray Carpenter. He is a person that has been long and favorably known to me as a very outstanding citizen and one who has been not only a pioneer but also a long, well-recognized expert in his field. And I will ask Murray Carpenter, who heads WTWO in Bangor, Maine, if he would be willing to step forward at this time.

Murray, you may proceed in your own way. I know that you have a prepared statement which I imagine probably you would like to follow very closely. The entire statement, in any event, would be made a part of the record with the several exhibits that you have attached. But you proceed in your own way.

Mr. CARPENTER. I will read it verbatim if that is the committee's wish.

Senator PAYNE. You proceed in any way you desire.

Mr. CARPENTER. Thank you, Mr. Chairman.

STATEMENT OF MURRAY CARPENTER, PRESIDENT, TREASURER, AND CONTROLLING STOCKHOLDER OF MURRAY CARENTER & ASSOCIATES, PERMITTEE OF WTWO, BANGOR, MAINE

Mr. CARPENTER. May I say that I appreciate the chairman's comments about me very much.

My name is Murray Carpenter. I live in Bangor, Maine, where my wife and I own television station WTWO.

I am definitely not one of the "fat cats" of the television industry. On the contrary, I frequently feel pretty scrawny, particularly when I look at the bank balance. However, every month that goes by I feel a little less scrawny, and I occasionally enjoy fleeting visions of becoming pleasingly plump, if not actually fat.

I am here today at the committee's invitation, but at my request, because I think this committee will welcome observations from a grass-roots operator. With great respect, I offer these two suggestions to the committee:

1. Please do not tamper with the vitals of networking.
2. Please take a careful look at A. T. & T. charges for intercity television service.

QUALIFICATIONS OF MURRAY CARPENTER

This committee is entitled to know something of my background and experience in the broadcast field. I am reasonably typical of very many small independent telecasters, and I think you will agree that my background and experience are sufficiently diversified to permit me to speak authoritatively in making the suggestions which I place before your committee today.

I first went to work in 1934 during the great depression when I was 18. During the 21 years since then, I have been continuously engaged in advertising and broadcasting.

During the first half of my business life, I worked on the advertiser's side of the table; the second half has been devoted entirely to radio and television station management.

In 1934 I started in as a personal messenger boy for Richard Compton who was the head of Compton Advertising, Inc., until a short while before his death a few years ago. I was very lucky to have a chance to start at the Compton agency. It is a superb training school for agency men. Besides that, Compton has always been one of the key agencies for the Procter & Gamble Co. whose skill and know-how in the use of broadcast advertising are matchless.

While with the Compton agency I held various posts in the media department. That is the branch which is responsible for planning the expenditure of advertising money and for actually spending it. There were also interludes during which I worked directly and exclusively for individual products in the agency's account group. Over the years I held jobs of various levels, ranging all the way from messenger boy to media supervisor. During my years at the Compton agency I would guess that I had a hand in the spending of about a hundred million dollars for broadcast advertising.

In 1945 I quit my job in New York to move into the field of station management. This was a careful and deliberate decision. My years of agency experience as a planner and buyer of advertising convinced me that the broadcast media had an unlimited future. In this belief I had organized financial backing for a new radio station to be established in Portland, Maine. I had successfully guided an application through an FCC hearing, and I was prepared to make the switch from working as a buyer to working as a broadcaster and seller.

Accordingly, I went to Portland, Maine, in the fall of 1945, where I organized and constructed radio station WPOR, and I remained with that station as its manager for 4 years.

In the fall of 1949 I went to Bangor, Maine, where I joined hands with former Gov. Horace Hildreth to acquire radio station WABI, of which I became manager. During my 4 years as manager and half-owner of WABI, the station achieved clear leadership of both audience and advertising business in the Bangor market area. It was also during my tenure as manager that WABI branched off into the television business. In January 1953 we established WABI–TV. It was the first postfreeze television station in New England and it provided the very first television service anywhere north of Boston.

In the summer of 1953 I sold my interest in WABI and left Bangor in order to become an applicant for channel 13 in Portland, Maine. I withdrew from that Portland television venture several months later when it became clear that I would not be able to secure adequate local financial backing on terms that I would accept.

In the fall of 1953 I returned to Bangor and bought radio station WGUY from the Guy Gannett publishing group. Shortly thereafter, we applied for channel 2 in Bangor, this being the channel on which our station WTWO now operates. I have been the manager and controlling owner of WTWO from the beginning. Incidentally, I no longer own radio station WGUY in Bangor; I sold it just before our television station went on the air in the fall of 1954 because I do not believe in trying to compete with myself.

As the committee can see from this chronology, I have been both a buyer and a seller of broadcast advertising. I have worked on the highest professional level and at the lowest. I am experienced in radio as well as television. I have created, sold, and produced broadcast advertising for the largest national advertisers and for the smallest local advertisers. At one time or another I have dealt with all of the radio networks as a buyer, and with three radio networks and all of the television networks as a seller. I have had personal experience with both losses and profits. And in the course of this experience, I have managed to acquire assets that most people would consider quite substantial, although, as I recall it, my initial investment in the broadcast business amounted to about $1,200.

In short, I think I know a good deal about how the broadcast field works, and I hope this committee will give appropriate weight to the observations that I am about to make.

DISCUSSION OF NETWORKING

This committee has been told that important changes in network practices should be forced upon the network companies. I say exactly the opposite.

I say that the networks have evolved a method of operation that is nothing short of marvelous in its effectiveness and efficiency. I say that the network companies have done more to develop American television to its present high level than all the station operators put together and doubled. I say that the network companies have worked out methods which have brought more television programs to more homes more rapidly than the wildest enthusiast would have predicted a few years ago. I say that the network companies have demonstrated ability to provide quality and variety of program fare that will stagger the mind of anyone who will take the trouble to dig through a week of program schedules. I say that the network companies have done more to help establish a nationwide and competitive television industry than all the carpers, criticizers, and second-guessers from Los Angeles to Washington, inclusive. I say that the practices and policies of the network companies are demonstrably successful and demonstrably in the public interest.

Mr. Cox. In that connection, Mr. Carpenter, would it be your position that the practices themselves are necessarily in the public interest, or that the programs which have been developed in connection with the employment of those practices are the things which, in your mind, are the important contributions to the public?

Mr. Carpenter. I am speaking of the effect, sir, rather than the causes. Does that answer your question?

Mr. Cox. That is, the programs are the things by which you measure the contribution to the public?

Mr. Carpenter. Yes, sir.

And I think it follows from this that anyone who proposes substantial changes to so successful a system ought to be required to make an overwhelming showing that his proposals are backed by urgent public necessity and unassailable logic.

I have spoken strongly on behalf of present network methods, and I mean my words to apply particularly to network option time. As I see the networks operate from my vantage point in Bangor, Maine, it seems very clear to me that the option time provisions of affiliation agreements are substantially responsible for the rapid growth in the volume of network programing in those markets not important enough to be characterized by "must buys"—and my own market of Bangor, Maine, is certainly such a one. I feel sure that many, many other smaller stations feel the same way about it.

The best way for me to explain this to the committee is to give a brief outline of the development of television in my own market area of Bangor, Maine. What I say about my station and my market will be found to be true of other smaller stations in smaller markets, although not always to the same degree.

Television started in Bangor in January 1953. The number of television-equipped homes was close to zero at the outset. There were no A. T. & T. television circuits available and the supply of available program material was small, as was the supply of available advertising revenue. During a typical week in April 1953, the Bangor market had a total of 63 hours of television available, of which 14 hours represented network programing.

One year later, in April 1954, the total hours of available television had risen to 74, of which 36 hours comprised network programs.

Bangor's first live network television circuit was established in the fall of 1954 and that naturally made additional network programing available to WABI in Bangor. My station W–TWO was also established in September of 1954, and although it had no network affiliation of any kind, W–TWO did contribute substantially to the variety and volume of television programing available. Consequently, by April of 1955, 172 hours of television programing were available in the Bangor area, and 76 of these hours were network programs.

In April of 1956, after a further year of development, the Bangor market enjoyed 193 hours of television per week, of which 103 hours were network programs.

The above figures (which are summarized in appendix A)[7] indicate clearly that television has developed with great speed in the Bangor market area.

Mr. Cox. I think that appendix A indicates, Mr. Carpenter, that your station was on the air, in the week in April that you used as a sample, 115 hours, of which 59 hours were network programing—is that correct?

Mr. Carpenter. In which April are we talking about?

Mr. Cox. April of 1956.

Mr. Carpenter. The table says in that month my station was on the air 115 hours and carried 59 hours of the network programing.

Mr. Cox. That is about 51 percent. Could you estimate for us, generally, what percentage of the remaining 49 percent was filmed programing and what percentage was local live programing?

Mr. Carpenter. I would have to guess—and I take your question to mean day as well as night.

Mr. Cox. Yes.

Mr. Carpenter. I would say that, probably, of the remaining 50 percent, probably two-thirds was live and one-third filmed. I would say that I could be wrong about that, though. I would be glad to dig up the figures and submit them separately if you wish.

Mr. Cox. I think those estimates are sufficient. Of course, in connection with that programing, whether filmed or local-live, your station is put to actual out-of-pocket expense in providing this programing, as distinguished from your arrangements with the network where, if your station is purchased for a particular show, you then receive a share of the time charge which is made for the time on your station?

Mr. Carpenter. Yes, sir; that is correct.

I might add that when I speak of the distinction between local-live and local-filmed, some of the program periods that we call local-live nonetheless contain film elements.

Mr. Cox. Yes.

Mr. Carpenter. It is hard to draw a line.

Mr. Cox. Your news shows use film clips and things of that kind, and regular shows may have filmed elements in them, and so forth?

Mr. Carpenter. Correct.

---

[7] Appendix A is set forth at p. 1664.

The rapidity of this development is further emphasized by the fact that the number of television-equipped homes served by the Bangor television stations gained from practically zero in 1953 to approximately 90,000 as of the spring of 1956. The percentage of television-equipped homes in Bangor was determined to be 83 percent in January 1956, according to a study made by American Research Bureau, Inc.

People in the Bangor television area spend an unusually high proportion of their time watching television. In April 1956, an audience study was made by Trendex, Inc., throughout an area of approximately 45 miles from Bangor in all directions, and it showed that the number of homes engaged in watching television at an average instant between 7 and 11 p. m. was 57.8 percent. Selected times of exceptionally high viewing show percentages in the seventies.

Television advertising revenues in the Bangor market area have been growing very rapidly too. We are in a competitive business, so naturally we keep half of one eye on how our various competitors are faring. In April of 1956 we estimated that the total number of dollars spent by advertisers of all kinds—national, regional, and local—for advertising time on the two Bangor television stations was almost exactly equal to the total number of dollars spent by advertisers of all kinds for advertising space in the two Bangor daily newspapers. Naturally our competitors do not confide in us to the extent that we know their revenues with precision, but even allowing for estimating errors, it seems plain that television in Bangor has achieved advertising stature comparable to that enjoyed by the newspapers. It is my impression that Bangor television has progressed further and faster relative to other media than is true in most other market areas.

My reason for reciting this chronology is that I want the committee to be aware of the very rapid and thorough development which has taken place in my area, because it is my belief that competitive television in Bangor would probably not have developed as thoroughly, and certainly not as rapidly, had it not been for the existence of highly developed network organizations and their efficient program distribution systems, including the network option time provisions.

I attach as appendix B [8] three typical evening WTWO program schedules. The first schedule shows the WTWO evening program lineup after 7 months of operation. The second shows the evening program lineup after a year of operation—and, incidentally, in the fall of 1955 immediately after network affiliation. And the third shows the WTWO evening program schedule for this present week. This appendix is attached because I think the committee will want to see the components of typical programing schedules for a developing station like WTWO.

This week's evening program schedule shows 19 hours of CBS programs and 6½ hours of sponsored film programs. Thirty-four individual programs comprise the CBS schedule and 13 programs comprise the sponsored film schedule. We think this schedule shows that our sales department has done a very effective job in developing both network programs and sponsored film programs.

Mr. Cox. Are all of these 19 hours of network programs—are they purchased from your station by the advertisers?

Mr. Carpenter. Yes, sir.

[8] Appendix B is set forth beginning at p. 1665.

Mr. Cox. And you receive your agreed percentage from the network for carrying those programs?

Mr. Carpenter. Yes, sir.

Mr. Cox. I think in the last week shown you carried two programs that start in option time and extend into station time.

Mr. Carpenter. Yes, sir.

Mr. Cox. Is that a fairly common experience in your dealings with the network?

Mr. Carpenter. Very common, yes, sir. In fact, so common that we do not stop to make any distinction between the network option time and the station option time.

Mr. Cox. In other words, if a network program is offered to you at any time, you accept it?

Mr. Carpenter. Well, I wouldn't want to go quite that far. But thus far, our situation has been simply this: That we have a great many hours to take care of in the course of the week. We have a staff and facilities and money which would seem small, I am sure, to many station operators, and certainly to the networks. And it helps us very greatly to program that portion of the schedule which is ours to get a large proportion of it programed by the network. Consequently, take a case—well, I suppose you were referring on the schedule to the Twentieth Century-Fox program and to Edward R. Murrow's See It Now?

Mr. Cox. Yes.

Mr. Carpenter. In accepting See It Now from 10 to 11—half in station time and half in network time—I do not think we even gave any thought to whether it lapped over or not. We decided the program was one we wanted, and we accepted it with alacrity.

Mr. Cox. Is it your feeling that, generally speaking, your net revenues are greater from network programing than they would be from the sale of national spot or local sponsored programing, because even though you would get 100 percent of those revenues, your costs in providing that programing and obtaining that business would be so great that the net would be reduced?

Mr. Carpenter. I would not want to say "greater," Counsellor. But I would say about the same as for the comparison between the national spot and the network.

Mr. Cox. I see.

Mr. Carpenter. It is true, as you indicate, that the network revenue is net, practically; whereas, the national spot revenue is not. It is true also that our sales cost is considerably higher on the national spot than it is on the network.

I would say they would come out about even.

Mr. Cox. So, there is no great advantage to your station, revenue-wise, from trying to sell national spot rather than accepting programing through the network?

Mr. Carpenter. There is this advantage: That in general what we can sell in the national spot field is in addition to what we can sell in the network field. They are not necessarily mutually exclusive.

Mr. Cox. But to the extent that the network is capable of fulfilling your requirements, you are glad to accept that programing and then start from there adding on the national spot sales?

Mr. Carpenter. Yes, sir; that is true.

The amount of manpower and money and travel and entertainment and correspondence and wires and phone calls and presentations required to sell the 13 sponsored film programs is probably greater than what was required to sell the 34 CBS network programs.

Perhaps that answers your question.

Mr. Cox. Yes.

Mr. CARPENTER. And that fact points directly at the heart of the conviction I am trying to convey. WTWO's sales department was able to develop a very strong lineup of CBS network programs because CBS had already done three-fourths of the selling job for us. Each one of the CBS programs on WTWO is there primarily because CBS sold the agency, sold the advertiser, and either produced the program or sold the advertiser on hiring someone else to do so. WTWO's sales job was limited to selling the agency and advertiser that WTWO should be purchased in addition to the major market stations already planned. Of course, some of the network business on WTWO is over-the-transom business, but a very substantial proportion has been sold by WTWO.

Mr. Cox. Basically your sales problem is the same, either in the case of persuading the advertiser to order your station or persuading an advertiser to place a program on your station on national spot, except that the programing which you obtain from the network is perhaps a more attractive type, and which, therefore, has already won advertiser acceptance. Would that be true?

Mr. CARPENTER. Not quite, sir. When you try to sell a program in the national spot field, you must sell the program, the market, the station, the time, and the price. When you make a comparable sale to an advertiser who is merely going to order the addition of your station through the network, there isn't any question about the station, the time, the price. There is only a question about the market. This simplifies your sales effort considerably.

Mr. Cox. Well, the market involves the price, doesn't it? Your basic approach to him is whether your time rate is going to be a cost per thousand which is within his range?

Mr. CARPENTER. Well, in a particular case. Of course, you must realize we are in competitive circumstances, and there may, in individual cases, be price competition as well as other kinds in the national spot field.

In the case of an advertiser who is being solicited to order his network program on our station, in real life there is not price competition, because the price has already been determined by bargaining between the station and the network. It is just removed from the discussion.

Mr. Cox. So the only question is whether he takes it at that price or doesn't take it at all?

Mr. CARPENTER. Yes, sir; that is true.

That is why the existence of network option time is so very important to a station like W-TWO. Certainly W-TWO would have cleared time for these CBS network programs even if there were no such thing as network option time, but the probability is that many stations in the top 50 markets would be either unable or unwilling to clear for some of the programs.

Mr. Cox. That would be almost solely in communities with less than three stations?

Mr. CARPENTER. I would assume so; yes, sir.

Mr. COX. As long as there are more than 3 stations, even in the top 50 markets, the normal inclination of the station operator would be to accept with alacrity the network programing offered him, because it is easier than programing the station independently and it can be done at less expense to him?

Mr. CARPENTER. I assume that is probably true.

Mr. COX. So that the only case in which you would find a problem presented to the network in getting clearance for its programs in the top 50 markets would be where another network was seeking to get programing on the station with which it had affiliation?

Mr. CARPENTER. I can only speak on information and belief, but I imagine that would be true in a large number of cases. I can at least imagine circumstances in which, in the larger markets, there is a seller's market condition which puts the station in a position to be quite choosy. And there might well be cases where he would propose to do something by himself in a given period of time rather than take something from a network even though it is automatic. It might also be more profitable to him.

Mr. COX. Now, to the extent that he is carrying the programs of another network, option time does not permit the displacement of those programs, does it?

Mr. CARPENTER. So I understand.

Mr. COX. So that option time would operate in these conditions you are describing only where the local station had chosen to carry a national spot program, and the network then wished to assert its option rights to acquire control of the time?

Mr. CARPENTER. That seems correct to me, sir.

And from the advertiser's standpoint, if he cannot have clear sailing in the top 50 markets he is going to lose a great deal of his interest in the program. Whether we small operators like it or not, we have to face the fact that the bulk of the advertiser's business volume is generated in the top 50 markets of the country, and we are just the tail of the dog.

What I am saying in plain blunt terms is that WTWO would not be where it is today if it were not for the existence of network option time. I do not believe that WABI, our competitor in Bangor, would be where it is today were it not for the existence of network option time. And the people in the 90,000 television homes of the Bangor area would not be spending 57.8 percent of their evening time watching television were it not for the strong program schedules made possible by the existence of network option time.

Now, please join me in looking at the same fact from a slightly different point of view. Network option time extends from 7:30 to 10:30 p. m. During these hours 86 percent of WTWO's time is occupied by CBS network programs during this current week. But except for Sunday evening, WTWO does not carry a single evening network program prior to 7:30 (except early CBS news). This does not indicate any lack of desire on our part. It is simply because CBS does not offer any programs before 7:30 with the single exception of the Doug Edwards news program. Why is this so? Why is WTWO denied the opportunity to secure evening network programing prior to 7:30 p. m.? It is because that time is not network option time. It is because a national advertiser who tries to buy such an early evening period would not be able to get station clearance in very many of the top 50 markets.

Mr. Cox. Don't some of them do it on a spot basis now?

Mr. CARPENTER. We are not fortunate enough to carry any.

Mr. Cox. But in the top 50 markets where they are anxious to get in, aren't some advertisers who are unable to get into the prime period that you referred to finding it possible to place their programs in the 5 to 7:30 period, with satisfactory results?

Mr. CARPENTER. I imagine that is true, councelor. It would be hard to say what the reasons are. One of them would almost certainly be that advertisers in that circumstance do not want to buy across-the-board, across the country, but they want to pick and choose their markets. And in doing so, they naturally have to look for time periods that are available in each individual market.

Mr. Cox. Are you suggesting here, in connection with the fact that you do not carry this programing prior to 7:30, that in your view it would be desirable if the networks had more option time so that this programing would be provided on a national basis, and that therefore WTWO would get additional programing from the network?

Mr. CARPENTER. Well, sir, it would be of advantage to my particular station at this particular time. But I am sure that in a national sense it would not be practical, because there are probably not enough stations who have that same desire.

And, therefore, he is just not interested. It is probably also true that it would not be economically feasible for the network to offer program service during this early evening time period because too few stations accept the offering.

I believe this shows clearly that network programs flow in network option time, and that network programs do not flow without network option time.

Mr. Cox. Isn't there also the element that the period of time covered by option is the time when the viewing public is at its peak and, therefore, when the time is most attractive to advertisers?

Mr. CARPENTER. That is true. But it is a question of which is the cause and which is the effect. It seems to me that one of the reasons which causes set use to be higher in the period from 7:30 to 10:30 is that more popular programing is available in that time period. At least, in our area I sincerely believe there are as many people at home and willing to watch at, say, 6:30 to 7:30 as would be present in the period 7:30 to 8:30, but the program structure is not the same by any means. And I see no way to make it equivalent.

Mr. Cox. But there would be a limit to the extent to which this period could be extended. That is, in other words, quite clearly in the middle of the afternoon or the middle of the morning would never be as attractive a period to advertisers, and, therefore, would never justify the expenditure of funds to provide that kind of programing.

Mr. CARPENTER. Oddly enough, counselor, I think that in some daytime periods it costs less, price considered, to buy a program in the afternoon than is true in the evening.

Mr. Cox. Yes; but that price is fixed partly because you have to adjust downward in order to keep cost per thousand in line.

Mr. CARPENTER. That is true. The price in the daytime is half the price at night. And there are quite a number of periods where the audience is considerably greater than half of the nighttime. This, of course, is constantly changing anyway.

Of course, it might be argued that if WTWO had not been able to develop the strong evening network schedule it now has, it might have been possible to build an equally strong program schedule using syndicated film—which would presumably be sponsored by various advertisers, local and national. This is "iffy." Obviously I do not know what we would have done had we faced those circumstances. My belief is that we could not have developed a schedule that would be within hailing distance of the present schedule if we had to do so with syndicated films, and there are two reasons for this belief:

1. We do not have, and I doubt we could have, enough sales manpower to sell that many film programs in a year and a half, and I doubt we would have been able to finance the sales cost of a venture of such magnitude.

2. The film billing for any such ambitious evening program schedule would make our accountant shudder and would make the entire evening program schedule so costly that we could not afford to carry it, considering the amount of advertising revenue that probably could be made available as a practical matter.

Mr. Cox. What is the cost of a 30-minute film to your market?

Mr. Carpenter. They vary quite widely, as you probably suspect. I have seen them as low as $35 or $40 per half hour; and as high as $125 or $130. I would have to guess at what the average level is in the market. I would say it would be somewhere in the neighborhood of $60 net.

To sum up this one point that I have tried to make, Bangor television could not have developed as well and as rapidly as it has were it not for the existence of network option time. I think it doubtful whether we could maintain as strong a program schedule as we now have were network option time to be abolished or severely limited. This is a matter of opinion, but a very strong opinion.

I am aware that everything I have said is in conflict with the proposals made to this committee on March 26, 1956, by Richard Moore, president of KTTV of Los Angeles, Calif. The circumstances of KTTV are obviously quite different from those of WTWO. And if the general flavor of Mr. Moore's statement be compared with the general flavor of mine, it will be clear, I think, that Mr. Moore is largely preoccupied with program problems that are entirely unknown to stations like WTWO. Mr. Moore's statement is filled with fears that the supply of syndicated film programs "will shrink and disappear." He is worried about the plight of stations which "are compelled to broadcast during certain periods whatever programs the network offers and only those programs." He speaks of stations "being required to abandon their local responsibilities." He says that "if a program is of inferior quality the network company should not have the right to force that program upon the public."

In short, Mr. Moore seems to be preoccupied with visions of networks compelling their affiliated stations to carry programs against the wishes and judgment of the affiliates. This concept may be very real in Los Angeles, but I can assure this committee that it is pure fantasy to the majority of television station operators. Far from being compelled by networks to broadcast programs they do not want, many stations have been preoccupied with the problem of getting their networks to feed more programs to them.

Mr. Cox. Wouldn't you feel that there may well be a substantial number of markets in which the station operator is able to get film programing—that is, if he were able to get filmed programing on a volume basis, he might get programing which he considered better than some part of the network fare that was offered?

Mr. CARPENTER. Yes, sir, I think that must necessarily be true—some part.

Mr. Cox. If he feels that he can, in a week's time in prime time, place 5 programs which are better than the 5 offered in those time slots by the network, would he not be in performance of his statutory obligations as a licensee if he sought to substitute those programs?

Mr. CARPENTER. Yes, sir, I would think he would. However, in our circumstances, you see, it would not be an either/or question. We would certainly strive very hard to do both. And considering our overall schedule, undoubtedly we could do so. In fact, I cannot think of any time when we have been unable to do so. So, we can have our cake and eat it too.

There are 9 independent stations located in the very largest markets, 7 of which are in New York and Los Angeles. Because these huge independent stations are located in two of the biggest and most desirable markets in the country, obviously they would gain greatly if someone were to throw a monkey wrench into the network option-time machinery. But the same monkey wrench might foul up the program machinery of hundreds of stations like mine located in smaller and less-favored markets.

Mr. Cox. As I recall Mr. Moore's testimony, his suggestion was that an affiliate would still be permitted to accept up to 75 percent of its programing during the prime time from the network, and that it would be required to open up 25 percent of its time to film programs or other fare acquired from sources other than the network. Now, actually, I think your figure was that you were carrying 86 percent——

Mr. CARPENTER. This week; yes.

Mr. Cox. Of your time this week from the network; yes. So, the difference would be a matter of 10 or 11 percent in your case.

Mr. CARPENTER. Yes, sir. But that is not the point that is concerning me. As I recall the testimony of Mr. Lee Jahncke before this committee, also on March 26 of this year, he drew attention to the sales problems which the ABC Television Network had due to inability to clear time in the larger and key markets. And he seemed to indicate that that was the biggest sales handicap they had to overcome.

What is concerning me is Mr. Moore's proposal to tinker with the network option time provisions that now obtain. I would be afraid that if the CBS Television Network, for example, did not have network option time available to them, their sales problems might turn out to be the same as ABC's sales problems. Now, in other words, they might have difficulty clearing time in prime evening periods and prime daytime periods in the larger markets. And this would secondarily make it more difficult for a station like my own to get access to the programs that are now there. Do I make my point?

Mr. Cox. Yes.

Mr. CARPENTER. If network option time were to be abolished or severely restricted, maybe the networks would be able to devise some other mechanism which would make a large volume of network programs available to stations outside of the top fifty or hundred markets. Maybe. I hope this committee will decide that it is unwise to exchange a good, efficient, productive, successful system for such a "maybe."

Mr. Cox. You are not commenting, I take it, on the portion of Mr. Moore's testimony which involved his legal conclusions that these practices were actually in violation of the existing antitrust laws, so that, therefore, he urged that the proposals he was making were simply designed to see to the enforcement of the law as it is presently written—that is, you express no opinion on that?

Mr. CARPENTER. I am not an attorney, and I do not think I should express a legal opinion. Our company takes counsel, and it has been advised that what we do, particularly with respect to network agreements, is legal and proper. That is a legal opinion. I won't venture any personal opinion.

INTERCITY VIDEO CONNECTION CHARGES

This committee is interested in seeing that this country has a nationwide and competitive television service. To achieve that goal, it is important to give special thought to the special problems of the numerous smaller markets—and I mean to include both the markets that are smaller by present-day standards and those that are now thought to be too small to support a television station.

I should like to call the committee's attention to one such special problem. It is the problem of very high A. T. & T. charges for live video connections. Although these charges are usually paid by networks, rather than stations, it is apparent that the cost of connections is an important factor which a network must consider in judging the economic feasibility of affiliating with a station. Because these connection costs must be important to a network, they are of interest to stations and to this committee.

Most station expenses are less in the smaller markets than they are in the major markets. Payrolls, overhead, and depreciation are usually less for the smaller markets. But A. T. & T. charges are the same for big and small, rich and poor alike. And ironically, it sometimes seems that it is the smaller stations having the lowest advertising rates whose line hauls are greatest.

Taking the CBS stations in New England as an example, the average station base rate per mile of the line haul is about $9. However, the Boston and Providence advertising rates per mile of line haul are $24 and $22, respectively, while the Bangor and Burlington advertising rates per mile of line haul are $2.50 and $2.60, respectively. Since A. T. & T. charges are based on mileage, obviously the economics of networking are going to give a tremendous advantage to the high-rate stations.

Mr. Cox. Your charges are based upon mileage beyond the last other affiliate below you; is that correct?

Mr. CARPENTER. Yes, sir. Of course, they are not strictly our charges; they are the network's charges. But in the long run the network has to consider these matters when they think of affiliating.

Mr. Cox. And is this $9—do you indicate that that would be the charge for the distance between Bangor and, say, Portland?

Mr. CARPENTER. No, sir. Perhaps I haven't made myself clear. The figures quoted in this paragraph are determined by dividing the published base rate for the station in question—that is, published on the network's rate cards—by the approximate number of miles from the last connection point to the station.

In other words, in the case of Boston, as I recall, the base rate of the CBS station is $2,400 an hour. Boston has a line haul of roughly a hundred miles from the nearest connection point. Dividing $2,400 by a hundred miles, you would find $24 per hour per mile of line haul.

Mr. Cox. You have a hundred miles at a charge of $250?

Mr. CARPENTER. Yes, sir.

Mr. Cox. From that you derive this $2.50 figure?

Mr. CARPENTER. Yes, sir. The A. T. & T. connection charges are not exactly proportionate to the mileages, because they have additional charges at each end. But as a broad assumption you can pretty well take it that the greater the distance the greater the charges, and somewhat in direct proportion.

Mr. Cox. This connection charge you speak of is a charge that is made every time you are receiving a network program; is that correct?

Mr. CARPENTER. Well, since my station does not pay the charges—the network does—I cannot speak with personal knowledge. But my belief is that they are charged on a monthly basis and not on a per occasion basis.

A connection cost which would not worry anyone in connection with a high-rate station might well be an intolerable burden on the network commercial traffic destined for a low-rate station.

This is particularly worrisome to me and some other small operators. Not only do our networks have to absorb connection costs which are high relative to the value of the traffic over the connections, but the charges seem much higher than they need be. This can be illustrated in a simple way.

In the main, television programs are transmitted from city to city over a series of microwave relays. The equipment used to transmit a program between two points of an intercity circuit is basically the same equipment as is used by a station to send a remote program back to the studio or to transmit a studio program to the station's own transmitter. These microwave relay links are readily available to the trade and most stations own and operate at least one.

Or to put it the other way around, a television circuit between cities is merely several microwave links laid end to end. The whole is equal to the sum of its parts.

Therefore, if it can be demonstrated that the A. T. & T. charge is too high for a television circuit between a single microwave transmitter and its associated receiver, it must follow that the charge is too high for a string of such transmitters and receivers employing the same type of equipment in the same type of service.

The simplest demonstration I can think of concerns the cost of a connection between studio and transmitter. This is a so-called STL, meaning studio-transmitter link. If telephone company charges for an STL can be shown to be far too high, it will become apparent that charges are also too high for more complicated A. T. & T. services using fundamentally the same type of equipment and having the same type of pricing structure.

My station maintains such an STL. The cost to operate it is $3,054.36 per year, assuming the equipment is depreciated to zero at the end of 4 years. If the depreciation were figured on a 20-year basis, as I believe is A. T. & T. practice, our cost to operate it would be $801.36 per year (as detailed in appendix C).[9] The cost to have exactly the same service performed by the telephone company would be over $7,000 per year. When so great a disparity exists between a station's cost and the telephone company rates for the same service, something is not right.

High telephone company charges are usually defended by arguing that the telephone company are expert and their service is superior. There is very little foundation to this in my station's experience. During the 18 months that W–TWO has operated its own STL, the amount of time lost due to breakdown is less than 2 hours—a reliability record of better than 99.964 percent. The reliability record of the A. T. & T. connection which brings network programs into the W–TWO studio is no better, and the quality of the picture service is frequently deficient, whereas we have never had that complaint about the service of our own STL.

My engineering department estimates it could establish and operate an intercity television circuit from Portland, Maine, to Bangor, Maine, for less than $25,000 per year, including very fast depreciation (4 years) and the services of two full-time maintenance men. By way of contrast, we estimate that the CBS network pays A. T. & T. more than $70,000 a year for a circuit between Portland and Bangor.

I want to make it clear that I am not talking about transcontinental television trunklines. Delivering high-quality television pictures from coast to coast is another subject altogether, and I suspect that the A. T. & T. charge for service of this type may well be reasonable. In fact, I suspect that the whole pricing difficulty is that A. T. & T. charges substantially the same rate for branchline service as for trunkline service, although the two services are quite different.

If these television connection charges are too high for branchline service, as I believe they are, it is very important that this committee consider the effect of these rates on the economic health of the smaller affiliated stations. This is probably not important to the larger stations whose advertising rates are high in proportion to the connection charges necessary to furnish network service. However, this committee should be concerned with whether it is equitable and in the public interest for the lower-rate stations to be burdened with the same high connection costs.

To correct the inequities which we believe exist, it is not necessary that Congress legislate connection costs. It is merely necessary to make it legally possible for individual stations to provide their own intercity connection if they wish to do so in preference to buying the same connection from A. T. & T. Stations and networks do not have this choice now, but are required by the rules of the FCC to use A. T. & T. facilities if A. T. & T. desires to make facilities available. A station can only provide intercity service for itself if A. T. & T. is unable or unwilling to provide it. The fact that a station may feel

[9] Appendix C is set forth at p. 1667.

it can provide a more satisfactory service or do so at lower cost cannot be considered under the present rules.

Mr. Cox. Isn't it true that the FCC is considering relaxing its rules to permit construction of more private intercity relays, and has actually granted permission in a number of instances?

Mr. CARPENTER. Yes, sir. I believe the rulemaking proceeding is still pending and would give the Commission authority to do just that, provided the station which makes the application makes a positive showing.

Mr. Cox. Would that be acceptable, in your view, if they could complete that proceeding along the lines they have indicated?

Mr. CARPENTER. I would imagine it would, yes, sir.

One thing which the present rules do permit is a station-owned microwave service between studio and transmitter. And it is noticeable that almost all stations do provide their own STL service in preference to purchasing it from the telephone company. This in itself suggests strongly that stations are able to perform service of this type more efficiently than the telephone company and would seek to provide analagous service on an intercity basis if it were legally practical for it to do so.

I therefore suggest to this committee that the FCC be urged to make suitable changes in its rules so as to make it possible for stations to perform an intercity connection service for themselves if they wish to do so. And this refers to the rulemaking proceeding you just mentioned.[10]

CONCLUSION

I believe that the networks have contributed greatly to the rapid development of television programing. I believe that high quality programing in volume has been distributed to hundreds of stations from coast to coast in an unbelievably efficient way. I therefore believe it would be extremely dangerous to tamper with a system that has demonstrated efficiency of so high an order.

I believe it is also backward thinking to propose to help solve the problems of nonaffiliated stations in a handful of larger markets at the risk of creating graver problems for affiliated stations in the majority of smaller markets.

For these reasons I earnestly request this committee to avoid any action which might result in abolishing or restricting network option time. I feel convinced network option time has played a major part in the growth of my station and hundreds of others.

On the other hand, if this committee would like to make network programs available in greater quantity to more stations in the smaller markets, this can be done by urging the FCC to make it possible for stations to perform their own intercity connection service if they wish to do so.

For myself and my company I want to thank this committee for considering the views of a small telecaster like myself. I have every confidence that my views will be given the same consideration as those of the largest and most powerful stations.

---

[10] For other comment on the matter of private intercity relays and A. T. & T. rates, see the testimony of John W. Boler, North Dakota Broadcasting Co., which is printed in the second volume of the UHF–VHF Allocation Problem at p. 983. See also testimony of Rex Howell at p. 2556 below.

(Appendix A, appendix B, and appendix C attached to Mr. Carpenter's statement are as follows:)

Appendix A

Hours of television programing available to viewers of the Bangor area

	Hours of programs during a typical week		
	WABI	W-TWO	Total
April 1953	63		63
April 1954	74		74
April 1955	112	60	172
April 1956	[1] 78	115	193

[1] In May 1956 WABI added approximately 35 additional hours.

Hours of network programing carried by Bangor television stations

	Clock hours of network for a typical week		
	WABI	W-TWO	Total
April 1953	14		14
April 1954	36		36
April 1955	76		76
April 1956	[1] 44	59	103

[1] In May 1956 WABI added a substantial additional volume of network.

NOTE.—All figures are based on published listings and are therefore approximate.

Appendix B

W-TWO Bangor, Maine

EVENING PROGRAMS FOR THE WEEK

OF APRIL 11-17, 1955

	Sun	Mon	Tues	Wed	Thurs	Fri	Sat
7:00	W-TWO Theater (movie film)	Amos & Andy (film)	Tales of Tomorrow (film)	Dangerous Assignment (film)	Annie Oakley (film)	Terry & The Pirates (film)	Wrestling (film)

11.00							

CBS Network Programs (19 hours)

Sponsored Film Programs (6 1/2 hours)

APPENDIX C

Cost of operation of W–TWO's studio-transmitter link (STL)

	If equipment depreciated over a period of— 4 years	20 years
Initial cost of equipment	$11,196.70	$11,196.70
Plus freight	28.80	28.80
Plus estimated installation	40.00	40.00
Total initial cost	11,265.50	11,265.50
Number of months in depreciation period	48	240
Monthly depreciation	$234.69	$46.94
Plus actual monthly maintenance	10.84	10.84
Plus estimated power consumption	9.00	9.00
Total cost per month	254.53	66.78
Total cost per year	3,054.36	801.36

NOTE.—The above-described equipment as used at W-TWO has caused less than 2 hours of lost air time in 18 months, a reliability percentage of better than 99.964 percent.

Senator PAYNE. Thank you very much, Murray.

Of course, I think you realize—I know you realize, because I have talked with you before—that some of the problems that have been brought before the committee here, for instance, the case that was discussed just before you appeared is quite a bit different than your own situation in the Bangor area, in view of the fact that you do not have an overlapping situation up there where you have got the two stations really that have that area up there pretty nearly within your own boundaries.

Mr. CARPENTER. Yes, sir.

Senator PAYNE. So that naturally if there are programs that are desirable to come into the area, or be made available on the part of the networks, they naturally are anxious to get the outlet there and come to the only two available stations in order to provide it. Whereas, if you were in an overlapping area, then, of course, you might run into a little different situation than you are confronted with.

Mr. CARPENTER. Yes, sir; that is true. But I think the major difference is that many stations have grown used to operating in a seller's market. I have never been in a seller's market yet. I would like to get in one some time. But I am not in one.

We operate in a quite free and competitive market. The differences between operating in a free and competitive market, which is to say a buyer's market, and operating in a seller's market, are quite different. And many of the people who have complaints to make are people who are in a seller's market of one degree or another.

I should also like to draw the committee's attention to the fact that although those operators like myself, who operate in the smaller and buyer's markets, are not as vocal as some of the larger ones; there are a good many of them. Many of the smaller operators are so preoccupied with the day-to-day problems of running a station that they do not pace back and forth to Washington as often as probably they should.

Senator PAYNE. Are there any questions?

Mr. COX. I have no questions.

Senator PAYNE. I believe that is all, Murray; and thank you very much for being here and giving this information to the committee.

We will now recess these hearings until 2 o'clock when they will be resumed, and Mr. Benedict Gimbel, Jr., of WIP, Philadelphia, will be the first witness.

(Whereupon, at 12:30 p. m., the hearing recessed to reconvene at 2 p. m.)

(Since the testimony of Mr. Gimbel and that of Henry B. Walker, Jr., the other witness heard in the afternoon related to allocations and other related matters; such testimony is printed in the second volume on the "UHF–VHF Allocation Problem" at pp. 897 and 912, respectively.)

TELEVISION INQUIRY

(Network Practices)

MONDAY, JUNE 11, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to notice, at 3 p. m., in room G-16, the Capitol, Senator Sam J. Ervin, Jr., presiding.

Present: Senators Ervin, Purtell, and Wofford.

Senator ERVIN. Senator Schoeppel is compelled to attend a meeting of the Committee on Agriculture and Forestry. He would like very much to be present here but he is unable to be here on that account.

Would you make a statement in the record, Mr. Cox, as to the matters that concern us at this time.

Mr. COX. We have some matters to be inserted in the record:

First, an exchange of correspondence on advertising in radio and television consisting of two communications from Senator Magnuson to the Federal Communications Commission, together with the Commission's replies on April 30 and May 29, 1956; and an adidtional exchange of correspondence on this same subject between Senator Magnuson and the Federal Trade Commission, under dates of February 15 and 27, 1956, respectively.

All of this correspondence relative to radio and television advertising is directed to be published in the printed reports of these hearings at part of an appendix to the volume (soon to be printed) containing the testimony of the members of the Federal Communciations Commission (these materials are set forth at pp. 221 to 258, inclusive).

There will also be printed, as an appendix to that volume, the several comments of the Commission upon the Jones and Plotkin reports, which have heretofore been made public (these materials are set forth at pp. 260 to 304, inclusive).

Second, an exchange of correspondence, already made public, between Senator Magnuson and Chairman McConnaughey, of the Federal Communications Commission (letters dated May 1, and 14, 1956), regarding Mr. McConnaughey's speech of April 17, 1956, and the necessity for prompt action on allocations. These letters will be inserted in the printed record in an appropriate appendix to the testimony on allocations matters (They are set forth in the appendix to the second volume on the "UHF-VHF Allocation Problem" at pp. 1031 and 1032.)

Third, a letter dated May 22, 1956, from Albert N. Jorgensen, chairman of the Joint Council on Educational Television, urging the increased manufacture of all-channel television receivers, the creation of substantial areas in which UHF is the sole or predominant television service, and the vigorous pursuit of answers to the technical problems of UHF transmission and reception. This letter will be inserted in the printed report in connection with the material on allocations. [It is set forth in the appendix to the second volume on the UHF-VHF Allocations Problem at p. 1033.]

Fourth, a letter dated June 1, 1956, from Joe Drilling, vice president, O'Neill Broadcasting Co., licensee of Station KJEO in Fresno, Calif., forwarding a map entitled "Coverage Map of Seven California Television Stations Depicting Full Service to all Central California Homes with No White Areas," together with a copy of the 1956 ARB Metropolitan Area Television Coverage survey for Merced and Tulare, Calif. This letter and the ARB survey will be inserted in the printed record in connection with the testimony allocations [they are set forth in the appendix to the second volume on the UHF-VHF Allocation Problem, at p. 1036], and the map referred to will be made a part of the committee's files.

Fifth, a letter dated May 22, 1956, from P. A. Sugg, executive vice president of station WKY-TV, Oklahoma city, Okla., relative to the testimony before this committee of Bill Hoover, of Ada, Okla., enclosing letters from National Broadcasting Co. to WKY and from the latter to KVSO-TV of Ardmore, Okla., regarding rebroadcast by the latter of programs of WKY-TV. This correspondence will be printed in connection with the testimony of Mr. Hoover. [It is set forth in the second volume on the UHF-VHF Allocation Problem, at p. 894.]

Sixth, a letter dated May 22, 1956, from Morton H. Wilner, counsel for Triangle Publications, Inc., commenting on the testimony before this committee of Benedict Gimbel, Jr., of WIP, Philadelphia, and enclosing a copy of Triangle's comments in FCC Docket No. 11532. This letter will be printed in conjunction with Mr. Gimbel's testimony [it is set forth in the second volume on the UHF-VHF Allocation Problem, at p. 912] and the comments will be retained in the committee's files.

Seventh, a letter dated May 16, 1956, from Vincent T. Wasilewski of the National Association of Radio and Television Broadcasters forwarding certain materials regarding newspaper polls referred to by Harold E. Fellows in his testimony in opposition to subscription television, together with a copy of a letter dated September 9, 1956, from F. S. Houwink of WMAL-TV to Chairman McConnaughey of the Federal Communications Commission, commenting on his station's experimental broadcasting of coded television signals in May and June of 1955. These materials will be printed in connection with Mr. Fellows' testimony. [They are set forth in the volume on Subscription Television, at p. 1273.]

Eighth, a letter dated May 11, 1956, from Lloyd H. Cutler, forwarding the answers of Richard A. Moore to certain questions presented to him by Senator Bricker during his testimony before this committee. This material will be printed in connection with Mr. Moore's testimony, following the questions of Senator Bricker.

(It appears at pp. 1574-1591, herein.)

Ninth, a letter dated May 7, 1956, from Len Higgins, manager of KTNT-TV of Tacoma, Wash., to Senator Bricker, commenting on references in the Senator's report The Network Monopoly to overlap as between that station and KVOS-TV, Bellingham, Wash., together with copies of Senator Bricker's reply and of his letter to station KVOS-TV.

(The letters referred to are as follows:)

TACOMA, WASH., *May 7, 1956.*

Hon. JOHN W. BRICKER,
Senator From Ohio,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR BRICKER: Broadcasting magazine of April 30, 1956, carried a report about your attack on CBS and NBC-TV networks as having a yoke of economic dominance over network telecasting and in which you cited three cases of overlap as between TV stations in large and small markets, purported as illustration.

The intimation that our television station KTNT-TV, Tacoma, included in your table as in 1 of 3 such larger markets, made a small profit at the expense of KVOS-TV, Bellingham, and that CBS has placed its programs on our station thereby injuring KVOS-TV, Bellingham, is in no sense fair, accurate, or reasonable in view of the facts.

KTNT-TV, Tacoma's A contour contains a population of 1,225,000 persons and is the basic outlet for CBS television in and for the central Puget Sound area. KVOS-TV, Bellingham's A contour contains a population of only 166,000 persons in the northern Puget Sound area of the United States. Its A contour overlaps that of KTNT-TV's A contour to the extent of only 5,500 persons. These figures are from carefully prepared analysis of the 1950 census tracts published by the Department of Commerce Bureau of Census in relation to the A contours of the respective stations filed with the FCC.

The fact that KTNT-TV covers the cities of Seattle, Tacoma, Bremerton, Olympia and Everett with its A contour and the fact that the A contour of KVOS-TV, Bellingham does not reach as far south as the north boundary of the city of Everett (which is north of Seattle), should be ample factual proof to you as to why we feel whoever supplied you with the purported facts in this case should be reprimanded for supplying you with but part of a story. It places you, Senator, in an untenable position for one who has the reputation of confining himself to statements which include full factual presentations.

We feel also that inclusion of the KVOS-TV, Bellingham, figures for 1954 is unfair use of context as we recall the facts; inasmuch as the CBS-TV extended market affiliation of KVOS-TV, Bellingham, was not effective during enough of 1954 to justify their citation for that year.

We here wish to express our firm conviction that association of KTNT-TV, Tacoma, as the basic CBS affiliate for the central Puget Sound area has in no wise injured the financial interests of KVOS-TV, Bellingham, prior to, during or after the year 1954.

Cordially,

LEN HIGGINS,
Manager, KTNT-TV.

MAY 10, 1956.

Mr. LEN HIGGINS,
Manager, KTNT-TV, Tacoma, Wash.

DEAR MR. HIGGINS: This will acknowledge your letter of May 7, regarding KVOS-TV, Bellingham, and KTNT-TV, in my recent report on the network monopoly.

In order that there may be no misunderstanding in this matter I am requesting that your letter be made a part of the record in the current television hearings being conducted by the Senate Committee on Interstate and Foreign Commerce.

Also, I am enclosing a copy of the report since it appears your knowledge of the matter stems from the article appearing in the April 30 edition of Broadcasting-Telecasting magazine.

Sincerely yours,

JOHN W. BRICKER,
United States Senator.

MAY 10, 1956.

STATION KVOS-TV,
Bellingham, Wash.

GENTLEMEN: I am forwarding, for your information, a copy of a letter I received recently from Mr. Len Higgins, manager of station KTNT-TV in Tacoma.

I have written Mr. Higgins that his letter will be made a part of the hearings in the current television inquiry being conducted by the Senate Committee on Interstate and Foreign Commerce.

I am sending you a copy of Mr. Higgins' letter with the thought that station KVOS-TV may also like to have its views on this matter made a part of the same record.

Also for your information, I am enclosing a copy of the network monopoly report.

Sincerely yours,

JOHN W. BRICKER,
United States Senator.

Tenth, a letter to Senator Bricker from Howard Buffett, of Omaha, Nebr., commenting on the degree of control over opinion possessed by the networks, together with a copy of Senator Bricker's reply.

(The correspondence above referred to is as follows:)

BUFFETT-FALK & CO.,
Omaha, May 1, 1956.

Senator JOHN BRICKER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR BRICKER: In the Chicago Tribune of April 30, I see reference to a report from you to the Senate Commerce Committee titled "The Network Monopoly."

If the copies of this report are available I would like very much to obtain one. If there is any charge in this connection I will be glad to pay it.

Incidentally, I know of no more important service one can render this country than to reveal the degree of mind control that is currently possessed and used by the radio networks. When I say radio networks I, of course, include the TV as well. I noticed that in the last annual report of NBC they told their stockholders that they had access to 93 percent of the TV listeners in America. That is a fearful amount of power, and there is no doubt in my mind but such power will be abused if not controlled in some feasible fashion.

Sincerely yours,

HOWARD BUFFETT.

MAY 10, 1956.

Hon. HOWARD BUFFETT,
Buffett-Falk & Co.,
Omaha, Nebr.

DEAR HOWARD: Thank you for your letter of May 1, regarding my report on the network monopoly.

In accordance with your request, I am forwarding several copies of the report.

If there is no objection, I will have your letter made a part of the record of the television inquiry being conducted by our committee.

With best wishes, I am,

Sincerely yours,

JOHN W. BRICKER,
United States Senator.

Eleventh, a letter dated May 21, 1956, from Senator Magnuson to Judge Stanley N. Barnes, Antitrust Division, Department of Justice, regarding the testimony of three independent producers of scenery and sets who testified before this committee on May 14, 1956, together with Judge Barnes' reply of May 24, 1956.

(The correspondence referred to above is as follows:)

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
MAY 21, 1956.

Judge STANLEY N. BARNES,
Antitrust Division, Department of Justice,
Washington, D. C.

DEAR JUDGE BARNES: I am enclosing herewith copies of statements presented to the Senate Interstate and Foreign Commerce Committee on May 14, 1956, by Mrs. Lucille Ashworth, Mr. Peter J. Rotondo, and Mr. David Steinberg. These people are independent producers of sceneries and sets in and around New York City. They have represented to the committee that they have been systematically excluded by national television networks from participation in the provision of scenery and sets for programs broadcast over the networks. It would appear that, if the matters set forth in their testimony are true, there may be an effort on the part of the networks to monopolize this collateral phase of the television industry.

It is apparently charged by these witnesses that all of the networks either directly or indirectly make the use of their set building facilities a condition to obtaining desirable broadcast time, over which it is alleged they exercise complete control. I would appreciate your examining the enclosed statements and advising me whether you feel they present any danger of practices violative of the antitrust laws, and further whether the Department of Justice has any plans at present for looking into this phase of the broadcast industry.

Sincerely yours,

WARREN G. MAGNUSON, *Chairman.*

DEPARTMENT OF JUSTICE,
Washington, May 24, 1956.

Hon. WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

MY DEAR SENATOR MAGNUSON: This is in reply to your letter of May 21, 1956, transmitting copies of statements presented to the Senate Interstate and Foreign Commerce Committee by three independent producers of sceneries and sets in the New York City area. In general, their testimony contained complaints that they have been excluded by national television networks from participating in providing scenery and sets for broadcast programs.

We are conducting an inquiry into this matter to determine whether or not the situation involves any violations of the Federal antitrust laws. If violations are found they will, of course, be prosecuted.

This answers the specific request in the last sentence of your letter that I advise you as to the present plans of this Department "for looking into this phase of the broadcast industry."

Thank you for calling this matter to our attention.

Sincerely yours,

STANLEY N. BARNES,
Assistant Attorney General, Antitrust Division.

Twelfth, a letter dated May 29, 1956, from Judge Stanley N. Barnes and a letter dated May 31, 1956, from Chairman McConnaughey, of the Federal Communications Commission, both in response to earlier requests by Senator Magnuson for comment upon the statement of Richard A. Moore, of Los Angeles, Calif., to this committee on March 26, 1956, as well as upon the legal memorandum submitted by Mr. Moore at that time.

(The correspondence above referred to is as follows:)

DEPARTMENT OF JUSTICE,
Washington, May 29, 1956.

Hon. WARREN C. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

MY DEAR SENATOR MAGNUSON: On March 29, 1956, you sent to us a copy of a statement made on March 26, 1956, before the Senate Interstate and Foreign Commerce Committee by Richard A. Moore, of Los Angeles, together with a copy of a legal memorandum discussing matters relating to that statement. On May 21, 1956, you requested that the Antitrust Division forward comments on those documents by May 31, 1956. This is in reply to those letters.

We have reviewed the facts presented by Mr. Moore bearing upon network practices in the television field, particularly with respect to network option time and must-buy clauses and their effects on independent and affiliated television stations, independent producers and advertisers. We have also studied the legal memorandum submitted with Mr. Moore's testimony, discussing those facts in the context of the antitrust laws. Material already in our files appears to be consistent with many of the statements of fact contained in Mr. Moore's statement to your committee.

The Anitrust Division has previously communicated to your committee those policies which will guide it in dealing with the problems raised by Mr. Moore. Deputy Attorney General William P. Rogers, in his letter to your committee on March 4, 1955, stated that the Antitrust Division would be "on the alert for information indicating that any network is engaged in a violation of those [antitrust] laws." He gave assurances that we would "continue to investigate any complaints submitted to the Department to determine whether or not any violation of the antitrust laws is involved." In my appearance before your committee on February 28, 1956, I stated:

"Since the Supreme Court in the National Broadcasting case has sanctioned this Commission power [to promulgate chain broadcasting regulations], the Federal Communications Commission now reexamines its regulations with a view to determining whether or not they should be modified and enlarged in order more effectively to promote the public interest in telecasting. Obviously, until we have the report of the Fedeal Communications Commission on this subject, further comment by a representative of the Department of Justice would be inappropriate."

This need to await the recommendations of the Federal Communications Commission is particularly appropriate with respect to Mr. Moore's testimony on network practices, inasmuch as the Commission's network study group is presently reappraising its regulations with respect to these practices.

I also stated during my testimony before your committee that there is a substantial area in the broadcasting field which is not regulated by the Federal Communications Commission and in which the Antitrust Division has primary responsibility for enforcing the Sherman and Clayton Acts. In recognition of that responsibility, we are looking into certain of the situations concerning which Mr. Moore testified. I refer particularly to those investigations which I described to your committee in February. Wherever possible, in those areas where inquiry by the Department would not conflict with reexamination by the Commission of its regulations, we are expanding our investigations to include charges of alleged restraints and monopolization in broadcasting referred to us by your committee. For example, in my letter of May 24, 1956, I advised you that we were investigating complaints, which you sent the Antitrust Division, by three independent scenery producers who were allegedly excluded by television networks from providing scenery and sets for broadcast programs.

If there is any further information you desire, please get in touch with me.

Sincerely yours,

STANLEY N. BARNES,
Assistant Attorney General, Antitrust Division.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., May 31, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I have your letter of May 21, 1956, in which you mention forwarding to me, on March 29, 1956, a letter asking for the Commission's comments on the statements made before your committee by Mr. Richard A. Moore, of Los Angeles, Calif. I have been unable to find any record of having received your March 29, 1956, request and therefore have not replied heretofore.

Mr. Moore's statement is largely concerned with his analysis of the option time provisions of the chain broadcasting rules and the must-buy list of network affiliates. These are matters under very serious consideration in the network study and in fact had been discussed by our network staff with Mr. Moore prior to his statement before your committee. However, the Commission has reached no conclusions as yet on these matters. Mr. Moore also discussed the question of possible violation of the antitrust laws. This, as you know, is under the primary jurisdiction of the Department of Justice. Thus, the Commission has no comments to make on the statement at this time.

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman.*

Senator ERVIN. The first witness is Mr. Leonard Marks, general counsel for the FM Broadcasters.

Mr. Marks, we will be glad to hear you at this time.

(At the request of the witness, his testimony appears following that of Benedict Gimbel Jr. It is set forth in the second volume on the "UHF-VHF Allocation Problem" at p. 906.)

Senator ERVIN. The next witness is Dr. Everett C. Parker. We would be glad to hear Dr. Parker at this time.

We are glad to have you with us, Dr. Parker. You have a prepared statement which you can either read, or if you prefer to talk extemporaneously and insert your statement—we will leave it up to you.

Reverend PARKER. I think I would prefer to read it, sir, because it has some facts and statistics in it.

STATEMENT OF REV. EVERETT C. PARKER, DIRECTOR, OFFICE OF COMMUNICATION OF THE CONGREGATIONAL CHRISTIAN CHURCHES

Reverend PARKER. My name is Everett C. Parker. I am an ordained minister and my present position is director of communication for the Congregational Christian Churches, 287 Fourth Avenue, New York City. This gentleman on my left is Frank Ketcham who is counsel for the organization.

I am also a member of the board of managers of the Broadcasting and Film Commission of the National Council of the Churches of Christ in the U. S. A. This latter is an elective, not a staff position.

I have been associated with religious broadcasting on a national scale since 1937. I have previously been director of the Protestant Radio Commission which was the central representative body for Protestant broadcasting until the formation of the National Council of Churches. The Protestant Radio Commission entered the national council along with such other cooperative interdenominational organizations as the Federal Council of Churches, the International Council of Religious Education, the Home Missions Council, etc. The national council has a membership of 30 Protestant and Eastern Orthodox Communions representing 35,874,601 persons.

After formation of the national council I was asked to make a definitive study of the effects of television on religion. I, therefore, organized and served as director of the communications research project from 1951 through 1955. The project was sponsored by the national council and conducted under the supervision of the Yale University Divinity School.

I am appearing today upon behalf of the office of communication. I am not here as a spokesman for the National Council of Churches or the Congregational Christian Churches as a whole.

I understand that to date hearings of this committee have been concerned primarily with television and, specifically, with the technical aspects of allocation of frequencies in the VHF and UHF bands. I also understand that representatives of the national television networks are to testify before you later on this month—tomorrow, I believe—concerning their operations and their views on the current status of television and its future.

While I recognize the critical importance of the technical situation of television today, I would like, respectfully, to remind the committee that the aspect of television that is of ultimate importance is the kind of programs that are transmitted into American homes. And since television is so greatly dependent upon network operation for programing, the most vital issue may well be the determination of the degree to which the networks and their affiliated stations are fulfilling their responsibility to give the public a well-rounded program service of superior quality.

The treatment of religion is illustrative of the present attitude of networks toward their public service obligations. The National Broadcasting Co. originates 4,860 minutes of network television each week. Thirty minutes of this time, sixty-two one-hundredths of 1 percent, is devoted to religion. Furthermore, this 30 minutes is divided between the Protestants, Roman Catholics, and Jews in varying proportions. The net effect for Protestants is that during 24 weeks in the year not a single minute on the NBC network is devoted to Protestant Christianity.

The Columbia Broadcasting System maintains two 30-minute religious programs, both aired in the early hours of Sunday morning. One of these periods they program independently. On the other there is cooperation in programing and production by the National Council of Churches and by Roman Catholic and Jewish agencies. Protestantism, at present, is faring somewhat better on this latter program over CBS than on NBC. It is absent from the CBS network only 23 weeks.

Of course in both cases the Roman Catholics and Jews receive even less time.

The American Broadcasting Co. currently offers no noncommercial religious programs on its network, although I understand the program featuring Dean James Pike, of the Cathedral of St. John the Divine, may be restored in the fall.

The situation in television should be contrasted with radio. The networks have never been overly generous with radio time for religion. Most programs have been scheduled on Sunday mornings or early Sunday afternoon. Most of them, in format, have been modeled after church services—which is about as ineffective a form of broadcasting as you can get. Church services are planned for corporate worship, i. e., they are effective when a group of people come together to share in the worship of God. They are not meant for a single person or 2 or 3 sitting in the livingroom. The essential participation in congregational prayer and confession is lost on a radio audience. Radio needs programs that are beamed to the individual listener.

Mr. Cox. Are such programs available and offered to the networks and to local stations?

Reverend Parker. Yes, they are.

Mr. Cox. That is, techniques have been developed by yourself and other organizations and these have been carried forward to the point where they are either in recorded form—filmed form—or in a form where there are the necessary materials for live presentation, and all of this can be turned over to a licensee or network if time is made available?

Reverend PARKER. Yes; for the past 10 years, year after year, the advisory committee of CBS's Church of the Air on radio—which is kind of a body that they have for a front; it consists of ministers like myself, who come together for lunch once a year—somebody has always made the suggestion, backed by one of the others, that they change the format of Church of the Air and do something else but a church service. I think maybe they will get around to doing that sometime when radio is far gone.

The representation of religion on radio has been greater than it is on television. The National Broadcasting Co. and the American Broadcasting Co. have always provided at least 30 minutes a week each to Protestants, Roman Catholics, and Jews. The National Council of Churches has for many years presented two programs on NBC: National Radio Pulpit, which is 30 minutes long, and Art of Living, which is a speech by Dr. Norman Vincent Peale, 15 minutes long. Both are broadcast early Sunday morning when available audience is minimal.

The Columbia Broadcasting System, on radio, has offered the Columbia Church of the Air, which they consider to be representative, in which 30 minutes have been set aside twice each Sunday on a rotation basis for Protestant, Roman Catholic, and Jewish clergymen to speak within the format of a miniature church service. Clergymen of the various faiths appear on a representative basis arbitrarily determined by CBS.

Thus, as you can see, the networks have reduced religion on television to a position of less than one-third the importance it has held on radio—where it has not been held in too great esteem.

Mr. COX. Now in this connection, have they taken the position that this is basically a responsibility of the local stations, who are more conversant with the requirements of their particular localities, and that therefore the function of a network is not as important in this field as it might otherwise be?

Reverend PARKER. I have never heard that view expressed to any of us in conferences with networks. I haven't had an official conference with a network on this in the last year or so, but I have never heard it expressed.

Mr. COX. Well, then, would it be their position that they acknowledge a responsibility for balanced programing on the network, including religious programing, and that they regard this as satisfying that requirement?

Reverend PARKER. That is my understanding. They have always acknowledged the necessity of broadcasting for the representative central agencies of the Protestant, Eastern Orthodox, and the Roman Catholic, and Jewish groups.

Mr. COX. Now it is true, is it not, that a number, perhaps all, local television and radio stations do provide additional programing of a local nature, largely on Sunday morning.

Reverend PARKER. Yes, I would say that the vast majority of them do.

Mr. Cox. That would at least be of particular service to shutins and people who were not able to attend regular church services, and who found some substitute in this?

Reverend Parker. Well, the use of church services—especially on the local level—it hasn't gone down to a point where church services are minority religious broadcasting, because the usual practice of a station is to offer some time for a devotional program. But councils of churches throughout the country—ministerial associations and the National Council of Churches—have been encouraging the use of more radio-wise and television-wise programs. For instance, the National Council puts out a program called Let There Be Light on recordings—15-minute dramas—and there are a great many news broadcasts now in the religious field, there are counseling programs, there are a few children's programs put on locally, both on radio and television. There is some experimentation going around on television with many program types. We have been able to do better locally, on television, in cutting down this incidence of church services. You see, it was always so easy for the local station in radio to throw a microphone into a church and pay $7 or $8 a week for a line, which usually they charged to the church, and called that their religious broadcasting; and maybe give 15 minutes 2, 3, or 4 times a week to the Ministerial Association for a talk. But we have been fighting that for years.

Mr. Cox. That would be relatively expensive for television, I take it, even if it were effective.

Reverend Parker. I think that is one of the reasons why television does not do it. For example, WPIX in New York started out with a rather grandiose plan that was opposed at the time by the National Council of Churches. There was no television committee of the Protestant Council of New York, but they were going around to pick up from the local churches. They did for sometime and they stopped, I think, because of the cost and the fact that it was not a good program, they found out. NBC found that out with Frontiers of Faith. They persisted for 2½ years in presenting a miniature worship service, in an empty church usually, and it just didn't go, so they changed the format.

This downgrading of religion by network television has come at a time when, apparently, we are experiencing a marked growth in interest in religion and a substantial increase in active participation in religious organizations by the people of America. A recent opinion poll by Ben Gaffin & Associates of Chicago, found that 99 percent of those questioned believe in God. The Yearbook of American Churches indicates that currently 60.3 percent of American citizens are on the rolls of all religious bodies. It is also noteworthy that in the past decade when television has been developing with minimal attention to religion, newspapers, wire services, feature syndicates, news magazines, and magazines of general circulation have been increasing the space devoted to news and features about religion. While the spiritual strength and depth of a nation cannot be measured by statistics or news coverage, most competent observers agree that religion is a vital force in America today and that a majority of our citizens are concerned with spiritual affairs.

Furthermore, there is widespread interest by the public in the presentation of religious programs on television and radio. This concern has been documented by scientific study of television audiences. The communications research project studied the value, the use, and the effects of television and radio in a metropolitan population, using New Haven, Conn., as the laboratory. New Haven is a representative American industrial city, not satellite to any other, and has the added advantage that residents can view the New York City television stations, as well as their own channel.

The project employed a 5-percent sample of the New Haven population as the basis of its study. This sample, which was drawn by Prof. August B. Hollingshead of Yale University Department of Sociology, was representative of the New Haven population on the basis of education, occupation, age, number in the household, income, and religious affiliation. There were 3,552 families in the sample. This sample is the only one of its type and adequacy that has been used in communication research.

The project staff interviewed each of the families in the sample at length on their regular television and radio habits. A smaller sample of 100 families was reached through depth interviews in which a tape recorder was taken into the home and a 3- to 5-hour interview was recorded.

The research found that 2,128 households—59.8 percent of the families—regularly listen to or look at one or more religious television or radio programs. Furthermore, it was found that this majority audience does not differ markedly in any respect from the total population of the city. In other words, the audience for religion is a cross section of the population. It is not specialized. It is not limited by religious affiliation or by cultural status. It is, of course, true that the audience for a particular religious program is apt to be particularized when studied on the basis of age, sex, education, religious affiliation, and other sociological factors. Religion on television is subject to the same limiting factors as are other types of programs. All audiences are minority audiences. In religion, as in other fields of programing, only a few programs have a cross-section audience.

The research I am citing divided all television programs into 14 types: News, sports, variety, religion, comedy drama, domestic drama, general drama, crime drama, Western drama, quiz, musical, domestic science and variety, personality, public issues, and education and information.

Senator Ervin. Pardon me. This is Senator Purtell. Dr. Parker was talking about the research project in New Haven—about the attitude of the people in listening and looking at television on the subject of religion. He was in the midst of that.

Senator Purtell. I am sorry I wasn't here. I assure you that I will read the statement very religiously.

Senator Ervin. Pardon the interruption.

Reverend Parker. Among adults we found measurable audiences for sports, adult variety programs, quiz programs, general drama, news, religion, comedy drama, crime drama, music, and domestic drama. Religion ranked sixth among these program types in regular usage by the households in New Haven. However, in availability on both the New Haven television outlet and the New York stations religion ranked last. In New York, at the time of our study, only 1 percent of television time was devoted to religion.

Mr. Cox. What was your method there, Dr. Parker? Did you ask them simply to list, on their own initiative, the areas of their interest, or did you provide them with a listing of these 14 different categories and ask them to rank them within that listing?

Reverend PARKER. We did neither. We went into the home and asked them to tell us what programs they viewed regularly, and we talked to them long enough to bring out their memory. It wasn't just a case of handing them a listing and asking them to check.

Mr. Cox. Then you minimized, as far as possible, any tendency, perhaps, to rank things which they felt might be expected of them?

Reverend PARKER. Yes; because they did not know the auspices of the study. In fact, they thought it was a commercial study, I guess. We just said it was the New Haven radio-television survey. We then broke them down into these 14 categories ourselves, by programs which they gave us by name.

Senator PURTELL. Were these all programs out of New York stations?

Reverend PARKER. And WNHC. We did a monitoring survey of WNHC and the New York stations and compared the two for the whole week. The NAEB monitored the New York stations and we did WNHC.

Senator PURTELL. In the course of that study did you determine what percentage of those you interviewed were listening to New York stations in New Haven? Did you find, in other words, a great number of people who said, "We don't listen to New York stations here"?

Reverend PARKER. No; of course channel 8 is determinative in New Haven, as we both know, but anybody who could get the New York stations would get them. There were several reasons for that. The network outlets in New York had dropped a great many sports programs—and so had WNHC at that time, because they were taking both NBC and CBS—so in order to get the Dodgers they had to get channel 9. People were putting up extra antennas so they could get channel 9 in New York. They could get all of the other New York stations, but they needed the antenna for channel 9.

Senator PURTELL. I thought all of those people were Red Sox fans. [Laughter.]

Reverend PARKER. No, I think they are all Dodger fans.

Parenthetically, I might add that the networks and stations seemed to guess as poorly on what the public wanted in other types of programs as they did in religion. For instance, among adult programs crime drama ranked first in availability, the New York stations giving 15 percent of their broadcast time to it. The people of New Haven ranked crime drama 8th out of the 10 program types in their regular viewing of programs. Similarly, while the audience ranked sports first in their interest, the New York stations ranked sports third in availability. Only in the case of news did the New York stations and the audience come close to being in agreement. The stations offered news as their fourth ranking program type. The audience ranked news fifth in their regular viewing. It is apparent that commercial considerations are paramount in the choice of programs to be offered the public.

Still another discouraging factor about network religious broadcasting that virtually assures the ineffectualness of the programs is the segmented scheduling of broadcasts by the various faith groups. On NBC's Frontiers of Faith from September 1955, through August of this year, no group—Protestant, Catholic, or Jewish—will have in sequence more than eight broadcasts. On the CBS Look Up and Live, a program for teen-agers on Sunday mornings, during 1956 the National Council of Churches is scheduled for a sequential group of 13 broadcasts. This is the longest sequence of the year. In 2 other cases—the National Council of Churches once and the Roman Catholics once—there will have been 9 broadcasts in sequence. This segmentation of assignment to the various faith groups makes it virtually impossible for any one of them to create and sustain an audience for its programs.

The type of scheduling that is being done for religious broadcasts, of course, contravenes the principles on which the networks operate in other fields. Continuity and repetition, we are told, are the sine qua non of successful broadcasting.

Local station acceptance of network-originated religious programs offers a further block to effectiveness. The Protestant segment of Look Up and Live on CBS is currently carried by 49 stations. Protestant programs on NBC's Frontiers of Faith are aired by 63 stations, 25 of whom delay the broadcasts. On the other hand What's Your Trouble? a filmed series distributed by the National Council to local stations, involving discussion between Dr. and Mrs. Norman Vincent Peale, has played on more than 150 stations. This is a fair average comparison between live network and film coverage. The National Council obtains this widespread station coverage through vigorous promotion of its programs. It does not enjoy this promotional advantage on network programs. And, of course, I should say parenthetically that it is limited to the network affiliates when it goes on the network, and if the network affiliate will not carry the program in its community, then it cannot be carried on another station that might be willing to carry it.

Mr. Cox. Do you make direct efforts to interest the affiliates in these live programs, or is that handled just as a matter of routine through the network organization itself?

Reverend Parker. Well, the National Council does. I always do myself when I have any programs. The networks are not always happy about that. They do not like to have the affiliate pressured from the local community, and so there has to be a meeting of minds, you see, and cooperation on the thing. Now there were times, in days gone by, when a network would set up a talker circuit and make a closed circuit broadcast on the initiation of a new religious series, but those times are pretty well past. I haven't seen that done recently.

Mr. Cox. Are all of these programs, then, that are on the network live broadcasts, so that the only use of the delayed broadcast is through a kinescope?

Reverend Parker. Yes.

Mr. Cox. Generally, then, the programs you prepare for use on television would be filmed, and you would therefore have this greater flexibility, as far as time and placement was concerned?

Reverend Parker. That is correct. That, of course, was true in radio and is today. You have much greater flexibility in a recorded program, in an organization like the National Council, than you would with a network program, but you have many more stations on radio.

Mr. Cox. Have you offered to furnish the networks with film programs for use by them in this network time that they make available?

Reverend PARKER. I am sorry, I couldn't answer that as to whether any specific offer has been made.

Mr. Cox. That would, of course, reduce their expense to the cost of the time, whereas if they furnish a live program, I assume it requires some additional studio personnel, as well as, in some cases, professional participants to put the program on?

Reverend PARKER. That is correct, but you will see later on that we usually pay for the participants.

Program costs of network religious programs typically are borne by the religious group to which the network allocates time. CBS pays a substantial share of the talent costs for Look Up and Live, and all expenses of its house-sponsored Lamp Unto My Feet. But, of course, that program, they decide who shall be on.

NBC contributed director, announcer, and crew, but does not pay talent and script fees on Protestant programs. The religious agencies require substantial staffs and budgets to service the network time segments. Incidentally, I don't want to make it seem that they pay on Roman Catholic and Jewish—I do not know whether they do or not.

In no network do the leading creative minds work on religious programs. On the other hand religious agencies, like the National Council of Churches, have developed production staffs with a good deal of competence in both the television and religion fields. The views of the religious bodies on what constitutes a proper presentation of religion are always subject to the veto of the network employee currently in charge of religious programs. These people do not have theological training, yet they do not hesitate to judge the adequacy of Protestant, Roman Catholic, and Jewish program plans.

Mr. Cox. Does each network have one individual in charge of religious programing?

Reverend PARKER. Yes; usually it falls in the public service department. There will be a man who is head of the department, has quite a few programs. Sometimes the one in charge of religion will have more things to do than just religion. In some cases there is a person who has religion, but he is always at the bottom of the totem pole. It is usually a young member of the staff.

The tenuous hold of the major religious bodies on network television representation is further threatened by the commercialization of religion on television. The American Broadcasting Co. has always sold time for religious broadcasting, and of this date gives no time for religion on television. NBC recently began to sell time on radio, reversing a policy established when the newtork was formed. Only CBS has maintained its original policy that the presentation of religion is a public service obligation of the network, and has refused to demand payment for time.

Of course, we are all familiar with the arguments that networks and stations are profitmaking bodies; that religious groups have something to sell, just like soap manufacturers, and should pay their own way, and so forth. But this ignores the public service responsibility of stations and networks. The fact is that the religious agencies that are representative of Protestantism, Roman Catholicism, and Judaism have high ethical standards about the use of television. They do not use television for proselytizing; rather their programs are specifically and primarily oriented to the solution of spiritual problems. It is not too much to say that the church bodies are the only groups that broadcast primarily in the interest of "character building" as distinct from education, information, entertainment, and other uses of the mass media.

When religion becomes commercialized it is no longer possible to keep it a service function. The religious body concerned must bow, at least to some extent, to the wishes of the commercial sponsor or, if it is buying time itself, must use the bulk of its energy for fund raising to support the programs. The Christian religion is a poor commercial risk. The Gospel can best be described in the words of the Apostle Paul: It is a "scandal" and an "offense" to people of worldly view. The presentation of the Gospel on television is calculated to make men examine their consciences and come to terms with the will of God. It is not a good medium to sell products, since it cannot qualify for that least common denominator of television that it offend nobody and entertain in the process.

The broadcasting and film commission of the National Council of Churches has been concerned over the twofold trend of the networks and local stations (*a*) to commercialize religion and (*b*) to consign religion to the hours of the day when there is least audience available. The commission appointed a committee from its board of managers which conducted a yearlong study, searching for a policy that would be fair both to the television-radio industry and the religious interests of the people of America. This committee held hearings and sought the advice of leaders in religion and in broadcasting. After careful consideration, it proposed a policy on sale and allocation of time for religion, which was adopted by the board of managers of the broadcasting and film commission on March 2, 1956, and was endorsed last Wednesday, June 6, by the general board, the governing body of the council. I should like to read this policy statement into the record.

Policy Statement for Religious Broadcasting for the Board of Managers of the Broadcasting and Film Commission

The broadcasting and film commission of the National Council of Churches of Christ in the U. S. A., records its concern that religious programs of the highest quality, designed to serve the spiritual needs of the American people and to strengthen their religious foundations, be presented on television and radio; and holds that the churches and synagogues of America have an obligation to provide such a responsible broadcast ministry to all people.

The broadcasting and film commission recognizes that it is vital to religious freedom that diverse religious positions have a right to be heard. No one religious body can speak for all; nor can the right and obligation to speak be limited to the clergy.

Religion is essential to the strong and healthy continuance of our life as a nation. Therefore, public interest requires that it be given a proper place in radio and television broadcasting schedules. While the broadcasting facilities are individually and corporately owned, they are licensed to be used "in the public interest, convenience, or necessity." Therefore, licensees have an obligation to provide adequate time and facilities for the broadcasting of religious programs as a public service.

Therefore, the broadcasting and film commission declares the following statements to be its position and policy concerning religious broadcasting in the United States of America, and instructs its staff to circulate these views on religious broadcasting to appropriate officers of networks and individual radio and television stations, to the members of the Federal Communications Commission, to members of the appropriate committees of the Senate and the House of Representatives of the United States, to religious communions, and to the general public:

1. The broadcasting and film commission recognizes it to be the responsibility of the churches to provide high-quality programs (live, recorded, or on film), free as a public service. It expects the networks and stations to recognize it as their responsibility to make a substantial provision of facilities and desirable broadcast time free as a public service for such programs.

2. The broadcasting and film commission calls attention to the fact that the broadcasting industry itself has indicated its endorsement of this position in two statements contained in the television code of the National Association of Radio and Television Broadcasters:

"It is the responsibility of a television broadcaster to make available, as part of a well-balanced program schedule, adequate opportunity for religious presentations."

"A charge for television time to churches and religious bodies is not recommended."

3. The broadcasting and film commission commends the television and radio stations and networks that adhere to these policy statements in the television code of the National Association of Radio and Television Broadcasters.

4. The broadcasting and film commission advises against the sale or purchase of time for religious broadcasts. It holds this practice to be inconsistent with its own basis of operation and, by implication, with the position of the broadcasting industry as expressed in the television code. The commission, therefore, calls upon its constituent communions, councils of churches, and councils of churchwomen to exercise their influence in support of this position by discouraging the practice.

5. The broadcasting and film commission also calls upon the stations, the networks, and the Federal Communications Commission to recognize that the scheduling of sustaining religious broadcasts only in marginal or unsalable time is not in the best public interest. It records the conviction that the high objectives of religious broadcasting can best be achieved when broadcasts are scheduled at times when substantial audiences are available, and in particular the audiences for whom the programs are intended.

6. The broadcasting and film commission calls upon stations and networks, in their allotment of time to Protestant and Orthodox broadcasting, to give due consideration to the strength and representative character of the councils of churches, local and national.

7. The broadcasting and film commission holds that the scheduling of sponsored or paid-for religious programing in all or a major part of the time allotted for religious broadcasts cannot be considered an adequate discharge of the public service obligation to religion by a network or a station.

Mr. Cox. In that connection, Dr. Parker, do you have an opinion as to what would be a reasonable expectation on the part of religious groups with respect to the quantity and the scheduling of time for religious purposes?

Reverend Parker. On a network?

Mr. Cox. Yes.

Reverend Parker. I think it is reasonable to expect a national network to provide a time period a week for the central representative Protestant-Orthodox bodies, like the National Council of Churches, and a time period a week for the central Roman Catholic body that is in charge of broadcasting—I believe that is assigned to the National Catholic Welfare Conference—and to a central Jewish agency, as they have done in radio. I think that is minimal. I think that once in a while it might come at some other time but early Sunday morning, or at 1:30 in the afternoon on Sunday, before people are really up and around and looking at television. I have been in religious broadcasting since 1937. I never have had class A time on a network for a sustained series of religious programs.

Mr. Cox. How are you going to take care, without purchase of time, of the interests of groups that are not included—religious groups that are not included in those three categories: that is, largely Protestant organizations that are not a part of the national council?

Reverend PARKER. That is a problem that I have great sympathy for the stations and networks on, and I believe that those people have a right to be heard. I don't believe you can give time to them every week—to a group, for instance, that may represent 250,000 people—but on a minority basis they have a right to be heard, and I would like to see that right exercised.

Senator PURTELL (presiding). Well, do you think that the time should be allocated on the basis of the number of communicants of a particular religion, since you spoke in this case of the number of adherents to that particular religious belief?

Reverend PARKER. I am not in favor myself—and there are a lot of people who will argue with me on this—on the present type of allocation being practiced by the networks, of giving a proportional representation to Protestants, Roman Catholics, and Jews. The Protestant representation on both NBC and CBS is broken down to give some minority group representation. I believe that in our culture here in America—as far as broadcasting is concerned, anyway—Protestants, Catholics, and Jews should have an equal representation. I know that the Jews are a small part. The argument is mostly made on that basis, and I believe on CBS they get—I don't know how many weeks—but it is a very few weeks, but culturally Judaism is the basis of our Christian tradition.

Senator PURTELL. I wasn't thinking of Judaism. I was thinking more of the group that Mr. Cox spoke about, which might be classed as nonaffiliated Protestant groups that would be seeking time. I understood your answer to be that, on the basis of their membership, they should be granted some time. That is what I had in mind.

Reverend PARKER. Yes; I think it would have to be on the basis of membership. But there is this situation: The national council has been willing to represent, and has represented fairly, groups that are not affiliated with the council. For example, the Missouri synod of the Lutheran Church has a program called—I am sorry, I can't remember—but it is a film series distributed by the national council, and to the complete satisfaction of the Missouri synod and the national council. The Evangelical Lutheran Church is including a program in a series distributed by the national council. The national council stands ready to be a service agency to those groups that will permit it; and that is true also in the local situation, where the Council of Churches is a fair representative agency, and tries to be that in behalf of the churches and the station, because a group with one church in a community can cause a lot of trouble. Rightfully, they have a right to be heard, but it is hard to say that they have the same right to be heard that all of the other churches have, just as if you took it on an educational basis—well, that isn't a good simile.

Senator PURTELL. That is exactly the problem that is presented. This whole major problem—assuming time was allocated on what would be a fair basis, then you would have a reallocation of time, it would seem to me, to these numerically smaller groups who would also want time.

Reverend PARKER. They do want time, and they have gotten it through the years—and they have gotten it on a pretty fair basis, for their influence. You see, in Protestantism the very vast percentage of Protestants are members of the national council through their denominations. There are a small number of Lutheran bodies that are not members. The rest are pieces and bits in size. They are represented by other organizations—the National Association of Evangelicals represents a group of denominations. We feel they should have representation, but we can't find any way but numbers to be fair in this case.

You can say "My way of preaching the Gospel is the only way," and who can say you nay?

The churches are also deeply concerned with the effect of television on the spiritual life of American children. Criticism of children's television programs, as you know, has been widespread and bitter. The Communications Research project conducted a study in New Haven of children's viewing and the attitudes of parents toward children's television.

The report of the Subcommittee to Investigate Juvenile Delinquency of the Committee on the Judiciary of the United States Senate lists 34 hours a week when children can be expected to be using television. This is the time between 5 to 7 p. m. and from sign-on to 7 p. m. on Saturdays and Sundays. This is a conservative interpretation on children's hours. Our study showed that children typically view programs after 7 p. m. and, in many homes, are permitted to watch television up to, and even beyond, 10 o'clock at night. We estimated conservatively that children typically spend 13 hours a week watching their regular television programs. They do additional random viewing.

The project discovered that while children constitute a major audience for television, only about 11 percent of the time of New York stations was devoted to children's programs. Drama is the program type that is broadcast most frequently in the children's hours. It may be adult drama, it may be children's drama, but it is some form of drama.

Senator PURTELL. When you speak of the children in the survey, what were the ages that you designated?

Reverend PARKER. We broke them down: Four to 9, 9 to 13, 13 to 16, 16 and above.

Senator PURTELL. What group, then, do you conservatively estimate spends 13 hours a week watching regular television programs?

Reverend PARKER. Anyone from about 5 years on up.

Senator PURTELL. But would that 13 hours apply to anyone from 5 on up?

Reverend PARKER. Yes, sir.

Senator PURTELL. Is that so?

Reverend PARKER. Yes, it is an average figure, and we are conservative about it. We could show you children who watch television 40 and 45 hours a week—and many of them.

Senator PURTELL. But from 5 on up to 16, the average would be 13 hours a week watching television?

Reverend PARKER. Yes.

Mr. Cox. That is about double the national average of 6 hours.[1]

---

[1] This statement i sin error. According to some estimates, the average family watches television some 6 hours per day.

Reverend PARKER. Yes, but when you get into the home and talk to them with a tape recorder, and have the whole family there, you get to realize what children watch, whether their parents realize it or not. We found parents were reluctant to admit that the children watched certain adult programs, but the children would pipe up and describe the program in detail. The women were reluctant to admit in front of their husbands that they watched television during the day. You start out and they say they always watch Today. And you say, "You know what follows that," and they say yes, they do—and they know what follows that, and that, and that. It may not be a fair way of doing it, but it shows what they are watching.

Senator PURTELL. You say this survey is predicated upon the report of the Subcommittee To Investigate Juvenile Delinquency, and also this survey you conducted?

Reverend PARKER. Yes; I suppose the hours used in the report were gotten from the NARTB.

Senator PURTELL. I am more interested in the 13 hours—that came from your survey, and it was limited to New Haven?

Reverend PARKER. That is correct, but I don't think children are much different in New Haven from any place.

Senator PURTELL. I didn't wish to imply that. I hope they are not different, anyway. [Laughter.]

Reverend PARKER. Nor parents.

Senator PURTELL. I doubly hope that. That is astounding, 13 hours.

Reverend PARKER. It really isn't so much when you figure they will get up at 7 o'clock in the morning, before their parents are up, and start looking, almost invariably; and on Saturday and Sunday many children look all day. It is fantastic, but true; and if they don't look at home they go next door, if you don't have a television set.

Senator PURTELL. I am sorry for the interruption, but it is important to me, and it has made quite an impression on me.

Reverend PARKER. Between three and four-fifths of what is called drama for children consists of westerns. In addition the study found that children watch adult drama a considerable amount of time, and I said earlier that crime drama was the ranking program type in New York at the time the studies were made.

Studies made by the National Association of Educational Broadcasters have shown that there is a great deal of violence depicted in dramatic programs. These studies show that children's drama has twice as much violence as does adult crime drama; that most of the violence on children's dramatic shows occurs in a nonhumorous context; and that most of it is carried out by human beings.

This overemphasis on violence greatly troubled the parents who were interviewed in our New Haven study. A majority of adults generally approved of children's television programs, but many of them had reservations about particular program types; and the minority of almost 30 percent who disapproved of children's programs is so large it cannot be ignored. The basic criticisms were that there are too many westerns, too much violence. Among parents of children 4 through 9 years of age there was concern about the kinds of programs the children were watching and the effects the children were exhibiting which the parents attributed to television.

There was general concern both among parents who approved of television for children, and those who did not, over the lack of educational and religious programs for children. There was no network religious program being broadcast for children at the time the study was made, nor is there such a program on the air today. On the other hand, children are regularly exposed through television to values which conceivably could corrupt the basic moral principles of American citizenship. For instance, what is it doing to a child's understanding of law enforcement in a democracy when he is exposed, hour after hour and day after day, to television programs which tell him in effect, that the people are unable to solve law-enforcement problems, that sheriffs and other law-enforcement officers are either venal or lack intelligence, and that the only hope for fair play is from "the good guy" on the horse or in the space suit who comes in and takes over by force?

Another matter of serious concern is the effect on children of the adult programs that they must watch most of the time when they are looking at television. I am sure that there are few adults who would condone the watching of adult crime dramas by children. I am also fully aware of the argument that these programs are broadcast in the late evening so children will be in bed and will not be exposed to them.

But the fact of the matter is that children are exposed to them. It is not enough to say that such exposure is the sole responsibility of the individual parents and thus shrug off all the responsibility from the rest of us. Every citizen has a duty to aid in the proper rearing of the children of America, and the broadcaster and the sponsor or his agent are not exempt from this duty.

Mr. Cox. Isn't it true, though, that if you are to broadcast varied programs in the hours running up to 10 o'clock, where you indicate some children are still viewing television, that to have adult type programs you are going to have to leave some measure of control to the parents, in the home, to see that their children do not view what may be perfectly all right for their parents, and for other adults throughout the country?

Reverend Parker. Certainly that is true. It is also true that stations delay a lot of these things on kinescopes and don't always broadcast them in the late evening hours. WNHC didn't always broadcast the crime programs after children went to bed.

Mr. Cox. In your view is there some dividing line in time beyond which you would absolve the station or the network of responsibility for the adult content of the program?

Reverend Parker. There is and there isn't, Mr. Cox. It is a very difficult problem, and I know it; but you find a child—I have a daughter who is 13 years old, and typically in our community 13-year-olds go to bed between 9:30 and 10 o'clock, whatever time you can force them into bed in that period. Now, while my own child doesn't watch television too much, I don't think, nevertheless, she is up to see the programs that are on at 9 o'clock, at least, and sometimes later, and she is not untypical of children. And I think you have to have a great deal of care on any kind of program you put into the home.

On the other side, I do not for one minute think that the artistic value of programs should be cut down for moralistic bases. I think that there has to be some thought of how much violence you put on a program, for instance, of any type that is going into the home—how much is necessary to the action, and how much just lets it move along; how much other material is put in that is necessary to the action, and how much is slipped in because it is a quickly written script. There has to be a concern, at any time of the day, for that.

Mr. Cox. You would think, then, that the most that could be said is that you would expect greater care in certain hours of the viewing day than in others, because of the greater likelihood of a high percentage of children in the audience?

Reverend PARKER. Yes, but I would like to see some care all of the way up, because don't forget that 15-, 16-, and 17-year-old children are looking at television just the way their parents do. They are adult listeners after they get to be 15.

Senator PURTELL. Isn't it also true that we are reaching an audience that weren't exposed, for instance, to the westerns that our people objected to when we were youngsters? Children are watching television today who are unable to read, and they see these westerns and see other things. I know westerns go on long before the children's bedtime. I have some grandchildren that like to watch television, and I at times fear as to what is happening to them by watching these programs they are subject to—and they can't read yet.

Reverend PARKER. There is that, which is very important, and there is the additional fact that you and I, when we were children, depending on how liberal our parents were, would get to a movie show and see William S. Hart once a week. That is all that they ever had then; and if you were like me it was every 2 or 3 weeks, maybe. Now, that isn't so bad; but when you are exposed, day after day and hour after hour, to exactly the same thing, and when you have no critical judgment, you begin to believe what you see. The Nazis found that out—they used it to good advantage. The Communists use it to advantage today on adults.

Now, what does it do to children? We don't know yet. We haven't had time to find out. I think it is more dangerous than the movie situation ever was. Of course, we got overexcited about what movies would do to us, I think. But this is something different. It has never been known in history before.

Senator PURTELL. We either got overexcited about it, or lived with the situation after it was created.

Reverend PARKER. It could be one or the other. That answers, a little bit more, the question I think you asked, too.

Parents know all too well that the tremendous publicity buildup given to certain of the evening television programs, including crime dramas, creates an almost irresistible demand on the part of children to experience the joys of these apparently delectable entertainment features.

The television industry has only partially recognized its obligation in this matter.

I should like to quote from paragraph one of the section entitled "Responsibility Toward Children" of the Television Code of the National Association of Radio and Television Broadcasters. This paragraph states:

> The education of children involves giving them a sense of the world at large. Crime, violence, and sex are a part of the world they will be called upon to meet, and a certain amount of proper presentation of such is helpful in orienting the

child to his social surroundings. However, violence and illicit sex shall not be presented in an attractive manner, nor to an extent such as will lead a child to believe that they play a greater part in life than they do.

I know this is not a careless flouting of convention. A case can be made for teaching children proper attitudes toward illicit sex, crime, and violence. But when the broadcasters undertake this educational responsibility toward our children—and they do it voluntarily—they must also be certain that such programs are carefully supervised by trained educators, religious leaders, and others with similar professional backgrounds. To adopt a code which permits the description, to children, of illicit sex, crime, and violence without guidance of a high professional order shows a shocking disregard of public responsibility.

We have scarcely had an opportunity to find out what the effect of the mass media in general may be through the acceleration that they give to the impact of the environment on the growing child. They present the child with the problems of the environment regardless of his stage of maturity. While the television broadcaster may think that he is doing the right thing, parents may have personal policies of not introducing the child of, let us say, 9 years to problems presented by marital infidelity. Yet by means of the television screen, such problems are thrust at him as soon as he is able to perceive the medium.

Children are not sophisticated enough to understand the implications of organized crime or of illicit sex relations. This criticism is pertinent both for the adult programs to which children are exposed inadvertently and, to an even greater extent, to the children's programs which deal in crime and violence in their content. No matter how few children are exposed to such programs the exposure is still unjustifiable. Children do not distinguish between the guns that a criminal shoots and the guns that a policeman shoots.

One of the parents interviewed in the New Haven studies gave a succinct opinion which might well be accepted as a universal principle in television programing. He said, "An older person knows crime does not pay, but children do not properly understand."

Purely from a business standpoint we would expect the television industry to look seriously at the criticisms made of children's programs by parents, educators, and impartial observers. Even if these critics are in the minority the leaders of the industry cannot evade—and will not wish to evade—their responsibility to find out through objective, scientific research as much as can be discovered about the effects on children of various types of programs now taking up a large proportion of television time. Nor can they forever evade the responsibility to present a number and variety of programs that, while they may well be entertaining, clearly enunciate the basic values of our Hebrew-Christian tradition and our American democracy. The director of children's work of the National Council of Churches, in writing of the need for research in religious television, has summed up well the attitude of responsible Christian educators to children's television programing. I should like to quote her:

It would be easy for the industry to toss its responsibility off lightly with the statement that parents are the guardians of their children and should control their viewing. But it would also be less than completely candid. For the truth is that not only parents, but even educators, lack a sound basis for judgment in assessing the merit of different programs. Further, all parents are not equally responsible guardians.

It is also true that when a set is turned off at home, the child may be welcome at the neighbor's. And, finally, an industry as anxious as television to come in the home certainly has a grave responsibility to that home, especially when its purposes are commercial.

Senator PURTELL. I would like to say here, too, that your touching on all of this is very important to me, particularly the effect on children. The persuasiveness of television on the minds of youngsters is pretty well demonstrated for you who have children—or in my case, grandchildren—because I find that my daughter almost has to have a grocery store to satisfy what the youngsters want for breakfast, because they saw a television show last night that said it should be pop and crackle, and tomorrow it has to be something else. They think that anything they see on television has to be right, and is right, contrary to what their parents tell them.

I find I am eating new breakfast foods all of the time because somebody on television thought it was a good thing to have. They do think everything they see there is just about right. It has a tremendous effect upon them during this time of life when they are very easily impressed, and I think we sometimes don't give proper value to that, and proper weight to that, and the effect on the minds of youngsters.

I think, too, that some of the things they see—I know in one particular case I am quite sure what one youngster saw on television was a reason for dreams at night, waking up and screaming, and being frightened about things which were horrible things she had seen on television. I think we must do something about it.

Reverend PARKER. Well, things are horrible to children that are routine to adults, also, because they haven't experienced them before, and we don't realize how much influence they have when they come through this medium because the child—no matter what you may say about its being a film, or anything else—the child things he is seeing something that is happening. In the back of his mind he always deals in terms of realities.

All television and radio stations, and, of course, the networks, have this obligation of broadcasting in the public interest. One phase of the obligation is broadcasting for religion, which is the greatest single force in the lives of our people. The networks have failed to fulfill this obligation on television by drastically limiting time for religion, by confining religious programs to the least desirable time, and by failing to meet the costs for programing. The American Broadcasting Co. has compounded all three failures by its policy of selling time for religion without regard to the representative character of the groups which come with money in their hands. There is danger National Broadcasting Co. will now adopt a similar policy.

Religious bodies such as the National Council of Churches, in my opinion, are willing to do their share as partners of the networks in serving the needs of the American people through religious broadcasting. The church organizations are wasting their substance on the present kind of network television programing. Until the networks and local stations provide (*a*) sufficient time; (*b*) good time; and (*c*) good production, they are not fulfilling their obligation to broadcast in the public interest, convenience or necessity in terms of the needs of the American people for religion.

Senator PURTELL. Well, while I wasn't here, as I said before—I had to appear on the floor; I had a short speech I wanted to deliver in the Senate and couldn't be here to hear all of your testimony—I want to thank you for appearing here, Reverend Parker, and I again assure you that I shall read all of your testimony, not only because it contains a survey made in New Haven, but because I think it contains information that would be most helpful to me as a member of this committee.

I have no questions to ask you, but Mr. Cox may—I beg your pardon, Senator, I apologize. You came in so quietly I didn't see you. Have you any questions?

Senator WOFFORD. No; I have no questions. I listened with a great deal of interest. I came in just a few minutes ago.

Senator PURTELL. You have treated the subject—again I don't know, of course, what the first portion of your testimony was—but you have treated the matter in a broad general way.

Now, have you specific recommendations to give to the committee as to the time, the hours—you speak of class A time, and we know what that is—but the degree of that time, the amount of that time, how it should be provided. You have touched upon it generally, but rather in a broad way. Those are all problems that ultimately will have to be met and answered if this is going to be solved as you feel it should be, and as completely as you would like to see it solved.

Reverend PARKER. Well, of course, Senator, I am not an attorney, I don't know how to draw legislation.

Senator PURTELL. That makes us even. I am not, either. [Laughter.]

Reverend PARKER. That is right; you are a manufacturer. That is a problem that we have faced for a long time. I believe in the original Communications Act there was inserted a clause that directed the FCC to come back—I would have to have the act, I haven't read it in years—but directed the FCC to come back and make a recommendation to the Congress as to how public interest could best be served.

Mr. COX. They never did.

Reverend PARKER. That is correct. They never made such a recommendation. There must be some way in which the general public can—once a day, at least—get public-service programs in times when the audience is available, say between 7:30 and 10 at night, when there is a majority audience. For example, I said that we had 14 program types, and we found an audience for 10 of them. One of the types we didn't find an audience for was public affairs. The reason we didn't find an audience was because there wasn't any program—and if there was, the audience was eating, or in bed, just as with religion. These people that listen to religion really have to be interested. They have to hunt around for it; and if you want to find out something about the Government of the United States, or something of that sort—unless it is the Secretary of State, or the President that is speaking, or it is a campaign—you don't get much of it.

For example, in children's programs, there is no educational program on in the hours when the children are watching. That is prime time.

You can put the Mickey Mouse Club on and get kids, but sometimes it might be wise to put on a series that tells how the Government of the United States works. There ought to be some time reserved for doing that, because the children are interested in that. We tried a little experiment outside television to see about putting on a program. We brought kids in and offered them a dollar and asked them what power did the House of Representatives have that the Senate did not have and that was directly representative of the people. None of the children knew, but they ran around the next week and came up with an answer. We almost got the program on the air, but we didn't. That kind of program, I think, ought to be required somehow—that kind of program be put on once in a while for children and adults, too.

There is a large audience for good programing. Look at the audience for Richard III. That is entertainment. There can be a substantial audience brought together for real discussion of public issues. They do it in Britain. It isn't what the stations and networks may want to call a mass audience, but their "mass audience" on a lot of the big entertainment programs is a very minority audience, as their own research shows. So I believe that, somehow, there is going to have to be a requirement that in the good times there be some public-service programing done.

Mr. Cox. Would you suggest, then, that this might be done in the form of the specification of certain percentages within prime time, as well as overall, which should be devoted to different types of programs?

Reverend PARKER. I do not see how you can do it any other way. You cannot say at 8 o'clock on Wednesday night you have to do something—you have to leave the stations some flexibility. But if the Federal Communications Commission was really concerned with programing—if it really followed its own Blue Book, for example—we might not have this problem. There might be some voluntary conformity with the public interest, but somehow some agency is going to have to look at the programing and say, "See here, you have all of your programs that deal with information, education, public affairs, on Sunday morning. Get them off Sunday morning and put them on sometime on Monday, Tuesday, Wednesday, Thursday, or Friday night."

Mr. Cox. To your knowledge, has any church group ever participated in a proceeding involving the renewal of the license of, let us say, one of the stations licensed to one of the national networks, and made a showing to the FCC as to the state of what you regard as lack of balance in programing?

Reverend PARKER. Recently church groups participated in a hearing on a station in New Orleans. The FCC renewed the license. I do not know the whole story, but certainly there was no religion on the station. I believe there was no education.

Mr. Cox. I assume, however, that the station promised that there would be, and that the promise was accepted, and that they will look 3 years from now, when the station's license comes up for renewal again.

Reverend PARKER. Yes; that is what happens. There have been other cases where church groups have appeared. There have been a couple of cases, maybe, where the FCC listened to them, I don't know. I cannot cite them to you, but there have been such cases. And we advised local groups—I mean people in positions like myself, now, not the National Council of Churches officially; but people like myself who had radio and television for denominations—we advised churches to "Work the matter out, if you can, with the station; but if you can't—appear before the FCC."

But there is nobody that helps a public-interest group appear before the FCC—and least of all the Federal Communications Commission. I have an example of a letter that was written just a few weeks ago to the FCC about, not just something a person did not like on a particular station, but the program schedule—and a completely perfunctory letter back from the FCC saying that the letter would go in the file. He had also written to the station, and there was a letter from the station pointing out that they were for public-service programs, as if they were the whole program schedule.

I think the FCC has to be a little tougher if they are going to get anything out of it.

Mr. Cox. That is all.

Senator PURTELL. We want to thank you, Reverend Parker, for appearing. If there are no other witnesses here, these hearings will adjourn until tomorrow, June 12, at 10 a. m., at which time Dr. Frank Stanton, president of CBS, will appear as a witness.

(Whereupon, at 4:50 p. m., the committee adjourned, to reconvene at 10 a. m., Tuesday, June 12, 1956.)

TELEVISION INQUIRY

(Network Practices)

TUESDAY, JUNE 12, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND
FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to notice, at 10:25 a. m., in room G–16, the Capitol, Senator John O. Pastore, presiding.

Present: Senators Magnuson, Pastore, Ervin, Bricker, Butler, Potter, Duff, and Purtell.

Also present: Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel; Bertram O. Wissman, assistant chief clerk.

Senator PASTORE. This hearing will come to order.

Our first witness is Dr. Stanton of CBS. I am a little concerned about the facilities in this room. I realize it is a small room and there are many interested people. Is there some way we could open up those doors and spread about a dozen chairs in there?

Mr. Purtell has suggested that maybe we ought to wait until we get the new Senate Office Building. [Laughter.]

Mr. STANTON. That is agreeable to me.

Senator BUTLER. That suggestion may be very welcome.

Senator PASTORE. This is off the record.

(Discussion off the record.)

Senator PASTORE. All right, Doctor, you may begin.

STATEMENT OF FRANK STANTON, PRESIDENT, COLUMBIA BROADCASTING SYSTEM, INC.

Mr. STANTON. Mr. Chairman, and members of the committee, my name is Frank Stanton. I am president of Columbia Broadcasting System, Inc., which is composed of seven operating divisions. One of these, the CBS television division, is engaged in four broad areas of television broadcasting: the CBS television network, CBS-owned television stations, CBS television spot sales, and CBS Television Film Sales, Inc. With me today are Mr. J. L. Van Volkenburg, president of CBS television, Mr. Richard S. Salant, vice president of CBS television, Mr. William B. Lodge, vice president in charge of engineering, CBS television, and Mr. Sidney S. Alexander, CBS economist.

Also with us is Judge Bruce Bromley, member of the firm of Cravath, Swaine & Moore.

My associates and I welcome this opportunity to appear before you today, to discuss the general topic of "network practices." Television broadcasting in all its aspects is constantly growing and evolving, and it is most important that all of us who are interested in it are properly aware of the facts and circumstances that govern its growth.

We are here today to try to do three things: First, I want to describe broadly what a television network is, what it does for people, stations, and sponsors, and how it operates. Second, I want to answer specific charges which have been leveled at networks. In this connection, I asked to testify after the critics had appeared in order to be able to deal directly with their comments and thereby avoid a generalized presentation. Third, and finally, of course, I am here to try to answer your questions.

The television network industry is an industry of very great complexity. It undertakes to provide, on an efficient and economic basis, a nationwide service of information and entertainment to millions of individual owners of television receiving sets. It must perform its difficult and highly diverse functions on a split-second timetable, more rigidly adhered to than that of any railroad or airplane.

One of its most essential functions is to provide instantaneous national interconnection day in, day out, between great cities and small towns throughout the length and breadth of America. It does so in more permutations and combinations than can be calculated. It does so for purposes ranging all the way from entertainment, through the presentation of unique on-the-spot coverage of such essentials to our government as the national political conventions and elections to be held this year—through this, I say, to the instantaneous alertment of the public in time of national crisis. No such facilities ever existed before the creation of the networks, nothing except networks can serve these functions, and nothing now imagined can take their essential place. These statements are central to my discussion, so I make them with some considerable emphasis.

The subject matter of networking is huge, and I know of no one man who has completely mastered it all. Yet all of its parts are closely interrelated, and no part can be examined in isolation from the others. This may seem like an elementary point, but I must emphasize it. A network is an organic thing—that is, it is very much alive. We all know that our own bodies are made up of only a few pennies' worth of chemicals. We also know that our own bodies are made up of a variety of separate organs. But neither the chemicals nor the organs can be alive by themselves; it takes the whole to be alive. And it is the same with so complicated a thing as a network. It has to be considered as an entity. The dangers of considering it only as a set of disrelated parts to be juggled around any which way are most considerable, and not everyone has successfully avoided them, by any means.

Because of the importance and complexity of the issues we are considering here, they cannot be dealt with quickly. Lunchtime gossip, tablecloth arithmetic and inexpert speculations cannot successfully deal with these issues, rooted as they are in the natural laws that govern the electron, or the economic laws that govern how an enterprise can be successfully conducted. Neglect or ignorance of basic facts can lead to wholly wrong conclusions, and wrong conclusions can lead to disaster. Judgment, to be successful here, must be highly informed judgment, based upon adequate and accurate knowledge.

For this reason, CBS has attempted to set forth the facts of its enterprise as comprehensively and in as much detail as possible. I would place an intolerably heavy burden upon this committee, and indeed upon myself, if I attempted, in an oral statement, to place all the facts and considerations before you. Therefore, we have prepared, and submit to this committee for the record, a number of documents, as follows:

1. A Supplemental Memorandum entitled "Network Practices.": Printers page proofs of this document have been in your hands since a week ago today. It describes the dimensions of television; the role of networks in the development of television, the tripartite network functions—for the public, for the stations, for the national advertisers; the operations of the CBS television network; the internal economics of networking—where the money cames from, where it goes and what the profits are; the external economics of network television as an advertising medium—the problems of creating an efficient lineup of stations and a sound program schedule so that the network is a good buy for the advertiser. It also examines in detail the charges which have been made against the network and discusses the various proposals which have been advanced. This I would describe as the basic document which deals with these matters definitively.

Senator PASTORE. On the question of incorporating these in the record, do you desire to have them incorporated by reference and to be filed with the committee so that anyone may be referred to them, or do you want them to be made a part of the body of the record? The reason I say that is they are rather voluminous, and I think we ought to charge the counsel of the committee to take the matter up with the chairman to see just how he would like to have it done. Because every time—committee hearings will be printed, and of course this will be part of it. I am thinking of the expense involved.

Mr. STANTON. It would be satisfactory, Mr. Chairman, as far as I am concerned, if they were made simply as reference documents.

Senator PASTORE. All right, sir.

(It was later agreed, however, that this and the succeeding documents would be incorporated into the record. The document referred to is as follows:)

NETWORK PRACTICES

Memorandum Supplementing

Statement of Frank Stanton, President,

Columbia Broadcasting System, Inc.

Prepared for the Senate Committee

on Interstate and Foreign Commerce by

Columbia Broadcasting System, Inc.

June 1956

TABLE OF CONTENTS

PART I: General Introduction

Purpose of this Memorandum

This memorandum has been prepared in the conviction that there has been little understanding, and considerable misunderstanding, of precisely what a television network is, what its functions and relationships with stations, advertisers and the public are, and how it operates. To the casual outsider—the viewer of programs—network broadcasting is exceedingly simple. A knob on the television set is turned to the on position and after a few seconds a picture appears on the face of the tube; the viewer turns another dial to see what other pictures there are; and if he finds what he likes, he settles back to watch—perhaps a play from Hollywood, or a political convention from Chicago or San Francisco, or a news program from many parts of the country, or a visit to Harvard University, or a variety program from New York City, or an interview with a Senator in Washington. One program follows another, with split-second timing. People—drama—news—debates—discussion, appear on the television screen. The viewer looks at what he wants and when he no longer wants to look, he turns the knob to the off position and goes on to some other activity.

It is the purpose of this memorandum to describe comprehensively what is behind the pictures on the face of the cathode ray tube. It has been prepared in order to give to the Committee some idea of the people, the equipment, the organization, the skills and the economics which make possible the remarkable flow of network programs.

The business structure out of which those pictures grow is complex. In many of its elements and combination of elements, it is unique, with no counterpart in other more familiar industries. The business of networking involves a unique integration of otherwise unrelated groups, skills and elements. It is a wedding of creative skills with the hardest-headed kind of slide-rule economics. Its success and its existence hinge on three wholly interdependent and interlocking elements—the public, television stations and advertisers.

The complexity of the structure has grown out of the demands and very nature of the business. There are profound reasons for the details of the structure, rooted in the necessities of the business itself.

Criticisms which have been leveled against networks and their practices, and proposals which have been advanced for change, can be properly weighed only in the context of the entire structure of the business. So interlocking are the relationships that often what appears to be one small change can injure and perhaps even destroy the entire structure.

Therefore, this memorandum has been prepared to provide the basic facts which are necessary before discriminating judgments can be made.

Part II of this memorandum will examine the dimensions of television today, its growth and the role of networks in television. Also in Part II, in order to provide a better understanding of what a network is, this memorandum will describe the CBS Television Network in terms of its organization, manpower facilities, stations and program structure.

To give greater clarity of understanding, Part III of this memorandum will deal with some of the *internal* economics of networking by focusing on one CBS Television Network program, in order to illustrate what the programming functions of a network are, why they are necessary and how the revenues derived from the program are expended.

Part IV will deal with the *external* economics of networking —the economics of providing sound values to advertisers through providing an efficient aggregate of stations and an efficient program structure. Finally, Part V will examine, in the light of Parts II, III and IV, some of the charges against networks and proposals for change.

PART II: Networks—Their Role in Television, Their Functions and Their Nature

A. THE DIMENSIONS OF TELEVISION. Today, over 34 million families in the United States have one or more television sets. They have invested $16.6 billion for the purchase and maintenance of these sets, and the latest figures show each family averages slightly over six hours a day watching television.[1]

Television's growth has been remarkably rapid. It took television ten years to reach 34 million homes. It took telephone service 80 years to reach that number of homes; electrical wiring, 62 years; automobiles in use, 49 years; the electric washing machine, 47 years; the electric refrigerator, 37 years; and radio, 25 years. See Chart I.

The public investment in money and time and the rate of growth of television have a vital implication to those concerned with the industry. Its dimensions today provide a striking measure of the public's interest in, and its acceptance of, television. It would be difficult to find any industry or business activity with so clear and explicit a stamp of public approval.

The universality of television in the United States is further evidenced by the fact, as Chart II shows, that 99.2 per cent of United States families live in areas which are within range of

[1]Nielsen Television Index, National Television Nielsen-Ratings, First Report for March 1956. The A. C. Nielsen Company is a leading research organization which studies and reports on broadcasting audience data.

as of March 1, 1956

7 out of 10 families have sets

at least one television signal.[1] More than seven out of ten United States families actually have television sets. Exclusive of educational stations, by March 1, 1956, there were 429 stations on the air, of which 393[2] were affiliated with a nationwide network.

Despite misconceptions to the contrary, in the vast majority of cases the American public has a considerable choice of service. As Chart III shows, 9.4 out of every ten television homes have a choice of two or more signals, while 8.7 out of every ten have a choice of three or more signals. The average television home has a choice of 5.1 different signals.[3]

Thus the size of television today is established by the availability of television signals, by set ownership, by the choice of programs available to each viewer and by the amount of viewing. But there is another important measure of television today —the advertisers' evaluation of television in the concrete form of their dollar investment in television advertising. From a volume of $57.8 million in 1949, advertising on television grew to more than $1 billion in 1955, far outstripping the rate of growth of national advertising revenues for newspapers and magazines during that period.

---

[1]Areas "within the range of at least one television signal" are all counties: (1) in which ten per cent or more of the homes had television sets on June 1, 1955, according to Advertising Research Foundation estimates, plus (2) all counties in the service areas of CBS Television affiliates which have gone on the air since June 1, 1955, and (3) all counties in the service areas of other stations which have gone on the air since June 1, 1955.

The service area of a CBS Television affiliate is defined in accordance with the criteria of the CBS Television Engineering Department as indicated on pp. XVII to XXII of Appendix C of this memorandum. The service areas of other stations which have gone on the air since June 1, 1955, are assumed to include all counties more than half of which fall within 50 miles of the station transmitter for a VHF station and within 30 miles of the station transmitter for a UHF station.

[2]Not including non-affiliated stations receiving network programs on a per-program basis, but including four satellites. Of the remaining 36 non-affiliated stations, 13 are in cities where all three networks have primary affiliates or own their own stations. Of the 23 in other cities, the CBS Television Network supplies programs to six stations on a per-program basis. Undoubtedly the other two networks similarly supply programs to some, if not all, of the other stations.

[3]Based on a special Nielsen Television Index study as of January 1, 1956.

CHART III

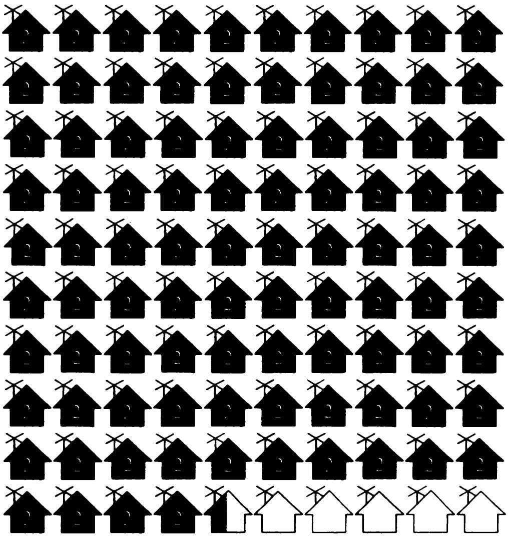
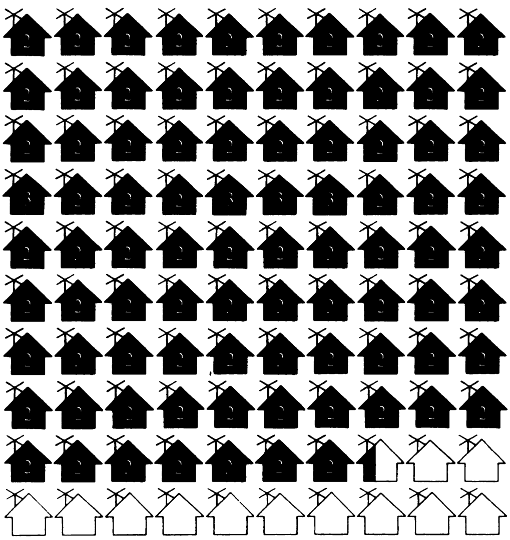
service from 2 or more stations — 94.4%



service from 3 or more stations — 87.3%



B. THE ROLE OF NETWORKS IN THE DEVELOPMENT OF TELEVISION. The foregoing provides some measure of the size of television and the rate of its growth. There can be no serious question that the stimulus for that growth and a basic, if not *the* basic, reason for its current size is *network* television.

The networks were active in the development of television long before most others now on the scene. By the end of 1930, both CBS and NBC had established television laboratories and had been licensed to operate experimental television stations. By the end of 1931, CBS was broadcasting on a regular schedule over its local station in New York. It was not until after the war, in 1946, however, that full scale broadcasting operations were possible.

But in the early postwar period there were few sets, numbering only in the tens of thousands. Because there were so few sets, there were few programs, since advertisers were unwilling to pay for programs which had such small potential audiences. Conversely, because there were so few programs, there was little incentive to purchase receivers. The industry was thus bound within a tight circle of economic frustration.

There was only one way to break out: to program far in excess of what was then justified by the number of sets, the potential viewers and advertiser interest. It was the television networks which, at enormous cost to themselves, broke the circle. They embarked on what was then an extremely uncertain and risky course. They provided the major entertainment programs and the broadcasts of popular sports events and important political events of national interest.

As was stated in a recent article in the *New York Herald*

Tribune (December 22, 1955), it was these programs that "signaled the start of television as a major industry back in June of 1949. There were few stations then and practically no network to speak of. Within a matter of weeks, people were flocking to their television dealers to buy sets because they wanted 'to see Milton Berle' [on NBC]."

Thus it was the networks, with their investment of creative energy and of dollars, that provided the driving force that brought together the families in the home, the receiver manufacturers, the performers and writers, the advertisers and the station licensees, which led to the explosion of television on the American scene.

In priming the television network pump so as to lead to the flow that we know today, CBS, alone, invested $53.1 million from 1934 through 1952, without a single year of network profit.

It may be noted that during that period of initial growth and financial loss, CBS Television alone among the networks lacked both of two vital elements: (1) ownership of its permissible quota of stations, which historically are profitable before networks are[1]; and (2) a supporting television receiver manufacturing activity. NBC and ABC each had five stations in major markets and DuMont had three, while CBS, until 1951, owned only one station. NBC and DuMont also were engaged in the manufacture of receivers, so that their investments in programming could be justified by the returns which resulted through the sale of receivers stimulated by programming.[2]

[1]See Part V, p. 131 of this memorandum.

[2]CBS did not enter receiver manufacturing until 1951.

In sum, the road which in retrospect may sometimes appear to have been so easy for the CBS Television Network to chart and develop—and on which so many who contributed so little in the early days to its construction would now like to travel—was a hard and dangerous one and its direction, while clear today, was by no means clear a few short years ago.

C. NETWORK FUNCTIONS. Networks today perform the same functions for the public, stations and advertisers, that they performed in starting television on its miraculous road to success.

(1) *Network functions for the public.* Networks function first for the public. The networks bring to the public news, information, education, and more and better entertainment than the general public has ever known on a nationwide basis. Today, through the networks and without paying any fee, the entire nation can see the Sadler's Wells Ballet, the World Series, "Peter Pan," "The Caine Mutiny Court-Martial," a debate between Leonard Hall and Paul Butler, a discussion of the Federal Constitution by Joseph Welch and an infinite variety of the best that the entertainment world has to offer. Never before have such opportunities for education and amusement been made so universally available, and on such a scale, to the people of any nation.[1]

By making available throughout the country information, education and the best of our culture, network television has

[1]For an interesting and vivid article concerning the cultural effect of television in Iowa, see an article in *Harper's Magazine*, April 1956, by William Zinsser, motion picture editor of the *New York Herald Tribune*, entitled "Out Where the Tall Antennas Grow." In his article, Mr. Zinsser describes a visit to Iowa where, to his consternation, his friends and relatives discussed cultural and entertainment matters to which they had been exposed through television with which Mr. Zinsser, who had no television set in New York, was unfamiliar. Mr. Zinsser resolved, on his return to New York, to become thoroughly familiar with the more obscure aspects of farms and farming, so that on his return to Iowa he might match the expertness of Iowans in their own fields.

brought about a cohesion among the people of the United States which has never before existed, and has given them a firsthand knowledge of the entire country which has never before been available to them. And it has provided the potential of an incalculable benefit in terms of the national interest, for it makes available a means by which in times of national crisis the nation is afforded a mobility which is needed to meet totalitarianism.[1]

It should be emphasized that the only source of nationwide *live* programming is the networks. Only by live network programming can events of national interest be seen throughout the country as they happen. The entertainment and informative qualities of some film programs cannot be denied; indeed, some programs require film and are better because of it. But good as film programs are, it is the live quality, the sense of seeing the actual event or performance taking place before the eyes of the viewer as he sits in his living room, that is the real magic of television. To remit television largely to film is to confine its excitement, scope and impact,[2] and even more important, it is to destroy the only effective means of nationwide visual communication to the entire country for national emergency purposes.

(2) *Network functions for the stations.* None of this service to the public can, of course, be performed by a network except through the individual stations. The second major element in television networking and the second vital link is, therefore, the stations themselves.

---

[1]See Frank Stanton, "The Role of Television in Our Society," before the National Association of Radio and Television Broadcasters, May 26, 1955.

[2]Another advantage of a *live* series of programs over film is the flexibility of the former in its being susceptible of change and reshaping in the light of actual experience and public response. See p. 39 of this memorandum.

A major difference between radio and television has thus far proven to be the great cost of television programming, even on a local basis. A vital function, accordingly, which networks perform for stations, is furnishing them with programming. Network programs furnish a double benefit to stations: First, revenues accrue to the station for carrying the network programs (see p. 47 of this memorandum). And second (and in many ways equally important), because the network has provided the programs to the station, the station is relieved of the necessity to expend monies for its own local programs or for the acquisition of other outside programs.[1]

Thus network service to the stations provides them with not only a program schedule at no additional cost to them but also revenue from network advertisers. Further, there is a third and basic by-product of benefits to the stations: As a result of a network's providing major programs of substantial popularity, a large circulation accrues to the affiliate. This large circulation attracts additional revenues directly to the station—revenues both from national spot advertisers and from local advertisers. These revenues are vital in station economics. It is a basic fact of television advertising that advertisers look to "adjacencies" —the times, whether 10 seconds, 30 seconds, a minute, 15 minutes or half-an-hour, which may be available adjacent to the programs which have attracted the greatest audiences.

The rating services show that, with rare exceptions, network

[1]The network schedule supplied to the affiliates is composed not only of the sponsored programs but also the sustaining entertainment and public affairs programs. These sustaining programs cost CBS Television in excess of $10.5 million in 1955 without any allocation of general administrative overhead (see p. 43 of this memorandum). It is reasonable to assume that no station, or limited group of stations, could afford to present such programs at their own expense or through their own facilities.

programs are far and away the most popular.[1] Hence it is network programs which build the station's circulation, on which the station bases its rates,[2] and make it possible for the station to attract additional revenues. In this important sense, it is relevant to note, network programming and national spot and local programming are not antithetical at all. Indeed, national spot and local advertising is complementary to network programming and takes its strength from a strong network schedule. National spot and local revenues in television have increased with network revenues (see pp. 123 to 126 of this memorandum). An explicit illustration of the strength which national spot programs are given by network programs is provided by the following comment of Frederick W. Ziv, the president of a leading producer of syndicated films, which appeared in *Variety* on November 16, 1955: "Ziv said that since the PEP, EMP and other network plans to bring web programming to smaller markets got underway, Ziv's sales to stations included in the plans have undergone an increase of between 10% and 15%. He declared that 'it's been the industry patterns so far that the more network programming an unaffiliated [sic] station carries, the more syndicated films it also schedules, boosting the total number of program hours the station airs each week.' Smaller stations, once they get more network revenue, he explained, usually use it to

[1]In the 60 television markets for which American Research Bureau local rating reports are available for January, February, or March, 1956:

10 of the 10 most popular programs are network programs in 46 markets.
9 of the 10 most popular programs are network programs in 12 markets.
8 of the 10 most popular programs are network programs in 2 markets.

In other words, on the average, in these 60 markets, 9.7 of the top 10 programs are network programs.

[2]An analysis of rate cards of stations in markets in which four or more stations are located shows that a network affiliation contributes to the circulation of the station so that it in fact charges a higher rate for all hours of the broadcast day than do non-affiliates, no matter how remote those hours are from a network program.

expand their airtime, buying in most cases syndicated film to do so."

While discussion of the division of revenues between stations and network is reserved for a later point in this memorandum (see p. 47), it may be noted here that it is this factor of dependence of national spot and local revenues on network programming which underscores the inaccuracy of comparing the direct revenues which a station receives from a national network advertiser for carrying a network program with the revenues received from national spot and local advertisers. In the first place, a station necessarily bears greater costs when it must provide its own sponsored program locally and must itself pay various costs such as advertising agency commissions in addition to operating costs and sales costs. Furthermore, there must be added to the revenues which accrue to the stations directly from the network program the circulation and revenues which come to it through national spot and local advertisers *because* of the network program. In many ways, the contribution of network programs as a factor in increasing the affiliates' circulation and rates generally and in attracting the national spot and local dollars is even more valuable to the affiliate than the actual revenues received by the affiliates directly from the networks as their share of the payment of national network advertisers.

(3) *Network functions for national advertisers.* As has been seen, the public and the stations are two of the vital elements which permit networks to exist and to which networks provide services and for which they perform their basic functions. The third vital element and the third point in television's immutable

triangle are the advertisers. For advertisers, network television provides large circulation at specific time periods in the schedule at a low unit "cost per thousand" (see pp. 59 to 85 of this memorandum) and in one efficient purchase. Detailed discussion of the economics of advertising in network television is reserved for Part IV of this memorandum. It is well to emphasize, however, that advertisers are hard-headed businessmen, who invest their advertising dollars carefully and as scientifically as possible. The annual investment of individual advertisers in network television ranges from the tens of thousands of dollars to the tens of millions. They will not make this investment unless they are persuaded they receive sound value for the money they expend. It is a network's function to organize itself and fashion its network line-up of stations and programming so that it can persuade the advertiser that network television is a good buy. For advertising dollars are the life blood of all of television.

D. THE OPERATIONS OF THE CBS TELEVISION NETWORK.

In the preceding subsections, this memorandum has examined the broad dimensions of television today and described in general the services and functions which networks perform for the public, for stations and for advertisers. In order to provide greater specificity, this memorandum here turns to focus on the operations of a single network—the CBS Television Network.

(1) *The CBS Television Division.* The CBS Television Network is a part of the CBS Television Division, one of the seven operating divisions of the Columbia Broadcasting System, Inc. The other six operating divisions are: The CBS Radio Division, historically the first of the divisions, which operates the CBS Radio Network and six owned radio stations; the CBS Laboratories

Division, which is engaged in the development of broadcast and receiving equipment for both black and white and color television and in research in electronics and other fields, not only for the CBS divisions but for the Government and for outside industrial use; the Columbia Records Division, which produces primarily phonographs and records; the CBS-Columbia Division, which makes television and radio receivers; the CBS-Hytron Division, which makes electronic tubes, including black and white and color television picture and receiving tubes; and the CBS International Division (the only one of the seven divisions which plays no part in bringing radio and television programs to people), which is engaged in the export business.

The CBS Television Division, whose activities began in 1931 but which was not established as a division until 1951, is engaged in networking and in operating VHF television stations in New York, Chicago and Los Angeles, and a UHF television station in Milwaukee. CBS has pending an application, which has been the subject of a comparative hearing and which is now before the FCC, for a VHF station in St. Louis. CBS also has contracted to purchase a UHF station in Hartford subject to FCC consent. The matter is pending before the Commission.

The CBS Television Division also includes CBS Television Spot Sales, an organization which acts as national spot advertising representative for the four CBS Owned stations and for eight CBS Television affiliates.[1]

CBS Television Film Sales, Inc., a wholly owned subsidiary of CBS, produces and sells entertainment and newsfilm pro-

[1]The eight affiliated stations represented are WTOP-TV, Washington, D. C.; WCAU-TV, Philadelphia; WBTV, Charlotte; WBTW, Florence; WMBR-TV, Jacksonville; KGUL-TV, Galveston-Houston; KSL-TV, Salt Lake City; and KOIN-TV, Portland, Oregon.

grams to all television stations which wish to purchase them.[1]

(2) *The CBS Television Network organization and staff.* Organizationally, the CBS Television Network comprises 47 major operating units, divided into five main groups: (1) Programming; (2) Sales; (3) Operations; (4) Operating Services, including Station Relations, Engineering and Research; and (5) Administrative Services.

The weekly cost to CBS Television of maintaining this organization and staff is about $700,000. In 1949 the full-time personnel devoted to the television network numbered only 427; in contrast, as of March 1, 1956, CBS Television employed on a full-time basis 2,412 people for its network and a total of 5,493 people, including per diem personnel, talent and supporting corporate personnel.[2]

Among the 47 operating units are the following:

The Program Department is the keystone of the network operation. Programs are a network's most important product. The Program Department has the primary responsibility for the basic creative and planning work which results in the conception, evaluation, development and production of the program schedule. It consists of 38 supervisory personnel and 91 addi-

[1]CBS Television Film Sales, Inc. offers its programs to all stations, regardless of network affiliation; network-owned stations and network affiliates get no preference. In fact, there have been instances when a CBS Owned station bid for a film series distributed by CBS Television Film Sales, and Film Sales sold the series to a competing station which made a better offer. During a recent week, 601 station half-hours were sold. CBS Owned stations purchased 9.2 per cent of the 601 station half-hours; primary CBS affiliates, 11.4 per cent; secondary affiliates, which are primary affiliates of other networks, 7.4 per cent; unaffiliated stations, 34.9 per cent; direct to advertising agencies and sponsors, 21.0 per cent; regional and national sales, 16.1 per cent.

[2]Included in the supporting corporate personnel are staff members in the News and Public Affairs Department (see pp. 22 and 23 of this memorandum) and in the Legal, Tax and Building Operations Departments, as well as in corporate management. It is estimated that this latter group spend about two-thirds of their time on television network matters.

tional employees, exclusive of the creative personnel assigned directly, and charged, to individual programs.

The Research Department, comprising 22 people, evaluates tastes; measures audiences, station circulation and set ownership; checks comparative media values; and evaluates and analyzes program content in order to determine public tastes and reactions. It functions in three separate operating areas—in programming, sales and station relations (affiliations). In the programming area, its objective is, to the greatest extent possible, to make television a two-way communication system by evaluating the viewers' over-all tastes and needs.[1] In assisting the Sales Department, it prepares circulation and audience data for presentation to advertisers and agencies. Through its circulation, set ownership and similar research, it also participates in the process of affiliation determinations (see Appendix C, pp. XIII and XVII to XXII of this memorandum) and negotiations of stations' network rates.

The Sales Department comprises 48 sales personnel and 23 sales service personnel. Its tasks are to sell network time periods (and, in appropriate cases, programs) to advertising agencies and advertisers; to assist in the determination of the advertisers' needs and relating those needs to the time periods and programs available; to provide continuous service of this nature to the agencies and their clients; and to clear time on stations and provide a station line-up in accordance with the advertiser's desires.

The Engineering Department, comprising 42 people, develops broadcasting equipment, maintains studio and transmission

[1]Over $300,000 is spent annually for research of this nature, involving rating services and special audience analysis studies.

standards, provides technical consulting services to affiliates, and conducts engineering studies of station coverage to assist in the affiliation process (see Appendix C, pp. XII, XIII, and XVII to XXII of this memorandum) and to assist in negotiations with stations leading to the setting of network rates for the stations.

The Station Relations Department, comprising 12 people, is engaged in the vital and complex function of securing and maintaining the most efficient line-up of stations for the network. See pp. 59 to 82, and Appendix C of this memorandum.

The Promotion Department, comprising 37 people, promotes the CBS Television Division and its network programs to advertisers and the public, and provides program promotional materials for stations.

The Operations Department is the largest of the network departments; it comprises more than 2,400 people employed on a continuing basis, including both staff and per diem personnel. The function of this department is to make it physically possible to broadcast a network program. Among its functions are the provision of studios, cameras, and other technical equipment and the personnel required therefor, building and designing the scenery and sets, arranging, securing or building the props, providing facilities for rehearsals, making up the performers, obtaining or making the costumes and performing all the other tasks in the physical job of getting the show on the air.[1] This department is also responsible for supervising film production activities, for making and distributing television recordings of television programs (TVR's), for securing and scheduling use

[1]For an indication of the variety of skills and functions of the Operations Department in connection with a single program, see pp. 41 and 42 of this memorandum.

75589 O—57—pt. 4——17

of telephone company circuits and for carrying on an active developmental program to improve production techniques.

Other Supporting Units. Other units whose functions are essential to network operation include Accounting, Legal, Building Operations, Office Services, Personnel, Information Services, Editing, Music Clearance, Business Affairs, and Labor Relations.

CBS News and Public Affairs. In order to fulfill its responsibility as a medium of mass communication devoted not only to entertaining but also to informing the people, CBS must maintain a News and Public Affairs Department. The current gross annual operating budget for the CBS News and Public Affairs Department is $7,000,000.

CBS News maintains four American news bureaus, five European bureaus and one Far Eastern bureau. It employs 600 contract and free lance correspondents at 263 locations throughout the world. In Washington, CBS News has a staff of 11 correspondents, in addition to three news executives, six persons functioning in connection with Public Affairs programming and a film unit comprising 13 persons. The CBS Television Network is now broadcasting 22 news broadcasts a week.[1]

For the week ending April 7, 1956, the Public Affairs Department produced eight programs totaling eight and one-half hours. The department comprises 103 full-time employees. In addition to the direct cost of programs totaling over $2,000,000 a year, the department cost more than $500,000 to maintain and operate last year. Public Affairs programs are produced by the network in order to maintain an over-all programming balance; few of them are sponsored. The programs of the Public Affairs

[1]For the personnel and man-hours involved in a single 15-minute network news program, see footnote, p. 42.

Department include "See It Now," "Let's Take a Trip," "Face the Nation," "Lamp unto My Feet," "Look Up and Live" and "The Search," as well as special programs such as the recent "Out of Darkness," an hour-and-a-half program devoted to mental illness[1]; and "Report Card," a special series of five programs devoted to schools and education.

The CBS Television Network believes that as a matter of policy it has an obligation and responsibility to devote the same degree of planning, care and skill to these Public Affairs programs as it does to the major sponsored entertainment programs. For a case history of "The Search," a typical CBS Public Affairs series, which took three and one-half years to prepare and cost more than $750,000, see Appendix B.

(3) *CBS Television Network physical facilities.* The CBS Television Network comprises not only people but facilities. For in order to supply high quality programs to its affiliates day in and day out, a television network must provide and maintain elaborate physical facilities. The CBS Television Network now has 29 broadcast studios—22 in New York, five in Hollywood, and two in Chicago. All but five in New York are equipped for the production of live programs. Those studios include elaborate, intricate and expensive equipment, including 148

[1]"Out of Darkness," broadcast by the CBS Television Network on March 18, 1956, was the first full-scale attempt to penetrate in depth into the private world of mental patients and mental hospitals and to bring the public up to date on the nature, causes and treatment of what has been termed the nation's number one health problem. It was produced with the help of The American Psychiatric Association and The American Association for Mental Health. This single one-and-one-half hour program pre-empted "Omnibus" (three of the four segments of which were sponsored) on March 18. "Out of Darkness" was unsponsored and involved out-of-pocket production costs in excess of $135,000 in addition to the revenues of $40,000 which were lost because of the pre-emption of "Omnibus." It should be noted that in all cases where special sustaining programs produced by the CBS News and Public Affairs Department pre-empt commercial programs, there are double costs to the network: (1) the cost of the program itself, and (2) the amounts lost by the network as a result of pre-emption of the commercially sponsored programs which the special program replaces.

live cameras and 35 film cameras, together with their assorted electronic control equipment, synchronizing generators, audio systems, lighting switchboards, 6,200 lighting fixtures, in connection with which are used substantially in excess of 20 miles of portable connecting cable, audio and video communication systems, including 792 microphones and 1,403 video amplifiers, 896 picture monitors, sound monitors, film recording and playback systems, 68 film projectors and 41 studio, telecine and master control rooms.

CBS has invested nearly $28 million in its television network program production facilities in New York and Hollywood alone. CBS spent more than $3 million in improving, equipping and finishing the New York color television studio and another $1 million on its Hollywood color studio. An additional $1 million has just been authorized for color in Hollywood. The cost merely of maintaining the New York and Hollywood facilities in 1955 was approximately $6,500,000, without including the cost of the departments which used the facilities.

It has become apparent recently that even this quantity of facilities is insufficient. CBS is now considering an investment of up to $25 million in additional plant facilities over the next few years.

This large reservoir of physical facilities is required in order to maintain a regular schedule of diversified programming.[1] Thus, for example, a one-hour dramatic program or musical variety show usually requires the use of a studio for rehearsal for three days. During the first day ten to 12 hours are re-

[1]See pp. 30 to 32 of this memorandum for a quantitative summary of the CBS Television Network weekly program schedule.

quired to erect the sets, the number of which varies from five to 15.[1] This is followed by four to six hours of lighting preparation, which includes hanging electrical equipment, focusing the lights in appropriate areas and planning the intensities of the various units to produce the necessary mood and effect. There follow eight to nine hours of intensive rehearsal with a cast and cameramen. The third day is usually devoted to five or six hours of rehearsal, including one or two dress rehearsals and finally the air show.[2]

Following the actual broadcast, as much as seven hours are required to remove the sets and prepare the studio for its next use by another program. Under normal operating procedure the new program is set up immediately following the removal of the sets and props which were used for the preceding program. Often the studios are in active operation 24 hours a day, seven days a week.

The continuous network schedule, however, actually permits economies which normally are not available in non-network production. The almost continuous use of the studios and other physical facilities makes for efficient operations and enables the enormous cost of maintenance and operation to be amortized over many programs, reducing to the lowest possible minimum the studio cost of each individual program.

[1] The CBS Television library of stock scenery in New York City alone consists of 5,000 units, while the storage warehouse of properties in New York includes about 100,000 items.

[2] In addition to the actual studio work, the average variety show requires three to five weeks of active preparation, including the designing and making of costumes and the designing, fabrication and painting of scenery and sets before the rehearsal moves to the studio. The actors for the average one-hour dramatic show rehearse in a rehearsal hall for ten days to two weeks before going into the studio. The less complex half-hour programs usually rehearse five to seven days before going into the studio, while the daytime serials, interview shows and other daytime programs usually complete rehearsals in two to eight hours.

(4) *The CBS Television Network affiliates.* The CBS Television Network consists not only of people and physical facilities but, most important, it is an aggregate of stations affiliated with CBS Television. As noted, only four of these stations are owned by CBS. The remainder are wholly owned by others. In total, as of March 1, 1956, the CBS Television Network furnished programs to 233 stations[1] in the United States, 27 in Canada, and seven in Alaska, Hawaii, Mexico, Cuba and Puerto Rico. As of March 1, 1956, CBS had 151 primary affiliates, 38 secondary affiliates,[2] and 26 Extended Market Plan affiliates (see pp. 78 to 80). The CBS Television Network also supplies programs to 52 additional stations on a per-program or letter agreement basis (see footnote 2, p. 68; p. 138; and Appendix C, pp. XXXII and XXXIII). As of March 1, 1956, CBS Television affiliates reached 33,914,900 families in the United States or 98 per cent of all the families who own television sets. (The location of the 181 primary, secondary and EMP CBS Television affiliates in the United States is illustrated in Chart IV.)

(5) *AT&T interconnection facilities.* In addition to its own organization and facilities which a network must maintain, and in order to serve its affiliates with its program product, a television network must arrange for a means by which its affiliates throughout the country can be interconnected.[3] Only in this

[1]Not including satellites.

[2]The terms "primary affiliate" and "secondary affiliate" are convenient means of loose classification of affiliates and are not subject to precise definition. Generally speaking, the principal difference between a primary affiliate and a secondary affiliate is that the affiliation agreement with a primary affiliate provides for network option time while the affiliation agreement with a secondary affiliate does not. A typical primary affiliation agreement is set out as Appendix A.

[3]Of 181 United States CBS Television affiliates, 163 are interconnected. See Chart IV. The 18 non-interconnected affiliates are dependent on television recordings which are supplied by the network.

way can a program be seen simultaneously by viewers on a nationwide basis. Interconnection is, of course, necessary for all live programs, whether they be entertainment programs or broadcasts of public events as they occur. Even with respect to film programs, interconnection is necessary in order to provide simultaneity and to make it possible for an advertiser to have his program and his advertising continuity broadcast through a single purchase from a single source and at a fixed point in the network program schedule.

At present most network stations are interconnected by American Telephone and Telegraph facilities, either in the form of coaxial cables or microwave relays. These facilities are used by the networks on a continuous basis and represent a major expense to the networks. CBS Television, alone, is currently paying at the rate of $13.5 million a year to the AT&T for the use of interconnecting facilities.

Only by the continuous use which networks make of AT&T interconnection facilities are even these large costs kept down or indeed are the facilities preserved on a regular basis to television. If interconnection facilities were not supported by the networks' regular and substantial use, and if instead they were used only on special occasions such as the World Series or a political convention, their costs on such an occasional use basis would vastly increase—possibly by as much as 30 or 40 times per program. In any event, it is likely that if these interconnection facilities were used only occasionally, at least those which go to the smaller markets outside the top 40 or 50 cities would not be used with sufficient frequency to warrant their being preserved by AT&T for television use at all. It is not unlikely,

CBS TELEVISION NETWORK – 181 U.S. AFF

therefore, that were it not for the continuous use by the networks of these facilities, some of them, at least, would revert to other uses and be unavailable to television even for special occasions, so that many smaller markets would forever be deprived of live programs emanating from any area other than that in which the local station is located.

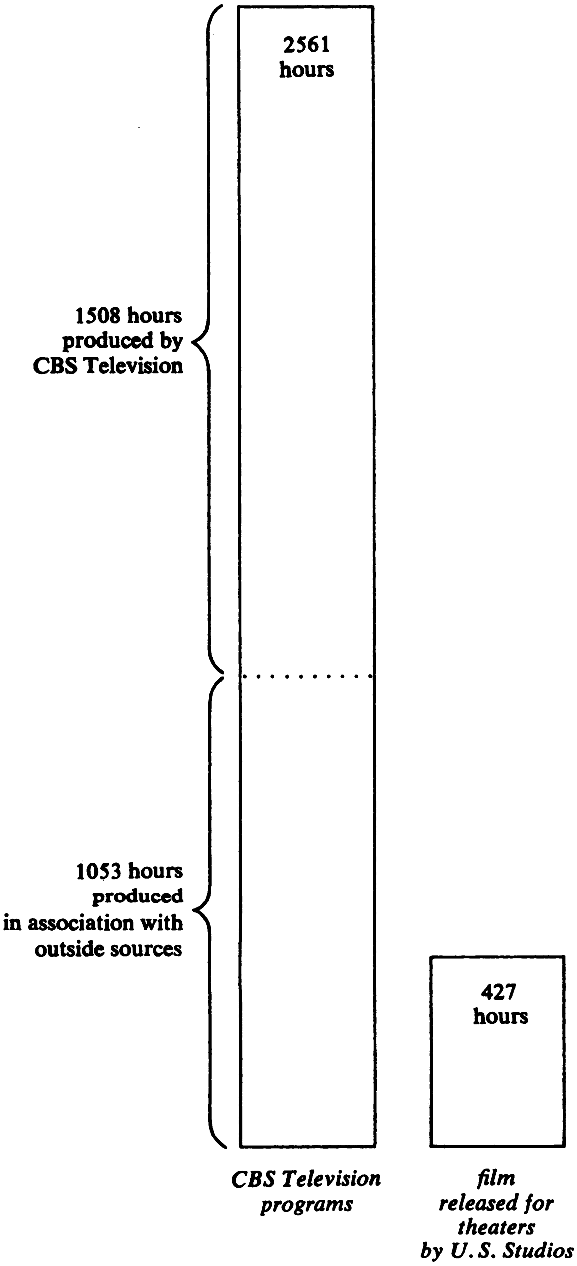
(6) *The CBS Television Network program schedule.* The end result of the CBS Television Network staff, physical facilities and aggregate of affiliates is the CBS Television Network program schedule. It is a truism that television is a voracious consumer of programs. In the legitimate theatre, a single production may be repeated for weeks, months and, if successful, years. In respect of motion pictures, the production of a single feature may extend for months or years, and an individual scene may be perfected by constant trial and error and reshooting; then the final product is shown repeatedly for days and weeks at a time in a single theatre.

Television does not enjoy these luxuries of lengthy production, flexible time schedule and multiple repetition of performance. A network must produce a full day's schedule day in and day out, and it cannot leave the screen blank even for a minute once a program is scheduled. Some idea of the dimensions of the task of a network can be gained from the fact that, for example during the week ending April 7, 1956, the CBS Television Network furnished to its affiliates 129 live programs,[1] varying in length from 15 minutes to three hours and covering an aggregate of 68¾ broadcast hours. It is estimated that during 1956, the CBS Television Network alone will produce and broadcast

[1]In computing the number of programs, each separate program of a program series such as five-times-a-week news programs and daytime serials was counted as an individual program.

CHART V

TOTAL ANNUAL PRODUCT



1,508 hours of programs, and CBS Television in association with outside sources[1] will produce and broadcast 1,053 hours of programs or a total of 2,561 hours of programs (without taking into account the programs broadcast by the network but produced by others). This compares with a total of 427 hours of running time for all United States feature film production released in 1955. Thus the product of the CBS Television Network alone, in terms of hours, will be more than three times that of the total product of feature films from Hollywood, and that of CBS Television and CBS Television in association with outside sources will be six times that of feature films from Hollywood. See Chart V and pp. 88 to 95 of this memorandum.

During the single week ending April 7, 1956, the CBS Television Network broadcast a total of 86¼ hours of sponsored and sustaining live and film programs. As Chart VI shows, of the 72¾ sponsored broadcast hours involved in that schedule, 55¾ were live, and 17 were filmed. A similar schedule during the two weeks ending March 10, 1956, resulted in an average of more than 800 million viewer hours per week spent watching CBS Television Network sponsored programs.

How this network program schedule is integrated into the program schedule of an average interconnected affiliate, and an analysis of the sources of such an affiliate's programs, are discussed on pp. 121 to 123 of this memorandum.

[1]Outside sources are defined for this purpose as organizations not owned or controlled by CBS Television which produce and sell programs or portions of programs to various elements in the industry including advertising agencies, networks and stations. CBS has no financial interest in any such organization except Desilu Productions, Inc., in which CBS, Inc., owns a minority interest.

PART III: The Internal Economics of Networking—Revenues, Expenditures and Profits

INTRODUCTION. Part II of this memorandum has dealt with the dimensions of television today and has sought to describe, in general terms, the elements, functions, organization, staff, facilities and product of a network. Part III will deal with the internal economics of networking—the revenues, expenditures and profits. In order to provide greater specificity for the sake of clarity, this part will deal mainly with one program series in order to illustrate why and how the programming resources of a network are brought into play, how the program is developed and what are the revenues and expenditures involved in the program—where the money comes from and where it goes, not only in supporting the particular program but the whole of the process of networking.

It should be emphasized, however, that the one program series selected herein is only for illustrative purposes. Unlike tangible manufactured products for mass consumption, the product which a network offers to the public—the network programs—is not fungible. Each program differs to a greater or lesser degree from the other; each has its own history, presents its own problems and has different requirements in terms of conception, production and costs. For purposes of this memorandum the full-hour drama entitled "CLIMAX!," broadcast on Thursdays from 8:30 to 9:30 PM (E.S.T.) and sponsored by the Chrysler Corporation, has been chosen as illustrative of some of the functions of a network and some of its basic internal economics.

A. THE HISTORY OF CLIMAX! "CLIMAX!" currently is broadcast over 164 CBS Television affiliates, of which 139 are in the United States and the remainder in Canada. The broadcast of March 1, 1956, was watched by more than 26,000,000 people in the United States. That was approximately 45.9 per cent of all the people watching television at the time the program was broadcast. These figures are typical of the audience sizes which have been attained by "CLIMAX!" this season.

The program was designed to meet a specific problem of over-all network scheduling; by a gradual and persistent process it has solved the problem which it was designed to meet.

In the Fall of 1953 and Spring of 1954, the hour between 8:30 and 9:30 PM (E.S.T.) on Thursdays was occupied on the CBS Television Network by two half-hour sponsored programs. Those two programs were broadcast weekly on a line-up which averaged 80 stations, and had an average weekly audience of less than 11,000,000 viewers, or 29.3 per cent of the total audience watching television at that hour. Thus neither the public nor CBS Television affiliates were fully served, since during 8:30 to 9:30 PM, less than half the number of affiliates were supplied with the programs and less than half as many viewers were tuning to CBS Television in 1954 as are currently tuning to it. As a result the sponsors were dissatisfied and one of the sponsors had issued a notice of cancellation.

Although the situation had crystallized in this fashion by the Spring of 1954, actual detailed planning of the new program had begun late in 1953. The Program Department had felt that a half-hour time period, then commonly utilized for mystery dramas and melodramas, was insufficient for development of this type of program and hence after discussion, it was decided to adopt the concept of an hour program. In March 1954, although there was not yet a definite determination of what time period the program might ultimately fill, the actual preparation of "CLIMAX!" began. Involved in the preparation were the Research Department, the Program Development Department and the Production Department, each of which would necessarily play a part if the program were eventually to be broadcast in the Fall of 1954.

By April 1954, thirteen stories, representing an investment in excess of $40,000, had been acquired. By July 1954, seven or eight of these stories had been reduced to the form of a first draft of script—a process which cost an additional $15,000.

The program was sold to the Chrysler Corporation late in May 1954. The sale was possible only because the months of preparation had sufficiently crystallized its ultimate form to permit concrete presentation to the sponsor.

From May until the Fall of 1954, the creative work was accelerated and the Station Relations and Sales Service Departments were active in informing CBS Television affiliates of the program and arranging for time clearance.

On October 7, 1954, the first program of the "CLIMAX!" series was broadcast by the CBS Television Network. But despite all the planning, preparation and financial investment, the program, as it was actually broadcast, did not meet the network's expectations. Accordingly, almost immediately after the program first was broadcast, the creative team which had been assigned to the program by CBS Television was reorganized and supplemented. The Program Department continued to work on the program, sharpening its concept, changing its production team and developing it to the successful stage which it has since attained.[1] As noted above, "CLIMAX!" now has accomplished the objectives for which it was designed: serving more of the public—well over twice as many viewers as had tuned in during the same time period before "CLIMAX!" was broadcast; providing program service and revenues to over twice as many affiliates; and giving the advertiser a vehicle which accomplishes his purposes. See Chart VII.

The foregoing brief history of the inception and ultimate evolution of "CLIMAX!" is representative of the effort and expense involved in program development. Some programs, even after investments in time and energy like those devoted to "CLIMAX!," never do evolve satisfactorily and are abandoned even before the first broadcast. Some are carried to the stage of pilot films, or to the point where several actual filmed programs of a series are produced, yet because they do not satisfy the network's standards, or a sponsor's, are abandoned. In some cases the planning and preparation have taken a far longer period—sometimes as much as two years between initial conception and ultimate first broadcast.

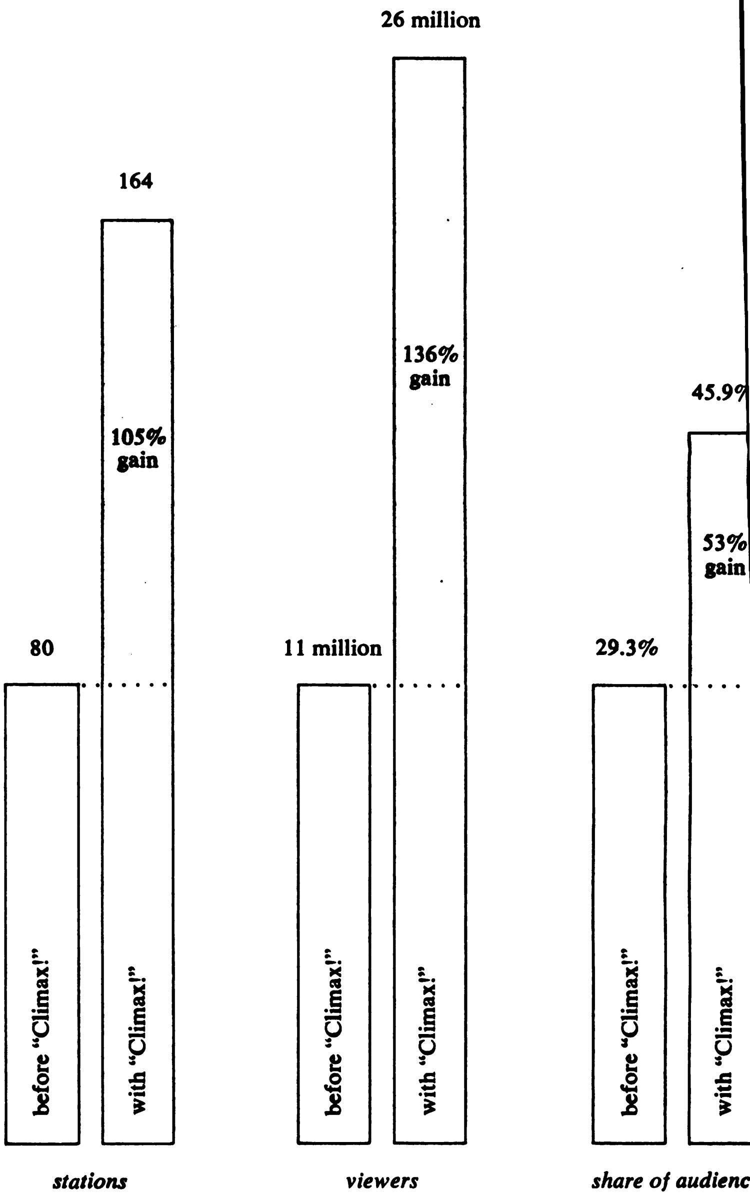
In almost all cases of nighttime programming, the time cycle of "CLIMAX!" between initiation and broadcast—some six to

[1]In addition, during the first four months the program was on the air, CBS Television spent over $115,000 on special newspaper advertising to promote the program.

75589 O—57—pt. 4——18

CHART VII

EFFECT OF "CLIMAX!," 8:30 TO 9:30 PM THURSDAY
ON CBS TELEVISION NETWORK



Before "Climax!": Oct. 1953-Apr. 1954 average With "Climax!": as of March 1, 1956 eight months—is a minimum. This, at least, is the period necessary between the drawing board and first broadcast in order that creative teams can be assigned to selecting, negotiating for, and preparing the material and devoting themselves continuously to the program's evolution.

This planning and preparation—even to the purchase of stories—goes forward without any certainty as to the time period the program might fill, or whether, indeed, any time at all can be found for it. For, in order to achieve the most effective schedule possible, a network's program department must engage in a constant process of forward planning for the next year, and the year after that. It must have a reservoir of programs so that, whenever the occasion demands (and failures of programs or changes in public taste often cannot be anticipated), a suitable program is ready.

Another aspect of the history of "CLIMAX!" also underscores the special character of network programming activities: the process of reorganization and evolution even after the first broadcast and in response to the actual experience gained from it. Since "CLIMAX!" was a live program,[1] and since it had been conceived, planned and produced by the network's own Program Department, it was possible to take prompt action to remedy the initial defects which became apparent after its early broadcasts. Because it was a network produced program, all the skills and program and production resources of the network could be brought to bear promptly and directly to continue the process of shaping and evolving it. And, as noted, it was by

[1]In the case of filmed programs, by the time the first film of a series is actually broadcast, normally a substantial number of the series has been completed and is "in the can." In such circumstances, reshaping in the light of actual experience and public reaction is exceedingly difficult and expensive.

this process that "CLIMAX!" was ultimately brought to its successful state.

B. THE ECONOMICS OF CLIMAX! Necessarily involved in any television programming are the advertiser dollars which must support it. The average gross weekly charges to the advertiser for "CLIMAX!" during January, February and March, 1956 total $137,007. This gross charge is composed of two elements: program charges of $43,287 and time charges of $93,720.

Time charges are applicable in the case of all programs—regardless of their source—broadcast by the network. They are the aggregate of the hourly rates, as published in the CBS Television Network Rate Card, of each of the 164 CBS Television Network stations[1] which are used by the Chrysler Corporation.

Program charges, however, are applicable only where the program is one created and produced or sold by the CBS Television Network. Where the program is produced and sold by outside producers, the program charge is made by the outside producer.

(1) *Program revenues and expenditures for "CLIMAX!"* As noted, the Chrysler Corporation is charged $43,287 weekly for the production of "CLIMAX!" Fifteen per cent of this amount, or $6,493, is paid by the network, in behalf of Chrysler, to Chrysler's advertising agency as the customary agency commission. After this deduction of $6,493, there remains to the CBS Television Network $36,794 to apply against the costs which

[1]The station's rate for a network program is set by agreement between the station and the network. While formerly, CBS Television affiliation contracts gave the right to the network unilaterally to reduce a station's network rate during the term of the affiliation agreements (a right which was in fact never exercised), current affiliation agreements now preclude the network's reducing the rate except in the event of a *general* re-evaluation and reduction, and even then, if there is a reduction, the station may terminate the agreement. See Appendix A, Schedule A, VI.

the network incurs for the program. Those costs fall into two general categories: (1) the costs of creating the program each week, known as "above-the-line costs," and (2) program production and (studio and technical) facilities costs, known as "below-the-line costs."

The direct above-the-line creative costs for "CLIMAX!" average $26,065 weekly which is paid out in the form of salaries to 59 people who may be categorized as creative talent. Those 59 people, who prepare, rehearse and present each program, devote an average of 2,454 hours to each week's program, which may be broken down as follows:

	personnel	*man-hours*
Producer	1	60
Director	1	100
Program Staff	5	216
Story Editor and Staff	10	98
Script	1	?[1]
Writers (script adaptation)	3	240
Music Scoring	5	36
Music Record Library	3	4
Cast	30	1,700
	59	2,454 *plus "?"*

The direct below-the-line costs for production and facilities average a total of $19,451 a week, including salaries to 263 additional people who spend an average of 2,105 man-hours providing the physical elements necessary for each program. The number of personnel and the man-hours which they devote to each program break down as follows:

[1]The original script or story may be in the form of a book, or a play, or a magazine story, or a script specially prepared for television. The number of hours, days, or even years which went into the preparation of the original story cannot, of course, be normally estimated.

	personnel	man-hours
Production Conference	15	24
Cost Control	8	26
Network Operations & Scheduling	4	6
Scenery Design	6	111
Scenery Construction and Painting	39	631
Costume Design	1	40
Wardrobe Handling	7	78
Props	14	110
Trucking	6	18
Stagehands	74	480
Special Effects	2	16
Technicians		
Supervisors	3	2
Cameramen, Boom Operators, Dolly Operators, Audio & Video Control	24	192
Maintenance	4	8
Audio Engineer	1	8

Ushers	3	24
Building Maintenance	12	86
Telecine	5	12
Film Production	7	25
Master Control	5	4
	263	2,105

Thus it will be seen that, each week, a total of 322 people, devoting more than 4,559 man-hours, work directly in the creation of each "CLIMAX!" program.[1]

[1]A typical CBS Television half-hour dramatic program is the product of 1,374 man-hours, involving 154 people exclusive of the services of such Departments as Sales, Advertising, Press Information and Traffic. Even for such an apparently simple program series as "Douglas Edwards with the News," in which normally only one person appears on camera, a total of 829 people is involved (14 program staff, 37 administrative staff, 147 newsfilm staff, 16 studio staff, and 615 foreign and domestic camera correspondents)—exclusive of the facilities and services of the Operations, Engineering, Reference and other Departments of CBS Television. Similarly, the coverage of the 1952 political conventions involved over a year of planning and preparation, and, for the 118 hours and 11 minutes of actual convention broadcasting, 41,750 man-hours were required.

It will be noted from the foregoing that although the Chrysler Corporation pays $43,287 per week for program charges for "CLIMAX!," the actual amounts expended by CBS Television directly for the program total $52,009—$8,722 in excess of the amount paid by the sponsor. See Chart VIII.

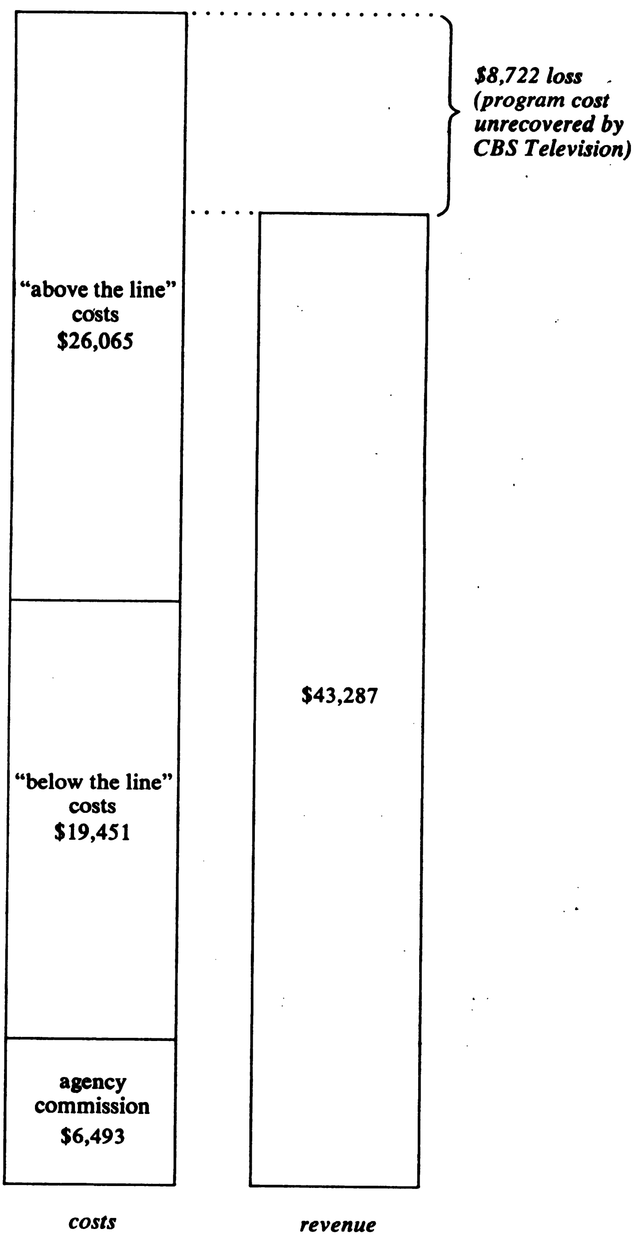
It is in this sense that "CLIMAX!" is not typical; the amount by which the program costs exceed program payments by the sponsor are abnormally large. CBS Television does attempt to attain full reimbursement for its program expenses. But some loss to CBS Television in programming is not unusual; the loss is the price which the network pays in order to develop and maintain a strong over-all program schedule for the public, for the affiliates and for the advertisers.

In 1955, the loss *for commercially sponsored programs alone* was in excess of $7.1 million without any allocation of general overhead such as selling and administrative expense. In addition, CBS Television spent over $10.5 million for sustaining entertainment and public affairs programs for which it received no revenues. It is estimated by CBS accountants that an additional $4.5 million in overhead expenses is attributable to program production. In total, sustaining programs and the loss on the sale of commercial programs cost more than $22 million in 1955.

(2) *Time revenues and expenditures for "CLIMAX!"* The gross time charges, comprising the total of the hourly rates of the CBS Television affiliates carrying "CLIMAX!," has been shown to be $93,720 each week. In order, however, to encourage (1) the advertiser's use of the maximum number of stations and (2) week-to-week continuity in advertiser sponsorship by making it more economic for advertisers to support major program-

CHART VIII

DISTRIBUTION OF GROSS PROGRAM REVENUE FROM "CLIMAX!"



ming throughout the year, the CBS Television Network provides for discounts designed for those purposes. In the case of "CLIMAX!" these discounts total $23,175. Thus, *net* time charges to Chrysler are reduced to $70,545.

From this latter amount, in turn, the advertising agency commission of 15 per cent is deducted—totaling, in the case of "CLIMAX!," $10,582—the customary commission which is paid by the network to Chrysler's advertising agency.[1]

After deducting the discounts and the 15 per cent agency commission, therefore, there remains to the CBS Television Network $59,963 as revenue accruing from the time charges for the 164 stations over which "CLIMAX!" is broadcast. But the network incurs another major category of expenses directly attributable to the program—the costs of physically bringing the program to each of the affiliates which carries it. These costs of distribution include a share of the network's payments to AT&T, estimated to be $6,056, which represents the approximate cost for use of AT&T transmission lines allocated to the program. The network also pays approximately $1,259 each week for television recordings (TVR's) for stations which wish to carry the program on a delayed basis or which are not interconnected by regular AT&T facilities.[2]

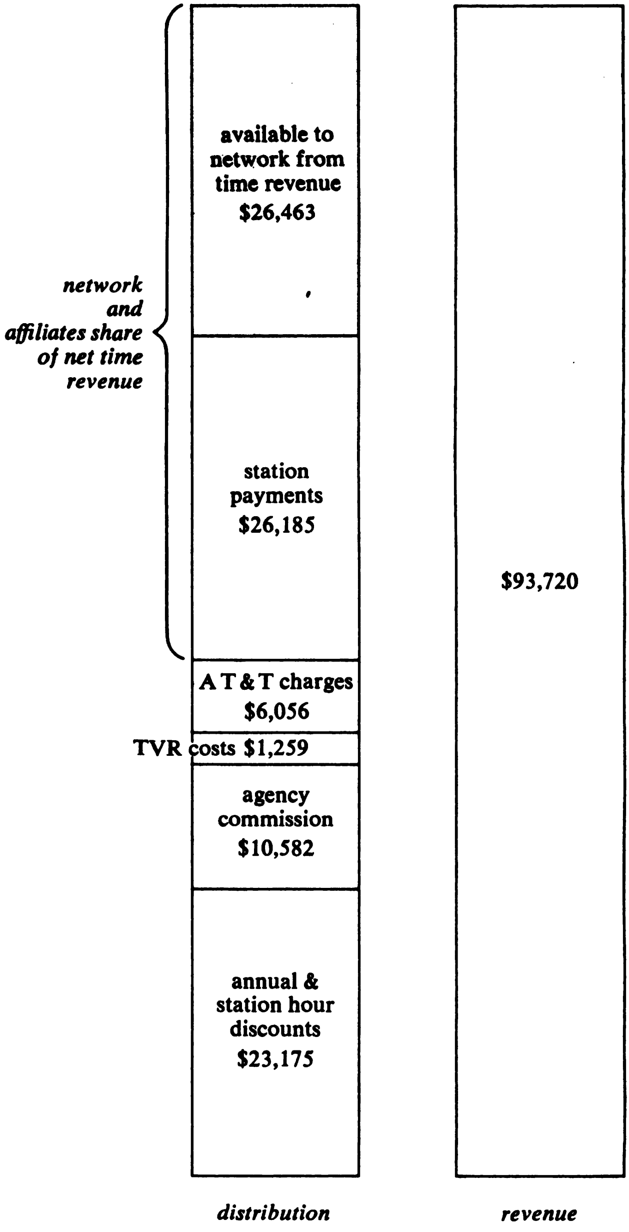
Thus of the total gross time charges of $93,720 for "CLIMAX!," there remain after these several deductions and expenditures $52,648. See Chart IX.

[1]The advertising agency performs a great many services to its client, the sponsor, in connection with the program. These services include actual preparation and payment for the commercials, research, merchandising, public relations and many other important functions. It is the understanding of CBS that although advertising agencies receive 15 per cent, as noted in the text, their net after expenditures for all the services approximates only one and one-half per cent or two per cent.

[2]In the case of "CLIMAX!," 15 interconnected stations carry the program on a delayed basis and an additional 20 stations are not interconnected.

CHART IX

DISTRIBUTION OF GROSS TIME REVENUE FROM "CLIMAX!"



(3) *Division of time charge revenues with affiliates.* This $52,648 amount is further substantially reduced by the network payment to the affiliates for the station broadcast hours which they devote to "CLIMAX!" The payments to those stations each week total $26,185.[1]

It is of first importance to note that the affiliation contracts normally provide for payment to the stations of a percentage of the *gross* time charges to the advertiser.[2] As has been shown, this gross amount is not in fact received by the network; rather it is reduced by several direct major deductions and expenditures totaling $41,072 or about 43.8 per cent of the total. Hence, as is illustrated by Chart IX, the total of $26,185 paid by the network to the stations for their broadcast time for "CLIMAX!," is almost equal to the $26,463[3] which is retained by the CBS Television Network after all the deductions, payments and charges which have been described. Before taking into account the $8,722 deficit incurred by the network in the production of the program, there is an almost exact equality in the amounts shared between network and stations.

In evaluating the division of revenues between stations and the network the functions of each must be examined.

(4) *Station functions in connection with network programs.* For the $26,185 which is paid by the network to the CBS Television affiliates for their broadcast of "CLIMAX!," the station provides the use of its transmitter and the most valued commodity which the station has to offer—its time. In providing

[1]Exclusive of $940 deducted for BMI and ASCAP payments.

[2]CBS Owned stations are paid in exactly the same manner and on the same basis as the typical primary affiliate.

[3]Exclusive of $620 deducted for BMI and ASCAP payments.

its transmitter and time, the station must, of course, attribute to that hour a proportionate share of its investment and of the costs of its over-all operations. Since "CLIMAX!" is produced for the station, sold to the advertiser by the network,[1] carried to the station by AT&T or by television recordings prepared and paid for by the network, the actual out-of-pocket expenses of the station attributable to its programming are normally minimal.[2] And, in turn, the personnel of the station are thus freed to create local programming, to sell the station's own (or outside produced) non-network programs to national spot and local advertisers and to do all the things necessary for successful local operation. As a result of the network program, as has been shown on pp. 13 to 17 of this memorandum, the stations benefit triply: (i) the share of the revenues, (ii) the saving of costs which would be incurred if the station were required to program that period itself, and (iii) the increased circulation which enables the station to charge substantial rates and to attract national spot and local advertising revenues directly to it.

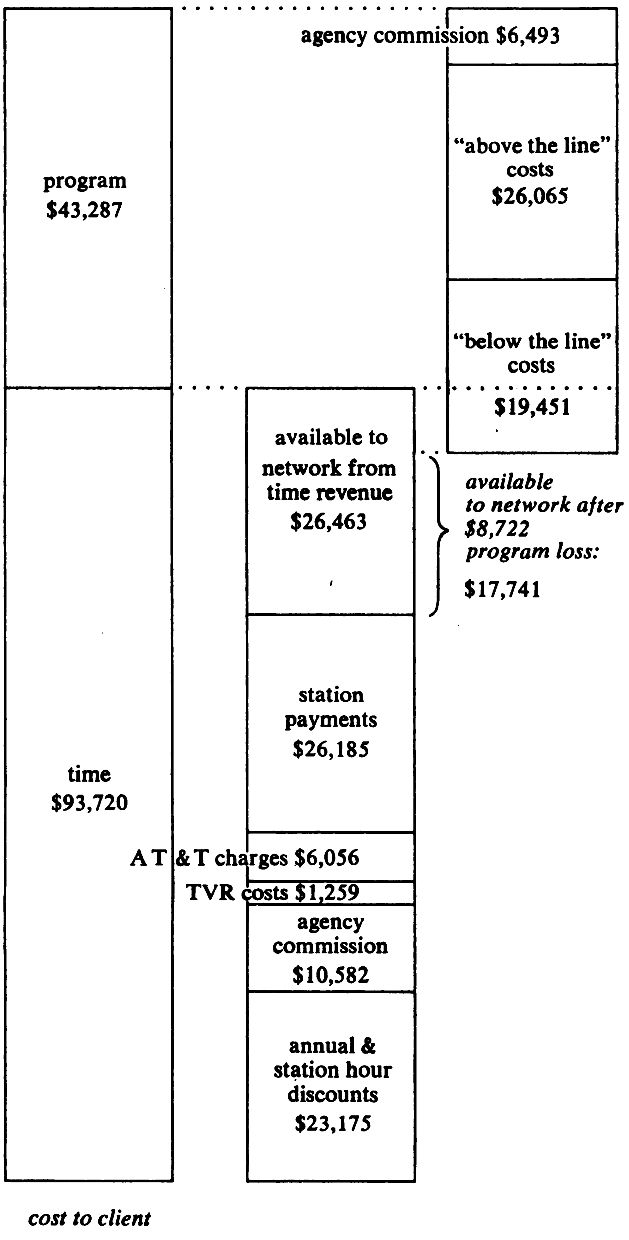
(5) *Network services maintained out of advertiser revenues.* As has been shown, the net residue to the CBS Television Network accruing from the gross charges of $137,007 to Chrysler for the 8:30 to 9:30 PM (E.S.T.) period on Thursdays, is only $17,741. See Chart X. This residue varies from program to program and in a number of cases is not subject to so large a reduc-

[1] In some instances, a network advertiser may order an additional station at least partially through the sales efforts of the station itself, whose representative may go directly to the advertiser's agency to persuade it to add the station to the line-up. These activities, supplementary to the network's own efforts to sell the station, do involve special expenses to the station attributable to the network program.

[2] Although AT&T costs are normally assumed by the network, there are cases in which stations assume incremental expense.

CHART X

STRIBUTION OF GROSS TIME AND PROGRAM REVENUE FROM "CLIMAX!"



tion for loss in respect of direct program charges. Nevertheless, except for the program deficit, this amount of residue and its relationship to the gross charges approximates the magnitude of net revenues to the network for nighttime hours.

It is out of this (and similar) net residue that the CBS Television Network must pay for the network staff and facilities,[1] and for all the functions and services described on pp. 12 to 17, and 19 to 32 which it must render. Out of this residue, the network must maintain its organization and its over-all programming schedule, including all its sustaining and public service programs (see pp. 22 and 23 of this memorandum).

C. REVENUES AND PROFITS. The preceding pages of this memorandum have summarized the organization and physical facilities which a network must maintain, as well as some of the services and functions which the network performs. All of these, as has been noted, must be supported out of the net revenues from sale of time to advertisers.[2]

The network organization is large and complex. It must be maintained in order to provide the highest quality programs possible, integrated into a balanced over-all weekly schedule of entertainment and information. Such a schedule requires an organization of the best creative personnel obtainable—executive and talent, writers and performers. Also there are enormous risks which must be taken through entering into the long

[1]As was noted on pp. 41 to 43 of this memorandum, only some staff and facilities expenses are paid for out of the program charges. The unreimbursed portion of these expenses must be paid for out of the residue of the time charges. Still another unreimbursed expense arises when non-sponsored (sustaining) programs are broadcast. The residue of time charges is the only source for covering staff, facilities and other expenses attributable to sustaining programs.

[2]Revenues from program production charges are excluded, but as noted on p. 43, total program charges, even if limited to sponsored programs, result in a net over-all loss which must also be met from time revenues.

term contracts and expensive commitments necessary to attract creative skills.

Not all risks crystallize in success, as they did in the case of "CLIMAX!" Some of the projects in which tens of thousands or hundreds of thousands of dollars are invested have to be abandoned; programs in which the network has made large investments in energy and dollars sometimes have failed even to get on the air.[1]

Inherent in the complexity of the network business, in the enormous costs of maintaining an organization and an over-all program schedule, and in a network's multiple obligations to the public, to its affiliates and to its advertiser-customers, is the phenomenon which marks the economic nature of the business of networking: The phenomenon of the delicate balance and the violent swing.

Unlike most businesses, a decline in network business involves a double liability to a network. If a shoe factory's sales are reduced, the factory can reduce production and thus reduce costs. Its chief loss, when sales are reduced, is loss of revenue, which is normally offset in some substantial degree by reduced operating costs. But in networking there is usually no such offsetting factor.

For when a network loses time sales, it not only loses the revenues; in addition, its costs are vastly *increased* as it continues its network service. Its program service to its affiliates cannot, in general, expand and contract in direct proportion to advertisers' time purchases but must continue at the same pace

[1]In 1955, CBS Television spent a total of one million dollars on the development of programs and program ideas which never saw the light of day.

regardless of whether time and program revenues are forthcoming. Thus, even though a time sale is lost, a network must, as a rule, maintain its program service to its affiliates—maintain it at a high qualitative level—if an over-all effective network program schedule on behalf of its affiliates and other advertisers is to be continued.[1]

Hence the network, when it loses a time sale, not only loses the revenue but incurs the costs involved in broadcasting the unsponsored program which must take its place.

Thus it is that failure to sell one hour between 7:30 and 10:30 PM each night for a year (whether because of refusal of stations to clear time or for any other reason) would result in an enormous swing in a network's profit and loss figures. The net revenues (net time charges less station payments) that would be lost from the failure to sell one nighttime hour each broadcasting day throughout 1955 would have been $13 million. In addition, the expenses to provide sustaining programs of comparable quality for the period would have been increased by some $13 million to $15 million. The possible swing, therefore, for one Class A hour each day for one year is in excess of $26 million.

Despite the risks and the complexity of the business and despite the inherent hazards, television networking has, in general, been profitable. According to public FCC figures[2] for the year 1954 (the latest figures available), the profit before taxes of the four then existing networks as a percentage of broadcast

[1]For the importance to an advertiser of an over-all effective program schedule, see pp. 83 to 85 of this memorandum.

[2]"Broadcast Revenues, Expenses and Income (Before Income Tax) of Radio and Television Broadcast Services 1954."

revenue[1] was 2.3 per cent.[2] These profit percentages for the networks are in sharp contrast to those for stations. As shown in Chart XI, 377 independently owned stations included in the FCC figures show a profit, before taxes, of 18.8 per cent of sales. It is to be noted that these 377 stations include *all* independently owned stations[3]—including non-affiliated stations, new stations and UHF stations. If only independently owned pre-freeze stations are taken into account, FCC figures show that the percentage of profits before taxes to revenues for such stations would approach 34 per cent.

This relationship between the respective profits of stations on the one hand, and networks on the other, is confirmed by other figures which were released by the FCC for the year 1954. These figures show that the average net return, before Federal income taxes, on total revenues (after commissions) of three stations operating in Philadelphia was 33 per cent; of three stations operating in Detroit, 46 per cent; of three stations operating in Milwaukee, 43 per cent; of two stations operating in Boston, 52 per cent; and of four stations operating in St. Louis, 46 per cent.

Still further confirmation of the relative profits of stations and networks is drawn from data concerning the 1954 revenues and income of two station operators not engaged in network-

[1]Broadcast revenue is defined as net revenue after deductions for (1) discounts, (2) agency commissions, and (3) station payments, plus the incidental broadcast revenues from sale of programs and charges for production costs.

[2]This percentage for network profits is depressed since it would appear that DuMont and American Broadcasting Company both lost money in 1954. It is estimated that if these two networks were excluded for the year, the percentage of profits *before* taxes would be about nine per cent. In the same year, the profits *after* taxes of the CBS Television Network, were 4.6 per cent of net sales.

[3]Excluding only 17 stations with less than $25,000 in time sales.

75589 O—57—pt. 4——19

CHART XI

1954 NETWORK AND STATION PROFIT
AS PER CENT OF BROADCAST REVENUE, FROM FCC

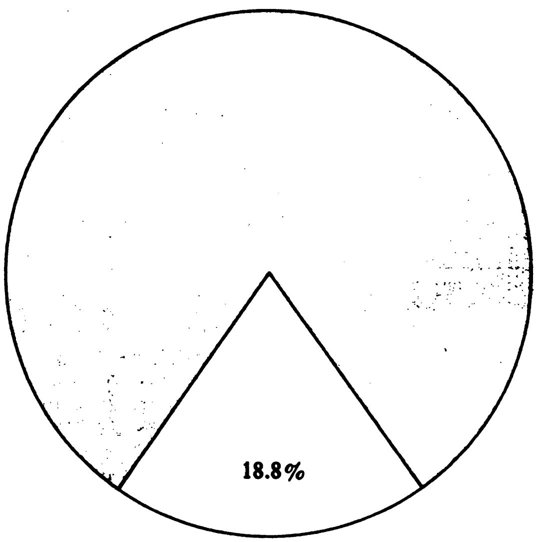
four networks



377 stations

ing.[1] The operators are Storer Broadcasting Company, a licensee of seven television and seven radio stations, and Gross Telecasting, Inc., a licensee of one television and one radio station, at Lansing, Michigan. These data are:

	total TV revenues	*total AM revenues*	*income before taxes*	*return*
Storer	$13,391,027	$4,345,504	$7,105,103	40%
Gross	1,973,031	268,558	1,320,464	60%

It is estimated by CBS that in 1954 the total net profits of the seven largest CBS Television affiliates (exclusive of the stations owned by CBS) *exceeded the net profit of the CBS Television Network.* In 1955, when the CBS Television Network profits were greater, it is estimated that nevertheless the total net profits of between 12 to 14 of its largest affiliates exceeded the total net profits of the network.

[1]These data were made public in 1955 in connection with offerings by the two companies of their securities.

PART IV: The External Economics of Network Television as an Advertising Medium

INTRODUCTION. In the foregoing sections, this memorandum has dealt with the dimensions of television and has described the CBS Television Network and the functions and services which it performs for the public, for its affiliated stations and for advertisers (Part II). In Part III, the network's operations and internal economics—in terms of revenues, expenditures and profits—in the focus of a particular program have been analysed.

In this Part IV, the memorandum will examine a different facet of network economics: the economics arising out of the relationships between network broadcasting and the advertisers. This part will deal with the two major factors that must be taken into account competitively in creating a nationwide television network which satisfies the requirements of national advertisers: first, in order to perform a complete and satisfactory service to its affiliates, to the public and to the advertiser, a network must carefully devise the most efficient possible nationwide combination of stations at the lowest possible cost to the advertiser. Second, it is equally imperative as a matter of network economics that the network provide to that efficient aggregate of stations an *effective over-all schedule* of programs in order that the advertiser can be furnished the circulation which he seeks at the times in the broadcast schedule when he seeks it.

A. NETWORK TELEVISION'S COMPETITIVE POSITION AS A NATIONAL ADVERTISING MEDIUM: THE FACTOR OF COST PER THOUSAND AND ITS RELATION TO CIRCULATION.

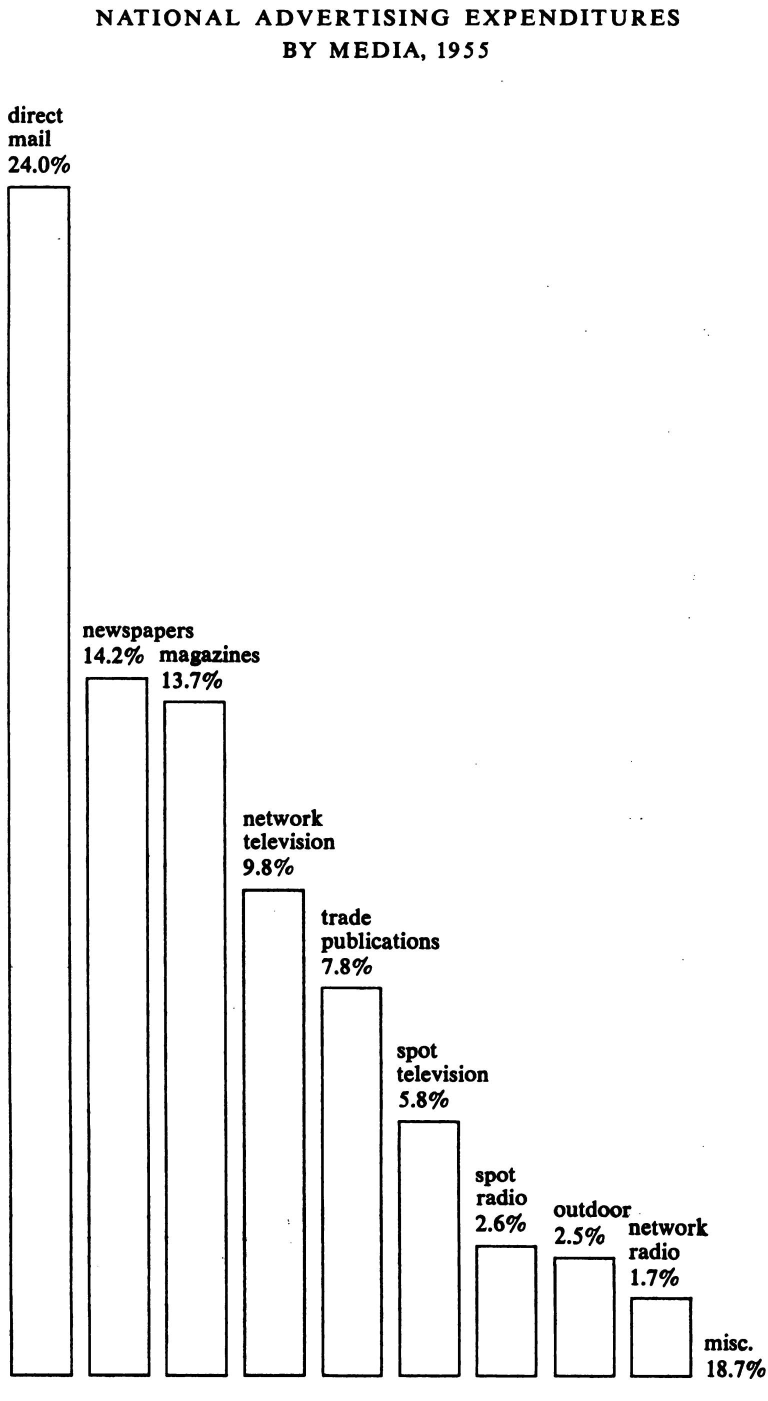
Since advertising support is the life blood of the American system of broadcasting, it is a condition precedent to providing programs for the public as well as providing programs and revenue for affiliated stations that a television network produce sound economic values for advertisers.

(1) *Identity and scope of competing media.* The economic values must be sound not only on an absolute basis in order to attract the most possible advertisers, but they must be sound on a relative basis because network television is in direct competition with other national media. The CBS Television Network must compete for national advertisers' dollars not only with the other television networks, but with national spot television advertising and with newspapers, magazines, radio, direct mail, trade publications, outdoor advertising and such miscellaneous forms of advertising as car cards and match boxes. And, as is shown in Chart XII, the *entire* broadcasting share of national advertisers' budget—the share accruing to (1) network television, (2) network radio, (3) national spot television,[1] and (4) national spot radio—amounts to less than 20 per cent of the total national advertising expenditures. Thus less than one out of every five dollars spent by national advertisers is spent on the broadcasting media.

---

[1]It may be noted, however, than in an important sense, national spot television advertising is complementary to, and built on, network television: A strong network schedule increases circulation and attracts spot revenues. See pp. 14 to 16 of this memorandum.

CHART XII



NATIONAL ADVERTISING EXPENDITURES
BY MEDIA, 1955
direct mail 24.0%
newspapers 14.2%
magazines 13.7%
network television 9.8%
trade publications 7.8%
spot television 5.8%
spot radio 2.6%
outdoor 2.5%
network radio 1.7%
misc. 18.7%

It is the factor of competition with other national advertising media which is a major touchstone of network economics. The competition between media is intense and direct. For example, an organization of newspapers recently announced its intention to launch a "frontal assault" on television to attempt to disprove that it is an effective and economical advertising medium.[1] Such competition is an added reason why there must be a constant and persistent effort by television networks to keep absolute, as well as relative, costs at a minimum. It is no secret that some advertisers have left network television for other media in the past few years because of cost considerations.

Of course, neither stations nor the public can be served without the revenues from national advertisers. Hence any factor which adversely affects the economic value of television for the advertiser almost inevitably results in less money for the medium. And this, in turn, normally means more restricted programming in terms of both quantity and quality.

Necessarily, therefore, in organizing its network of stations and in creating its programming structure, a network must strive to provide a medium which has the maximum possible economic value for advertisers.

(2) *Basic factors influencing advertisers' choice of media; the factor of cost per thousand.* When an advertiser decides between spending his money for a program to be broadcast on the CBS Television Network, or for a television program on another network, or for another medium altogether, probably the most important factor which influences his decision is which

[1]*The New York Times*, January 25, 1956.

medium (or program) will produce the greatest sales per dollar spent. Or putting it another way, the advertiser's question is which medium costs least per unit of sales produced. This depends on three factors: the cost[1] of the medium, the number of homes reached by the medium, and the "impact" of the medium (i.e. the effectiveness of the medium in producing sales in the homes reached). In order to determine whether the cost is justified, the advertiser must relate the cost to the number of homes reached by the program and to the "impact" of the program.

Before a program goes on the air, there is no way an advertiser can be certain of how many homes the program will reach. However, the number of homes the program will reach obviously depends to a large extent on the *potential* audience of the program—the number of television families living in the areas served by the CBS Television affiliates which the advertiser orders. The number of such families served by each of those affiliates is commonly referred to as the station's "circulation." A station's time rate, divided by its circulation (in terms of thousands of families), gives its cost per thousand circulation—a figure which is television's counterpart of a newspaper's or magazine's cost per thousand circulation and is used generally in the advertising field to compare the circulation costs of different advertising media.

After an advertiser's program has been produced and broadcast, he is able to estimate cost per thousand in terms of homes which actually tune to his program.

[1]The cost of a network television program to an advertiser consists, as has been shown in Part III, of (1) the aggregate of the time rates charged by each affiliate ordered by the advertiser and cleared by the network, less discounts, and (2) the program charges.

The usual method of estimating homes actually reached by a program (as contrasted to circulation of the stations carrying the program) is by conducting national sample surveys. Since these surveys are much too expensive for an individual or company to perform solely for its own information, the surveys are made by organizations known as "rating services" and the results are made available to multiple subscribers.

Measuring "impact" or sales produced per home reached is much less precise than measuring the number of homes reached by a program. Sometimes it is intuitively evaluated by the advertiser. However, just as the format of a magazine and the position and attractiveness of the advertisement carrying the sponsor's message determine impact in a magazine or newspaper, so also do the nature of the television network of stations, the particular program he sponsors, the attractiveness of the commercial he presents and the quality of the programs adjacent to his determine the impact of the sponsor's television program. Homes reached by the program plus the impact of the program when related to the cost of the program will generally determine whether an advertiser will use television or another medium.

Since cost per thousand circulation for a television program (or any medium) is so important in determining cost per sale produced by the program, it is for most advertisers a major factor[1] in determining whether to use the program as an advertising medium.

One of the precepts of advertising economics is that (1) *high*

[1]In some cases an advertiser may be interested in advertising for prestige purposes or to deliver a message to a special audience. In such cases, cost per thousand (or even cost per sale) becomes less important.

circulation with (2) *high* dollar rates yields (3) *low* cost per thousand, while (1) *low* circulation with (2) *low* dollar rates yields (3) *higher* cost per thousand. This phenomenon stems from the fact that the rate of a broadcasting station, a newspaper or a magazine does not increase directly with the circulation increase, but instead tapers off in a less sharply ascending curve. This is a matter of economic necessity: There are basic costs (plant, equipment, operations and the like) which a station, newspaper or magazine must incur, no matter how small its circulation; hence, the rate of media in small markets must be relatively high in order to cover these basic costs. Costs do not rise proportionately, however, to increased circulation; hence, added circulation comes in at a lower proportionate cost. Accordingly, a broadcasting station or a newspaper with 1/50th of the circulation of a New York City station or newspaper will have a rate greater than two per cent of the New York rate. Therefore, the cost per thousand of the medium with the smaller circulation is higher.

The factor of high circulation/low cost per thousand is illustrated by the actual rates and costs per thousand shown in Charts XIII, XIV and XV. As Chart XIII shows, the *New York Daily News* has a circulation of 2,136,928 and its rate per line is $3.47; in contrast, the circulation of the *Watertown Times* (Watertown, New York) is 42,042 and its rate per line is only 22¢. Yet the cost per thousand of the *News* for a thousand line ad is only $1.62, while the cost per thousand of the *Watertown Times* is $5.23—almost three-and-one-half times as high.

Chart XIV illustrates how the same factor of low cost per thousand with high circulation operates where multiple small

CHART XIII

RELATIONSHIP OF NEWSPAPER CIRCULATION AND RATES TO COST PER THOUSAND (I)

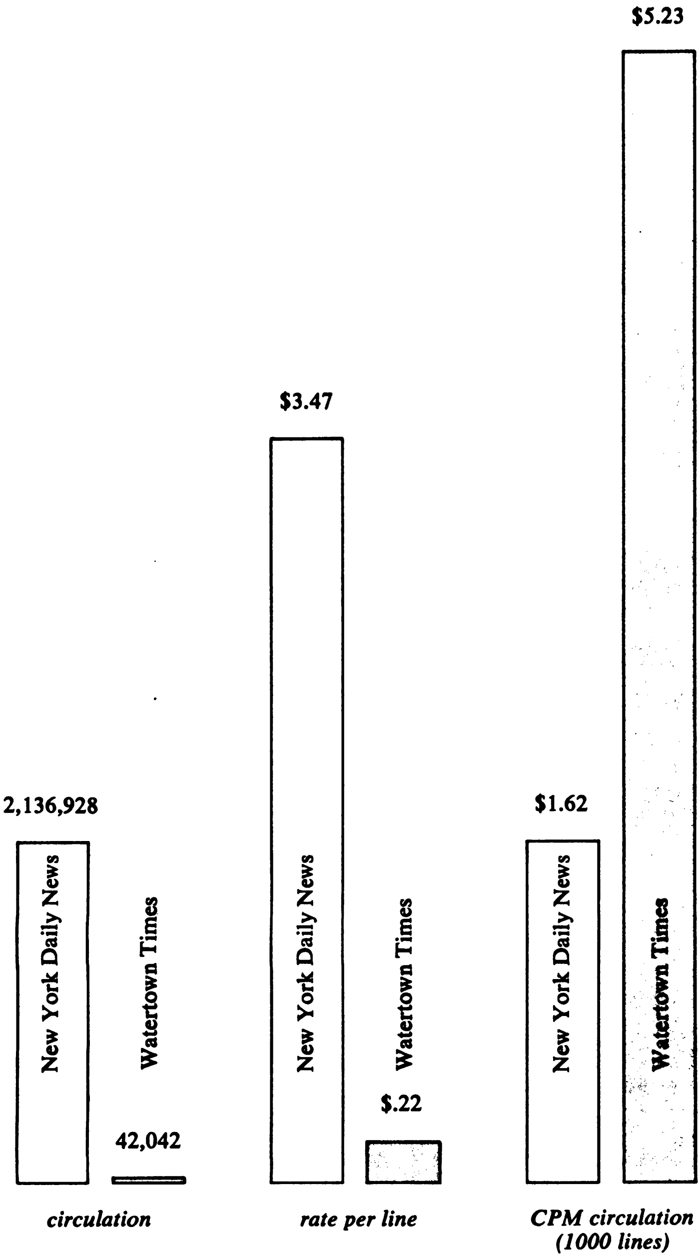


CHART XIV

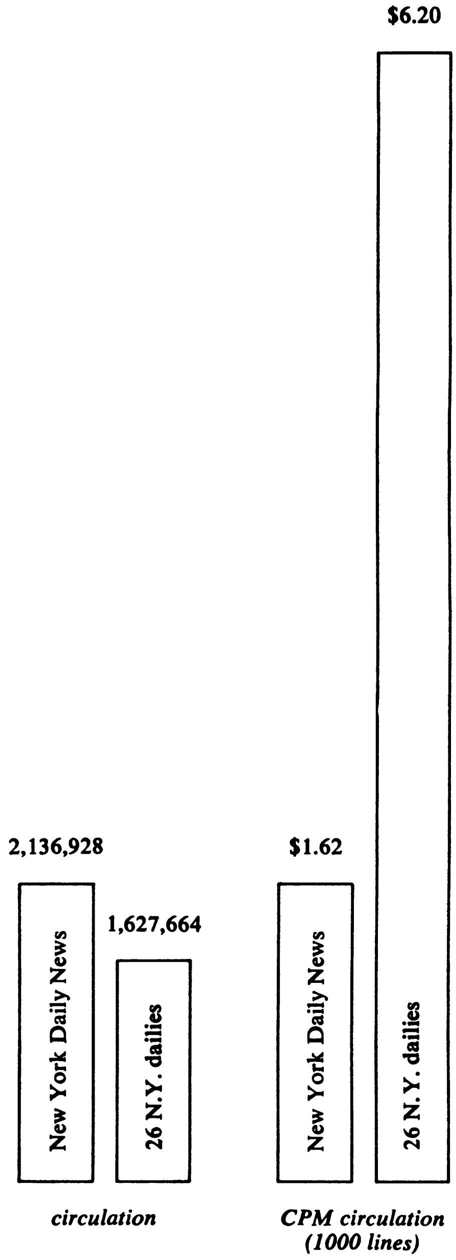
RELATIONSHIP OF NEWSPAPER CIRCULATION AND RATES TO COST PER THOUSAND (II)



units of circulation are aggregated to achieve a large circulation. It is possible in New York City for an advertiser to reach a circulation of about 1.6 million people in two ways. First, the advertiser can place his advertising solely in the *New York Daily News* yielding, as has been shown, a circulation of over two million at a cost per thousand for a thousand line ad of $1.62. Alternatively, the advertiser can select 26 different New York dailies with a circulation of about 1.6 million.[1] The cost per thousand of these 26 New York dailies, even though the circulation still falls almost one-half million below the circulation of the *New York Daily News,* would be $6.20—almost four times the cost per thousand of the *News.*

Nor is this phenomenon peculiar to print media. Chart XV shows how it similarly operates in respect of television. A Philadelphia television station with a circulation of 1,630,000 families and a Class A rate of $3,100 per hour yields a cost per thousand of $1.90. In contrast, the 36 smallest CBS Television affiliates[2] with an aggregate circulation almost the same as the circulation of the Philadelphia station have a *total* rate of $7,175 and, thus, yield a cost per thousand of $4.39—almost two-and-one-half times the cost per thousand of the Philadelphia station, although the circulation is virtually the same.

B. THE ADVERTISER ECONOMICS OF AFFILIATIONS. The immediately preceding discussion concerning the factor of cost per thousand and its effects bears directly upon the question of a network's affiliation determinations. For, in order to attract advertisers to network television, and to maintain network tele-

[1]To minimize duplication, standard daily newspapers have been excluded from the group of 26 and, instead, such dailies as *Il Progresso, The Wall Street Journal, The Staats-Zeitung* and nine Westchester dailies have been included among the 26.

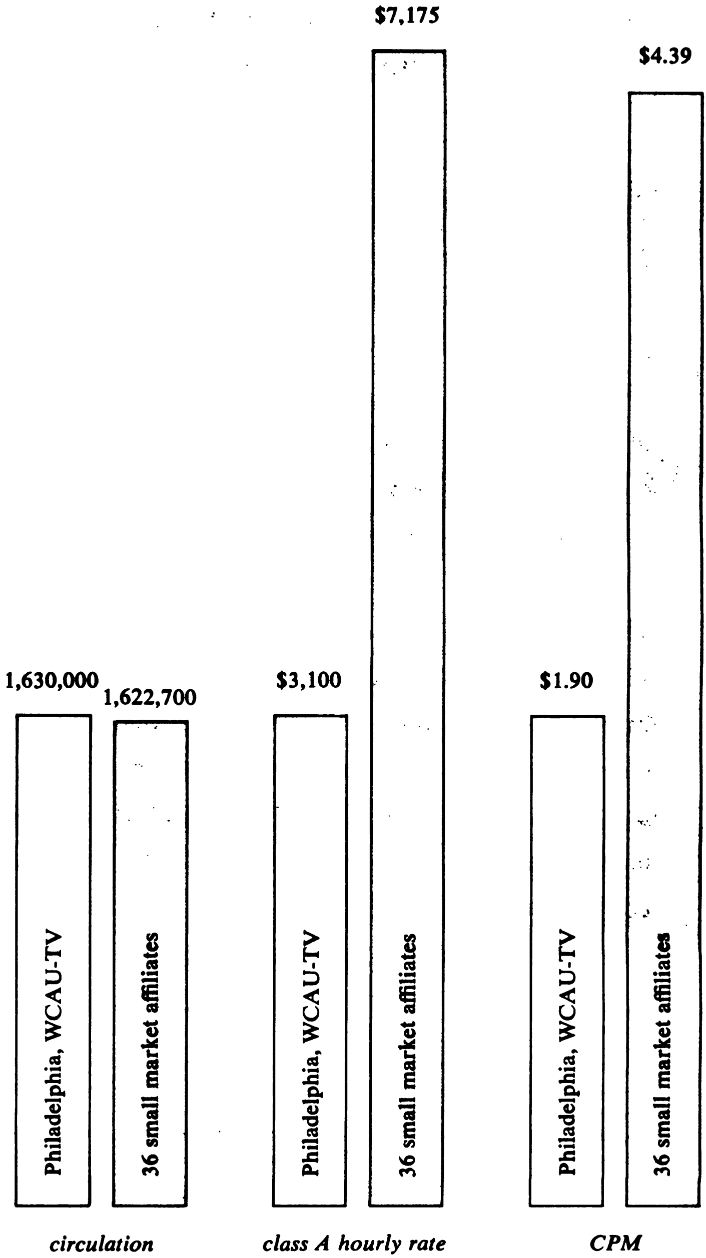
CHART XV

RELATIONSHIP OF TELEVISION CIRCULATION AND RATES TO COST PER THOUSAND



vision's competitive position with other national media, the objective of maximum circulation at the lowest possible cost per thousand must be a primary consideration in devising the structure of a network of affiliates.

A second factor, closely related to the cost per thousand factor, is "duplication," which, in broadcasting, means the overlapping of signals in the same area by different affiliates. Affiliates normally must be selected by a network so that there is the minimum possible duplication.[1] (For a full description of the criteria and procedures followed by CBS Television in its affiliation determinations, see Appendix C, of this memorandum.)

The problem of duplication is accentuated in the field of network broadcasting. In printed media, an advertisement in two morning papers in the same city or in *LIFE* and *The Saturday Evening Post* might well involve substantial readership duplication, as many of the same readers read both papers or both magazines. But this duplication would not necessarily be wasteful because the reader can read the papers or magazines successively and, hence added values may be gained from the multiple impressions on the duplicated reader. In contrast, there is an element of exclusivity in respect of the television viewer: While watching one program from one station, the viewer obviously cannot watch the same program from another station. And having watched a program on one station, he cannot later turn to the other station to see the program which it had been

[1]The major exception to this rule of minimum duplication involves neighboring major markets such as Washington, D.C. and Baltimore, and Providence and Boston. Even though these two pairs of cities involve very substantial duplication, experience has shown that as a matter of advertiser preference, each must normally be covered from within. See Appendix C, pp. XV, XX and XXI, XXIV and XXXII. The importance of the market and advertisers' beliefs with reference to the need for local support of his product in such larger cities sometimes outweigh cost consideration relating to duplication. The exceptions are rare.

broadcasting at the time he was watching the first station. In this sense, there is no factor of successive multiple impressions in broadcasting which would offset duplication.[1]

For these reasons, an advertiser will not ordinarily pay twice for the same unit of circulation because the audience will not be proportionately enlarged and each viewer can only look once at any given time. As a matter of advertiser economics, therefore, a network's task in forming its network of affiliates is something like putting together a jigsaw puzzle: It must choose its affiliates insofar as possible in a pattern so that each contributes the maximum additional *unduplicated* service. It was because of duplication that, for example, CBS Television found it necessary to refuse to affiliate with KOVR, a VHF station operating in Stockton, California. As is shown in Chart XVI, KOVR's location is such that the CBS Television affiliates in San Francisco, Sacramento, Fresno and Chico virtually duplicate the circulation of KOVR. Because KOVR could add no new circulation to the CBS Television Network, and because of the nature of the market of Stockton itself, a regular affiliation was determined to be clearly uneconomic.[2]

---

[1]Moreover, the audience for a single program broadcast in the same area simultaneously over two stations would not normally assure twice as large an audience as if it were broadcast over only one station; rather the tendency would be merely to divide the normal audience for the program between the two stations.

[2]It should be noted, however, that lack of affiliation does not necessarily exclude a station from network programs. It has long been the practice of the CBS Television Network to make a sponsored program available, at the sponsor's request, to a non-affiliate in a community where the regular CBS Television affiliate has not cleared time for the program. For example, in Washington, D. C., WTOP-TV, a CBS Television primary affiliate, has not cleared for the sponsored network programs during the period 4 to 5 PM. These programs, accordingly, are carried on WTTG in Washington, which is not affiliated with CBS Television. In addition, CBS Television has recently adopted a plan of making its commercial programs available to non-affiliates in cities different from those in which a CBS Television affiliate is located, if (1) the sponsor requests that the program be carried on the non-affiliate and (2) the non-affiliate (a) accepts a rate based upon the incremental circulation that it contributes to the CBS Television Network and (b) pays the actual out-of-pocket costs, if any, of getting the program to it. Under that policy, during the week ending April 7, 1956, 12 non-affiliated stations carried a total of 240 hours of sponsored CBS Television Network programs.

Chart XVII illustrates the economics of affiliating in order to fill in gaps in coverage. For purposes of illustration, the question of affiliating with WEHT, a UHF station in Henderson, Kentucky, or WTVW, a VHF station in Evansville, Indiana, is used. As shown in the chart, the CBS Television Network has existing affiliates in Louisville and Nashville, as well as in Terre Haute, Indiana, and Cape Girardeau, Missouri. The coverage of these affiliates, however, includes only part of the areas covered by the Henderson-Evansville stations. In the remainder of the areas covered by the Henderson-Evansville stations, no CBS Television signal would be available in the absence of a Henderson-Evansville affiliate. As shown on Chart XVII, if CBS Television were to affiliate with WTVW, the VHF station, 14.1 per cent (or 35,200 homes) of that station's coverage would be duplicated by the CBS Television Louisville affiliate; 9.2 per cent (22,800 homes) would be duplicated by the Nashville affiliate; 11.7 per cent (29,200 homes) would be duplicated by the Terre Haute affiliate; 4.5 per cent (11,100 homes) would be duplicated by the Cape Girardeau affiliate and an additional 2.0 per cent (5,100 homes) would be duplicated by the combined coverage of the Louisville and Nashville affiliates. Thus, only 58.5 per cent (145,600 homes) of WTVW's coverage would be unduplicated.

In contrast, as shown on Chart XVII, WEHT, the UHF station, minimizes this duplication. Falling within the WEHT coverage area are 22,900 homes (14.5 per cent of the WEHT coverage area) already covered by the Louisville affiliate and 11,100 (7.1 per cent of the WEHT coverage area) covered by the Nashville affiliate. But, in the case of WEHT, there are

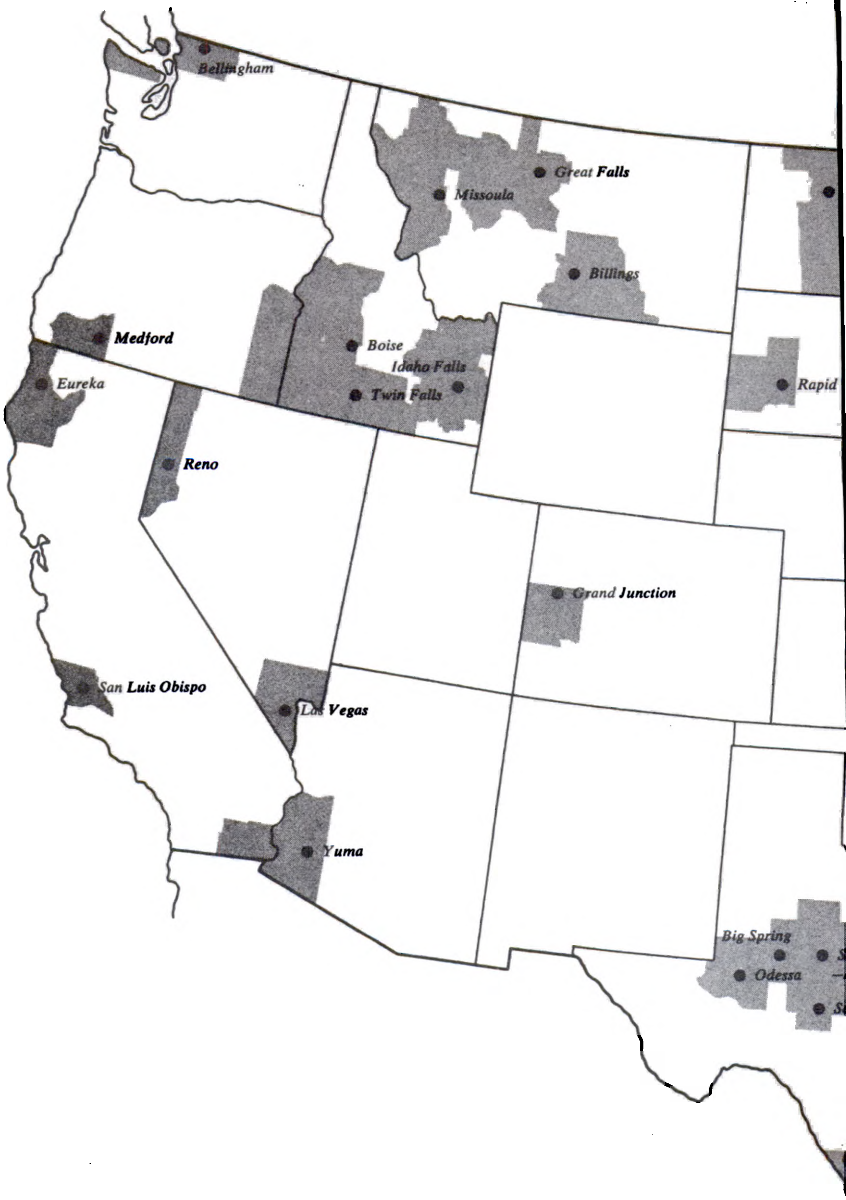

CHART XVIII

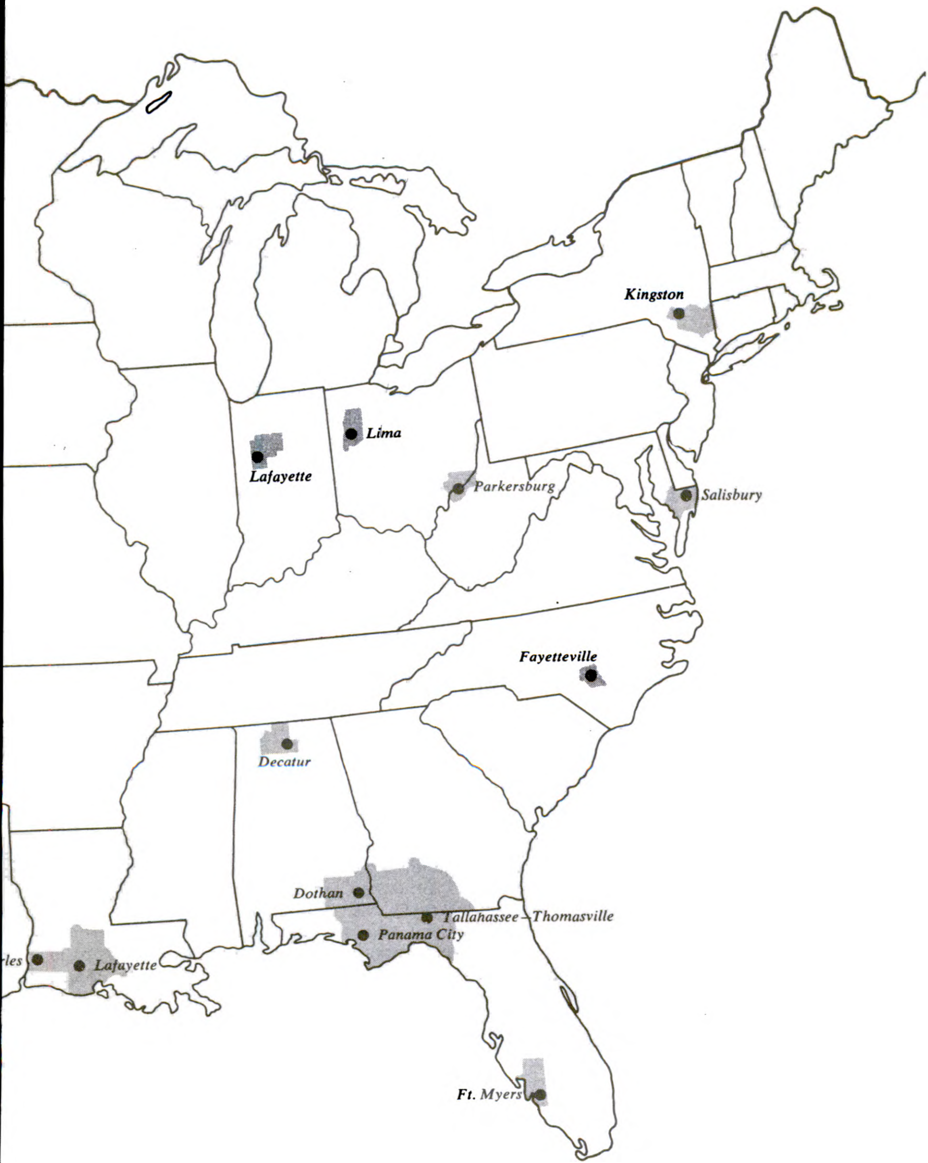
OVERING LESS THAN 40,000 TELEVISION FAMILIES



123,500 unduplicated homes, or 78.4 per cent of the WEHT coverage area in contrast with only 58.5 per cent unduplicated by WTVW. Since the cost per thousand of the unduplicated circulation of WEHT was, therefore, lower than the cost per thousand of the unduplicated circulation for WTVW, CBS Television affiliated with WEHT, the UHF station, in order more efficiently to fill in the gap in coverage.

As noted, the second major reason for affiliating with stations in smaller markets is to extend service into areas which would not otherwise be served by CBS Television Network programs. Pursuant to that policy, the CBS Television Network has affiliated with 36 television stations, each of which covers less than 40,000 television families. See Chart XVIII. The smallest of these is KHAD-TV, Laredo, Texas with a March 1, 1956 circulation of only 3,700 television homes.

By adhering to the basic principles underlying advertiser economics, the CBS Television Network has, in fact, succeeded in providing nationwide service, reaching all but two per cent of the television homes and at the same time keeping cost per thousand at a reasonable level. See Chart XIX. The general tendency over the years has been in the direction of lower cost per thousand despite the fact that the total rates of time for all stations has increased and total circulation has also increased.[1]

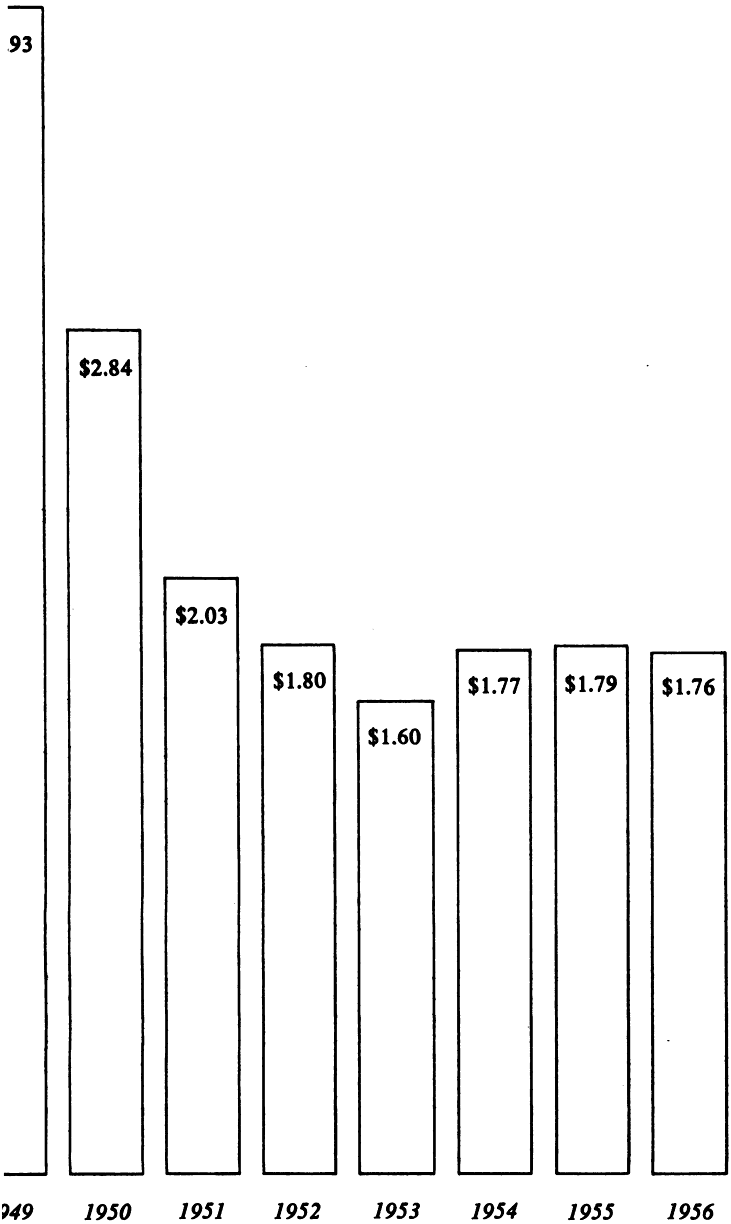
It is important to note that an affiliation is not, in any event,

---

[1]Subsequent to the lifting of the freeze there have been two conflicting factors in operation affecting cost per thousand. Tending toward a lower cost per thousand on the one hand has been the growth of set ownership in individual markets. As noted above, as circulation increases, since rates do not increase proportionately, the result is a lower cost per thousand. Operating counter to this factor, however, has been the factor that many new stations are located in the smallest markets and, hence, entail a higher cost per thousand. Prior to the end of the freeze only the first factor was at work, which accounts for the sharp decline of cost per thousand through 1953. After 1953, both factors were at work simultaneously and tended to equalize each other and, hence, there was a leveling off of cost per thousand.

CHART XIX

COST PER THOUSAND CIRCULATION,
CBS TELEVISION NETWORK



a guaranty of success.[1] Except for affiliates in the Basic Required Group (see pp. 127 to 130), the advertiser may pick any (or none) of the CBS Television affiliates. Before an affiliation can ripen into sponsored programming, there remains the problem of persuading the advertiser to order the station. As Chart XX shows, during December 1955, for example, 41 CBS Television affiliates carried 12 or less hours of CBS Television Network commercial programs each week; 21 carried from 13 to 24 hours; 38 carried from 25 to 36 hours; 22 carried from 37 to 48 hours; and 52 carried from 49 to 60 hours.[2]

Not only the affiliate, but also the network suffers when an advertiser fails to order the affiliate. The network's revenues derive from the sale of time of the affiliates and its revenues increase as more stations are ordered. Conversely, the network receives no revenues for an affiliate which is not ordered. Nevertheless, the network provides the affiliate with non-sponsored programs; it normally pays for the AT&T lines to the affiliate as well as the other expenses of serving the affiliate.[3] There are cases where the advertisers order an affiliate so seldom that an actual loss to the network, attributable to the station, is involved. During 1955, for example, the actual costs attributable to 48 of the stations with which the network did business exceeded the revenues attributable to those stations by more than $640,000. Nevertheless, many of these stations are

---

[1]See testimony of Frank Stanton, President, Columbia Broadcasting System, Inc., before Senate Subcommittee No. 2 on Communications, Committee on Interstate and Foreign Commerce, June 18, 1954.

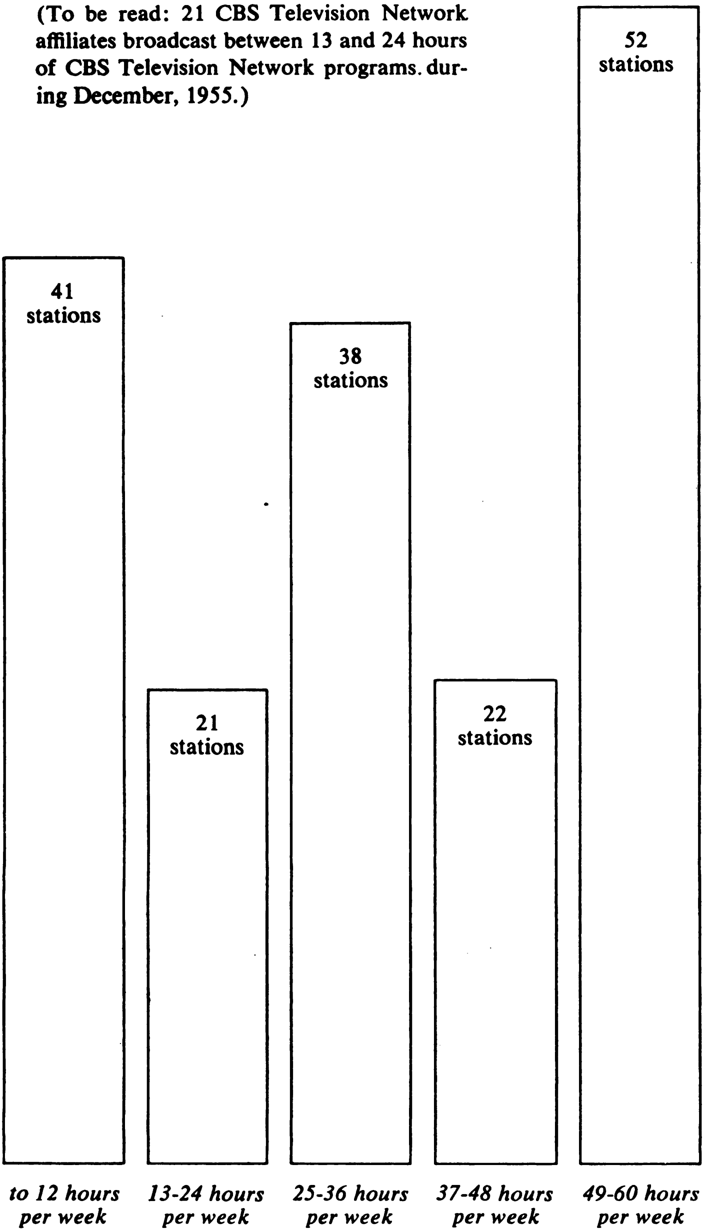
[2]Conversely, stations not affiliated with any network may well prosper. For example, KTVW-TV, a VHF station operating without a network affiliation in the four-station Tacoma-Seattle market, had billings in excess of $50,000 a month in June 1955, and was operating profitably. Similarly, the net television sales of KTTV in Los Angeles totaled $7,473,759 in 1955, an increase of almost 33 per cent over the prior year, while its net income rose 76 per cent to $396,886.

[3]For a description of these expenses, see footnote 2, p. 82 of this memorandum.

CHART XX

DISTRIBUTION OF CBS TELEVISION AFFILIATES BY HOURS OF SPONSORED NETWORK PROGRAMS

(To be read: 21 CBS Television Network affiliates broadcast between 13 and 24 hours of CBS Television Network programs. during December, 1955.)



retained by the network in the hope that advertisers can be persuaded to order them and that, as they carry more network programs, their circulation will increase and the stations will ultimately be able to pay their way.

It is, accordingly, of primary importance both to the network and to the affiliates that advertisers be persuaded as vigorously as possible to order the maximum number of stations. The CBS Television Network has met with some success on this score. The average number of stations carrying network daytime programs has increased over the last year from 72 to 83, while the average number of stations carrying nighttime network programs has increased from 87 to 121.

In addition, the CBS Television Network has attempted, within the framework of basic advertising economics, to extend network program service to that segment of the public which is served by smaller affiliates. The two plans which have been developed—the Extended Market Plan and the Extended Program Service Plan—illustrate some of the potentialities, as well as the limitations, of increasing service to stations and the public without violating the basic economics of television networking.

(1) *The Extended Market Plan (EMP).* After a year of planning, the CBS Television Network instituted its EMP in December 1954. It was devised to meet the problems which were involved in encouraging advertisers to use the stations in the smaller markets. Because, as noted, there are actual out-of-pocket operating expenses for AT&T lines and for the other functions which a network must perform in servicing stations,[1] a minimum volume of orders for a station is neces-

[1]See footnote 2, p. 82.

sary to avoid network losses attributable to the station. Based on experience, CBS Television had found that stations with a gross hourly nighttime rate of less than $150 usually result in a net operating loss for the network, since the network's share of any lesser rate normally does not permit service to such an affiliate at a profit to the network. Hence the minimum network rate for any station had been fixed at that figure. As a result of this rule, markets served by stations which had lower rates were not provided with CBS Television Network service or, alternatively, if the station did maintain a rate of $150 where its circulation did not warrant it, advertiser orders for such stations were sparse. In either event, the public served by such stations in smaller markets was deprived of network programs, and the stations received neither programming nor revenues—both of particular importance to the smaller stations.

The EMP cut through this dilemma by abandoning the rule of the $150 minimum rate. By agreement with the stations, lower rates—in some cases as low as $50—related to their actual circulations were established. To induce the advertiser to use the stations in sufficient volume to cover the network's out-of-pocket expenses, and to provide the stations with revenues and programs, a special network sales unit was assigned to work exclusively on obtaining orders for EMP stations. In addition, the network provided special discounts, in addition to the regular discounts, to an advertiser ordering EMP stations.[1] It is to be noted that those discounts do not reduce the revenues to

[1]Advertisers using EMP stations are allowed an extra discount of five per cent for ordering five to nine such stations, seven and one-half per cent for ordering ten to 14 stations, ten per cent for ordering 15 to 19 stations and 15 per cent for orders of 20 or more stations. Thus, the total discounts for EMP can be as high as 36.25 per cent.

the station. Since the station's percentage is based on gross rate before reduction for discounts (see p. 47), the entire cost of the discounts is borne by the network.

As a result, from the date when the EMP was instituted to March 1, 1956, the number of regular CBS Television advertisers using the plan had increased from 30 to 47, and the number of EMP stations on the air in the United States had increased from 13 to 25[1] (seven of which are UHF stations). In approximately one year, television receiver ownership in the markets covered by these stations had increased from 143,000 to 464,800. Because of the increase in circulation, 12 EMP stations were able to increase their network rates by an average of 49 per cent. Yet in spite of those rate increases, the cost per thousand dropped from \$5.52 to \$4.00 and the average network payment to each EMP station is about \$860 a month.[2] And, of course, the additional network programs thus made available to these stations also attracted additional revenues from national spot and local spot advertisers (see pp. 14 to 16).

(2) *The Extended Program Service Plan (EPS).* This plan devised by the CBS Television Network and instituted in April 1955, was designed to extend program service to the smaller markets. It represents an attempt to encourage the distribution of sponsored programs to affiliates which are not ordered by advertisers. In accordance with that plan CBS Television offers commercial programs to many of its regular affiliates which are not ordered by advertisers. Although the stations receiving EPS programs cannot carry the commercial messages and are not

[1]An additional EMP station is in Alaska.

[2]For the week ending April 7, 1956, the gross time billing for all programs carried on Extended Market Plan stations was \$19,029.15.

permitted to insert substitute commercials into the programs, they are able to sell spot announcements both before and after the programs. CBS Television thus provides those stations with the drawing power of network programs and the corresponding assurance of selling adjacencies locally or to national spot advertisers. Additionally, the stations do not have to program locally to fill the time. The public, of course, benefits from the plan by the increased availability of high-quality programs. The plan has been partially successful: In March 1956, 40 CBS Television Network affiliates received one or more of 21 network commercial programs totaling 383 station quarter-hours per week.

Its limited success is illustrative of the necessity of adapting affiliation practices and program service to advertiser economics. In order for a program to qualify for inclusion under EPS, permission must be obtained from a number of different sources, each of which has a legitimate interest in the program. Thus, for example, it is necessary to obtain permission from the advertiser who is paying for the program. It is hardly to his interest to permit the program, with commercials deleted, to be carried on a station whose circulation significantly duplicates the circulation for which the advertiser pays. To require the advertiser to permit the program to be carried without commercials on a duplicating station would be to require him to compete with himself, thus giving some portion of the viewers a choice of seeing the program—for which he pays—without his commercials or with his commercials. Understandably, some advertisers have been reluctant to permit inclusion of their programs on a station which duplicates the coverage of a station for which he pays.

Similarly, the rights of the program producer and talent, as well as the syndication rights, if any, must be taken into account. Where a filmed program is involved, for example, the owner of the program may be reluctant to permit it to be carried in unordered markets free and thus diminish the possibility of future sale to stations in those markets.[1]

However, even if clearances are obtained from the advertiser, producer and talent, sometimes a station does not avail itself of a program furnished under EPS, because the station has already sold the time to a local or national spot advertiser. In March 1956, 27 stations did not accept 526 quarter-hours of programs a week made available to them under EPS.

Despite these limitations, EMP and EPS indicate what can be accomplished within the framework of the whole complex of economic relationships and interests involved in broadcasting; these plans also delimit the areas in which progress can be made within that framework.[2]

---

[1]Where all the program rights, however, reside in CBS Television or the syndication rights belong to CBS Television Film Sales, Inc., consent for inclusion of the program in EPS is granted.

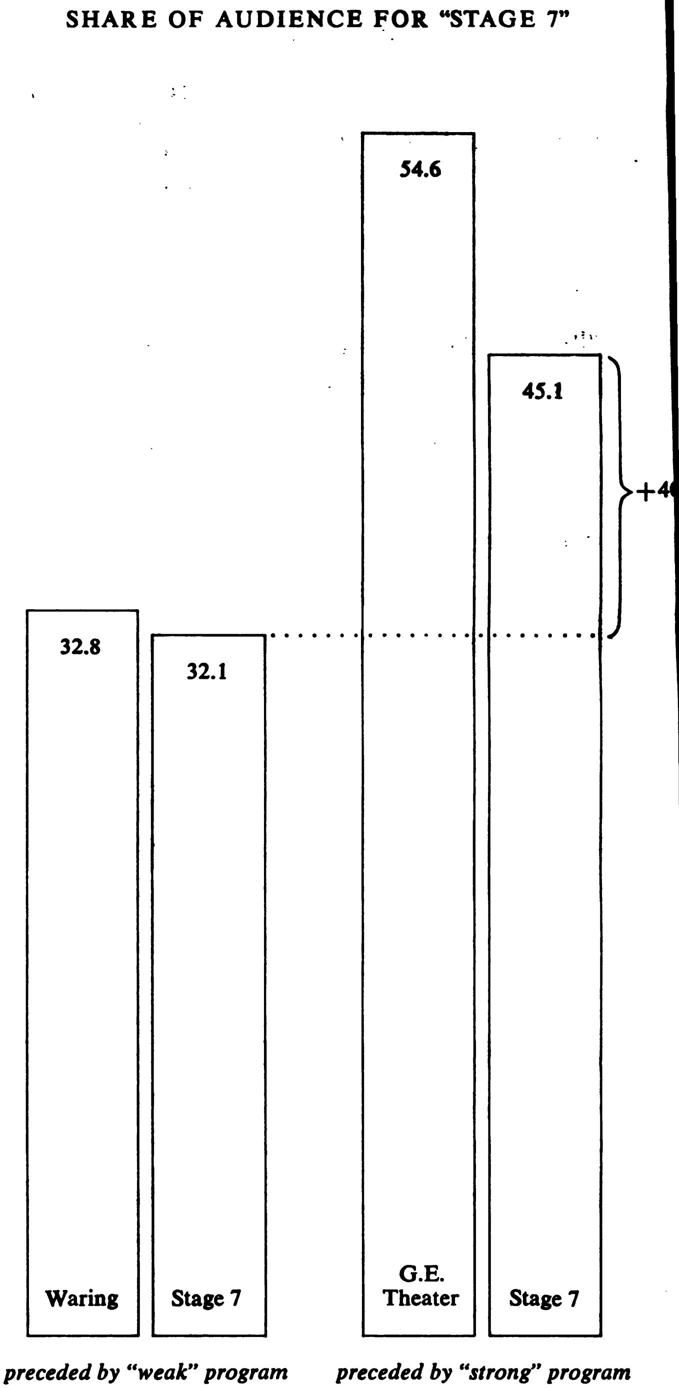
[2]Considerations such as those described in the text establish the basic difficulties of accepting the suggestion, which has from time to time been advanced, that in order to provide stations with network programming on the broadest possible basis, networks should affiliate with them and make them available to advertisers free, as a bonus. While providing affiliates to advertisers on a free basis would indeed solve the problem of cost per thousand to the advertiser, it must be noted that network revenues come from the network's share of the advertiser's payment for the station. If the rate for a station is zero, the network's revenue when the station carries a network commercial program is also zero. Yet, servicing the station is in the aggregate costly to the network. CBS Television Network studies have shown that the network direct out-of-pocket expenses of servicing stations in smaller markets approximate $90 a week without assigning to the station any portion of the indirect selling, programming and administrative costs involved. To that must also be added the network's payment of AT&T charges. Those charges can be illustrated by taking the case of a small station 100 miles from the nearest service point. It may be assumed, as is customary, that the station does not qualify for full time use of the cable and that it is used only two hours a week. Even on so limited a basis, the cost which must be borne by the network is $230 a week for the intercity relays, plus an additional $170 a week for the minimum connection charge and local loop. Of course, for a "free" affiliate, the AT&T costs would be vastly increased since the lines would be in almost constant use. It is readily apparent, therefore, that the concept of free stations is not, in general, economically feasible. The EPS, which is an attempt to avoid those difficulties, is sounder—both in theory and in practice.

C. ADVERTISER ECONOMICS OF A SOUND PROGRAM SCHEDULE. In the preceding portions of this Part IV, the memorandum has dealt with the exacting problem of devising an efficient network of stations so that network television can be a sound economic value to advertisers and competitive with other media. In addition to providing an efficient aggregate of network stations, it is necessary, in order to furnish the advertiser with maximum network values, to provide an effective composition of the over-all weekly network schedule. It is the network's special obligation, both to the public and to advertisers, to provide: (1) a suitable number of popular programs well balanced as to type between information and entertainment both for purposes of variety and in order to serve the public interest, and (2) assuming that strong and balanced programs are provided, a schedule in which these programs are placed in such reference to each other as to maximize their over-all appeal.

Those objectives are important not only to the stations and to the public; they are also important to advertisers. Both the over-all schedule and the program which precedes and which follows the time period which an advertiser has under consideration are important to him, for he knows that audiences are built up and retained through an appropriate flow in sequence of programming.

The phenomenon of audience flow has been presented negatively before this Committee. Audience flow does not mean, however, that a poor program has a larger audience than it deserves because it follows a popular program. Rather, it means that a program is not *deprived* of the audience it deserves

CHART XXI



SHARE OF AUDIENCE FOR "STAGE 7"

preceded by "strong" program

by following a poor program. People will not watch a poor program no matter how much they like the program that preceded it. However, when two or more good programs are presented at the same hour over different stations in the same area, a large part of the audience of one station may never know that a good program is on the other station if their attention has already been attracted to the first station by a preceding program on that station, which they enjoyed watching. The importance of program sequence is illustrated by Chart XXI which shows the effects upon the program "Stage 7" when the program which preceded it was changed from one which received only fair audience acceptance to one which received wide audience acceptance. "Stage 7" had only 32.1 per cent of the audience when it was preceded by "The Fred Waring Show" with a 32.8 per cent share of audience. When "The Fred Waring Show" was replaced with "General Electric Theater" which attracted 54.6 per cent of the audience, the audience for "Stage 7" increased to 45.1 per cent, a 40 per cent increase.

The phenomenon of audience flow may also be illustrated by the effect of reversing the order of two adjacent programs, as in the case of "Navy Log" and "The Phil Silvers Show." When "Navy Log" was presented first, between 8:00 and 8:30 PM on Tuesdays, it attracted 28.1 per cent of the audience, and "The Phil Silvers Show" which was broadcast between 8:30 and 9:00 PM on Tuesdays, attracted 26.2 per cent of the audience. When the order of the two programs was reversed, "The Phil Silvers Show" attracted 40.4 per cent of the audience, an increase of 44 per cent, and "Navy Log" attracted 31.3 per cent of the audience, an 11 per cent increase.

PART V: The Charges Against the Networks and Proposals for Change

The preceding parts of this memorandum have sought to describe the dimensions of television, and the nature, functions and economics of television networking. It is in that entire context that the several charges which have been leveled at the networks and the several proposals which have been advanced will be examined seriatim.

A. THE CHARGE THAT THE NETWORKS RECEIVE A DISPROPORTIONATE AMOUNT OF TELEVISION NETWORK REVENUES. The facts described (Part III) concerning the economics of networking and the distribution of revenues between stations and the network readily establish that networks do not receive a disproportionate amount of television revenues. In fact, as has been shown, the station profits in terms of percentage of return on total broadcasting revenues (i.e., sales) far exceed network profits in percentage of return, despite the sharply contrasting functions of networks and stations[1] and the relative risks which each takes. In order for a network to perform its functions at all, it must maintain a large organization and ex-

[1]See pp. 47 to 50 for a description of the contrast between the functions of a network and the functions of a station in respect of network programs. See also p. 47 for an analysis of the division of network revenues between affiliated stations and the network.

tensive facilities. Necessarily, therefore, the very nature of a network's functions is such that its revenues are large; but for the same reason, its expenses are also proportionately large.

In the circumstances, a comparison of the total revenues of the stations and the total revenues of the network would appear to be wholly irrelevant. If the inquiry is a proper one at all, it must take into account the contrasting functions; and the basis of comparison must be the relative percentage of profits in their relation to revenues. On that basis, there is clearly no disproportion in favor of the network.

Not only are the functions and services of a network, and hence its expenses, vastly different from those of stations, but so are the risks inherently different.

In network operations, there are double risks and double liabilities (pp. 50 to 52). The loss of a sponsor for a program period entails not only the loss of revenues but an additional heavy burden of uncompensated expense in providing a program service to the stations on a sustaining basis. The stations' operations do not normally entail a like risk. While it is true that a station loses its share of the revenues when a network program loses its sponsorship, the station still has the opportunity of selling the time period to a national spot or local advertiser. And failing that, it receives the network sustaining program at no cost to it for programming that period. In contrast, the network must bear the full expense of the sustaining program.

Thus, the facts seem clearly to establish that the charge that networks receive a disproportionate amount of television broadcasting revenues stems from a pervasive misunderstanding of the basic facts of network functions and economics.

B. THE CHARGE THAT NETWORKS INSIST ON THE USE OF NETWORK PRODUCED PROGRAMS. The charge that the CBS Television Network discourages, or discriminates against, non-network produced programs by making valuable time periods available only to network produced programs is mistaken. CBS Television follows no such policy; there is no such discouragement or discrimination.[1]

No evidence of a program tie-in has been adduced before this Committee and none can be for there is none. Indeed, the facts refute the charge: as is shown on Chart XXII, during the week ending April 7, 1956, 72¾ hours of sponsored programs were broadcast by the CBS Television Network. A total of 36½ of those hours, or 50.2 per cent, were occupied by programs created and produced entirely by 38 outside producers with whom CBS Television has no direct connection, and an addi-

[1]There is one category of programs which CBS Television insists be produced under its own supervision and control: As a matter of policy, and in order to maintain direct responsibility in the public interest, the CBS Television and Radio Networks have always maintained the production, supervision and control over all its news and public affairs programs. This policy is based on the belief that only in this way can the network fulfill its responsibilities of maintaining its standards of objectivity and over-all balance among significant viewpoints on public issues.

In addition, there are two types of programs which may be said to be tied, to a greater or lesser degree, by CBS Television to particular time periods: (1) multiple sponsorship programs; and (2) "anchor" programs. Multiple sponsorship programs are represented by "Good Morning with Will Rogers, Jr.," "Captain Kangaroo" and "Arthur Godfrey Time." The nature of these programs and the sales patterns involved are such that after one or more sponsors have agreed to purchase a participation or sponsor one of the several segments, the time obviously cannot be sold to another sponsor for a different program. In this sense, so long as the programs remain in their time period, one of the sponsors or a potential sponsor cannot, as a practical matter, substitute a different program during the time period.

"Anchor" programs include the following: On Sundays, "The Jack Benny Show," and "The Ed Sullivan Show"; on Mondays, "Arthur Godfrey's Talent Scouts," "I Love Lucy" and "Studio One"; on Tuesdays, "The Phil Silvers Show," "The Red Skelton Show" and "The $64,000 Question"; on Thursdays, "Climax!"; on Fridays, "The Line-Up," and on Saturdays, "The Jackie Gleason Show." These programs are the anchors for the night's schedule; they become anchor programs through proven popularity. Normally, since the schedule is built around them, the CBS Television Network would be reluctant to sell the time periods which they occupy for programs of a different nature. If, however, their strength and popularity should decrease, or if some other programs of clear merit were proposed, the list of anchor programs might well change. It may be noted in any event that a program qualifies as an anchor program on its merits and irrespective of its source: four of the 11 programs listed in this footnote as anchor programs are not CBS Television-produced.

tional 19¾ hours, or 27.1 per cent, were occupied by programs produced by eight companies or individuals in association with CBS Television. That total of 72¾ hours was comprised of 74 different programs or program series, only 17 of which were wholly produced by the network. Of the remaining 57 programs or program series, 47 were wholly produced by outside producers and ten were produced by outside producers in association with CBS Television.[1]

An analysis of programs on the CBS Television Network produced by outside sources in whole or in part over the last three years reveals a significant increase in the number of hours of programs produced solely by outside sources and by outside sources in association with CBS Television, while, despite an increase in the total hours of network programming, the hours of programs produced by CBS Television alone has decreased:

	sponsored broadcast hours per week			
	April 1954		*April 1956*	
	hours	*per cent*	*hours*	*per cent*
Produced by outside sources	27¼	46.6	36½	50.2
Produced by outside sources and CBS Television	8½	14.5	19¾	27.1
Produced by CBS Television	22¾	38.9	16½	22.7
Total	58½	100.0	72¾	100.0

However, a comparison of the numbers and hours of programs produced by CBS Television and outside sources does not alone reveal the full story of the opportunity of outside producers to have their programs broadcast over the network. An analysis of the amounts paid by advertisers for commercial programs

[1]In addition, there were 13 sustaining programs and program series occupying 13½ hours. Of those sustaining programs, CBS Television produced 11 which occupied 12½ hours. Of the 28 programs produced by CBS Television alone, 11 were news and public affairs programs which, under CBS Television policy, must be produced under its supervision and control. See p. 88, footnote 1.

broadcast on the CBS Television Network during 1955 reveals, as is shown in Chart XXII, advertisers paid out almost twice as much for programs produced wholly by outside producers as they did for programs produced by CBS Television and programs produced by CBS Television in association with independent producers. It is estimated that during an average week advertisers paid $1,170,000 for programs produced wholly by outside sources, $520,000 for programs produced by CBS Television alone and $130,000 for programs produced by CBS Television in association with independent producers. For the year 1955, it is estimated that $61,000,000 was paid for programs produced wholly by outside sources, $27,000,000 for programs produced by CBS Television alone and $7,000,000 for programs produced by outside producers in association with CBS Television.[1]

An examination of the sources of programs broadcast on the CBS Television Network during Class A commercial time[2] over the past three years reveals that, proportionately, independent producers of programs have an even greater and increasing outlet on the CBS Television Network at night:

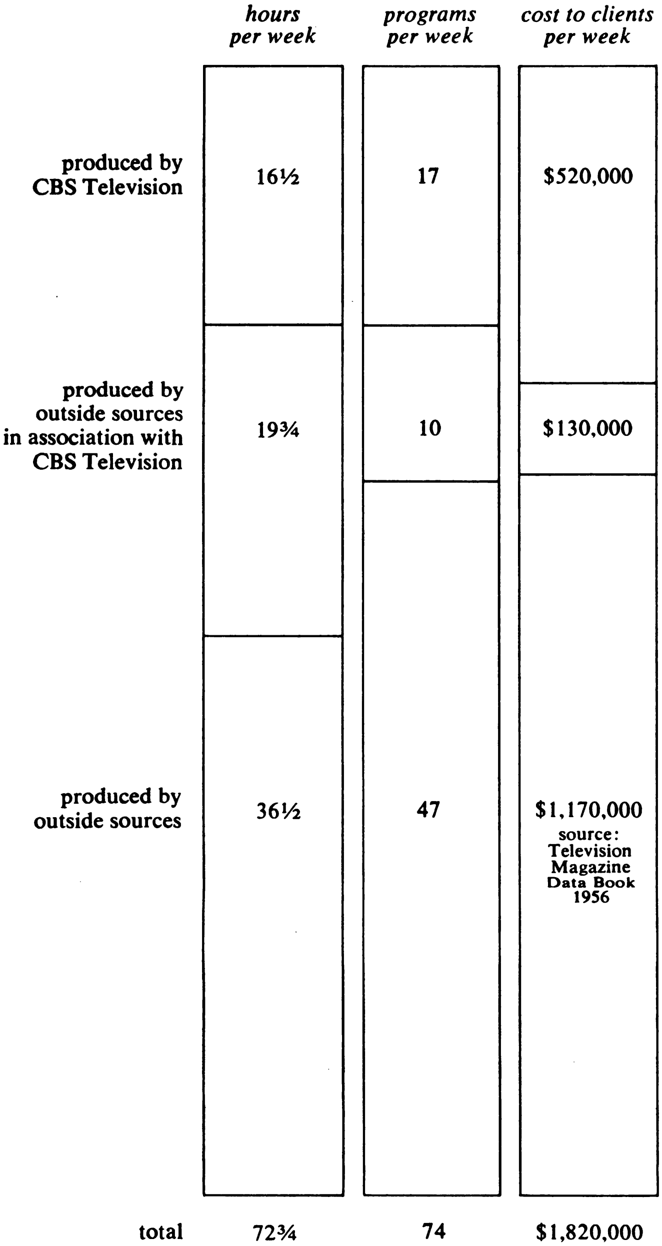
	Class A sponsored broadcast hours per week			
	April 1954		*April 1956*	
	hours	*per cent*	*hours*	*per cent*
Produced by outside sources . .	9½	38.0	16	57.7
Produced by outside sources and CBS Television	2½	10.0	2½	9.0
Produced by CBS Television . . .	13	52.0	9¼	33.3
Total	25	100.0	27¾	100.0

[1]The amounts for CBS Television productions and CBS Television productions in association with outsiders were arrived at by taking four sample weeks (in the months of February, May, August and November 1955) and converting them to an annual basis. Cost of outside produced programs was based on estimates appearing in *Television Magazine Data Book—1956*. All amounts include agency commissions.

[2]6 PM to 11 PM, Monday through Saturday, and 5 PM to 11 PM on Sunday.

CHART XXII

PRODUCTION SOURCES, CBS TELEVISION COMMERCIAL PROGRAMS



Further evidence of the fact that there is no policy or practice on the part of CBS Television to discriminate in favor of programs it produces over those produced by outside sources is the history of changes in network programs since 1951. There have been 171 program replacements since 1951—106 nighttime programs and 65 daytime programs. Of the 65 daytime programs which were replaced, 23 were outside produced. In replacing these programs exactly the same number of outside produced programs was used. Of the 106 nighttime programs replaced since 1951, 52 of those programs *replaced* were produced by outside sources, but 62 of the *replacing* programs were produced by outside sources. In other words, there has been a net *gain* of ten outside produced programs and a net loss of ten CBS Television produced programs in the network's nighttime schedule as a result of program replacements. Surely this does not lend support to the charge that CBS Television is systematically replacing outside produced programs with CBS Television produced programs.

Demonstrably, therefore, the CBS Television Network does not exclude independent program packages from its program schedule. Indeed, any such policy of exclusion and discrimination would be suicidal because it would weaken, if not destroy, the asset on which a network stands or falls—the quality of its programming. Precisely for that reason, the policy of the CBS Television Network has always been, and will continue to be, to schedule the right program in the right place regardless of its source. Pursuant to that policy, the CBS Television Network has replaced programs produced by it with programs produced outside, and has given precedence to outside programs over network-produced programs, in which it has invested heavily in money and manpower.[1]

Not only do the facts show that CBS Television does not insist on advertisers using CBS Television produced programs in order to buy time on the network, but the charge becomes frivolous when one considers that CBS Television lost $7.1 million on commercially sponsored programs alone in 1955, without any allocation of general overhead expenses. It can be easily understood that incurring such a loss is not the voluntary choice of a domineering businessman engaged in restrictive practices. Rather it is the natural result of trying to serve the public, the affiliates and the advertisers in the best manner possible even though such a result eats heavily into over-all profits.

In the final analysis, it would seem that the charge that the CBS Television Network insists on using its own programs by making prime time available only if the advertiser uses a CBS Television produced program is in reality an attack designed to prevent networks from engaging at all in creating and producing programs.

If a network is to fulfill its responsibility to its affiliates and to the public, it must, however, engage in program production. Only in this way can there be assurance of day-in, day-out, and week-in, week-out high quality programs. The network cannot perform its functions in this area if it must stand and wait for programs from outsiders who do not have the same continuous relationship which the network has to the broadcasting indus-

[1]Recent examples of CBS Television produced programs which were replaced by programs produced by outside sources include: "Honestly Celeste," "Jane Froman Show," "Life with Father," "Meet Millie," "My Favorite Husband," "My Friend Irma" and "The Johnny Carson Show." In addition, a number of CBS Television produced programs were rejected by the sponsor in favor of "Name that Tune," an outside package. All of these programs involved time periods between 7:30 and 10:30 PM (E.S.T.).

try, to stations and to the viewing public. It must play some greater role in programming than merely reviewing whatever outsiders should happen to offer—and even then having only a veto power limited by the fact that not enough quality product may be available. Indeed, those basic facts have long since been emphasized by the Federal Communications Commission itself which, in "Public Service Responsibility of Broadcast Licensees" March 1946, p. 13, criticized networks for *not* engaging in program creation and production and hence failing to exercise their programming responsibilities. The FCC stated: "Experience has shown that in general advertisers prefer to sponsor programs of news and entertainment. There are exceptions; but they do not alter the fact that if decisions today were left solely or predominantly to advertisers, news and entertainment would occupy substantially all of the time. The concept of a well-rounded structure can obviously not be maintained if the decision is left wholly or preponderantly in the hands of advertisers in search of a market, each concerned with his particular half hour, rather than in the hands of stations and networks responsible under the statute for over-all program balance in the public interest.

"A device by which some networks and stations are seeking to prevent program imbalance is the 'package' program, selected, written, casted and produced by the network or station itself, and sold to the advertiser as a ready-built package, with the time specified by the station or network. In order to get a particular period of time, the advertiser must take the package program which occupies that period. This practice, still far from general, appears to be a step in the direction of returning control of programs to those licensed to operate in the public interest..."[1]

Thus, it will be seen that this charge is directed at the networks' performing precisely the function which the FCC has criticized the networks for failing to exercise and which it contended they ought to exercise in the public interest.

C. THE CHARGE THAT THE NETWORKS HAVE A MONOPOLY.

The charge that the networks, or CBS and NBC, constitute monopolies is reckless and insubstantial. Its legal aspects are discussed in full in the legal memorandum submitted to this Committee simultaneously herewith. This memorandum deals with the factual aspects of the charge.

The facts establish that no monopoly exists in any ordinary meaning of the word. As has been shown (pp. 57 to 59), many other national advertising media are in competition with network television. Network television has only a 9.8 per cent share of the national advertising dollar. The CBS Television Division —the Network and the four CBS Owned stations—receive only 3.2 per cent of the national advertising dollar and about 20 per cent of the television advertising dollar.

Even if the total business of only television networks is taken into account, no monopoly exists. It is obviously true that *all* the television networks do *all* the network business. But it is a travesty of common sense so to define monopolies. Few facts in the television industry are clearer than the intense competition

[1]See to the same effect *The New York Times*, Sunday, April 8, 1956, Section 2, p. 13: "If network control is materially crippled the advertising world for all practical purposes will be taking over TV; frankly, this could easily constitute a far greater danger than the shortcomings of the status quo. A sponsor normally is interested only in his own show, not with the general balance of a programming structure. He intuitively leans to the more popular type of show and does not generally think in terms of television's over-all well-being.... The plain fact is that many of the principal cultural advances in television—the ninety-minute plays, the documentaries and the coverage of such happenings as the Army-McCarthy hearings—have stemmed from the incentive of the networks, often against the opposition of advertisers and individual stations."

which exists between and among the networks. Each is engaged in trying to take audience, programs, talent, advertisers and affiliates from the other. Indeed, the networks are frequently criticized for being overcompetitive by placing attractive programs opposite each other so as to make the viewer's choice difficult. But this intense competition has benefited the public in terms of the programs and services they have received.[1]

The facts establish that no network has a monopoly of the television network business. The gross billings of the CBS Television Network during 1955 totaled 46.5 per cent of the total network billings; of NBC 40.2 per cent; and of ABC 12.6 per cent. The CBS Television Network share of television network billings falls far short of monopoly.

Indeed, the entire history of the growth of networks and of national advertising expenditures in network television is wholly inconsistent with the normal indicia of monopoly—i.e., a smaller and smaller share to those behind the leader. In the television network field, perhaps the outstanding phenomenon of recent years has been the growth of ABC. Like CBS and NBC, ABC started from scratch in 1948, but it soon fell behind because of lack of capital to invest in the necessary amount of facilities, organization, talent and programs. In 1953, ABC merged with the United Paramount Theatres and as a result new capital was available. It has made substantial investments in facilities, programs and talent commitments since 1953 and its billings rose from $21 million in 1953 to $34 million in 1954 and to $51 million in 1955, while according to trade reports its current billings for 1956 are at the rate of $76 million a year.

[1]The factor of "exclusive" viewing, noted on pp. 67 and 68, intensifies the competition among networks. Since a viewer can look at only one program at a time and normally several are broadcast simultaneously, the competition necessarily must be intense.

Growth such as this requires the flat rejection of the charge of a network monopoly and squeezing out the smaller network competitors.

The growth of the television networks reflects nothing more than the results of intense and vigorous competition. During the first quarter of 1949—the infancy of television networks—the gross billings of NBC were about $1 million, of CBS Television $431,000, of ABC $51,000 and of DuMont $200,000. The billings of NBC, alone, exceeded the combined total billings of the other three networks. For the third quarter of 1950, the gross billings of NBC were $4.3 million, of CBS Television $1.6 million and ABC $0.9 million.[1] Thereafter, the gross billings of NBC and CBS Television rose rapidly, although CBS Television did not pass NBC and attain the lead which it still has today until the first quarter of 1954.[2]

Those increases were the result of planning, of courageous investment in creative programming and physical facilities and of intensive selling efforts. As has been noted, CBS, alone, invested $53.1 million in television networking before 1953 when it first made profits in its network operations.

It is true that the very nature of the network business, with its requirements of enormous effort and investment, makes the establishment of new networks difficult. But it is not impossible.[3]

[1]DuMont's gross billings were not reported.

[2]CBS Television led NBC in the third quarter of 1953 but dropped behind during the fourth quarter of 1953.

[3]It is probable that as a matter of economics there is a finite limit on the potential number of networks. That is in part because of the relatively limited number of stations, but the limit also arises from the factor of exclusive viewing as previously noted. Inevitably there must come a point where, if a substantially increased number of networks of equal strength and equal programming attractiveness are assumed, the audience will be so fragmentized that the actual circulation for each network will fall below the point at which the advertisers will find it economical to support it. It is not, of course, contended that that point has been reached.

Under FCC regulations, no station is, or may be, closed to other networks even where the station may be a primary affiliate which grants option time to the network with which it is affiliated. The FCC regulations provide that option time is not effective against programs of competing networks and all three networks have programs which are carried by primary affiliates of the others.

The touchstone is strong programming. For example, ABC's "Disneyland" has crossed network affiliation lines; even when the program was first broadcast, 60 CBS Television affiliates, including ten primary affiliates, carried the program. On February 11, 1956, 79 CBS Television affiliates carried "Disneyland," including 65 CBS Television primary affiliates.

An additional network, therefore, is not restricted to new stations which are unable to obtain a primary affiliation with one of the existing networks. If a new network's programming is strong, it will have a market even among stations primarily affiliated with another network, and if its over-all programming schedule should prove to be consistently better and more attractive than the programming of the existing networks, there is no question but that stations would readily change their affiliation in order to obtain the best schedule.

In sum, the charge of monopoly falls before the actual facts. If construed only as an attack on size, it may be factually correct but it is otherwise insignificant. As this memorandum has established, the very nature of the functions of a nationwide network necessitates substantial investments and commitments, extensive facilities and a large staff. This necessarily entails a unit of considerable size. So long as networks continue to perform network functions, there can be no such thing as a small nationwide network. Mere size, however, certainly where so shaped by the inherent requirements of the business, is no justification for penalty or elimination. For, as stated by the radio-television editor of *The New York Times* (Sunday, April 8, 1956, Section 2, p. 13): "It should not be entirely forgotten ... that their 'bigness' also has been responsible for much of the best in TV."[1]

D. THE CHARGE THAT NETWORKS CHANNEL A DISPROPORTIONATE SHARE OF TELEVISION REVENUES INTO STATIONS IN LARGE MARKETS AND IGNORE STATIONS IN SMALL MARKETS. Related to the charge of monopoly is the charge[2] that networks tend to channel a disproportionate share of television revenues to stations in larger markets and to ignore small markets. That charge is inaccurate; the facts, indeed, are to the contrary, for networks are of particular importance and assistance to the stations in the smaller markets.

In support of this charge, it is contended[3] that all the television stations located in 12 cities whose population rank ranges from first to thirty-second, received 50.9 per cent of the net income (before Federal taxes) of the entire industry during

[1]*The New York Times* article also stated: "If the price of economic independence for all TV stations is the sort of half-hour films that now dominate the programming efforts of non-network outlets, it would seem a fair guess that a good many viewers would scream for a return of 'bigness' in the TV business."

Similarly, in an article in the *New York Post,* April 11, 1956 (p. 76), the radio-television editor of that newspaper stated: "No one will dispute that the networks are big ... but without them we would never see most of the best programs broadcast. If the drive had not come through the networks, you would never have seen a 'Peter Pan' or a 'Richard III,' almost none of the big 90-minute shows, no 'See It Now,' no 'Adventure' or NBC Opera Theater. Whatever their faults, the network men have a sense of public responsibility. Many sponsors feel responsible only to their stockholders.... No, the fact is that at least until now the network influence with all its failings has been decidedly a good one for the viewer. We could not possibly have gotten most of the good things now on TV without it."

[2]See Progress Report Prepared for the Committee on Interstate and Foreign Commerce by Robert F. Jones, Special Counsel.

[3]Jones Progress Report, p. 17.

1953. This fact hardly establishes the accuracy of the charge, because those stations served, as of November 1, 1953, 51.7 per cent of all the television families in the United States. Hence, the proportion of income which was cited bears an almost exact relationship to the proportion of the circulation which those stations represent.

The more significant fact that is cited is that only 31.8 per cent of the *revenues* received by the entire television broadcasting industry went to the television stations in those 12 markets. That means that stations which served more than one-half of all the television families in the United States received less than one-third of all the television revenues.

Normally it would be expected that a disproportionately large share of national advertising expenditures would be devoted to major markets. For there are strong natural economic forces working to the advantage of stations in the larger markets, since as has been shown (pp. 61 to 65), their rates are higher, but their cost per thousand are lower than those of stations in smaller markets. It is networks, in fact, which tend to counteract the normal disproportionate flow of revenues to large markets and to divert a share, which would otherwise not be available, to stations in the smaller markets. Standing alone, because of their relatively small circulation and higher cost per thousand, the stations in the smaller markets tend to be ignored by the advertiser. For the administrative cost which an advertiser must incur to place a program or an advertisement directly on a small station on a station-by-station spot basis is generally just as large as the administrative cost involved for a larger station. Similarly, for every additional station bought on an individual basis by the spot advertiser, additional program costs are usually incurred since independent program suppliers often sell programs on a per-station basis. Networking offsets these disadvantages of the smaller stations. A network advertiser can add the smaller stations as a by-product through a single network order, with no additional program or administrative costs.

Thus, not only does the operation of television networks provide, in normal course, benefits to smaller stations which they would not otherwise enjoy,[1] but in addition the CBS Television Network has taken affirmative steps to adapt its sales and distribution policies to accentuate those normal trends on behalf of small stations. The Extended Market Plan and the Extended Program Service Plan (pp. 78 to 82) were explicitly designed for those purposes.

In addition to these plans, the CBS Television Network discount structure also provides positive stimulus encouraging advertisers to order small market stations. Its discounts depend on the number of stations ordered, and the per cent of discount increases as the number of stations ordered increases. This means that when an advertiser orders a large number of stations (including small market stations) he receives a larger discount on the more expensive, large market stations than he would if he did not order the small market stations.[2]

Hence, psychologically and economically there are factors in

[1]See pp. 27 and 30, of this memorandum, for a discussion of the adverse effects on stations in smaller markets which would occur if it were not for networks' continuous use of AT&T facilities. As noted there, without networks to sustain the use of intercity facilities, the costs on an occasional basis would probably be so prohibitive that small market stations would be cut off from live programs—including the broadcast coverage of great national events which are now available to them.

[2]It is even possible for an advertiser to add a few small stations to a line-up and to pay less for the larger line-up than he did for the smaller.

75589 O—57—pt. 4——22

networking which work towards advertisers' inclusion of small stations, while on an individual station-by-station basis, the smaller stations might be excluded.

This has in fact been confirmed in practice by the pattern of purchases by national advertisers: As a general rule, a national advertiser, even though he may have nationwide distribution, purchases fewer stations on a national spot basis than he does on a network basis. A vivid example is provided by Philip Morris, which sponsored "I Love Lucy" on the CBS Television Network with a line-up of 152 stations. When it cancelled its sponsorship of the program and embarked upon a national spot advertising campaign, it ordered only the 50 top markets.

The facts establish, therefore, that networks tend to *prevent,* rather than accentuate, a disproportionate flow of revenues to the larger markets.

E. THE PROPOSAL TO PROHIBIT OPTION TIME.[1] Proposals have been advanced before this Committee to eliminate network option time. This memorandum addresses itself to the nature, functions and importance of option time and analyses the premises on which the attack on option time is based. The question of whether option time violates the antitrust laws is discussed in a separate legal memorandum submitted herewith.

(1) *The nature, functions and importance of option time.* Since there has been misunderstanding of the reach and operation of option time, its precise nature should be set out at the threshhold. The standard option time clause in CBS Television Net-

[1]The remaining portions of this memorandum are addressed to certain proposals on which thus far the chief attention of this Committee has been focused. Other suggestions have been, or subsequent to preparation of this memorandum, may be, brought forward. CBS necessarily has not addressed itself to all possible proposals and hence suggests to the Committee that, if additional issues arise more sharply, CBS be permitted to submit supplemental memoranda dealing with those issues if the situation warrants.

work affiliation agreements[1] provides (see Appendix A, p. II):

"(a) Station, as an independent contractor, will accept and broadcast all network sponsored programs offered and furnished to it by CBS Television during 'network option time' (as hereinafter defined); provided, however, that Station shall be under no obligation to accept or broadcast any such network sponsored program (i) on less than 56 days' notice, or (ii) for broadcasting during a period in which Station is obligated by contract to broadcast a program of another network. Station may, of course, at its election, accept and broadcast network sponsored programs which CBS Television may offer within hours other than network option time.

"(b) As used herein, the term 'network option time' shall mean the following hours:

"(i) if Station is in the Eastern or Central Time Zone, Daily, including Sunday, 10:00 A.M. to 1:00 P.M., 2:00 P.M. to 5:00 P.M. and 7:30 P.M. to 10:30 P.M. (expressed in New York time current on the date of broadcast);

"(ii) if Station is in the Mountain or Pacific Time Zone, Daily, including Sunday, 10:00 A.M. to 1:00 P.M., 2:00 P.M. to 5:00 P.M. and 7:30 P.M. to 10:30 P.M. (expressed in local time of Station current on the date of broadcast).

"Nothing herein shall be construed (i) with respect to network programs offered pursuant hereto, to prevent or hinder Station from rejecting or refusing network programs which Station reasonably believes to be unsatisfactory or unsuitable, or (ii) with respect to network programs so offered or already con-

[1]As of February 10, 1956, the clause was included in contracts with 143 CBS Television affiliates. Seven other contracts had slight variations in the hours specified because of local problems.

tracted for, (A) to prevent Station from rejecting or refusing any program which, in its opinion, is contrary to the public interest, or (B) from substituting a program of outstanding local or national importance. CBS Television may, also, substitute for one or more of the programs offered hereunder other programs, sponsored or sustaining, of outstanding local or national importance, without any obligation to make any payment on account thereof (other than for the substitute program, if the substitute program is sponsored). In the event of any such rejection, refusal or substitution by either party, it will notify the other by private wire or telegram thereof as soon as practicable."

Thus it will be seen that option time is limited. It applies only to *sponsored* network programs during the hours specified. It is inapplicable as against programs of any other network. It may not be exercised on less than 56 days' notice. Further, CBS Television has construed the option time provisions to be inapplicable to any program which occupies a period straddling option time and non-option time. Thus, for example, the periods between 10 and 11 PM (E.S.T.) on Mondays and Wednesdays, which are now occupied by hour-long programs, and the period once every four Saturdays occupied between 9:30 and 11 PM (E.S.T.) by an hour-and-a-half program, are not in any part subject to network option time. In fact, therefore, contrary to contentions that have been advanced to this Committee, option time, under the construction followed by CBS Television, is *contracted* rather than expanded when a single program in part covers option time and in part covers non-option time.

Option time, in addition, is sharply limited so as to permit broad discretion by the station. As the option clause provides, a station has the right to reject any network programs in option time in order to substitute other programs "of outstanding local or national importance." But a station's rights are much broader. It may also reject or refuse any network programs offered which the station "reasonably believes to be unsatisfactory or unsuitable" or, even though the program has already been contracted for by the station, which the station believes "is contrary to the public interest." Those provisions have been construed by CBS Television to permit wide discretion to the station to reject network programs which the station believes will not serve the local audience as fully as a non-network program which the station proposes to broadcast.[1]

The precise limits of the respective rights of the CBS Television Network and its affiliates under these provisions of the option time clauses have never been fully delineated, because in practice there has been no necessity for it. Rather, acceptance by stations of network programs has been based on the cooperation which is inherent in the basic partnership relation which exists between the network and its affiliates. There has been no rigid invocation of its option rights by the network, and affiliates' schedules are studded with non-network programs in option time (pp. 120 and 121 of this memorandum).

[1]As provided in the FCC rules, and as embodied in CBS Television Network affiliation agreements, the affiliate's right to reject a network program during option time would seem to be greater when the network program is first offered to the affiliate; the right appears to be more restricted after the station has actually agreed to accept the network program. Even after acceptance by the station, however, the station has considerable latitude since its own "opinion" that the program "is contrary to the public interest" suffices to support rejection. In any event, it should be noted that if a station feels that it has not received enough information in advance concerning the nature of the program to be offered, a station can preserve its broader right to reject, even after the program has begun; for if the station believes that it cannot evaluate, on the basis of advance information supplied, whether a network program offered is "unsatisfactory or unsuitable," it can condition its acceptance upon being satisfied after broadcasting the first programs of a series that it is satisfactory and suitable for continued broadcast.

An illustration of the operation of the network-station relationship in respect of option time is afforded by a recent example on station WTOP-TV, a CBS Television primary affiliate in Washington, D. C. and one of the four VHF stations in that city. The events were recently described by the radio-television editor of the *Washington Daily News*[1] as follows:

"The congressmen, currently up to their eyebrows in puzzlement as they try to unravel the mysteries of the TV industry at the current hearings on the Hill, should study how come WTOP—9 is taking 'Name that Tune' away from WTTG—5. It would be as instructive as taking the back off a watch to see what makes it go.

"The lawmakers would see:

"That the networks and their member stations are NOT ruthless monopolists trying to squeeze out independent stations.

"On the other hand, when a station suffers a business setback, it will take advantage of its network membership to mend its affairs even tho at the expense of an independent in the same city.

"IT'S CBS SHOW

" 'Name that Tune,' the quiz program offering a top prize of $25,000, is produced by CBS to which WTOP is affiliated. The show has been carried on WTTG this season because WTOP didn't want it.

"WTOP had 'Amos 'N' Andy' with a local sponsor and wanted to keep it on. However, it arranged for WTTG to take 'Name that Tune,' which was on at the same 7:30 p.m. Tuesday time.

[1] March 29, 1956.

"Thus the network station not only didn't try to keep a network show from a rival; rather it helped it get it.

"But the sponsor of 'Amos 'N' Andy' gave notice that it was dropping the syndicated film program. With spot thus due to be vacated, WTOP notified CBS that it needed network service, thus exercising its prior right to 'Name that Tune.'

"SHIFTS APRIL 10

"CBS gave the usual month's notice to WTTG, and 'Name that Tune' starts April 10 on WTOP.

"That the networks' hold on members can be weak is shown by the fact that 'Name that Tune' is on what is called 'network time,' meaning those hours when members are supposed to carry the network's show.

"The soap opera serials, 'Brighter Day,' 'Secret Storm' and 'On Your Account' from 4 p.m. to 5 p.m. are CBS shows and on network time. But they are shown by WTTG. WTOP prefers its own Pick Temple show.

"NATURAL PROCESS

"Its ability to take 'Name that Tune' when it needs it shows that WTOP is in a better competitive position than WTTG. That's because CBS has prospered in a competitive business, while only fragments are left of the Dumont network which owns WTTG.

"But there have been no deep-dyed plots, no bribery of government officials as has been hinted in the Hill hearings."

Thus in operation, CBS Television Network option time is not a one-way street; rather, in practice, it is utilized and adjusted for the benefit of both network and its affiliates.

While option time is thus in fact administered flexibly, either it or some equivalent tool is the keystone of network operations. Without such a tool, networks cannot operate. Without some reasonable assurance of general clearance by stations, the effectiveness of the over-all, day-in, day-out, week-in and week-out network schedule would be eroded.

It would take the defection of only a few key stations in major markets to deprive a network television advertiser of so substantial a part of his circulation that the program would not continue and thus would be lost not only to the network but, far more important, to the vast majority of stations which need and want the program. It is the public, then, and the stations in the smaller markets which would suffer most acutely, if any major pattern of non-clearance developed.[1]

It cannot be stated with certainty that any such fatal erosion would occur overnight; indeed, that is improbable. But equally, there can be no certainty that over a period of time, such erosion would not occur. If it did, the blow to networking, with all that networking means in the way of major programs and the programs which must be carried live, would be fatal.

---

[1]The station clearance history of "The $64,000 Question" serves to illustrate the importance to the public, to affiliates and to the advertiser of station clearance.

In order to make sponsorship of this program economically possible it had to be carried by a number of stations sufficiently large to insure a wide audience. The program might never have gone on the air if enough stations in important key markets had not agreed to accept it.

On June 7, 1955, the CBS Television Sales Service Department had been able to secure time on 104 stations—enough to justify introduction of the program by the sponsor. After it became available to the public, and because there were enough clearances to justify its introduction, the program proved so popular that the number of stations carrying the program increased each month. On July 5, 139 stations carried it; on August 2, 145; on September 6, 147; on October 4, 158; on November 1, 161; and on December 6, 163.

Thus, the public, the stations and the advertiser benefited. In November 1954, before the Tuesday 10 to 10:30 PM (E.S.T.) period on the CBS Television Network was occupied by "The $64,000 Question," 43.3 per cent of U.S. television receivers were not in use. In November 1955, after "The $64,000 Question" had occupied 10 to 10:30 PM (E.S.T.) for a few months, the sets not in use had been reduced by 18.4 per cent to 35.3 per cent.

Were it not for the clearance results which were forthcoming, it is possible that a handful of stations in key markets could have deprived the public of a program which it enjoys and could also have deprived more than 150 stations of the program itself, and the revenues accruing to them from the program.

Particularly in a period, if it ever should occur, of a declining market, without option time or some equivalent there would be a real threat of destruction which would be difficult to contain. It is wholly possible that an entire schedule could be eroded by a pattern of non-clearance that would checkerboard across the schedule. It is hardly likely that key stations would pick the same programs and the same time periods for non-clearance. What would be more likely to occur is that some key stations would refuse to clear during one half-hour, another group of key stations might pick another half-hour and another still a different half-hour. If the stations were in enough large markets, each network time period would then become unsalable to national advertisers. Obviously, no network could afford to program, with a quality schedule, so many time periods on a sustaining basis; as has been shown previously, the costs of high quality programming on a sustaining basis for one nighttime hour, seven days a week, would be between $13 million and $15 million. The alternative would be to curtail network service and thus throw the burden of programming and large costs on the scores of smaller stations which had *not* refused to clear.

These dangers are accentuated during a period of a softening of network business. Moreover, once a time period became sustaining because of the loss of an advertiser, it would be difficult for the network to recapture the period, because in many instances key stations might well have sold it to national spot and or local advertisers.[1] The station's contracts for those pro-

[1]It is one of the phenomena of the broadcasting business, illustrated by the recent history of radio, that in periods of decline, network business is hit first and hardest. A national advertiser's diminished budget is normally first withdrawn from the network and devoted instead to a more limited number of stations in key markets.

grams would have varying termination dates; hence, without option time, re-entry of the network would have to await the last termination of the last group of stations. But that date may be so late other stations meanwhile will not have waited, and cannot be expected to wait, and in turn will have entered into new contracts. By then the network advertiser is likely to be lost.

Essentially, therefore, option time is not a rigid right, explicitly exercised in particular cases by the network. Rather it is a limited protection against erosion, which can be used if it ever becomes necessary. It is a safeguard and a shield against destruction of networking,[1] rather than a sword.

It is of first importance in considering option time and its justification to recognize that it is the result of negotiations between stations and the network. It is not an abdication by stations of their responsibility; rather it is a voluntary recognition by them that the network is a reliable source of a substantial portion of an over-all effective weekly schedule with appropriate balance of the various elements which are necessary to successful broadcasting in the public interest. Since, by affiliating with a station, a network in effect agrees to use its best efforts to sell the station's time and make programs available to it, it naturally follows that the station will agree to make time available when the network does sell its time.

Option time is not, as has been suggested in the memorandum prepared for this Committee by its Special Counsel[2], "given" by

[1]Compare the comments in *The New York Times* (see Sunday, April 8, 1956, Section 2, p. 13): "There is, however, another most important side to the 'option time' controversy. Unless a network can count on access to a fixed number of hours it is hard to see how a chain could long survive. And without the combined economic strength of many advertising markets joined together it simply would not be feasible to finance many of the network's major fine productions and other public service features."

[2]Memorandum prepared for the Senate Committee on Interstate and Foreign Commerce by Harry M. Plotkin, Special Counsel, p. 34.

the Government. It is, rather, not forbidden by the Government and hence arrived at voluntarily by stations and network.

It has been claimed that networks should not be able to have option time since independent program producers do not have it. But it is fallacious to equate networks with independent film syndicators, for as has been shown, they do not perform the same functions. Film syndicators offer particular types of programs on a limited basis. The functions of a network are in sharp contrast with those of film syndicators.

A network offers a full and balanced schedule of both live and film programs and of both entertainment and non-entertainment nature.[1]

A network, to survive, must offer this kind of rounded overall schedule and, as has been described, it must, in order to perform its functions for the public, the stations and the advertiser, provide an effective composition of the weekly programming schedule.

It must be able to give a network advertiser some assurance of reasonably complete nationwide coverage on the basis of a single order.

It must, because of the importance to advertisers of program sequence (see pp. 83 to 85 of this memorandum), be able to provide him with assurance, in general, of where the program he sponsors will be broadcast in relation to programs which precede it, and follow it, and to programs with which it will compete.

[1]For the contrast between the programming of film syndicates, on the one hand, and networks, on the other, see the recent articles in *The New York Times* and the *New York Post*, cited at footnote 1, p. 99 of this memorandum.

A network must maintain an organization to experiment, create and produce; it must amortize the cost of major programs over many markets; it must schedule them for maximum circulation.

It must, in order to attract the ablest writers, producers and performers, make long-term commitments, and it must plan a reservoir of programs for the future in order to assure the maintenance of a high quality, continuous schedule.

A network must deliver simultaneity for national news and public affairs programs, for sports events, for entertainment programs in which the live and spontaneous element is essential, and for flexibility in scheduling simultaneous advertising messages.

A network creates, promotes and sells a national advertising medium.

Film syndicators and national spot advertisers may, in a limited way, perform some of these functions. But none must perform all, and none does so.

It is these basic differences between network television advertising and other television advertising, and between individual program suppliers and networks, which require the rejection of the attempt to equate the needs of the two groups for option time. If and when non-network programming sources provide an over-all qualitative programming service containing all the necessary variety of elements, then there still will be no need for Government intervention. For the stations are free now to deny option time to networks and to grant it to any other program source or sources which provide assurance of fulfilling their over-all needs. Stations will surely exercise that right at such time as other sources provide a more attractive over-all product.

In sum, without the ultimate safeguard of some device such as option time, at the worst networking with all its benefits could ultimately be fatally injured, and at the best the medium of television would be made less attractive and less economic so that the flow of advertiser dollars would be diverted to competing media, with the consequent weakening of television broadcasting, all of which—including broadcasting of syndicated film—is dependent upon these dollars.

(2) *The unsound premises on which option time is attacked.* The very nature of networking, and national advertising which uses networks, therefore, requires option time or some similar device which can provide reasonable assurance of the simultaneous availability not of a few scattered and isolated stations, but of a *network* of stations. It has been urged, however, that regardless of its importance to networking, it has restrictive consequences on other segments of the industry which require its elimination. Specifically, the premises upon which the proposal for elimination of option time is based are: (a) that option time has restricted the growth of non-network program sources; (b) that option time has unduly restricted the time available for non-network programs; and (c) that option time has restricted the ability of non-network advertisers to use television. None of these premises is sound.

(a) *The quantity and growth of non-network program sources.* A basic premise which underlies the proposal to forbid option time is that its effect has been to diminish the supply of television programs from non-network sources; it is alleged thereby to affect television stations adversely by limiting the supply of programs. The premise is inaccurate. The supply of non-network programs is large and increasing and its use by television stations, both network affiliates and non-affiliates, has been extensive.

Programs produced by non-network sources fall into two general categories: (1) syndicated film destined for national spot or local use on individual stations,[1] and (2) live or film programs for broadcast over the networks.[2]

There are a very large number of independent program producers, both large and small. Some are subsidiaries or affiliates of major Hollywood motion picture producers. Some are producers who have expanded into television from the radio syndication business. Some are talent agencies which in their productions utilize the talent they represent. Some are organizations which have come into being in recent years and devote themselves solely to production for television.

The vast majority of programs produced independently for use on individual stations are on film. These syndicated films are usually light situation comedies, mysteries, Westerns and other adventure programs.

While there has been no over-all survey of its total components and product, it is clear from published sources that the film syndication business is large, with a great many program suppliers. The business and its product have grown rapidly over the last few years.

[1]Such syndicated film may be either feature film initially prepared for theatre release or film produced especially for television.

[2]Another type of non-network program is the locally produced live program, produced by local stations or by independent producers.

Thus the *Television Factbook* for 1948 listed 192 independent programs, sources and services known to be acting as suppliers to television at that time. In the 1956 *Factbook*, 810 sources were listed, of which apparently almost 500 were newcomers since 1953. According to the *Television Magazine Data Book*, the number of syndicated films and film series produced especially for television and available for distribution increased from 85 in 1952, to 259 in 1955, and to more than 400 in 1956. The films listed in 1956 would provide 6,900 hours of programming, exclusive of the new installments of continuing syndicated programs which are being added to daily or weekly.

According to the January 23, 1956 issue of *Sponsor* magazine, film distribution in 1955 grossed $80 million and is expected to gross $100 million in 1956. Many syndicated film distributors reported increases of 50 per cent or more in revenues for 1955 over 1954.

According to the December 1955 issue of *Television Age*, the production budget of Screen Gems, Inc., one of the leading producers of syndicated film for television, rose from $100,000 in 1951 to $10 million in 1955. Its gross sales rose from $6 million in its 1954 fiscal year to $11 million in its 1955 fiscal year[1]; and it expects to gross $15 million in 1956.[2]

Guild Films Company, Inc., another producer of television films, almost doubled its sales and tripled its earnings in 1954, and, without network distribution, was able to place its programs on as many as 178 television stations in the United States, including many primary and basic required network affiliates.

[1] *Broadcasting-Telecasting Magazine*, December 12, 1955.

[2] *Sponsor*, January 23, 1956.

Its programs were sponsored by almost 400 companies.[1]

National Telefilm Associates, Inc., a distributor of syndicated feature film for television, increased its sales from $350,000 for the *year* ending July 31, 1954, to $870,000 for the *eight months* ending March 31, 1955, and to $1.5 million for the *six months* ending January 31, 1956. Its programs were broadcast by 313 stations during the 16-months period ending April 30, 1955.[2] Forty of its films were recently being broadcast in 96 different markets.[3]

The production plans for only three independent syndicated film producers call for expenditures of at least $31 million in 1956, according to *Television Age* for February 1956. The producers and their reported budgets are: TPA, $10 million; Screen Gems, $12 million; and Hal Roach, $9 to $13 million.

A cursory examination of trade publications received during the seven days April 11 to April 17 included announcements of 11 new film series which were being put on the market by independent producers and distributors. There were from 13 to 39 programs in each of those series. The most striking information came from the April 7, 1956, issue of *The Billboard,* which listed 173 *new* film series planned or in production for national sponsorship next Fall. At the head of the list appeared the following sentence: "The list does not pretend to be complete but does contain a large majority of shows being created for next season."

Another index of the upsurge of independent film producers

[1] Prospectus, September 28, 1954; Annual Report for 1954.

[2] Prospectus, June 7, 1955; Annual and Semi-Annual Reports for 1955 and 1956.

[3] *The Billboard,* January 21, 1956.

is the reported rise in the employment and earnings of writers in Hollywood who work exclusively for non-network film producers. According to the Western Branch of the Writers Guild of America,[1] the highest number of writers employed in Hollywood television production (exclusive of networks) in 1955 was 79; and in February 1956, the number had increased to 276. The gross earnings of the Hollywood television writers (again excluding those employed by the networks) for the ten months ending January 31, 1955, were $1.4 million; and during the succeeding ten months the writers received $4.5 million.

If, despite this evidence to the contrary, there is any present uncertainty on the part of syndicated film producers and distributors concerning the future salability of their products, it must be attributed to the overhang in the market of the vast film inventories of the major motion picture studios in Hollywood, which only now are being made available for television use.[2]

M-G-M is reported to be negotiating for the sale of its entire film library valued at $110 million. RKO last year sold its library for $15.2 million and the films are now being offered for television broadcast. Warner Brothers has just sold its feature film library for $21 million. Columbia Pictures has released to television 104 feature films, 22 Westerns and 151 cartoons. Paramount has sold 1,600 short subjects and 34 feature films. Republic Pictures has released 350 feature films. Universal

[1] *The New York Times* for April 5, 1956.

[2] Dwight Martin, Vice President of General Teleradio, the company that purchased the RKO feature film library, stated in a speech before the National Television Film Council on November 17, 1955, that there were then available for television approximately 3,362 feature films and 1,287 Westerns. He declared that there were twice as many features then available as past practice indicated stations would use. As noted in the text hereof, many additional feature films have been made available since that time.

Pictures has released 97 feature films and short subjects. Warner Brothers has released 191 short subjects. There are still large backlogs at Allied Artists, Columbia Pictures, Walt Disney, Paramount, Twentieth Century-Fox, United Artists and Universal Pictures.[1]

Indeed, when the Department of Justice recently decided not to appeal the judgment of the Federal Court in *United States vs. Twentieth Century-Fox Film Corp., et al.*, it was stated that "the Attorney General pointed out that in recent weeks, five of the companies named as defendants in the action—RKO, Columbia, Warner Bros., Universal and Republic have licensed or sold over 1,800 features and Westerns to television. In addition there have been reports that the remaining defendants are currently engaged in negotiating for release to television of an approximately equal number of features."[2]

It is clear, therefore, that there is a large and increasing number of non-network sources of supply and a large quantity of non-network programming available.

(b) *The time available for non-network programs.* A second premise on which the demand for the elimination of option time is based is that, apart from the matter of the number of non-network program sources, option time is somehow contracting the market available to these sources of non-network produced programs by permitting the pre-emption of all (or all desirable) station time during which their programs might be given exposure.

It is certainly true that whenever a station is broadcasting a

[1] *Variety*, March 28, 1956.

[2] Department of Justice release, March 6, 1956.

network-distributed program, it is prevented from carrying at the same time a program distributed by a non-network program source. It is clear, however, that despite any allegation to the contrary, non-network produced programs are given ample and desirable time for exposure.

This is perhaps most clearly demonstrated by the tremendous growth in the number of independent producers, and in the great increase in the number of television programs they are producing. (See pp. 113 to 118 of this memorandum.) To suggest that the current prosperity of non-network television producers exists in the face of an inability of their programs to appear (or to appear at desirable times) flies in the face of reason.

First, there is available virtually the full broadcast day of stations without option time agreements with any network. Among these stations are 36 stations without any network affiliation of any kind. The markets these 36 stations serve account for 43.2 per cent of the television homes in the United States. Although it is true that some, or perhaps all, of these stations carry some network programs, it cannot reasonably be maintained that option time agreements are preventing the exposure of non-network programs on these stations during any important segment of the broadcast day.

But, it may be argued, the great majority of television stations in the United States have affiliation agreements with networks, and it is probable that most of these agreements contain option time provisions. This is certainly true. However, even in the case of an affiliate whose network affiliation contract contains an option time provision, such option time applies to, at most, only nine hours of the broadcast day.

In addition, the network option applies only when the network broadcasts a sponsored program. None of the networks broadcasts sponsored programs during all nine hours of network option time (in fact, ABC does not now broadcast network programs before three o'clock in the afternoon, E.S.T.). Therefore, the network option applies to substantially less than the full nine hours provided in the standard CBS Television option clause. Furthermore, on many stations additional time is available even during the sponsored portions of the nine hours of network option time because the station is not always ordered by the network advertiser.[1] Also open to non-network programs, obviously, are all periods outside of option time.

Specific evidence of the fact that time is available, that it is desirable time, and that it is being utilized by the non-network advertiser is contained in the following excerpt from an address by Oliver Treyz, President, Television Bureau of Advertising:[2] "'Man Behind the Badge,' sponsored by Ohio Oil and ordered in 11 stations was cleared on ten of these in the supposedly difficult Class 'A' time. 'Great Gildersleeve,' for Lucky Lager Beer, was ordered in 26 stations and achieved 100 per cent Class 'A' clearance—26 Class 'A' clearances in 26 markets. 'Steve Donovan,' for Langendorf Bakeries, ordered into 13 stations, cleared in Class 'A' time in 11 of them. 'Racket Squad,' for Heilman Brewing Company, ordered in nine markets, 100 per cent Class 'A' clearance—nine markets cleared in Class 'A'

[1]The average number of stations carrying CBS Television Network programs during the daytime is 83, and the average number at night is 121. 150 CBS Television affiliation agreements provided for network option time on February 10, 1956.

[2]Speech delivered April 18, 1956, in Chicago at the annual convention of the National Association of Radio and Television Broadcasters.

time. 'The Turning Point,' a new program for General Electric, ordered into 68 markets and 66 markets with Class 'A' clearance. 'Dr. Hudson's Secret Journal' for Bowman Biscuit Company—12 markets ordered, Class 'A' clearances in all 12. 'Socony Mobil Theatre,' for Socony Mobil-Oil, primarily a central division order, 56 markets ordered, 56 markets cleared in Class 'A' time....This is a clear-cut demonstration that there are excellent availabilities in time and that these times can be claimed and can be staked out as franchises for syndicated film programs."

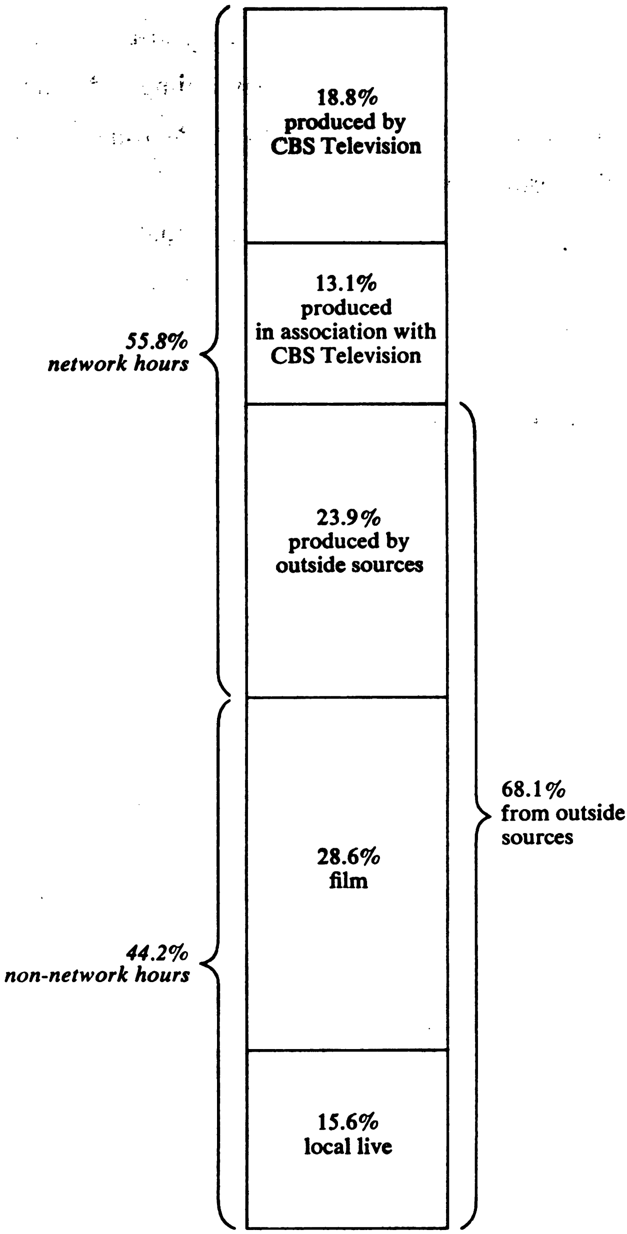
In summary, then, it appears that there is a substantial amount of time available for the broadcast of shows not distributed by the network. And indeed, the evidence bears out this appearance. Statistics which bear on this point are provided by a recent survey[1] based on the reports of 132 television stations, which showed that, during the week ending March 16, 1956, the average interconnected network affiliate was on the air a total of 102 hours and 45 minutes. Of this total, 29 hours and 22 minutes (28.6 per cent) were devoted to film programs not originated by the network, 16 hours (15.6 per cent) were devoted to local live programs and 57 hours and 23 minutes (55.8 per cent) were devoted to network originated programs. See Chart XXIII. Since only 57.1 per cent of the CBS Television Network commercial and sustaining[2] schedule is devoted to programs wholly produced by CBS Television or by CBS Tele-

[1]*Broadcasting-Telecasting Magazine*, April 2, 1956, pp. 78 to 80.

[2]For purposes of this computation it has been assumed that the average interconnected affiliate carried the same proportion of the CBS Television Network sustaining program schedule as it did of the CBS Television Network commercial schedule. As noted on pp. 88 and 89, only 49.8 per cent of the CBS Television Network commercial schedule is comprised of programs wholly produced by the network or by the network in association with outside producers.

CHART XXIII

PROGRAM SOURCES OF AVERAGE INTERCONNECTED AFFILIATE, SUSTAINING AND COMMERCIAL SCHEDULE



vision in association with independent producers, it will thus be seen that in fact by far the largest percentage (68.1 per cent) of the average interconnected network affiliate's time is actually devoted to programs produced directly or indirectly by outside sources, and the smallest percentage of the station's time (31.9 per cent) is devoted to CBS Television Network produced programs, 18.8 per cent produced by CBS Television alone and 13.1 per cent produced by CBS Television in association with outsiders.

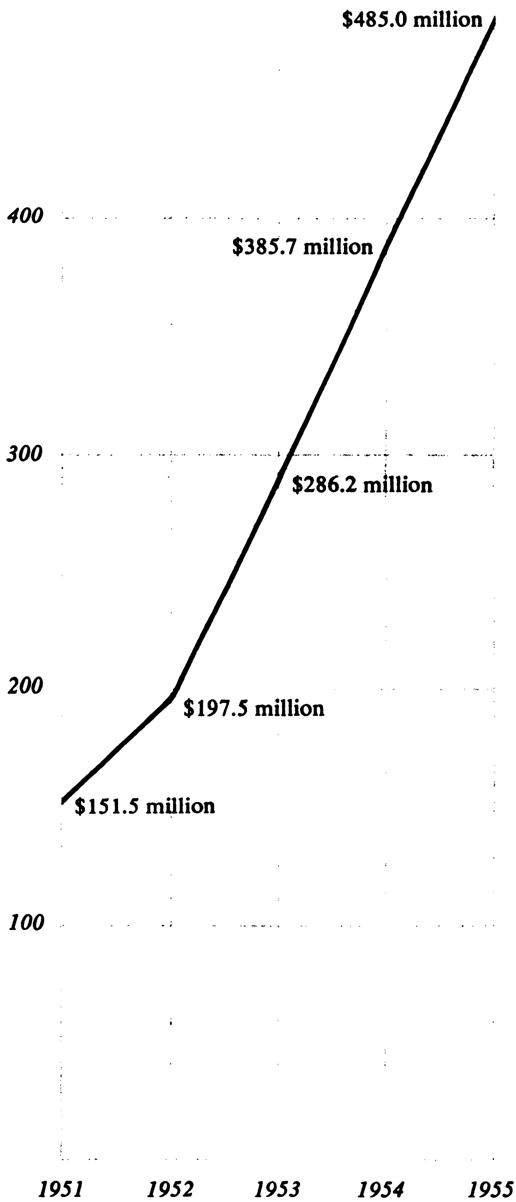
In considering the magnitude of use of non-network produced programs, the *Broadcasting-Telecasting* figures for non-network stations should also be taken into account. Non-network stations averaged about 85 hours of programming a week, of which 63 hours and 32 minutes, or 74.6 per cent, were devoted to non-network film (32 hours and 39 minutes, or 38.3 per cent, to film specially made for television and 30 hours and 54 minutes, or 36.3 per cent, to feature films).

A large part of the broadcast day, therefore, is available to non-network produced programs both on network affiliated and unaffiliated stations during and outside option time.

(c) *The growth and size of non-network television advertising.* The third premise on which the demand for elimination of option time is based is that, apart from the matter of quantity of network program sources, and the time available for non-network programs, option time is somehow restricting the growth of non-network television advertising. The evidence to the contrary is overwhelming. As indicated on Chart XXIV, there has been a steady and substantial increase, over the past five years,

CHART XXIV

TOTAL U.S. NATIONAL SPOT AND LOCAL TELEVISION ADVERTISING EXPENDITURES



in the volume of television expenditures by national spot and local advertisers: from $151.5 million in 1951[1] to $485 million in 1955.[2]

In 1955, the aggregate of money spent on national spot and local television advertising was only $55 million less than the corresponding network figure.[3] As in the case of radio, the margin between television network advertising volume and national spot advertising volume is steadily decreasing. Although nearly twice as much money was expended on network television advertising as was spent on national spot television advertising in 1955, the ratio between the two modes of national television advertising has materially decreased since 1949. In 1949, total expenditures for spot television advertising totaled 31 per cent of total expenditures for network television advertising; in 1955, this ratio had risen to 51 per cent. *Printers' Ink,* a publication accepted in the industry as a reliable source for advertising volume and other statistics, shows network—$520 million, national spot—$265 million, local spot—$220 million. Those figures were based upon estimated time costs adjusted upward to include program production costs. The amount of the adjustment for network was much greater than that for spot, because the costs of production of network programs are generally much greater than for spot programs. When based upon time charges alone, the ratio is substantially reduced—national spot volume for 1954 was 73 per cent of network volume based on official FCC figures.

---

[1] *Printers' Ink,* October 21, 1955, p. 69.

[2] *Printers' Ink,* February 10, 1956, p. 24.

[3] For the dependence of national spot and local advertising on strong network programming, see pp. 14 to 16.

A recent survey by the Television Bureau of Advertising shows that the gap between gross time charges for time purchased through the networks and gross time charges for time purchased on a national spot basis is rapidly closing. During the period October through December 1955, gross national spot television time sales to 3,017 advertisers equaled $103,872,000, while gross network television time sales during the same period totaled $116,336,797. National spot time sales, therefore, have increased to 89 per cent of network time sales.

It appears, therefore, that contrary to assertions which have been made concerning restrictions which have impeded the rate of growth of non-network television advertising, this growth has exceeded that of network advertising and there is every indication that the amount spent by non-network advertisers will soon exceed that spent by network advertisers.

(3) *Summary*. Option time, in sum, is a necessary device based on, and arising out of, the very nature of networking and network advertising. Its benefits to networking are not offset by detriment to other segments of the industry. Non-network sources of programming are numerous and plentiful—and have been expanding rapidly. There is more than ample opportunity on stations and on networks for exposure of the product of these non-network sources, and indeed, they enjoy such wide exposure. And option time has had no contracting effect on non-network television advertising. On the contrary, the record is clear that such advertising has grown rapidly, and in recent years, at a higher rate than network advertising.

In the circumstances, the attack against option time must fail on the basis of the actual facts.

F. THE PROPOSAL TO ELIMINATE "MUST-BUYS."[1] CBS Television, in accordance with a long standing practice in the broadcasting industry[2] which has never before been seriously questioned, had, as of March 1956, a list of 52 affiliates which it designates as "basic required" stations. Those stations cover substantially all the major markets in the United States and 81.8 per cent of American television homes. With a few exceptions arising out of special circumstances and the special needs of network advertisers,[3] the effect of the basic required list is to require advertisers who wish to use the network to order these stations as a minimum.[4]

The basic required stations, taken as a group, constitute the indivisible product that CBS Television creates, assembles and sells. *They are the basic network.* Combined, they provide a medium which in fundamental respects is different from the limited medium provided by each individual station. It is a national advertising medium, as distinguished from a local medium. Its function is to provide nationwide circulation in the tele-

[1]To the extent that the "basic required" practice is attacked as a violation of the antitrust laws, see the discussion in the legal memorandum submitted simultaneously herewith.

[2]Contrary to suggestions which have been made to this Committee, each of the networks has some form of must-buy or minimum purchase. As stated in Rate Card Number 6, effective March 1, 1956, ABC imposes the following requirement: "Advertisers are required to purchase a minimum cleared gross for station time equivalent to $50,000 per Class A hour. Advertisers are required to order as part of the applicable minimum the five ABC owned stations in New York, Chicago, Detroit, Los Angeles and San Francisco and any other ABC owned stations added during the effectiveness of this rate card."

[3]For the week ending April 7, 1956, one advertiser ordered less than 52 affiliates for its program. In the case of four other programs, more than 52 affiliates were ordered, but the orders did not include some of the basic required stations.

[4]Except in the case of one station, there is no agreement between the CBS Television Network and the stations involved by which they are designated as "basic required." In the case of the one exception, the designation was specified in the affiliation agreement at the insistence of the station. With this exception, CBS Television is free to, and does, alter the list at will. A station will be a basic required station if its unduplicated coverage area includes a minimum of 175,000 families. Stations having a service area containing somewhat less than the minimum number of families and stations having a service area containing more than the minimum number of families may be included in, or excluded from, the basic required group by reason of considerations other than population. Some of these considerations are conversion rate in case the station is a UHF station, income, retail sales, and buying power of the area served and importance of the principal city served.

vision field, just as *LIFE* and *The Saturday Evening Post* serve the entire nation in the publication field.

The size and characteristics of the network medium are determined by CBS Television, based upon the interrelated requirements of its customers (advertisers), its affiliates and its own internal economics. In practice, national advertisers who want network coverage almost universally order far in excess of the basic required stations. In April of this year, the average number of stations which broadcast CBS Television Network commercial programs during daytime hours was 83, and during nighttime hours was 121.

The minimum dimensions of the network having been outlined by advertiser demand, CBS Television has fashioned its product and geared its operations to meet that demand. The basic required list was not adopted to suppress competition in any way, nor does it do so. Its basic purpose and function are merely to define and delineate the product that the network has for sale.

It is interesting to note that the advertisers—the only group to whom the basic required practice directly applies—have never raised a question about the practice. The answer is simple. Those who need nationwide coverage use network advertising, and their normal wants include coverage in all the major markets represented by the basic required stations. Those who need something less than nationwide coverage turn naturally to spot advertising, or share the network facilities on a regional basis with other advertisers.

Advertisers thus have a great freedom of choice in the market. They have three different nationwide networks from which to choose. If they prefer not to use a network, they can choose any line-up of stations that they want on a spot basis, including network affiliates in the basic group. Or they can, as many do, mix network advertising with spot advertising. Or they can choose non-television media, as some do. An advertiser should not be permitted, however, to choose a particular network and at the same time reject a substantial part of it, thereby making the rejected part unusable as a network for that period.

In the publishing field, it would not occur to anyone that an advertiser who buys space in *LIFE* or *The Saturday Evening Post* should be able to say that he does not want the advertisement to appear in those copies of the magazines which are distributed in Los Angeles, or Louisville, or Seattle, or some other specific city. Theoretically it is possible to regard each copy as a separate publication which an advertiser could be free to order or not; but for business reasons the publisher determines that its product is a single nationwide publication, and no one questions its right to sell its advertising space on that basis. There is no reason for viewing a network in a different light.

Once a network has determined the character and dimensions of its basic product (the basic required group) and geared its operations to satisfying the demand for that product, there are compelling economic reasons for prohibiting fragmentation of the product. The network, as stated, makes heavy commitments for AT&T interconnection service among its affiliates, on a minimum basis of eight hours per day. The cost of maintaining the interconnection service simply could not be supported by orders for only a few major stations. If an advertiser were to place an order, for example, limited to New York, Chicago and Los Angeles, the costs for interconnection facilities, alone, would be unbearably excessive. There must be stations along the line to provide sufficient revenues to defray the cost.

The other extensive network services that are described in Parts II, III and IV of this memorandum also require the broad financial support of sales of the combined time of the major network affiliates. Those services cannot be supported by sales of only a small fraction of a network.

In summary, the policy of the basic required group is no more than a conformance to the normal demand of national network advertisers, and it is no different from any other minimum order policy which a supplier adopts where the nature of his product, the requirements of his customers and the economics of distribution justify it.

G. THE PROPOSAL TO PROHIBIT NETWORK OWNERSHIP OF STATIONS. It has from time to time been suggested that networks should be prohibited from owning stations. Insofar as this suggestion is predicated on the belief that such a divorcement is compelled by, or even consistent with, judicial decisions under the antitrust laws in motion picture cases, it is demonstrated to be erroneous in the legal memorandum submitted simultaneously herewith.

In any event, the proposal to prohibit networks from owning stations is arbitrary. Also, because of their importance to networking as well as the record of performance of network-owned stations in their communities, the prohibition would clearly be contrary to the public interest.

Network ownership of stations is essential as a matter of economics. In previous portions of this memorandum (pp. 52 to 55) it has been shown that the station profits as the percentage of revenues are far larger than network profits. This fact is indeed confirmed by CBS' own experience as is demonstrated by the following table:

		per cent of gross sales attributable to:		per cent of broadcast profits before taxes attributable to:	
	year	*network*	*owned stations*	*network*	*owned stations*
Television	1955	85	15	58	42
	1954	85	15	51	49
	1953	84	16	34	66
	1952	88	12	0	100
Radio	1955	69	31	22	78
	1954	75	25	45	55
	1953	76	24	44	56
	1952	75	25	31	69
	1951	77	23	43	57
	1950	77	23	46	54

It should be noted in connection with the foregoing table that in 1952, and for the first month of 1953, CBS owned only two television stations, and from February 1953 until February 1955, it owned only three television stations. Since February 1955, it has owned only four television stations, of which one, WXIX, Milwaukee, is a UHF station.

Not only is station ownership, in general, more profitable than network ownership, but equally important, station revenues are far more stable. As has been shown (pp. 50 to 55), the margins of network profit in relation to sales are narrow and the swings are violent. Because networks are particularly vulnerable in periods of decline (see table on this page showing the relationship of CBS Radio Network profits to the profits of CBS

Owned radio stations), and because of this phenomenon of the violent swing, station ownership provides an essential bulwark supporting network operations. Because of the economic peculiarities inherent in the network business, it is the stable source of revenues provided by its owned stations which permits the network to maintain the organization and take the necessary risks involved in major investments in facilities and long-term talent commitments. Indeed, it would seem clear that without these assurances of stable revenues from its ownership of stations, networks would be forced substantially to curtail their investments and commitments and to shrink their sustaining, informational and similar programming to which the revenues of owned stations contribute so heavily.

It has been suggested that the force of the economic justification for network ownership of stations is fatally weakened by the success of CBS Television in the face of the fact that, unlike NBC and ABC, it has not owned its full quota of stations. But this is hardly assurance for the future; on the contrary, past history indicates that it is a weak reed upon which to rely. For the past few years hardly represent a typical period in the life cycle of television. It has been a period of explosive growth and of shortage of stations. There has not yet been a period of normal conditions, nor a period of any degree of recession. Hence none of the stresses against which station ownership is such powerful insurance have in fact obtained. And, in any event, as the table on p. 131 shows, the CBS Owned television stations have contributed a significant portion of CBS Television profits.

The FCC itself has confirmed the desirability of network ownership of stations because of the economic factors involved. Thus, in the ABC-Paramount merger case, the Commission recognized the speculative character of network operations and attributed the difficulties of ABC to its lack of financial resources "to take the risks involved in making long-term contracts with outstanding talent" (8 R. R. p. 599). It noted (p. 614): "Officials of all three networks involved in this proceeding, ABC, CBS and DuMont, are in agreement concerning the economic and operational importance of network ownership of television stations. The revenues of owned stations support networking operations, which are not per se significantly profitable."[1]

While the economics of networking provide the primary reason for the essentiality of networks' ownership of stations, there are other important reasons. Thus, network owned stations are far more likely to accept sustaining programs produced by the News and Public Affairs Department, and it is because of that reasonable assurance of substantial exposure for such programs that it is possible to plan and produce these at all.

So, too, ownership of stations provides an important lifeline for the infusion of new personnel into the network. The stations which CBS owns have furnished the CBS Television Network with a reservoir of personnel who are thoroughly familiar

[1]See also the Commission's Report and Order in Docket No. 10822, 11 R. R. 1519, 1523, in which the Commission noted: "The ownership of broadcast stations in major markets by the networks ... is an important element of network broadcasting."

See also address of Commissioner Bartley, January 1955, at the University of Georgia, in which he stated: "Network service, which is essential if we are to reap the benefits of instantaneous programming on a nationwide basis, would be complicated to the point of impracticability if their key stations, that is, the principal origination points for the bulk of their programs, were not run by the networks.

"Then, too, there is some basis for the claim that network operation, if divorced from the revenues of key stations, could not long survive. The cost of line charges, particularly in television, may well tend to drive more and more programs onto film or tape. So, based primarily on these two things: first, necessity for key station control, and, two, the need for key station revenues to help defray network costs, we have found it beneficial and in the public interest to allow a degree of multiple ownership."

with the operations of the network and who are experienced in broadcasting at the station level—where there is more immediate contact with public tastes and public reaction. Such personnel, trained at the station level, make it possible for the CBS Television Network to have executives who are sensitive to the problems of station operations and the broadcasting needs of different parts of the country. Their knowledge of station operations enables them to provide intelligent assistance and advice to the managers of the owned stations, and to appreciate the problems of affiliated stations in endeavoring to adapt to the needs of their viewers for network and local programs.

Similarly, owned stations are laboratories for program ideas and talent. In a number of cases, programs developed by its owned stations have later been added to the network schedule. For example, KNXT, the CBS Owned television station in Los Angeles, created and broadcast a series of programs by Dr. Frank C. Baxter on Shakespeare. Its success led the network to expand the program and carry it on a nationwide basis. Similarly, "Camera Three" and "Eye on New York," originally developed and broadcast by WCBS-TV, New York, were later broadcast by the network. Among the CBS talent developed by the stations, and later utilized on the network, are Arthur Godfrey and Jack Sterling.

But television stations owned by CBS contribute not only to the network but, even more important, to the communities which they serve. It has long been the policy of CBS that both the personnel of the owned stations and the stations themselves play an active role in the civic life of their cities. The stations owned by CBS have concentrated heavily on local programming and community service. Appendix D summarizes some of the details of the local programming, and of the community activities of these stations, and the awards which they have won for their local service.

It is submitted that no facts and no considerations of public policy would justify discriminating against networks, among all potential owners, as ineligible to own stations. On the contrary, as has been shown, the public would be seriously disserved by such a prohibition, not only because of its grave effect on networking operations, but also because it would deprive important local communities of station ownership which has proved by its record that it serves the communities well.[1]

H. THE PROPOSAL TO REGULATE NETWORK AFFILIATIONS.

The proposal that the Federal Government intervene in the question of network affiliation with stations and in effect determine with which stations a network must affiliate is apparently based on the premise that networks have been arbitrary and whimsical in their affiliation determinations. The facts are to the contrary.

It should be noted at the outset that the number of stations with no network affiliation at all is exceedingly small. For of the 429 commercial stations on the air as of March 1, 1956, 393 were affiliated with a nationwide network.[2] Thus, only 36 stations are not affiliated with one of the three networks and

[1]It has been suggested that network ownership of stations curtails competition. But the Commission's rules carefully guard against ownership of stations where competition would be adversely affected. It is to be noted that WCBS-TV is one of seven VHF stations in New York; KNXT is one of seven VHF stations in Los Angeles; WBBM-TV is one of four VHF stations in Chicago; and WXIX is a UHF station competing against three VHF stations in Milwaukee.

[2]The 393 affiliates do not include stations with which the networks have only "per-program" arrangements.

even of these 36 a substantial number have "per-program" arrangements with the networks.[1] In the case of these 36 stations, affiliation is not feasible either because they are in cities (such as Los Angeles, New York and Chicago—in which there are a total of nine unaffiliated stations) where each of the three networks already has a primary affiliate or they are in areas where there is severe overlap with existing affiliates.

Nor is it consistent with the facts to predicate Government control of network affiliations on the charge of discrimination against UHF. The fact is that the CBS Television Network is not concerned with whether a station is UHF or VHF, except insofar as it determines size of the audience which will be added to that already served by the network, and the effect upon the network's over-all cost per thousand.[2] During 1955 a total of 53 UHF stations broadcast CBS Television commercial programs for which they received $2,334,481 as their share of the revenues for those programs.

In any event, it is submitted that any careful examination of the procedures, practices and criteria which the CBS Television Network has adopted in making its affiliation determinations readily establishes that the network is not arbitrary or whimsical. These practices, policies and criteria have been described in full in response to a "Questionnaire for TV Networks," submitted to this Committee in December 1954. Brought up to date, that response is set out in full in Appendix C of this memorandum. The Appendix establishes that CBS Television

[1]Thus the CBS Television Network currently has "per-program" arrangements with six of these non-affiliated stations.

[2]For a description of the part played by the fact that a station is UHF, see Appendix C, pp. XXVI to XXVIII.

practices, policies and criteria are the result of careful consideration, and have been formulated in the light of the responsibilities of the network to each of the several groups which must be involved—the public, present affiliates and advertisers.

It is true that it is not possible for a network to formulate precise criteria for affiliation which are self-executing and which can be applied in any situation with mathematical certainty. The question of whether or not to affiliate is often difficult and delicate, involving close questions of business judgment and rooted in advertiser economics (see Part IV, B of this memorandum). Affiliation determinations, because of the very nature of the business, require substantial room for the exercise of sensible business judgment.

For the same reasons, affiliation determinations seem plainly not susceptible to regulation by Government fiat. It would be impossible, by legislation or regulation, to establish a sensible set of standards which would automatically dictate the choice in each case. And indeed, as far as competition for affiliation between stations in the same community is concerned, precisely this conclusion has been conceded by the Special Counsel of this Committee in his Memorandum transmitted on February 1, 1955. He there stated (p. 24) that absent a conspiracy or unduly restrictive practices (over which both the FCC and the Department of Justice have ample authority under present law), "it is of no governmental concern whether a given network awards an affiliation to station A or station B where they are both located in the same community, and where they serve approximately the same service area."

It would seem that exactly the same conclusion applies in any case of affiliation. It is difficult to conceive how the Government can sensibly make the necessary business judgments involved. And even if it could, it is unlikely that any benefit to the handful of unaffiliated stations would result. As has been noted (pp. 74 to 78 of this memorandum), mere affiliation is not enough. Affiliations are denied where there is already an affiliate in the community, or where the applicant would contribute so little additional circulation that an advertiser could not be expected to order the station. Obviously, in such cases, affiliation is unlikely to be of significant help to the station. The advertiser must still order the station, and it has not yet been suggested that the Government can compel the advertiser to do so; nor can the Government compel the advertiser to remain in network television.

It is to be noted that by its adoption of a policy of accepting an advertiser order for any station, even though not affiliated, so long as it is not located in the principal community where an existing affiliate is located, CBS Television has provided substantially all which Government regulation could provide, for the effect of this policy is to give every station (except those located in the same communities), whether affiliated or not, opportunity to carry CBS Television Network programs if they are ordered by the advertiser.

In sum, it is submitted that the proposal to regulate the affiliation practices of networks, and thus to determine where and with whom the network must affiliate, will inject the Government into an area in which even the large bureaucracy necessary for administration of such a law could make no sensible or beneficial contributions.

I. THE PROPOSAL TO REQUIRE VHF STATIONS TO SHARE NETWORKS. The American Broadcasting Company has suggested to this Committee that VHF stations in one- or two-station markets be required, for an unspecified "interim" period, to "share their service equally and equitably among the three networks."[1] The representative stated (p. 1705) "I think it should operate to provide positive entry rather than operate as an additional barrier to an additional program service common to the market." It would appear, therefore, that the ABC proposal is, in fact, a proposal not only to forbid a VHF station in one- and two-station markets from carrying more than a specified percentage of programs of a particular network; it is designed also to *require* the station to carry the programs of ABC (or any new networks not now in being) for a specified percentage of time.

Proposals such as this have previously been advanced in recent years. A similar proposal was the subject of FCC rule making proceedings in 1950-51 (Docket No. 9807). It was also advanced by DuMont in 1954. Both times it has been rejected; both times, indeed, it was opposed by ABC itself. In its

[1]Transcript of Hearings before this Committee, March 26, 1956, p. 1705. The precise content of this proposal is unclear. While, as first stated, ABC proposed that the stations share "equally and equitably," at p. 1707 the ABC representative stated that in such two-station markets as Providence each station would be required to provide one out of three of the evening option hours for service for the network with which it is not primarily affiliated. The ABC representative stated that thus "the primary network would still have a two to one advantage and therefore, I am not talking about parity." Of course, if the CBS Television affiliate in Providence were required to give up one hour to a network other than CBS Television, it could do so in order to carry an NBC program; similarly, the NBC primary affiliate, forbidden to carry NBC during the third hour, could theoretically carry the CBS Television programs. Thus, ABC would not be benefited. It is probable that ABC actually suggests that each station be forbidden to carry programs during the hour, not only of the network with which it is primarily affiliated, but also, of the network with which the other station is primarily affiliated. Only in this way could ABC be assured of the exposure which it demands. But this would involve a regulation the impact of which would apply to one station depending on the action of its competitor station in the same market: Station A, a primary affiliate of NBC, could carry two NBC hours, but none of CBS Television if Station B carries two hours of CBS Television.

comments in Docket No. 9807, ABC explicitly stated that it "would oppose any requirement affirmatively obligating licensees to clear a minimum number of hours for each network."

Apart from the extraordinary mechanical difficulties which such a proposal would entail (see footnote, p. 139), such a proposed rule is objectionable. It abandons the basic concept of licensee responsibility which is a fundamental tenet of the Federal Communications Act and a central policy of the Commission. The rule would destroy the licensee's freedom to select its own programs and to determine those persons with whom it would deal.

Contrary to fact, the rule assumes that each network is offering programs of equal quality and popular appeal. The rule would require stations to broadcast certain programs even when its management is convinced that they are unwanted by the station's audience. It would establish a dangerous and unsound precedent based on Government compulsion upon a licensee forcing the licensee to deal with a network not of its own choosing, and to accept programs which it would otherwise reject.

The proposal also turns its back on the principle that the public interest requires that there should, and must, be free competition among the networks for station affiliation and clearance. This was precisely the philosophy which underlay the Commission's rule forbidding the operation of option time against any other network. Stations are now free to choose, during any period of the broadcasting day, the programs of any network. As has been shown (p. 98), network programs cross affiliation lines so that, for example, ABC's "Disneyland" is carried on many CBS Television primary affiliates.

In essence, therefore, the proposal, under the guise of encouraging and equalizing competition, in fact is antithetical to competition. It would dilute the incentive of networks constantly to provide the best possible programs, for no matter how good their programs, the networks would *by law* be forbidden access, during certain periods of the day, to stations in favor of a competitor.

Nor can these undesirable consequences be considered, as ABC seems to suggest, in the light only of a *third* network. The possibility of fourth, fifth, sixth, etc. networks must also be considered, particularly if, as the proposal contemplates, each has a right automatically to a free ride in sharing stations' time. Thus, the moment a fourth organization declares itself a network and enters the business, it would have an automatic right, regardless of its performance, schedule, or record, to share one quarter of the aggregate time of stations in markets which have less than four stations; a fifth network would get one fifth of stations' time in markets of less than five stations—and so on, cutting down on the time available to existing networks with each new "network."

It is submitted that these considerations, which have led to rejection of this proposal over the past six years, are still of controlling persuasiveness. They require the proposal's rejection once again.

J. THE PROPOSAL TO LICENSE NETWORKS. The proposal to license and regulate networks is, on its face, simple. But since the Commission already exercises considerable regulatory powers over a network through its licensing of the stations owned by the network, as well as through its licensing of stations affiliated with the network, the implications of a proposal directly to license and regulate networks are both wide and unknown. In effect, it would seem that the proposal is designed to regulate, and hence license, anyone entering into the business of networking, irrespective of the fact that the network may own no stations and thus make no use of any portion of the broadcast spectrum. Yet it is the use of the spectrum which has always provided the basis in law for licensing and regulating broadcasters.

By abandoning this concept, the proposal enters into a novel and dubious realm. Its implications are perhaps most clearly assessed by regarding it as a proposal to regulate and license a network, not only in its affiliation practices,[1] but also as a supplier of program material—just as are film producers, independent program packagers or advertising agencies which produce programs. That is an extreme concept which may well lead to the complete destruction of the principle of free competition embodied in the Federal Communication Act and basic to the American system of broadcasting.

To the extent that the proposal is an attempt to regulate networks *per se* and wholly apart from *station* licensing, it is no different from saying that newspaper wire services or newspaper syndicates should be subject to regulation in order to control the subject matter of their writings, and perhaps, even how much they charge customers. It would inject the Federal Government into areas which have long been forbidden to it: areas of business judgment, of program content, of determining with whom suppliers may and may not deal; all involving the most

[1]To the extent that the proposal is designed to reach affiliation practices, it has been discussed on pp. 135 to 138.

intimate details of the business relationships between networks and stations and networks and advertisers—even to the fixing of rates, although there is no payment by the ultimate consumer—that is, the television viewer—involved at all.

It is submitted that nothing in the nature of television broadcasting or of current practices warrants, or even permits, so radical a departure from existing concepts and so dangerous a philosophy of Governmental intervention.

APPENDIX A

Form of Typical CBS Television Primary Affiliation Agreement

CBS TELEVISION

A division of Columbia Broadcasting System, Inc.

TELEVISION AFFILIATION AGREEMENT

AGREEMENT made this day of , 19 by and between CBS TELEVISION, a division of Columbia Broadcasting System, Inc., 485 Madison Avenue, New York 22, New York (herein called "CBS Television") and

(herein called "Station") licensed to operate television station at full time on a frequency of on Channel number

CBS Television is engaged in operating a television broadcasting network and in furnishing programs to affiliated television stations. Some of such programs, herein called "sponsored programs," are sold by CBS Television for sponsorship by its client-advertisers. All non-sponsored programs are herein called "sustaining programs." "Network sustaining programs," "network sponsored programs" and "network programs" as used herein mean network television programs. Station and CBS Television recognize that the regular audience of Station will be increased, to their mutual benefit, if CBS Television provides Station with television programs not otherwise locally available.

Accordingly, it is mutually agreed as follows:

1. CBS Television will offer to Station for broadcasting by Station network sustaining programs as hereinafter provided, without charge, and CBS Television network sponsored programs for which clients may request broadcasting by Station and which are consistent with CBS Television's sales and program policies. Network sustaining programs made available by CBS Television are for sustaining use only and may not be sold for local sponsorship or used for any other purpose without the written consent of CBS Television in each instance.

Station shall have a "first refusal" of each network sponsored program and each network sustaining program which is to be offered to any television station licensed to operate in the community in which Station is licensed to operate. Station may exercise its "first refusal" with respect to any network program by notifying CBS Television within 72 hours (exclusive of Saturdays, Sundays and holidays) after CBS Television shall have offered the program to Station that Station will accept and broadcast such program in the time period and commencing on the date specified by CBS Television in its offer of such program to Station. In the event that Station shall not so notify CBS Television with respect to any such program, Station shall not thereafter have any right to broadcast such program.

2. (a) Station, as an independent contractor, will accept and broadcast all network sponsored programs offered and furnished to it by CBS Television during "network option time" (as hereinafter defined); provided, however, that Station shall be under no obligation to accept or broadcast any such network sponsored program (i) on less than 56 days' notice, or (ii) for broadcasting during a period in which Station is obligated by contract to broadcast a program of another network. Station may, of course, at its election, accept and broadcast network sponsored programs which CBS Television may offer within hours other than network option time.

(b) As used herein, the term "network option time" shall mean the following hours:

(i) if Station is in the Eastern or Central Time Zone, Daily, including Sunday, 10:00 A.M. to 1:00 P.M., 2:00 P.M. to 5:00 P.M. and 7:30 P.M. to 10:30 P.M. (expressed in New York time current on the date of broadcast);

(ii) if Station is in the Mountain or Pacific Time Zone, Daily, including Sunday, 10:00 A.M. to 1:00 P.M., 2:00 P.M. to 5:00 P.M. and 7:30 P.M. to 10:30 P.M. (expressed in local time of Station current on the date of broadcast).

3. Nothing herein shall be construed (i) with respect to network programs offered pursuant hereto, to prevent or hinder Station from rejecting or refusing network programs which Station reasonably believes to be unsatisfactory or unsuitable, or (ii) with respect to network programs so offered or already contracted for, (A) to prevent Station from rejecting or refusing any program which, in its opinion, is contrary to the public interest, or (B) from substituting a program of outstanding local or national importance. CBS Television may, also, substitute for one or more of the programs offered hereunder other programs, sponsored or sustaining, of outstanding local or national importance, without any obligation to make any payment on account thereof (other than for the substitute program, if the substitute program is sponsored). In the event of any such rejection, refusal or substitution by either party, it will notify the other by private wire or telegram thereof as soon as practicable.

4. Station will not make either aural or visual commercial spot announcements in the "break" occurring in the course of a single network program or between contiguous network sponsored programs for the same sponsor where the usual station break does not occur.

5. CBS Television will pay Station for broadcasting network sponsored programs furnished by CBS Television as specified in Schedule A, attached hereto and hereby in all respects made a part hereof. Payment to Station will be made by CBS

Television for network sponsored programs broadcast over Station within twenty (20) days following the termination of CBS Television's four or five week fiscal period, as the case may be, during which such sponsored programs were broadcast.

6. CBS Television will offer to Station for broadcasting such network sustaining programs as CBS Television is able to cause to be delivered to Station over coaxial cable or radio relay program transmission lines under arrangement satisfactory to CBS Television. CBS Television shall not be obligated to offer, or make available to Station hereunder, such network sustaining programs as it may have available in the form of TV recordings, unless CBS Television has the right so to do and Station shall agree to pay CBS Television's charges therefor.

7. When, in the opinion of CBS Television, the transmission of network sponsored programs over coaxial cable or radio relay program transmission lines is, for any reason, impractical or undesirable, CBS Television reserves the right to deliver any such program to Station in the form of TV recordings, or otherwise.

8. Station agrees to observe any limitations CBS Television may place on the use of TV recordings and to return to CBS Television, transportation prepaid by Station, immediately following a single broadcast thereof, at such place as CBS Television may direct, and in the same condition as received by Station, ordinary wear and tear excepted, each print or copy of the TV recording of any network program, together with the reels and containers furnished therewith. Each such TV recording shall be used by Station only for the purpose herein contemplated.

9. Neither party hereto shall be liable to the other for claims by third parties, or for failure to operate facilities or supply programs for broadcasting if such failure is due to failure of equipment or action or claims by network clients, labor dispute or any similar or different cause or reason beyond the party's control.

10. The obligations of the parties hereunder are subject to all applicable laws, rules and regulations, present and future, especially including rules and regulations of the Federal Communications Commission.

11. Station shall notify CBS Television forthwith if any application is made to the Federal Communications Commission relating to the transfer of any interest in Station (or in the television station to which this Agreement relates), and CBS Television may terminate this Agreement, effective as of the effective date of such transfer, by giving not less than ten days' prior notice to Station. If CBS Television does not so terminate this Agreement, Station will procure the agreement of the proposed transferee that, upon the consummation of the transfer, the transferee will assume and perform this Agreement.

12. All notices required, or permitted, to be given hereunder shall be given in writing, either by personal delivery or by mail or by telegram or by private wire (except as otherwise expressly herein provided) at the respective addresses of the parties hereto set forth above, or at such other addresses as may be designated in writing by registered mail by either party. Notice given by mail shall be deemed given on the date of mailing thereof. Notice given by telegram shall be deemed given on delivery of such telegram to a telegraph office, charges prepaid or to be billed. Notice given by private wire shall be deemed given on the sending thereof.

[III]

13. This Agreement shall be construed in accordance with the laws of the State of New York applicable to contracts fully to be performed therein, and cannot be changed or terminated orally.

14. Neither party shall be or be deemed to be or hold itself out as the agent of the other hereunder.

15. As of the beginning of the term hereof, this Agreement takes the place of, and is substituted for, any and all television affiliation agreements heretofore existing between the parties hereto concerning the market area to which this Agreement relates, subject only to the fulfillment of any accrued obligations thereunder.

16. The term of this Agreement shall begin on and shall continue for a period of two (2) years from such date; provided, however, that unless either party shall send notice to the other at least six months prior to the expiration of the then current two-year period that the party sending such notice does not wish to have the term extended beyond such two-year period, the term of this Agreement shall be automatically extended upon the expiration of the original term and each subsequent extension thereof for an additional period of two years; and provided, further, that this Agreement may be terminated effective at any time by either party by sending notice to the other at least twelve months prior to the effective date of termination specified therein.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the day and year first above written.

CBS TELEVISION, a Division of Columbia Broadcasting System, Inc.

By..

SCHEDULE A

(Attached to and forming part of the agreement between CBS Television and

This Schedule A contains provisions supplementary to said agreement and in case of any conflict therewith, the provisions of this Schedule A shall govern.)

I. CBS Television will pay Station for broadcasting network sponsored programs furnished by CBS Television during each week of the term hereof, thirty per cent (30%) of the gross time charges for such week, less the "converted hour" deduction and the ASCAP and BMI deduction.

II. The "converted hour" deduction for any week shall be one hundred fifty per cent (150%) of the amount obtained by dividing the gross time charges for such week by the number of "converted hours" (as hereinafter defined) in such week.

III. The ASCAP and BMI deduction for any week shall be the amount obtained by (i) deducting the "converted hour" deduction for such week from thirty per cent (30%) of the gross time charges for such week, and (ii) multiplying the remainder by the ASCAP and BMI percentage.

IV. As used herein, the term "gross time charges" for any week shall mean the aggregate of the gross card rates charged and received by CBS Television for broadcasting time over Station for all network sponsored programs broadcast by Station during such week at the request of CBS Television.

V. As used herein, the term "converted hour" means an aggregate period of one hour during which there shall be broadcast over Station one or more network sponsored programs for which CBS Television shall charge and receive its Class A time card rate for broadcasting time over Station. An aggregate period of one hour during which there shall be broadcast over Station one or more network sponsored programs for which CBS Television shall charge and receive a percentage of its Class A time card rate, such as its Class B time card rate, shall be the equivalent of the same percentage of a converted hour. Fractions of an hour shall be treated for all purposes as their fractional proportions of a full hour within the same time classification.

VI. CBS Television shall not have the right to reduce Station's gross hourly card rates for network sponsored programs except in connection with a re-evaluation of the gross hourly card rates for network sponsored programs of a substantial number of its affiliated stations. CBS Television shall give Station at least thirty days' prior notice of any reduction in Station's then current gross hourly card rates for network sponsored programs and Station may terminate this Agreement, effective as of the effective date of any such reduction, on not less than fifteen days' prior notice to CBS Television.

VII. As used herein, the term "ASCAP and BMI percentage" shall mean the aggregate of the percentages of CBS Television's "net receipts from sponsors after deductions"

[V]

and of CBS Television's "net receipts from advertisers after deductions" paid or payable, respectively, to American Society of Composers, Authors and Publishers (ASCAP) and Broadcast Music, Inc. (BMI) under CBS Television's network blanket license agreements with ASCAP and BMI. (Currently such percentages are 3.025 and 1.2, respectively.)

VIII. In the event that CBS Television shall have license agreements with ASCAP or BMI which shall provide for the payment of license fees computed on a basis other than a percentage of CBS Television's "net receipts from sponsors after deductions" or "net receipts from advertisers after deductions," as the case may be, CBS Television shall deduct from each payment to Station, in lieu of the ASCAP and BMI deduction, the proportionate share of music license fees paid or payable by CBS Television which is properly allocable to such payment.

IX. The obligations of CBS Television hereunder are contingent upon its ability to make arrangements satisfactory to it for facilities for transmitting CBS Television network programs to the control board of Station.

APPENDIX B

A Case History of a CBS Public Affairs Series

Except that no revenues were involved, the case history of the planning, conception and evolution of the Public Affairs program entitled "The Search" parallels that of "Climax!" (see pp. 36 and 37 of this memorandum). "The Search," a series of programs produced by the Public Affairs Department, was designed to broaden man's horizons by bringing to the viewer knowledge of current scientific research projects. Its history illustrates the basic philosophy of the CBS Public Affairs Department that the objective must be to produce educational and informational programs which are designed and presented attractively so they will reach the largest possible audience.

Preparation of "The Search" began in January 1951, when a series of staff conferences led to the concept of a program series which would describe to the viewing public, in terms which would be informative and useful, the research done in major universities. In the Spring of 1951, negotiations were begun with a major university and sample scripts were prepared. Later, negotiations were begun with a second major university. By the Winter of 1951-52, two different types of programs were simultaneously prepared—one on a live basis with the first university, the other on a filmed basis with the second university. In September 1952, the pilot film was completed and revised. In October 1952, both the live and the filmed pilots were rejected since they did not measure up to the standards of the department. Research was begun again to determine where the scope of the series could be broadened so as to include many projects of many universities. In November 1952, the department assigned a staff to engage in a research tour of a number of universities throughout the country.

In December 1952, a decision was reached to proceed to film 26 programs, each dealing with a different research project at a different university. In January 1953, a skeleton staff was assembled, and in March 1953, the first actual production steps were taken. In July 1953, the first rough cut version of a single program was screened. Again after careful analysis, in September 1953, it was decided that the program was not wholly satisfactory and that its approach should be shifted. For the next few months, the organization for research, reporting and production was rebuilt and by February 1954, the rebuilt unit began active production.

In September 1954, the first of the series of 26 "The Search" programs was broadcast—*three years and nine months after actual preparation had begun.*

The series was continued throughout the Fall and Winter; it was repeated at a different time period in the Summer of 1955. The subjects with which the 26 programs dealt include such varied research projects as automation at the Massachusetts Institute of Technology; Arkansas folklore at the Fine Arts Center of the University of Arkansas; diagnosis and care of deafness at Johns Hopkins University; child development at

Yale University; and uranium prospecting and mining at the Colorado School of Mines.[1]

The total direct cost of "The Search," which was unsponsored, was approximately $750,000. Of this amount, $500,000 was spent during the years of preparation preceding the first broadcast.

The program has won ten awards, including the George Foster Peabody Award and the Blakeslee Award of the American Heart Association.

[1]One of the programs in the September series dealt with the work of Cornell University in the area of automobile safety. As a direct result of suggestions made in the course of the program, at least one major automobile manufacturer made available in its 1956 cars safety steering wheels, safety door locks, crash padding and seat safety belts.

APPENDIX C

CBS Television's Criteria in Affiliation Actions

NOTE: *This Appendix is a reprint of substantially all of the reply of CBS Television to Section III of a questionnaire submitted to CBS Television and other networks on October 19, 1954, by the Honorable John W. Bricker, then Chairman of the Senate Committee on Interstate and Foreign Commerce. Some explanatory text has been added as shown in italics within parentheses. New footnotes are numbered. Omissions from the original reply are indicated by a line of asterisks. Essentially, the omitted material consists of material duplicated in the body of the memorandum to which this document is an appendix.*

General Introduction

In selecting its affiliates, CBS Television is mindful of its obligation to discharge its responsibilities to each of several groups—viewers, potential viewers, the public at large, advertisers and the stockholders of CBS.

Ideally, it strives to select affiliates so that (1) CBS Television programs will be available to the largest possible number of viewers, and (2) the "cost per thousand"* of circulation provided by a network of all of such affiliates, or of whatever selection from such affiliates may meet the needs of a particular

*As used in this response, cost per thousand is the ratio of cost of station time to potential audience. The cost per thousand for a particular program is obtained by dividing (i) the aggregate of the card rates of all of the television stations which broadcast such program by (ii) the net unduplicated number of television homes within the combined service area of all such stations.

advertiser, will be as low as possible and, in any event will be competitive with other media.*

Superficially, these two objectives may appear to be mutually exclusive. In actual practice, achievement of the second will, in large part, result in achievement of the first.

The reason is simple. CBS Television cannot afford to affiliate with any station unless advertisers will purchase that station for network broadcasts. And, even if a station is affiliated with CBS Television, the viewers of that station cannot enjoy a particular program unless that station is purchased for that program. If a television network increases its economic efficiency in terms of cost per thousand, advertisers will be able to purchase, and will purchase, an increasingly larger number of stations for the broadcasting of their network programs, particularly if the cost per thousand of the additional stations is reasonable. Thus, as efficiency of the network in terms of cost per thousand increases, the number of stations used will be increased and the network's programs will be available to a larger number of viewers.

Increased time sales make it possible for television networks to attain a greater measure of success in discharging their responsibility to the public at large. Income from time sales provides monies to enable the network to create and produce high quality programs of all kinds.

In furtherance of its efforts to achieve both of the objectives set forth above and at the same time to make CBS Television network programs available to stations located in smaller com-

*Network television competes for the advertisers' dollar with all other advertising media—radio, magazines, newspapers, billboards and many other media. Television networks also compete with each other.

munities, CBS Television has recently adopted an Extended Market Plan.[1]

* * * * * * * * * * * *

The basic criterion utilized in most cases by CBS Television in determining whether or not to affiliate with a particular station is: Will affiliation with that station aid CBS Television in its efforts to obtain affiliates which in the aggregate, or in selected groups, will enable CBS Television to furnish advertisers a television network with a cost per thousand of circulation which will be competitive with other networks and all other media?

In applying this test all of the criteria discussed below are taken into account to a greater or lesser extent, although any one or more of them may be of insignificant, or only minor, importance in any given case. Because of the many variables involved, application of these criteria cannot be reduced to a mathematical formula.

Our current procedure for determining whether or not to affiliate with a particular station is generally as follows:

1. A representative of the potential affiliate calls on a member of the Station Relations Department of CBS Television and is invited to furnish the Station Relations Department with engineering, marketing and other pertinent data concerning the station.

2. The information so submitted is transmitted to the Engineering and Research Departments of CBS Television for their comments and recommendations.

3. The Engineering Department reviews the data submitted,

[1]That plan is described in the memorandum (pp. 78 to 80) to which this document is an appendix. It was described in an exhibit to the reply to Senator Bricker's questionnaire.

together with such other pertinent data as are available to it, and submits its recommendation concerning affiliation to the Station Relations Department, together with its estimate of the area to be served, the number of homes within such area, other services presently (or which later may be) available to the area and the extent to which the service area of the potential affiliate overlaps the service area of present or anticipated affiliates.

4. The Research Department reviews the comments and data furnished by the potential affiliate and the Engineering Department, as well as such other pertinent data as may be available to it. The Research Department, in turn, makes its recommendation to the Station Relations Department, particularly in the light of such information as it may have with respect to viewing data concerning the service area of the potential affiliate, the number of families within the area, and the number of television homes within the area, as well as such comments as it may wish to make upon the comments of the Engineering Department.

5. The Station Relations Department then reviews the recommendations of the Engineering and Research Departments and evaluates such recommendations and determines whether (a) to offer an affiliation agreement to the potential affiliate or (b) to advise the potential affiliate that it would not be feasible for CBS Television to affiliate with it or (c) if acceptance or rejection of the potential affiliate is not clearly indicated from the recommendations of the Engineering Department and Research Department, consults further with representatives of such departments and with such other officials and employees of CBS Television as may seem appropriate.

The procedure outlined above is the "normal" one, although no two cases are treated in exactly the same manner and the procedures followed with respect to any individual case are varied or modified depending upon the circumstances.

Because network television is a relatively new and complicated business, and because after the lifting of the freeze we were besieged by applicants for affiliation, our first decisions on affiliation were made solely on a case to case basis without regard to any definite criteria. The present "normal" procedures and application of various criteria have been evolved over a period of time and are subject to constant review and revision.

With the foregoing qualifications, the answers to Section III of the Committee's Questionnaire are:

1. SIZE OF COMMUNITY

a. *Please indicate whether size of the community in which a prospective television affiliate is located is a factor in awarding television affiliations.*

ANSWER: The size of the community in which a station is located is not ordinarily a factor in determining affiliates. (For the purpose of this question, we are assuming that a television station is "located" in community A if it is licensed as a community A station.)

However, generally speaking, CBS Television wishes to have an affiliate in each of the larger (in terms of population) communities and, other things being substantially equal, if faced with the problem of choosing between two stations serving substantially the same area, but located in different communities, would prefer the station located in the larger community.

The reason is that we believe that advertisers would prefer the station located in the larger community because it would be more likely to attract viewers than a comparable station in a smaller community. However, so far as we have been able to determine, we do not have any examples of cases where size of community in which a station is located has played a part in our decision to affiliate with one station in preference to another.

Also, the application of all of the factors which are considered in selecting an affiliate may result in the selection of a station located in a smaller community instead of one located in a larger community. *Example:* station KXJB-TV in Valley City, North Dakota, was preferred to station WDAY-TV in Fargo, which is larger than Valley City, because it was our belief that KXJB-TV would provide service to a larger number of homes than would WDAY-TV.

Further, the mere size, importance or other characteristics of two communities may result in the granting of a CBS Television affiliation to a station located in each of such communities although, technically, a station located in either could serve both. *Example:* CBS Television has an affiliate in both Washington, D. C., and Baltimore, Maryland.

b. *If the answer to* (a) *is "yes," please indicate the smallest community in which a television station affiliate of your network is located.*

ANSWER: Poland Springs, Maine, population unknown, estimated to be less than 1,000.

[XV]

2. SIZE OF SERVICE AREA

a. *Please indicate whether size of service area, in terms of population, of a prospective television affiliate is a factor in awarding television affiliations.*

Note: Except as specifically noted, the reply to this question does not apply to Extended Market Plan affiliations.

ANSWER: The total number of families residing within that portion of any television station's service area which is not otherwise served by a CBS Television affiliate is a primary factor in decisions affecting affiliation, since there is a direct relationship between this factor and CBS Television's objective of reaching the largest possible number of homes at a competitive "cost per thousand." In most situations, the television station serving the largest service area is preferred because more television homes will be reached and rates for stations with larger service areas generally reflect a lower cost per thousand than do those for stations with smaller service areas.*

However, if network coverage is desired in a market which is located not far from the service area of one or more CBS Television affiliates, it may be advisable to select a station with a smaller service area in order to minimize the effect of duplication of service.

* * * * * * * * * * * *

Size of service area has been, and will be, a determinative as well as a comparative factor in selecting affiliates. Generally, we will not affiliate with a station unless it can provide an unduplicated circulation of at least 40,000 homes. In specific

*Television rates are not directly proportional to station circulation. If they were, stations in small markets would find it difficult or impossible to obtain sufficient revenue. For that reason, stations with smaller circulation do not have a card rate proportionately less than that of a station with a large circulation. This pattern of increasing cost per thousand as circulation decreases is consistent with other media.

cases the number may be increased or decreased somewhat by the interplay of other factors affecting affiliation.

The reason for refusing to affiliate with stations which cannot produce a minimum of circulation is purely economic. A circulation of approximately 40,000 homes is required to justify a card rate of $150 to $175. We have found that affiliation with a station which cannot justify a card rate of at least $150 will result in a financial loss to CBS Television.

(The two preceding paragraphs do not apply to EMP affiliates with respect to which there is no minimum as to circulation or justifiable card rate. The reason we could not afford to affiliate, except on an EMP basis, with a station which would not produce a minimum circulation and justify a minimum card rate is that such a station could not produce sufficient revenue to defray even our out-of-pocket costs [such as wire line and TVR costs]. While many EMP affiliates did not pay their way from the beginning, and some do not do so now, the EMP affiliation held out the prospect of such stations being able to pay their own way in the future as, indeed, many of them are now doing.)

b. *Please indicate what criteria are utilized in ascertaining the boundaries of service areas. Are the Grade A or Grade B contours of the FCC utilized? If not, please indicate in some detail the methods utilized.*

ANSWER: At the present time, the geographical boundary of the service area of a station is based primarily on engineering measurements or computations. CBS Television includes within the service area of each station all of that area to which that station delivers a signal having the minimum required field intensity. The respective minimum field intensity requirements used by CBS Television are based upon the following values:

Channels 2-6	40 dbu (100 uv/m)
Channels 7-13	50 dbu (316 uv/m)
Channels 14-83	64 dbu (1600 uv/m)

The contours of service areas as used by CBS Television do not coincide, for Channels 2-13, with either the A or B contours as defined by the FCC. The reason for this is that, in general, audience data indicate a substantial public acceptance and use of VHF signal values lower than that corresponding to Grade B.

Whenever available, actual measurements of field strength are used. When measured data are not available, CBS Television engineers compute the outer limits of a station's service area. Such computations are made in accordance with methods prescribed by the FCC for computing field intensities.

In the past considerable reliance was placed on the Nielsen-CBS Television Reception Study, particularly in areas where all of the stations serving — or which will serve — that area were in operation prior to the time of such study. Because of the large number of stations which have commenced operation since the date of such study (reviewed Fall of 1953) and the many changes which have occurred in stations' transmitting facilities, it is now used only as a supplement to the engineering data.[1]

In addition, a certain amount of reliance has been placed upon reports from local television set dealers and servicemen, advertisers, advertising agencies and others as to the public

[1]Since the date of the reply to Senator Bricker's questionnaire, CBS Television has subscribed to a coverage study which is now in progress. When completed, this study will show on a county-by-county basis the viewing and the frequency of viewing of all television stations.

acceptance and effective service area of a television station. These reports and the Nielsen-CBS Television Reception Study have been valuable in enabling CBS Television Engineering and Research Departments to establish the relationship between field intensity contours and actual viewing.

Further, CBS Television may adjust a station's service area for the purpose of network affiliation by consideration of overlap of present or potential affiliates and the terrain of the area in which the station is located.

As is often the case with respect to application of other criteria, determination of a station's service area is the result of the exercise of judgment based upon practical experience. While the criteria outlined above are useful as guide posts, they cannot be applied rigidly or in a vacuum.

For example, theoretically, and in the absence of other data based on practical experience and observation, the A and B contours determined in accordance with the Commission's standards are useful measures of the service area of a station. So are the Commission's definitions of adjacent and co-channel interference, although the experience of CBS Television indicates that, in many instances, such interference has more theoretical than actual significance. Studies, such as the Nielsen-CBS Television Reception Study, underwritten by CBS, and reports from dealers, servicemen and others have indicated that tests other than delineation of the A and B contours and computation of theoretical interference must be applied. In many instances, mathematics must be tempered with judgment and practical experience.

In determining the usefulness of the service area of a prospective affiliate, one of the most perplexing and difficult problems is the estimation of absolute and relative overlap and the seriousness of such overlap when viewed in the light of other criteria.

The actual amount of present or potential overlap of any station with present or future affiliates of CBS Television is determined in the first instance by the Engineering Department of CBS Television. For this purpose, contours are drawn using the signal intensity value referred to in the first part of this section. The overlap is deemed to exist in those areas which are common to the areas which are delineated by two or more of such contours.

The Research Department of CBS Television determines overlap contours on the basis of the contours furnished to it by the Engineering Department and adjusts such contours in the light of such audience data as may be available to it and, where in its opinion such projection is appropriate, on a projection arrived at by combination of such data with subsequent changes in the number and method of operation of stations in the area under consideration. The principal source of such data is the Nielsen-CBS Television Reception Study.

The number of homes within the various overlap areas is computed by either the Engineering or Research Departments, using the usual methods for that purpose.

In evaluating the seriousness of overlap in any particular case, various factors are considered. If we are concerned only with the problem of overlap with respect to station A and station B, the principal factors are the extent to which the total service areas, in terms of number of homes, of station A and station B, taken separately, are included within the overlap area; the relative importance of the communities in which station A and station B are located; the relative importance of other communities in the non-overlap service areas of each of the stations; the relative importance of the entire service area of each of such stations; and the importance of communities within the overlap area which may be receiving a relatively poor quality signal from either station A or station B. If the overlap involves more than two stations, the same factors must be considered with respect to the respective service areas of each of such stations.

The following are the primary reasons which make it necessary for CBS Television to make its affiliation determination in such a way as to keep to a minimum the amount of serious overlap:

(i) Overlap will decrease the value to advertisers (whether network, national spot or local) of the affiliates which are subjected to overlap and, particularly, in the case of affiliates in important markets, will make it more difficult for CBS Television to obtain affiliation agreements with the better stations in those markets.

(ii) Despite the fact that a prospective affiliate is willing to accept a network card rate based solely on its unduplicated circulation, it seems inevitable and quite natural that such an affiliate, after it has secured for itself any substantial portion of the viewers in the overlap area, will believe itself entitled to be paid, and will request that it be paid, on the basis of actual circulation delivered by it. In such a case, because of the fact that station rates are not directly proportional to circulation,

[XXI]

the network's cost per thousand will increase. In addition to this factor, costs to the advertiser would also tend to increase, without compensating value to him in terms of increased circulation, since it would be quite unlikely that the first affiliate would consent to a rate decrease proportionate to the new affiliate's increased circulation.[1]

CBS Television does not contend that it now has perfected the best methods for determining the service areas of television stations. It intends to continue to re-examine and re-evaluate its methods in the light of continued experience of itself and others.

c. *What is the smallest service area of any television affiliate of your network?*

ANSWER: The smallest service area, in terms of population, of any CBS Television affiliate is that of KZTV, Reno, Nevada (19,800 homes).[2]

The foregoing comments with respect to minimum size of service area apply in general to Extended Market Plan affiliates, although the number of homes required will be greatly reduced. Whether or not it will be necessary to establish a minimum is not now known. The smallest service area of any Extended Market Plan affiliate now under contract is that of Big Spring, Texas, 9,800 homes.

3. NUMBER OF TELEVISION SETS

a. *Please indicate whether the number of television sets in the service area of the prospective television affiliate is a factor in awarding television affiliations.*

ANSWER: No, except in the case of UHF stations, since ordinarily it is assumed that eventually there will be a television set in most homes in the service area of a prospective affiliate and,

---

[1]Since the date of the reply to Senator Bricker's questionnaire, CBS Television has formulated a policy with respect to making individual stations available for specific programs upon the request of the advertisers concerned. That policy is outlined in the last section of this appendix.

[2]Since the filing of the reply, CBS Television has affiliated with KHAD-TV, Laredo, Texas, which, according to the most recent available information, has a service area of only 14,000 homes and of only 3,700 television homes.

where such assumption is made, this factor is of little importance. For the bearing of this question on UHF stations, see the answer to Question 9.

b. *If the answer to* (a) *is "yes," please indicate the television affiliate of your network with the fewest television sets, giving the number of such sets.*

ANSWER: We do not have this information. However, on the basis of estimates by the Research Department of CBS Television, it would appear that at December 1, 1954, WAIM-TV, Anderson, South Carolina, had only 7,550 television homes in its service area.[1]

4. PROXIMITY TO OTHER TELEVISION AFFILIATES

a. *Please indicate whether proximity to another television affiliate of your network is a factor in awarding television affiliations.*

ANSWER: Proximity to other affiliates is not in itself a criterion in the selection of affiliates, but because of its relationship to overlap, please see the answers to Questions 2 and 4(b).

b. *If the answer to* (a) *is "yes," please indicate (i) the minimum distance permitted (ii) the maximum overlap permitted.*

ANSWER: CBS Television has no fixed rules as to minimum separation distance or maximum overlap. As a result of proximity a station may provide very little unduplicated service and, hence, be unattractive as an affiliate. Factors such as terrain, power with which the station and nearby stations are

[1]See second footnote to answer to question 2(c).

operating and the propagation characteristics of the different channels all have a bearing on desirable mileage separation between affiliates. So does the importance of the communities served—e.g., Washington and Baltimore. Also taken into account is the ratio of overlap to otherwise unduplicated circulation.

For the reasons outlined above, no minimum or maximum is prescribed for mileage separation or overlap.

* * * * * * * * * * * *

5. *If the criteria referred to in III-1, III-4, are in any way interdependent, please explain in detail the nature of the interdependence.*

ANSWER: The criteria referred to in Questions 1 through 4 are interdependent, as are all other criteria used in determining questions of affiliation, to a greater or lesser degree depending upon the facts of each individual case. Ordinarily, size of service area, in terms of unduplicated circulation, will be the most important criterion.

6. CARD RATE

a. *Please indicate whether the card rate of the prospective television affiliate is a factor in awarding television affiliations.*

b. *If the answer to* (a) *is "yes," please indicate the lowest card rate of any television affiliate of your network.*

ANSWER: With two exceptions, the card rate of a prospective affiliate is not a factor in determining whether or not to affiliate with that station.

The first exception is that if the station will not accept an

Extended Market Plan affiliation and unduplicated circulation (present and near future) of the station will not justify a card rate of at least $150, CBS Television will not affiliate with that station because to do so would result in excessive out-of-pocket loss.

Also, if a station should demand a card rate in excess of that which CBS Television believes is justified by the unduplicated circulation (present and near future) of that station (and, perhaps, other factors) CBS Television would refuse to affiliate with that station, or might terminate its affiliation with that station and shift to another. In practice, this exception is more theoretical than real, although it has been determinative in a few instances.

7. *Please indicate what effect, if any, is given to the fact that the prospective television affiliate also owns one or more television stations in other communities which are television affiliates of your network.*

ANSWER: The fact that the owner of a prospective television affiliate in area A is also the owner of a present television affiliate in area B (or a radio affiliate in any area) may be of significance in three respects in determining whether to affiliate with such owner in area A:

(i) Where such owner has only just commenced operations in area A, or just purchased the prospective affiliate in area A, the quality of such owner's local station operations in area B will usually be a good indication of the probable quality of such owner's local station operations in area A;

(ii) If the business relationship between CBS Television and such owner in respect of the area B affiliation has been mutually pleasant, there will be a natural desire on the part of CBS Television to continue that relationship in area A; and

(iii) In order to obtain network coverage in, for example, three specific areas in the aggregate, it may be necessary to apply affiliation criteria to prospective and present affiliates in groups, rather than separately, weighing the merits of affiliating with the same owner in all three areas as against the merits of not covering one or more of such areas. In such a case, the decision may be to affiliate with the same owner in all three areas on the ground that aggregate network coverage will be improved.

8. *Please indicate what effect, if any, is given to the fact that the prospective television affiliate operates on channels 7-13 rather than on channels 2-6.*

ANSWER: No effect is given to the fact, as such, that a prospective affiliate operates on one of channels 7 through 13 instead of on one of 2 through 6. Such fact does, however, affect size of service area. (See the response to Question 2.)

9. *Please indicate what effect, if any, is given to the fact that the prospective television affiliate operates on a UHF rather than a VHF channel:*

a. *If no VHF television station is allocated to the community in which the UHF station is located.*

b. *If one or more VHF television stations are allocated to that community, but no VHF station is yet in operation in that community.*

c. *If one VHF station is in operation in that community.*

d. *If two VHF stations are in operation in that community.*

e. *If three VHF stations are in operation in that community.*

f. *If four or more VHF stations are in operation in that community.*

g. *In answering* (a) *through* (f), *please indicate what effect, if any, is given to the fact that a VHF station may not be allocated to or located in the same community as that in which the UHF station in question is located, but is allocated to or located in a nearby community. If any effect is given to that factor, please show with as much specificity as possible the criteria followed —e.g., distance, power, antenna height, etc.—in determining whether a television affiliation should be granted to the UHF station.*

ANSWER: No effect is given to the fact, as such, that a prospective affiliate operates on a UHF instead of a VHF channel. However, such fact does affect the size of the service area of the station, which is one of the criteria used in determining affiliation.

In determining whether or not to affiliate with a UHF station, if a VHF station is available, CBS Television must, because of competitive considerations, take into account the percentage of sets in the area which are capable of receiving UHF.

Assuming that no VHF station is allocated to the community to which a UHF station is allocated, CBS Television would affiliate with the UHF station if it provided a satisfactory amount of unduplicated circulation (after taking into account

[XXVII]

the circulation of other present and prospective CBS Television affiliates) and met the other criteria referred to in this response.

CBS Television has affiliated with UHF stations in communities in which a VHF station is in operation—e.g., Erie, Pennsylvania, and Milwaukee, Wisconsin.[1]

CBS Television has not affiliated with a UHF station in a community in which more than one VHF station is in operation. Whether or not it will do so will depend on all of the pertinent factors in each case. It should be noted, however, that CBS has contracted to purchase, subject to FCC consent, station WOKY-TV, Milwaukee. Three VHF channels have been allocated to the Milwaukee area.

10. *Please describe any other criteria which are utilized in the awarding of television affiliations by your network.*

ANSWER: In addition to the several criteria and factors described in the answers to the first nine questions, and which play a part in CBS Television's determination whether or not to affiliate with a particular station, there are a number of other considerations which, in appropriate circumstances, have a bearing on the CBS Television decision.

Where the question which is presented to the CBS Television Division involves a choice among two or more competitors for an affiliation in the same market, the nature of each station plays an important part. In such a case, the stature and operat-

---

[1]Since the date of the reply to Senator Bricker's questionnaire, CBS Television has affiliated with WEHT, Henderson-Evansville, although a VHF station will be in operation in that market within the near future. Also since that date CBS has purchased WOKY-TV, Milwaukee, pursuant to FCC consent and is operating that station as WXIX. As of March 1, 1956, CBS Television was affiliated with 29 UHF stations, 22 on a regular basis and seven on an EMP basis and has "per-program" arrangements with 20 others. CBS has contracted to buy WGTH-TV, Hartford, subject to FCC consent.

ing record of each station will have an important bearing and such factors as its physical facilities, its community activities and community relationships, the aggressiveness of its operation and its over-all popularity are considered. Similarly, the aggressiveness of its national representation may play a part. So, too, all other things being equal between or among the competing stations, CBS Television generally prefers a television affiliate which is newspaper-owned because of the effect of such ownership on the role of the station in the community.

A second additional factor has from time to time, although certainly not invariably, played an important part in the affiliation decision: this is the factor of existing relationships between CBS and the owners of the television station in the radio broadcasting field. Thus, all other things being reasonably equal, where the question is otherwise a close one, CBS Television has affiliated with a television station with whose owners CBS Radio has had an historical and pleasant relationship. This factor, it may be noted, depends on the particular circumstances involved and has not always been decisive. Particularly where the market is one which does not otherwise justify affiliation or where the radio affiliate has been long delayed in obtaining a television station, or where the radio affiliate has not obtained facilities reasonably equivalent to other television stations in the market, CBS Television has found it economically necessary to affiliate with non-radio-affiliated television stations in preference to one which has had a radio affiliation.

A third and related factor which may play a part in the choice of a television affiliate is its previous history in radio broadcasting, even though it has not been a CBS Radio affiliate. Again, all other things being equal, CBS Television will choose a television affiliate with experience, and successful history, in the broadcasting field over one without such experience and history. Further, in the event that the licensee of a television station is also the licensee of a radio station with which CBS Radio wishes to affiliate, that fact will be considered.

A fourth factor which plays a part in choosing among competitors for a television affiliation is the structure and organization of the television station. CBS has found that as a general rule a station whose ownership and management are integrated will be a more successful station than one whose ownership and management are not integrated, and hence will prefer the former type of station to the latter.

A fifth factor which tended to play a larger rôle in affiliation determinations in the earlier days than it does now was simply what was available as the result of the historical progression of assignments. In the period during or immediately following the freeze, the pattern of operating stations obviously did not always follow the scale of the desirability of the market. As the result, affiliations in major markets were not available to CBS Television and it was faced with a necessity of affiliating in less important markets which provided some service in an important area. This criterion, if such it can be called, was only the necessity of providing the best service which was available.

A sixth factor which is applicable in appropriate circumstances in influencing a choice among applicants for an affiliation is that arising from antenna installations. Thus, there are situations in a community or an area where for example over a period of years there have only been one or two stations and the home antennas have been installed solely to receive those existing stations. If this occurs, there may be difficulty in receiving a new station in the same community, since it will be necessary for the antennas to be converted. In such circumstances, CBS Television would, if all other things were equal, prefer the station for the reception of which no such problems or expenditures by the home owner are necessary.

A seventh factor which in fact has been decisive in only one affiliation decision thus far is the station's pattern of cooperation in broadcasting network programs. Where, over a substantial period of time, CBS Television's experience with a station establishes clearly that the station is not providing clearances for network programs during network option time and is refusing such clearances in favor of local or national spot commercial programs which are clearly of no special public service nature, CBS Television has on one occasion switched its affiliation from such a station at the expiration of the affiliation contract. A related situation is that where station A considers itself primarily interested in carrying the programs of another network and is unable to do justice to the programs of the other network and those of CBS Television. In such a case if station B were available, could serve the area adequately, and indicated its intention of looking to CBS Television as its primary network, CBS Television would affiliate with station B.

An eighth factor, applicable not to a choice among television stations, but to the question whether to affiliate at all in a given area, is the economic status of the area which the television station serves. This factor, which is supplementary to the factors described in Questions 1 to 4, is likely to be determinative where there is a close question as to whether the population in the service area and the cost per thousand warrant affiliation. For example, if the area presents a borderline case in terms of homes, such factors as retail sales, rate of growth and family purchasing power are taken into account in the affiliation decision.

Finally, in addition to all the foregoing more or less objective and tangible factors, it must be realized that intangible and psychological factors may and do play a role in affiliation decisions. These psychological factors include the general personal impression which the owners and managers of a proposed affiliate make on CBS officers and personnel who make the decision; expressions of Congressional interest; and public community reactions. Even if it were desirable to do so, it is impossible to exclude such intangible factors which play an indeterminate, but nevertheless apparent role in affiliation problems just as they do in the decisions of all businesses. It is difficult to isolate and identify the precise role which psychological factors of this nature play, but they unquestionably do play a role in the difficult and delicate task of determining whether to affiliate in a particular community and with whom.

(PER-PROGRAM STATIONS)

(NOTE: *Where CBS Television has not affiliated with a station in a particular community because CBS Television did not deem it desirable to do so in the light of the foregoing criteria, CBS Television, upon request of the sponsor of a particular program will furnish that program to the* *non-affiliated station on a per-program basis provided that CBS Television is able to enter into mutually satisfactory arrangements with the non-affiliated station.*

These per-program arrangements are made with non-affiliates in completely isolated markets—that is, where the service area of such non-affiliates do not overlap the service areas of existing affiliates, with non-affiliates located in the same city or within the service area of an existing affiliate if that affiliate has not accepted the particular program, and with non-affiliated stations located in a community other than the community to which an affiliated station is licensed but still within the service area of the affiliate.

If the non-affiliated station is located in a community other than that to which an affiliated station is licensed but still within the service area of the affiliated station, releasing the program to the non-affiliated station is contingent upon that station accepting a rate which is based on the incremental set circulation contributed by that station to the CBS Television Network.)

APPENDIX D

The Record of CBS Owned Television Stations

The following is a summary of the local programming activities of the four CBS Owned television stations:

WCBS-TV, New York City

The total dollar value of facilities and air time[1] contributed free by WCBS-TV in 1955 to charitable, governmental, religious, educational and other civic organizations amounted to $3,204,089. Some of this contribution consisted of announcements on behalf of the various agencies which, because of their frequency and flexibility, are often more effective than a fixed weekly program. WCBS-TV broadcast a total of 5,438 such announcements in 1955. Many of these were carried on a "live" basis and delivered within established programs by well-known talent.

Program Series. In addition to announcements, WCBS-TV broadcasts a variety of local program series in the field of information, education and public affairs. Among the local programs which were broadcast by WCBS-TV in 1955 were the following:

[1]Time costs, as set forth in this Appendix, represent the card rates of the respective stations for the amount and class of time involved.

CAMERA THREE, a weekly half-hour program produced with the cooperation of the State Education Department of the University of the State of New York. Dr. Ward C. Bowen, Chief of the Bureau of Audio and Visual Aids of the New York State Education Department, is advisory consultant for the program and the regular host is James F. Macandrew, Director of Broadcasting for the New York City Board of Education. "Camera Three" is designed to serve as a study of man and his relationship to himself and to those about him. It utilizes experimental television techniques in production and in treatment of subject matter. During 1955, "Camera Three" focused primarily on the literary contributions of Dostoevsky, Shakespeare, Conrad, Sandberg, Steinbeck and others. The facilities and time costs for "Camera Three," for each program, average $6,306.

EYE ON NEW YORK, a weekly half-hour program, employing both live and film techniques, and dealing with community activities in and around New York City. The subjects presented on "Eye on New York" range from occurrences in New York City's history to the events encountered by a Police Department squad car on duty in Times Square. Leading local public figures have appeared on the program to discuss matters of community interest. The facilities and time costs for "Eye on New York," for each program, average $5,349.

ON THE CAROUSEL, produced in cooperation with the New York City Board of Education. "On the Carousel" is a weekly hour-long program intended primarily for children of elementary school age. The principal effort of the program is to blend education and entertainment for such children. Among the topics presented have been young people's hobbies, children of other nations, pets and their care, and simple "how-to-do" features. The facilities and time costs for "On the Carousel," for each program, average $5,074.

HICKORY DICKORY DOCK, produced in cooperation with the New York City Board of Education. "Hickory Dickory Dock" is a half-hour weekly program intended for children of elementary school age and conducted by a kindergarten schoolteacher. The facilities and time costs for "Hickory Dickory Dock," for each program, average $1,461.

OUR GOODLY HERITAGE, featuring Dr. William Bush Baer, Dean of the College of Arts and Sciences of New York University. Presented on Sunday mornings, "Our Goodly Heritage" is a fifteen-minute program devoted to readings and interpretations of the Bible by Dr. Baer, a leading authority on the Bible. The facilities and time costs for "Our Goodly Heritage," for each program, average $1,782.

AMERICA IN THE MAKING, a series of twenty-six weekly half-hour programs that was broadcast commencing in November 1954, and was produced by WCBS-TV with New York University and the Metropolitan Museum of Art. The program, with the aid of artifacts available from the Museum, explored America's colonial origins and the early days of the Republic. Dr. Robert Iglehart, Chairman of the Department of Art Education at New York University, moderated this series, assisted by other members of the University faculty. The facilities and time costs for "America in the Making," for each program, averaged $2,606.

GIVE US THIS DAY, a five-minute religious program at the opening and closing of each broadcast day. "Give Us This Day" is produced in cooperation with the Protestant Council of the City of New York, The New York Board of Rabbis and the television office of the Archdiocese of New York. Clergymen from these groups deliver inspirational messages which are filmed by the station for broadcast. The weekly facilities and time costs for "Give Us This Day" average $7,571.

THE BIG PICTURE, a half-hour weekly filmed documentary series produced by the United States Army. The time costs for this program are $900 weekly.

THE PASTOR, a fifteen-minute filmed program presented each week under the auspices of the Protestant Council of the City of New York. "The Pastor" features the Reverend Dr. Robert E. Goodrich, Jr. of the First Methodist Church in Dallas, Texas. The time costs for this program are $1,250 weekly.

SHAKESPEARE ON TV, a series of lectures on Shakespeare by Dr. Frank C. Baxter of the University of Southern California. This series of filmed programs was produced by KNXT, the CBS Owned station in Los Angeles, and was first presented in New York in 1954. A special "summer school" series of forty-five minute weekly programs was again presented in New York in 1955. The time costs for this series of "Shakespeare on TV" were $2,500 per program.

Special Programs. Among the individual special local programs broadcast by WCBS-TV in 1955 were:

A LINK IN THE CHAIN, under the auspices of the Christophers;

BORN IN THE WHITE HOUSE, for the National Foundation for Infantile Paralysis;

75589 O—57—pt. 4——27

CARDINAL SPELLMAN AND CATHOLIC CHARITIES;

DAY OF ATONEMENT and FESTIVAL OF LIGHTS, for the New York Board of Rabbis;

JACK BENNY VARIETY SHOW FOR RETARDED CHILDREN;

JUNIOR LEAGUE MARDI GRAS BALL, for Junior League Charities;

MIKE MAKES HIS MARK, for the National Education Association;

NEW YORK DOCUMENT, for the Federation of Jewish Philanthropies;

NEW YORK HERALD TRIBUNE FORUM FOR HIGH SCHOOLS;

SENATOR HERBERT LEHMAN ON "NIKE";

THAT I MAY SEE, a film produced by the Catholic Church;

THE CHRISTMAS STORY, in cooperation with the Protestant Council of the City of New York;

THE DAY BEFORE EASTER, a special religious program;

THE MAYOR'S CONFERENCE, a panel program in which Mayor Robert F. Wagner was interviewed by four New York City newspaper reporters; and

RELIGION IN AMERICAN LIFE, a special religious program.

News Programs. In addition to its public affairs programs, WCBS-TV broadcasts regular local news and weather programs. Insofar as possible film shot locally is used to supplement films of national and international events which appear on both network and local news programs. The local news schedule of WCBS-TV is as follows:

NEWS OF NEW YORK: 7:25-7:30 AM, and 7:55-8:00 AM, Monday through Friday;

SIX O'CLOCK REPORT: 6:00-6:15 PM, Monday through Saturday;

RAIN OR SHINE: 7:10-7:15 PM, Monday through Friday;

LATE NEWS: 11:00-11:10 PM, Monday through Saturday;

LATE WEATHER AND SPORTS: 11:10-11:15 PM, Monday through Saturday;

LATE LATE NEWS: three to five minutes at sign-off, each day of the week.

The program costs, value of time and facilities for all local news programs in 1955 were $2,600,687.

A Typical Week's Programs and Announcements. During the week of March 25 through March 31, 1956, WCBS-TV broadcast a total of 111 announcements, having a value of $29,100, for the following organizations: American Council to Improve Our Neighborhoods, American Optometric Association, American Red Cross, Citizens' Committee to Keep New York City Clean, Committee for a Quiet City, Federal Bureau of Investigation, Ground Observer Corps, *Herald Tribune* Fresh Air Fund, Hospitalized Veterans' Writing Project, National Safety Council, Nephrosis Foundation, N.Y. Association for the Blind, N. Y. City Board of Education, N. Y. City Cancer Committee, N.Y. City Fire Department, N.Y. City Society for Crippled Children and Adults, N. Y. Philanthropic League, N. Y. State Department of Education, United States Air Force, United States Department of Agriculture, United States Department of Defense, United States Department of Health, Education and Welfare, United States Marine Corps, United States Navy and United States Treasury Department.

In addition to its regular local news schedule, during the week of March 25 through March 31, WCBS-TV broadcast the following local religious, informational or educational programs: "Camera Three," "Eye on New York," "Give Us This Day," "Hickory Dickory Dock," "On the Carousel," "Our Goodly Heritage," "The Big Picture" and "The Pastor," all described previously. WCBS-TV also broadcast the following other local programs during this week:

YESTERDAY'S WORLDS, a half-hour program on archeology presented in cooperation with New York University, the Metropolitan Museum of Art and the Educational Television and Radio Center of the Ford Foundation. "Yesterday's Worlds" is a series of programs currently being broadcast weekly by WCBS-TV. The program broadcast during this week was devoted to the Persian Empire and presented Dr. Casper Kraemer, Professor of Archeology at New York University and the regular moderator of the program, discussing Persian artistry and crafts with Charles Wilkinson, Curator of Middle Eastern Archeology at the Metropolitan Museum of Art.

RIGHT NOW, a half-hour panel discussion program concerning civic problems in New York City. "Right Now" is also a series currently being broadcast by WCBS-TV. During the week of March 25 through March 31, the program presented the President of the High School Teachers Association, a representative of the Teachers' Guild of the AFL-CIO, the Director of the Budget for New York City and the President of the United Parents Association discussing "Teachers vs. New York City."

THE PASSOVER FESTIVAL, a special half-hour program in observance of Passover.

EASTER SEAL TELEPARADE OF STARS, a half-hour film for the New York City Society for Crippled Children and Adults.

The total facilities and time costs for these programs during this single week were $39,108.

Awards and Commendations. WCBS-TV received the following awards in 1955:

Variety Showmanagement Award to WCBS-TV, New York, for "Education With Showmanship."

For "Camera Three," the Institute for Education by Radio-Television of Ohio State University presented its First Award in the local and regional classification for a cultural program to WCBS-TV.

For "On the Carousel," WCBS-TV received the Institute for Education by Radio-Television of Ohio State University's Special Award in the local and regional classification for a children's program.

For its over-all public service programming, WCBS-TV was cited by the Alfred I. duPont Awards Foundation for "America in the Making," "Camera Three," "On the Carousel" and "Our Goodly Heritage." The citation stated that in each of these programs "talent and showmanship are called to the service of programs of unusual educational and spiritual value."

The Board of Managers of the New York Chapter, Sons of the American Revolution, presented the Gold Good Citizenship Medal of the Society to the Chancellor of New York University, Dr. Henry T. Heald, "in recognition of the outstanding dramatization of American history portrayed in the University's notable television series entitled, 'America in the Making'."

Other awards and citations to WCBS-TV during 1955 were received from the Protestant Council of the City of New York, the New Jersey State Fair, the National Exchange Club, the New Jersey Science Teachers Association, National Foundation for Infantile Paralysis and the Boy Scouts of America.

In April 1956, "On the Carousel" received honorable mention in the awards made by the Institute for Education by Radio-Television of Ohio State University. The citation commended the program "for a challenging series designed to occupy children's attention during their free Saturday mornings. The program provides opportunity for self-expression and wholesome entertainment for studio participants and home viewers. As an important by-product, the program also serves as an excellent public relationship vehicle for interpreting the work of the schools to the community."

Many letters of appreciation and commendation were received from individuals and organizations. Among the organizations were American Heart Association, American Red Cross, Big Brothers of America, the Bishop's Welfare and Emergency Fund, Catholic Charities of the Archdiocese of New York, Federation of Jewish Philanthropies, Hadassah, New York Board of Rabbis, Office of the Attorney General of New Jersey, United Hospital Fund, Vacation Camp and Dormitory for the Blind, Young Men's Christian Association and the Young Women's Christian Association.

KNXT, Los Angeles

The total dollar value of facilities and air time contributed free by KNXT in 1955 to charitable, governmental, religious, educational and other civic organizations amounted to $1,214,484. KNXT broadcast a total of 5,996 announcements in 1955 on behalf of these organizations.

Program Series. In addition to those announcements, KNXT broadcast the following local program series in the field of information, education and public affairs:

SHAKESPEARE ON TV, a series of eighteen 45-minute programs presenting Dr. Frank C. Baxter of the University of Southern California. These programs constituted the "third semester" of this well-known educational series. College credit at the University of Southern California was offered for those viewers who enrolled and took an examination. "Shakespeare on TV" has been broadcast on twelve educational television stations as well as on other CBS Owned television stations. The earlier series of "Shakespeare on TV" received seventeen national and local awards including citations from The Shakespeare Club of New York City, the American Shakespeare Festival Theatre and Academy of Connecticut, the Sylvania Award as the nation's best local educational program and two "Emmys" from the Academy of TV Arts and Sciences. The facilities and time costs for "Shakespeare on TV" during 1955, for each program, averaged $1,216.

OPERATION SAFETY, a series of 15-minute weekly programs produced in cooperation with the California Highway Patrol and the National Safety Council. The programs concerned traffic problems and the prevention of highway accidents. The facilities and time costs for "Operation Safety," for each program, averaged $375.

PREPARE, a series of thirteen 15-minute programs produced in cooperation with the Los Angeles Office of Civil Defense. These programs, part live and part film, were designed principally to demonstrate to the people of Los Angeles what should be done in the event of a local disaster. The programs also served as a means of disseminating information to the Los Angeles Civil Defense volunteers. The facilities and time costs for "Prepare," for each program, averaged $375.

YOUR INCOME TAX, a series of six half-hour programs produced in cooperation with the Department of Internal Revenue and the California State Franchise Tax Board providing information for the preparation of state and federal income tax returns. The facilities and time costs for "Your Income Tax," for each program, average $530.

LIGHT OF FAITH, a half-hour religious program broadcast each week and presenting clergymen, choirs and soloists from churches and synagogues in the Los Angeles area. The facilities and time costs for "Light of Faith," for each program, average $540.

GIVE US THIS DAY, five-minute inspirational messages by local religious leaders at the opening and closing of each broadcast day. The weekly facilities and time costs for "Give Us This Day" average $3,360.

SPOTLIGHT ON OPERA, a sixteen-part series of half-hour programs produced in cooperation with the University of California at Los Angeles and offered by the University as a college credit course. Dr. Jan Popper, Professor of Music at the University, discussed opera and opera techniques, illustrating his lectures with student performances of scenes from opera. The facilities and time costs for "Spotlight on Opera," for each program, averaged $529.

LEARNING '55, an educational series produced in cooperation with the City and County schools of Los Angeles. Through the reproduction on television of actual classroom techniques, this series is designed to inform the people of Los Angeles of the educational methods used in the Los Angeles City and County public schools. The facilities and time costs for "Learning '55," for each program, average $1,075.

FOCUS ON DELINQUENCY, a six-part series of half-hour documentary films produced by KNXT concerning the problems of juvenile delinquency. By bringing motion picture cameras to the breeding places of juvenile delinquency, into court rooms, juvenile retention centers and prisons, this series portrayed the causes and results of juvenile crime. The series also emphasized the positive forces at work to prevent delinquency. The facilities and time costs for each of these programs averaged $4,420.

DRESS BLUES, a series of fifteen-minute weekly programs produced in cooperation with the United States Marine Corps. Using amateur talent available from the El Torro Marine Air Base near Los Angeles, and films prepared by the Marine Corps, the program is entertaining as well as informative of the activities of the Marines. The facilities and time costs for "Dress Blues," for each program, average $367.

CHILD PSYCHOLOGY ON TV, a sixteen-part series of 45-minute programs produced in cooperation with the University of Southern California. In a classroom setting, Dr. Herman Harvey, Assistant Professor of Psychology at U.S.C., discussed the methods and techniques of child psychology, using films and studio demonstrations. This program was offered for college credit by the University. The facilities and time costs for "Child Psychology on TV," for each program, averaged $1,216.

AMERICA IN THE MAKING, the series of programs produced by WCBS-TV, the CBS Owned television station in New York, with New York University and the Metropolitan Museum of Art. The time costs for "America in the Making," on KNXT, for each program, averaged $480.

Special Programs. Among the individual special local programs broadcast by KNXT in 1955 were:

CRISIS OVER LOS ANGELES, a program concerning "smog";

DAY AFTER EASTER, for the Los Angeles Church Federation;

FANFARE, for the Community Chest;

FIGHTER PHOTO, SEA POWER IN THE PACIFIC, SEA POWER FOR FREEDOM and THE SIXTH FLEET, for the United States Navy;

GIVE THANKS, for the National Association for Retarded Children;

HEART BEAT and HEART TO HEART, for the American Heart Association;

HERITAGE, for B'nai B'rith;

JOIN THE STARS, for the American Red Cross;

MY RIGHT AND MY CAUSE, for the American Bible Society;

NIGHT OF VIGIL, for the American Hebrew Congregation;

OPERATION TRUTH, for the United States Information Agency;

SMOG MEN AT WORK, for the Los Angeles Air Pollution Control Board;

SUMMER MAGIC and TELEPARADE OF STARS, for the Easter Seal Society;

THAT MORE MAY WALK, for the Sister Kenny Foundation;

THAT 146,000 MAY LIVE, for the American Cancer Society;

THE LATTER DAY SAINT, a two-hour conference at the Salt Lake City Tabernacle;

THE MEANING OF EASTER, for the National Council of the Churches of Christ;

THE WHITES OF THEIR EYES, for the United States Army;

THE 'Y' ON WORLD FRONTS, for the YMCA;

WE HOLD THESE TRUTHS, for the Church Federation of Los Angeles;

WORKSHOP FOR PEACE, for the United Nations;

YOUR NEIGHBOR CELEBRATES, for the American Hebrew Congregation; and

An hour-long remote broadcast on the dedication of Mt. Sinai Hospital in Los Angeles.

News Programs. In addition to its public affairs programs, KNXT broadcasts regular local news and weather programs using local films and films of national and international events. The local news schedule of KNXT is as follows:

GRANT HOLCOMB AND THE NEWS: 7:00-7:10 AM, 7:30-7:40 AM, 8:00-8:10 AM, 8:45-8:55 AM, Monday through Friday;

CLETE ROBERTS AND THE NEWS: 6:10-6:15 PM, Monday through Friday;

THE BIG NEWS: 10:30-11:00 PM, Monday through Friday;

SUNDAY NEWS SPECIAL WITH BILL STOUT: 11:00-11:15 PM, Sunday;

SATURDAY NEWS: 9:30-9:45 AM, 1:45-2:00 PM, 2:45-3:00 PM, 12:00-12:15 AM;

SUNDAY NEWS: 11:00-11:15 AM, 3:30-3:45 PM.

The program costs, value of time and facilities for all local news programs are approximately $1,200,000 a year.

A Typical Week's Programs and Announcements. During the week of April 1 through April 7, 1956, KNXT broadcast a total of 105 announcements, having a value of $13,508, on behalf of the following organizations: Boys Clubs of America, City of Los Angeles, Civic Light, Crusade for Freedom, Easter Seal Society, League of Women Voters, Los Angeles Philharmonic Orchestra, Padua Hills Theatre, Ramona Pageant, Shrine Circus, United States Air Force.

In addition to its regular news schedule, KNXT broadcast the following local religious, informational or educational programs: "Give Us This Day," "Learning '56," "Light of Faith," "Dress Blues" and "Your Income Tax," all described previously. KNXT also broadcast the following other local programs during this week:

RENAISSANCE ON TV, a half-hour series with Dr. Frank C. Baxter of the University of Southern California and guests, discussing Renaissance literature and art.

KNXT FARM REPORT, a ten-minute daily series presenting market reports and agricultural news. This program is designed to serve as a "bridge" between the agricultural community of Los Angeles and urban viewers.

The total facilities and time costs for these programs during this single week were $8,987.

[XLVIII]

Awards and Commendations. Among the awards received by KNXT for programs broadcast in 1955 were the following:

National Citizens' Committee for Educational Television 1955 award to Dr. Frank C. Baxter, for "Shakespeare on TV," "for pioneering vision and outstanding public service in helping to bring to the American community the advantages of educational television."

Hollywood Chapter of the B'nai B'rith 1955 Award to Dr. Baxter "for outstanding contribution to television programming."

New Jersey State Fair Blue Ribbon Award to "Shakespeare on TV" as "the most outstanding program of its type on television."

Little Peabody Award to "Shakespeare on TV" for "outstanding programming in the public's interest."

Little Peabody Award to "Learning '54" for outstanding interpretation of teaching methods and course content.

Little Peabody Award to KNXT for "outstanding programming in the public's interest." The multiple honors accorded KNXT at this time were stated to be "unprecedented in the [Peabody] Committee's history."

TV-Radio Life Magazine, Twelfth Annual Achievement Special Award to station KNXT for outstanding service.

Thirty-First District California Congress of Parent-Teachers Association to "Learning '54" for excellence in public service programs.

National Women's Committee of Brandeis University to Dr. Herman Harvey and "Psychology on TV" for "special contribution to American culture and education through the medium of college credit courses presented on KNXT."

Los Angeles Tenth District California Congress of Parents and Teachers to "Psychology on TV" and "Child Psychology on TV," for general excellence in programming and availability of public service programs to the public.

California State Fair Award presented for KNXT's "outstanding programming as judged from the 'exceptional comments' received from viewers answering a public survey conducted by the California State Fair and Exposition."

Los Angeles Presbytery Award, a "resolution of appreciation" for "Light of Faith." Presented "for your outstanding contributions to the Southern California community and the Protestant cause in providing free time and technicians for the program."

TV-Radio Life Magazine Distinguished Achievement Award for distinguished programming in 1955 to "Spotlight on Opera."

Sylvania Award to "Focus on Delinquency" for outstanding local public service. This was one of four presented to local television stations in the country, and the only one to a station west of the Mississippi.

Juvenile Delinquency Digest Citation. This national publication cited "Focus on Delinquency" as the "Best TV Film" in a list of "This Year's 'Best on Juvenile Delinquency'."

Gold Mike for "Consistent Enterprise in Radio or Television News Reporting" by the Radio and Television News Club of Southern California.

Hollywood Kiwanis Club "Special Award" for outstanding contribution to the fight against juvenile delinquency. This was the first such award presented by the organization in its thirty-year history.

Los Angeles County Conference on Community Relations "Citation for Outstanding Service" for "continuing and substantial contributions to the betterment of human relations in this area."

Institute for Education by Radio-Television of Ohio State University, a First Award to "Shakespeare on TV." This second Ohio State award for this program in three years cited Dr. Baxter as setting a "praiseworthy example of university instruction, employing television techniques to reach the students and vitalize the subject of dramatic literature."

Honorable Mention by the Institute for Education by Radio-Television of Ohio State University to "Focus on Delinquency," "for its human quality, its honest approach, its varied setting, and a certain great sincerity in its presentation of one of Southern California's most serious problems."

Among the letters of appreciation and commendation received from organizations were letters from: American Association for the UN, American Cancer Society, American National Red Cross, California State Franchise Tax Board, California Tuberculosis and Health Association, Campfire Girls, CARE, Community Chest, Crippled Children Society, Hollywood Bowl Association, Invest in America Committee, Los Angeles County Heart Association, Los Angeles Junior Chamber of Commerce, Los Angeles Presbytery, the Mayor of Los Angeles, Muscular Dystrophy Association, National Foundation for Infantile Paralysis, San Francisco Opera Association, Sister Kenny Foundation, Southern California Symphony Association, The Air Pollution Control Board, United Jewish Welfare Fund, United States Treasury Department and YMCA.

WBBM-TV, Chicago

The total dollar value of facilities and air time contributed free by WBBM-TV in 1955 to charitable, governmental, religious, educational and other civic organizations amounted to $1,117,230. WBBM-TV broadcast a total of 4,247 announcements in 1955 on behalf of such organizations.

Program Series. In addition to announcements, WBBM-TV broadcast the following local program series in the field of information, education and public affairs:

OPERATION NEW HORIZONS, a half-hour weekly program produced by the Education Department of WBBM-TV in association with seven local colleges and universities: Lake Forest College, University of Illinois, Northwestern University, DePaul University, Illinois Institute of Technology, Loyola University and Roosevelt University. The program covers the wide range of activities in progress at the participating institutions. Faculty members and others associated with the colleges and universities are presented in demonstrations and discussions involving their respective fields. In the course of a single month's programs, topics ranged from crystallography to the commemoration of the tenth anniversary of the United Nations. The facilities and time costs for "Operation New Horizons," for each program, average $1,265.

THIS WAY UP, a half-hour weekly religious quiz program for young people from Chicago churches and synagogues. Each program presents youngsters of one or more churches of the same faith answering questions prepared by church-school leaders. Choirs from participating churches also appear on the program. The facilities and time costs for "This Way Up," for each program, average $877.

VISION, a half-hour program broadcast on alternate weeks devoted to the study of the traditions and cultural influences in American life, with particular emphasis on religious institutions. Programs have included an examination of present day religious culture in Italy, produced in cooperation with the Italian consulate and Italian State Tourist Bureau in Chicago, and a study of the Mormon religion, depicting the early hardships experienced by the Mormon settlers in establishing a community in Utah. The facilities and time costs for "Vision," for each program, average $1,130.

THOUGHT FOR THE DAY and MEDITATION. At the opening and closing of each broadcast day, WBBM-TV presents a brief message of an inspirational nature by clergymen of various faiths. The weekly facilities and time costs for "Thought for the Day" and "Meditation" are approximately $1,700.

THIS IS THE MIDWEST, a weekly half-hour profile of Chicago and midwestern industries and the men who have contributed to making these industries important. For each program a particular industry in the Chicago area is chosen and the assistance of a representative company in that industry is obtained. Produced in cooperation with the Chicago Association of Commerce and Industry, "This is the Midwest" makes extensive use of demonstrations, displays and film. The remote broadcast facilities of the station are occasionally used to provide direct coverage of industrial events. The wide range of industries featured has included the newspaper industry, the dredging industry, the story of the Merchandise Mart, the banking business, the meat packing industry and many others. Civic problems such as the development of inland waterways and improving Chicago's transit system have been explored.

UN IN ACTION, a half-hour program devoted to the activities of the United Nations, broadcast weekly while the UN Assembly is in session. Films of United Nations' activities, together with appropriate locally produced film, are used to present the subject matter with special emphasis on its significance to the local television audience. The facilities and time costs for "UN in Action," for each program, average $1,340.

THE TRUE PICTURE, a weekly program of films of educational and cultural interest. The facilities and time costs for "The True Picture," for each half-hour program average $1,090; for each quarter-hour program $785.

EYE ON CHICAGO, using films produced by WBBM-TV to present scenes of Chicago and its activities. Stories and places have included the North Pier Terminal "shape up," a public auction on South Michigan Avenue, weather research at the University of Chicago, the International Dairy Show, the Shedd Aquarium and the story of Chicago as the rail hub of the United States.

FARM DAILY, a daily fifteen-minute agricultural program. The regular features of the program include weather and market information and a special feature, such as an interview with a farm authority or filmed reports of farm activities. The facilities and time costs for "Farm Daily" are approximately $2,240 per week.

FARMTOWN, USA, a series of weekly half-hour programs produced in cooperation with the Illinois Agricultural Association and the Pure Milk Association. This program presented the station's Farm Director and guests from rural areas near Chicago. Activities at state and county fairs, livestock shows, dairy shows and other farm events were described. The program also provided information on methods of farm improvement and the alleviation of farm problems. The facilities and time costs for "Farmtown, USA," for each program, averaged $1,265.

CHOOSE YOUR CAREER, a series of half-hour programs broadcast weekly designed to afford an opportunity for high school students to learn pertinent facts concerning career possibilities in various industrial, business and professional fields. Each week a panel of high school students and prominent leaders in various fields discussed career possibilities. The facilities and time costs for "Choose your Career," for each program, averaged $1,265.

Special Programs. Among the individual special local programs broadcast by WBBM-TV in 1955 were:

FIRE AT WHITING, INDIANA, direct coverage of the fire at the refineries of the Standard Oil Company, using the station's remote facilities;

MAYORALTY ELECTIONS, special films and a direct audio line to election headquarters for coverage of the returns;

MEMBER OF THE TEAM, a panel discussion of juvenile problems;

OPERATION UNITY, for the American Museum of Immigration; and

THE MAYOR'S REPORT TO THE PEOPLE.

News Programs. The news gathering facilities of WBBM-TV include eleven wire services and regular reports from the State Highway Departments of Illinois, Indiana, Wisconsin and Michigan, and the Chicago Police Radio. Still photographs are available from the Soundphoto Network of International News Pictures and from Radiophoto. It is believed that the WBBM-TV news staff of 29 persons and five newscasters (which includes nine men and three camera crews, each crew equipped with both sound and silent equipment) constitutes one of the largest —if not the largest—television news operations outside of New York, Los Angeles and Washington.

Extensive use is made of films of news events, shot locally by the station's camera crews. WBBM-TV's news cameramen were the first to film the proceedings of the Illinois State Legislature, the first to record the hearings of a Chicago City Council committee on the floor of the Council Chamber and the first to film the deliberations of a Federal Grand Jury in Chicago. The WBBM-TV news film operation is so established that on an important story, a film of the event can be broadcast within thirty minutes after its arrival in the developing laboratory. An average of approximately 7,000 feet of film is produced locally each week of which approximately 1,400 feet are used on the air.

The local news schedule of WBBM-TV is as follows:

LOCAL NEWS AND WEATHER: 7:25-7:30 AM, and 7:55-8:00 AM, Monday through Friday;

LOCAL, NATIONAL AND INTERNATIONAL NEWS AND WEATHER: 8:25-8:30 AM, 8:55-9:00 AM, Monday through Friday;

FRANK REYNOLDS NEWS: 12 Noon-12:15 PM, Monday through Friday; 10:30-10:35 and 11:40-11:45 PM, Sunday;

JULIAN BENTLEY NEWS: 6:15-6:30 PM, Monday through Friday;

NEWS, WEATHER AND SPORTS: 10:00-10:15 PM, Monday through Friday;

NEWS AND WEATHER: 10:30-10:45 PM, Monday through Friday;

PAUL HARVEY NEWS: 6:45-7:00 PM, Wednesday;

LOCAL, NATIONAL, INTERNATIONAL NEWS AND LOCAL WEATHER: 7:50-8:00 AM, Saturday;

THIS WORLD THIS WEEK: 3:00-3:45 PM, Saturday.

The program costs, value of time and facilities for all local news programs in 1955 were approximately $1,500,000.

A Typical Week's Programs and Announcements. During the week of April 1 through April 7, 1956, WBBM-TV broadcast a total of 115 announcements for the following organizations: American Cancer Society, Anti-Defamation League, Boys Club Anniversary, CARE Food Crusade, Employ The Handicapped, Girl Scouts, Ground Observer Corps, Income Tax, National Blood Program, National Guard, National Safety Council, Nursing Careers, Religion in American Life, Social Security, Travelers Aid Volunteers, United States Air Force, United States Savings Stamps, Veterans Administration.

In addition to its regular local news schedule during the week, WBBM-TV broadcast the following local religious, informational or educational programs: "Operation New Horizons," "The True Picture," "Farm Daily," "This is the Midwest," "Thought for the Day" and "Meditation," all described previously. WBBM-TV also broadcast during this week a special Easter program, the traditional Lutheran Easter service, originating from the Garrick Theater in Chicago.

The total facilities and time costs for these programs and announcements during this single week are estimated at $24,000.

Awards and Commendations. WBBM-TV received the following awards for programs broadcast in 1955:

Institute for Education by Radio-Television of Ohio State University, first place award to "Eye on Chicago" in the category of public service by a regional station. The citation stated: "This series is good television. It bridges the gap between spot news and education by television through the use of excellent camera work, revealing subject matter, and new techniques of finding the unusual through the eye of the camera, and in interest-compelling voice. It is lively in tempo and has attractive story-telling quality."

The Annual *TV Guide* poll for the top female personality, the best disc jockey, the best newscaster, the best male vocalist, and the best female vocalist.

The Chicago Federated Advertising Club four first place awards to WBBM-TV for the best variety program, the best musical production, the best news and commentary program, the best documentary program, and honorable mention in the educational program division.

Other awards were received from the Arthritis and Rheumatism Foundation, the Continental Air Defense Command Ground Observer Corps, the March of Dimes, the National Exchange Club, the Santa Claus Campaign for Needy Children, and the Sixth Annual Scout-O-Rama.

Among the letters of appreciation and commendation received from organizations were letters from: American Foundation for the Blind, Inc., American Legion, American Medical Association, American Red Cross, CARE, Chicago Board of Education, Chicago Park District Police Benevolent Association, Citizens Schools Committee, Citizens Traffic Safety Board, Community Fund of Chicago, Inc., DePaul University, Greater Chicago Churchmen, Illinois Agricultural Association, Illinois Association for the Crippled, Illinois National Guard, Loyola University, National Citizens Commission for the Public Schools, National Foundation for Infantile Paralysis, Salvation Army, The Tuberculosis Institute, United Cerebral Palsy of Chicago and United States Treasury Department.

On August 2, 1955, Mayor Daley of Chicago wrote the General Manager of the station and the Manager of the News Department expressing his appreciation for the station's cooperation in participating in the "Chicago Plan" for broadcasting in connection with mob disorders in Chicago. In his letter, the Mayor stated: "Civic responsibility such as you have shown in this instance will help make Chicago a greater, finer city, and deserves the thanks of everyone interested in the rights and safety of all Chicagoans."

WXIX, Milwaukee

The total dollar value of facilities and air time contributed free by WXIX in 1955[1] to charitable, governmental, religious, educational and other civic organizations amounted to $208,368. WXIX broadcast a total of 2,309 announcements in 1955 on behalf of such organizations.

Program Series. In addition to announcements, WXIX broadcast the following local program series in the field of information, education and public affairs in 1955:

THIS IS YOUR BUSINESS, a series of nine quarter-hour programs in cooperation with the Milwaukee Association of Commerce and presenting the stories of some of the major industries in Milwaukee. The facilities and time costs for "This Is Your Business" totaled $2,554.

BACKYARD FUN, a series of five half-hour programs presented in cooperation with the Milwaukee Department of Recreation. This program was presented on five consecutive days during a period when the Milwaukee schools were closed due to a threatened polio epidemic. The program demonstrated constructive activities for children who were confined to their homes. The facilities and time costs for "Backyard Fun" were $1,708.

YOUR PUBLIC LIBRARY PRESENTS, a series of thirteen half-hour programs in cooperation with the Milwaukee Public Library. The program was devoted to discussions and displays

[1]CBS acquired WXIX (formerly WOKY-TV) in February 1955. Accordingly, all information included for the year 1955 covers the period from February 27, 1955, the date on which WXIX commenced the broadcast of CBS Television Network programs, to December 31, 1955.

by groups of young people and adults of the customs and histories of children in other countries, native costumes, instruments, toys, games and books. The central theme of the program was the development among children of a greater interest in books. The facilities and time costs for "Your Public Library Presents" totaled $4,541.

THE TIME BETWEEN, a half-hour weekly series produced in cooperation with Marquette University. This program presented Father John W. Walsh of Marquette University in a series of discussions on drama and dramatists. The facilities and time costs for "The Time Between," for each program, averaged $490.

LIGHT OF FAITH, a half-hour program presented weekly in cooperation with the Milwaukee County Council of Churches. The facilities and time costs for "Light of Faith," for each program, average $278.

YOUR DOCTOR ADVISES, a series of half-hour programs broadcast on alternate weeks produced in cooperation with the Milwaukee County Medical Association and presenting a panel of practicing physicians discussing the causes and treatments of common illnesses. Telephoned requests for information from the viewing audience are answered on the program. The facilities and time costs for "Your Doctor Advises," for each program, average $378.

MILWAUKEE REPORTS, a series of half-hour weekly programs presented in cooperation with the Milwaukee Junior Chamber of Commerce and Wisconsin State College. The series is devoted to panel discussions by qualified persons on current topics of civic interest in Milwaukee. The facilities and time costs for "Milwaukee Reports," for each program, average $364.

LIVING WITH CHILDREN, a series of half-hour programs, broadcast on alternate weeks, concerning child psychology. A child psychologist answers questions posed by a panel of parents. The facilities and time costs for "Living with Children," for each program, averaged $467.

SHAKESPEARE ON TV, a series of lectures on Shakespeare by Dr. Frank C. Baxter of the University of Southern California, produced by KNXT, the CBS Owned television station in Los Angeles. During the summer of 1955, WXIX carried the first series of these programs. The total time costs for "Shakespeare on TV" on WXIX were $3,120.

AMERICA IN THE MAKING, the series of programs produced by WCBS-TV, the CBS Owned television station in New York, with the cooperation of New York University and the Metropolitan Museum of Art. The total time costs for "America in the Making" on WXIX were $3,120.

GIVE US THIS DAY, a five-minute religious program at the opening and closing of each broadcast day. In 1955, WXIX broadcast films produced by WCBS-TV. Recently WXIX has commenced the production of its own series. The weekly facilities and time costs for "Give Us This Day" are approximately $990.

In addition to these programs, WXIX regularly broadcasts films in the field of information, education and public affairs. Among the films shown on WXIX are:

A LIFE TO SAVE, for the County Medical Association;

4-H HEADLINES, for the 4-H Clubs;

HEART OF AMERICA, for the American Heart Association;

THE BIG PICTURE, a series for the United States Army;

THE MAGIC BOND, for the Veterans of Foreign Wars;

THEN THERE WERE FOUR, on safety;

THEY MET IN GALILEE and HILL NUMBER ONE, for religious groups;

TWO THOUSAND CITIES, for the United States Army Signal Corps;

YOUR MARINE BAND, for the United States Marine Corps; and films concerning the preparation of tax returns for the United States Treasury Department.

Special programs. Among the individual special programs broadcast by WXIX in 1955 were:

BROTHERHOOD, in commemoration of Brotherhood Week;

PREVENT THAT FIRE, for the Milwaukee Fire Department;

THIS IS CHRISTMAS, a special 90-minute program utilizing the native groups of Milwaukee and a cast of over 200 persons;

YOUR EASTER SEALS, showing the work done by contributions for Easter seals.

News Programs. In addition to its public affairs programs, WXIX broadcasts regular local news and weather programs, making extensive use of films of local, national and international events.

The local news schedule of WXIX is as follows:

MILWAUKEE MORNING HEADLINES: 6:55-7:00 AM, Monday through Friday, 7:25-7:30 AM, Saturday;

MILWAUKEE MORNING NEWSREEL: 7:25-7:30 AM, Monday through Friday;

NOON NEWS AND WEATHER: 11:25-11:30 AM, Monday through Friday;

THE SIX O'CLOCK REPORT: 6:00-6:15 PM, Monday through Friday;

THE BIG NEWS: 11:00-11:20 PM, Monday through Friday;

LATE NEWS: 12:45-12:50 AM, Monday through Friday; 12:30-12:35 AM, Saturday;

SATURDAY NOON NEWS: 1:55-2:00 PM, Saturday;

SATURDAY NIGHT NEWS ROUNDUP: 11:00-11:15, Saturday;

LET'S VIEW THE NEWS: 5:00-5:15 PM, Sunday.

The total weekly program costs, value of time and facilities for local news programs are $6,282.

A Typical Week's Programs and Announcements. During the week of April 1 through April 7, 1956, WXIX broadcast 69 announcements with an air time value of approximately $3,500 on behalf of the following organizations: American Cancer Society, Arthritis-Rheumatism Foundation, Boys Clubs of America, Disabled American Veterans, Fred Miller Community Theatre, Get Out the Vote Committee, Internal Revenue Department, Milwaukee Council of Churches, Milwaukee Easter Seal Society, National Safety Council, United States Army, United States Coast Guard, United States Treasury Department.

In addition to its local news and weather schedule, during the week WXIX broadcast the following local religious, informational and educational programs: "Light of Faith," "Your Doctor Advises," "Give Us This Day," "Milwaukee Reports" and "The Big Picture," all described previously.

WXIX also broadcast the following other local programs during this week:

BILLY'S QUIZ, a regularly scheduled half-hour weekly program in cooperation with the Milwaukee Public Library. The format of the program consists of a quiz for children designed to stimulate their interest in reading.

OPERATION BALLOT, a special program originated by the station and utilizing the combined forces of the station's staff and the representatives of three Milwaukee radio stations with approximately 300 special employees to cover the election results.

The total facilities and time costs for these programs during this single week are estimated at $4,500.

Awards and Commendations. WXIX has received the following awards:

The Medical Society of Milwaukee County for "outstanding public service in the presentation of 'Your Doctor Advises'."

The Department of the Army for the presentation of "The Big Picture," "a most important contribution to the public understanding of the role and mission of the United States Army."

The Milwaukee Fire Department for services contributed "to the cause of public safety by active participation in National Fire Prevention Week."

The National Police Officers Association of America "for distinguished service to the Association and law enforcement which it represents."

A United States Naval Recruiting Certificate for "WXIX's public-spirited cooperation in furthering the excellent relations between the United States Navy and the people of the community."

In May 1956, WXIX received from the Milwaukee County Radio and Television Council a first award in the category of cultural programs for "The Time Between," a first award in the field of public issues for "Milwaukee Reports" and a special citation for "This Is Christmas," described as "an outstanding one-time program artistically utilizing local cultural and ethnic groups."

Among the letters and commendations received from organizations were letters from: Arab Information Center, Consulate General of Israel, Lutheran Radio Church Service, Milwaukee Community Concert Association, Milwaukee County Council of Churches, Milwaukee County Good Friday Observance, Milwaukee County Radio and Television Council, Milwaukee County Society for Mental Health, Milwaukee Junior Chamber of Commerce, Milwaukee Public Library, National Conference of Christians and Jews, 75th Anniversary of Marquette University, and United States Treasury Department, Bureau of Customs.

Mr. Stanton. (2) An Opinion of Counsel and Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc., prepared by our attorneys, Cravath, Swaine & Moore: This document addresses itself to the major legal issues which have been raised before this committee—the issues of monopoly, of network option time, of the basic required practice, of alleged program and time tie-ins and of network ownership of stations. The opinion and memorandum consider all the facts as well as the legal brief previously submitted to this committee by Donald F. Turner, and conclude that the activities of CBS in the television field "do not in any respect violate the antitrust laws."

(The document is as follows. See also material at p. 2929 and item 30 in the appendix.)

June 4, 1956

Dear Sirs:

You have requested our opinion as to whether your television broadcast activities are in any way contrary to the antitrust laws, particularly in reference to your practices of (a) obtaining agreements from individual television broadcast stations affiliated with your television network whereby each such station agrees, subject to prescribed conditions and limitations, to broadcast all network sponsored programs offered to it by you during certain specified hours of the day (generally referred to as "network option time"); (b) requiring advertisers who seek to use your television network facilities to order a minimum network of not less than certain specified stations (currently 52 in number); (c) selecting, producing or owning some of the programs to be broadcast over your network; and (d) owning and operating some of the television broadcast stations which are a part of your television network.

We have had before us (a) the facts, assertions of fact and arguments of law set forth in "Memorandum Concerning the Need for Amending the FCC's Chain Broadcasting Regulations to Prevent Violations of Antitrust Law in the Television Industry", dated March 26, 1956, filed with the Senate Committee on Interstate and Foreign Commerce; (b) the facts set forth in "Network Practices Memorandum Supplementing Statement of Frank Stanton, President, Columbia Broadcasting System, Inc.", which you are filing with the above-mentioned Committee; and (c) such other facts concerning the television broadcast industry as seemed to us or to you to be relevant and which you furnished to us or we obtained by independent research. A summary of those facts and a discussion of the principles of antitrust law applicable thereto are set forth in our "Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc." annexed hereto.

Upon the basis of those facts, we are of the opinion that your television broadcast activities, and in particular the practices referred to above, do not in any respect violate the antitrust laws.

Very truly yours,

CRAVATH, SWAINE & MOORE

Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc.

Memorandum Concerning the Applicability of the Antitrast Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc.

Columbia Broadcasting System, Inc. (CBS), a New York corporation, is engaged in various phases of the television broadcast industry. Questions have been raised as to whether such activities are in any way contrary to the antitrust laws, including particularly its business practices of (a) obtaining agreements from individual television broadcast stations affiliated with the CBS Television network whereby each such station agrees, subject to prescribed conditions and limitations, to broadcast all network sponsored programs offered to it during certain specified hours of the day (generally referred to as "network option time"); (b) requiring advertisers who seek to use the CBS Television network facilities to order a minimum network of not less than certain specified stations (currently 52 in number); (c) selecting, producing or owning some of the programs to be broadcast over the CBS Television network; and (d) owning and operating some of the television broadcast stations which are a part of the CBS Television network. Messrs. Cravath, Swaine & Moore of New York City have furnished a written opinion under date of June 4, 1956, to CBS that its television broadcast activities, and in particular the practices referred to above, do not in any respect violate the antitrust laws.

This memorandum sets forth a summary of the relevant facts, a discussion of the applicability of the antitrust laws to such facts and conclusions as to the questions referred to above. Since it is designed to be a self-contained document, it repeats rather than refers to many facts set forth in "Network Practices Memorandum Supplementing Statement of Frank Stanton, President, Columbia Broadcasting System, Inc." (Supplemental Memorandum) to be filed with the Committee in conjunction with the testimony of Frank Stanton.

I. *The Facts*

General Nature of the Television Broadcast Industry

A television network is composed of a number of television stations in different localities, for the most part separately owned and operated, which are interconnected by telephone cables or microwave relays so as to be capable of the simultaneous broadcast of the same television programs. The three existing networks were separately organized by the Columbia Broadcasting System, Inc., the National Broadcasting Company and the predecessor of American Broadcasting-Paramount Theatres, Inc. Each of those companies operates its network and owns one or more of the television stations included in its network. The organization of a network, aside from physical interconnection, consists merely of the execution of separate written contracts between the company operating the network and those independently owned stations which desire to become a part of the network. Such stations are called affiliates and the contracts are called affiliation agreements. Each network provides a schedule of programs, including programs produced by the network and by others, and arranges for interconnection facilities to carry those programs to its affiliates. Each network also seeks to persuade advertisers to pay for broadcast time and program costs in return for the nation-wide broadcast of commercial messages accompanying the programs.

From the business viewpoint, a network is a national advertising medium: it is a means of carrying to the national audience the program which an advertiser sponsors, together with his commercial message. Advertisers are the network's customers. Each individual broadcast station is a supplier to the network of one element of network service, namely, local broadcast time, and is paid by the network for its use of that time.* The organization, functions and affiliation contracts of the CBS Television network are hereinafter described in greater detail.

As of March 1, 1956, there were 429 commercial television stations on the air in the United States, of which 334 were VHF and 95 were UHF stations. Of those stations, 393 were affiliated** with one or more of the regularly operating networks. The distribution of such stations among the various localities and networks is set forth below:

*No "sale" of station time is actually involved in network broadcasting, as is more fully explained in various places in this Memorandum. The CBS Television network merely contracts with each advertiser to broadcast designated programs for the advertiser over its network, for which the advertiser agrees to pay to the network compensation based upon (i) the time charges of the affiliates for carrying the programs and (ii) all or part of the cost of producing the programs if they are furnished by CBS. The making available by individual stations of their facilities for the broadcast of sponsored programs is, for purposes of convenience, frequently referred to in the industry as the "sale of station time." That terminology is sometimes used in this Memorandum, but it does not denote a "sale" in its usual sense.

**Six of the remaining 36 stations broadcast CBS Television network programs on a per-program basis. Undoubtedly some, if not all, of the other unaffiliated stations similarly broadcast some programs of NBC and ABC on a per-program basis.

Operating and Allocated Stations

			Total

	258	429	67	82	88	48	54	19	35	393

*As of March 1, 1956.

The remaining available 1413 commercial stations are not in use for one of the following reasons: (i) licenses have not been applied for; (ii) licenses have been applied for but have not been granted by the FCC; (iii) stations which have been licensed are not on the air because construction is in progress but has not been completed, or construction has not begun or the station has gone off the air for business reasons.

Today, television service is practically universal in the United States. It is estimated that 99.2% of United States families live in areas which are within the range of at least one television signal, and more than 35 million families own one or more sets. It is estimated also that 94 out of every 100 television homes have a choice of two or more signals; 87 out of every 100 have a choice of three or more signals; and the average television home has a choice of 5 different signals. According to a recent study by a reliable market research organization, each family spends slightly more than six hours a day watching television.

CBS Television Broadcast Activities

CBS is a corporation formed in 1927 primarily for the purpose of establishing and operating a radio network. The television broadcast activities of CBS are carried out by the CBS Television Division and include the ownership and operation of four television broadcast stations and the operation of the CBS Television network. Through other units of the Division, CBS acts as national spot representative for its own stations and eight of its network affiliates and produces, sells and distributes entertainment and news film programs for use on television stations. Through other divisions, CBS is engaged in radio broadcast activities; manufactures television receivers and many types of electronic tubes; and engages in research and in the development of broadcast and receiving equipment.

(a) *CBS-Owned Stations.* CBS owns television broadcast stations in New York, Chicago, Los Angeles and Milwaukee, respectively, and has pending applications for an existing station in Hartford and for a new station in St. Louis. The stations in Milwaukee and Hartford are UHF stations, and the other stations are VHF stations. The number of VHF and UHF stations operating in each of the cities is as follows:

City	VHF	UHF
New York	7	0
Chicago	4	0
Los Angeles	7	0
St. Louis	2*	1
Milwaukee	3	1
Hartford	0*	2

The CBS-owned stations receive a share of the revenues of the CBS Television network attributable to its use of the broadcast time on those stations and the revenues from the sale of time and programs by those stations to national spot and local advertisers. In 1955, the national television time revenues of

*The CBS application for a station in St. Louis is for an additional VHF station not included in the above chart. A VHF channel is assigned to Hartford and hearings involving competing applicants have been held. In addition, a VHF station is operating in New Haven, which covers much of the same area reached by Hartford stations.

the CBS-owned stations represented only .46% of all national advertising expenditures and only 5.5% of all national television time expenditures. The national spot television time revenues of the CBS-owned stations in 1955 represented only 8.8% of national spot television time expenditures. In 1955, the share of network revenues for CBS-owned stations represented only 2.9% of all television network time revenues and only 7.2% of CBS Television network time revenues. The local television time revenues of the CBS-owned stations in 1955 represented only 1.5% of all local television time expenditures.

CBS-owned stations operate independently of the CBS Television network. They receive approximately the same percentage of their network rate and have the same rights and responsibilities to the network as do all other affiliates. Accordingly, CBS-owned stations are treated in the same way as other affiliates in this memorandum.

(b) *Affiliates.* The CBS Television network as of March 1, 1956, had 151 primary affiliates (which take all or most of their network programs from CBS), 38 secondary affiliates (primarily served by another network) and 26 Extended Market Plan affiliates (which serve small markets and are sold by a special network staff in accordance with a special pricing and discount structure designed to attract network advertisers). In addition, the CBS Television network supplies programs to 52 other stations on a per-program basis. Of the stations served by the network, 233 are located in the United States, 27 in Canada, and 7 in Alaska, Hawaii, Mexico, Cuba and Puerto

Rico. Signals from the stations affiliated with the network reach 98% of all families who own television sets in the United States.

Affiliates are selected with the aim of giving the widest possible coverage for the CBS Television network programs throughout the country and in all the major markets, without substantial duplication.

The relations between the network and each of its affiliates are governed by an affiliation agreement. In the case of a primary affiliate the agreement contains a commitment by the CBS Television network to offer to the station, which shall have a "first refusal" of all network programs, network sustaining programs without charge, and also network sponsored programs which network clients request be broadcast in the market served by that station, for which the network agrees to pay the station compensation as prescribed in the agreement; and also, usually, a commitment by the station to accept and broadcast all network sponsored programs, offered and furnished to it by CBS during certain specified hours, called "network option time", subject to various conditions and limitations. A typical option time clause in a CBS Television network affiliation agreement,* which complies in every respect with the requirements of the Chain Broadcasting Regulations of the FCC, is as follows:

*As of February 10, 1956, the clause is included in contracts with 136 U. S. CBS Television network affiliates. Seven other U. S. contracts had slight variations in the hours specified because of local problems. The clause is also included in contracts with 7 Canadian CBS Television network affiliates.

"2. (a) Station, as an independent contractor, will accept and broadcast all network sponsored programs offered and furnished to it by CBS Television during 'network option time' (as hereinafter defined); provided, however, that Station shall be under no obligation to accept or broadcast any such network sponsored program (i) on less than 56 days' notice, or (ii) for broadcasting during a period in which Station is obligated by contract to broadcast a program of another network. Station may, of course, at its election, accept and broadcast network sponsored programs which CBS Television may offer within hours other than network option time.

"(b) As used herein, the term 'network option time' shall mean the following hours:

(i) if Station is in the Eastern or Central Time Zone, Daily, including Sunday, 10:00 A. M. to 1:00 P. M., 2:00 P. M. to 5:00 P. M. and 7:30 P. M. to 10:30 P. M. (expressed in New York time current on the date of broadcast);

(ii) if Station is in the Mountain or Pacific Time Zone, Daily, including Sunday, 10:00 A. M. to 1:00 P. M., 2:00 P. M. to 5:00 P. M. and 7:30 P. M. to 10:30 P. M. (expressed in local time of Station current on the date of broadcast).

"3. Nothing herein shall be construed (i) with respect to network programs offered pursuant hereto, to prevent or hinder Station from rejecting or refusing network programs which Station reasonably believes to be unsatisfactory or unsuitable, or (ii) with respect to network programs so offered or already contracted for, (A) to prevent Station from rejecting or refusing any program which, in its opinion, is contrary to the public interest, or (B) from substituting a program of outstanding local or national importance. CBS Television may, also, substitute for one or more of the programs offered hereunder other programs, sponsored or sustaining, of outstanding local or national importance, without any obligation to make any payment on account thereof (other than for the substitute program, if the substitute program is sponsored). In the event of any such rejection, refusal or substitution by either party, it will notify the other by private wire or telegram thereof as soon as practicable."

The CBS Television network designates certain of its affiliates (currently 52) as "basic-required" stations. Those stations cover substantially all the major markets in the United States and 81.8% of American television homes. With a few exceptions arising out of special circumstances and the special needs of network advertisers* the effect of the basic-required list is to require advertisers who wish to use the network to order those stations as a minimum. With one exception, there is no agreement between the CBS Television network and the stations involved by which they are designated as basic-required. CBS is free to, and does, alter the list at will.

In practice, national advertisers who want network coverage almost universally order far in excess of the basic-required stations. In April of this year, the average number of stations which broadcast CBS Television network commercial programs during daytime hours was 83, and during nighttime hours was 121.

---

*For the week ending April 7, 1956, one advertiser ordered less than 52 affiliates for its program. In the case of four other programs, more than 52 affiliates were ordered, but the orders did not include some of the basic-required stations.

(c) *Organization and Staff.* The operating requirements of the CBS Television network are such that it is necessary for it to maintain a sizable staff to carry out its functions. As of March 1, 1956, CBS Television employed on a full-time basis 2,412 people for its network and a total of 5,493 people, including per diem personnel, talent and supporting corporate personnel. Among the most important departments are the following: the Program Department, which has the primary responsibility for the basic creative and planning work which results in the conception, evaluation, development and production of the network program schedule; the Research Department, which evaluates tastes, measures audiences, station circulation, and set ownership, checks comparative media, and evaluates and analyzes program content in order to determine and predict public taste reactions; the Sales Department, which sells the network medium to advertisers and other users, assists in the determination of advertisers' needs and in the relating of those needs to the time periods and programs available and clears time on stations in accordance with the advertisers' desires; the Engineering Department, which develops broadcasting equipment, maintains studio and transmission standards, provides technical consulting services to affiliates and CBS-owned stations, and conducts engineering studies of station coverage; the Station Relations Department, which is engaged in the function of securing and maintaining the most efficient line-up of stations for the network; the Promotion Department, which promotes the CBS Television Division and its network programs to advertisers and the public, and provides program promotional materials for stations; the Operations Department, comprising more than 2,400 people, which makes physically possible the broadcast of network programs; and the CBS News and Public Affairs Department, which maintains, at an annual gross operating cost of approximately $7,000,000, a world-wide news gathering service and produces non-commercial public affairs programs of national interest.

(d) *Physical Facilities.* In order to supply high-quality programs to its affiliates day in and day out, the CBS Television network provides and maintains elaborate physical facilities. CBS has invested nearly $28,000,000 in its television network program production facilities in New York and Hollywood alone. Because it believes that even its existing facilities are insufficient, it is now considering additional plant facilities for the next few years, for which an expansion investment of up to $25,000,000 would be necessary.

A large reservoir of physical facilities is required in order to maintain a regular schedule of diversified programming. The continuous network program schedule permits economies which normally are not available in non-network production. The almost continuous use of the studios and other physical facilities makes for efficient operations and enables the cost of maintenance and operation to be amortized over many programs, reducing to the lowest possible minimum the studio cost of each individual program.

(e) *Interconnection Facilities.* In addition to its own organization and facilities which a network must maintain, and in order to serve its affiliates with its program product, a television network must arrange for a means by which its affiliates throughout the country can be interconnected. Only in that way can a program be seen simultaneously by viewers on a nation-wide basis. Interconnection is, of course, necessary for all live programs, whether they be entertainment programs or broadcasts of public events as they occur. Even with respect to film programs, interconnection is desirable in order to provide simultaneity and to make it possible for an advertiser to arrange through a single source to have his program broadcast from a single source and at a fixed point in the network program schedule.

At present most network stations are interconnected by American Telephone and Telegraph facilities—either coaxial cables or microwave relay systems—which transmit all network programs at a cost to the CBS Television network of approximately $13,500,000 a year.

The continuous use made of interconnection facilities keeps the network's per-program costs down and preserves the facilities on a regular basis to television. If interconnection facilities were not regularly called upon by the networks, and if instead they were used only on special occasions such as the World Series or a political convention, their cost on such an occasional basis would vastly increase—by possibly as much as 30 or 40 times per program. In any event, it is likely that if the interconnection facilities were required only occasionally, at least those which go to the smaller markets outside the top 40 or 50 cities would not be used with sufficient frequency to warrant their being preserved by AT&T for television use at all. It is not unlikely, therefore, that were it not for the continuous demand made by the networks upon those facilities, some of them, at least, would revert to other uses and be unavailable to television even for special occasions, so that many smaller markets would be deprived of live programs emanating from any area other than that in which the local station is located.

(f) *The Program Schedule.* The end result of the CBS Television network organization, physical facilities, interconnection arrangements, affiliation contracts, activities and energy is the creation of a nation-wide medium of communication by television, distinct from all other forms of nation-wide media, and also distinct from the local medium provided by each individual broadcast station.

The network medium is not just the bare avenue of communication afforded by the interconnection facilities arranged for by the network, any more than the medium created by Life Magazine can be said to be the bare pages of the magazine and the mechanics of its distribution. The network medium consists in principal part of the network program schedule which is broadcast over its facilities, which gives the medium form, substance and content and determines its character and impact. Accordingly, one of the prime objectives of the CBS Television network is to provide the best program schedule that it can devise, giving due consideration to the interrelated needs of the television audience, stations and advertisers. It is in order to perform that basic function that the network maintains a large organization and comprehensive facilities for the conception, development and production of programs, and that it retains final decision as to the selection and scheduling of its network programs.

An important fact about network programming, and indeed about television programming in general, is that not only must the programs be good but they must be continuous. A network must produce a full schedule, day in and day out. Some idea of the dimensions of the program task of a network can be gained from the fact that, for example, during the week ending April 7, 1956, the CBS Television network furnished to its affiliates 129 live programs,* varying in length from 15 minutes to 1¾ hours and covering an aggregate of 68¾ broadcast hours. Assuming that the CBS schedule for the week ending April 7, 1956, is typical, CBS alone will produce and broadcast 1,508 hours of programs, and CBS in association with independent producers will produce and broadcast 1,053 hours of programs, or a total of 2,561 hours of programs (without taking into account the programs broadcast by the network but produced by others) in 1956, compared to a total of 427 hours of running time for all United States feature film production released in 1955. Thus, the product of the CBS Television network, alone, in terms of hours, will be more than three times that of the total product of feature films from Hollywood, and that of CBS and CBS in association with

*In computing the number of programs, each separate program of a program series, such as five-times-a-week news programs and daytime serials was counted as an individual program.

independent producers will be six times that of feature films from Hollywood. During the single week ending April 7, 1956, the CBS Television network broadcast a total of 86¼ hours of sponsored and sustaining programs. Of the 72¾ sponsored broadcast hours involved in that schedule, 55¾ were live, and 17 were filmed.

The extent to which others contribute to the CBS Television network program schedule is shown by the following data: during the week ending April 7, 1956, 72¾ hours of sponsored programs were broadcast by the network. Of those hours, 36½ (50.2%) were occupied by programs created and produced entirely by 38 different outside producers with whom CBS has no direct connection, and an additional 19¾ hours (27.1%) were occupied by programs produced by 8 companies or individuals in association with the network. That total of 72¾ hours was comprised of 74 different programs or program series, only 17 of which were wholly produced by the network. Of the remaining 57 programs or program series, 47 were wholly produced by 38 outside producers and 10 were produced by 8 outside producers in association with CBS.*

An examination of the sources of programs broadcast on the CBS Television network during Class A commercial time** for the week ending April 7, 1956, reveals that, proportionately,

*In addition, there were sustaining programs and program series occupying 13½ hours. Of those sustaining programs, CBS produced 11 which occupied 12½ hours. Of the 28 programs (17 sponsored and 11 sustaining) produced by CBS alone, 11 were news and public affairs programs which, under CBS policy, must be produced under its supervision and control.

**6 P. M. to 11 P. M., Monday through Saturday, and 5 P. M. to 11 P. M. on Sunday.

independent producers of programs have an even greater outlet at night. Of the 27¾ hours of programs broadcast during that time, 16 hours, or 57.7 per cent., were wholly produced by outsiders, 2½ hours (9%) were produced by outsiders in association with CBS and 9¼ hours (33.3%) were produced by CBS alone. An analysis of programs on the CBS Television network produced in whole or in part by outside sources over the last three years reveals a significant increase both in the number of hours and in the percentage of programs produced solely by outside sources and by outside sources in association with CBS. Despite an increase in the total hours of network programming, the hours of programs produced by CBS alone and the percentage of programs produced by CBS alone and in association with outsiders, have decreased.

	Sponsored Broadcast Hours			
	April 1954		April 1956	
	Hours	Per Cent	Hours	Per Cent
Produced by Outside Sources	27¼	46.6	36½	50.2
Produced by Outside Sources and CBS Television Network	8½	14.5	19¾	27.1
Produced by CBS Television Network	22¾	38.9	16½	22.7
Total	58½	100.0	72¾	100.0

CBS estimates, that during an average week in 1955, advertisers who sponsored programs carried on the CBS Television network paid $1,170,000 for programs produced wholly by outside sources, $520,000 for programs produced by CBS Television network alone, and $130,000 for programs produced by CBS Television network in association with independent producers; and that for the entire year 1955, $61,000,000 was paid for programs produced wholly by outside sources, $27,-000,000 for programs produced by the CBS Television network alone, and $7,000,000 for programs produced by outside producers in association with the network. There have been 171 program replacements on the network since 1951—106 nighttime programs and 65 daytime programs. Of the 65 daytime programs which were replaced, 23 were outside-produced. In replacing those programs exactly the same number of outside-produced programs was used. Of the 106 nighttime programs replaced since 1951, 52 were originally outside-produced and the replacement process has resulted in 62 outside-produced programs. In other words, since 1951, there has been a net gain of 10 outside-produced programs and a net loss of 10 CBS-produced programs in CBS's nighttime schedule as a result of program replacements and without regard to programming new periods not theretofore filled by network broadcasts.

While the program-producing function is of vital importance to the network, it is not in itself a profitable side of the business. CBS lost $7,100,000 in 1955 solely on the commercially sponsored programs that it produced, without any allocation of general overhead expenses.

According to the findings of independent market research organizations that provide rating services, network programs are generally the most popular by a large margin. In the 60 television markets for which American Research Bureau local rating reports are available for either January, February or March, 1956, 10 of the 10 most popular programs were network programs in 46 markets,

9 of the 10 most popular programs were network programs in 12 other markets,

8 of the 10 most popular programs were network programs in 2 other markets.

In other words, in those 60 markets, 97.3% of the top 10 positions were occupied by network programs and only 2.7% by non-network programs.

The Market

Advertisers and advertising are categorized as "local" or "national". Local advertisers are those whose business and therefore whose advertising are limited to one or a few localities. National advertisers are those whose business and advertising are planned to reach the national public. National advertisers use networks as national advertising media. When a national advertiser uses the CBS Television network the time charges are paid directly to CBS. National advertisers, however, also advertise nationally by placing what is called national spot advertising on individual television stations. In that case the national advertiser pays the time charges directly to the individual stations which he selects. Therefore national television advertising consists of both network television advertising and national spot television advertising. The distinction between spot advertising and network advertising is that in spot advertising stations are selected individually rather than on a group (network) basis. Spot television advertising employs both brief announcements and commercially sponsored programs. It may consist of ten second (or longer) announcements or sponsored film programs or locally originated live programs.

Television networks compete for advertisers' patronage not only with each other but also with all other national media, including national spot television,* newspapers, magazines, radio, direct mail, trade publications, outdoor advertising and other miscellaneous forms of advertising. In 1955 total U.S. expenditures for national advertising were approximately $5,287,000,000, of which $785,000,000 was spent for national spot and network television advertising. Thus national advertisers spend only 15% of their advertising budgets on national television advertising. Of the total United States expenditures for national advertising of $5,287,000,000, the share of the CBS Television network for 1955 was but 3%. Of the total United States expenditures for national spot and network television advertising (including time and program costs) the share of the CBS Television network for the last quarter of 1955 was 27.2%.

As television has grown, advertising expenditures for both network and national spot and local television advertising have expanded as well, as is indicated by the following table:

	Television Advertising Expenditures		
	Network	National Spot and Local	
Year			(% of Network)
1952	$256,400,000	$197,500,000	77.0
1953	319,900,000	286,200,000	89.5
1954	417,900,000	385,700,000	92.3
1955	520,000,000	485,000,000	93.3

*It may be noted, however, that in an important sense, national spot television advertising is complementary to, and built on, network television: a strong network schedule increases circulation and attracts spot revenues.

The above figures are based upon estimated time costs adjusted upward to include program production costs. When based upon time charges alone, national spot and local television advertising revenues exceeded network time revenues by $76,100,000 in 1955.

The report of a recent survey by the Television Bureau of Advertising shows that the gap between network time charges and national spot time charges is rapidly closing. During the period October through December, 1955, net national spot television time charges to 3,017 advertisers amounted to $75,800,000, while the net network television time charges during the same period totaled $84,900,000. The ratio of network time charges to national spot time charges has, therefore, decreased to 1.12 to 1. If the net time charges for all national television advertising (network time charges plus national spot time charges) are used, the net time charges of the CBS Television network in the last quarter of 1955 were 23.0% of the total; NBC 21.4%; ABC 8.5%; and 47.1% was accounted for by time charges paid directly to the individual television stations selected by national advertisers for national spot television advertising. If only the net time charges of the networks are used, the net time charges of the CBS Television network in the last quarter of 1955 were 43.5% of the total; NBC 40.5% and ABC 16.0%. In 1953 ABC's share was 9%, but by 1955 it had increased to 13% and as of the end of February, 1956, its share had increased to 17%.

Competition among the networks and between the networks and spot advertising is constant, and major advertisers usually use both network and spot advertising simultaneously, depending on their appraisal of the relative costs and effectiveness of the two for the particular needs of the advertiser. In 1955, of the 50 largest CBS Television network customers, 78% also used national spot television and 50% were included in the 100 largest customers of national spot television advertising. 76% of those 50 customers also used at least one other television network and 58% were among the 50 largest customers of at least one other television network.

The following chart presents estimated figures for the segment of the national advertising market occupied by television advertising and gives figures for (1) all television stations; (2) all stations in cities with more than 100,000 population, (3) all stations in one-station areas, (4) all CBS affiliates in one-station areas, and (5) all stations in cities with CBS basic required stations. For each of those station groupings separate figures are given for the entire broadcast day* and for the five evening hours from 6:00 to 11:00 p. m. local station time. For each of the foregoing station groupings for both the entire broadcast day and for the separate five-hour evening period, estimated figures are given for (1) the total number of television hours actually broadcast; (2) the total number of CBS Television network hours carried; (3) the total number of hours of CBS-produced network programs carried; (4) the total number of television broadcast hours subject to CBS

*"The entire broadcast day" starts when the station "signs on" for its first broadcast following the early morning period during which it was off the air, and ends with the station's last broadcast when it "signs off" and again goes off the air.

options; (5) the total number of television broadcast hours ordered by CBS customers during option time; (6) the total number of television broadcast hours cleared as ordered for CBS network programs during option time; and (7) the total number of television broadcast hours cleared as ordered during option time for CBS-produced programs. The second chart merely expresses the figures in the first chart in terms of percentages of total hours broadcast in the various station groupings. The charts cover a week in May, 1956, which is believed to be typical.

II. *Legal Discussion*

1. *Introduction*

Consideration of whether the television broadcast activities of CBS in any way violate the antitrust laws involves principally three statutory provisions: Sections 1 and 2 of the Sherman Act (15 U. S. C. §§ 1 and 2) and Section 3 of the Clayton Act (15 U. S. C. § 14). Those sections will be discussed in this memorandum in inverse order.

The impact of the antitrust laws on the CBS Television network and its business practices cannot be determined merely by applying to the conduct of the network, labels used in other cases to identify practices which on the basis of the particular facts in those cases were determined to be unlawful. The antitrust laws have never been applied by the courts in so formalistic a manner. "Price fixing", for example, is a term that is customarily used to identify practices that are anathemas under the antitrust laws, yet the same term from a layman's standpoint also includes normal pricing practices which are entirely lawful. "Agreements in restraint of trade" are unlawful by definition, yet every lawful business agreement places some restraint on trade. Only if the restraint is undue does the agreement offend the Sherman Act and, in determining what restraints of competition are undue, the rule of construction to be applied is the standard of reasonableness. Of course, certain forms of conduct, such as agreements among competitors to fix prices, are presumed to be illegal and in such cases inquiry under the rule of reason is over, once it has been decided that the agreement under review in fact constitutes price fixing.

The test of lawfulness does not depend upon terminology, but upon an interpretation of the particular facts in each case in the light of the basic provisions and purposes of the antitrust laws as construed by the courts. Terms such as "block booking", "blind selling", "forced buying" and "collective arrangements" have no meaning or pertinence, except as they may identify practices which in both form and context are the same as those held in other cases to be contrary to the antitrust laws.

During the following discussion, references are made to certain Federal Court decisions dealing with the statutes involved. Digests of certain antitrust cases, including the so-called motion picture cases which have been asserted by others to have particular pertinence to the television industry, are attached to this memorandum as Appendix A.

2. *Section 3 of the Clayton Act*

Section 3 of the Clayton Act provides that it shall be unlawful for any person, in interstate or foreign commerce, to lease or sell commodities for use, consumption or resale within the United States or its territories, or to fix a price charged therefor

> "on the condition, agreement or understanding that the lessee or purchaser thereof shall not use or deal in the goods . . . or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale or contract for sale or such condition,

> agreement or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce."

Section 3 clearly does not apply to the television broadcast activities of CBS. Section 3 applies only to *commodities;* the television broadcast activities of CBS involve only services.

a. No "Commodity" Involved

It is clear that Section 3 of the Clayton Act applies only to "commodities" and that the term "commodities" includes only tangible materials moving in commerce and does not include intangibles, such as services or facilities. Commercial television broadcasting is simply the furnishing of broadcast services; by law the station licensee cannot sell or lease his station, as such, without FCC approval, and the furnishing of broadcast facilities to a sponsor directly or through a network does not involve the sale of any "commodity" by the station. Similarly, as discussed in detail below, the activities of the CBS Television network do not involve the sale of any "commodity" but are the furnishing of programming services, *e.g.,* the assembled broadcast services of the stations and the program and other services of the network.

The legislative history and the Committee reports and debates on the floors of Congress with respect to both the Clayton Act and the Robinson-Patman Act, which make similar use of the term "commodities", indicate that Congress, in passing the Acts, did not have in mind the furnishing of services or the sale of intangibles. A study of the cases* interpreting the word "commodities" also indicates that the courts have consistently held that the word refers only to tangible movable goods, wares and merchandise, and the governmental agencies primarily concerned with administering those Acts, including the Federal Trade Commission and the Department of Justice, agree with this interpretation of the term.

b. No Substantial Lessening of Competition

Even if Section 3 applied to television broadcasting, CBS television broadcast activities would not be illegal, because Section 3 prohibits only those agreements which, in the light of reason and an analysis of all the attendant facts, may be expected to substantially lessen competition. As discussed in detail below in connection with the applicability of Sections 1 and 2 of the Sherman Act, especially in view of the nature of the industry, CBS television broadcast activities do not substantially lessen competition in any of the markets concerned, but, on the contrary, are a reasonable means of providing a national advertising medium which is competitive with other advertising media.

3. *Section 2 of the Sherman Act*

Section 2 of the Sherman Act provides:

> "Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other

---

* *Fleetway, Inc.* v. *Pub. Service Interstate Transp. Co.*, 72 F.2d 761 (1934), *cert. denied*, 293 U. S. 626; *General Shale Products Corp.* v. *Struck Construction Co.*, 132 F.2d 425 (6th Cir. 1942); *Schow Bros.* v. *Adva-Talks Co.*, 232 S. W. 883 (Tex. Civ. Apps. 1921); *People* v. *Epstean*, 170 N. Y. Supp. 68 (Ct. Gen. Sess. 1918); *Binkley* v. *State*, 198 Pac. 884 (Okla. 1921); and *In re Jackson*, 107 N. Y. Supp. 799 (Sup. Ct. 1908).

person or persons, to monopolize any part of the trade or commerce among the several states, or with foreign nations shall be deemed guilty of a misdemeanor . . .".

CBS clearly does not monopolize, and there is no evidence that it has attempted to monopolize, the national advertising market, the segment of the national advertising market occupied by television advertising, the market for television station time or the market for television programs, nor does it monopolize or attempt to monopolize "any part of the trade or commerce" in any of those areas.

a. Actual Monopoly
