Comments of the Federal Communications Commission on the Jones and Plotkin Reports

TELEVISION INQUIRY

(UHF–VHF Allocation Problem)

THURSDAY, JANUARY 26, 1956

United States Senate,
Committee on Interstate
and Foreign Commerce,
Washington, D. C.

The committee met, pursuant to call, at 10:15 a. m., in room G–16, United States Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Pastore, Bible, Bricker, Schoeppel, Purtell, and Payne.

The Chairman. The committee will come to order.

I was going to wait a little longer, because there are several other Senators who are going to be present. However, in view of the fact that Mr. McConnaughey does have a lengthy statement, I think we could get started and get through most of it. The other Senators have been furnished with a copy.

But before we start, the Chair would like to make a short statement which merely sums up the matter before the committee. There has been a lot said by members of the committee and other Senators regarding this whole matter, but I do want to have this in the record.

I first want to announce that this is the first of a series of hearings which the Senate Interstate and Foreign Commerce Committee plans to hold during the next few weeks. Actually, of course, these hearings are not completely new, but are intended to carry on the work previously done in this field by the Subcommittee on Communications and by our committee staff over the last almost year and a half.

As most of us will no doubt recall, extensive hearings, for instance, were held on the status of UHF television and on multiple ownership of television stations, in May and June of 1954 by the Subcommittee on Communications under the chairmanship of Senator Potter, of Michigan.

Those hearings, in part at least, related to Senate bill 3095, which was introduced in the 83d Congress by Senator Johnson, of Colorado, the former chairman of this committee, and related to the multiple ownership of television stations.

Thereafter, the full committee decided to institute a study of the entire broadcasting field, and Robert F. Jones and Harry Plotkin

---

Note.—Staff Members assigned to this hearing: Kenneth A. Cox and Wayne T. Geissinger, special counsel; Nicholas Zapple, communications counsel.

were designated as majority and minority counsel, respectively, for that investigation.

They submitted separate reports in February of 1955 which were immediately forwarded to the Federal Communications Commission and the Justice Department for comment and suggestions.

Since that time, members of the committee and its staff have met with representatives of the manufacturers of television sets and tuners in an effort to encourage stepped-up production on all-channel sets. Toward that same end, the Senate Finance Committee was urged to eliminate the excise tax on such sets.

During the same period, the Communications Act of 1934 has been under study by former Senator C. C. Dill, who was then chairman of this committee briefly and probably had more to do with drawing the original act than any other one man. He has concluded that perhaps minor improvements could be made in the provisions of that act, but that the solution of the pressing problems in the television field are not to be found in mere refinement of the language of the existing statute. In other words, television came on later, after the act was written.

The committee has also established an ad hoc committee of outstanding radio and television engineers under the chairmanship of Dr. Edward Bowles, of MIT, which is working on the technical aspects of television allocation and the UHF problem.

Likewise, the FCC has been given an appropriation of $80,000 in this year's budget to finance a study of the networks and of the economics of the broadcasting industry. It so happens that the chairman of this committee is chairman of the Subcommittee on Appropriations for the FCC, too. So I sort of wear two hats in this matter.

With this by way of background, we are ready to proceed with today's hearing, and I want to interpose here that I apologize on behalf of myself and the committee for at least two delays in this matter.

The first delay was occasioned by the early adjournment of Congress at the end of July, and the second delay was caused by the very untimely death of our general counsel.

No hearings were held in the fall because the chairman found that it was most difficult to get together any 1 or 2 Senators to go ahead with this matter from September until the Congress met again.

The chairman of the Subcommittee on Communications, the very able Senator from Rhode Island, Senator Pastore, did evidence a desire to go ahead, but he also encountered complications. The President designated the Governor of Rhode Island to be a member of the General Assembly of the United Nations but he couldn't do it, so Senator Pastore was designated.

Senator Pastore. Very unfortunately.

The Chairman. So he was tied up, and many of us were likewise engaged throughout our own respective districts, but I am sure everybody will understand that situation.

Now, the committee is interested in all problems of radio and television broadcasting which properly fall within its jurisdiction. It is concerned with problems arising out of the operation of networks and has before it Senate bill 825, introduced by the distinguished Senior Senator from Ohio, Senator Bricker, and designed to authorize the FCC to regulate networks.

A copy of S. 825 will be inserted in the record at this point.
(The bill referred to follows:)

[S. 825, 84th Cong., 1st sess.]

A BILL To authorize the Federal Communications Commission to establish rules and regulations and make orders with respect to networks and their activities

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Communications Act of 1934, as amended, is amended as follows:

(1) In section 2 (a) after "radio stations" insert "and the regulating of networks".

(2) At the end of section 3 insert the following:

"(ee) 'Network' means any person who operates a system which, for the purpose of simultaneous or delayed broadcasting of identical programs, in any way interconnects or affiliates any two or more broadcasting stations."

(3) At the end of section 303 insert the following:

"(s) Have authority to establish rules and regulations and make orders with respect to networks and such of their activities as affect licensed broadcast stations to operate in the public interest."

The CHAIRMAN. Now, in relation to the ad hoc committee, I conferred most of yesterday afternoon with Dr. Bowles and received an informal account of the work of his committee to date. Quietly, informally, they have done considerable work.

It was agreed then that the committee should be enlarged somewhat to permit it to broaden certain aspects of its study, and this investigation is still in the active stage. It is hoped, and we were assured by the chairman of the committee, that interim recommendations will be forthcoming.

Now, the committee is also deeply concerned, as has been indicated on many occasions, about the problem of the UHF band and deintermixture, set conversions, and other questions relating to a truly national, competitive television system.

It is interested in the FCC's network study, its procedural problems, and what steps have been taken to find solutions to all these problems, with specific attention to what the Commission has done in respect to the recommendations set forth in the Jones and Plotkin reports.

Now, we have invited all the members of the Commission to appear before the committee at this time, and we, of course, have the Chairman as our first witness. He has submitted a statement in advance, and I think the committee appreciates, Mr. McConnaughey, the furnishing of this copy of this statement yesterday morning, I believe it was.

On receipt of the statement yesterday, in conformity, of course, with the provisions of the Legislative Reorganization Act of 1946, I am sure we have all had the benefit of being able to look at it, maybe not as carefully or as closely as we should, but the hearing will bring out many of those points as we move along. So I suppose, Mr. McConnaughey, you could proceed with your general statement, and the other members of the Commission who may have statements could proceed with theirs, not necessarily separately, but maybe independently. I think in view of the number of subjects that are involved in the statement, and the fact that the committee sent a letter to the Commission not too long ago, making inquiry about several of the many aspects of this matter, that you might well go ahead with your statement and the committee members could follow, I am sure, very closely. Then they will probably know more the type of questions they may want to ask you or the other Commissioners when we are through.

I want also to point out—and I have conferred with many members of the committee individually on this matter—that we don't expect, because of the broad and complex aspects of this matter, to go ahead with hearings every single day and conclude them. I am sure that we will get into many subjects and then recess to a time agreeable to everybody, when we can come back and go into specific aspects of this very broad field.

If that is agreeable to the members of the committee, we will proceed in that manner.

Senator PASTORE. Do I understand that it is the desire of the Chairman that the witness not be interrupted until he has completed his statement?

The CHAIRMAN. Well, I was thinking that if he went ahead with his statement, or at least sections of it, the committee might have a better chance to evaluate what the Chairman is about to say, and then the questions could be asked with a better background of his long and detailed statement.

Is that agreeable to the members of the committee? Of course, any committee member may interrupt the witness any time he wishes. That has always been the rule here, and I think it has been quite frequently invoked.

Go ahead, Mr. McConnaughey.

STATEMENT OF HON. GEORGE C. McCONNAUGHEY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION

Mr. McCONNAUGHEY. My name is George McConnaughey. I am Chairman of the Federal Communications Commission.

My colleagues and I value a great deal this opportunity to report to your committee concerning current developments in the dynamic, fast-moving and complex field of television broadcasting.

Not wishing this morning to burden your time or your patience unduly, it was not my intention to read the full text of my prepared statement, which I now submit for your record.

The CHAIRMAN. That will be put in the record in full.

(Full statement will be found at p. 30.)

Mr. McCONNAUGHEY. I hope it will be helpful if I now review with you briefly the highlights of the more detailed questions your committee has directed to the Commission.

I would like first to express the gratitude of the Commission for the most helpful amendment to the statutory requirements on Commission procedure which has now been enacted upon the recommendation of this committee. It may be expected that this amendment to section 309 (c) of the Communications Act concerning hearings and stays in protest procedures will help substantially toward facilitating the prompt, fair, and orderly disposition of protests against Commission decisions.

We are indeed grateful for the way you gentlemen, many of you, helped us out with this new amendment. The television industry, which I understand you are primarily concerned with in this hearing, is a many-faceted complex of station licenses, networks, advertising agencies, producers of shows, manufacturers of equipment, program sponsors, and other elements, all of which play significant roles in bringing the end product of television programing to the screen.

Among all these, only the station licensee is directly subject to Federal communication jurisdiction. All are conducted as competitive enterprises responsive to the same basic economic forces which influence the development of any other competitive industry. I think we must bear that in mind. Moreover, television as a whole competes with other mass media, notably with radio, newspapers, and magazines, for the advertising dollar.

Notwithstanding the important role of the Commission, it will be apparent to the committee that the Commission alone cannot insure the fullest achievement of the ulimate goals of the Nation's television service. Our efforts are concentrated on establishing the basis for television operations which will best facilitate the orderly development and continued expansion of television service in large and small communities over the Nation.

The proble we now face in overcoming hindrances to television's further expansion cannot obscure the impressive and unpredictable strides which have been achieved by television during the brief period since the freeze was lifted in July 1952—108 television stations serving 63 markets have grown during the last 3½ years to over 440 serving 278 communities in outlying areas. As against 23 communities which, in 1952, had 2 or more local stations, there are now 113.

Over 90 percent of the people of the United States receive television service and about 75 percent of the people of the United States are within the range of two or more television stations. The American public has invested no less than $15 billion in 37 million receiver sets. The annual volume in television advertising, receiver sales, and servicing runs close to $3 billion per year.

I was privileged to be in Europe this summer and see and talk to the broadcasting people in the various countries and to see in a comparative light what we have accomplished in this country. I take no credit for it. I have had very little to do with it. But it is a rather imposing record that the United States of America has made in this regard.

The brief facts I have mentioned sketch the picture of a television service well established, and taking impressive strides forward. In fact, the meteoric rise of the industry has, itself, created some of the problems which are of present concern to this Commission and the industry and to this committee.

One crucially important aspect of television broadcasting today is the extent to which the stations depend on the networks for much of their popular programing. I am now coming to the network study. I welcome the invitation to this Commission, as extended to me, to report on the progress of the network study. We at the Commission consider it one of our most important current activities.

As you undoubtedly know, no study has been made of networks since the chain-broadcasting investigation of 1938 to 1941. The rules that grew out of that investigation have been applied without change to a much larger radio industry and to the vital new television industry. Clearly, it is time to study the situation anew.

I am happy to report that the study is well underway. It has been placed under the direct responsibility of Commissioners Hyde, Bartley, Doerfer, and myself. A special network staff comprising 11 highly competent professional personnel has been organized. The staff has already begun study on 3 basic issues described in the Network Study Committee Order No. 1, issued November 21, 1955.

First, whether there is opportunity for effective competition among networks. Two, whether there is opportunity for effective competition between network and nonnetwork organizations. Three, whether changes are desirable in the present relations between networks and affiliated stations. These are important areas for study, since under existing legislation competition, rather than regulation, is depended upon to determine the industry's course of growth.

We are all aware of the importance of the networks to economic health of the broadcast industry. The limited number of networks is of vital concern to us as it may adversely affect competition and the fullest development of the industry. We are, therefore, exploring thoroughly the various economic and other factors which have combined to limit the number of competing networks.

Also, nonnetwork organizations, especially independent program suppliers, state that they are unable to assure advertisers that stations in large communities will carry their programs during preferred hours.

These organizations state that the source of their competitive disadvantage is the option time arrangements between networks and stations. Yet networks state that option time is vital to their survival. For these reasons, the network study staff is analyzing the competitive opportunities between network and nonnetwork organizations.

The staff is also studying the need for changing the chain broadcasting rules governing relations between networks and affiliated stations. These rules were designed to free stations from undue control by networks and to encourage competition among stations for affiliation and among networks for affiliates. The staff expects to ascertain what changes, if any, should be made in the rules to achieve these objectives. This portion of the study is also concerned with the possibility of extending network affiliation or services to stations in the smaller communities. The networks have developed plans to do this, but the study is examining additional possibilities.

Network Study Order No. 1 specifies other matters for study which the staff is currently examining in relation to the three issues already described. They include joint ownership of radio and television networks, joint ownership of networks and stations, multiple ownership of stations, talent contracts and production and sale of programs, network representation of stations in the national spot field, and the impact of networks' related interests on the conduct of their network function.

The special staff has participated in formulating these issues and is now engaged in collecting the necessary facts. It has already held several conferences with representatives of networks and other components of the industry and, in the process, has obtained a substantial amount of factual data. The networks are now preparing additional information for the staff. Arrangements are being made for conferences with all other components of the industry.

As the network study has progressed, it has become increasingly clear that more than 1 year will be required to deal adequately with the numerous and complex problems of network broadcasting. I so advised the Appropriations Committee a year ago. It is contemplated that if sufficient funds are appropriated, the study will be completed in fiscal year 1957.

The President, in his budget for fiscal year 1957, has recommended that $141,000 be appropriated for this purpose. However, the $80,000 appropriation for this fiscal year to initiate the study will enable the staff to attempt much of the required statistical data on network operations and affiliations by the end of the fiscal year 1956.

You have also asked whether the Commission will wait until the study is completed before taking appropriate action. Many of the matters under study are so interrelated that the Commission must wait until all the facts have been analyzed before it can act on any of them. However, some phases of the study, when completed, may be sufficiently independent of the rest of the study that action can be taken on them at an earlier date. It is not possible at this time to specify what these phases are, but we hope to be able to do so after the study has progressed further.

I have been in contact with Dr. Bowles and Dean Barrow, dean of the Law School of the University of Cincinnati, who heads our network study. I feel we were most fortunate to get Dean Barrow for this work. He has been in conference with Dr. Bowles, and I want to assure you gentlemen that we will work in every way to cooperate with your committee in any way that it is humanly possible to hasten the proper conclusion of this study.

The next topic which I will discuss is UHF broadcasting. This important matter is the subject of questions your committee has directed to the Commission.

The inability of a substantial proportion of UHF stations to achieve financial success has disappointed the expectations generally held in 1952 concerning the contribution which utilization of the UHF band could make toward the expansion of our national television service.

While financial problems are by no means confined to stations operating on UHF channels, the difficulties associated particularly with UHF broadcasting do raise problems of widespread concern to the industry and to the Commission.

It would serve little useful purpose to repeat here the familiar catalog of the difficulties UHF broadcasters have encountered in acquiring sufficient audience, network programing, and advertising revenues to support their stations. The scope of the problem is indicated by the fact that of 152 UHF stations which have commenced operations, only 99 are now on the air.

A considerable number of those still on the air continue to operate at a loss. These difficulties have spawned numerous suggestions to the Commission and to this committee for remedial action ranging from the deintermixture of UHF-VHF channel assignments in individual communities to proposals for major recasting of the entire allocations plan and basic revision of the present television engineering standards.

A substantial part of the Commission's time and efforts during the past year has been concentrated on the questions for solutions of lasting value.

Deintermixture: Formal rulemaking proceedings have been conducted to examine proposals in 5 separate communities for channel reassignments which would confine local channels to a single band. In these cases, the UHF band.

In doing so, the Commission endeavored to ascertain whether the public interest could be served by "selective deintermixture." Proponents of selective deintermixture urge it as a means of facilitating more balanced competition between stations in selected communities, in the hope that this would strengthen UHF generally by increasing the number of "UHF islands" in which local UHF stations would be substantially free from competition with VHF stations.

It had been hoped when these rulemaking proceedings were initiated that a detailed examination of the problem in the light of the circumstances prevailing in these communities might yield useful indications concerning the possible effect of deintermixture locally, and also concerning the question of whether policies applicable nationally might be evolved from a study of these individual cases.

During the period when the individual deintermixture petitions were under consideration, the Commission also gave attention to other, alternative approaches to the allocations problem, which it has become increasingly apparent is nationwide in scope.

Some proposals conflicted wholly or partially with deintermixture. The majority of the Commission concluded that the review of individual deintermixture petitions would neither provide an adequate basis for considering deintermixture itself as a nationwide solution, nor afford the opportunity to evaluate deintermixture as a possible solution in the light of a considerable number of other alternative proposals.

Moreover, the majority felt that there was serious doubt that scattered deintermixture adopted without reference to the general nationwide problem could provide significant lasting improvement.

There was, for example, little in the records of these cases to support the conclusion that limited deintermixture on the basis sought by the petitioners would have helped significantly to resolve the difficulties confronting UHF broadcasters in other cities, or would materially strengthen UHF.

To illustrate, we were unable to conclude that the reassignment of channels on an ad hoc local basis would significantly stimulate the conversion of VHF receivers to UHF, the increased sales of combined UHF-VHF receivers, or the improvement of transmitting equipment. The Commission, therefore, determined that selective deintermixture of communities where allocated VHF services had not yet gone into operation was not a satisfactory solution to what was essentially a nationwide problem.

The conclusion was also reached that proper consideration of the numerous and somewhat conflicting proposals for alleviating the national allocations problem called for the conduct of a formal rulemaking proceeding to review all the suggested alternatives.

Since selective deintermixture, as proposed—that is, based on the absence of local VHF services—had been determined to be an inappropriate approach to the problem, it was decided that the individual petitions before the Commission should be denied. This was done, however, without prejudice to full consideration of deintermixture in the context of the broad rulemaking proceeding. Consistently with this, the Commission denied not only the deintermixture petitions on which rulemaking had been initiated, but also a number of others on which action had been deferred pending decision on these pilot cases.

The CHAIRMAN. Mr. Chairman, I think, with the permission of the committee, we can alter our original proposal a bit. The Senator from Rhode Island thinks that if we break this down into general subjects it might be helpful, and I think he does have some questions he might want to ask at this point.

Senator PASTORE. Do I understand your thesis, developed under this particular subsection, to be that the majority of the Commission has found that selective deintermixture is not feasible?

Mr. MCCONNAUGHEY. That is correct on the basis set out in my statement.

Senator PASTORE. Now, if selective deintermixture is not feasible, how are you going to reach the feasibility of a nationwide deintermixture?

Mr. MCCONNAUGHEY. In this way: A nationwide study means a study of the country as a whole, and going back and studying the sixth order and report with reference to the possibility of completely reallocating the entire spectrum. That, in turn, means that we can decide after a study of all the possible methods of reallocation, including squeeze-ins of more V channels, the possibility of getting more V channels from various sources and numerous other possibilities, then you can make a decision——

Senator PASTORE. Well, don't let's go by that too fast. From other sources—you mean from the military?

Mr. MCCONNAUGHEY. I mean a possibility from the military.

Senator PASTORE. Is there any other possibility?

Mr. MCCONNAUGHEY. Well, possibilities have been suggested from the FM band. I am merely telling you what has been suggested.

Senator PASTORE. All right.

Mr. MCCONNAUGHEY. We have over 200 comments that have been filed by the leading people in this country, engineers and people interested in this business, to permit us to study the whole reallocation plan, and we felt to do it on a selective basis would not be helpful for the reasons contained in my statement.

It only involved about 2 percent of the population of the country in these 5 cases. We didn't feel that we were justified—I am speaking of the majority—that we were justified in creating and causing a freeze, because that is what the majority felt would be involved, and we had had enough experience with freezes.

The allocation plan under the sixth report already provided for VHF channels to go in these five places. We felt that the public deserved to have the service. It can be taken back after our study is completed.

Under the law, we can take out any other V's which may have to do when we complete this whole study. We may have to try to make UHF islands of V's; we may have to try to make whole areas VHF or UHF.

That may be, but we felt that we had to get service on the air. If there is anything in the world I dislike, it is a freeze. It scares me to death when I hear the word.

The people are entitled to all the service they can get. By putting in these V's some people will get service that wouldn't have gotten service before. There are some people who will be getting service from their local communities that wouldn't have been getting it before, and it involves basically putting in a V where it had been assigned, where there are 2 U's in operation, and we felt that 1 V with 2 U's—we had no evidence to show that that means it is going to drive anybody out of business under that operation.

The CHAIRMAN. It might be well for the record to put in the names of these five areas.

Mr. McCONNAUGHEY. Hartford, Evansville, Madison, Peoria, and Albany.

The CHAIRMAN. May I just say this so that we can get a little bit of order here. I might say that I forgot to mention this in the opening statement. I would like to say that there may be questions regarding individual communities in connection with deintermixture applications and issuance of licenses. We hope to take up some of these individual cases after we are through with the general proposition.

I do not think there is a Senator in the whole 96 who does not have 1 or 2 cases which he would like to inquire about.

Mr. McCONNAUGHEY. When you come to that, we would like to know about them beforehand, because we are going to have to compile the information.

The CHAIRMAN. Yes. And I am not passing on the merits of the decisions one way or another. But the Commission being an arm of the Congress, I think Members of Congress and this committee are entitled to a perfectly logical explanation of why certain things happen. But we will take that up later, because I am afraid if we get into those individual cases right now, we might be here all weekend. So, we will get to them. I just wanted to point that out.

Senator PASTORE. Yes; and my purpose in pointing up a specific case is in line with this matter of giving service to the public.

The CHAIRMAN. Yes. I just forgot to make that announcement. And I wanted that on the record.

Senator PASTORE. There is no need to point up specific examples. But you have two UHF stations serving the city of Hartford; right?

Mr. McCONNAUGHEY. One in Hartford and one in nearby New Britain.

Senator PASTORE. You have two VHF stations in the city of Providence? Am I right?

Mr. McCONNAUGHEY. That is correct.

Senator PASTORE. You have one UHF station in the city of Providence that is off the air? Am I right?

Mr. McCONNAUGHEY. That is right.

Senator PASTORE. You have an application, or have heard of an application, with reference to a VHF station in Hartford? Am I correct in that?

Mr. McCONNAUGHEY. That is right.

Senator PASTORE. Now, you have taken the position that, until such time as you have made a nationwide study of deintermixture, you should allow the VHF station in Hartford? Am I correct?

Mr. McCONNAUGHEY. That is right.

Senator PASTORE. Now, why can't you give 3 UHF stations to Hartford and 3 VHF stations to Providence without putting them all out of business?

Now, what is wrong with that?

Mr. McCONNAUGHEY. We may do something on those lines when we finish the allocation plan. And I don't think we are going to put anybody out of business in the meantime.

Senator PASTORE. This is no reflection on the applications made anywhere. But the thing I don't understand is how you are going to start intermixing and then later on deintermix your intermixture? You are going to get yourself in an awful squeeze on that.

Mr. McCONNAUGHEY. No, no. We do not feel so.

Senator PASTORE. The allocations are all mixed up now and have been for some time. The point I would like to have explained to me—and I hope someone can explain it to me— is this: An application was made to bring the VHF station to the Providence area, whereby the people could enjoy 3 channels instead of 2, isn't that correct?

Now, you have two UHF stations serving Hartford. I understand that they have raised the argument that if your VHF goes into Hartford it will put the two UHF stations out of business.

Now, why can't you satisfy the State of Rhode Island and the State of Connecticut by this selective deintermixture, whereby you would have three channels in Hartford and everybody would be happy on a UHF band? And you would have three VHF's in Providence and make everybody happy there on a VHF band.

Now, why can't that be done?

Now, I think it is a very simple thing, and requires a very simple answer, without all of this technology and technical advice that I think is going to add up to nothing.

Can somebody answer that?

Senator PURTELL. Would the Senator yield?

Senator PASTORE. Yes.

Senator PURTELL. Mr. Chairman, how long has the application for that very high frequency station been in? It has been pending for a number of years; is that correct?

Mr. McCONNAUGHEY. The application was filed in 1952 for channel 3. Earlier applications came in before the freeze, which started in 1948.

Senator PURTELL. I don't mean any particular station. Was it not considered originally that there would be an allocation of a very-high-frequency station in Hartford regardless of who might have it?

Mr. McCONNAUGHEY. That is in the sixth order and report. That is already in there. That is your present allocation. That is what you have got to follow until it is changed.

Senator PURTELL. Let me ask this: Actually is it not true that you have a controversy as to who should get that allocation, and that matter is in the process of adjudication?

Mr. McCONNAUGHEY. That is an understatement to say that it is a controversy. It was a controversy to say the least.

Senator PASTORE. I don't want to get into who should get it, because I think all of these petitioners are reaching for the pot of gold at the end of the rainbow. All I am talking about is the viewer. I have said here time and time again that I am only interested in the people in Connecticut and the people in Rhode Island getting all the television service that they can get.

Mr. McCONNAUGHEY. That is all we are interested in.

Senator PURTELL. That is all I am interested in.

Senator PASTORE. We are all interested in that.

The CHAIRMAN. One thing we are all in agreement on is that point, I gather.

Senator PASTORE. That is right. The point I want to make is this—and I hope someone can answer this question: Why couldn't 3 UHF stations do in Hartford, regardless of who runs them, and 3 VHF stations do in Rhode Island, regardless of who runs them?

Now, what is wrong with that?

The CHAIRMAN. I think Commissioner Lee could answer that. I did want to proceed here with these general things. But I think as long as we are on the subject, we can proceed with it. Commissioner Lee probably has something to say about that.

Mr. LEE. On this particular case I wanted to call attention to 1 or 2 things.

In the first place, I think it is generally agreed that the VHF is a superior service. It gives more coverage and takes less investment. There might be some technical reasons why the U could be almost as good as the V as far as coverage is concerned. But it takes a lot more money.

Now, then, when we speak about deintermixture, we are speaking of a situation where you could put only U's in one place. Now, if the U would give as much coverage as the V—maybe it would in that situation; I don't know—that might be one thing. The V probably would give service to people who won't get it with the U.

Now, the other thing is: If you are going to have all U's in Hartford, you have to remember that you have a VHF station now in New Haven that is putting a very good signal into Hartford. So, if the second V does not go into Hartford, you still have the V from New Haven.

Senator PASTORE. Now, taking your thesis, what happens to the two UHF's in Hartford once you put another station in there? Don't you throw them out of business?

Mr. LEE. In my opinion, "No."

Senator PASTORE. Hasn't that been the record here? You say you started out with a hundred-and-some-odd UHF stations, and now you have 99. What has happened to them? Hasn't it been the competition between U and V?

Mr. LEE. That has not been where the UHF has been established first and one V has moved in. It has been where the V was there first and then the U came in.

Senator PASTORE. Are the two UHF stations serving Hartford happy about the VHF coming in?

Mr. LEE. No, sir. But I could call one further point to your attention. And that is that they originally had the opportunity to apply for the V.

Senator PASTORE. Well, that is apart from the question. We are talking about public service now. Now, isn't there a tendency, if this trend continues, that that VHF going into Hartford will get the better programs on VHF because it has more power, is a superior station by contrast with the two existing UHF stations?

The ultimate result will be that the concentration will be on VHF, and the two UHF's are going to suffer thereby, with the consequence that they may go out of business? And the people in Hartford might be left with the one station, with the hope of tying in with the New Haven station? Am I right or wrong?

Mr. LEE. I think you are right to the extent that the V will get the better programing, because they are better stations. Therefore, the people of Connecticut get a better service.

Senator PASTORE. Let me ask another question, and then no more. Do you honestly, fairly, and sincerely feel that once you have intermixture, you are ever going to deintermix?

Mr. LEE. I wouldn't hesitate a minute if I found it was in the public interest.

Senator PASTORE. How are you going to take away something you have already given? Didn't you come here with the idea of changing section 309 (c) because there were 2 pending cases before the circuit court and in the event you were ruled against you would have to take 2 stations off the air, both in Providence and Rochester? Wasn't that your big problem? Wasn't your big problem that of allowing stations to go off the air once you put them on? Isn't that an awful thing to happen?

Mr. LEE. But if we changed the frequency, they would not have to go off the air.

Senator PASTORE. Well, I hope that never happens.

Mr. DOERFER. Senator, there might be as many reasons for the position taken as there are commissioners. But there is one thing that has been overlooked throughout all of the comments and throughout all of the criticisms of our present policy, or the policy of the majority. And that is that section 1 of the law itself provides that the FCC was created to provide a service to all of the people.

And section 307 (b) provides for a fair and an equitable distribution of the frequencies amongst the several States and communities. And our problem is: Is it fair and equitable that Providence have all V's and Hartford have all U's, or vice versa?

Senator PASTORE. If you can give them proper service, I would say yes.

Mr. DOERFER. Therein lies the rub.

Senator PASTORE. I would say this: I would like to see Hartford all VHF; I would like to see Rhode Island all VHF if that is the better quality of service. But I am saying this: I think we are all in accord that UHF and VHF, because of the superiority of one station over the other, cannot live in the same community for too long a period of time. Now, history has shown that. I think, to be fair with ourselves, we ought to say if we are not going to deintermix, we ought to tell these people that. But we have been fumbling and toying with this proposition for 2 years. We are no closer to the solution now than we were to begin with.

Mr. McConnaughey assured me that there would be no further grants until we had settled the problem of deintermixture the last time he appeared before this committee. Since then I think you have granted 3 or 4 applications. Then, actually, you create a situation of intermixture. And I am telling you very frankly as I sit here—and I am sorry and regret to say this—I do not see any hope for a solution of this problem. I really don't see any hope for a solution while the present attitude of the FCC prevails.

And I think they ought to have the courage to stand up and say "Look, boys, we are going to continue intermixture; it is going to be the survival of the fittest; hang on as long as you can; but within the next month, year, or 2 years, nothing much is going to change." Now, if you only told these people that, then I think we would not be troubled any more with all of these telephone calls from people wanting to talk to us about UHF and VHF.

Mr. DOERFER. May I add this:

Getting back to the original premise, the policy of Congress has been an equitable distribution of the frequencies. The sixth order and report was a culmination of about 4 years of hearings and considerations. That incorporates the equitable principles which I just announced, or discussed.

We are required under the law to try to be equitable in the distribution of frequencies. Now, to unscramble the sixth order and report on a piecemeal basis is not working in compliance with the announced policy of Congress, nor is there any solution that I can see which will satisfy the present law unless we wind up with an equitable distribution of frequencies.

Senator PASTORE. Do you think that is really ever going to happen? I mean, as a fair man, do you think that is ever going to happen?

Now, you have been with this Commission for some time. The thing that I am weary of is that we are no closer to a solution now than we were a year and a half ago. And in my own mind I will tell you frankly that I do not think we are ever going to have deintermixture in this country.

I regret to say that. But for all the problems that have been raised and all the innuendoes in these comments that have been made here, all the clouding and all the mystery in these statements that are made before this committee convince me pretty much that we are never going to have the day of deintermixture, because it is so badly scrambled that you will never unscramble it. And you are in the process now of scrambling it up even more, because the minute you throw out selective deintermixture, you throw nationwide deintermixture right out the window.

Mr. DOERFER. I do not agree with that.

Senator PASTORE. Well, I hope you are right and I am wrong.

Mr. DOERFER. The Commissioners indicated that they would go to the extent of deintermixing markets if it ultimately proved to be in the public interest.

The big question today is: Deintermixture. As you have indicated, today it is a scrambled situation or intermixture.

Now, to unscramble it you just don't deintermix the tail end of a processing list and think that that is going to solve the overall nationwide problem.

If anything is required, it would be some bold overall action. But whatever it is it requires a conformance with the policy of this Congress. It is manifestly unfair to deprive the rural people of a service at the expense of the urban dwellers. That is our real problem today.

Mr. McCONNAUGHEY. That is exactly right. That is the reason we put these V's in there.

The CHAIRMAN. I think we will come to that in due course. Unless the other Senators have other questions, I think we should proceed.

Senator PURTELL. I think it has been ably said that what we are thinking of and trying to do is serve the greatest number of people. Certainly I think that the Senator from Rhode Island would agree with me that it does not necessarily follow that an easy solution is a proper solution.

Senator PASTORE. No. And I never took that position. I do not want to take that position. I am very realistic about this, and I think we are both in accord that we want all the people possible to have all the choices of television service possible.

Senator PURTELL. That is correct.

Senator PASTORE. The only point I make is this—and I want to be understood on this: I am not interested in individual parties. I repeat again that they are all reaching for the pot of gold at the end of the rainbow. I am only interested in the viewer. But I am only saying this: That from what Mr. Lee has already said—and I acknowledge everything that he said about the superiority of VHF—I do not see how UHF can live with VHF in the same area. It is impossible economically to do that. Let's face it.

Mr. McCONNAUGHEY. Senator Pastore, I would like to call your attention to this: That history shows that UHF stations which were built before local VHF service started have, in the majority of the cases, been able to live with the subsequently established VFH stations.

With reference to your statement a while ago on unscrambling——

The CHAIRMAN. Well, let's get our ducks in a row here. There is no member of this Commission who would make an application himself for a UHF channel if he had a choice between VHF and UHF.

Mr. McCONNAUGHEY. You are so right about that; there is no one who owns a U who wouldn't like to have a V.

Senator PURTELL. There is no reason, Mr. Chairman, is there, that we should concentrate all of the VFH's in one area simply because it is an easy way of doing it? There is no reason why the people of Connecticut—assuming that VHF is better—and I do not know whether it is or not in that particular case—should be deprived of some of their rights simply because an easy solution can be found otherwise?

Senator PASTORE. No. But all I am saying is this: Beware, because once the VHF goes into Hartford, you will see your UHF's go out. That is all I am saying. That is the prediction I make.

Mr. McCONNAUGHEY. Senator Pastore, one statement you made should be corrected from the standpoint of the 7 members of this Commission.

I think that every member of this Commission is going into this rulemaking sincerely, hoping and believing that this matter can be solved in the next 15 or 20 years. And if it involves deintermixing, making islands of UHF, or whatever it involves, or putting the whole thing in UHF, I think that this Commission is going on honestly and face up to that fact; and nobody has any preconceived ideas as to the final result, speaking for the seven members of this Commission.

(Letter from Hon. George C. McConnaughey, dated March 9, 1956, inserted at this point at his request.)

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., March 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee,
United States Senate,
Washington 25, D. C.

DEAR SENATOR MAGNUSON: During the course of my testimony before your committee on January 26, 1956, I stated that the members of this Commission hoped and believed that "this matter (i. e., the diffiulties standing in the way of full development of the Nation's television service) can be solved in the next 15 or 20 years." While it would appear unlikely that this brief comment would be misconstrued, it may be desirable to clarify it in order to allay any possibility of its being misunderstood to indicate that it would require anything approaching that period of time to eliminate some of the present barriers to the expansion of the number of TV stations serving the public.

When the present TV allocations plan was adopted in 1952, it was intended to serve as the basis for the long-range development of our television system, and it was recognized that, as in the case of radio, it would take many years—15, 20, or more—before the industry could achieve anything approaching complete realization of the objectives set out in the Commission's sixth report and order. In my statement I wished to convey the confidence of my fellow Commissioners and myself that in the rulemaking proceeding in which we are now engaged we can take steps which will allow scope for the continued expansion of television over the longer run of 15 or 20 years.

It was not intended, of course, to indicate that it would require that length of time to work out the particular allocation problems now before us. In order to avoid any possible misunderstanding of my statement, I would be appreciative if this clarification might be inserted in the record where my statement occurs (page 36 of the typewritten transcript of your committee's proceedings of January 26, 1956).

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman.*

Senator PASTORE. I will take your word for it; and I look forward to the future with hope.

The CHAIRMAN. I think we ought to also clear up the fact that when we all come to the conclusion that VHF is now a better service than UHF, that that is because of present conditions. I don't think we ought to foreclose the possibility that correction of certain conditions or the development of new conditions might make UHF just as desirable in the future. That is a possibility, but that isn't true now.

Mr. MCCONNAUGHEY. I am glad you brought that up, Mr. Chairman, because there are developments being made today——

The CHAIRMAN. That is because of the network situation, the established position of the older channels, and many other things, but that doesn't mean——

Mr. MCCONNAUGHEY. And the developments that are being made.

The CHAIRMAN. Yes, and the developments that are being made, and I think we ought to have that clear. But as of now, that is the situation.

Mr. MCCONNAUGHEY. That is right.

Senator PURTELL. May I ask a question? How many FM channels are there available that are not being used, or might be made available?

The CHAIRMAN. Well, I might say to the Senator from Connecticut that the engineering committee is right in the middle of that. The FCC engineers have thought about it, and——

Mr. MCCONNAUGHEY. We can't answer it yet, sir.

The CHAIRMAN. I think it is hard to answer, but I think before we are through with this we will have an answer.

Senator PURTELL. Well, he brought it up, and I simply wanted to remark on it. Perhaps there is an area in which something can be done. I want to make it clear that I want to see all stations prosper. Nor do I want to see us do anything that will keep them from being prosperous, at the same time safeguarding the public good. I have no particular interest in any particular channel or station or anything else.

Senator PASTORE. One more question, in conclusion: You have expressed the hope that this thing can be unscrambled.

Mr. McCONNAUGHEY. Yes.

Senator PASTORE. And I join in that hope. You have now 99 stations out of 152 UHF's now on the air?

Mr. McCONNAUGHEY. That is correct.

Senator PASTORE. By the time you get around to solving this problem, do you expect to have more than 99 or less than 99 on the air?

Mr. McCONNAUGHEY. You, naturally, know that I or no man alive can say that it will be thus or it will be so.

Senator PASTORE. You don't expect more than 99 on the air by that time; do you?

Mr. McCONNAUGHEY. Expect more?

Senator PASTORE. Yes.

Mr. McCONNAUGHEY. I don't know. I don't know how many U applications are pending. I know we are granting them. We are making new grants right along. We are going to make one before long in Canton, Ohio, and we are making them right along, Senator.

That is rather interesting. Since we put out our notice of rulemaking, and denied the 5 deintermixture cases, since we have denied deintermixture on a selective basis, there have been 5 U's that have gone off the air, which is no more in proportion than have gone off the air in the 12 months previous to that time.

In other words, they aren't going off any faster. Now, there is about a third of the U's—the last report of the Federal Communications Commission showed that about one-third of the U's are operating successfully, and possibly more than that today.

That last report was as of October 1954, and the present report isn't due until some time in February or March. About two-thirds of the V's are successful.

In other words, we have V's that aren't successful, as well as U's, but the U's do have——

The CHAIRMAN. You mean financially?

Mr. McCONNAUGHEY. I am speaking financially. And, of course, when you get into that, you get into so many things. You get into the operation and management, and many other factors, but what Commissioner Lee said is a fact. Today the V does have the advantage. That is one reason for this network study. We come into it there. What can be done, if anything there, to help the U situation.

The CHAIRMAN. I think we would like to proceed here. Of course, the committee also realizes that the Commission is never unanimous on these matters, and I know Commissioners Hyde and Bartley might have something to say, and the rest of you. Of course, you can have that opportunity. I do hope you will address yourself to the subject, because I think it is the crux of the whole problem that we face.

Mr. McCONNAUGHEY. We certainly will do it, Mr. Chairman, and you are so right about seven people not agreeing. If we did, we might as well just have one. That is all. One would be enough.

The CHAIRMAN. That is the reason we made seven of you.

Mr. McCONNAUGHEY. Right.

The CHAIRMAN Unless some of the other Senators have some more questions, I think it will be brought up later by the other Commissioners who do have something to say about it.

Mr. BARTLEY. Mr. Chairman, if we are expected to say anything, I think this might be the point at which it should be said, so the record is even on it.

The CHAIRMAN. Well, all right, if the committee has no objection. It is perfectly all right to ask the other Commissioners on this particular point. I think there are other points you wanted to discuss later. On this particular point, we would be glad to hear from you, as long as we have got it out in the open here.

Mr. BARTLEY. Mr. Chairman, what I would like to say is that I think that the principal difference of opinion in the disposition of the proposed rulemaking cases which we had before the Commission is that in those cases in which we had the benefit of the views of the people in those areas, it is my own view that failure to deintermix those particular areas will foreclose deintermixture in other areas.

I think we had all the facts necessary to make a decision. The prime reason I wanted a decision out of the Commission was to afford some stability to the industry so it would know which way we are going.

Now, we could have done that back in November. We had, I think, all the facts that we will get in connection with those cases at that time, and the reason I point it up is that I think that the word "freeze" which has been thrown around more or less implies that those who wanted to go ahead and adopt final decisions in those cases are being accused of being the ones who are now in favor of a freeze.

I was in favor of just exactly the opposite.

Senator PASTORE. Well, let me say on that point, I would have preferred to see 3 UHF's in Rhode Island in the beginning than 2 VHF's with a dead UHF. Now, that is the way I feel about it. At least you could turn on NBC, CBS, and ABC. As it is now, you only have two.

It would have been better, in the beginning, if the FCC had assigned 3 stations in Rhode Island, even if they were all UHF, and you could have had 3 in Hartford, even if they had to be VHF, because then each community would have the advantage of 3 channels in the same band.

I realize that this cannot be done now, because this would mean that the set owners would have to convert their sets. I must emphasize that I would want nothing done, under any circumstances, which would compel a set owner to undergo any exepnse whatsoever to unscramble a mess for which he is not responsible, or even had anything to do with.

If it is a question of the power of the stations, either raise it or lower it, but give the people the opportunity of 3 channels if you have 3 national broadcasting setups. That is all I am arguing. It is a question of which one you take.

I know VHF is better. I am saying that they can't live in the same pond together, because the big fish will eat up the small one, and UHF is the small fish.

The CHAIRMAN. Commissioner Hyde, do you have any comment to make?

Mr. HYDE. Mr. Chairman, I do not have a formal statement to make. I hope I will have an opportunity to answer some of the statements that have been offered for the record, particularly with reference to the suggestion that any procedure contrary to that taken by the Commission would promote a freeze. I think I can demonstrate that it would have just the opposite effect. I would like to offer, for the committee's attention, the separate views which I stated at the time the Commission entered its order of November 10, when it dismissed or denied the deintermixture petitions without making findings as to the factual matter submitted to the Commission.

The CHAIRMAN. Commissioner, if you would stop right there, Senator Pastore wants to make a further comment.

Senator PASTORE. In Hartford, you don't have the problem of set conversion. The people already have sets that are tuned to UHF. In Rhode Island their sets are on VHF, and if they want to listen to a UHF, they have to convert. I mean, I wanted that in the record, but if we were starting from scratch, if we were starting over again, I would take 3 UHF's in preference to 2 VHF's and 1 dead UHF, so that we would have NBC, CBS, and ABC.

Mr. DOERFER. People in Hartford don't have to convert.

Senator PASTORE. They don't have that problem at all. I mean, I wanted to make that qualification so that someone wouldn't say, "Well, now, what about the poor person who has already bought a television set?"

I realize that that is a big problem in this, but all I am arguing is that UHF, if it is all UHF, can well service a community with the three networks.

Mr. HYDE. In that connection, Senator, a man who had recently been an applicant before us, speaking to me after the action, told me that he had to fight for that one VHF as long as it was going to be allocated to his community, because if it was going to be there, it was essential for him to have it.

He would be content to take an ultra-high if he was sure that one of his competitors would not get that channel.

Senator PASTORE. Now, is that a fact?

Mr. HYDE. It is the fact that he told me that. I assume that he meant what he said.

Senator PASTORE. You mean to tell me that the petitioner for the VHF, if the Commission would pass a rule saying that Hartford would have three UHF——

Mr. HYDE. No, I am not speaking of Hartford.

Senator PASTORE. Oh, excuse me.

Mr. HYDE. I am speaking of a city which has only ultra-high service, and where only one VHF channel is available under the allocation. The concern of the applicant is that somebody is going to get it there, and he is going to be the top man. He must fight for it as long as—as long as we have that 1-for-1 allocation.

The CHAIRMAN. The set man. To the fellow that has the set?

Mr. HYDE. That is right.

I want to repeat that in taking that action, the Commission did not make findings as to what areas would be served or would not. There is nothing in that order of November 10 which indicates that rural areas would lose service if the Commission proceeded on those cases.

Now, in the records of the proceedings, there are conflicting claims on that, but in dismissing the action, the Commission did not make findings one way or the other. There is nothing in the November 10 order which would indicate that that order was necessary in order to provide service to rural areas.

I would like to say that the basic issue here now is whether the United States, with its growing economy and its expanding need for communications service, and particularly for television service, is going to have a system with low ceilings built in or whether it is going to have a system with a sufficient number of channels to give opportunity for development of a comprehensive competitive free enterprise system.

I think that we should recognize the fact that the main issue now is what steps are necessary to conduce to the development of a television service on this broader basis. Now, the broader basis must necessarily include ultra-high-frequencies.

The CHAIRMAN. Commissioner Hyde, right there I think we ought to clear up one matter for the committee. Even if we could find some more VHF channels, we still would be faced with the same problem we have on the matter of UHF, because the present sets would not be capable of receiving signals on these new VHF channels without conversion, which would involve some expense.

I think this committee is not looking for any villains around here. We are trying to see that we will have a national policy that is going to be broad enough and expansive enough to cover national growth in this great new medium of expression—television.

Mr. HYDE. Yes, sir.

The CHAIRMAN. And no matter which way we go, we have got problems, and I think that is what we should sit down here and try to work out. I think the other members agree with me on that.

Senator PASTORE. Yes.

The CHAIRMAN. Because television is somewhat frozen, now, even in its technical aspects.

Mr. HYDE. It could be very well frozen, indeed, if we follow a policy that is going to encourage the demise of the ultra-high stations, all of them, and limit our potential to 12 or 15 channels, if it proves feasible to salvage 2 or 3 from FM or anywhere else.

I think that anyone who has made any study at all of the overall spectrum allocations knows that there is no other place in the spectrum where anything comparable to the allocation of 72 UHF channels can be found. They just are not there.

If you could persuade the military at this time to give up more channels than they were willing to give up in 1945, there still wouldn't be enough to compensate for the abandonment of the ultra-high, because there aren't channels in that number available in the VHF spectrum. And as you have pointed out, additional channels in any part of the spectrum have that same conversion problem that you have with ultra-high. I can't but be concerned with a policy that vacillates from one period to another.

How are the manufacturers, the investors in stations, or anyone else, to know how to plan or what investments of capital should be made? What we should be doing is turning our attention to a policy that would provide incentives or inducements to improvement of sets in the use of all of these channels in the interest—as I have said before—of a multichannel comprehensive, nationwide system.

I do not think that this premise that you cannot make improvements in the situation in one particular place because you have a national problem is sound at all. It doesn't make sense to me to say you must not improve the situation in this locality because this petitioner here has not provided a plan which will solve the problems in every other community.

In the first place, that puts a very unreasonable burden on the particular petitioner. I have been concerned about a policy which disregards the difficulties in local situations and proceeds with a course of action which is discouraging to the development of the ultrahigh stations.

It gives a very unfortunate psychology. It causes doubt as to whether the Commission means to continue to encourage the use of those channels. This unfortunate psychology affects the judgments made by time buyers, by networks, by set buyers, by manufacturers; while the uncertainty about this policy has been prevalent, the percentage of sets being manufactured for all-channel reception has constantly been going down.

If it could be made clear that the United States policy looks toward the development of a multichannel system, you would have added interest in the improvement of apparatus, both for transmission and reception. Notwithstanding these, to me, very unfortunate developments, there have been some very significant developments, looking toward improvement in sets, particularly. I should like to say, too, that the——

The CHAIRMAN. Right there, Commissioner Hyde, of course, the Commission is familiar with the attempts we made to see what we could work out with all the set manufacturers who came down here. We even had the tuners, and the only suggestion they could make was we take off the excise tax. Senator Harry Byrd didn't like that, Secretary Humphrey didn't like it, and a few of the rest of them didn't like it, but that was about the only real conclusion or suggestion we finally got after quite a long discussion.

So the fact that you say now, even after posing the problem that exists, there seems to be even more reluctance to get into all-channel sets because of the fact they don't know where the Commission is going.

Mr. HYDE. The reluctance at the present time is due to this uncertainty more than anything else, in my opinion. Now, that is a matter that there could be different views about, of course.

Now, as to the procedures that have been undertaken here, the Commission majority dismissed the deintermixture petitions without findings as to their merits, except for the finding that this is a nationwide problem and that decisions in these particular cases will not give you a 100 percent nationwide solution.

It was essentially a procedural device. Having dismissed these procedures, the Commission proceeds to make grants of VHF stations in markets which up to now have been ultrahigh markets.

These grants go into communities where the dominant services are rendered by UHF stations, and stations operating under those conditions are succeeding in general. Ultrahigh service is not an inferior service. The number of lines per picture and the number of frames in a given interval of time are identical with VHF stations.

Actually, there are some aspects of ultrahigh operations which are superior to VHF. Engineers will tell you that in the transmission of color, there is some advantage in use of the ultrahigh channel. There is some advantage with respect to freedom from interference from automobile ignition and other electrical apparatus.

The CHAIRMAN. Well, in any event, I don't think any of us should say that the possibility of making UHF as good as VHF, engineeringwise, is remote.

Mr. HYDE. No, sir. We should not say it is remote, because very substantial progress has been made.

Mr. CHAIRMAN. And if color is coming in, why, if it has some advantages—I don't know what comes out of laboratories; you fellows do—it might be even better.

Mr. HYDE. Senator, what we need, in order to get that progress, is to provide some incentive to the development of that apparatus. Our allocation policy should be one that conduces to that kind of development, rather than one that conduces to the abandonment of ultrahigh channeling.

The CHAIRMAN. But this was a nationwide problem when you all began.

Mr. HYDE. That is right, sir. It was, Senator, and, of course, all of us can——

The CHAIRMAN. Now, we suddenly discover it is. I don't know why.

Mr. HYDE. The sixth report was a nationwide plan, and the original allocation that was made by the Commission was intended to obtain the objective which I have mentioned. There were some operational results which were not judged nearly as well then as we can judge them now, with the advantage of hindsight. I wanted to say something about the effect of the kind of procedure that has been undertaken here. In the first place, I do——

The CHAIRMAN. Now, by procedure—we want the record to be clear as to what you mean.

Mr. HYDE. I refer to the order of November 10 which dismissed the individual deintermixture petitions and cleaned the slate so that processing could begin. At that time, the Commission did issue an order of a general rulemaking character inviting comments looking toward consideration of changes in the allocation. The majority stated, in issuing its notice, that denial of the deintermixture petitions was without prejudice to the consideration of the petitons for deintermixture or any of the other changes. I would like to suggest that whether you say it is without prejudice or not, it still is prejudicial to the consideration of any such course of action for several reasons—particularly for legal reasons, and factual reasons which have to do with investments and that sort of thing that will ensue.

Let me explain. When the Commission makes a rule, it must make it on a finding that public interest, convenience, and necessity will be served by the adoption of the rule, and the allocation is a matter of rulemaking.

When we issue a license or a permit for the construction of a station, we issue it on a finding that the granting of that permit will serve the public interest, convenience, and necessity. Now, in bare legal theory, the Commission, on an appropriate finding, can first issue a permit and later modify that permit.

But that would require the Commission first to find that the issuance of the permit will serve public interest, convenience, and necessity, and then a little later make a contrary finding that public interest, convenience, and necessity will not be served by the operation of that VHF channel under the conditions.

That picture is complicated further by the fact that the Commission is already on notice that we have problems in this field. There are questions as to whether this licensing policy which tends to discourage the development of ultrahigh is in the public interest. So you have this very difficult situation that, when you come to judge the rulemaking, when we get to that, subsequent to the grant, the Commission can't change that rule unless it makes a finding which is just the opposite of the one we have previously made. Now, one more matter of law——

The CHAIRMAN. The policy may be bad, but you have the authority to modify it.

Mr. HYDE. In bare legal theory, the authority is there.

The CHAIRMAN. Legally, you have the authority.

Mr. HYDE. Also, that authority has to be exercised in accordance with certain——

The CHAIRMAN. But you have the burden of proof in that particular case.

Mr. HYDE. We have that, and also there are certain procedural conditions attached to it.

In the absence of any—in the absence of an issuance of a new permit or a license in an area which would be affected by the rule, a rulemaking procedure could accomplish the change in the allocation. But after you have issued a permit or a license, then you have established legal rights which require notice and hearing. These rights are not just technical obstacles at all; they represent changes in a situation which will have to be taken into consideration in determining whether a modification of that license will serve the public interest, convenience, and necessity.

These changes in the situation might very well be the investment of as much as a half a million dollars in the construction of a station. It might very well represent steps taken by thousands of citizens to put in antennas or equipment tuned toward that station.

At the time that we go to make this second finding that public interest will be served by an entirely different course of action, we must satisfy these additional procedural steps. We must take into consideration the new factual situation, and having done that, we must be satisfied that public interest, convenience, and necessity would be served by the action.

In view of those requirements, how can you say that to summarily dismiss the petitions and say "We will take them up in a subsequent proceeding" is not prejudicial? I disagree with that finding for the reasons I have stated there.

The CHAIRMAN. It may not be technically prejudicial, but I think it puts it quite at a disadvantage.

Mr. HYDE. I think it does. Let me illustrate——

Senator PASTORE. Well, before you illustrate, you have the added legal problem of constitutional rights. I mean, how can you take a man's station or compel him to go into something else where he would have to spend money in order to do it without giving him a right to be heard? Otherwise, you would be depriving him of property without due process of law. Every man who owns a station will have a right to be heard. You can't do that too easily.

Mr. HYDE. Not just the right to be heard, but he is entitled to a right to have his equities, if you wish to call them that, determined on the record made at that hearing.

There is another legal point that I think I ought to mention here. Section 319 of the act provides that when the Commission issues a permit to construct a station, and the station is built in accordance with that permit, and it appears that all the conditions of that permit have been satisfied, the Commission must issue a license unless there is some new condition first coming to the attention of the Commission after the grant which would demonstrate that the issuance of a license would not serve the public interest, convenience, and necessity.

In this situation, the circumstance which raises the question in my mind, at least, as to whether you should issue permits without first solving the policy question, is already before us. Consequently, permits made after our notice of this difficulty would be subject to this provision of 319 which requires issuance of a license unless some new condition has intervened.

In connection with the difficulties that arise where permits have been issued and investments have been made, let me mention the fact that when the Commission promulgated its sixth report, it made substantial allowances for the existing situation. It limited the number of instances where the assignments of stations were changed to a minimum. The Commission had, for instance, the fact that there were 7 VHF assignments in New York City prior to the 1952 decision, and 7 in Los Angeles.

If it were not for the fact that these stations were constructed, the investments made, the public accustomed to listening to them, and business enterprises operating based on these, I am quite sure the Commission would have wished to make a better distribution of those facilities.

Senator PASTORE. In other words, we wouldn't be in the mess we are in now.

Mr. HYDE. Well, there would have been some improvement. I mean, changes in those particular places wouldn't have solved the whole problem at all, but it would have given you a more equitable distribution of the VHF assignments if the Commission could, in fact, disregard established investments and listening habits and all those things.

Senator PASTORE. Wouldn't you say this: That the very inability to do anything about that will be duplicated in the inability to deintermix after you have intermixed?

Mr. HYDE. I was illustrating that element by the example that I cited.

I want to mention again that probably the most disturbing thing about a policy which seems to be looking for a solution to this problem in VHF only is the depressing effect it has, and the discouraging effect it has, on efforts to develop the ultrahigh channels, which it has been recognized since 1945 would be required for a truly nationwide system with any potential for growth, any potential for a truly free-enterprise system.

I want to say a word or two, if I may——

The CHAIRMAN. Well, in other words, I think we all are in agreement that this was a problem that we knew about a long time ago.

Mr. HYDE. This problem has been before us for some months.

The CHAIRMAN. We have held hearings up here, I think, away back in——

Mr. HYDE. Well, the hearings before Senator Potter's subcommittee were——

The CHAIRMAN. Were a year ago, May 1954, nearly 2 years ago.

Mr. HYDE. Yes. Well, I must say that at that time——

THE CHAIRMAN. And then prior to that, we had discussed this. I remember having discussions on this matter with the then members of the Commission, I think as far back as 5 or 6 years ago, up here in this committee, and Senator Bricker has pointed it out on many occasions.

Mr. HYDE. Actually, the difficulties of developing television in the ultrahigh service have come to the fore since the lifting of the freeze in July of 1952.

The CHAIRMAN. Off the record.

(Discussion off the record.)

Mr. HYDE. I want to question the need for proceeding with——

The CHAIRMAN. Well, we will move along here—well, you can finish, because we want to hear from you later about several matters.

Mr. HYDE. One statement more, and that is simply this: The statement which the majority has submitted says there is television service available to 90 percent of the population, at least 2 services to as much as 75 percent. In view of that, what argument is there for this proposition that we have to go ahead and license new stations irrespective of the consequences that may follow in regard to our allocation procedure?

The CHAIRMAN. Well, I pose a question there to the Commission. Taking the fact that 75 percent of the people have 2 channels available to them, I don't think that is enough.

Mr. HYDE. It is not enough.

The CHAIRMAN. I mean it may be at the present time, all factors considered, but I think looking in the future, that can't be permitted to exist, and I don't think that is enough.

Mr. HYDE. In that connection, Senator——

The CHAIRMAN. There may be enough now—I mean all factors considered.

Mr. HYDE. It is hardly enough to provide competitive opportunity for as many as three national networks.

Senator PASTORE. Well, do you think we are promoting a national competitive television system throughout this country when certain cities have 7 channels and others are being told that if you have 2, you ought to be satisfied?

Mr. HYDE. No; certainly we are not. I do believe, Senator, that if we could get established that it is the policy of this country to use the whole 82 channels, to so conduct our affairs as to provide conditions conducive to that development, that we would have enough channels to have a comprehensive setup.

The CHAIRMAN. Well, Mr. Chairman, didn't you recently make a speech at the Poor Richard Club in Philadelphia, in which you said—

basically, at issue, is how widespread a service can television become? In one sense, television is already a national medium. Industry researchers tell us that with 450 stations on the air, 96 percent of the Nation live within viewing distance of at least 1 service, and a large majority of the public have at least 2 services available.

Then you say—

That is good, but not good enough. For one, there are not enough competitive facilities in the largest centers to completely serve the needs of the public or of the advertisers. Even when we have disposed of all pending applications, almost two-thirds of the 100 leading markets will have only 2 stations or less.

Mr. McConnaughey. That is my statement.

The Chairman. You say that is good, but not enough.

Mr. McConnaughey. Why sure.

I trust that this committee got no other idea when I merely stated that in 3½ years we have grown to a place where 90 percent of the people in this country can see a picture; 75 percent of them can see 2 or more—and I think that is a remarkable record in 3½ years, perfectly remarkable taking any other country in the world. But, of course, it isn't enough, and I never said and I never implied it was enough.

The Chairman. I think you made that clear in your statement.

Mr. McConnaughey. I think so.

The Chairman. Well, I think if we could proceed here with the chairman's statement—it is getting near adjournment time——

Mr. McConnaughey. Commissioner Lee and Commissioner Mack will not be able to be here tomorrow, if you are going to go forward tomorrow.

The Chairman. I will discuss that with you. The Commissioner from Florida hasn't said anything, and I don't know, maybe you might just want to say something briefly. You haven't been there a long time.

Mr. Mack. Thank you for those kind words.

It just so happens I made, some weeks ago, an engagement for tomorrow that I can't very well get out of. Of course, I will be right back.

The Chairman. Well, the committee will be glad to arrange this. None of us are going to hold anybody, and I know the Commission has a lot of work to do.

We are not going to straighten this out today—I am am sure of that—or tomorrow either. I have a lot of questions I want to ask the Commission. I have about 40 pages of them.

Mr. Mack. Well, I will wait. I won't make any statement now.

The Chairman. On policy. And I don't know how long it will go on some of the individual stations.

Mr. Lee. Senator, I am absent tomorrow through no fault of my own. That is a classified matter. I will be glad to tell you about it in privacy. This is just beyond my control. I need, oh, maybe 7 or 8 minutes is about all.

If it is all right with you, I could do it now or later. Are we going to meet this afternoon?

The Chairman. Well, I don't know. We have the gas bill on the floor.

Senator Pastore. We have gas on the floor, too.

The CHAIRMAN. And it is a bill from this committee, and most of the members are vitally interested in it. Well, if the Chairman would go ahead, unless you wanted to interrupt at this point.

Senator SCHOEPPEL. Mr. Chairman, do I understand that at some later meeting, we will have an opportunity to go into some of these matters, because I know personally—and I regret this—a previous engagement takes me out of Washington this afternoon, back to Kansas. I did want to leave some questions so that if we are going on this week, and not going to have the opportunity to have some of these men before us later, I would appreciate their answering these questions into the record, which would be satisfactory.

The CHAIRMAN. I will say to the Senator from Kansas that it was the hope of the chairman that we would discuss general policy and listen to the Chairman's statement, which I knew would take most of the morning.

Then I thought we would arrange the most satisfactory time for everybody interested to get into some of the details with the Commission.

Senator SCHOEPPEL. That would be satisfactory.

The CHAIRMAN. If that is satisfactory, we will work that out someway. They need not all be here, but I am sure they want to be cooperative.

Commissioner Lee, we will take your statement now.

Mr. LEE. All right, sir.

The CHAIRMAN. You don't mind that, Mr. Chairman?

Mr. MCCONNAUGHEY. I don't mind a bit.

Mr. LEE. On the problem of the procedures of the Commission, I wanted to say that at the time these matters came up, I, for one, was prepared to dispose of the pending deintermixture cases on their merits. I think I would have denied them.

I was persuaded that perhaps I should retain my mind open until we had this rulemaking, and if I thought that the rulemaking could have been concluded in a reasonable period of time, I would have no hesitancy in holding up pending grants.

I thought it was impractical. I think it has been proven to be. We have already granted some three extensions of time to file. This could go into hearings and so on. I was just afraid it would last a year. Hence, my feeling was we should make these grants and give people service.

Now, I wanted to leave just 2 or 3 suggestions with the Commission, or with the committee, that I think are pertinent to your inquiries.

I believe that you should give some consideration, for example, to subscription television as a related problem. That might sound strange, but after looking over the docket and discussing this thing with about everyone I could find, I feel there is some merit to considering subscription television on the UHF only under certain limitations, since their problem (the UHF) is a matter of revenue.

If this thing is good, I feel that maybe it should be given a trial on UHF only, and under controls such as a percentage of the broadcast time. If you can broadcast on subscription television 10 percent of the time you are on the air, if you want more time for subscription, you have to give more free, and that sort of thing. Perhaps even consideration on some kind of a limitation on the rates, and certainly not permit it where there is only one service; and that sort of thing.

But I would hope that you would give it some consideration.

The CHAIRMAN. We have that on the agenda.

Mr. LEE. Likewise, I wanted to call to your attention something that I found. I am sure the staff is familiar with it.

In 1950, February 2, 1950, there was delivered to this committee a report by a committee of experts, Dr. Condon, of the Bureau of Standards; Newbern Smith, chief of the Central Radio Propagation Laboratory; Dr. William L. Everett, dean of engineering, University of Illinois; Donald Fink, editor of Electronics; and Stewart Bailey, consulting engineer.

Now, this report, I think, is worth your perusal, since at that time it pointed out—this was 1950—this very problem of U versus the V, and it indicated the problems that the U had from a technical standpoint.

At that time, it is my understanding, the President appointed the so-called Stewart Committee to make a study, and this apparently went to them. Now, the——

The CHAIRMAN. That was on color, too; wasn't it?

Mr. LEE. I believe so; yes, sir.

Now, the real impact of this thing, as I see it, is on the problem of obtaining, if possible, more space from the Government, more VHF space. They pointed out very clearly how important that was and pointed up the problems of the FCC adjudicating for commercial broadcasters and finding in the public interest, versus the Government passing out frequencies without that kind of review.

That was a part of the Stewart study group who, as a matter of fact, recommended some kind of coordination.

Senator PASTORE. If I may ask a question, Mr. Lee, the only thing that I see wrong with your suggestion is this: Let's assume that subscription turns out to be a very lucrative thing. Then aren't you reversing the problem as against the VHF station? Why should they be precluded? I mean, you are going to have the problem there.

Mr. LEE. My suggestion is to consider the limitations only as a beginning, perhaps eliminating the restrictions later. If this thing is in the public interest, you would presumably extend it, so that everyone could see it.

It just occurred to me, reading these petitions, that since it is a matter of revenue and the proponents say this is like Coca-Cola, there are so many millions of people even at a dime, if you can give them revenue, they can stay on the air and provide a free service as well as the subscription service.

Senator PASTORE. Until you decide the overall policy.

Mr. LEE. That is right, sir.

Senator PASTORE. I see.

Mr. LEE. The reason I want you to look at this report is that it points up this dual problem of commercial versus Government, and it quotes Senator MacFarland; at that time he was quite interested in this problem. He has some very firm ideas.

The CHAIRMAN. Is it classified to state for the record how many channels the Government has frozen for itself?

Mr. LEE. No. I think depending on how you measure it, it approaches about a 50–50 split.

The CHAIRMAN. On the band?

Mr. LEE. On the entire band, yes.

The CHAIRMAN. That is all we need to know. Approximately 50–50.

Mr. LEE. Much of it is highly classified.

The CHAIRMAN. Yes. What they use it for, but I mean generally speaking, the band is about 50–50.

Mr. LEE. Yes, sir. There is one other important point, and I will sit down, and that is in the event there are additional possibilities of additional channels, I personally would like to see some kind of legislation—I think we need it—to permit a show-cause order to permit a U to go on a V if we put it in.

Apparently now if we find another one and set it up in a community, anybody can file for it. Now, I think the existing U operator would have quite a leg up, but to force him through 2 years of hearings and so on would give me some concern.

I think that is a matter that should be properly before you.

That is all I had to say. Thank you very much.

Senator SCHOEPPEL. Mr. Chairman, I know that Mr. Lee has to go, and the time is approaching when I will have to leave for the airport. I have a series of questions that I wanted to ask the respective Commissioners, and for the purpose of getting them into the record, so they might be prepared when we reconvene, I would like to record the following inquiries:

No. 1. What is the status of the negotiations to obtain additional VHF space from the Government for commercial broadcasting?

No. 2. Do you consider the present allocation plan adequate to meet the requirements for nationwide television service?

No. 3. Do you recommend the intermixture of VHF and UHF stations in selected areas?

No. 4. Do you recommend shifting all television assignments to the UHF portion of the spectrum?

No. 5. Do you recommend freezing all further assignments until the present rulemaking proceedings have been completed?

No. 6. What is the status of subscription television, and what are your views on it?

No. 7. Do you have any specific recommendations for this committee here?

The CHAIRMAN. Senator, those are asked to the Commission generally ?

Senator SCHOEPPEL. Yes, sir.

The CHAIRMAN. They will take them with them.

Senator SCHOEPPEL. Yes, because I have to leave.

(FCC answers appear at p. 165.)

Mr. MCCONNAUGHEY. Do you want me to start answering those now?

The CHAIRMAN. Well, I think they open up a field that a lot of us have questions on.

I am going to suggest this: It is almost 12 o'clock, and we are not allowed to be in session when the Senate is in session without unanimous consent. The Chairman will work out with the Commission and the Senators a time for another hearing, but I do think it would be better to wait.

(Discussion off the record.)

(The prepared statement of Chairman McConnaughey follows:)

PREPARED STATEMENT OF GEORGE C. MCCONNAUGHEY, CHAIRMAN OF THE FEDERAL COMMUNICATIONS COMMISSION

The Commission welcomes this opportunity to report to the Committee on Interstate and Foreign Commerce concerning recent television activities and developments, particularly insofar as those activities and developments relate to the functions of the Commission and this committee.

We are all aware of the tremendous growth of television during the last decade and of the impact it has had on so many facets of our way of living. But the development of this marvelous new medium has not been without "growing pains." Under these circumstances we at the Commission are sincerely appreciative of the cooperative manner in which we have been able to work with your committee and members of your staff.

It is important that the Commission let your committee have the full benefit of information, experience, and advice available to it in order that legislative policies may be charted in a realistic manner with a view to providing and preserving for the American people the best possible television service.

To that end we welcome your guidance and counsel. The field with which we are concerned is dynamic, fast moving, and very complex. As changes occur, we must be prepared to make suitable adjustments to reflect new conditions. It is singularly difficult to foresee with any precision the course of rapid developments in the still very new field of television broadcasting.

THE TELEVISION INDUSTRY

There are few, if any, other industries having so many independent, although closely related, segments so vital to the successful operation of the business as a whole. Fitting into the complex television pattern are station licensees, networks, advertising agencies, producers of shows, including large film companies, and independent packagers, talent, labor unions, manufacturers of equipment and, of course, the sponsors of programs whose support in the final analysis makes possible the end product which the American people view on their television screens.

All of these interrelated components play an important role in the overall process. Yet among all these components, only the station licensee is directly subject to FCC jurisdiction. Indirectly, and to a more limited extent, the Commission can establish limitations affecting the network and equipment manufacturers, through requirements laid down for station licensees.

Nevertheless, television broadcasting in all its facets is conducted as free, competitive enterprise, responsive to the same basic economic forces which influence the development of any other competitive industry. Competition is no less a desirable feature of the television industry because its end product is a public service, or because limited aspects of television broadcasting are subject to Federal regulation.

Station competes with station for audience, programing, and advertising revenues. Networks compete among themselves for station affiliates, for talent, for the advertising dollar. Other program sources, including film syndicators, compete among themselves and with the networks. National spot advertising represents an additional field of competition. These are only some of the many aspects of competition within the television industry itself. Moreover, television as a whole competes with other mass mediums for the advertising dollar--notably with radio, with newspapers, and with magazines.

These facts underscore the enormous impact which economic factors, largely beyond the Commission's control, have on the development of the Nation's television service.

This is not to minimize the importance of the Commission's role, with which you are familiar. But it does suggest the limitations on the ability of the Commission, alone, to insure the fullest achievement of the ultimate goals of the television service.

OTHER COMMISSION RESPONSIBILITIES

Television is not the only fast-growing industry or activity with which the Commission is concerned. Radio broadcasting has mushroomed since World War II. In 1940 there were fewer than 800 AM stations on the air; today there are nearly 3,000.

In 1940 there were 9,988 stations in the important safety and special radio services. Today there are nearly 170,000 such stations, excluding amateurs. These 170,000 stations include over 700,000 individual transmitters. And the trend is still upward. In 1950 we received 6,288 broadcast applications (TV, AM, and FM). During the current fiscal year we expect to receive well over 7,000.

In the safety and special radio services, the change has been even more marked. In 1950 we received 93,960 applications; in 1955, 151,330; and for fiscal year 1956 we expect our workload in this field to be almost 160,000 applications. This briefly illustrates the diversity and the size of the Commission's task, which extends into numerous fields besides television.

Television has, however, absorbed a major and increasing part of the Commission's time and attention during recent months. We understand that this hearing is concerned chiefly with the problems of the television service. This statement, is accordingly, directed particularly to television broadcasting.

TELEVISION'S METEORIC GROWTH

Since its inception, progress in the development of our television service has been marked by impressive strides. In most important respects accomplishment has outstripped even the most optimistic predictions. And if we are now confronted by problems which are hindering television's further expansion, these problems can be better understood in the perspective of the tremendous advances which have been achieved in the relatively short period since the freeze was lifted in 1952. It may be useful, therefore, to take brief stock of the developments since then before commenting on the problems which remain to be solved.

In July 1952, when the first postfreeze station was authorized, only 108 television stations were on the air. Today more than 440 are in operation. When the freeze was lifted only 63 markets had 1 or more local stations. Only 23 had 2 or more. Today there are over 4 times as many communities with their own television stations; 278, to be exact.

One hundred and thirteen of these have two or more stations. While it is difficult to provide precise figures, it has been estimated that over 90 percent of the people are now within the range of at least 1 television station and a large portion of the public—perhaps as much as 75 percent—lives within the service range of 2 or more stations.

The American public has overwhelmingly accepted this expanded television service; 37 million television receivers are in the hands of the public, and almost 70 percent of American homes have television sets. The American people have invested over $15 billion in television-receiving equipment and the annual volume in television advertising, set sales, and servicing runs close to $3 billion per year.

Whatever the questions which have arisen during this phenomenally rapid expansion, it is evident that the problem is no longer the establishment of a television service. We already have a well-established television service. The problem is how we can best facilitate the further development and expansion of this service in accordance with the needs and desires of the American public, giving the fullest opportunity for application of the abilities and ingenuities of American broadcasters.

THE NETWORK STUDY

The networks perform a crucially important function in the television industry of today. You have requested a progress report on the network study, including the subject matter to be covered, target dates for completion of any phases, and whether the Commission will take appropriate action on each phase, as the facts are developed, or await completion of the entire study before determining whether remedial action is indicated.

I am pleased to report on the progress made in the network study. The Commission regards the study as one of its most important current activities. It has for some years felt the need for a comprehensive study of radio and television network broadcasting.

Each Commission budget since fiscal 1950 has called attention to the need for such a study and pointed out the limiting budgetary considerations. No study of the functions of networks has been made since the chain-broadcasting investigation of 1938–41. The chain-broadcasting rules adopted, incident to that study, for radio were applied to television without change, and it is not known whether the rules are achieving their objectives for the larger radio industry of today or the vital new television industry. Also, to recommend or comment upon proposed legislation in the network field requires greater knowledge of the network function. The Commission is gratified by the opportunity given in the $80,00 appropriation for this fiscal year to initiate the study.

The study is well underway. It has been placed under the direct responsibility of a committee composed of Commissioners Hyde, Bartley, Doerfer, and myself. A special network-study staff has been organized under the competent direction of Dean Roscoe L. Barrow, of the Cincinnati College of Law. Dean Barrow has had extensive experience with the Federal Government, and he is ably supported by 10 staff members of high professional caliber. I am pleased with the stature of this staff. Selection of a special staff of this stature for a relatively short term of employment has taken considerable time.

A number of matters to be studied were described in the Network Study Committee Order No. 1, issued November 21, 1955, and other matters may be added as the study progresses. A study designed to assist the Commission to an informed solution of problems in the network field and to comment on proposed legislation for the regulation of networks, must encompass the economic structure and operation of the broadcast industry. Accordingly, the order was intended to lay a broad base for the study. A copy of the order and accompanying statement are attached.

The order is basically concerned with three issues: (1) whether there is opportunity for effective competition among networks; (2) whether there is opportunity for effective competition between network and nonnetwork organizations; and (3) whether changes are desirable in the present relations between networks and affiliated stations.

Analysis of the opportunity for network competition is important. The small number of national networks, the recent withdrawal of a network, and the lack of entry of new networks in recent years suggest the need for study of those factors which limit entry of new competition.

A multiplicity of networks fosters competition, increases program choices, provides broadcast time for additional advertisers, and gives broader economic support to the broadcast industry. An important factor governing the number of networks is the availability of outlets. However, this is not the only factor involved.

Assuming a potentiality for sufficient outlets, other factors must be appraised. Among these are the number of networks which advertising will support and whether the investment and risk in network operations are so disproportionate to incentive as to discourage entry of new network competition. In this connection, the study must consider the number of advertisers desiring network advertising, the point at which division between networks of potential audience in a given market renders other advertising mediums more desirable to the advertiser, and the point at which division of audience so decreases revenues that the network function is not profitable.

These and other considerations involved in developing the maximum number of networks are focal points of the study.

The study will also consider the opportunity for effective competition between network and nonnetwork organizations. Nonnetwork organizations include national spot representatives, independent stations, and independent program sources. The Commission desires to secure an opportunity for as many program choices as possible.

Nonnetwork organizations state that they are at a competitive disadvantage because they are not able to assure advertisers, as networks under affiliations contracts are, that stations in major markets will be available to carry the programs during the preferred hours. A change in option time rules, it is argued, would enable stations to exercise freer choice of programs between network and nonnetwork program sources. On the other hand, networks consider option time as vital to the maintenance of the network structure. The Commission in considering whether to change its rules, as they relate to competition between nonnetwork and network programs, must determine the effect of such change on the broadcast structure.

A third area for study is whether changes are needed in the chain-broadcasting rules governing relations between networks and affiliated stations. These rules were intended to free stations from undue control by networks, to provide opportunity for local programing, and to encourage competition between stations for affiliation and between networks for affiliates.

This committee is fully aware of the impact on stations of the tremendous growth in radio and the advent of television since the chain-broadcasting rules were adopted in 1941. In this connection, consideration is being given to determining what changes would be desirable in the rules under present conditions of competition with a limited number of networks and stations and what changes might be desirable if there were more networks and more stations.

This portion of the study is also concerned with the possibility of extending network affiliation or services to stations in the smaller communities which now receive little or no network service.

It is appreciated that networks have developed plans for expanding television to smaller communities. The study will examine the possibilities of bringing additional network programing to stations in such communities as well as to extending service to other stations not receiving network programs under these plans.

Network Study Order No. 1 specifies a number of other matters for study. These will be examined primarily in relation to the issues already described.

(*a*) Joint ownership of radio and television networks. Consideration is being given to such matters as the advantage or disadvantage which joint ownership gives to a network in competition with another network engaged only in one medium for advertiser support and for affiliates; whether television network affiliation is in any way dependent upon radio affiliation with the same network; whether the decline in network radio is due in part to an overriding interest of the network in television; whether there is sufficient incentive to attract new radio networks not in the television field; and whether joint control is necessary in order that television may support radio.

(*b*) Joint ownership of networks and stations. Consideration is being given to such matters as whether network ownership of stations in major cities tends to discourage entry of new networks in view of the limited number of stations, and whether ownership by networks of stations is necessary to their economic health or to the continuation of network services of high quality.

(*c*) Multiple ownership of stations. Consideration is being given to the extent to which an owner of more than one station has an advantage over an owner of a single station in the competition for affiliation with networks, and related matters.

(*d*) Talent contracts and production and sale of programs. Consideration is being given to such matters as whether long-term exclusive-talent contracts tend to impair network competition; whether the fuller occupation of the talent and program fields by networks since the advent of television unduly restricts the opportunities for the broadest choice of programs; and whether there is any relationship between sale of network programs and sale of preferred viewing hours.

(*e*) Representation of stations in the national spot field. Consideration is being given to whether representation of stations in the national spot field by networks gives the networks any undue advantage in the competition with non-network program sources.

(*f*) Related interests. Consideration is being given to the effect of having companies engaged in the network function engage in other enterprises related to the broadcast field and to what extent the related interests tend to influence the conduct of the network function in ways which are detrimental or beneficial to the public interest.

The special staff which has been assembled for the network study participated in the formulation of these issues for study, and is now engaged in collecting the necessary data. The staff has held several conferences with representatives of the networks and other segments of the industry; has obtained from the networks substantial information regarding accounting procedures and financial organization; has requested information, which the networks are assembling, relative to contract provisions with affiliated stations, and has held initial conferences with the networks relative to obtaining detailed data on network programing.

The staff is arranging meetings with all components of the industry—networks, affiliates, television film producers and syndicators, talent agencies, national spot representatives, advertisers and advertising agencies, independent stations and others, as rapidly as feasible. Overall planning of the study and the preparation of questionnaires along lines of recognized problems is going forward.

From our experience with the network study to date, it is clear that the study cannot be completed during this fiscal year. During the Senate hearings on the independent offices appropriations bills for 1956, I testified that the $80,000 appropriation would be sufficient only to initiate the study. This amount, I stated, would enable the Commission to establish a staff adequate to formulate procedures for conducting the study and to make substantial progress in the first, or factfinding phase. (Pages 293 and 294 of the hearings on H. R. 5240, subcommittee of the whole Committee on Appropriations of the United States Senate, 84th Cong., 1st sess.)

As the network study has progressed, it has become increasingly clear that the number, magnitude and complexity of the problems under study will require substantially more than 1 year. The former chain broadcasting study was conducted from 1938 to 1941. The telephone industry investigation continued from 1935 to 1939. It is contemplated that if sufficient funds are appropriated, the current study of radio and television network broadcasting will be completed in fiscal year 1957 and that a final report will be prepared by the end of fiscal year 1957.

At this stage of the study it is difficult to give accurate estimates of target dates for completion of any phase. It is hoped that by the end of fiscal 1956 substantial data will have been assembled in the following areas:

(1) Historical, organizational, and financial development of networks.

(2) Significant revenue sources and categories of cost of networks and their owned and operated stations.

(3) Functioning of the networks and national spot organizations.

(4) Opportunities for choices by stations of programs from network and nonnetwork sources.

(5) Affiliation contracts, especially on such factors as right of first refusal, option time, free hours, division of revenue, and term of contract.

You have asked whether the Commission will wait until the study is completed before taking any appropriate action. Many of the matters under study will be affected by facts gathered in all phases of the study and, accordingly, action as to these interrelated matters should be withheld until the study is completed. However, other phases of the study will be completed earlier, and it may well be that some of these are sufficiently independent to be acted upon prior to completion of the entire study.

In such instances, if the facts indicate that remedial action needs to be taken, the matters will be presented to the Commission. It is not possible, however, in the current status of the study to specify such areas in which action might be taken before completion of the entire study.

UHF BROADCASTING

Another important matter which is the subject of questions your committee has directed to the Commission is the status of UHF.

The inability of a substantial proportion of UHF stations to achieve financial success has disappointed the expectations, generally held in 1952, concerning the contribution which utilization of the UHF band could make toward the expansion of our national television service.

While financial poblems are by no means confined to stations operating on UHF channels, the difficulties associated particularly with UHF broadcasting raise problems of widespread concern to the industry and to the Commission.

It would serve little useful purpose to repeat here the familiar catalog of the difficulties UHF broadcasters have encountered in acquiring sufficient audience, network programing and advertising revenues to support their stations.

The scope of the problem is indicated by the fact that of 152 UHF stations which have commenced operating, only 99 are now on the air. A considerable number of those still on the air continue to operate at a loss.

These difficulties have spawned numerous suggestions to the Commission, and to this committee, for remedial action ranging from the deintermixture of UHF–VHF channel assignments in individual communities to proposals for major recasting of the entire allocations plan and basic revision of the present television engineering standards. A substantial part of the Commission's time and effort during the past year has been concentrated on the quest for solutions of lasting value.

DEINTERMIXTURE

Formal rulemaking proceedings have been conducted to examine proposals in five separate communities for channel reassignments which would confine local channels to a single band—in these cases the UHF band. In doing so the Commission endeavored to ascertain whether the public interest could be served by "selective deintermixture."

Proponents of selective deintermixture urge it as a means of facilitating more balanced competition between stations in selected communities, in the hope that this would strengthen UHF generally by increasing the number of UHF "islands" in which local UHF stations would be substantially free from competition with VHF stations.

It had been hoped, when these rulemaking proceedings were initiated, that a detailed examination of the problem in the light of the circumstances prevailing in these communities might yield useful indications concerning the probable effect of deintermixture locally, and also concerning the question of whether policies applicable nationally might be evolved from a study of these individual cases.

During the period when the individual deintermixture petitions were under consideration, the Commission also gave attention to other, alternative approaches to the allocation problem, which it has become increasingly apparent is nationwide in scope.

Some proposals conflicted wholly or partially with deintermixture. The majority of the Commission concluded that the review of individual deintermixture petitions would neither provide an adequate basis for considering deintermixture itself as a nationwide solution, nor afford the opportunity to evaluate deintermixture as a possible solution in the light of a considerable number of other alternative proposals.

Moreover, the majority felt that there was serious doubt that scattered deintermixture adopted without reference to the general nationwide problem could provide significant lasting improvement. There was, for example, little in the records of these cases to support the conclusion that limited deintermixture on the basis sought by the petitioners would have helped significantly to resolve the difficulties confronting UHF broadcasters in other cities, or would materially strengthen UHF.

To illustrate, we were unable to conclude the reassignment of channels on an ad hoc local basis would significantly stimulate the conversion of VHF receivers to UHF, the increased sale of combination VHF–UHF receivers, or the improvement of UHF transmitting and receiving equipment.

The Commission therefore determined that selection deintermixture of communities where allocated VHF services had not yet gone into operation was not a satisfactory solution to what was essentially a nationwide problem. The conclusion was also reached that proper consideration of the numerous and somewhat conflicting proposals for alleviating the national allocations problem called for the conduct of a formal rulemaking proceeding to review all the suggested alternatives.

Since selective deintermixture as proposed, that is based on the absence of local VHF services, had been determined to be an inappropriate approach to the problem, it was decided that the individual petitions before the Commission should be denied. This was done, however, without prejudice to full consideration of deintermixture in the context of the broad rulemaking proceeding.

Consistently with this, the Commission denied not only the deintermixture petitions on which rulemaking had been initiated, but also a number of others on which action had been deferred pending decision on those pilot cases.

REVIEW OF TELEVISION ALLOCATIONS

In the notice of proposed rulemaking initiating the general proceeding, proposals and comments were invited from all interested parties for such revisions of the nationwide allocations plan and television engineering standards as might reduce the present obstacles to fuller development of the television service.

Written comments were requested by December 15, 1955. Approximately 200 comments have been filed. The time for filing reply comments has been extended to February 8, 1956. The suggestions before the Commission encompass a considerable variety of approaches, including the use of additional VHF frequencies; the reduction of minimum station separations to make additional VHF channel assignments possible, using either the present 12 VHF channels, or new VHF channels, or both; the use of directional antennas; cross-polarization; deintermixture; and others, including combinations of the foregoing.

A considerable number of these proposals contemplate basic departures from the structure of the existing system, which was adopted in 1952. The proposals are widely diversified. Some are mutually exclusive. Most of them cannot be properly evaluated except in the light of a complete review of the nationwide allocation plan. The basic question before the Commission is whether, and if so, in what manner, the public interest may be served by revising the structure of the present plan.

Notwithstanding the pendency of the general rulemaking proceeding in which the foregoing proposals are being considered, the public continues, understandably, to press vigorously for the expansion of presently available television services, especially in communities and areas where available service is either nonexistent or where there is an insufficient number of stations to provide adequate choice of programs.

It happens that in a number of communities in which local UHF broadcasters had sought deintermixture, mutually exclusive applications for a locally assigned VHF channel have reached advanced states in comparative hearings which have been subjected to unavoidable but lengthy delays.

The Commission has been urged by some of these UHF broadcasters to defer or stay the authorization of new VHF stations on those channels. The majority are convinced that it would be contrary to the public interest to create added delays by deferring grants on such VHF channels until it could be determined whether final decisions in the general allocations proceeding would possibly result in deintermixture of any such local cammunity.

To do so in the opinion of the majority would be to frustrate further expansion of television service when expansion is the very objective of the current review of the television allocations plan.

Your committee has requested the views of the majority on a dissenting opinion of one of the Commissioners who expressed the view that:

"The Commission may, in granting the VHF applications, effectively eliminate many UHF stations which are presently in operation, and in many instances render the cases moot. * * * The actions of the Commission in making further VHF grants in these areas (deintermixture areas) can have the effect of seriously hampering and perhaps of unalterably precluding the Commission from giving proper and adequate consideration to the overall study of the allocation plan."

In the typical case involved here, the VHF grant is for the first VHF station in communities where a large proportion of the existing sets are capable of receiving UHF as well as VHF signals. Thus, set conversion, although a significant obstacle to some UHF broadcasters, is a far less significant factor in communities where UHF service is already established.

There is little basis, in the opinion of the majority, to assume that a first local VHF station would necesarily eliminate local UHF stations.

Nor, in the majority's view, would the VHF grants in question hamper or preclude proper and adequate consideration of any of the suggested revisions to the allocation plan. The particular concern which may be felt on this point is indicated in the next question raised by the committee, namely:

"How can the Commission, having denied deintermixture in specific cases, adopt deintermixture as a sound, overall policy in the public interest after it has proceeded to intermix or further intermix the areas requested to be deintermixed?"

No VHF grant, whether recent or long standing, creates a necessary barrier to deintermixture, should the Commission find, in keeping with the conclusions reached in the general allocations study, that deintermixture of any community is required in the public interest.

As the Commission has stated, the fortuitous circumstances of whether there is an existing or authorized VHF station in any community cannot provide a proper basis for determining whether the deintermixture of local channel assignments would serve the public interest as part of any overall revision of the existing system.

A decision as to whether deintermixture would serve to enhance the opportunities for the expansion of television service in any communities or areas must be governed by the manner in which this action would fit into an integrated nationwide television plan. The fact that the Commission has recently granted a new VHF station can have no more bearing on its judgment as to whether deintermixture in that locality would serve the public interest than the existence of a long-established VHF station.

Moreover, no grant, whether recent or long standing, impairs the Commission's authority to order such channel reassignments as it may find necessary in the implementation of revisions to the allocations plan which may be necessary in the public interest.

In view of this, and in view of the fact that it cannot be determined at this time whether deintermixture will be adopted either on a broad or limited basis, the majority is unable to justify the withholding of authorizations for stations which have been long awaited and which are needed to expand inadequate local television service.

For the stated reasons, the majority believes that neither the denial of the individual deintermixture petitions nor the grant of VHF channels in the same communities can prejudice the fullest consideration of the merits of deintermixture as a possible feature of any nationwide revisions to the allocations plan.

The committee has inquired whether the public would be penalized if the Commission permits a channel to go on the air and then decides that it must go off the air at a later date because deintermixture would be a sound policy.

This question is understood to refer to recent VHF grants in communities where deintermixture has been sought. It should be noted first that none of the deintermixture proposals before the Commission contemplate the elimination of a local VHF assignment without the substitution in its place of a UHF channel.

Accordingly, there would be no question of the VHF station being obliged to go off the air. What could arise is a requirement that a VHF station transfer its operation to a substitute UHF channel.

In most of the cases for which deintermixture requests were submitted to the Commission, almost all of the families in the communities involved already own receivers capable of getting UHF transmissions. Viewers having such sets will not be penalized by a later shift of a station to UHF since their sets will be equipped to receive UHF.

Further, as to the minority of viewers in these communities with VHF-only sets, if the Commission decides at a later date to deintermix particular localities and to require certain VHF stations to shift to UHF, the shift over to UHF need not be accomplished abruptly.

It is quite possible that an appropriate transition period could be provided during which the affected stations could operate on both the old VHF channel and the new UHF channel, thereby assuring that those members of the public having VHF-only sets would continue to receive service for a suitable period.

Such a gradual shift-over during which new sets may be purchased, or old sets converted to UHF, would minimize any disruption of television service provided to the public.

The Commission also desires to acquaint the committee with its efforts to overcome the obstacles hindering the advent of television to many of the smaller communities.

Another of the committee's questions was directed to this matter. A major obstacle has been the high cost of building, operating and programing of television stations during this early stage in the development of the art—factors largely beyond the Commission's control.

TELEVISION FOR THE SMALLER COMMUNITIES

The high cost of local programing has, as you know, made adequate amounts of network programing generally indispensable to economic station programing. With this in view, the Commission has been considering ways by which the cost of intercity transmission of programs can be minimized.

Under the Commission's present rules, stations may operate private intercity relay systems to connect with program service points only on an interim basis until adequate common-carrier facilities are available.

Stations located in communities at some distance from program service points have urged that the common carrier mileage charges for connecting them to the network make profitable operation impossible. We have instituted rulemaking looking toward liberalizing the requirements for establishment of private intercity relay systems by the broadcasters themselves.

The telephone company has suggested in this proceeding the establishment of an off-the-air pickup service at charges substantially less than those required for direct network connections. Broadcasters interested in establishing their own intercity relay systems claim that their costs would be still lower than these reduced charges of the common carrier. We hope to issue our final report on this proceeding in the near future.

One of the first steps the Commission took to alleviate the high cost of programing was to announce in August 1954 that it would authorize the operation of satellite stations—stations that would be permitted to operate without their own locally originated programs or local studies—in communities which might not otherwise be able to support their own stations.

The satellites are licensed to operate in accordance with our rules and differ from other television stations only in that they confine their programing to the rebroadcast of programs of other stations.

Supplementing this policy for reducing the high cost of station operation in the smaller communities, the Commission amended its rules in June 1955 to reduce the minimum power requirements of television stations from 1,000 watts to 100 watts, and to eliminate the minimum antenna height requirement. This amendment makes possible the construction of television stations in the smaller cities at reduced cost.

In addition to these steps designed to encourage the construction of stations in the smaller communities, the Commission instituted rulemaking in March 1955 to consider the operation of "boosters" which would operate with limited power on the same channel as the main transmitter of UHF stations.

Such operation, if technically and economically feasible, would benefit the UHF stations by enabling them to improve their coverage by filling in shadow areas within their service range. Initially the proposal was aimed primarily at reducing disparities between UHF and VHF service in rough terrain, and the Notice of Rulemaking looked toward confining the use of boosters to UHF stations.

However, comments have been filed and are being considered by the Commission in this proceeding which urge that such authorizations should also be permitted by which VHF stations could boost their signals. The Commission is presently evaluating the comments filed in this proceeding.

In some areas of the country where regular TV service is not yet available there is a great temptation to erect low-power booster stations to provide this desired service. For reasons which I will mention, the Commission has not established rules permitting booster stations.

In a few cases such booster stations have been installed without Commission authorization, particularly in the central part of the State of Washington, where geographical isolation prevents direct service from existing stations.

This situation gives the Commission a dual concern. On the one hand, unauthorized operations present a problem. On the other hand, the Commission recognizes the natural desire of the residents of these communities to receive broadcasts which cannot reach them direct from distant stations without some device which will enable them to do so.

The Commission has, accordingly, concentrated careful attention on this problem in an effort to find a solution which will avoid serious interference problems created by boosters operating outside the normal service range of television stations. In addition, it is necessary to give careful consideration to the possible impact on UHF stations of any VHF boosters which would extend the effective range of existing VHF stations.

Our first inclination was to authorize low-power booster operation so that the existing booster stations could continue operation without making major changes. Careful engineering analysis has convinced us that this would be a very dangerous thing to do. Boosters are essentially squeezed-in channels, and as such, derogate from the planned approach of the sixth report and order.

Operating as they do on the same channel as the parent station, and usually from high elevations, we see no way, at least at the present time, of insuring that existing stations will be protected from interference. Although the actual coverage of boosters may be confined to a few miles, their signals can easily interfere with reception of signals within the normal coverage area of regular TV broadcast stations as much as 50 miles away.

This is an engineering fact. It occurs, the engineers tell us, because a signal of less than one-hundredth of the value of the signal strength needed to provide service can result in interference to another station.

However, I think we may have found the answer with the use of "translator" stations, which were the subject of a rulemaking instituted earlier this month. Let me give you a brief history leading up to this action.

In its search for an effective and economical method of serving isolated areas, the Commission began, as early as 1951, authorizing research and experimentation with a type of satellite station now known as translators. As distinguished from the booster type of station, translators pick up the signal from a parent station and "translate" the program to a new frequency before rebroadcasting. Thus, the translator type of operation has the very important advantage of being able to select a frequency least likely to cause interference in the particular area.

In January 1955, a permittee in Manson, Wash., was given an experimental authorization to begin construction of a station of this type, and by June programs were being furnished to the area by this station. On the basis of observations of the operation of this station, and of comprehensive reports furnished in connection with a similar operation begun in 1951 at Emporium, Pa., as well as other interrelated experimental operations, the Commission, on January 11, 1956, instituted a rulemaking to consider the operation of translator stations on a commercial basis.

As a result of the experimental data accumulated, it has been possible to reduce operating requirements to the barest minimum consistent with dependable service and protection to other services. Realizing that operating costs must be kept to a minimum in order to make such stations feasible, the proposed rules contemplate major relaxations of our rules relating to operator requirements, multiple ownership, monitors, measuring equipment, times of operation, station identification, and transmitter locations.

It is proposed to confine translator stations to the channels between 70 and 83, and thus reduce the need for protection spacings with existing stations because most UHF stations operate on lower channels. In addition, by confining translator operations to one portion of the UHF band, it is possible that transmitters used by translator stations may be manufactured to sell for about $1,000.

Comments on this translator proposal are due by March 5, 1956. The Commission intends to pursue this matter diligently in an effort to find suitable solutions with a minimum of delay.

NEW TELEVISION GRANTS

In a separate question, the committee inquires concerning the number of final decisions issued in the past year in television procedures. Nineteen grants were made in 1955 after comparative hearings conducted to select the best qualified applicant for channels for which more than one qualified applicant had applied. A total of 53 new television stations were authorized in 1955, including in addition to the foregoing, grants made for channels on which only a single application had been received.

The Commission has continued its diligent efforts to reduce the large backlog of mutually exclusive applications for television channels which have required numerous lengthy hearings. I am happy to be able to inform you that there are now only 10 cases awaiting the final decision of the Commission. Eleven are ready for oral argument. Only four are awaiting the examiner's initial decision. Hearings are in progress on the 11 other cases now remaining for disposition.

STATION COVERAGE

The committee has also inquired concerning whether the Commission at the time it adopted an order on July 22, 1955, with respect to antenna heights for VHF television stations in zone I, was in possession of data respecting "actual coverage" of the VHF stations if they proceeded to the new antenna heights authorized by the order. It should be noted that the amendment adopted by that order has not gone into effect. After several extensions of the effective date the Commission decided that the question of changes in maximum antenna heights should be considered in the general rulemaking proceeding on revision of the allocation plan. Accordingly, the order of July 22, 1955, has been vacated.

The question concerning "actual coverage" requires a brief explanation of the basis on which coverage of television stations in calculated by the Commission. Numerous factors determine the range within which satisfactory signals can be received from a television station transmitter. These factors include conditions of terrain, the sensitivity of receivers, the height and elaborateness of receiving antennas, the time of day, the time of year, weather conditions, and other factors.

Because a considerable number of variables enter into the picture and because the concept of a satisfactory signal calls, to some extent, for subjective judgments, there are many bases on which "coverage" might be defined and measured. Standards and criteria for evaluating "coverage" and "interference' have been established with the help and advice of leading electronic scientists, engineers, and physicists, with the assistance of the Bureau of Standards, the Commission laboratory, and field divisions, and on the basis of substantial data accumulated on propagation characteristics and the general behavior of radio waves and equipment.

From these standards the Commission evolved the well-known grade A and grade B coverage contours. Our grade B contours tell us the distance from an average station where 50 percent of the locations can receive for 90 percent of the time what we have determined to be a "satisfactory" signal. Our grade A contour gives us the same information for 70 percent of the locations at 90 percent of the time. For the purposes of determining Commission policy on channel assignments and overlap between stations the Commission believes this basis strikes a desirable compromise between more costly refinements on the one hand and the requirements of administrative efficiency on the other hand.

In making its decision on July 22, 1955, to permit VHF stations in zone I to operate at maximum power at 1,250 feet instead of 1,000 feet, the Commission relied principally on the standards and criteria to which I have referred. The average increase in range of stations going to the new height at maximum power would be minimal—on the order of 2 to 5 miles depending on the interference encountered. As noted, the amendment has not gone into effect, but will be reconsidered in the general allocations proceeding. A minor change was adopted, however, to avoid hardships in one special type of situation.

OVERLAP

You have also asked for the Commission's policy on overlap in television. The Commission is concerned with overlap in the television service in connection with the so-called duopoly rule (sec. 3.636 (a) (1) of the Commission's rules) which provides that licenses for TV broadcast stations shall not be granted to any party if such party owns, operates, or controls another television broadcast station which serves substantially the same area.

In determining what does or does not constitute "substantially the same area," the Commission considers the existence or absence of significant grade A overlap, i. e., whether the grade A contour of one station owned by a licensee would significantly overlap the grade A contour of another station proposed by that licensee. Where only grade B overlap exists or is proposed, in the absence of other considerations, the Commission has considered such overlap not to involve service to "substantially the same area."

CONCLUSION

It was not my desire, in this report, to burden the committee with an encyclopedic review of all the aspects of television which have engrossed the Commission's attention during the past year. In the belief that it would better serve the committee's present purposes this report has touched, rather, on the highlights of matters in which it is understood the committee is particularly interested at this time.

As you have seen, the keynote of the Commmission's recent activities has been the diligent quest of solutions to problems which are inhibiting the fulller expansion of television service in communities throughout the Nation, both large and small. To this end the Commission is bending strong effort to seek the means for bringing service to the limited areas still lacking it, to bring local outlets to many of the smaller communities, and to augment the number of competing stations in the larger centers.

The network study, our current review of the entire allocations plan, and our efforts in regard to satellite, booster and translator station are foremost among the Commission's present activities in the television broadcast field. Great importance is attached to these and other endeavors to keep abreast of constant changes and developments on the television scene. We must insure not only that our decisions are well adapted to current conditions, but also that the framework of the allocations plan and television standards is realistically calculated to facilitate television's continued growth and the fullest possible achievement of the goal of a nationwide competitive television service.

For its own part, the Commission will continue to explore every possibility for improvements which lie within its power to bring about. The Commission welcomes the interest of your committee in the problems which remain to be solved before this goal can be fully attained.

The cooperative efforts of the committee, the Commission and the industry itself can go far toward realizing our common objective of service to the people.

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D. C.

NOVEMBER 22, 1955.

STATEMENT BY NETWORK STUDY COMMITTEE OF PURPOSES AND OBJECTIVES OF THE NETWORK STUDY

In order to perform its functions and duties in the field of radio and television network broadcasting, the Commission has recognized a need for information in this field.

The Commission is frequently requested by appropriate committees of the Congress to comment upon proposed legislation relative to the networks.

In 1943, the Commission promulgated its chain broadcasting rules following a rulemaking proceeding begun in 1938. The essential principles adopted in those rules are still in force. However, in the interim, radio network broadcasting has undergone substantial change and television network broadcasting has developed. Moreover, the Communications Act was enacted prior to the advent of television and no amendment to meet problems raised by the growth of this great new industry has been adopted.

The chain broadcasting rules applicable to radio were, upon the advent of television, carried over to the television field with little change. No detailed study has ever been made to determine whether radio and television networks are sufficiently similar to justify the application of the same regulatory policies to both media. Nor has such a study been made to determine whether and to what extent chain broadcasting rules have been rendered obsolete by developments in radio network broadcasting in the past 15 years.

The Congress has authorized a study of radio and television network broadcasting to provide the Commission with the information necessary to the performance of its duties. Accordingly, the network study committee has initiated an appraisal of the entire network broadcasting industry, both radio and television.

A firm factual basis is necessary for a determination as to whether the Commission's rules, in the light of current conditions, are achieving the objectives of the act and of the Commission's policies under the act. This appraisal is also necessary to enable the Commission to comment on any proposed legislation in the network field.

Existing regulatory concepts can be evaluated only after a thorough study of the broadcast industry. Such a study should necessarily encompass a thorough, well-documented, factual analysis of network broadcasting, and its effect on the broadcast industry and the public which the industry serves. To study the networks one must consider not only the networks themselves, but also the interrelations between the networks and their owned stations, affiliated stations, advertising agencies, talent agencies, national spot representatives, producers and distributors of film for television and radio purposes, and the effects of network operations on independent radio and television stations. Only in the context of these relations of the networks with other components of the industry and the public can the adequacy and wisdom of current regulatory policies be appraised.

The nature of an objective study of network broadcasting requires that the full scope of the study not be delineated until substantial exploratory work has been done. On the basis of its work to date, however, it is possible for the committee to set forth in broad terms several areas within which the study will proceed. As the study goes forward other necessary areas of inquiry will be added.

Basically, the network study will concern itself with the broad question whether the present structure, composition, and operation of radio and television networks and their relationships with their affiliates and other components of the industry, tend to foster or impede the maintenance and growth of a nationwide competitive radio and television broadcasting industry.

In determining this overall question, it will be necessary first to obtain the detailed facts required for the solution of the following subsidiary problems:

(a) What has been and will continue to be the effect on radio and television broadcasting of the following:

(i) Ownership and operation of both radio and television networks by the same person, or persons affiliated with, controlled by, or under common control with the same person;

(ii) Ownership and operation of radio and television broadcasting stations by persons who, directly or indirectly, own or operate radio or television networks;

(iii) The production, distribution, or sale of programs or other materials or services (including the providing of talent) by various persons, both within and outside of the broadcasting industry, for (1) radio and television network broadcasting, and (2) radio and television nonnetwork broadcasting;

(iv) The representation of stations in the national spot field by various persons;

(v) The relationships between networks and their affiliates including but not limited to those having to do with: (1) selection of affiliates, (2) exclusivity, (3) option time, (4) free hours, (5) division of revenue, and (6) term of contract.

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON 25, D. C.

IN THE MATTER OF STUDY OF RADIO AND TELEVISION NETWORK BROADCASTING PURSUANT TO DELEGATION ORDER NO. 10, DATED JULY 20, 1955

NETWORK STUDY COMMITTEE ORDER NO. 1

Whereas by delegation order No. 10, dated the 20th day of July 1955 the Commission, pursuant to section 5 (d) of the Communications Act of 1934, as amended, and section 0.201 of the Commission's Rules and Regulations, designated this committee composed of George C. McConnaughey, chairman, and Commissioners Rosel H. Hyde, Robert T. Bartley, and John C. Doerfer, and ordered that this committee institute and carry on the study of radio and television network broadcasting provided for by Public Law 112, 84th Congress, 1st session, with the same powers and jurisdiction conferred by law upon the Commission; and

Whereas orders of this committee issued in respect to the matters assigned or referred to this committee by said delegation order shall have the same force, and effect and may be evidenced and enforced in the same manner as if made by the Commission (47 U. S. C. A. sec. 155 (d). Sec. 0.201 FCC Rules and Regulations); and

Whereas the Commission pursuant to sec. 403 of the Communications Act of 1934, as amended (47 U. S. C. A. sec. 403) has full authority and power, at any time, to institute an inquiry to obtain information necessary to the discharge of its proper functions and duties; and

Whereas under the provisions of the Communications Act of 1934, as amended, this Commission is empowered and directed to grant construction permits and station licenses, or modifications or renewals thereof, for broadcast stations only after it has made a determination that the public interest, convenience, or necessity would be served thereby; and

Whereas the Commission is empowered to perform any and all acts, make such rules and regulations, and issue orders not inconsistent with the act, as may be necessary in the execution of its functions (47 U. S. C. A. 154 (i) and 47 U. S. C. A. 303 (f)), and to make such special regulations applicable to radio stations engaged in chain broadcasting as the public interest, convenience, or necessity requires (47 U. S. C. A. sec. 303 (i)); and

Whereas, the Commission is required to make specific recommendations to Congress as to additional legislation which the Commission deems necessary or desirable (47 U. S. C. A. 154 (k)); and

Whereas, the Commission has been requested by Congress to comment on proposed legislation affecting networks; and

Whereas the network study committee has determined that, in order to institute and carry on the study of radio and television network broadcasting directed by the Commission, as aforesaid, and to report to the Commission the relevant facts necessary to enable the Commission properly to perform its functions and duties under the Communications Act of 1934, as amended, as above set forth, it is essential that inquiry be instituted pursuant to said section 403 of the Communications Act of 1934, as amended, by the committee, to obtain certain data and other information from various persons and sources regarding radio and television network broadcasting.

Now, therefore, it is ordered this 21st day of November 1955, that inquiry be made by the network study committee to obtain data and other information relevant to the study ordered by the Commission, as aforesaid, regarding the following matters and such other matters relating to radio and television network broadcasting as the committee may, from time to time, direct:

(*a*) What has been and will continue to be the effect on radio and television broadcasting of the following:

(i) Ownership and operation of both radio and television networks by the same persons, or persons affiliated with, controlled by, or under common control with the same person;

(ii) Ownership and operation of radio and television broadcasting stations by persons who, directly or indirectly, own or operate radio or television networks;

(iii) The production, distribution, or sale of programs or other materials or services (including the providing of talent) by various persons, both within and outside of the broadcast industry, for (1) radio and television network broadcasting, and (2) radio and television nonnetwork broadcasting;

(iv) The representation of stations in the national spot field by various persons;

(v) The relationships between networks and their affiliates including but not limited to those having to do with (1) selection of affiliates, (2) exclusivity, (3) option time, (4) free hours, (5) division of revenue, and (6) term of contract;

(vi) The contracting for or lease of line facilities used in the operation of networks by persons who, directly or indirectly, own and operate networks;

(vii) Related interests, other than network broadcasting, of persons who, directly or indirectly, own or operate networks;

(viii) The ownership of more than 1 radio or television broadcast license by any 1 person.

(*b*) Under present conditions in the radio and television broadcasting industry, what is the opportunity for and the economic feasibility of the development of a multiple-network structure in terms of (1) the number of broadcast outlets available, (2) national advertising potential, (3) costs of network establishment and operation, and (4) other relevant factors.

(*c*) Under present conditions in the radio and television broadcasting industry, what is the opportunity for and economic feasibility of effective competition in the national advertising field between networks and nonnetwork organizations in terms of (1) the number and type of broadcast outlets available, (2) national advertising potential, (3) needs of the advertiser, and (4) other relevant factors.

The CHAIRMAN. The committee will adjourn, to reconvene at the call of the chairman.

(Whereupon, at 11:56 a. m., the committee adjourned, to reconvene at the call of the chairman.)

TELEVISION INQUIRY

(UHF–VHF Allocation Problem)

TUESDAY, FEBRUARY 7, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to call, at 10 a. m., in room G–16, United States Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Pastore, Monroney, Potter, and Payne.

Also present: Harold I. Baynton, acting chief counsel; Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nichols Zapple, staff communications counsel; Bertram O. Wissman, assistant clerk.

The CHAIRMAN. The committee will come to order.

We will have some more Senators here in a moment, but they were in session late last night so a lot of them are in their offices.

Before we begin today, I want to read another short opening statement for the record.

When we recessed our last hearing on January 26, we had hoped to resume last week. On checking with the Commission, however, we found that they were involved in hearings before the House Committee on Interstate Commerce and the House Appropriations Committee; had a regularly scheduled meeting of their own, and that some of them had other commitments. As a result, this was the earliest possible date for continuation of these hearings; and because of the Commission's schedule, we again find that this will be the only day available this week.

When we recess today we probably will have to convene on Monday, February 20. I understand the Commission will be available at that time. The reason is that next week is the anniversary of the founder of the Republican Party, and the Senate doesn't do much that week—the Republicans are all gone. Of course we Democrats go out in April when the great Thomas Jefferson was born.

Senator MONRONEY. We consider Jackson born all the year around.

The CHAIRMAN. So it appears we will have to continue these hearings until the 20th, but after that we hope to have hearings on a fairly regular basis so we can get at some of these matters. I am going to try to set some more definite dates after this is over. We have a regular meeting of the committee tomorrow, and I am sure that we can sound the Senators out as to when they will be available.

75589—56—pt. 1——4

Now, one other thing the Chair wants to announce. I have sent a letter to the Federal Trade Commission about a matter we are going to have to get into. I am asking the Federal Trade Commission what procedures it is following, if any, to establish a check on what I call false advertising on radio. I want to see if they have any method by which to check possible false and fradulent advertising. I am sure the committee and the FCC might want to go into that at a future date.

I realize that the Federal Trade Commission has jurisdiction over false and fraudulent advertising so far as the advertiser himself is concerned, whereas, the FCC only has the authority to deal with the broadcaster. Sometimes these activities aren't correlated. I think anyone listening to the radio on any given day in any given area in the United States will run into some very startling things, which I think are in violation of the Federal Trade Commission Act. We will probably hear from the Federal Trade Commission in reply to my letter by the time we have our next hearing.

Senator MONRONEY. Is there any limitation on the amount of time commercials can take? Should you get 50 percent commercials and 50 percent entertainment, or three-fourths commercials and one-fourth entertainment on radio now?

The CHAIRMAN. Is there a Communications Commission rule on that?

Mr. McCONNAUGHEY. Just a balance is all. As far as the Commission is concerned, they are required to have a reasonable balance.

Senator MONRONEY. What is the reasonable balance? Is it 50 percent soap and 50 percent news, or 75 percent advertising and 25 percent entertainment? If you listen to the car radio—and about the only time I get to do so is as I go about the State of Oklahoma—your commercials are taking at least 50 percent of the time.

Mr. McCONNAUGHEY. That is certainly true. They take far too much in many instances.

Senator MONRONEY. Are you monitoring any of these stations to know just how much they are abusing the privilege of the air waves with excessive amounts of "character-building cigarettes" and that sort of thing?

Mr. McCONNAUGHEY. The only jurisdiction I think, Senator Monroney, that the Commission has, is that they look at it at renewal time, and in response to complaints.

Senator MONRONEY. Then you have a death sentence?

The CHAIRMAN. You mean they have the autopsy.

Senator MONRONEY. In other words, you pull the license away because the fellow for 3 years or so has been devoting 50 percent of his time to commercials and maybe 50 percent to public-interest programs of some kind. I have noticed a tremendous difference, since the advent of television, in the loss of entertainment values in radio, and the overwhelming percentage of time—I don't know what percent, but it always seems like a great deal more—devoted to advertising. I don't know whether there are fewer advertisers and they have to give them more time, but they are driving people away from the radio with this policy.

Mr. McCONNAUGHEY. That is true.

The CHAIRMAN. I know that Mr. McConnaughey has expressed his concern on a number of occasions about this. I am not talking about legitimate advertising—cigarettes and food and things of that kind—

but it seems to me that if any monitoring were done, a rundown on some of these fantastic offers that come on the air would show that some advertising is not what it pretends to be at all, and that the public gets bilked.

If you listen to the radio long enough on a given day, you will be told that you can get almost anything free of charge. They tell you there is no obligation, but you find there is a gimmick to it all, in my opinion, which generally violates the concept of the Federal Trade Act. I suppose it would be most difficult for a radio operator himself to run those things down, and I suppose he should only be responsible if and when he had knowledge of the fact that it was that type of advertising. But the Federal Trade Commission has the right and the duty to look at those things and go directly to the advertiser himself. They do it on all other types of advertising, but I don't know what they have done here—they may be doing something—and we will have that information I hope by the next time we get together.

We will get at that matter and I hope to have a report. I am sure the Federal Communications Commission is concerned with it, and it is becoming, I think, a very serious matter. I am sure the Commission will be cooperative. And in these cases there should be some kind of rules of the game on this, as Senator Monroney points out, so these people can adhere to our policy.

Senator MONRONEY. Do you have a radio association now?

Mr. McCONNAUGHEY. Yes.

The CHAIRMAN. They will testify, I suppose?

Mr. McCONNAUGHEY. Yes.

Senator MONRONEY. When they do, I hope we can ask what they consider a normal formula. The newspapers pay postal rates according to the percentage of advertising contained. In other words, if they are carrying 50 percent advertising and 50 percent news, then they pay one rate. If they carry 75 percent advertising, they have to pay a higher rate. Public service material is what is carried at low cost.

The CHAIRMAN. Isn't it true, Mr. Chairman, that once a year or so, all stations send to the Commission a breakdown of their general programing?

Mr. HYDE. Just with a renewal license application.

The CHAIRMAN. That isn't broken down as to the content of advertising, is it? I suppose it is broken down only as to the amount of time devoted to advertising?

Mr. HYDE. That is an analysis by classifications and numbers of announcements. It is a pretty comprehensive analysis.

The CHAIRMAN. Not as to content?

Mr. HYDE. Just so many minutes.

The CHAIRMAN. Not what they say in those minutes?

Mr. McCONNAUGHEY. No.

The CHAIRMAN. It would be very difficult for you to get that, but surely the Federal Trade Commission and this committee might be able to do something about this.

Senator MONRONEY. We ought to give the Federal Trade Commission some money to monitor these programs. If we put some more money in the Federal Trade Commission's budget for this kind of a job, I believe it would be very helpful.

The CHAIRMAN. I would like to have enough people sometime to answer all of this advertising and to see the difference between what is said on the radio and what you get when you go down to the advertiser. There is absolutely no connection in some cases, and the public gets it in the neck. A lot of people assume that what the announcer says is right, and they go down and find themselves paying more, or there are some hidden qualifications, making it false and fraudulent advertising.

Senator PASTORE. May I ask a question? Would that fall within the exclusive jurisdiction of the FCC?

Mr. MCCONNAUGHEY. No.

Senator PASTORE. I mean, let's get into the jurisdictional part of it. Would it be your responsibility?

Mr. MCCONNAUGHEY. We have no jurisdiction over the advertisers.

Senator PASTORE. If an advertiser broadcasts fraudulent, deceptive matter, it is not in your purview?

Mr. MCCONNAUGHEY. Except to the extent of looking into the licensee's discharge of his responsibility.

Senator PASTORE. That is as to the station, which may be an innocent party. It is the advertiser who is actually deceiving the public, so to speak.

Mr. MCCONNAUGHEY. We have no jurisdiction.

Senator PASTORE. That would fall under the Federal Trade Commission?

Mr. MCCONNAUGHEY. Entirely.

The CHAIRMAN. The station would only be liable, and you would only have jurisdiction over it, if they knew in fact it was false and deceptive advertising.

Senator PASTORE. I grant you that.

Mr. MCCONNAUGHEY. They have an inherent implied station-operator responsibility.

Senator PASTORE. You almost have to prove a conspiracy.

(Letter inserted later at request of Mr. McConnaughey.)

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., March 15, 1956.

Hon. WARREN D. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington 25, D. C.

DEAR SENATOR MAGNUSON: The information contained in this letter is submitted in response to requests conveyed through Mr. Zapple and Mr. Cox of your committee's staff.

Inquiry has been made as to the Commission's policy and actions with respect to excessive commercialization and alleged fraudulent or misleading advertising contained in radio and TV commercials.

Broadcasting is, within the framework provided by the Communications Act of 1934, as amended, essentially conducted as a free, competitive enterprise. Under section 326 of the act, the Commission is prohibited from exercising censorship of radio communications by conditions or regulation and the Commission does not undertake to dictate specific advertising format or program content.

As I indicated in testimony before your committee on February 7, 1956, the Commission examines evidence of overcommercialization at renewal time and if the Commission should be unable to find that renewal of a license is in the public interest, either on account of past operating practice or for any good and sufficient reason, then the Commission would not renew.

My testimony of February 7, 1956, also refers to power to revoke licenses under section 312 of the act. In this connection, I wish to call to your attention that the same section 312 also provides for issuance of orders calling upon any person who (1) has failed to operate substantially as set forth in a license, or (2) has violated or failed to observe any rule or regulation of the Commission, or (3) has violated or failed to observe any of the provisions of this act to cease and desist from such action. The Commission has used the cease and desist procedure in appropriate cases, but not as a device for halting specific advertising practices.

Over a recent 2-year period (December 1, 1953 to December 1, 1955) the Commission directed staff inquiry into some 60 situations where there appeared to be evidence of overcommercialization. While in none of these situations was it found necessary to deny an application for renewal of a license, I feel that on the whole the steps taken by the Commission have served to improve advertising practices in the industry.

In addition to the foregoing, the Commission also accepts responsibility for directing attention of other agencies to possible frauds and sharp practices which seem to fall largely within the jurisdiction of the respective agencies. Of these agencies, the Department of Justice and the Federal Trade Commission have the principal primary jurisdictions in frauds and advertising practices conducted by wire or radio. As you know, the Federal Trade Commission conducts rather extensive monitoring of advertising scripts and frequently institutes proceedings designed to minimize or halt unlawful practices. Where violations of the criminal laws are concerned, the Justice Department of course, is primarily concerned and is most cooperative about investigating and prosecuting law violations which are referred to them.

This Commission does not have staff personnel assigned specifically to monitoring advertising scripts. However, in the course of the Commission's other monitoring and regulatory activity, it is felt that the Commission receives sufficient information to enable it to discharge its responsibilties in this field.

In view of the fact that the content of this letter, in part, elaborates on certain of my testimony before your committee on February 7, 1956, I would appreciate having the text hereof inserted in the official transcript, volume 2, Television Inquiry, Tuesday, February 7, 1956, p. 127 following line 14.

I am happy to have been able to supply the foregoing information, and if further information is desired, please so advise.

Sincerely yours,

George C. McConnaughey, *Chairman.*

The Chairman. The members of the Association of Radio Broadcasters have tried to police themselves. They do have very definite rules—what they call a code—and when you get that in front of you, you will get information about their operations.

Well, now, for instance, you can listen to radio advertising, and it urges you to call number so-and-so, STerling 6–7400, or whatever the number is, and——

Senator Potter. It is interesting to know the type of program the chairman listens to.

The Chairman. They say: "Call this number, and we will deliver you a television set free of charge. You can use it for 10 days, there is absolutely no obligation, and you can have the fellow take it back at the end of that time if you don't want it." Well, I'd like to have the average person just try that.

Senator Monroney. Shifting from the character of the advertising, you do have power over the time consumed?

Mr. McConnaughey. That is right.

Senator Monroney. If an unduly large amount of time is devoted strictly to commercials, as I understand your testimony, you only consider that at the time of renewal of the station license and you have not invoked any sanctions or warnings other than at that time?

Mr. McConnaughey. We consider the question also if we have a specific complaint, Senator Monroney, from the public, then we inquire into it.

Senator Monroney. The public is not very well advised as to the fact that you accept such complaints.

Mr. McConnaughey. That is right.

Senator Monroney. If they think you are permitting too much advertising, you'd have to get a couple of trucks to handle the mail.

The Chairman. When the Federal Trade Commission was up here last summer, there was some indication that it might begin to monitor some of these programs. I wonder if that has been done at all?

Mr. McConnaughey. I don't think so.

Mr. Lee. I don't think it is quite fair to blame the advertiser entirely, although that is the FTC jurisdiction. The broadcaster has some responsibility to see that he is putting out a good product, and it is at that point that we can move in on the public-interest concept.

Senator Potter. Do you have a rule as to what is too much advertising?

The Chairman. Yes.

Senator Potter. What is too much advertising?

Mr. McConnaughey. No.

Mr. Lee. The NARTB has. It varies by the time hours—20 percent, during the day, of a 15-minute spot, I believe.

Senator Potter. What criterion do you use when a license comes up for renewal, as to whether they have used too much time for advertising?

Mr. Doerfer. We have a difference of opinion.

The Chairman. You get into a rule of thumb, 3 minutes out of 15, I think, is what is generally looked at as proper.

Senator Pastore. With all the other things you have to do, how much serious attention can you pay to all this?

Mr. McConnaughey. Not a whole lot, Senator.

Mr. Doerfer. There are 3,000 radio stations on the air.

The Chairman. Why don't we do this, and we can proceed. If you could, the next time we meet, submit for the record what general policies you have on the question that the Senator from Oklahoma raises——

Mr. Hyde. May I say that there is a specific provision of the act, section 326, which denies us any responsibility for censorship, or any power of censorship.

The Chairman. You couldn't censor context of a piece of advertising yourself, but if you knew this was going on——

Mr. Hyde. A violation of law is not made proper by the anticensorship provision.

The Chairman. That is right.

Mr. Webster. Not all of the broadcast stations belong to NARTB, and a great many, I believe, from my observation, are stations that do not comply with their code, because they don't belong. Secondly, I think you should keep in mind that the whole trend in broadcasting has changed since television. Their livelihood now is depending upon more and more advertising, and I think that is one of the reasons. We are increasing every day the number of broadcast stations in this country, and that is one of the reasons they are going more and more into advertising, that is the way that they live, and I think that is an element in the problem.

The Chairman. I am sure we appreciate that, and I think we all appreciate that the very fact that this is happening should give us a greater sense of responsibility for the type of advertising being broadcast.

Senator PASTORE. May I ask another question.

Isn't it a fact that the trend has been more advertising in radio because the rates in television have become almost impossible?

Mr. WEBSTER. That may be so.

Senator MONRONEY. If you overload radio or television with a superdose of commercials, you are going to kill the goose that lays the golden egg. "I am going to get a hi-fi and play my own records," is what the attitude may become.

Mr. WEBSTER. I am surprised at the number of AM broadcasting applications we get every day; it is increasing all the time. If they are losing money, they'd go out of business, so they must be making money by loading up with advertising.

Senator MONRONEY. We are in favor of making money, but we think you will finally reach a point of diminishing returns. Certainly the programs on my car radio as I drive over that great State of Oklahoma lead me to believe you have a heavy load of advertising. Three minutes out of 15. If you get 3 minutes of entertainment in a 15-minute program, consider yourself lucky.

The CHAIRMAN. Have you segregated the Mexican programs from those originating in Oklahoma?

Senator MONRONEY. We get Mexico, too.

Senator PASTORE. From now on in you will be floating on gas.

The CHAIRMAN. We are up in the air now. The Chair wants to finish this statement. Since the last hearing we have received a number of communications which I believe should be inserted in the record at this point. The first of these consists of a form of resolution signed by Senator Bush and all of the members of the Connecticut Delegation in the House of Representatives, urging that Congress and this committee require the Federal Communications Commission to assign additional VHF channels in Connecticut, or to minimize VHF competition with UHF stations, or both. A copy of this resolution with indication of all the signatories will be placed in the record.

(The resolution referred to is as follows:)

RESOLUTION

Whereas the Communications Act directs the Federal Communications Commission to make television service available, insofar as possible, to all the people of the United States by providing a fair, efficient, and equitable allocation of television channels to the several States and communities; and

Whereas almost 10 years after the inception of commercial television, there are only 5 television stations in operation in the entire State of Connecticut—fewer stations than in a single city of a neighboring State—and this number may be reduced to 3 since 2 stations have operated at a substantial deficit since their inception and see no prospect of successful operation under present conditions; and

Whereas the various communities in Connecticut are entitled to their own television stations to serve as outlets for local self-expression in the same manner as this function is performed in related fields by the 31 radio stations and 32 daily newspapers which are in operation in the State of Connecticut; and

Whereas the principal reason why Connecticut has so few operating television stations is that 14 of the 16 television channels assigned to Connecticut are in the UHF band, and UHF stations find it extremely difficult to survive when they are faced with competition from VHF stations in neighboring cities—a type of competition which is the fate of most UHF assignments in Connecticut; and

Whereas the Committee on Interstate and Foreign Commerce of the United States Senate is scheduled to commence hearings at an early date in an attempt to solve this problem: Now, therefore, be it

Resolved, That the undersigned public officials from the State of Connecticut do hereby earnestly petition the Congress and the Committee on Interstate and Foreign Commerce to take imediate steps to insure that the congressional policy set forth in the Communications Act is implemented by requiring the Federal Communications Commission forthwith to assign additional VHF channels in Connecticut or to minimize VHF competition to UHF stations, or both.

PRESCOTT BUSH, *United States Senator.*
J. T. PATTERSON, *Member of Congress.*
A. P. MORANO, *Member of Congress.*
THOMAS J. DODD, *Member of Congress.*
ALBERT W. CRETELLA, *Member of Congress.*
HORACE SEELY-BROWN, Jr., *Member of Congress.*
ANTONI N. SADLAK, *Member of Congress.*

The CHAIRMAN. The second item is a joint telegram from 10 of the members of the Massachusetts delegation in the House of Representatives, urging substantially the same relief for Massachusetts. This telegram will be inserted in the record.

(The telegram referred to is as follows:)

JANUARY 26, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee,
United States Capitol, Washington, D. C.

DEAR MR. CHAIRMAN: We, the undersigned United States Representatives from the Commonwealth of Massachusetts, do hereby earnestly petition your Committee on Interstate and Foreign Commerce to take immediate steps to insure that the congressional policy and intent set forth in the Communications Act is implemented by requesting the Federal Communications Commission to assign additional VHF channels in Massachusetts or to equitably regulate any unfair VHF competition to UHF stations, or both.

Respectfully,

Harold D. Donahue, Richard B. Wigglesworth, Edward P. Boland, Thomas J. Lane, Philip J. Philbin, Donald W. Nicholson, Edith Nourse Rogers, Laurence Curtis, William H. Bates, Thomas P. O'Neill, Jr.

The CHAIRMAN. In addition, Congressman Philip J. Philbin, of Massachusetts, one of the signers of the telegram, has submitted a statement on this problem, which will also be made a part of the record.

(The statement referred to is as follows:)

STATEMENT OF HON. PHILIP J. PHILBIN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

I desire to present my views on the UHF–VHF problem with special emphasis on the situation insofar as Massachusetts is concerned, and especially wish to commend this committee and its distinguished chairman, Senator Magnuson, of Washington, for its work and efforts in trying to get established a clear, realistic, overall FCC policy on the assignment of television channels.

I think that certain facts ought to be carefully considered in connection with television channel allocations—that it is most desirable:

(*a*) To have uniformity of reception in television sets so that as nearly as possible everyone in the country owning a television set can enjoy all of the programs.

(*b*) To provide a system whereby each community in its choice and discretion shall have a television outlet for its own culture and establish patterns, including an opportunity for the expression of political views and the conduct of charitable, social, and educational work. In the present situation, which involves conflict, dispute, and controversy between the networks for position and markets, this important public-service feature is in jeopardy.

I would address a few words to my own county of Worcester, Mass. For your information, this is a very important area combining industrial, mercantile, residential, and some farming areas. There is a single TV station located in the county, the signal of which cannot be received by the set owners without special technical adaptation entailing considerable expense. Of course, in such an area most of the popular programs of one of the major networks should be available.

I have read the brief filed by the Committee for Home Town Television on some of these points, and believe it contains suggestions as to how the above results can be accomplished without adversely affecting, but rather effectively implementing, existing priorities.

Unquestionably, monopolistic groups are seeking to control the television field in some areas, and this would clearly be very harmful to the small local stations which could otherwise perform such valuable functions. Another anachronism in this picture is the present total number of unused channels as a result of the daily schedule for some stations which, when they go off the air, leave channels entirely unused. The effect of this is to add to the number of major cities in Massachusetts with no local outlets, and we are facing a situation which may result in greatly impairing television service in our State.

I think that the FCC has an obligation to correct such abuses in the television field, and, obviously, if it fails in that primary obligation, Congress should act.

There are 22 potential UHF channels available to Massachusetts. About half of these channels have already been assigned by the FCC, but actually only four of these stations are now operating. Of these 4, it is extremely doubtful that any 1 station is operating in the black. The financial outlook for these telecasters is far from encouraging in the face of entrenched VHF competition offering a varied fare of network programing. These stations are losing money, but they remain on the air with the hope that the FCC will allow more VHF channel assignments and that their past record of public service as a UHF station might perhaps work in their favor when a VHF channel is being assigned.

One UHF station, channel 14, WWOR–TV of Worcester, up until recently provided programs of distinct interest to central Massachusetts. The station carried some network programing, but much of its telecasting was of a distinct community interest. Now, WWOR–TV is off the air after several months operation in the red because it was unable to cope with VHF competition from the Boston, Providence and Manchester stations. All these VHF stations have good signals which can be picked up by viewers with regular television sets. WWOR–TV, while it did its best to offer worthwhile program material, was faced with this problem: how to get the average viewer to spend anywhere from $50 to $100 to convert his present television set and receiving antenna so as to pick up the UHF picture. The problem was doubly difficult for WWOR–TV because these same viewers could watch top network programing from the nearby VHF stations without any additional expenditures for special adapters or special antennas.

Actually, all UHF stations in Massachusetts, despite the huge television viewing audience, are still in the pioneering stage and are facing the same problems which beset our Boston VHF stations, WBZ–TV and WNAC–TV, several years ago. These two stations also operated in the red during those early days of television when a television receiver was truly a luxury. WBZ–TV and WNAC–TV rendered outstanding public service in those early days and are continuing this splendid public service tradition to this day.

The problems which face the UHF stations in Massachusetts are the same that have held back UHF programing all over the country where VHF channels are already providing service: only a small proportion of the TV audience have sets to receive the UHF broadcast, networks are not too desirous to affiliate with them and advertisers are loathe to support them because of the small audience. Without network affiliations and advertising, UHF stations lose money and without money, they cannot offer the quality of local programing to build up an audience.

The only hope of the UHF stations to stay on the air is to obtain VHF channel assignments from the FCC. These stations already have the know-how, the technical people, the transmitters, the towers, and local program features to serve community interest.

I hope that the FCC will not longer delay the assignment of VHF channels to the UHF pioneers who have their personal fortunes and the money of their stockholders tied up in a losing battle. When these channels are made available, a new competitive era will begin in the television broadcasting industry to the distinct advantage of the viewers.

I urge your continued consideration of these matters and hope that in the not too distant future this distinguished committee will come up with the

right answer to adjust the present problems of the television industry so that it can more capably and adequately serve the public interest.

The CHAIRMAN. Mr. Chairman, you didn't finish your statement, and I think we were down to what page?

Mr. McCONNAUGHEY. We were on page 9. No, I was not reading my statement; I was merely giving you a synopsis.

I am to the "Review of television allocations."

The CHAIRMAN. That is on page 10. We will be glad to have you proceed in the same manner, if you wish.

STATEMENT OF HON GEORGE C. McCONNAUGHEY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION—Resumed

Mr. McCONNAUGHEY. In the notice of proposed rulemaking initiating the general proceeding, proposals and comments were invited from all interested parties for such revisions of the nationwide allocations plan and television engineering standards as might reduce the present obstacles to fuller development of the television service. Written comments were requested by December 15, 1955. Approximately 200 comments have been filed. The time for filing reply comments has been extended to February 8, 1956. The suggestions before the Commission encompass a considerable variety of approaches including the use of additional VHP frequencies; the reduction of minimum station separations to make additional VHF channel assignments possible, using either the present 12 VHF channels or new VHF channels, or both; the use of directional antennas; cross polarization; deintermixture; and others including combinations of the foregoing.

A considerable number of these proposals contemplate basic departures from the structure of the existing system, which was adopted in 1952. The proposals are widely diversified. Some are mutually exclusive. Most of them cannot be properly evaluated except in the light of a complete review of the nationwide allocation plan. The basic question before the Commission is whether, and if so, in what manner, the public interest may be served by revising the structure of the present plan.

Notwithstanding the pendency of the general rulemaking proceeding in which the foregoing proposals are being considered, the public continues, understandably, to press vigorously for the expansion of presently available television service, especially in communities and areas where available service is either nonexistent or where there is an insufficient number of stations to provide adequate choice of programs. It happens that in a number of communities in which local UHF broadcasters had sought deintermixture, mutually exclusive applications for a locally assigned VHF channel have reached advanced states in comparative hearings which have been subjected to unavoidable but lengthy delays. The Commission has been urged by some of these UHF broadcasters to defer or stay the authorization of new VHF stations on those channels. The majority are convinced that it would be contrary to the public interest to create added delays by deferring grants on such VHF channels until it could be determined whether final decisions in the general allocations proceeding would possibly result in deintermixture of any such local community.

The CHAIRMAN. In that particular case you are speaking about the allocation of channels in areas where deintermixture has been proposed; is that right?

Mr. MCCONNAUGHEY. Grants, not allocations?

The CHAIRMAN. I mean grants. In other words, there are cases pending before the Commission that can be decided that do not involve this problem, is that correct?

Mr. MCCONNAUGHEY. That is right, Senator.

The CHAIRMAN. I wanted to make that clear.

Senator MONRONEY. Do I understand you to say you think that it would be bad to hold up the TV grants where you would destroy the few remaining islands of successful U stations?

Mr. MCCONNAUGHEY. We don't feel it would destroy them.

Senator MONRONEY. If you put a V in there you would destroy them.

Mr. MCCONNAUGHEY. We don't think so.

Senator MONRONEY. Don't you have an examiner's report saying that?

Mr. MCCONNAUGHEY. No.

Senator MONRONEY. You say it is the Commission's stand that if you put a V in there you will not destory the U's in the area?

Senator POTTER. It would if you have two V's.

Senator MONRONEY. One V.

Mr. MCCONNAUGHEY. It depends on the place you are talking about entirely.

Senator MONRONEY. Only one place that is left, Hartford.

Mr. MCCONNAUGHEY. Oh, no, no. Well, no, sir, quite a number of them.

Senator MONRONEY. I am glad to know that.

Mr. MCCONNAUGHEY. There are 29 markets where UHF stations were established before VHF stations were built. UHF survived the VHF in 16 markets and went off the air in 13 markets. Nobody can make an absolute statement. There are many places where 2 U's could live with 1 V. When you get to two V's with the U's, I am speaking personally only, I have my serious doubts.

Senator MONRONEY. Until the television set manufacturers do something to make all-wave reception possible on a standard basis, all new sets, with one V in the area, are perhaps going to be just the V channels, isn't that so?

Mr. MCCONNAUGHEY. The opposite of that happens. The thing we are talking about, the people in the communities all have U's.

Senator MONRONEY. Those are the old sets. There are a lot of color sets coming in and a lot of new set buyers.

Mr. MCCONNAUGHY. A little bit.

Senator MONRONEY. With a $30 or $40 conversion cost, you surely do handicap these U stations, with the result the advertisers are going to be slow to patronize such stations.

Mr. MCCONNAUGHEY. It is a pretty big problem.

The CHAIRMAN. The results you cite give the U stations a 50–50 chance to survive.

Mr. MCCONNAUGHEY. It depends on whether there are 1 or 2 VHF stations; where there is 1 it would show a lot more chance to survive.

The CHAIRMAN. We are only speaking about those places where intermixture would take place if grants were made.

Mr. McConnaughey. I think that that is a correct statement.
The Chairman. There are some places where the problem doesn't exist.
Mr. McConnaughey. That is right.
Mr. Webster. You have some places where you can't survive with just one V.
Mr. Doerfer. You have some places where you cannot survive without a V.
The Chairman. Let's go on with this statement here, Mr. Chairman.
Senator Pastore. When do you expect this study of yours to be complete?
Mr. McConnaughey. Senator Pastore, the reply comments will be in tomorrow.
Senator Pastore. Tomorrow?
Mr. McConnaughey. If I guessed it would be just as wild as anything that ever could happen. We are putting our staff, as many of them as we can, on this thing immediately. We consider it top priority. I hope that within 3 or 4 months we could come to some conclusion on it.
Senator Pastore. So we would definitely know, say, within 6 months anyway, just what the ultimate decision is going to be on deintermixture and drop-in in VHF stations here and there, and all that sort of thing?
Mr. McConnaughey. I certainly——
Senator Pastore. You would resolve this whole problem and would have a definite answer, whether everybody likes it or not, within a period of 6 months?
Mr. McConnaughey. Yes, sir. I am speaking personally, and I will say yes, sir.
Senator Pastore. Does anyone else on this Commission have a different viewpoint on this? I'd like to know when we can hope for an answer.
Mr. Webster. When we have the proper investigations before us under the Communications Act and under the Procedures Act and the volume of material to be analyzed and the difficult questions involved in that—and they are difficult, and it is not just one little problem it is hundreds of little problems—you analyze all of these comments that have come in and they are varied and everybody has a different idea, and don't forget that those people who came in with good intent, honest about it, are not the people that make the decisions. I have to make a decision, I am the legal one to make the decision. I have been on their side, too, and I can make recommendations very easily when I do not have to make the final decision. I think it has got to be more than 6 months.
Senator Pastore. How long?
Mr. Webster. I said when we started the proceeding it would be at least a year. We started the proceeding in November.
The Chairman. I was hoping to get this done before Congress recessed.
Mr. McConnaughey. Mr. Hyde, do you have something to say?
Mr. Hyde. It might be helpful to know how long it took the Commission to write the sixth report which specifies the general allocation of station assignments on TV channels. The notice looking toward the completion of that project was issued in July of 1951, about

the 25th of July. In this undertaking it was proposed to establish a television allocation on some 82 channels. We completed that very enormous study by April of 1952.

What is proposed here are some adjustments within that allocation, and, depending on how you go about it, whether or not you undertake to re-do the whole thing, or whether you give some appropriate consideration to work that has already been done, you could make some very constructive changes in much less time in my judgment. It all depends, though, on whether you want to face up to the issues, recognize the realities of the thing, and take advantage of work that has already been done, judgments that have already been made.

Senator PASTORE. How long do you say?

Mr. HYDE. I should say that we could have completed these adjustments in the time that we have been arguing about the individual cases.

Senator PASTORE. Can you put it in a matter of months?

Mr. HYDE. I should say 6 months. But, Senator, one Commissioner cannot control the timing of it and a lot depends upon the approach that is taken. I meant to indicate that. If we undertake now to reexamine all of the decisions that have been made in the past and start from scratch, it could take years. If, however, we want to take advantage of work that has previously been done and try to do something that is realistic, we could do it in 6 months, such as the chairman mentioned.

Senator PASTORE. Let me say this. You have a complex problem, and you have different points of view, and naturally each man is looking out for his own point of view. Of course, all of you are concerned with the public interest, and I think we should adopt some kind of a system where people would have as much television as possible.

We keep saying most regions have two outlets now. What I want to find out is whether we are going to end up with 2 in most localities, and 7 in others. I think something ought to be done about it. If you want to advertise in a little community outside of New York, and you have to pay New York station prices, it is prohibitive. There ought to be some local benefit in television, too. I recall, one of the candidates that ran for high office in Massachusetts had to come into Rhode Island and get himself on a station there in order to reach some parts of Massachusetts, and vice versa. A lot of the small people cannot advertise on television because the rates are prohibitive. They ought to have a community service, too. I am holding out for—I hope I am going to be successful—but somehow we ought to have three V's in Rhode Island. I am going to fight for that until the cows come home. Because I don't relish this idea—I come down to Washington and it has 4 outlets, New York has 7, I think Miami has 7 or is it Los Angeles, and I don't see why we shouldn't have a competitive system where any viewer can get NBC, CBS, or ABC.

The CHAIRMAN. Or a local.

Senator PASTORE. Or a local.

Mr. MACK. There are not 7 in Miami; 2 at the moment.

Senator PASTORE. I'd like to see them get 3 or 4 or more.

The CHAIRMAN. Let's go on with this——

Senator PASTORE. I hope you're going to end up with four.

The CHAIRMAN. I don't know why we have to take so much time on all these things. It seems to me you can make decisions a little faster than you do.

Mr. HYDE. May I say something more about the time there?

The CHAIRMAN. I want to go into that a little later. I think there are a lot of things that can be done to speed up these things so we can get to a place where the Commission can meet and vote them up or down. I know your problem, I know what a regulatory lag that becomes, because that is the complaint against all the Commissions downtown. It isn't just your Commission. Some cases in the ICC have been over there for years, not for months. We in Congress have to go down and stand up and say "yes" or "no," there comes a time.

Senator MONRONEY. I suggest that the Commission talk to Ross Rizley, a good Republican, Chairman of the CAB, who has about determined that this musclebound practice in Washington has reached the limit. Once permission is granted, that is permission to build, but before the station gets on the air other procedures are invoked which act as a delaying factor. All the while the Washington lawyers get fat on the fees, and the viewers don't get the stations. I mean, I think they are musclebound.

The CHAIRMAN. All those in the room stand up.

Senator MONRONEY. And until you do finally take the bit in your teeth and say, "We are running this for the public and we are not going to flyspeck this thing with dozens and dozens of different hearings on little technicalities," you are going to be tied up in a morass of legalistic joking. Mr. Rizley has accomplished that in the CAB. We have gotten more action down there in cases pending than we have in the last 5 or 6 years.

Mr. McCONNAUGHNEY. Congress musclebound us in section 309 (c) until some of you good Senators got us relieved within the last month. We were musclebound by Congress in spite of the fact that we told Congress over and over again that that section should never be passed, but it was.

Senator MONRONEY. Give us some more examples and we will try to unmusclebind you some more.

Senator PASTORE. If you will play ball with us the way we played ball with you on 309 (c), we ought to get somewhere.

Mr. DOERFER. I'd like to say something with respect to that. I think we are up to our necks in due process, and that has been the result of a series of laws and court decisions, piecemeal, which, when added up, really hobble us. For illustration, section 309 (c), which I don't think even today, as amended, goes far enough. Nonetheless, Congress has even engrafted upon the FCC procedure a remedy without a right. People now have the right to come in to prevent competition, when the act itself calls for a competitive system.

Now, with respect to some court decision, naturally I am going to abide by them, but——

The CHAIRMAN. Of course, the law provides that, but you don't have to give the parties all this time to do these things. Sometimes hearings on a given case are spaced 6 months apart.

Mr. DOERFER. Senator, a protest——

The CHAIRMAN. Read some of your examiner's reports in a lot of these hearings. A person can have his day in court, but you have to get on with the cases. I have seen examiner's reports, and the examiners say "this is not relevant to the case at all, but go ahead and put it in," and some of them are in this high [indicating].

Mr. DOERFER. I think that could be explained.

The CHAIRMAN. Evidence is admitted in these proceedings that wouldn't be admitted in a police court.

Mr. DOERFER. I agree to that, Senator, but I do think there are some decisions the examiners find it difficult to follow. The Johnston case——

The CHAIRMAN. We all have a sense of duty, but we don't have to sit there and go on and on. You can exercise your duty quickly.

Mr. DOERFER. I think each Commissioner is very anxious to do so. The courts don't always permit that. For illustration, in the Johnston case, the courts require that the applicants be permitted to assert every reason why they should have a license, and the other fellow shouldn't. We have to make findings on all assertions that aren't frivolous; we have to explain why he got it, and the other fellow didn't. We decided a case, and after it was decided by us and was on appeal in a circuit court, one of the principal parties, a losing applicant, died, and the court sent it back and said we should take that into consideration.

The CHAIRMAN. Let the court do that; that is the court's responsibility, for whatever they do. You can give people their day in court under the act.

Mr. DOERFER. And they sure take it.

The CHAIRMAN. You can, you know, shorten these things up. Our court proceedings don't go along indefinitely. Cases are begun and the evidence is heard, and only that evidence is admitted that is pertinent. Many times I have had judges tell me to hurry along, cut out all this business, let's get going. That is our system.

I think you people can come up here, when we are through with these hearings, with some pertinent suggestions for procedural improvements in the act itself.

Mr. MCCONNAUGHEY. We can't even speak to a hearing examiner. We can say, "Good morning," and that is all.

The CHAIRMAN. You have a right to set the rules by which he conducts hearings.

Mr. MCCONNAUGHEY. I told you last summer I was going to do it, and it has been done.

The CHAIRMAN. You went to work on that matter right away.

Mr. MCCONNAUGHEY. And it's been accomplished.

Senator PASTORE. The protest amendment we have passed is going to help.

Mr. DOERFER. We still have to have the hearings.

The CHAIRMAN. You folks do shorten up procedures. I think you allow 30 minutes for an oral argument, 20 or 30 minutes. That is an important part of the case done in a short period of time.

Mr. DOERFER. We have that, and we have a prehearing conference where we try to get the attorneys to stipulate.

The CHAIRMAN. All the regulatory lags are down in the other places apparently.

Mr. MCCONNAUGHEY. I think we must look at this thing in terms of what has been accomplished. In 12 months it is all going to be over. In other words, we are talking about something, the deal is over, this Commission. I don't get any credit for this. This Commission has gotten television to over 90 percent of the people in the United States.

Senator POTTER. When are we going to get it in Cheboygan?

Mr. McCONNAUGHEY. Seventy-five percent of the population has got two. No other place in the world has as many as we have. They have been about as far from being musclebound as any regulatory agency that ever existed. They have gotten the show on the road in about 5 or 6 years. My hat is off to them because I can't take any credit, and now we have only got about 12 months left, only about 35 or 40 cases on the docket, and we are talking much ado about nothing.

The CHAIRMAN. That is not the way I view it, taking into account the expansion of our television system which I think we must provide for in the future.

Mr. McCONNAUGHEY. There you get, Senator, into this rulemaking thing. How much expansion can you get? You have 12 VHF channels, not enough to cover the country; you have got your UHF. What utilization can you make of it? What is going to be economically feasible and possible to have in this country?

The CHAIRMAN. How many unused allocations do we have now, about 1,400?

Mr. LEE. 1,200.

Mr. McCONNAUGHEY. In other words, you get into the question of how you expand it, you run into economics, as well you know. What will the manufacturers do? I wish I knew what they would do. We have no control, and we can't tell them what to do.

Senator MONRONEY. I think you said 6 months

Mr. McCONNAUGHEY. I said I would hope we could get it out of the way in 6 months.

Mr. DOERFER. It all depends. May I explain my position?

Mr. McCONNAUGHEY. I think Mr. Webster said a year.

Senator MONRONEY. I think we should get what the Commission's target date on this is.

Mr. DOERFER. It will be a guess, but let me outline what I consider to be the problem. The sixth report, as I read it, did nothing more than decide that the first objective was service to all of the people, and the next one, as much competition as possible. Now, in the actual administration of those two things, they are antithetical. It doesn't appear so on the surface, but it is. And our problem today is whether or not we are going to shift that fundamental priority, whether or not we are going to try to rearrange the priorities to have a national competitive system with a possibility of all people getting a television service relegated to the bottom of the ladder practically. The problem is fundamentally complex; over much we don't have control. Commissioner Bartley's and Commissioner Hyde's view don't necessarily part with mine. The law says an equitable distribution of the frequencies. It doesn't say one State or one area gets all the U's or V's and the other doesn't. They say, "Create U islands." When you create UHF islands you create islands of VHF also, and ne'er the twain shall meet. They can't compete with V's in the big market today——

The CHAIRMAN. I understand the difference of viewpoints. Senators Pastore, Monroney, and I had a different viewpoint for about 2 weeks, but we finally had to go down to say "Yes" or "No."

Mr. DOERFER. The sixth order report was based on the premise that there must be intermixture to get the full utilization of the spectrum. Now, if we are going to divert that policy, if intermixture is going to be replaced by deintermixture, that is a very serious problem. If it were not, we could decide it in 30 days.

The CHAIRMAN. There are a lot of other decisions that lag down there. I haven't gotten your agenda recently but it gets thicker all the time. And I want to say this—and I have said this to other Commissions when they have been up here—I have asked the question time and time again, is the reason why we can't make some of these decisions due to the lack of money to hire people? I have always tried to recommend to the Appropriations Committee the amount of money you needed to do the job. In some cases I appreciate that it is hard to find the type of man to do the job, but I don't think there is a one of you who will disagree with me that there has been a lot of delay—and it is true of all commissions—what we call a regulatory lag that sometimes becomes almost unconscionable, due to a lot of things.

Maybe the Commission should meet more often as a Commission, then you'd argue yourself out for awhile, call for the previous question, and you'd have to vote. I don't know, maybe that is the answer.

Mr. DOERFER. The problem is like trying to unscramble eggs, and that is a pretty tough job for anybody. This thing started in 1948.

The CHAIRMAN. Don't scramble them any more than they are already.

Mr. DOERFER. In 1951 you had 108 television stations serving 75 percent of the people; now, according to some estimates it is 95 percent. My question is, what about it, are we going to forget about the remaining 5 percent? We have got to remember that you have to look at the VHF problem and the UHF problem as though you had a plate with a saucer on top. How about that perimeter on the edge? Are those people going to be without service forever? That is a very serious problem. If this Congress will say——

The CHAIRMAN. The Senator from Michigan has got to go down and make a television show.

Senator POTTER. You know, I can't even get into my hometown.

Mr. DOERFER. I will close by saying, if this Congress wants the Commission to lay emphasis on a competitive system rather than a service to all the people, I can make up my mind in 10 minutes. We will intermix what we have got here and try to pull some V's out that are established and let it go at that. But I am satisfied there will be many many years when many rural inhabitants will never get a television service unless they get it through community antennas or some other means.

The CHAIRMAN. I know that members of the Commission have different views on these matters, but once they have established their views, then, what I am trying to say is, sit down and vote it.

Mr. DOERFER. We tried to expedite what we had on the calendar and, of course, it gets tied up in the courts. Just the other day the courts refused a stay——

The CHAIRMAN. Get it that far anyway; that is my point. If the court ties it up, no one can blame any commission for that. Get it to that point.

Mr. DOERFER. We would like to have the benefit of their opinion.

The CHAIRMAN. You are supposed to worry about the law and the purposes of Congress. After the court has made an opinion, you adjust your thinking to what the court decides, but I think until that happens you should forget about the courts.

Mr. WEBSTER. Mr. Chairman, will you go into this subject of delays and so forth, because I have a lot to say about that.

The CHAIRMAN. Well, I think we want to. I would like to get through with the chairman here, and when we get through this statement we can go on with some of these other things.

Mr. LEE. The only thing I was going to say is that I can certainly agree with Commissioner Hyde that one Commissioner cannot speak for the Commission. On the other hand, I think when we are speaking of delays, we have two areas. One is the competitive-applicant aspect where two or more people are fighting for one facility and we are separated from the staff. On this so-called rulemaking, I feel that we could act much more quickly if we had the will to be, let's say, a little bit arbitrary.

That might not be a very good choice of words, but I am impressed with the fact, in reading the sixth report and order and in reading all the comments that have been filed since in this present proceeding, that many decisions of a body of this nature must necessarily be somewhat arbitrary in order to reach a decision.

In other words, I would be prepared to adjust my viewpoint in order to get some kind of unanimity to get something done, because the greatest error we can make, I feel, is to do nothing, and that is a general weakness in Government, where it is easier to drag along than to face up to something, knowing that somebody is going to get hurt, which is certainly true here.

Senator PASTORE. Use the word "forthright" instead of "arbitrary."

Mr. LEE. Thank you.

The CHAIRMAN. I must admit that in some cases even Congress has suggested that some matters be not decided until the policy is determined, but that doesn't mean you can't go ahead and decide the policy and then go right ahead and decide the particular matter accordingly.

Mr. LEE. That is right. As far as my estimate is concerned, it would be under a month.

Well, Mr. Chairman, if you will go ahead here——

Senator MONRONEY. Could we get their opinion on a time schedule? Mr. Bartley, I think, had an idea about it.

Mr. BARTLEY. I would say as far as I am concerned we should be able to get it out by the first of June.

Mr. MACK. I would like to make an observation here, just a short one. It has been my experience in about 9 years of regulatory agency work that when you adopt a major policy, such as you adopted in the Sixth Report, you'd better stick awfully close to it, once you start.

We have proceeded on the basis of that order and report and all 7 of the members of this committee voted to have this general rulemaking procedure. It is my opinion we are bound by the sixth report until we change it and I am not going to hold up any action, as far as I am concerned, unless the court holds me up, on the policy of the sixth report, until this Commission changes it. I think it is our duty to abide by that policy.

Senator PASTORE. Even if it means scrambling it more?

Mr. MACK. My point is this: It might be that when we get through with this general rulemaking, we won't want to change the sixth report because it may not prove to be practical, sound, or reasonable.

Senator PASTORE. When do you think we will get to that point?

Mr. MACK. When you gentlemen put me on this job you put me here for 7 years. I am going to finish every job as quickly as I can.

Senator PASTORE. Do you think it might take 7 years?

Mr. MACK. No, I just would not want to hazard a guess.

Senator PASTORE. The chairman said 4 months.

Mr. MACK. The chairman said he hoped 6 months.

Mr. HYDE. I said it would depend upon the approach that was taken. If, for instance, the Commission should undertake to allocate additional VHF space and try to salvage out a comprehensive television system in VHF alone it would mean dislocation to other services.

Furthermore, it would require that the Commission give public notice of this possible new alinement of spectrum space to the other services, at which time we would want to hear these various other services which have vital needs for VHF.

I will mention that in the VHF, which goes from 30 megacycles to 300, the non-Government services have about 58 percent of the total VHF. In the division of that, television has about 46 percent. The vehicular services, a very important application of radio, have about 22 megacycles.

The CHAIRMAN. By that you mean, for the record, police cars, taxi cabs and things of that sort?

Mr. HYDE. I refer to the State vehicle, land transportation, public safety, the industrial and the common carrier mobile services. This part of the spectrum is the backbone of those services and they are pinched now.

If there should be any additional VHF space available for non-Government use, or if the Commission should undertake in this allocation study to make some adjustments, we would necessarily have to provide opportunity for representatives of these several services to be heard. Any changes in existing operations would involve modification of licenses, as well as rulemaking. These items which I have mentioned just illustrate the scope and extent that a rulemaking could grow into. If you add to that such other interesting subjects as pay-as-you-go TV, the thing could be made so all-inclusive that you could work on it for years.

I am very hopeful that the Commission will determine that the television space now available can be used more effectively and that we can turn our attention to a more effective use of it. I think that very substantial improvements in that direction could be made in a relatively short time.

The CHAIRMAN. Let me ask one question: You said that this has top priority. How many people do you have working on this particular project now?

Mr. HYDE. I believe the personnel in what we call the rules section, in the Broadcast Division, is 4 or 5.

Mr. MACK. Five, I believe.

Mr. HYDE. And, of course, in a matter of this kind the Commission would expect to have the assistance of the Chief Engineer.

The CHAIRMAN. You draw on all of the people, too?

Mr. HYDE. That is right, sir.

The CHAIRMAN. If the addition of a few more people in this matter could speed up the decision, I would hope that we could take that up with the Appropriations Committee when you come up here.

Mr. HYDE. Thank you.

The CHAIRMAN. Go ahead.

Mr. MACK. Your committee has requested the views of the majority on a dissenting opinion of one of the Commissioners who expressed a view that:

> The Commission may, in granting the VHF applications, effectively eliminate many UHF stations which are presently in operation and in many instances render the cases moot. The action of the Commission in making further VHF grants in these areas, can have the effect of seriously hampering and perhaps of unalterably precluding the Commission from giving proper and adequate consideration to the overall study of the allocation plan.

In the typical case involved here, the VHF grant is for the first VHF station in communities where a large proportion of the existing sets are capable of receiving UHF, as well as VHF signals. Thus set conversion, although a significant obstacle to some UHF broadcasters is a far less significant factor in communities where UHF service is already established. There is little basis in the opinion of the majority, to assume that a first local VHF station would necessarily eliminate local UHF stations.

The CHAIRMAN. Let me ask this question there. I should know, but I do not, because I do not know much technically about UHF receivers. Do the sets in use in an all-UHF area have to be converted for VHF?

Mr. MACK. No, sir.

The CHAIRMAN. In other words, they are capable of taking both?

Mr. MACK. That is right.

The CHAIRMAN. I think the record ought to show that. There is nothing that has to be done to the UHF set to get VHF.

Mr. MACK. That is correct.

Nor in the majority's view would the VHF grants in question hamper or preclude proper and ample consideration of the suggested revisions to the allocation plan. The particular concern which may be felt on this point is indicated in the next question raised by the committee, namely,

> How can the Commission having denied deintermixture in specific cases, adopt deintermixture as a sound, overall policy in the public interest, after it has proceeded to intermix or further intermix the areas requested to be deintermixed?

No VHF grant, whether recent or of long standing——

The CHAIRMAN. I want to say also here, for the record, that the questions sent to the Commission are not necessarily the questions of the chairman or any one individual. They represent the combination of a lot of questions that were put together and condensed, representing a great number of viewpoints of the committee.

Mr. MCCONNAUGHEY. No VHF grant, whether recent or of long standing, creates a necessary barrier to deintermixture should the Commission find, in keeping with the conclusions reached in the general allocations study, that deintermixture of any community is required in the public interest. As the Commission has stated, the fortuitous circumstance of whether there is an existing or authorized VHF station in any community cannot provide a proper basis for determining whether the deintermixture of local channel assignments would serve the public interest as part of any overall revision of the existing system. The decision as to whether deintermixture would serve to enhance the opportunities for the expansion of television service in any communities or areas must be governed by the manner in which this action would fit into an integrated nationwide television plan. The fact that the Commission has recently granted a new VHF station can have no more bearing on its judgment as to whether deintermixture in that locality would serve the public interest than the existence of a long-established VHF station.

Moreover, no grant, whether recent or long standing, impairs the Commission's authority to order such channel reassignments as it may find necessary in the implementation of revisions to the allocations plan which may be necessary in the public interest. In view of this and in view of the fact that it cannot be determined at this time whether deintermixture will be adopted either on a broad or limited basis, the majority is unable to justify the withholding of authorizations for stations which have been long awaited and which are needed to expand inadequate local television service.

For the stated reasons, the majority believes that neither the denial of the individual deintermixture petition nor the grant of VHF channels in the same communities can prejudice the fullest consideration of the merits of deintermixture as a possible feature of any nationwide revisions to the allocations plan.

The CHAIRMAN. In other words, the majority feel it is all right to do this, and that in the long run it is not necessarily controlling one way or another.

Mr. McCONNAUGHEY. Yes, sir, that is certainly true.

The CHAIRMAN. And the majority feels that it doesn't complicate the problem at all?

Mr. McCONNAUGHEY. That is the majority opinion, but we want it understood, I guess, that there is a minority opinion.

Mr. HYDE. Yes.

Mr. McCONNAUGHEY. Commissioner Hyde expressed that.

The committee has inquired whether the public would be penalized if the Commission permits a channel to go on the air and then decides it must go off the air at a later date because deintermixture would be a sound policy. This question is understood to refer to recent VHF grants in communities where deintermixture has been sought. It should be noted first that none of the deintermixture proposals before the Commission contemplate the elimination of a local VHF assignment without the substitution in its place of a UHF channel. Accordingly there would be no question of the VHF station being obliged to go off the air. What could arise is a requirement that a VHF station transfer its operation to a substitute UHF channel. In most of the cases in which deintermixture requests were submitted to the Commission, almost all of the families in the communities involved already own recivers capable of getting UHF transmissions. Viewers having such sets will not be penalized by a later shift of a station to UHF, since their sets would be equipped to receive UHF.

Further, as to the minority of viewers in these communities, with VHF only sets, if the Commission decides at a later date to deintermix localities, and to require certain VHF stations to shift to UHF, the shift over to UHF need not be accomplished abruptly. It is quite possible that an appropriate transition period could be provided during which the affected stations could operate on both the old VHF channel and the new UHF channel, thereby assuring that those members of the public having VHF-only sets would continue to receive service for a suitable period. Such a gradual shift over during which new sets may be purchased or old sets converted to UHF, would minimize any disruption of television service provided to the public.

The Commission also desires to acquaint the committee with its efforts to overcome the obstacles hindering the advent of television to many of the smaller communities. Another of the committee's questions was directed to this matter. A major obstacle has been the high cost of building, operating and programing of television stations during the early stage in the development of the art factors largely beyond the Commission's control.

The high cost of local programing has, as you know, made adequate amounts of network programing generally indispensable to economic station programing. With this in view the Commission has been considering ways by which the cost of intercity transmission of programs can be minimized.

The CHAIRMAN. Now, right there I just wanted to ask this one question. Is that due a lot to the so-called cable charges?

Mr. MCCONNAUGHEY. Yes.

The CHAIRMAN. And interconnection charges?

Mr. MCCONNAUGHEY. That is right.

The CHAIRMAN. That is a matter which the Commission has authority to determine, isn't it?

Mr. BARTLEY. Yes.

Mr. MCCONNAUGHEY. Yes, we do.

The CHAIRMAN. When were they last fixed, do you remember?

Mr. MCCONNAUGHEY. Somebody said 2 years ago.

The CHAIRMAN. Of course, the suggestion would naturally follow there, maybe it is about time we took another look at them.

Mr. MACK. You can always take a look, even at an individual rate for a particular type of service.

The CHAIRMAN. It might be time to take another look at them. I don't know whether they are right or wrong.

Mr. MCCONNAUGHEY. We are constantly surveying those costs.

The CHAIRMAN. Go ahead.

Mr. MCCONNAUGHEY. Under the Commission's present rules stations may operate private intercity relay systems to connect with program service points only on an interim basis, until adequate common carrier facilities are available.

Stations located in communities at some distance from program service points have urged that the common carrier mileage charges for connecting them to the network make profitable operation impossible. We have instituted rulemaking looking toward liberalizing the requirements for establishment of private intercity relay systems by the broadcasters themselves.

The telephone company has suggested in this proceeding the establishment of an off-the-air pickup service at charges substantially less than those required for direct network connections. Broadcasters interested in establishing their own intercity relay systems claim that their costs would be still lower than these reduced charges of the common carrier. We hope to issue a final report on this proceeding in the very near future.

The CHAIRMAN. For instance, on that, Mr. Chairman, we won't go into detail, but the committee has heard from 1 broadcaster who claims that he built his own microwave system for $51,000 and operated it for 1 year at the cost of $14,800, as against a proposed charge by the telephone company of $67,000 a year, together with a termination charge scaling down from $104,000 in the event of a cancellation of service within 3 years. That is just one example. There may be more.

Mr. McCONNAUGHEY. I think that is one we approved, wasn't it?

The CHAIRMAN. Well, go ahead with your statement. We will go into those matters.

Mr. McCONNAUGHEY. One of the first steps the Commission took to alleviate the high cost of programing was to announce in August 1954 that it would authorize the operation of satellite stations—stations that would be permitted to operate without their own locally originated programs, or local studios, in communities which might not otherwise be able to support their own stations. The satellites are licensed to operate in accordance with our rules and differ from other television stations only in that they confine their programing to the rebroadcasting of programs of other stations.

The CHAIRMAN. Now, for the purpose of the record, could you give us a simple definition of a satellite station?

Mr. McCONNAUGHEY. I will try to do that. I have that written down here someplace.

The CHAIRMAN. Well, would this be correct, Mr. Chairman? It is a station that must confine itself to the rebroadcasting, or retelevising, of programs that come from another station?

Mr. LEE. No local programs.

Mr. McCONNAUGHEY. No local programs.

The CHAIRMAN. On a channel allocated to the local area. Would that be a good definition?

Mr. McCONNAUGHEY. That is right.

The CHAIRMAN. And that would be, of course, in communities getting further out in my country?

Mr. McCONNAUGHEY. That is correct.

The CHAIRMAN. We will get away from Rhode Island here, sooner or later.

Senator PASTORE. Over my dead body.

Mr. McCONNAUGHEY. Supplementing this policy for reducing the high cost of station operation in the smaller communities, the Commission amended its rules in June 1955 to reduce the minimum power requirements of television stations from 1,000 watts to 100 watts and to eliminate the minimum antenna height requirement. This amendment makes possible the construction of television stations in the smaller cities at greatly reduced cost.

The CHAIRMAN. Now, let me ask this, again for the record: The reduction to 100 watts and the elimination of the minimum antenna height requirement doesn't necessarily affect the character of the operation, does it?

Mr. McCONNAUGHEY. They get smaller coverage is all.

The CHAIRMAN. They get just as good a picture and things of that kind?

Mr. McCONNAUGHEY. That is right.

The CHAIRMAN. All right; go ahead.

Mr. McCONNAUGHEY. In addition to these steps designed to encourage the construction of stations in the smaller communities, the Commission instituted rulemaking in March 1955 to consider the operation of boosters which would operate with limited power on the same channel as the main transmitter. The Commission is presently evaluating the comments filed in this proceeding. In some areas of the country where regular television service is not yet available, there is a great temptation to erect low-power booster stations to provide this desired service. For reasons which I will mention, the Commission has not established rules permitting booster stations. In a few cases such booster stations have been installed without Commission authorization, particularly in the central part of the State of Washington, where geographical isolation prevents direct service from existing stations.

This situation gives the Commission a dual concern. On the one hand, unauthorized operations present a problem. On the other hand, the Commission recognizes the natural desire of the residents of these communities to receive broadcasts which cannot reach them direct from distant stations without some device which will enable them to do so. The Commission has concentrated careful attention to this problem in an effort to find a solution which will avoid serious interference problems created by boosters operating outside the normal service range of main station transmitters.

Our first inclination was to authorize low-power booster operation so that the existing booster stations could continue operation without making major changes. Careful engineering analysis has convinced us that this would be a very dangerous thing to do, since boosters operate on the same channel as the parent stations and usually from high elevations. We see no way, at least at the present time, of insuring that existing stations will be protected from interference. Although the actual coverage of boosters may be confined to a few miles, their signals can easily interfere with reception of signals within a normal coverage area of regular television broadcast stations as much as 50 miles away.

However, I think we may have found the answer, with the use of translator stations, which were the subject of a rulemaking instituted early in January.

The CHAIRMAN. Now, would translators cost more than boosters?

Mr. McCONNAUGHEY. A little bit.

The CHAIRMAN. About how much more?

Mr. McCONNAUGHEY. As I recall, they figure about $1,000 for these translators.

The CHAIRMAN. That is for the translator, alone; isn't it?

Mr. McCONNAUGHEY. Manufacturers have estimated that translators may be manufactured to sell in quantity for about $1,000.

The CHAIRMAN. Then, there would be the added cost of installing it and putting it all together.

Mr. McCONNAUGHEY. While the cost of equipment is approximately equal in both cases—that is in both booster and translator—boosters would usually require high installation cost in order to protect against interference with the other stations on the same channel. Also in the matter of operating expenses, translators should be considerably cheaper, since these stations operate on little-used channels, and we are able to relax requirements with respect to operators, monitoring equipment, transmitting locations and so forth.

Senator MONRONEY. They don't operate on the same channel?

Mr. McCONNAUGHEY. No.

Senator MONRONEY. Would they involve getting into set conversion again?

Mr. McCONNAUGHEY. Yes, they would.

The CHAIRMAN. In other words, generally speaking, without having all the details, the overall cost of operating a translator over a given period of time, in the opinion of the Commission, wouldn't be any higher than the booster?

Mr. McCONNAUGHEY. I think it would be lower.

The CHAIRMAN. It might even be lower?

Mr. McCONNAUGHEY. Yes, I think so. I think so.

Senator MONRONEY. But you would have to convert your set?

Mr. McCONNAUGHEY. Yes, you would.

Senator MONRONEY. Would normal conversion to the U be sufficient or would it be something beyond a U?

Mr. McCONNAUGHEY. No, the normal.

Senator MONRONEY. It comes back to the set as being the problem?

Mr. McCONNAUGHEY. It really does.

Senator PASTORE. How many sets do we have in the country, how many adaptable to VHF, how many to UHF?

Mr. McCONNAUGHEY. We have 37.5 million receivers in the United States and around 7 million are U's.

Mr. DOERFER. Seven million were produced, but there are probably in use today about 4 million.

Senator PASTORE. The new ones that are being made, are they dual purpose?

The CHAIRMAN. Oh, no.

Mr. McCONNAUGHEY. About 15 percent of them, sir, are dual purpose.

Mr. LEE. Most of the color sets are.

The CHAIRMAN. That is what we had all the manufacturers in about last year. I am sorry to say that despite that meeting of all of them, there seem to be fewer all-channel sets being made than there were last year.

Mr. LEE. I think in color, Mr. Chairman, they are making a great many all-channel sets.

Senator MONRONEY. Don't these manufacturers have any sense of public service at all, or are they just interested in getting the lowest price possible so they can advertise at a lower figure every wear?

Mr. McCONNAUGHEY. Of course, I can't answer, sir, for the manufacturers, but I suppose they feel they get into a competitive situation where they say, "Well, we will try to manufacture an all-channel set," and it costs a little more, and their competitors won't do it, and you are walking right into competition.

Senator MONRONEY. Didn't we have testimony at one time that about $6 additional cost was involved in the production of all-channel sets?

The CHAIRMAN. I can clear the record on that. It was not testimony, but just an informal meeting of every manufacturer, or 95 percent of them. Various estimates ran from $8 to $13. That is at the production level. Now, that would be multiplied as you go through the wholesale, and I suppose retail level, so that you probably end up closer to $25 or $30 on the floor.

Mr. LEE. Plus antenna.

Senator MONRONEY. It takes a different antenna, does it?

Mr. LEE. Yes.

The CHAIRMAN. And the only suggestion they had, in the last analysis, was that we take the tax off an all-purpose set, which would stimulate them to build such sets. The amount of the Federal tax is just about the difference in the cost of an all-channel set. I transmitted that information to the Finance Committee, but they took a dim view of the situation.

Mr. MCCONNAUGHEY. In the search for an effective and economical method of serving isolated areas the Commission began as early as 1951, authorizing research and experimentation with the type of satellite station now known as translators.

As distinguished from the booster type of station translators pick up the signal from a parent station and translate the program to a new frequency before rebroadcasting. Thus a translator-type of operation has the very important advantage of being able to select a frequency less likely to cause interference in the particular area.

The CHAIRMAN. Now, I think, Mr. McConnaughey, for the purpose of time, the rest of the statement regarding that matter in Washington may be omitted. The only reason I say that is the problem arose in my area first, but it is spreading throughout the West and the East, too.

How much time do you think will elapse before the translators can be authorized and begin furnishing service?

Mr. MCCONNAUGHEY. Comments on the translator proposal are due March 5, and replies can be accepted up to March 15.

The CHAIRMAN. That is, people can make application?

Mr. MCCONNAUGHEY. No, comments on the rulemaking.

The CHAIRMAN. How long do you think it would take then?

Mr. MCCONNAUGHEY. I think a final decision can be issued in early April.

The CHAIRMAN. Then the applications, of course, would have to go through the normal process.

Mr. MCCONNAUGHEY. That is right. Well, no, it would be a very simple matter, then. It would be a very simple matter.

The CHAIRMAN. So sometime in April, whatever the Commission decides on this, if they do decide on the translators, the people who want them could probably get going very soon?

Mr. MCCONNAUGHEY. I would think so. I would think they could get equipment on the market very shortly after it is authorized by the Commission. I think the manufacturers could.

The CHAIRMAN. It is an important matter for these small communities who are isolated because of the topography and nature of the country. I hope we can resolve something that will do the job for them. Out in my State there are all kinds of valleys in the mountains, and this is the only chance they have of getting service. It applies to Nevada, also, and all of the Mountain States—Utah, Oregon.

Mr. McCONNAUGHEY. In a separate question, the committee inquired concerning the number of final decisions issued in the past year in television proceedings. Nineteen grants were made in 1955, after comparative hearings conducted to select the best qualified applicant for channels, for which more than one qualified applicant had applied. A total of 53 new television stations were authorized in 1955, including in addition to the foregoing, grants made for channels for which only a single application had been received.

The Commission has continued its diligent efforts to reduce the large backlog of mutually exclusve applications for television channels which have required numerous lengthy hearings.

I am happy to be able to inform you that there are now only 10 cases awaiting final decision of the Commission. Eleven are ready for oral argument. Only four are awaiting the examiner's initial decision. Hearings are now in progress on the 11 other cases now remaining for final disposition.

The CHAIRMAN. And that was a matter we covered earlier. I think we are all agreed to proceed as fast as possible.

Mr. McCONNAUGHEY. The committee has also inquired whether at the time the Commission adopted an order on July 22, 1955, with respect to antenna heights for VHF television stations in zone 1, it was in possession of data respecting actual coverage of the VHF stations if they proceeded to the new antenna heights authorized by the order.

It should be noted that the amendment adopted by that order has not gone into effect. After several extensions of the effective date, the Commission decided that the question of changes in maximum antenna heights should be considered in the general rulemaking proceeding, on revision of the allocation plan. Accordingly, the order of July 22, 1955, has been vacated.

Senator PASTORE. Will you put that in practical language for me? What does that mean?

Mr. McCONNAUGHEY. We put out an order raising the height of antennas from 1,000 feet to 1,250 feet, and then we rescinded that and put it in the whole allocation order.

Senator PASTORE. Why did you put out the original order, and why did you rescind it? What did you seek to accomplish?

Mr. McCONNAUGHEY. We put it in the original order raising it to 1,250 feet thinking we could get more coverage without interference from other sections—we would get 2 to 5 miles more coverage in outlying areas. Then, when you come to going into the whole proceeding, we decided we had better not put it into effect until we had covered this whole allocation plan because we might come out with a different setup of shortening separations and mileage separations, and we might not want to stick with it.

Senator PASTORE. If you had points A, B, and C; and B was in the middle, and you had a television station at A and a television station at C, could you cut down the power of A and C and drop in another station at B, without interference?

Mr. McCONNAUGHEY. That is something that is in this rulemaking now.

Senator PASTORE. I mean technically; is it feasible? Is that what we are getting at? For instance, if you had a television station at each of two points and they are strong enough to meet the center, couldn't you cut down the power and drop in a third one? And spread it to left and right?

Mr. McCONNAUGHEY. I think so.

Senator PASTORE. Isn't the Commission considering that element, too?

Mr. McCONNAUGHEY. That is in this rulemaking, Senator.

The CHAIRMAN. How many people took advantage of the order increasing antenna heights when it was in effect?

Mr. McCONNAUGHEY. It was never put into effect.

The CHAIRMAN. Wasn't one fellow permitted to raise his antenna?

Mr. McCONNAUGHEY. One was granted in Buffalo.

The CHAIRMAN. It doesn't mean there were a lot of people who had the advantage of this and went ahead and did something, and then the vacation of your order shuts other people out?

Mr. McCONNAUGHEY. Oh, no.

Senator PASTORE. May I ask this other question: Is not part of the problem of lack of service in a local community the result of too much power in neighboring communities?

Mr. McCONNAUGHEY. I do not know.

Senator PASTORE. Can anyone answer that?

Mr. HYDE. Senator, the sixth report was designed to provide——

Senator PASTORE. I am not concerned with the sixth report. I just want to get an answer to the question.

Mr. HYDE. I am really answering your question, sir. An effort was made to balance antenna heights and powers so that interference-free reception could be had in a way that would achieve the objective of the sixth report to provide service to the whole country, multiple services to communities, and so forth.

My point is that with the advice of engineers, both from the Commission and the industry, a formula that was appropriate to recognize the needs of communities and also to provide general service was worked out. On any question such as that, as you have proposed, there can be variations. The formula used in the sixth report is the one that the Commission, on the basis of the record, thought would give the best results.

Senator PASTORE. The point I am getting at, if you see what I mean, is I don't want so much power on the part of a certain number of stations that they could monopolize an entire field.

If, technically speaking, you can cut down this power and give local service to other communities as well, then why not do it, because I repeat again, television has to have a local aspect, too.

I am only using this as an example. You are going to have four stations in Boston, ultimately. Now, is the policy going to be that those 4 stations are going to spread out so far that other communities are going to be satisfied with service from them, or are we going to contain this power so that the people in Boston will have adequate service, but insofar as Rhode Island is concerned, we can still have our 3 stations and have 3 networks come in?

Now, that is my point. Why isn't that technically feasible without hurting Boston, without hurting Hartford, without hurting New Haven?

Mr. HYDE. That is really a very complex question that you have asked there. You could have more stations by having lower power and lower antennas. You could have the stations so small that they wouldn't serve the logical market area of the city where they are located.

I would also raise the question of service to rural areas, dependent upon the station.

Senator PASTORE. I mean to do this on a selective basis, of course.

Senator MONRONEY. Do you know how far your television station range is?

Mr. HYDE. Studies have been made to indicate how far they can be observed.

Senator MONRONEY. Do your records show how far the New York City stations reach out into Connecticut?

Mr. HYDE. Our records would not give exact mileage in every instance, but they would give you general information as to the coverage they get; that is right.

Senator MONRONEY. Is it not a fact that on your figures you don't go nearly as far as Bridgeport, but as a matter of fact, Bridgeport people are now served by New York stations?

Mr. HYDE. One of the things that complicates the problem there is that various definitions of service are used. In one man's mind, a reception of a picture that is full of snow indicates that the station is too far away. To another, that is service. Very often your judgment on that depends upon your standards of reference. In my own State of Idaho, my father gets television service from Idaho Falls, 90 miles away, but on the basis of my observation of that picture, I have very grave doubts as to whether he is really getting service or just a suggestion of it. In the absence of something better, he looks at it for such information and entertainment as can be had. It is not a satisfactory picture by any means.

The CHAIRMAN. Let me ask you this, too. When I was talking about confinement to a certain market area, is it true that some of the stations direct their antennas so that they don't cover the whole surrounding area? In other words, just part of the circle?

Mr. HYDE. In television, directional antenna techniques are not practiced. Such devices are used extensively in AM broadcasting, but the rules do not contemplate the use of a directional antenna for the operation of stations at short separations.

The CHAIRMAN. If a fellow gets a license in Tulsa, Okla., it has to cover a circumference. It can't just be limited to the northwest, only, or the southwest?

Mr. HYDE. There are some instances where you have directional antenna characteristics, like where an antenna might be tilted at the top of the mountain in order to give better coverage in the market. That technique was used from Mount Wilson, I understand, in certain instances, because some of the communities nearer to the mountain apparently were underneath the projection of the signal, but in television, we have not used the directional-antenna technique.

The CHAIRMAN. How about those that border on water? The signal still goes out over the water?

Mr. HYDE. That is right. Now, let me mention, quickly if I may, that the directional-antenna technique in AM has caused many complications. For one thing, you get stations of different coverage characteristics in the same market.

It was the hope of the Commission when it adopted the sixth report to keep service areas on as nearly a uniform basis as possible, to keep competitive conditions as nearly uniform as possible.

There are quite a number of considerations that go into any projected use of that.

The CHAIRMAN. But you have the overlap in given communities. Take my own community. The Tacoma stations come into Seattle and Seattle stations go into Tacoma, but you consider that as a single-market area, I suppose?

Mr. HYDE. Market areas are determined by commercial practices there, rather than by the Commission. We endeavored, in making station-operating assignments, to set it up in such a way as to make the assignments available to the communities, large and small, but actually what is a trade area is determined by trade conditions in it, as you know.

Mr. McCONNAUGHEY. Senator Pastore and Senator Monroney asked a question which might help explain this. As I have explained more fully in my complete statement, I submitted to the committee that there are so many variables which enter into the calculation of station coverage that a completely accurate depiction of the service contours of individual station coverage would require very expensive field engineering checks.

After careful study of the problem on the basis of the advice of experts and voluminous data, the Commission evolved a concept of grade A and grade B contours, which is used for purposes of television assignments, and the determination of station overlap.

Our grade B contours tell us the distance from an average station, where 50 percent of the locations can receive for 90 percent of the time, what we have determined to be a satisfactory signal.

A grade A contour gives us the same information for 70 percent of the locations at 90 percent of the time. The Commission is aware that signals considered to be satisfactory are received beyond grade B contours, and also that service with a grade B standard is not received at all locations within the grade B contour.

This method of calculating service range is considered, however, to strike a desirable compromise between the inordinately high costs of engineering refinements on the one hand, and the requirements of administrative efficiency on the other.

In the opinion of the Commission, the grade A and grade B contours have provided a very satisfactory basis for calculating the service ranges for the purposes I mentioned.

Senator PASTORE. Well, that is so from the efficiency of the signal, insofar as the strength of that particular station is concerned, but I am approaching this on a new angle.

I am approaching this on the angle of greater competition and less monopoly. I think we are creating an evil here when we get down to the point that we grant a license to 3 or 4 operators, and say, "You have so much strength that you can cover all these communities, only because your power will carry satisfactorily."

Now I do say this, that their signal would be just as good if you cut down their power and allowed someone else to come in, in order to give the people more channels to work on.

The CHAIRMAN. More stations?

Senator PASTORE. And your advertisers in local places a chance to advertise on television. Have you any idea what the cost is for 15 minutes locally in a zone 1 area? Has the Commission ever gotten into that?

Mr. McCONNAUGHEY. Yes.

Senator PASTORE. How much does it cost an advertiser to take a 15-minute spot on television?

Mr. LEE. It might run from $600 to $900.

Senator PASTORE. That is a lot of money. In other words, if a candidate for office wants 15 minutes on television, it will cost $800 or $900?

The CHAIRMAN. We are going to get into this question of political time a little later.

Senator MONRONEY. Somebody else uses television besides politicians. Grocery stores in Bridgeport might want to advertise on television. A. & P. comes in, but the independent grocery store can't advertise in Bridgeport.

Senator PASTORE. He can't pay that price, only because he has to advertise in a locality where he has no patronage and that is the only way he can get on the air.

He has to pay the big price because they cover a big area, and yet he comes from a small town on the outskirts, so television means nothing to him. That kind of television means nothing to him and I think it is bad. I think we ought to consider that.

The CHAIRMAN. I think that is true—it is a basic problem. There are many large communities like the city of Bremerton with 70,000 people—the merchant over there has to advertise on a Seattle station. Well he can't afford that so he is denied the use of television.

Senator MONRONEY. But his competitor, the chain store, can advertise and reach not only the market in Seattle, but every place else.

Mr. McCONNAUGHEY. I think that is a problem that is a real one.

The CHAIRMAN. Well, you have further here a statement on overlap. Why don't you read this and that might clear it up? That is on page 17. You have finished the station-coverage matter. We asked you that question, too.

Mr. McCONNAUGHEY. You have also asked for the Commission's policy on overlap in television. The Commission is concerned with overlap in the television service in connection with the so-called duopoly rule, which provides that licenses for television broadcasting stations shall not be granted to any party if such party owns, operates, or controls another television broadcasting station which serves substantially the same area.

In determining what does or does not constitute substantially the same area, the Commission considers the existence or absence of significant grade A overlap. That is, whether the grade A contour of one station owned by a licensee would significantly overlap the grade A contour of another station proposed by that licensee.

Where only grade B overlap exists or is proposed, in the absence of other considerations, the Commission has considered such overlap not to involve service to substantially the same area.

The CHAIRMAN. Well that is based on your Commission's standards rather than an examination, isn't it?

Mr. McCONNAUGHEY. Rules.

The CHAIRMAN. On the Commission rules rather than a direct examination of the area?

Mr. McCONNAUGHEY. Yes, it is on the rules.

The CHAIRMAN. And if the question arises as to whether there is an overlap between A and B, what do you do then?

Mr. McCONNAUGHEY. Where there is an overlap in grade B——

The CHAIRMAN. Between two points.

Mr. McCONNAUGHEY. They have said that is all right but if there is a substantial overlap in the grade A contour, then they do not permit it, under the duopoly rule.

Mr. DOERFER. "Substantial" overlap.

The CHAIRMAN. If there is a question as to overlap between Pittsburgh and Cleveland, do you go out and take a look at it and measure the actual signals?

Mr. McCONNAUGHEY. Do you mean between the coverage between Pittsburgh and Cleveland?

The CHAIRMAN. Yes.

Mr. McCONNAUGHEY. You are talking about the same owner?

The CHAIRMAN. Yes.

Mr. McCONNAUGHEY. Yes. We check that if it is the same owner.

Mr. DOERFER. We do not go out and take a look at it.

Mr. McCONNAUGHEY. We do not physically go out and take a look at it.

The CHAIRMAN. That is what I am getting at.

You just look at your standards.

Mr. McCONNAUGHEY. That is right.

It is not my desire in this report to burden the committee with an encyclopedic review of all aspects of television which have engrossed the Commission's attention during the past year. In the belief that it would better serve the committee's present purposes this report has touched on the highlights of matters in which it is understood the committee is particularly interested, at this time: The network study, our current review of the entire allocations plan, and our efforts in regard to satellite, booster and translator stations are foremost among the committee's present activities in the television broadcast field.

Great importance is attached to these and other endeavors to keep abreast of constant changes and developments on the television scene. We must ensure not only that our decisions are well adapted to current conditions, but also that the framework of the allocations plan and television standards is realistically calculated to facilitate television's continued growth and the fullest possible achievement of the goal of a nationwide competitive television service.

For its own part, the Commission will continue to explore every possibility for improvement which lie within its power to bring about.

The Commission welcomes the interest of your committee in the problems which remain to be solved before this goal could be fully attained. The cooperative effort of the committee, the Commission, and the industry, itself, should go far toward realizing our common objective of service to the people.

The CHAIRMAN. You have included in your statement the public notice on the network study and you have set out in that notice the different phases of the study, the ownership and operation of both radio and television networks by one person, so on and so forth.

The question of option time and affiliation contracts—as we understood it last year, Mr. Chairman—you were also going into the network contracts with affiliates, in some detail.

Mr. McConnaughey. Yes, sir, we are doing that and also we are going into talent.

The Chairman. Talent?

Mr. McConnaughey. Yes, and the advertisers.

We are meeting in New York Thursday and Friday and Saturday and Monday and Tuesday with ABC and Mutual, and also with the advertising people and talent people.

The Chairman. And then for the benefit of the committee, when we gave the Commission the money for this study last year you were in general agreement that as your people move along, the committee can have the benefit of whatever they find out.

Mr. McConnaughey. We are going to report to you as we go on.

The Chairman. And they have been sending those things up when we have asked for them.

Mr. McConnaughey. And we have asked for more money to go on and do the job.

The Chairman. We want to go into that phase, too, and many other phases that have been brought up here in a general way.

I did say that I had 40 pages of questions here, which supplement the general questions sent down to the Commission in advance and which have been answered here. They are the concern of different members of the committee and somewhat detailed. They are not just the questions of one man. We will go into them when we have our next meeting.

Mr. McConnaughey. Senator Schoeppel, if you will recall, Mr. Chairman, asked some questions. Perhaps I should wait until he is here to answer them——

The Chairman. I discussed that with him and he discovered that they were very broad and go into the things we are asking for here, anyway, in detail.

Senator Monroney. Could I ask one question?

The Chairman. Yes, go ahead.

Senator Monroney. Is there any way that you could be given money, through the Congress, on appropriation, to do independent work on a low-priced converter to use. The point I am getting at is that the geniuses who make these television sets can't build one at a reasonable price. Is there any chance that it could be brought in through some experimentation and development within the FCC, and then made available to these companies, on a free licensing basis?

Mr. McConnaughey. Would you mind if I let our chief engineer, Mr. Allen, who is here, answer that question?

Senator Monroney. There is no legal prohibition against the Congress appropriating money for research or development.

Mr. McConnaughey. No, there is no legal bar. I can answer that.

Senator Monroney. Maybe he can answer the technical side.

Mr. Allen. I don't think it would be practical for the Commission to undertake a program of research on television receivers, principally because it is a problem involving the development of vacuum tubes. It is a very specialized type of research. It takes a lot of equipment and resources to do it. There are several laboratories in the country who are very diligently working on this problem, and quite recently one of them has come out with a new tube which gives great promise of permitting the development of tuners for UHF.

I am sure the rest of the engineers in the industry are looking forward with great expectation to the development from that source.

Undoubtedly, the other laboratories will meet this challenge and will produce similar tubes in the near future. I don't think it is a problem that we can assist in very much. Once the tube is developed we can assist in the circuitry, but in the tube development I don't think we can be adequately equipped to do that.

Senator MONRONEY. Do you think anybody is dragging their heels in the manufacturing industry intentionally to keep everything concentrated in the V field?

Mr. ALLEN. I haven't seen any evidence of that.

I think that the people are very diligently working on vacuum tubes and transistors, both, in order to develop them as quickly as possible.

Senator MONRONEY. For the purpose of making available at the lowest possible cost, the sets that will take both the V and the U?

Mr. ALLEN. On the set circuitry, itself.

Senator MONRONEY. I am not talking about perfection of the picture and all the daylight tubes and all that, I am talking about the simple little matter of finding out how to get the lowest possible manufacturing costs to receive the U band.

Do you think there is diligence in the manufacturing industry commensurate with the need for diffusion of ownership and the opening up of hundreds of new stations?

Mr. ALLEN. That is a little beyond the engineering problem. There is a professional problem that comes into that.

The CHAIRMAN. Well, they are getting tuners down cheaper; aren't they?

Mr. ALLEN. That is right; but as I say, the solution to this problem is mainly a vacuum tube development problem, and a transistor development program, and those things are being worked upon and once the tubes are available then we will go into the circuit design.

I see no evidence of deliberate dragging.

The CHAIRMAN. Mr. Hyde.

Mr. HYDE. I should like to say, in the rulemaking proceeding which the chairman referred to, we received comments for several companies interested in the manufacture of equipment—large ones—favoring the use of the ultra-high-frequency channels. Now, they would not be doing that except that they are interested in developing the equipment, if there is some incentive for the use of it.

As I indicated in a previous statement to the committee, I think the Commission's allocation policy should be one to encourage the use of the ultrahigh, which would provide incentive for the development of equipment such as you have mentioned.

The CHAIRMAN. Senator Monroney.

Senator MONRONEY. It would open up new fields for television sets, wouldn't it; the more stations you have?

Mr. DOERFER. Not necessarily. That is the point I would like to emphasize, that many of the applications, those sets are 100 percent converted, today. If we followed their suggestion we wouldn't add one UHF set to the overall picture, other than the normal growth which is going on, today.

Senator PASTORE. It all depends on the way you start. If you start out with UHF and drop in a V, naturally the person who has U can get V; but the opposite is not true.

If you start with 1 or 2 V's and try to add a U, you have a conversion cost problem. You place the burden upon the viewer to meet a situation which he is not responsible for, at all. I mean if he wants the new U channel. Now, if you are going to say, "If you have 2, you have enough," that is one argument; but if we say that with 2 V's on the air you can drop in another U and give the community 3 channels, we are only kidding ourselves.

It is just as simple as all that. You can't expect the people to go out and make that kind of conversion. It costs $30 or $35. They have to readjust their aerial, and actually you are imposing upon the public to unscramble a mess they are not responsible for and you just can't get away from it.

Mr. DOERFER. That doesn't necessarily follow. I would say that my position then is if we are going to embark upon a policy of deintermixture, then we should do a thorough job, and it should be a bold job. We should probably take out some V's in some of the larger markets. But to expect to give a shot in the arm to UHF to the point where it will get off the ground by merely stopping now what we have in process, in my opinion, is not a cure, nor does it promise to be a cure.

Senator PASTORE. When you speak about boldness, I agree with you, there has to be boldness, but what I am trying to look at is the practical element, too. Where you have a VHF area, and people have sets that can only receive VHF, you can never convert that to U without telling all these people they have to throw away their sets and buy new ones, or get themselves a converter.

I mean you just can't do that. You can't impose upon the viewing public the responsibility to unscramble this. The only way that you can get deintermixture, in my humble opinion, is where you already have a UHF market. They have the sets to receive it, you see, and you shouldn't allow a VHF to come in that can be assigned someplace else.

Now, if you allow the VHF to come in, in all probability, as far as the public in that area is concerned, they will be satisfied, because they just switch from U to V, since they have sets adapted to that.

But speaking of a VHF area, when you bring in a UHF station you can't kid that viewing public along with the idea that now they have three receptions, because they don't, without converting their sets.

Mr. DOERFER. Let me put it this way: If the objective is merely to deintermix, I agree you are correct; but I don't think that should be our objective, at least without further examination. Our objective should be to try to figure out how UHF can work with intermixture in all the major markets in the next 10, 20, or 50 years. And if we don't do that, we will stop short. We won't have any more than perhaps 3 stations in the first 100 markets. If you are satisfied that that is an adequate, competitive nationwide service for the next 50 years, we can solve that in 30 minutes.

Senator PASTORE. No; but that isn't my point at all. That isn't my point at all. You started out with the statement here—I think the chairman did—that we had 152 UHF stations. Today we have less than 100. Apparently something is happening. These people are going out of business. Something is causing it.

You can sit back and talk about the sixth report until the cows come home, but the fact remains that some of these U's have gone out of business.

Your chairman has said that in his experience, 2 UHF's can live where you have 1 VHF.

Mr. DOERFER. I don't quite agree with that. I would say yes, in some markets, but not in all markets.

Senator PASTORE. The chairman has already made that statement and you don't agree with it. That is where we are.

Mr. McCONNAUGHEY. I believe he agrees with the statement I made. It depends on the market. In the little, tiny market, it wouldn't.

The CHAIRMAN. The fact is if you have 2 VHF's in a given area, and granted applications for 3 UHF's, the latter won't even be built.

Mr. McCONNAUGHEY. That is right.

Senator PASTORE. Isn't it true in Boston you have two UHF's that haven't even been applied for?

Mr. DOERFER. That is probably true in many of the markets.

Senator PASTORE. Does it ever occur to you to ask why?

Mr. DOERFER. I am aware of that.

Senator PASTORE. What is the answer?

Mr. DOERFER. Economics.

Senator PASTORE. They cannot live?

Mr. DOERFER. We don't have control over the economic end of this problem.

Senator PASTORE. I realize that, but the point I am making is this: Somewhere along the line someone has to come up with a certain boldness and say, "This is going to be it." Then these people will have to fish or swim or do whatever they can to meet their own problems. But somewhere along the line I think we ought to stop kidding somebody. You see, in the beginning when these people applied for the U—I wasn't a member of this committee at the time, but I heard our former chairman, Ed Johnson, discuss it—apparently very grandiose prospects were given out to these people on UHF.

Mr. DOERFER. By whom?

Senator PASTORE. By members of the Commission. I don't know who, particularly, but apparently everybody thought they were going to hit the jackpot.

Mr. DOERFER. No; what they thought was if they got in the markets first, and with our delay in the processing, that they would be on the air for about 2 years, everybody would have sets, and then they would be safely home.

The CHAIRMAN. That is what I am talking about, that delay, you see.

Senator PASTORE. You have a very, very serious problem and it becomes all the more serious because there seems to be such divergence of view, even within the Commission itself. Somewhere along the line you have got to hit some unity on this and tell the viewers and the industry exactly what the pattern is going to be. Somewhere along the line, the decision has to be made.

Now, if Rhode Island is going to end up with two V's, I suppose that is going to be the end; but I am hoping for the time when you can give us a little more service.

The CHAIRMAN. Let me ask you this: As I understand the statement of the majority of the Commission here, now, at least your objective is to keep both alive, is that correct?

Mr. DOERFER. If possible.

Mr. McCONNAUGHEY. Yes, sir.

The CHAIRMAN. If it is possible.

Mr. McCONNAUGHEY. If it is possible to do it.

The CHAIRMAN. We have that objective and we are clear on that.

Mr. McCONNAUGHEY. That is right. That is the feeling of all seven Commissioners.

The CHAIRMAN. That is 1 thing all 7 of you agree on?

Senator PASTORE. And in a year's time or so you will tell us whether or not that is possible?

The CHAIRMAN. Oh, shorter than that.

Senator PASTORE. I hope.

The CHAIRMAN. Before Congress recesses, they ought to come up with that.

Senator PASTORE. I don't think so.

The CHAIRMAN. Burn a little midnight oil. Do what we do. We meet sometimes from noon until midnight. And we vote several times during that time.

Mr. DOERFER. I wish you would vote on the NARBA Treaty.

The CHAIRMAN. We will vote on that. We will get that out.

Senator PASTORE. If I may add this, Mr. Chairman: We have a lot of the owners of these stations, V's and U's, come before this committee and recite their problems. We would like to listen to their problems. They certainly do have problems. But fundamentally I don't see how we of the committee are going to unravel these problems. It is your responsibility. I think whether it is going to take boldness, forthrightness, courage, whatever it will take, somebody will have to stand up and be counted.

Mr. DOERFER. Consider how the ground shifts. Less than 2 years ago you were told that the big problem was the conversion of sets. If they could get conversion of sets they wouldn't have a problem. Today, Madison is about 99 percent converted—Madison, Wis.; Fresno, 99 percent, Springfield, Ill., 99 percent, and some of the others, substantially converted.

Now today, you don't hear that argument any more, but still they want us to keep the V's out of those markets. So it is no longer a problem of set conversion. It gets right down to programing. It gets right down to trying to keep competition out. Now, that is our big problem.

Senator PASTORE. I think you have an easy answer there. I don't see any problem there. Where you have people who can switch on either one or the other, as they choose, why then you have serviced the public, and that is the answer.

Mr. DOERFER. The answer is we should not deintermix in those markets.

Senator MONRONEY. You have the problem of a policy of the networks that favors VHF over UHF.

Mr. McConnaughey. It is the advertisers, and we have no jurisdiction over them.

The Chairman. Advertisers are the ones who direct this.

Mr. McConnaughey. They call the shots.

Senator Monroney. It is Madison Avenue, again.

The Chairman. It is getting late and I appreciate you gentlemen coming up here and we will meet again on February 20. I don't want to give you any more to do, but you can do this afterhours and you don't even need to meet for this. I hope you can bring some suggestion on the very important matter of political time for the next few months.

(Whereupon, at 12:30 p. m., the committee recessed, the hearing to reconvene Monday, February 20, 1956, at 10 a. m.)

TELEVISION INQUIRY
(UHF–VHF Allocation Problems)

MONDAY, FEBRUARY 20, 1956

United States Senate,
Committee on Interstate and Foreign Commerce,
Washington, D. C.

The committee met, pursuant to call, at 10 a. m., in room G–16, United States Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Pastore, Bricker, Schoeppel, Potter, and Payne.

Staff personnel present: Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel; Bertram O. Wissman, assistant clerk.

The Chairman. The committee will come to order.

There will be some other Senators here later, but we have a long session and we want to get started.

The chairman wants to make just a short statement here. Since our last session, I have received a reply from the Chairman of the Federal Trade Commission on the question of advertising on radio, and we released it to the press sometime since our last hearing. In general, we found out that they do quite a bit of checking on advertising, and are looking into these matters.

I will insert the letter in the hearings right now, with some enclosures, and also a number of letters on the subject which have been received from members of the public.

(The communications referred to appear in appendix I, p. 221.)

The Chairman. In addition, I want to insert a copy of a letter from the Governor of Massachusetts, Christian Herter, to Senator Saltonstall, relating to local television stations as affected by increase in power and in antenna height.

The Commonwealth of Massachusetts,
Executive Department, State House,
Boston, February 1, 1956.

Hon. Leverett Saltonstall,
Senate Office Building, Washington, D. C.

Dear Lev.: It is my understanding that a Senate Interstate and Foreign Commerce Subcommittee is now conducting hearings on certain problems raised by holders of ultra-high-frequency television licenses, some of whose stations are located in Massachusetts.

It is the claim of this group that recent rulings by the Federal Communications Commission, granting the holders of certain VHF licenses the right to increase their transmitting power and to increase the height of their transmitter towers, unfairly place the holders of UHF licenses in an unfavorable position.

It is held that these commission rulings will act to centralize television broadcasting in the so-called large stations and to curtail or even wipe out the smaller home-town stations holding UHF licenses.

In my opinion it is important that "hometown" television be maintained on a more healthy basis than at present. Local television stations serving smaller areas can surely serve Massachusetts communities better than the larger stations blanketing wide areas from transmitters located in other States.

My warmest personal regards.

Sincerely,

CHRISTIAN A. HERTER,
Governor of Massachusetts.

UNITED STATES SENATE,
COMMITTEE ON ARMED SERVICES,
February 6, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee, Senate Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: Because I know it will be of interest to you, I enclose a copy of a letter I have just received from Governor Herter of Massachusetts, describing a situation with which I also have some acquaintance as a result of visits to certain Massachusetts communities in recent weeks.

I think that it might be of interest and some value if Governor Herter's letter could be included in the record of your current hearings.

Thank you for your courtesy in this regard.

Sincerely yours,

LEVERETT SALTONSTALL,
United States Senator.

The CHAIRMAN. Now, Mr. Chairman, we have this series of questions here which I stated before were not necessarily mine, but a combination of what we thought would be typical questions that have been asked through communications, letters, other Senators, members of the committee, all dealing with the various phases of the television industry.

In order that the record may be entirely clear, I wish to point out that some of them have been answered in general in the colloquies that occurred during the last two hearings. But in order to have a cohesive record we have written them all down and I am going to ask the committee's special counsel to ask them.

I presume that the Chairman will answer for the Commission, but we will have the same procedures we have had before. Knowing that the Commission is not always in agreement on many of these matters, any of the other members of the Commission who are here can add anything that they wish to the chairman's answers.

There are quite a number of questions and I don't know whether we will get through with them all today, but we will go as fast as we can. Some of them may seem overlapping, where the problem was discussed in general last hearing, but these questions are more specific and better worded.

Mr. Cox will go ahead with the questions.

Mr. Cox. Thank you, Senator.

The CHAIRMAN. I want to say this before you start that in many cases here we have used the word "you." That means the Commission, and not you, personally.

[Laughter.]

Mr. Cox. Without detracting in any way from the very solid advances in television which have been made since July 1952, as outlined in your statement to the committee, I would like to explore and establish some less reassuring aspects of this matter for the record.

In the first place, you noted that there are now more than 440 commercial television stations on the air. Now, isn't it true that that is somewhat less than 25 percent of the commercial assignments which the Commission made in the sixth report and order?

Mr. McCONNAUGHEY. I think there were about 1,800 commercial assignments—1,800 assignments made in the sixth report.

Mr. COX. If you look only at the UHF assignments and the UHF stations presently on the air, wouldn't it be fair to say that you have only about 7½ percent, at least, something less than 10 percent, of the UHF assignments presently in use?

Mr. McCONNAUGHEY. I don't know what the number is. I think I testified to 99.

Mr. COX. There were over 1,300 UHF commercial assignments made; weren't there?

Mr. McCONNAUGHEY. I think that is right, roughly.

Mr. COX. Isn't it true that 21 UHF stations left the air in 1955?

Mr. McCONNAUGHEY. I think that is correct; that is about right, yes.

Mr. COX. Now, you did in a general way discuss what you thought might be the impact on UHF stations still on the air of certain of your policies, but would you think it is a reasonable expectation that additional UHF stations are likely to leave the air during this calendar year unless some rather positive steps are taken to improve their relative position in the industry?

Mr. McCONNAUGHEY. I don't know how you can answer that "Yes" or "No," for this reason: The present state of the development of UHF, we hope, is going to be improved, and speaking from a technical standpoint, the stations that have gone on, some of them have not been on for too long a period of time, and I think we always have to bear in mind that when we speak of stations going off the air it is something you cannot project with any definite ideas.

For example, when TV first started in, an awful lot of stations lost a tremendous amount of money for quite a period of time. I understand that there is about a third of them yet, that is, postfreeze V's that lost money during 1954. So I don't know how you can say definitely how many would, or how many would not, or whether there would be very many of them that would. It depends a good deal upon the demand and the way they get established in business.

Mr. COX. Based upon past history, would you say that a VHF station which has been losing money has a better chance of converting that into a favorable earning picture than a UHF station which has been losing money for the same period?

Mr. McCONNAUGHEY. I think so. I say, I personally think that is true because of the reputation that a V has for being a better facility. At least, that is the reputation it has, and getting a wider coverage. I would think there would be a better opportunity. And the advertisers, to date at least, seem to prefer the V operations. I think that is a matter of common knowledge.

The CHAIRMAN. Mr. Chairman, isn't it true, too, that even in a VHF station the initial cost of getting it on the air is so great that it would take some time, even though they might be in the black, before they would ever get out where they were making any reasonable profit?

Mr. McCONNAUGHEY. That is certainly true, Mr. Chairman.

Mr. Cox. What does it cost on the average to put a VHF station on the air?

Mr. McConnaughey. Three, four hundred thousand dollars.

Mr. Doerfer. Half a million.

Mr. McConnaughey. Half a million at least.

The Chairman. As I understand from reading some of the figures in the trade magazines of the industry, some of these costs run between half a million——

Mr. McConnaughey. That is right.

The Chairman. And up, according to the amount of working capital. I think you would have to have almost a million dollars for a large station.

Mr. Doerfer. That is right.

Mr. McConnaughey. I think at least that, Senator, because we all know of examples where they started out and they lost seven or eight hundred thousand dollars before they get into the black. I am talking about V's, now.

The Chairman. And the UHF would be a little bit lower, but it is quite expensive.

Mr. Cox. What would be the average cost of a UHF station to get it operating?

The Chairman. It would be a little less.

Mr. Lee. No.

The Chairman. More?

Mr. Lee. Yes. I think one of the points that should be made, another one of the factors where the U is at a competitive disadvantage is that in attempting to equalize coverage they have to use higher power and perhaps a higher tower.

The Chairman. It costs them more.

Mr. Lee. Therefore, to reach the same area it costs them more to start.

Mr. McConnaughey. It is a more expensive operation.

Mr. Cox. Could you give us a figure on that to compare with the half million mentioned for VHF stations?

The Chairman. It is a half million and up, because I saw some costs in trade papers, some of them run seven, eight hundred thousand dollars.

Mr. McConnaughey. That is right.

Mr. Cox. Mr. McConnaughey, could you have your staff get a figure on that for us, and supply it for the record, on the comparative costs of VHF and UHF stations?

The Chairman. Just in a general way.

Mr. McConnaughey. All right.

Mr. Cox. You mentioned technical improvements as possibly increasing the chances of success——

Mr. McConnaughey. Could I go back a minute? They just handed me here——

Mr. Cox. Yes, sir.

Mr. McConnaughey. —average actual costs. This is last year's figures. For the V stations—this is an average—$376,125—and average cost to UHF stations, $300,493.

Mr. Cox. You have no way of knowing whether that is a U station with sufficient power even to approximate the coverage of a V, do you?

Mr. McCONNAUGHEY. It would be less coverage.
Mr. Cox. Less coverage?
Mr. McCONNAUGHEY. Oh, yes.
Mr. Cox. You mentioned certain——
The CHAIRMAN. Just a minute, there. Of course, that is only the construction costs.
Mr. McCONNAUGHEY. That is correct.
The CHAIRMAN. When you start to talk about personnel and working capital and all the other things that go with it, you almost double that?
Mr. McCONNAUGHEY. That is right. This is just base construction cost.
The CHAIRMAN. Just construction and material.
Mr. McCONNAUGHEY. Yes.
Mr. Cox. Would the operational cost of the U be higher because of the extra power required?
Mr. LEE. I understand there is some differential. I couldn't tell you how much more. They do require more maintenance.
Mr. Cox. Mr. Bartley?
Mr. BARTLEY. I just said not substantially different, I mean percentagewise.
Mr. Cox. Could you give us a figure for that on the record?
You mentioned certain technical improvements which you thought were perhaps on the way which might improve the chances of survival of UHF stations. Are those in such a status that you could give us any date as to when you think they would be likely to play an effective part?
Mr. BARTLEY. No, sir, I couldn't.
Mr. Cox. You noted in your statement to the committee that 278 communities now have local stations. Are some of those satellite stations?
Mr. McCONNAUGHEY. Just a handful.
Mr. Cox. Could you give us for the record the number of——
Mr. McCONNAUGHEY. Five or six.
Mr. Cox. Five or six?
Mr. McCONNAUGHEY. Yes; just a very few of them.
Mr. Cox. Doesn't that figure of 278 amount to about 20 percent of the communities for which allocations were made in the sixth report?
Mr. McCONNAUGHEY. That is correct; that is correct.
Mr. Cox. Could you tell us how many communities got a first local television station in calendar 1955, excluding satellites?
Mr. McCONNAUGHEY. That will have to be checked.
Mr. Cox. All right, you can furnish that for us.
Mr. McCONNAUGHEY. Surely.
Mr. Cox. And at the same time, can you tell me how many pending applications for permits are before the Commission which would give a first local television station in the community concerned, excluding again satellites and also excluding UHF permits which have been outstanding for more than 6 months.
Mr. McCONNAUGHEY. We will supply that for you.
Mr. Cox. All right. Now, the committee, of course, is familiar with the sixth report, and with the policies or priorities that are

stated there. I wish you would state for the record at this time, however, what the priorities set out in the sixth report were?

The CHAIRMAN. I think we can read those.

Mr. COX. I have them here, subject to your confirmation.

The CHAIRMAN. Ask if that is correct?

Mr. COX. I believe the first one was to provide at least one television service to all parts of the United States—is that correct?

Mr. MCCONNAUGHEY. That is right.

Mr. COX. Second, to provide each community with at least one television broadcast station?

Mr. MCCONNAUGHEY. Right.

Mr. COX. Third, to provide a choice of at least two television services to all parts of the United States?

Mr. MCCONNAUGHEY. That is right.

Mr. COX. Fourth, to provide each community with at least two television broadcast stations; and finally, any channels then unassigned under the foregoing priorities were to be assigned to the various communities depending on population, geographical location, and the number of television services available to such community from television stations located in the other communities.

Mr. MCCONNAUGHEY. That is right; that is correct.

Mr. COX. All right. Now, in your opinion, sir, is it going to be necessary for substantially greater progress to be made toward the achievement of all of those objectives if this country is going to have a truly nationwide competitive television system?

Mr. MCCONNAUGHEY. Well, in what way do you mean that? I mean, I don't quite understand.

Mr. COX. Well, when you issued your sixth report you set up these priorities. You have admittedly made tremendous steps toward the achievement of some of them.

Mr. MCCONNAUGHEY. That is right.

Mr. COX. Particularly the first one.

Mr. MCCONNAUGHEY. On the first one they have made wonderful progress, the Commission.

Mr. COX. All right. Would you say, however, that these remaining items are goals which must be pursued, at least below the first one, if we are to develop a competitive nationwide system of television?

Mr. MCCONNAUGHEY. I feel that a lot of improvements need to be made and I think they are going to have to be made. We hope considerable of them can be made in our reallocation rulemaking proceeding, which we are going into now.

Mr. COX. The point I would like to develop, though, is: Do you and the other members of the Commission in general feel that, although perhaps reallocation must be made to achieve these policies, these continue to be goals for which the Commission ought to be working?

Mr. MCCONNAUGHEY. Yes.

Mr. DOERFER. We don't agree as to whether or not we have made substantial progress on the first priority.

Mr. COX. All right. Would you care to expand on that point, Mr. Doerfer?

Mr. DOERFER. Yes. I feel that west of the Blue Ridge Mountains there are much more wide-open spaces; these require V services rather than U. I feel that within the range of a V service there would be a fringe area which would be denied a service if converted either to a U or maintained at a present U service—so that a substantial number of people may be forever without a service unless they get it through community antenna systems or perhaps boosters or satellites. But we don't have any jurisdiction, as I read it, to compel the UHF operator to install a booster or a satellite. In the first place, it would be uneconomic; and, secondly, there would be no incentive.

Assuming there is a market of 300,000 people that would be served with a V service, but only 250,000 with a U service—the 50,000 people are spread on the perimeter or the fringe area. They are not dense. They can't be reached readily by booster or satellites unless you put a number of them around the circumference of the grade B contour.

Mr. Cox. The cost, however, of the translators that the chairman was discussing at the last session would not be prohibitively great to permit achieving that peripheral coverage, would it, on the part of the U?

Mr. Doerfer. Human nature being what it is, a broadcaster is not going to increase his expenditures unless it reflects itself in the rate card.

Mr. Cox. However, if there is a V in that market, isn't it almost imperative that he equalize his coverage with that very station if he is to have a chance competitively?

Mr. Doerfer. I agree. That is why I feel that the proper way to achieve a solution of this is to try to blend or permeate U services and V services, so that a market which will sustain 3 U's, I think will also sustain 1 V and 2 U's. That, in my opinion would be the proper approach. I have been opposed to the establishment of UHF islands because the necessary corrolary is that you establish VHF islands and you never will achieve the penetration of the U's and the V's.

All you have done is you have isolated service; you have built a sort of an economic Iron Curtain between the two.

Mr. Cox. Substantially, then, you say that you feel that there still remains progress to be made to a fairly considerable degree even in achieving the first priority in the sixth report.

Mr. Doerfer. Yes, I think so, Mr. Cox. I would say this, that I think on the fringe areas there are some people who, if there were a V service presently implemented, would be getting an only service. I do think there are a substantial number of people who desperately and rather pathetically reach out for a service by putting antennas on top of pine trees or whatever object they have in order to get it. I do think that many times they get a picture which you and I might consider snow, but which they, not having the opportunity to compare it with anything else, think is an acceptable service. I think those people are just as much entitled to a service as are the people in the more populous eastern sections of the country.

Mr. Cox. You are speaking there, I take it, ideally, because, by the nature of their geographical location which they have selected themselves, they have placed themselves at disadvantages as regards other services; haven't they?

Mr. Doerfer. That is not true. I have given an illustration of a market in which today, in accordance with the sixth order and report, they are within the range of a V service.

If we implement it, if we keep faith with the objectives of the sixth order and report, they would get a service. I do not agree with the chairman that the objectives of the sixth order and report are harmonious, and that they complement each other. I think that there is definitely a conflict between the first priority and the second priority.

Mr. Cox. Would you elevate the first priority to such a point that it would prohibit achievement, even on a reasonable scale, of the second priority?

Mr. Doerfer. No, I would not. I think that you certainly reach a point where the loss of service is *de minimis*. I think that if people live in the mountains or the wide open spaces where they would not receive a VHF service under the present allocation, they have definitely put themselves by choice beyond a service. But where the Commission has taken the entire map of the United States, and allocated various services, I would say that any of those people within the fringe areas are entitled to a service.

I think that the act itself does not place emphasis upon a nationwide competitive service. The Federal Communications Act provides for an equitable distribution of frequencies, and I say that it is inequitable to assign a U service to some people and a V service to others under the present state of the Art.

Mr. Cox. Wouldn't the specific provisions of the Communications Act regarding the applicability of the antitrust laws require that this service that you establish be competitive?

Mr. Doerfer. Well, I don't think I understand your question.

Mr. Cox. Well, you said that all that the act requires is that there be a fair distribution of the frequencies?

Mr. Doerfer. I did not say that that is all that the act required. I think that the achievement of a nationwide competitive service is consistent with the act. But I do say that the act itself lends support, first, to the equitable distribution over the competitive. In other words, I think that in view of the scarcity of available frequencies this Commission is struggling essentially with a priority system.

Whenever you have a priority system you have to choose, sometimes, between whether or not you are going to attempt an equitable distribution or whether you are going to get off of the course and get into the so-called competitive system.

Now we have ample competition in many, many markets. I do not think we have as much as I would like. I am not so sure that we have had enough experience, as yet, to write off UHF. I think that a good deal of the success of UHF in a so-called V market—and I am speaking of a one V market—depends essentially upon programing. I think that if the Commission—and we have been considering it, I think that perhaps what we have to explore would be the feasibility and the practicability of writing a rule limiting an affiliate to one network service, so that the one V affiliate, where there are U's in the market, cannot scoop off the cream of the three networks.

I am not so sure that I am ready at the moment to adopt it. I would like to explore it. But I think that the solution of the problem will be programing. If we can devise some rules which will not do violence to our free-enterprise system.

Mr. Cox. We will go into that a little more at a later point, but I am interested in this proposition: Would you think that you have achieved an equitable distribution of facilities if, in order to get as near as possible to 100 percent coverage for a first signal, you take steps which in terms of the economic interplay of forces in the market are going to restrict major centers of population to less than the number of services that they can support?

Mr. DOERFER. Well, now, you are tending to be academic about it. Let me say this: A farmer 50 miles from Madison is just as important as John Jones in New York City.

Mr. COX. Is he just as important as 7 million John Joneses in New York City?

Mr. DOERFER. Let me say this: Why should John Jones in New York have seven services and farmer Brown 50 miles from Madison no service?

Mr. COX. Well, isn't that partly because of the policies that were followed in the sixth report which maintained seven existing V channels in New York, rather than make any drastic readjustment in those in 1952?

Mr. DOERFER. Well, I do not want to pick out New York. I use that as perhaps an extreme illustration. But let's go down to the 4-station market, or let's go down to the 3-station market. Why, within the city of Madison or in its immediate environs, within the reach of a UHF signal, should 250,000 people have 3 services, and immediately outside of that 50,000 people having no service?

Mr. COX. We will get to that question about whether they have a service a little later on.

Mr. DOERFER. Of course, I am assuming that. Now all I say is this: I am faced with the situation between 2 choices. For myself I would choose 1 service for 300,000 people rather than 3 services for 250,000 people, if I have no other solution.

Mr. COX. If you have no other solution. Would you take that one service for all of them even though it drove from the market the existing additional services that served the five-sixths of the population?

Mr. DOERFER. Given that assumption directly. However, I am not quite as pessimistic as to believe that the people living within the 250,000 population limit that I have just indicated would be without a service.

Mr. COX. We will explore that also.

Mr. DOERFER. I think it will work out.

Mr. COX. Is it a fair inference, however, from what you said in starting, that in your opinion, east of the Blue Ridge or Alleghanies, you have substantially achieved the first priority to the maximum possible extent?

Mr. DOERFER. I think yes. I think that either most of the people there have it or it is available to them without doing violence or altering the sixth order and report.

Mr. COX. All right. Now, Mr. Lee, a while ago I think you had a comment regarding the chairman's statement that these priorities of the sixth report were still valid policies that ought to be pursued?

Mr. LEE. Well, as we go along here I just wanted the record to reflect my individual views on the items of importance. I think it is very difficult to quarrel with the objectives of the sixth report and order. It may be that they need some redefining. For example, maybe it is not realistic to say that we can provide each community with a service.

Maybe we will have to give some recognition to the area concept. As far as I am concerned at this time after reading most of these comments I would like to have the flexibility to determine where stations should be in any given area on application, irrespective of allocations of the sixth report and order.

In other words, I would retain some engineering standards, but I would like the ability to revise or waive them in a given situation. Where I can weigh in an area that they need a service, that it will provide additional service, and that it can be perhaps fitted in without violence and without interference.

I want the ability to say I will do it here, but I don't want to be stuck with the same situation somewhere else.

Mr. Cox. In other words——

Mr. Lee. I think the country is different.

Mr. Cox. You are going to handle this on a case-by-case basis?

Mr. Lee. I am leaning that way; yes.

Mr. Cox. Even though you felt it was not wise to handle deintermixture on that basis.

Mr. Lee. Yes. [Laughter.]

Mr. Cox. Are the present allocations of the sixth report based on a city-to-city approach or on an area approach?

Mr. Lee. Pretty much on a city-to-city approach.

Mr. Cox. Were those cities selected, however, to give at least a fair degree of areawide coverage?

Mr. Lee. I am not the person best qualified on that. It is my impression that at the time we made the allocations we did not fully appreciate how much coverage these stations would give. In other words, we might not have known as much as we do now. These signals go out further than perhaps were anticipated at that time, and certainly some recognition had to be given to the economic support.

The Chairman. Isn't it true that as time goes on we surely hope that the technological aspects of this are not going to remain just the same?

Mr. Lee. It should improve, if history teaches us anything.

The Chairman. Yes. Any new thing usually starts out in the places where it is most adaptable, and as we move along technologically and scientifically it spreads. That was true of the telephone. There are some areas in the United States today that still do not have telephones.

Mr. Cox. I think Mr. Hyde had a comment on that point.

Mr. Hyde. May I say that the sixth report did contemplate area coverage. The station assignments were made to communities, the Commission recognizing the fact that a station has to have a market and has to have a home base. But the geographical separations and engineering standards were all designed to permit the stations to locate in the cities where they have to be located to reach the areas which are entitled to service.

And the Commission did not approve that report without ascertaining in advance that it would give area coverage, assuming that stations were constructed and operated. I would like to mention in this connection that we have better national coverage in television now, after this very short experience operating under a nationwide plan, than we have been able to obtain in AM radio in 30 years of application-by-application processing.

Mr. Cox. Mr. McConnaughey, I think it was brought out earlier that you had recently stated in a speech that even when the Commission has disposed of all pending applications, some 66, or two-thirds, of our country's 100 top markets will have 2 television stations or less; is that right?

Mr. McConnaughey. I believe that is. If that is what I said, that is what I said.

Mr. Cox. I think this is from your speech to the Poor Richard Club in Philadelphia in December.

Mr. McConnaughey. That is correct.

Mr. Cox. You went on to say that you thought that this constituted an undue constriction, both upon advertising outlets and upon the availability of program choices to the people; is that correct?

Mr. McConnaughey. I think that is right; yes.

Mr. Cox. I think you also said that you were not willing yet to surrender the hope that the some 1,400 communities in this country which have a local newspaper or radio station would someday have their own television station.

Mr. McConnaughey. It certainly is my hope that can be accomplished.

Mr. Cox. Can you suggest at this time any basis on which it is conceivable that that can be achieved—that you can get that wide a distribution of stations and can avoid this undue constriction—which will not require full and effective use of the UHF portion of the spectrum?

Mr. McConnaughey. I do not know of anything right at this time, but I have great faith in development of this brandnew gadget, I will call it, television—this brandnew business and industry—that there will be developments made that will enable many, many people to have television outlets.

Mr. Cox. Do you have similar faith that there will be developments——

Mr. McConnaughey. You get into the economics of it, and the thing has to develop as economically as possible, plus technical improvements.

Mr. Cox. Do you have similar faith that techniques are going to develop that will bring an effective use of the FM band?

Mr. McConnaughey. I hope so; I don't know.

Mr. Cox. I take it, then, that if you still have this much unfinished business in accomplishing the policies of the sixth report and in achieving relief from this constriction and further extension of local services, that when in our last session you indicated that it was "much ado about nothing" to talk about delay in your procedures because the whole thing was going to be done in 12 months, you were speaking only of pending applications which were made for V channels under existing economic conditions?

Mr. McConnaughey. That is all; just with reference to what we have.

Mr. Doerfer. Just the V's?

Mr. McConnaughey. Well, V's and U's; whatever applications there are. I spoke of the number as 36 or maybe 35, or whatever it is. We are talking about what we presently have before us; that is all I had reference to.

Mr. Cox. In other words, however, the job of effecting a nationwide competitive system of television, or bringing local services to anything like 1,400, or even 700, communities is going to require years?

Mr. McConnaughey. I would think so, and a lot of developments and a lot of economic changes; something that you and I, nobody, can foresee.

Mr. Cox. Under the Communications Act the Commission is the agency which is primarily charged with developing the orderly and efficient use of the radio spectrum.

Do you agree that when the Commission feels that it lacks power to do something which it conceives is necessary to achieve that end, it should come to Congress, to this committee, and ask for changes in the law?

Mr. McConnaughey. I would think so; yes.

Mr. Cox. Do you feel that the Commission does require additional statutory authority from Congress at this time to assist in its continued efforts toward achieving a nationwide competitive television system?

Mr. McConnaughey. I think we would have to study it to find out, and that is what we are doing now, as you know, in this network study which you folks had us make. I think when we get through with this, we can make some suggestions to you, to the Congress of the United States. We have nothing specific sitting here today.

Mr. Cox. Isn't it true that the problem of the present allocations, at least as far as their impact upon the interrelationship, the intermixture of U and V stations is concerned, has been before the Commission at least since May and June of 1954, when the Potter hearings were held?

Mr. McConnaughey. Yes; sure.

Mr. Cox. Now, do you feel, for instance, that at least as far as you now know the Commission has all the statutory authority that it needs to deal effectively with the allocations problem in the course of its present proceeding?

Mr. McConnaughey. Well, I don't know. We may come back and ask you people for suggestions after we have made a study of it.

Mr. Cox. In other words, you are going to ask Congress whether it thinks you need more authority?

Mr. McConnaughey. No. We would come and ask you and tell you if we thought we needed more authority.

Mr. Cox. Very well. Then it is primarily, as far as the allocations problem is concerned, a matter of the Commission's making up its mind and then executing any policies that are decided upon within the powers which are already conferred upon you by the Communications Act of 1934?

Mr. McConnaughey. Yes; that is right.

Mr. Cox. Now, there has been some talk in your statement, and of course throughout the industry, about the possibility of obtaining more V channels. Do you have any substantial hope at this time that additional VHF channels can be obtained from other services?

Mr. McCONNAUGHEY. The Commission addressed a letter to the Office of Defense Mobilization some time ago and a study is being made by the Government today at a pretty high level.

Mr. Cox. Could you tell us approximately when that letter went forward?

Mr. McCONNAUGHEY. It was in the fall. And then an ad hoc committee was appointed and a staff committee was appointed from Government and they have been working, and working pretty hard, on that very subject.

Mr. Cox. Well, realizing of course——

Mr. McCONNAUGHEY. So I can't tell you a thing about it.

Mr. Cox. Realizing of course that their efforts are not complete I am asking you for the expression of a personal opinion as to whether you think this is likely to be productive.

Mr. McCONNAUGHEY. I cannot answer that, I do not know.

The CHAIRMAN. You have the military working on it?

Mr. McCONNAUGHEY. That is right.

The CHAIRMAN. You have an ad hoc committee within the defense group?

Mr. McCONNAUGHEY. That is right.

The CHAIRMAN. And we have our ad hoc committee which is working on the same problem?

Mr. McCONNAUGHEY. That is right, yes.

The CHAIRMAN. They are all engineering problems?

Mr. McCONNAUGHEY. Yes, sir, they are.

The CHAIRMAN. I might say to the Commission that we have had several meetings, not several, 2 or 3 meetings, with part of the ad hoc committee that we asked to work here, including Dr. Bowles, who is the chairman, and they are quite active and will be for the next few weeks in an effort to see what they can recommend to us which of course would be a recommendation to you people.

Mr. McCONNAUGHEY. Which would be very helpful.

Mr. Cox. Can you at least tell us this much, Mr. McConnaughey: In your opinion is there any conceivable possibility that this work now being carried out with respect to additional V spectrum space can produce any number of channels remotely comparable to the 70 UHF channels which are already available for television?

Mr. McCONNAUGHEY. Well, you are just asking me my personal opinion; I would not think it would be possible.

Mr. Cox. There is not that much frequency space even under discussion, is there?

Mr. McCONNAUGHEY. No.

The CHAIRMAN. And of course you run into the practical problem. That requires a change in sets, too?

Mr. McCONNAUGHEY. Certainly.

Mr. Cox. Could you explain that a little further?

That is, don't you have the same problem there of set incompatibility that UHF operators initially had?

Mr. McCONNAUGHEY. A good deal, yes, sir.

Mr. Cox. Aren't you going to have to convert sets to receive signals on any new V channels?

Mr. McCONNAUGHEY. Yes.

Mr. LEE. May I just add that that conversion is considerably less of a problem than the UHF conversion, if you convert to a new V channel.

Mr. COX. In what way?

Mr. LEE. For example, you do not need a new antenna, which might be half the cost.

Mr. COX. Is the cost of the tuner substantially less than a UHF converter?

Mr. LEE. It varies by area and depending on where the space is. I am advised, for example, that if some adjustment came out where you would use some FM space, the cost there might be as low as, oh, maybe a dollar plus a service call, or maybe you could do it yourself.

The CHAIRMAN. It is cheaper?

Mr. LEE. I understand it is very simple in that instance.

Mr. COX. In any event, however, a licensee licensed by the Commission to operate on such a frequency would have the problem, through programing or other means, of persuading local viewers to take the effort to make that conversion?

Mr. LEE. That is right.

Mr. COX. Would you say that the possibility of getting additional V channels from the military or from other present users can be realistically considered by the Commission as a solution to the allocations problem as it is now presented to the Commission and as it must be decided in its pending rulemaking proceeding?

Mr. MCCONNAUGHEY. It certainly could contribute. I do not think it is a final answer one way or another, but it certainly could contribute.

Mr. COX. Even if you get additional space there, how long is it going to be before it will be available for commercial television use?

Mr. MCCONNAUGHEY. There again nobody in the world can answer that.

Mr. COX. It will be years, won't it?

Mr. MCCONNAUGHEY. I do not know. It could be or could not be.

Mr. COX. Mr. Bartley?

Mr. BARTLEY. Not necessarily.

Mr. COX. That is you think it is possible that the military can be displaced without some period for amortization of their existing equipment, also the aviation people and so on?

Mr. BARTLEY. I do not know. That is what is being studied now.

The CHAIRMAN. That is what we are trying to find out.

Mr. BARTLEY. That is what we can't find out yet either.

Mr. MCCONNAUGHEY. That is what we are trying to find out too.

The CHAIRMAN. And of course if we should find out that these would be available that still means we have just another tool to work with to help solve the allocation problem, that is all.

It may be the one we want to use and it may not.

Mr. MCCONNAUGHEY. I don't know.

Mr. LEE. As a matter of fact, Mr. Chairman, part of the decisions as to how quickly such a channel might be available would be a congressional consideration, through appropriations.

The CHAIRMAN. Oh, yes.

Mr. LEE. If you might be willing to spend a lot of money and obsolete something instead of letting it amortize.

Mr. COX. That would cost a lot of money, wouldn't it?

Mr. LEE. I am afraid it would.

Mr. Cox. In the range of billions of dollars?

The CHAIRMAN. It would not be that, but the way they spend money it is a lot of money.

Mr. Cox. Didn't you say in your report to this committee last March, your original comments [1] on the Plotkin and Jones Report, that the addition of substantial VHF space would involve such tremendous dislocation of existing operations that it should be considered only if Congress itself should determine this should be done?

Mr. McCONNAUGHEY. I think that is right. It is just as Commissioner Lee pointed out, it gets into something that has to come to Congress.

Mr. Cox. Do you feel you lack authority to make such adjustments, assuming you can reach agreement with the military?

Mr. McCONNAUGHY. You come into the money proposition where you have to come to Congress.

Mr. Cox. It would be largely on appropriations, rather than a question of your authority?

Mr. McCONNAUGHEY. I think that is right.

The CHAIRMAN. Congress would have to agree that it is worth while to spend this money in the solution, otherwise you could not do it.

Mr. McCONNAUGHEY. That is right.

The CHAIRMAN. You could do it, but otherwise it wouldn't be done, I should say that.

Mr. Cox. Turning now to your very interesting discussion, in your statement, of the Commission's network study, am I correct in assuming that that study is for the long-range general guidance of the Commission, and that you are not looking to it to develop answers to the UHF problem, and therefore do not propose to withhold an order in your rulemaking proceeding until that study is completed?

Mr. McCONNAUGHEY. You are correct about that.

Mr. Cox. Are you agreeing, Mr. Doerfer?

Mr. DOERFER. No, I was not agreeing, no.

Mr. Cox. All right, let's have your view, then.

Mr. DOERFER. Well, I think that as we go along with the network study, we may find some basis for some change which may help solve the UHF problem. I indicated before that I am exploring the possibility of having the Commission issue some proposed rulemaking which would deny an affiliate the right to scoop off the cream of the best networking programs of 3 networks in a market where there are 2 U's either operating or potentially capable of operating.

I am not as pessimistic about the development of UHF as some people are. I do feel that the Commission and Congress should not get too impatient. After all, it is an infant industry. An industry, if it needs anything, needs a certain amount of stability, definiteness. Set a policy, even if it is not a perfect one, and industry will be able to work with it.

Now, I say that in the absence of some very bold stroke to move it up in the UHF or to deintermix the first dozen major markets. Now with respect to the network study I am satisfied that some, not all, of the UHF problem has to do with programing and network programing.

[1] These and other comments of the Federal Communications Commission on the Jones and Plotkin Reports are set out in appendix II.

But I am also aware, Mr. Cox, that some UHF, at least one that I can document, has gone off the air albeit it had a network-affiliation contract.

So, the solution is not as easy as some people would lead you to believe, although I do think that with respect to some of the critical areas, if we could devise some legal constitutional means, without destroying the fundamental concept of the act which is free interplay of enterprise and competition, and devise some way to get some networking program to the UHF operators, I think that we have probably solved the immediate problem and we would lay a good foundation for the ultimate growth, and that is the intermixture of U's and V's for we need both.

Mr. Cox. All right. Now as I recall it——

Mr. McConnaughey. I think I answered your question. It is not anything different from what the Commissioner says. We, of course, will use whatever information we obtain from the network study that can be of use, but we are not going to hold up our rulemaking proceedings until the network study is completed.

Mr. Cox. The target date on that network study is probably July 1957?

Mr. Doerfer. There are many things connected with the study which may not have anything to do with the life and death of UHF.

The Chairman. In the network study, you are going to study contracts, you are going to study questions of monopoly, all phases of the problem?

Mr. McConnaughey. Programing, talent.

Mr. Cox. Are you attempting to accelerate that part of the study which bears on this possible rule you are discussing, limiting the affiliation rights of a V?

Mr. Doerfer. Well, it has been accelerated to this extent, that four Commissioners spent a good deal of time in New York with respect to the first once-over involving networks, national spot representatives, advertising agencies, talent agencies. We have got a rough picture which we hope will be filled in and studied further by the staff. It has given me, and I am satisfied some of the other Commissioners, much more intimate knowledge as to how these things work.

Now with the proposition which I just indicated before, I feel at the moment that it is possible to work out a rule, but yet I realize my shortcomings with respect to experience, and I would like to test it out with the other Commissioners and with the industry, not only the UHF people but with independent operators and network people themselves.

I think with some of the studying that the Commissioners have been doing on their own, that it might be possible to get some rulemaking going within, I would say, a week or 2 weeks, if we feel that 1 or 2 possibilities would aid not only the immediate solution, but would be harmonious with a long-term solution.

Mr. Cox. In connection with what you have just said, is it planned to conduct this investigation by your network committee through informal private conferences such as these recent meetings held in New York, or is it intended that at least in part, to the extent possible, you will develop a public record which will permit all segments of the industry to know what has been submitted to the staff, to comment on it, and where necessary to correct it?

Mr. DOERFER. I do not know what the Commission will do. My viewpoint, if you are asking that, is that no doubt a good deal would be handled through the public hearing process. But I am reluctant to make public that which may be a trade secret, that which may cause more harm to the programing for the people than good. Now, there is an area within which the networks operate that I do not think it would contribute much to the solution of any of our problems to make it public.

Mr. COX. Will you at least do this, and perhaps I should address this question to Mr. McConnaughey—perhaps he would like to answer my general question about this procedure—it is your view that if you are presented with such information, and perhaps do not desire to make it public, that you should at least undertake investigations in other segments of the industry to check to see whether the information you have been supplied is accurate and is not in any way distorted?

Mr. MCCONNAUGHEY. Yes; we naturally would——

The CHAIRMAN. What we are trying to say is that I could appreciate that you must have these informal conferences to get sort of the feel of things, and then you would probably have informal conferences with other segments of the industry?

Mr. MCCONNAUGHEY. That is what we propose to do, Mr. Chairman. I don't think we would ever make any final decision, I am speaking for myself, without having a public hearing.

The CHAIRMAN. And surely this Commission would say right now that before any decisions are made, all segments of the industry should be heard, and sometimes in public?

Mr. MCCONNAUGHEY. Yes.

Mr. DOERFER. Oh, yes.

Mr. MCCONNAUGHEY. By all means, that is exactly what we do.

Mr. DOERFER. That I may not be misunderstood, I was thinking about the revelation, publicly, of the negotiations that go on between a network and talent. If they were made public, my present appraisal of the situation is that the talent would just play one network against the other, and just increase the cost of programing. Of course that is talent's right to do so, to drive the best bargain they can. But I do not know why a governmental agency should get in there and tip the scale of something which does not really concern the public to that extent.

Now, if it does, I am heartily in accord with even putting that in a public hearing. But I would have to be convinced first that a public good would be the ultimate result.

The CHAIRMAN. But you surely should not ignore contracts that create a monopoly of talent in any one given place?

Mr. DOERFER. I agree with that, absolutely.

The CHAIRMAN. And you should not ignore the fact that maybe 2 or 3 or 4 or 5 large advertising agencies might—I don't say this is happening—but it could be possible the trend would be such that there would become a monopoly of talent?

Mr. DOERFER. Well, if there is any evidence on our first run there which points——

The CHAIRMAN. In other words, that is what you are looking at. If that is true, you are going to pursue that I hope?

Mr. DOERFER. Yes.

Mr. MCCONNAUGHEY. No question about that.

Mr. Cox. In connection with what you have indicated about your desire to reach all segments of the industry, is that, subject at least to budgetary problems, going to include visits to Los Angeles where the film producers are largely centered, consultation with advertising agencies, local stations, national spot representatives and so on, independent stations throughout the country, not centralized in this area or in New York?

Mr. McConnaughey. Oh, no. No, no. We will do it on an overall basis.

The Chairman. I think we ought to be clear here because this is a very important study. You might be subject to some criticism. On the face of things it might appear, since you went to New York and had an informal private conference with some of the networks, that maybe you are sitting down in some closed room and talking things over. But as I understand what you were doing, you are doing this first so you can get sort of a feel of the thing.

Mr. McConnaughey. So our network study committee would get—yes, you put it very well, we get a feel of it.

The Chairman. Then you go out and do the same thing with other segments of the industry?

Mr. McConnaughey. That is right.

Mr. Cox. Then you come to a point where you are going to decide on public hearings on the many factors involved?

Mr. McConnaughey. Yes, you go to the station around over the country, I mean get a complete overall job, and then have a public hearing before a decision is made.

Mr. Cox. Is it fair to say, although we have been referring to this as the network study, that actually it is a study of the economics of the entire broadcasting industry and will therefore involve consideration of the problems of the affiliate, of the independent station, of the independent film producer and so on?

Mr. McConnaughey. I think yes, because they are so interrelated, Mr. Cox.

Mr. Cox. It is called a network study only because of the preponderant position which is occupied by the three major networks?

Mr. McConnaughey. That is right.

The Chairman. That is why you have got to embrace such questions as whether independent stations have equal and fair access to programs?

Mr. McConnaughey. Correct.

The Chairman. Whether the small-business man has a fair chance of employing television to advertise his product or services?

Mr. McConnaughey. That is right.

The Chairman. What is the chance of the small-business man in a given community today to use the world's greatest medium of expression, television, to advertise his product?

Is he shut out because of a network situation?

Is it approaching a monopoly? Or does he have an equal access to a television station?

Mr. McConnaughey. I think that is right, that is one of the very, very, important——

The Chairman. I think that is the most important thing of all.

Mr. McConnaughey. Yes, that is just vital, just vital.

Mr. Cox. Turning again to this ever-prevalent question of UHF, you referred briefly in your statement to the——

The CHAIRMAN. Before we go into that, I think we will take a recess, give the reporter a rest here, for about 10 minutes.

(Short recess.)

The CHAIRMAN. The committee will come to order.

Mr. Cox. You referred very briefly in your statement, Mr. McConnaughey, to the difficulties of the UHF operators, without going into any detail. I would like to ask whether you agree in general with the factual analysis of the extent and causes of their problems which is set forth by Mr. Jones and Mr. Plotkin in their reports.

Mr. McCONNAUGHEY. I would have to analyze those pretty carefully to give you an answer to that. There are some 100 pages of their reports and they are not in harmony, one with the other. They have disagreements.

The CHAIRMAN. Well, we are talking about the facts that they put in the reports.

Mr. Cox. Have you not had those analyzed? They were sent to you last February.

The CHAIRMAN. Some of them were economic facts, the number of stations.

Mr. McCONNAUGHEY. I think, generally speaking, the facts are correct.

Mr. HYDE. If I may add a word here, I would direct your attention to a statement that was made in behalf of the Commission in connection with the hearings conducted by Senator Potter. In that statement we outlined the whole history of the development, and reported to the committee the various considerations which entered into the difficulties which have prevented ultrahigh stations from reaching the success which the sixth report contemplated.

The CHAIRMAN. But the facts in both cases——

Mr. HYDE. Largely a recitation of the factual pattern as it developed after lifting the freeze.

Mr. Cox. In your opinion, if the UHF channels are allowed to stagnate, in the sense that you do not have applications for the available allocations and if UHF stations continue to leave the air, do you think there is a danger that there will cease to be any adequate incentive to manufacturers to develop high quality all-channel sets, high-power UHF transmitters, and the other equipment which is necessary for this technical development that you were talking about awhile ago?

Mr. HYDE. I think a number of manufacturers, from what I understand from our chief engineer as he testified last week or the week before last, a number of manufacturers are working pretty hard to try to perfect technical improvements in UHF, and I think that will continue. I think many of them are very much interested in trying to perfect it.

Mr. Cox. Do you think that that will continue even if there is a growing disuse of U channels so their possible markets for either sets or transmitters are reduced?

Mr. HYDE. If they all go off the air, no, of course not. But we do not anticipate that is going to happen at all.

Mr. Cox. If half of them go off the air, is that not going to have a substantial discouraging effect upon technical development in the field?

Mr. Hyde. I would think it would have some effect on them, yes.

Mr. Cox. If these channels, the UHF channels, fall into growing disuse, is there not grave danger that the chance of ever making effective use of them for commercial and educational purposes might be lost for good?

Mr. Hyde. No question about it. If they continue to go off the air at a rapid pace, it is going to discourage the development of UHF.

The Chairman. Of course, the fact is that despite what we have been trying to do, as I understand it, last year there were less all-channel sets made and put on the market than there were a year ago.

Mr. McConnaughey. I think that is correct. I think that is right.

Mr. Cox. Mr. Webster?

Mr. Webster. Referring back to a question you asked a minute ago. There is apparently a recent development that may help out UHF. I have in front of me the release of RCA that announces the production of a 4½-million watt radiated power for UHF–TV transmitters. This shows the encouragement that is taking place, at least on the transmitter side.

Mr. Cox. Is this the first such high-powered transmitter that has been available?

Mr. Webster. Apparently. It is a new tube. As far as I know, as I say, I have just looked at the release, and all I know is what I read in the newspaper.

The Chairman. Well, is not NBC buying 2 or 3 UHF stations? Two?

Mr. McConnaughey. Two, yes.

The Chairman. That is a recent application, is it not?

Mr. McConnaughey. Yes.

The Chairman. They might be buying them for experimental purposes on this.

Mr. Cox. That is in Buffalo and Hartford, is it?

Mr. McConnaughey. That is right; that is right. CBS bought one.

The Chairman. CBS has bought one, too?

Mr. McConnaughey. In Milwaukee, yes.

Mr. Cox. And is applying for one in Hartford?

Mr. McConnaughey. CBS? Yes, that is correct.

Mr. Cox. Or, rather, the one in New Britain which serves Hartford.

Mr. McConnaughey. Yes, that is the reason for my confusion—it is the same one.

Mr. Cox. Now, is it not true that in those areas, the people from whom the networks are acquiring the stations have already achieved substantial set conversion?

Mr. McConnaughey. Yes, I think so.

Mr. Cox. So that this is not going to contribute materially to the sale of all-channel sets?

Mr. McConnaughey. Well, in Buffalo, I guess it would. I think it would in Buffalo. Of course, the same thing you can say where we had these deintermixture cases, most of the people already had UHF sets, as you know. So the question of how much that would contribute to the sale of additional UHF sets——

Mr. Cox. They would both contribute primarily, would they not, in the sense of providing a more or less guaranteed future market for replacement sets, at least?

Mr. McConnaughey. Let us put it this way: That it might be an encouragement to some extent.

Mr. Cox. I believe I understood you to say at our last session that all of the pending UHF construction permits which have not been utilized, in the sense of starting construction, have now been extended until July 16 of this year, pending your further proceedings.

Mr. McConnaughey. That is correct.

Mr. Cox. Now, are you extending all of these permits, including those which may have been applied for and received within fairly recent months, even in the light of all the information that now exists as to the problems which face the UHF operator?

Mr. McConnaughey. We have nothing to extend on the more recent ones, but the ones that have been there longer, we have extended them.

Mr. Cox. What is the initial period of such a construction period?

Mr. McConnaughey. Eight months.

Mr. Cox. In other words——

Mr. McConnaughey. The ones recently being filed, there is nothing to extend.

Mr. Cox. No action is required on them?

Mr. McConnaughey. That is right.

The Chairman. But you have extended quite a few of them?

Mr. McConnaughey. The ones that need to be extended. We have extended all of them.

The Chairman. I should know this but I do not—how many educational channels are on UHF?

Mr. Doerfer. About 200.

Mr. McConnaughey. Pretty close to it.

The Chairman. About 200. Then how many on VHF?

Mr. Doerfer. About 57.

The Chairman. So most of the educational channels are on UHF, is that right?

Mr. McConnaughey. Two-thirds of them.

The Chairman. Two-thirds of them. I wanted to get that in the record. In the case of educational stations you have to extend construction permits quite frequently, do you not?

Mr. McConnaughey. Oh, yes.

The Chairman. I can understand that because they have difficulty in financing.

Mr. McConnaughey. That is right.

The Chairman. Legislators do not appropriate money for them.

Mr. McConnaughey. A lot of things come into that picture.

The Chairman. Yes.

Mr. Cox. We have been talking here, of course, for several days now about deintermixture. I think perhaps it would be wise if we got a definition of that in the record. Could you tell us just exactly what is meant by deintermixture?

The Chairman. Educate me and the press table there, and everybody else.

(Laughter.)

Mr. McConnaughey. Well, when you deintermix, you remove a channel that has been allocated and make it all one band.

Mr. Cox. It is an adjustment of the allocations which would result in all V in one area and all U in another?

Mr. McConnaughey. All U, yes.

The Chairman. But you have got it mixed first, have you not?

Mr. McConnaughey. Yes. You have an allocation, we will say, of a V and two U's. If you are going to deintermix, you would say that the V would be taken out, and that could become a U. It would replace the V with a U.

Mr. Cox. Is it not true, however, that some proposals for deintermixture do not go quite all the way, but would leave perhaps a dominant V in the market and additional U's, but would eliminate a second V, or any further V's?

Mr. McConnaughey. Yes, there are different shades of deintermixture, partial deintermixture, total deintermixture.

Mr. Cox. Then "selective deintermixture" is simply the concept of applying deintermixture not across the Nation, nationwide, but in carefully selected areas?

Mr. McConnaughey. In areas.

Mr. Cox. Selective deintermixture was suggested as a possible solution for this problem as early as the Potter hearings, was it not, in May and June of 1954?

Mr. McConnaughey. I was not here at that time. It may have been.

Mr. Cox. Then in his report, did not Mr. Plotkin suggest that the Commission should reconsider certain petitions for selective deintermixture which it had previously denied?

Mr. McConnaughey. Yes, he did.

Mr. Cox. During the spring and summer of 1955, is it not fair to say that the Commission represented to this committee on at least three occasions that it was considering selective deintermixture as a possible solution to the UHF problem?

Mr. McConnaughey. Yes.

Mr. Cox. And in addition, did you not, sir, in testifying before a subcommittee under the chairmanship of Senator Pastore, in connection with the protest bill, state that the Commission was withholding VHF grants in areas where deintermixture had been requested until decision was reached on the question of whether or not to deintermix?

Mr. McConnaughey. Yes, we did withhold them until we made a decision not to deintermix.

Mr. Cox. Have you ever decided, on the merits, whether you are or are not going to deintermix in the areas which were in question?

Mr. McConnaughey. Well, it will come under this broad rulemaking proceeding. We refused to deintermix in these particular markets.

Mr. Cox. Without prejudice; was it not?

Mr. McConnaughey. Yes.

Mr. Cox. And you are still considering that in the pending allocations procedure?

Mr. McConnaughey. Absolutely.

Mr. Cox. So you have never actually, in any of the cases that you were talking about when you were before Senator Pastore's subcommittee, you have never actually decided in those areas whether to deintermix or not?

Mr. McConnaughey. Not as of now, no.

Mr. Cox. Now, as I understand it, the time for reply comments in your pending allocations proceeding expired on February 8?

Mr. McConnaughey. That is right.

Mr. Cox. You have already talked about the overall time that various members of the Commission thought this proceeding might take?

Mr. McConnaughey. Right.

Mr. Cox. I would like to consider briefly what some of the steps will be that are involved in your further proceedings. Now, what is the next stage of your proceeding?

Mr. McConnaughey. Having the staff digest some 200 comments and some 350 reply comments.

Mr. Cox. That work, I assume, has been going on ever since the comments first began to come in last December?

Mr. McConnaughey. Right; correct.

Mr. Cox. And I believe you stated last time that you had some 4 or 5 people at work on them?

Mr. McConnaughey. When you speak of comments starting to come in last September——

Mr. Cox. December, I meant.

Mr. McConnaughey. December. I thought you said September.

Mr. Cox. No.

The Chairman. Let me ask you this——

Mr. McConnaughey. We have seven people working on that at the present time, in addition to the heads of the departments. Excuse me, Mr. Chairman.

The Chairman. We discussed this at the last hearing—the number of people you might have. Is it possible to speed that work up by putting on more people?

Mr. McConnaughey. Yes, if you sacrifice other work. That is a question of allocation—it is a question of allocation of work.

The Chairman. Do you not think we ought to go ahead faster on digesting those replies, get more people?

Mr. McConnaughey. I was surprised last week, Mr. Chairman, to find out how rapidly these people have been—how much time they have been spending, how rapidly they are able to digest them. They indicated to me that within another week they expect to have practically all lof them digested.

The Chairman. That is fine. I hope that will be done.

Mr. McConnaughey. They have been doing a terrific job.

Mr. Cox. What will be the next step after that?

Mr. McConnaughey. Then they will come to the Commission to study those digested comments.

Mr. Cox. Do you plan to hold oral arguments on this matter?

Mr. McConnaughey. Do we?

Mr. Cox. Yes.

Mr. McConnaughey. We have not decided whether we will or not.

Mr. Cox. It is possible that you may?

Mr. McConnaughey. It is possible.

Mr. Cox. I believe you stated that in your best judgment you, individually, believed that the Commission would be in a position to issue its final order in these proceedings in, say, from 4 to 6 months?

Mr. McConnaughey. I said I would hope within 6 months we could.

The CHAIRMAN. I still want to say I hope it is done before we quit here.

[Laughter.]

Mr. McCONNAUGHEY. Are you quitting before 6 months?

The CHAIRMAN. Well, we might. [Laughter.] Senator Bricker has some important business in San Francisco and I have some important business in Chicago, and we have got to be there.

Mr. MACK. I might say, Mr. Chairman, that I hope that the FCC and this committee of yours will be able to work this thing out faster than the ICC and this committee have worked out the railroad passenger deficit.

The CHAIRMAN. Yes, I hope so, too.

[Laughter.]

Mr. Cox. Mr. Webster?

Mr. WEBSTER. I wouldn't want to let the impression be gained on the length of time it is going to take us to come to a final decision. You mentioned final decision. I would like to point out that when these comments are digested and they are laid before the Commission, I can't digest them overnight. It is going to take me some time, and I don't know how long that is going to be. I hope it is a short time, but I have a lot of other things to do besides digesting these. If you want the work of the Commission to go forward, that is. Now, after I have digested those and we have a meeting and decide our course of action, that doesn't close the matter.

Mr. Cox. That is what I was coming to.

Mr. WEBSTER. We at that point—and this is the point I want to make—at that point we have to sit down and work out what we think would be a practical set of changes to the rules. Now, when we do that we are then just starting, because we have to put those proposed rules out for rulemaking, and we have to go through a series of rulemakings to put those rules out for the public to comment on.

Mr. Cox. In other words, you have another round of comments and reply comments?

Mr. WEBSTER. Yes—now, wait a minute. When they go out, the public is entitled to comment on those and I am as sure as I sit here that there is going to be a lot of disagreement with it, because we are not going to—as far as I am concerned I am sure that our solution is not going to be satisfactory—well, I was going to say to anybody.

(Laughter.)

Mr. Cox. Not to everybody.

Mr. WEBSTER. Not to everybody. And we are going to have a series of disagreements and we may end up with a public hearing so that the people can come in—and this is the point I want to make because I am very sincere on this—I want to be in a position where I can test what these people, who have made comments, test their material on a record. Now, all we have at the present time is self-serving statements. I have no way of testing them; even though they might be under oath, I have no way of testing them, unless I get the person on the stand to test them. And I don't mean by that that they have done anything wrong or said anything wrong. But if I am going to make a decision in this matter, I want the man that made those statements in front of me so I can test them. That doesn't mean I have to test everybody. I will select out those that I think are important enough to test. So I want—I don't want to leave anything misunderstood here that this thing is going to wind up in a month or a few days.

Mr. Cox. Mr. McConnaughey, that is the thing I want to pin down. When you say 4 to 6 months, is that going to be the date, the time within which you expect to issue these proposed rulings for further comment?

Mr. McConnaughey. I would think that we should be able to issue those in not a longer period than that. But when it comes to a finalization, which Commissioner Webster had reference to, which is a statutory requirement.

Mr. Cox. I realize that.

Mr. McConnaughey. To attempt to say there will be any final decision and conclusion in 6 months, it is a very optimistic statement, from a practical standpoint.

Mr. Cox. Then how long is it going to take, in your best judgment, from now till the day when you will have gone through all the procedures statutorily required and you will have issued what in your best judgment, after weighing all of these comments, is the set of rules regarding possible changes in the allocation?

Mr. McConnaughey. I would have not the slightest idea.

The Chairman. Can't you fellows——

Mr. McConnaughey. Nobody in the world can ever——

The Chairman. Can't the Commission set a target date? You may not hit it.

Mr. McConnaughey. Mr. Chairman, if you set a target date on when you would hope to get out——

The Chairman. The rules.

Mr. McConnaughey. The rules. But then when you get out the rules and you start romancing about what answers are going to be, and what demands are going to be for hearings, and how long the hearings are going to take, and how long it is going to take the Commission, of necessity, to come to some attempted logical, wise solution, there is no man alive, and I repeat that, can say the day or the month that that is going to happen. I hope within——

The Chairman. Would this be a fair question to ask you: Do you consider this to be—this whole matter, which is probably the real reason why we are all here—a top priority insofar as your time and energies are concerned?

Mr. McConnaughey. To me, sir, it is the very top priority, which we have to be thinking about.

The Chairman. I appreciate that you have other things to do. You are a lot like us up here on the Hill—there are several things going on this morning that Senator Bricker and I should or could attend, but some mornings, some days, we have to just decide which one we think is the most important.

Mr. McConnaughey. I feel this certainly has top priority, but there would be a lot of people that would take exception to my statement in that regard, particularly all the people in industrial radio—thousands of applications, 163,000 of them filed this year and 170-some next year—they would take very violent exception to that, and they'd say "You are just a thousand percent wrong. You don't know what is important. You have gotten 90 percent of this country covered. We have something that is vital to the defense and protection of the country."

The CHAIRMAN. Yes.

Mr. McCONNAUGHEY. I mean you could get a lot of arguments on what should take top priority in this business.

Mr. COX. We understand that you, at least, are giving this top priority.

Mr. McCONNAUGHEY. Yes, that is my personal view.

Mr. COX. Isn't it also true that, even in line with this statutory requirement, you can expedite these matters by setting short periods for comment and reply which can perhaps speed up the process?

Mr. McCONNAUGHEY. Oh, yes. It has to be reasonable. I mean you always have to use a rule of reason.

Mr. COX. Mr. Hyde?

Mr. HYDE. I think you are overlooking one important additional step. If the change in rules should by any chance require changes in licenses now existent, or if these changes should require modification of these permits that we are now granting, there would have to be notices to those holders and an opportunity for hearing before the Commission could order the modifications of permits or licenses necessary to effectuate the rule change.

The CHAIRMAN. Then you may run into some court action.

Mr. HYDE. Undoubtedly.

Mr. McCONNAUGHEY. No question about it. I shouldn't say that, but I imagine you will.

Mr. COX. But at that stage, at lease, you will have reached a new policy as far as the Commission is concerned, and it is a question then of effectuating the policy.

Mr. HYDE. Yes, sir. Once the policy is stabilized, and once it is made clear what the Government policy as to use of channels is going to be, we will have made a reasonable contribution to the solution of the problem now before us.

Mr. McCONNAUGHEY. Mr. Chairman, I would like to make a statement which is my own feeling, a good deal—that when we come to some decisions as to proposed rulemaking, and we put those out, while that isn't a final answer, I think that that is going to be a very substantial alleviating assistance to this whole thing, to this whole picture. It doesn't resolve it finally, but I think it is going to be a very substantial help in the settlement of this entire allocations problem.

The CHAIRMAN. Well, at least the industry will know then where it is going.

Mr. McCONNAUGHEY. That is what I was—that is what I am talking about.

The CHAIRMAN. With some exceptions, but there will be some broad——

Mr. McCONNAUGHEY. They will have some guideposts.

Mr. COX. Am I correct in my understanding, Mr. McConnaughey, that the reason for the action of the majority of the Commission in denying the petitions for deintermixture on November 10 of last year was that you had concluded that the problem was nationwide in scope and that deintermixture in these five communities would not solve the broader problem?

Mr. McCONNAUGHEY. That certainly was what we were taking into consideration.

Mr. Cox. Wasn't that problem nationwide in scope when you instituted the deintermixture proceedings back in April of 1955?

Mr. DOERFER. That is what I thought. But I stood alone.

Mr. Cox. Didn't you so state in your notice of proposed rulemaking in April 1955?

Mr. DOERFER. I was giving you my view. I thought in April it was certainly nationwide. I opposed the rulemaking. I am speaking for myself now. I opposed the motions to deintermix on the basis of what was before us at that time.

Mr. MCCONNAUGHEY. I think, to answer your question, the majority of the Commission felt that they wanted to look at these five cases which you have reference to on an individual case-by-case basis, and the majority decided that that would not be an answer to this problem, that we ought to go into a complete study of the whole picture as far as the country is concerned. I think a good many of us felt that it would not be an answer, it would not be of any material help and it might keep some people from getting service. We didn't feel—we felt we were still operating under the sixth order and report—it has not been changed—that there should be no attempt at selectively deintermixing in any of these markets.

Mr. Cox. In light of your statement in your decision that you denied deintermixture primarily because you concluded it was not a solution to what you had now determined to be a nationwide problem, isn't it true that on page 5 of your decision of November 10, in a footnote, you stated: "In our notice of further rulemaking * * * in Docket No. 11238, issued April 21, 1955, we explained that we were 'attempting to arrive at a decision of future policy to be uniformly followed, wherever possible, in the effectuation of our allocation table for a nationwide television system.' "

Mr. MCCONNAUGHEY. We were attempting, but it didn't work out.

Mr. Cox. Then it was not a sudden discovery in November that this was a nationwide problem with which you were attempting to deal.

Mr. MCCONNAUGHEY. No. It has become a gradually increasing problem.

The CHAIRMAN. Mr. Chairman, wouldn't it seem clear that even at the time of the Potter hearings the question of allocations, as it bears on UHF, was a nationwide problem?

Mr. MCCONNAUGHEY. I was not here, sir, but I would think so. I say, I would think so. I think it has been a nationwide problem, and is going to continue to be a problem.

Mr. Cox. Is it true certain UHF operators in other areas, aside from the five which you were specifically considering, were advised by the Commission that it wasn't necessary to institute rulemaking on their petitions because nationwide policy was going to be made on the five cases in Madison, Peoria, Evansville, and so on?

Mr. MCCONNAUGHEY. I don't think so. I think we were just looking to see if it was a nationwide problem.

Mr. Cox. You were looking to see if it was a nationwide problem?

Mr. MCCONNAUGHEY. To see how much it developed into a nationwide problem.

Mr. Cox. Don't you think, as I believe was suggested awhile ago by one of the members of the Commission, that when you reach a nationwide solution to the allocations problem, it is quite likely it is going to consist, not of a universal rule that can be applied in every part of the country, but is going to be made up of a combination of various proposed remedies?

Mr. McCONNAUGHEY. That is certainly possibly true, possibly. It may come out where there can be shortening separations, where you can get more VHF channels assigned. There is just a lot of things that may come out of it. I mean, it is not strictly a UHF–VHF problem. It is a problem that the Commission is now, I think quite properly, after the sixth order and report—4 years have elapsed—taking another look to see what can be done in light of experience.

Mr. Cox. After looking at all these comments and all the proposals, isn't it likely that you are not going to pick on one and say, "We are going to apply the logic of this recommendation to every community in the United States," but that instead you will look at one community, and then at another community, and decide which of these proposals, in the broad picture, is going to produce in this area the goal you are seeking?

Mr. McCONNAUGHEY. Well, you tie into a broad, overall picture—you can look at the individual communities, but to me it is a broad overall picture. It is not a localized picture. I mean, you never can say, "Well, this State has this and this State has that, and because this community doesn't have this, this one is going to have that." I think it is too big; when you start looking at the United States in spectrum, you have to do it on a nationwide basis.

Mr. Cox. How are you ever going to develop a universal without consideration of some specifics in the first place?

Mr. McCONNAUGHEY. Well, they all work together. I mean, it all works together. I mean, you can't pick out one town or one community and say, "We are going to build a nationwide allocation around this community."

Mr. Cox. No; but in reaching a nationwide system of allocation, you are going to have to consider a possible choice among different solutions which, fitted into the whole context, best develops the problem in a particular area.

Mr. McCONNAUGHEY. That is correct. That is correct.

Mr. Cox. Now, do you think that deintermixture—which as I understand it, you say you are still considering—do you think that selective deintermixture fits conditions in Madison, Evansville, Hartford, Peoria, and the Hudson Valley as well as it is likely to be found to fit anywhere in the United States?

Mr. McCONNAUGHEY. I don't know if that is true. I say, I don't know if that is true at all.

Mr. Cox. Didn't you develop considerable information in those proceedings, prior to dismissing them, as to what the facts were in those areas?

Mr. McCONNAUGHEY. And we concluded we should not deintermix under existing conditions, but go into the nationwide situation. I don't know whether deintermixture is an answer in Peoria or not. I don't know today. It is difficult to say.

Mr. Cox. I think it was indicated earlier that at least some members of the Commission felt that in November they had sufficient information about these communities, and the impact of selective deintermixture on them, to decide the cases on the merits, even though they were willing to look ahead to a general allocations proceeding to take care of the rest of the country.

Mr. McCONNAUGHEY. It is true of two of the Commissioners; yes.

Mr. MACK. That doesn't mean that this action would have been taken, though. They might have been ready to vote.

Mr. COX. You would have voted on the matter on its merits.

Mr. MACK. But there might not be anything more happen than has happened now.

Mr. COX. At least you would have disposed of the thing in those five areas.

Mr. MACK. We didn't think we ought to do that.

Mr. COX. So I gathered.

Mr. MACK. We didn't dismiss them with prejudice.

Mr. COX. The proposals are still pending in those five areas, and in any community in the country where deintermixture has ever been suggested?

Mr. DOERFER. Not pending.

Mr. McCONNAUGHEY. You know what they are. They are under the rulemaking.

Mr. COX. I do not mean in separate proceedings, but I would assume that the applicants in the earlier cases have suggested, in the allocation proceeding, that at least you ought to deintermix those five areas.

Mr. DOERFER. Well, Mr. Cox, I think we pointed out in the November 10 decision that these people are building at their peril, so to speak. They may or may not have a V operation in those communities.

Mr. COX. Well, they are strongly resisting any effort to stay them from building the stations, aren't they?

Mr. DOERFER. Well, the UHF operators are.

Mr. COX. I mean the VHF operators are resisting the stay.

Mr. DOERFER. Yes; the court has decided that.

Mr. McCONNAUGHEY. You have got to take all these things in their proper light, I think. Each individual person is thinking about his own existence, and I don't blame him a whole lot. But we just recently put a V in Corpus Christi where there was only one station. That was a U, and the U bitterly opposed a V coming in, to keep the people in Corpus Christi from having more than one service. That allocation was made there. We would, of course, have obviously done a terrible injustice to the public had we done what the U operator wanted us to do. But I mean you have to take all of these and think about the individual people. They are the people who make the most noise. They are the people you hear from.

Mr. COX. We will consider that in a moment. You said further in your statement that you doubted whether scattered deintermixture would provide lasting improvement, because it wouldn't significantly help UHF broadcasters in other cities. Do you think it would be helpful to the general status of UHF operations if they could be stabilized at least in some areas?

Mr. McCONNAUGHEY. If it was large enough, it might—it might be a help, if it was large enough. But I don't know that either, and I don't know who does know it. I always have in my own mind a question: What are the people going to get? That is about all I think about, not the operator. I think about what the people are going to get if they have all UHF. I don't know yet. I am not sure in my own mind what they get. Are we making second-class citizens out of them?

Mr. Cox. If they get the signal, it is a good signal, isn't it, from a UHF station?

Mr. McConnaughey. If they get it, if they get it, if they get it.

Mr. Cox. All right.

Mr. McConnaughey. There is a lot of testimony that in a lot of spots they don't get it, a lot of testimony that they get snow in various places. There is a lot of testimony that they can't get the proper coverage. There is a lot of testimony that it costs more money; that their equipment goes out quicker and it costs more money to keep them up. I don't know.

We do know that the Columbia Broadcasting System, which owns a U in Milwaukee—and CBS doesn't have any difficulties with reference to programing, they can put on programs that will be comparable to anybody—and they are having a rough go making it go in Milwaukee with the Columbia Broadcasting System programs.

Why? I don't know all the reasons. I do know what they said, that there would be certain places right in the city of Milwaukee where they get no picture at all to speak of, and where there will be snow and where it will be blacked out. So when you ask me that question, I always wonder in my mind whethere there has been the developments made.

What am I going to do to the people if I deintermix? If I deintermix Peoria, Ill.? A question comes to my mind. What am I going to do to the folks by having them all have UHF? I have a question in my mind as to coverage in the Peoria area. Can the V, which will get out and cover some of the people out in the outlying rural areas, that the U won't cover, who are part of the Peoria farming market, which is the largest farming market in America, basically, the largest farming market in the area—what am I doing to those people out in the country? I don't know.

Mr. Cox. Isn't it true that you have never made a formal finding that the people out there in this rural area surrounding Peoria do not receive television service?

Mr. McConnaughey. No, you never make a formal finding, merely——

Mr. Cox. Isn't there considerable evidence that they do get service, perhaps not from the U station in Peoria, but from V's in surrounding communities?

Mr. McConnaughey. All right, then you go back to another problem that you must consider, the fact that they get V's from, we will say Chicago, if that was true, or from Bloomington, Ill., or from some other city.

Mr. Doerfer. Iowa.

Mr. McConnaughey. Or from Iowa. Is that the answer to the people who have their own center, their own farming market center? I don't know. I am just telling you some of the questions that come to my mind.

The Chairman. Well, it is not the answer to the small-business man in the area.

Mr. McConnaughey. No.

The CHAIRMAN. Surely that is true. I think that is one of the most important things here. The local businessman in a situation like that, unless he has a local station, has no chance to advertise.

Mr. McCONNAUGHEY. Now, more important—these are things that come to my mind and I think to all the Commissioners' minds, they are not so simple as the point you attempt to make.

Mr. COX. I don't think they are simple, Mr. McConnaughey.

Mr. McCONNAUGHEY. There is a lot of questions. I mean, you give me the idea we will—well, why didn't you deintermix here, there, and the other place. We have told you that quite a number of times. But I was giving you some of the reasons that come to my mind as an individual as to why I want to proceed with a considerable amount of caution in all of these matters.

Mr. COX. As I understand it, one of the reasons that you give is that you feel that by permitting the continued allocation of a V in Peoria and the ultimate construction of a V station there, that you are going to get apparently a first signal to someone in the rural area who is not now served by the existing U stations in Peoria, is that correct?

Mr. McCONNAUGHEY. Possibly, that is one of the things. I say, that is one of the things I think about.

Mr. COX. But you do this despite the fact that there is, as I understand it, and this is hearsay with me, evidence in the record that in many of these alleged white areas surrounding these centers where deintermixture is proposed, there is evidence that actual surveys have found one or more acceptable signals in those areas.

Mr. DOERFER. May I correct that?

Mr. McCONNAUGHEY. There is no evidence to that effect.

Mr. DOERFER. Somebody may even have come in under affidavit——

Mr. COX. He is under oath.

Mr. DOERFER. No, the affidavit is on oath, but there has been no cross-examination.

Mr. COX. You can verify his conclusions, can you not?

Mr. DOERFER. No, we don't have the staff nor the facilities to go out and check that.

Mr. COX. How about his opponents, do they come in and offer sworn proof that it is not true?

Mr. DOERFER. They counter it. You will find a direct conflict in the testimony with respect to that.

Mr. COX. I am advised that in the court of appeals proceeding in the Evansville case, I believe it is, there is an unchallenged sworn statement that in the areas of alleged lack of service there are at least two acceptable signals. That has not been controverted?

Mr. DOERFER. What case is that?

Mr. LEE. Evansville.

Mr. COX. *Premier Television* v. *the FCC*, the Evansville case.

Mr. DOERFER. I am not familiar with it, but I know some of the facts of life. The fact that it is not controverted doesn't convince me that Evansville is any different with respect to other areas in this country where there is hilly terrain.

Mr. COX. Don't you suppose if it were controvertible it would be to the best interests of the opposing party in that proceeding to controvert it?

Mr. DOERFER. Let's get the record straight. This is an application to change a rule. This was not an adjudicatory case in that sense. Obviously, those people who didn't want to deintermix were in there. But when we submit questions for rulemaking and we set a time limit, that doesn't give the opponent an opportunity beforehand to know what the other fellow is coming in with, much less to prepare and counter it. I wouldn't put too much emphasis on the validity of many of these assertions. I don't wish to impugn the intent of the people who present them. They believe that. But remember, they always put their best foot forward.

Mr. COX. I will get back, Mr. Doerfer, to the fact, and correct me if this is not true, that as far as the Commission's actions are concerned, it is founded on no finding that there is no service in those areas, primarily because the Commission doesn't know whether there is any service in those areas.

Mr. DOERFER. Let me put it this way: We have the sixth order and report; that was a rule that was adopted after years of consideration. That order also includes standards. It defines the grade A contour and the grade B contour. Now, we can't go outside of that because the best engineering brains in the country have indicated that there is no validity to some of the assertions which have been attempted to be interjected in some of the contested cases. Now, we are not blind to the fact that there is perhaps an excellent service outside of the grade B contour under certain circumstances in certain terrain, but we don't have the staff to check it. So we have to revert to the standards which we ourselves have adopted. They haven't been changed and we are not warranted in disregarding them until they are changed.

Mr. COX. The point I am trying to make, though, is that in applying those standards in a decision, in an admittedly very difficult problem in a specific area and Peoria is the one we have been talking about that you proceed, the majority, on the assumption that it is a fact that if you were to grant deintermixture, you would be depriving people on the periphery of this market area——

Mr. MCCONNAUGHEY. No.

Mr. COX. Of service.

Mr. MCCONNAUGHEY. No, that wasn't the basis of the decision at all, and it doesn't so state. It doesn't so state. I merely said those are questions which come to your mind when you start to deintermix.

Mr. COX. All right. They came to your mind. Did you dispose of these proceedings without deciding those questions?

Mr. MCCONNAUGHEY. I think there is no question about it.

Mr. COX. Well, wasn't the procedure an apt one for deciding them?

Mr. DOERFER. The correct term is we didn't dispose, we suspended.

Mr. MCCONNAUGHEY. That is all.

Mr. DOERFER. We are attempting to dispose of who is the winner of these things. Now, that is to avoid some further adjudication, and if possible I don't know whether we could legally—but if possible whoever is the winner, in the event that we do deintermix, should get the U. We may not be able to do that.

Mr. COX. You said in that proceeding you tried to dispose of the matter in the sense of deciding who was the winner, and to make way for your general rulemaking proceeding. Didn't you also dispose of this matter procedurally to permit you to grant a first V in some of those markets, Mr. McConnaughey?

Mr. McCONNAUGHEY. Grant the first V, but it belonged in there. It was the first V under the allocation system. You couldn't—the majority felt you couldn't hold up the public getting additional service until you resolved the final rulemaking.

Mr. Cox. Did you ever make a finding that the first V in Madison, or anywhere else, is going to give additional service?

Mr. McCONNAUGHEY. If it was found in the public interest—when you make your decision, you make that, my friend.

Mr. DOERFER. Excuse me. The first V was assigned there in 1952. Now, some basis there must have been some support for that allocation.

Mr. Cox. It was assigned there on the supposition, was it not, that at least in the relatively near future U and V allocations would be substantially competitive?

Mr. DOERFER. Not entirely. I think if you read the sixth order and report you will find that part of the basis was the equitable distribution of the various types of frequencies.

Mr. Cox. That is, you distributed the V's as far as they would go, and then gave U's because that is all you had left?

Mr. DOERFER. I don't know exactly what entered into the mental process of the commissioners at that time. I read their report, and apparently they were trying to follow their priorities, first a service to all parts of the country and then the competitive things. But this did qualify it by indicating that they were trying to observe the equitable distribution mandate of the act itself. So it is a combination of other things. That had been determined. All we were doing was following the policy which had been set in 1952.

Mr. Cox. But as I understand it, gentlemen, since 1952, when this initial allocation of the V in Madison was made, there has developed experience with respect to the probable conditions of intermixed assignments.

Mr. DOERFER. There is a more important thing at stake than the experience or the fate of UHF broadcasters. In my opinion one of the things that motivated me was that I don't think that this Commission could accomplish anything if we ever recognized the right of anybody to stay our hand in an adjudication proceeding by petitioning us for rulemaking in the adjudication proceeding. That would be devastating to our process. That would really tie us up in all adjudicatory proceedings.

Mr. Cox. Your conception is that any comparative proceeding for the granting of a permit under the existing allocations should be made only in terms of the comparative qualifications of the applicants, and without considering the underlying question of whether or not the sixth report should still be effectuated in this area in terms of permitting anybody to build a VHF station?

Mr. DOERFER. As a general proposition, I think that is correct. But you may find, even in an adjudicatory case, that there is some vast public interest at stake, or a peril to the public interest, which is imminent and which can be seen. But that doesn't apply in those cases where there is a good difference of opinion by reasonable-minded men trying to protect the public interest.

Mr. Cox. All right. I would like to go back, Mr. McConnaughey, to the point we broached awhile ago, that is quite apart from the question of whether deintermixture is a good policy in any given market. You indicated that one of your reasons for dismissing these pending proceedings was that you didn't think that doing anything in these areas, even if it were affirmatively to grant deintermixture, would help the situation on any broad scale.

The question that I was trying to get to was whether or not there would have been some benefits on a somewhat broader scale if you had: (1) voted on the merits of these cases, and (2) in at least some of them, granted the deintermixture that was petitioned for?

My first suggestion was whether it would not have granted some degree of stability, for the long range, for UHF operations in at least those areas in which you decided to grant deintermixture by deleting V allocations?

Mr. McConnaughey. I doubt if it would have had very much of an encouraging effect on anybody.

Mr. Cox. What is your meaning then——

Mr. McConnaughey. I would question it, but that is just——

Mr. Cox. You made a report to this committee in which you referred, yourself, to the concept of creating "UHF islands of security." Wasn't that something you thought had some significance?

Mr. McConnaughey. It may have, and we may come to that solution; I mean, that may be one of the things we will finally decide when we get through with this. But the way I felt about it, and the majority of the Commissioners, was that we wanted to take a look at this on an overall basis. And that is what we have decided we are going to do, that is what we are going to do. What we have done, we have done. That is over with. That is past. The reasons for our doing it, we felt were sound. And that is a matter of history now. Now we are going into a rulemaking on the whole picture. And as to the whys and wherefores, I think we have explained them about as thoroughly and completely as we possibly can. We are not going to change our ideas.

The Chairman. Mr. Chairman, with that last statement I think this is a good time to recess until tomorrow.

Mr. Cox. No, this afternoon.

The Chairman. This afternoon. Would you like to come this afternoon? [Laughter.]

Mr. McConnaughey. I would prefer to come this afternoon rather than tomorrow.

The Chairman. All right, 2 o'clock this afternoon.

(Whereupon, at 12 o'clock, the hearing was recessed until 2 p. m., of the same day.)

AFTERNOON SESSION

The Chairman. The committee will come to order.

We will proceed with the questioning.

Mr. Cox. Mr. McConnaughey, in your statement to the committee in our two earlier hearings you stated that during the time you were considering these individual deintermixture petitions which were denied last November, the Commission gave attention to some other alternative approaches to the allocation problem. Could you tell the committee what these alternative approaches were that you were considering at that time?

Mr. McConnaughey. Well, possibly what should be done with the VHF channels in case they would be taken out, and possibly squeeze-ins, what could happen, whether they could be put in other places. I think those were things the commission was thinking about.

Mr. Cox. Now were these alternatives suggested to the Commission by its staff, or were they proposed by private parties who were not before the Commission in the deintermixture proceedings?

Mr. McConnaughey. I guess both. I believe both, Mr. Cox, I believe both.

Mr. Cox. In other words, you were—did you receive suggestions from outside parties for proposals which were inconsistent with deintermixture and regarded it as no solution to the problem?

Mr. McConnaughey. Yes. Well, they gave suggestions where they would like to have a V moved, and then the staff also brought up——

Mr. Cox. Were you able to effect any procedure in which these views were then called to the attention of the parties in the deintermixture proceedings, so that they had a chance to make replies to them?

Mr. McConnaughey. No, it was not a part of the proceedings at all.

Mr. Cox. It was not a part of the proceedings?

Mr. McConnaughey. No, no.

Mr. Cox. However, it may have firmed up your conclusion that deintermixture was not a substantial solution to the problem?

Mr. McConnaughey. No, no.

Mr. Cox. It did not enter into your decision at all?

Mr. McConnaughey. No, I do not think so. It was just something that was talked about, was all.

Mr. Cox. Well, would you comment then on Commissioner Hyde's dissent in those cases, in which he indicates that he thought that material outside the record had been considered in reaching these conclusions?

Mr. McConnaughey. No, no comment to make on that. I say I have no comment to make on that.

Mr. Cox. Would you care, Mr. Hyde, to add to what was stated?

Mr. Hyde. I do not have the text in front of me but I think you will find in the text of the majority report an acknowledgement that they had taken into consideration matters outside the records in the five deintermixture cases.

If you will give me just a moment I will refer you to the language.

Mr. Cox. Fine.

Mr. Doerfer. May I comment on that, Mr. Cox?

Mr. Cox. Yes.

Mr. Doerfer. With respect to outside comment I assume you were referring to the meeting that the Commission had with some of the networks. Now that is not the only outside comment you get in a rulemaking proceeding. For my part, I was satisfied that whatever information we got should be subjected to cross-examination and study by other parties. And that was one of the things that motivated my rejecting the determination of the motion to deintermix on November 10 with respect to the five that were before us.

And that has happened. Now since that time, with the new rulemaking, the CBS comments and many other comments from engineers, both sides of the question, are now, as I understand it, part of the record for everybody to examine, explore and reply to.

Mr. Cox. That is, you considered the overall allocations proceeding a better vehicle for that sort of confrontation than the deintermixture proceedings themselves?

Mr. DOERFER. Let me say this: That when the original motions for deintermixture were made, they were made with respect to the particular problem in the community of the moving party. But, by a process of presentation and proposed rulemaking, all of them apparently attempted to convince the Commission that this was a nationwide problem. So that I concluded for myself that if this is a nationwide problem, then there is no sense in trying to determine a nationwide problem by the merits of five applicants before us.

Mr. Cox. But as we pointed out this morning, hadn't you invited them to advance deintermixture in these areas as a possible basis for reaching some kind of a broader solution?

Mr. DOERFER. Yes. And I think when they filed their comments and as they made their oral arguments, it became more clear to me that we had to have the comments and reaction of all of the leaders in the industry, those that had actual experience, as well as the bar, or anybody else that was familiar with the problem and could lend some aid or assistance.

Mr. Cox. Well, then, as I understand it—and I think this has already been stated, but to come back to it—the majority, in denying intermixture in these cases, did so without prejudice, and is presumably still giving serious consideration to the possibility of employing deintermixture at least as a partial solution to this problem. Would that be true, Mr. McConnaughey, that it is still under consideration?

Mr. McCONNAUGHEY. Yes, sir.

Mr. Cox. Now if you think that you may want to create a certain number of all-UHF markets—which is one form, at least, of deintermixture as you defined it this morning—don't you think it would be sound policy, while you are trying to make up your mind on that ultimate question, to preserve any existing all-UHF areas which you have?

Mr. McCONNAUGHEY. Any existing all-UHF areas?

Mr. Cox. Yes.

Mr. McCONNAUGHEY. What do you mean, are you talking about like Peoria and Madison?

Mr. Cox. Yes.

Mr. McCONNAUGHEY. Heavens, no. That is the reason the majority acted differently. No, no, we told you this morning that we did not feel that we could hold up the public interest—and I think the court of appeals has affirmed the Commission in that regard—you can't hold up the demands of the public on a temporary basis while you are going into rulemaking proceedings, you can't do that. The Commission does not propose to do it, they don't propose to do anything of that kind.

Mr. Cox. What was the nature of this demand of the public?

Mr. McCONNAUGHEY. Well, it is in the public interest.

Mr. Cox. Were public bodies appearing before you?

Mr. McCONNAUGHEY. Oh, no, no, but it is obviously in the public interest to get television grants out under the sixth order and report just as fast as you can. That is what the Congress has been interested in all the time.

Mr. Cox. Is it in the public interest to get out grants which may complicate a problem which you are considering at the same time?

Mr. McConnaughey. We do not think it complicates it.

Mr. Cox. Let's go into that a little. Isn't it true that there is a very definitely limited number of areas which are now available for deintermixture on a reasonably simple basis—that is in terms of a minimum disturbance of existing conditions?

Mr. McConnaughey. I do not know how many there are, Mr. Cox. I have never made a study of it. I do not know how many.

The Chairman. There would be very few?

Mr. McConnaughey. As I recall, Mr. Chairman, it was, oh, I think 15 or 20 areas at least where they asked that such an action be considered.

Mr. Cox. Weren't most of the areas where what I refer to as a simple sort of deintermixture is available—weren't they involved in these five proceedings, and in the group of other proceedings which you dismissed at the same time that you dismissed Madison, Peoria and so on?

Mr. McConnaughey. Yes, that is right.

Mr. Cox. And isn't it true—I think it has been established, but just to make it clear for the record—isn't it true that since November 10 when you denied all of these pending petitions for deintermixture, the Commission has granted construction permits for a first VHF station in Corpus Christi, Evansville, Fresno, and Madison?

Mr. McConnaughey. That is right.

Mr. Cox. Isn't it generally agreed that this intermixture, which is basic to the sixth report, is at least one of the roots of the UHF problem, in that it results in requiring competition between facilities which, it has developed, are not quite equal?

Mr. McConnaughey. It is one of the problems, that is right.

Mr. Cox. Now this is where I want to get back to the point you suggested a while ago. Having refused to grant deintermixture in 5 specific cases where you considered it in some detail, and on the same basis, then, in some 29 or 30 other petitions involving additional areas, how can the Commission assert that it is not going to be less likely to grant deintermixture ultimately in those areas than if no construction permit for a V station had ever been made?

Mr. McConnaughey. I think the Commission's feel is that after a study of this overall reallocation, then they can come out with some very positive statements with what can be done. They might come out with shorter separations and be able to get more V's in; they might come out with an all-UHF recommendation. I don't know. I mean you can't tell what——

Mr. Cox. In the first instance, of course, your action in granting the V permit raises no problem; but if you are ever going to tend toward all-UHF, or toward deintermixture in this particular market, haven't you in some sense prejudged the issue by having denied deintermixture and granted the V, so that you are bringing into existence a facility that was theretofore only allocated but not realized?

Mr. McConnaughey. We don't believe so at all.

Mr. Cox. Well, assuming——

Mr. McConnaughey. It has just been the opposite of any prejudging. There has been no prejudging on the part of the Commission at all.

Mr. Cox. Mr. Hyde?

Mr. HYDE. You asked me to give you the reference for the statement which you read from my dissent. In paragraph 10, 4 lines from the top of page 8 of the mimeograph, you will find this language:

We have determined that the records now before use are inadequate to support a grant of the requested deintermixture because of their limited scope. We of course have knowledge, and should, of other and more general suggestions informally submitted to us or before congressional committees.

Mr. Cox. Yes, sir. That was the reference that you had in mind in connection with the statement in your dissent?

Mr. McCONNAUGHEY. That is right.

Mr. Cox. Thank you. Well, now, you have at least complicated ultimate deintermixture—if you are going to decide that it should be the policy pursued, and I have no opinion that—but assuming that in 1 of these 5 areas, and related areas, where you have granted a first V, you now decide to deintermix. Have you not made the Commission's problem more difficult, procedurally at least, by granting the V in the meanwhile?

Mr. McCONNAUGHEY. I don't think we complicated it at all.

Mr. Cox. Isn't your grantees perhaps going to go out and spend substantial funds erecting a transmitter which, in the final analysis, you are not going to permit him to operate?

Mr. McCONNAUGHEY. He is doing it at his own risk, and he so understands it.

Mr. Cox. Why didn't you make that expressly conditional in the grant you gave him?

Mr. McCONNAUGHEY. We made it very, very specific that it is a condition of the grant.

Mr. Cox. Whereabouts in the grant?

Mr. McCONNAUGHEY. It is a condition of all grants.

Mr. Cox. What?

Mr. McCONNAUGHEY. It is a condition of all grants.

Mr. Cox. Of all grants?

Mr. McCONNAUGHEY. Yes.

Mr. Cox. Well, any such condition attached to the grant is fully hedged about, is it not, by the procedural rights that are created in the Communications Act in the event you are going to alter or impair——

Mr. McCONNAUGHEY. That is right.

Mr. Cox. The grant in any way?

Mr. McCONNAUGHEY. Exactly, that is right.

Mr. Cox. Exactly what proceedings would you have to go through—let's take Madison, where you have granted a V, and we will assume that the V is under construction, or on the air, and you decide, strictly hypothetically, that in the overall public interest you are going to substitute a U channel for that. Now, don't you have to serve some kind of a notice to show because on the permittee, or the licensee, before you can make——

Mr. McCONNAUGHEY. We would have to have a hearing if the licensee objected to it.

Mr. Cox. All right. In that hearing the burden is upon you, is it not, by statute, to establish that the public interest requires what you are now proposing to do, is that not correct?

Mr. McCONNAUGHEY. Yes, I would think so, I would think so.

Mr. Cox. You are in a position then, are you not, of having just a short time ago, over objection, and in the light of this entire picture, made a ruling that the public interest requires you to grant the V?

Mr. McCONNAUGHEY. As of this time, that is true. But you get into a reallocation, and you may find something entirely different.

Mr. Cox. Now, however, even though you may prevail in the long run, is it not true, having made the V grant, that under the statute the grantee is going to be entitled to the full course of certain procedures which are going to consume time?

Mr. McCONNAUGHEY. It will consume some time, yes.

Mr. Cox. And it may be a substantial period?

Mr. McCONNAUGHEY. I cannot answer that; I do not know.

Mr. Cox. Well, that is——

Mr. McCONNAUGHEY. I say I don't know. I mean——

Mr. Cox. He has a right, if you make an adverse decision, to appeal to the courts?

Mr. McCONNAUGHEY. Sure.

Mr. Cox. And to carry it to the Supreme Court if necessary?

Mr. McCONNAUGHEY. That is right.

Mr. Cox. And that might well consume a couple of years?

Mr. McCONNAUGHEY. It could.

Mr. Cox. And in that event, simply in pursuing procedural remedies that are available to the man, you have involved yourself in a delay in the eventual effecting of your policy which would not have existed, would it, if you had not made the grant?

Mr. McCONNAUGHEY. Yes; it was just pointed out that the policy could have been appealed too, but in the meantime you are not going to keep anybody from having service. That is about all we are interested in, you see. You must not lose sight of the fact that what we are interested in is the public getting service, that is the thing we are interested in, and that is the reason we made these grants basically, because we wanted the public to have more service.

And if we ever created a freeze here, which some of us felt would be a freeze—if not a freeze at least holding up of grants——

Mr. Cox. If we are going to talk about a freeze, how many applications for licenses do you now have pending in which a station which has applied for will provide a new service where none now exists?

Mr. McCONNAUGHEY. Now pending?

Mr. Cox. Yes.

Mr. McCONNAUGHEY. Now pending? I would not have any idea.

Mr. MACK. You mean where there is no service at all?

Mr. Cox. Yes.

Mr. McCONNAUGHEY. No service now?

Mr. Cox. That is what you are talking about. You say you have got to go ahead with this, you have got to keep turning out grants despite the pendency of your overall proceeding, because you are granting service to people who do not now have it?

Mr. McCONNAUGHEY. I did not say that; you must not put words in my mouth. I said additional service.

The CHAIRMAN. He didn't say that.

Mr. Cox. A second signal?

Mr. McCONNAUGHEY. Second or third, whatever it is.

The CHAIRMAN. Complete?

Mr. McCONNAUGHEY. Yes.

The CHAIRMAN. One of the best available?

Mr. McCONNAUGHEY. Exactly right.

Mr. Cox. Perhaps I did misunderstand you, sir, but didn't you state this morning that in Madison, to use that as an example, one of the chief motivations was the feeling that by granting a V allocated there in the sixth report you are going to provide a first-rural service beyond the reach of the existing U stations?

Mr. McCONNAUGHEY. I said that was one of the arguments that was put up in the Madison case, that it would be a first service from Madison to some outlying rural areas. That is one of the arguments put up to the Commission. The same thing is true in Peoria.

Mr. Cox. All right.

Mr. McCONNAUGHEY. Those are arguments that were presented.

Mr. Cox. Now assuming that there is in fact a first service there—although I do not think that was ever established in the records in your proceedings, and certainly not in any findings made by the Commission—would there not arise, then, a possibility that viewers in that area would acquire VHF-only sets, since they are now, you feel, in an area to be served by this V that is granted, who will then be left with no service if you eventually delete that V, deintermix the market, and substitute U?

Mr. McCONNAUGHEY. That depends upon so many things that I don't know. It depends upon the power of the U's and what they may have developed by that time. I mean you just don't know.

Mr. Cox. Mr. Webster?

Mr. WEBSTER. I take it that you are assuming that we are going to deintermix.

Mr. Cox. No, I am not assuming anything. I am assuming that you are still considering that you may want to deintermix, because that is what you tell me.

Mr. WEBSTER. That is true. But the way you have been wording it, I took it for granted that what you are assuming, that when we got through with our procedure that we were going to do some deintermixes.

Mr. Cox. You say you are still considering it.

Mr. WEBSTER. I want to make it perfectly clear that I don't know what I am going to do at the end of that proceeding. It might be deintermixture plus a lot of other things. And there are a lot of other things, like smaller separations, lower power, higher power, various other elements that go into the picture. And one of them might be deintermixture, but in deintermixing you may have other things that go along with it that will upset the situation in any one of these places—Peoria, or Madison, or any place else.

You may upset it by the formula that we finally come out with. Deintermixing only one, we can have very readily upset Madison with other features than deintermixture. So deintermixture is not the whole problem that we are talking about.

Mr. Cox. I quite realize that, Mr. Webster.

Mr. WEBSTER. You might have three V's before we get through in there.

Mr. Cox. The only question I am raising is this: One, you say you are still considering deintermixture as a solution——

Mr. WEBSTER. As a part of the solution——

Mr. Cox. As a part of the solution; two, you have, meanwhile, granted a first V in at least four markets; three, if you decide that deintermixture would work and be in the public interest in those four markets, have you not made your problem, then, procedurally more difficult than if you had either made a conditional grant or had temporarily suspended the grant until you concluded this allocations proceeding sometime this summer or fall?

Mr. WEBSTER. I do not think so, and I don't think it is any worse than if it was the other way around.

Mr. Cox. Let's consider this factor, then. You referred in your statement to these 200 comments—you mentioned them this morning—and the 350 reply comments that you received in this allocation proceeding. Isn't it true, by and large, just putting these into general categories, that for the most part the substantial recommendations you have had that approach anything like a general basis, rather than being limited to specific markets, propose one of these things: First, that you transfer all television to the UHF; second, that you create VHF drop-ins by means of reduced separations, lower power and antenna heights, cross polorization, and/or directional antennas.

The CHAIRMAN. What is cross-polarization?

Mr. Cox. They turn the antenna like this [indicating]——

The CHAIRMAN. O. K. [Laughter.]

Mr. Cox. Three, selective deintermixture; four, additional VHF channels from other services; five, reassignment of unused educational VHF channels; and six, subscription television. Now, isn't it fair to say that only the last, only subscription television is a proposal which is not either a complete or partial suggestion of deintermixture.

Mr. MCCONNAUGHEY. Oh, I guess that is true, and shades of that. You may have to deintermix. Of course, the Commission may come out and say, the sixth order and report is all right, we will just leave things where they are. We may do that.

The CHAIRMAN. But that is what the general trend of these answers were?

Mr. MCCONNAUGHEY. The general trend of these comments—as you know I haven't digested them—contained those suggestions and many shades of those suggestions.

The CHAIRMAN. Many shades of them, but generally speaking that is what they——

Mr. MCCONNAUGHEY. I think the basic principle of them has been brought out.

Mr. Cox. Did the following individuals or organizations file comments which either advocate deintermixture, or suggest that no more V grants should be made in markets which are now served by UHF. These would be the American Broadcasting Company, did they file such a comment to the best of your knowledge?

Mr. MCCONNAUGHEY. I haven't digested it. I say I haven't digested it.

Mr. Cox. But, you have received substantial support for such a proposal from other organizations than the individual operators concerned?

Mr. MCCONNAUGHEY. Yes. And I suppose, as many or more strong counterproposals.

Mr. Cox. Well, have you received any proposal in this 200 which suggests that you should affirmatively adopt a policy of further intermixture?

Mr. McConnaughey. I can't answer, I don't know, because they are being digested, as I said this morning.

The Chairman. Well, the only thing is, Mr. Chairman, that we had information that certain groups advocated either deintermixture or no more grants in markets now served by UHF. I don't think there is anything private in their opinion—they have said this on many occasions and I think it is only fair to say they include not only American Broadcasting, but General Electric, RCA, Storer Broadcasting, Westinghouse, UHF Industry Coordinating Committee—which we will hear from here, I suppose all of these people—the Committee for Home Town Television—I don't know what that is—and some twenty-four other individual UHF licensees or permittees. I think it is common knowledge that they did advocate either deintermixture or that no more grants be made in markets served by UHF. Well, that is part of the whole group of people that advocate it. There are probably several others involved.

Mr. McConnaughey. That is right, yes.

Mr. Cox. You said in your statement that there is little basis, in the opinion of the majority, to assume that a first local VHF station would necessarily eliminate local UHF stations. Now, as I understood your testimony the last time you were here, your records indicate that in 13 of 29 cases where a first V came into a market where U's were already on the air, the appearances of the V did eliminate at least one U, is that correct?

Mr. McConnaughey. I think that is correct. I say I think that is correct.

Mr. Cox. And hasn't the appearance of a second V in a market almost invariably meant the elimination of an operating U if there was one on the air?

Mr. McConnaughey. I don't know, I say I don't know. I don't know who——

The Chairman. Well, that was the general testimony here.

Mr. Cox. You stated, did you not, the last time, sir, that you personally thought that a U in a market with two V's would have a very difficult time making a go of it.

Mr. McConnaughey. I sure did. I say I certainly did, as a general rule, as a general rule.

Mr. Cox. Yes. There may be exceptions.

Mr. McConnaughey. There, generally, it depends on the size of the territory you are going to serve.

The Chairman. Size of the market?

Mr. McConnaughey. Yes, sir, completely.

Mr. Cox. Isn't there very real danger though, the way things are going now, that the establishment of two VHF stations in a market which has only U channels in addition thereto—that is the sixth report gave them 2 V's and 1 or more U's to fill out room for expansion—isn't there a very real danger that under existing conditions those 2 V's constitute an artificial restriction and limitation upon the possibility of growth of television service in that area?

Mr. McCONNAUGHEY. Well, maybe, it depends again on your area. You have got two V's I guess in Milwaukee, the Columbia Broadcasting system saw fit to buy a U.

Mr. Cox. You said this morning that they were losing money?

Mr. McCONNAUGHEY. They are not having too easy a time. They feel they can operate. The same with NBC buying one in Buffalo and New Britain, Conn., I believe it is. They feel—undoubtedly their business judgment caused them to feel that they could make money with V's that they won't have any trouble making money with the 2 V's in the market.

Mr. Cox. That would restrict you to owned and operated stations of a network, as a possible basis for further growth of UHF service.

Mr. McCONNAUGHEY. Maybe; maybe not. I don't know. Maybe there are some U operators in some large markets that can survive and get along well with 2 V's, I don't know.

Mr. Cox. Isn't it historically established that in Providence the existence of 2 V's has created a ceiling on possible future growth of television service there because the only other allocations made are U's?

Mr. McCONNAUGHEY. It could be, I don't know. Portland, Oreg.——

Mr. Cox. Who owns the UHF station in Portland? George Storer?

Mr. McCONNAUGHEY. Mr. Storer, I believe. Among 16 markets where UHF survived, there were 4 markets with 2 VHF's that is just a note given me here.

Mr. Cox. Can you name those four?

The CHAIRMAN. Just a moment. The only difference in Portland is the UHF is still on NBC and gets the advantage of the network.

Mr. McCONNAUGHEY. And that helps it, and you are putting your finger on the crux of all this talk.

The CHAIRMAN. What would happen to the UHF in Portland if the network was taken off? That is another story?

Mr. McCONNAUGHEY. Then you get into the network study, Mr. Chairman.

Mr. Cox. Would you care to venture a prediction as to what will happen when, in Portland, a third V station goes on the air?

Mr. McCONNAUGHEY. It depends on whether he has a network or not.

Mr. Cox. Either way.

Mr. McCONNAUGHEY. I wouldn't attempt to predict what is going to happen in Portland.

The CHAIRMAN. I don't think we need to belabor this. I think we all recognize the fact that UHF or VHF, with a network program, has a pretty good chance to survive in any given good big market area.

Mr. McCONNAUGHEY. Sure. Sure.

The CHAIRMAN. But without that—I think we also recognize the fact that most networks, I suppose for their own economic reasons or because they deem it advisable, want to go on VHF wherever they have a choice, in any given market area, between UHF and VHF.

Mr. McCONNAUGHEY. That is pretty much the crux of all this problem.

The CHAIRMAN. And that means that the UHF people, of necessity, have a poor chance of economic survival.

Mr. McCONNAUGHEY. Surely.

The CHAIRMAN. And the proof of that pudding is that they are going off the air, and I think we all recognize that fact. Now, the record will show a lot of the reasons for this, but nevertheless that is a fact. We are trying to see if we can't solve that problem for those who are on the air.

Mr. McCONNAUGHEY. See if we can get the advertisers to buy UHF time.

The CHAIRMAN. And that works pretty well—we must say this, too, in all fairness, the networks furnish the service, but the advertisers pick out where they want to go.

Mr. McCONNAUGHEY. That is right. And we have no control over them. I guess Congress doesn't either, up to date.

Senator PASTORE. I realize that and I hate to be too critical, but it strikes me and I say this as kindly as I could say it—it strikes me here that we are closing our eyes, or wearing blinkers, to fundamental facts, that we ought to know almost by instinct. Now, I don't see, Mr. Chairman, why you take such an uncertain position about what makes this thing work or not work. Fundamentally, to me—and I am a newcomer in this whole field—fundamentally to me the survival of the UHF in many of these areas has been only through ownership of the major networks. Now, you will recognize that, don't you?

Mr. McCONNAUGHEY. I think that has generally been true.

Senator PASTORE. Now, you say that is the crux of the whole thing. Now, are we actually talking here that the only way that we can survive with a national competitive television system throughout the country is to allow the big networks to own them, own the stations?

Mr. McCONNAUGHEY. Why, of course not. I say, of course not. I say the crux of the whole thing is getting the advertisers to buy UHF service. That is the crux of it.

Senator PASTORE. How are you going to do that——

Mr. McCONNAUGHEY. It has nothing to do with networks.

Senator PASTORE. How are you ever going to do that? I mean how are you and I ever going to do that?

Mr. McCONNAUGHEY. I don't know how you can change their minds. It is not going to be easy.

Senator PASTORE. We have talked here for a long time about getting the manufacturers to make these sets in the future, so that you can receive UHF and VHF, but we can't make them do it—this is America. We can't tell the manufacturer what kind of a set to produce. We have a regulated industry here, but there is a limitation even on regulation. Now, the thing that is bothering me is this: That here we are after so long a period of time, it strikes me—I have said this before and I don't want to belabor the same thing—there has got to come a time when we have to take the bull right by the horns, and call a spade a spade. If we keep saying here that a UHF can live in the same locality with two VHF's, I think myself we are shutting our eyes to the facts. Now, it may be——

The CHAIRMAN. I don't think anyone said that.

Senator PASTORE. Oh, yes. The chairman, if you go back to the record, he said, "Well, I don't know, it could be, it depends upon the size of the market." Well, we "if" and "but" this thing until we kick it around and we lose it. But all we do is "if" and "but" it. I think the time has got to come when we have to recognize the realities involved here.

The CHAIRMAN. I don't think anyone up here thinks that a UHF can survive in a market with two VHF's.

Mr. McCONNAUGHEY. Unless it is an awfully big market.

Senator PASTORE. Where is that market? Do you know of any market where it has survived outside of a network owning it? That ought to be simple to answer that question.

Mr. McCONNAUGHEY. Sacramento, Tampa, West Palm Beach and Wichita.

Senator PASTORE. All right, let's take them one at a time, let's get into these things one at a time. Let's take West Palm Beach. What was the first station that went there, a VHF or a UHF?

Mr. McCONNAUGHEY. A U went there first.

Senator PASTORE. A U went there first. Therefore, everybody who had a set would receive the U.

Mr. McCONNAUGHEY. Right.

Senator PASTORE. Can you name one market where you had a VHF first?

Mr. MACK. Miami.

Mr. McCONNAUGHEY. That is right.

Senator PASTORE. How many VHF's do you have in Miami?

Mr. MACK. One.

Senator PASTORE. How many UHF's?

Mr. MACK. Two.

Senator PASTORE. Now, how did the UHF's feel in Miami about the two VHF's coming in?

Mr. MACK. I don't know, but they had an opportunity to apply for those V's just like these other people.

Senator PASTORE. That is apart from the point. You are talking now about the person who owns the station. I am not so much concerned about him as I am about the public getting these five vehicles of receiving programs.

Mr. MACK. All right. If they have three services that are good, does it make any difference to you whether they are V's or U's?

Mr. COX. Does it make any difference to you, Mr. Mack, whether in permitting these things to come about you may possibly be imperiling the possible future usability of these UHF channels?

Mr. MACK. Well, it is awfully hard for Congress or anybody else to legislate economics. Now take Jacksonville, Fla. They had a V and a U come in there. There are only two services, that is a big market, and the U is well financed and doing a good job.

Senator PASTORE. Who owns it?

Mr. MACK. John H. Perry.

Senator PASTORE. What station network do they have?

Mr. MACK. I don't know. They have got two of the networks, I know. The V is CBS and they are showing programs on the other two——

Senator PASTORE. Now——

Mr. MACK. Here is what I started to say.

Senator PASTORE. All right.

Mr. MACK. In spite of the fact they have had two networks and they are running a good operation, they have only been able to get the people of that area to buy 36,000 conversions or all-channel sets, whereas the area is supposed to have some 360,000 just straight V sets. You cannot make John Q. Public buy anything he doesn't want to.

Senator PASTORE. That is right. I go along with that a hundred percent. That is the reason why I say it makes a big difference here whether you start out with UHF or VHF. In a locality where you only had UHF to start out with, like you had in Hartford, the fact that a VHF comes in you might get a little squabble as to who has got more power and who is going to be able to get the network. But the fact of the matter is, insofar as the public is concerned, they can turn it on and off as they please, so you have no disruption. But I am talking about the localities where you had a lot of VHF. Well, all I heard here was that the UHF claims that "Every time a VHF station came in, we couldn't talk to the network any more. They would draw their contract to a close, and the first thing we knew they would do business with the VHF station." Now, that is a fundamental fact to me. Is it so or isn't it so? Can't we agree on that? That every time a VHF comes in, it gets the prize of the networks.

Mr. DOERFER. That is not true.

Senator PASTORE. Where was it not true?

Mr. DOERFER. It was not true in Portland, Oreg.

[Aside.] Sure, Storer owns the station; he owns it down in Miami, too——

The CHAIRMAN. But it is true—let us get in general agreement here—it is true that the networks would rather, in a given community, get on a VHF instead of a UHF?

Mr. DOERFER. Speaking for myself, I would make that concession and I agree. But following up Senator Pastore's thought there, to me it is much more logical to permit one V to operate, where it is operating in competition with two U's. Or stated another way, it is better to prevent the other V's from going in than it is to prevent the first V to go in, and make it an all-UHF market. Now, I am talking about permeating the country with UHF and not building economic iron curtains around certain communities.

Mr. Cox. You are talking, are you not, about a system in which no market would have more than one V?

Mr. DOERFER. We have to start with a premise we have not got enough V's, and the economic practicalities of it? We cannot shift this thing up to all U's. So we have to use both. Now, that is intermixture; that is not deintermixture.

Senator PASTORE. In other words, you do not believe in islands of V's and islands of U's.

Mr. DOERFER. Nobody has ever indicated remotely to me how it is possible. All I have gotten is a prayer and a hope; once you have a UHF on it, we think, we hope—it is all speculative. Now, if the advertiser will not take a U in competition with a V, where three stations would ordinarily be sustained of one kind or the other, how can we hope he will do it in the future?

Senator PASTORE. In other words, you are saying this—are you not actually saying this, Mr. Doerfer—that insofar as your thinking is concerned this is the survival of the fittest?

Mr. DOERFER. No——

Senator PASTORE. And the fact that you had 152 UHF's and now you have only got 99 and gradually they are dying off, makes very little difference to you. Insofar as you are concerned, there are not going to be islands of U's, there are not going to be any islands of V's.

You are just going to grant these V's as they have been allocated, and who stays on stays on, and who gets off, gets off. Is that not in fact what your conclusion is coming to? I mean in plain English, is that not it?

Mr. DOERFER. No; if you will hear me out——

The CHAIRMAN. The Chairman does not like to stop this, but we have gone into a lot of this all morning.

Senator PASTORE. But I was not here. [Laughter.]

That is just it; I was not here.

The CHAIRMAN. Everybody got their notices.

Senator PASTORE. I know.

The CHAIRMAN. Everybody got their notices. What we are trying to do here is this. The special counsel and I have gone over a great list of questions to get the really technical ones and good ones along these same lines—to get this record in shape. And we—but go ahead. I did not want to stop you.

Senator PASTORE. I do not care when I ask the questions. But the thing that has disturbed me—and I cannot make that too clear—somehow this thing is so loose, now, there does not seem to be a meeting of minds, even among the members of the Commission. There seems to be frustration now, the way we started with frustration in the beginning. No one seems to have a sense of where we are going.

Now, the thing that disturbs me is that the chairman said here last time that this thing was all going to be studied, we are going to have an answer in 6 months. After the last statement you just made, I will tell you very frankly and honestly, I do not expect an answer.

Mr. COX. Mr. McConnaughey, along this line——

The CHAIRMAN. Now, I am interrupting. [Laughter.] But I want to say that I am not in agreement with the Senator from Rhode Island, but it is true that on this whole problem the Senator from Michigan did go into the whole thing—was that a year ago?

Senator PASTORE. Two years ago.

Senator POTTER. Two years ago.

The CHAIRMAN. It was the same then, I will agree, as it is now. And I think the Commission will say that they think it is pretty near the same. And that was——

Senator POTTER. The fact remains that if you have more than two stations with a V and a U mixed, the V's are going to get the networks—they are going to go to the V's, rather than the U's. It is happening right along. The networks claim it is the advertisers that make the selection because of the wider market. I do not know what the answer is.

The CHAIRMAN. I think we are all in agreement on that. Of course, I think we all understand that when two VHF's come into a community, the networks and the advertisers all begin—the industry wants to go on the VHF's.

Now, what the Commission says, it is like that old song, "It Ain't Necessarily So." But we all agree that it has happened that way and it seems to continue that way.

Go ahead.

Senator PASTORE. And Mr. Doerfer takes the position that you ought not deny a community a VHF that has been allocated to that community. There is a lot of common sense in that, because, as I think Mr. Lee said, I think it is a better quality of reception, it is a better kind of television broadcasting. But even if that is so, where does that lead us? That is the big question in my mind.

Mr. DOERFER. Senator, I base my viewpoint at the present on what I consider to be fundamentals. If we are groping for a nationwide competitive system, then we have to remember that if you are going to drop the Iron Curtain around just a few communities, how are we going to get the fourth station in what is today a three-station market? How about the Philadelphias and the Detroits, the St. Louises, and we go right down with the first 30 markets.

It seems to me that we must start out with the fundamental premise we do not have enough in the V's, and in the U's who do not have economic acceptability at the moment. So we have to decide in our own minds that there must be intermixture. Either that, or we have to shorten our sights and say that this country will then settle for about 3 stations in the first 100 markets, with a few exceptions.

Senator PASTORE. In other words—and I give you a lot of credit for your position—I mean at least you have got the courage to say what you think. Your answer is deintermixture is no answer to the problem—you said that?

Mr. DOERFER. That is right.

Senator PASTORE. You do not believe in deintermixture?

Mr. DOERFER. I think it will work out.

Senator PASTORE. There are the ifs and buts. There you go. How are you going to work——

Mr. DOERFER. I am trying to say that by deintermixture, you would not provide a service to all the people. I do think if you allow intermixture that we will eventually have a nationwide competitive system.

I agree with the chairman, the nub of this whole thing is programing.

Mr. COX. Mr. Hyde, do you have some views on possible ways in which we can get this room for expansion—that is, the possible creation of a third or fourth network, or at least the development of additional outlets—through deintermixture or anything else?

Mr. HYDE. I think that it should be clear from the studies that have been made on this, and from reference to the comments that have been filed in the rulemaking proceeding by very knowledgeable people who have made very great studies of this subject, that there is only one place in the spectrum to find enough channels to ever provide multichannel, mutistation service, and that is by using the ultrahigh channels. If you determine that that is the only place where you can find the channels, then does it not follow that we must give our attention to ways and means that will be conducive to the development of those channels?

Now, in that connection, the weight of opinion seems to suggest consideration of the deintermixture technique. Certainly in those areas where you have ultrahigh channels operating on an equal competitive basis, they are working satisfactorily. The public is getting service, and so far as I am aware the Commission is not getting any complaint about the brand of service. Ultrahigh channels do not offer an inferior service. As I mentioned earlier in this proceeding, the picture has exactly the same number of lines, the same number of frames per second, and it has certain advantages with respect to interference and industrial, electrical emissions. It has certain advantages in the transmission of color.

Senator PASTORE. Let me interrupt you, Mr. Hyde, just so we can get this thing crystalized. Mr. Doerfer, here, believes that deintermixture is not the answer. Am I right, Mr. Doerfer?

(Mr. Doerfer nods.)

Senator PASTORE. How do you feel, Mr. McConnaughey? Is, or is not, deintermixture the answer?

Mr. McCONNAUGHEY. It certainly is not the answer at all. It might be part of the answer. That is the reason we are studying this rulemaking. It may come out to be a very substantial part, and I think I believe that, and I think the majority of this Commission believes that.

Senator PASTORE. Well, then, you would not go as far as Mr. Doerfer goes?

Mr. McCONNAUGHEY. I would not go so far as to say that deintermixture is no answer, because it may well turn out to be a part answer.

Senator PASTORE. It strikes me that we have reached a point where you have got to—you can certainly take a position whether it is or it is not.

Mr. McCONNAUGHEY. I have already taken it. I told you that I thought that it was a part of the answer.

Senator PASTORE. I tell you very frankly that is the thing that disturbs me. We are no closer to the solution of this problem than when Senator Potter ran his hearings.

Mr. McCONNAUGHEY. I think we are a lot closer——

Senator PASTORE. How do you feel, Mr. Webster, is it or is it not?

Mr. WEBSTER. I do not think it is fair, Senator, to ask any one of us to state categorically what our position is, not that I would be dodging it. But there is a hearing—a procedure underway. I have got to study those various comments that are made. There are alternatives. There are all sorts of suggestions. And for me to sit here and say I am for or against deintermixture, I think it would be unfair for anybody to ask me that.

Now, it is a possible technique, along with a lot of other things. And I am willing to study all of those when the time comes for me to review all these proposals. Now, if you will read those proposals, you will find there are differences of opinion there in the industry as well as around this table.

Senator PASTORE. But I read the Plotkin report and it leans very heavily on the element of deintermixture. Will you agree with me on that?

Mr. WEBSTER. That is one man's opinion.

Senator PASTORE. I know it. I realize that. But after he reviewed this whole subject, it really boils down to that.

Mr. WEBSTER. And he worked in the Commission and helped us on it.

Senator PASTORE. I know there are a lot of elements concerned here, but I think deintermixture is a big element. I think it is a very, very big element. Whether or not we are going to deintermix is a very, very big element in this whole problem. And I think pretty soon somebody will have to come to a conclusion, without any ifs or without any buts, as to whether or not this is ever going to happen.

Mr. WEBSTER. But I do not think——

Senator PASTORE. I am trying to be realistic. I know you could be very technical about this and say it is unfair to ask that kind of a question, but, my goodness gracious, I have waited 3 years to ask it.

Mr. COX. Mr. Hyde, would you care to continue?

Mr. HYDE. I was asked a question as to how we were going to get this competitive service, and I gave my opinion that we would have to find some method of developing the use of the ultrahigh channels.

I would like to explain why that is necessary. The VHF part of the spectrum runs from 30 megacycles to 300. Subtract 30 from 300 and you get 270. Divide that by 6 and I think you get 45. That means that in the entire VHF part of the spectrum there is a potential of 45 television channels, including the present 12 now allocated to VHF television.

Now, bear this in mind that about 58 percent of this VHF part of the spectrum which I have referred to is available to the non-Government services, the balance to the Government services, with a certain overlapping of Government and non-Government as to 24 megacycles of space. The general division is 58 percent to non-Government and the balance to Government.

In the non-Government or commercial part of the VHF space where we have allocated 46 percent, now, to television, we have allocated 21.73 to land mobile. This includes various safety services, police, industry and all types of land mobile services—95 percent of it, as a matter of fact.

If the Commission should find it possible to find additional VHF space from any source, they would certainly have to give consideration to other possible use before it could be given to television. When we come to make that decision we would certainly have to decide whether or not the problem of television is one of needing more space or whether the allocation is an efficient one of the space now allocated.

That might be critical for this reason: The demands for mobile or vehicular and manufacturing radio are not in any wise satisfied by the present allocation. As a matter of fact, our present economy tends to develop along the lines of a production-line economy. Attempts are being made to provide transportation facilities, and concurrent with that we ought to have communications facilities. One television channel in the lower part of the VHF portion of the spectrum would provide as many as 150 voice channels. In the upper part of the VHF under the present divisions, it runs to about 100.

If we had some additional VHF space to allocate in the public interest we could make a very significant addition to the provision that has been made for industrial use of the radio spectrum. That is also something very important since it affects our national economy.

Senator POTTER. Mr Hyde, would you yield at this point? Isn't it true that if you did find some more space for additional VHF channels you would have the problem of set conversion?

Mr. HYDE. We would have that problem if we attempted to allocate it to television, and it is essentially the same problem we have in trying to implement the use of UHF.

Mr. COX. If we are going to use the U's then, which would seem to be the most—that is they are presently allocated and are aavilable in sufficient number—how are you going to make an effective use of those to get this multiple service?

Mr. HYDE. You must set up conditions that will make it possible for a U station to operate, it seems to me. Now, I haven't wished any more than Commissioner Webster to give an opinion now about our rulemaking matter. That should be decided by study of the record, exchange of views among the Commissioners, and all of us, of course, would do well to reserve our opinions until we could study this together, and make a judgment on that record.

I have been concerned, however—and I expressed my concern in various dissenting views—by the course of action which tends to freeze the situation in a present pattern which, of course, will limit us in what we can do when we reach any solution that we would attempt on completion of the rulemaking.

I want to state here, I want to call attention here to the low horizons that obtain where you attempt to solve this thing in the VHF alone. Suggestions have been made here about shortening separations, putting in more stations. We instituted the freeze to reexamine the situation when short separations tended to produce interference conditions. Now, supposing that we would narrow or reduce the separations 50 percent, one-half, and assuming that would give you twice the number of stations that you have on VHF, there would be 2 stations where you have 1. We have too many cities where you have one VHF. If you add a second one, have you made provision for a truly competitive television service? I don't think you have. We have, as of now, 3 national networks, only 2 of which are able to get into as many as the first 50 markets of the country.

An analysis of the situation would go something like this: In 7 of the top 100 markets, there are 4 or more VHF channel assignments; in 26 markets, there are 3; in 32, there are 2; in 19 of the first 100, 1 VHF. We now have a shortage of facilities evident. As I have mentioned, the third network cannot get into enough markets to operate fully competitively with the other two.

The two that can get into the top markets have all of their time sold out in the evening hours, fully sold out, and actually there is jockeying for space there. You have the spectacle of not being able to activate all of our television channels notwithstanding the fact that 2 networks are sold out and the 1 that isn't sold out can't get into all the markets on a competitive basis.

This isn't just a network matter. Networks are not the only source of program materials, and we shouldn't look toward them as being the last and final answer to that problem. We should have provision for local community stations with local programs. There should be opportunity for programs that might be produced and delivered in any number of ways.

We can look forward to the development of tape recording. We can recognize right now that television programs can be produced on films. We should recognize right now that there are commercial interests, known as station representatives, engaged in the sale of spot advertising, and spot programing. I am not talking now about spot announcements, solely. I am talking about advertising which is spotted in the geographical sense. Certain industries do not market their products on a nationwide basis, and would logically have interests in marketing their products in those places where they have their distributors.

Without enough facilities to take care of three networks, obviously there are not enough facilities to take care of these other types of advertising.

As of now, and just based on a preliminary examination of it, you can notice that more than 50 percent of the advertising on networks is controlled by about 25 advertisers. So with a shortage of facilities available to television you can expect that it will have untoward results, economically, in the sense that you will have those that are fortunate enough to be on shows having facilities, having a tremendous advantage over those that do not.

I believe that some way must be found to make it possible to use the ultrahigh channels to provide the incentives that will permit the operation of the stations that will encourage the development of the apparatus, so that you can at least have facilities available for present demands. And of course, in a situation like this, we must give some consideration to the future.

The thing is pointed up by the fact that right as of now you can't even accommodate the three networks presently organized in the present economy. That doesn't look like a very bright picture insofar as any consideration might be given toward future needs.

Senator POTTER. Is ABC growing, or are they struggling?

Mr. HYDE. ABC?

I don't want to——

Senator POTTER. We know that is the third network.

Mr. HYDE. Yes. I don't want to seem to be urging the needs of any one network, but ABC is the third network. They have made rather remarkable progress in the expansion of their network, but it doesn't make any difference how good your program is, if when you want to offer it in a market against the program of two other networks there is no space to put it before the public. You are stopped at the threshold.

Mr. COX. Would it be your position, Mr. Hyde, assuming that it were found to be desirable by the Commission, that deintermixture could have been accomplished in selected areas without having prejudged the solution to the balance of the problem on a nationwide basis.

Mr. HYDE. I think something could have been done in that regard. I would like to say in this connection that the sixth report is not like an act of Congress. It isn't like the laws of the Medes and the Persians, that can't be changed except by complete and revolutionary changes. It was not contemplated as being the last and final solution, although we heard that phrase "firm, fixed and final."

The fact of the matter is that the sixth report was issued under the Administrative Procedure Act. It was issued by an administrative commission, and it is the particular forte of an administrative agency that it should be able to review its rules and regulations, and make adjustments as conditions which come to its attention may require.

When the sixth report was adopted, for procedural reasons and for procedural reasons only, the Commission announced it would not entertain petitions to make changes for 1 year. That was necessary in order that the Commission could turn its attention to lifting the freeze, and making some grants.

Actually, under the Administrative Procedure Act, we must be ready to consider petitions to make changes in the rules at any time consistent with the orderly handling of our work a petition might come up.

Mr. Cox. That could be done on a local basis.

Mr. Hyde. That could be done on a local basis. And as a matter of fact, you could make area changes. The dropping in of additional channels is an example.

Mr. Cox. Wasn't that done at the time you denied the deintermixture petitions?

Mr. Hyde. Yes, however, there is no difference in logic in taking away a channel and putting one in. It is a modification of your rules, it is a rulemaking proceeding, and is the sort of thing that an administrative agency, as I view it, should be prepared to do in order to meet changing conditions or to take care of the situations first coming to its attention.

Senator Pastore. For my benefit, would you explain what you mean by "dropping in a channel"?

Mr. Hyde. When a petitioner shows that a VHF assignment can be set up in the rules in a given place, consistent with the geographical separations and the other conditions of the sixth report, and the Commission grants a petition establishing another television assignment in its rules, it has come to be known as a drop-in.

In other words, in writing up the sixth report, a possibility may have been overlooked, a petitioner calls attention to it, the Commission allocates the channel to the community, and that is called a drop-in.

Senator Potter. You allocate a channel where a channel didn't exist before?

Mr. Hyde. That is right.

Mr. Cox. Take that specific example where you dropped one in at Vails Mills, N. Y. Wasn't that a sort of a deintermixture in reverse in the sense of creating a signal in Albany, which placed a probable ceiling upon future development of television service in the area?

Mr. Hyde. I have felt, on the basis of the evidence to come to us so far, that adding VHF's in ultrahigh areas would tend to freeze the situation against other changes. Now, actually, in the Albany area there was a single V, and it is a prefreeze station, WRGB, at Schenectady. An added V does bring in another competitive V in the area.

Deintermixture could involve adding V's in some areas, taking them out of others, and trying to arrange the allocations so that like stations would be in competition with like stations.

Mr. Cox. Isn't there this possibility that, in having decided not to wait about making available in the Vails Mills area this additional channel, a disposition may be made of it if procedures are completed which will prevent the Commission from making perhaps another use of that V channel, in connection with this general allocations proceedings, which would have been a more effective overall usage of that spectrum space?

Mr. Hyde. Every action that is taken either to allocate a channel in a single place or to grant a permit will, at least from a procedural standpoint, complicate the problem that you have in making any changes later on.

In that connection, the Commission decided when it was working on the sixth report that it would not be feasible to move television to the ultrahigh channels, because of the developments in the field that had already taken place. Subsequent to that, studies were made by counsel for this committee, and I believe both Mr. Plotkin and Mr. Jones advised that it would not be possible to make a wholesale change. That simply illustrates the difficulty you run into when you have a buildup which would have to be reduced for purposes of making a change.

Let me just conclude this whole statement by saying that in 1945, when the Commission completed its general reallocation, it determined then that there was not sufficient room in the VHF part of the spectrum, which I analyzed here in outline, to accommodate a nationwide competitive television system. Nothing that has happened since has raised any questions as to the validity of that judgment.

The CHAIRMAN. Is that how we got into all this mess?

Mr. HYDE. No, sir; no, sir; it is not.

The CHAIRMAN. Let me ask this question which has been bothering me, and you know hindsight is always very good. If the military had not got on to a third of the VHF band—approximately a third; is it not?

Mr. HYDE. The division is 58 percent–42 percent, with a certain part of it in joint use.

The CHAIRMAN. Well, if they had not got on to that, and they had gone up to the UHF and stayed there, would we have this problem here?

Mr. HYDE. Certainly, we would.

The CHAIRMAN. You still would have it?

Mr. HYDE. We would have 45 channels in the VHF space. Now we have 82, including UHF and the 12 VHF.

The CHAIRMAN. So that was not a factor?

Mr. HYDE. Let me put it this way: The total VHF space from 30 to 300 megacycles would give you only forty-five 6-megacycle channels which, in my judgment, would give you a limited service unless you cut those channels, unless you cut the service areas down to small parts. But before you would do that, you would have to take into consideration the needs of other services which have need of frequencies with the characteristics available in the VHF.

The CHAIRMAN. Supposing that in the beginning we had put all channels on UHF, would the problem have been solved?

Mr. HYDE. We certainly would not have this problem that is created where stations operating on very different channels are attempting to compete in the same market.

The CHAIRMAN. Would there have been enough UHF for the whole country?

Mr. HYDE. There would be 70 channels, and notwithstanding the fact that the upper channels are a little bit slow of development, we would have a lot more room than we have in the VHF allocation. In that connection, Senator, the ultra-high allocation to television is in one solid block. If you would study the spectrum allocations, you can't help but notice that that is just about the outstanding allocation of spectrum space to a given service. Even in the VHF part of the spectrum the channels are in three different blocks.

Senator POTTER. Did I understand you to say that with 45 channels we couldn't have a nationwide competitive television system?

Mr. HYDE. Oh, you could have a very, very sizable system—you could. But it is an academic question, Senator, because you can't possibly, giving any consideration at all to safety needs, allocate 45 channels from the VHF to television. You just couldn't do it and make provision of certain vital needs.

With 45 VHF channels you could have a tremendous television service, I am sure. If you followed the separation that we used in the Sixth Report, there would be cities where the number of stations would be limited. You get about one national coverage from six channels.

Senator POTTER. Here we are today, and in most communities there is just 1 channel, in some communities there are 2, and at the best 3, where you have networks and maybe another one with local programing. Now if that is the case, I am wondering about the concern—about having so many channels and getting the programing to put on those channels.

Mr. HYDE. Well, sir, as of now, programing is finding difficulty to find facilities to get into markets. You will find that—you will find evidence of that with the national advertising agencies, with the networks, particularly the ABC network, which is having the greatest difficulty. We should not assume, it seems to me, that three networks alone should be the criteria. We should give some thought to having facilities available for other methods of program distribution, such as film and tape.

Senator POTTER. Would that be competitive with your big network programs?

Mr. HYDE. Based on the opinions of certain advertising people, certain station representative people, if they could get their programs into enough markets they could put on a show that would be competitive. But they are stopped at the threshold by not being able to find time in those markets. Comparable facilities are in such short demand that there is scarcely any station time left.

The networks not only need what is known as network option time, but they tend to get into time which ordinarily would be reserved by the stations to take care of other types of programing. Shortage of facilities creates a pinch on independent programing, both from a national representative's and from a local standpoint.

Mr. COX. Thank you, Mr. Hyde.

I would like to turn, at least temporarily, from the intriguing question of deintermixture and go to——

The CHAIRMAN. Well, are we all through with that section? I think this will be a good time to take about a 5-minute recess.

(Recess.)

The CHAIRMAN. The committee will come to order. I want to say to the Commission that as far as the questioning on deintermixture and UHF and VHF, we have concluded that. Then we have these other matters relating to some of these problems which we will try and go on here a little bit today, and see if we can't get far enough so we'll be sure and be through tomorrow.

Mr. MCCONNAUGHEY. Do you want to go forward tomorrow?

The CHAIRMAN. Well, I don't think we will be able to quite finish it today.

Mr. MCCONNAUGHEY. I understood we were going on this afternoon on the condition that we would——

The CHAIRMAN. Well, we will be cutting it half a day for you anyway, because I think we are moving along as fast as we can. There are some other matters I am sure the Commission will want to be on record on. So we will start on those.

Mr. Cox. I would like to turn to some other matters which were discussed in your statement with reference to television for smaller communities. In that connection, you listed a number of steps that the Commission was taking which it hoped would be helpful. The first of these was the freer establishment of private intercity relays by broadcasters. Could you tell the committee why the Commission, in the past, has had restrictions on the operation of intercity relays by individual broadcasters which you are now proposing, apparently, to relax?

Mr. HYDE. I am sorry, I didn't hear that question——

The CHAIRMAN. The question is: Why has the Commission previously restricted private intercity relays so that it is now proposed that this should be relaxed?

Mr. HYDE. The reason has been that this has been thought to be a field in which a common carrier could best handle the transmission of materials. Handled on a common carrier basis, the cost, of course, could be allocated to all users and it would also make it possible to make most efficient use of spectrum space.

The CHAIRMAN. Well, then, what happened that you thought there was basis for a proposal that you relax this now?

Mr. HYDE. It has been relaxed by degrees. The Commission started first by issuing permits to television grantees, with notice that they should plan to amortize their investments looking toward the use of common carrier facilities.

The rapid development of the television industry, however, brought many calls for transmission of programs, many times from markets where the station's funds would be relatively low, too low to afford the kind of costs that would be involved in using a type of service that a common carrier would undertake to put in.

The Commission has recognized the realities of the situation. Where it appeared that the carrier could not provide the service as quickly as needed, or where the conditions were going to be very burdensome for the market, and where it did not appear that the granting of the private facilities would cause any untoward effect on other stations, we have issued permits for the private link. I will add this. It has seemed to me not a bad policy to issue permits for private links to people who could demonstrate ability to provide that service at low cost. It is just another example of use of competitive techniques to get a desired result.

Mr. Cox. And you do require, before the grant is made to them, a showing of what their expected cost is, their ability to establish and maintain this service?

Mr. HYDE. We do require in all applications a showing as to what the investment is going to be and, of course, an appropriate description of the equipment, so we will be able to ascertain—because we determine the grant will serve the public interest—that the service that can reasonably be expected will do the job.

Mr. Cox. When was your rulemaking proceeding for this freer establishment of such relays initiated? Do you recall? Was it sometime in September of 1954?

Mr. HYDE. That is approximately right. I can't recall the exact date.

Mr. Cox. What is its present status?

Mr. HYDE. It has not been finalized, but we have been following a very liberal policy in this——

The CHAIRMAN. You have been issuing them while it is pending?

Mr. HYDE. That is right.

Senator POTTER. I wonder if I could ask a question at that point, and this is a personal question. My home town, a little town of 6,000, has applied for use of the channel there. Can you let me know so I can advise my people back home when we are going to have television up there?

Mr. HYDE. Yes; we will take a look at any applications pending looking towards service there. It will be a pleasure to find out what the situation is. I don't think you are going to find the Commission insisting upon some method which will not be practicable for bringing that service to you.

Senator POTTER. At the present time the nearest station is over a hundred miles, and it is surprising the number of people that have invested, not only in sets but more money in an antenna to get a very bad picture.

Mr. HYDE. Senator, I would like to mention that, before Chairman McConnaughey came to our Commission, we had informally called this situation to the attention of the carrier, since it is the type of service you would normally expect a carrier to supply. In this connection you are all aware of the fact that they provide the program transmission for the aural network. We informally called attention to the need for providing a service which a television station in a small market could afford.

One of the results of that suggestion or inquiry was the filing of the off-the-air pickup tariff, and that was designed to provide service at a lower cost by picking up a transmitted program from some station at a point nearer to the place of usage.

Mr. Cox. Was that proposed by the telephone company as a substitute for relaxation of your rules on private relays?

Mr. HYDE. That was proposed, as I understood it, as one possible way of providing service at lower cost to markets which didn't seem to justify the other method.

Senator POTTER. Is that cheaper than microwave?

Mr. HYDE. That might combine both, Senator. They could have a pickup from a——

Senator POTTER. I am thinking of towers, these connecting towers.

Mr. HYDE. It would have this advantage: If a network program of station A were to be used at station B, it would be taken off the air at some point between station A and B, saving the first link, and then you would have the usual cost from that pickup to the place of usage. We have Mr. Cowgill here from the Common Carrier Bureau who could give you more specifications on how that works if you wish it.

Senator POTTER. That is all right.

Mr. Cox. Could you state just generally what the present status of this rulemaking proceeding on private relays is as far as a possible date for finalization?

Mr. COWGILL. My name is Harold Cowgill.

I am from the Common Carrier Bureau, chief of the Common Carrier Bureau. The comments are in from the rulemaking. They are being processed at staff level within the Commission. We are not far away from carrying that question to the Commission. I would say 2, 3, 4 weeks—something in that order.

Mr. Cox. Now, in your report to this committee of March 16 of last year, it seems to be suggested that it is thought that this proposal, in and of itself, might be a possible solution to the UHF problem. In your opinion, is it going to result really in any improvement of UHF's competitive position, or is it simply going to grant a cheaper form of operation to remote stations regardless of whether they are U or V.?

Mr. Hyde. I would be inclined to think that it would simply help television stations in either class.

Mr. Cox. Generally?

Mr. Hyde. Generally, yes.

Mr. Cox. With regard to this proposed off-the-air pickup service which was discussed by Mr. McConnaughey in his statement. I gather that is not separate proceeding—that it is simply being considered as a comment in this same proceeding, is that correct?

Mr. Hyde. No. The off-the-air pickup is an established service. They filed a tariff and that is available now.

Mr. Cox. That is in operation?

Mr. Hyde. Yes.

Mr. Cox. Now, I think Mr. McConnaughey said in his statement that certain broadcasters claim that they can still build a private intercity relay at their own expense and provide themselves with connection at a cost lower than afforded by the Telephone Company in this off-the-air pickup service. I would like to ask you whether the Commission has made any study of the costs of construction of these systems built by the broadcasters to determine their adequacy, operating costs and so on?

Mr. Hyde. We, of course, have taken note of the costs, and there are very great differences in the way the private operator will perform this service and the way the Telephone Company will do it, and there have to be certain differences. The Telephone Company, of course, would have to put up a complete system. It would have to acquire either leases or land, and it would have to put up equipment that would not require too much attention from time to time. A station operator, with a resourceful staff, could use that same staff to put up equipment, some of it of his own manufacture, and he could make a good part of the maintenance a part of the incidental duties of personnel attached to his radio operation. We must recognize here, too, that he will also content himself with a service which will not be up to the technical standards which the carrier would feel bound to supply.

Now, I am not—I don't want to leave the impresion here that I think that television service delivered over these private lines is in general inferior to that supplied by the carrier. There are a good many private installations that would be a credit to any carrier, I am sure. But in general a less costly installation, less capital outlay, and less special personnel can do the job if it is handled by the broadcaster.

Mr. Cox. Does it permit him to establish a service tailored to his needs which in turn provides a type of signal to the public that the Commission is justified in authorizing?

Mr. Hyde. I think it does. We make—we have so determined in those instances where we have authorized the private links.

Mr. Cox. Now, Senator Magnuson pointed out the other day that the committee has been advised of at least one instance in which we were furnished with some figures, which he read into the record, showing a very substantial difference in operating costs of about a quarter of what he had been told the Telephone Company would want for a similar service. Now, if there is in fact such a substantial differential, don't you think that the existence of those higher toll charges might tend, in itself, to stifle the development of stations some distance from the main lines of the carrier?

Mr. Hyde. I think it might tend to retard the development except for the fact that the Commission has been very liberal in making grants of circuits to be operated on a private basis.

Mr. Cox. Where they have been applied for?

Mr. Hyde. Where they have been applied for.

The Chairman. And I suppose if an applicant could show that the telephone proposal was expensive and that he could do it much cheaper, that that would be a good bit of evidence in the case for you to allow him to do it?

Mr. Doerfer. I might say that in one case, if I remember correctly, we gave the applicant permission to run it from point A to point C, and after operating it for some time on his own he concluded that he would have to do the job over by running it from point A to point B and then to point C. We also gave him authority to do that. But the disparity in costs there can be explained by the fact that the carrier has almost a guaranteed job, whereas the independent operator himself is willing to take his chances.

The Chairman. But don't you think he should be allowed that opportunity if he wants to?

Mr. Doerfer. We have allowed them.

Mr. Hyde. Mr. Cowgill has called my attention to the fact that we haven't made grants on the sole finding that the private link is cheaper than the common carrier. It hasn't been that simple. Usually it has been a question of immediate availability—the larger and more formidable array that the Telephone Company would supply has usually not been available as quickly as the broadcaster would wish it. And also we have taken into consideration the fact that we have got to encourage the broadcaster to solve that problem. So we get the application, and if he is in position to provide a needed service which he can afford, we approve it.

Mr. Cox. Did you have a comment?

Mr. Bartley. Yes. I think there are two points that I would like to put on the record here that do get into our consideration as to whether or not we grant these. One of them is that if the station operator himself—and I am not talking about off-the-air only—but if he is interconnected, he is not dependent upon the mother station. If he is interconnected he can take programs which the mother station doesn't necessarily have to take. So he has that flexibility, so there is value in that.

Another point that we have to consider, I think, is that in the first place we do have authority to require the Telephone Company to extend their lines and provide their service. Some of these inter-city links might very well be the links which would keep you from having an inter-continental network. Once you break it on an off-the-air picture, you are broken down all the way through. So that if enough of the, let's say, inter-Mountain stations used off-the-air pickups for their own private links, there wouldn't be support enough for the telephone company to supply the inter-continental link. So economics gets into this thing, too.

Mr. Cox. As I understand it, though, by encouraging a rapid amortization of the cost of this, you would be in a position perhaps to require the private operator at a later time, when the economy has developed further, to permit the substitution of a common carrier facility which would do this job on the nationwide basis.

Mr. Bartley. I would think that most of these will end up as an interim operation, because any station that can support itself is going to eventually want an interconnection.

Mr. Hyde. There has been this transition over to common carrier operation in a number of instances.

Mr. Bartley. I believe so.

Mr. Mack. The common carrier, as a general rule on a proposition like that, will give them a very substantial allowance for their equipment and all when they switch over.

The Chairman. You mean the phone company is getting liberal

Mr. Mack. Well, if you make a suggestion to them, sometimes they do.

Mr. Cox. Again I think it was indicated earlier that this proposal might help UHF. Is this again a situation where substantially what it does is just facilitate service in remote areas regardless of the portion of the spectrum that the station is in?

Mr. Hyde. That is true in general. But if you can envisage the situation where many stations are being brought into operation, that will necessarily include UHF, and so any move that helps to provide transmission of programs to a lot of stations should help UHF.

Mr. Cox. Because UHF allocations have been made in some of these remote areas which can't come into existence without such a cheap service?

Mr. Hyde. That is right.

Mr. Cox. Mr. McConnaughey, in your statement you said that in order to reduce programing costs, the Commission had authorized the operation of satellite stations by some action taken in August of 1954, and in your report of March 16 of last year to this committee, you indicated that you thought that this policy would help strengthen UHF. Could you tell the committee whether the authorization of satellites has, first of all, brought television service to people who otherwise would have had none?

Mr. McConnaughey. It certainly has. It permitted them to operaate without their own locally originated programs, and I think basically it has worked out pretty well to enable people in smaller communities—it has assisted them in being able to get television.

Mr. Cox. You said this morning you thought there were only approximately five such instances.

Mr. McCONNAUGHEY. I think that is about all.

Mr. Cox. Would you be of the opinion that this change in your rules has helped the status of UHF stations generally throughout the country?

Mr. McCONNAUGHEY. Well, it has helped. It hasn't developed to any great extent. It is available, they can use it.

Mr. Cox. How many of these satellites—the five that you mentioned—operate on UHF channels? Could you tell us that or provide the information for use?

Mr. McCONNAUGHEY. We will provide that information.

Mr. Cox. You will provide that?

Mr. McCONNAUGHEY. Yes.

Mr. Cox. Only one, Mr. Bartley?

Mr. BARTLEY. One is all I can recall.

Mr. Cox. I take it, then, that your rules under which satellite stations are permitted to operate, very clearly do not limit the benefit of such an arrangement to UHF stations?

Mr. BARTLEY. Oh, no, it wasn't designed to do that.

Mr. Cox. In fact, haven't you in a number of instances permitted the construction of VHF satellites to VHF parent stations?

Mr. BARTLEY. In a very few cases.

Mr. Cox. For instance, isn't it true that in Lufkin, Tex., you authorized a VHF satellite which rebroadcasts the programs of a VHF parent in Houston, 124 miles away?

Mr. BARTLEY. That is not the same ownership.

Mr. Cox. Not the same ownership. But the satellite and the parent are both V stations?

Mr. BARTLEY. That is correct.

Mr. Cox. The point I am making is that the creation of the satellite on a V channel has not materially, for instance, stimulated the purchase of all-channel sets?

Mr. BARTLEY. No, it is a VHF channel in Lufkin; it is a VHF channel in Sweetwater; the one out of Cheyenne, Scotts Bluff, is a VHF; and I believe Pasco, Wash., is a UHF; and there is a UHF in New York State—I forget the name of that town—off of a UHF station, that is.

Mr. Cox. If you permit V satellites to V parents, whether they are under common ownership or not, don't you find that you not only have not stimulated the development and sale of better UHF receivers and better UHF transmitters, but that, at least in the case where the parent owns the satellite, you have permitted this parent to increase its competitive position through this kind of an operation? Would that be true, Mr. McConnaughey?

Mr. McCONNAUGHEY. I don't think that we felt it was designated for that purpose at all.

Mr. Cox. That is you simply——

Mr. McCONNAUGHEY. It was designed to be helpful to small communities is what it was. Irrespective of VHF.

Senator POTTER. It similarly would go to a community if the market were such that it couldn't afford to operate its own station?

Mr. McCONNAUGHEY. That is right.

Mr. Cox. I take it, as you have indicated, this satellite station is not really a local television station within the meaning of the second priority of the sixth report, would that be true?

Mr. McConnaughey. Well, it could grow into one, I guess.

Mr. Cox. Have you in any way conditioned the grant of the license for a satellite to require that the licensee develop it into a truly local station within a certain period of time, or upon the happening of certain circumstances?

Mr. Doerfer. I think our original rulemaking commented on the fact that that was our purpose. Now I am not sure about it, but that was discussed. Is that correct?

The Chairman. Let me get this straight. Let's take the Pasco station. I think they get their programs out of Yakima. Is there a local staff in Pasco, or do they just feed the programs to Pasco? Can they take local advertising?

Mr. Hyde. I'm sure that the station is not equipped with a camera and necessary facilities to put on a local program.

The Chairman. So it is just an extension——

Mr. Hyde. It really becomes an extension of the Yakima station.

Mr. McConnaughey. Just a rebroadcasting——

The Chairman. Of what they have in Yakima?

Mr. McConnaughey. That is right.

Mr. Bartley. It takes its programs off Yakima.

The Chairman. I see. For instance, the local Pasco merchant couldn't go in there and advertise on that station because it is in Pasco, could he?

Mr. Bartley. That is correct.

Senator Pastore. What happens on a satellite station when they have an advertising portion? I mean they do not rebroadcast that, do they?

Mr. Hyde. Sure, everything.

Senator Pastore. What good does it do the community 125 miles off?

Mr. Hyde. They hear the network programs

Senator Pastore. Unless it is a national product.

Mr. Cox. They get the network programing.

Mr. Hyde. These things have usually been authorized simply to meet the demands of the public in some place.

Senator Pastore. I am not being critical of that. I am curious to know what happens. For instance, their advertising, you say it comes from a large city.

Mr. Cox. Yakima is not very large.

Senator Pastore. It comes from a parent station that has, let us assume, a local advertisement.

Mr. Hyde. They repeat that, too.

Senator Pastore. They repeat that, too?

Mr. Hyde. Repeat everything, yes.

The Chairman. They repeat local news from the other place?

Mr. Hyde. Yes.

Senator Pastore. So it isn't really desirable service; it is more or less an expedient.

Mr. Hyde. It is not the best possible service, but it is something there seems to be a great demand for.

Senator Pastore. Something more than nothing.

[Laughter.]

Mr. Cox. Recognizing, of course, that this does permit you to get national programing, at least, into areas where a station might otherwise not exist——

Senator POTTER. Isn't it true in many cases where you have your satellite stations, your parent station has also a limited market and it allows them to increase their market and put them on a little better competitive position?

Mr. COX. It permits them to increase their card rate for television service.

Mr. HYDE. There seems to be an acquiescence of many a licensee in the extension of his programs by such means as community antenna and other devices.

Senator PASTORE. One more question. Do you shift from a V to a U on that setup, too?

Mr. HYDE. Not usually, but the Commission has issued proposed rulemaking to permit a very liberal use of the upper part of the UHF allocation for what are called translators, which would of course operate in the ultrahigh channels. On of the reasons for proposing use of the ultra high channels is it would eliminate any problem of interference with stations operating on the VHF allocations.

Mr. COX. Isn't it true, though, that when you license a satellite, you have made use of a channel that is allocated to that community in the Sixth Report?

Mr. HYDE. Well, in the case of satellites, yes. But in the case of these translators, it is contemplated that they would use ultra high channels without regard to the allocation.

Mr. COX. Yes. But in so doing, in permitting, say, the station in Yakima, either to extend its market as Senator Potter suggests, or simply to meet the demands of the people in Pasco to build a satellite there, have you not in some sense permitted the usurpation of the channel in Pasco to the extent it may, if the Yakima owner doesn't desire to create a local station in Pasco, prevent the appearance in the Pasco area of a truly local station?

Mr. HYDE. These kind of authorizations do tend to supplant the local station, and that is why the Commission has been reluctant to encourage that type of operation. The Commission would prefer a complete station, prepared to broadcast matters originating locally. But you cannot refuse the people some national programs and wait too long a time awaiting the development of the local station.

The CHAIRMAN. Well, are those satellites conditional grants? I mean, in the sense, supposing someone decided now in Pasco to go ahead and have a real local television station, you could take the satellite away, could you?

Mr. HYDE. No license can be issued for more than 3 years at the most, Senator. This is a program—this is a field in which developments are not going to be too rapid to get out of hand.

The Chairman. No, and you have not granted many of them. But in the cases you do, surely the applicant must realize the reason he has the satellite is because there is no other local service available there?

Mr. HYDE. I am sure they do. We have had a policy question of this kind to come up in my own State. I think we mentioned this at the last meeting. We had a community station in Twin Falls, Idaho. Some other interest operating a station in Boise proposed to put in a transmitter at Twin Falls to repeat the Boise station. The Commission raised questions as to whether it would be in the public interest to license this relay station to operate competitively with the complete station. At that juncture the applicant amended its application to put in local facilities.

Senator PASTORE. Take the situation that was given as an example by Mr. Magnuson. Let's assume you have a satellite station in Pasco. Let's assume "X" comes along and applies for a station—an actual station in Pasco—can the satellite object to it?

Mr. HYDE. He has a procedural objection. Now, of course that has been watered down considerably by the recent amendment of the act.

Senator PASTORE. But he does have a right to protest?

Mr. HYDE. He does have a right to protest.

Senator PASTORE. And in his protest, before we passed the amended law, he could have kept that station off the air.

Mr. HYDE. He could have kept it off. There was a builtin automatic stay with that protest. If the protest conformed to the requirements of section 309 (c).

Senator PASTORE. Now under the present law, if you find it in the public interest to allow the new station to go on, you can grant it.

Mr. HYDE. That is right, sir.

Mr. MCCONNAUGHEY. Let him go on, that is right.

Mr. COX. Are satellites counted as separate stations for the purpose of the Commission's multiple-ownership rule?

Mr. MCCONNAUGHEY. I don't think so. I don't think so. It never came up. There has been no problem.

Mr. COX. Now, if you wanted to permit a UHF parent station to get a signal into white areas within its normal service area—which was one of the initial purposes you stated for the adoption of this rule—wouldn't another possibility be, as I think Mr. Hyde already suggested, the licensing of a translator or booster to provide that fill-in service, rather than the use of a satellite?

Mr. MCCONNAUGHEY. That is right.

Senator POTTER. Let me ask this question so I fully understand what a satellite is. We have a case, I mentioned my hometown of Cheboygan, where there has been an allocation of channel 4 VHF channel, Traverse City, which is 100 miles distant. There is a parent station. The man at Traverse City has filed with the Commission for the channel 4 station in Cheboygan, a town of 6,000 people and very little, in northern Michigan, very little market outside of the area. Now, is that a satellite station?

Mr. MCCONNAUGHEY. I understand, Senator, that he has filed an application for a grant. That would not be a satellite station.

Senator POTTER. But he is going to take the programs from the parent station and rebroadcast them on the Cheboygan station.

Mr. MCCONNAUGHEY. And then it is a satellite.

Senator POTTER. Then it would be a satellite?

Mr. MCCONNAUGHEY. If he does that, and he does that alone and rebroadcasts; if he just rebroadcasts them.

Mr. COX. But if he set up an intercity relay to bring the programs that he wanted from the national network and supplemented that?

Mr. MCCONNAUGHEY. Then it is a separate station. Then it is a separate station.

Senator PASTORE. Who has that choice? Does he have that choice or do you supervise it in any way. I mean, how do you determine the public interest? You have the public interest in having programs of a local aspect. Now, does he decide whether it is going to be a satellite or whether he is going to have local programs, or is he supervised in any way or told in any way what he should have in the public interest, or does he do as he pleases?

Mr. McCONNAUGHEY. Well, it depends on what his application would show at the time he filed it. As I take it, in this particular case he is asking for a separate operation. Then he comes into a hearing and he states what his programing is going to be.

Senator PASTORE. And you have to pass on it?

Mr. McCONNAUGHEY. We have to pass on it.

Mr. COX. If you concluded that the application was not in the public interest because you thought there was a possibility of the development of a truly local station, then you simply would reject his application?

Mr. McCONNAUGHEY. That is correct.

Mr. COX. Have you turned down some applications for satellites in this rather limited experience?

Mr. BARTLEY. In effect.

Mr. COX. In effect?

Mr. BARTLEY. In effect.

Mr. COX. By requiring amendment of the application?

Mr. BARTLEY. By asking—no, we used the letter process.

Mr. COX. Could you tell us what is the approximate cost of a satellite, for instance, as related to the cost of the translators you were discussing the other day? It is a much more expensive proposition, isn't it?

Mr. McCONNAUGHEY. Yes, considerably more. I can't tell you—I don't know the exact figures. It is a much more expensive operation.

Mr. COX. I think I saw figures for one in Nebraska which was stated to cost upward of $180,000. Would that be possible?

Mr. McCONNAUGHEY. I don't know.

Mr. BARTLEY. Generally, Mr. Cox, they are a television station without studio equipment.

Mr. COX. So that transmitterwise they require equipment comparable to that of a regular station rather than one of these more local expedients of the translator type?

Senator POTTER. I assume the distance from the parent station would have a great deal of bearing on the cost, too.

Mr. COX. Wouldn't it be more the size of the area they wanted to service?

Mr. BARTLEY. That is the determining factor in cost of transmission, tower and power.

Mr. COX. Mr. Chairman, as a further means of reducing construction and operating costs you cited the amendment of your rules in June of 1955 to reduce the minimum power requirements and to eliminate the antenna height requirement. Could you tell the committee how many stations have taken advantage of this change in the rule?

Mr. McCONNAUGHEY. I do not know the number.

The CHAIRMAN. You can furnish that for the record?

Mr. McCONNAUGHEY. All right.

The CHAIRMAN. Furnish that for the record?

Mr. McCONNAUGHEY. Yes.

Mr. Cox. Could you, in supplying that, indicate whether they were new or previously existing stations, seeking to reduce their power and antenna heights; how many of them were UHF and how many were V; and whether or not, therefore, your rule is limited to UHF stations?

Mr. McConnaughey. Yes, we will furnish that.

Mr. Cox. Now, you say that this change in your rules is going to make possible the construction of television stations in smaller cities. Is it restricted to cities smaller than a certain size?

Mr. McConnaughey. No, sir. It makes possible, I said, the construction of television stations in smaller cities.

Mr. Cox. All right. To the extent it is not limited to smaller cities, does it raise a possibility that channels may be preempted even in larger cities by the expenditure of relatively small sums for the construction of such a station?

Mr. McConnaughey. Well, it could. But I would assume that the larger cities would want a thousand watts and the maximum antenna height that they could get.

Mr. Cox. But it would be possible under the rule?

Mr. McConnaughey. Yes. I mean, it is not limited. It is merely an aid.

The Chairman. And it would make it possible, would it not, Mr. Chairman, in cities even of large size, for a fellow with a smaller investment to have a better chance of taking on local advertising and take care of the local people?

Mr. McConnaughey. Better chance to survive.

The Chairman. It would be possible he could do that?

Mr. McConnaughey. That is correct.

Mr. Cox. In that connection, however, are these lower power station required to originate any local programs?

Mr. McConnaughey. Not in the event they are satellites, they are not.

Mr. Cox. The point I am raising is, Aren't they always going to be satellites?

Mr. McConnaughey. I do not know that. I mean I don't think—you can't tell because the future you can't figure out.

Mr. Cox. Didn't you state in your annual report for the fiscal year 1955 that by lowering power requirements stations can be constructed in small communities at a modest investment, particularly if they are also permitted to operate without originating local programs? So that——

Mr. McConnaughey. That would be a satellite.

Mr. Cox. You contemplate satellite operation?

Mr. McConnaughey. Yes.

The Chairman. But there is no reason—I hope you wouldn't rule out the fact that the fellow could start in and be a local programer.

Mr. McConnaughey. We certainly would not.

Mr. Bartley. The idea is to build it into a situation where he may do that.

The Chairman. He might do that.

Mr. McConnaughey. Sure.

Mr. Cox. Has the Commission considered, in that connection, inserting a condition in his grant that he be required to make an orderly progression to full-fledged operation?

Mr. HYDE. I am sure that the Commission finds it is in the public interest when they grant one of those only for the license period, which has a maximum run of 3 years. Now, when he comes up for renewal of license, we can raise the question then as to whether this kind of service is adequate to the needs of that community. It was discussed among the Commissioners that it might be desirable, as this thing developed, to raise that question.

Mr. COX. Add requirements each time he comes up?

Mr. HYDE. The Commission thought it would be better to proceed that way than to put conditions on at the beginning which might discourage——

Mr. COX. Applications?

Mr. HYDE. Applications.

Mr. COX. Well, how do you expect this change in your rules to effect any material improvement in the general UHF situation in the future?

Mr. MCCONNAUGHEY. Well, it could.

We know it is our hope, but I assume that when we authorize satellites, it was our hope that they would grow into a regular operation.

Mr. COX. This would be done, as far as overall UHF improvement is concerned, where the low-power station authorized is the first station in the area and therefore will get a certain amount of additional sale of all-channel service; would that be a possible benefit from it?

Mr. MCCONNAUGHEY. It could be. It certainly could be. And if and when local advertisers support the additional cost of local spots, then the satellite could invest in equipment and grow into a regular operating station. It would be possible.

Mr. COX. Both in your report of last May to this committee and in your present statement you referred to exploration of the possible use of boosters as a means of increasing the coverage of UHF stations, and also possibly of extending service into remote areas. Now, could you tell us what the status is of the rulemaking proceeding that you referred to at that time?

Mr. MCCONNAUGHEY. Well, I think I told you at the time it was being studied. And I believe Mr. Allen, who is the chief engineer, could tell you we have run into some pretty serious engineering problems on these boosters, with reference to interference.

The CHAIRMAN. There is a bill introduced in Congress—I think in both House and Senate—which they are urging me to bring up in front of the committee. It would allow boosters 1 watt, is that correct—1 watt boosters to operate without any license, but only subject to inspection by the Commission, when they interfered with other air waves or things of that kind? Of course they would only cover really isolated areas; that is, they possibly could. Does the Commission have any opinion as to that bill? Where is that, in the House? It is in the House, I am informed.

Mr. ALLEN. These boosters would be operated within the State and would be expected not to cause interference across State lines, is that it?

The CHAIRMAN. Yes, that is the one.

Mr. ALLEN. We will probably have to examine those very carefully, because you have not only the problem of interference in television, because if these things don't design properly, they can interfere with the aviation frequencies.

The CHAIRMAN. The bill would provide, of course, that you people would have the right to inspect them and throw them off the air if they were interfering in any way; but they could go on without any license from the Commission.

Mr. ALLEN. I am afraid that would introduce some rather fundamental problems in the national treatment of the use of radio frequencies, because these things have a chain reaction, you see, and they have to fit into the overall pattern. It could not be done from an engineering standpoint.

The CHAIRMAN. You would be fearful, I suppose, that by the time you got around to them, they may have caused some trouble, would that be it?

Mr. ALLEN. They could raise some serious problems.

Mr. COX. Mr. Hyde?

Mr. HYDE. I suggest that that is a proposition which would have to be examined very carefully, because you may find that you will have to have some regulation of even the one-watter at the initial stage to keep them from interfering with each other. How are you going to prevent the two one-watters from coming up in the same city?

The CHAIRMAN. If they wanted to collide with each other privately, why, the Commission has enough troubles without worrying about that.

(Laughter.)

The CHAIRMAN. What I mean is that under this, if we went on the air without a license, you and I, and we collided, why, we would have no right to come to the Commission and ask for protection, either one of us. We took it on ourselves.

Mr. HYDE. You remember from the history of the Radio Act of 1927 that a licensing authority was set up to bring order out of the chaos that was developed when stations operated without regulation.

The CHAIRMAN. You are fearful this might bring on the same kind of thing?

Mr. HYDE. Locally, if not in a larger area.

Mr. COX. Am I correct in this, that when this rulemaking proceeding was started the concept that you had was of a booster created by the parent station for purposes of extending its service—that it did not contemplate the erection of boosters by local residents who are trying to use it to bring in signals from remote points?

Mr. HYDE. I think our discussion did not go to the point of who should operate that booster. The first tests were actually efforts at research to find out what could be done from a technical standpoint.

Mr. COX. Do I understand that, because of the engineering problems which it is felt would be encountered, this proceeding is not going to be drawn to a conclusion, or that——

Mr. HYDE. I should think we would be able to resolve it one way or another. I think we must do that.

The CHAIRMAN. You have got the case from my State down there now, haven't you?

Mr. HYDE. I am thinking of your State.

(Laughter.)

Mr. MCCONNAUGHEY. That is where it is.

Mr. HYDE. We have got to find some authorized way to satisfy a need. Is that all I need to say on that? [Laughter.]

Mr. McCONNAUGHEY. That is about it.

Mr. COX. Now as I understand Mr. McConnaughey's statement, then, your current thinking toward that end is in line with the development of these translators to provide not a repetition of the signal on the same channel but a conversion of the signal to one of the top 14 UHF channels for purposes of rebroadcasting into more remote areas, is that right?

Mr. McCONNAUGHEY. That is a true statement. As you will recall, I said that careful engineering analysis has convinced us that this would be a very dangerous thing to do. I am speaking now of boosters. Let me go to the translator which is a facility which intercepts the signal of a TV station and puts it over on a different channel.

The CHAIRMAN. My people raised the question of how much more will it cost for a translator?

Mr. McCONNAUGHEY. I testified to that. As I recall, it was a thousand dollars.

Mr. COX. Isn't it true that that is the cost of the converter, the part of the equipment——

Mr. McCONNAUGHEY. Translator you mean.

Mr. COX (continuing). Translator, the part of the equipment that is going to convert the received V signal, or U signal, to a high band U for rebroadcast? Wouldn't there be additional expense for construction of the necessary receiving equipment, the amplifiers, the traps, cable connections and any other items that would be necessary in this whole complex?

Mr. McCONNAUGHEY. There would be some cost. I don't know what it would be. Remember we told you the cost of the converter, along with the UHF antenna, would vary from $20 to $50 per receiver.

Mr. COX. Yes. Now you are talking about the viewer and his expense?

Mr. McCONNAUGHEY. That is right.

Mr. COX. That is, you anticipate that the man who presently gets some kind of a signal from a booster, which simply rebroadcasts the V signal received from the distant station, when you use a translator so that he receives a U signal, is going to have to spend from $25 to $50 in, and on top of, his house to get that signal on his set?

Mr. McCONNAUGHEY. It is estimated $20 to $50.

Mr. COX. Now do you think that it could be possible that the cost of the receiving equipment which would be prior to the translator would be $1,000 to $1,500 per channel, to be handled in this way?

Mr. McCONNAUGHEY. I don't know whether we made any study of the cost of that.

Mr. COX. Mr. Allen?

Mr. ALLEN. I don't see why the receiving end of the apparatus would be any more expensive than the receiving end on the booster. Some of the aspects of it would be simple, because you would not have to isolate the receiving antenna from the transmitting antenna.

The CHAIRMAN. Is the picture the same?

Mr. ALLEN. The picture would be the same.

Mr. COX. What I am trying to get at is that—at least for a new operation, not one where you are converting an existing booster to a translator—for a new operation there would be, in addition to the thousand-dollar cost for the translator, some such cost for the erection of receiving equipment?

Mr. ALLEN. That is right. It would include receiving antenna installation, a good receiver which is stable, and then your translator, and an outgoing antenna system, UHF antenna system.

Mr. Cox. And you would have such an array for each one of the channels that you wanted to try to bring into this community, would that be correct?

Mr. ALLEN. That is right, and housing of course.

The CHAIRMAN. What about the station they take the programs from? Do they pay them?

Mr. Cox. Don't your proposed rules on the translators require, at least, that they get the consent of the station whose program is rebroadcast?

Mr. HYDE. Our Commission rules do require that a station that rebroadcasts the program of another have his consent. And we would naturally assume that anyone appropriating or using the broadcasts of station A to rebroadcast on B would have to have that consent.

Mr. Cox. Does that carry with it the right in the owner of station A to decline that consent, or to exact a charge for it?

Mr. HYDE. We could not undertake to settle property rights in our regulations. There are rights of artists, copyrights and things; it is a field in which the operators would have to resolve their problems.

Mr. MCCONNAUGHEY. As you know——

Mr. Cox. There is a requirement in the statute?

Mr. MCCONNAUGHEY. The act itself requires it.

Mr. HYDE. That you have consent for broadcast is a statutory requirement.

Mr. Cox. Wasn't that designed—at least wouldn't it appear to have been designed—to prevent a person setting up a full-fledged commercial broadcast station from appropriating the property of another, and not with specific reference to a man who is simply trying, in effect, to use this rebroadcast as a means of receiving the signal for a limited area?

Mr. DOERFER. I think that interpretation is possible under the wording of the act. I do think that perhaps the courts would have to decide it in the event these was ever a contest. But a good argument can be made that once the signal has been dissipated so that it is of no earthly use——

Mr. Cox. No more property?

Mr. DOERFER. No more property rights there.

Mr. Cox. How about this. Are the receivers, when they operate at these extremely high frequencies above channel 70, are they less sensitive than in the lower U bands?

Mr. MCCONNAUGHEY. Mr. Allen, could you tell him that?

Mr. Cox. Mr. Allen, are the receiving sets, when they operate in the top 14 bands of UHF—do they have a tendency to be less sensitive than when they operate in the lower band?

Mr. ALLEN. There is a gradual increase in a UHF receiver as you go toward the top channels.

Mr. Cox. Are there any UHF broadcast stations now operating in these top 14 channels?

Mr. ALLEN. I can't answer that. You will have to get that from the records.

Mr. Cox. Will you get us that information for the record, please? Is there a problem with the oscillator tube in the UHF receiving set having a tendency to fade out more—and be more erratic in the higher bands than in the lower bands?

Mr. ALLEN. That is right, as of the present day.

Mr. Cox. If we ever get to substantial broadcast of color television in these remote areas, will there be problems there also in connection with the use of these top 14 bands?

Mr. ALLEN. I think so far as color is concerned, the problem is tied in with the same problem in black and white, to get your receiver to work in the upper end of the UHF. As I stated here in the last appearance, I believe, that there are developments which have been perfected, which I think will go a long way toward solving this problem. I think it is a matter of time when we can build a good all-wive, all-channel receiver, both VHF and UHF.

Mr. Cox. Which would be equally sensitive in all of the bands?

Mr. ALLEN. I would not say equally sensitive, but satisfactory in all bands.

The CHAIRMAN. Now this is a good place for us to recess. Are you through with that?

Mr. Cox. I have just three more questions I think here which are slightly related, and we might as well dispose of them.

The CHAIRMAN. All right.

Mr. Cox. First of all, does the Commission have, or at least exercise, jurisdiction over the community antenna systems which have come into some of these remote areas for purposes of bringing television service?

Mr. MCCONNAUGHEY. They have not exercised jurisdiction over community antennas.

Mr. Cox. Do they pose any problems, or does the fact that they are wired systems and do not emit signals avoid the difficulties that you have encountered in the boosters?

Mr. MCCONNAUGHEY. How about it, chief engineer; does it present any problems?

Mr. ALLEN. Well, they would not be expected to have problems of as great magnitude as you would on the reradiating booster, but it is not true that they do not emit signals.

Mr. Cox. They do?

Mr. ALLEN. They do emit signals, and depending upon the design of the system, how well it is designed, and the original equipment that goes into it, some of them can operate satisfactorily in areas where people are trying to receive direct signals and no interference is caused. But in other systems, they radiate sufficiently so that they interfere severely with local reception and direct reception by people who are trying to receive the signal directly.

That is reasonably close to the system, usually though, within say feet or hundreds of feet of a system, rather than a question of miles which you may get in a booster station.

The CHAIRMAN. Isn't it true that they have some sort of a petition before the Commission, the community antenna people, in which they are asking for some kind of protection—is that right, Mr. Chairman?

Mr. MCCONNAUGHEY. I don't think so, Mr. Chairman, none that I know of.

Mr. Cox. Have you ever instituted any formal proceeding to decide and pass upon the question of whether they are within or without the jurisdiction of the Commission.

Mr. DOERFER. There was one applicant that asked the Commission to decide that, but I understand that he dismissed his petition. Isn't that the Clarksburg matter?

The CHAIRMAN. I don't want to go into cases. This is off the record.

(Discussion off the record.)

The CHAIRMAN. Is this correct: You never decided whether you had authority over community antenna systems; and, not having decided that, they have no way to formally petition you, but they watch these other proceedings very closely to see what you are going to do.

Mr. McCONNAUGHEY. And they write us letters all the time. Once a week, I just heard, one gentlemen out there has been writing for the last 20 weeks.

Mr. Cox. Is it correct—this question has been raised as to the Commission's jurisdiction over these systems by the circuit court in the Clarksburg case, with a suggestion that this matter should be determined one way or the other by the Commission; is that right?

Mr. McCONNAUGHEY. Just a minute. The General Counsel will answer that.

Mr. HENLEY. That has been raised only in a very limited way by the Clarksburg case. That is, the court of appeals said, in the Clarksburg case, that in determining whether there is overlap of service between the two stations the Commission should consider also the program service that is brought into one of the communities by a community antenna system. The Commission had theretofore not considered that service. So it is only to that very limited extent.

Mr. Cox. Well, is there any good reason why the Commission shouldn't determine jurisdiction one way or the other?

The CHAIRMAN. They may have to, sooner or later. I should think you are going to have to meet up to the problem sooner or later if there is this sort of interference.

Mr. DOERFER. If it is broadcasting or whether it is a common carrier service is the big issue. Now, if it is a common carrier, that would mean that the Commission probably would assume jurisdiction over 300 community antenna systems, if not more, setting the rates for the service and setting service standards.

Now, if the Commission decides that it is not a common carrier service—and there is good argument to indicate that it is not—but broadcasting, well, then about the only question that remains there happens to be whether or not a particular service is going to frustrate an overall Commission plan.

The CHAIRMAN. Yes.

Mr. DOERFER. To develop free television.

The CHAIRMAN. They are mainly intrastate, are they not, too?

Mr. DOERFER. That is another question; yes. I don't know, I would assume that the only possible way to determine that is to initiate a proceeding whereby we take all of the national implications into consideration. I don't think you could reach an answer by merely deciding a case in which the court has indicated that there is some overlap, and is more interested in overlap than it is as to whether or not we have jurisdiction.

Mr. Cox. In these some 300 or 400 community systems that are built, isn't there an investment of some $30 million which is more or less in a dubious status until the question is decided?

Mr. MACK. I understand it has been decided in 2 States by the State regulatory agency. They have taken jurisdiction.

Mr. Cox. It has been decided in favor of State regulation?

Mr. MACK. That is right.

Mr. DOERFER. California and Wyoming.

Mr. Cox. To the possible exclusion of your jurisdiction?

Mr. MACK. Why, certainly.

Mr. Cox. Is this decided by these agencies without any consideration on your part, so as to preempt you from later deciding otherwise?

Mr. MACK. Let me finish. They have considered it as the same thing as local telephone service, over which we have no jurisdiction.

The CHAIRMAN. So in a State, for instance, the State of Washington, the State public utility service——

Mr. MACK. If they have the statutory authority.

The CHAIRMAN. If they have the statutory authority they could go——

Mr. MACK. Move in.

The CHAIRMAN. We might have rulemaking to take care of the community antenna?

Mr. MACK. We could certainly run into the same situation that we have with the State regulatory agencies now, that on interstate service if the fellow was getting any we would be involved to the extent he paid interstate tariffs.

Mr. Cox. Will the Commission—when it gets around to licensing translators, if it is decided in this pending rulemaking proceeding that that is the solution to this problem—is it going to be inclined to regard the operators of these present informal boosters as being debarred from being licensed to convert that to a translator?

Mr. MACK. We had better wait until we come to that.

Senator THURMOND. Are you asking these people to say what they are going to do when a case comes before them? If so, I object to that, Mr. Chairman. I think you are trying to browbeat these people and trying to get them to say what they will decide and I think it is unfair.

The CHAIRMAN. I was just going to say that is a case before them, they have testified they are getting ready to work on it——

Senator THURMOND. I don't think counsel had any business trying to pull out of these people what they are going to decide in the future because that is not our people.

The CHAIRMAN. He hasn't done that and didn't intend to.

Mr. Cox. I would like to state for the record that I was not relating to any pending case, I was asking with regard to a statutory policy. As I understand it, the Communications Act states that no person can ever be licensed to operate a broadcasting facility who has built such a facility without license from the Commission. Isn't that—

Mr. HYDE. No, that is not correct, the act provides that if a station is built without a permit, we may not license that station.

Mr. Cox. That particular——

Mr. HYDE. But that relates to the station, not necessarily the operator.

Mr. Cox. I certainly wasn't inquiring as to any pending case or any possible decision in that case.

Mr. Hyde. No, you are referring to section 219.

Mr. McConnaughey. I thought you were referring to the present booster case before us.

Mr. Cox. No. I am talking about rulemaking and about the policy that might come out of your translator rulemaking proceeding.

Senator Thurmond. I think also what they are going to decide in any matter in the future is something that would be unfair to ask them. I think you are pinning them down to tell you what they are going to do in setting policies and rules in the future. I don't think we have a right to do that.

The Chairman. No, no one is trying to pin them down to that at all, Senator. We are talking about certain matters which involve the problem of when they are going to get at this matter or whether they have authority to get at the matter. It is a very ticklish matter, legally and otherwise. It is a problem that the Commission hasn't yet taken up and I don't know whether they can, as Commissioner Doerfer said, for several reasons, and involves community antennas. No one intended to ask them about what they were going to decide on a case before them at all.

Well, I think this is probably a good time to recess, and I am sure we can get through very quickly tomorrow.

Mr. Mack. What time, Mr. Chairman?

Mr. Cox. Ten o'clock.

(Whereupon at 4:33 p. m., the committee adjourned, to reconvene at 10 a. m., Tuesday, February 21, 1956.)

TELEVISION INQUIRY

(UHF-VHF Allocation Problems)

TUESDAY, FEBRUARY 21, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m. in Room G-16, United States Capitol, the Honorable Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Pastore, Bible, Bricker, Schoeppel, and Potter.

Committee personnel present: Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel.

The CHAIRMAN. The committee will come to order. There will be other Senators here, but we are going to try and see if we can't finish this morning, so we will skip along. We will skip over some of the questions that the counsel and the committee have prepared; some of them are necessarily a little bit repetitious; but in order to make the record cohesive, we have put them in here. We will skip over those and if we want the answers we can always send our questions down and you can send them up in writing.

Mr. McCONNAUGHEY. Yes, sir.

The CHAIRMAN. Some of them are technical anyway.

Do you have a statement you want to put into the record?

Mr. COX. Did you have a letter in response to some questions from the committee?

Mr. McCONNAUGHEY. Yes.

The CHAIRMAN. That will be placed in the record at the proper place.

(The information is as follows:)

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., February 20, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: The information contained in this letter is submitted in response to a telephoned request received from Mr. Nicholas Zapple of your committee's staff on February 13, 1956.

Mr. Zapple first requested the names of the 29 markets to which I referred in my testimony before your committee on February 7, 1956. These are markets in which UHF stations commenced operating before the advent of VHF stations, which subsequently came on the air. In answer to the first question, the names of these 29 markets are:

Alabama: Mobile,[1] Montgomery
Arkansas: Little Rock [1]
California: Bakersfield, Sacramento, Stockton [1]

---

[1] See footnote p. 158.

Florida: Pensacola,[1] Tampa-St. Petersburg, West Palm Beach
Georgia: Columbus, Macon[1]
Illinois: Rockford
Kansas: Wichita
Louisiana: Baton Rouge, Lake Charles, Monroe[1]
Maine: Lewiston,[1] Portland[1]
Minnesota: Duluth-Superior
Mississippi: Jackson[1]
North Carolina: Asheville, Winston-Salem
Oregon: Portland
South Carolina: Columbia, Greenville
Texas: Beaumont-Port Arthur, Tyler,[1] Waco[1]
West Virginia: Charleston.[1]

The next question related to the profit or loss position of UHF stations as of the most recent date for which data are available. There are at present 96 UHF stations on the air. However, the most recent date as of which the Commission possesses information concerning the current financial position of UHF stations is October 1954.

The financial position of UHF statons at that time is reflected in table 1 of the enclosed Third Survey of Postfreeze Television Stations.

A question was also raised concerning the survival of UHF stations in markets where UHF broadcasting commenced before the advent of local VHF stations, and the profit or loss position of UHF stations in such markets. As I have already pointed out, UHF stations which went on the air before the advent of local VHF stations have continued to operate in 16 of the 29 markets in this category. However, as of October 1954, the latest date as of which we possess information disclosing the current financial position of these UHF stations, there were only 11 markets of this type in which local VHF stations had already come on the air. There were 12 UHF stations in these 11 markets. One of these reported a profit for the entire period January through October 1954. One additional UHF station in this group, while reporting a loss for the entire 10-month period, had attained profitable monthly operation by October 1954. The remaining 10 UHF stations in this group reported continuing monthly losses through October 1954.

The regular financial reports for 1955 are due to be filed by April 1 of this year. As soon as these are received and can be compiled, we will have more current information concerning the financial position of UHF stations.

It was also requested that the Commission furnish the names of all members of the Commission staff who were working on the general allocations proceeding (Docket No. 11532), the percentage of their time which was being devoted to the proceeding or to related problems and the date each staff member started working on it. The Rules and Standards Division of the Broadcast Bureau has the primary responsibility for handling rulemaking proceeding at the staff level. The following members of that Division have devoted the indicated percentages of their time to television allocation problems arising out of and related to Docket No. 11532 since November 10, 1955, when that rulemaking proceeding was initiated:

	Percent
Hart S. Cowperthwait, chief of the division	50
Herbert M. Schulkind, assistant chief of division	50
Robert G. Weston, engineer	80
Louis H. Rein, engineer	80
Louis C. Stephens, attorney	80
Lynne A. Kaufman, attorney	80
Arnold I. Weber, attorney	80

In addition, a substantial amount of the time of Edward F. Kenehan, chief of the Broadcast Bureau, and James E. Barr, assistant chief of the Broadcast Bureau has been devoted to this problem.

Also, Edward Allen, chief engineer and several members of his staff have devoted substantial time to the allocation proceeding, and problems relating directly to it. Warren E. Baker, general counsel, Richard A. Solomon, assistant general counsel, and Charles Smoot, assistant general counsel, have also devoted time to television allocation problems.

[1] The UHF stations went off the air after the advent of local VHF stations in these 13 markets.

Substantial time of the aforenamed staff members of the Rules and Standards Division and the Office of the Chief Engineer was devoted to the allocations problem during the weeks preceding the initiation of the general allocations rulemaking proceedings.

Replies to the additional questions concerning excessive and fraudulent commercial announcements will be submitted separately.

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman*.

(The survey is as follows:)

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON 25, D. C.

THIRD SURVEY OF POST-FREEZE TELEVISION STATIONS

PUBLIC NOTICE 23055, AUGUST 19, 1955

The Commission's third survey of post-freeze television stations covers the period January 1 through October 1954. Of 144 VHF post-freeze stations, 52 (36 percent) had overall profitable operation during the 10-month period; another 50 VHF stations (35 percent), although reporting an overall loss for the 10-month period, were showing a monthly profit in October or in October and one or more earlier months; while 42 stations (29 percent) had continuing monthly losses through October 1954. Only 1 of these 42 stations had ceased opearting as of June 4, 1955.

Reports from 122 UHF stations indicated that 18 (15 percent) had overall profitable operation during the same period; 15 others (12 percent), although reporting an overall loss for the 10-month period, were showing a monthly profit in October or in October and 1 or more earlier months; and 89 (73 percent) had continuing monthly losses through October 1954. Of the 89 UHF stations with continuing monthly losses, 31 (35 percent) had ceased operating by June 4, 1955. (Table 1.)

The median monthly loss for those stations with continuing monthly losses (and still in operation as of June 4, 1955) was $8,460. For VHF stations, the median monthly loss was $8,750 and for UHF stations, $8,260. (Table 1A.)

Of the 143 VHF stations, 101 (70 percent) carried commercial programs of NBC or CBS, or both, in excess of 7½ hours per week (based on the week of October 10, 1954). The great majority of these stations (82 percent) were either profitable overall or achieving a monthly profit by October 1954. Of the 42 VHF stations with fewer that 7½ hours of CBS–NBC programing, less than half (45 percent) were in these 2 profit categories. Of the 42 UHF stations carrying commercial programs of NBC–CBS in excess of 7½ hours per week, 62 percent were in the profit categories; of the 49 UHF stations with fewer than 7½ hours of NBC–CBS programing, only 14 percent were in the profit categories. (Table 2.)

Half of the VHF stations had average monthly revenues of $30,000 or more. Of these, 90 percent were in the 2 profit groups, whereas of 41 VHF stations below $20,000 in average monthly revenues, 48 percent were in the profit categories. (Table 3.)

Approximately one-fourth of the UHF stations reported monthly revenues of $30,000 or more. Of these, 75 percent were in the profit groups while only 11 percent of those with less than $20,000 monthly revenues were in the 2 profit groups. (Table 4.)

Tables 5 and 6 show the general interrelationship of carrying NBC–CBS programing, average monthly revenues, and profitablility. Of the 101 VHF station carrying 7½ hours of NBC–CBS programing, 64 (63 percent) had average monthly revenues above $30,000; of these 64, 60 (94 percent) were in the profit groups. Of the 42 VHF stations carrying less than this number of NBC–CBS programs, 8 (19 percent) had average monthly revenues of over $30,000. Of these 8, 5 (62 percent) were in the profit categories. Below $20,000 average monthly revenues, 8 out of 13 stations in the NBC–CBS group were in the profit categories as compared to 12 out of 28 stations in the "all other" group. Table 5.)

For UHF stations, 18 of 42 such stations (with NBC–CBS programing) obtained revenues above $30,000, of which 16 were in the profit groups as compared to 2 out of 6 in the "all other" group. Below $20,000 average monthly revenues, 3 out of 11 UHF with NBC–CBS were in the profit groups as compared to 3 out of 40 in the "all other" category. (Table 6.)

Of the 143 VHF stations, 44 (31 percent were located in areas served by at least 2 other VHF stations; 55 (38 percent) were in areas served by only 1 other VHF station; and 44 (31 percent) were the only VHF stations serving their area. (Tables 7, 8, and 9.) [The availability of competing VHF signals is based on the number of VHF signals received by 50 percent or more of the TV homes in the station's standard metropolitan area—1955 Metropolitan Area Coverage Study, American Research Bureau, Inc.]. Of the 44 VHF with competition from 2 or more other VHF, 68 percent were in the profit groups; of 55 with competition from only one other, 71 percent were in the profit groups; and 75 percent of the VHF with no other VHF competition were in the profit groups. For stations above $30,000 average monthly revenues, there was little difference in the percent in the profit groups based on number of competing VHF stations, that is, approximately 90 percent. For stations with average monthly revenues between $20,000–$30,000, 36 percent were in the profit groups where there were 2 or more competing VHF as compared to 80 percent where there was no competing VHF. Similarly, for stations with revenues of less than $20,000 monthly, more than half of the VHF without competition were in the profit groups as compared to less than half where one or more other VHF stations were serving the same area. (Table 13.)

Of the 91 UHF stations, 34 (37 percent) were in areas served by 2 or more VHF stations; 39 (43 percent) were in areas served by only one VHF station; and 18 (20 percent) were in areas served by no VHF stations. Tables 10, 11, 12, and 14.)

Table 15 shows the relationship between community size and level of monthly revenues for VHF stations. Of 43 stations located in communities of 175,000 and over, 37 achieved monthly revenues of $30,000 or more, whereas, of 64 stations located in communities below 75,000 population, only 13 had this level of revenues. In addition, 21 of the 41 VHF stations with continuing monthly losses were located in the smaller communities (that is, below 75,000 population).

TABLE 1.—*Third survey of postfreeze TV stations*

[Covering period January through October 1954]

	VHF	UHF	Total
A. Postfreeze TV stations in survey (total in operation July 1, 1954)	148	124	272
B. Total stations reporting	144	122	266
C. Number reporting profit during 10-month period, January through October 1954	52	18	70
D. Number reporting loss for same period:			
1. But reporting profitable operation in 1 or more months at end of period	50	15	65
2. With continuing monthly losses during period	42	89	131
(a) Operating as of June 4, 1955 [1]	41	58	99
(b) Ceased operating by June 4, 1955	1	31	32

[1] See table 1A for volume of average monthly losses.

TABLE 1A.—*Postfreeze TV stations with continuing monthly losses during period January–October 1954*

Average monthly loss during 10-month period	VHF	UHF	Total
Under $5,000	7	14	21
$5,000 to $10,000	18	23	41
$10,000 to $20,000	12	12	24
Over $20,000	4	9	13
Total	41	58	99
Median monthly loss	$8,750	$8,260	$8,460

TABLE 2.—*Postfreeze television stations*

Type of station	Network programs carried	Number of stations, January through October 1954			Total
		Profitable overall	Monthly profit by October 1954 [1]	Losses through October 1954	
VHF	NBC-CBS [2]	46	37	18	101
	All other	6	13	23	42
	Subtotal	52	50	41	143
UHF	NBC-CBS [2]	14	12	16	42
	All other	4	3	42	49
	Subtotal	18	15	58	91

[1] Stations reporting overall loss for the 10-month period but reporting profitable operation in October or in October and 1 or more earlier months (see table 1, group D-1).
[2] Stations carrying network programs of NBC, CBS (or both) in excess of 7½ hours per week (based on week of Oct. 10, 1954).

TABLE 3.—*VHF post-freeze television stations*

Average monthly revenues [1]	Profit overall or monthly profit by October 1954	Continuing losses through October 1954	Total	Average monthly revenues [1]	Profit overall or monthly profit by October 1954	Continuing losses through October 1954	Total

[1] During period January through October 1954.
[2] Stations carrying metwork programs of NBC, CBS (or both) in excess of 7½ hours per week (based on week of Oct. 10, 1954).
[3] Includes stations reporting profit overall for period and stations reporting overall loss for period but reporting profit in October or October and 1 or more earlier months (see table 1, group D–1).

Mr. McCONNAUGHEY. And there were some answers to questions Senator Schoeppel asked.

The CHAIRMAN. All right. They will be put in the record at the proper place.

(The information is as follows:)

FEDERAL COMMUNICATIONS COMMISSION

Washington, D. C.

Answers to questions asked by Senator Andrew F. Schoeppel on January 26, 1956.

Question No. 1: What is the status of the negotiations to obtain additional VHF space from the Government for commercial broadcasting?

Answer: The FCC has requested consideration by ODM and other interested departments, including the Department of Defense, of the possibilities for making some VHF frequencies now allocated to Government uses available for TV broadcasting. The matter is under study by the interested departments. There is no clear indication yet of the possible results.

Question No. 2: Do you consider the present allocation plan adequate to meet the requirements for national television service?

Answer: The present allocation plan provides for over 1,800 commercial channel assignments in more than 1,200 communities. Thus in terms of allocated space the present plan affords opportunity for over four times the present number of stations on the air. But there have been disappointing results with broadcasting in the UHF band, in which 1,300 of the commercial channel assignments are located. The 12 VHF channels alone offer much more limited opportunity for the development of the Nation's television system. In these circumstances the Commission is giving intensive study to a considerable number of proposals for revision of the present allocation plan.

Question No. 3: Do you recommend the deintermixture of VHF and UHF stations in selected areas?

Answer: Deintermixture is one of the proposals now being considered by the Commission. For the reasons which are set out at some length in the statement I submitted to the committee, the majority have concluded that deintermixture on the basis proposed in a number of petitions relating to scattered individual communities would not afford lasting solution.

Whether deintermixture on some other basis would be desirable is one of the questions with which the Commission will deal in its present review of the entire television allocation plan.

Question No. 4: Do you recommend shifting all television assignments to the UHF portion of the spectrum?

Answer: As in the case of deintermixture, the Commission cannot offer recommendations concerning the proposal to move all television to the UHF band until it has completed its extensive review of the entire nationwide allocation plan.

The Commission has in a previous report expressed the opinion that, although an all-UHF television system would offer some advantages, it could not be achieved without substantial dislocation and cost to both the industry and the public. Owing to this the Commission has in the past felt that other solutions should be sought. Nevertheless the proposal for moving all television to UHF, like all the other proposals the Commission has received, will be given careful consideration in the present allocation rulemaking proceeding.

Question No. 5: Do you recommend freezing all further assignments until the present rulemaking proceedings have been completed?

Answer: The majority are convinced, for the reasons set out in my statement to your committee, that it would be distinctly contrary to the objectives of facilitating television's continued expansion to freeze new assignments or new station authorizations until the present allocation proceedings have been completed.

Question No. 6: What is the status of subscription television and what are your views?

Answer: The Commission instituted the subscription television proceeding on February 11 of last year to explore the question of whether it would be in the public interest to permit television stations to engage in subscription television operations on a regular commercial basis. Interested parties were invited to submit their comment in order to assist us in resolving the numerous legal, technical, and policy questions involved. When the time for filing comments expired on September 9, 1955, the Commission found that the comments received totaled approximately 25,000 formal pleadings and less-formal submissions which filled nearly 80 reference volumes. This is more than has been filed in any other docketed case in the Commission's history.

Because of the nature of this proposal and the many questions and problems to be resolved, including the question of whether legislation by the Congress is called for, I am unable to promise the early conclusion of this proceeding.

Moreover, our consideration of this matter must also yield to the need for the earliest possible resolution of the questions before us in our current review of the established system of television allocations.

Question No. 7: Do you have any specific recommendations for this committee here?

Answer: For the reasons already given, it is felt that it would be premature for the Commission to lay specific recommendations before the committee at this time. Insofar as the networks are concerned, useful recommendations could be made only after we have assembled, compiled, and evaluated data on network operations which is now being obtained.

With respect to allocations, there is no recommendation which the Commission can usefully make until its review of the present system has been completed.

TESTIMONY OF MEMBERS OF THE FEDERAL COMMUNICATIONS COMMISSION

Mr. Cox. With respect to the matter of station coverage and overlap, which was discussed somewhat previously, you listed certain factors, such as terrain, weather, and so on, which affected the range or coverage of a television station, and said that there are many other bases on which such coverage might be made. Now, as I understand your testimony, the one which is actually used is simply the application of certain formulas involving power of transmitter and antenna height; is that right, in a particular zone?

Mr. McConnaughey. I think that is correct.

Mr. Cox. That, then, is a mere matter of standards which have been set by the Commission for an average station, without considering the actual site, the terrain, the prevailing weather, or the other specific conditions surrounding any particular station?

Mr. McCONNAUGHEY. They were developed, as I understand it, for allocation purposes. I wasn't here, but that is my understanding of it.

Mr. Cox. And those standards which were developed, then, I take it, in or prior to 1952, are still being applied in current questions which arise involving overlap, duopoly, and things of that sort?

Mr. McCONNAUGHEY. That is right.

Mr. Cox. Now, I gather from the testimony of the Commissioners, or statements that have been made, that the reason for not attempting to determine exact and precise overlap in these cases, or coverage in these cases, is lack of personnel and equipment for doing that; is that true?

Mr. McCONNAUGHEY. It would be too expensive to do this.

Mr. DOERFER. No, it is more than that.

Mr. HYDE. Well, if I may comment on that question? The Commission hasn't thought it wise to attempt, particularly in a hearing, to define exact coverage patterns because of the lack of tools or data that would give you the kind of exact determinations that you seek in that sort of thing. The art hasn't developed to the point where the tools available will permit you to define with the definition of "a line," exactly where television coverage would go. And also the Commission has been aware of the fact that when you attempt to count heads to determine exact populations that would get a given signal you run the risk of getting into very doubtful data because conditions vary from antenna to antenna depending on installation and things that would be local to 1 block or 1 house, and of course, certain variables as Commissioner Doerfer mentions——

Mr. Cox. Based on seasonable conditions?

Mr. HYDE. Yes.

Mr. Cox. Do the individual stations undertake such measurements for their own commercial purposes?

Mr. HYDE. I am sure that individual stations do attempt to estimate their circulation, and I am sure that network research departments attempt to get a workable measure of their audience in order to use it for sales purposes, yes.

Mr. Cox. Has the Commission ever undertaken—or any other agency—to make some kind of a check of this simply in terms of set sales in areas which might appear to be white areas according to the Commission's standards?

Mr. HYDE. Our economic section has tried to follow the trend in the industry by obtaining information as to set sales, but not for the purpose of defining the coverage of an individual station.

Mr. Cox. Now, Mr. Jones in his report to this committee, which was forwarded to the Commission for comment, recommended that the Commission should require each television station to file some sort of proof of performance to show its measured coverage. Has the Commission given consideration to that proposal?

Mr. DOERFER. May I ask what the date of that proposal was?

Mr. Cox. It was submitted to you February 17, 1955, in the Jones report.

Mr. DOERFER. Oh, excuse me.

Mr. McCONNAUGHEY. I think Iwould like to read an answer on that into the record.

Mr. Cox. All right.

Mr. McCONNAUGHEY. The letter which Senator Bricker addressed to the Commission on October 1, 1954, as chairman of this committee, requested the Commission supply the committee information with respect to the 108 pre-freeze television stations and all of the television stations which have been authorized since the date of the Sixth Report, and Order.

The material requested was principally of an engineering nature. Upon receipt of this letter members of the Commission's staff were assigned to prepare the requested information for the committe.

On December 3, 1954, the information requested in paragraph 1 of the committee's letter was furnished to the committee. It consisted of three copies of a list which contained the following information pertaining to all television stations as of the date of the television freeze in 1954, and as of October 1, 1952, and as of October 1, 1954: Call letters, channel number, location of stations, name of licensee or permittee, authorized visual power, antenna height above average terrain, antenna height above ground, date upon which station commenced operation and the name of network with which station is affiliated.

Preparation of the remainder of the information requested by the committee required the making of various maps showing the service areas, as limited by interference, of all television permittees in the United States. As applicants for television stations are only required to submit to the Commission information as to their normal service areas, not considering interference, this information was not contained in the Commission files.

The chairman of the committee was informed by letter of October 27, 1954, that the determination of service areas of television stations, as limited by interference, would require the use of considerable Commission manpower. A letter of November 8, 1954, the chairman of the committee replied, suggesting that the Commission request licensees of individual television stations to perform some of the required work. Accordingly, the Commission, by letter dated December 15, 1954, requested all VHF commercial stations prepare and submit to the Commission small scale clear acetate templates depicting their service areas.

The letter advised permittees as to the method to be used in the preparation of these templates. Excellent cooperation was received from permittees in supplying the Commission this requested information. The Commission's staff computed the interference contours and prepared templates showing the service areas of all UHF and educational permittees. A sample map was prepared showing all the existing and proposed UHF stations in the United States.

Because of the great number of services in heavily populated areas of the country, principally the northeastern section, a map resulted which contained sections so densely filled with service contours that it was difficult to identify an individual contour. From the appearance of this map it was evident that it would not be possible to superimpose further service contours on this map and indicate the numbers of services available to certain areas as requested by the committee.

In the early part of 1955 arrangements were made for members of the Commission's staff to confer with Mr. Robert Jones, committee majority counsel, regarding this problem. The Commission's staff members called on Mr. Jones at the committee staff offices on the appointed date, but were advised he would not be able to consult with them. An attempt was made to discuss the problems with other committee members, committee staff members in the office, but they advised they could not do so. Shortly thereafter, Mr. Jones resigned as counsel for the committee, presenting his report and recommendations before resigning.

A letter dated December 21, 1954, from Commission Chairman to chairman of the committee, estimated 47 man-months of manpower would be required to complete this project. A total of 19 man-months had been used already, leaving a balance of 28 man-months which have not been expended.

Mr. Cox. Then the Commission does now have—at least based upon reports of licensees computed in accordance with standards set up by the Commission—information as to their claimed actual coverage?

Mr. McConnaughey. To this extent, that it has been done, yes.

Mr. Cox. That is, as I understand it from that statement, you received such information from all VHF stations and the Commission's staff, itself, made similar calculations for the UHF and educational stations?

Mr. McConnaughey. That is my understanding. I say that is my understanding.

The Chairman. Of course, how does the station do that? Do they do that themselves, or do they hire somebody, an engineer or something like that? I guess that is the way they do it.

Mr. McConnaughey. I think so.

The Chairman. I suppose they all have a tendency to pad it a little bit?

(Laughter)

The Chairman. I mean, make it look better than it actually is.

Mr. Cox. Does the Commission proposed to request that this information be furnished to it on a recurring basis, or at least whenever it seems that there have been changes in power or in the state of the art which might have affected these coverages?

Mr. McConnaughey. There is no plan in that regard at the present time.

The Chairman. Well, in any event, when the Commission has to make an allocation plan, you are going to have to go into that again—and be more accurate on it than just get the station's estimate of it.

Mr. McConnaughey. Mr. Plummer is here, I believe, I think he could explain that.

Mr. Plummer. I am Curtis Plummer, Chief of the Safety and Special Services Branch.

Mr. McConnaughey. At that time, he was Chief of the Broadcast Bureau of the FCC.

Mr. Plummer. I was the member of the staff that talked with Mr. Jones on this problem. First, I would like to underline that there are no service standards, no method of determining service in our rules at present. A certain amount of work was done on that in the sixth report and order, but due to the great variation that you can get in various terrains as you have previously mentioned, Mr. Cox, we just regarded these curves as average and used that only for overlap in multiple ownership.

Now, when we came up to this problem with Mr. Jones on the problem of trying to get overall coverage, we had to take something as a bench mark, so to be equal for all stations, whether it was actually that in the field or not. I want to carefully determine the difference between, let us say, a set of Hoyle's Rules, and what actually happens in the field. So Mr. Jones and myself determined a set of Hoyles Rules to make these calculations—an average situation.

We assumed a certain signal-to-noise ration; we assumed two sets of the Commission's curves; and we figured from there. The thing I want to point out is that that does not necessary correlate with what you would measure in the field. If it does, it is coincidence.

Mr. Cox. In other words, what these stations then submitted was not itself based on actual measurement?

Mr. Plummer. That is right.

Mr. Cox. It was based on their application of the standards that you provided to them at that time?

Mr. Plummer. That is right.

Mr. Cox. It was based on their application of the standards that you provided to them at that time?

Mr. Plummer. Well, I would like to say it this way: That after Mr. Jones and myself agreed on this Hoyle's Rules, then we made that up and sent it out to the stations and said: "Calculate it this way, please."

Mr. Cox. I see. Now, in your opinion, were the overlays you got showing coverage at that time more, or less, likely to approximate actual conditions than the application of the standards of the Sixth Report? So far as service areas are concerned?

Mr. Plummer. Again, I would like to point out that the sixth report does not delineate service areas. Then I will go from there. They probably are a good average condition. But when applied to any one station it could go either way. Now, among engineers and scientists there is a great amount of disagreement on exactly what the correlation is between these Hoyle's Rules and what actually happens.

For instance, one organization—I do not remember who—when they sent in their data and the discs, sent us a letter and said that their field work had indicated, at least in some stations they had measured, that the coverage was somewhat greater; whereas, some others in mountainous terrain thought that the coverage was so much smaller. That goes back to the thing I mentioned before, that after all, they are nothing more than averages. I would like to add one thing.

The Chairman. But you do think you struck a mean average?

Mr. Plummer. Yes, as a mean average, but you cannot apply it to any one station. Now, I would like to point out the reason behind this: Whenever you try to correlate measurements and average conditions, there are a lot of factors like terrain that will make the actual measurements vary greatly. The variation might be in the order of 100 to 1 in signal strength in these television frequencies, whereas, in standard broadcast the order of variation might be only 5 to 10 or 10 to 1.

That is one of the basic reasons we did not put service calculating devices in our rules, because we knew when we got to hearings, for instance, engineer A could measure this and engineer B could measure this, both would vary greatly.

The Chairman. Thank you.

Mr. Cox. Have you made any use of the information that was obtained in this way in any of the subsequent deliberations of the Commission or the activities of the staff?

Mr. PLUMMER. Commissioner McConnaughey answered that, that we got up to the point of measuring the maps and Commissioner Jones resigned and it was dropped at that point.

Mr. Cox. But I mean the information, even as accumulated to that date, then, has not been further used?

Mr. PLUMMER. That is right, the disks are all available and filed a the Commission, and I believe there has been one request from a licensee.

The CHAIRMAN. But you could use them if necessary?

Mr. PLUMMER. Yes.

The CHAIRMAN. In a certain given case?

Mr. PLUMMER. Yes.

The CHAIRMAN. You might want to go back and look at that for some kind of a reference, if you have a mean average there.

Mr. PLUMMER. Yes. They are all made up in disks of an average service area, and the original idea was to put those on maps. As Commissioner McConnaughey pointed out, we ran into a presentation problem of how much data you needed on any one map versus readability, and we wanted to talk about other methods of presentation, and the project stopped there.

Mr. Cox. I take it these disks are different for different stations?

Mr. PLUMMER. Yes.

Mr. Cox. Does it involve any difference in terrain?

Mr. PLUMMER. No.

Mr. Cox. In other words, this is not an effort to adjust it beyond the effective radiated power of the station?

Mr. PLUMMER. No, no.

Mr. Cox. Now, what are some of the practical problems that arise out of the question of whether there is or is not overlap? There is the familiar illustration that has been used here of New York and Bridgeport—the question of whether you can get a signal in Bridgeport despite the fact that the Commission's standards apparently would show it is not within the service range of the New York stations?

Mr. PLUMMER. I think Mr. Allen touched upon that in one of his previous statements. It depends a great deal on how willing a person is on the receiving end to go after a signal—how much money he is willing to put into an antenna; high-gain receiving antenna; a tower to go with it—that is one of the great variables in the thing, besides terrain.

For instance, I understand there are many places in the West where there is only 1 station, and people will put up a 250-foot tower, put a high-gain antenna on top of that, maybe even a booster amplifier; and that tower, antenna, and booster-amplifier are worth 2 or 3 times the cost of his television set. But he does get a signal. It may have some snow. But it is the only thing that he has, and that is better than nothing.

Mr. Cox. Does the Commission, though, really have any knowledge as to whether people in Bridgeport are doing that—or have to do it—to get the New York signals, or are able to get the New York signals with an average antenna?

Mr. PLUMMER. I do not know that a particular study has been made of that, sir. It is a difficult subject. Of course you can go into any one city and start looking at houses and counting antennas and see what they are, but we have not done any of that.

Mr. Cox. The Commission, however, I assume is aware of the possible consequences, in terms of the likelihood of development of local television in these areas, of the availability of a signal from a high-powered station in another community?

Mr. PLUMMER. I would say in an average way we are; yes. In general, you know, as I mentioned——

Mr. Cox. Is that again just from an application of these standards?

Mr. PLUMMER. No. I think I pointed out a while ago that these standards are average conditions, and we just know from general knowledge that there are many places that people get television beyond it, and within any calculated areas there are also holes.

Mr. Cox. Let's take it this way and perhaps I can address this question again to Mr. McConnaughey. I think it was stated last week, or at least in our last hearing prior to this week, that antenna heights had been increased in zone 1, and this action later canceled; and that the purpose for increasing the antenna heights was to provide increased coverage. Now hadn't you already, at that time, received complaints from some areas that the existing VHF stations in other communities were already possessed of too wide a coverage in terms of the possibility of developing local service?

Mr. HYDE. Yes. The Commission was aware of the fact that there were complaints that networks would get into a second community from a first, and to that extent make it difficult for the second community to obtain affiliation with that network. But here is a situation where you have conflicting factors in operation.

On the one hand, you have the interest of setting up conditions that are conducive to development of a local station. On the other hand, you have a need for getting reception at substantial distances in order to reach people who do not live in either city.

Obviously we can't control radiation in such a way as to protect a station in city B and yet provide enough service in certain hinterlands outside of both cities to serve the rural folks and the folks in very small communities where it is not reasonable to expect development of an independent station.

Mr. Cox. Is that true in the Northeast and along the Atlantic seaboard?

Mr. HYDE. In the Northeast it is true that there are more communities and less wide-open space, but this whole problem—the problem you get into when you undertake to protect one service against another gets you immediately into this question as to whether there should be any protection of one competing signal against another when those signals have anything near an equal competitive opportunity.

A policy of protecting local stations in general from the competition of stations which reach the areas from other points would be most difficult of application.

Mr. Cox. Isn't it true, however, that the second priority of the sixth report looks to the development of local TV stations in as many of these communities as possible, and that you simply are never going to create conditions in which that can be done unless some attention is given to this problem?

Mr. HYDE. Let me suggest one way to get reception of programs in a given community is to have a program which will appeal to the residents of that community as against a program from out of town. Now in other broadcast services—in AM radio—we have witnessed the development of very successful local broadcasting. A correlation with the local community in many situations will hold the attention of the residents of that community against the broadcasts from out of town.

But we must recognize, of course, that folks in the small community and in the big one are interested in national affairs; those in the smaller villages just as much as those in the big city. They also have their separate interests, and what is needed, of course, is the development of local services to meet local needs concurrent with the recognition of the fact that there are programs of wider interest which will be competitive everywhere they can be received.

Mr. Cox. But if those programs of wider interest come into this area on a network program from another community, the advertiser who has paid the station originating that program is not going to pay for duplicated coverage in this area, so that leaves the local station, if it does develop, to present local programing, completely dependent upon local advertising; does it not?

Mr. HYDE. As long as we are going to be dependent upon 2 or 3 sources of programing you are going to have that kind of a problem. I suggested yesterday that if we could get enough stations operating on a comparable competitive basis we could expect the development of other program sources which would make it possible—at least this has worked in AM broadcasting—to develop schedules that would be competitive.

The CHAIRMAN. Well, there is nothing—I just ask this question, maybe I am wrong—there is nothing really wrong with overlaps unless they would kill off the economic incentive for local stations? I may be wrong in that.

Mr. HYDE. Senator, you could——

The CHAIRMAN. I mean, that just gives more service to more people?

Mr. HYDE. More selections.

The CHAIRMAN. More selections I should say.

Mr. HYDE. Yes.

The CHAIRMAN. Unless that would completely kill the incentive, or the opportunity, for a local station to operate as a local station and survive?

Mr. HYDE. Right. Now the Commission did attempt, in its sixth report, to try to balance these things in such a way as to provide both area coverage and to provide enough assignments to give opportunity for community assignments.

The one thing that has caused difficulties in the implementation of the sixth report and the attainment of its objectives has been our failure to get the expected development of the ultra high channels.

There would be no shortages of facilities in the first hundred markets—at least there would not be such shortages as to prevent competive operation of three networks and possibly more—if we had been able to get the expected development of the ultra high channels.

The CHAIRMAN. The only difference, I would think, would be that you would have to be much more alert to this thing in the television field because of the cost of programing for a local station versus a network. There are some little local stations that are listened to more in a small community than the network radio stations coming in from a nearby big city.

Mr. HYDE. That is very true in AM.

The CHAIRMAN. Yes? In AM?

Mr. HYDE. Right.

The CHAIRMAN. For instance I know of a case in Bremerton, where all of the Seattle and Tacoma stations beam in, yet the Bremerton station has the biggest audience. That is AM. But in television it would be a little more difficult. I think you would have to be much more alert to it in that case.

Mr. HYDE. In television the cost of programing, and the cost of operation——

The CHAIRMAN. Is a difference?

Mr. HYDE. Yes, it is so different that up to now it has been almost essential to have a network affiliation to operate. Now that is not——

Senator POTTER. Of course, in AM even with your little station you have good programs with the use of your records—same type of quality—that you have in your large stations?

Mr. HYDE. That is right.

Senator POTTER. But in television the big problem is the fact that with your local stations you can't have the programs that you receive from your networks?

Mr. HYDE. We think—at least I think—that there is a possibility of development of additional program resources and of additional apparatus. I am thinking particularly of magnetic tape recordings, and I am also thinking of the development of regional programing, cooperative programing, and more extensive use of films. But these are things it is very difficult to get developed on a national scale without access to more of the larger markets.

Senator POTTER. Even so, I doubt if it would still be competitive with your big programs that originate from our major networks?

Mr. HYDE. I imagine so.

Senator POTTER. When all a person has to do is flip the dial to make the selection, I doubt very much if he is going to select something on tape, when he can get a live program from one of the major networks?

Mr. HYDE. Well, if we are talking about a variety show, undoubtedly that would be true. But there could be, of course, a local basketball game.

Senator POTTER. That is right.

Mr. HYDE. There are many variations of programing, and some categories, interest in local personalities——

Senator POTTER. We have I think in Washington a good, probably a typical situation: We have four major stations.

Mr. HYDE. Yes.

Senator POTTER. One is not a network station. Now I will be very frank with you that unless it has special programs, such as a ball game or some special programs, that station does not receive the watching audience that your other stations receive. And I think they do an excellent job in providing local programs.

Mr. HYDE. During the baseball season we all took a considerable interest in this independent station.

Senator POTTER. That is right.

The CHAIRMAN. Let me ask you this question: Would you consider this true, and I am quoting Mr. Taishoff here [indicating], I guess, on this. In the latest issue of Broadcasting and Telecasting it says:

"What was the greatest impression made upon FCC's Network Committee and its special staff during its "clinical study" of network TV and related operations in New York? Answer is unequivocally: Shortage of competive facilities in top 100 markets. This was recognized not only by networks but also advertising agencies, station representatives and other groups contacted during sessions which concluded last Tuesday.

Would you say that was a fair analysis of the situation?

Mr. HYDE. Yes, I think it is. I would add a little more to that. I believe that there are national accounts that would be available for broadcasting on a national basis now, if they could obtain clearances in the first 50 markets.

The CHAIRMAN. Top markets——

Mr. HYDE. Yes.

The CHAIRMAN. Let's proceed here.

Senator POTTER. You made a statement, or somebody made a statement yesterday I believe, that 25 advertisers——

Mr. HYDE. Yes, I did make a statement that 25 advertisers account for as much as 50 percent of the national network advertising, and I was relating that to sale of time.

I think the figure actually runs closer to 60 percent than 50, and I am only talking about station time. I think if you took into consideration talent costs and others the figure might be higher.

Senator POTTER. That is not a healthy situation.

Mr. HYDE. No, sir, I regard that as a very restrictive situation.

Mr. MACK. I think the same thing would apply to any other medium of advertising—the Saturday Evening Post, any newspaper.

The CHAIRMAN. It might.

Senator POTTER. But they can still go into the smaller magazines or less expensive magazines for advertising. But you have just so much time on the television stations.

Mr. MACK. Senator, what I meant was I think if you took the same 25 advertisers, they spend more money with every other medium of advertising than anybody else.

Mr. COX. Those media are not restricted as are the television frequencies we are talking about—isn't that the fundamental problem?

Mr. MACK. We are speaking about getting the national advertising dollar.

Mr. DOERFER. On a national basis.

Mr. COX. Isn't the problem that if the 25 companies with the biggest advertising budgets go out to buy television advertising, they are going to prevent others who have funds and would advertise if they could get the time clearance simply because there are not enough facilities in enough of the major markets to give them a substantial coverage to justify such expenditure?

Mr. MACK. I think you come right back to economics. The local grocery store cannot pay as much as A. & P.

Senator POTTER. Say you have four companies. You have one company that advertises over one network; another one over a second network; the third one on the third network; where is that fourth company going to go?

Mr. MACK. I do not know whether you are going to get General Motors to switch to a fourth network. I don't know whether you are getting them to switch from the Miami Herald to the Miami News.

Senator POTTER. Let's use the automobile industry; Maybe General Motors, I do not know what they advertise over, but say one is with NBC, maybe Ford with CBS, Chrysler with ABC, what about Packard-Studebaker?

Mr. COX. What about Chrysler——

Mr. MACK. They are probably still on NBC.

The CHAIRMAN. General Motors advertises with their dealers mainly.

(Laughter.)

The CHAIRMAN. Let's go on here because I think that we realize that the quote there just about hits it. I don't know what the answer to the problem is. That is the American economy. I suppose the same is true on billboards. There is just so much billboard space available, and yet Safeway buys up all the billboards to the exclusion of the local grocery store.

Mr. COX. There is a lot more real estate available for more billboards.

The CHAIRMAN. Yes, but it gets down to availability, I think that is your problem.

Mr. COX. There are a number of other matters which have not been discussed by the Commission in its current appearance but which were referred to in earlier reports as possibly providing assistance in solving the UHF problem. For instance, in your Preliminary Report of March 16, 1955, you stated that you felt the Commission's action of September of the preceding year in relaxing its multiple-ownership rules—which we referred to briefly yesterday—to permit one person to own 5 V's and 2 U's was going to strengthen UHF generally. Could you tell us whether, in your opinion, this has actually been the case under the operation of this change?

Mr. MCCONNAUGHEY. Whether it has strengthened UHF?

Mr. COX. Yes.

Mr. MCCONNAUGHEY. I think it has protected UHF.

Mr. COX. In what way?

Mr. MCCONNAUGHEY. I think it has protected it by preventing too many of the larger people to get too many stations. Of course, we have gotten knocked down by the court here recently on our multiple-ownership rule. The Court of Appeals said it will not stand up. So we have tried to constrict this so the big people could not get all the control but so far the courts knocked us down.

Mr. COX. But the effect of the relaxation of this rule was to permit the big people to own 2 more stations, as long as they were UHF?

Mr. MCCONNAUGHEY. Yes.

Mr. COX. I think there——

Mr. MCCONNAUGHEY. It was to help in the regard that they could have 2 U's, as I understand it. I was not here at the time. It was 5 V's, 5 stations before. Now they can have 2 U's.

Mr. DOERFER. Multiple ownership?

Mr. MCCONNAUGHEY. Yes.

Mr. Cox. How many multiple owners have taken advantage of this rule?

Mr. McConnaughey. NBC, CBS, Storer. That is about it.

Mr. Cox. Just those 3?

Mr. McConnaughey. I think that is right.

Mr. Cox. That involves, then, a total of something like 6 UHF stations that have been brought under the operation of this rule?

Mr. McConnaughey. Yes.

Mr. Cox. Is it not true that in each case those were stations that were already on the air, and so did not represent the construction of new UHF stations?

Mr. McConnaughey. Yes, but they were stations having a very difficult time getting along in the world, and they have a better chance now. I think it was a wonderful encouragement to UHF. The statement I made in 1955 sure holds good today.

Mr. Cox. Were they not stations that were in better markets, certainly as far as UHF were concerned?

Mr. McConnaughey. They were in better markets, but they were not doing very well. They were having a tough time, about ready to go under, I guess, most of them. This has given quite a boon to UHF.

Mr. Cox. As I understand it from your testimony yesterday, you feel in the case of CBS in Milwaukee they probably are still losing money?

Mr. McConnaughey. They are having a rough time. They were about even, or losing a little, but I have a suspicion that they will make money. It is confidential information and I actually do not know as of today; but I would venture a hazard that they will make good on it someway or other.

Senator Potter. Are the other stations making money, Storer and NBC?

Mr. McConnaughey. We do not have the latest financial reports.

Mr. Cox. Isn't it true that in one of the trade magazines it was reported that Storer showed, for the first time, a profit in the Miami UHF station in 1955, and that was of course before the appearance in that market of additional V's?

Mr. McConnaughey. I think he showed a profit in 1955, I think I saw that.

Mr. Cox. Another measure which you listed as likely to be helpful was the proposed rule-making to preclude the establishment of transmitter sites more than 5 miles from the city in which the station is authorized, unless special reasons for such a location are established. Now the final outcome of that proceeding was that you decided against adopting such a rule, wasn't it?

Mr. McConnaughey. That is right.

Mr. Cox. Can you tell the committee the basis upon which the Commission decided that this was not going to help UHF after all?

Mr. McConnaughey. We did not decide that. We thought it was too arbitrary, and we thought we would put it on a case by case basis.

Mr. Cox. So it is going to be left initially to the application of the licensee in each case, which would be then accepted or refused by the Commission?

Mr. McConnaughey. That is right. We felt a hard and fast rule just practically is not workable.

Mr. Cox. Does the Commission have a policy of favoring the location of transmitter sites within some such reasonable distance of the community in which a channel is allocated?

Mr. McCfnnaughey. Yes, I would say that is a correct statement, yes.

Mr. Cox. Doesn't the establishment of transmitters at remote locations result in straddling markets, so that a station which was allocated to city A ends up in duplicating, in part, the coverage of a station allocated to city B?

Mr. McConnaughey. That sometimes is true, yes.

The Chairman. Doesn't the Commission, when you grant an application—or a construction permit I guess is what you would call it—doesn't the site have to be approved?

Mr. McConnaughey. That is right.

The Chairman. On a case by case basis?

Mr. McConnaughey. Yes, sir.

The Chairman. And naturally in each case you would have to look at the distance from the coverage area?

Mr. Cox. Don't you have instances in which application has been made for the location of transmitter sites to serve city A, which are actually closer to city B, which also has an allocation.

Mr. McConnaughey. Yes.

Mr. Cox. Have some of those applications been granted?

Mr. McConnaughey. Yes. I think there is one; down in Galveston-Houston I think one was granted.

Mr. Cox. Doesn't this amount to a sort of a private modification—with the concurrence of the Commission—of the allocation scheme in this particular, in that you are, in effect, moving the service area of this assignment from the place where it was originally contemplated in 1952?

Mr. McConnaughey. I do not think the Commission has that feeling about it. I think that is one of the things they are going to consider in this rulemaking. We may have to go—you see I am going back and saying something about what happened when I was not even around.

Mr. Cox. I realize that, sir.

Mr. McConnaughey. But we may have to go to an economic basis in this matter in order to serve more people with more different services. We speak of 1,800 channels. Do you know where a good many of them are? They are in places where you probably never could have television in a thousand years. In other words, they were just placed here and here and here and here, all around. So we may have to go to an economic basis.

What are the economics of this place, locating a transmitter? If your transmitter is located out here [indicating] where it serves 200,000. If it could be moved where it will serve 2 million, then you have got a question of taking it on a case-by-case basis, looking toward the public interest; and that is where we may have to come out in the final analysis.

I think many Commissioners have that feeling. I have stuck a little bit close to the old hard and fast rule of sticking by a city, but I am not at all sure that I am right in my thinking.

Mr. Cox. If you move it so that you can serve 2 million instead of 200,000, haven't you possibly created a situation where, in obtaining that desirable coverage, you have at the same time reduced the chance of developing other TV outlets to serve the extra 1,800,000?

Mr. McConnaughey. No. Well, so far it has not worked that way. In other words, we are very careful, if we—as I understand it again, I think the Commission has been very careful. When they would permit a transmitter to be moved from Galveston toward Houston, they have been careful that they were not taking service away from anybody.

That the Galveston station, from the standpoint of economics, probably would have to go out of existence, but by moving in closer where they got a bigger coverage, they then were able to stay in business and cover more people. More people would get service, and I think that has been a good deal of the theory of this thing.

In other words, why let a fellow die because he is sitting out here at Salem, Oreg., when if he would move in closer to Portland he would be able to live. I mean that is the type of thing that is involved in these considerations, and that is the reason we made no hard and fast rule. And we would have been very foolish if we had adopted a so-called 5-mile rule. We would be fighting economics, and you can't do it.

Mr. Cox. Has there been any indication to the Commission that, in some instances, these requests to move transmitters are made in order to avoid overlap with an existing station which has an affiliation with a network, to permit the man who is seeking a remote transmitter site to get an affiliation that he otherwise could not have gotten?

Mr. McConnaughey. Oh, I think your network problem comes into it every time, almost every time you enter into one of these moves. They are all fighting to get the networks.

The Chairman. Aren't you getting down to what is the real problem here, in this whole allocation? It is not how many stations you can put on the air—it is how many can live.

Mr. McConnaughey. You said a mouthful there, sir. [Laughter.] That is a fact. You will pardon me for saying that, Mr. Chairman, but that is the truth.

The Chairman. All right.

Mr. Cox. Isn't there also, however, an underlying problem not only of providing facilities where they can now live, but of providing room for growth in areas where they can be supported at some time in the future?

The Chairman. As our economy expands, you have got to be able to have the allocations, or whatever these engineers are trying to study now—there must be channels available as our economy expands, to take care of new stations for better coverage as the economy changes the picture.

Mr. McConnaughey. That is the balance.

Mr. Cox. Another matter that you mentioned in your March 1955 report was that you were——

The Chairman. Excuse me. That is what I think—I may change my mind—that no allocation plan can be hard and fast. It can't deal only with the present economy, because we hope we are living in an expanding economy.

Mr. McCONNAUGHEY. And many intelligent people feel that these things should be taken on a case-by-case basis; and for you or for me, or for anyone else, to sit here with 160 million people in America and try to project what it is going to be in 15 or 20 years with 210 or 220 million people in America, we can't do it. It just cannot be done.

The CHAIRMAN. And with that, we hope, will come a lot of technological advances that may make it easier to fit into this expanding economy?

Mr. McCONNAUGHEY. Quite right.

The CHAIRMAN. And we may be able to build these stations much cheaper, so that the local stations can survive. The programing may be cheaper. Capital investment may be reduced. And ultimately we try and end up with everybody having this service.

Mr. McCONNAUGHEY. That is right. But you cannot—a bureaucratic agency cannot do that by artificial means.

Mr. Cox. Another item you mentioned in your 1955 report was that you were continuing to review the charges of the telephone company for direct intercity program transmissions. Now is this a formal proceeding or just a staff review that is continually underway?

Mr. McCONNAUGHEY. I think it is a formal proceeding.

Mr. BARTLEY. Informal.

Mr. McCONNAUGHEY. Informal.

Mr. Cox. I think you said at that time—last March—that you expected to conclude this in the near future. It has not been concluded to date has it; or is it something that is periodically concluded and then reopened?

Mr. McCONNAUGHEY. I would say it is under constant review. I would think it would just be under constant review. Maybe one of the staff members here, Mr. Cowgill, Chief of the Common Carrier Bureau, is better able to answer that question.

Mr. Cox. Can you help us on that?

Mr. COWGILL. Harold Cowgill, Chief of the Common Carrier Bureau. Did you have a question pending?

Mr. Cox. The question is this: Mr. Bartley said this is an informal proceeding. Do you periodically, then, either accept new tariffs that are filed, or reject them, or adjust rates, or does this go on all the time? What is the nature of the operation?

Mr. COWGILL. Generally speaking, it is a continuing operation. Let me describe this area of the problem in this way. With the development of television, along about 1948, the first tariffs were filed with the Commission which established intercity transmission rates.

The question was raised at that time as to whether or not those rates were reasonable within the concepts of public utility regulatory policies and law and so forth. That proceeding was never drawn to a close; it is still a continuing, pending proceeding.

Periodically during that period—I think now we have had three complete studies of the costs of doing business in this particular area by the telephone company.

Just this last year, with the commencement of your interest in this subject, we asked the telephone people to make a thorough third study of this problem. That study was completed late last summer, and the staff has been, both in the field and in Washington, reviewing the results of those studies.

Mr. Cox. Then has there never been any determination made that the rates that have been charged for the last 7 years are, or are not, reasonable?

Mr. Cowgill. No determination has been made.

Mr. Cox. What if it is decided they are unreasonable; then are there refund procedures available?

Mr. McConnaughey. No.

Mr. Doerfer. There won't be any refunds. [Laughter.]

Mr. McConnaughey. I think we might tell you they are very apt to go up. The television industry has made a very close study of it at a number of conferences which were had, and I think from the standpoint of costs they are apt to go in the opposite direction.

Mr. Cox. If they are going up, certainly this is not going to produce anything that would be of assistance to a struggling UHF station?

Mr. McConnaughey. No.

Mr. Cox. You stated also in your preliminary report that the Commission favored the removal of excise taxes on all channels on receivers in order to promote their manufacture. I would like to ask whether you formally communicated your views to the appropriate committees of the Senate and House of Representatives on that matter?

Mr. McConnaughey. We contacted the Bureau of the Budget. I think we wrote a letter to one of the committees. Does anybody here know?

The Chairman. I don't know that we have received a formal letter from you, but surely the committee understands—this committee at least understands—that you people were all for it.

Senator Potter. I believe they submitted a letter.

Mr. McConnaughey. Yes, we reported it right here.

Senator Potter. To the Finance Committee——

The Chairman. Then we took it to the Finance Committee. So I think you will find it is on record over there.

Mr. Hyde. That was in the previous session. Yes, we did.

Senator Pastore. There, again, aren't we whistling in the dark? I mean, does anybody really hope that an exception is going to be made on the excise tax?

The Chairman. No; I do not think so. We made a good try, but it did not receive any support. I appeared before the Finance Committee, and I talked to the members individually, and I find no response whatsoever to it. Of course, the Treasury Department is vigorously opposed to it.

Mr. Cox. Has an effort been made——

Mr. McConnaughey. Senator Byrd probably is not favoring it very strongly.

The Chairman. No. And the rest of the committee, too.

Senator Pastore. It would be a nice thing, if it is going to happen.

The Chairman. Right at this point would be a good place to put in the record an article from the Columbus (Ohio) Dispatch. We have all these problems. Now here is another one that has come into the picture. This is by Robert Connors, the radio-TV editor, and reports that he went out and personally made a check with TV salesmen to inquire about the feasibility of purchasing a TV set equipped to receive ultra-high-frequency channels, in order to get the new Ohio State University station which is to go on the air this month.

"I'm not familiar with this matter of VHF and UHF," I told the salesmen. "A friend said that I should get a set with UHF. What do you think?" * * * The gist of each salesman's response was: Unless you are interested in "educational" programs, don't bother.

So we have the salesmen now in this. [Laughter.]

And he went to all the places in Columbus and he even called service companies. They had people call to get their sets converted to UHF, and the service people were not interested. So there is another problem.

Senator BRICKER. I would not want to clutter up the record with this, so take it off the record.

(Discussion off the record.)

(The article is as follows:)

[From the Columbus (Ohio) Dispatch]

ON THE AIR: THINGS TO KNOW ABOUT UHF—AND WOSU-TV

(By Robert Connors, Dispatch radio-TV editor)

Are local television salesmen and servicemen playing fair with WOSU-TV—and the public?

I know a few who are not. First, let's discuss TV salesmen. Not too long ago I contacted several salesmen in their stores and without identifying myself inquired about the feasibility of purchasing a TV set equipped with ultra-high-frequency channels in order to receive the new Ohio State University station which is to go on the air February 20.

"I'm not familiar with this matter of VHF and UHF," I told the salesmen. "A friend said I should get a set with UHF. What do you think?" I asked.

The gist of each salesman's response was: Unless you are interested in "educational" programs, don't bother. And it was the way the salesmen said "educational" that would make many customers decide not to bother with UHF.

"Is that what you recommend when customers inquire about getting UHF?" I asked. In each case, they said it was.

I don't think it's fair to give a customer such an offhand opinion of the new station. The customer ought to be presented details of what UHF—and in this case, what WOSU-TV—is likely to offer. Then let the customer make up his mind rather than get a VHF set home and become dissatisfied with it.

Since some salesmen are not bothering with the explanations. I'll do it briefly here.

After it once gets on the air and irons out the initial bugs of operation, WOSU-TV plans to offer:

(1) News, sports, musical and children's programs conducted by its professional staff. The TV station, just as the present radio station, will not be a student endeavor.

(2) Programs conducted by members of the university faculty. These will be information as well as instruction broadcasts.

(3) Community programs conducted by members of local organizations.

(4) Kinescope programs made for the Educational Radio-TV Center at the University of Michigan at Ann Arbor, Mich. An example of the type of broadcasts the center produces (although this one may not necessarily be shown by WOSU-TV) is Dr. Frank Baxter's Shakespearean program which has received wide acclaim in the press.

(5) In-school instruction programs. These programs are not planned for the immediate future but will eventually become a part of the daytime WOSU-TV program schedule.

As far as TV service is concerned, the TV station has received several telephone calls from local residents who were attempting to get their sets converted to UHF. One woman reported that the serviceman tried to discourage her and did not agree to put in the converter until she became angry. These cases probably are rare, but they should not occur at all.

Many sets can be converted in two ways, and be sure to inquire about both before converting. One is through a boxed converter which sits on top of your present set. Although converters come in all sizes and types, you can probably get one for your purposes for approximately $20.

If you are able to decipher the instruction book and unfasten a few screws on the back of your TV set, you can install it yourself and save the service fee. With most of these converters you can receive any UHF station on the air locally.

This, however, is of dubious value since the only other UHF channel available locally, for a commercial station, may not be used.

The other way to convert a set is through a "strip" converter. A TV serviceman tells me the cost is usually $10 (plus installation) for such strips. They are adjusted to pick up only one channel and should be set for channel 34 for WOSU-TV.

Some sets (those with wafer, or continuous, type tuners) can be converted only through the box converter.

If your present set has an outdoor antenna, it will also serve a UHF set. If you have an indoor antenna, "rabbit ears," it too will serve a UHF set, in most cases.

TV servicemen say that you may find reception is clearer if the "ears" of the indoor antenna are lowered to a point close to the set.

Next Sunday I'll discuss what other UHF stations have discovered about the rate of conversion to UHF.

Mr. Cox. In this matter of the excise tax is it your opinion then that no further effort will be made by the Commission to persuade the Treasury or Congress on the advisability——

Mr. McConnaughey. Yes, we have already spoken in favor of it. No, we are not going to do anything further.

Mr. Cox. At this session you are not going to press the matter again?

Mr. McConnaughey. No.

The Chairman. The Commission would only express their opinion and then you could not go any further unless you were asked to, or unless you were called up before the committee.

Mr. McConnaughey. That is right.

The Chairman. And asked your opinion. But I think it is common knowledge up here on the Hill, and down in the Treasury Department, what the feeling of the Commission is about this matter?

Mr. McConnaughey. I think so.

Senator Pastore. Yes.

Mr. Cox. You further stated that you believed that voluntary action by manufacturers looking to expanded production of all-channel sets would help in the development of UHF. Now, has the Commission been able to do anything to encourage this, informally, as far as manufacturers are concerned?

Mr. McConnaughey. No; I do not think the Commission or your committee has been able to do very much.

Mr. Cox. Have you consulted with representatives of manufacturers about the problem?

Mr. McConnaughey. Talked to them at various times, I have talked to them personally at various times and just—well, just have not gotten any place, that is all.

The Chairman. And this committee called them in. We had them all here for a long meeting, and the only answer they had was removal of the excise tax, although they did say that they were hopeful that they could do more themselves, in their laboratories or their research departments, to get the cost of an all-channel set down cheaper, so that it wouldn't make much difference which kind they manufactured. And I honestly believe they they are trying to do that.

Mr. BRICKER. Has there been any advance, since we had the report at the time of the hearing, in the technology of production so that the cost of the combined set, the complete set, is less than it would have been then?

Mr. MCCONNAUGHEY. Is Mr. Allen here? Chief engineer.

Mr. ALLEN. I don't have any information on the cost of the thing. The only information we have on the advance of technology has been the development last fall of a new tube which should make a successful UHF receiver.

The CHAIRMAN. Would it make it——

Mr. ALLEN. I don't think the cost would be materially different.

The CHAIRMAN. It would make it cheaper, wouldn't it?

Mr. ALLEN. Well, I am not sure of that because the sets that have been made up to the present time do not have a radio frequency, an amplifier ahead of the section of the set that changes the signal down to a lower frequency, and the sets have been defective in that respect. What they need is a front-end section which is equivalent to the front-end section in a VHF receiver, which would amplify the signal just as it comes into the set. That is the tube they haven't had. This new tube will do that, and will also make the set operate through all of the channels up to Channel 83. Some of the sets would not do that—the sets would operate on the lower UHF but not on the upper end. But this new tube should make them operate through there.

Senator PASTORE. The argument has been made here that V is much better than U. Now, with this new tube would you say that improves the status of the U?

Mr. ALLEN. Relative to the V it should improve the status.

Senator PASTORE. By comparison, to what extent would it improve it? Would it make it as good as the V in your opinion, or not quite so good?

Mr. ALLEN. It depends on what you mean by as good. In certain conditions the U promises to be better than the V in that there are four kinds of miscellaneous noise to get into your set—ignition noise and things of that nature are practically nonexistent in UHF. But on the other hand, from the nature of the propogation of radio waves, and the fact that a VHF antenna is bigger, and the fact that as far as we know VHF sets will probably be more sensitive than UHF sets, if you want to get extended range, VHF is likely to get extended range beyond the U.

But as long as you can get enough coverage so as to get good support for the UHF it seems to me that the UHF can be competitive with the V.

Senator PASTORE. With this new tube especially?

Mr. ALLEN. That is true. The rate at which it is going to be implemented and put into new sets is going to depend on the demand for the sets.

Senator POTTER. What about the maintenance cost for this new tube?

Mr. ALLEN. We have no experience with that. The maintenance cost is going to be the problem of the tube, and the circuit it is going to be put in, and the whole design of the receiver. This tube has just come out of the laboratory and it is going to take some experience. We have had no experience with it at our laboratory at all. We don't even have a tube available.

Mr. COX. Is it in production yet?

Mr. ALLEN. I don't know whether it is on production line yet or not.

The CHAIRMAN. Anyway, this is one instance that proves that we are making some technological advances toward an answer to the problem?

Mr. ALLEN. We certainly will make technological advances. If there is a demand for the UHF receiver, that is.

Senator BRICKER. Just one question: Regardless of the demand, if you have level terrain the UHF signal, picture and sound, are just as good as the VHF within a certain radius, are they not?

Mr. ALLEN. Within the radius to which it provides a required signal level it is just as good as the VHF, and we have measured data from several stations which indicates that in level terrain the UHF gets a good signal and gets good range.

Mr. COX. Mr. Webster?

Mr. WEBSTER. I think we can look, in the near future, for some help in this production of UHF receivers, or combination, from the color situation, because undoubtedly there will be a drive in the very near future for the production of more color receivers. As more of those come in and the price goes down, I think you will begin to see color receivers bought instead of black and white.

That isn't today's solution, but I am sure that before long you are going to find that the color situation is going to have an effect on the increase in the number of UHF receivers.

The CHAIRMAN. Are color sets all-channel?

Mr. WEBSTER. Yes.

The CHAIRMAN. Is this one we have in here (pointing to adjoining room) all-channel?

Mr. WEBSTER. Yes. I am not saying every color set is going to be all-channel, but I think the move will be in that direction.

Mr. COX. We hope to get representatives of the manufacturers in to tell us about that.

Senator BRICKER. There is no more difference, then, in color reception that would distinguish UHF from VHF than there is in the black and white?

Mr. WEBSTER. No, sir.

Mr. DOERFER. It might be a little bit better.

Senator BRICKER. It might be better?

Senator PASTORE. Why is that so, Mr. Webster; why is it better?

Mr. WEBSTER. The same standards are used, same number of lines, same frames.

Senator PASTORE. I am just curious, that is all. I was just wondering why, technically, UHF is better for color than VHF.

Mr. MACK. I don't think he heard your question.

Mr. COX. The question is why UHF is possibly going to be better for color than VHF.

Mr. HYDE. Our engineer will tell you that he can transmit more intelligence usable for color reproduction in the ultra-high band. That may relate to this freedom from noise as well as other considerations.

Senator PASTORE. I see.

Mr. HYDE. I have had one engineer tell me that he has observed it, and noticed the improvement in the transmission but he, as an engineer, wasn't right sure why it all happened.

[Laughter.]

Mr. HYDE. But he was sure that it did happen.

Senator BRICKER. That is a very encouraging development, I think. If the transition could take place at the same time, or the one encouraging the other.

Mr. HYDE. And then as more color comes on the air, the more people will be buying color sets—if and when they get cheaper, which they probably will.

Mr. BARTLEY. Mr. Chairman, the difficulty, I might add, is that the color sets aren't necessarily going to be all-channel sets.

The CHAIRMAN. I thought they were.

Mr. BARTLEY. They are not. And the same competitive factors will enter into the manufacturing and sale of sets with color that do so with black and white. And the manufacturer that can sell a cheaper set in color will bring the others down with him before it is over with.

Mr. COX. Isn't it true that the Commission presently sets technical standards for transmitters—minimum standards? That is correct, Mr. McConnaughey?

Mr. MCCONNAUGHEY. Yes, that is correct.

Mr. COX. But you have taken the position that, at least under present statutory authority, you do not have power to fix standards for the receiver at the other end of the signal?

Mr. MCCONNAUGHEY. That is right.

Senator SCHOEPPEL. I would like to ask this question now, since we were talking about the difference in the picture presented by UHF and VHF on the color sets. Can somebody here tell us for the record—and I am merely inquiring for my own information—what is the differential in cost between an all-inclusive type of set in color as related to the all-inclusive type set in black and white.

Mr. MCCONNAUGHEY. The difference in cost?

Senator SCHOEPPEL. Yes. Does the corresponding cost run about the same?

Senator BRICKER. You mean as bmetween UHF and VHF?

Senator SCHOEPPEL. I mean as between UHF and VHF, yes.

Mr. MCCONNAUGHEY. I guess the UHF would be $25—I am just estimating this—$25 to $40 more. And I think what Commissioner Bartley said is something that this committee should keep in mind. We shouldn't attempt to impress you with the idea that every manufacturer is going to put out, in color, all-channel receivers, because several of them have started out to do that, not all of them—some are not.

But I think the manufacturer would be very honest with you if you would ask him. If his competitor comes out and he is knocking the price off $25 or $30 and he is selling them, that will be the end of that all-channel business. Now, that is a very practical situation that would result. I think RCA, Philco or any manufacturer would tell you just that. They may start out with the all-channel sets, which cost a little more money, but if their competitors don't do it, and they are cutting the price and they are losing sales, that is the end of it.

The CHAIRMAN. What would you think, just offhand, Congress could do, or the FCC could do, to encourage the all-channel color set? It is just starting out; maybe we could take the tax off color sets.

Mr. HYDE. That bill which would take the excise tax off the all-channel set would apply to the color and would be a tremendous incentive.

Mr. McConnaughey. No question about it.

The Chairman. Because this is a new thing.

Senator Potter. If we limit it just to color, we wouldn't have the big revenue problem that the Treasury confronts us with.

Senator Pastore. If the excise tax was merely being imposed upon these sets, I could see where you could work up a logical case that it ought to be removed in order to encourage this all-channel set. But, after all, this excise tax applies to jewelry and other things. When you begin to single out one, you run into some difficulty to justify that exception. But if it were decided, let's assume, in the public interest in order to have a nationwide competitive television system that you must have, let's say, this intermixture as against deintermixture, in order to keep UHF alive, and that it would promote the public interest by having these all-channel sets, then without the excise tax do you see any relief at all in speaking with the manufacturers?

In other words, if the very survival of UHF in a VHF market depended upon an all-channel set in color, would you feel that you would have any authority to encourage the manufacturers to have all-channel sets?

Mr. McConnaughey. This is certainly a curbstone opinion——

Senator Pastore. Yes.

Mr. McConnaughey. You can be sure. Offhand, I can't quite see the authority.

Mr. Cox. Haven't you recently imposed a requirement that receiving sets bear a certificate that they are free from excessive radiation?

Mr. Doerfer. Well, that is definitely our duty under the act.

Mr. McConnaughey. That is an obligation which is specifically there.

The Chairman. I think the point that counsel is trying to make here is—what they are trying to do is not be critical—but if you do have some authority over receiving sets, that you might be able to go a little further, and if you haven't got that authority, that may be something we want to look at.

Mr. Webster. We have authority over the emissions of any piece of apparatus——

Mr. Cox. Isn't the reason that you can do this, with respect to emissions from the set, because it is going to interfere with other radio transmission or reception? Can't you perhaps, by analogy, take the position that you will require certain minimum standards with regard to the number of channels that this set is going to receive in order to preserve and promote your responsibility for the development of a nationwide competitive television system?

Senator Bricker. That would have to be tested by the facts.

The Chairman. I am afraid we would have to give them some more lawyers. [Laughter.]

Mr. McConnaughey. I want to talk to my General Counsel about that, and think about it myself.

The Chairman. O. K. I think this would be a good time to take just about a 5-minute recess and give the reporter a rest here.

(Recess.)

The Chairman. The committee will come to order. The committee will proceed.

Mr. Cox. Mr. McConnaughey, the last suggestion which you made to this committee in your report of July 21, 1955, was that you thought that UHF would be helped as a result of a proceeding instituted the preceding month for the purpose of increasing maximum power for such stations from 1,000 kilowatts to 5,000 kilowatts. I think there was a comment made yesterday that RCA had announced the placing on the market of a 4,500-kilowatt transmitter. What is the status of this rulemaking proceeding—has that been concluded yet?

Mr. McCONNAUGHEY. It has not; no.

Mr. COX. How many UHF stations are now operating at the presently permitted maximum of 1,000 kilowatts?

Mr. McCONNAUGHEY. How many of them? I will have to get that, and supply it.

Mr. COX. Can you get that information for us, for the record?

Mr. McCONNAUGHEY. Yes.

Mr. COX. Isn't it two?

Mr. McCONNAUGHEY. I think 2 or 3. I can think of two offhand. There might be a third one.

Senator POTTER. As of the time of the last hearing they experienced difficulty in receiving the powerplants that they needed. Has that been remedied?

Mr. McCONNAUGHEY. Again, I am going from memory. I think it has, to some extent. There was some trouble over at Wilkes-Barre, I think it was, and I believe that RCA went in there and straightened a good deal of that out. I believe George Storer has installed one down at Miami, and my understanding is that he has had pretty good success with it.

Mr. COX. Has the Commission any information as to the probable cost of a 5,000-kilowatt transmitter, as compared to a VHF transmitter?

Mr. McCONNAUGHEY. Again, I think that can be furnished.

Mr. COX. Can be furnished to us?

Mr. CONNAUGHEY. Yes.

Mr. COX. Fine. Can you also furnish us information as to the comparative costs of operation of a UHF transmitter at maximum of 5,000 kilowatts as compared with the cost of a VHF transmitter?

Mr. CONNAUGHEY. We haven't any reports to show it yet. Just as soon as we get it we will furnish it to you.

The CHAIRMAN. Well, in a general way, what we want to know is whether it will cost more or less.

Mr. COX. Whether it is much greater—the proportion. Do you have any information upon which you can found a belief as to whether or not a UHF station with a 5,000-kilowatt transmitter can duplicate the coverage of a VHF station operating at its presently authorized maximum?

Mr. McCONNAUGHEY. It would depend upon the terrain. I am giving my opinion now. I do think that we have our staff people—our staff people, I think, have observed an operation of that type and in certain types of terrain it does a pretty creditable job compared with the VHF. I don't know whether you could say it is just the same—whether you could say sufficient study has been made to say it is just the same. I do know personally I have observed one of those installations and they give a good signal out quite a long distance. But I don't know how many tests have been made to show what it would do in apartment buildings and built-up sections.

Mr. COX. Mr. Doerfer?

Mr. DOERFER. The height of a transmitting antenna may be more important than an increase in power. There is a relationship between the UHF signal and line-of-sight radiation—more so than in the V, as I understand it. So that just the increase in power, although it may send a signal out farther from the center of the circle, may not get the coverage that a V would get, nor would it probably get the coverage if you raised the antenna so that the radiations would beam downward and fill in the so-called shadow areas.

Senator POTTER. Isn't it true many times with the UHF receiver that just by shifting the height of the receiving antenna, or shifting the place on the roof or whatever it may be, means the difference between getting a good signal and not getting a good signal? It is much more sensitive in that respect than a VHF; isn't that correct?

Mr. DOERFER. I understand so.

Mr. MCCONNAUGHEY. That is correct.

Mr. COX. Mr. Webster?

Mr. WEBSTER. I think we should remember also that in the V portion of the spectrum, the low V's and the high V's require different elements of power. So that you have the same principle that stations in the low part of the spectrum, in the element of power, are different than the high.

Mr. COX. Under your rules, and in the current state of the art, you have been able pretty well to equalize the effectiveness of stations on all of the V channels?

Mr. WEBSTER. The stations do it themselves.

Mr. COX. Yes. But you adopted rules to permit them to do it.

Mr. WEBSTER. Under rules, yes. But I say the principle is the same. You have got to have more power under certain conditions.

Senator BRICKER. Just one question.

Mr. COX. Yes, Senator.

Senator BRICKER. What is the real technical difference between UHF transmission and the VHF that causes the greater distance of the signal in the VHF? That is a technical engineering problem, but I would like for the record to show it.

Mr. MCCONNAUGHEY. Yes.

Mr. ALLEN. I may say there are two principal differences. One difference is, as Commissioner Doerfer said, the UHF signals travel more nearly in the line of sight, like light does, than do the VHF signals. The VHF signals will bend more easily and get down behind obstructions and will follow the curvature of the earth better. Then there is a second propagation difference, in that the UHF signal is absorbed more by vegetation. Where you have lots of trees going overland, with lots of trees, forest and so forth, the UHF signal is absorbed more quickly than VHF.

Senator BRICKER. Why is that?

Mr. ALLEN. It is just a——

(Laughter.)

Mr. ALLEN. The UHF will have a wavelength which is measured in a few inches, and things like pine needles and twigs and things of that nature have a length such that they resonate that frequency, like you pluck a fiddlestring. And when they resonate, they have large amounts of current in them, and the signal is absorbed by the action of that current in the twig or the leaf. Whereas, with VHF you have to have longer things to absorb this energy, and the energy is absorbed less rapidly.

Senator BRICKER. Coming back to what Commissioner Webster said a moment ago, is that a matter of degree between UHF and VHF and is there the same range in VHF and then you just continue on to the shorter wave in UHF?

Mr. ALLEN. There is a continuous progression in the wavelengths from VHF to UHF; however, there is not a continuous progression in the frequencies which are assigned to television. They are in various blocks. In the VHF you have 3 blocks of frequencies, you have channels 2, 3, and 4 together, and then 5 and 6 are together, and 7 to 13 are together. Then you skip about 250 megacycles and then you come to channel 14.

Senator BRICKER. And it is that skip that causes the great difficulty?

Mr. ALLEN. That is a gradual degradation as you go up in frequency.

Senator BRICKER. It is something of the same thing that you have in AM and FM.

Mr. ALLEN. That is a different problem: In the AM band there is a degradation from the lower frequencies to the upper frequencies. So that the stations in the lower end of the AM band can, at certain times, cover 3 or 4 times the area than in the other band. So you don't have a complete comparability of facilities in the AM band with frequency.

Senator BRICKER. Then there is not a distinction in the character of the transmission or the nature of the waves, except that the higher the wave the shorter the length.

Mr. ALLEN. The shorter the length, and therefore the shorter the distance. Now, there is another factor related to that which has a bigger effect than this first propagation factor. That is the fact that as you shorten the wavelength, you also have to shorten the elements on your receiving antenna.

So the receiving antenna being smaller it gathers less energy than at the lower frequencies. Therefore, in order to produce a picture you have got to have greater field strength, or greater intensity of energy in the area, so that this smaller antenna will pick up enough to produce the picture. That is a bigger effect than this absorption effect.

Senator BRICKER. You mentioned that the VHF, or the long wavelength, will follow the contour of the earth.

Mr. ALLEN. Better.

Senator BRICKER. Better than the UHF?

Mr. ALLEN. But it is a matter of degree. In rough terrain even the "V's" do not do a very good job of coverage—in West Virginia, Pittsburgh, places where you have lots of hills.

Senator BRICKER. Thank you very much.

Mr. COX. I would like to go now to some matters raised in the Jones and Plotkin Reports on which the Commission has never commented to the committee in reply. For instance, both Mr. Jones and Mr. Plotkin suggested that the networks should clarify their affiliation policies, under Commission approval, to the end that affiliation be uniformly and impartially available, except where it would result in a substantial duplication of network service. Has the Commission taken any action on this proposal?

Mr. McCONNAUGHEY. They certainly have in this network study which you have authorized us to make. That is going to be very thoroughly covered.

Mr. Cox. Do you think this is a matter which must necessarily await the completion of the network study? Doesn't the Commission have considerable knowledge about the method of operation of the networks at the present time, which would justify action on some of these matters?

Mr. McCONNAUGHEY. Oh, no, you have got to await the network study.

Mr. Cox. That is, after regulating the networks for 25 years——

Mr. McCONNAUGHEY. We don't regulate them.

Mr. Cox. Having dealth with networks——I will strike that suggestion.

Mr. McCONNAUGHEY. That is better. We have no jurisdiction.

Mr. Cox. In all this time, you don't feel that you know enough about any phase of their operation to permit Commission action?

Mr. McCONNAUGHEY. I think, as told to Senator Magnuson, that we expect as soon as we complete any phase of this network study—this might be a part of it—as soon as we complete it we are going to report to this committee, and we are going to put into effect whatever we can as we go along, not wait until its completion.

Senator BRICKER. What control is that? I missed the first question because I was thinking about some pulsation problems.

Mr. McCONNAUGHEY. We have no control over the networks.

Senator BRICKER. I know that now. I wish you did have. There was something in the Plotkin report that suggested you did have. I have never agreed with it. But should we go into that problem here; is that what you are going into now?

Mr. Cox. Yes.

Senator BRICKER. I will wait until you have finished.

The CHAIRMAN. In any even, I think the chairman did answer this last question, and that is correct. As they move on the network study—and we hope they will move quickly—as they move, if any one phase of it is completed, they have agreed to tell us what that phase is.

Senator BRICKER. I think we ought to have that information as you go along because the problem is going to confront this Congress this year, next year, and the year after if something isn't done about it as to the control of the networks. They have too much economic and too much power generally in the country today. They could make or break a station; they can make or break an industry.

In my judgment that is entirely too much power to be in the public interest. I think it is something that we have to face, and I wish that the Commission would give its attention to that problem because the Congress is going to be dealing with it sooner or later.

Mr. McCONNAUGHEY. Senator Bricker, we are doing that just as rapidly as we can. We have retained Dean Barrow, and he has collected a very able staff around him—in my opinion, a very outstanding staff. They are working very diligently on all these network problems, and they are are going to report to the Commission and to the Congress as they go along without awaiting until we finally finish.

We hope we can finish this study by June 30, 1957, that is the target date. But in the interim we are going to report to you folks just as rapidly as we complete any phase of this thing.

Senator BRICKER. I think that is fine.

Mr. COX. I gather it is your opinion, presently, that the Commission does not have power to regulate the networks and their various practices, even if you might find, hypothetically, that something they were doing was contrary to the public interest; is that correct?

Mr. McCONNAUGHEY. That is correct.

Mr. COX. Isn't it true that the networks——

Mr. McCONNAUGHEY. Wait a minute, Mr. Cox. I ought not to go quite that far. We can regulate their stations, as you know.

Mr. COX. That is their owned and operated stations?

Mr. McCONNAUGHEY. Yes.

Mr. COX. And you can regulate the terms of contracts that other licensees enter into with them; is that not correct?

Mr. McCONNAUGHEY. That is right; that is right.

Senator BRICKER. But you can't at the present time say to them, "You can't take this one on because the other is a better public service"?

Mr. McCONNAUGHEY. No, sir.

Mr. COX. Isn't it true, to state an obvious truism, that the networks play a tremendously important part in broadcasting today, as we know it?

Mr. McCONNAUGHEY. They certainly do.

Mr. COX. Do you think that the Commission can properly exercise, in the public interest, all of the delegated constitutional authority of Congress in regard to the radio spectrum without having some power to regulate the networks and their practices?

Mr. McCONNAUGHEY. I think we will have to await the conclusion of this study.

Mr. COX. You think that that would develop facts——

Mr. McCONNAUGHEY. Not necessarily the conclusion of it. We have got to wait until we know a little bit more about it.

Senator PASTORE. Didn't you say yesterday that the crux of much of the problem lies in the programing? I think you said that, Mr. Chairman?

Mr. McCONNAUGHEY. I think that is correct, Senator.

Senator PASTORE. Now, if a network owns broadcasting stations and fundamentally the problem is in programing, and they have the authority to pass on to their affiliates what they please, then don't you feel that if programing is the crux of the problem that proper regulation would regulate how the programing is allocated, and the fact that a network owns a station might be fundamental?

Mr. McCONNAUGHEY. That is on of the facets that we are going to have to ascertain. Yes; I mean there is an awful lot to what you say, but I say we are just going to have to get into this.

Senator PASTORE. What is the distinction between—I ask this question; you might want to refer to the counsel—what is the distinction between a motion-picture maker running a show house in the city, which they had to divest under our antitrust laws, as against a network running a broadcasting station? What is the fundamental distinction?

Mr. DOERFER. I can give you my interpretation of that.

Senator PASTORE. I would like to have it.

Mr. DOERFER. I think that in the movie industry the restraint of trade was the result—and the courts so found—of a design to suppress competition, other outlets. In the networking situation the shortage of facilities is not by design of the networks.

It happens to be by reason of the fact that the Federal Communications Commission hasn't got enough space to provide the additional facilities at this particular moment, or those facilities which have been provided have not been accepted by the public or the broadcasters or the networks or the advertisers because of the economic aspects.

Mr. COX. Isn't it true, however, in the Paramount case, that it was ruled that you can find a violation of the antitrust laws in the absence of any express intent to monopolize?

Mr. DOERFER. I don't think that the court went that far. It quoted Justice Learned Hand's language. But I think there are some excellent dissertations on it by lawyers who disagree that the Supreme Court adopted that. If there is any question about it they certainly veered away from it in the Times-Picayune case.

Mr. COX. Mr. Plotkin suggested that use of time options constitutes a form of block booking which he felt was comparable to the practices held illegal as violative of the antitrust laws in the Paramount Picture case. I would like to ask you, Mr. McConnaughey, whether you have referred this question to your General Counsel or to the Department of Justice for an opinion.

Mr. MCCONNAUGHEY. That is covered by this network study.

Mr. COX. Isn't this a matter primarily for the determination of your legal staff or of the Attorney General?

Mr. MCCONNAUGHEY. I don't think the Commission—the Commission at least hasn't felt so.

Mr. COX. That is your'e not——

Mr. MCCONNAUGHEY. First, you got to get the facts. The fact Plotkin says it doesn't mean a thing.

Mr. COX. We are talking now——

Mr. MCCONNAUGHEY. Mr. Plotkin is just talking about his opinion or something.

Mr. COX. We are talking, however, not about facts but about the interpretation of certain decisions of the Supreme Court, and about analogies which I think would fall within the knowledge of the Commission between what was dealt with in the moving-picture cases and the network situation. The question is whether you have consulted, or will consult, with your General Counsel and the Attorney General to see whether Mr. Plotkin has anything in this conclusion of his.

Mr. MCCONNAUGHEY. I think you go back, it depends upon what facts you are applying it to. I think when we get along with this network study we will talk to our General Counsel about it.

Mr. COX. Does not the Commission now have copies of all the affiliation contracts between the networks and their affiliates?

Mr. MCCONNAUGHEY. I think we do have; yes.

Mr. COX. Don't you know, from observation if from nothing else perhaps, the way in which the option provisions in those contracts operate for purposes of time clearance?

Mr. McConnaughey. I think the General Counsel's office has an estimate he could make on this.

Mr. Cox. Yes.

The Chairman. In any event, let us get the record clear.

The first question was whether or not you had referred this matter, which was raised in the Plotkin report, to the Attorney General; and the answer is you have not.

Mr. Henley. Sir, if I might address myself to that question?

The Chairman. I thought you said you had not.

Mr. Henley. That is the one I wanted to answer.

The Chairman. All right.

Mr. Henley. The Plotkin report and the Jones report have been sent to the Department of Justice. The Commission's staff also maintains an informal liaison with the Department of Justice in antitrust matters, through direction of the Commission.

The matter of the time-option contracts is, of course, a very significant aspect in relationship of antitrust laws, or the applicability of antitrust laws, to network practices. As the Chairman told you, however, I think it would be premature to try to come up with any final answer until at least that portion of the network study is completed.

It is quite true we have a good many of the facts, but it is not easy to say either legally or factually the extent to which the principles of the Times-Picayune case and the ABC-Paramount case, to which we have referred, also apply to this situation. There is considerable difference of opinion among lawyers and I think the General Counsel's Office of the Commission certainly does not at this point have what it feels is any final answer.

Senator Pastore. I am not maintaining there is any compatibility between the two situations, because naturally it is a factual situation that has to be explored in detail. But as a general proposition we are driving in that area.

The thing that disturbed me—last year we had before us a bill that would have authorized the networks to assume more of these UHF stations in order to cure this problem, and I think I made the observation at the time that it was actually encouraging a monopoly to cure a monopoly, which, of course, is not good, either.

I don't think that the ultimate answer in this whole problem is going to be to encourage the networks to take more of these stations in order to fortify them with better contracts, to the exclusion of the other operators within that area, in the hope that we may settle this problem. I don' think that is the answer to it. But it does drive in that general direction.

Mr. Henley. As the committee knows, one of the ways in which we have some control over network operations is through our so-called chain-broadcasting rules, which are directed, of course, not to networks but to our licensees.

Now, I am sure that one of the things that the Commission will want to do, after it gathers some more facts through this network study, is take another look, a complete look, at these chain-broadcasting rules, which were enacted in substantially their present form many years ago before there really was television.

They were enacted to be applicable to the AM situation. I think we have to look and see whether those rules actually fit the present pattern of television. I am sure that is one thing the Commission and its staff will do.

Senator BRICKER. May I ask a question?

Mr. COX. Yes.

Senator BRICKER. You mentioned there is a difference of opinion among lawyers as to the impact of the Paramount and the Times-Picayune cases. There is no question among lawyers about this whole industry being charged with the public interest if Congress so says?

Mr. HENLEY. Certainly not.

Senator BRICKER. That is my judgment. Because after the Supreme Court decision in the Associated Press case, which dealt with the transmission of news alone, there is no doubt but what the Congress could say that this whole industry, from the inception to the receiver, is charged with the public interest.

Mr. HENLEY. I think there is no doubt about that. I didn't mean to leave that impression——

Senator PASTORE. We are not getting into natural gas again? [Laughter.]

Senator BRICKER. You are not dealing with a natural resource or a tangible product here. You are dealing with something entirely different, and something far more important, I might say in passing.

Mr. COX. As I understand it, in connection with the time-option clause, the two largest networks maintain a policy of so-called "must buy." Could you explain to the committee what that consists of and how it operates, or are you familiar with it?

Mr. HENLEY. I am familiar with it only in a general way. I could not explain to this committee in detail.

Mr. HYDE. It is simply a schedule of stations, of the number, I think, of 55, which the network requires the sponsor to take as a minimum. Now, you mentioned that two networks have such a list. The third network is not in position to get enough clearances to operate on that basis—that is my understanding of the situation.

Mr. COX. I would like to ask where the network study group and the General Counsel's Office are considering the possible antitrust implications of a practice of that kind as perhaps constituting some sort of collective refusal to deal, of the sort outlawed by the Supreme Court in the Griffith case?

Mr. DOERFER. That is the opposite. The advertiser himself—many advertisers themselves are perfectly content to take the first 25 or 30 markets.

Mr. COX. Can be buy the first 25?

Mr. DOERFER. The network says, "No; you have to take some of these others."

Mr. COX. All right. Now, is that, again, an exercise of economic power on the part of the network to require the purchase of something that the man doesn't want, in order to get a facility he needs?

Mr. DOERFER. I think that is definitely within the area of bargaining power, indeed.

Mr. COX. And is it also possibly within the area of concern of the Commission under the antitrust provisions of the Communications Act?

Mr. DOERFER. Well, as the Chairman indicated, that is still under study. I would say that the proper exploration should be along the lines as to whether or not—which I think is highly academic—the sponsor wants to buy more than the network is willing to sell, and I don't think you can find an instance of that. That will be an attempt by a network to prevent certain stations from getting programs.

That would be in restraint of trade. That would have all the earmarks of an exercise of a monopolistic power. But certainly not where a sponsor thinks that he can get 80 percent of the people in this country by X dollars, and the network comes along and says, "Now we are going to make you spend a little bit more so that you get 95 percent of the country."

Mr. COX. If the operation of this time-option system for clearance of network time were shown to prevent the producers of other forms of programing from getting sufficient clearance to make their products salable, would you not possibly then have a case where, without any intent, the operation of the system is such as to restrain trade?

Mr. DOERFER. Well, I don't quite—I haven't concluded at this stage of my study that it is a restraint of trade or an exercise of monopolistic powers. It may be contrary to the public interest. The time-option agreements may well warrant some revision. But we have to remember this; that we are not dealing with the fortunes of broadcasters. We have to always keep our foot on earth, and that is—it is the people. The people like networking. Now, we have to be careful that we don't throw the baby out with the bath water.

Mr. COX. They like the programs that the networks provide them.

Mr. DOERFER. We have to be careful that if the people want networking and if the people get something that they could not get without networking, that we can't destroy networking. We may be faced at the end of this study as to whether or not a certain move that we take or don't take is either going to sustain or destroy networking. It must always be valued and related to the interest of the public and not necessarily to the individual fortunes of broadcasters.

Mr. COX. In connection with this antitrust matter I would like to ask——

Senator BRICKER. Mr. Chairman? I don't think anybody is interested in destroying networking.

Mr. DOERFER. I don't think so.

Senator BRICKER. I don't think this committee or the Congress of the United States is interested in it. But they want it exercised in the public interest, that is the only purpose of the investigation as I see it. If they get too much economic or political power over the country, it will become a very dangerous thing to all of our institutions, economic and otherwise.

Mr. DOERFER. That is precisely why I don't think any Commissioner is in a position today to state——

Senator BRICKER. I think you are right, and I don't think this committee is in a position to say yet what they think about it.

The CHAIRMAN. But we do have before us S. 825, and I presume from what you say that the Commission is not in position to comment on S. 825 if we would ask for a comment. That is Senator Bricker's bill for regulation of the networks.

Mr. COX. Has that been under study by your legal staff?

The CHAIRMAN. Have we ever formally sent that down for comment? We have.

Mr. HENLEY. It has been under study, but we have not as yet prepared any comment on it.

Senator BRICKER. I do not think you could until you complete this study you are on now.

Mr. DOERFER. We could not give any opinion that would be of value because it may be reversed as we go along in this study. It would serve no useful purpose.

Mr. MACK. Let me make one observation. I think the purpose of this study—I do not want to argue with John here—is not to bring you personal opinions but to bring you the facts.

Senator BRICKER. Your opinion is worth a great deal, because you are experts in the field.

Mr. MACK. After we get you the facts.

Senator BRICKER. Yes.

Mr. COX. I would like to ask whether or not the Commission, in another connection, in handling applications for licenses or for the transfer of licenses considers the antitrust aspects in each case?

Mr. McCONNAUGHEY. I do not think there is any question about it. We have a duopoly rule—we have even gone to the extent of instituting a rule just to prevent that antitrust violation.

M. COX. Then do I understand you that as a matter of routine the Commission considers, and passes on, the question of whether granting this application will, or will not, tend to lessen competition or restrain commerce in violation of the antitrust laws?

Mr. McCONNAUGHEY. No question about it.

The CHAIRMAN. At this point, I know the chairman has got to go and make a speech and it is the luncheon hour. He could be excused. I do not know that we should go on, without the chairman here, with some other questions. That is up to the Commission, but I think we could——

Senator POTTER. How much do you have left?

Mr. COX. We could finish in half an hour.

Mr. McCONNAUGHEY. I will stay here for half an hour if we could finish. I will be late, but it does not make any difference.

Mr. COX. Does the Commission have any established procedures to get additional facts which may be necessary in passing upon this question—that is other than the representation made by the parties to the case?

Mr. McCONNAUGHEY. Oh, I think by sending 309–B letters and by making investigations by our staff, yes. That is one of the purposes of a 309–B letter, is to get information.

Mr. COX. That is addressed to whom?

Mr. McCONNAUGHEY. To the applicant.

Mr. COX. To the applicant?

Mr. McCONNAUGHEY. Yes.

Mr. COX. You take his statements on this. Now do you have addional methods of investigation?

Mr. McCONNAUGHEY. We have additional methods of our own staff to go out and investigate to find out what their opinion is.

Mr. COX. Do you have a section which is concerned with economic matters which would be capable of looking into questions of possible restraint of trade?

Mr. McConnaughey. Yes, I think it is a pretty good economic staff.

Mr. Cox. Well, do they in fact function in this field?

Mr. McConnaughey. Not strictly in this field, but they partially function in that field.

Mr. Cox. How many men are in this section that you are talking about now?

Mr. McConnaughey. Well, there are 3 of them, 3 or 4 of them, 3 or 4 of them.

Mr. Cox. Do you in these cases, where you are considering passing on the antitrust aspect, do you clear this with the Department of Justice in any way? Do you have any procedures for clearance?

Mr. McConnaughey. I do not think we clear them. I think the Commission general counsel's office works with the Department of Justice pretty closely.

Mr. Henley. Mr. Cox, if I might——

Mr. Cox. Yes?

Mr. Henley. Through a delegation by the Commission the general counsel's office maintains a liaison with the antitrust department of the Justice Department. I am the Commission's liaison representative. We are authorized to confer with the staff over at Justice about any of these antitrust problems that come to our attention in the general counsel's office or that are referred to us by other staff people.

Justice, in turn, calls to our attention anything that they run across in the course of their affairs that shows or indicates that there may be some antitrust problem in a broadcasting matter. It is handled on that basis.

If as a result of staff conference there seems to be some need for further attention to it, the matter may be referred either by Justice to the Commission formally, by a letter from Judge Barnes, or the Attorney General, or from us to Justice by formal letter from the chairman to Justice.

Mr. Cox. Do you delay action, then, if you are advised that the Department of Justice is still investigating the matter because of possible antitrust complications?

Mr. Henley. Not necessarily, not necessarily.

Mr. Cox. Then I would like to ask Mr. McConnaughey whether it is the feeling of the Commission that the Commission has primary jurisdiction insofar as the enforcement of antitrust laws in the field of radio and television is concerned, or does it more or less confine itself to the technical communications aspects of the case and leave the antitrust issues primarily to Justice?

Mr. McConnaughey. I think—the first of course is our primary function, but we do keep a constant liaison with Justice, but we are also looking toward monopoly.

Senator Bricker. Mr. Chairman.

The Chairman. Yes.

Senator Bricker. The chairman mentioned a moment ago that you have a duopoly rule. I am interested in that because of the fact that a few years ago the Justice Department threatened to bring a duopoly suit against an industry in this country that was highly competitive, and I am wondering if you would explain for the record what you mean by the duopoly rule?

Mr. McCONNAUGHEY. It merely means that the same owner cannot have stations in the same communities, adjoining communities. Where there is an overlap of service, where there is an overlap of grade A service. There can be an overlap of grade B service but not of grade A service.

In other words, so they could not be here and here in two cities (indicating), and overlap each other with the same owner. That in very simple terms is the duopoly rule.

Senator BRICKER. That is an entirely different thing than what I was thinking about.

Mr. PASTORE. May I ask a question?

The CHAIRMAN. Yes.

Senator PASTORE. Has the Commission ever denied an application on the grounds that it violated an antitrust law?

Mr. McCONNAUGHEY. I have not been here long enough. Maybe some of these people who have been around longer.

Mr. HYDE. I can't recall any case that was denied on that sole ground. But the Commission has denied applications on the ground that they were not consistent with our own rules which are designed to promote competition.

Mr. Cox. I would like to pursue a little more, with Mr. Henley perhaps, this question about primary jurisdiction. That is, does the Commission's legal staff take the view that the initial and basic responsibility for preventing monopoly in the communications field is upon the Commission, or is it upon Justice, or is it a sort of divided matter where maybe something gets lost in between?

Mr. HENLEY. Mr. Cox, I think the General Counsel's office is of this opinion:

First, our rules are designed to promote diversification of viewpoint, program viewpoint, and to discourage monopoly.

Senator BRICKER. In a local community?

Mr. HENLEY. Not only in a local community, but in a region, or in an area. The duopoly, rule, for example, is a part of that. So that we do not have stations with overlapping service areas owned by the same person.

Now, so far as the application of those rules is concerned, and entirely apart from criminal proceedings or other proceedings that the Justice Department is authorized to bring, it is our primary responsibility.

We have, however, in many of these areas overlapping and concurrent jurisdiction with Justice. For example, a practice that might be a violation of the antitrust laws, a specific practice, would in all probability also be a violation of one of our rules. Now we are applying our own rules. When it gets over into a violation of the antitrust law we ship it to Justice.

Of course, if it violates our rule, which is designed to follow the congressional policy against monopoly, it is not in the public interest and should not and would not be granted.

Mr. Cox. And you have procedures for the enforcement of those rules if after a grant you determine that some such——

Mr. HENLEY. Yes, we do. We have two very useful tools. We have revocation and we have cease and desist.

If the matter is so serious as to warrant a revocation proceeding, we can institute such a proceeding and revoke a license.

Now that could be done, for example, if an operator—if a licensee has misrepresented certain facts to us at the time he made his application and it later developed that he had done so.

Mr. Cox. I understand though that you have never done this actually, is that right? Never revoked a license?

Mr. HENLEY. On an antitrust matter?

Mr. Cox. Yes.

Mr. HENLEY. I do not think we have.

Mr. HYDE. I cannot recall.

Senator PASTORE. Let me help you out in this instance. Would you say that your rules are much more stringent, in your desire to promote a competitive television or radio system within an area, your rules are much more stringent than the antitrust laws might be?

Mr. HENLEY. Yes, we stop far short of the antitrust laws in most of these areas. That is, a particular operation cannot violate the antitrust law but still present a concentration that we would find was not in the public interest.

Senator PASTORE. In other words, anything that might have violated the antitrust law certainly violates on of your rules before it gets that far?

Mr. HENLEY. That is correct.

Senator BRICKER. May I ask a question, Mr. Chairman?

The CHAIRMAN. Yes.

Senator BRICKER. In the light of your study, your experience in the limiting of your antitrust applications to regions or communities, do you see a need for the Congress taking a new look at the antitrust laws which originally were enacted for the purpose of controlling monopoly in manufacture and industrial pursuits? Here you have got an entirely different problem.

Mr. HENLEY. I think I could not answer that at this point, sir. If the Supreme Court affirms the Court of Appeals in the case that is now before it on our multiple ownership rules and strikes them down, then it may very well be that we will come to the Congress and ask for specific authority to adopt rules in that area.

And if as the result of facts that are discovered in this network study we feel that some further authority is necessary in the network situation we may very well ask for authority. Now those two are the only situations I know of at the moment.

Senator BRICKER. At the present time?

Mr. HENLEY. Yes.

Senator PASTORE. Isn't the essence of the opinion of the Circuit Court of Appeals, really, that it does not make any diffierence as to the number of stations that a man owns, but you have to justify each situation on the facts as to whether or not it violates the public interest?

Mr. HENLEY. In a capsule, yes, that is what it amounts to.

The CHAIRMAN. Well, it is much the same as we have discussed on a number of occasions before—the fact that a person owns a newspaper is not necessarily a disqualification for owning a television station. But if in the circumstances owning newspapers and television stations would create a monopoly, then you have a different situation. So that each case is different.

Mr. HENLEY. The Court of Appeals decision, I think, amounts to this in the multiple ownership situation: The Commission saw fit, in an area that is incapable of exact definition, to express a policy favoring diversification in a numerical proscription.

Now to some extent that is like my enacting a rule that my children must go to bed at 7:30. We know they must go to bed some time, they must stop somewhere. Whether it should be 7:15, 7:25, or 8 o'clock, I could not perhaps sustain that in an argument with them each evening. [Laughter.]

So I adopt an arbitrary rule, that it must be here, I know it is in this area. That is what is really at stake. The Court of Appeals said, "You cannot draw this line. You must give each applicant a hearing each time on each application." That is what the fuss is about.

Senator BRICKER. When will the Supreme Court likely pass upon that case?

Mr. HENLEY. I think at this term. I believe it will be argued the 28th of March—February, excuse me, this month.

Mr. COX. Have you given any consideration to Mr. Plotkin's suggestion that perhaps some thought should be given to possible abolition of the chain broadcasting regulations so as to bring into the forefront again the normal application of the antitrust laws?

Mr. HENLEY. Well, I do not think that we have considered abolishing them. I think that we have considered that substantial revisions may be necessary, and that is one of the things, of course, we hope will come out of this network study.

Mr. COX. In connection with this use of time-options that we have been discussing in this monopoly situation, isn't it possible that their employment serves to place primary determination of the program content of an affiliated station in the hands of the network for a substantial portion of the time?

Mr. HENLEY. Oh, you could say that. Really it places it in the hands of the advertiser, I think, more than the network, in that sense.

Mr. COX. Yes.

Mr. HYDE. I would like to discuss that if I may.

Mr. COX. All right.

Mr. HYDE. The regulations permit the option contract, but a station can reject any program which it determines would not be in the public interest for it to broadcast. But the actual pressure on the station to broadcast a program does not come from that option contract, which, as I say, has a qualification, so much as it does from the interest of the station in broadcasting network programs.

Mr. COX. And maintaining his affiliation?

Mr. HYDE. Yes, that has been said.

Mr. COX. Now is this consistent, if there is any such operation—that is, if through any pressure of any sort the affiliate takes programs on just a steady flow basis because they are submitted to him from the network, is this consistent with the Commission's policy that the licensee's responsibility for his programing is not delegable?

Mr. HYDE. The chain broadcast rules, which permit the options, with the qualifications, were designed to provide a method by which a station could retain its responsibility and yet the network have a sufficient assurance of being able to clear the time to get sponsors and to offer national advertising.

You have got a very difficult problem there on both sides. The station must, under its license, maintain a sufficient degree of control to satisfy this principle of licensee responsibility. On the other hand, we must recognize that if they are going to have national advertising, the advertising agency, or the network, has got to have a reasonable prospect of being able to offer national coverage at the time that it negotiates.

Mr. Cox. Isn't it true that the network regulations were adopted at a time prior to the development of systems permitting release of a program at different times at different points?

Mr. Hyde. The network regulations, or chain broadcast rules, so-called, were adopted as I recall in May of 1941, and the whole television industry has developed since then.

Mr. Cox. I mean even in the field of radio—wasn't it true that the use of transcriptions did not come to the front until a later time?

Mr. Hyde. That is right, that is right.

Mr. Cox. Doesn't it make a difference, therefore, whether the program that network is releasing to the affiliate is live, and therefore must go out simultaneously coast to coast, or whether it is filmed and could be released substantially at different times?

Mr. Hyde. There would be some differences there. Some programs are so arranged that the time is of the essence—baseball games, for instance, which would be of no interest later. The coverage problem remains a serious one, and those networks that have to use delayed broadcasts have certain difficulties in selling national advertisers which in another situation would not obtain.

Mr. Cox. How about the mere matter of the determination of the time a program is to go on? We have a problem on the west coast with Disneyland, for instance, as to when you can get your children to bed, as Mr. Henley says. Should the question of the time of the release of that program in the local market be determined by the licensee or by the network?

Mr. Hyde. We hold that consistent with his responsibility the licensee must make that final judgment as to anything that goes over his station, but we recognize that a licensee has got to take into account in making his judgment that the maintenance of a network program is an important factor.

The Chairman. Because he is responsible to you?

Mr. Hyde. He will be one—that is right, he is responsible, the licensee is responsible to us.

Senator Bricker. If he does not conform to the wishes of the network they can easily remove his contract, take it away from him?

Mr. Hyde. Under our own rules a network contract may not be made for a period longer than 2 years. That is another matter that we do feel should be reexamined in the light of current conditions.

The Chairman. Now the time is running here. We have quite a few further questions, but I think that some of them can be taken down and answered in a brief way. The ones on exclusivity, here, you can take with you. Some of them I would not be too particular about the wording, because some of them were typed out fast. Then one is on the question Mr. Jones raised in which he suggested that the Commission should establish a more uniform accounting procedure providing for the submission by the networks, and by individual stations, of reports in much greater detail. That was not answered.

And then there are—these can be passed. I think we have covered a lot of it. But Mr. Plotkin did raise additional questions on spot representation, cable and microwave charges, and things of that kind which you can have and submit answers later.

Then the matter that we took up briefly in the beginning. I think maybe you would like to enlarge upon your testimony on the question of what power you do, or do not, have in view of the Federal Trade Commission's answer to me concerning advertising on radio stations.

And then I wanted to review with the Commission a typical case of a person who applies for a radio or television license—just what are the steps—because I think there is great room for improvement

Mr. DOERFER. Who are his opponents, first?

The CHAIRMAN. Well, perhaps Congress can be helpful in clarifying this and making it more simple, with better ground rules.

Mr. McCONNAUGHEY. You are speaking about an application that will be in controversy.

The CHAIRMAN. Yes, just the steps. One thing that has always bothered me is that I know the Commissioners have a meeting informally and sort of decide on applications; then the case is sent to an opinion writer; and in the meantime a lot of things may, or may not, happen. Sometimes we think it might be much more helpful to the Commission—and I know you have legal problems involved—if you could be like some Federal judges I have appeared before. They come on the bench and say "Case decided, written opinion follows." Then it is all over with. Then you are not subject to all kinds of pressures and everything else that occurs between the time you really think you have decided and the time you formally write your opinion.

I think—maybe it can't be worked out that way legally—but I think if we could do that it would be helpful to this committee.

I think maybe we are going to have to come back on this other item a little later. There are a lot of bills pending on this. This is the year when everybody is going to be interested in what political time——

Mr. McCONNAUGHEY. Political broadcasting.

The CHAIRMAN. There are all kinds of ideas. The problem on television has become greater and greater not only for candidates, but both political parties. The costs of campaigns are becoming terrific because of the advent of television.

This is a public license the station has. We do have the equal time theory in the law. But all of us know, as a practical matter, that is not the answer. It does not work. And I think we are going to have to sit down and get a lot of suggestions from everybody on this, because if we do not, when you get into the heat of this campaign I am sure there are going to be more complaints and more trouble than ever before. People will feel that they are shut out, or are not getting time, or that somebody has too much time. The State candidates have a problem—the local candidates.

I don't know the answers to it, but I do know that we have probably got to have some ground rules there, too. So maybe we will pass over that and come back to it later.

Now we have just a very few questions here—there seems to be no end of problems—on another matter which I am sure is going to be covered by other witnesses before the committee, and that is the question of subscription television. I think our counsel would like to ask just a few brief questions on that, without going into—again, we do not expect the Commission to intimate what they are going to do about these things; that is your business.

Mr. Cox. Without regard to the merits of the proposals, and in the light of Mr. Lee's statement during the first day's hearing that subscription television might be a possible answer to the UHF problem, I would like to ask whether the Commission is still of the opinion expressed to the House Committee on Interstate Commerce in May 1954—that is, if it were to decide that a subscription service was in the public interest, does it feel it has legal authority to approve and to adopt a rule so providing?

Mr. McConnaughey. I think so.

Mr. Cox. You are still of that view?

Mr. McConnaughey. I think so.

Mr. Cox. I would like to put into the record at this time, then, the comments of the Federal Communications Commission submitted in connection with the Hinshaw bill on May 6, 1954.

(The document is as follows:)

COMMENTS OF THE FEDERAL COMMUNICATIONS COMMISSION

H. R. 6431 is a bill concerned with the application of the Communications Act to subscription operations carried on over either radio or television stations. Specifically, it attempts to clarify the legal status of such operations by amending the definition of "broadcasting" in section 3 (o) of the Communications Act of 1934, as amended, expressly to exclude communications, intended to be received by the public, which involve "the payment of any charge, subscription fee or other form of direct compensation."

At the same time, section 3 (h) of the Communications Act would be amended to provide that persons engaged in subscription operations in interstate or foreign communication by radio shall be deemed to be common carriers.

No subscription service, in the sense that that term is usually used, is presently authorized by the Commission; broadcast station licensees may not transmit radio or television programs for reception by the public on home receivers under circumstances where such programs can only be received by those members of the public willing to pay a specified fee.

There are, however, presently pending before the Commission a number of petitions requesting the authorization of subscription radio or television services by broadcast stations and in the broadcast bands.

The entire problem is now being actively studied. Pending the conclusion of its study, the Commission wishes to stress the fact that it has reached no determination relative to the merits of subscription radio and television, and that th se comments are in no way based on any policy decision with respect to subsection operations.

There has never been any definitive determination, either by the Commission or the courts, as to whether the transmission of program material intended to be received by those members of the general public willing to pay a fixed charge or subscription fee can properly be classified as "broadcasting" within the meaning of the present definition of that term in section 3 (o) of the act.

It would appear, however, that, were the Commission to decide that such subscription operations were in the public interest, such programs could be classified as "broadcasting" within the meaning of the present language of section 3 (o). It might be argued that such programs are not "intended to be received by the public" since their intended receipt would be limited to members of the public willing to pay the specified price. But absence of any charge for the program is not made a prerequisite of "broadcasting" operations under the present language of section 3 (o).

And the reliance of the broadcasting industry upon advertising revenue, rather than upon direct charges to the public, as its principal source of revenue, has not been the result of any action by either Congress or the Commission, but rather the result of the natural development of the industry.

It would appear that the primary touchstone of a broadcast service is the intent of the broadcaster to provide radio or television program service without discrimination to as many members of the general public as can be interested in the particular program as distinguished from a point-to-point message service to specified individuals.

If this is true, subscription services should properly be characterized as a type of broadcast service. For while particular subscription programs might have a special appeal to some segment of the potential audience, this is equally true of a substantial portion of the programing now transmitted by broadcasting stations.

The legislative history of section 3 (o), while admittedly meager, does not in any way detract from an interpretation of the language of the section under which subscription operations would be held to be broadcasting. At the time of the passage of the Radio Act of 1927, which contained no definition of broadcasting, there was some discussion of subscription radio, and H. R. 16887, a separate bill, upon which no action was ever taken, had been introduced which would have prohibited the "broadcast" of programs for which a fee was charged.

And in the course of the debates on the bill, Senator Dill, who was the manager of the bill in the Senate stated that in his opinion nothing in the Radio Act would prohibit the institution of a subscription service and that, while he had doubts as to the extent to which the public would be willing to pay for radio programs, he did not believe Congress should preclude such a broadcast service (see 68 Congressional Record 2880–1).

The present definition of "broadcasting" was adopted at the time of the enactment of the Communications Act of 1934, without discussion or explanation in the committee reports or in the public debates. It was apparently derived from the definition of "broadcasting" which had been adopted at the International Telecommunications Conference held in Madrid in December 1932 and incorporated into the radio regulations annexed to the convention signed there.

A study of the documents surrounding these negotiations also fails to disclose any consideration of the question of whether a radio program service offered to the public upon the payment of a specified fee would, because of such charge, cease to be a broadcasting service.

The exclusion of subscription services from the classification of "broadcast" operations, which would be accomplished by the proposed amendment to section 3 (o) would not, in and of itself, preclude the authorization of subscription operations by licensed stations operating in the broadcast bands.

The Commission may authorize other services on the broadcast bands if it determines that the public interest will be served thereby.

Adoption of the proposed amendment would, however, have certain significant effects upon any subscription operations which the Commission might authorize, for there are several provisions of the Communications Act which by their terms apply only, or particularly, to broadcasting activities. These include section 303 (i), which gives the Commission authority to make special regulations applicable to stations engaged in chain broadcasting; section 307 (d), which limits the license term of broadcast stations to 3 years, but permits licenses for other classes of radio stations to be for as long as 5 years; section 315, which provides for equal opportunities for legally qualified candidates to use the facilities of broadcast stations; section 317, which provides that, in the case of broadcast stations, matters paid for or otherwise furnished to the station licensee must be properly announced as such; section 325, which provides no broadcast station may rebroadcast a program of another broadcast station without express authority of the originating station; section 506, relating to coercive labor practices affecting broadcasting; and section 605 of the act, which expressly exempts "the contents of any radio communication broadcast" from its application.

The Commission believes that it would not be advisable to make these various provisions inapplicable to any stations which might be authorized to provide subscription programs to the general public for home reception. Thus, while it is not presently known to what extent networking of subscription operations would be either technically or economically feasible, there would appear to be no reason why the Commission should not have the same authority over any chain operation in the subscription field as it now does over stations engaged in conventional chain broadcasting.

Similarly, to the extent candidates for public office might use subscription services, or the program material of such operations be paid for or furnished by commercial sponsors or other groups, it would appear that the provisions of sections 315 and 317 of the act, relating to the handling of such programs over broadcast stations, might well be applied to the subscription operations.

Section 1 of the proposed bill would amend section 3 (h) of the Communications Act to classify the operations under consideration as "common carrier" operations. Although it might be felt to be desirable to subject subscription services to regulation as a public utility, the Commission does not believe that classification of these services as operations would appear to be selling program material to the members of the listening or viewing public, either developed by the station itself or procured by contract with another originating source, rather than providing them with a communications service for hire. It has been a fundamental concept in the communications field that a person is not a "common carrier" of communications where he is providing his subscribers primarily with a news or information service, rather than with a communication service enabling subscribers to communicate among themselves. Thus, for example, while the furnishing of leased wires or radio circuits by the telephone or telegraph carriers is part of their common-carrier activities, the use of such leased wires by the news services to transmit news to their subscribers, or by the stock exchange to transmit price quotations, has been held not to involve common-carrier operation.

Similarly, in the case of subscription radio or television program services, the subscribing members of the public would be paying for the programs rather than for the use of communications facilities.

Moreover, it obviously is not contemplated that subscription stations would have the common carrier obligation of carrying, without discrimination, all programs offered for carriage. And since the Commission's jurisdiction over common carriers runs only to their interstate operations, a serious question would be raised as to whether particular subscription operations are interstate or intrastate, for purposes of the Commission's common carrier jurisdiction. The Commission believes, therefore, that subscription program services do not lend themselves to classification as common carriers, pursuant to the provisions of title II of the Communications Act.

The Commission now has authority under title III of the Communications Act to adopt such regulations as might be required with respect to matters such as the number and type of hours during which subscription programs could be broadcast by any station, the number of stations in any community which could engage in subscription operations at any one time, or the approved transmission standards for such operations. Any subscription service which might be authorized will be likely to be faced with the natural forces of competition from other subscription operations (including "closed circuit" operations by wire of the type now utilized in "theater television"), and from conventional broadcasts received by the public without direct charge.

In the absence of experience in this field, we cannot now foretell the effect of these natural competitive forces and whether any additional regulatory authority would be required in the future.

Attachment.

Adopted May 6, 1954.

The CHAIRMAN. Maybe I can simplify this too: Is there an application pending before the Commission on this?

Is there one application, or two, or how many are there pending?

Mr. McCONNAUGHEY. There are three; three systems. But this is in general rulemaking.

The CHAIRMAN. A rulemaking application. Now do you have any indication as to when you may make a decision on this matter? I know we are asking you to make a lot of decisions fast——

Senator POTTER. But they are such easy decisions. [Laughter.]

Mr. McCONNAUGHEY. I would like to answer that in this way, speaking personally, I feel that we should bend every effort with reference to this rulemaking in allocations, and I feel that we should pretty much get that out of the way before we take up the subject of subscription television.

Senator PASTORE. May I ask a question at this point?

The CHAIRMAN. Yes.

Senator PASTORE. Isn't one of the important issues in this rulemaking process that you are undergoing now, with reference to subscription television, the question as to whether or not you have the authority under the law.

Mr. McCONNAUGHEY. That question certainly does come into it, Senator.

I say it does come into it. I think the general feeling is that possibly we do have the authority. But it is not too clear-cut.

Senator PASTORE. Well now, how does the legal staff feel with reference to that, as against these opposing parties?

Naturally those who are interested in it say you have the authority; those who are opposed to it say of course you do not.

It would be an endless war between two conflicting interests as to whether or not you have the authority. But it strikes me that it is a matter for the legal staff to decide, and if they are in doubt they ought to come to the Congress.

I would not waste too much time with that. Why do you have to ask outsiders whether or not you have the authority. Your legal department ought to determine that. If you don't think so, you ought to come here and get it.

Mr. HENLEY. I would hope that the Senator would not insist upon an answer from the legal staff at this time. [Laughter.]

As to whether we do have. I agree, however, that I think the staff is capable of answering that question to the extent that an answer is available. And of coming to the Congress.

Mr. COX. Are you possibly, then, considering a modification of the position taken by the Commission at this earlier time?

Mr. McCONNAUGHEY. I don't feel that he should try to answer that at this time.

Mr. COX. Perhaps that is not appropriate.

Mr. BARTLEY. There are not the same Commissioners here now.

Mr. COX. Not the same personnel? Then my understanding is that your scheduling on the decision on these matters would be that the allocations proceeding comes first, and that the pending subscription proceeding would be decided thereafter.

Mr. McCONNAUGHEY. I feel—that is my own personal feeling that we have to take up this rulemaking, and I think Chairman Magnuson pointed out pretty clearly that he thought it took No. 1 priority in our work.

The CHAIRMAN. Yes.

Mr. McCONNAUGHEY. I feel we have to do it.

The CHAIRMAN. I think it does. I may be wrong about it, with all these problems.

Mr. McCONNAUGHEY. Along with all the rest of our regular work which has to go on.

The CHAIRMAN. Yes. But Mr. Henley, I do think that the quicker you can resolve whether you have the power—I am not talking about the merits of this—so that Congress can act if you have not the power. I think in any event, regardless of what you decide in these cases, that Congress should give you the power in this matter, the authority to act. I think we are agreed on that, aren't we?

Mr. HENLEY. Yes.

Mr. McCONNAUGHEY. Yes, sir.

The CHAIRMAN. Yes. And that might pose a problem for us as to what to do, because you are the experts in the field and we have to listen to you. The last few questions we have—I will make them brief and this is just general—but some of these stations are having some labor troubles, station management. Has there been any tendency to try to inject the FCC in these labor disputes at all?

Mr. HYDE. There have been, I think, two instances where sabotage of equipment was charged to operators licensed by us; that was the charge. But these have been very infrequent.

In another instance where we undertook to modify the requirements as to operators of stations, labor organizations submitted views and there were some differences of opinion as to whether we should make the changes that were made.

The CHAIRMAN. That is as to the number of people employed?

Mr. HYDE. Yes; this had to do with the class of operator required for a certain type station.

The CHAIRMAN. There was one case out in California of some kind.

Mr. MCCONNAUGHEY. That is right.

The CHAIRMAN. Yes. But generally speaking I think you will agree that the FCC should not involve itself in any of these cases as between the parties involved.

Mr. MCCONNAUGHEY. And we have not been brought into the subject. It is only destruction of property, if it is in the public interest, that we come into that.

The CHAIRMAN. I want to thank the members of the Commission. We have taken up a lot of your time, but I think we are quite clear on many things in the record that we were not before. And we appreciate your coming up here.

Senator BRICKER. Mr. Chairman, before you conclude I would like to ask the engineer to come to the desk here for a minute. I would like to talk to him. [Laughter.]

The CHAIRMAN. I want to say that I hope maybe we can all be thinking informally about this matter of political time, because I am afraid we have got several bills in—they will all come here—and rather than make a report on all the bills, which might be difficult, we might arrange sometime in the very near future to sit down and discuss them all.

Mr. MCCONNAUGHEY. We would be glad to do that with you.

The CHAIRMAN. And then you will send in the answers to the questions to fill in the record?

Mr. MCCONNAUGHEY. Right.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., April 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: We are happy to provide the following additional material concerning the Commission's testimony before your committee:

The information below marked "I" through "VIII" is in response to questions posed to the Commissioners during the hearings before your committee on February 20 and 21, 1956, on which we agreed to furnish answers for the record.

I. In volume 3 of the official transcript, at pages 328–329, Mr. Kenneth Cox, committee counsel, asked if the operational cost of the U would be higher because of the extra power required. The operational cost of a television station as far as the equipment is concerned is composed of (1) power costs and (2) maintenance costs. The difference in power costs for UHF and VHF is negligible either at below maximum authorization or at maximum power. The maintenance costs for the two services depend, in a large part, on the replacement cost of parts and tubes in the equipment. Although the Commission does not possess detailed data on this, the maintenance costs for the two services are understood to be generally comparable. This conforms with the statement of Dr. Engstrom, of RCA, who in a recent statement made before your committee testified that the equipment and operating costs of maximum power VHF and UHF stations are approximately the same.

II. On page 330 Mr. Cox asked: "Could you tell us how many communities got a first local television station in calendar 1955, including the satellites?" Twenty-six communities got their first local station on the air in 1955. Of the 26, 24 were VHF stations and 2 were UHF stations; 4 of these were satellites. In addition, 14 communities received their first local television grants, but of these none were on the air as of the end of 1955; 11 of the 14 grants were VHF and 3 were UHF.

A second part to this question was: "* * * how many pending applications for permits are before the Commission which would give a first local television station excluding again satellites and also excluding UHF permits, which have been outstanding for more than 6 months?" As of March 9, 1956, there were 24 VHF applications pending before the Commission, which would give a first local service to the community, and 6 UHF applications pending.

III. On page 364, it was agreed that there be incorporated into the record of this committee the statement of the then Chairman of the Federal Communications Commission, Mr. Rosel H. Hyde, before the Subcommittee on Communications, concerning the status and development of the UHF channels in the United States. This statement is enclosed.

IV. The answer to Mr. Cox's question, asked on pages 468–469, concerning satellite television stations is: A total of 14 stations have been authorized to operate on a satellite or a semisatellite basis. The term "semisatellite" is used here to refer to satellite stations wich are broadcasting or planning to broadcast a small amount of locally originated programs. Of the 14 authorized cases, a total of 11 are on the air; 10 of these are VHF and 1 is UHF. One of the 3 satellites authorized, but not yet on the air, is a VHF and 2 are UHF.

V. Quoting Mr. Cox from page 481: "Mr. Chairman, as a further means of reducing construction and operating costs you cited the amendment of your rules in June of 1955 to reduce the minimum power requirement and to eliminate the antenna height requirements. Could you tell the committee how many stations have taken advantage of this change in the rule? * * * new or previously existing stations * * * how many of them were UHF * * * [is] your rule limited to UHF stations?"

There are nine stations which have taken advantage of the reduced minimum power requirements set forth in the rules amendment of June 1955. These were all new stations, both VHF and UHF. Eight are VHF and only 1 of the 9 is a UHF station.

VI. On page 494, Committee Counsel Cox asked Commission Chief Engineer Edward W. Allen, Jr., whether there are any UHF broadcast stations now operating in the top 12 channels of UHF. There are now a total of five stations presently authorized to operate on UHF channels 70–83. However, of these, only one is on the air, channel 71 in Harrisburg, Pa.

VII. At page 572 it was asked how many UHF stations are now operating at the presently permitted maximum of 1,000 kilowatts. There were, as of February 29, 1956, 6 UHF stations operating at 1,000 kilowatts.

VIII. On page 573, Mr. Cox asked if the Commission had any information as to the probable cost of a 5,000-kilowatt transmitter, as compared to a VHF transmitter? The Commission has no prices on such a transmitter. It is still in the experimental stage.

IX. The question of this Commission's power and policy concerning advertising on radio and television asked on page 608 of the transcript has been answered by my letter to you dated March 15, 1956.

X. The following aditional questions were submitted to the Commission at the conclusion of the Commission's testimony:

1. Has the Commission done anything with regard to the following matters during the last year, aside from the institution of its Network Study?
   - (*a*) National spot representation by networks.
   - (*b*) Coaxial cable and microwave charges.
   - (*c*) Ownership of AM and TV networks by the same organization.

(*d*) Ownership of station by networks.
(*e*) Multiple ownership of stations by nonnetworks.
(*f*) Duration of networks contracts.

The Network Study is presently studying topics (*a*), (*c*), (*d*), and (*f*) above. As to topic (*b*) above the Commission's Common Carrier Bureau has made studies of the telephone company's program transmission services, rates, and regulations. As to topic (*e*), on February 24, 1955, the United States Court of Appeals for the District of Columbia Circuit held, in *Storer Broadcasting Co.* v. *United States and the Federal Communications Commission* (220 F. 2d 204) that the portion of section 3.63 (a) of the Commission's rules fixing maximum limits on the numbers of television stations under common ownership was invalid because of the lack of provision for a hearing on applications for television stations exceeding the maximum number specified in the rule. This decision has been appealed to the United States Supreme Court, before which oral argument was held on February 28 and 29, 1956. It is hoped that a decision will be rendered during the current term.

2. Questions of exclusivity:

(*a*) Is it planned that your study will look into the question of whether exclusivity of affiliation and territorial exclusivity continue to be practiced, despite the provisions of the Chain Broadcasting Regulations?

Answer. Yes; as set forth in Network Order No. 1.

(*b*) Have you instructed your study committee to consider and evaluate Mr. Plotkin's suggestion for dealing with the exclusivity problem?

Answer. This and related suggestions will be considered by the study committee.

(*c*) Do your plans in this field include discussion of the problem with affiliates, independent stations, competing networks, national spot representatives, and other segments of the industry?

Answer. Yes; the Network Study staff has already met with the networks and national spot representatives.

3. Questions of more complete financial information:

(*a*) Has the Commission done anything about the proposals set forth by Mr. Jones concerning uniform accounting procedures?

Answer. Yes. The Network Study has this problem under consideration.

(*b*) Has the Commission looked into the matter of whether the networks follow reasonable and equitable policies with regard to paying for electrical interconnection of affiliates, and in other respects treat their various affiliates fairly?

Answer. Yes.

XI. On page 143, in answering a question posed by Senator Monroney, I stated that there was no examiner's report finding that to grant a VHF channel to an area that was at present solely a UHF area would destroy the UHF's. On going into this more fully, I find that on January 20, 1956, an examiner concluded on the record that a UHF station would go off the air in Saginaw, Mich., if a nearby VHF station assigned to Flint, Mich., went on the air at the proposed transmitter site. This would not, however, furnish the first VHF signal in the area. (See initial decision of Hearing Examiner Herbert Sharfman, *In re Application of WJR, the Goodwill Station, Inc.*, pages 76–77, paragraphs 18–21, Docket No. 11412.)

This letter elaborates on testimony before your committee. Accordingly, I would appreciate having this additional information inserted in the official transcript.

Sincerely yours,

George C. McConnaughey, *Chairman*.

Statement of Chairman Rosel H. Hyde on the Status and Development of the UHF Channels in the United States

Mr. Chairman and members of the committee, my name is Rosel H. Hyde. I am Chairman of the Federal Communications Commission.

I appreciate this opportunity to join you in a discussion of the status and development of UHF channels, for the fate of the UHF channels is a matter of great import in the development of our Nation's communications system.

The problem which confronts us today stems basically from the fact that the television service began in one part of the frequency band—the VHF. Now, that service has been expanded into another and substantially higher portion of the spectrum—the UHF, or ultra high frequencies.

The stations in operation prior to June of 1952 all operated in the VHF. And all of the television equipment—transmitting and receiving—was geared to VHF operation. The UHF stations require new types of transmitting equipment and, in order for the stations to be received, the public must either purchase new receivers or make extensive changes in existing receivers. In short, UHF operation requires substantial changes by manufacturers and by the public, and therefore has a significant impact on advertisers, networks, and all other elements in the industry.

I think it necessary to an understanding of the problems that are presented that we review and keep before us the principal events and considerations which have brought this situation about. I shall, therefore, set forth briefly the factors which led to the utilization of the UHF band and the manner in which it was to be used. I shall indicate specifically why we could not place all television in the VHF, why we intermixed VHF and UHF channels in the same community, anad why we provided for wide coverage areas for all stations. I shall also analyze the growth of television stations since the lifting of the "freeze" and the current financial reports of new VHF and UHF stations. Finally, I shall touch on the measures the Commission has under consideration affecting UHF.

Television is a newcomer in the art and industry of communications. You will recall that commercial television began in 1941 but was blocked from normal development as a result of the wartime freeze, which lasted until October of 1945. The utilization of the UHF band is an even more recent development. In the sixth report and order, adopted April 11, 1952, after 3 years of extensive hearings in which hundreds of experts were heard and thousands of exhibits were carefully studied, the Commission promulgated a nationwide Table of Television Assignments and rules and standards to govern the television broadcast service. For the first time commercial television stations were authorized to operate in the frequency band 470–890 Mc., commonly known as the UHF band. This table of assignments provided for assignments of both VHF and UHF channels in the same community. In addition, the rules and standards governing the television broadcast service adopted by the Commission at that time specified the powers and antenna heights that stations operating on VHF and UHF channels might employ.

It was apparent that the 12 VHF channels allocated for commercial television would not be adequate for a competitive nationwide system of television broadcasting. And it was equally apparent that realistically there was little prospect for allocating to television more channels in the VHF portion of the spectrum. To do so would have required that other highly important radio services would have to be deprived of frequencies vital to their operations. These other services include the use of radio frequencies for FM as well as for police, fire, aeronautical, petroleum, utility, railroad, and other nonbroadcast services. Accordingly, the plan adopted by the Commission in its sixth report and order provided for use of the 12 VHF channels and, in addition, for the use of 70 UHF channels. In reaching this decision the Commission rejected another proposal which had been made—that all television be moved to the UHF band. For at that time there were 1 or more VHF stations in operation in 63 of the most populous centers of the United States. At the end of 1951 close to 15 million families, located principally in and around these 63 areas, had VHF sets. In many of these cities set saturation was more than 50 percent. The assignment of all television stations in the UHF would have had staggering consequences, not only to the industry but to the public as well. The investment of consumers in VHF at that time amounted to billions of dollars. Similarly, the industry, including broadcasters, manufacturers, service and repair people, had invested untold millions in the VHF.

To put the matter simply, if we were to provide an adequate number of television facilities, if we were to meet the need for multiple and local sources of expression, if we were to meet the need for adequate service, then we had no other choice—we were obliged to use not only the 12 channels available in the VHF portion of the spectrum but also 70 channels in the UHF band. We must not lose sight of the fact that the assignment plan must serve not only for the present but for the future. It must serve as the basis for the long-range development of our national television service.

A reference to the pattern of development of AM emphasizes the importance of this long-range viewpoint. Twenty years after the institution of the aural broadcast service there were less than 900 stations. From time to time the view had been expressed that this country could not support more than that number of stations. The fact is, however, that since 1945 the number of operating AM stations has increased almost threefold, so that today there are approximately 2,600 radio broadcast stations. An assignment plan that limited AM to 900 stations obviously would not have been in the public interest.

With the increased demand for television service following the end of World War II, it was perfectly clear that 12 channels were not enough to do the job needed to be done.

It was necessary, therefore, to use both VHF and UHF channels. And, for reasons which I shall discuss in some detail, it was necessary also to make both VHF and UHF assignments in the same community in order to avoid serious limitation on the number of services that might be provided. Indeed, of the 100 most populous markets, the Commission felt that the assignment of UHF channels in addition to VHF was needed in 70 of these top markets. Thus, UHF was needed to provide the fourth commercial local station in 24 of those communities, the third commercial local station in 29 communities, and the second commercial local station in 17 communities. In another 17 of these top 100 markets only UHF assignments were made. Some examples may help to illustrate the problem: The Boston metropolitan area is able to support 17 radio stations. Are 3 commercial VHF stations adequate to meet the needs of that community? The Baltimore metropolitan area supports 11 radio stations. Are 3 VHF stations adequate to meet its needs? The Chicago metropolitan area supports approximately 30 radio stations. Are 4 commercial VHF stations adequate to meet its needs? The same question may be asked of many, many other leading markets. To ask the question is to answer it, for the answer is indeed obvious.

But there is a further consideration which impels the intermixture of UHF and VHF assignments. Technically, it is the most efficient way of allocating the scarce and precious television frequency space to maximize the number of assignments. As we have pointed out:

"* * * VHF stations are capable of providing a greater coverage than UHF stations. Hence a more extensive television service is made available where some VHF assignments are made in as many communities as possible than where only VHF assignments are made in some communities and only UHF assignments are made in the other communities."

Stated otherwise, if we do not arbitrarily limit the assignment of VHF stations, we achieve a greater flexibility in the utilization of these assignments and as a result are enabled to use them more often and where needed most.

The Commission concluded, therefore, that intermixture was necessary. However, even had we been willing to limit arbitrarily the number of channels in communities—even had we been willing to utilize a less efficient method of assigning the VHF portion of the spectrum—even so, we would not have eliminated the effects of intermixture. For eliminating the intermixture of VHF and UHF assignments in the same cities would not have eliminated the overlap of VHF and UHF service areas. And there is the rub. For one of the principal difficulties facing most UHF stations is that they are within the service areas of large VHF stations.

But the difficulties in the long-run development of UHF would, in my opinion, have been greater than they are today if we had failed to intermix. At the time of the lifting of the freeze there were 108 television stations operating throughout the United States. These were all VHF stations, and they were located in 63 of the top markets in the United States—markets which contain over 60 percent of the Nation's population and which account for approximately 60 percent of the Nation's retail sales. If we had not assigned additional UHF stations to these very important population and economic centers, then for a certainty the UHF would have been permanently relegated to an inferior position in the television service. For if we had assigned the UHF service to the smaller communities only, then such incentive as presently exists for equipment manufacturers to produce reliable low-cost, all-channel tuners or converters, or to produce UHF high-powered transmitting equipment, would have been very substantially lessened.

In recent weeks some currency has been given to proposals for the reallocation of the spectrum assigned for television broadcast stations. Sometimes it is suggested that we reallocate the VHF portion of the spectrum so as to provide one or more additional VHF channels and then assign all stations in the VHF. On the other hand, it has also been suggested that we move all stations into the UHF. Both proposals have an obvious appeal. For—in one fell swoop—

they would eliminate the disparity between stations; put all stations on an equal competitive basis; and thus remove the UHF problem.

But the very factors that made such moves impracticable 2 years ago when the sixth report and order was adopted still exist, and perhaps in even more intensified form at this time. The needs of other services in the VHF portion of the spectrum are at least as great now as they were several years ago. You will recall that these include other broadcasting services, such as FM: They also include many other services such as police, fire, aeronautical, petroleum, utility, and railroads which are not only important to the national economy but also to public safety. In these services many thousands of stations are operating. New lodgings in the spectrum would have to be found to house these services, with a resulting chain reaction of dislocation. And even the most drastic action would secure only a few additional VHF channels, hardly enough to supplant the 70 UHF channels. In view of the cost, the widespread disruption and confusion that would result from any effort to move these stations elsewhere in the spectrum, it must be concluded that a proposal to obtain more VHF channels for television to replace UHF channels is infeasible and impracticable.

And the impact upon the public and the industry of a move of all stations to the UHF would be far greater now than it was 2 years ago: For since the lifting of the freeze the number of VHF receivers in the hands of the public has increased from approximately 15 million to 30 million. And the number of stations operating on VHF channels has increased from 108 to 250. Similarly, the investment of the industry, including broadcasters, manufacturers, service and repair people, has increased several fold. Here, too, the disruption and dislocation, and uncertainty and confusion, make this proposal infeasible and impracticable.

I have dealt at some length with the salient considerations involved in the assignment of channels because of the importance of these matters to the national television structure. A second and equally important problem arises from the nature and extent of the service area that should be provided for television stations authorized to operate on the assigned channels.

It was our objective to provide the whole of the American public—including people who reside in cities, farms, and rural areas—in all parts of this country, with at least one television service. In addition, it was our objective—wherever practicable—to make it possible for the American people to be provided with a choice of two or more television services. Further, it was our objective to make a nationwide service available at the earliest practicable date. We assumed that in the immediate future, at least, television service would originate from the larger cities where there was a substantial economic base for their operation, in terms of population and purchasing power. Consequently, if persons outside these cities were to obtain television service in the near future, it would have to come from stations in the large centers.

In the light of these objectives and considerations it was the Commission's decision that all stations should have the potentiality of relatively wide coverage. Further, we concluded that the high power which was necessary for wide coverage was further desirable since it made possible a better grade of service to the viewer within the service area. We, therefore, authorized the use of high power.

I think you can see that in terms of the public interest there is substantial justification for providing television stations with wide coverage. However, the fact is that the transmitters necessary to provide such high powers for the UHF have not yet been developed. The result is that the approximation to comparable coverage that we hoped would be possible between VHF and UHF stations has not yet been attained.

Now, I should like to review briefly the growth of television stations since the lifting of the "freeze" and the current financial status of these new stations. I do not propose to burden the committee with the detailed data, but rather I shall set out the highlights of our analysis. The summary figures are available in these tabulations which I have had prepared for this proceeding. In addition, I would like to make available copies of a previous report which the Commission released on the UHF situation.

As you know, there has been a very rapid expansion in television during the past 2 years. There are well over three times as many stations in operation now as compared with April 1952. Of the 377 commercial stations on the air as of May 1, 1954, 127 were UHF.

On the basis of applications already received, there could be a total of 673 commercial stations. Of these, 404 would be VHF and 269 UHF. By comparison, in our allocation plan, we provided for approximately 550 commercial VHF and 1,300 commercial UHF stations.

Now, how extensive is intermixture of VHF and UHF stations in the same community? The great majority of UHF stations on the air—68 percent—do not operate in the same community with a local VHF station. Another 26 percent of UHF stations have only one VHF station in their same community. Only a handful—6 percent of the UHF stations—are in communities with two or more VHF stations. I want to emphasize that I am now talking about intermixture in the same community. However, intermixture on an area basis—that is, VHF signals coming in from outside communities—is very general.

I said a moment ago there could be 673 commercial stations on the basis of stations authorized and applications pending. This, however, presumes two things: (1) That all stations on the air will continue in operation; and (2) that all permit holders will eventually build stations.

Let me indicate what has been our experience thus far with both of these factors. Thus far, a total of 77 permittees have canceled out their authorizations before going on the air or have ceased operation after going on the air. These 77 include 13 VHF and 64 UHF. Thus the number of UHF cancellations is half as large as the total number of the UHF stations in operation. However, it should be noted that few of the dropouts had actually gone on the air—2 in VHF and 10 in UHF.

In the great majority of cases where UHF permittees have canceled, they faced substantial VHF-only set saturation in their markets. This was true not only in communities in which a VHF station was in operation in their community, but also in communities which had no local VHF station. It is also true that in a number of these communities VHF-set saturation was relatively low in May 1952, when the Commission had just lifted the "freeze". Such VHF-set saturation developed between then and the end of 1953 as the result of two factors: New VHF stations going on the air, and increased coverage of existing VHF stations.

There are now 120 UHF permits outstanding, in addition to the 127 UHF stations on the air. Over 60 percent of the 120 UHF permits outstanding are now at least 8 months old. We do not know when these 120 UHF permit holders will go on the air. We do know that they face the task of overcoming considerable VHF-only set saturation. This is particularly true of the 49 UHF permittees scheduled to go into 33 prefreeze markets. To a somewhat lesser degree, it is also true of 40 UHF permittees authorized for operation in 40 UHF-only markets where there are no UHF stations now in operation and no UHF-only circulation, but where there is considerable VHF-set ownership.

Previously, I have indicated that if UHF is to achieve comparable coverage with maximum-power VHF stations, it must have higher power. In fact, it would require radiated power of 1,000 kilowatts. This calls for a transmitter with rated power of 50 kilowatts or more. RCA, GE, and DuMont have advised that such transmitters are currently under development, but they are not likely to be available commercially until late 1955 or mid-1956.

The bulk of UHF transmitters now in operation are relatively low-powered. They have a rated power of 1 kilowatt and with high-gain antennas they operate at approximately 20 kilowatts. The highest rated UHF transmitter currently in operation is 12 kilowatts; with high-gain antennas these operate at approximately 200–240 kilowatts radiated power.

With the transmitters now available to UHF operators, they generally cover their local community, but they cannot reach out as far as VHF stations nor can they overcome poor viewing conditions as well as VHF stations.

We do not know precisely how many UHF sets are presently in the hands of the public, but the best information available indicates that the figure is somewhere between 2 million and 3 million. A survey made in November 1953 by a commercial organization indicated that as of that date there were 27.5 million families with a television receiver, including 1.8 million families who were equipped for UHF reception. In this connection, it is important to note that factory production and factory sales of combination VHF-UHF receivers have both gone down rather substantially between October or November 1953, and March 1954.

The financial statements of the stations taken as a whole should reflect broadly the various factors operating in the industry. However, because there has been a sudden expansion of stations and because most of the postfreeze stations have had a relatively short operating experience—their average age is only 9 months—the financial pattern at this point is still somewhat confused.

However, the financial reports of the industry for 1953 and the first quarter of 1954, which we have collected and analyzed, do reveal some broad trends, and are of considerable importance for the light they shed on the UHF problem.

First, I should like to report on the overall 1953 financial experience of the television industry. The industry, as a whole, had a prosperous year. Total revenues were $430.8 million. Income, before Federal income tax, was $68.4 million. The average prefreeze station had revenues of $1.9 million and income, before Federal income tax, of $658,000. The 4 networks and their owned and operated stations, as a group, had revenue of $231.7 million and income of $18 million.

With respect to the postfreeze stations, let me first give you an overall view of their investment. As of the end of 1953, the postfreeze VHF stations reported a total investment in tangible broadcast property (transmitters, studios, land, and buildings, etc.) of $41 million, an average of $376,000 per station. The UHF stations reported an investment of $30 million, an average of $300,000 per station.

To measure the experience of postfreeze stations in terms of profit and loss, we are using as our benchmark the reports of the stations detailing their operations during the 3 months—January, February, and March 1954. This is necessary because of the varying periods that these new stations have been in operation and their very limited experience overall. The information pertains to 175 of the 192 postfreeze stations that were in operation by November 1, 1953.

About 37 percent (33 stations) of the postfreeze VHF group reported profitable operation during the first quarter of 1954. By contrast, only 15 percent (13 stations) of the UHF group were profitable during the same period.

The average monthly profit of the profitable VHF and UHF stations was about the same—between $10,000 and $11,000. However, the monthly losses experienced by the losing UHF stations were substantially higher than for the losing VHF stations—between $10,000 and $11,000 for the UHF's, and $7,000 for the VHF's.

Thus far I have discussed the economic condition of postfreeze stations in terms of profitability. I think it important that we view these data in another light, to determine the number of these stations which suffer continuing substanial monthly losses. We find that 25 percent of the postfreeze VHF stations, as contrasted with 60 percent of the UHF stations, reported substantial monthly losses.

I have described in very broad terms the growth, development, and present status of UHF television. When examined in detail the problem is exceedingly complex: In some degree it varies from market to market, and it changes from month to month. Some of the facts are readily measurable; others are not. The applicability of some of the factors is not limited to the UHF only. Such factors as size of the market, the number of stations already in existence, the resources and experience of station operators, will influence the success of any station, VHF or UHF. Thus, any generalization which is drawn may have only limited applicability in understanding the present status of any individual UHF operation.

With these caveats and qualifications in mind I believe we can draw at least the general outlines of the problems and difficulties that confront the UHF broadcaster. I have pointed out that 68 percent of all operating UHF stations are in markets with no competing VHF station. But intermixture of service areas is far more general, and I would say that the typical UHF broadcaster finds himself in competition for the viewing audience with one or more VHF stations.

In this competition the disadvantage of the UHF station in coverage is two-pronged: In most cases he finds that his own service area is already effectively covered by high-powered VHF stations located in large urban markets: UHF stations frequently are in the position of providing duplicate coverage. And it is well known that national advertisers seek as far as possible to avoid duplicate coverage. The second disadvantage stemming from inequality of coverage is that where VHF and UHF stations are in the same market, the national advertiser can reach many more people by buying time on the VHF rather than the UHF station.

But most important in my view is the receiver difficulty with which UHF stations must contend. This difficulty arises from the fact that VHF receivers in the hands of the public cannot receive transmissions from the UHF station without conversion. This I believe is the most critical disability facing the UHF.

There are relatively few large-sized markets in which UHF stations can be located, which do not already have 25 percent or more VHF-only set saturation. Thus the new VHF operator will often find a ready-made substantial market in the sense that the public will receive his signal merely by a twist of the dial. The UHF operator, however, must actively sell and promote the sale of UHF converters which may cost $50–75, and which may not operate altogether successfully. Or he must persuade the public that in the purchase of new sets they ought to buy receivers which will tune all channels including the UHF channels, and such combination receivers may cost the consumer substantially more than a VHF only receiver.

To accomplish this task of building audiences, the UHF operator must make his service sufficiently attractive so that the listener will voluntarily incur the added expense involved in the conversion of his VHF receiver or in the purchase of a new all-channel receiver. In a community which is not reached by VHF service, the UHF station can expect gradually to build up a UHF audience. At best, the process is slow and costly to the station.

At the other end, where there are two or more local VHF stations or signals from outside stations serving the same community, and especially where these VHF stations are bringing in popular network programs, the incentive to convert or to buy UHF equipment, which is higher priced, is substantially weakened. And, where UHF-set circulation is low, obviously advertisers and networks are reluctant to place their programs on the UHF station. And so, to the extent that these factors apply to individual cases, the circle is complete. The audiences of UHF stations are limited. They can be increased by obtaining network programs. The UHF stations do not get sufficient network programs because they do not have an audience.

This set-conversion problem also has serious long-run implications. While UHF stations are on the air, they are an active force in persuading people in their community to buy UHF equipment. But if the UHF station becomes discouraged as a result of slow conversion, or if it does not have the financial resources to wait out the period necessary to achieve substantial UHF-set circulation, and it goes off the air, then, what are the consequences? The chances are that progress will be halted in building up UHF-set circulation, only VHF-only sets will be purchased and it will be even more difficult in the fuutre for new UHF stations to operate in that community. In other words, so long as VHF-only receivers are manufactured and retailed and purchased time alone will not solve the UHF problem in many, many communities.

In brief, then, the UHF problem, generally speaking, stems from three limitations: The limitation of low UHF set ownership, of coverage, and of programing. These limitations are substantial and I must state my own conviction that there is no one magic solution to the problem. Nevertheless, there are measures which may help overcome some of the present handicaps of UHF. Some, the Commission itself has proposed; others have been urged on the Commission by outside parties. I would like to review these proposals with you, although I cannot of course state the ultimate decision which my colleagues may reach in their consideration of any one of these proposals.

First, the problem of coverage. On March 11, 1954, the Commission issued a notice of proposed rulemaking, looking toward the upward revision of its requirements with respect to the minimum power which UHF stations might utilize. In the Commission's notice it pointed out that requirements of power by UHF stations were made in the light of the equipment which was then available. At that time transmitters capable of producing an effective radiated power in the order of 100 kilowatts were not available in the UHF. Since the adoption of the sixth report, it appears such power has become available and can be accomplished with a transmitter with a rated power of 5 kilowatts. Accordingly, the Commission proposed to require all UHF stations to operate with a transmitter with a minimum rated power of 5 kilowatts. The time afforded interested parties for the submission of views expired on May 17, 1954.

Another proposal for extending coverage was made in two petitions filed by parties requesting an amendment of the television broadcast rules so as to authorize the use of new techniques for extending the service of television stations. These techniques have been labeled as satellites and boosters. The satellite operation contemplates the operation of a subsidiary station on a different channel than is authorized for the operation of the main station. The booster technique contemplates the operation of a subsidiary station on the same channel authorized for the main station. Both petitions which have been filed and are presently pending before the Commission request the authorization of satellites and boosters on both the VHF and the UHF channels. The Commission has already authorized Sylvania Electric Co. to experiment with satellites and several parties, including RCA, WSM, Adler Communications Laboratories, and Associated Broadcasters, to experiment with boosters. The results of these experimental authorizations will undoubtedly help the Commission in its final decision.

The problem of building of UHF set ownership is, as I have pointed out, of major significance in the present situation of UHF stations. This problem need not be one of indefinite duration, however. First, if the manufacturers of receivers were to manufacture only all-channel tuners, obviously this problem would disappear as new sets were purchased. The data I have furnished sets out the extent to which all-channel tuners have been manufactured. Further, the problem would be considerably lessened if set conversions were readily accomplished.

The Commission's authority in this area is virtually nonexistent. But to the extent that actions in other fields within our competence and jurisdiction have a bearing on this problem I think it appropriate to raise it at this time. The committee is aware that on December 23, 1953, the Commission issued a notice of proposed rulemaking, looking toward a revision of its mutiple ownership rules. The rules in effect specify a five-station maximum for television stations without distinction between UHF and VHF. The revision proposed by the Commission is to increase the maximum permissible ownership of television stations to 7—no more than 5 of which may be in the VHF band. In its notice the majority of the Commission stated their view that this amendment would help encourage the development of the UHF band. This proposal is designed to encourage large organizations with program production, know-how, and resources, to enter into the UHF field, in the ownership and operation of stations. To the extent that this is accomplished and results in the rendition of full network programs over UHF facilities on a regular basis, a direct incentive would be furnished to persons within the service range of such stations to convert to UHF. Moreover, to the extent that a number of major networks have UHF stations with popular programs, the greater the incentive to manufacturers to turn out all-channel receivers only and highpower UHF transmitters. Accordingly, although no action can be taken by the Commission directly with respect to the UHF receiver problem, it might be that the liberalization of the multiple-ownership rules would help indirectly in some measure to reach the same result.

On March 9, 1954, a Senate bill, S. 3095, which generally looked toward the same objectives as the Commission's proposal, was introduced in the Senate. This bill proposed to add a new section to the Communications Act, which would regulate the multiple ownership of television broadcast stations. The Commission's views on this bill were submitted to the full committee yesterday.

In addition, on May 11, 1954, a proposed amendment of H. R. 8300 was introduced, which would exempt from the 10-percent excise tax all television sets with built-in UHF tuners.

And now let us consider proposals designed to assure UHF stations better programing. Under the present provisions of the Commission's chain broadcasting rules a network affiliate, which renders coverage to a substantial portion of the service area of a station located in another community, may contract with a network organization to preclude the station in that other community from carrying network programs which the affiliate carries. The network affiliate may do so, even though the program's sponsors and the network itself desire that they be broadcast by the latter station also. On April 1 of this year the Commission issued a notice of proposed rule making, looking toward a revision of this section of its chain broadcasting rules. The change proposed by the Commission would continue to recognize the right of an affiliate to contract with the network to preclude stations located in the same community as the affiliate from taking programs of the network. The proposed rule would operate to the benefit of UHF stations where the existing rule, because of the wide latitude afforded the VHF affiliate, has operated to preclude UHF stations from obtaining network programs where the sponsor desires to broadcast over the UHF facilities. The time for the submission of views by interested parties expired on May 10, 1954, and that proposal is presently pending before the Commission for final action.

On April 29 a further proposal, seeking a revision of the Commission's network rules, was filed. That proposal requests an amendment of the chain broadcasting rules to provide, in effect, that 1 year from the effective date of the amendment at least one-third of network television affiliates receiving revenue from the sale of network time be UHF stations and that 2 years from the effective date of the amendment at least one-half of network television affiliates receiving revenue from the sale of network time be UHF stations. That petition is presently pending before the Commission.

More recently, on May 13, 1954, a bill was introduced in the Senate (S. 3456) which looks toward a revision of the Communications Act to give the Commission authority to "establish rules and regulations and make orders with respect to networks and such of the activities as affect licensed broadcast stations to operate in the public interest."

In addition to the foregoing proposals designed to assure UHF stations a high-quality-program fare, a number of petitions have been filed with the Commission relating to subscription television. Subscription television takes various forms, but basically it is a technique for coding or scrambling the transmitted signal so as to produce a distorted picture and unintelligible sound at any receiver which is not equipped with appropriate decoding or unscrambling devices. The systems contemplate a regular charge by the operator of the system for the periodic purchase of the "code" or "key" to activate the decoding units. Developmenttal and experimental research has been carried on for some time and there are presently several different systems in various stages of experimentation and development. From time to time, upon request of interested parties, the Commission has granted special authorizations to permit developers of subscription television systems to use broadcast facilities for such developmental work and experimental operations. Among other things, the proponents of the system urge that the operation of subscription television by UHF stations will open the way to many new avenues of attractive programing and thus speed up set conversions; and also that it will supplement the revenues of such stations. In addition, it is alleged that subscription television will free stations of their dependency on networks. These petitions are presently pending before the Commission.

Also, there is now pending H. R. 6431, a bill to amend the Communications Act with respect to its application to subscription radio and television. Last week in reply to a request from the chairman of the House Interstate and Foreign Commerce Committee, the Commission submitted its comments on this bill, and I would like to make a copy of the Commission's comments available.

Thus far I have described those proposals made by the Commission and by interested private parties which are related to the three principal problems that I have described, i. e., coverage, UHF set ownership, and programing. In addition, there have been filed on April 29 of this year a couple of miscellaneous proposals, looking generally toward a relaxation of the Commission's rules with respect to the operation of UHF stations. One request seeks a revision of the Commission's technical standards to authorize what has been described in the request as "binaural third dimensional or stereophonic sound"—designed to provide "* * * tonal perspective with movement and quality and * * * a feeling of realism." A further request for the amendment of the Commission's operating requirements of UHF television stations seeks an amendment of the Commission's rules so as to authorize aural transmissions by stations with varied fixed images rather than moving images as the rule presently requires.

In addition to these requests a further request presently pending before the Commission seeks a suspension of the further processing and grant of construction permits in the television broadcast service until such time "that the Commission may adequately study, particularly in the light of forthcoming Senate hearings, as adjustment of the inequities presently existing between UHF and VHF television stations."

In conclusion I should like to state that this meeting between representatives of the Government and the industry can be helpful in adducing all relevant data so that we may explore fully all facets of the problem. The Commission will, of course, cooperate to the fullest extent with this committee.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., April 11, 1596.

Hon. WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I have your letter of April 3, 1956, referring to the information the Commission was requested to supply for the record during the appearance of the Commissioners before your committee. Eleven items are listed on which additional information is sought.

The information requested in items 2 through 11 have been supplied in my letter to you of April 9, 1956.

Item 1 asks for the average cost of construction of UHF television stations. During my testimony I read into the record the average cost of construction for UHF stations for 1953 as $300,493 (transcript p. 328, as corrected).

I will be happy to furnish any additional information that you may require.

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman.*

The CHAIRMAN. The committee will now recess until 10 o'clock on Monday morning, at which time we will begin to hear outside witnesses.

(Whereupon, at 12:27 p. m., the committee was adjourned, to reconvene at 10 a. m. Monday, February 27, 1956.)

APPENDIXES

APPENDIX I

RADIO AND TELEVISION ADVERTISING

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
February 3, 1956.

Mr. JOHN W. GWYNNE,
Chairman, Federal Trade Commission,
Pennsylvania Avenue at Sixth Street,
Washington, D. C.

DEAR MR. GWYNNE: It has come to my attention both through complaints from the public and from my own observations that there is a great deal of objectionable and possible fraudulent advertising being broadcast over radio stations in the Washington area.

I wonder if you would advise me if the Federal Trade Commission maintains any continuing check, monitoring service or otherwise, on the contents of such radio advertising. Would you please advise me for use of the Senate Interstate and Foreign Commerce Committee in our pending investigation in radio and television, what if any procedures are followed by the Federal Trade Commission in guarding the public interest in connection with such radio advertising.

Very truly yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL TRADE COMMISSION,
OFFICE OF THE CHAIRMAN,
Washington, D. C., February 9, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In reply to your inquiry of February 3, 1956, the Commission requests and receives the written continuities of all radio and television advertising originating from individual stations, for one selected 24-hour period approximately every 3 months. This applies to all commercial advertising except that over which the Commission has no jurisdiction. Enclosed herewith is a specimen of the form upon which such requests are regularly made.

However, we do not put the individual stations to the burden of transcribing their film or advertising or advertising broadcasts from electrical reportings. Instead, we request and receive a list of the sponsors, products so advertised, and the advertising agencies from which they originate. If it appears that some sponsor, product, or agency is involved with which the Commission is already concerned, a request is made for transcripts.

The national networks, without request, voluntarily forward to us written transcripts of all advertising continuities broadcast over national hookups, for a selected 8-day period, once each month.

All continuities submitted are examined by attorneys and any appearing to warrant further action are referred directly to our Bureau of Investigation for consideration, except where such advertising appears to violate trade practice rules, stipulations, or cease and desist orders, in which event it is referred directly to the division having the responsibility for the administration of the respective matter.

In addition to the foregoing, any and all complaints of false and misleading advertising received from the public, or from competitors of advertisers, are referred to our Bureau of Investigation. When an investigation is instituted in any case we do not rely entirely on the submittals by the radio and television station but obtain all the relevant advertising material either from the advertiser itself or other sources.

No attempt is made otherwise than herein described to monitor local stations in the metropolitan area, and for that reason advertising that is "ad libbed" would not come to our attention.

For the period from September 1, 1955, to and including January 20, 1956, in this fashion there were examined 3,676 radio and television continuities.

Our records are not kept so that corrective actions based on radio and television advertising in this area obtained in the foregoing manner can readily be segregated from the corrective actions taken on such advertising coming to our attention by any other means. However, the following are illustrative of actions taken involving radio and television advertising in this area:

Docket No. 6131, advertiser, Lacy's, Inc., et al.; complaint issued October 27, 1953, O. C. D. issued, February 26, 1954. Monetary savings on a "family food plan" in connection with sale of home freezers, and bait advertising for television sets and other appliances.

Docket No. 6140, advertiser, George's Radio & Television Co., Inc., et al.; complaint issued, November 4, 1953, O. C. D. issued, December 28, 1953. Substantially the same as Lacy's.

Docket No. 6181, Clean-Rite Vacuum Stores, Inc., et al.; complaint issued February 18, 1954, O. C. D. issued, June 4, 1954. Bait advertising of vacuum cleaners.

Docket 6209, Bond Vacuum Stores, Inc., et al.; complaint issued May 27, 1954, O. C. D. issued October 22, 1954. Bait advertising and other misrepresentations of vacuum cleaners and sewing machines.

Docket 6295, Sew-Ezy Machine Co., et al.; complaint issued February 8, 1955, O. C. D. issued May 31, 1955. Bait Advertising and other misrepresentations of sewing machines and vacuum cleaners.

Docket 6404, Mayflower Television Co.; complaint issued August 24, 1955, O. C. D. issued December 1, 1955. Misrepresentations of service and other charges for repairing television sets.

There are enclosed herewith copies of the complaints, findings, decisions of the Commission, and orders in the above entitled matters. There have been many others, of which these are only representative.

I trust that this will be the information you require, but if additional information is desired, please advise.

Very truly yours,

JOHN W. GWYNNE, *Chairman.*

FEDERAL TRADE COMMISSION

WASHINGTON

ADVERTISING SURVEY IN RE COMMERCIAL BROADCASTS

GENTLEMEN: The Federal Trade Commission, in connection with its review of current radio and television advertising, requests that you forward to the Advertising Survey, Federal Trade Commission, Washington 25, D. C., typed script representing the commercial text of all advertising originating in your studios and disseminated through your facilities on the following date(s):

Commercial continuities submitted should include those announcements, statements, and testimonials tending to or intended to create a demand for, or to induce the purchase of, any article of commerce, whether such commercial script opens, is interspersed with, or concludes a program. If commercial continuities are in a foreign language you are requested to submit an English translation of the continuities.

Date of dissemination and station call letters should be printed, stamped, or written, preferably at the bottom of each sheet of commercial continuity. Legible carbon copies of commercial continuities are acceptable. The advertiser's name and address should be indicated where not part of the script. Electrical transcriptions or films need not be transcripted. It will be sufficient to list the sponsor, the product advertised, and the agency from which it is received.

Noncommercial script (i. e., without any commercial objective) covering lectures and similar programs, which are purely educational, religious, civic, or political need not be submitted. Further, you may omit forwarding commercial advertising continuities of local banking institutions, building and loan associations, transportation companies, including local taxi services, local hotels, restaurants, theaters, nightclubs, and mortuary establishments.

Please mail return promptly, in packages weighing not more than 4 pounds, each, and use the enclosed Government franks for mailing. Please prepare the enclosed transmittal form FTC-R-6 covering individual station material, to distinguish your network material sent by originating key stations.

Very truly yours,

LEO J. KRIZ,
Attorney in Charge, Advertising Surveys.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF GEORGE'S RADIO AND TELEVISION COMPANY, INC. A CORPORATION, AND GEORGE WASSERMAN, LEOPOLD FREUDBERG, SOLOMON GROSSBERG, AND PHILLIP KELLER, INDIVIDUALLY

Docket No. 6140

COMPLAINT

Pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said Act, the Federal Trade Commission, having reason to believe that George's Radio and Television Company, Inc., and George Wasserman, Leopold Freudberg, Solomon Grossberg, and Phillip Keller, hereinafter referred to as respondents, have violated the provisions of said Act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest, hereby issues its complaint, stating its charges in that respect as follows:

PARAGRAPH 1. George's Radio and Television Company, Inc. is a corporation, organized, existing, and doing business under and by virtue of the laws of the District of Columbia, with its principal office and place of business located at 816 F Street, NW., Washington, D. C. George Wasserman is President and Treasurer, Leopold Freudberg is Vice President and Chairman of the Board of Directors, Solomon Grossberg is Secretary, and Phillip Keller is General Manager of the corporate respondent, George's Radio and Television Company, Inc. These individuals formulate, control, and direct the affairs and policies of the corporate respondent. Said individual respondents have their offices at the same place as corporate respondent.

PAR. 2. Respondents are now, and for more than one year last past have been, engaged in the sale of electrical appliances, including home freezers and television sets. Respondents have made arrangements whereby purchasers of said home freezers are enrolled in a food-distributing organization operated by a concern unaffiliated with respondents, which entitles members to purchase certain food items in bulk quantities.

PAR. 3. In the course and conduct of their business, respondents cause their home freezers, television sets, and other electrical appliances, when sold, to be transported to the purchasers thereof at their places of residence in the District of Columbia, and in the States adjacent thereto, and at all time material herein have maintained a course of trade in said home freezers, television sets, and other electrical appliances in commerce in the District of Columbia and adjacent States. Respondents maintain, and at all times mentioned herein have maintained, a course of trade in commerce, as "commerce" is defined in the Federal Trade Commission Act.

PAR. 4. In the course and conduct of their business, respondents, through the use of radio broadcasts and other means of advertising, have made certain statements and representations of which the following are typical:

Continuity broadcast over Station WARL, Arlington, Virginia, on June 7, 1952:

". . . Friends, if you've been doing without—if you've been denying yourself big necessities and little luxuries because you just can't see where the money's coming from: this revolutionary plan may alter your whole life. Now George's make it possible for you to buy food the way your grocer does—buy it packaged the way you want—meats cut the way you want—buy it at tremendous savings—buy it at George's Food Chest Plan Way. Call George's at RE 7420 now for all the details at no obligation. Find out what the Food Chest Way can mean to your standard of living now that prices are going up again in foods. . . ."

"A plan that will save you hundreds of dollars and still let your family eat better than before. Has the cost of living got you down? Are you constantly worried about how you can make your budget stretch? Friends, savings on your food bill can be the difference between poverty and plenty. George's has gotten together with nationally famous food distributors and now you can buy direct with fantastic savings. . . . Call RE 7420 now to see how you can buy as your grocer buys, direct, and save hundreds of dollars. . . ."

". . . If you've ever been worried about money—if you're seriously concerned about how your salary can stretch—or how your husband's salary can meet ever-increasing expenses—a simple phone call can open up a whole new way of running your household."

Continuity broadcast over Station WTTG, Washington, D. C., June 7, 1952:

". . . I'm going to tell you how you can eat better than you've ever eaten, and spend less. How you can put money in the bank, not for one month, not for one year, but for the rest of your life! George's . . . Washington's great appliance dealer and the Nation's famous food distributors have gotten together. Famous brands like Snow Crop, Armour, Swift, dozens more. They've cooked up a fantastic plan to let you buy direct with incredible savings. You actually buy as your grocer himself buys, with foods packaged and meat cut the way you specify. You buy direct, and save hundreds of dollars, with no money down, for your food, and convenient installments. . . . This revolutionary new way to eat better and actually save money is as close as your telephone . . . call George's and ask about the fantastic Food Chest Food Plan, to save you hundreds of dollars . . . it's money in the bank, tremendous lifetime savings. . . ."

Continuity broadcast over Station WARL, Arlington, Virginia, on June 12, 1952:

"Republic 7420—that's the number to call now for the fantastic George's Food Plan—the food plan that's sweeping the whole country—the food chest you've heard so many incredible things about. Yes, it's an amazing new idea—and here's the lowdown on how you can save hundreds of dollars . . . because now with a Food Chest not only can you buy food in season, not only can you buy it in quantity, but you can actually buy it with a big quantity discount! Yes, because of a special new arrangement with the big national distributors, you get the benefit of buying with a discount that saves you an incredible percentage of your whole food budget, and you pay no money down for your food. Imagine being able to buy meats, fish, fruits, and vegetables, at actual discounts that will mean fantastic savings for you and your family. . . ."

Continuity broadcast over Station WTOP, Washington, D. C., on June 13, 1952:

". . . Now for years people have been buying food chests and saving money every year by having the facilities to buy in quantity. When beef is low they buy 100 pounds of beef. In the summer they buy strawberries and eat them all year around. And now something sensational has been added, because now with a Food Chest not only can you buy food in season, not only can you buy it in quantity, but you can actually buy it with a big quantity discount. . . ."

PAR. 5. Through the use of the foregoing statements and representations and others of the same import, but not specifically set out herein, respondents represented, directly or by implication:

(1) That participants in said plan can buy food at wholesale prices or from a wholesaler.

(2) That participants in said food plan can effect overall monetary savings through the general use of frozen foods in a place of corresponding foods in other forms.

(3) That substantial overall reductions in food costs will be effected through participation in said food plan.

(4) That net monetary savings can be effected by all who purchase and use respondent's home freezers.

PAR. 6. The aforesaid statement and representations are false, misleading and deceptive. In truth and in fact:

(1) The food distributing organization from which participants in said plan purchase is not a wholesaler and the prices at which participants purchase are not wholesale prices.

(2) In the main, frozen foods, purchased through said plan, will cost more per edible pound than corresponding foods in other available forms normally consumed by the public. No overall saving in food costs will be accomplished

by the general substitution of frozen foods, available under said plan, for corresponding foods in other forms.

(3) In the main, food plan prices are considerably in excess of usual retail prices of corresponding foods in other forms, and are close to, and in some instances identical with, usual retail prices of similar frozen foods. As a consequence, substantial overall reductions in food costs will not be effected through participation in said food plan.

(4) In a substantial number of instances, the purchase and use of a home freezer will not result in net monetary savings. In such instances, the increase in expenses directly attributable to the purchase and use of a home freezer will eliminate savings, if any, which may be effected through the purchase of food in bulk quantities. Among the expenses which will be thus incurred are the costs of financing where credit is used, and the costs of operation, maintenance and depreciation of the home freezer.

PAR. 7. In the course and conduct of their business, respondents, through the use of radio broadcasts, newspaper advertisements, and other means of advertising, have made certain statements with respect to their television sets. Among the typical, but not all-inclusive, of said statements, are the following:

In the Washington, D. C. "Evening Star," issue of April 11, 1952:

"Brandnew $309.95 Majestic 20 Inch Console Television
"$188
"Fully Guaranteed—On Sale At All Stores."

"Brandnew $279.95 Majestic 20 Inch Table Model Television
"$134
"Fully Guaranteed—On Sale At All Stores."

"New 1952 $249.94 Mirrortone 20 Inch TV
"$99
"Fully Guaranteed—On Sale At All Stores."

"Brandnew $299.95 CBS Columbia 20-Inch TV
"$149
"In Full Supply At All Stores."

In the Washington, D. C., Evening Star issue of April 18, 1952:

". . . We may be stepping on toes but for once and for all let's get the record straight. George's has served the Washington area for over a quarter century. We've grown and prospered with your patronage and we did it by honest, straightforward selling. The record proves it! Over a million satisfied customers. Satisfied with Bargains NOT BAIT! When George's advertises such specials as appear on this page you can be sure of quality and value. A quarter-century of successful business proves it!"

"Brandnew 1952 Mirrortone TV
"$99.95
Regular $249.95"

In the Washington, D. C., Times-Herald issue of April 25, 1952:

"50 Percent OFF!
"Brandnew Famous Make Television"

"Brandnew $459.95 Emerson 19-inch console
"$229.98
"This Merchandise On Sale At All Stores"

"Brandnew $525 Admiral 20-inch Console
"$262.50
"This Merchandise On Sale At All Stores"

"Brandnew $369.95 Philco 17-inch Console
"$184.98
"This Merchandise On Sale At All Stores"

"Brandnew $299.95 Motorola 20-inch Ensemble
"$149.98"

"Brandnew $299.95 CBS–Columbia 20-inch Table Model
$149.98
"This Merchandise On Sale At All Stores"

"Brandnew $279.95 Hallicrafters 20-inch Table Model
"$139.98 (base extra)"

"Brandnew $249.95 1952 Mirrortone 20-inch Table Model
"$99
"This Merchandise On Sale At All Stores"

"Brandnew $299.95 1952 Mirrortone 20-inch TV Console
"$129
"This Merchandise On Sale At All Stores"

Continuity Broadcast by Station WRC, Washington, D. C., on June 29, 1952.

". . . George's makes a special offer of 20-inch table-model television for just 99 dollars plus tax and warranty. A fabulous price and a great value you can't afford to miss. A 99-dollar price tag on any television is going some—but when it's a 20-inch television from George's it's the buy of a lifetime. George's invites you to look this set over at no cost, no obligation. Right now special operators are waiting to take your calls at RE 7420. Well rush a 20-inch television to your home this very afternoon for a free look. . . ."

PAR. 8. Through the use of the foregoing statements and others of the same import, but not specifically set out herein, respondents represented, directly or by implication:

(1) That respondents' television sets which are described as brandnew, are sets of the current year's model.

(2) That the higher price for "Mirrortone" sets shown in said advertisements, represents the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

(3) That the price at which said "Mirrortone" sets are offered is lower by 50 percent than the usual price at which they were customarily offered for sale and sold by respondents in the recent regular course of their business.

(4) That respondents were making bona fide offers to sell "Mirrortone" television sets for $99 and various other prices stated from time to time.

PAR. 9. The aforesaid statements and representations are false, misleading and deceptive. In truth and in fact:

(1) The television sets described as brandnew were not current models at the time the said advertisements were published.

(2) The higher price for "Mirrortone" sets shown in said advertisements does not represent, but on the contrary greatly exceeds the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

(3) The price at which said "Mirrortone" sets are offered is not 50 percent less than the usual price at which said sets were customarily offered for sale, and sold by respondents in the recent regular course of their business.

(4) Respondents' offer to sell "Mirrortone" television sets at the various advertised prices were not genuine or bona fide offers to sell such sets. On the contrary, said offers were made for the purpose of inducing persons to visit respondents' stores or to obtain leads as to persons interested in the purchase of television sets in order that they could be solicited in their homes by respondent's salesmen.

Respondents and their salesmen, at their places of business and in calling upon persons in their homes, in many instances displayed great reluctance or refused to demonstrate or gave an improper demonstration of said television sets, or disparaged the design, workmanship and performance of said sets and attempted to demonstrate and sell different and more expensive sets than those advertised.

PAR. 10. The use by respondents of the said false and misleading statements and representations has the capacity and tendency to mislead and deceive a substantial portion of the purchasing public into the erroneous and mistaken belief that the statements and representations contained therein are true and to induce the purchase of substantial quantities of respondents' freezers and television sets by reason of such erroneous and mistaken belief.

PAR. 11. The aforesaid acts and practices of respondents, as herein alleged, are all to the prejudice and injury of the public and constitute unfair and deceptive acts and practices in commerce within the intent and meaning of the Federal Trade Commission Act.

WHEREFORE, THE PREMISES CONSIDERED, the Federal Trade Commission on this 4th day of November A. D. 1953, issues its complaint against said respondents.

NOTICE

Notice is hereby given you, George's Radio and Television Company, Inc., a corporation, and George Wasserman, Leopold Freudberg, Solomon Grossberg, and Phillip Keller, individually, respondents herein, that the 13th day of January, A. D., 1954, at 10 o'clock is hereby fixed as the time and room 332, Federal Trade Commission Building, Washington, as the place when and where a hearing will be had before William L. Pack, a hearing examiner of the Federal Trade Commission, on the charges set forth in this complaint, at which time and place you will have the right under said act to appear and show cause why an order should not be entered requiring you to cease and desist from the violations of law charged in this complaint.

You are notified that the opportunity is afforded you to file with the Commission an answer to this complaint on or before the twentieth (20th) day after serivce of it upon you. Such answer shall contain a concise statement of the facts which constitute the ground for defense and shall specifically admit or deny each of the facts alleged in the complaint unless you are without knowledge, in which case you shall so state. Failure to file an answer to or plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

If respondents desire to waive hearing on the allegations of fact set forth in the complaint and not to contest the facts, the answer may consist of a statement that respondents admit all the material allegations of fact charged in the complaint to be true. Such answer will constitute a waiver of any hearing as to the facts alleged in the complaint and findings as to the facts and conclusions based upon such answer shall be made and order entered disposing of the matter without any intervening procedure. The respondents may, however, reserve in such answer the right to submit proposed findings and conclusions of fact or of law under Rule XXI, and the right to appeal under Rule XXIII.

Failure to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize the Commission and Hearing Examiner William L. Pack, without further notice, to find the facts to be as alleged herein and to issue the following order in this proceeding:

It is ordered, That respondents, George's Radio and Television Company, Inc., a corporation, and its officers and George Wasserman, Leopold Freudberg, Solomon Grossberg, and Phillip Keller, individually, and respondents' representatives, agents, and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of home freezers and television sets, in commerce, as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from representing, directly or by implication:

1. That participants in a food purchasing plan can buy food at wholesale prices or from a wholesaler, contrary to the fact.

2. That overall monetary savings can be effected through the general use of frozen foods in place of corresponding foods in other forms.

3. That substantial overall reductions in food costs will be effected through participation in a food purchasing plan.

4. That net monetary savings, however expressed, can be effected through the use of freezers purchased from respondents unless the costs of operation, maintenance and depreciation and, in the event that the freezer is purchased on credit, the costs of such credit, are taken into account.

5. That television sets which are not of the current year's model are new, through the use of such terms as "Brand New" or any other terms which describe said sets as new, unless the year in which said sets were current models is disclosed.

6. As the usual price of television sets, any price or value which is in excess of the price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

7. That the price at which respondents' television sets are offered is lower by 50 percent or any other designated percentage, than the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

8. That television sets are being offered for sale when such offer is not a genuine and bonafide offer to sell the sets so offered.

The inclusion of such order to cease and desist in this complaint will be without effect in the event you show cause, on or before the 13th day of January, A. D., 1954, why such order should not issue.

In witness whereof, the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary, and its official seal to be hereto affixed, at Washington, D. C., this 4th day of November, A. D., 1953.

By the Commission:

Issued December 28, 1953.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

(Commissioners: Edward F. Howrey, Chairman, Lowell B. Mason, James M. Mead, Albert A. Carretta, John W. Gwynne)

IN THE MATTER OF GEORGE'S RADIO AND TELEVISION COMPANY, INC., A CORPORATION, AND GEORGE WASSERMAN, LEOPOLD FREUDBERG, SOLOMON GROSSBERG, AND PHILLIPS KELLER, INDIVIDUALLY

Docket No. 6140

CONSENT SETTLEMENT

Pursuant to the provisions of the Federal Trade Commission Act, the Federal Trade Commission on November 4, 1953, issued its complaint, which was duly served on the respondents named in the caption hereof, charging them with the use of unfair and deceptive acts and practices in violation of the provisions of said Act.

The respondents, desiring that this proceeding be disposed of by the consent settlement procedure provided in Rule V of the Commission's Rules of Practice, solely for the purpose of this proceeding, any review thereof, and the enforcement of the order consented to, and conditioned upon the Commission's acceptance of the consent settlement hereinafter set forth and in lieu of answer to said complaint, hereby:

1. Admit all the jurisdictional allegations set forth in the complaint.

2. Consent that the Commission may enter the matters hereinafter set forth as its findings as to the facts, conclusion, and order to cease and desist. It is understood that the respondents in consenting to the Commission's entry of said findings as the facts, conclusion, and order to cease and desist, specifically refrain from admitting or denying that they have engaged in any of the acts or practices stated therein to be in violation of law.

3. Agree that the consent settlement may be set aside in whole or in part under the conditions and in the manner provided in paragraph (f) of Rule V of the Commission's Rules of Practice.

The admitted jurisdictional facts, the statement of the acts and practices which the Commission had reason to believe were unlawful, the conclusion based thereon, and the order to cease and desist, all of which the respondents consent may be entered herein in final disposition of this proceedting, are as follows:

PARAGRAPH 1. George's Radio and Television Company, Inc., is a corporation, organized, existing, and doing business under and by virtue of the laws of the State of Maryland, with its principal office and place of business located at 816 F Street, N. W. Washington, D. C.

George Wasserman is president and treasurer, and Phillip Keller is general manager of the corporate respondent George's Radio and Television Co., Inc. These individual respondents formulated, controlled and directed the affairs and policies of the corporate respondent at the time the acts and practices hereinafter set for the transpired.

Said individual respondents have their offices at the same place as corporate respondent.

Individual respondents George Wasserman and Phillip Keller have executed affidavits dated November 24, 1953, which state that individual respondents Leopold Freudberg and Solomon Grossberg are officers for convenience purposes only, and during their tenure of office as vice president and secretary, respectively, have had no voice whatever in the formulation, control, or direction of the affairs, policies, or advertising practices of respondent George's Radio and Television Co., Inc.

By reason of the matters set forth in said affidavits, the Commission finds that the complaint herein, insofar as it relates to the respondents Leopold Freudberg and Solomon Grossberg as individuals, should be dismissed, and accordingly, the term respondents, as hereinafter used, shall refer to respondents George's Radio and Television Co., Inc., and George Wasserman and Phillip Keller, individuals.

PAR. 2. Respondents are now, and for more than one year last past have been, engaged in the sale of electrical appliances, including home freezers and television sets. Respondents have made arrangements whereby purchasers of said home freezers are enrolled in a food distributing organization operated by a concern unaffiliated with respondents, which entitled members to purchase certain food items in bulk quantities.

PAR. 3. In the course and conduct of their business, respondents caused their home freezers, television sets, and other electrical appliances, when sold, to be transported to the purchasers thereof at their places of residence in the District of Columbia and in the States adjacent thereto, and at all times material herein have maintained a course of trade in said home freezers, television sets and other electrical appliances in commerce in the District of Columbia and adjacent States. Respondents maintain, and at all times mentioned herein have maintained, a course of trade in commerce as "commerce" is defined in the Federal Trade Commission Act.

PAR. 4. In the course and conduct of their business, respondents, through the use of radio broadcasts and other means of advertising, have made certain statements and representations of which the following are typical:

Continuity broadcast over Station WARL, Arlington, Virginia, on June 7, 1952.

". . . Friends, if you've been doing without—if you've been denying yourself big necessities and little luxuries because you just can't see where the money's coming from: this revolutionary plan may alter your whole life. Now George's makes it possible for you to buy food the way your grocer does—buy it packaged the way you want—meats cut the way you want—buy it at tremendous savings—buy it at George's Food Chest Plan Way. Call George's at RE 7420 now for all the details at no obligation. Find out what the Food Chest way can mean to your standard of living now that prices are going up again in foods . . ."

"A plan the will save you hundreds of dollars and still let your family eat better than before. Has the cost of living got you down? Are you constantly worried about how you can make your budget stretch? Friends, savings on your food bill can be the difference between poverty and plenty. George's has gotten together with nationally famous food distributors and now you can buy direct with fantastic savings . . . call RE 7420 now to see how you can buy as your grocer buys, direct, and save hundreds of dollars . . ."

". . . If you've ever been worried about money—if you're seriously concerned about how your salary can stretch—or how your husband's salary can meet ever-increasing expenses—a simple phone call can open up a whole new way of running your household."

Continuity broadcast over Station WTTG, Washington, D. C., June 7, 1952:

". . . I'm going to tell you how you can eat better than you've ever eaten, and spend less. How you can put money in the bank, not for one month, not for one year, but for the rest of your life! George's . . . Washington's great appliance dealer and the Nation's famous food distributors have gotten together. Famous brands like Snow Crop, Armour, Swift, dozens more. They've cooked up a fantastic plan to let you buy direct with incredible savings. You actually buy as your grocer himself buys, with foods packaged and meat cut the way you specify. You buy direct, and save hundreds of dollars with no money down, for your food, and convenient installments . . . This revolutionary new way to eat better and actually save money is as close as your telephone . . . Call George's and ask about the fantastic Food Chest Food Plan, to save you hundreds of dollars . . . it's money in the bank, tremendous lifetime savings . . ."

Continuity broadcast over Station WARL, Arlington, Virginia, on June 12, 1954:

"Republic 7420—that's the number to call now for the fantastic George's Food Plan—the food plan that's sweeping the whole country—the food chest you've heard so many incredible things about. Yes, it an amazing new idea—and here's the lowdown on how you can save hundreds of dollars—because now with a Food Chest now only can you buy food in season, not only can you buy it in quantity, but you can actually buy it with a big quality discount! Yes, because of a special new arrangement with the big national distributors you get the benefit of buying with a discount that saves you an incredible percentage of your whole food budget and you pay no money down for your food. Imagine being able to buy meats, fish, fruits, and vegetables, at actual discount that will mean fantastic savings for you and your family . . ."

Continuity broadcast over Station WTOP Washington, D. C., on June 13, 1952:

"Now for years people have been buying food chests and saving money every year by having the facilities to buy in quantity. When beef is low they buy 100 pounds of beef. In the summer they buy strawberries and eat them all year around. And now something sensational has been added, because now with a Food Chest not only can you buy food in season, not only can you buy it in quantity, but you can actually buy it with a big quantity discount . . ."

PAR. 5. Through the use of the foregoing statements and representations and others of the same import, but not specifically set out herein, respondents represented, directly or by implication:

1. That participants in said plan can buy food at wholesale prices or from a wholesaler.

2. That participants in said food plan can effect overall monetary savings through the general use of frozen foods in place of corresponding foods in other forms.

3. That substantial overall reductions in food costs will be effected through participation in said food plan.

4. That net monetary savings can be effected by all who purchase and use respondents' home freezers.

PAR. 6. The aforesaid statements and representations are false, misleading and deceptive. In truth and in fact:

1. The food distributing organization from which participants in said plan purchase is not a wholesaler and the prices at which participants purchase are not wholesale prices.

2. In the main, frozen foods, purchased through said plan, will cost more per edible pound that corresponding foods in other available forms normally consumed by the public. No overall savings in food costs will be accomplished by the general substitution of frozen foods, available under said plan, for corresponding foods in other forms.

3. In the main, food plan prices are considerably in excess of usual retail prices of corresponding foods in other forms, and are close to, and in some instances identical with, usual retail prices of similar frozen foods. As a consequence, substantial overall reductions in food costs will not be effected through participation in said food plan.

4. In a substantial number of instances, the purchase and use of a home freezer will not result in net monetary savings. In such instances the increase in expenses directly attributable to the purchase and use of a home freezer will eliminate savings, if any, which may be affected through the purchase of food in bulk quantities. Among the expenses which will be thus incurred are the costs of financing where credit is used, and the costs of operation, maintenance, and depreciation of the home freezer.

PAR. 7. In the course and conduct of their business, respondents, through the use of radio broadcasts, newspaper advertisements, and other means of advertising, have made certain statements with respect to their television sets. Among the typical, not not all inclusive, of said statements, are the following:

In the Washington (D. C.) Evening Star, issue of April 11, 1952:

"Brandnew $309.95 Majestic 20-inch Console Television
"$188
"Fully Guaranteed—On Sale At All Stores."

"Brandnew $279 Majestic 20-inch Table Model Television
"$134
"Fully Guaranteed—On Sale at All Stores"

"New 1952 $249.95 Mirrortone 20-inch TV
"$99
"In Full Supply At All Stores"

In the Washington (D. C.) Evening Star, issue of April 18, 1952:

". . . We may be stepping on toes but for once and for all let's get the record straight. George's has served the Washington area for over a quarter century. We've grown and prospered with your patronage and we did it by honest, straightforward selling. The record proves it! Over a million satisfied customers, Satisfied with Bargains, NOT BAIT! When George's advertises such specials as appear on this page you can be sure of quality and value. A quarter century of successful business proves it!"

"Brandnew 1952 Mirrortone TV
"$99.95
"Reg. $249.95

In the Washington (D. C.) Times Herald, issue of April 25, 1952:

"50 percent OFF!
"Brandnew Famous Make Television"
"Brandnew $459.95 Emerson 19-inch Console
"$229.98
"This Merchandise On Sale at All Stores."

"Brandnew $525 Admiral 20-inch Console
"$262.50
"This Merchandise On Sale at All Stores."

"Brandnew $369.95 Philco 17-inch Console
"$184.98
"This Merchandise On Sale at All Stores."

"Brandnew $299.95 Motorola 20-inch Ensemble
"$149.98
"This Merchandise On Sale at All Stores."

"Brandnew $279.95 Hallicrafters 20-inch Table Model
"$139.98 (base extra)"

"Brandnew $249.95 1952 Mirrortone 20-inch Table Model
"$99
"This Merchandise On Sale at All Stores."

"Brandnew $299.95 1952 Mirrortone 20-inch TV Console
"$129
"This Merchandise On Sale at All Stores."

Continuity Broadcast by Station WRC, Washington, D. C., on June 29, 1952.

". . . George's makes a special offer of 20-inch table model television for just 99 dollars plus tax and warranty. A fabulous price and a great value you can't afford to miss. A 99 dollar price tag on any television is going some—but when its a 20-inch television from George's its the buy of a lifetime. George's invites you to look this set over at no cost, no obligation. Right now special operators are waiting to take your calls at RE 7420. We'll rush a 20 inch television to your home this very afternoon for a free look . . ."

PAR. 8. Through the use of the foregoing statements and others of the same import, but not specifically set out herein, respondents represented, directly or by implication:

1. That their television sets which are described as brand new, are sets of the current year's model.

2. That the higher price for "mirrortone" sets shown in said advertisements, represents the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

3. That the price at which said "mirrortone" sets are offered is lower by 50 percent than the usual price at which they were customarily offered by sale and sold by respondents in the recent regular course of their business.

4. That respondents were making bona fide offers to sell "Mirrortone" television sets for $99 and various other prices stated from time to time.

PAR. 9. The aforesaid statements and representations are false, misleading and deceptive. In truth and in fact:

1. Many of the television sets described as brand new were not current models at the time the said advertisements were published.

2. The higher price for "mirrortone" sets shown in said advertisements does not represent, but on the contrary greatly exceeds, the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

3. The price at which said "Mirrortone" sets are offered is not 50 percent less than the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.

4. Respondents' offers to sell "Mirrortone" television sets at the various advertised prices were not genuine or bona fide offers to sell such sets. On the contrary, said offers were made for the purposes of inducing persons to visit respondents' stores or to obtain leads as to persons interested in the purchase of television sets in order that they could be solicited in their homes by respondents' salesmen.

Respondents and their salesmen, at their places of business and in calling upon persons at their homes, in many instances displayed great reluctance or refused to demonstrate or gave an improper demonstration of said television sets, or disparaged the design, workmanship and performance of said sets and attempted to demonstrate and sell different and more expensive sets than those advertised.

PAR. 10. The use by respondents of the said false and misleading statements and representations, had the capacity and tendency to mislead and deceive a substantial portion of the purchasing public into the erroneous and mistaken belief that the statements and representations contained therein were true and to induce the purchase of substantial quantities of respondents' freezers and television sets by reasons of such erroneous and mistaken belief.

CONCLUSION

The aforesaid acts and practices of respondents, George's Radio and Television Co., Inc., and George Wasserman and Phillip Keller, individually, as herein found, are all to the prejudice and injury of the public and constitute unfair and deceptive acts and practices in commerce within the intent and meaning of the Federal Trade Commission Act.

ORDER TO CEASE AND DESIST

It is ordered, That respondents, George's Radio and Television Co., Inc., a corporation, and its officers and George Wasserman and Phillip Keller, individually, and respondents' representatives, agents and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of home freezers and television sets in commerce, as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from representing directly or by implication:

1. That participants in a food-purchasing plan can buy food at wholesale prices or from a wholesaler, contrary to the fact.
2. That overall monetary savings can be effected through the general use of frozen foods in place of corresponding foods in other forms.
3. That substantial overall reductions in food costs will be effected through participation in a food purchasing plan.
4. That net monetary savings, however expressed, can be effected through the use of freezers purchased from respondents, unless the costs of operation, maintenance and depreciation and, in the event that the freezer is purchased on credit, the costs of such credit, are taken into account.
5. That television sets which are not of the current year's model are new through the use of such terms as "Brand-New" or any other terms which describe said sets as new, unless the year in which said sets were current models is disclosed.
6. As the usual price of television sets, any price or value which is in excess of the price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.
7. That the price at which respondents' television sets are offered is lower by 50 percent or any other designated percentage, than the usual price at which said sets were customarily offered for sale and sold by respondents in the recent regular course of their business.
8. That television sets are being offered for sale when such offer is not a genuine and bona fide offer to sell the sets so offered.

It is further ordered, That respondents, George's Radio and Television Co., Inc., and George Wasserman and Phillip Keller, individually, shall, within 60 days after service upon them of this order, file with the Commission a report in writing, setting forth in detail the manner and form in which they have complied therewith.

It is further ordered, That the complaint be, and it hereby is, dismissed as to the respondents Leopold Freudberg and Solomon Grossberg, individually.

GEORGE'S RADIO AND TELEVISION COMPANY, INC.,
By GEORGE WASSERMAN,
President and Treasurer.
(Sgd.) GEORGE WASSERMAN, *Individually.*
(Sgd.) PHILLIP P. KELLER, *Individually.*

Date: December 4, 1953.

The foregoing consent settlement is hereby accepted by the Federal Trade Commission and ordered entered of record on this the 22d day of December 1953.

By direction of the Commission:

[SEAL] ALEX. AKERMAN, Jr., *Secretary.*

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF BOND VACUUM STORES, INC., A CORPORATION, AND ALBERT HYATT, PHILIP MORRIS, HAROLD STENGEL AND JULIUS LANGSNER, INDIVIDUALLY AND AS OFFICERS OF SAID CORPORATION

Docket No. 6209

COMPLAINT

Pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said Act, the Federal Trade Commission having reason to believe that Bond Vacuum Stores, Inc., a Delaware Corporation, and Albert Hyatt, Philip Morris, Harold Stengel and Julius Langsner, individually and as officers of said corporation, hereinafter referred to as respondents, have violated the provisions of said Act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest, hereby issues its complaint, stating its charges in that respect as follows:

PARAGRAPH 1. Respondent Bond Vacuum Stores, Inc., is a corporation organized, existing and doing business under and by virtue of the laws of the state of Delaware, with its office and principal place of business located at 610 Ninth Street, Northwest, Washington, D. C. Respondents Albert Hyatt, Philip Morris, Harold Stengel and Julius Langsner are individuals and president, vice-president-treasurer, vice president and secretary, respectively, of the corporate respondent. These individual respondents formulate, control and direct the policies, acts and practices of the corporate respondent. Their address is the same as that of the corporate respondent.

PAR. 2. The respondents are now, and for several years last past have been, engaged in the sale and distribution, among other things, of vacuum cleaners and sewing machines. In the course and conduct of their said business respondents have caused their vacuum cleaners and sewing machines, when sold, to be transported from their place of business at the aforesaid address to purchase thereof located in the District of Columbia and in various States of the United States.

They maintain, and at all times mentioned herein have maintained, a course of trade in said products in commerce in the District of Columbia and between the District of Columbia and various States of the United States. Their volume of trade in said commerce has been and is substantial.

PAR. 3. At all times mentioned herein respondents have been, and are now, in direct and substantial competition with other corporations, firms and individuals engaged in the sale and distribution of vacuum cleaners and sewing machines in commerce.

PAR. 4. In the course and conduct of their business, as aforesaid, and for the purpose of inducing the purchase of their vacuum cleaners and sewing machines, the respondents have engaged in extensive advertising in newspapers and on television and radio. Among and typical of the statements and representations made in such advertising relating to their said products are the following:

"ACT NOW! QUANTITIES LIMITED

BOND RECONDITIONED

ELECTROLUX

COMPLETE WITH 8 ATTACHMENTS

(Picture of vacuum cleaner)

RECONDITIONED BY BOND EXPERTS WITH BOND PARTS

1-Year Guarantee Parts and Labor

$10.95

Big Trade-In Allowance on Your Old Sewing Machine

BOND

VACUUM STORES, INC.

STORES IN PRINCIPAL CITIES

PAR. 5. By and through the use of the aforesaid statements and representations and others of similar import, but not specifically set out herein, respondents represented, directly or by implication:

1. That they were making bona fide offers to sell reconditioned Electrolux vacuum cleaners and reconditioned Singer sewing machines at the low prices specified in the advertising and that the said products would do a satisfactory job of cleaning and sewing, respectively;
2. That they operate stores in principal cities;
3. That in connection with the sale of vacuum cleaners and sewing machines they will give big trade-in allowances on customers' old cleaners and sewing machines;
4. That they furnish a five-year guarantee on their reconditioned Singer sewing machines.

PAR. 6. The aforesaid statements and representations were false, deceptive and misleading. In truth and in fact:

1. The said cleaners and sewing machines would not do a satisfactory job of cleaning and sewing, respectively, and the said offers were not genuine or bona fide offers to sell the cleaners and sewing machines advertised, but were made for the purpose of obtaining leads and information as to persons interested in the purchase of vacuum cleaners and sewing machines.

After obtaining such leads, through responses to said advertisements, respondents' salesmen called upon the persons so responding at their homes or waited upon them at respondents' place of business and in many instances demonstrated such cleaners and sewing machines, well knowing that their performance would be unsatisfactory; made no effort to sell the advertised cleaners and sewing machines, but in many instances belittled and disparaged such cleaners and sewing machines and attempted to, and frequently did, sell different and much more expensive vacuum cleaners and sewing machines to such persons;

2. Respondents do not operate stores in principal cities. The store located at the address hereinabove set forth is the only store operated by respondents.
3. Respondents do not make or give big trade-in allowances, or any trade-in allowances, on customers' old cleaners and sewing machines when they purchase new or reconditioned cleaners and sewing machines, since the price of the merchandise purchased in so-called trade-in transactions is increased to cover and take care of the so-called trade-in allowance made or given.
4. Respondents' five-year guarantee is not a bona fide guarantee because it does not set forth the terms thereof or the manner in which respondents will perform thereunder. Such a guarantee is confusing and misleading to the purchasing public.

PAR. 7. In addition to the foregoing, the respondents, in connection with the offering for sale and sale of vacuum cleaners and sewing machines, have misrepresented the regular and customary prices at which they sell their merchandise. In advertising literature such as instruction booklets which they exhibit to purchasers and prospective purchasers respondents have represented that the regular and customary price of their Kingston vacuum cleaner is $129.95; that the regular and customary price of their Monarch sewing machine is $189.50 and that the regular and customary price of their Kingston sewing machine is

$199.50. These prices are fictitious and far in excess of the prices at which the respondents regularly and customarily sold the said merchandise.

In connection with the sale of vacuum cleaners and sewing machines respondents have also engaged in the practice of charging purchasers an amount of $2.50 represented as being a "recording fee." Respondents have not had any of their sales contracts recorded but have retained the money thus collected for their own use.

PAR. 8. The use by the respondents of the aforesaid false, deceptive, and misleading statements, representations and practices had the tendency and capacity to mislead and deceive a substantial portion of the purchasing public into the erroneous and mistaken belief that such statements and representations were true and because of such statements, representations and practices to purchase substantial quantities of respondents' vacuum cleaners and sewing machines, particularly their more expensive vacuum cleaners and sewing machines. As a result thereof, substantial trade in commerce has been unfairly diverted to respondents from their competitors and substantial injury has been and is being done to competition in commerce.

PAR. 9. The aforesaid acts and practices, as herein alleged, are all to the prejudice and injury of the public and of respondents' competitors and constitute unfair and deceptive acts and practices and unfair methods of competition in commerce within the intent and meaning of the Federal Trade Commission Act.

WHEREFORE, THE PREMISES CONSIDERED, the Federal Trade Commission, on this 27th day of May A. D., 1954, issues its complaint against said respondents.

NOTICE

Notice is hereby given you, Bond Vacuum Stores, Inc., a corporation, and Albert Hyatt, Philip Morris, Harold Stengel, and Julius Langsner, indivdiually and as officers of said corporation, respondents herein, that the 5th day of August, A. D., 1954, at 10 o'clock is hereby fixed as the time and Federal Trade Commission Building, Sixth and Pennsylvania Avenue, Washington, D. C., as the place when and where a hearing will be had before John Lewis, a hearing examiner of the Federal Trade Commission, on the charges set forth in this complaint, at which time and place you will have the right under said Act to appear and show cause why an order should not be entered requiring you to cease and desist from the violations of law charged in this complaint.

You are notified that the opportunity is afforded you to file with the Commission an answer to this complaint on or before the 20th day after service of it upon you. Such answer shall contain a concise statement of the facts which constitute the ground for defense and shall specifically admit or deny each of the facts alleged in the complaint unless you are without knowledge, in which case you shall so state. Failure to file an answer to or plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

If respondents desire to waive hearing on the allegations of fact set forth in the complaint and not to contest the facts, the answer may consist of a statement that respondents admit all the material allegations of fact charged in the complaint to be true.

Such answer will constitute a waiver of any hearing as to the facts alleged in the complaint and findings as to the facts and conclusions based upon such answer shall be made and order entered disposing of the matter without any intervening procedure. The respondents may, however, reserve in such answer the right to submit proposed findings and conclusions of fact or of law under Rule XXI, and the right to appeal under Rule XXIII.

Failure to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize the commission and hearing examiner John Lewis, without further notice to find the facts to be as alleged herein and to issue the following order in this proceeding.

It is ordered, That respondent Bond Vacuum Stores, Inc., a corporation, and its officers, respondents Albert Hyatt, Philip Morris, Harold Stengel, and Julius Langsner, individually and as officers of said corporation, and respondents' representatives, agents, and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of vacuum cleaners and sewing machines or other merchandise in commerce, as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from:

1. Representing, directly or by implication, that certain merchandise is offered for sale when such offer is not a bona fide offer to sell the merchandise so offered;

2. Representing, directly or by implication, contrary to the fact, that their reconditioned vacuum cleaners will do a satisfactory job of cleaning or that their sewing machines will do a satisfactory job of sewing;

3. Representing that they operate more stores than they do in fact operate;

4. Representing that trade-in allowances on old or previously used sewing machines or vacuum cleaners may be obtained by purchasers, when the prices of respondents' merchandise have been advanced above respondents' regular prices in any amount serving to nullify or offset such allowances;

5. Representing, directing or by implication, that any merchandise sold or offered for sale by respondents is guaranteed, unless the nature and extent of the guarantee and the manner in which the guarantor will perform thereunder are clearly and conspicuously disclosed;

6. Representing, directly or by implication, that the usual or customary price of any merchandise is in excess of the price at which said merchandise is regularly and customarily sold in the normal course of business;

7. Requiring purchasers to pay sums of money to respondents represented by them as being for recording fees or for other expenses to be paid to others by respondents, when such sums are retained by respondents.

The inclusion of such order to cease and desist in this complaint will be without effect in the event you show cause, on or before the 5th day of August, A. D., 1954, why such order should not issue.

In witness whereof, the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary, and its official seal to be hereto affixed, at Washington, D. C., this 27th day of May A. D. 1954.

IN THE MATTER OF BOND VACUUM STORES, INC., A CORPORATION, AND ALBERT HYATT, PHILIP MORRIS, HAROLD STENGEL AND JULIUS LANGSNER, INDIVIDUALLY AND AS OFFICERS OF SAID CORPORATION

Docket No. 6209

DECISION OF THE COMMISSION AND ORDER TO FILE REPORT OF COMPLIANCE

Pursuant to Rule XXII of the Commission's Rules of Practice, the attached initial decision of the hearing examiner did, on the 9th day of December, 1954, become the decision of the Commission; and, accordingly:

It is ordered, That the respondent, Bond Vacuum Stores, Inc., a corporation, and its officers, and Albert Hyatt, Philip Morris, and Harry Stengel, individually and as officers of said corporation, shall within sixty (60) days after service upon them of this order, file with the Commission a report in writing, setting forth in detail the manner and form in which they have complied with the order to cease and desist.

By the Commission:

[SEAL] ROBERT M. PARRISH, *Secretary.*

Issued December 20, 1954.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF BOND VACUUM STORES, INC., A CORPORATION, AND ALBERT HYATT, PHILIP MORRIS, HAROLD STENGEL AND JULIUS LANGSNER, INDIVIDUALLY AND AS OFFICERS OF SAID CORPORATION.

Docket No. 6209

INITIAL DECISION

Before *Loren H. Laughlin*, Hearing Examiner.
Appearances:
Michael J. Vitale, Counsel supporting the complaint.
Stanley Kamerow of Kamerow and Kamerow, Attorney for Respondents, 1010 Vermont Avenue, N. W., Washington, D. C.

The Federal Trade Commission (hereinafter referred to as the Commission) on May 27, 1954, issued its complaint herein under the Federal Trade Commission Act against all of the above-named respondents, charging them with having committed certain alleged unfair or deceptive acts and practices which purport to be violations of section 5 of said act. All respondents joined in an answer filed on June 18, 1954, after due service of the complaint upon each of them.

On September 24, 1954, the respondent corporation, by its president and its attorney, and all individual respondents except Julius Langsner, both in person and by their attorney, stipulated in writing with counsel supporting the complaint that a consent order against such respondents be entered herein, which stipulation was approved by the Director and Assistant Director of the Commission's Bureau of Litigation.

By said stipulation, among other things, said respondents admit all the jurisdictional allegations set forth in the complaint and stipulate that the record herein may be taken as if the commission had made findings of jurisdictional facts in accordance with such allegations; that such stipulation is made for settlement purposes only, and does not constitute an admission by said respondents that they have violated the law as alleged in the complaint; and that respondents withdraw their said answer filed on June 18, 1954.

It was further stipulated that the complaint, insofar as it concerns the respondent Julius Langsner, be dismissed for the reasons set forth in his affidavit executed August 27, 1954, attached to said stipulation, which affidavit in substance states that theretofore having held stock in and having been a member of the Board of Directors of respondent Bond Vacuum Stores, Inc., in July 1953, the said Julius Langsner sold all of his said stock and thereupon severed all connections with said corporation; and that neither as an employee or director of said respondent corporation did he ever formulate, control or direct its policies, acts and practices; and that he has no intention of again being connected in any way with said corporation or any similar corporation engaged in a like business, having been since August 1949, and presently being employed by the United States Government.

Said stipulation further provides that all the parties thereto expressly waive a hearing before a Hearing Examiner or the Commission, the making of findings of facts or conclusions of law by the Hearing Examiner or the Commission, and the filing of exceptions and oral argument before the Hearing Examiner and the Commission to which respondents may be entitled under the Federal Trade Commission Act or the Rules of Practice of the Commission; and that the cease and desist order therein set forth and hereafter made, shall have the same force and effect as if made after a full hearing, presentation of evidence, and findings and conclusions thereon.

Respondents further specifically waive any and all right, power or privilege to challenge or contest the validity of the order entered in accordance with said stipulation, and agree that the complaint herein may be considered in construing its terms in any further proceedings which may arise involving said order.

The said stipulation for consent order and the accompanying affidavit of respondent Julius Langsner were submitted on October 4, 1954, by the Commission's Bureau of Litigation to the undersigned Hearing Examiner duly designated by the Commission, for appropriate action by him under Rule V of the Commission's Rules of Practice.

After due consideration, it appearing to the Hearing Examiner from the presentation of such matter that only such acts and practices alleged in the complaint as are unsupportable by evidence or are repetitious have been deleted from the sanction of the proposed consent order and that the said stipulation and affidavit afford the basis for appropriate disposition of this proceeding, said stipulation and affidavit are accepted and ordered filed as a part of the record in this proceeding. The withdrawal of respondents' answer is hereby approved.

Upon the whole record as now made, in accordance with the said stipulation, the Hearing Examiner finds that the Commission has jurisdiction of the subject matter of this proceeding and of all of the parties respondent; that this proceeding is in the interest of the public; and that the following order as proposed in said stipulation is appropriate for the disposition of this proceeding, and the same therefore should be, and hereby is, entered as follows:

ORDER

It is ordered, That respondent Bond Vacuum Stores, Inc., a corporation, and its officers, respondents Albert Hyatt, Philip Morse, and Harold Stengel, individually and as officers of said corporation, and respondents' representatives, agents and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of vacuum cleaners and sewing machines, or other merchandise in commerce, as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from:

1. Representing, directly or by implication, that certain merchandise is offered for sale when such offer is not a bona fide offer to sell the merchandise so offered;
2. Representing that they operate more stores than they do in fact operate;
3. Representing, directly or by implication, that any merchandise sold or offered for sale by respondents is guaranteed, unless the nature and extent of the guaranty and the manner in which the guarantor will perform thereunder are clearly and conspicuously disclosed;
4. Representing, directly or by implication, that respondents' usual or customary price of any merchandise is in excess of the price at which said merchandise is regularly and customarily sold by respondents in the normal course of respondents' business.
5. Requiring purchasers to pay sums of money to respondents represented by them as being for recording fees or for other expenses to be paid to others by respondents, when such sums are retained by respondents.

It is further ordered, That the complaint insofar as it relates to the respondent Julius Langsner be, and the same is, hereby dismissed.

LOREN H. LAUGHLIN,
Hearing Examiner.

October 22, 1954.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF STANLEY L. ROSE AND RUTH ROSE, INDIVIDUALS, TRADING AND DOING BUSINESS AS SEW-EZY MACHINE COMPANY, SEW-EZY SEWING MACHINE COMPANY, SEW-EZY VACUUM CLEANER COMPANY, SEW-EZY SEWING MACHINE AND VACUUM CLEANER COMPANY

Docket No. 6295

COMPLAINT

Pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said Act, the Federal Trade Commission, having reason to believe that Stanley L. Rose and Ruth Rose, individuals, trading and doing business as Sew-Ezy Machine Company, Sew-Ezy Sewing Machine Company, Sew-Ezy Vacuum Cleaner Company, and Sew-Ezy Sewing Machine and Vacuum Cleaner Company, hereinafter referred to as respondents, have violated the provisions of said Act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest, hereby issues its complaint, stating its charges in that respect as follows:

PARAGRAPH 1. Respondents Stanley L. Rose and Ruth Rose, are individuals trading and doing business as Sew-Ezy Machine Company, Sew-Ezy Sewing Machine Company, Sew-Ezy Sewing Machine and Vacuum Cleaner Company. Said respondent, Stanley L. Rose and Ruth Rose, cooperate and act together in performing the acts and practices hereinafter set forth. Respondents' office and principal place of business is located at 5156 Benning Road, SE., Hillside, Maryland.

PAR. 2. The respondents are now, and for more than one year last past have been, engaged in the sale and distribution of vacuum cleaners and sewing machines. In the course and conduct of their said business respondents have caused their vacuum cleaners and sewing machines when sold, to be transported from their place of business at the aforesaid address to purchasers thereof located in the District of Columbia, and in various States of the United States. They maintain, and at all times mentioned herein have maintained, a course of trade in said products in commerce among and between various States of the United States and the District of Columbia. Their volume of trade in said commerce has been and is substantial.

PAR. 3. At all times mentioned herein, respondents have been, and are now, in direct and substantial competitions with corporations, firms and other individuals engaged in the sale and distribution of vacuum cleaners and sewing machines in commerce.

PAR. 4. In the course and conduct of their business, as aforesaid, and for the purpose of inducing the purchase of their vacuum cleaners and sewing machines, the respondents have engaged in extensive advertising in newspapers and on radio. Among and typical of the statements and representations made in such advertising relating to their said products are the following:

"SEW-EZY VACUUM CLEANER CO.

"Here's what you get for the total complete price of $13.50. You get a New famous make vacuum cleaner. You get the complete Goodhousekeeping set of attachments, the floor brush, floor tool, rug tool, upholstery tool, crevice tool, dusting brush, paint sprayer and ~~demothing~~ attachment free with your vacuum cleaner. Plus while they last, you'll get free with your nationally famous vacuum cleaner, a 24 piece set of silverware, 6 knives, 6 forks, 6 table spoons, 6 teaspoons, all free with your vacuum cleaner. Remember, only 20 people daily can be accommodated on this outstanding offer and the supply is limited. so you must hurry. Here's what to do—pick up your phone and call Overlook 3-3000, Overlook 3-3000, leave your name and address and phone number, and at your convenience a Sew-Ezy Company representative will come to your home to fully demonstrate this sensational vacuum cleaner. He'll clean your rugs, your closets, your blinds, anything that you'd like for him to do. He'll show you what a wonderful buy this vacuum cleaner is. You inspect it, you look it over, you try it, and if you like it, and want it, you make just a small down payment, and keep the vacuum cleaner * * *"

"The Sew-Ezy Company handles the finest vacuum cleaners in the world, Electrolux, General Electric, Westinghouse, Lewyt and Premiers. Just arrived at the Sew-Ezy Company is a full shipment of new vacuum cleaners. We are overloaded, and will have to get rid of these vacuum cleaners. These vacs must be sold and the Sew-Ezy Company is reducing the price of a famous make vacuum cleaner down to a low, low $13.50 * * *. If you like a free home trial dial now Overlook 3-3000, Overlook 3-3000. We can save you up to $100, up to a hundred dollars. Try before you buy, that's been the Sew-Ezy Motto for 25 years. Try before you buy. This is definitely a famous make vacuum cleaner, advertised nationally and reduced just in time for fall cleaning to Thirteen and half dollars. Also, as a part of our get acquainted offer, we will send out free a parakeet for the children or for yourselves a lovely 24 piece set of silverware. We have mobile units to service you whether you live down in Fredericksburg or out at Hagerstown, Maryland, or live right here in Washington, D. C."

"Announcing a Sew-Ezy rebuilt Electrolux Vacuum Cleaner for only nine dollars and fifty cents and every one runs like new. * * * This is the famous Model 12 Vacuum. The large size Electrolux with all parts guaranteed. * * * The price has been brought down for clearance—down to $9.50, saving you many, many dollars on the regular catalog listing. Here are Electrolux Vacuum Cleaners rebuilt by the Sew-Ezy Company experts using all brand new parts—guaranteed. * * * What makes this a wonderful buy for you housewives or Government girls—is the goodhousekeeping set of attachments, the floor buffer—the demother, the paint sprayer, the crevice tool for hard to get at places—many other attachments—this complete set of tools will be yours free along with the Electrolux." * * *

"Just arrived at the Sew-Ezy Company.

"Just arrived at the Sew-Ezy Company are some wonderful Singer Sewing Machines. These Singers are all guaranteed, rebuilt by the Sew-Ezy experts with brand new parts. * * * You can sew fall clothes for the kiddies going back to school or for the pre-school children * * *. We'll come to your apartment, place it there for you to use and you can sew garments, clothes, anything under the sun free of charge as part of your free home trial offer. For 25 years, our motto has been Try before you buy, and Madam, if you don't know how to sew don't be ashamed of that for one moment because our polite, courteous Sew-Ezy representative will show you how to sew. Just dial Overlook 3–3000, the price is only $18.50 * * *. Also free to you will be a lovely and entertaining parakeet bird for the children or a set of 24 piece silverware absolutely free because we are getting acquainted." * * *

PAR. 5. By and through the use of the aforesaid statements and representatives, and others of similar import, but not specifically set out herein, respondents represented, directly or by implication:

1. That they were making a bona fide offer to sell new and reconditioned vacuum cleaners and new and reconditioned sewing machines at the low prices specified in the advertising.
2. That their products were guaranteed.
3. That they have been engaged in their present business of selling vacuum cleaners and sewing machines for 25 years.
4. That the new vacuum cleaners offered for sale are of a famous make.

PAR. 6. The aforesaid statements and representations were false, deceptive, and misleading. In truth and in fact:

1. The said cleaners and sewing machines would not do a satisfactory job of cleaning and sewing, respectively, and the same offers were not genuine or bona fide offers in that respondents did not intend to sell the cleaners and sewing machines advertised, but were made for the purpose of obtaining leads and information as to the persons interested in the purchase of vacuum cleaners and sewing machines. After obtaining such leads, through response to said advertisements, respondents or their salesmen, called upon the persons so responding at their homes or waited upon them at respondents' place of business and, in many instances, demonstrated such cleaners and sewing machines, well knowing that their performance would be unsatisfactory; made no offer to sell the advertised cleaners and sewing machines, but in many instances belittled and disparaged such cleaners and sewing machines, and attempted to, and frequently did, sell different and much more expensive vacuum cleaners and sewing machines to such persons.
2. Respondent's use of the word "guaranteed" without disclosing the terms and conditions of the guarantee is confusing and misleading to the purchasing public.
3. Respondents have been engaged in their present business of selling vacuum cleaners and sewing machines for substantially less than 25 years.
4. The vacuum cleaners represented as being of a famous make in the aforesaid advertisements are not of a famous make.

PAR. 7. The use by the respondents of the aforesaid false, deceptive, and misleading statements, representations, and practices had the tendency and capacity to mislead and deceive a substantial portion of the purchasing public into the erroneous and mistaken belief that such statements, representations were true and, because of such statements, representations, and practices, to purchase substantial quantities of respondents' vacuum cleaners and sewing machines, particularly their more expensive vacuum cleaners and sewing machines. As a result thereof, substantial trade in commerce has been unfairly diverted to respondents from their competitors and substantial injury has been and is being done to competition in commerce.

PAR. 8. The aforesaid acts and practices as herein alleged, are all to the prejudice and injury of the public and of respondents' competitors and constitute unfair and deceptive acts and practices and unfair methods of competition in commerce within the intent and meaning of the Federal Trade Commission Act.

WHEREFORE, THE PREMISES CONSIDERED, the Federal Trade Commission on this 18th day of February, A. D., 1955 issues its complaint against said respondents.

NOTICE

Notice is hereby given you, Stanley L. Rose and Ruth Rose, individuals, trading and doing business as Sew-Ezy Machine Company, Sew-Ezy Sewing Machine and Vacuum Cleaner Company, respondents herein, that the 12th day of April A. D. 1955, at 10 o'clock, is hereby fixed as the time and Federal Trade Commission Building, 6th and Pennsylvania Avenue, North West, Washington, D. C., as the place when and where a hearing will be had before James A. Purcell, a hearing examiner of the Federal Trade Commission, on the charges set forth in this complaint, at which time and place you will have the right under said Act to appear and show cause why an order should not be entered requiring you to cease and desist from the violations of law charged in this complaint.

You are notified that the opportunity is afforded you to file with the Commission an answer to this complaint on or before the twentieth (20th) day after service of it upon you. Such answer shall contain a concise statement of the facts which constitute the ground for defense and shall specifically admit or deny each of the facts alleged in the complaint unless you are without knowledge, in which you will so state. Failure to file an answer to or plead specifically to any allegation of the complaint shall constitute an admission of such allegation.

If respondents desire to waive hearing on the allegations of fact set forth in the complaint and not to contend the facts, the answer may consist of a statement that respondents admit all the material allegations of fact charged in the complaint to be true. Such answer will constitute a waiver of any hearing as to the facts alleged in the complaint and findings as to the facts and conclusions based upon such answer shall be made and order entered disposing of the matter without any intervening procedure. The respondents may, however, reserve in such answer the right to submit proposed findings and conclusions of fact or of law under rule XXI, and the right to appeal under rule XXIII.

Failure to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize the Commission and Hearing Examiner James A. Purcell, without further notice, to find the facts to be as alleged herein and to issue the following order in this proceeding:

It is ordered, That respondents, Stanley L. Rose and Ruth Rose, individuals, trading and doing business as Sew-Ezy Machine Company, Sew-Ezy Sewing Machine Company, Sew-Ezy Vacuum Cleaner Company, and doing business under any other name or names, and respondents' representatives, agents, and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of sewing machines and vacuum cleaners or other merchandise in commerce as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from:

1. Representing, directly or by implication, that certain merchandise is offered for sale when such offer is not a bona fide offer to sell the merchandise so offered;
2. Representing, directly or by implication, that any merchandise sold or offered for sale by respondents is guaranteed, unless the nature and extent of the guarantee and the manner in which the guarantor will perform thereunder are clearly and conspicuously disclosed;
3. Representing directly or by implication, that they have been engaged in their present business of selling vacuum cleaners or sewing machines any number of years in excess of that in which they have actually been engaged;
4. Representing, directly or by implication, that any merchandise being offered for sale is of a famous make when such is not the case.

The inclusion of such order to cease and desist in this complaint will be without effect in the event you show cause, on or before the 12th day of April A. D. 1955, why such order should not issue.

In witness whereof, the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary and its official seal to be hereto affixed, at Washington, D. C., this 18th day of February A. D. 1955.

By the Commission:

[SEAL] ROBERT M. PARRISH, *Secretary*.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF STANLEY L. ROSE AND RUTH ROSE, INDIVIDUALS, TRADING AND DOING BUSINESS AS SEW-EZY MACHINE COMPANY, SEW-EZY SEWING MACHINE COMPANY, SEW-EZY VACUUM CLEANER COMPANY, AND SEW-EZY SEWING MACHINE AND VACUUM CLEANER COMPANY

Docket No. 6295

INITIAL DECISION BY JAMES A. PURCELL, HEARING EXAMINER

1. The Federal Trade Commission on February 18, 1955, issued its complaint in this proceeding charging respondents with specific unfair and deceptive acts and practices and unfair methods of competition in commerce in violation of the Federal Trade Commission Act, as will with particularity appear by reference to said complaint. On March 16, 1955, respondents filed answer in form of a general denial of the allegations of the complaint, and specifically, inter alia denying that respondent, Ruth Rose, is a co-partner or otherwise connected with the described business other than to assist respondent, Stanley L. Rose, her husband, in the business.

2. Thereafter, on May 21, 1955, respondent, Stanley L. Rose, entered into a Stipulation or Agreement for Consent Order with counsel supporting the complaint, all in conformity with Rule No. 3.25 of the Commission's Rules of Practice. Thereafter said Agreement was submitted to the hearing examiner who, being of opinion that said Agreement effectually disposes of all of the issues herein, hereby accepts same with the proviso that this Initial Decision shall not become a part of the official record of this proceeding unless and until it becomes the official decision of the Commission.

3. The Agreement recites that respondent, Stanley L. Rose, during the period charged, has been engaged in, and trading under the names of Sew-Ezy Machine Company, Sew-Ezy Sewing Machine Company, Sew-Ezy Vacuum Cleaner Company, and Sew-Ezy Sewing Machine and Vacuum Cleaner Company with his office and principal place of business located at No. 5156 Benning Road, Southeast, Hillside, Maryland. It will be noted that respondent, Ruth Rose, is not a party signatory to said Agreement, with respect to whom there accompanied said Agreement an affidavit by her to the effect that she is not associated or connected

with her husband, Stanley L. Rose as owner or co-partner in his business undertaking; that she is not engaged in the sale and distribution of sewing machines and vacuum cleaners, and renders only such assistance to her husband in his business as she "possibly can and as a wife should."

4. All parties move that the answer filed on March 16, 1955, be withdrawn of record and held for naught, which motion is hereby granted.

5. By said Agreement respondent specifically admits all of the jurisdictional allegations set forth in the complaint and agrees that the record herein may be taken as though the hearing examiner or the Commission had made findings of jurisdictional facts in accordance with such allegations; that the order therein agreed upon shall have the same force and effect as though made upon a full hearing, presentation of evidence and findings and conclusions based thereon, specifically waiving any and all right, power or privilege to contest the validity of said order and that the complaint herein may be used in construing the terms of said order, which order may be altered, modified or set aside in the manner provided by statute affecting orders of the Commission.

6. All of the parties to said Agreement waived a hearing before a hearing examiner or the Commission; the making of findings of fact or conclusions of law by the hearing examiner or the Commission; the filing of exceptions and oral argument before the Commission; and all further and other procedure before the hearing examiner and the Commission to which the respondent might otherwise, but for the execution of said Agreement, be entitled under the Federal Trade Commission Act or the Rules of Practice of the Commission; and further, that said Agreement, together with the complaint, shall constitute the entire record herein. The Agreement further provided that same was executed for settlement purposes only and does not constitute an admission by the respondent that he has violated the law as alleged in the complaint.

7. On the basis of the representations contained in the affidavit of Ruth Rose, and nothing to the contrary appearing of record, the complaint, as to her, will be dismissed.

8. Pursuant to the intent of said Agreement and of the facts therein agreed upon, and that the order embodied therein is in accord with the order nisi accompanying the complaint excepting only as to the named respondent, Ruth Rose, the hearing examiner, being of opinion that the order agreed upon will effectually safeguard the public interest; finds that this proceeding is in the public interest and issued the following order:

ORDER

It is ordered, That respondent Stanley L. Rose, an individual trading and doing business as Sew-Ezy Machine Company, Sew-Ezy Sewing Machine Company, Sew-Ezy Vacuum Cleaner Company, and Sew-Ezy Sewing Machine and Vacuum Cleaner Company, or trading and doing business under any other name or names, and respondent's representatives, agents and employees, directly or through any corporate or other device, in connection with the offering for sale, sale or distribution of sewing machines and vacuum cleaners or other merchandise in commerce as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from:

1. Representing, directly or by implication, that certain merchandise is offered for sale when such offer is not a bona fide offer to sell the merchandise so offered;
2. Representing, directly or by implication, that any merchandise sold or offered for sale by respondents is guaranteed, unless the nature and extent of the guarantee and the manner in which the guarantor will perform thereunder are clearly and conspicuously disclosed;
3. Representing directly or by implication, that he has been engaged in his present business of selling vacuum cleaners or sewing machines any number of years in excess of that in which he has actually been engaged;
4. Representing, directly or by implication, that any merchandise being offered for sale is of a famous make when such is not the case.

Further ordered, That the complaint, insofar as same affects the named respondent, Ruth Rose, be, and the same is hereby, dismissed.

JAMES A. PURCELL, *Hearing Examiner*.

May 31, 1955.

UNITED STATES OF AMERICA

BEFORE FEDERAL TRADE COMMISSION

IN THE MATTER OF MAYFLOWER TELEVISION COMPANY, INC., A CORPORATION, AND RAYMOND H. BENTE, LOWELL EWING, AND LILLIAN TURNER, INDIVIDUALLY AND AS OFFICERS OF SAID CORPORATION

Docket No. 6404

COMPLAINT

Pursuant to the provisions of the Federal Trade Commission Act, and by virtue of the authority vested in it by said Act, the Federal Trade Commission, having reason to believe that Mayflower Television Company, Inc., a corporation, and Raymond H. Bente, Lowell Ewing, and Lillian Turner, individually and as officers of said corporation, hereinafter referred to as respondents, have violated the provisions of said Act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest, hereby issues its complaint, stating its charges in that respect as follows:

PARAGRAPH 1. Respondent Mayflower Television Company, Inc., is a corporation, organized and existing under the laws of the State of Delaware, with its principal office and place of business located at 1529 17th Street NW., Washington, D. C. Respondents Raymond H. Bente, Lowell Ewing, and Lillian Turner are President-Treasurer, Vice President, and Secretary, respectively, of this corporate respondent.

All of the aforesaid respondents cooperate and act together in performing the acts and engaging in the practices hereinafter set forth.

PAR. 2. Respondents, for more than several years last past, have been engaged in the sale and distribution of television and radio replacement parts. An essential and integral part of respondents' said business is the furnishing of television repair services. In connection with their television repair service respondents remove television sets from the homes of owners located in the District of Columbia and in the States of Maryland and Virginia, and transport said television sets to their repair shop, which is located in the District of Columbia, for servicing and replacement of parts, said parts being furnished and sold by respondents.

Respondents maintain, and at all times mentioned herein have maintained, a course of trade in their said business in commerce in the District of Columbia and between the District of Columbia and other States. Their volume of business in said commerce has been and is substantial.

PAR. 3. At all times mentioned herein respondents have been, and are now, in direct and substantial competition in commerce with other corporations, firms, and individuals engaged in a similar business.

PAR. 4. In the course and conduct of their aforesaid business, respondents have made and are making certain statements and representations concerning said business by means of advertisements on television, in newspapers, and other advertising media. Among and typical of the statements and representations made in such advertising are the following:

"* * * We offer this terrific T-V special? $1.50 service charge to all who call for Mayflower T-V service now at STerling 3-3800 * * *"

"* * * Each a specialist for a different make set! * * *"

"* * * For today's great special! A Mayflower serviceman will come to your home to fix your T-V set for only $1.50 service charge. If parts are needed, there is no service charge at all! * * *"

"* * * A Mayflower expert will come to your home to fix your television set—for the low service fee of just $1.00. And that's not all. For if your set does happen to need new parts in this home repair—Mayflower will foot the service charge. You pay nothing for the service. This offer is in effect for a limited time only—so we urge you to call now * * *"

"* * * One of the finest engineers in the business will come out to your home * * * if you want him to fix your television set, the charge is only $1.50."

"* * * Nine out of ten, it's some small thing that can be fixed in a jiffy, right there in your own home, and if you want us to fix it, the service charge is only $1.00."

"* * * We'll have one of our experts out to your home today, free. He'll examine your set, find out what's wrong with it, inform you of it. Nine times out of ten, we can repair the set right there in your own home. Usually it's a small adjustment that has to be made. Maybe a tiny part replaced, maybe a connection tightened * * *"

"* * * Mayflower will repair your set for a service charge of $1.00, plus parts if any are necessary, and your set will be working perfectly again."

". . . He'll examine that set, find out what's wrong with it FREE OF CHARGE, repair it for a Service charge of $1.00 IF you want him to."

". . . If you want us to repair the set after you know what's wrong with it, we do 9 out of 10 repairs in the home. The Service charge is only $1.00, regardless of what's wrong with your set. . . ."

PAR. 5. By and through the use of the said statements and representations, and others of similar import, but not specifically set out herein, respondents represent, directly or by implication:

1. That the service charge for servicing and repairing a television set is $1.00 or $1.50.

2. That only those parts which are needed will be replaced and if any new parts are replaced in a television set there will not me a service charge.

3. That a television expert or specialist will come to your home to examine and repair your television set.

4. That nine times out of ten a television set can be repaired in the home.

PAR. 6. The aforesaid statements and representations were false, deceptive, and misleading. In truth and in fact:

1. The service charge for repairing a television set, in most instances, is far in excess of the represented amounts of $1.00 or $1.50. A service charge of $1.00 or $1.50 is made only when the television sets are serviced and repaired in the customer's home. However, in many instances, the television sets are removed to respondents' place of business for repairs and at that time the service charge is automatically increased to an amount far in excess of that which is represented. The advertisement of a low service charge was made to obtain leads and information as to persons interested in having their television sets repaired. After obtaining such leads, respondents increase the service charge to a larger amount without disclosing it to the customers.

2. Respondents have adopted the practice of replacing parts which were not needed and have also included a service charge in those instances.

3. The persons who examine the television sets are not experts or specialists in the servicing or repairing of television sets, but are persons possessing a limited knowledge in the field of television repairs. In fact, at the time the so-called experts or specialists come to the homes of customers, the only testing equipment they have with them is that which is used for testing tubes.

4. In most instances the television sets are removed from the homes of their owners and transported to respondents' place of business for service and repair. In fact, the servicemen, as an inducement to discourage the repair of television sets in homes, receive a commission for each set brought into the workshop for repairs.

PAR. 7. The use by the respondents of the aforesaid false, deceptive, and misleading statements, representations, and practices, has the tendency and capacity to mislead and deceive a substantial portion of persons owning television sets into the erroneous and mistaken belief that such statements and representations were and are true, and to induce said persons to have respondents service and repair their television sets because of such erroneous and mistaken belief. As a result thereof, substantial trade in commerce has been unfairly diverted to respondents from their competitors and substantial injury has been and is being done to competition in commerce.

PAR. 8. The aforesaid acts and practices of respondents, as herein alleged, are all to the prejudice and injury of the public and of respondents' competitors and constitute unfair and deceptive acts and practices and unfair methods of competition, in commerce, within the intent and meaning of the Federal Trade Commission Act.

WHEREFORE, THE PREMISES CONSIDERED, the Federal Trade Commission on this 24th day of August, A. D. 1955, issues its complaint against said respondents.

NOTICE

Notice is hereby given you, Mayflower Television Company, Inc., a corporation, and Raymond H. Bente, Lowell Ewing, and Lillian Turner, individually and as officers of said corporation, respondents herein, that the 20th day of October, A. D., 1955, at 10 o'clock is hereby fixed as the time and Hearing Room, Federal Trade Commission Building, Washington, D. C., as the place when and where a hearing will be had before a hearing examiner of the Federal Trade Commission, on the charges set forth in this complaint, at which time and place you will have the right under said Act to appear and show cause why an order should not be entered requiring you to cease and desist from the violation of law charged in this complaint.

You are notified that the opportunity is afforded you to file with the Commission an answer to this complaint on or before the thirtieth (30th) day after service of it upon you. Such answer shall contain a concise statement of the facts constituting the ground of defense and a specific admission, denial or explanation of each fact alleged in the complaint or, if respondents are without knowledge thereof, a statement to that effect.

If respondents elect not to contest the allegations of fact set forth in the complaint, the answer shall consist of a statement that respondents admit all material allegations to be true. Such an answer shall constitute a waiver of hearing as to facts so alleged, and an initial decision containing appropriate findings and conclusions and an appropriate order disposing of the proceeding shall be issued by the hearing examiner. In such answer, respondents may, however, reserve the right to submit proposed findings and conclusions and the right to appeal under Section 3.22 of the Commission's Rules of Practice for Adjudicative Proceedings.

If any respondent elects to negotiate a consent order, it shall be done in accordance with Section 3.25 of the Commission's Rules of Practice.

Failure to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize a hearing examiner without further notice to respondents, to find the facts to be as alleged in the complaint, to conduct a hearing to determine the form of order, and, thereafter, to enter an initial decision containing such findings and order.

In witness whereof, the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary, and its official seal to be hereto affixed, at Washington, D. C., this 24th day of August, A. D., 1955.

INITIAL DECISION

(By Everett F. Haycraft, hearing examiner)

The Federal Trade Commission issued its complaint against the above-named respondents on August 24, 1955, charging them with having made certain false, deceptive, and misleading statements and representations regarding television and radio services and replacement parts in violation of the Federal Trade Commission Act. In lieu of submitting answer to said complaint, respondents Mayflower Television Company, Inc., a corporation, and Raymond H. Bente, an individual, entered into an agreement for consent order with counsel supporting the complaint, disposing of all the issues in this proceeding, which agreement has been duly approved by the Director of the Bureau of Litigation.

Respondents, pursuant to the aforesaid agreement, have admitted all the jurisdictional facts alleged in the complaint and agreed that the record may be taken as if findings of jurisdictional fact had been duly made in accordance with such allegations. Respondents in the agreement waived any further procedural steps before the hearing examiner and the Commission; the making of findings of fact or conclusions of law; and all the rights they may have to challenge or contest the validity of the order to cease and desist entered in accordance with this agreement. It was further provided that said agreement, together with the complaint, shall constitute the entire record herein; that the agreement shall not become a part of the official record unless and until it becomes a part of the decision of the Commission; that said agreement is for settlement purposes only and does not constitute an admission by the respondents that they have violated the law as alleged in the complaint. The agreement also provided that the order to cease and desist issued in accordance with said agreement shall have the same force and effect as if entered after a full hearing; that it may be altered, modified, or set aside in the manner provided for other orders; and that the complaint may be used in construing the terms of the order.

While the other respondents in the proceeding, Lowell Ewing and Lillian Turner, were formerly officers of corporate respondent Mayflower Television Company, Inc., it appears from affidavits executed by such respondents that they are on longer connected with said corporation; that said individual respondents did not participate in the management or operation of respondent corporation, and have had no part in determining its policies; and that any of the acts alleged in the complaint were without the knowledge, consent, cooperation, or condonement of said individual respondents. It is therefore provided in the agreement that the complaint should be dismissed as to these individuals.

This proceeding having now come on for final consideration by the hearing examiner on the complaint and the aforesaid agreement for consent order, and it appearing that said agreement provides for an appropriate disposition of this proceeding, the aforesaid agreement is hereby accepted and is ordered filed upon becoming part of the Commission's decision in accordance with Sections 3.21 and 3.25 of the Rules of Practice, and in consonance with the terms of said agreement the hearing examiner makes the following jurisdictional findings and order:

1. Respondent Mayflower Television Company, Inc., is a corporation existing and doing business under and by virtue of the laws of the State of Delaware, with its office and principal place of business located at 1529 17th Street, NW., Washington, D. C. Respondent Raymond H. Bente is an individual and officer of said corporation, with his office and principal place of business the same as that of corporate respondent.

2. The Federal Trade Commission has jurisdiction of the subject matter of this proceeding, which is in the public interest, and of the respondents hereinabove named; the complaint herein states a cause of action against said respondents under the provisions of the Federal Trade Commission Act.

ORDER

It is ordered, That respondent Mayflower Television Company, Inc., a corporation, and its officers, Raymond H. Bente, individually and as an officer of said corporation, and respondents' representatives, agents and employees, directly or through any corporate or other device, in connection with the offering for sale, sale and distribution of replacement parts for television sets and other merchandise, or repair services in connection therewith, in commerce, as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from representing, directly or by implication:

1. That the charge for servicing or repairing is $1.00 or $1.50 or any amount which is not in accordance with the facts.
2. That only parts which are needed will be replaced unless such is the fact.
3. That in case parts are replaced no service charge will be made.
4. That their servicemen are experts in servicing and repairing.
5. That repairs can or will be made in the home in any specific number of cases which is contrary to the fact.

It is further ordered, That the complaint be, and the same hereby is, dismissed without prejudice as to respondents Lowell Ewing and Lillian Turner as individuals.

EVERETT F. HAYCRAFT,
Hearing Examiner.

OCTOBER 18, 1955.

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
February 15, 1956.

Hon. JOHN W. GWYNNE,
Chairman, Federal Trade Commission,
Washington, D. C.

DEAR MR. CHAIRMAN: Thank you very much for your letter of February 9, 1956, in reply to my inquiry concerning the procedure followed by the Federal Trade Commission in checking radio advertising in the District of Columbia. I wish to express my appreciation for your very prompt response to my letter.

I read your letter and examined the enclosures with a great deal of interest. Am I to understand that the program of supervision which you outline applies to radio and television stations throughout the country or is this program limited to the District of Columbia? The enclosures which you sent me related only to advertising in the District of Columbia, which was the specific subject of my letter. However, it appears from the general terms employed in your letter that this program applies on a nationwide basis.

Does this problem justify an extension of your program? Is the Commission's present staff adequate to accommodate such an extension, or would additional personnel be required? If so, what is the estimate as to the extra number of personnel required? To what degree does the Commission monitor radio and television broadcasting? If not, why doesn't it monitor broadcasts? Is a system of spot checking such as the Commission employs satisfactory and effective?

Is not advertising of the sort involved in the specific cases that you sent me still being carried on in the District of Columbia, particularly with respect to reconditioned electrical equipment, low-priced television sets and television repairs? Isn't such advertising now being done by means of electrical transcriptions, which, as I understand it, are not checked by your staff unless they have previously received a complaint concerning the advertisement in question?

Any further information which you can give us in accordance with the above will be very helpful to the Senate Interstate and Foreign Commerce Committee in its current hearings on radio and television.

Sincerely yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL TRADE COMMISSION,
Washington, February 27, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: This is in reply to your letter of February 15, 1956, requesting further information in regard to the procedure followed by this Commission in checking radio and television advertising.

The program detailed to you in previous correspondence on this subject does apply, as you have assumed, on a nationwide basis, the idea being to get a satisfactorily representative coverage of both national and regional broadcasts. This is because the Commission is not usually concerned, except in the District of Columbia, with purely local broadcasts. We believe the principal advertising affecting commerce is broadcast nationwide and regionally for such periods of time that our present selective sampling is effective.

It is felt that the question of whether the problem justifies a substantial extension of the program ought to be appraised in the light of its relative importance in the overall project of enforcing all the laws committed to the Commission for enforcement, which it must administer with available funds and personnel.

A small increase in personnel engaged in such survey is contemplated from existing funds, when feasible.

A reasonable lapse of time of necessity occurs between observance of false advertising and its correction. Each case requires careful investigation, preparation of complaint, and thereafter all due process of law. From this it is apparent that a considerable amount of questionable advertising now being observed is already in process of correction here in various stages. Its broadcast may continue until a cease-and-desist order is obtained and enforcement proceedings brought, if necessary.

The appearance of any form of censorship is to be avoided, and no amount of correction, after publication, is likely to prove 100 percent effective. However, I believe that, generally speaking, the Commission's present program is proving satisfactory and effective.

You inquire whether advertising of the sort involved in the specific cases sent you with my letter of February 9 is still being carried on in the District of Columbia, particularly with respect to reconditioned electrical equipment, low-priced TV sets, and TV repairs. Such advertising, I am informed, is being done by means of electrical transcriptions, and otherwise. The majority of the cases previously referred to related to bait advertising in which cease-and-desist orders have been issued.

The practices of four local TV repair shops were recently investigated by our staff, resulting in a complaint being recommended in 1 case and closing of the other 3. These practices were somewhat similar to those considered in the *Mayflower* case, Docket 6404 (reported to you previously) and involved bait advertising only in the sense that representations may have been employed in local advertising, including statements as to service charges, to obtain leads to new customers.

We also have pending in our Washington field office a case involving unfair bait advertising by a Washington radio and TV concern offering brand new TV sets for $99.

We have no pending cases involving reconditioned electrical equipment by local concerns, but we are giving current consideration to bait advertising charges filed against two sewing machine distributors in New York and one in Ohio.

We are also working on a bait advertising case involving a local distributor of hearing aids.

Investigations are pending, or have been concluded, which involve charges of bait advertising by 10 or 12 distributors of storm windows, none of whom are located in Washington. Our Bureau of Consultation is now giving consideration to an application for a trade practice conference covering the storm-window industry. None of these matters have yet reached the stage of information for general public release.

Corrective actions of the Commission, widely published as they are, particularly in trade publications of the industry affected, undoubtedly exercise a stabilizing and deterrent effect upon many who otherwise would be disposed to publication of misleading advertising claims. The extent of this effect is only to be surmised. It cannot be calculated.

In false advertising penalty proceedings for violations of Commission cease and desist orders, we have pending in the United States district courts 10 suits asking a total of over $400,000 in civil penalties, and since 1947 we have obtained over $273,000 in judgments for violations of such orders. These facts will indicate that we are sometimes obliged to, and do, go further than merely issuing our orders. However, I believe that in the great majority of cases our orders are voluntarily obeyed.

Since August 1954, when the present Advertising Unit was instituted as a part of our Compliance Division (the operations of which have been described to you in prior correspondence), 43 investigations have been started from advertising referred by it to our Bureau of Investigation. Of them, 13 or 14 involved local advertising practices culled from national and regional advertising broadcast here.

I trust this information will be helpful to your committee in its current hearings on this subject.

Sincerely,

JOHN W. GWYNNE, *Chairman.*

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
March 19, 1956.

Hon. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR MR. MCCONNAUGHEY: Thank you for your letter of March 15, 1956, in answer to certain requests for information forwarded to you by Mr. Zapple and Mr. Cox.

I note that in referring to your power to issue cease and desist orders you indicate that this procedure has never been employed to halt specific advertising practices. This seems to be consistent with a newspaper account of a recent statement of yours warning the industry to police itself in this regard and stating that the Commission has no power to deal with overcommercialization until a license comes up for renewal. Is it your position that the cease and desist procedure is not appropriate for dealing with advertising practices? If so, do you feel that Congress should enact legislation which would permit you to employ this machinery to deal with false and fraudulent advertising as well as excessive commercialization? In your opinion, would cease and desist proceedings be more effective in stamping out bad advertising practices than the mere review of the practices of the station when its license comes up for renewal?

I also note that your staff made an inquiry into some 60 situations where there appeared to be evidence of overcommercialization, but that in none of these cases was the application for renewal of the station's license denied. I would appreciate further information as to the basis for renewal of the licenses in these cases. Did you find that the complaints against the stations' advertising practices were not well founded in fact? Did you conclude that, although some of their practices were objectionable, they were not likely to repeat them? If so, has the Commission maintained a check upon the practices of these stations to see that their records in this regard have improved upon renewal of their licenses?

You state that the Commission has the responsibility for directing attention of other agencies to possible frauds. Will you please advise me in how many instances the Commission has forwarded information on fraudulent advertising to the Department of Justice or to the Federal Trade Commission?

You further point out that the Commission does not have staff personnel assigned to monitoring advertising scripts, but that you feel that it receives sufficient information on this through other means. I assume that if at any time additional personnel is required to discharge that duty you will advise the Congress. In this connection, I would like to know whether or not you regularly receive from the Federal Trade Commission information as to all cases instituted by it against the advertiser where the medium employed is radio or television? If so, are these matters then taken up with the station which carry such advertising?

Pursuant to your request I have asked the committee staff to arrange to have your letter inserted in the record of the hearings for February 7, 1956, on page 127 following line 14.

Very truly yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., April 30, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington 25, D. C.

DEAR SENATOR MAGNUSON: This is in further reference to your letter of March 19, 1956, concerning overcommercialization and alleged false and misleading advertising over the facilities of broadcast stations. One of your inquiries is directed to my position on the use of cease-and-desist proceedings in dealing with such matters. Because of the interrelationship of your questions, I have taken the liberty of answering your in letter in the following manner.

It should be pointed out that in the experience of the Commission, it has not been found necessary to resort to the use of cease-and-desist proceedings in dealing with licensees who permit the use of their facilities for allegedly false and misleading advertising. In the past, when a broadcast station has had its attention called by the Commission to the presentation of questionable advertising over its facilities, it has taken steps to correct the matter, thus obviating the necessity for formal action. You will appreciate, I am sure, that as a practical matter, broadcast licensees are not always able to test the accuracy of advertising claims made over their facilities. Generally, the first indication which a licensee receives that the advertising presented by it is false and misleading, is the receipt of a complaint either by the station or by the Commission. In those instances where the Commission receives information which indicates that a station may have permitted its facilities to be used for the dissemination of fraudulent and misleading advertising, it is the practice to inquire of the station concerning the matter in order that such action may be taken as the facts determined in the particular case warrant. In addition, it has been the practice of the Commission, in cases where there appear to be instances of fraudulent advertising, to refer a copy of the complaint to the Federal Trade Commission for appropriate action by that agency. While the latter agency does not pursue the specific practice of informing this Commission of instances where it has instituted proceedings against concerns or individuals employing the medium of radio and television in disseminating false and fraudulent advertising material, the Federal Communications Commission does receive a report from the Federal Trade Commission, published approximately weekly, setting forth all actions taken by that agency involving false and misleading advertising. However, this report does not disclose whether the media of radio and television was used for such advertising practices. In the event the report disclosed that the action taken by the Federal Trade Commission involved advertising matter presented over the facilities of a broadcast station, the matter would be taken up by us with the station involved.

As indicated in my letter of March 15, 1956, to you, section 312 (b) of the Communications Act of 1934, as amended, provides for the use of cease and desist procedures where any person (1) has failed to operate substantially as set forth in a license or (2) has violated or failed to observe any of the provisions of the Communications Act, or (3) has violated or failed to observe any rules or regulations of the Commission authorized by this act. It will be noted that advertising practices are not set forth in either the license or the Communications Act, nor has the Commission promulgated any rule or regulation governing advertising practices of station licensees. The failure to promulgate such rule or regulation has resulted from the provisions of section 326 of the Communications Act of 1934, as amended, which expressly prohibit the exercise of censorship powers by the Commission. Additionally, it should be pointed out that under section 312 (d), both the burden of proceeding with the introduction of evidence and the burden of proof in a cease-and-desist hearing rest upon the Commission. Because of these burdens, it would first be necessary to conduct a full-scale investigation in the service area of the station to determine whether sufficient probative evidence could be discovered to justify a hearing. Then, such evidence would have to be assembled, checked, and formally presented before an examiner at the hearing. Furthermore, because of the very nature of such proceeding, the hearing should be conducted in the area where the station is located. At present, budget and personnel limitations do not make such hearings practicable. Thus, it is believed that the above two cited sections make the use of cease-and-desist proceedings in dealing with advertising practices impractical, as well as of questionable legality. Personally, I have not been shown sufficient evidence to warrant legislation at this time to empower the Commission to institute such proceedings.

It should also be pointed out that if the Commission adopted the use of cease-and-desist proceedings to halt specific advertising practices, it would be to a great extent duplicative of procedures within the Federal Trade Commission. As you know, the Federal Trade Commission has jurisdiction over all false, fraudulent, and misleading advertising in interstate commerce. They have a field organization whose function is to investigate claims relative to such advertising and to present their findings to that agency for such action as it deemed necessary. Cease and desist proceedings are used by the Federal Trade Commission in dealing with false and misleading advertising, and their order halts the practice complained of, irrespective of its manner of dissemination.

With reference to your inquiry concerning the 60 stations cited for purported overcommercialization, there is enclosed a chartered summary of the Commission's inquiries into what, on initial examination of the stations' applications for renewal of licenses, appeared to be evidence of tendencies to overcommercialize. The compilation covers Federal Communications Commission action authorizing staff inquiries from October 28, 1953, through December 1, 1955, as to stations whose licenses expired during the period December 1, 1953, through December 1, 1955. It should be noted that column 7 of the enclosed chart briefly summarizes the stations' responses to the Commission's inquiries in the matter. On the basis of the submitted information, the Commission concluded with regard to 50 of the applicants (the applications of 10 are still pending), that the stations would fulfill their future responsibilities, and that a grant of their applications would be in the public interest. A further analysis of the chart will disclose that in some instances the charges of overcommercialization were not well founded, since the purported excessive showing of commercial programing was attributable to the applicants' errors in computing the program log analyses submitted to the Commission.

In granting the aforementioned applications, the Commission relied upon the good faith and cooperation of the licensees to self-regulate and self-restrain their operations within the limits of the programing representations submitted to the Commission. Thus, no independent check is made as to their subsequent operations. However, the Commission's renewal of license procedures enable it to reexamine and reevaluate the stations' overall records upon subsequent applications for renewal of licenses. At that time the Commission is afforded the opportunity to determine the extent of improvements in the stations' operations.

We regret to inform you that the Commission is unable to supply the precise number of instances in which the Commission has forwarded complaints pertaining to fraudulent advertising to the Department of Justice or to the Federal Trade Commission. The unavailability of such information is attributable to the fact that the Commission maintains no separate file for correspondence of this nature. It is not segregated, but is associated with the Commission's files on the stations involved. The effort required to enable the Commission to supply you with the information requested would entail the examination of virtually all outgoing Commission correspondence files since the Commission's inception. I am sure that you will appreciate the enormity of such a task and the tremendous expenditure of Commission manpower it would involve. I am informed that the Federal Trade Commission would have a similar problem in locating complaints forwarded by this Commission.

I hope that the foregoing information answers the questions raised in your letter, and if further information is desired, please do not hesitate to let me know.

Sincerely yours,

GEORGE C. MCCONNAUGHEY,
Chairman.

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
May 11, 1956.

Hon. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission,
Washington, D. C.

DEAR MR. MCCONNAUGHEY: This is in further reference to matters raised in my letter to you on March 19, 1956, and dealt with in your reply of April 30, 1956, regarding overcommercialization and alleged false and misleading advertising over radio and television.

There are still a number of points on which I would appreciate further clarification. Am I to understand from your letter that in every case where the Commission has received a complaint regarding the broadcasting of allegedly false and misleading advertising the station in question has discontinued such advertising upon notification from the Commission, except where it is found the advertising is in fact not improper? Do you keep a record of all such incidents in the file for each station, and do you raise an issue of general policy with any station which has a record of repeated acceptance of questionable advertising?

I was glad to know that it is your practice to refer complaints regarding advertising to the Federal Trade Commission for appropriate action. I am also glad that you receive reports from the Federal Trade Commission setting forth all action regarding false and misleading advertising. Would it be feasible for you to arrange with the Federal Trade Commission to advise you as to its cases in which such advertising was disseminated over the facilities of a broadcasting station? Would this not give you an additional source of information to be used in policing advertising practices in broadcasting?

You point out that advertising practices are not set forth in either the license issued to the station operator, the Communications Act, nor the rules and regulations of the Commission, and indicate that the Commission has failed to promulgate such rules because of the statutory prohibition against the exercise power of censorship by the Commission. It would appear to me that, without any reference to advertising practices in the act, the license, or the rules or regulations of the Commission, any instance of the continued broadcasting of false and misleading advertising would demonstrate clear failure to operate in the public interest, requiring Commission action. In connection with the matter of censorship, I am quite sure that section 326 of the Communications Act is designed only to prevent prior restraint by the Commission in advance of broadcasting, and that it cannot be construed as prohib'ting punitive measures to deal with this type of misuse of the airwaves after the fact.

You again refer to budget and personnel limitations as making it impractical to police advertising practices through cease and desist proceedings. I would again remind you that, as I have previously indicated, I would be happy to recommend the appropriation of additional funds to make possible whatever activities on the part of the Commission might be necessary to deal with this problem. In this connection, I note that you indicate you personally see no need for legislation to empower the Commission to institute such proceedings. Do you take this position because you feel the Commission already has such power, or because you feel that the use of such proceedings is not necessary in dealing with advertising practices?

You state further in your letter that if the Commission were to employ cease and desist proceedings to halt advertising practices this would duplicate the activities of the Federal Trade Commission. Is it not true that the Federal Trade Commission proceeds only against the advertiser concerned, and that any action to correct the practices of a radio or television station which has a record of continued broadcasting of improper advertising would fall completely within the jurisdiction of the Federal Communications Commission?

Thank you for sending me the information regarding the 60 stations cited by the Commission for alleged overcommercialization.

Could you please tell me what was the nature of the staff inquiry made in regard to these stations? Was it of such a nature that the Commission was able to determine precisely what the practices of the station had been in this regard? I note, of course, that with a few exceptions the licenses were reissued in rather short order. You state that this was done in reliance upon good faith of the licensees, who promised to correct any improprieties. You further indicate that no independent check is made as to subsequent operation of such stations, but that the matter is again considered when their licenses come up for further renewal. If at that time it appears that the station has not corrected the practice previously complained of, what is the policy of the Commission with regard to renewal of the license?

I am sorry to protract our correspondence on this matter, but I feel that there are important problems in this area which should be fully explored.

Sincerely yours,

WARREN G. MAGNUSON, *Chairman.*

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., May 29, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, United States Senate, Washington 25, D. C.

DEAR SENATOR MAGNUSON: This will supplement my acknowledgment of your letter of May 11, 1956, regarding overcommercialization and alleged false and misleading advertising broadcast over the facilities of radio and television stations. In your letter, you request further clarification of certain matters set forth in my letter of April 30, 1956.

With reference to your inquiries relating to false and misleading advertising, it should be pointed out that where it can be determined that a particular station has knowingly and deliberately engaged in misleading advertising, or has permitted its facilities to be so used after having its attention drawn to the fact that questionable advertising practices have occurred over its facilities, a substantial question would be raised as to the station's continuing ability to serve the public interest. The Commission would be authorized to consider this question in connection with its periodic examination of the overall station performance when application is made for renewal of license. If the record, after hearing, warrants, the Commission can deny renewal of the offending station's license. Thus far, as pointed out in my letter of April 30, 1956, it has not been found necessary to resort to such drastic measures since the Commission has not been confronted with a case involving a station which has a record of repeated acceptance of questionable advertising subsequent to inquiry by the Commission. In a number of instances, alleged false and misleading advertising has been brought to the attention of the respective stations and, in each instance, pursuant to the Commission's inquiry into the matter, the station has submitted a satisfactory explanation or has given adequate assurance that the practice or practices complained of have been discontinued and that improper advertising copy would not be broadcast in the future. I know of no case where formal action was warranted because a station failed to make a satisfactory showing with respect to alleged false and misleading advertising. In answer to your specific question, it is the Commission's practice to place the records of such incidents in the station's files.

The Commission has found the above procedure to be both expeditious and practicable. Further, it is believed that the course heretofore followed by the Commission has substantially circumscribed the broadcasting of false and misleading advertising material over the media of radio and television. For reasons set forth in my letter of April 30, I am of the view that the utilization at this time of cease-and-desist procedures in dealing with advertising practices of this nature would be administratively impracticable and, in all likelihood, would raise a serious question as to its legality.

In my letter to you of April 30, I stated that, personally, I had not been shown sufficient evidence to warrant legislation to empower the Commission to institute cease-and-desist proceedings in cases involving objectionable advertising practices. While the Commission has never been called upon to decide in a formal proceeding whether it has power to institute such proceedings, as heretofore indicated, the Commission has not found the use of such proceedings to be necessary in dealing with advertising practices.

In pursuance of the thought expressed in your letter, the Commission is planning to seek an arrangement with the Federal Trade Commission for the latter agency's submission to us of instances in which false and misleading advertising material is disseminated over the facilities of broadcast stations. In the event that such an arrangement is feasible, the Commission agrees with your observation that it would serve as an additional source of information concerning stations which provide the use of their facilities to advertisers engaged in improper advertising practices.

In my previous letter, I referred to a duplication by this Commission "of procedures within the Federal Trade Commission." I was not referring to the sanctions available to that agency and to this Commission. Rather, I had in mind the investigative procedures and expertise necessarily involved in ascertaining the actual falsity or misleading character of the objectionable advertising. As you indicate in your letter, we have jurisdiction over station licensees but not over sponsors.

To illustrate the nature of the inquiry made by the Commission with respect to a station's operations and alleged overcommercialization, there is enclosed a sample letter used to elicit additional programing information in such cases. The Commission has found that a station's response to such an inquiry usually results in the submission of detailed information pertaining to the circumstances surrounding the alleged overcommercialization. This information permits the Commission to determine whether renewal of the station's license, and its continued operation, would be in the public interest. In the event the licensee should fail to self-regulate and self-restrain its operations within the programing representations submitted to the Commission in such a response, the Commission, upon subsequent application for renewal of license would again defer the station's renewal application and inquire into its continued ability to serve the public interest.

I trust that the foregoing information answers the questions raised in your letter. If further information is desired, please advise me and I shall endeavor to supply it.

By direction of the Commission.

GEORGE C. MCCONNAUGHEY, *Chairman.*

GENTLEMEN: This has reference to your application for renewal of license of Station ———. The Commission considered your application on ——— and deferred action pending further study of the program service.

A review of the program analyses submitted with the renewal application indicates that Station ——— devoted more than — percent of total time to commercial programs and broadcast ——— commercial announcements during the 1955 composite week. Additionally, it appears that there has been a failure to include agricultural, educational, and discussion programs in the station's offerings.

A station is not expected to conform to a rigid standard with respect to the amount of time it devotes to particular types of programs or the amount of time it devotes to commercial programs. The Commission is aware that, in the day-to-day operation of a broadcast station, numerous questions of policy will determine the selection of programs so that the amount of time devoted to particular types will vary with the facts and circumstances in each case. Also, the Commission recognizes the limitations under the act whereby it cannot direct a licensee to broadcast or refrain from broadcasting a particular program or to censor the content of a particular program. Nevertheless, it has been the experience of the Commission that a comparatively high percentage of commercial time and the failure to include agricultural, educational, or discussion programs in the program structure are sometimes indcative of the failure on the part of the licensee to maintain a well-balanced program service which serves the needs and interests of the community. In view of these considerations, your comments regarding programing matters are requested.

The information requested herein should be filed at your earliest convenience in order that further consideration may be given the application for renewal of license.

Very truly yours,

MARY JANE MORRIS, *Secretary.*

LETTERS FROM MEMBERS OF THE PUBLIC

EARLE C. ANTHONY, INC.,
February 14, 1956.

HON. WARREN MAGNUSON,
United States Senator,
Senate Office Building, Washington, D. C.

DEAR SENATOR MAGNUSON: I refer to information we have received relative to the Senate hearing pertaining to "false and fraudulent" sales pitches.

On behalf of one of the radio stations that was adhered to a firm policy in the matter of ethical advertising, I wish to congratulate you and thank you and the committee for your concern against this bad business practice. This practice, which seems to be condoned by the authorities, has become so flagrant in recent years that we feel a protest such as yours is long overdue.

We are proud of the fact that our listeners rely upon our integrity in program and commercial content, as well as our selectivity in our sponsors, and are fully aware that any deviation from this concept can only deteriorate our industry.

We appreciate the stand you are taking and wish you success in alerting the Federal Trade Commission to this situation.

Very truly yours,

CHARLES HAMILTON,
Assistant to the President.

ST. ALBANS 12, N. Y., *February 9, 1956.*

Hon. WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I was much interested in reading, in the New York Times of yesterday, your criticism of radio advertising. I would like to add my support, and that of many in the audiences I address, in my work as an instructor and lecturer.

For some time, I believe, that there have been excessive liberties taken by the advertisers, when sponsoring the products they represent over radio and television.

There are three very glaring faults that I have found: (1) the announcements are exaggerated and superfluous; (2) they are very often misleading, and sometimes false; (3) they are represented by glamor, both in the text and by the individuals who deliver and "act" the text.

In addition, I believe they may be exceeding the time allowed for advertising on programs.

I have written both to the Federal Trade Commission and the Federal Communications Commission, and have had no satisfaction. In one or two cases, they have not even answered my letters.

I believe this matter should be very much more carefully checked, and something should be done to bring these announcements within the range of truth and modesty.

I hope that you and your committee will follow through in this matter.

Sincerely yours,

AUGUSTUS E. CALIFANO.

RADIO ENTERPRISES, INC., (AMERICAN BROADCASTING CO.),
El Dorado, Ark., February 8, 1956.

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D. C.

DEAR SENATOR: Relative to our telephone conversation, I would like to expand my remarks on the subject of false and fraudulent claims made in radio advertising. Of course, many of these same ads are run in the printed media, but that is no concern of mine.

I have worked diligently at this business of cleaning up radio during the past several years. During my term as president of the Arkansas Broadcasters Association, our group was vitally concerned with a rash of rebuilt sewing machine and vacuum cleaner deals.

The broadcasters of our country are deeply concerned with the welfare of our listeners. We feel a deep obligation to protect them from such deals offered by unscrupulous merchants.

We try our best to investigate each deal that might seem the least bit misleading, but we admit that other fraudulent schemes have slipped by us.

It would be next to the impossible to clear each and every offer we handle in a day—with a thorough investigation. However, upon finding such a scheme or discovering advertising which is fraudulent or misleading, the broadcaster will immediately take steps to cease such advertising on his facilities.

Under the present system of the Federal Trade Commission (in checking the local advertising on broadcast stations), it is not possible to secure an actual picture of what the public is being offered.

On the other hand, it is an unjust hardship on the broadcaster to require copies of every ad run on each day of a year. We are currently plagued with forms, reports, and questionnaires as it is.

I feel that the answer to your problem might be found in more active trade organizations of various types. Let the trade organization help police themselves. We, as broadcasters, cannot be sure of every claim made by an advertiser. After all—we are broadcasters—not furniture men, car dealers, or vacuum machine salesmen.

As a broadcaster, may I say that we are most anxious to help clean up any existing advertising practices that are either fraudulent or misleading. We will continue our investigations into advertising that does not appear to be accurate or in good faith. It is my hope that some method of self-policing can be worked out among both the broadcasters and the various trade organizations, because I am strongly opposed to any form of Government control or restrictions or any business that would prohibit fair trade or the right to operate on a competitive basis.

I enjoyed talking with you and hope to hear from you.

Regards

W. N. McKinney,
General Manager.

Aluminum Products Co.,
Salisbury, Md., February 11, 1956.

Senator Magnuson,
Senate Office Building,
Washington, D. C.

Dear Senator Magnuson: I read in the Baltimore Sun paper under date of February 8, 1956, that you had "accused some radio advertisers of engaging in 'false and fraudulent' practices by which the public is bilked" and "we ought to make a rundown on some of these fantastic offers."

You have my enthusiastic approval for all efforts your committee may make along this line, and especially may I recommend that you investigate thoroughly the fantastic offers made in the aluminum storm window and door business.

These radio and newspaper advertisers follow the well-known "bait and switch" game of which every better business bureau is well acquainted.

Our local area on the Eastern Shore of Maryland has for the better part of a year been subjected to their advertising, mostly in our local Salisbury Times, but also from radio stations in Philadelphia and Baltimore.

These "bait and switch" operators advertise storm windows at a ridiculously low price, from $6.50 to $9.99, but after you call or write them, if you insist on the advertised window, they never deliver. The salesman of such a firm must switch the customer to the "de luxe" window, which in every case is an inferior product at a highly inflated price.

Firms engaging in this type of advertising as a rule operate "out of a hat," have no address except a mail pickup or a box, employ every unethical sales practice in the book, are not set up to give any service on their installations, and in case of legal suit, quickly change their name and continue their false and misleading advertising.

I estimate that these baiters have taken from the local dealers in this area about 50 percent of our business in the last 6 months, and are making it hard for legitimate local dealers to stay in business.

Anything your committee can do to expose and give publicity to this racket will be appreciated.

Sincerely yours,

Allen C. Gregory.

Wessen Buick Co.,
Los Angeles, Califg., February 14, 1956.

Senator Warren Magnuson,
Senate Building, Washington, D. C.

Dear Senator Magnuson: I have read with great interest the news item of February 7 about your comments at a hearing of the Senate Commerce Committee on the subject of radio and television advertising. It seems to me that it is high time someone interested themselves in this deplorable situation.

For several years now the Los Angeles Motor Car Dealers Association has made substantial contributions to the Better Business Bureau to help underwrite the expense of controlling and eliminating fraudulent and misleading advertising from all media. We have met with some success, but find the most difficult job lies in radio and television. Here it is easier to deviate from prepared script, and a clever announcer can change the meaning of a statement so that only an experienced person in advertising can detect the falsifications in it.

As a businessman in a very competitive field, I feel that we should operate with a minimum of laws and regulations, but here is one phase of our economic life that is in desperate need of some controls against the false and fraudulent advertising that is all too common today.

Under present laws, many radio and television stations accept most any kind of advertising copy, and unless the Better Business Bureau does something about it, the advertiser and his advertising agency go on with ever-increasing dishonest "pitches."

It is the feeling of many automobile dealers as well as businessmen in other fields, that advertisers, advertising agencies and radio and television stations should be held fully responsible for the truthfulness and accuracy of all commercials given.

I could write pages about the clever way automobile copy is handled over the air, but you are undoubtedly quite familiar with all this.

Please read the enclosed article that I have clipped from the February 6th issue of Automotive News. This is one of the practices that the great majority of new car automobile dealers want stopped.

Please continue your efforts to correct this serious and dangerous condition that has been going on too long.

Sincerely,

J. T. WESSEN.

[From Variety, February 22, 1956 (editorial)]

IT'S HAPPENED AGAIN

The NARTB meets regularly and indulges in discussions on sundry matters, sometimes realistic, sometimes lofty. It has yet to do something about policing the fast-buck indies who, seemingly, have no compunction in lending their facilities to propagate food clubs, blue-sky stock peddlers, dubious underwriting propositions and the like.

And they get caught every time, but not without helping to do much trouble, because no more vivid medium of propaganda exists for the radio pitchman. The food clubs came first. Recently the "let's pay your debts for you" boys got curbed, but only after New York State Attorney General Jacob K. Javits got into the act. And now the same arm of the law succeeded in getting a temporary injunction restraining Tellier & Co., a Jersey City securities dealer, from doing business in New York. The concern is accused of fraudulent practices in the sale of uranium and Alaskan telephone securities involving $1 million. Tellier was a large user of spot commercials on the indie Manhattan and nearby Jersey stations covering the New York metropolitan area.

It might be more in the public interest for the eager-beaver time sellers on any of those stations to take stock of how the AM time is being used and abused. They should do it not only in the public interest but also with an immediate eye to the goodwill engendered by the station in becoming party to such a dubious pitch. It doesn't require much perspicacity for that—all you got to do is just listen to a sample of the unctuous pitch with its almost open-and-shut blue-sky ballyhoo.—*Abel.*

APPENDIX II

FCC 55-314

FEDERAL COMMUNICATIONS COMMISSION

Washington 25, D. C.

PRELIMINARY REPORT OF THE FEDERAL COMMUNICATIONS COMMISSION TO THE SENATE INTERSTATE AND FOREIGN COMMERCE COMMITTEE WITH RESPECT TO VHF-UHF AND TELEVISION NETWORK PROBLEMS

1. In evaluating the current status of television broadcasting and in determining how it may best develop in the future, we think it essential to keep in mind the positive advances which have been made in the less than 3 years since the "freeze" was lifted. In July 1952, when the first postfreeze station was granted, there were only 108 television stations in operation; at the present time more than 425 are in operation. In 1952, 63 markets had 1 or more local stations—in most cases 1; now there are over 4 times as many communities with their own television facilities, 100 of which have 2 or more facilities. The pub-

lic's acceptance of the expanded television service has been overwhelming. The number of television receivers in the hands of the public has grown from 20 million to 35 million; and today almost 70 percent of American homes have a television receiver. The American people have already invested over $10 billion in television receiving equipment and the annual volume of television advertising, set sales, servicing, and operating combined runs close to $4 billion per year.

2. We mention these figures at the outset to stress the fact that the problems raised by the Plotkin and Jones reports are not whether we can develop an adequate television service—for we already have such a service. The problem with which these reports and your committee's study is concerned is rather how we can best insure the fullest development of the industry's potentialities in line with the needs and desires of the American public and the abilities and ingenuity of the American broadcasters. So much has been accomplished in so short a time that we cannot but feel optimistic that the remaining problems can be resolved through constructive planning and cooperation among all interested groups.

3. The Commission in formulating its national television assignment plan and the associated rules and standards in the sixth report, was seeking to promote several different objectives designed to provide television service and facilities to the Nation. It gave first precedence to making available at least one service to all areas of the country; second priority to making a local facility available to as many communities as possible; third and fourth priorities to making second services and second local facilities available wherever possible; and allocated the remainder of the channels so as to achieve a fair, efficient, and equitable distribution of television service and facilities throughout the Nation.

4. Many of the Commission's objectives have been largely fulfilled. While it is difficult to provide any precise figures, it is estimated that over 90 percent of the people of the country are now within service range of at least 1 station. A large portion of the public, perhaps as much as 75 percent, is within service range of 2 or more stations. Furthermore, 255 communities have at least 1, and 100 of these have 2 or more, local television facilities in operation.

5. However, it is evident that there are substantial obstacles (for example, limited economic support) presently in the way of bringing a first local outlet to hundreds of smaller communities as well as in expanding the number of multiple, competing services in the larger economic and population centers of the country. A major obstacle is the high cost of television programing during this early stage in the development of the art, which makes the securing of a substantial amount of network and similar programing a prerequisite to successful station operation. Of even greater importance is the failure, thus far, of UHF stations to become fully integrated with established VHF stations into an economically sound nationwide television service. To a large extent these two problems, the securing of adequate programing and the UHF problem, intermesh.

6. Thus, while there is some indication that many larger communities can support 3 stations when all of the stations are in the VHF band, these same communities may be unable to support at the present time 3 stations when only 2 of the stations are VHF and the third is UHF. The failure of UHF to become integrated with VHF is manifested by the fact that of 318 UHF stations authorized by the Commission, only one-third are presently in operation. Many authorized were never actually constructed. And the financial outlook for a number of the operating UHF stations is by no means bright. The plight of UHF has been discussed in detail in the presentation of Commissioner Hyde and other witnesses at the Potter hearings, as well as in the Plotkin and Jones documents.

7. It has been argued that the difficulties encountered by most UHF stations, and by some VHF stations, are the result of the inability of the economy to absorb the suddenly increased number of stations. We cannot, of course, predict the exact nature of the future development of the television industry, nor is it the Government's function to create television service where there is no demand or economic basis for such service. It is essential, however, that television's capacity for future growth not be impaired by any artificial curtailment of channel space. To achieve its full potentialities, we believe television will eventually utilize a number of channels in the order of those presently allocated to it, just as AM broadcasting developed its present national pattern within the 107 channels allocated to that service.

8. The majority of the Commission agree with the conclusions reached in both the Plotkin and Jones reports that the only practicable course of Commission action lies in doing what is possible to promote the present allocation plan

utilizing both VHF and UHF channels. The addition of substantial new VHF space or the movement of all television stations to the UHF would involve such tremendous dislocation of existing operations and have such a severe impact on millions of viewers that such action should be considered as a possible alternative only if Congress itself were to determine that the long-run benefits to the publc required adoption of such drastic remedies. Therefore, the Commission has taken, and is contemplating, a number of specific actions calculated to enhance the potentialities for television's growth within the existing allocation system. No one of these moves, in and of itself, provides or is intended to provide any cure-all. But their cumulative effect, we believe, will be beneficial.

9. Thus, it is expected that the acquisition of UHF stations by certain multiple owners as a result of last year's modification of our multiple ownership rules will help to strengthen UHF in such markets as Milwaukee, Portland, Oreg., and Miami where such parties have recently acquired UHF outlets. Similarly, we believe the Commission's policy in permitting UHF satellite stations to rebroadcast programs of established stations in areas which might otherwise not be able to support a station will prove helpful. We also have two rulemaking proposals under consideration which offer promise of facilitating the growth of additional television outlets and of maintaining existing stations. One of these would authorize low-power operation in communities of less than 50,000 population; the other would preclude the establishment of transmitter sites more than 5 miles from the city in which the station is authorized unless special reasons for such locations can be established.

10. As part and parcel of the same problem, the Commission is considering ways by which the cost of intercity transmission of programs can be minimized. It is attacking this problem in two directions: First, we have instituted rulemaking looking toward the freer establishment of private intercity relay systems by the broadcasters themselves. In this connection, the telephone company has initiated suggestions looking toward the establishment by it of an off-the-air pickup service which the company believes could be provided at charges substantially less than those required for direct network connections. At the same time, we are continuing to review the existing charges of the telephone company for direct intercity program transmissions and expect to be able to conclude the outstanding proceedings as to this matter in the near future.

11. "Selective deintermixture" has been suggested as another possible line of approach. The Commission has been requested to reconsider certain actions it has already taken in this area to determine whether it might not be possible, with a minimum of dislocation of existing services, to insure that a number of markets become or remain UHF-only communities or are restricted to a single VHF station. The theory of such deintermixture is that it would provide for more balanced competition in the various communities, while at the same time strengthening UHF generally by increasing the number of "islands" of permanent UHF stability. The Commission is presently studying this problem to determine the feasibility of any such limited deintermixture—a study which necessarily involves such questions as the other VHF service available to the communities from outside and the effect that the elimination of VHF operations in some of the areas would have on rural coverage. We are unable at this preliminary stage in our consideration to offer any definitive answer to these questions. However, we are presently considering the circumstances, if any, under which such limited deintermixture may be appropriate in the public interest.

12. A related and highly important problem referred to in both reports is the inability of most outstanding sets to receive UHF programs. Of the 35 million receivers in the hands of the public, only 5 million are UHF-equipped. We also note with some concern that less than 20 percent of the sets now being produced are all-channel receivers. It may well be that this lack of UHF receiving equipment, as well as the delay in developing high-power transmitting equipment, have been the most important single factors in the relative backwardness of UHF development.

13. The Commission has no direct regulatory authority over the manufacturers of radio and television receiving equipment which would enable it to require manufacturers to adopt any particular course of conduct. It is the Commission's view, however, that removal of the excise tax on the manufacture of all-channel receivers would conduce to the wider distribution and sale of all-channel sets and the Commission therefore favors legislation toward this end. In this connection, the Commission also believes that voluntary action by manufacturers looking toward the expanded production of all-channel sets to the greatest extent practicable would be extremely helpful in assisting the development of the UHF.

14. Over and beyond these specific measures the Commission believes that a general study by the Commission into the entire economic structure and operations of the television industry is essential. This study would include, but not be limited to, consideration of the respective roles of the networks, advertisers, agencies, talent, independent film producers and distributors, and other program sources as well as other means of distributing programs to the public. The essential objective of such a study would be to obtain for the first time a factual basis for evaluating the necessity and advisability of any action by the Commission, Congress, or the Department of Justice in this area.

15. In our opinion, the network problems referred to in both the Plotkin and Jones reports cannot be considered by themselves but are inextricably interwoven within the structure of television programing. Only through a study such as we are proposing will we have a proper basis for evaluating the various types of regulatory proposals which have been suggested. While network programing is admittedly of crucial importance to profitable station operation at the present stage of development, the Commission believes that establishing an economic base for the growth of new stations lies not in any artificial restriction or redistribution of network programing but in an overall expansion of all sources of programing.

16. The Commission has long believed that an overall study of the broadcast industry, including a review of the network rules, should be made. The last such comprehensive study was conducted in 1938–41 with respect to AM broadcasting and led to the promulgation of the chain broadcasting and multiple ownership rules. We have informed both the legislative and appropriations committees of the Congress on numerous occasions since the end of World War II of the need for a new study. But we have also indicated, and here reiterate, that any such study by the Commission, if it is to be meaningful and productive, requires a high-caliber staff. This staff would have to devote full attention to the study. As a result, we would need to recruit immediately additional personnel in order to avoid disruption in the essential work of the Commission. Neither the Bureau of the Budget nor the Congress has seen fit to make available the funds necessary for conducting such a study; such supplemental sums as have been appropriated have been earmarked for application processing. No funds have been allowed by the Bureau of the Budget in our present budget proposal for fiscal 1956 to establish such a staff—though we had originally asked for funds sufficient to establish at least a skeleton staff to make a start on the problem.

17. It is the Commission's view that the type of study contemplated in this field cannot be completed within 1 fiscal year. We think it would be appropriate, therefore, for such a Commission study to be authorized and the funds therefor appropriated pursuant to a congressional resolution. This was done in the 1935 telephone investigation, at which time Congress specifically authorized the Commission's continuing study by a resolution (Public Res. No. 8, 74th Congress). We are prepared to present to the committee in detail the subject matter to be covered by the proposed study and the funds and staff required.

FCC 55-590

Interim Report of the Federal Communications Commission to the Senate Committee on Interstate and Foreign Commerce

1. In our preliminary report we noted that we were contemplating various actions designed to strengthen the structure of television broadcasting within the existing allocation plan utilizing both VHF and UHF channels. By this interim report the Commission is bringing the committee up to date on the status of the various measures the Commission has under consideration.

2. As indicated in our preliminary report, "selective deintermixture" has been suggested as one possible line of approach to alleviate some of the problems now confronting UHF stations and to enhance the potentialities for the further growth of the television service. We noted that a number of petitions requesting selective deintermixture were then pending and that we were considering the circumstances, if any, under which limited deintermixture might be appropriate in the public interest. In this connection, on March 31, 1955, the Commission instituted rulemaking proceedings to look into deintermixture of television assignments in Peoria, Ill.; Evansville, Ind.; Hartford, Conn.; and Madison, Wis. In addition, the Commission is engaged in a similar proceeding with respect to the Albany, N. Y., area. Copies of the Commission's notices of proposed rulemaking institut-

ing these proceedings are enclosed for your information. Your attention is directed to the matters specified by the Commission in the enclosed notices with respect to which the Commission has asked that data be submitted. The date for filing written comments in the proceedings was originally specified as May 2, but in response to requests from several of the parties, was extended to May 17, 1955. You will note that the Commission has also stated that subsequent to the submission of written comments, oral argument will be held before the Commission en banc. The Commission hopes that as a result of the procedures to be followed in these proceedings, it will have a firm, factual basis for determining the need, feasibility, and circumstances, if any, under which deintermixture would be warranted in these communities.

3. In addition to the several communities listed above for which we have instituted rulemaking proceedings, the Commission also has pending similar requests for deintermixture in a number of other cities.

4. Since the submission of our preliminary report to the committee we have initiated another rulemaking proceeding aimed at improving the VHF–UHF relationship. It is apparent that, as compared with VHF, the signals from UHF transmitters have less tendency to fill in areas which are not in direct line of sight with the transmitting antenna. One means of providing UHF coverage in such shadow areas may be the use of amplifying transmitters, sometimes referred to as boosters. The purpose of the rulemaking proceeding, which was initiated March 31, is to determine whether such operations would present a feasible means for increasing the coverage of UHF stations. The time for filing comments in this proceeding has been designated as May 20, 1955; and a copy of this notice is also enclosed.

5. We wish also at this time to note the status of rulemaking proceedings which we have previously brought to the committee's attention. One of these proceedings relates to the authorization of low-power stations in communities of less than 50,000 population; another deals with a proposal to preclude the establishment of transmitter sites more than 5 miles from the city in which the station is authorized unless an adequate basis for such location can be established. The time for filing comments by interested parties in both of these proceedings has expired, and we are now in the process of analyzing the various comments submitted.

6. Another rulemaking matter referred to in our preliminary report concerned ways of reducing the cost of intercity program transmissions. It was noted that a rulemaking proceeding had been initiated for the purpose of relaxing present restrictions on the establishment of private intercity relay systems by the broadcasters. In view of the response by the American Telephone & Telegraph Co. indicating their willingness to provide an off-the-air pickup type of intercity service at substantially less than present charges for direct network connection, the Commission, on April 1, issued a further notice of proposed rulemaking to obtain the views of interested parties on this new proposal. Comments are still being received on this matter.

7. We wish also to call your attention to the appropriation of $80,000 proposed by the House in connection with the Commission's 1956 budget allocation "to make a study of radio and TV network broadcasting." In a statement presented to the Senate Appropriations Committee on May 5, we indicated our views that such a study would be very worthwhile. We stated, however, that it should not be limited to networking but, as indicated in our previous report to your committee, the study should be concerned with the entire economic structure and operation of the industry. Such a study, we suggested, would be a large undertaking and would require more staff and time than contemplated by the House bill. We stated to the Senate Appropriations Committee that the suggested $80,000 appropriation would enable the Commission to establish the staff to initiate the study, draw up the detailed procedures, and make substantial progress in the first, or factfinding phase of the study.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., July 21, 1955.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: The Commission is herewith transmitting its second interim report with respect to television network regulation and the

UHF problem. This report will apprise the committee of the present status of various actions previously reported as well as new measures initiated by the Commission.

By direction of the Commissison:

GEORGE C. MCGONNAUGHEY, *Chairman*.

SECOND INTERIM REPORT OF THE FCC TO SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

The committee has requested that the Commission furnish reports at 60-day intervals on the subject of network regulation and the UHF problem. This is the Commission's second interim report and will apprise the committee of the present status of the various actions previously reported as well as new measures which have been initiated since our previous report.

Deintermixture.—On June 27 and 28, the Commission heard oral argument with respect to deintermixture in 5 specific localities—Peoria, Ill.; Evansville, Ind.; Hartford, Conn.; Madison, Wis., and Albany, N. Y.

Low power.—On June 22, we issued a final report amending our rules to reduce the minimum power requirement for TV stations without regard to the size of the city. Our new rules permit stations to operate with a mimimum power of 100 watts with no minimum antenna height specified. (Report and order enclosed.)

Chain broadcasting.—On June 22, 1955, the Commission amended its television chain broadcasting rules to remove a restriction which operated to preclude stations from contracting with networks for particular programs when a station with overlapping coverage in another community had contracted for "first call" on the same network programs. The revised rules restrict the right of stations to contract for "first call" rights on network programs to the communities in which they are located. (Report and order enclosed.)

Amplifying transmitters or boosters.—Our previous interim report referred to a proceeding to consider the authorization of amplifying transmitters or boosters intended to fill in shadow areas of UHF transmitters. The Radio-Electronic-Television Manufacturers Association has requested that the time for filing comments in this proceeding be extended to July 21, and this request has been granted.

High power for UHF.—On June 22, the Commission issued a notice proposing to amend its rules to increase the maximum permissible effective radiated power for UHF stations from 1,000 to 5,000 kilowatts. In the same proceeding the Commission requested data relating to the sensitivity of UHF sets and tuning mechanisms. (Notice of proposed rulemaking enclosed.)

Pending actions.—No action has as yet been taken on two other rulemaking proceedings mentioned in our previous report. One of these proceedings is a proposal to limit transmitter sites to within 5 miles of the city in which the station is authorized, and the other concerns ways to reduce the cost of intercity program transmissions.

The committee will also be interested to know that the Commission on July 20 took action setting up a Committee of Commissioners to institute and carry on a study of radio and television network broadcasting as authorized by the Congress in appropriating funds specifically for such a study during the fiscal year 1956 (order enclosed).

FEDERAL COMMUNICATIONS COMMISSION

Washington 25, D. C.

Delegation Order No. 10

IN RE DELEGATION ORDER FOR COMMITTEE OF COMMISSIONERS

ORDER

At a session of the Federal Communications Commission held at its offices in Washington, D. C., on the 20th day of July 1955,

IT APPEARING, That it is necessary to the proper functioning of the Commission and the prompt and orderly conduct of its business to refer to a committee of Commissioners the work, business and functions of the Commission in connection with the study of radio and television network broadcasting provided for by Public Law 112, 84th Congress, First Session;

IT IS ORDERED, Pursuant to the provisions of Section 5 (d) of the Communications Act of 1934, as amended, and Section 0.201 of the Commission's Rules and Regulations that there be designated a committee of four Commissioners, composed of Chairman George C. McConnaughey and Commissioners Rosel H. Hyde, Robert T. Bartley, and John C. Doerfer; that there be referred to this Committee the conduct of the study of radio and television network broadcasting provided for as aforesaid; and

IT IS FURTHER ORDERED, That the committee so designated shall be and hereby is instructed to institute and carry on a study of radio and television network broadcasting, with the same powers and jurisdiction conferred by law upon the Commission, all as provided for in the Communications Act of 1934, as amended.

FEDERAL COMMUNICATIONS COMMISSION,
MARY JANE MORRIS, *Secretary.*

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., November 17, 1955.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington 25, D. C.

DEAR SENATOR MAGNUSON: The Commission, as you know, has been giving close attention to the matter of television service, and recently took a number of actions in this field.

On November 10, 1955, the Commission instituted a rulemaking proceeding to consider all possible overall solutions, on a nationwide basis, to the difficulties now confronting the fuller development of a competitive nationwide television service. Interested parties have been afforded to December 16, 1955, to file comments in this proceeding, with reply comments due January 6, 1956. Copies of the Notice of Proposed Rule Making are enclosed.

On the same date, the Commission, in the light of the general rule making proceeding, denied requests for selective deintermixture of commercial VHF and UHF channels in Peoria, Evansville, Madison, Hartford and Albany. The Commission also rejected requests for the institution of rule making to achieve deintermixture in various other scattered communities or to add channel assignments by means of substandard spacings. Copies of the Commission's report and order and memorandum opinion and order taking these actions are also enclosed. Views of dissenting Commissioners are attached to the decisions.

As more fully explained in the enclosed decisions, it was the Commission's view that the problem of deintermixture could not be approached on the piecemeal basis of scattered communities but, along with all other remedies, must be considered in the general proceeding which will explore the matter from a national standpoint.

At the same time, the Commission concluded that the public interest would be served by the assignment of channel 10 to the community of Vail Mills, N. Y. This assignment can be accomplished in complete conformity with the Commission's present rules and engineering standards, and the Commission concluded that it would not be justified in withholding from the public the additional service that can be afforded by this facility pending the general proceeding. The Commission pointed out that this assignment differs from the requests for deintermixture, or for the assignment of additional channels at substandard spacings, in that the latter proposals involve basic departures from the present television structure.

It is the Commission's firm belief that its recent action represents a significant step toward the realization of a truly nationwide competitive television service. The Commission will continue to give this matter careful attention and will keep your committee fully advised of subsequent action.

By Direction of the Commission.

GEORGE C. MCCONNAUGHEY, *Chairman.*

FCC 55-1125
24918

BEFORE THE FEDERAL COMMUNICATIONS COMMISSION

Washington 25, D. C.

Docket Nos. 11238, 11333, 11334, 11335, 11336

IN THE MATTER OF AMENDMENT OF SECTION 3.606, TABLE OF ASSIGNMENTS, RULES GOVERNING TELEVISION BROADCAST STATIONS

REPORT AND ORDER

By the Commission: Commissioners Hyde and Bartley dissenting and issuing statements; Commissioner Webster concurring in part and dissenting in part and issuing a statement.

1. The Commission has before it for consideration five proceedings concerning requests for the deintermixture of VHF and UHF television channel assignments in specific communities and a request for the addition of a VHF channel assignment in one community. The Commission issued a Notice of Proposed Rule Making concerning the proposal to assign Channel 10 to Vail Mills, New York on December 17, 1954. On March 31, 1955, the Commission issued Notices of Proposed Rule Making in the Peoria, Evansville, Madison and Hartford deintermixture proceedings. On April 21, 1955, the Commission issued a Notice of further Rule Making in the Vail Mills case to consider the deintermixture proposal for the Albany-Schenectady-Troy area. Oral Argument in the five cases was heard before the Commission on June 27 and 28, 1955. Following is a brief summary of the proposals:

(*a*) *Peoria, Illinois* (*Docket No. 11333*)

This proceeding involves the joint request of two UHF broadcasters in Peoria, Illinois-West Central Broadcasting Company (WEEK-TV) and Hilltop Broadcasting Company (WTVH)—for deintermixture of commercial VHF and UHF assignments in the Peoria area by reserving VHF Channel 8 in Peoria for noncommercial educational use in place of UHF Channel 37; or, in the alternative, by deleting Channel 8 from Peoria, substituting UHF Channels 31, 78 or 82 therefor, and shifting Channel 8 to some other community. Plains Television Corporation (WICS), Springfield, Illinois, requests that Channel 8 in Peoria be shifted to Illipolis, Illinois, to provide additional VHF service to the Springfield area in the event Springfield is not also deintermixed by the removal of Channel 2. Other parties participating in the proceeding include WIRL Television Company and WMBD, Inc., applicants for Channel 8 in Peoria; Bradley University, and the American Farm Bureau Federation. In addition to the pleadings and material in the record of the proceeding when Oral Argument was heard on June 27–28, 1955, the Commission now has before it the following pleadings: "Petition to Adopt Policy of Deintermixture or for Alternative Relief", filed by Plains Television Corporation on October 18, 1955; "Opposition to and Motion to Dismiss" the foregoing petition, filed by WMBD, Inc., on October 21, 1955, an Opposition to the foregoing petition filed by WIRL Television Company on October 25, 1955; and Petitions for Further Oral Argument filed on November 4, 1955 by West Central Broadcasting Company, Hilltop Broadcasting Company, and Plains Television Corp.

(*b*) *Evansville-Hatfield, Indiana* (*Docket No. 11334*)

This proceeding involves the request of two UHF broadcasters in the Evansville area—Premier Television, Inc. (WFIE), Evansville, and Ohio Valley Television Company (WEHT). Henderson, Kentucky—for deintermixture of the commercial VHF and UHF assignments in the Evansville-Hatfield area by deleting Channel 9 from Hatfield and by either reserving Channel 7 in Evansville for education or deleting it. Petitioners suggest that Channel 56 can be added to Evansville and Channel 78 to Hatfield. If Channel 7 in Evansville is deleted rather than reserved, Channel 39 is suggested as an educational frequency. Mid-America Broadcasting Corporation (WKLO-TV) Louisville, Kentucky, requests that the Evansville-Hatfield area be deintermixed by reassigning Channels 7 and 9 to Louisville, Kentucky. To accomplish these channel shifts, Mid-America requests that the rules be amended to permit television stations to operate at reduced separations with directional antennas. Other parties participating in the proceeding include Evansville Television, Inc., Consolidated

Television & Radio Broadcasters, Inc., and On The Air, Inc., applicants for Channel 7 in Evansville; Owensboro Publishing Company and Owensboro On The Air, Inc., applicants for Channel 9 in Hatfield; Congressman Winfield K. Denton (8th District of Indiana); the Evansville Chamber of Commerce and Evansville College. In addition to the pleadings and material in the record of the proceeding when Oral Argument was heard on June 27–28, 1955, the Commission now has before it two petitions filed on October 17, 1955, by Mid-America Broadcasting Corporation and by Premier Television, Inc., and Ohio Valley Television Co. jointly, requesting "Time to File Additional Comments", Opposition to the petition of Mid-America Broadcasting Corporation, filed by Evansville Television, Inc., on October 27, 1955, an Opposition to both petitions filed by Owensboro On The Air, Inc. on October 27, 1955, and by On The Air, Inc., on October 28, 1955, and an Opposition to the joint petition of Premier Television, Inc. and Ohio Valley Television Co., filed by Evansville Television, Inc., on October 28, 1955. Also, on November 7, 1955, Mid-America Broadcasting Corp., Premier Television, Inc. and Ohio Valley Television Co., filed Supplements to their October 17 Petitions, making further requests discussed in Paragraph 11, below.

(c) *Madison, Wisconsin, and Rockford, Illinois* (*Docket No. 11335*)

This proceeding involves the requests of two UHF broadcasters in Madison—Monona Broadcasting Company (WKOW-TV) and Bartell Television Corporation (WMTV)—for deintermixture of commercial VHF and UHF assignments in the Madison area by shifting the educational reservation in Madison from Channel 21 to Channel 3. Another UHF broadcaster in Rockford—Winnebago Television Corporation (WTVO) requests that commercial deintermixture be achieved in Madison by deleting Channel 3 from Madison, substituting Channel 39 therefor, and by assigning Channel 3 to Orangeville, Illinois, so as to make Madison an all-UHF city and Rockford an all-VHF area. Alternatively, Winnebago Television suggests that Rockford be made an all-UHF area by deleting Channel 13 from Rockford, substituting Channel 51 therefor, and assigning Channel 13 to Aurora or Elgin, Illinois. Other parties participating in the proceding include Radio Wisconsin, Inc., and Badger Television Company, Inc., applicants for Channel 3, Madison; the State Radio Council of The State of Wisconsin (WHA-TV), Madison, and the Greater Rockford Television, Inc. (WREX-TV). In addition to the pleadings and material in the record of the proceeding when Oral Argument was heard on June 27–28, 1955, the Commission now has before it the following pleadings: "Petition for Taking of Official Notice or for Limited Reopening of Record" filed on August 29, 1955, by Monona Broadcasting Company, and Bartell Television Corporation; a Response to the aforementioned petition filed on September 7, 1955, by Radio Wisconsin, Incorporated; "Petition to Adopt Policy of Deintermixture or for Alternative Relief" filed on October 18, 1955, by Winnebago Television Corporation, a Motion to Strike the Winnebago petition filed by Radio Wisconsin, Incorporated, on October 27, 1955; and Petitions for Further Oral Argument filed on November 4, 1955, by Monona Broadcasting Company, Bartell Television Corp., and Winnebago Television Corp.

(d) *Hartford, Connecticut* (*Docket No. 11336*)

This proceeding involves the joint request of four UHF broadcasters in the Connecticut River Valley—General Times Television Corporation (WGTH-TV), Hartford, New Britain Broadcasting Co. (WKNB-TV), New Britain; Hampden-Hampshire Corporation (WHYN), Springfield and Springfield Television Broadcasting Corp., Springfield (WWLP)—for deintermixture of commercial VHF and UHF channels in Hartford by shifting the educational reservation in Hartford from UHF Channel 24 to VHF Channel 3. Three other UHF broadcasters request that Channel 3 be deleted from Hartford and assigned elsewhere. Channel 16 of Rhode Island (WNET) in Providence, Rhode Island, requests that Channel 3 in Hartford be assigned to Westerly, Rhode Island; Eastern Connecticut Broadcasting Company (WICH, AM), Norwich, Connecticut; requests that Channel 3 in Hartford be assigned to Norwich, and Thames Broadcasting Corp. (WNLC-TV), New London, Connecticut, requests that Channel 3 in Hartford be shifted to New London. Other parties participating in the proceeding include Hartford Telecasting Company, Inc. and Travelers Broadcasting Service Corporation, applicants for Channel 3 in Hartford; Western Massachusetts Educational Television Council, Springfield; the Connecticut Radio Foundation (WEDH), Hartford, and the WGBH Educational Foundation (WGBH-TV), Boston, Massachusetts. In addition to the pleadings and material in the record of the proceeding when Oral Argument was heard on June 27–28, 1955, the Commission now has before it the following pleadings: "Petition for Leave to File Additional Comments" and "Additional Comments" filed on October 17, 1955, by General Times Television Corporation, New Britain Broadcasting Company, Hampden-Hampshire Corporation and Springfield Television Broadcasting Corporation; a "Petition to Adopt Policy of Deintermixture or for Alternative Relief" filed on October 18, 1955, by the same four parties; "Opposition to Petition for Leave to File Additional Comments" filed on October 20, 1955, by Travelers Broadcasting Service Corporation, "Statement with Respect to Matters Not of Record" filed on October 28, 1955, by the same four parties; and Petitions for Further Oral Argument filed on November 4, 1955, by General Times Television Corp., New Britain Broadcasting Co., Hampden-Hampshire Corp., Springfield Television Broadcasting Corp., and Channel 16 of Rhode Island, Inc.; and by Eastern Connecticut Broadcasting Company on November 9, 1955.

(e) *Albany-Schenectady-Troy, New York (Docket No. 11238)*

This proceeding involves the request of Hudson Valley Broadcasting Company, Inc. (WROW-TV), Albany, New York, for the assignment of Channel 10 to Vail Mills, New York, as a "drop-in" to bring a second VHF service to the Albany-Schenectady-Troy area, and the alternative request of Van Curler Broadcasting Company (WTRI), Albany for the elimination of the intermixture of commercial VHF and UHF assignments in the Tri-Cities area by shifting the educational reservation at Albany from Channel 17 to Channel 6 and by modifying General Electric Company's authorization to operate Station WRGB on Channel 6 at Schenectady, New York, to specify operation on Channel 17. Other parties participating in the proceeding include Greylock Broadcasting Company (WMGT), North Adams, Massachusetts; the General Electric Company (WRGB), Schenectady; Walter C. Neals, Albany, and the State Education Department of the University of the State of New York (WTVZ), Albany. In addition to the pleadings and material in the record of the proceeding when Oral Argument was heard on June 27–28, 1955, the Commission now has before it a "Petition to Adopt Policy of Deintermixture or for Alternative Relief" filed by Greylock Broadcasting Company on October 18, 1955; a "Petition to Reopen Proceedings" filed by Van Curler Broadcasting Corporation on October 25, 1955, an Opposition to the Van Curler petition filed on October 28, 1955, By Hudson Valley Broadcasting Company and a Petition for Further Oral Argument filed November 4, 1955, by Greylock Broadcasting Company.

2. The petitioners in these proceedings are UHF broadcasters. With the exception of Hudson Valley, which requests the assignment of Channel 10 to Vail Mills, the petitioners seek to deintermix the VHF and UHF assignments in their communities by eliminating VHF commercial channel assignments by reserving them for educational use, shifting them to another community, or by deleting them. The VHF channels which would be affected by the petitioners' basic proposals, with the exception of Channel 6 in Schenectady on which Station WRGB is operating, have not yet been granted by the Commission. However, applications are pending for the VHF channels in the other four cases—Peoria, Evansville an Hatfield, Madison, and Hartford—and lengthy comparative hearings have been conducted to select the best qualified applicant. Initial Decisions have been rendered by the Hearing Examiner in the Evansville, Peoria and Madison cases and Oral Argument has been heard by the Commission. In the Hartford case, an Initial Decision has been issued and Oral Argument is being awaited. In Hatfield, the hearing has been concluded and proposed findings have been filed, but an Initial Decision has not yet been issued.

3. A grant of the deintermixture petitions in these proceedings would enable the UHF broadcasters to avoid competition from VHF stations in their own communities or immediate areas. In support of their proposals the petitioners cite the familiar difficulties which have been encountered by UHF broadcasters in competing with VHF. They urge that the opportunities for a full utilization of the locality assigned UHF channels will be substantially reduced by the advent of a local VHF station, or, as in the case of the Albany-Schenectady-Troy area, the continued operation of a VHF station already on the air. Referring to the experience of UHF broadcasters generally where UHF and VHF assignments are intermixed, the UHF broadcasters submit that deintermixture as proposed for their respective communities would insure a larger number of local television services and a healthy, competitive television operation in their communities.

4. It is necessary, however, not to lose sight of the fact that the communities involved in the instant proceedings represent only limited segments of the overall problem, which is nationwide in scope. The five rule making proceedings now under consideration were initiated in the hope that a detailed examination of the problem in the light of circumstances prevailing in these communities would provide the basis on which the Commission could formulate policies applicable generally in the effort to alleviate a nationwide problem.[1] In addition to the instant five cases, petitions had been submitted seeking similar action in approximately 15 other communities. But the scope of the problem does not end there.

5. Careful review of the comments and data submitted in the instant proceedings has convinced us that it would not be useful to attempt to find solutions of lasting value within the relatively limited scope of the instant proceedings.[2] Although they have shed helpful light on the problems associated with deintermixture, including the disposition of the channels sought to be removed, the question of "white areas" and others, it has become clear that these proceedings provide an inadequate basis for the formulation of policies which must take due account of the extensive and intricate interrelationships of all parts of the Table of Assignments.

6. Petitioners seek alleviation of a nationwide problem by action directed toward their individual, local communities. Whatever the merits of their contentions that local deintermixture would benefit the particular UHF operators and their local communities, the Commission has serious doubts that the requested relief would be meaningful with respect to the general problem. It is noted that most of these petitions are directed toward those communities where both VHF channels and UHF are now allocated but where no VHF stations (or, in some instances not more than one) have commenced operation, apparently on the theory that deintermixture should be accomplished wherever VHF stations have not yet become so established that, in the view of petitioners, deintermixture is no longer feasible. In our opinion, if deintermixture, even on a partial basis, should finally be determined to be a useful method of resolving the overall problems, the particular communities for its application should not be selected merely because of the fortuitous circumstance of whether a VHF station has commenced operation in any particular community. Certainly there is nothing in the records before us which would lead us to conclude that the limited deintermixture here sought would provide any significant help in resolving the difficulties now confronting UHF broadcasters in other communities, or for that matter, whether the relief that might result in the areas directly involved, would materially strengthen UHF in general. There is little, if any, reason to believe, for instance, that the reassignment of channels as requested in the instant petitions, and in the other pending petitions seeking similar relief, would significantly stimulate the conversion of VHF receivers, the increased sale of combination UHF-VHF sets, the improvement of UHF transmitting and receiving equipment or the elimination of UHF and VHF equipment cost differentials. Moreover, apart from the question of whether deintermixture would provide lasting benefit to the specific communities in question here, it is not possible to ascertain on the basis of the instant rule making proceedings whether deintermixture on the basis proposed by petitioners would be consistent with measures which the Commission must consider in a separate rule making proceeding of much broader scope to cope with the nationwide problem.

7. The present system of intermixed channel assignments is basic to the structure of television allocations established by the Sixth Report and Order. We believe that any modification of the Table of Assignments which would involve significant departures from this system of assignment requires a thorough reexamination of the entire television structure. The interrelationships between the particular circumstances in specific cases and the nationwide tele-

---

[1] In our Notice of Further Rule Making (FCC 55–492) in Docket No. 11238, issued April 21, 1955, we explained that we were "attempting to arrive at a decision of future policy to be uniformly followed, wherever possible, in the effectuation of our Allocation Table for a nationwide television system."

[2] On August 29, 1955, Monona Broadcasting Company and Bartell Television Corporation filed a petition requesting the Commission to take official notice, or to permit limited reopening of the record in the Madison proceeding to admit certain figures released in August 1955 by the United States Census Bureau. Radio Wisconsin, Inc., filed a response to this request. This data has been considered by the Commission.

In the Evansville case, On The Air, Inc., moved to strike the comments of Mid-America Broadcasting Corporation, contending that it would be illegal for the Commission to adopt Mid-America's proposal without further rule making. Owensboro On The Air, Inc. and Owdensboro Publishing Company also moved to dismiss Mid-America's comments. Mid-America filed a reply to these motions. Mid-America's comments have been considered in the proceeding.

vision system as a whole cannot be disregarded. In the Commission's opinion, considerations of both fairness and practicability preclude an *ad hoc* approach such as that suggested by the petitioners in these proceedings.

8. The Commission is convinced that if lasting solutions to the allocation problems now confronting the development of a nationwide competitive television service are to be found, the approach must be nationwide in scope. Accordingly, in order to facilitate the orderly examination of a number of possible solutions, the Commission is instituting a general rulemaking proceeding. Only through such a general proceeding do we believe the Commission may thoroughly and effectively treat this matter. Accordingly, the Commission believes that the public interest would be best served by denying the instant requests for deintermixture. Petitioners will have the opportunity of participating in the general rulemaking proceedings and our denial of their petitions is without prejudice to any action the Commission may take as a result of that proceeding.

9. The Hudson Valley proposal presents a different problem. Hudson Valley requests the assignment of a new channel, Channel 10, to Vail Mills, a small community located in the Albany-Schenectady-Troy area, about 20 miles northwest of Schenectady. The Hudson Valley proposal comports with the Commission's present television allocation plan and rules. Unlike the proposals for deintermixture, the petition to assign Channel 10 to Vail Mills is consistent with the rules and principles of our present television allocations established in the Sixth Report and Order. Channel 10 would meet the present minimum spacing requirements and all other standards.[3] Until a decision has been reached on possible amendments to our present allocation, the Commission believes that it would not be justified in withholding action, pursuant to our present allocation plan and rules, that would bring additional television service to a significant number of people. Refusing to make use of this valuable VHF frequency as contemplated by the present rules would, we believe, be a waste of valuable spectrum space for which active demand is indicated. Channel 10 in Vail Mills will represent a second television service to an appreciable percentage of families residing in the area, as well as a first service to a significant number of families. We do not believe that we would be justified in withholding this service, which can be afforded under our present rules even though we are presently considering possible amendments to our allocations. Accordingly, we are amending our rules to add the assignment of Channel 10 to Vail Mills.

10. A number of parties have filed requests for additional time for the filing of supplementary comments, or for the reopening of the record for the submission of additional material or for other relief. The submitted basis of these pleadings is that matters have been presented to the Commission outside of the formal framework of comments and arguments provided for in the procedures governing consideration of the petitions and notices of proposed rule making. In short, an opportunity to reply to this matter is requested. The material referred to related to possible national reallocation schemes. It does not pertain to the merits of granting or denying the particular petitions before us, except as part of such a nationwide approach. We have determined that the records now before us are inadequate to support a grant of the requested deintermixture because of their limited scope. We, of course, have knowledge, and should, of other and more general suggestions informally submitted to us or before congressional committees. Having decided upon these records that some approach other than piecemeal deintermixture must be followed, we will afford an opportunity for the formal submission of nationwide solutions in the general rule making proceeding we are concurrently instituting. Whatever plans or solutions which may there be advanced by those persons who were not parties to the present proceedings will be considered in that proceeding, and an opportunity afforded for the submission of supporting or adverse comment. In view of our decision in the instant proceedings, and the fact that a new proceeding of wider scope will now be held, there is no point in reopening the present proceedings to insert comments, and replies thereto, whose function is to discuss nationwide plans and whose proper forum is the general rule making proceeding in which all interested parties may participate.

11. There are also pending in the Evansville case (Docket No. 11334) petitions filed on November 7, 1955, by Mid-America Broadcasting Corp. and Premier Television, Inc. and Ohio Valley Television Company, jointly, which request,

---

[3] It is noted that Vail Mills does not have a post office. A post office, however, is not a prerequisite to the assignment of a television channel. The post office is merely a convenient reference point; and the lack of a post office in a community does not bar an assignment.

inter alia, consolidation of the rule making proceeding concerning deintermixture in Evansville and Hatfield with the two adjudicatory proceedings instituted for the purpose of choosing among mutually exclusive applications for VHF Channels 7 and 9 assigned to those cities. The same petitions also request an amendment of the rules which would preclude action on applications for construction permits for new television stations until after disposition of all pending petitions for rule making and rule making proceedings looking toward removal of the particular channel assignments applied for. The Commission does not believe that it would be desirable to confuse the rule making proceeding with questions of the comparative merits of mutually exclusive applications, which are at issue in the adjudicatory proceedings. Moreover, it would serve no useful purpose to burden the rule making process by consolidating the two matters since, as we point out in paragraph 6 above, final decision on deintermixture of VHF and UHF channels in any community should not be governed by the existence or absence of a VHF station in the community. Nor does the Commission believe that it would serve the public interest to adopt the proposed amendment to the rules, which would be tantamount o a freeze on authorizations for new television stations. The Commission believes that it must retain the discretion to determine on a case-by-case basis when the public interest requires that it freeze its adjudicatory processes during the pendency of rule making. (See *FCC* v. *WJR, The Goodwill Station, Inc.*, 337 U. S. 265. The Commission is of the opinion that the procedural inflexibilities petitioners seek to introduce are neither necessary nor desirable. The petitions referred to at the beginning of this paragraph are, accordingly, denied. The petitions for intervention in the adjudicatory proceedings, which were incorporated in the same documents with the foregoing requests, are not disposed of here. Various requests for stays in adjudicatory proceedings are also not disposed of here.

12. Several additional petitions advert to the fact that Commissioner Mack was not yet a member of the Commission at the time the oral arguments were held in the instant proceedings and request further oral argument for the purpose of enabling Commissioner Mack to participate in these proceedings, and to afford an opportunity to present views on courses of action which petitioners state were not contemplated at the time of the initial oral arguments. It should be recognized at the outset that there is no requirement of law that an oral argument be afforded in a rule making proceeding. *FCC* v. *WJR, The Goodwill Station, Inc., et al.*, 337 U. S. 265. *Daily News Television Company*, 7 Pike & Fischer, R. R. 839. The Commission, within its discretion, heard oral arguments in these proceedings. However, we see no necessity for further argument. Petitioners' reference to participation by Commissioner Mack erroneously presupposes that because he took office after the oral arguments were held, he is not qualified to participate in decisions adopted in these proceedings. In the Commission's view, no such limitation affects the qualifications of a Commissioner to participate in these proceedings. The full record in the proceedings, including the transcript of the oral arguments, has been available to Commissioner Mack; and he has read the transcript. There is no bar to participation by a Commissioner who takes office after an oral argument if the Commissioner has read the transcript of the argument. See *Eastland Co.* v. *FCC*, 92 F. 2d 467, cert. den., 302 U. S. 735. The petitions requesting further oral argument in these proceedings are accordingly denied.

13. Authority for the adoption of the amendment herein is contained in Sections 4 (i), 301, 303 (c), (d), (f) and (r), and 307 (b) of the Communications Act of 1934, as amended.

14. In view of the foregoing, IT IS ORDERED, That the foregoing petitions for deintermixture listed in paragraph 1 above, ARE DENIED.

15. IT IS FURTHER ORDERED, That, effective December 16, 1955, the Table of Assignments contained in Section 3.606 of the Commission's Rules and Regulations IS AMENDED insofar as the city named is concerned as follows:

City: Vail Mills, N. Y. Channel: 10.

FEDERAL COMMUNICATIONS COMMISSION *
MARY JANE MORRIS, *Secretary*.

Adopted: November 10, 1955.
Released: November 10, 1955.

*See attached Dissenting Statements of Commissioners Hyde and Bartley;
*See attached Statement of Commissioner Webster concurring in part and dissenting in part.

(NOTE.—Rules changes herein will be included in Amendment 3–61.)

DISSENTING OPINION OF COMMISSIONER ROSEL H. HYDE

I dissent to the Report and Order entered by the majority in Docket Nos. 11238, 11333, 11334, 11335 and 11336, dated November 2, 1955, and to the Memorandum Opinion and Order of the same date, denying some 26 petitions for rule making to amend Part 3 of the Commission's regulations. I consider the actions of the majority of the Commission to be premature, ill-advised and wholly inconsistent with the Commission's other actions in this area.

The Commission is under a statutory mandate to provide a nationwide competitive television service. Until it has been shown that this can be achieved with the 12 present VHF channels (or that additional VHF channels are available with which to achieve such result), I deem it imperative to preserve the UHF service. What the Commission has done today may deal a death blow to UHF television service.

The Orders which have been entered in these cases would dispose of a large number of individual petitions addressed to specific situations, by blanket declarations to the effect that action on individual petitions would not resolve the overall problem. This offers strange reasoning and an abrupt change in procedure much belated in its application.

Until this moment, it has been the practice of the Commission to consider petitions for changes in rules establishing the TV allocation upon an individual basis. Many such petitions have been acted upon in individual rule-making proceedings. A large number of such petitions have been granted, including petitions for shifts in TV station assignments, changes in zones, reservation of channels for educational purposes, and the addition of new station assignments. Five of the petitions disposed of today have been subjects of notices of proposed rule making issued in March of this year. Comment was invited from interested persons, and the Commission requested that participants direct their attention and submit data with reference to a number of particular matters. Oral Argument in the five cases was heard before the Commission on June 27 and 28, 1955. The rule making notices, the requests for specific information and the issues discussed in the argument contemplated consideration of the cases on their individual merits. The summary disposition of these cases today on what is essentially a new procedural device seems certain to raise grave questions as to the meaning of the earlier proceedings.

While the orders are virtually bereft of specific findings to support the conclusions, it is manifest that material, both in and end de hors the record, has been considered in reaching such conclusions. The unfortunate result of this method of disposing of the various proposals is that no real consideration is given to the merits of any of them. Moreover, to the extent that information outside of the record played a part in the majority decisions, the participants in the formal proceedings have not had a fair opportunity to be apprised of the existence of such material, let alone meet or test the validity thereof. To give the semblance of due process, the majority proposes a general rule-making proceeding in which all of the various problems can be lumped together and considered, and in which proceeding all pertinent information can be spread upon a public record before a final determination is reached.

The procedures which have been invoked at this time can only be interpreted as putting the petitions (and the formal proceedings heretofore held on a number of them) out of the way, although obviously, such procedure is not at all necessary to the general rule-making proceeding proposed.

But the obvious reason for the sudden haste of the majority in taking the present action is to clear the decks for the immediate grant of VHF applications in a number of communities involved in the deintermixture cases, and in other communities in which deintermixture has been suggested and peremptorily turned down. The deintermixture petitions which have been turned down request stays in the pending VHF proceedings. Therefore, these requests for stays are here being denied without proper findings or without proper consideration of the material submitted in their support. But if the evidence which has been adduced by the petitioners (and not considered by the majority) has merit, the grant of these VHF applications may well have the effect of denying the very relief sought by the proponents of deintermixture prior to the determination of the general rule making proceedings. Without passing upon the contentions made by the various petitioners, and without evaluating the evidence that has been adduced upon the record, the Commission may, in granting the VHF applications, effectively eliminate many UHF stations which are presently in operation and in many instances render the cases moot. Thus, we have a situation not too dissimilar from that presented in the Ashbacker case whereby the Commission, by making a grant to one applicant before it is effectively denying relief to another party, and without giving that party its day in court. The actions of the Commission in making further VHF grants in these areas can but have the effect of seriously hampering and perhaps of unalterably precluding the Commission from giving proper and adequate consideration to the overall study of the allocation plan.

DISSENTING STATEMENT OF COMMISSIONER ROBERT T. BARTLEY

I believe these petitions should be disposed of separately upon their individual merits, thereby serving as a pattern for the expeditious disposition of the remaining deintermixture petitions. Such action would afford stability and guidance to the television service. Such action would clear the way for continued processing of applications and would provide permit holders with the necessary confidence that their status would not be changed in the immediate future. The uncertainty created by the action of the majority is not conducive to encouraging the assumption of the substantial risks involved in getting additional service on the air.

With respect to the Vail Mills "slug-in," I cannot agree with the conclusion reached by the majority on the merits of the petition. In my judgment, the result will be the death knell of multiple UHF services in the area; consequently, less instead of more service to the public.

COMMISSIONER WEBSTER CONCURRING IN PART AND DISSENTING IN PART

When consideration was first given to these deintermixture cases I was of the opinion that, deplorable as may be the delay already occasioned by unforeseen developments relating to these petitions, action thereon at this time, in the face of the Commission's notice of proposed rulemaking for the purpose of reviewing the nationwide television allocation plan, appeared both inappropriate and inconsistent. It seemed to me that the further delay which would result from the Commission withholding action on these petitions until a decision in the general proceeding had been reached would be warranted in view of the cloud which the decision in these cases might place upon the larger proceeding.

However, in view of the fact that the Commission's report and order as now written provides that its denial of the deintermixture petitions is without prejudice to any action the Commission may take as a result of the general rulemaking proceeding in which the petitioners in these deintermixture proceedings will be given the opportunity to participate, it would appear to me that the majority's views are sufficiently similar to mine to enable me to concur with its report and order insofar as it concerns the deintermixture cases.

However, the decision to authorize a drop-in of channel 10 at Vail Mills, N. Y., is so obviously inconsistent with the proposed general rulemaking proceeding that I am forced to dissent from this action.

FCC 55-1126
24919

BEFORE THE FEDERAL COMMUNICATIONS COMMISSION

Washington 25, D. C.

IN THE MATTER OF AMENDMENT OF PART 3 OF THE COMMISSION'S RULES AND REGULATIONS GOVERNING TELEVISION BROADCASTING STATIONS

MEMORANDUM OPINION AND ORDER

By the Commission: Commissioner Hyde dissenting for the same reasons set forth in his dissent in the Report and Order in Docket Nos. 11238 et al; Commissioner Bartley dissenting.

1. The Commission has before it for consideration the following petitions seeking to amend the Table of Assignments contained in Section 3.606 of its rules and regulations and other rules and standards relating to television broadcast stations:

Date filed	Petitioner	Request
1954		
July [1] 6	Mid-America Broadcasting Co., Louisville, Ky.	Assign channels 7, 9, 13 to Louisville, Ky.
Aug. 13	Neptune Broadcasting Corp., Atlantic City, N. J.	Assign channel 8 to Atlantic City, N. J.
Oct. 29	Coastal Bend TV Co., Corpus Christi, Tex	Delete channels 6 and 10 and assign channels 56 and 65 at Corpus Christi.
1955		
Jan. 5	Atlantic Video Corp., Asbury Park, N. J	Assign channel 8 to Asbury Park, N. J.
Feb. 2	Stanley H. Durwood, Hutchinson, Kans	Assign channel 8 to Hutchinson, Kans, and delete from Manhattan, Kans., and Woodward, Okla.
Mar. 22	Supreme Broadcasting Co., Inc., New Orleans, La.	Assign channel 2 to New Orleans and substitute channel 61 for channel 2 at Baton Rouge, La.
Mar. 30	Plains TV Corp., Springfield, Ill	Shift educational reservation from channel 22 to channel 2 at Springfield or assign channel 2 to St. Louis and substitute channel 41.
Apr. 5	Sir Walter TV Co., Raleigh, N. C	Shift educational reservation from channel 40 to channel 11 in Durham, N. C., and from channel 22 to channel 5 in Raleigh.
7	O'Neill Broadcasting Co., Fresno, Calif	Shift educational reservation from channel 18 to channel 12 in Fresno.
11	Jacksonville Journal Co., Jacksonville, Fla	Shift educational reservation from channel 7 to channel 36.
12	Capital City Corp., Sacramento, Calif	Shift educational reservation from channel 6 to channel 40 or delete channels 3 and 10 from Sacramento.
13	Wilton E. Hall, Anderson, S. C	Delete channel 7 from Spartanburg, S. C., and reassign to other cities.
[2] 14	Storer Broadcasting Co. and Gerico Investment Co., Miami-Fort Lauderdale, Fla.	Delete channels 7 and 10 from Miami, Fla.
15	Eastern Broadcasting Corp., Newport News, Va.	Shift educational reservation from channel 21 to channel 10 at Norfolk-Portsmouth-Newport News, Va.
22	Woodward Broadcasting Co., Toledo, Ohio	Delete channel 11 at Toledo and assign to Detroit and reserve channel 13 for education.
May 12	The Brush Moore Newspapers, Inc., Canton, Ohio.	Assign channel 12 to Canton, Ohio.
13	Bakersfield Broadcasting Co., Bakersfield, Calif.	Assign channel 12 to Bakersfield and delete from Fresno.
June 6	Southern Connecticut and Long Island TV Co., Inc., Bridgeport, Conn.	Assign channel 6 to Bridgeport, Conn.
17	Prairie TV Co., Decatur, Ill	Delete channel 2 from Springfield, Ill.
July 28	James Monroe and William E. Sullivan, Santa Barbara, Calif.	Assign channel 12 to Santa Barbara, Calif.
29	Southern Radio and Equipment Co., Jackville, Fla.	Reserve channel 12 for education in Jacksonville and assign channel 7 to Savannah, Ga.
Aug. 15	Board of Public Instruction of Duval County, Fla., Jacksonville, Fla.	Shift educational reservation from channel 7 to channel 36.
8	WLBE, Inc., Leesburg, Fla	Delete educational channel 7 from Jacksonville and assign it as a commercial channel in Leesburg.
Oct. 14	Herbert Mayer d/b as Ajax Enterprises, Philadelphia, Pa.	Delete VHF channels in Philadelphia, Pa.
18	Charles W. Lamar, Jr., and KTAG-TV, Inc., Pensacola, Fla., Lake Charles, La.	Delete channel 4 from Beaumont-Port Arthur, Tex., and New Orleans, La.
25	WGOV-TV, Inc', Valdosta, Ga	Assign channel 8 to Valdosta, Ga.
27	W. Glenn Thomas, Sr., Jesup, Ga	Assign channel 8 to Brunswick, Ga., and delete channel 7 from Jacksonville, Fla.
28	Southern Central Broadcasting Corp., Knoxville, Tenn.	Delete channel 7 from Spratanburg, S. C., and assign to Knoxville, Tenn., and Columbia, S. C.
31	WISE-TV, Inc., Asheville, N. C	Assign channel 2 to Asheville, N. C.
Nov. 7	Great Lakes Television Co., Erie, Pa	Assign channel 6 to Erie, Pa.

[1] Amended June 2, 1955.
[2] Amended Oct. 14 and Nov. 4, 1955.

2. The foregoing petitions seek to institute rulemaking proceedings to consider new television channel assignments, and also to consider other amendments to the television rules and standards which would constitute basic departures from our present allocation plan and standards promulgated in the Sixth Report and Order. For example, some of the petitions contemplate the assignment of the VHF channels at separations below those presently specified, coupled with the use of low power operation and directional antennas. Others request departure from the principle of intermixture of VHF and UHF channels employed in the present allocation plan. The petitions, however, are all designed to alter the television assignments in an individual community or a limited area.

3. The Commission is today instituting a general rulemaking proceeding to consider amendments to its present television allocation plan and rules on a nationwide basis. The Commission points out in its Notice announcing that proceeding that the difficulties now confronting the television service, while they affect individual communities, are national in scope and may have far-reaching implications for the future of the television system as a whole; and the Commission expresses its conclusion that any approach to their consideration must, of necessity, take cognizance of the broad scope of the general problem.

4. In the Commission's view it would be neither appropriate nor feasible to approach the problem on the basis of separate, individual petitions designed to alleviate conditions in an individual community or a limited area, through departures from the present structure of channel assignments or existing television standards. In our view, it would be fruitless to undertake to consider this nationwide problem through piecemeal measures, which neither promise significant overall relief, nor would necessarily be consistent with such action as the Commission may find it appropriate to take in its general proceeding.

5. Accordingly, the Commission does not believe that the institution of rulemaking proceedings in the above-mentioned petitions would be warranted at this time. The petitioners will, of course, have full opportunity to submit their views with respect to the overall, nationwide problem in the general rulemaking proceeding we are instituting today. When the Commission may have determined the broad basis of any desirable revisions to its present allocation scheme and related rules, it will be in a position to consider questions, such as those raised by the subject petitions, concerning specific channel assignments in individual communities or limited areas.

6. In view of the foregoing, IT IS ORDERED, That the aforementioned petitions for rule making listed in paragraph 1 above, ARE DENIED.

7. On November 7, 1955, Sir Walter Raleigh Television Company and Prairie Television Company submitted petitions requesting (1) leave to intervene in the respective comparative hearings instituted to select the best qualified applicant for Channel 5 at Raleigh, North Carolina (Docket Nos. 10861 and 10862) and for Channel 2 at Springfield, Illinois (Docket Nos. 10701 and 10703); (2) consolidation with the foregoing respective docketed proceedings of petitioners' requests for rulemaking looking toward the channel reassignments in Raleigh and Springfield listed above; and (3) amendment of the Commission's rules to preclude action on pending applications for television channels until pending petitions and rulemaking proceedings looking toward reassignment of the channels in question have been disposed of. It is not appropriate to deal here with the request for leave to intervene in the adjudicatory proceedings. With regard to Request (2) the Commission does not believe that it would be desirable to confuse matters which are the proper subject of rulemaking proceedings with questions of the comparative merits of mutually exclusive applications, which are at issue in the adjudicatory proceedings. Moreover, it would serve no useful purpose to burden the rulemaking process by consolidating the two matters since, in our view, final decision on deintermixture of VHF and UHF channels in any community should not be governed by the existence or absence of a VHF station in the community. With respect to Request (3), the Commission does not believe that it would serve the public interest to adopt the proposed amendment to the rules, which would be tantamount to a freeze on authorization for new television stations. The Commission believes that it must retain the discretion on a case-by-case basis when the public interest requires that it freeze its adjudicatory processes during the pendency of rulemaking. (See *FCC* v *WJR, The Goodwill Station, Inc.*, 337 U. S. 265). The Commission is of the opinion that the procedural inflexibilities petitioners seek to introduce are neither necessary nor desirable. Accordingly, so much of the subject petitions are concern Requests (2) and (3) above, ARE HEREBY DENIED.

FEDERAL COMMUNICATIONS COMMISSION,
MARY JANE MORRIS, *Secretary*.

BEFORE THE FEDERAL COMMUNICATIONS COMMISSION

Washington 25, D. C.

Docket No. 11532

IN THE MATTER OF AMENDMENT OF PART 3 OF THE COMMISSION'S RULES AND REGULATIONS GOVERNING TELEVISION BROADCAST STATIONS

NOTICE OF PROPOSED RULEMAKING

1. The Commission's present television assignment plan, promulgated in its Sixth Report and Order in 1952, was designed to lay the foundation for the development of a nationwide competitive television system which would meet a series of stated objectives. These objectives may be briefly summarized as follows:

(*a*) At least one service to all areas.

(*b*) At least one station in the largest possible number of communities.

(*c*) Multiple services in as many communities as possible to provide program choice and to facilitate competition.

2. To some extent these objectives have been realized. Over 90 percent of the population can receive a degree of service from at least one television station. Approximately 75 percent can receive a degree of service from two or more stations. Almost 275 communities have at least one, and 112 of these have two or more, local television facilities in operation. Over 430 stations are now on the air, and the number of television sets in the hands of the public has increased to 35 million.

3. But despite this tremendous growth, it is evident from recent experience that a nationwide competitive television service has not been realized to the extent contemplated at the time the Commission issued its Sixth Report and Order. Many of the smaller communities are without a first local outlet and the expansion of multiple, competing services in the larger economic and population centers of the country is lagging. Difficulties encountered in achieving successful operation of stations in the UHF band have been a significant factor leading to this situation.

4. The familiar difficulties presently facing television broadcasters raise questions with respect to basic elements of the standards and principles established by the Commission in the Sixth Report and Order. And while these difficulties have varying impact on individual broadcasters and communities, they are manifestly nationwide in scope and may have far-reaching implications for the future of the television system as a whole. The Commission is therefore convinced that any approach to their solution must take cognizance of the overall, national scope of the problem.

5. The Commission recognizes that some of the present hindrances to the further expansion of television service in many communities are due to causes which lie beyond its control. To an appreciable extent these problems are basically economic and arise out of the limits beyond which it is not possible, at the present stage of the development of the television art, to obtain sufficient economic support to meet the high costs of construction, programing and operation of television stations. On other aspects of the problem, relating for example to the improvement of transmitting and receiving equipment, the industry itself can make valuable contributions. At the same time, the Commission wishes to insure that to the extent that any of the present difficulties may be alleviated by possible revision of the present allocation system, such possibilities will be fully explored.

6. The Commission has received a number of propsals from interested segments of the industry, which although they envisage fundamental departures from the present system adopted in the Sixth Report and Order and approach the problem on a nationwide basis, do not challenge the Commission's basic objectives. Some of the techniques suggested for alleviating the difficulties involve the use of additional VHF frequencies; the reduction of minimum separations to make additional VHF channel assignments possible, using either the present 12 VHF channels or new VHF channels, or both; deintermixture on a basis consistent with a nationwide solution; and other techniques. A number of the proposals include suggestions for modifications of the present standards which would permit the use of directional antennas, cross polarization, new limits on antenna heights and maximum powers for new channel assignments, and

others; and some proposals contemplate combinations of the foregoing techniques. Some of the proposals envisage a revised nationwide table of fixed assignments; others look toward the adoption of new standards which would govern the addition of specific channel assignments on the basis of individual applications. In addition to these plans which have already been advanced, the Commission understands that a number of studies have been initiated by other groups in the industry.

7. In these circumstances, the Commission believes that the public interest would be served by the institution of a general rule-making proceeding to consider possible overall solutions to the problem on a broad, nationwide basis. All interested parties, including those who have informally tendered proposals to the Commission, will have the opportunity of submitting their suggestions in this proceeding. This proceeding will, we believe, facilitate an orderly review of the proposals and will afford the Commission a sound basis on which it may compare the advantages and disadvantages of the proposals, both among themselves and with respect to the present plan, and evaluate them in terms of the opportunities they may provide for fuller realization of a nationwide competitive television system.

8. As noted, there is considerable diversity among the various approaches that have been suggested. The multiplicity of the possible alternative plans suggests the desirability of establishing a basis on which it will be possible for the Commission to make a full and fair evaluation of the different proposals. This would be facilitated if those parties submitting proposals included data and comments relating to:

(*a*) The nature and the extent of departures, if any, from the present standards as adopted in the Sixth Report and Order with respect to:

(1) Minimum separations.

(2) Minimum and maximum limitations on powers and antenna heights.

(3) Use of directional antennas.

(4) Cross polarization.

(5) Any other deviations from present standards.

(*b*) The effect of the proposed revision on the assignments occupied by existing stations.

(*c*) The extent to which the plan submitted provides for the future expansion of television service.

(*d*) The impact of the plan on the problem of receiver incompatibility.

(*e*) The effect of the plan on the educational reservations.

It would also be helpful to the Commission if parties submitting proposals which envisage a revised table of fixed channel assignments, would include an assignment plan for Zone I indicating the specific assignments in each city. The Commission will also consider proposals which envisage revised standards for the addition of channel assignments on the basis of individual applications, rather than by incorporating new assignments in a revised fixed Table of Assignments.

9. In this initial stage, the Commission believes it would not be desirable to consider proposals whose scope is limited to action affecting only individual communities or a limited area. Premature involvement with questions relating exclusively to individual city assignments or to limited areas, without reference to a nationwide system, would unduly impede our progress in determining the basic course which it would be desirable to follow in considering possible revisions to the nationwide television allocation plan. At a later date, when the Commission has determined the general nature of any revisions to the present allocation scheme which it would be desirable to adopt, it will then be in a better position to consider comments relating to specific channel assignments proposed for individual communities.

10. All interested parties are invited to file written comments in accordance with this Notice. In light of the many considerations which favor minimizing delay, the Commission has decided to require the filing of comments no later than December 15, 1955, and the filing of reply comments by January 6, 1956. An original and 14 copies of comments should be filed.

11. Authority for the institution of this proceeding is contained in Sections 1, 4 (i) and (j), 301, 303 (a), (b), (c), (d), (e), (f), (g), (h), and (r), and 307 (b) of the Communications Act of 1934, as amended, and Section 4 of the Administrative Procedure Act.

FEDERAL COMMUNICATIONS COMMISSION,
MARY JANE MORRIS, *Secretary*.

Adopted: November 10, 1955.
Released: November 10, 1955.

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., April 29, 1955.

HON. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce,
United States Senate, Washington 25, D. C.

DEAR MR. CHAIRMAN: Since I do not share the views expressed by the majority of the Commission in its comments submitted pursuant to your request, I welcome this opportunity to submit by separate comments on the grave problems of UHF, and network monopoly of television.

The congressional objective of a nationwide competitive system providing a free market place of ideas which is possible only through diversified program sources and adequate numbers of station outlets is now being seriously jeopardized. This congressional policy is vital to the national interest. The Congress itself must take decisive and prompt action if its policy is not to be vitiated by monopolistic control of the whole TV industry.

It is gravely disturbing that neither Special Counsel Harry M. Plotkin nor Special Counsel Robert F. Jones nor the Commission has come to grips with the three basic issues facing this committee:

First. The sets now being sold are depriving the public of 85 percent of TV.

The public has invested more than $10 billion in over 30 million sets that cannot tune into the UHF channels, which represent 85 percent of all television. The public, still kept in the dark, continues to buy VHF-only sets at the rate of over half a million a month. All this adds up to destruction of 85 percent of television.

Second. The network monopoly controls every phase of TV and strangles its development.

The networks maintain a life and death control over TV and are strangling UHF and the development of TV. There are 108 UHF stations presently left on the air, whose continued operation is threatened by the vicious circle of no sets—no programing—no advertising. The fate of these 108 stations is inseparable from the fate of 85 percent of all TV spectrum space.

Third. Inaction is destroying UHF.

Almost immediately after UHF stations went on the air in 1952 it became obvious that something had to be done to save UHF, but the FCC did nothing. This committee appointed counsel to study means of saving UHF, and the stations on the air, but all they recommend is more study and more delay. The time has come for action.

I urge this committee to embark upon the following 4 point program:

First. This committee and the Federal Communications Commission should immediately initiate a national campaign to inform the public that they are purchasing sets that cannot tune into 85 percent of television. Unless your committee takes action to put a halt to the deluge of incompatible sets, the monopolistic pattern will take hold permanently and thereby thwart the congressional objective of a nationwide competitive television system. In the next 6 to 8 years, the normal turnover of sets can take care of the problem if the public is informed that it should buy VHF–UHF sets.

Second. This committee should take all necessary measures to make it possible for the public to buy VHF–UHF sets, including a direction to the FCC that it use its power in connection with licensees who are manufacturers. For the networks, the television licensees who are manufacturers, and Government agencies involved should be held to account for what is presently happening to the service to which the public is entitled from 85 percent of television.

Third. This committee should direct the FCC to institute immediate rulemaking proceedings aimed at correcting the monopolistic scarcity of network programing and at equitable availability of such programing to UHF as well as VHF stations.

Fourth. An immediate, vigorous network investigation should be conducted by Congress to get at the monopolistic grip which the networks are exercising over stations, advertisers, programing and talent in television.

I have the utmost faith and confidence that this committee and the Congress will do whatever is necessary to preserve this most important medium of communication for the best interests of the American people.

Very truly yours,

FRIEDA B. HENNOCK, *Commissioner.*

Summary of Separate Comments of Frieda B. Hennock, Federal Communications Commissioner

UHF, which represents 85 percent of TV, is in danger of destruction. The reports to the Senate committee by the special counsel and the FCC suggest delay and study instead of immediate remedial action. Because I feel that immediate action is necessary by the Congress, I submit these separate views.

ULTRA HIGH TELEVISION

I. Comments on the Plotkin memorandum

The crucial problem—Present sets shortchange the public.—The public has been kept uninformed that the sets it has bought, and continues to buy are unable to tune into UHF, which constitutes 85 percent of the television channels. This set incompatibility, unless checked, will wreck UHF.

Eighty-five percent of television laid waste.—Nowhere does Mr. Plotkin point to the fact that one of the major reasons for the UHF debacle is the long line of decisions by the Commission preferring and advancing VHF over UHF. This started with the decision allocating channels to television, and has been followed by decisions in specific cases which in each instance have favored VHF over UHF.

FM—The pattern of destruction for UHF.—The same pattern is being used to destroy the growth of UHF as was used to stunt the development of FM—no sets, no network programing, no advertising. Having seen this happen to FM 10 years ago, we should not continue to let it happen to UHF now.

Technical comparisons—UHF and VHF.—Present disparities between UHF and VHF service areas, which Mr. Plotkin imputes to technical differences, could be eliminated by appropriate action of the FCC and the production of suitable UHF transmitters by the manufacturers.

All-UHF television.—Of all the proposals made to the Senate, this is the first of three which Mr. Plotkin considers. He discards it for erroneous reasons based on inadequate data.

Deintermixture.—Mr. Plotkin's comments about deintermixture continue to mislead desperate UHF broadcasters into thinking that he deems it a solution for their difficulties. Actually the opposite is true, since he is opposed to it except for a few scattered communities throughout the country.

II. Comments on the Jones progress report

The Jones report marshals the facts showing the suppression of UHF, and deals with network practices, but suggests no effective remedies. Mr. Jones lays undue stress on the operation of the natural laws of economics as a basic source of much of UHF's plight. The fact is that the barriers to UHF's success can be and must be levied by decisive action. All Mr. Jones proposes is further study and fact gathering at this time but the mere passage of time militates against the success of UHF.

III. Comments on FCC report

The Commission's majority report accurately diagnoses the existing situation when it states that the lack of VHF–UHF sets is critical and that the UHF crisis was precipitated in part by program limitations. However, it completely fails to prescribe any effective remedies for the illnesses it diagnoses, and prefers to let the passage of time take care of them.

THE NETWORK PROBLEM

I. Congressional investigation of networks

I recommend an immediate, thorough, and vigorous congressional investigation of networks. The critical nature of the problem, the breadth of involvement of other industries and of Government agencies and the relationship to congressional policy and necessary legislation, requires an immediate congressional airing and investigation rather than a long-term study by the FCC.

II. Congressional policy against monopolies

The policy of Congress is strongly against monopolistic control of broadcasting. Despite this, the networks today have a stranglehold over the industry, through their control over programing, advertising, and talent. The FCC's chain broadcasting regulations are a dismal failure in preventing monopolistic control of broadcasting by the networks.

I recommend that the FCC be given statutory authority to regulate networks.

III. Scope of investigation

The Congress should investigate the following:

(1) Should networks be permitted to dominate and control TV?

(2) Why is American business unable to procure advertising time on TV?

(3) Should networks be allowed to own TV stations?

(4) Should networks be allowed to produce and syndicate motion pictures?

(5) Additional matters requiring congressional investigation as set forth fully in the attached comments.

Separate Comments of Frieda B. Hennock, Federal Communications Commissioner

INTRODUCTION

The Senate Committee on Interstate and Foreign Commerce has requested a report from the Federal Communications Commission on the memorandums of Mr. Harry M. Plotkin and Mr. Robert F. Jones, both addressed to two basic problems:

1. The difficulties confronting UHF television, and
2. The necessity and feasibility of legislation authorizing the FCC to regulate networks.

The FCC, by majority vote, has submitted a report so unsuited to protecting and advancing the public interest that I feel compelled to submit these separate comments.

The recommendations of Mr. Plotkin and Mr. Jones on UHF are pure temporizing or ineffective expedients and do not alleviate the plight of UHF as Congress clearly intended. They both suggest study and delay; the mere passage of time works against UHF.

Their recommendations on networks display utter disregard for the essential legislative role of Congress in this area. Moreover, the have failed to meet the challenge posed by Senator Bricker that "it would appear that the networks, rather than the FCC, control the physical number of TV stations which will serve the public."

In general, neither the Plotkin, Jones, nor FCC report reflects what Chairman Magnuson calls "a continuing responsibility to insure that law and regulations are kept abreast of the growth of the industry and the needs of the American people."

The following comments are submitted in the hope of meeting this responsibility.

UHF

I. COMMENTS ON THE PLOTKIN MEMORANDUM

(1) The crucial problem—present sets shortchange the public

Nowhere does Mr. Plotkin perform a greater disservice to UHF than in his neglect of the crucial problem of mounting UHF set incompatability. For he does not deem it worthy of mention that with every passing day the public invests an addition $5 million in 20,000 TV sets of which only 3,500 can tune into UHF stations. The 30 million VHF-only sets already in the hands of the public which cannot tune into ultra high—85 percent of the television spectrum—represent a crucial disadvantage to UHF. But the alarming increment of over half a million additional VHF-only sets every month could alone seal UHF's fate, if it is not promptly remedied.

Set incompatibility.—Mr. Plotkin does not cope with the progressively worsening problem of set incompatibility, which is the crux of the entire ultra high debacle. Not only has he failed to point out the gravity of this daily compounding of the set problem, but nothing has been done by anyone to arrest it or to bring it to the public's attention. As a result, the public at this late date, is still completely unaware of the fact that they are being cheated when they buy sets that cannot receive signals from 85 percent of the TV spectrum.

Mr. Plotkin has not only failed to analyze the causes of the UHF set debacle but has also failed to relate them to FM, where the industry established the pattern of not making sets for spectrum space that it did not want used and developed. This was accomplished so deftly in FM that set incompatibility was at the bottom of FM's failure to prosper. It is no wonder therefore that he fails to state that since the Potter hearings the public acquired another 7,200,000 sets, representing an investment of $1,800 million. Moreover, since Mr. Plotkin was appointed special counsel in September, over 4 million of these sets have been acquired, representing an investment of $1 billion. Only a little over 18 percent of these sets can receive UHF signals.

Without sets capable of receiving UHF signals, the UHF broadcaster, deprived of audience, cannot attract advertising revenues, and his station goes off the air. Without such sets, 70 UHF channels are condemned to disuse, the public is deprived of 85 percent of its potential television service and the remaining 15 percent succumbs to inescapable monopolistic domination. This is the significance and the portent of the UHF set problem.

To the rapidly worsening problem of set incompatibility Mr. Plotkin responds by concentrating all his attention on the necessity of preserving the public's investment in the outstanding 30 million VHF-only sets. He totally ignores the daily compounding of this critical problem. The public, with the purchase of every new VHF-only receiver, continues to victimize itself by reducing its chances of ever obtaining service from 85 percent of television. Nor does Mr. Plotkin mention that the proportion of VHF–UHF sets being manufactured is constantly dwindling. I cite the following table which illustrates more specifically the worsening condition of UHF set incompatibility:

TV set production

[In millions]

	1953	1954
Total TV set production	7.2	7.4
With UHF tuner:		
Number	1.5	1.4
Percent	20.2	18.8

Moreover, although 35 percent of the sets manufactured during November 1953 were VHF–UHF receivers, the figure had dropped to below 10 percent by January 1955.

Instead of calling for an urgent warning to prevent the still uninformed public from participating any longer in the destruction of its chances for anything approaching full television service, Mr. Plotkin, by loudly proclaiming the need to safeguard the public's past investment in the 30 million VHF-only sets, creates the powerfully misleading impression that due regard for the public compels the rejection of measures urgently needed to save 85 percent of their television service.

Mr. Plotkin professes great concern with these 30 million sets and brandishes them constantly as a reason for dismissing aid to UHF which would prove really effective. He raises misleading alarms about damage to the public's investment in these sets resulting from several suggested remedies, but no public official has proposed or would advocate measures which would injure the public's investment in these sets. I will expose later the fallacies of Mr. Plotkin's unsupported conclusion that the public's investment is in any way jeopardized.

No sets—No UHF.—Mr. Plotkin's failure to deal with set incompatibility is difficult to reconcile with the tacit admission, discernible on a careful reading of his memorandum, that the very existence of UHF hinges on the set problem. For instance, he claims that the stifling effect on network development resulting from the lack of VHF channels in the first 100 markets is such that there are insufficient outlets for more than 2 networks in too many of these markets. He goes on to say that many of these VHF communities do have UHF assignments but the latter are not the answer to the problem at this stage of television's development.

The most disturbing thing about the latter statement is the fact that only 2½ years after the Commission opened up UHF for licensing, Mr. Plotkin is ready to write off UHF television as a service in most of the first 100 markets. He gives as his reason the poor UMF set circulation potential in these communities where most of the sets are VHF-only.

He also states advertisers will not order these UHF stations because of poor set circulation. Mr. Plotkin goes on to say: "Hence as a practical business matter networks frequenly place their programs on a delayed basis over a VHF station rather than live on a UHF station." He thus fails to charge the net works with any dereliction in placing the programs on a delayed basis on the VHF, and depriving the UHF stations of these live programs, because of lack of UHF receivers. At the same time he implies that no criticism is due the networks for heaping programs on the over-glutted VHF stations while starving the needy UHF stations. The whole problem is relegated to the sphere of practical business judgment by the networks without any suggestion that it is a proper concern of the Commission or the committee which demands their urgent and immediate attention. Justification of the networks in favoring VHF is based on the lack of UHF set circulations. The effect and significance of Mr. Plotkin's subsequent criticisms of network practices are thus considerably lessened.

Set incompatibility in color TV.—Nor does Mr. Plotkin point out that the Commission's neglest of the crucially important problem of set incompatibility in UHF television stands in vivid contrast to its concern with the same problem in color television during the same period.

From the outset the Commission recognized that any decision preferring one color system over another must, in part, rest on the system's comparative merits as to compatibility with receivers then in the hands of the public. Accordingly, the Commission in the color television hearings heard extensive testimony of manufacturers and other elements of the television industry in order to elicit information concerning that subject which would facilitate the Commission's decision

In sharp contrast, the ultrahigh hearings were characterized by an absence of diligent inquiry into the issue of set compatibility and fact-gathering conferences between the Commission and representatives of the television industry. This was so despite the fact that the public was acquiring millions of VHF-only receivers annually throughout the freeze, and by the time the freeze was lifted the public had bought 17 million VHF-only sets.

In the CBS color television decision of 1950 the Commission said in paragraph 124:

"It would not be in the public interest to deprive 40 million American families of color television in order to spare the owners of 7 million sets the expense required for adaptation."

In paragraph 151 of the same decision, the Commission requested the manufacturers to submit proof to the Commission's satisfaction that they could incorporate bracket standards in their sets. If the Commission received satisfactory assurances from a sufficient number of manufacturers that such bracket standards would be incorporated, then the Commission stated:

"* * * we will be in a position to postpone a decision in this proceeding * * * confident in the knowledge that adequate provision has been made to prevent aggravation of the compatibility question. If the bracket standards cannot be made final * * * or if assurances are not received from a sufficient number of manufacturers concerning their plans for incorporating bracket standards in their receivers, the Commission will not feel free to postpone a decision, for every day that passes would aggravate the compatibility problem. In that event, a final decision would be issued adopting the CBS color standards."

For a technological improvement, albeit an important one, the Commission not only went to all this trouble to solve the incompatibility problem, but because of the intransigence of the set manufacturers, felt justified in deciding in favor of the CBS color system. Moreover, the important distinction should not be overlooked that, whereas the color hearings were concerned with a new technical development, UHF involves 85 percent of the entire television spectrum space.

Legislative proposals.—To the critical problem of set incompatibility, Mr. Plotkin responds with nothing more than a proposal for an excise tax exemption for manufacturers who would produce only VHF–UHF sets.

While I favor the exemption, I agree with that part of the Jones report which states that excise tax exemption will not be a sufficient incentive for production and distribution of VHF–UHF sets. There is no assurance that the same forces at work today to suppress their manufacture will not conduce to production of the minimum possible number of VHF–UHF sets, despite the exemption.

The more effective remedy of legislation prohibiting shipment in interstate commerce of VHF-only sets, Mr. Plotkin disposes of by casting doubt on its constitutionality, without explaining the grounds for his doubts. Nor, taking into account the vital importance of VHF–UHF receivers to an objective so important as a nationwide competitive television system, is it easy to understand why, in Mr. Plotkin's language: "* * * a manufacturer should not be prevented from marketing a receiver capable of receiving one channel only, if the public will buy it."

Public deceived.—While Mr. Plotkin displays great concern over the 30 million VHF-only sets in the hands of the public, his concern does not extend to the fact that these sets are confined to the use of only 15 percent of the TV spectrum space. Mr. Plotkin speaks of these 30 million VHF-only sets in the hands of the public as if their restriction to the VHF channels alone was in keeping with the FCC's sixth report and order, and as if that decision opened up for licensing only 12 VHF channels. Consistent with that approach, Mr. Plotkin says in his report: "We cannot overlook the fact that more than 30 million receivers are in the hands of the public and that they have been bought on the faith of a formal decision of an agency of the Federal Government. The public is entitled to rely upon decisions of the Federal Government."

Mr. Plotkin proclaims the obvious when he stated that "the public is entitled to rely upon decisions of the Federal Government." However, he seriously misapplies this principle. For the public, when it purchased the 30 million VHF-only sets, had never been informed that these sets could not receive 85 percent of the spectrum space. They certainly had every right to rely on the decisions of the Federal Government.

But the decisions with which we are here concerned were the ones made as far back as 1945, reannounced in 1948 and implemented in 1952, to open up UHF for television. The public was led to invest in 17 million VHF-only sets during the 3½-year freeze and an additional 13 million VHF-only sets since the freeze—not in reliance on, but in derogation of, the decisions of the Federal Government. Thus, rather than having been bought on the faith of a decision of the Federal Government, as Mr. Plotkin suggests, these VHF-only sets were bought in deplorable ignorance of that decision and because proper steps were not taken by the Commission to implement it.

In a field so highly technical, the public was particularly dependent on efforts which should have been made by the Commission to provide for the availability of equipment to the public which would implement rather than frustrate the FCC's allocation decisions. The public made television possible by their gigantic investment, which should have been protected with bona fide VHF–UHF sets in conformity with FCC decisions.

Industry's failure to act in public interest.—Mr. Plotkin went to great length to discuss the necessity of standardization in the radio, as distinguished from the automotive field. He showed that when a change is effected in the radio field it results in the abandonment of a band of frequencies and that all of the old receivers are automatically rendered either partially or totally useless. By contrast, however, he fails to excoriate the industry for its failure to produce sets that will implement the FCC's decisions and thus destroy for a second time the allocation of spectrum space by the FCC and allow it to fall into disuse. Nor does he account for the FCC's failure to cope with this set and equipment problem.

Mr. Plotkin does not discuss the inefficient sets and converters produced for FM and relate them to UHF, nor does he mention the gradually dwindling production of VHF–UHF sets.

The performance of UHF sets and UHF converters leaves much to be desired. UHF receivers have not reached the same state of development as have VHF receivers. As the UHF receivers are improved, it will have the same effect as increasing the power of the transmitter. For example, a decrease of 6 decibels in the internal noise of the receiver would have generally the same effect as quadrupling the power of the transmitter.

The manufacturing industry with all its ingenuity and resourcefulness in bringing improvements quickly to the public in this field has been notably lacking in the development of UHF. Nor has the FCC demonstrated any interest in conferring with the industry, either during the freeze or since the freeze—a period of 7 years—with regard to the development of both sets and transmitting equipment.

This is particularly unfortunate because the acceptance of television by the public has been so great, and especially so among the lowest income groups who most require information and guidance as to the limitations of the sets they are purchasing.

Further delay will be fatal to UHF.—If this committee follows the advice of the Plotkin memorandum of delay and further studies and continues to raise a hue and cry about existing sets, and takes no action to get the proper sets into the hands of the public, then UHF will inevitably fall into disuse in the foreseeable future.

There is critical need for immediate action by this committee to get through to the public and bring the entire problem to their attention. It also must instruct the FCC to call to account those licensees who are also manufacturers for not making sets that will tune into all TV channels, thus depriving the public of the use of 85 percent of the spectrum space. The committee should also question those licensees who have stated in congressional hearings that sets and transmitters would be forthcoming and that this equipment would be available for UHF. They should also be questioned.

Mr. Plotkin neither points out the serious effects of the Commission's failure to alert the public in the past, nor does he make any suggestion as to the urgency of doing so.

He fails to show that by the end of the next turnover period, which is generally estimated to be between 6 to 8 years, all television sets can be VHF–UHF if proper measures are taken now—and in that way 85 percent of television can be preserved.

Nothing has been done to invite the attention of the Federal Trade Commission to the question of whether these sets should be labeled so as to indicate that they can receive only 12 TV channels out of 82. Nor has the Department of Justice been called in to determine whether there is a violation of the Sherman Act by the manufacturers who manufacture TV sets that tune into only 15 percent of the spectrum space and who are constantly decreasing the manufacture of the VHF–UHF sets.

With the passage of time, TV programing will rely more and more on films. Unless UHF sets are manufactured, UHF stations will not be able to come on the air even though sources of filmed programs become more widely available. These UHF channels would continue to lie fallow for lack of sets.

VHF–UHF sets—The key to the problem.—Mr. Plotkin states that the UHF portion of the band "shows alarming signs of going the way of failure upon which FM-preceded it." Every effort must be made to prevent the public's continued purchase of these limited VHF-only sets. The public must be apprised of the limitation of these sets in terms of program sources and the fact that they are going to be limited to the use of 12 channels instead of 82. It would be virtually impossible to release television from a relentless monopolistic grip already fastening on it if this dynamic industry were constricted within the limits of 12 VHF channels.

During the next 6 to 8 years, which is the normal period of turnover of sets, the public will, at the present rate, acquire 50 million sets, representing an investment of another $12 billion. Here lies the key to the future of television. If these sets are equipped to receive UHF as well as VHF signals, then UHF would become the equivalent of AM; that is to say, it could provide a nationwide service and unlike FM, it would have 50 million sets that could tune into it. For then the spectrum space would be kept alive for UHF with its 70 channels. Nothing could then stop this dynamic industry from realizing the great achievements for which it is destined because of its public acceptance, its importance as a medium of mass communications, and its vital role in a democratic society.

But if the public should acquire in the next 6 to 8 years 50 million VHF-only sets, then we have nothing to look forward to except the sure destruction of any realistic hope for a nationwide competitive TV system, and can expect the imminent demolishment of 85 percent of all television. The stakes are high. Every effort must be made by this committee, the Commission, the industry and all concerned to insure that the next 50 million sets the public buys will be able to tune into all television.

Come to grips with this problem and the solution is in hand. Neglect it and no other solution will save UHF. Mr. Plotkin has chosen the latter course. For in his memorandum the crucial problem of set incompatibility is neither traced to its real causes nor approached in terms of the critical urgency for prompt, decisive, and effective remedial action.

(2) *85 percent of television laid waste*

The second major defect of the Plotkin memorandum is its failure to analyze clearly the actions of the Federal Communications Commission in order to determine the extent to which the Commission is at fault for the present state of UHF. Any impartial investigation of these decisions will convince this committee that in addition to failing to do anything to help ultra high during the freeze between 1948 and 1952, the Commission handed down a long series of decisions on particular cases and issues, each one vitally affecting the very life of UHF. In these decisions the Commission turned its back on its earlier repeated announcement that UHF was necessary if the public was to obtain a satisfactory nationwide television service. The Plotkin memorandum ignores the fact that the Commission itself is in very large measure responsible for the present critical condition of UHF.

As early as 1945, the Commission realized that use of the ultra high band was necessary in order to achieve a nationwide competitive television system. It then stated: (To quote the Commission):

"The Commission repeats the hope expressed in its proposed report that all persons interested in the future of television will undertake comprehensive and adequate experimentation in the upper portion of the spectrum. The importance of an adequate program of experimentation in this portion of the spectrum cannot be overemphasized, *for it is obvious from the allocations which the Commission is making for television below 300 megacycles* (i. e., in the VHF band) *that in the present state of the art the development of the upper portion of the spectrum* (i. e., in the UHF band) *is necessary for the establishment of a truly nationwide and competitive television systems.*" [Emphasis supplied.] (Report of General Allocations Proceeding, May 25, 1945, Docket 6651.)

But despite the payment of periodic homage to principle, Commission practice has been at the expense of service in the UHF. For during the freeze and since it was lifted, the Commission, by action and inaction, has, with only two exceptions, made television synonymous with VHF. Its policies resulted in bringing television service to the public via the big-city VHF stations, and the extension of their coverage wherever possible to include outlying communities while it did little to improve the worsening UHF problem. I submit that the series of actions listed below have led to the morass in which the Commission is presently entangled, and out of which it cannot be expected to extricate itself.

I believe it desirable to sketch the various decisions taken by the Commission affecting UHF and by so doing, to set out the Commission's attitude toward it. For the remedies suggested by me are in large part depentent upon a recognition of the inadequacies and mistakes made by the Commission in recent years.

Commission Action and Inaction on UHF

HELPFUL

1. March 2, 1955, notice of proposed rulemaking to limit location of antenna to 5 miles from city to which channel is assigned.
2. March 30, 1955, notice of proposed rulemaking looking toward the use of amplifying transmitters (boosters) by UHF stations.

INJURIOUS

1. Prolonged 3½ year freeze during which VHF became firmly established in the most desirable markets, the public acquiring almost 17 million VHF-only and no VHF-UHF receivers.
2. The sixth report and order establishing a table of assignments which intermixed VHF and UHF channels in the same communities, and thereby placed the latter in an unfair competitive position.
3. Increase of maximum permissible antenna heights and power for VHF stations, thereby increasing the coverage of these VHF stations to such a point that they blanketed UHF stations in contiguous as well as distant communities.
4. Failure to apprise the public both during and after the freeze that it would be economicaly unwise to invest in VHF-only receivers when the purchase of VHF–UHF receivers would result in a greater variety of programs from a larger number of stations.

HELPFUL	INJURIOUS
	5. Failure to take any significant action directed toward the manufacture of VHF-UHF receivers or expedition of the development of adequately powered UHF transmitters.
	6. Unjustified acceleration of post-freeze VHF licenses by hurried grants and procedural short cuts in cases of dropouts and mergers of competing applicants.
	7. Dropin of additional VHF channels subsequent to adoption of Commission's allocation table, thereby giving further dominance to VHF.
	8. Revision of rules to authorize common ownership of 2 UHF in addition to the 5 VHF stations, thereby increasing monopoly control by multistation owners.
	9. Institution of rulemaking to increase antenna heights of VHF stations in zone 1, which would further increase present large coverage at the expense of UHF.
	10. Authorization of satellites, as described below.
	11. Institution of rulemaking to permit operation of low-power television stations in communities of less than 50,000 without requirement of local programing.
	12. Failure to adopt measures to make available network programs and other programing to UHF licensees.

From the foregoing, it is immediately apparent that the Commission has instituted only two constructive measures to aid ultra high since the freeze, these of very recent origin and not yet of benefit since they are only in the proposed rulemaking stage.

Multiple ownership rule—Network and nonnetwork.—It should be noted that I consider the amendment of the Commission's multiple-ownership rules to allow ownership of 2 UHF stations in addition to 5 VHF stations as an action detrimental to the development of ultra high service. When this action was taken, the majority expressed the view that it would constitute an assist to UHF by encouraging the largest chain broadcasters, network and nonnetwork alike, to undertake UHF broadcasting. But, as I suggested in my dissent at that time, no more illusory benefit has ever been advanced as justification for increasing concentration of control of the most effective medium of mass communications. First, such large chain broadcasters will only enter the markets most propitious for UHF broadcasting; second, even were such actions to lead to an improvement in the UHF broadcasting situation in the areas involved, only a few more UHF stations would result; and finally, the acquisition by such large chain broadcasters of UHF stations has presently only resulted in the demise of existing, independent UHF stations struggling to attain a foothold in such markets.

The majority cite the recent purchase of UHF stations in Milwaukee, Portland, Oreg., and Miami subsequent to this amendment as examples of the way in which the UHF plight is being mitigated. I am not that discerning. But I do note, however, that 1 of these UHF stations is owned by Columbia Broadcasting System and 2 by Storer Broadcasting Co., and that 2 of these acquisitions resulted in a second UHF station in Milwaukee and Miami going off the air.

It is suggested that medicine wrongly administered makes the sick more sick. It took no extraordinary prescience to foresee that this amendment to the rules would not only fail to favor the development of UHF, but would also do violence to the very important principle against undue concentration of control in television. This is particularly borne out by the failure of the rule to produce additional UHF applicants for local, independent stations.

There is serious need of consideration by this committee of whether networks should be permitted to own and operate television stations. Not only do the network charges and those of their 16 owned stations enable them to corral the lion's share of all TV broadcast revenues (60 percent in 1953), but it is difficult for film syndicators, who are attempting to compete with the networks, to clear desirable time on these major stations, which are of course inaccessible to competing networks as well.

While Mr. Plotkin invokes history as justification for permitting the networks to own stations in the three major talent centers of New York, Chicago, and Los Angeles, history shows that the network owned stations are the cornerstone of the network monopoly, and this committee should determine whether there is justification for permitting the networks to own TV stations.

The multiple ownership rules permitting the licensing of as many as seven TV stations to a single licensee without regard to the size of the station or the concentration of such stations in contiguous areas, seriously infringe upon the important principle of diversification of control over mass media. They also give the multiple-station owners enormous and unjustifiable advantages over their competitors in the quest for network affiliation, programing, and advertising dollars. Because of this, I would urge the committee to give close attention to the multiple ownership rules, whose inadequacies and inequities urgently require correction.

Satellite stations usurp UHF channels.—Until August 5, 1954, nothing has been done to disturb the allocation of channels under the FCC's allocation plan. On that date the Commission suddenly issued an announcement that it had adopted the policy of licensing television stations which provide no local programing. This new pronouncement overthrew important basic policies and opened the way to the usurpation of the unused TV channels for purposes diametrically opposed to the objectives for which those channels had been reserved.

It now became possible to build satellite stations which merely rebroadcast the programs of some distant parent station, and provide no local programing.

Rulemaking procedures appropriate to so radical a departure from long-settled policy were bypassed. No conditions or limitations were established as to the number of satellities a parent station could program. No limit was set on the distance a satellite could be authorized from the parent station. Nor, although the policy announcement intimated that it was intended as an aid to UHF, were satellites limited to UHF. The Commission soon after granted a construction permit for a VHF satellite at Lufkin, Tex., to broadcast exclusively the program of a VHF parent station at Houston, 124 miles away.

The adverse affect of this decision is clear. It discourages others from applying for available UHF channels and thus deprives the Lufkin area of a VHF and potential UHF station which could provide local programing responsive to community needs, and surrenders control of the market to a large VHF station in a distant area. The Commission's decision of August 5, 1954, is an almost incredible departure from two of the most firmly established policies of the Commission which have heretofore always governed the grants of broadcast licenses in the public interest. One of these is that a station serve the particular needs and interests of the community in which it is licensed. The other is that a licensee maintain full "control over the operation and programing of his station."

Satellite stations destroy local initiative.—The operation of a satellite deprives the local public of the kind of television service Congress and the Commission intended to be made available. Instead of having programs originated by independent, local station management to meet its local needs and interests, the community becomes—for purposes of television—a mere appendage of the parent community.

Not only is the community deprived of local programing on the channel occupied by the satellite station, but where the satellite happens to be a VHF station, the set conversion problem it creates blocks the way to the building and successful operation of a station on a locally assigned UHF channel. In this way satellites can be used as another device for suppressing the development of UHF television, not to speak of the inability of UHF to overcome competition of large distant VHF stations, with their extensive coverage.

If it were necessary in exceptional cases to permit a UHF parent station to get its signal into a "white area" within its normal service area, the appropriate means would be a booster, which operates on the same channel as the parent station. But by authorizing satellite stations, the Commission has opened the way to preemption of television channels and spectrum space in complete derogation of the Communications Act.

To compound its error, the Commission has initiated rulemaking looking toward reduction in the minimum power requirements of stations in communities under 50,000. This would open the way to the preemption of valuable TV channels or spectrum space by the outlay of negligible sums required for very low power transmitters for satellite stations. The proposal applies equally, however, to stations not serving as satellites. Yet, it is not known how such extremely low-powered stations could meet the Commission's programing standards. It is also open to question whether they could render a useful broadcast service.

The effect and potential danger of this decision can be more graphically illustrated when it is recalled that out of 1,300 communities in which channel assignments have been made by the Commission under the allocation plan approximately 1,128 have a population of less than 50,000, and therefore would qualify under the proposed rule.

The policy of authorizing satellites gives unprecedented power to parent stations which, through satellites, can program for large areas. The parent station with a far-flung audience, could easily shoulder all local competitors aside in the quest for advertising revenues. In short, satellites present one of the most insidious threats to free competition in television and conveniently facilitate monopolistic control, with which this committee is so deeply concerned. Without the preservation of spectrum space and its effective utilization through proper receivers, we are sterilizing the potential usefulness of the whole UHF band, and inviting monopolistic control over the inadequate 12 VHF channels.

This line of decisions culled from many made by the FCC, issued while UHF was trying to get started ever since the lifting of the freeze, is in derogation of the Commission's statutory duty to provide so far as possible television service to all of the people of the United States, and to preserve competition and prevent monopoly by providing a choice of as many services as feasible. The Commission's decisions indicate a predetermined policy to favor large stations with large coverage regardless of how few would result from such policy. Congress obviously intended that there should be a nationwide chain of local stations serving local needs throughout the country. This the Commission has thwarted by its decisions.

(3) *FM—The pattern of destruction for UHF*

It is important to consider what happened to FM, which held high promise as the home of all radio broadcasting and which suffered the same fate that will befall UHF unless immediate steps are taken for its relief. Mr. Plotkin does not comment anywhere that the pattern in FM parallels the techniques which have been used to frustrate UHF's fulfillment of its vital role in television. Because Mr. Plotkin does not do so, I feel that a brief review of the FM debacle is necessary to throw helpful light on the entire UHF problem.

The FM service, like UHF, was initiated after a freeze. The freeze which preceded FM licensing was occasioned by World War II, and lasted almost 4 years. The television freeze lasted just about as long. The dramatis personnae are similar, and this similarity is not, perhaps, purely coincidental. Here are the facts: When the wartime freeze on aural broadcasting licensing was lifted, a great cry was voiced for bringing radio service to the public. Apparently, radio service was then synonymous with AM. When the television freeze was lifted, there was a similar cry for bringing television service to the public. This time, television service was synonymous with VHF.

In both cases, two new services were awaiting a chance to get going in new spectrum space whose virtues were widely proclaimed. In the case of FM, it was generally anticipated that it would become the future home of aural broadcasting; and, in the case of UHF, it represented 85 percent of all television channels. But, in both cases, new expediting procedures favorable to the entrenched services were devised.

In AM, the favored device was "drop-ins" of new AM stations, made possible by the ingenuity of the engineering profession in devising directional antennas. In television, the favored devices were mergers and "drop-outs," with all parties cooperating to avoid the process of public inquiry, and the "drop-in" of additional VHF channels.

Through quick processing and by "drop-ins," there were more than 1,000 new AM stations licensed in the 2-year period after the FM spectrum space was opened up for licensing. This figure exceeded the total number of AM stations licensed since the inception of the medium in 1912.

Great interested in UHF and FM.—Lest there is a misimpression that there was a dearth of interest in FM, I hasten to add that there were plenty of applicants for FM stations. As a matter of fact, the interest was so great that the Commission during the same 2-year period licensed 769 FM stations. Similarly, there has been no lack of interest in UHF. Three hundred and fifty applicants have applied for authorizations to build UHF television stations in a medium that is much more expensive and complex than radio and must of necessity move more slowly. Three hundred and eighteen of these applicants obtained construction permits. Today there are 108 left on the air.

The facts are the same with respect to receivers. In a 4-year period, from 1946 to March 31, 1950, there were only 179,000 FM sets produced; and indeed, they were faulty and expensive. During the same period, there were 4,600,000 AM–FM sets made. But the production of AM-only sets was a remarkable 46,-655,000. The retail cost of many AM receivers was as little as $15 or less, while FM sets to this day are much more expensive. Thus, FM was confronted with virtually the same receiver problem in a fast growing AM world that UHF encountered in the VHF world. Out of some 18 million new television sets sold in less than 2½ years since the TV freeze was lifted, only 3½ million are UHF-equipped. In addition, 17 million VHF sets were acquired by the public before the freeze was lifted—about 16 million of these during the freeze itself.

Starvation of programing.—Like UHF stations, the FM stations as a class have not been successful in obtaining network programing and the lucrative advertising revenues that go with it. At first, the networks prohibited their AM affiliates from carrying network programs on their FM stations. After complaints to the Commission, the networks reversed their position and authorized AM stations to carry network programs on their FM stations as well, provided however, that the FM station duplicated all the network programs broadcast by the AM parent station. This not only violated the intent of the chain broadcasting rules, which sought to preserve a licensee's control over his programs, but also inhibited the independent development of FM as a separate aural broadcast service. Nine years after the aural freeze was lifted, there are, as far as I know, no FM-only stations that are affiliates of a network. (The term "FM only" is used to denote the 60 FM stations that are operated as independent broadcast services, as distinguished from the approximately 540 FM stations that are used solely to duplicate the AM stations' programing and for which no additional network advertising revenue is received). The record is similarly replete with evidence as to the small amount of network programing available to UHF stations and the niggardly amount of advertising dollars doled out to UHF broadcasters by the networks.

And so FM, like UHF, was a victim of intermixture and was caught in the same deadly circle—no sets because no programs, because no advertising, because no sets.

Those who would consign UHF to the ultimate fate of FM do not fully appreciate the indispensable role of UHF in the development of a nationwide visual service. They are willing to surrender too easily in the face of exaggerated difficulties, and underestimate the resourcefulness of their Congress.

But it must not be overlooked that despite the striking similarities in the history of techniques used to repress the development of FM and UHF, there is no comparison between them in the gravity of the crippling of these two services. The public, denied the advantage of a fully developed FM broadcasting service, is at least served by 2,600 AM radio stations. In television, however, the elimination of UHF threatens to deprive the public of service from 85 percent of the total number of stations for which provision is made in the allocation plan. Thus, not only would UHF's demise force all of television into 12 grossly inadequate channels and deprive countless communities of the stations and diversity of program sources to which they are entitled, but the resultant scarcity of stations could operate only to augment the network domination of television.

(*4*) Technical comparisons *UHF–VHF*

Part of the pattern of killing UHF is to speak disparagingly of it as technically inferior to VHF.

Mr. Plotkin states that VHF and UHF have different technical qualities and that VHF signals travel farther than UHF and reach more people. But nowhere does Mr. Plotkin mention the Commission's error, in the sixth report and order, of substantially increasing the VHF service areas by raising the maximum power and antenna heights permitted for VHF stations. This was done at the same time the Commission opened up the UHF band for licensing. Nor does Mr. Plotkin point out—although it was urged during the Potter hearings—that reduction of these powers and antenna heights could reduce the disparity between VHF and UHF service areas, thereby confining VHF stations to their natural markets and removing their signals from distant communities intended to be served by local UHF stations.

Mr. Plotkin admits that "UHF has suffered from equipment limitations." But what Mr. Plotkin fails to point out is that during the entire period of the freeze the Commission did not confer with the manufacturers of both transmitting and receiving equipment in order to encourage and facilitate the development and availability of proper and adequate UHF equipment.

The majority of the UHF stations on the air today are still operating with either 1-kilowatt or 12½-kilowatt transmitters. Until the spring of 1953 the highest power UHF transmitter available was 1 kilowatt. For the next 1½ years the highest power UHF transmitter was 12½ kilowatts. And only recently has higher power transmitter equipment become available making it possible to attain the maximum permitted limit of 1 megawatt of effective radiated power.

Nowhere does Mr. Plotkin emphasize the crucially important point that most of the "marked [technical] advantages" he ascribes to VHF, would disappear with reasonable exploitation of UHF's acknowledged technical potentialities. Not only could service areas be equalized, but the use of inexpensive UHF boosters, where necessary, could fill in and extend UHF coverage.

Mr. Plotkin makes no mention of the fact that whereas the 1 megawatt power maximum authorized for UHF transmitters is considered to give UHF coverage in flat terrain equivalent to VHF coverage, higher UHF maxima ranging from 2 to 3 megawatts or more would, with adequate antenna heights and occasional boosters, enable UHF to give service equivalent to VHF in rough terrain. Nor does he advocate that the Commission adopt these higher UHF maxima, or mention that by using high power tubes and taking advantage of high antenna gains possible in UHF, there is no reason why 2 or even 3 megawatt transmitters could not be made available in the near future for UHF broadcasting.

In short, Mr. Plotkin, while conceding that performance in producing transmitting equipment capable of realizing UHF's technical potentialities has been "disappointing," he neither traces this serious handicap to its true sources, nor calls for immediate remedial action by either the committee or the Commission.

Mr. Plotkin points out that the quality of UHF pictures is at least as good as, if not better than VHF. The technical advantages Mr. Plotkin ascribes to VHF all relate to service area coverage; but as I have explained, this VHF-UHF disparity can be equalized. Yet UHF's potential as a broadcasting service technically comparable with VHF has not been exploited by the manufacturers or the broadcasters.

It is unfortunate that those broadcasters who are UHF licensees and those who have since ceased operation had to spend their money on equipment that was so limited and deficient, and in addition sustain the great losses in operatiton that they did. For at this time, they could very well come in for new equipment and obtain the coverage that they have so badly needed from the inception of UHF, except for the loss of their original capital investment and their staggering operational losses.

(5) All UHF television

The Plotkin memorandum is at its worst when it comes to proposing remedies. It is, fundamentally, shot through with pessimism and do-nothingism. Mr. Plotkin is all for UHF, provided you do nothing for it. He rejects the remedies proposed by others and offers nothing himself that is even remotely adequate to meet the ills for which he purports to prescribe.

Of all the many thoughtful and helpful proposals made during the Potter hearing, advanced by responsible and well-informed people, Mr. Plotkin merely discusses three recommendations, one of which he rejects altogether and the other two of which he vitiates by the character of his suggestions.

The first of these many recommendations which he discusses is that for an orderly transfer of all TV to UHF over a suitable transition period of 6 to 8 years.

Orderly transition to UHF.—First, Mr. Plotkin adverts to the millions of VHF-only receivers in the hands of the public and expresses the baseless fear that

VHF service would be discontinued long before 100 percent of the sets have been converted and certainly long before 100 percent of the sets have become obsolete. He makes no mention of the fact that the average life of a television receiver is estimated at 6 years, or of the obvious conclusion that by the end of a 6- to 8-year transition period during which VHF service would continue to be available, normal set turnover alone would eliminate any question of financial injury to the public from a gradual move of television to the UHF band. Nor does Mr. Plotkin allude to two factors which tend to sustain, if not accelerate, normal set turnover—the reduced prices of large screen monochrome receivers, and the gradual development of color television which must make itself felt during a 6- to 8-year period.

Mr. Plotkin, moreover, ignores the powerful incentive for the public to install UHF converters on their VHF-only sets when, by doing so, the public could avail itself of greatly expanded service and wider program choices. Neglecting relevant facts, Mr. Plotkin says nothing about the continuous reduction in the cost of UHF converters, or that they can now be installed for as little as $25. Nor is there any reason to suppose that the cost of converters will not continue to be reduced. Experience has demonstrated that as sales of receiving equipment climb in volume, prices reduce and quality improves, as a result of increased competition in the growing market.

Mr. Plotkin also conjectures that VHF service would disappear while the public is still making installment payments on VHF-only sets. This conclusion inexplicably ignores the fact that installment payments customarily run not longer than 2 years, whereas the transition period envisaged would run at least 6 to 8 years. Quite obviously there is no realistic prospect that by the end of such a period any member of the public would still be paying installments on VHF-only receivers purchased that long ago.

Protection of the public paramount.—Mr. Plotkin predicts that when VHF service discontinues, an unstated number of people will be left with sets incapable of receiving UHF signals. This prophecy he rests on the curious supposition that the cost to VHF stations of broadcasting simultaneously on a UHF and VHF channel during the transition period, together with unidentified pressure on the Commission to permit the use of VHF frequencies for other purposes would force premature discontinuance of VHF service long before UHF set conversion and set replacement were completed.

Here, Mr. Plotkin goes so far as to suggest that the nominal additional cost of operating a second transmitter, including the added cost of electric power, tube replacements, maintenance, and in some cases a small addition to the staff, would dissuade VHF operators from profiting by the substantial advantage of being able to broadcast on two channels throughout the transition period. This supposition is too far removed from the facts of broadcasting life to warrant serious consideration. Rather than being based, as Mr. Plotkin would have it, on straight economics, it reflects greatly distorted economics.

Mr. Plotkin omits any mention of the fact that the additional cost of a UHF transmitter and incidental equipment would represent only a percentage of the investment already made in the VHF station. Nor does he take into account the fact that by the end of the transition period the major part of the existing investment in VHF transmitters would have been fully depreciated.

The suggestion that irresistible pressures would preclude the Commission from maintaining the VHF television allocations until the end of the transition period is equally specious. Mr. Plotkin does not explain the reasons for his conclusion that the Commission, endowed with the responsibility and the authority for allocating spectrum space in the public interest, would be powerless to maintain VHF television allocations so long as they were required in the interest of an orderly transfer to UHF.

It has been suggested in some quarters that certain of the VHF television channels might eventually become very useful to the military; and I feel sure that this committee will look very carefully into the necessity for the use of VHF channels by the military.

Rural service.—Mr. Plotkin goes on to raise unwarranted fears that a move to UHF might permanently deprive a substantial portion of the rural public of television service. He adduces no facts or data to support these fears. In fact, Mr. Plotkin points out that no study has been made or submitted on the subject. He implies criticism when he points this out. Yet, as counsel to the committee, Mr. Plotkin called for no such study, which could have been furnished promptly. Instead, he proceeded to make judgments whose fallacies would have been exposed by the study. A study should be made and could be completed within several weeks.

Mr. Plotkin's discussion of rural service adopts the approach of the proponents of clear channel, superpower radio stations which was rejected by this committee in 1938. In doing so, it ignores the most important objective of the allocation plan, which is to provide for the largest possible number of stations furnishing diversified sources of programing which respond to the particular interests, needs, and desires of the communities the stations are licensed to serve.

While it is true that it requires more time to build stations in the less densely populated areas than in the larger markets, Mr. Plotkin wrongly assumes that UHF stations cannot be equipped to serve these rural areas. The use of UHF boosters, coupled with adequately powered transmitters and sufficient antenna height, would enable UHF stations to provide full rural coverage. Moreover, there are almost six times as many UHF channels as VHF, so that UHF offers not only better coverage but, what is more important, diversity of program sources.

Mr. Plotkin states that "In the present state of the television art, the service area of a VHF station is substantially greater than that of a UHF station." It is of course fallacious to impute the present VHF coverage solely to the state of the television art. The inequality in coverage is actually attributable to a very large extent to the Commission's Sixth Report and Order in which it increased the maximum power and antenna heights permissible for VHF stations. Moreover, the manufacturers have not made it possible until this year for UHF broadcasters to take advantage of the maximum power (1 megawatt ERP) which the Commission has allowed for UHF stations. Furthermore, as Mr. Jones has pointed out, still higher power maxima would be required to make UHF coverage reasonably equivalent to VHF coverage.

Mr. Plotkin says nothing about the fact that blanketing rural areas with VHF signals from large VHF stations intensifies the set incompatibility problem and lays down an almost insuperable barrier to the building of UHF stations on many channels assigned to smaller communities. If, during an interim period, high-power stations were required in some cases to provide service before local stations are built, there is no reason why that service could not be provided by UHF stations. Mr. Plotkin does not mention that if this were done, the barrier of set incompatibility would be lifted and the way opened to the utilization of large numbers of UHF channel assignments now lying idle.

In his preoccupation with what Mr. Plotkin considers to be the indispensability of superpower VHF stations for rural service, he overlooks the important fact that the prodigious expansion of AM service in hundreds of smaller communities was made possible by the absence of set incompatibility. Rural audiences formerly dependent on large, distant stations could tune their sets in to the local stations as soon as they appeared. That is why the AM spectrum space is not lying fallow today.

The Commission, moreover, has already stated in its report of July 27, 1954, to the Subcommittee on Communications that the bulk of all present television channel assignments could be encompassed in an all-UHF television allocation plan. The Commission went on to say: "Under such a UHF plan, present problems of disparity and set incompatibility would be overcome. As a result, station and network competition might well be fostered."

Nationwide allocation plan necessary.—It would be helpful for the committee to obtain from the Commission a nationwide all-UHF allocation plan along with a nationwide all-VHF allocation plan. Since the clear danger facing the industry and the public is disappearance of UHF service, it is important that the committee have an all-VHF allocation plan which will show specifically and graphically the grossly inadequate basis on which it would be necessary to provide television service with only 12 VHF channels. Mr. Plotkin has himself deprecated the possibilities for a nationwide competitive TV system based on the VHF channels alone.

The Commission has already prepared an all-UHF plan covering the northeast, which clearly demonstrates the feasibility of providing nationwide television service in the UHF band. The nationwide UHF allocation plan should be accompanied by an economic analysis of its relation to varying population densities, and its adaptation to the differing economic circumstances of different areas. Only on the basis of such full factual data is it possible to arrive at valid conclusions concerning questions of rural service, about which Mr. Plotkin proceeds to casual conclusions totally unfounded in fact.

As far back as 1945 the Commission indicated that the permanent home of television would lie in the UHF band, and allocated to television the UHF spectrum space in which, in 1952, after 3½ years of deliberation, it assigned UHF channels. Eighty-five percent of all television channels were thus established in UHF for the indefinite future.

Despite this, Mr. Plotkin does not take the move to UHF any more seriously than to consider it a passing fancy. "Today," he says, "the pressure may be to move all television receivers to the UHF portion of the band. Tomorrow a new development may come along that theoretically has important advantages for television if the band could be moved again." For Mr. Plotkin to indicate that a move to still another portion of the spectrum might be anticipated tomorrow hardly indicates any but a flippant attitude toward the most critical problem that has yet faced this Commission in the history of communications.

There were 350 applicants who retained lawyers and engineers and applied for UHF channels. Of these, 318 received construction permits. There are still 108 stations on the air, most of whom are in critical condition. Mention is not made, moreover, of the public's investment in 5 million UHF sets and converters, not to speak of the investment in the UHF stations that have shut down to date, the losses they have taken, or the losses that are incurred daily by existing UHF stations.

It must be pointed out also that to this very day the Commission itself has made no distinction between VHF and UHF as a broadcasting service. And despite the encouragement given by the FCC and by individual Commissioners to the use of the UHF channels opened up for television in 1952, there is no mention anywhere of the obligation to investors in UHF stations or to the public which has invested in VHF–UHF sets and converters, all of whom relied upon our conduct and our representations as a Commission.

Nor is recognition given to the fact that additional numbers of applicants would have sought licenses to build UHF stations if, so soon after the first UHF stations went on the air, they had not been subjected to the punishing disadvantages of lack of sets, network programing and advertising dollars. All of this has been clearly evident from the inception of UHF broadcasting, and repeatedly called to the attention of the Commission. But no relief has been provided to this day.

The move of all television to UHF, proposed during the Potter hearings, is before the committee for its consideration. The committee would of course wish to base its decision on more substantial evidence than the unsupported judgments offered by Mr. Plotkin.

(6) Deintermixture

The main fault of the basic allocation plan of the Commission in 1952 was the intermixture of VHF and UHF channel assignment, just as it was in the case of AM–FM intermixture.

The difficulty intermixture creates is that the existing VHF channels are generally affiliated with the large networks which have both the programing and the sets. UHF cannot get started in these communities as there is no incentive on the part of the public to buy sets which tune into stations unable to supply them programing as a result of which these stations cannot get advertising. To meet this problem, suggestions were submitted at the Potter hearing for "deintermixture" or revision of the table of assignments so that a community would have either VHF or UHF channels exclusively.

It would be diffcult to imagine a greater blow to UHF in its present parlous state than to arouse false hopes of relief. This Mr. Poltkin has done in sounding a hopeful note on deintermixture which, as he mentioned, had strong support at the Potter hearings. The widespread impression has been gained that Mr. Plotkin's report advocates deintermixture as a meaningful solution to the UHF problem, and that he has recommended that the Senate committee require the Commission to pursue a meaningful policy of deintermixture. The UHF broadcasters have not been slow to respond to the impression that in deintermixture Mr. Plotkin has held out hope for salvation.

Intermixture the underlying cause of the trouble.—If it were possible to single out from the welter of UHF's affilictions one basic cause for its failure to prosper, it would be the intermixture of VHF and UHF service, taking into account the enormous handicaps of set incompatibility and the absence of adequate transmitting equipment and network programing, which have plagued the UHF broadcaster from the beginning.

The key to the crushing disadvantages confronting UHF broadcasters in the intermixed system is the fact that so few sets are able to receive UHF signals. As early as March 22, 1951, when the Commission issued its third notice of further proposed rulemaking during the freeze, it recognized that "receiver problems" would have to be overcome in order to enable UHF stations to complete successfully with VHF stations serving the same markets. In response to warnings concerning "receiver problems," the Commission then said:

"* * * During the hearing on the general issues, it was urged by some witnesses that the elimination of intermixtures would simplify receiver problems and would minimize the broadcasters' competitive problems. It was argued that intermixture would tend to deter the construction of UHF stations and that until a large number of VHF-UHF receivers were distributed, such UHF stations as were constructed would have difficulty in surviving."

The Commission concluded, however, that:

"* * * * It is reasonable to assume that if the entire UHF band is allocated for regular television broadcasting, television receivers will be built to receive VHF and UHF signals. * * * The Commission has concluded that the adoption of an assignment table based on nonintermixture constitutes a short-term view of the problem and is inadvisable. Accordingly, the proposed table attached herein has been prepared on the basis of intermixture of VHF and UHF channels."

The foregoing excerpt from the third report and order was incorporated in the sixth report and order, which went on to state in paragraph 197:

"Because television is in a stage of early development and the additional consideration that the limited number of VHF channels will prevent a nationwide competitive television service from developing wholly within the VHF band, we are convinced that the UHF band will be fully utilized and that the UHF stations will eventually compete on a favorable basis with stations in the VHF. The UHF is not faced, as was FM, with a fully matured competing service. In many cases UHF will carry the complete burden of providing television service, while in other areas it will be essential for providing competitive service. In view of these circumstances, we are convinced that stations in the UHF band will constitute an integral part of a single, nationwide television service."

The record of the Potter hearings convincingly demonstrated that the Commission's judgments and anticipations concerning UHF operation in intermixed markets were erroneous and illusory. With the benefit of hindsight it has become clear that the warnings urged on the Commission during the freeze, as to UHF's inability to overcome the problem of set incompatibility, were well founded. While there would be little gained in dwelling lengthily on these errors of the past, it is necessary to recognize them as such; and it is crucially important to rectify them without further delay.

Mr. Plotkin rejects deintermixture in practice.—In point of fact, he has all but rejected deintermixture on the ground that it would run into the same practical difficulties as confronts the suggestion that all television stations be moved to UHF. Mr. Plotkin actually would limit any consideration of deintermixture to those few cities which do not yet have an existing VHF operation. It would appear from his subsequent discussion of deintermixture that Mr. Plotkin would exclude from consideration not only cities where there is an existing VHF operation but also cities where a grant has been made.

Continued discussion of deintermixture by Mr. Plotkin coupled with the recent notices of proposed rulemaking which the Commission has issued on the subject, raises the hopes of desperate UHF licensees seeking relief and who see relief on the horizon every time deintermixture is mentioned. These hopes are destined only to be dashed, however, by an approach so inadequate and so harmful as that suggested by Mr. Plotkin. Broadcasters who are eager to grasp at the last straw in the wind are likely to find that a straw like this is the one that finally breaks their backs.

For not only would deintermixture on Mr. Plotkin's basis leave the problem virtually untouched, but it also offers only illusory benefits to the few UHF stations directly concerned.

Nationwide plan necessary.—Patently, any program of deintermixture which would both conform to reasonable standards and respond realistically to the desperate need for deintermixture, must be based on a nationwide plan creating a reasonable and equitable proportion of UHF-only communities in the large metropolitan areas. Moreover, it seems to me impossible to make a judicious and meaningful attack on the problem of intermixture without first assembling complete information showing the extent of intermixture, not only arising out of the assignment of VHF and UHF channels to the same communities, but also regarding intermixture which results from the overlap of vastly over-extended VHF service areas into the areas intended under the allocation plan to be served by UHF stations.

Such a study should be instituted immediately so that it will be possible for the Commission to make a sound determination of the steps required to carry out a fair and equitable plan of deintermixture which will not merely affect a few individual communities selected at random, but will accomplish deintermixture on an equitable nationwide basis.

Economic analysis necessary.—Another requirement for a sound and effective approach to the problem of deintermixture is careful analysis of the economic considerations which should enter into a revised allocation plan. Only by taking into account varying population densities and other economic factors largely overlooked in formulating the present allocation plan will it be possible to establish a realistic basis for the equitable distribution and the efficient use of television channels.

Thus Mr. Plotkin exalts above everything else the desire to avoid dislocation; and without adducing facts, data, or sound analysis to show how meaningful nationwide deintermixture would involve dislocation, he makes the serious proposal that the Commission consider deintermixture in just those few scattered cities where it just happens that there is not yet an existing VHF operation. He says "It is not possible to fortell just how many intermixed communities could eventually be saved in this manner, but the effort is worth while.

One inquiry to the Commission would have provided Mr. Plotkin with the information that there are only 3 cities in the first 100 markets where no VHF grant has been made and only 8 in markets with populations of at least 100,000. Nevertheless, undeterred by the fact that he lacked information which was readily available, Mr. Plotkin recommended that deintermixture be contemplated—after, of course, more study and reconsideration—in just a handful of cities. He does not trouble to explain the justification or the value of arbitrarily confining deintermixture to just these few cities, but he would have the Commission do this despite the fact that it would favor a few and abandon all other UHF broadcasters to their fate.

Moreover, as was pointed out to the Potter subcommittee last year in testimony representing the views of the majority of the Commission:

"* * * eliminating the intermixture of VHF and UHF assignments in the same cities would not have eliminated the overlap of VHF and UHF service areas. And there is the rub. For one of the principal difficulties facing most UHF stations is that they are within the service areas of large VHF stations."

Commissioner Hyde also stated to the Potter subcommittee last year:

"I have pointed out that 68 percent of all operating UHF stations are in markets with no competing VHF station. *But intermixture of service areas* is far more general * * *." [Italic supplied.]

This emphasizes the necessity for developing a revised reallocation plan on a nationwide basis.

FCC policies aggravate intermixture.—Nowhere in Mr. Plotkin's discussion does he mention the fact that intermixture was vastly augmented by the Commission's increase in the maximum power and antenna heights for VHF stations in the sixth report and order. Although warned about the impact of the set incompatibility problem on UHF broadcasters in an intermixed television system, the Commission nevertheless in this way vastly extended the reach of VHF stations into distant communities to which UHF channels were assigned.

The large VHF stations which were thus created blanketed the UHF areas. As was foreseen, the availability of VHF service from distant VHF stations in many areas where UHF beginners were making their start, provided a substantial deterrent to the purchase of UHF–VHF sets and to the conversion of existing VHF-only sets. This put in motion the vicious circle which has since hobbled the most strenuous efforts of UHF broadcasters. Absence of sets led to absence of network programing and absence of advertising revenue.

Under these circumstances, it would have seemed appropriate for Mr. Plotkin to comment on the desirability of reducing VHF power and antenna heights. Mr. Plotkin, however, was content to ignore one of the most important aspects of the intermixture problem, notwithstanding the fact that it was raised repeatedly during the hearings and the record of these hearings contains strong recommendations to reduce the overextended service of VHF stations.

This further illustrates that Mr. Plotkin was not seriously suggesting deintermixture as a nationwide solution for UHF but desired it only for a few scattered cities. It is needless to labor this subject any further in order to demonstrate how far Mr. Plotkin's proposal falls short of the measure of real relief which the UHF broadcasters desperately need and to which they look with hopeful anticipation whenever deintermixture is mentioned. At all events, Mr. Plotkin's misleading remedy of deintermixture in a few markets must be exposed in its true light.

II. COMMENTS ON THE PROGRESS REPORT OF ROBERT F. JONES

The progress report submitted by Mr. Jones calls for less extensive comment than Mr. Plotkin's memorandum.

In addition to a restatement of available financial and statistical information on UHF and on network operation, Mr. Jones has also provided a concise summary of the factors which have suppressed UHF's development, in which he traces many of its difficulties to their actual sources.

Mr. Jones points out how past actions of the FCC have served to accentuate, rather than alleviate, the economic and operational difficulties of the UHF telecasting as compared with VHF telecasting. He also recognizes the deeply injurious effect of the operation of satellite stations by VHF stations, and points out that satellites, coupled with the proposed doubling of VHF maximum antenna heights in the northeastern United States, would compound the problem of overextension of VHF service areas. Mr. Jones looks into the past for the basic causes of the UHF crises and properly ascribes many of them to what he correctly terms "The Uneconomic Allocation Plan," meaning the sixth report and order.

However, for the reasons I have already set out at length in discussing Mr. Plotkin's memorandum, I disagree with Mr. Jones' conclusion that voluminous additional study and fact gathering should be completed before firm action is taken to aid UHF.

I also differ from the disquieting implication Mr. Jones leaves in a number of sections of his report that we must look primarily to the natural laws of economics for a principal source of UHF's difficulties. This, it seems to me, tends to put the cart before the horse, for whatever validity may attach to some of the economic factors he discusses, they serve only to reinforce and underscore the necessity for taking bold, effective countermeasures which will create the only condition in which UHF can possibly hope to fill its vital role as a broadcasting service, i. e., an opportunity to compete in the market on an equal footing.

The sine qua non of equalizing VHF–UHF competition is, as I have stressed, to solve the problem of mounting set incompatibility. One of the principal remedies proposed by Mr. Plotkin for this problem was the excise-tax exemption. Mr. Jones properly evaluates this remedy when he says: "The proposed removal of the Federal excise tax from all-channel receivers, in order to make all-channel sets competitively priced with VHF-only sets, appears an insufficient incentive for the increased production and successful marketing of such sets."

He goes on to say: "The committee might well consider some other means to encourage manufacturers of TV receivers to shift to production of all-channel receivers only. This would give UHF considerable impetus." Elsewhere I have discussed means to accomplish this purpose.

I fully agree with Mr. Jones when he says that: "It is little short of tragic that the body to whom Congress has delegated quasi-legislative, quasi-judicial, and quasi-executive functions have less information in their files than have the people it purports to regulate." This situation, little short of a travesty on the conduct by a public body of is regulatory functions, should be remedied without delay.

In the concluding section of his report Mr. Jones points out that selling time in the first 50 markets is a condition precedent to a network's financial success, and goes on to describe the lack of sufficient VHF stations in the major markets to enable 4 networks to compete in these markets on an equal basis. The scarcity of VHF stations in major markets could be alleviated by relaxing the Commission's rules, but Mr. Jones correctly states that this would tend to make the plight of UHF stations even worse in areas given additional VHF assignments, although such action would help equalize the competitive opportunities of the third and fourth networks.

Mr. Jones contends that any action to make UHF service areas competitive with VHF would require a wholesale reassignment of VHF channels and entail staggering capital expenditures by VHF permittees and licensees. I need not repeat here the reasons for my disagreement with this conclusion, which I have discussed in detail in commenting on similar conclusions reached by Mr. Plotkin.

This, of course, leaves Mr. Jones in a dilemma which he cannot resolve because he does not contemplate a bold frontal attack on the problem of UHF set incompatibility which is mounting daily, and which is daily pushing UHF further from hope of success.

Mr. Jones concludes that whatever advantage the sixth report and order gave VHF over UHF, and whatever unfair opportunities for success it may have created for two networks and their affiliates in the major markets, this is now an "accomplished fact," and "we have to live with the results of the allocation plan that the Commission adopted in 1952." There is, in my opinion, no justification for acceptance by the committee or the Commission of the dolefully pessimistic view that, in only two and a half years since the allocation table was promulgated, the pattern so destructive to UHF has become crystallized beyond remedy and that as a consequence, UHF must be denied the meaningful remedial measures which alone could save it, reinvigorate it, and enable it to play its intended role as a source of 85 percent of all television service.

Nor would I admit that the Commission which had the power to issue the sixth report and order containing the allocation plan, cannot issue a new one and remedy its shortcomings. If the Commission had the power to create this mess, they certainly have the power to undo it.

III. COMMENTS ON FCC MAJORITY REPORT

The Commission's majority report is to my mind seriously deficient. It is remarkable for its air of equanimity, complacency, and optimism that all is well in the television industry and that nothing should be done to disrupt the status quo, despite the admittedly urgent UHF crisis. While this falls in line with the Commission's inaction during the past 3 years, it nevertheless contrasts vividly with its repeated admissions of UHF's critical state.

VHF–UHF receivers

In its report of May 19, 1954, the Commission, speaking through its Chairman, testified at the Potter hearings that lack of VHF–UHF receivers constitutes "*the most critical disability facing the UHF*." [Emphasis supplied.] The July 27, 1954, report of the Commission expressed a like conviction when it said that "it is essential for the effective use of UHF channels that there should be widespread ownership by the public of sets equipped to receive UHF." The analysis of course is well founded; the action commensurate therewith fell far short of the mark, for it could only suggest excise-tax exemption and voluntary agreements among set manufacturers as means of remedying the set incompatibility problem, neither of which has materialized.

The latest report again reaffirms these views when the Commission states in paragraph 12 that lack of UHF receivers and high power transmitters are the greatest deterrents to the development of UHF. Yet, despite all this, the majority has not advanced one step from their July 1954 report, offering the same ineffective remedial measures.

In paragraph 7 the majority states: "To achieve its full potentialities, we believe television would eventually utilize a number of channels in the order of those presently allocated to it, just as AM broadcasting developed its present national pattern within the 107 channels allocated to that service." The fallacy here is clear. Whereas the 107 channels referred to above are part of a continuous, unbroken band, the problem of television growth is seriously handicapped by the separation of TV channels in 2 separate parts of the spectrum. Unlike AM broadcasting, over 85 percent of TV receivers presently in the hands of the public are not equipped to receive 85 percent of the television spectrum. I have discussed this matter at length elsewhere. Suffice it to say that to date the Commission has taken no steps to encourage set conversion nor to prevent the continued manufacture of VHF-only receivers and has failed to inform the public that it would be unwise to purchase these sets.

Deintermixture

The Commission in its May 19, 1954, statement before the Potter subcommittee stated that intermixture—both as to communities and especially as to service areas—results in serious competitive disadvantage to UHF operators. That it defines and admits the difficulties resulting from intermixture is clear; however, it is equally clear that the Commission fails to institute or even recommend effective remedial measures.

It is significant that in its July 27, 1954, report, commenting on various projected remedial measures, the Commission summarily rejected one calling for deintermixture in the first 100 markets using the stereotyped reason, "economic dislocation," a phrase apparently serving as a roadblock to every avenue leading to the relief of UHF.

Now the majority, after this lapse of time, despite the urgency of the UHF crisis, can only offer to inquire into the feasibility of selective deintermixture. I note that the Commission recently adopted a notice of proposed rulemaking, from which I dissented, to deintermix in four cities only and which, even if finalized, would be of no help to UHF.

I have no objection to deintermixture if properly defined. If it is to be taken seriously, however, then it must be executed on a nationwide basis or at least in a substantial number of the major markets. To be really effective, deintermixture on an area basis—to eliminate VHF–UHF service area overlap—requires the reduction of VHF power and antenna heights. Only in this way can deintermixture be seriously suggested as a means of aiding UHF.

Moreover, I propose that if undertaken at all, it should be accomplished at a pace consistent with the preservation of existing, and the need for additional, television service.

The Commission need not feel shackled by the sixth report and order. Intermixture was an avowed error, so let it be remedied, even if a seventh report and order is necessary.

Programing

In its report of May 19, 1954, the Commission unequivocally stated that the UHF crisis was precipitated in part by limitations on programing. Consistent therewith the Commission on April 1, 1954, issued a notice of proposed rulemaking designed to prevent an affiliate from contracting with a network in order to preclude a station—presumably UHF—in a different community from carrying the same program, despite overlap of service areas. Time for submission of views by interested parties expired on May 10, 1954.

Although in the above-dated report the Commission depicts this notice as being "* * * designed to assure UHF stations better programing," it is submitted that one year has elapsed since then without action by the Commission looking toward finalizing this notice. Clearly such apathy is inconsistent with the Commission's purported interest in saving UHF.

Moreover, in the July 27, 1954, report the Commission's response to proposals designed in part to effect program distribution conducive to UHF development was to the effect that "extensive investigation will be required" before any detailed comments, much less remedial measures could be offered. This despite the majority's admission, in the previous report that programing was one of the contributing factors to the UHF plight. Now comes a suggestion for lengthy and involved study before any changes in network distribution of program are effectuated. This means further delay, so that by the time the Commission will be ready to act, if at all, the demise of UHF will be fait accompli.

And so, the Commission now can only conclude without offering any remedial measures that the "high cost of television programing" is a major obstacle to the development of local, competing television services—words tantamount to UHF. This statement, profound as it is, is merely carrying coals to Newcastle. What the Commission should have appropriately directed its attention to, and made recommendations accordingly, are the causes of such prohibitive cost of television programing. I cannot impress too strongly on this committee the importance of its insistence that the FCC institute immediate rulemaking proceedings looking toward the equitable distribution of network programs among VHF and UHF stations alike.

Additional comments on the majority's report

There are additional statements in the majority's report to which I take exception and which do not appropriately fall under any of the foregoing rubrics, and which I shall therefore treat specifically below.

In paragraph 9 the majority refers to several measures adopted by the Commission purporting to have a salutary effect on the development of UHF, namely; (1) amendment to the multiple ownership rule to allow common ownership of 2 UHF in addition to 5 VHF stations; (2) August 5 policy announcement permitting UHF satellite stations which would rebroadcast programs of established stations; (3) rulemaking to permit operation of low power television stations in communities of less than 50,000 without requiring local programing; and (4) adoption of notice of proposed rulemaking to preclude establishment of transmitter sites more than 5 miles from the city in which the station is located.

I have discussed these alleged remedies in detail elsewhere and point out how the first three, on the contrary, militate not toward but against the healthy development of UHF, and how the latter will hardly conduce to the growth of UHF because the damage it seeks to obviate has already been incurred.

The "positive advances" in the television industry suggested by the majority in the first paragraph cannot be attributed to the Commission as such; rather it is the dynamics of the industry and the overwhelming public acceptance of television that have resulted in the tremendous growth of the industry. That this is so demonstrated by the fact that in September of 1948 just before the freeze there were only 750,000 receivers in the hands of the public whereas in April of 1952 notwithstanding the freeze the number of sets had catapulted to more than 17 million, not to mention the mushrooming growth of industry budgets for television advertising.

Moreover, I have difficulty with the majority's assertion in paragraph 2 that the Nation has already achieved "adequate television service." Immediately preceding this statement the Commission cites the amount of money invested by the public in sets and the tremendous expansion of the television industry. I therefore understand the majority to equate adequate television service with dollar expenditure. The adequacy of our television service depends upon what the public can get on TV. Does the FCC now, by its statement, abandon its allocation plan as the means of complying with the congressional dictate for a nationwide competitive television system to provide a choice of as many services as possible to each community?

The majority of the Commission agree with the conclusions reached in the Plotkin memorandum that any suggestion of an ultimate move of television to ultrahigh is impracticable and feel constrained also to argue undue economic dislocations if such a move were effected. The majority go one step further, however, and say that if such a step is to be taken, it should be done only after Congress concludes that it would be in the public interest. While I do not object to the Commission's seeking the considered judgment of Congress on such an admittedly important change, I am clearly of the opinion that the majority should not have heaped this burden on Congress without first submitting a detailed factual report, consonant with its expertise, on why all UHF television would entail "tremendous dislocation of existing operations."

With respect to the majority's proposal in paragraph 14, concerning long-range studies, I need add nothing to what I have already said concerning the pressing need of immediate relief for UHF broadcasters and that delay with its attendant increment of VHF-only sets would prove fatal. As for the need to obtain full information concerning the rules of the networks, advertisers, agencies, talent, independent film producers and distributors, and other program sources, these are, in my opinion, appropriate fields for intensive investigation by this committee in hearings conducted under close cross-examination of all the important witnesses. Among the various reasons why the Congress and not the FCC should conduct the investigation is that legislation is necessary in this field, as I will show at another point, and this can accrue best through investigation and action.

I cannot accept the suggestion of the majority that the Commission be authorized to undertake an extensive investigation of the broadcast industry like that of 1938–41. This type of protracted investigation would, in my opinion, spell out the doom of UHF.

If the committee considers the majority's report in the light of what has been said herein, I feel confident that it will not subscribe to any policy of delay or inaction, but rather will immediately accept the challenge with the kind of balance and prudence that will ultimately result in the extrication of UHF from its present crisis and create an atmosphere conductive to the growth of a nationwide competitive television system.

The Network Problem

I. Congressional Investigation of Networks

Senator Magnuson aptly said, in the letter of transmittal with the Plotkin report, that there is "a continuing responsibility upon both the Congress and its administrative arm, the FCC, to insure that private monopoly does not occur where Government monopoly is avoided." And Senator Bricker, in his letter of transmittal accompanying the Jones report, said of the networks that "the objective of the Communications Act to provide for a nationwide competitive system of television is threatened with defeat," because "The power of TV networks to affiliate or not affiliate amounts practically to the power to control the number of TV stations in the Nation which can subsist financially."

Nevertheless, Mr. Plotkin proposes no action by Congress to loosen the network stranglehold over TV, but merely suggests further studies by the FCC—

ignoring the Commission's inability, since its creation, to cope with network domination of the broadcast industry, as proved by the dismal failure of the chain broadcasting regulations and the fact that the Commission did not enforce them against the networks.

If ever a subject were appropriate for congressional investigation, it is this, the network monopoly. It involves (1) the basic issue of future congressional policy, (2) the assessment of the success of previous congressional enactments, (3) the role of other related industries (such as the movie industry) in TV, (4) the function of other Government agencies in this field (e. g., the Justice Department and the monopoly problem, the Commerce Department and others who may be involved in needed technical research and development, and the Federal Trade Commission), and (5) the effect of the economy of scarcity in TV stations and TV time upon business seeking time to advertise its merchandise. The FCC cannot and should not be asked to conduct such an investigation. This is an appropriate and necessary area for a congressional committee.

Nothing less than a sweeping and searching investigation by a congressional committee will, in my opinion, suffice to achieve full disclosure of all the facts necessary to a determination of the action needed to free broadcasting from network domination and to create the conditions in which a fully nationwide, competitive television system can be developed and maintained. Detailed information on numerous aspects of network operation is lacking at the Commission. Whatever supplemental efforts the Commission may contribute, it would seem clear that there is urgent need of a broad-scale and intensive investigation by a congressional committee, and that it should be undertaken without further delay.

I strongly urge that this Senate committee embark as soon as possible on such a thorough and vigorous investigation.

II. CONGRESSIONAL POLICY AGAINST MONOPOLY

Congress has consistently opposed monopoly in the communications field.

The deepening crisis in UHF is part of the broader problem of 30 years of dominance of the broadcasting industry by networks.

In the most important markets, the most desirable outlets in AM and TV are affiliated with and under the control of networks. The tremendous influence wielded by the networks over television programing centralizes control over the dissemination of news and opinion in a few hands. The result is to frustrate the basic American principle enunciated by Congress in the Communications Act.

Congressional mandate against monopoly

The legislative history of the Radio Act of 1927 attests the alertness of Congress to the perils associated with monopolistic control of broadcasting. Senator Dill, as sponsor of the bill, counseled the Senate:

"* * * the Commission, of course, having the power to protect against a monopoly, must give such protection."

He continued:

"I wish to state further that the only way by which monopolies in the radio business can secure control of radio here, even for a limited period of time, will be by the Commission becoming servile to them. Power must be lodged somewhere, and I myself am unwilling to assume in advance that the Commission proposed to be created will be servile to the desires and demands of great corporations of this country."

The antimonopoly provisions of the Radio Act of 1927 were substantially reenacted and expanded in the Communications Act of 1934, which in addition empowered the Commission to make special regulations applicable to radio stations engaged in chain broadcasting. But as Senator White stated in a speech before the upper House on March 17, 1937:

"The regulatory body has seemed indifferent to the problem or without definite views concerning it."

In July of the same year Senator White charged that:

"With the approval of the Commission there has come about a monopolistic concentration of ownership or control of stations in the chain companies of the United States."

Spurred by this and other expressions of dissatisfaction on the part of Members of both Houses, the Commission in April 1938 inaugurated an investigation into chain broadcasting.

Network monopoly controls TV

Hearings were held between November 14, 1938, and May 19, 1939. Two years later, in May 1941, the Commission issued a lengthy report which discussed in detail the network practices which had made possible their domination of radio station affiliates and which had so severely inhibited free competition in the broadcast industry. The network practices criticized then were essentially similar to those in evidence today with the difference that they have since been applied to the new media of FM and TV, in addition to AM. Plotkin's study merely shows how little has been done to curb the networks in the practices that were rampant in 1938.

The following summary of the 1941 report reflects patterns of network operation basically similar to those which are now being followed to minimize free competition in TV broadcasting:

1. The networks buttressed their dominant position in the broadcast industry by ownership and control of the most powerful and profitable stations.

2. The 2 major networks had as affiliates all but 2 of the 30 high-power, unlimited-time, clear-channel stations.

3. The networks developed their "chains" around these network owned and controlled stations. The interests of the stations, the real foundation of nationwide broadcasting, were subordinated to the interests of the network owned and controlled stations.

4. Half of the 1938 net operating income of all radio stations and networks went to NBC, CBS, and their 23 owned and operated stations. The remainder was divided among 327 affiliated stations and 310 nonaffiliated stations.

5. Whereas CBS and NBC had aggregate time sales of $44 million for 1938, they paid to their 253 affiliates only $12 million, approximately half of which went to 25 of these affiliates which had a relatively strong competitive position based on the networks' need of their particular facilities. Affiliation contract provisions requiring the free use of station time for broadcasting a specified number of the first hours of network commercial programing each month, combined with low initial compensating rates for the next hours, resulted in inequitable distribution of proceeds from network broadcasting.

6. The networks exercised complete control of the programing of affiliated stations by including provisions in affiliation contracts which, for example:

(*a*) Prohibited affiliates from taking programs of other networks;

(*b*) Gave the networks options to clear time during all of the desirable hours and most of the remainder of the stations' broadcast day; and

(*c*) Required affiliates to accept all commercial programs unless they were able to prove to the satisfaction of the networks that a particular program would not serve the public interest.

7. Affiliates were bound to one network (in those days under affiliation contracts), thereby depriving such affiliates of profitable business and the listening public of programs in popular demand. They also obstructed opportunities for competing networks to clear station time.

8. NBC and CBS controlled name talent and numerous additional artists as well. In 1941 both these networks operated talent agencies through which talent was placed under the management of and exclusive contract of these networks.

9. Competition from national spot business was suppressed through preemption of desirable station time for network programs, and penalization of affiliates for offering to national spot advertisers rates lower than those applicable to time sales for network programs.

In their report to the full Commission of June 12, 1940, the Committee on Chain Broadcasting, consisting of three Commissioners, summed up the situation in these words:

"The inescapable conclusion is that National and Columbia, directed by a few men, hold a powerful influence over the public domain of the air and measurably control radio communication to the people of the United States. If freedom of communications is one of the precious possessions of the American people, such a condition is not thought by the committee to be in the public interest and presents inherent dangers to the welfare of a country where democratic processes prevail."

Chain-broadcasting regulations a failure

In 1941 the Commission announced its chain broadcasting regulations, a series of rules whose basic purpose was "opening up the field to competition." It sought to accomplish this by proscribing certain provisions in agreements between licensees and networks. These rules met with intransigent opposition from the networks, and they did not go into final effect until 1943, after the Supreme Court upheld their validity.

Experience during the 12 years which have elapsed since the rules went into effect in AM radio has demonstrated their inadequacy to accomplish the objective of insuring free competition in broadcasting; for although the rules prohibited certain types of provisions in affiliation contracts, they left the stations and the networks relatively free to conduct their actual operations in much the same fashion as before, so long as the affiliation contracts conformed to the letter of the law.

Moreover, the Commission was unequipped to enforce the regulations and unwilling, where evidence of violation on the part of a broadcaster was uncovered, to invoke the extreme sanction of revocation of station licenses held by the networks.

With the advent of FM and later TV, the Commission perfunctorily applied to these new instruments the same chain broadcasting rules designed for AM radio, without inquiry into or adaptation to the different needs and circumstances of the new media. The networks were therefore uninhibited by the chain broadcasting rules from adapting to FM and TV the basic techniques they had employed in AM, over which they acquired a position of dominance.

Legislation necessary

One of the two purposes for which the Senate committee initiated the present study was to determine whether networks should be brought within FCC's direct regulatory jurisdiction, as proposed by Senator Bricker who initiated the study. Mr. Plotkin finds no necessity for such legislation at present. Mr. Jones finds insufficient jusification for it on the basis of information available to date.

The simple and uncontested fact is that television is controlled by the networks. The congressional purpose that the FCC act as an arm of the Congress in regulating the broadcast industry is being thwarted by an ostrich-like attitude toward networks. The FCC has no statutory authority to regulate networks as such, but only insofar as they are station licensees. This is an absurd situation, wholly inacapable of serious justification. If television is to be regulated by the FCC, then the FCC must be given jurisdiction over networks. I strongly urge enactment of legislation empowering the Commission to extend its direct regulatory jurisdiction over the networks themselves. The conclusion is amply supported by the failure of the chain broadcasting regulations.

III. SCOPE OF INVESTIGATION

Congress should conduct, as I have recommended, a sweeping investigation of the networks and their monopoly over the broadcast industry.

Mr. Jones is quite correct when he points out how little information the FCC has in its files on networks in particular, and on licensees in general. This makes it all the more important that the Congress obtain the necessary information, on the basis of which it can legislate.

Some of the questions to which answers should be sought by the Congress are:

(1) Should network be permitted to dominate and control TV?

The networks can grant or deny affiliation at will. Since affiliation is essential to remaining in business, the networks have a life-and-death grip over stations and, to a large extent, over their programs and use of time on the air. This situation was well summed up in the remarks of Mr. Dunville, president of the Crosley Corp.: "Networks seem increasingly inclined to consider individual stations as push-button operations, automatic outlets which cater to programing networks' desires."

With particular reference to UHF, the experience of the last 2½ years since UHF was opened up for licensing reflects a clear disposition on the part of networks to heap their programing on the larger VHF stations and, by and large, to keep the UHF stations on a starvation diet.

(2) Why is American business unable to procure advertising time on TV?

Competition in business is adversely affected by the inability of advertisers to get television time, owing to the monopoly of scarcity created by networks. The networks, who are reaping the advantage of a seller's market, would have you believe that the reason for the inability of more stations to achieve profitable operation is the limit on sums advertisers are prepared to devote to television. The Congress should look at the facts.

Although television required the development of a new technique of advertising, the growth of the TV advertising dollar has been spectacular from the outset, as is attested by the following figures:

Advertiser expenditures for TV:	Amount
1949	$57,200,000
1950	170,800,000
1951	332,300,000
1952	453,900,000
1953	610,500,000
1954	809,100,000

Advertising expenditures for television in 1954 increased 33.5 percent over the 1953 figures. Mr. Frank M. Folsom, president of RCA, has pointed out that 7 percent of all-media advertising expenditures were allocated to TV in 1952, and 9 percent in 1953. It was approximately 10 percent in 1954. Mr. Folsom has predicted an increase to 20 percent in 1956, equivalent to an estimated expenditure of $1,900 million for TV advertising by that date. He made no suggestion that this represented the end of the climb.

The public statement of the president of just one rapidly rising company in the cosmetics industry illustrates the kind of information which this committee could usefully develop in public hearings concerning the crucial question of the amount of advertising support now available for TV and which may reasonably be expected in the future. Mr. Willard Gidwitz, president of Helene Curtis Industries, Inc., had the following things to say in an article in the December 1954 issue of Television Magazine:

"Yet we have not been able to spend the proportion of our advertising budget on television that we would like. This last year we could have handled any good evening network program in the $2 million to $2,250,000 bracket that was offered to us. But we could not get one."

(3) *Should networks be allowed to own TV stations?*

In 1953, the networks and their 16 stations garnered almost 60 percent of all TV broadcast revenue, while 50 percent of all TV stations on the air got a total of only 5 percent of the TV broadcast revenue.

(4) *Should networks be allowed to produce and syndicate motion pictures?*

Control by networks of their own stations and affiliates and talent, and the penetration of networks into the production, syndication and all other phases of the motion picture industry, jeopardize development and expansion of TV film as a competitor to networks for programing. More and more, television is becoming a motion picture business in its end product, the programing. Should networks be permitted a monopoly not only of live programing but of film programing as well?

(5) *Additional matters requiring congressional investigation*

In addition to those inquiries, there are other questions which need investigation by this committee, namely: other potential sources of revenue for UHF, such as subscription TV; the charges for intercity TV transmission service; the impact of network practices on national spot business; the extent of control of talent by networks; and all other aspects of network domination of the television industry.

HEARINGS

BEFORE THE

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE UNITED STATES SENATE

EIGHTY-FOURTH CONGRESS

SECOND SESSION

PURSUANT TO

S. Res. 13 and 163

AUTHORIZING INVESTIGATIONS OF CERTAIN PROBLEMS RELATING TO INTERSTATE AND FOREIGN COMMERCE

(Including testimony on S. 825, by Mr. Bricker, to authorize the Federal Communications Commission to establish rules and regulations and make orders with respect to networks and their activities)

FEBRUARY 27, 28, 29, MARCH 2, 14, 15, 16, 26, 27, 28, MAY 14, 15, JUNE 11, AND JULY 17 AND 18, 1956

PART II

UHF-VHF ALLOCATIONS PROBLEM

Testimony of Public and Industry Witnesses

Printed for the use of the Interstate and Foreign Commerce Committee

KENNETH A. COX, *Special Counsel*
WAYNE T. GEISSINGER, *Special Counsel*

[1] Appointed April 18, 1956, to succeed Strom Thurmond, South Carolina, who resigned on April 4, 1956.

CONTENTS

APPENDIX

ALLOCATIONS

The hearings in connection with the Television Inquiry, are printed in four parts, as follows:

Part I, UHF-VHF Allocation Problem—testimony of Federal Communications Commission.

Part II, UHF-VHF Allocations Problem—testimony of public and industry witnesses.

Part III, Subscription Television.

Part IV, Network Practices.

TELEVISION INQUIRY

(UHF–VHF Allocations Problem)

PART II: TESTIMONY OF PUBLIC AND INDUSTRY WITNESSES

MONDAY, FEBRUARY 27, 1956

United States Senate,
Committee on Interstate and Foreign Commerce,
Washington, D. C.

The committee met, pursuant to adjournment, at 10:10 a. m. in room G–16, United States Capitol, Senator Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Pastore, Ervin, Thurmond, Bricker, Schoeppel, and Potter.[1]

The Chairman. The committee will come to order. Again, because of the number of witnesses, we will start without certain Senators who will ultimately be here.

The first witness is Mr. George Storer. We are glad to hear from you at this time. Do you have a prepared statement? Do you wish to read that?

Mr. Storer. Yes, Senator, I have a very brief statement.

The Chairman. We will be very glad to hear from you.

STATEMENT OF GEORGE B. STORER, PRESIDENT, STORER BROADCASTING CO., MIAMI, FLA.

Mr. Storer. Incidentally, if I don't speak loudly enough—I have a hearing aid on these glasses—please tell me and I will speak up.

The Chairman. Several of the people in the back are interested in your testimony, and it is easy for us to hear, but maybe they cannot hear as well back there.

Mr. Storer. In the first place, I want to say that we appreciate the privilege of being back here again. My name is George B. Storer. I am president and founder of Storer Broadcasting Co. Our company has owned and operated radio and television stations since 1928, and presently it owns and operates 5 VHF stations and 2 UHF stations.

Our business is the ownership and operation of these stations, and our radio stations. Each station is operated as an integral part of its local community, creating local programing, servicing local advertisers, and meeting the needs of local public service organizations. Our company does not link its own stations together in a company net-

---

[1] Staff members assigned to this hearing: Kenneth A. Cox and Wayne T. Geissinger, special counsel; Nicholas Zapple, communications counsel.

work. We have affiliation agreements with the national networks in most markets, but we do not own or operate any network organization. We are not connected with the manufacturing part of the broadcasting industry, except insofar as we use its products. So much for the description of Storer Broadcasting Co.

The CHAIRMAN. The record ought to show what VHF stations you have.

Mr. STORER. We have Detroit, Toledo, Cleveland, Atlanta, and Birmingham, Ala.; and the UHF's are in Portland, Oreg., and Miami, Fla.

The CHAIRMAN. Now they are operated, as I understand, as a corporation?

Mr. STORER. I couldn't quite hear you, sir.

The CHAIRMAN. Is this a corporation that operates these seven stations?

Mr. STORER. Yes, sir; it is. The corporation has 4,000 stockholders, and all of the management own a substantial part of the corporation.

The CHAIRMAN. It is one of the pioneer companies in the radio broadcasting and television field?

Mr. STORER. Yes, sir.

The CHAIRMAN. But you are here today to testify, as I understand it, generally—and you will read this testimony—on the UHF experience of the corporation?

Mr. STORER. Yes, sir; that is right.

The CHAIRMAN. Are you doing all right with the VHF?

Mr. STORER. Yes, sir.

I have read with great interest the transcript of the prior hearings held before this committee as part of its television inquiry, and I realize fully that the committee members are very well informed on the problems facing the television industry. My only reason for appearing here, at the committee's request, is that I feel that my company's actual experience in the operation of local stations in diverse communities has given it some knowledge that may be of value to the committee.

For 28 years we have participated in the development of radio broadcasting; and for 8 years, since July 1948, we have actually operated television stations. We acquired UHF station KPTV, Portland, Oreg., in November 1954, and UHF station WGBS-TV, Miami, Fla., in December 1954, pursuant to commitments made to the Federal Communications Commission in the proceedings in which the Commission relaxed its multiple-ownership rules, effective in October 1954, permitting multiple owners, including ourselves, to acquire two UHF stations in order to aid in the development of the UHF band.

We have gone all out in the installation at WGBS-TV and KPTV of the best equipment available at the present stage of the art. At WGBS-TV, Miami, we have installed a 1,000-foot tower, equal in height to the tower of the VHF station already in the market. Our station WGBS-TV now operates with 185,000 watts visual power, and provides a very satisfactory, if not superior, signal to the entire area, including coverage about 70 miles south of Miami.

I want to say in passing that we found that tower height is of the utmost importance, even more so than power. We learned from this installation that, given a high-tower, high-power operation, a UHF station in an area of flat terrain and constant foliage conditions, can provide a service equal to VHF service, and even better than VHF with respect to manmade interference—manmade interference being particularly road signs, neon signs, and trucks, ignition static, and that sort of thing.

We have reported to the Commission that in areas of flat terrain such as Miami—where the highest hill is 33 feet above mean sea level—grade B quality service extends to the 500-microvolt-per meter contour rather than to the 1,600-microvolt-per meter contour as specified in the Commission's 1952 rules, which in effect makes our coverage equal to that of the VHF station in the area. We have over $1,300,000 invested in WGBS–TV, in equipment and operating losses.

I might say in passing that the operating losses at the end of the year were about $272,000, as near as I recall. So the rest is in equipment. The tower, due to the hurricane situation in Miami, and the land on which it stands has cost us an aggregate of $330,000.

Senator SCHOEPPEL. Was that this last year?

Mr. STORER. Yes, sir. Our investment in Miami includes very substantial sums spent for improvement in programing, operating a conversion project to secure the accelerated conversion of receivers unable formerly to receive UHF signals, and appropriate promotion and advertising.

The CHAIRMAN. What do you mean there—a conversion project? What do you mean by that?

Mr. STORER. Senator, we soon found that it took a lot of promotion and effort working with the dealers to get people to convert from VHF to UHF. It just didn't happen. You had to really put on a terrific campaign. So we set up what we call project 23, which was to get people to convert. We employed technical men, promotion men, and an advertising agency, and put on a campaign in all mediums that we felt was effective in the Miami area, to tell the people of the programs that they could get on WGBS–TV.

We accelerated the conversion very rapidly by doing that. If we hadn't done it, it would have remained rather static.

The CHAIRMAN. In other words, you went out on your own volition and started a so-called sales campaign to get people to convert their sets?

Mr. STORER. Yes, sir. We divided the area up into districts, and we had various technical assistants go around to the dealers, and we created banners promoting the sale of converters and/or all-channel sets.

The CHAIRMAN. The retail dealers?

Mr. STORER. Yes, sir.

The CHAIRMAN. What percentage have converted?

Mr. STORER. Above 85 percent.

The CHAIRMAN. In the Miami area?

Mr. STORER. Yes, sir. I noticed in one of the papers there the other day it said 90.1 percent. We don't believe it is quite that high.

The CHAIRMAN. What was it when you started?

Mr. STORER. Roughly 40 to 45 percent.

The CHAIRMAN. So the ability to receive the U signal has increased by 40 percent in the Miami area?

Mr. STORER. Yes, sir; that is true.

The CHAIRMAN. How long a period of time did this take?

Mr. STORER. Twelve months.

The CHAIRMAN. But in about a year, with your campaign and other factors, you were able to increase that up to between 85 and 90 percent?

Mr. STORER. Yes, sir.

The CHAIRMAN. So that only maybe about 10 or 15 percent of the sets in the Miami area now are not all channel?

Mr. STORER. Yes, sir. I might say in passing that currently no new sets are sold in Miami that are not all-channel receivers. That we find is the 100-percent answer from every dealer we talked to.

The CHAIRMAN. I want to get this straight: All the dealers in Miami now sell all-channel sets; is that what you say?

Mr. STORER. Yes, sir.

The CHAIRMAN. That is all they sell?

Mr. STORER. Yes, sir; they have some old second-hand sets from time to time that they sell at low prices, which are not all-channel receivers, but most of those are now being sent to other points. They are exported—some to South American countries and Cuba. Generally speaking, the receiver problem no longer bothers us very much down there.

The CHAIRMAN. Is that due to the public demand or to dealer policy, or both?

Mr. STORER. It is a combination of both. You have to waken the public to the fact that they are missing a lot of good programing. That is the first order of business. Then after you have done that, you have to work with the dealers and sell them the idea that here is a substantial new business area that they can avail themselves of. That takes quite a bit of doing at first.

The CHAIRMAN. I suppose you go into that later in your statement?

Mr. STORER. Yes; I do.

The CHAIRMAN. You are affiliated with a network?

Mr. STORER. NBC. Our sales staff in New York worked with the National Broadcasting Co. with which WGBS–TV is affiliated, to secure additional network advertisers, so that we were able to increase our network programing to approximately 60 percent of the basic NBC network schedule.

We had hoped that NBC would place us on its "must-buy" list in the same manner as WTVJ, the Miami VHF station, is on the CBS television network list, but they felt that due to advertiser resistance they could not see their way clear to do this, with which we could have no quarrel.

The CHAIRMAN. I don't understand what you mean by "advertiser resistance" there. You might enlarge upon that.

Mr. STORER. As I believe was reported in the——

The CHAIRMAN. First of all, what is a "must-buy" list, so the record will be clear?

Mr. STORER. "Must-buy" means the list of stations which an advertiser must buy at certain times of the day to get on the network, so to speak.

The CHAIRMAN. A certain number of stations?

Mr. STORER. Yes, sir.

The CHAIRMAN. I think that figure is in the record.

Mr. STORER. About 55, I think it was.

The CHAIRMAN. What about the advertiser resistance? That is because of what?

Mr. STORER. The advertiser very properly said that he didn't want to add a station which only serve a half, we will say, of the population in the area. NBC cooperated to the fullest extent. We have absolutely no quarrel with them. Their sales department were very active in working with ours. Yet we did find that there was a tremendous resistance from the advertisers and agencies to adding the station.

The CHAIRMAN. Go ahead, sir.

Mr. STORER. The net result, however, has been to prove that local and network advertisers, and some national advertisers, can be persuaded to buy UHF and do learn that a UHF picture is as good a sales medium as a VHF picture, provided the UHF station has a high-tower, high-power operation. This experience enables us to conclude that if enough UHF stations throughout the country were used by the advertisers, in competition with not more than one VHF station, it would be possible ultimately to attain advertiser recognition of the UHF service.

In addition, our Miami experience demonstrates that UHF is highly acceptable to the viewing public. In the 12-month period from December 1954 to November 1955 the improved service of WGBS-TV and the increased power of the other UHF station in the area, which carries ABC network programs, resulted in all-channel tuner and UHF converter sales totaling 121,241. So that at the present time in excess of 85 percent of the television receivers in the area can receive the two UHF stations.

At our UHF station in Portland, Oreg., we increased the power to 1 million watts effective radiated power and installed a new tower on the hill above the city. As a matter of fact, our total investment in equipment is $1,172,000, which includes color equipment. Portland, of course, lies in a valley surrounded on two sides by high mountains, with a high hill in the middle of the city, on which our antenna is located.

In the outlying areas there are some other hills where our UHF station has a serious shadow, or fill-in, problem. Despite the fact that KPTV has the best tower location and 1 million watts power, because of the inherent difficulty UHF signals have in filling in shadow areas, there are some few areas where the signal of KPTV does not compare favorably with the signal received from the low-band VHF station in Portland. The comparison with the high-band VHF station is not so bad.

The CHAIRMAN. There is another channel that has been granted in Portland?

Mr. STORER. Yes, sir.

The CHAIRMAN. Is that in the high or the low?

Mr. STORER. That is in the high. That is channel 8. There is channel 8 and I believe channel 12 in the high band, and channel 6 in the low band. Parenthetically, it should be noted that low-band VHF stations on channels 2 to 6 enjoy better fill-in characteristics than high-band VHF stations on channels 7 to 13.

Thus we have learned from our KPTV experience that, at the present time, equipment is not available to make UHF equal to VHF in areas of rugged terrain—and the same applies to areas of high buildings. In Miami we do not have the building-shadow problem, because the high buildings are so located that shadow areas fall into Biscayne Bay or the Atlantic Ocean.

Our Portland experience has also led us to the conclusion that high-power UHF satellite stations may well provide the necessary relief for UHF stations in rugged terrain.

The CHAIRMAN. Tell us about that. What do you think you can do in an area like Portland on satellites?

Mr. STORER. Sir, the proposal or the remedy which we have in mind is to situate a second satellite of considerable power on a separate channel so that we wipe out the shadows. In other words, over on one side of the valley we have our present UHF station. Out a ways you will find some hills and behind those hills the shadow areas are very pronounced. In those areas down deep——

The CHAIRMAN. Is that across the river?

Mr. STORER. That is across the river.

The CHAIRMAN. You go across the river and take one of those hills over there and get on top of that?

Mr. STORER. Yes.

The CHAIRMAN. So you would have two towers?

Mr. STORER. That is right.

The CHAIRMAN. One on one side of the river and the other on the other side?

Mr. STORER. Yes, that is right. And to show you, if you will bear with me a moment——

Senator SCHOEPPEL. On the same channel?

Mr. STORER. No, not on the same channel.

Senator SCHOEPPEL. Different channels?

Mr. STORER. You have to take a different channel. If you were on the same channel, the interference would be so bad it just would not be practical.

If you will bear with us a moment, Mr. Clemans X. Castle, who is our director of engineering, had these shadowgraphs prepared in Portland and they show very clearly what happens.

Mr. CASTLE. The photograph was taken of the basic scale relief map about 10 by 16 feet. We put a very small light at an elevation above the map, which corresponds to our present 500-foot tower. You will notice on this there are areas in here that are in very black shadow.

The CHAIRMAN. Here is your river?

Mr. CASTLE. Yes, that is the Columbia River, and there is also the Willamette River there which runs along at the foot of the hill.

The CHAIRMAN. We will look at these. Let Mr. Storer go on.

Mr. CASTLE. If you will notice, these are from three different locations. Therefore the shadows in the three locations do not overlap completely. In other words, it is floodlighted.

(The three photographs referred to will be retained in the committee files.)

The CHAIRMAN. All right. Go ahead, Mr. Storer.

Mr. STORER. Thank you sir. We believe that it will be possible in Portland to construct a satellite station, using power on the order of 200,000 watts, which can be so located that most, if not all, of the shadow areas can be served adequately by either the main transmitter or the satellite transmitter of the station.

We are preparing an application to the Federal Communications Commission requesting permission to construct such a satellite on an experimental basis, but carrying the regular programs of KPTV. In connection with that application, we will request, if necessary, that the Commission waive or suspend its multiple ownership and overlap rules. We believe that this experiment holds great promise of providing a realistic solution to the UHF coverage problem in many areas. This experiment will cost our company about $150,000.

The CHAIRMAN. Would you say that that is the average price of the satellite?

Mr. STORER. Oh, no, sir. Portland being a rather large community, and with the extremely rugged terrain, we have to use a higher power in Portland than you would in other areas.

Our experience in Miami and Portland also bears on the questions of the cost of equipping UHF stations and of maintaining them in operation, which have been considered by this committee. It is true that both VHF and UHF studios, transmitting and antenna plants cost a lot of money—somewhere between $500,000 and $1,500,000, depending on the type of installation.

When the size of the investment is considered, the cost of a UHF station is not very substantially higher than that of a comparable VHF station. At the present time, there is no difference in the cost of studios and studio equipment; there is no difference in the cost of land and tower; and UHF transmitters and antennas for full-power operation cost about $35,000 more than similar equipment for VHF high-band stations (channels 7–13).

With respect to operating costs, UHF transmitting tube costs are about double that of VHF, which means an additional expense of about $1,500 to $2,000 per month for running a high-power UHF station for a full 17-hour daily operation. Other operating expenses are about the same for UHF and VHF.

Experience with similar problems in VHF, in the years 1948 to 1952, indicates that UHF costs of transmitting equipment and tubes will go down, as the manufacturers gain more experience and amortize their developmental expenses. In my personal opinion, the additional cost of UHF should not be used as a reason for not utilizing the UHF band to the fullest extent possible.

I might say in passing that in Toledo, where we operated on channel 13, we had terrific difficulty when we first went on the air with our tubes. We burned up tubes about every week or every 2 weeks in the final stages of that transmitter. But ultimately the manufacturers were able to eliminate that difficulty. The higher the frequency, the more difficulty you have, but we believe there is considerable hope, based on that experience.

The CHAIRMAN. What you say here, in effect, is that, generally speaking, with technological developments and better know-how and manufacture, the cost of VHF and UHF may vary back and forth, but nevertheless it could be practically the same for development of the station?

Mr. STORER. Yes, except there is a question of power involved which has some costs.

The CHAIRMAN. You mean the necessity for more power?

Mr. STORER. Yes. I wouldn't want to go so far as to say——

The CHAIRMAN. Out in Portland that would be cheaper than power in Toledo, wouldn't it?

Mr. STORER. Yes, sir, I think so.

Now, turning to the economic and allocation problems which face this committee, the Commission, and particularly the UHF pioneers who are losing money from operations and who face the loss of their entire investment.

First, considering the VHF situation, we recognize that VHF stations are superior to UHF both in propagation characteristics and in the ability of receivers to accept signals. This country deserves the best possible television system, and to attain this goal, the VHF band must be preserved without degrading the service VHF stations can render.

VHF stations are superior in providing rural service in a large part of the United States, and we believe that in Zones I and II the 170-mile and 190-mile cochannel separations should be maintained in order to provide this rural service. VHF stations are superior in providing close-in service in rugged terrain, such as Portland, Oreg., and Pittsburgh, and they should be maintained to provide this service.

Likewise, VHF stations are superior in providing service behind high buildings and in areas of rolling terrain and high trees, and they should be maintained in cities like New York, Chicago, and Detroit, to provide the best possible service to the cities, their suburbs, and the outlying rural areas.

We also believe, and I don't see how this can be disputed, that UHF stations are essential to provide room for future growth of the television system. In the cities and areas where multiple television stations can be supported economically, there are too few VHF assignments available to allow for future expansion in the number of stations, unless the UHF band is preserved.

From Commissioner Rosel H. Hyde's testimony before this committee, it seems apparent that there is no real chance of obtaining additional VHF channels from the Government or other non-broadcast services. Further, additional VHF stations cannot be created by reducing cochannel separations, unless at the same time the valuable propagation advantages of the VHF band are sacrificed and rural service is abandoned in many areas.

There has been some talk of obtaining two VHF channels from the FM band. This is a problem that the Commission can best evaluate, for they must determine whether the public interest would be best served by seriously reducing the frequencies available for FM, in order to create two new VHF channels.

But even if two new VHF channels are taken from FM, they would be insufficient and inadequate to provide any substantial number of stations. By preserving the present UHF stations that are now on the air, more stations could be saved than could be created from two new VHF channels.

The CHAIRMAN. Mr. Storer, you still have the same set conversion problem anyway, regardless?

Mr. STORER. Yes, sir.

The CHAIRMAN. In creating new VHF bands, you have the same set problem as you have with the UHF's.

Mr. STORER. Yes, sir; that is truly substantial, particularly in an area currently served by a multiple group of VHF stations. You have to persuade the public to spend that money, and if they are getting 2 or 3 or 4 good services—good program services—today, I could tell you that in my opinion it will take an awful long while, and I seriously doubt whether they will ever get converted.

Now what can be done to alleviate the present problems and provide a sound foundation for the future growth of television? It is apparent that there is no panacea, and no simple solution for all the problems. But it seems to us that there is so much to be gained, and so little to lose, from preserving the UHF band for the television service, that steps should be taken at once to accomplish this objective.

Storer Broadcasting Co.'s proposal to the Federal Communications Commission to save the UHF band for television is contained in its Reply Comments dated February 1, 1956, in docket No. 11532. Copies of this document have been distributed to the committee members, and I would like to request that the entire document be made part of the record of this hearing.

The CHAIRMAN. We will make it a part of the record in the sense that it will be kept in the committee's files in connection with this inquiry. We cannot put these maps and things in the record itself. But we will take advantage of the document, its tables and things of that kind, by retaining them in our files.

Mr. STORER. Thank you, sir.

[Document entitled "Reply Comment" of Storer Broadcasting Co., in Federal Communications Commission docket No. 11532, dated February 1, 1956, will be retained in the committee files.]

Mr. STORER. Briefly, our proposal is that the Commission adopt a policy of deintermixture to provide 6 new UHF-only markets, 8 new markets with UHF plus only 1 VHF, 9 new 3-VHF markets, and 1 new 4-VHF market, as detailed in exhibit A attached to our reply comments.

The CHAIRMAN. Right there, when you talk about the six UHF-only markets, you are suggesting Evansville, Fresno, Madison, Peoria, Corpus Christi, and Springfield?

Mr. STORER. Yes, sir.

The CHAIRMAN. The new one-VHF markets, you are suggesting Hartford—we have heard that name before around here—New Orleans, Miami, Jacksonville, Norfolk, Spartansburg, Beaumont-Port Arthur, and Albany?

Mr. STORER. Yes, sir.

The CHAIRMAN. Then the new three-VHF markets: Davenport, Harlingen, Laredo, Terre Haute, Providence, Tampa, Orlando, Knoxville, and Charleston, S. C.?

Mr. STORER. Yes, sir.

The CHAIRMAN. And a new four-VHV market, St. Louis?

Mr. STORER. Yes, sir.

The CHAIRMAN. Then in your maps you show how that will cover the market areas?

Mr. STORER. Yes, sir.

The CHAIRMAN. In the country?

Mr. STORER. Yes, sir.

This proposal can be adopted by the Commission at once without dislocation of any existing station and without depriving a single person of existing VHF or UHF service because:

First: No change is made in the license of any stations now on the air or authorized, except that proposed VHF stations authorized by recent final hearing decisions in Fresno, Madison, Evansville, Peoria, Miami, and Corpus Christi would be modified to UHF.

The CHAIRMAN. In that case, the Commission, I think, testified that they could take these back?

Mr. STORER. Yes, sir. I comment on that a little later.

The CHAIRMAN. Go ahead.

Mr. STORER. Second: No changes are made in present VHF engineering rules or standards. All VHF changes proposed by Storer comply with the Commission's rules as to cochannel separation and otherwise.

After adopting this proposal, with such modifications as it deems in the public interest, the Commission can then proceed to evaluate at length the possibility of obtaining additional VHF channels, the desirability of reducing cochannel separations, and similar problems; but it can then do so with the assurance that enough UHF stations will stay in existence, so that, during its deliberations, the UHF service will not, like the fabulous dodo bird, become extinct.

Under the Storer deintermixture proposal, a total of 20,765,866 persons will rely on UHF stations for program service, thus, I believe, establishing a strong economic base for survival and growth of the UHF service.

In the markets involved, there are today 4,225,268 UHF television receivers, and numerous stations which I haven't counted. These viewers, receivers, and stations, in my opinion, represent sufficiently large numbers so that the advertiser cannot afford to neglect them. He will be forced to use UHF stations where they can compete effectively, and will learn, therefore, that the UHF service can be, and is, a good television service.

Likewise, manufacturers will be given the incentive to continue the manufacture and development of UHF transmitting and receiving equipment, and ultimately they will solve the major technical problems facing UHF, by providing superpower transmitters and antennas, improved UHF receivers, and economical transmitter tubes.

Under the Storer deintermixture proposal, 25 markets will be established where UHF stations can compete on a fair basis with not more than 1 VHF station. These markets include 8 UHF-only markets, and 17 1-VHF markets, as listed in exhibit C attached to our reply comments.

These basic UHF markets will be supplemented by the numerous other smaller markets in which today many of the UHF stations on the air now defy the maxim that UHF cannot compete with more than one VHF station.

For example, I am informed that WHIZ-TV, Zanesville, Ohio, a UHF station on channel 18, is operating at a small profit, and that WIRK-TV, West Palm Beach, Fla., a UHF station on channel 21, is just about breaking even. WHIZ-TV has no VHF station in its market, but WIRK-TV competes with two local VHF stations.

Incidentally, I understand that in Zanesville, they get service from Columbus, Ohio, from the VHF station. So they do have some competition.

WIRK–TV may have the formula for the UHF-holding operation, since it is able to continue on the air by operating only a few hours a day with a very small staff of 5 or 6 persons.

The CHAIRMAN. What kind of programs do they have? What type?

Mr. STORER. They have films. They have a rather restricted schedule, it is true.

The CHAIRMAN. Apparently they have been able to sell it.

Mr. STORER. They have been able to sell it locally. By keeping their expenses at a very modest figure, they are still in business. It has been quite a surprise to us, frankly, watching it, because there are two VHF's there. One of them on NBC lying to the north of West Palm Beach, and one right in Palm Beach.

The CHAIRMAN. Do they do any local programing at all?

Mr. STORER. Yes; they all program locally.

The CHAIRMAN. Live?

Mr. STORER. Live and film, both. Stations like the WHIZ–TV's and the WIRK–TV's undoubtedly will gain substantial encouragement from the adoption of a deintermixture proposal which demonstrates that the Commission has not sold UHF "down the river." Further, they will be operating as part of a going industry, and will benefit from the promotion and sales activities, and the success stories, of their bigger brothers in the deintermixed markets.

On the other hand, if nothing is done for UHF, these stations would be foolhardy to try to buck the tide of advertiser resistance on a nationwide basis.

Release of certain VHF channels, as the result of deintermixture, also makes their use possible in present 1–VHF and 2–VHF markets, not now served by UHF stations. Thus, under the Storer plan, 9 new 3–VHF markets will be created to provide competitive facilities for the 3 national television networks, and St. Louis will become a 4–VHF market, as set forth in exhibit A attached to our reply comments.

As a result of the deintermixture plan we have proposed to the Commission, in the first 100 television markets—as defined by CBS—3 or more competitive stations will be established in 80 markets. Two VHF stations will remain in only 20 markets, and in 9 of these CBS' own plan does not propose to add additional stations.

We do not propose our plan as a panacea. It evolved from a comprehensive study of the entire country to determine whether UHF stations had a realistic chance of success, provided no more VHF stations went on the air in their markets. We realize that criticism can be leveled at the plan, and it may well be possible to make changes in it that will improve it; but we felt a definite obligation, arising out of 28 years of broadcasting and telecasting, to make a contribution designed to maintain, insofar as possible the UHF service.

After a very thorough consideration of the problem, based on our actual experience in VHF and UHF broadcasting, we feel that it would be contrary to the public interest to abandon UHF at a time

75589—56—pt. 2——2

when, as outlined in our reply comments, the major technical problems of UHF are on the verge of solution, and while there still remain on the air sufficient UHF stations to provide a strong base for the development of the service.

We do not view the UHF markets as "islands"; we think they would be UHF strongholds, where UHF could be demonstrated to be a good television service which the adertiser could not afford to ignore.

In our opinion, Miami would be a particularly strong center for demonstrating the potentialities of UHF stations. The terrain characteristics, and the fact that Miami is rapidly developing as a network origination center, would provide the greatest opportunity for proving out UHF, and for convincing the doubters. Incidentally, I realize this is somewhat self-serving, but nonetheless we haven't found anywhere in the United States a better location for a UHF station.

Finally, with respect to the UHF service, we urge that action be taken at once. Whether the UHF service is going to be saved or abandoned, in all fairness to present UHF licensees and pioneers, let them be advised promptly of the final decision, whatever it may be.

Certain members of your good committee have pointed out, if additional VHF stations are permitted to go on the air in many of today's UHF markets, even fewer UHF stations will remain to be saved for the future.

Although we filed our deintermixture proposal with the Commission on February 7 in good faith, in all candor I must say that the recent decision of the court of appeals issued February 14, denying stays of the Madison, Evansville, and Corpus Christi VHF grants makes deintermixture practically moot. Once VHF stations are built in these cities, and in Fresno, Peoria, and Miami, I have grave doubts whether deintermixture could be implemented as a practical matter. It is a serious matter for any Government agency to attempt to delete existing stations and withdraw existing service from the public.

With respect to the operation of UHF stations by the major national networks, Storer Broadcasting Co. believes that networks that take advantage of the liberalization of the five-station limit on television station ownership to obtain UHF stations for themselves have a definite obligation to continue affiliations with UHF stations where it can be shown that no substantial loss of network coverage results from such continued affiliation. We especially want to commend the National Broadcasting Co. for having pursued such a policy of continued affiliation with our Portland UHF station, for without their support it is doubtful that the station could afford to continue on the air.

The CHAIRMAN. Right there, when the new VHF comes on the air, I suppose that there will be a question of policy involved with any network as to what network goes on that station. Isn't that correct?

Mr. STORER. Yes. sir.

The CHAIRMAN. Because unless you get the so-called satellite, the new VHF might be a better service. I don't know.

Mr. STORER. Yes, sir.

The CHAIRMAN. Technically, I mean, engineeringwise.

Mr. STORER. But I must say, Mr. Chairman, in all fairness——

The CHAIRMAN. I mean, here comes the problem, again—that is what I am trying to say. You have got to face up to it again.

Mr. STORER. Yes. But NBC, as recently as within the last 2 weeks, has indicated to us that they will continue with us and assist in developing, if the Commission grants permission for us to try this experiment, a development of the UHF service in Portland.

The CHAIRMAN. Naturally then you would have a better service to offer to any network if you did get the satellite; more nearly competitive, let me say that.

Mr. STORER. A better service than we have now.

Changing to another subject, which is of particular interest to the management personnel of our company, why, by reason of geography—living down in Miami as we do—have to fly continuously in airplanes, we are not sympathetic toward the idea of towers higher than 1,000 feet. We feel that the public safety is more important than the 5 extra miles of coverage for a television station which is gained by going from 1,000 feet to 1,250 feet. In some cases I might say that higher towers offer a very serious hazard. We don't think they are of that importance.

May I express my thanks and appreciation for your consideration in hearing the views of our company. If there are any questions, I would be delighted to answer them.

The CHAIRMAN. I think the counsel has 2 or 3 questions he wants to ask. I want to thank you for the statement. I think it has contributed a great deal to the problem we have in front of us.

I wanted to ask this because you have had a lot of experience in these matters. I might say since last week's hearing, I have inquired of people who have had experience, but it did strike the committee that in all of these cases again, we are getting down to the problem of the set. That is one of the things that causes a great deal of this problem.

It is good to note that in the Miami area, which is a little different and a little easier to handle, which you will admit, than in other areas, you have been able to work this set problem out. But we are coming now to color, and I suppose you would agree with me—or your engineer would, that color sets will gradually drop in cost as they get the know-how, and what is in the tube that Allen testified about—General Electric's development.

What would be your suggestion, as to what we could do, or the Commission or all of us and the manufacturers, now that we are phasing into a new set situation in which I suppose in a few—not too many—months, maybe 2 or 3 years, people will be buying color sets. Networks, I suppose, will be putting on more and more color programs as the sets multiply, and the cost goes down.

Most color sets now, I understand, are all channel.

Mr. STORER. Yes, sir.

The CHAIRMAN. But they could be made color and just VHF, too.

Mr. STORER. Yes, sir.

The CHAIRMAN. And make them maybe a little bit cheaper.

Mr. STORER. A little bit cheaper, probably.

The CHAIRMAN. What would be your suggestion—if you haven't one now I wish you would think about it—how we can now get this thing when it is just budding. There are not too many color sets now, but if we could start this off now whereby the color sets would be all channel, wouldn't it in your opinion help go a long way toward the solution of the thing you are talking about?

Mr. STORER. Yes, sir.

The CHAIRMAN. In other words, we have a chance now to grab it?

Mr. STORER. I suppose that this might be a little arbitrary, but the Federal Communications Commission does set the standards for receivers and/or transmitting apparatus. It might be possible to insist that the color receivers generally be all-channel.

I don't know legally whether that can be done, but if it could be done, that would probably do more to insure the future of UHF than anything.

The CHAIRMAN. The FCC has not said so flatly, but in effect they felt that their authority to deal with this problem as far as the manufacture of sets was concerned, was somewhat vague or nebulous.

If that is true, of course, the place to come is here, to get the authority. Whether or not they would ask for the authority, I don't know. What I am trying to find out from you, from your long experience, is whether or not if this could be done—whether it be done voluntarily or by FCC ruling—wouldn't it go a long way insofar as the future is concerned, and the expansion of television service, to solve our problem?

Mr. STORER. Yes, it would, sir.

The CHAIRMAN. Now, Mr. Storer, we have another little problem, of course, of the tax involved. I am having that explored. Maybe we might find that color sets could be excluded from the excise tax without taking anything much away from the Treasury.

I am sure Mr. Humphrey won't like this, but I think if someone explains to those who are administering these taxes that it would be worthwhile to forego this small amount that may come in to solve a real economic problem that is existing in this big, new, growing industry in this country—would you agree with me on that?

Mr. STORER. I agree with you very much, Mr. Chairman. I doubt seriously whether that idea could be sold, but if it could, it would be a terrific boost.

The CHAIRMAN. Let's take the Treasury. If they really understood what this would do to this real problem—that actually the amount of taxes that may come in on color sets now is small—by helping to get this industry stable and on a basis where it knows where it is going, it might be that in the long run revenues would be added which would amount to more than the excise tax—would amount to a great deal more.

Mr. STORER. Just from the standpoint of income taxes——

The CHAIRMAN. Wages—everything that goes with it. It would seem to me that to let this industry grow like it should and give us really a competitive system in this country, that the Treasury might find itself, after a period of time, with more money than if it insists on an excise tax on the set.

Mr. STORER. I think it would be a very worthwhile objective, and if it could be accomplished it would be fine.

The CHAIRMAN. May I ask you this question: Do you agree with me on this, that if we are going to do something like this, now is the time to do it?

Mr. STORER. Yes, sir. I think everything that has to be done to save UHF has to be done yesterday.

The CHAIRMAN. Yes; that is right.

Mr. STORER. It is pretty far gone, in my book.

The CHAIRMAN. That is what we are hopeful that we can be helpful in trying to work out.

Let me ask another thing about the economics here. I was interested in the part of your statement where you said that the trade-ins in the Miami area, a lot of them were being sold to other countries just developing television.

Mr. STORER. Yes, sir.

The CHAIRMAN. That offers a possibility, too, for the investment the American people have in old sets.

Mr. STORER. Every week there are large numbers of television receivers that are shipped out of Miami to Cuba and other places. Those offer the people in those countries a lower-priced set at considerably reduced prices, and I think it is very constructive.

The CHAIRMAN. Do you have any questions? I think the counsel has some questions he wants to ask.

Mr. COX. Just a few.

Mr. Storer, is it your conclusion, then, that in your operation in Miami at the present tower height that an increase in your power above 185 kilowatts would not materially improve the service there—your coverage?

Mr. STORER. It would help; yes. But we felt that we should build a high tower first and then find out whether that helped the situation to the extent that we had to add additional power. We were quite surprised to see that the additional power, while desirable, is not nearly so important as the additional height of the tower.

Mr. COX. As I understood it, you said you felt that with this power and antenna height you now have achieved substantial equality with the VHF station in Miami?

Mr. STORER. Yes, sir.

Mr. COX. Consequently, then, with 90 percent conversion in the area, you offer an advertiser in Miami 90 percent of the coverage he could get with your VHF competitor?

Mr. STORER. Approximately. I said 85.

Senator POTTER. How far out can you get with your grade A signal?

Mr. STORER. That depends, Senator, on what you determine is a grade A signal. In that area, due to the flat terrain, it is almost all grade A until you get out to the point where the signal falls off substantially—which begins, incidentally, at about 65 to 70 miles. We had a firm of engineers, the Craven, Lohnes & Culver firm here in town, make a survey. I think this illustrates the grade A coverage.

I want to make myself clear. The additional power is desirable, and out at the fringe, for instance way down in the Keys, 60 miles down the Keys, you do get a better picture with higher power. It so happens that WITV on channel 17 has a radiated power of something on the order of half a million watts, I believe. At that point we notice that their signal has a little less snow than our signal, but we go out farther. Actually, you can get our signal on down the Keys—the case in point—where you can't get theirs.

So it would be desirable—and we planned if we could make an economic success of this station—to increase our power at Miami. But we first wanted to get a determination as to which was more important—the tower height or the power.

Mr. COX. The point I am trying to get at is: If you have substantially the same coverage as the V and you have, of course, coverage in the center of the metropolitan area around Miami, isn't it true that you offer to the national advertiser just about as satisfactory an outlet for his advertising as your competitor does?

Mr. STORER. Yes, sir.

Mr. COX. In your opinion.

Mr. STORER. Yes, sir; insofar as we have 85 to 90 percent conversion.

Mr. COX. Isn't it true that your card rate for class A time is only about half that which is charged by the V?

Mr. STORER. About 60 percent.

Mr. COX. Therefore, in terms of cost per thousand, your cost is competitive?

Mr. STORER. Yes, sir.

Mr. COX. Then is the advertiser resistance that you talk about a feeling that they have toward UHF generally, regardless of the particular situation in the market?

Mr. STORER. Yes; and they have it rightly. There is no gainsaying the fact that in the past we have had in UHF a receiver problem which in recent months has been greatly improved. In my own house—and my associates have all had this experience—we do have more service on UHF sets, until recently. Lately, the service from the UHF sets seems to be quite stable and satisfactory.

So in the earlier days of UHF, the converters were not as good as the later day converters, and all-channel sets weren't nearly as good. I understand that this new GE tube improves it to the point in the front end of the set, as they say, so that the UHF receiver is as good in every respect. How soon that will get into public usage, I don't know. I understand that they are shipping a lot of those tubes on an experimental basis for military production now.

But all we say is that there should be a holding operation somewhere here for UHF. Frankly, we haven't done very well with UHF. We are not too proud of our results. Economically, in Miami we broke in the black in November-December. Due to the Christmas checks, bonuses, and so on, we are in the red. I have not seen the January figure yet.

In Portland, we have economically done quite well. However, we have had an awful lot of expense to improve that facility, and if you took the amounts that we have poured back into UHF in Portland, we are still way behind the eight ball economically.

The CHAIRMAN. What would you do without a network?

Mr. STORER. We have a certain amount of pride in continuing, but I am afraid that with 4,000 stockholders at our backs, we would probably have to fold up. I do not think we have any choice. That is why we are so appreciative of NBC, as the case in point, in sticking with us.

The CHAIRMAN. But they don't have to stick with you?

Mr. STORER. No; they don't. In Miami, with the channel 7 grant there—and I want to say in passing in all fairness, that when we went into the Miami picture, we were told by NBC that when a VHF was granted down there and with the connection that Niles Trammel, formerly president of NBC had, that we would lose our affiliation. They have been completely square with us, and if we lose the affiliation in Miami, we will probably try to rock along for a while on a reduced basis.

But whether we can keep it going in my book, on the standards which we have set for our company generally, programwise, I doubt it.

The CHAIRMAN. But you would have a better chance of surviving in Miami as of now than any other place, because of the sets that you have?

Mr. STORER. Yes, sir.

Mr. COX. If, however, two V's come in, not only channel 7 but channel 10 that is still in hearing, isn't that going to substantially wipe out the investment which the people in that area have made in conversions or purchase of all-channel sets?

Mr. STORER. No doubt about it, sir.

Mr. COX. I assume that would be a very substantial figure, with the 120,000 sets converted?

Mr. STORER. Call it 250,000 times a minimum of $50.

Mr. COX. That would be the minimum conversion cost?

Mr. STORER. Yes. That would be roughly $12½ million.

Mr. COX. I gather that it is your opinion, based on a reading of your proposals to the Federal Communications Commission, that the chances of survival of the UHF station in a market with two V competitors is very slim unless that station is owned and operated by one of the networks; is that correct?

Mr. STORER. Yes.

Mr. COX. But you feel that one or more well-managed U's can compete successfully is there is only one V in the area?

Mr. STORER. Yes, I do, sir.

Mr. COX. Because primarily that permits still the possibility of network programing for the U's in the area in order to get conversion and maintain it?

Mr. STORER. Yes. I would say that it will take some time for the national advertiser to arrive at a point where he is completely sold on the U versus the V, even with just the one VHF. But we find that every month we have repeat orders. They come along on the basis of a very short-term contract, shall we say, just a week-to-week kind of existence. But we got a lot of repeat orders from good advertisers today that we didn't get last year at all.

Mr. COX. I think in your statement you indicate that about 56 percent of the present UHF sets in service are in the markets which would be covered by this holding operation you are proposing.

Mr. STORER. Yes; that is right.

Mr. COX. You are of the opinion that is a sufficiently broad economic basis to encourage the manufacturers to continue to produce effective equipment?

Mr. STORER. I would prefer to say I hope so. I do not really know. I don't think anyone does. But certainly at some point, if we are going to save UHF—we can talk about it a lot and have a lot of wishful thinking—but at some point we have got to find a way of at least demonstrating that UHF is a good service. That is the thing that bothers us the most.

Senator POTTER. I am sorry I wasn't here for your statement, Mr. Storer. I had an Appropriations Committee hearing this morning and I had to take that in too—but are you saying that in order to save UHF, the Commission will have to agree to an order to deintermix?

Mr. STORER. I think so. This little operation which I describe, Senator, in this statement, down in Palm Beach, where they have between 5 and 6 people, I believe, on the payroll and a very modest program schedule, may refute the idea that you have got to do something along the lines we suggest.

But I do not believe so. I think unless they get some advertising support from other than just their local operation—and I might say in Miami that the competition for local business from the VFH has been surprisingly active. We have found that they point out some of our deficiencies as good salesmen, continuously. It just isn't easy to sell the advertisers.

The only way we have been able to effectively sell the advertiser is to maintain very good programing in certain segments of the early evening hours where we don't get the network shows. By putting in film programing—which increases the cost of a UHF operation over a VHF operation——

Senator POTTER. It has been suggested that in case the Commission should decide to deintermix certain areas, that the areas that should be deintermixed should be your large metropolitan areas, to allocate your large cities such as New York, Los Angeles, Chicago, Philadelphia, and so forth, as the UHF areas. Then your VHF is more conducive to your smaller communities and your sparsely settled areas.

Mr. STORER. Yes, sir.

Senator POTTER. Would you care to comment on a suggestion of that kind?

Mr. STORER. I would especially like to comment on that one because we have a sales office in New York. It is sort of like the old country store idea. We found it was so hard to get hotel reservations that we rented this very small building. It is only 20 feet wide, but it is 5 stories high. It is situated on 57th Street behind a lot of other buildings.

Naturally we wanted to be able to show television and see television in our own office, in our own house, so to speak. So we put up an antenna on top of the roof. Even with the low-band channels—channels 2, 4, and 5—we had tremendous reflection problems. But on channels 7 to 13 we had difficulty getting the stations, even from the Empire State Building.

So we had to move three roof tops over. Fortunately we had a friend three doors away in the picture-framing business. He was kind enough to let us put an antenna up there. It wasn't until we got that antenna up there that we were able to get all the stations. We feel in any large city UHF is an awful headache, and that many, many people would be deprived—for instance in New York—of service if you made them into UHF centers.

Senator POTTER. In other words, because of the high buildings and so forth, UHF frequency is not conducive to that area?

Mr. STORER. Yes, sir. As a matter of fact, any time you get into a deep shadow, you must remember that up here at the top of a building, if you have a low-band VHF signal coming in, you get down in the shadow behind that building, you have got a loss of say 10 to 1. If you get up into the upper band, the 7 to 13 group, it doubles and even more. In other words, it might be a ratio of 20 to 1 fall-off.

But when you get a UHF that comes in down in this area behind that building, you have a 100 to 1 drop-off. In other words, at this point if you have 10 millivolts up here, and you get down in behind that building, you have a one-tenth millivolt with the UHF as opposed to a 1 millivolt signal, which is a good signal on low-band VHF.

So we feel very definitely that in the larger areas, with buildings and apartments—multiple dwellings—that that is a terrible problem.

Mr. Cox. Isn't it true that your plan, in addition to a holding operation for UHF, also adds first V channels in 10 of the top markets? Would you tell the committee why it is important to guarantee the availability of multiple outlets in these top markets?

Mr. Storer. The old saying is that 2 is company and 3 is a crowd. If you get three strong networks, you have for the American public better programing.

As has been said before your good committee before, one of the difficulties that ABC has found is in getting into a lot of these markets. If you can create some more 3-VHF markets, you have helped very materially increase the availability of better programing by helping the third network.

The Chairman. For ABC, for instance?

Mr. Storer. Yes, sir.

The Chairman. Mr. Storer, I still get back to this. I appreciate what you have said, but we are still talking about stations with networks, aren't we?

Mr. Storer. So often we are, yes, sir.

The Chairman. Is it possible, in your opinion, if the set situation was taken care of as it is now in Miami, practically, for a UHF to exist as a local station—or are we going to look to the future and have no local stations at all in television—whether they are VHF or UHF?

Mr. Storer. No, currently, Senator, I believe there is a market improvement in the large, independent television station operation.

Back in the early days of radio, I remember when a 100-watt station in a small town was something that nobody wanted, economically. As time went on, the independents in the large centers began to do pretty well. And while we have a totally different set of circumstances in television with the high cost of programing, yet there are some evidences that that is going to be solved because sooner or later these large film packages, so to speak, owned by these older film producing companies, will be released for sale, and they will be shown on the independent stations and after they have run them 2 or 3 times, those are going to be offered to the smaller stations and to smaller stations in smaller towns, and you are going to have some program sources.

The whole difficulty today in operating either an independent V or an independent U is the battle between the high cost of programing and the station's income.

The Chairman. I appreciate, of course, that the problem would always exist if the set problem is not solved. But if that is solved, what I am trying to say to myself: There must be some economic hope in the future. I appreciate the networks are going to do their programing, and that is one part of the procedure.

Mr. Storer. Yes, sir.

The Chairman. That involves the place of the national advertiser, of course, which is what makes the networks survive.

Mr. STORER. Yes, sir.

The CHAIRMAN. But I would feel quite dismal about this whole situation if I thought that with the technological advancements, the cost of building a station probably going down, that there was no room for a station in a given market to act independently without a network, because I am thinking of the local advertisers. If this would keep up this way, pretty soon you couldn't advertise anything but a national product.

Mr. STORER. There is room for development.

The CHAIRMAN. I am a little bit worried—more worried than ever, too—because there have been more mergers in the past 18 months in this country than any prior 18 years. The big ones are getting bigger, and there have been more bankruptcies in the past 18 months than in the prior 10 years, and 98 percent of them are little businesses.

Mr. STORER. Yes, sir.

The CHAIRMAN. I do not say there isn't a place for the network scheme of things. I mean that is going to be a great part of it. But it seems to me that we ought to be looking at this other problem, too—maybe the survival of UHF might help achieve this.

Mr. STORER. Yes, that is right, sir.

The CHAIRMAN. To maybe an independent UHF station in a given community. In my own town of Seattle, for instance, where the local fellow could come and advertise, even a few of us local politicians might get on.

But the way it is now, it is almost impossible.

Mr. STORER. It certainly is indicated by the improvement in the larger stations.

The CHAIRMAN. I might make a better mousetrap, but I would have no chance to tell anybody about it. I hoped we were going, in this expansion, to come to at least competitive independent stations in given communities. I see maybe a place for UHF in that, if the set situation is cleared up.

Mr. STORER. Senator, in the large areas such as New York, years ago the independent VHF's were having a serious problem. I believe that they are beginning to see much better figures from an earnings standpoint, and their circle of influence in the communities around New York, as well as in New York, has improved greatly.

As a matter of fact, I think that some of the networks—and not for 1 minute do I disparage the tremendous courage which the networks have shown in developing this whole——

The CHAIRMAN. Any station that would have to compete with a network program would have to have a good program.

Mr. STORER. That is right.

The CHAIRMAN. I hate to just sound the death knell to locals—what I call local programing and local stations. Just take baseball. What is happening? The network puts on the Yankees playing the Washington Senators on a given afternoon. The minor leagues are dead, aren't they?

Mr. STORER. Very dead, yes, sir.

The CHAIRMAN. That is a good example of it. I just deplore seeing that happen, and the local advertiser has no chance to get on these stations. The cost is too great and he has got to have some outlet because this is going to be, in my opinion, the greatest medium of expression of all time.

Mr. STORER. I think there is still some hope if you can keep a holding operation of this character.

The CHAIRMAN. I was going to say maybe this is where UHF fits into the picture. What do the Commissioners say—maybe pay-as-you-go might be put on the UHF band. Who said that—Lee, didn't he?

Senator POTTER. Isn't it true, Mr. Storer, they have reached more or less a breakthrough on this so-called picture tape?

Mr. STORER. Yes, sir.

Senator POTTER. If that is developed, that will allow any independent station on earth to have fairly cheap programing, which should be good programing.

Mr. STORER. Yes, I think that is true. As a matter of fact, I was very interested in reading a comment by General Sarnoff the other day that he felt the live programing on the networks was very important and the immediacy of a program was very appealing to the public.

The CHAIRMAN. And they do a good job. But it costs a great deal of money.

Mr. STORER. But the interesting part to me was—and is—that he commented that if everybody went to film, it would be lost—that immediacy, that live programing would be lost, which shows that in the general's mind, and certainly I don't believe there is anybody that knows more about this business or has thought more about it and pioneered more than he, there is a growing acceptance of film.

So there may be a place for the small independent element.

The CHAIRMAN. And they are making shorter films—half-hour films—and not the long features.

Let me ask you this: If you could build a UHF station—the cost could be gotten down to $200,000 capital investment—and get a channel in a given market area, couldn't you then, if the set situation was materially changed, couldn't that station with local programing be economically sound with that small investment?

Mr. STORER. I doubt it, sir. If you have a VHF market and you are invading that VHF market, and hope to convert all those receivers.

The CHAIRMAN. I am speaking a little bit about the future, where we hope that a set can take either band—maybe in this color thing. Couldn't he, with local programing, survive?

Mr. STORER. He might well. But it is in the future. In the meantime we have to have something to hold the band.

The CHAIRMAN. In the meantime we have this other. I am speaking always in terms that we hope we get this set situation cleared up a little. Then he has got a chance, hasn't he, as a local programing unit?

Mr. STORER. Yes.

Senator POTTER. How did you get such a high percentage, Mr. Storer, of conversion in your Miami market?

The CHAIRMAN. He went out and went after it, and he had NBC.

Mr. STORER. First we got a lot of additional network programs and we spend a very considerable amount of money on good film programs in those spots where we could not get the network advertisers to take our station. We employed a very substantial number of engineers to go around to all the dealers and promote the development of UHF.

Senator POTTER. Was there reluctance on the part of the dealers?

Mr. STORER. At first. But after a while they were our best helpers. I can tell you in just 1 month we spent $23,000 just on project 23.

It just happened to come out at the same figure, so I remember it very well. That was just the promotional end of the operation.

The CHAIRMAN. The reason you could do that was because they wanted to see the programing on NBC?

Mr. STORER. That is true, sir, no doubt about it.

The CHAIRMAN. You wouldn't have been able to do it if you were just having local programing, unless you had something very unusual?

Mr. STORER. If we had a lot of very expensive film programs, we might have.

The CHAIRMAN. It would have been more difficult, let's put it that way.

Mr. STORER. It would have been more difficult, yes, sir.

The CHAIRMAN. We will take about a 5-minute recess here to give the reporter a rest.

(A short recess was taken.)

The CHAIRMAN. The committee will come to order.

Mr. Storer, I would like to ask you one further question and get your opinion on this. It relates, of course, to the survival of UHF. It would apply, maybe, only to this type of condition. But supposing there is a market with 2 U's and 1 V. Would it substantially help the survival of the 2 U's if that 1 V was limited to 1 network?

Mr. STORER. Yes, sir.

The CHAIRMAN. In other words, not the way it is now in some cases. They take all of them.

Mr. STORER. In the first place, their own network has first call. Then after that, the next network vies with the other to see how many kinescope periods they can get, and as a result, you lose 30 to 40 percent of your traffics.

The CHAIRMAN. That sort of a policy might help considerably; wouldn't it?

Mr. STORER. Very much, sir.

The CHAIRMAN. The V's would be all right anyway; wouldn't they?

Mr. STORER. Yes, they do very well.

The CHAIRMAN. Thank you, unless there are some further questions. Do you have any?

Senator POTTER. No.

The CHAIRMAN. Thank you, Mr. Storer.

The next witness is Harold Thoms, who represents the UHF industry Coordinating Committee. We will be glad to hear from you, Mr. Thoms.

STATEMENT OF HAROLD THOMS, UHF INDUSTRY COORDINATING COMMITTEE, ACCOMPANIED BY BENEDICT COTTONE, THE COMMITTEE'S COUNSEL

Mr. THOMS. Mr. Chairman and members of the committee; I am president of radio station WISE and WISE-TV, a UHF station in Asheville, N. C.

I have served as chairman of the UHF Industry Coordinating Committee since the time it was organized in March of 1954. This is my second appearance before several of the gentlemen of this committee with respect to the UHF problem. I first appeared before you in May of 1954 in the hearings held by the subcommittee of this committee under the chairmanship of Senator Potter.

At the outset, I would like to bring the record up to date. When I appeared before Senator Potter's subcommittee almost 2 years ago, I was questioned at that time concerning my holdings in UHF television. I then stated that my television interests were confined to the UHF and that I held interests in stations WISE-TV, Asheville, N. C., WAYS-TV, Charlotte, N. C., WTSK-TV, Knoxville, Tenn., and WCOG, which held a construction permit for a UHF station in Greensboro, N. C.

In order that I may bring the record up to date, I would like to report that my television interests are still confined to UHF. However, my holdings in UHF television have radically altered since I last appeared before you. In September 1954, I surrendered the construction permit for WCOG and returned it to the Commission. In December 1954, station WAYS-TV was sold for the price of $4—and in March 1955 the station ceased operation and went off the air. In July 1954, station WTSK-TV was sold for $1. My holdings in television are, therefore, limited at this time to UHF station WISE-TV in Asheville.

So much for my personal UHF history. I would also like at this time to bring the record up to date in other respects. When the UHF Industry Coordinating Committee appeared before your subcommittee almost 2 years ago, testimony was presented through a number of witnesses representing operating UHF television stations. Many of the stations represented by witnesses who appeared before your committee 2 years ago are no longer in operation. The list of stations which have been compelled to cease operation since that time is, of course, much longer. The record should show that at the time of the hearings before your subcommittee, 10 stations which had commenced operation had been compelled to cease their operations and go off the air. At that time, 54 permits for construction had been relinquished and turned back to the Commission. The record should further show that, as of this morning, a total of 56 stations have been compelled to cease operation and go off the air, and 109 permits for construction have been relinquished and turned back to the Commission.

When we came before your subcommittee almost 2 years ago, we then predicted that unless effective remedial action was promptly taken, we were faced with the grave danger that this Nation's television broadcast industry would be reduced to a small hard core of superpower, multiple-market VHF stations providing a limited number of local outlets and services. It was clear, at that time, that unless effective and remedial action were taken, the existing allocation table and the rules would limit the television industry to the hands of a few with a concentration of monopolistic control rather than a television broadcast industry with a large number of stations owned and operated by many, providing a multiplicity of outlets and services.

These grave dangers and the consequent disservice to the public interest were established by numerous witnesses, extended testimony, and exhibits. The problem and our recommendations were summarized in the testimony presented in behalf of the UHF-ICC. The position that was stated at that time, much to our own surprise, is our position today.

In the interest of brevity I will merely restate the summary of our position.

First, the paramount consideration of public interest which should be recognized by the Senate subcommittee and the Commission is that the American public has a vital stake in the preservation of existing television stations as a competitive force in the industry.

This consideration is based upon the basic governmental determination which is implicit and explicit in the nationwide television allocation report and plan that the existing VHF channels are inadequate to assure the attainment of a truly nationwide competitive television service. Pertinent to this general public-interest factor are the great financial and economic stakes of UHF broadcasters, UHF station personnel, and television dealers, distributors, servicemen, and manufacturers.

Second, bitter experience has now proved that intermixture of UHF and VHF channels in the same market was based upon a misguided, though sincere, faith in the ability of UHF stations to achieve competitive equality of opportunity with VHF stations in the same service areas.

Therefore, administrative proceedings should immediately be instituted to explore methods of reallocation or reassignment of channels in such a manner that such equality of competitive opportunity is more readily available. Such plan should, of course, seek to safeguard against serious dislocation of public and industry investments in television.

Third, so that the problem of survival of a competitive television system will not have been rendered academic by the extinction of all UHF broadcasters in intermixed areas, and in order to avoid complicating a solution to the intermixture problem, pending completion of such proceedings, there should be an immediate suspension of any further grants of applications for new television permits and for changes in existing television authorizations affecting coverage.

The CHAIRMAN. By that, you still mean in the areas where this intermixture problem exists?

Mr. THOMS. That is right—only.

The CHAIRMAN. I think the record will show that.

Mr. THOMS. It was our hope, then, and indeed there was every reason to believe, even though reallocation proceedings by the Commission might consume a considerable period of time, that the mere institution of such proceedings by the Commission, with a sincere purpose in carrying them through to a decision on the merits, would in and of itself be a shot-in-the-arm for UHF operators. For if this had been done, the whole climate and attitude in the industry with respect to UHF would long ago have improved. That was just short of 2 years ago. Today, although scarcely a soul has questioned the crying need for the prompt institution and resolution of such administrative proceedings, we are actually no farther along this path than we were when I sat before Senator Potter's subcommittee 2 years ago.

I say this notwithstanding the fact that the Commission purported to open up rulemaking proceedings recently when it threw out some 30 deintermixture petitions. And the reason I say this is because although a minimum of a 2-year study period has been available to the Commission, which has the principal responsibility and the expertise to solve this problem—that agency has yet to come forward with a proposal of its own. But as I will soon show, the record of the past 2 years is one of shameful neglect of the problem, of building up hopes and expectations that solutions would soon be forthcoming, only to have every single such hope dashed to the ground when the chips were down.

Your committee, which has been standing on the sidelines during these 2 years, also with the expectation that something definite would be forthcoming from the Commission, has been treated to the spectacle of a Government agency—which it likes to call one of its arms—repeatedly "marching up the hill and then marching right down again." We have heard solemn proclamations from Congress and from the Commission that the UHF problem simply must be solved, but beyond these hortatory gestures, something tangible has yet to be produced.

The inaction of the past 2 years cannot be excused on the ground of lack of definite recommendations. UHF operators en masse came before the Potter subcommittee 2 years ago and urged prompt consideration of the feasibility of a long-range transition of television into the UHF band, under a program which would protect against serious public and industry dislocations. This plan was branded as too radical, despite the fact that even the former majority counsel of this committee could find no better reason against the plan than the utterly far-fetched one that some members of the public would still be paying installments on their present VHF sets 5 years from now.

The CHAIRMAN. Who was that?

Mr. THOMS. The majority counsel for Senator Potter's committee.

Senator POTTER. That wasn't my committee—that was the full committee. As a matter of fact, I think if the recommendations of our subcommittee had been carried out, if the full committee had accepted them, we would have been further along our way to getting some solution to this problem.

Mr. THOMS. You are so right, Senator.

The CHAIRMAN. Mr. Plotkin and Mr. Jones were employed by the committee, by Senator Bricker and Senator Johnson, as special counsel on radio and television matters.

Mr. THOMS. Be that as it may, UHF operators bowed to the resistance to consideration of an all-UHF plan. When such highly respected persons as the president of CBS came before Senator Potter's subcommittee to urge consideration of selective deintermixture, we came back to you before public hearings had been completed and said to you:

> We believe, however, that in the final analysis, Dr. Stanton's presentation was most forthright in that he recognized that a grave problem exists which can only be met by serious consideration of reallocation measures. We certainly accept his premise that reallocation is the proper method by which to achieve nationwide competitive service. We have felt and feel that this premise must lead logically to a single spectrum system, because the availabilities in VHF are so limited that UHF alone can bring about the equal opportunity to compete for the maximum possible public service.

Senator PASTORE. Do you mean by that you would do away completely with VHF?

Mr. THOMS. No.

Senator PASTORE. That is what you said there.

Mr. THOMS. We gave up insisting that VHF be given up and all television moved to the UHF band. We relinquished that position.

Senator PASTORE. You have receded from that position?

Mr. THOMS. Yes, sir.

Senator PASTORE. You have therefore urged selective deintermixture?

Mr. THOMS. That is right. We went on to say:

> But we nevertheless endorse Dr. Stanton's recommendation of a study to determine whether any feasible deintermixture plan can accomplish the necessary goal of a truly nationwide competitive system provided that such study is speedily accomplished so that it may promptly be determined whether it will or will not be necessary to go to a single spectrum system in order to provide a truly nationwide system providing equal competitive opportunity to broadcasters.

As will be further shown, there have been other proposals and recommendations which were urged upon the Commission throughout this 2-year period with the same result—inaction.

When we completed our presentation to Senator Potter's subcommittee, we believed that there was a very good likelihood that effective action would be taken to avoid a grave threat to the public interest. And we were not alone in that view. For example, the trade press reported in May of 1954 that "so impressed were Senate Communications Subcommittee members by the pleas of UHF operators for urgent action to alleviate their plight that as of now they seem inclined to use strong measures—possibly drastic enough to cut across the whole fabric of the TV structure." We now know, of course, that the hopes and expectations that were engendered at that time were wishful thinking.

From time to time, UHF operators have been given reason to hope that remedial measures would soon be forthcoming. But the fact is that the whole succession of events amounts to nothing more than repeated disappointments and failures to act. A report of that history was prepared by the Ultrahigh Frequency Industry Coordinating Committee. I have attached it to my statement, and I ask that it be made a part of this record.

Senator PASTORE (presiding). At this point, without objection, it is so ordered.

(The document referred to is as follows:)

REPORT ON THE HISTORY OF THE ACTIVITIES OF THE UHF INDUSTRY COORDINATING COMMITTEE AND ON THE HISTORY OF THE STRUGGLE FOR MEASURES TO RELIEVE THE CRITICAL UHF PROBLEM

The UHF-ICC was organized in April of 1954 after a wave of UHF failures and the worsening situation with respect to UHF throughout the country had prompted the Communications Subcommittee of the Senate Interstate and Foreign Commerce Committee, under the then chairman, Senator Potter of Michigan, to schedule hearings on the status and development of UHF channels in the United States. Within a short space of less than a month, over 80 UHF stations and permittees enthusiastically indicated their desire and willingess to join in a committee dedicated to the purpose of making a full, factual presentation of the relevant data in the forthcoming hearings before the Senate subcommittee and of pressing for effective governmental remedial measures which would assure nationwide competitive television service.

The hearings before the Senate subcommittee were held in May and June of 1954 and the record of the proceedings covered more than 1,000 pages. The UHF-ICC, through testimony by a large number of UHF broadcasters from all sections of the country, and by its chairman, vice chairman, legal counsel, and economic consultant, presented extensive data with respect to the situation then existing in the operation of UHF stations.

The basic objective urged by the UHF-ICC was the modification of the existing geographic television assignment plan upon a basis which would eliminate the gross competitive disparities inherent in the two-spectrum assignments made under that plan; and provision of sufficient equal compatible assignments in the same markets to insure fair and equal competitive opportunity among television broadcasters and networks as well as a diversity of national and local program services. To accomplish that objective the UHF-ICC urged that the public interest could only be served by the assignment of all stations within one portion of the spectrum with a "single market concept" as the basis for the establishment of a revised allocation plan in the public interest. The availability of 70 channels in the UHF portion of the spectrum as compared with only 12 channels in the VHF portion of the spectrum clearly dictated the wisdom of establishing such a revised plan by use of the UHF band solely. In view of the number of outstanding VHF receivers in the hands of the public the UHF-ICC recognized the need for, and accordingly urged that a reasonable transition period be provided to coincide with the period of obsolescence of such VHF receivers in the hands of the public. Many individual UHF broadcasters separately urged similar reallocation proposals.

The members of the FCC, in their presentation to the Senate committee, recognized the gravity of the existing problem but did not present any remedial measures and defended intermixture of VHF and UHF stations. It was apparent, however, that the members of the Senate subcommittee had been greatly impressed by the presentation of UHF broadcasters, that they recognized the urgent need for remedial action, and that they were not satisfied with the Commission's willingness to rest with the status quo. Thus, for example, it was reported in Television Digest on May 22, 1954 that—

"Senators lean to drastic UHF remedies: So impressed were Senate communications subcommittee members by the pleas of UHF operators for urgent action to alleviate their economic plight, that as of now they seem inclined to use strong measures—possibly drastic enough to cut across the whole fabric of the TV structure."

* * * * * * *

"Network representatives and old-time station operators—the few who bothered to pay attention—were taken aback at the way things were going."

The Potter subcommittee hearings were recessed, however, during the NARTB convention in Chicago. This recess was most unfortunate since it appeared that the considerable momentum which had built up for immediate and effective relief was dissipated not only by the passage of time but by the lobbying of powerful interests during the intervening period and particularly at the NARTB convention. At the conclusion of the hearing, Chairman Potter stated:

"I can assure you that we are not going to make any half-cocked decisions, but we are going to act immediately * * *. Not only the members of this committee, but all Members of Congress are greatly concerned about this problem, if the communications that I have received from the various Members of Congress are any indication."

More than a month elapsed, however, and no action of any kind was taken. Chairman Thoms and Vice Chairman Weber spent a week in Washington visiting with the Members of Congress in an attempt to determine what action was proposed to be taken. The results of their investigation were most disheartening. Chairman Thoms issued a report to the members of the UHF-ICC stating that in his view "* * * no sound relief is forthcoming now or in the foreseeable future."

The remainder of the year vindicated that view. Conduct of the investigation was removed from the jurisdiction of the Potter subcommittee as a result of differences between Senator Potter and Senator Bricker who was then chairman of the Committee on Interstate and Foreign Commerce, and taken over by the latter committee. Except for the selection of majority and minority counsel, however, for the alleged purpose of intensifying the study of the UHF problem, there were no visible signs of any activity from congressional quarters looking toward any definite action. Activity at the Commission level was similarly inconclusive. In two actions which the Commission professed to be taking in order to help UHF, it (1) issued a public notice stating that it would consider UHF satellite operation on a case-to-case basis; and (2) revised its multiple ownership rules to permit the ownership of a total of 7 television stations provide that 2 were UHF. The latter measure had been severely criticized by the UHF–ICC as one which would not ameliorate the UHF problem but on the contrary would promote further monopolistic concentration by networks and other already favored multiple VHF operators, in testimony by its counsel before the Potter subcommittee. In a letter to the FCC on August 16, 1954, the UHF–ICC, by its chairman and vice chairman, pointed out that the Commission's satellite proposal, to the extent that it would permit high-powered wide coverage VHF stations to operate satellites, "must prove disastrously injurious to independent station UHF operation," and further aggravate competitive disparity between VHF and UHF stations. It was urged that the FCC postpone the effectiveness of its announced satellite policy and institute proceedings on a rule which would limit satellite operation in a manner which would preclude further VHF encroachment in distant markets served by UHF stations. The Commission, however, rejected these comments and permitted its policy to become effective without limitation.[1]

[1] In a letter dated November 8, 1954, from the Commission's Secretary, the UHF–ICC was advised that the Commission desired to leave the satellite policy "flexible." It does not appear from this letter that the UHF–ICC's comments were formally considered by the Commission en banc.

On September 15, 1954, the Commission issued a notice of proposed rule-making looking toward the authorization of private microwave intercity relay stations by television broadcasters in apparent recognition of mounting clamor by UHF stations for relief from the crushing burden of exorbitant cable costs required to be paid the telephone company. The proposal was strongly opposed by the telephone company and by no one else. It was however supported vigorously by the UHF–ICC and by a great number of other parties. The UHF–ICC pointed out that (1) many stations and particularly small stations located in communities distantly removed from large urban centers are faced with the insurmountable barrier of exorbitant rates charged by the common carriers for interconnection; (2) that the public interest is seriously affected adversely by the inability of stations to obtain facilities for interconnection on a reasonable basis; (3) that it is vitally important for the successful operation of all stations (including noncommercial educational stations) that they be able to broadcast simultaneously the programs originated by any one of the stations; and (4) that it is important that stations serving a homogeneous area with common interests and needs, be enabled to link together for the broadcast of programs and particularly in times of national emergency. Although hope was aroused by the Commission's announcement of this rule change that some measure of relief would thereby be provided to heavily burdened UHF and small market VHF stations, it still remains unacted on, 16 months after the Commission proposed its adoption.

During the Potter hearings many parties urged that selective deintermixture should be undertaken. In rebuttal testimony the UHF–ICC endorsed selective deintermixture provided that prompt consideration of selective deintermixture be undertaken. Thus it was stated that the UHF–ICC favored "a study to determine whether any feasible deintermixture plan can accomplish the necessary goal of a truly nationwide competitive system provided that such study is speedily accomplished so that it may promptly be determined whether it will or will not be necessary to go to a single-spectrum system in order to provide a truly nationwide system providing equal competitive opportunity to broadcasters."

When it became apparent that no early remedial action could be expected upon the initiative of the Senate committee or the FCC, UHF operators were urged by the working group of the UHF–ICC to file individual proposals with the FCC for deintermixture or other change of the channel assignments in their own markets which would ameliorate the situation on a market-by-market basis. A number of proposals for selective deintermixture of particular markets were filed in the latter part of 1954. The Commission, however, denied these proposals giving as the reason its belief that it would be unfair to applicants for the VHF channels which would be deleted by the deintermixture proposals who had expended large sums of money to prosecute their applicants.

As a result of the change of party control in the 84th Congress Senator Bricker was replaced by Senator Magnuson as chairman of the Senate Interstate and Foreign Commerce Committee. Hopes of UHF operators were again aroused by public statements indicating that the committee expected to push for early remedial action with respect to the critical UHF situation. In February 1955 the reports of counsel to the Senate Committee on Interstate and Foreign Commerce on television network regulations and the UHF problem were released. The recommendations of the report of the majority counsel with respect to the UHF problem were timid and ambivalent. Although it was recognized that an all-UHF allocation was sound logic and was the only solution which could reasonably be expected to achieve nationwide competitive television service, it was concluded that such an allocation should not be attempted. The majority counsel report, while on the one hand urging that the Commission reconsider its denial of deintermixture, argued that broad-coverage VHF stations were the only means by which service to rural areas could be provided, and that it would not be fair to require the public to convert to UHF regardless of how long a period of transition was provided. The additional recommendations of the majority counsel to alleviate the UHF problem were that tax exemption should be provided for all-channel receivers, as proposed in pending legislation, and that certain regulatory restrictions be imposed on network operations and on the multiple ownership of stations. The minority report made extensive factual findings showing the seriousness of the UHF problem and recommended that additional investigation be conducted for the purpose of arriving at substantive recommendations. The reports of counsel were transmitted by the chairman of the committee to the Commission and the Department of Justice for comment.

In confirmation hearings before the Senate Committee on Interstate and Foreign Commerce on February 23, 1955, Chairman McConnaughey testified that "I think that very likely it would be wise, and thinking for myself now, not speaking for the Commission in these matters, I think that the Commission should consider rulemaking on a selective basis possibly in deintermixture."

On March 3, 1955, the expectation of early remedial measures regarding the UHF problem was again encouraged when the Commission granted the request of UHF station WKNX-TV, Saginaw, Mich., for proposed rule making, looking toward the amendment of its rules to limit the location of antennas to within 5 miles of the principal city to be served, unless strong public interest reasons to the contrary were shown by the applicant. In its notice the Commission recognized that the implementation of a fair, efficient, and equitable allocation plan required that a specific distance limitation should be observed unless such reasons were clearly shown. As will be pointed out below, however, the Commission discarded this proposal at about the same time that it decided to turn down selective deintermixture proposals.

On March 18, 1955, the Commission in its comments to the Senate in response to the staff reports on the network and UHF studies, urged no specific remedial measures, but stated that Congress could encourage production of all-channel sets by removal of excise tax and/or getting manufacturers to agree to produce such sets voluntarily and urged that Congress grant FCC extra funds to conduct a full study of networks, advertisers, agencies, talent, individual film producers, and distributors.

The Commission further stated that moving all stations to UHF "could involve such tremendous dislocation of existing operations" that such action should be taken only if Congress itself so determines. With respect to selective deintermixture the Commission stated that it was unable to advance any "definitive answer," but that it was "* * * considering the circumstances, if any, under which such limited deintermixture may be appropriate * * *." The Commission listed as the steps it had already taken to solve the existing problems (1) the relaxation of its multiple-ownership rules; (2) the announcement of the "satellite" policy; (3) the proposed 5-mile rule; (4) the proposed rule to authorize private microwaves.

Senator Magnuson stated his reaction to the Commission report as follows: "Failure to advocate immediate remedial action * * * could soak the householder millions of dollars. We can solve this thing without this expenditure, which I am sure everyone, FCC included, does not want to happen." He further stated that he had hoped that "FCC will move before it is too late to deintermix anything."

Shortly thereafter, the UHF-ICC announced the following 10-point formula in response to the statement of Senator Magnuson that the Senate Interstate and Foreign Commerce Committee would resume its investigation and study of the UHF problem: "(1) Deintermixture; (2) directional antennas; (3) power and antenna height adjustments; (4) mileage separation reductions; (5) confinement of TV stations to their own market; (6) common carrier cable cost reductions; (7) opportunity for competitive common carrier service in the field of transmission of network programs to TV stations; (8) opportunity for TV broadcasters to operate microwave relays for transmission of network and other programs; (9) receiving set performance standardization and elimination of cost differentials for all-band sets; (10) grant of funds for FCC for extensive investigation into entire field of network programing."

In the early part of 1955 the Commission instituted rulemaking proceedings on the controversial question of subscription television. The Commission took no position on the numerous difficult matters involved but rather was limited to the listing of questions of fact, law, and public policy on which comments were requested. Arrayed on one side of the controversy are the proponents of individual subscription systems, Zenith, International Telemeter, and Skiatron. On the other side are the opponents of subscription TV in any form, networks, movie interests and entrenched VHF stations. While the controversy was raging, the NARTB directorship took a position opposing subscription TV and the management of that association issued public statements against introduction of subscription TV even on a trial basis.

On April 28, 1955, the UHF-ICC, addressing itself to the NARTB's position, issued a statement pointing out that subscription television may develop in a manner that will provide beneficial results to the public and the industry and condemning the NARTB prejudgment of the issue before proper study of the matter had been conducted. It was urged that the Commission should give subscription TV a full hearing and investigation.

The foregoing developments in the early part of 1955 gave rise to renewed hope among UHF broadcasters that the FCC was now likely to be more favorably disposed toward effective remedial measures. Therefore, despite the previous turndown of deintermixture a series of deintermixture proposals were refiled, and additional deintermixture proposals were filed, in the early spring and summer of 1955. These hopes were fanned into optimistic expectation on March 31, 1955, when the Commission reconsidered its previous denials of the requests for deintermixture of four cities and instituted rulemaking proceedings looking toward channel reassignments in those cities (Peoria, Evansville, Madison, and Hartford) so as to make those cities all UHF. The Commission in its orders, called for extensive data with respect to enumerated matters which the Commission considered pertinent to its decision on the requested channel reassignments proceedings. Oral argument was held by the Commission on June 27 and 28, 1955.

On May 24, 1955, an address by Chairman George C. McConnaughey at the annual convention of the National Association of Radio and Television Broadcasters, provided additional basis for encouragement to UHF operators. The FCC Chairman stated that the Commission had taken the following steps to meet the UHF problem:

"(1) We have recently put out rulemaking proposals looking to the possibility of deintermixture of UHF and VHF in certain cities."

* * * * * * *

"(5) We have instituted a rulemaking proceeding which looks toward the setting of a 5-mile limit from the boundary of the city to be served where a television station may place its transmitter, with provision for exception upon a proper showing of public interest."

Because of the costs of travel to Washington, no general meetings of the UHF–ICC were held from the time of the Potter hearings until the spring of 1955. Several meetings of a working group were held in Washington during this period in connection with the developments described above.[3]

General meetings of the committe's membership were held in Washington May 22–25, 1955. Topics on the committee agenda included methods of relieving UHF broadcasters of the heavy financial burden of meeting equipment obligations, deintermixture, reduction of VHF power, antenna height and mileage separations, use of directional antennas, confinement of stations to their own markets, reduction of cable and microwave relay costs, and methods for obtaining network programs for UHF stations.

As a result of the meeting a group was organized for the purpose of conducting negotiations with manufacturers looking toward relief measures for UHF operators in serious financial distress. Additionally it was agreed that the UHF–ICC file a petition with the Commission urging the institution of general allocation rulemaking proceedings, the prompt resolution of pending deintermixture proposals, and the deferment, in the interim, of VHF grants which would aggravate intermixture. On June 21, 1955, a group of members of the UHF–ICC met with the Commission for the purpose of urging early action on the proposals in the UHF–ICC petition. The petition was filed on the same day.

It was specifically requested in this petition that the Commission—

(1) Immediately institute rulemaking proceedings looking toward the amendment of its rules so as to authorize on a case-by-case basis, upon consideration of individual applications therefor, the assignment of VHF stations at reduced mileage separations upon a showing that the public interest will be served thereby. More particularly it is requested that stations be authorized in the VHF portion of the spectrum at reduced separations where it can be established: (*a*) That the utilization of directional antennas or low power in the proposed operation would not result in more interference than would be caused at the heights, powers, and separations presently authorized under the Commission's rules and regulations; or (*b*) that if interference will be caused the need for the proposed service outweighs the needs for the service which will be lost by reason of such interference.

(2) Withhold for at least 90 days the grant of authorizations and modifications of authorizations of television facilities in every case where such authorizations will result in aggravation of intermixture of UHF and VHF stations.

(3) During the 90-day period resolve pending proposals for deintermixture.

During the early summer congressional hearings were held upon a bill recommended by the Commission which would modify the recently enacted protest

[3] The travel and other costs of attendance at these meetings were at all times borne by the individuals themselves and at no time has any participating member requested or received a penny in reimbursement of such costs.

provisions of the Communications Act so that, among other things, the Commission could permit a protested grant of a new service to become operative and effective even though the Commission determined that a hearing on such grant was required. The UHF–ICC appeared by its counsel before both the House and Senate Committees on Interstate and Foreign Commerce and supported those features of the bill which would give the Commission greater discretion in determining whether a hearing should be held on particular protests, but urged the retention of the existing automatic stay provisions of law or a revision which would permit a protested grant to become effective pending a hearing only where the public interest compellingly or imperatively required institution of service. The reasons urged against the Commission-sponsored proposal were that the present mandatory stay requirements of the protest provisions are most essential to protect the rights of UHF operators who are entitled to a hearing upon Commission VHF grants which result in market straddling, further encroachment on UHF service areas, and monopolistic concentration making it even more difficult for UHF stations to compete with VHF stations. It was pointed out that if such a VHF grant protested by a UHF station could be made effective and operative by the Commission during the period that a required hearing was being held, the hearing would be a virtual futility since the UHF station would be suffering the very injury which caused it to protest and there would be little or no reason for the UHF station to proceed with the hearing, at the great expense involved, under such conditions. The bill, with certain revisions, passed the House but failed to pass the Senate before the summer congressional adjournment, although it was reported out favorably by the Senate committee. The bill will undoubtedly pass the Senate and become law very early in 1956 unless strong senatorial opposition, which is presently unlikely, should suddenly develop.

It was during the hearings before the Senate committee on the protest amendment that further cause was provided for optimism among the UHF operators when it became publicly known that the Commission had decided on a policy of making no VHF grants in cases where deintermixture proposals were pending. During the testimony of Chairman McConnaughey, inqury was made as to whether the Commission was making VHF grants where deintermixture proposals were involved. The testimony was as follows:

"Senator POTTER. But are most of these protests on new grants or extension of facilities?

"Commissioner DOERFER. Mostly new grants.

"Mr. McCONNAUGHEY. Not all of them, but most of them.

"Senator PASTORE. How about in the deintermixture; is that still going on?

Commissioner DOERFER. Yes.

"Senator PASTORE. Has any policy been promulgated by the Commission as to whether or not it should continue in the public interest?

"Commissioner DOERFER. We just heard 2 days of oral argument last week.

"Senator PASTORE. Are you granting intermixtures in the meantime?

"Mr. McCONNAUGHEY. Under the sixth report they are; yes, sir.

"Senator PASTORE. Aren't we muddying up this soup a little more?

"Mr. McCONNAUGHEY. We have held up the grants in these cases which have been filed.

"Senator PASTORE. Everybody seems to be of accord here that one of the big problems is intermixture, and yet we go on doing it. At the same time we are investigating it to reach a decision as to whether or not it is good policy to have it.

"Mr. McCONNAUGHEY. We have not gone on. We have held them up. In these cases you are acquainted with we have held them up and not issued any grants at all, pending the outcome of the intermixture question" (hearing before a Subcommittee of the Committee on Interstate and Foreign Commerce, United States Senate, 84th Cong., 1st sess., on S. 1648, pp. 43–44).

Throughout the summer, no action was taken on the pending deintermixture proposals or the June 21 petition of the UHF–ICC. Nor was any other significant action taken by the FCC until July 20, 1955. On that date, by a vote of only three Commissioners,[3] the Commission adopted a report and order amending its rules, as requested about a year before by a VHF station in Buffalo, N. Y., to authorize VHF stations in zone 1 to operate with increased power over that previously permitted. This development was so shocking that a petition was filed in behalf of the UHF–ICC characterizing this action as literally incredible. It was asserted that it was inconceivable, at this crucial period while the Commission had under consideration measures and proposals designed to eliminate

[3] Of the other 4 Commissioners, 1 dissented, 1 refrained from voting, and the remaining 2 were absent.

or minimize intermixture to make it easier for UHF stations to compete with VHF stations, that the Commission could in good conscience take an action which on its face was designed to aggravate intermixture, result in further monopolistic concentration of VHF stations and cause further irreparable injury to the operation of UHF stations. It was urged that rather than increase the power of VHF stations it would seem compelling that the existing superpowers should be reduced.

Because of this and other objections, the Commission later postponed the effectiveness of this rule change four times. Following the action of July 20, 1955, authorizing VHF station power increases in zone 1, no Commission meetings were held from July 27 to August 31 and during this period only routine matters were acted upon. A glimmer of interest in the UHF problem and possible future activity was indicated during the month of September. In nonpublic statements which were nevertheless reported in the trade press, several Commissioners allegedly expressed the need for remedial action. Thus, individual Commissioners were reported to be in favor of less rigid separation standards and the obtaining of more VHF channels from the military. In an internal confidential memorandum which was published in Broadcasting-Telecasting magazine, Commissioner Doerfer, who later opposed deintermixture in an official public opinion, reportedly urged deintermixture of the major markets such as New York City by the assignment of only UHF channels to these communities. The press characterized this position as having been advanced by Commissioner Doerfer with "tongue in cheek."

Funds for a network investigation were appropriated to the Commission by Congress in the budget for the fiscal year 1955–56. This investigation was slow in getting under way. On September 22, 1955, the Commission announced the appointment of a staff director of the investigation and additional staff assignments were made later in the fall. The Commission announced on November 22, 1955, that the network study would concern itself with "* * * the broad question whether the present structure, composition, and operation of radio and television networks and their relationship with their affiliates and other components of the industry tend to foster or impede the maintenance and growth of a nationwide competitive television broadcasting industry." No announcement has been made by the Commission as to the procedure to be followed in the network investigation, namely, whether public hearings are to be held, whether the views of, or information from, individual station operators will be sought, or whether field investigation will be conducted as a means of obtaining pertinent information.

In early October the Commission held meetings to consider the television problem. Shortly thereafter reports were rampant in the trade press and industry circles that the Commission had met in private and secret sessions with some segments of the industry to discuss the UHF problem. It was reported that CBS had privately presented its own allocation plan to the Commission, which would reject all but two deintermixture proposals, and that the Commission had also had closed sessions with NBC and ABC to discuss the same problem. It was further reported that following those meetings, a majority of the Commission had decided to vote against all deintermixture requests.

Alarmed at this development, many UHF operators expressed concern that the rumored action would have devastating results to the entire UHF cause, unless prompt steps were taken. On October 10, 1955, the Chairman of the UHF–ICC sent a telegram to each Commissioner stating in part that:

"In all justice any critical decision which may further aggravate the plight of those who are most vitally concerned ought not be taken without equal opportunity to them to be heard. * * * We believe that the proper manner in which the substantive questions should be considered is by open hearing and argument * * *."

Further, it was requested that the Commission meet with UHF operators to hear their views. That request was granted and on October 13, 1955, 45 UHF permittees and operators who came to Washington from all over the country for the meeting with the Commission met to decide on a course of action in the light of the recent developments. A statement was prepared for presentation to the Commission and on the following day, in meeting with the Commission, the Chairman of the UHF–ICC reiterated "that it would be a serious blow to a nationwide allocation plan and grossly unfair to the UHF operators * * * if without further proceedings, any direct or indirect action is taken which would, in practical effect, make future deintermixture or any effective alternate remedies difficult or impossible." Further, it was stated that "All views on these grave problems should be made by formal, public proceedings in order that other interested parties may fairly address themselves to those recommendations. It is only in this way that problems that are most critical to the survival of many television stations throughout the country can be fairly resolved."

On October 17, 1955, pursuant to the action taken at a general meeting of the membership following the meeting with the Commission, the UHF–ICC filed a further petition with the Commission urging withholding of action on VHF grants pending determination of general rulemaking proceedings having the objective of a nationwide competitive television service. In that petition the UHF–ICC stated that:

"It is clear that the only sound way in which the Commission can properly resolve these questions is to institute broad rulemaking proceedings in the light of the many pending proposals for the solution of the problem, including not only the deintermixture proposals but the other various alternative and complementary proposals. Accordingly, it is requested that the Commission immediately institute such broad rulemaking proceedings setting forth its views and proposals in the light of the foregoing. Pending disposition of those proceedings, it is requested that the Commission take no action by way of granting authorizations and modifications of authorizations where the effect of such action would worsen or aggravate intermixture of UHF and VHF stations, and thereby render moot the many pending petitions for deintermixture."

The optimism among UHF operators engendered by the encouraging public pronouncements of the Commission in the spring and summer of 1955 was completely shattered by the about-face developments of the next few weeks. Initially, no specific actions were formally announced publicly by the FCC, but discouraging reports of unannounced Commission votes and actions appeared in the trade press. Thus, it was reported that on November 2, 1955, the Commission voted on the deintermixture proposals in Commissioner Bartley's absence, and had decided, by a vote of 4 to 2, Commissioners Hyde and Webster dissenting, to deny all deintermixture petitions, but, at the same time, to drop VHF channel 10 into Vail Mills, a locality having a population of approximately 250 persons. However, according to reports, Commissioner Bartley, who, at the time the matter was called up for a vote, was away from Washington, insisted that action be withheld until he could have an opportunity to be present and participate. It was next reported that a special meeting with all Commissioners present was called for Saturday, November 5, but action was deferred until Commissioner Mack (who had not yet been appointed to the Commission at the time oral arguments had been held) could familiarize himself with the record in the deintermixture proceedings.

On November 10 the Commission formally announced a series of actions which blacked out the last vestige of hope for early Commission remedial action assisting the UHF cause. Those actions were as follows:

1. In a 5-to-2 decision, with Commissioners Hyde and Bartley dissenting, the Commission denied the requests for deintermixture in the pending rulemaking proceedings in Peoria, Evansville, Madison, and Hartford, and summarily denied 30 other pending petitions for deintermixture and other relief.
2. In a 4-to-3 vote, with Commissioners Hyde, Bartley, and Webster dissenting, the Commission dropped in channel 10 in Vail Mills, N. Y.
3. By unanimous vote the Commission instituted overall rulemaking proceedings, requesting comments and data to serve as the basis for further rulemaking proceedings.

In addition, during the same week that the foregoing actions were taken, in the words of Television Digest, "another UHF hope, along with deintermixture, was dashed" by the Commission's rejection of the 5-mile rule which it had previously proposed to adopt as one of the measures to assist UHF.

It was made perfectly clear in the decisions released on November 10, 1955, that the purpose of these actions was to unleash actions making grants to VHF applications on which the Commission had previously committed itself to withhold action until the problem of deintermixture had been disposed of on its merits. Accordingly, shortly after November 10, numerous efforts were made by UHF stations to prevent such precipitous Commission action. UHF stations filed petitions with the Commission asking leave to intervene in the VHF contested proceedings, to withhold action on the grant of the applications pending resolution of the rulemaking proceedings, and to consolidate the rulemaking and application proceedings. At the court level, two UHF stations petitioned for review of the channel 10 drop-in in Vail Mills and asked the court to stay the effectiveness of that order. On December 9 the United States Court of Appeals for the District of Columbia granted that request and stayed the effectiveness of the drop-in of channel 10 to Vail Mills.

The Commission, nevertheless, soon proceeded to make final VHF grants in Corpus Christi, Madison, and Evansville. UHF stations in those cities promptly appealed those actions and requested the court to stay those grants. Decisions by the court on the requests for stays will very likely be made during the week of January 9, 1956. These decisions will have a profound effect upon the entire UHF problem. Depending upon which way these decisions go, many UHF stations still in operation may survive until the Commission's general rulemaking proceedings are concluded, or may succumb under the competition of the additional VHF operations which will commence throughout the country.

On November 18, 1955, the UHF-ICC filed a petition to set aside the Commission's report authorizing higher power for VHF stations in zone 1, pointing out that in view of its action instituting rulemaking proceedings it would now be most arbitrary to permit that proposal to become effective. The Commission on November 30, 1955, vacated that report, but in doing so appended an exception the effect of which would permit a single station in the entire country, namely, the VHF station in Buffalo, N. Y., which originally urged the power increase, to increase power above the maximum. The UHF-ICC thereupon filed a petition with the Commission, which is still pending, in which it attacked that exception as arbitrary and discriminatory.

On December 14, 1955, the Commission consolidated in the pending general rulemaking proceedings the UHF-ICC's petitions of June 21, 1955, and October 17, 1955, except for those portions of such petitions which requested withholding of action on VHF grants which would aggravate intermixture.

The UHF-ICC filed its comments in reply to the Commission's notice of proposed rulemaking. The UHF-ICC reiterated the views previously expressed and urged upon the Commission, stating that events since the Potter committee hearings have vindicated its judgment. Since the Commission has, however, steadfastly refused to entertain proposals for the assignment of all television stations to the UHF portion of the spectrum only, the UHF-ICC advanced other and alternative proposals in the hope that the Commission might take some action to correct and alleviate existing conditions in the broadcast television service. Three specific actions were recommended:

(1) Forthwith resolve pending proposals looking toward the elimination of intermixture of UHF and VHF television assignments by severing the question of selective deintermixture from the overall proceedings. Immediately grant the requests for deintermixture which have been the subject of rulemaking proceedings and immediately institute separate proceedings on the remaining deintermixture requests.

(2) The assignment of television stations at lower separations than those presently provided by the Commission's rules in order to provide additonal facilities for the establishment of mutiple local outlets and services. One factor which is absolutely critical to the implementation of the foregoing proposal in the public interest is the assignment of such additional stations in the VHF spectrum only where such additional assignments would not adversely affect the operation of any UHF station.

(3) The adoption of the single-market concept and the confinement of stations to their own community by the revision of the existing rules so as to permit the utilization of maximum power only on a special affirmative showing that the public interest will be served thereby: It was recommended that the Commission revise its rules to limit the permissive range of maximum power to 50 kilowatts for channels 2 to 6, and 100 kilowatts for channels 7 to 13, and that authorizations for operation with power in excess of the foregoing but not more than 100 kilowatts for channels 2 to 6 and 316 kilowatts for channels 7 to 13 not be granted unless it can be shown that television service to specific areas would not otherwise be available from any station operating with the maximum power.

Approximately 200 comments were filed. The most significant fact to emerge from the filings is the virtually complete unanimity of opinion shown in support of sweeping revisions of the allocations rules and standards. In addition, powerful support was won for some of the basic principles for which the UHF-ICC has been contending since its inception. Thus, for example, General Electric urged the consideration of an all-UHF system: RCA and NBC gave support to deintermixture. It urged that careful consideration be given to reduced separations by use of directional antennas, low power, et cetera. The only major broadcast interest which refused to lend any significant support to deintermixture was CBS which ironically, not only conceived the term "deintermixture," but warmly embraced it as a solution during the Potter hearings.

Reply comments are due to be filed on January 20, 1956. The nature of the reply comments which will be filed by the UHF–ICC will be determined upon completion of the study of the multitude of initial comments which have already been filed.

The most recent action of the UHF–ICC related to the matter of extension of outstanding UHF permits. During the year 1955, the Commission made it known that its existing liberal policy of extending UHF permits would be reconsidered in early January of 1956. On December 23, 1955, in an effort to assist UHF permittees who, although not in operation, desired to continue to retain their permits, the UHF–ICC filed a petition with the Commission urging the Commission to continue the previous liberal policy until the determination of the pending allocation rulemaking proceedings. At this writing, no action had been taken by the Commission upon this petition.

No congressional hearings have been held with respect to the critical UHF problem since the spring of 1954 when the Potter hearings were held. Subsequent to the issuance of the reports of the majority and minority counsel of the Senate Interstate and Foreign Commerce Committee in the early part of 1955 a number of public statements emanated from that committee indicating that the UHF problem would be further investigated by the committee. Because of the resignation of counsel, new counsel was appointed in the early spring, who remained for a few months only. After this post had been vacant several months, it was recently filled by a new appointment. Throughout the year, it was made known that certain investigations were being made by the committee staff and that hearings would be held. However no bearings were held and no further tangible recommendations or actions were forthcoming from the committee throughout the balance of the year 1955 except that during the summer the Senate committee organized an ad hoc engineering committee to study possible technical solutions to the existing serious televison allocation situation. No recommendations or actions have been forthcoming from this ad hoc committee and there have been no reports as to its activities.

Upon the return of Congress in the early part of 1956, it was indicated that hearings would definitely be begun by the Senate Committee on Interstate and Foreign Commerce on January 17, 1956, at which the FCC Commissioners would be called and questioned concerning the entire television allocation situation with particular referrence to the seriousness of the UHF problem and the failure of the Commission to take any remedial action.[4] It is understood that individual UHF operators will be afforded the opportunity to appear before the committee at a later time. It is, of course, the intention of the UHF Industry Coordinating Committee to appear in these hearings through its officers or counsel, as well as such UHF broadcasters who are interested in testifying, to make as vigorous a presentation as is possible in behalf of UHF operators throughout the country, and to urge prompt action revising the present television allocation plan so that nationwide competitive television service by means of equal competitive facilities for televison broadcasters wll be made possible.

Mr. Thoms. A careful effort was made to make this report purely factual. I am sure you will find that the mere recitation of the factual history of the UHF problem attests more eloquently than any commentary or argument the disappointing record of past governmental inaction, and the great necessity for prompt and effective relief.

I will not now take your time by reading that history, although I strongly urge the members of this committee to do so. I think it will be very helpful, however, to point out some of the salient matters in that history. One of the salient features of this past history is the deintermixture story. It is to this committee's credit that the desirability of considering selective deintermixture was urged upon the Commission in the report of its former majority counsel. Deintermixture had received considerable attention during the course of the past hearings. Deintermixture makes obvious good sense and clearly serves the public interest.

---

[4] Because of the sudden death, on January 14, 1956, of the chief counsel to the Senate Committee, the hearings have been postponed to January 26, 1956.

Shortly after the conclusion of the subcommittee hearings a stream of petitions were filed by individual operators in particular markets, seeking relief by deintermixture. Actually such petitions were encouraged because of assertions made by the Commission Chairman to this committee, and other public statements, as well as assertions by the Commission itself.

Today, a score of months later—after initial denials by the Commission—reconsideration—further rulemaking—the Commission has denied all deintermixture proposals. The Commission stated that the reason for the denials is that it is considering the problem as a part of the overall UHF problem, and that deintermixture is part of the nationwide problem. But no explanation has been given to this committee why it suddenly became a nationwide problem a couple of months ago. Indeed, the only reason for the Commission's consideration of deintermixture "on a selective basis" was that nationwide reallocation was considered undesirable.

It is hard to believe that there was any other reason for the Commission's action than the desire to make VHF grants in areas affected by the pending deintermixture petitions, and to get around the commitment to this committee that until the deintermixture petitions were disposed of, such grants would be held up.

In any event, the Commission's position simply makes no sense. Deintermixture—by definition—is the assignment of VHF or UHF channels in selected areas. To assert that deintermixture in selected areas can only be considered on a nationwide basis is not merely unconvincing—it is silly. In the recent testimony before this committee by the Commissioners, you have been given a number of additional reasons why the majority felt it to be undesirable to grant the deintermixture petitions. One reason is the danger that rural areas will remain unserved if a VHF station is not authorized.

I am informed that in at least two of the deintermixture situations turned down by the Commission—Evansville and Hartford—it was undisputed that no area would be denied or lose service if the communities involved were made all UHF. Also, in the other situations turned down, all of the UHF operators involved were willing to commit themselves to increase their coverage by increasing power so as to remove any doubt that certain rural areas which would receive a first service from the VHF station in question would be assured of such service from the existing UFH stations. Moreover, as I will point out below, the claim of the need for superpower, supercoverage VHF stations in order to assure service to rural viewers is the age-old argument always used by the clear-channel lobby and is one which has never been convincing to this committee.

In a second significant, through somewhat less important, area, we have witnessed the same spectacle of the Commission marching up the hill and then right back again. In March of 1955 the Commission instituted rulemaking proceedings looking toward the amendment of its rules to limit the location of station antennas to within 5 miles of the principal city to be served, unless strong public interest reasons to the contrary were shown by the applicant.

In its report to this committee, later in the month of March, the Commission pointed with pride to this proposal as a measure which would benefit UHF stations. In its notice, the Commission recognized that the mandate of the Communications Act for a fair, efficient, and equitable allocation plan required that such limitation be observed unless such reasons were clearly shown. The proposal did not purport to make the 5-mile limit a hard and fast rule, but only used a mileage limitation as a convenient yardstick. The rule, if adopted, would still have required a case-by-case consideration. It would have also required that the applicant make an affirmative showing of facts or reasons why the public interest would be served by such a distant location. This is something which the Commission does not today require an applicant to show. That rule would have prevented applicants from moving their transmitters tremendous distances away from the home community, without showing anything more than the technical engineering fact that from such distance the home community would receive a bare minimum required signal.

Almost simultaneously with its rejection of deintermixture, the Commission threw out the proposed 5-mile rule, stating it would consider distant locations of transmitters on a case-to-case basis. The Commission's case-by-case consideration of applications involving distant VHF transmitter moves have played a substantial part in the worsening of the UHF problem. Such moves are commonly referred to as "market-hopping" or "market straddling."

The Chairman of the Commission testified here the other day that it was "a correct statement" that the Commission has a policy of favoring the location of transmitter sites within some reasonable distance of the community to which it is allocated. He also said that it "sometimes is true" that "the establishment of transmitter sites to remote locations results in describing the market so that the station which was allocated to city A ends in duplicating in part a station or channel allocated to city B."

But the fact is that, despite the apparent recognition of the desirability of limiting stations to a reasonable distance from their own "home" communities, the Commission has nevertheless merely given lip-service to this proposition. For in its day-to-day actions it has regularly permitted the location of station antennas at far distant points from these communities, without concern for the fact that such moves aggravate intermixture and further jeopardize the existence of UHF stations.

Senator PASTORE. Would you explain that by giving an example?

Mr. THOMS. I have an example following.

Senator PASTORE. All right.

Mr. THOMS. The fact is, as proven by actual results, that such moves have driven UHF stations out of existence. Let me mention two known instances to date. UHF television station KCEB in Tulsa, Okla., was forced off the air and another permittee never constructed as a result of the location of VHF station KTVX 23 miles from Muskogee, the community to which the channel was assigned, to a point closer to Tulsa than to Muskogee.

UHF station KNUZ-TV, Houston, Tex., was forced off the air chiefly because KGUL-TV, a station assigned to Galveston, was permitted to locate its transmitter close enough to Houston to make it a Houston station for all practical purposes. Recently, with two Commissioners dissenting—Chairman McConnaughey and Commissioner Lee—the Commission authorized a further transmitter move by this same Galveston station to a location even closer to Houston.

Senator POTTER. Isn't it true by doing that the UHF station that has a network affiliation normally loses its network affiliation?

Mr. THOMS. That is right.

Senator POTTER. If you have a UHF station in a market maybe with one V, and they have a network affiliation, and you move in another VHF station that covers that market, the UHF will lose its network affiliation to the VHF. Isn't that true?

Mr. THOMS. To the encroaching station.

There are now pending before the Commission other proceedings, on protest or objections from UHF stations, involving VHF transmitter moves. One case involves a pending move of a VHF station in Charleston, W. Va., to a point closer to UHF station WTAP in Parkersburg, W. Va. Another pending case involves a proposed move of an Enid, Okla., station to a point closer to Oklahoma City than to Enid. In another case, an examiner has issued an initial decision in which he actually found that a proposed move of a station assigned to Flint, Mich., to a point which would be closer to Saginaw than to Flint would not only put UHF station WKNX in Saginaw out of business, but would also destroy a small market VHF station located in Cadillac, Mich.

Still another case is the celebrated Spartanburg case with which this committee is familiar. It is, of course, not known whether in any or all of these pending cases the Commission will see fit to authorize the proposed transmitter moves involved, but it is to be hoped that the Commission agrees with its Chairman that the Commission's policy favors the location of transmitters within some reasonable distance from the "home" community.

In still another area, the Commission's efforts in the direction of remedial measures which would benefit small market stations, whether they be UHF or VHF, appear to have stalled. On September 15, 1954, 2 months after the hearings before your subcommittee, the Commission issued a notice of proposed rule-making, looking toward the authorization of private microwave intercity relay stations. That relief was urgently required, in view of the crushing burden of exorbitant cable cost required to be paid to the telephone company.

It was apparent that such a rule change was necessary so that stations, and particularly stations in small markets, would be able to continue to exist. Seventeen months have elapsed, however, and that proposal still remains unacted upon by the Commission. The Commission has advised this committee, however, that it expects to have some action on this in the near future. To the credit of the Commission, it is true that the Commission has in recent months been liberal in authorizing television broadcasters to have been their own private microwave relays, despite the strict requirements of its present rules. But such a liberal policy is not an adequate substitute for a rule, upon which broadcasters can rely, which will better guarantee them the right to obtain and continue to hold authorizations to operate their own facilities.

So far I have been discussing the Commission's failure to adopt amendments of its rules which might affirmatively benefit UHF stations. Let us look at the other side of the coin and examine measures which the Commission has been willing to adopt but which would aggravate the serious plight of UHF stations and further entrench large market VHF stations in a more favorable competitive position.

From June 1954 to July 1955, no action of any importance was taken by the Commission with respect to pending measures which would alleviate the UHF problems. By July 20, 1955, the five pilot deintermixture cases had been concluded, argument having been held on June 27 and 28. Those cases as well as some 25 other petitions for deintermixture were pending decision on July 20, 1955, when the Commission, by the bare vote of only 3 to 1, adopted a report and order amending its rules to authorize VHF stations in zone I to operate with greater power than was previously permitted under its rules.

As the UHF Industry Coordinating Committee stated in a formal petition, this was a shocking and incredible action. The Commission later suspended the effectiveness of its rule, but it nevertheless wrote an exception into its existing rule which would permit only a single station in the entire country, station WBEN, Buffalo, owned by the Buffalo Evening News, to increase its power even beyond the existing superpower limits to which other stations were subject. The further significance of this action is that station WBEN pleaded for this exception upon the ground that it had voluntarily located its transmitter about 25 miles away from the city of Buffalo before the freeze with the hope that the Commission would later adopt rules permitting greater power and antenna heights than it did.

As a result of having placed its transmitter so far away from Buffalo, it found that when a new VHF station was granted for Buffalo which located its transmitter within the city of Buffalo, the quality of its own signal in Buffalo suffered by comparison. Therefore, it pleaded hardship on the ground that it had been disappointed in its hopes. The Commission bought this plea, and created for the benefit of WBEN-TV the sole exception in the entire Northeast section of the country to the existing power and antenna height limits.

Senator Pastore. How did that affect the UHF station?

Mr. Thoms. I frankly am not familiar enough with the situation up there to answer that question. Maybe Mr. Cottone can.

Mr. Cottone. Senator Pastore, the authorization for the increased power meant the VHF stations could further enlarge their markets; and in a situation where a VHF station was to be able to increase its coverage with respect to a UHF station that might be in that same community, the competitive disparity was therefore increased. In addition, where a UHF station might be in an adjoining community, it would result in further overlap of the signal of the UHF station, a further encroachment on the market of the UHF station, putting it in an even more disadvantageous competitive position.

Senator Pastore. Is that a theory or is that a fact?

Mr. Cottone. I think it is an actual fact. We have heard here that one of the serious problems that UHF stations have to contend with is the fact that VHF stations have such tremendously greater coverage and therefore become more desirable——

Senator Pastore. I realize that, of course. When you increase the power, you disturb someone else, of necessity. But the argument was made that first they initiated this rule in zone I about increasing power. I think the Chairman of the Commission said it was revoked. I think the argument that is being made here is that it was revoked only after Buffalo had been granted more power.

Mr. Cottone. That is right.

Senator PASTORE. I would like to know what effect did this grant have in the Buffalo instance that lends credence to the weight of his case. That is the point I make. If you can be specific in that, I would appreciate it.

Mr. COTTONE. It does it in this way. The basis for the exception is one that cannot hold up as against similar claims that might be made by every other single VHF station in zone I. Already the Commission has been confronted with requests by other stations in zone I to make a similar exception or to expand the rule, to enlarge the rule, so that they are not put in a more discriminatory position, so that they are not discriminated against by having the rule apply only to this single situation.

Senator PASTORE. Therefore the argument that you are making here is that the instance of Buffalo should not be taken as a precedent.

Mr. COTTONE. But it can very well be used as a precedent. By virtue of the fact that they have permitted it one case, in effect the Commission is virtually forced on any long-range consideration of this question to do likewise for every other single VHF station in zone I.

Senator POTTER. Is there a UHF station in that market?

Mr. COTTONE. There was a UHF station. There still is. It was purchased by NBC.

Senator POTTER. Do they have a network?

Mr. COTTONE. By that time, the UHF station had, I believe, lost its network; but it may have had an ABC affiliation. The UHF station was WBUF-TV in Buffalo.

Senator POTTER. That is an NBC station?

Mr. COTTONE. It is now an NBC station.

Senator POTTER. So they do not have to worry about losing the network.

Mr. COTTONE. They do not have to worry about losing the network.

Senator POTTER. If they were a privately owned station, however, with this new station coming in—and two VHF's covering the Buffalo market—they might have a difficult time holding the network.

Mr. COTTONE. Yes. I do not know in this particular instance that it was critical to any particular UHF station, but it was the chain reaction effect that an authorization of this type was likely to have. It could spread all over the country and affect UHF stations that were already in serious condition as a result of being in the shadow of large VHF stations from other markets.

Senator PASTORE. I am not finding fault with the argument that is being made by the witness. I merely want to know what the point is. The point of the argument is what I was trying to get at, whether or not you, representing the UHF operators, are taking the position that this one exception has done some injury to some existing UHF facility in that region—merely to specify it on the record. Your answer is you do not know of any offhand?

Mr. COTTONE. I do not think it can fairly be stated that in that particular instance there was any injury. But the point of this recital, however, also is the fact that the Commission during this period, when it was presumably considering the feasibility of deintermixture, when deintermixture petitions were pending, the Commission's disposition was one to put out a proposal of this sort which was of course later suspended. And right in the very middle of this consideration, this deliberation on deintermixture, the kind of a proposal could have no other effect but to aggravate—that kind of a change in the rule could have no other effect but to aggravate—intermixture even more.

Mr. THOMS. I have attempted to cover only some of the salient facts and events which stand out in the history that has brought UHF to its present state. This record of inaction and adverse action was maintained and taken by the Commission in the face of repeated and insistent pleas for immediate effective action. Petition after petition was filed by individual UHF stations and by the UHF Industry Coordinating Committee asking that such action be taken. But these requests were either rebuffed or ignored. Included among these requests was the petition of the UHF Industry Coordinating Committee filed on June 21, 1955, which requested the immediate institution of proceedings looking toward the amendment of the Commission's rules to authorize the assignment of VHF stations at reduce mileage separations upon a showing that the public interest would be served thereby.

It was also requested that the Commission in the following 90-day period resolve pending proposals looking toward the elimination of intermixture of television assignments, and that the Commission withhold for at least 90 days the grants of authorizations and modifications in every case where such authorizations would result in the aggravation of intermixture of UHF and VHF stations. As has been pointed out above, the Commission ignored such requests but was quite ready, 1 month later, to take the action which I have described increasing VHF station coverage in zone I, with only four Commissioners voting, and thereby actually creating a condition which could only further aggravate intermixture and make the plight of UHF stations even worse.

Although no action was taken on the petitions of the UHF Industry Coordinating Committee and others, it nevertheless appeared on the basis of the testimony by Chairman McConnaughey before your committee in connection with the revision of section 309 (c) that the Commission would withhold grants of VHF stations in areas where there were pending proposals for deintermixture. But the fact is that, although the Commission now says that such proposals have not been denied by the Commission on the merits, the Commission has proceeded to make VHF grants in such areas.

I have the greatest difficulty in following the Commission's explanations on this point. I would assume that if it was necessary and proper for the Commission to hold up those VHF grants because of the pendency of the deintermixture petitions at the time the Commission was urging enactment of section 309 (c), it was equally necessary and proper to do so when it decided in November to deny thte deintermixture petitions without prejudice. Nor can I understand how the Commission, when it was urging enactment of the amendment of section 309 (c), could urge the sufferings of the public if a station were to be permitted to go on the air and then taken off, and not be equally concerned when it made the VHF grants in the face of its own recognition of the fact that later, if deintermixture were adopted, the public would have that service taken away.

The Commission has said, however, that in such a case the public would not lose because the VHF grantee would then get a UHF channel. But the Commission conveniently ignores its own argument that one reason for making the VHF grant was to reach areas which the

UHF stations would not reach. If that is true, then how can the Commission say that if deintermixture is later ordered, that part of the public will not suffer, just as in its section 309 (c) argument?

Senator PASTORE. Referring to the argument you have made previously, why couldn't the Commission give the UHF station, in that instance, more power and cover those members of the public involved in this argument you have just made?

Mr. THOMS. It could.

Senator PASTORE. Would not that be the answer to it if, later on, let's assume, they change the VHF station to a UHF station and the question arises as to whether or not such a station would reach the distance? They could increase the power, could they not?

So the record will be clear, counsel says that that is up to the station and not up to the Federal Communications Commission. Why couldn't the Commission make it a condition in changing to VHF—or UHF in that particular instance—by making it a condition upon the increase of power?

I don't see any objection on the part of the station in that event. Do you get the point I make, Mr. Thoms? The argument that you are making now is this: One of the arguments why the VHF should be granted by the Commission is that the Commission takes the position that the VHF will reach these distances ordinarily not being covered by the present UHF stations in that community.

Mr. THOMS. Right.

Senator PASTORE. And that later on, when the UHF is substituted for the VHF on this deintermixture proposition, then they would have a hiatus in this distance that was covered by the VHF grant.

The argument that I make is that when they did change it from VHF to UHF, they could increase the power of the UHF station; thereby you wouldn't have that difficulty at all.

Mr. THOMS. Right.

Mr. COX. Is it your opinion, Mr. Thoms, that in every case the U can, by increasing its power, provide equal coverage to that which may have been afforded by the V?

Mr. THOMS. I would not say in every case. I think it depends a lot upon terrain. In mountainous country, you simply cannot overcome completely the handicap of UHF with additional power.

Mr. COX. In those areas, then, would you get this problem of previous service which had been afforded under Commission authorization?

Mr. THOMS. That is right.

Senator POTTER. I believe we have had testimony that the antenna height is more important than the power.

Mr. THOMS. That is right.

Mr. COTTONE. Senator Pastore, may I address myself to the question of the authority of the Commission with respect to conditions. I believe it was asserted here that there is doubt as to the authority of the Commission to condition a grant so that the grantee may be required to serve greater areas than he is proposing.

I personally do not believe that there is any question as to the Commission's authority to do that, and I think we have had many instances in the past—in connection particularly with channels that have been assigned to the United States under treaties where they are permitted to be used to a certain maximum power—where the licensee has not utilized that channel to the fullest extent of the power permitted under the treaty, and the Commission has taken the position that the licensee must make a more efficient use of the channel that was contemplated—in other words, in effect requiring the licensee to increase its power. That is not, as I see it, a common-carrier concept.

Senator PASTORE. I realize that. But I have something else in mind. When the applicant for a VHF station files his application, which will result in intermixture in a locality that is already being serviced by UHF, he predicates that petition upon the ground that the VHF will serve a wider area.

Why can't the Commission at that point say: "In the consideration of this, and because we are getting into a nationwide rulemaking as to deintermixture, we will grant you this VHF station to allow you to service this wider area—provided, however, that should we later deintermix and compel you to take a UHF channel, you will apply for a UHF station that will give the same coverage"?

Mr. COTTONE. Yes, I agree with that. The point made here, however, Senator, is the consistency of the argument that you should not permit intermixture because there is a danger that rural areas would not be served. If the VHF might later go off the air, by that very same argument the part of the public in the rural areas who have not converted will lose that service. So the argument cuts against the reason given for denial of deintermixture. That was the only point that was made here—that there will be a later loss of service to the public if the Commission's argument is a sound one.

Senator PASTORE. How do you answer the argument that, under the Sixth Report, it was the policy of the Commission to grant these allocations that were already made, and that have not yet been changed, even in spite of the fact that we did have other reports?

What answer do you make to the argument that here is the public that wants this service, and wants this third station to come in, without regard to whether it is UHF or VHF, because in many instances where you already have an UHF area they can tune in VHF as well as UHF?

What argument do you make to the Commission that, after all, in the public interest this is being asked for, and they have no alternative but to grant it in the public interest?

Mr. COTTONE. The answer is that that is a short-range view of the public interest, if it is true that to permit that situation to develop is going to result in driving out existing UHF stations, and the contraction of the number of outlets that there are in the country for rendering service to the public.

If that be true, then the long-range public interest requires that the Commission reconsider the determination that it once made upon what it believed to be a different set of facts. That is the argument. It is the question of the long-range public interest. It may be true that there may be immediate, but possibly fleeting, benefits to the public; but if it is true that the long-range public interest requires a nationwide competitive service, and an individual action results in throwing impediments in the way of that goal, then the long-range public interest does require that the Commission should take a look at the situation and see if it should not try to avoid that result.

Senator PASTORE. In other words, what you are saying, Mr. Cottone, is this. Where you already have two UHF stations, by allowing a VHF station to come in, you want to give the people three chances. But unless those original 2 can live with the 1 V, you might ultimately have only 1 station because the 2 U's just may go out of business.

Mr. COTTONE. That is precisely the argument that was made in the intermixture petitions, sir.

Mr. COX. And the third station that was sought can be provided by substituting the U for an allocated V channel; is that correct?

Mr. COTTONE. Yes, I believe that is correct.

Senator PASTORE. In the instance we have been talking about, could the Federal Communications Commission have allowed a third UHF station right there and then?

Mr. COTTONE. Oh, yes. I believe there were channels that could readily have been assigned to those communities. I cannot answer the question as to whether there were allocated UHF channels that had not been applied for. There may very well have been in these cases. I am not sure whether in the Evansville case it would have been necessary to find a UHF channel to put in in place of the VHF channel. But concededly there was no particular problem on that score.

Mr. COX. That is, the UHF channels are plentiful now?

Mr. COTTONE. Yes, the UHF channels are relatively abundant.

Senator POTTER. There is no problem, then, in reality, in reallocating a UHF channel for a specific community.

Mr. COTTONE. That's right.

Senator PASTORE. Let us take the Hartford case, for instance. Would there have been any difficulty at all in the Commission giving the people of Hartford a third channel there and then, even if it had to be UHF?

Mr. COTTONE. The proposals that were made in that very proceeding, Senator Pastore, did provde, by several different alternative plans, for the substitution of UHF channels that would be available. There was no question drawn, as I understand it, as to the availability of UHF channels.

I must say that in the New England area, it is a little bit more difficult. But it is not impossible. The channels are available and the engineering that was done there did indicate that UHF channels could be allocated.

Senator PASTORE. The reason why I am bringing this up is—I regret I was in transit this morning—I understand a witness appeared here this morning, a Mr. Storer, who suggested that we have a third VHF station in Providence. I called that to the attention of Mr. Doerfer. That is very refershing news to me.

Mr. COTTONE. I might point out the UHF Industry Coordinating Committee had nothing whatsoever to do with Mr. Storer's statements.

Senator PASTORE. It is good news to me.

Mr. COX. I would like some clarification on your basic argument. Is it your position that it is fallacious to claim that granting the first V in Madison or Peoria is going to provide a first service for some people who are not now served either from U stations in those areas or from V's in other communities? Or is it your argument that it is unfair to give them this service if the Commission is thinking of later taking it away?

Mr. COTTONE. I think the argument comprises both. Part of the argument that Mr. Thoms has just read merely is in effect a pointing out of the inconsistency of the Commission's position.

Mr. COX. I appreciate that.

Mr. COTTONE. I do not believe it has necessarily been established, as a matter of fact, in this very proceeding—which is the only one upon which a record was made, with the five pilot deintermixture cases. But in those cases there was possibly a basis for a finding by the Commission that if there was a possibility of the UHF station not being able to reach areas that the VHF stations could reach, that could readily be taken care of. These were facts on the record. Commissioner Doerfer, I believe, stated the other day that he questioned those things, those facts. But they were facts of record.

In the situations where there was a doubt as to whether the UHF stations presently reached those areas—and I do not know that there was any more than one case where that question did arise, as to whether the white area would be greater, so to speak—there were commitments that were made on the record by the existing UHF stations that, if the cloud and uncertainty as to the possible advent of the VHF station into this community were removed, these people would be perfectly willing to invest more money and expend funds in enlarging their facility to reach the areas where conceivably service might not otherwise be provided. There were such commitments on the record of these proceedings.

Senator PASTORE. Mr. Thoms, you may proceed.

Mr. THOMS. There is a bitter irony in the situation in which we find ourselves today in the television field. We have had experience in the AM and FM field which should have steered television away from the same pitfalls. Unfortunately, the lesson taught by history has not been learned.

The members of this important Senate committee have traditionally been cognizant of the dangers of superpower, supermarket stations in the field of radio, and have frequently openly expressed their abhorrence of a radio broadcast system based on such a monopolistic concept.

On June 13, 1938——

Senator PASTORE. May I interrupt you just for a moment, Mr. Thoms. Do you desire—because if you so desire I think your desire should be paramount—to read the rest of this statement? It is now almost 20 minutes to 1 o'clock. You cannot possibly finish another 4 or 5 pages much before 20 minutes or so.

Mr. THOMS. I will be glad to come back.

Senator POTTER. I think we might just as well leave now and come back at 2.

Senator PASTORE. Why don't you finish the paragraph and then we will stop there.

Mr. THOMS. On June 13, 1938, when determined efforts were being made by clear-channel stations to obtain greater power and coverage, the Senate passed a resolution opposing the operation of AM stations with power in excess of 50 kilowatts (S. Res. 294, 75th Cong., 3d sess., vol. 83, Congressional Record, pt. 8, p. 8943).

Ten years later, when the danger of increased power for clear-channel stations again became acute in connection with the Commission's pending rulemaking proceedings, a bill was introduced by

Senator Ed Johnson in the 80th Congress to limit the power of AM stations to 50 kilowatts and to open the way to duplication of clear channels (S. 2231, 80th Cong., 2d sess.).

Extensive hearings were held by this committee on that bill. Prior to the commencement of those hearings, as Senator Magnuson will recall, this committee, which was then under the chairmanship of Senator Wallace White and the acting chairmanships of Senator Charles W. Tobey, by unanimous action requested the Commission to withhold action in its clear-channel proceedings until the completion of the congressional hearings (hearings before the Committee on Interstate and Foreign Commerce, U. S. Senate, 80th Cong., 2d sess., on S. 2237, pp. 2–4).

Senator PASTORE. We will pause at this point and we will resume again at 2 o'clock this afternoon.

(Thereupon, at 12:40, the committee recessed, to reconvene at 2 p. m., of the same day.)

AFTERNOON SESSION

Senator PASTORE. All right, Mr. Thoms.

Mr. THOMS. I would like to go back for just 1 minute to the question that came up this morning about the increase in power, and so forth, and what it does to existing UHF stations.

Senator PASTORE. You mean you are talking now about the Buffalo incident?

Mr. THOMS. For one, and Atlantic City, I guess, is the outstanding example of where—when power increases went into effect in Philadelphia—it put the UHF station in Atlantic City out of business.

In Buffalo we were not sure about that this morning. There was another U that went out of business in Buffalo besides the UHF that was bought by NBC.

Mr. COX. That was before the increase in power, I take it?

Mr. THOMS. That was before the increase in power.

Mr. COX. Do you want to go ahead with your statement?

Mr. THOMS. One year later, Senator Ed Johnson made a speech on the floor of the Senate designed to defeat the further efforts of the clear-channel lobby to perpetuate and increase the monopolistic grip on the broadcast industry threatened by superpower clear-channel stations. The dangers to a nationwide competitive broadcasting system were vividly and eloquently described by Senator Johnson. The principal argument of the clear-channel lobby was that superpower was needed to serve the farmers. Senator Johnson demolished that argument with devastating logic, and he was supported by the present chairman of this committee, Senator Magnuson. The ironic thing is that today we find the Commission leaning on that same age-old argument of the clear-channel lobby, as the reason for its hesitation to provide a greater number of smaller and equal television facilities.

I would like at this point to refer you to a portion of a very pertinent colloquy between Senator Johnson and Senator Magnuson which occurred during the speech of Senator Johnson to which I have referred. It is attached to my statement as an appendix.

(The document referred to is as follows:)

SELECTIONS FROM A REPORT ON COMMUNICATIONS—SPEECH OF HON. EDWIN C. JOHNSON OF COLORADO IN THE SENATE OF THE UNITED STATES APRIL 20, 1949

Mr. JOHNSON of Colorado * * *

Originally this country had 46 clear channels. But as the need grew for additional local and regional stations, the Commission began to duplicate clear-channel frequencies, placing additional stations on the same channel but sufficiently distant apart so there would be no interference.

CLEAR-CHANNEL LOBBY FORMED

Several years ago 16 clear-channel stations realizing that this sensible and necessary trend would eventually catch up with them banded together into a lobbying organization. This lobby filed a petition with the Commission demanding that the remaining clear-channel stations be granted 750,000 watts of power, contending the objective to be to give better service to 23 million rural listeners. They made this ridiculous argument with a poker face. That the 23 million farm people could be better served by local stations, the result of a wise use of duplication, is glossed over by the clear channels and the obedient Commission.

Mr. MAGNUSON. Mr. President will the Senator yield?

Mr. JOHNSON of Colorado. I yield.

Mr. MAGNUSON. I might illustrate what the Senator has just said by citing an example. I know the Senator could cite many other examples. For instance, in my home State, in the city of Spokane, Wash., a request has been made to the Commission informally—it was not a formal application—that a certain frequency be given to a station there so that the station might serve a radius of, say, another 25 or 30 miles, and include about 60,000 farmers who are not now served from the Spokane area by this particular station, which is a network station. The frequency available for the area, however, happens to be one of the clear channels that some station back on the east coast has. The Commission has consistently refused to act on this type of application. But here are these rural areas denied the right of local radio service, and the people are obliged to listen, whether they like it or not, to programs which come on a clear channel, which may originate in San Francisco or some other place.

Mr. President, I wish to ask the Senator from Colorado if he does not know that that situation is duplicated in many, many cases?

Mr. JOHNSON of Colorado. Yes; there are literally hundreds of such cases throughout the country. In my opinion there is absolutely no excuse for them.

Mr. MAGNUSON. The listener wants to listen to programs coming from his local station, just as we like to read our local newspapers, although we may read some out-of-town newspapers.

In Senator Johnson's speech he also warned, even as early as April of 1949, against the danger that television broadcasting was headed toward monopolistic control because of scarcity created by allocation policies. He expressly pointed to the serious inadequacy of the 12 VHF channels then assigned to television. He pleaded for the imperative need for the effective utilization of the UHF band as the only hope for averting a tight and dangerous monoply in television. In view of all the facts which we now know, Senator Johnson was indeed prophetic.

About everything that can be said for or against a two-spectrum system has already been said, and little more can come from further talk. The time is long past due for the Federal Communications Commission and Congress to stop talking and promising, and to come forth with a sharp knife to cut up the spectrum pie.

When a TV station picture goes beyond the normal trading area of its community it is merely denying possible service to other deserving cities from their own local stations. Certainly the fantastic overall TV revenues produced in 1955 have proved the ability of our economy to accommodate additional equal facilities to more communities, for greater service to the public.

Despite the propaganda (generated by those who wish to retain a favored economic position) to the effect that our economy will not accommodate more television stations than we now have, there are many veteran broadcasters who believe that the pie is large enough for many slices, if the slices were smaller, and who would therefore be willing to risk their capital in television if there were just a 50–50 chance for success—a chance which can be provided only by the availability of equal competitive facilities. This philosophy has been consistently expressed from the very beginning by the UHF–ICC, which has urged that what is required is a reallocation premised on the basic concept that television stations should be assigned to provide service to a single homogeneous market, with the principal and primary purpose of serving the local needs of specified communities. By definition, wide area stations cannot serve such a purpose.

We have also been of the view that while it would be desirable to explore the possibility of tighter regulation of networks in order to eliminate restrictive practices which deprive broadcasters of a fair opportunity to compete for network programs, such regulatory measures would merely attack the basic problem at its periphery rather than at its core. They would merely apply salve to a cancer that requires major surgery.

Senator PASTORE. At this point, Mr. Thoms, would you say that whatever remedial action is required is of a legislative nature or is it administrative?

Mr. THOMS. We have taken the position all the time—our group has—that basically the Federal Communications Commission has the authority to take all necessary remedial action.

The problem today is no longer simply one of disparities between UHF and VHF but one of a simple principle—namely, shall this country have many TV stations separately serving many communities or a few superpower stations each covering extensive areas and many communities. The old AM superpower fight has now been extended to TV.

The abnormal profits made in radio and TV have come about through the principle of scarcity, inherent in present allocation policies, creating the forces of "haves" and "have-nots."

Nineteen hundred and fifty-four and 1955 proved that it was not lack of finances, ingenuity, industry, or experience that caused UHF stations to fail when subjected to VHF competition. Deintermixed areas have rendered excellent TV service, and could continue to do so if given proper protection. If the powerful "haves" had not thrown effective roadblocks all along the way, we could by now have been well along the way to an effective nationwide competitive system based upon a sound reallocation.

I respectfully submit to this committee that the time has long since passed when we may permit ourselves the luxury of a wait and see attitude. The Commission has made it abundantly clear that it is disposed to temporize and not to act. If it is the view of this committee that the public interest does not require immediate remedial action—and that the present accelerated trend to a monopoly of superpower, multiple-market stations may be permitted to continue—then no action need be taken by this committee or the Congress. However, if it is the view of this committee that the public interest does require immediate remedial action and that the public interest requires that the national television structure must provide the potential of multiple services and multiple local outlets, then this committee or the Congress must act.

Perhaps Congress cannot feasibly legislate the specific details of a reallocation plan. However, where, in the face of the urgent need for prompt action, the administrative agency has delayed unreasonably even in proposing a solution, and where that agency is riddled with doubts as to the proper course to pursue, then it necessarily devolves upon the Congress to direct the way.

This it can do by enunciating as the policy of Congress, by resolution, that the Commission issue its own rulemaking proposal providing for reassignment of television channels on or before a specified date; and, pending the conclusion of such rulemaking proceedings, the effectiveness of television authorizations providing for new or changed facilities granted within 30 days previous thereto shall be suspended, and future grants of such authorizations shall be withheld.

We have already pointed out past precedents for such congressional action. In such a resolution, it should be declared to be congressional policy that such a reassignment of channels should have as its primary objective a multiplicity of equal competitive facilities limited to service of a single market unless unusual circumstances in any particular case require otherwise.

We believe that the following principles are necessary to the establishment of a nationwide competitive television service:

1. Deintermixture.
2. Reduction of the present permissive limits of power.
3. Reduction of the present permissive limits of antenna heights.
4. Reduction of presently prescribed VHF mileage separations.
5. Confinement of television stations to their home communities.
6. Provision for the use of directional antennas whenever necessary to accomplish the foregoing objectives.
7. Elimination of cost differentials for all-band sets.

Senator PASTORE. On that No. 7, what do you mean by that? It sounds good, but who would have the authority to effect that—the Commission or the Congress? We could not dictate to private industry to remove a differential in costs, could we, unless you are referring now to the excise tax. Is that what you have in mind?

Mr. THOMS. That is one means, yes.

Senator PASTORE. That is discriminatory legislation. The minute you do that, you fall back in your other six categories.

Mr. THOMS. And we are not all agreed on that.

Senator PASTORE. I just thought I would clear the record as to what you meant.

Mr. THOMS. This might be accomplished through congressional action in authorizing, or giving the Commission the authority to set standards for receiving sets.

Senator PASTORE. Provided you do not allow the viewer or the public to swallow up the additional cost here. I mean, in all this we have got to be very, very careful that the public itself is not being called upon to unscramble something they are not responsible for, either in the way of costs or inconvenience. That is absolutely important in all this discussion.

Senator ERVIN. Your idea there is fundamentally to change the revenue law with regard to the excise tax so as to make it advantageous, through a reduction of the tax, for manufacturers to equip their receivers to receive all TV signals.

Mr. THOMS. We think that is one possible way.

8. Reduction of common carrier cable and microwave relay costs.

Since the principle of deintermixture has been almost universally endorsed by substantial segments of this industry, including those which today have a great stake in VHF, deintermixture should be the basic criterion for a proper reallocation.

We believe that in the directive which we urge Congress to issue to the Commission, objectives (1) through (6) should be included as the specific standards upon which a proper allocation should be based.

A failure to accept the foregoing objectives can only result in a perpetuation of the present two-network monopoly which has been fostered by the existing television allocation plan.

Senator PASTORE. Thank you very much, Mr. Thoms. Any questions, Senator Ervin?

Senator ERVIN. No, sir. I would just like to say our folks in North Carolina have been following these hearings with a great deal of interest. It is unfortunate, and I think that Senator Pastore agrees with me, that the Federal Communications Commission has not moved a little faster in this field to try to solve this problem.

We are glad to see you fellow Tarheels up here.

Mr. Cox. I take it your basic proposal, then, is deintermixture almost on a nationwide basis, making use, in those areas where you have to substitute for UHF stations existing in a predominantly V market, of these drop-in V's, and you would make that possibly through reduction in the Commission's standards. Is that correct?

Mr. THOMS. Yes. I would say at this late date a long-range plan of solving the issue should incorporate a deintermixture. Taking away in some areas could have been done 2 years ago without much damage, but at this late date you will probably have to take away some V's and make those areas all U.

Mr. Cox. You are not suggesting a specific plan? You are just proposing to lay this down as a basic premise for the Commission?

Mr. THOMS. That is right. We feel that the Commission has the time, the brains, the money and the engineers—the know-how—to do this job if they were directed to do it.

Mr. Cox. You are asking, then, that this committee, or through the committee, the Congress, should adopt a resolution so directing the Commission?

Mr. THOMS. Yes, that is right.

Mr. Cox. Do you think that such a proposal could be worked out on terms which would provide this localized coverage of equal competitive facilities on a basis that would not create white areas in between the coverages of these somewhat smaller stations?

Mr. THOMS. Undoubtedly.

Mr. Cox. Isn't there some likelihood that, at least in some parts of the country where you don't have large population concentrations, you don't have substantial outlying cities, you would still need full power V stations in order to get an economical coverage of those areas?

Mr. THOMS. You are talking about the Middle West, for instance?

Mr. COX. And the Far West, the mountainous areas.

Mr. THOMS. I don't think there has been any major problem of finding enough V's to take care of those white areas out in the West.

Senator POTTER. You have not taken care of Cheboygan yet.

Mr. COX. They will give you a small drop-in V.

If you simply drop-in a V in an area which is now predominantly V, to provide a competitive channel for the U operator there today, unless you similarly reduce the power—as I understand you propose to do—for the existing V stations, you would still leave him with a noncompetitive facility, would you not?

Mr. THOMS. Not necessarily. There may be cases where a U operator would rather have a low-power V than a maximum-power U as provided under the present standards.

Mr. COX. He at least would get away from the conversion problem?

Mr. THOMS. He would get away from the conversion problem, and he at least will have a fighting chance with a competing type of facility. He will not be an outcast.

Mr. COX. Do you think he can persuade the advertisers at least to pay a reduced card rate for that kind of V coverage better than he can a more substantial U coverage?

Mr. THOMS. Just as a 250-watt station does very well in a community with a regional or clear-channel station; yes, sir.

Mr. COX. If you are going to have a lot of these small area coverage stations, either U or V, is it your position that their added cost—because each one of them is going to have a station, staff, and so on—that those costs can be economically borne by the present advertising revenues which go to the support of television on a nationwide basis?

Mr. THOMS. There isn't any doubt about it. I can use my own Asheville situation as an example. It is possible to pay all costs of an economical low-powered V, as I do with my U in Asheville, for as little money as it takes to operate a radio station. The industry has found out many, many shortcuts—we practice them and we do a good job with them—whereby you do not have to think of television in terms of millions of dollars all the time.

You can think in terms of revenue for a low-powered V in terms of $8,000, $10,000, or $12,000 a month and you can still make money in a hometown community.

Mr. COX. For the record, it is true, is it not, that in Asheville itself—disregarding possible competing signals from outside the community—you compete with 1 high-band V, and that you have 2 network affiliations and he has 1. Is that correct?

Mr. THOMS. Right.

Mr. COX. However, his card rate is double yours.

Mr. THOMS. That's right.

Mr. COX. What percentage of conversion do you have in the area?

Mr. THOMS. We had at one time, before the encroaching V's were started and before the local V opened up, around 60 percent conversion, which was considered pretty good.

Mr. COX. Now what would it be?

Mr. THOMS. I don't think we have particularly lost any conversion.

Mr. Cox. You are just holding on at that level?

Mr. THOMS. That's right. It's a holding process now.

Mr. Cox. Is your principal problem, you think, competition from the V in Asheville, or is it competition from the V's in surrounding communities?

Mr. THOMS. Both.

Senator PASTORE. In what way do you feel the competition? Do you lose out on a better type of program, or what? After all, fundamentally, if the people in a community can turn on a U as easily as they can turn on a V, or turn on a V as easily as they can turn on a U, then why is it the concern of Congress as to whether or not the stations live or don't live? Is it not a question of what kind of a program you can get?

Mr. THOMS. It isn't a question of programs with me.

Senator PASTORE. What is fundamentally your trouble? Do you mean the fact that other stations come into your area?

Mr. THOMS. It is the inequality of the facilities, to begin with. I am a U, and the others are V's. They have more extensive coverage. In my particular area, the Commission, when they originally made the allocation plan, did not take into consideration terrain. They just drew a bunch of circles on maps and fit them on a map, and that was it.

If you happen to be in a mountainous area where the UHF propagation is poor, that was something that time and technical development was supposed to overcome.

So far it has not been overcome. So I am constantly behind in circulation because I don't have the coverage, and the technical ability of the UHF transmitting equipment and receivers don't make me comparable with the V.

Senator PASTORE. How about the programs that you get? Do you get nationwide programs?

Mr. THOMS. Yes, sir.

Senator PASTORE. What do you carry—NBC?

Mr. THOMS. And CBS.

Mr. Cox. What percentage of your daily programing is network programs?

Mr. THOMS. I have no daily program. I have a limited operation 4 hours a night.

Mr. Cox. You are only on the air in the evening?

Mr. THOMS. That's right.

Mr. Cox. Let me ask you this. Are you making money or losing money?

Mr. THOMS. I am losing a little money. I cannot sell any local advertising and keep an advertiser on a UHF station.

Mr. Cox. Is your competitor able to sell advertisers on the proposition of buying time on this station during the days? Does he have a daytime operation?

Mr. THOMS. Yes, he has a salable product.

Senator POTTER. Can't you sell spots around the major programs?

Mr. THOMS. My circulation is so poor that I can't even sell, in good conscience, the spots around the national programs.

Senator PASTORE. Why not? Aren't you able to sell cheaper than the next fellow because your facilities are smaller?

Mr. THOMS. Yes. My rate is much lower.

Mr. Cox. But you still don't find purchasers?

Mr. Thoms. I can't deliver results. These advertisers stay on a station only so long as they get results for their advertising.

Senator Potter. What is the quality of your signal? Is your signal of good quality?

Mr. Thoms. Where it is received, it is excellent. But in the mountainous area, with all these deep shadows and all, most of the people live in the coves along the river bottoms. A few live on the mountain tops. But the UHF signal simply will not penetrate into those coves and those deep shadowed areas.

Senator Potter. That has been one of the problems I have always been concerned about—the fact as to the technical quality of UHF. I am thinking now of the public interest that is involved.

I had hoped—and probably there has been—a great deal of improvement in the engineering of the UHF or the all-channel receivers, and possibly the transmitting equipment. I do not know.

Mr. Thoms. There has been no improvement in the transmitting equipment.

Senator Potter. There has been no improvement in the transmission?

Mr. Thoms. None at all.

Mr. Cox. They have higher power available; do they not?

Mr. Thoms. Higher power, yes.

Mr. Cox. I take it that it is your feeling that that would not be a solution in your case; increasing your signal strength is still not going to take care of your shadowed areas?

Senator Potter. My point is this, that even if you had 100-percent conversion in your area, if you have these so-called shadows, I do not know what could be done from a rulemaking standpoint as far as the Commission is concerned, or by action of the Congress, to remedy that particular situation. I would like your comment on that point.

Mr. Cox. Have you given any thought to satellites, for instance? Mr. Storer was talking about that this morning.

Mr. Thoms. It would take about four satellites.

Senator Potter. For you to have complete coverage?

Mr. Thoms. An important limitation is the cost of satellites and the superpower—and additional power—in the small markets. They simply can't invest a million and a half dollars in a market the size of Asheville.

You not only have the availability of more power and its proven lack of, even with more power, filling in the deeper shadow areas; but you have the economics of it. It is not possible or practical to invest the necessary sums to increase the UHF power to get the coverage.

Senator Potter. We had testimony this morning by Mr. Storer, who stated that in a large city where you normally expect to have fairly flat terrain, UHF is not too successful because of the barriers from the high buildings. Now, if we find that from a technical standpoint it is not as good in rough country terrain, it presents a real question as far as the further development of UHF as a major factor in our nationwide competitive television system, as to how well the public interest will be served by UHF.

If you have that problem that was mentioned this morning in the major cities and we have problems like you mention this afternoon where you have rough terrain, I do not know how much selectivity could be worked out in the interest of the public, which is our concern.

Mr. THOMS. I think the major mistake was probably made in the original allocation plan, in that the Commission did not take into consideration terrain. They probably should never have allocated any UHF frequencies in extremely mountainous areas. I am not saying that I want one or that I am arguing for it because I am not arguing my own case.

Mr. COX. But in a case like yours, in the case of a U operating in mountainous terrain in competition with a V, the solution would more likely be to replace the U with a drop-in V than to deintermix in favor of all U's, in order to maintain service to the public?

Mr. THOMS. That is right.

Senator POTTER. Do you have any views on the question I asked Mr. Storer this morning on the suggestion that has been made in times past that if we have deintermixture, it should be confined in the large markets? Mr. Storer says that that does not work out too well because of the high buildings. Do you have any information on that?

Mr. THOMS. I did not hear all of Mr. Storer's testimony.

Senator POTTER. My question was, it has been suggested at times that your large metropolitan areas, such as New York, Los Angeles, Philadelphia, and Chicago, be made UHF communities, and allow your VHF to operate in your more remote areas where the distance is a factor.

Mr. THOMS. My answer is this, that I believe the Federal Communications Commission has enough data and information on hand now that they can determine where they can deintermix areas that will give perfectly satisfactory UHF service. There are areas in Indiana, Illinois, Ohio, and places like that, and in Florida, where deintermixing—where the U's do a beautiful job. UHF should not be cast aside, because that special spectrum is valuable and it is needed and should be kept in use.

Senator POTTER. My question is, Where should it be used?

Mr. THOMS. I think the Commission can find the places, where to use it and where not to use it. I think they know enough about it now.

Senator POTTER. If we cannot use it in our large cities and we cannot use it in rough terrain, then it does not leave too much of the country that is left. You have sections in Florida and the Central Midwest.

Mr. THOMS. I would say that it leaves better than half the country for them to work with.

Mr. COX. I think Mr. Storer's testimony this morning was that there would be about 25 areas which would be all UHF or predominantly UHF. Do you think that would be a substantial enough area of UHF strength to maintain the industry as far as manufacturing of transmitters is concerned?

Mr. THOMS. I think it would go a long way, yes.

Mr. COX. It would involve, would it not, some loss of areas in which there is a present sale of UHF receivers and transmitting equipment? That is, if for instance, in mountainous areas the shift is made to all V, you are then going to lose the set conversions that have been made in that area and you will have no replacement sales.

Mr. THOMS. We are going to lose them anyway.

Senator POTTER. Let me ask you one more question: If color television develops as we expect it will develop, wouldn't it be a big help to the UHF stations if the manufacturers of color television sets continue their policy of making all-channel sets?

Mr. THOMS. I think RCA is doing that. They say that they will give no guaranty that they will continue it.

Senator POTTER. But isn't it very desirable that all manufacturers make all-channel sets?

Mr. THOMS. Yes. You haven't got black and white solved yet.

Senator POTTER. If you are going into a new phase, black and white may be obsolete 10 years from now. We don't know.

Mr. THOMS. I mean if you are going to regulate it. RCA makes the statement that if, when other manufacturers come in the production of tubes and sets, it becomes necessary for them to drop their UHF in the color sets to be competitive they will drop them. I imagine that won't be too far off.

Senator POTTER. If they start selling color sets to a mass market, all the competitive factors will be operating, and 1 manufacturer who can save $20 by leaving the all-channel tuner off, from a competitive standpoint that might be done. But the point I want to bring out is, if they would refrain from doing that, it would be a big help to bring about this nationwide competitive television system we have been talking about, wouldn't it?

Mr. THOMS. Yes, sir; I agree with you.

Mr. COX. Thank you, Mr. Thoms.

Senator POTTER (presiding). Mr. Johnson, do you have a prepared statement?

Mr. JOHNSON. Yes.

Senator POTTER. You may proceed, Mr. Johnson.

STATEMENT OF JOHN G. JOHNSON, WTOB-TV, WINSTON-SALEM, N. C.

Mr. JOHNSON. My name is John G. Johnson and I am one of the owners and general manager of television station WTOB-TV at Winston-Salem, N. C. We operate on UHF channel 26 and have been continuously on the air since September 10, 1953. We do have a network. We are an affiliate of the American Broadcasting Co.'s television network. We have successfully operated a radio station in Winston-Salem for almost 9 years, and we also operate radio stations at Birmingham, Ala., and Norfolk, Va.

I want to thank you gentlemen for the opportunity of appearing here and make a few brief comments about a matter which, I am sure, is of deep concern to all of us.

I first appeared here about 2 years ago before this subcommittee, at which time Senator Potter was serving as chairman, and although we were at that time gravely concerned about the future of the UHF stations, the argument was made by many segments of the industry that we were merely experiencing growing pains, and it was not unusual that this should be true, because we represented a new segment in what was a relatively new industry. I believe that at that time about 10 stations in the UHF band had gone dark and ceased operation.

Now we come back some 2 years later, and we find not 10 stations, but some 56 have gone off the air as of today, I believe, which is almost 36 percent of the total aggregate number of UHF stations that were ever on the air, and I believe about 56 percent of the number of UHF stations now on the air.

Every time one of these stations has gone off the air, it, of course, has meant a loss of television service to the particular community. It has meant a loss of employment for a number of specially trained people who need these jobs, and this I think emphasizes the seriousness of this situation in every community where it has occurred. I feel certain if you gentlemen could have had an opportunity to have seen in any community, first hand, one of these situations, you would readily recognize it is a very desperate sort of thing.

I think the evidence is testified to by the number of stations and the high percentage of the UHF industry that has been decimated, which pretty clearly establishes that in most cases a UHF station cannot compete successfully in a VHF market. May I say in most cases, because there are a few exceptions. But if you analyze the exceptions, I believe by and large it is where the network owns and operates a station, or where there is an all-UHF market or some unusual circumstance that made that UHF station in that particular situation have advantages not normally enjoyed by the average UHF station in a multiple-market competing with the V.

Senator POTTER. Do you compete with a V?

Mr. JOHNSON. Yes, sir; two of them. One is in our home city, and the other one is 25 miles away. One services us with NBC, the other with CBS.

I don't want to take your time to review all the evidence; as you know we have submitted it, as Mr. Thoms has pointed out. Nor do I come here with a single plan which I think will cure all of the ills of the UHF stations. But for 2 years now the people who have been operating these stations, and who have their investment in these stations, have come here and to the FCC and to the industry at large, and have looked hopefully for some positive action.

I think, in all fairness, 2 years is a long time, particularly in view of the growing mortality of the UHF stations. And I think in all fairness we are not unreasonable in asking now that the FCC, or someone, take action in this matter.

To elaborate on that just a moment, most of these stations—and I have not surveyed them individually, but I have talked with a large number of them—most of the current operating UHF commercial stations—I think about 95—I believe without any doubt the majority of them are now losing money. I think most of them have probably lost money for anywhere from a year to 2 years, or longer.

Senator POTTER. Are you losing money?

Mr. JOHNSON. Yes, sir. When I say we have come hopefully, that is because of the statements about selective deintermixture. Because of some of the statements made by the Commission, these people have continued to lose money and continued to try to render a service to their communities, feeling that somewhere just around the corner is a chance that something might be done.

When I say that we feel we are entitled to an answer, it seems to me it is really a cruel thing to continue the indecision. Whatever the answer is, I think the people involved in this business are entitled to some definite solution, or some definite answer as to what the trend is going to be.

Senator POTTER. One way or the other.

Mr. JOHNSON. One way or the other; yes, sir; whatever it may be.

As I say here, many plans have been submitted to the Commission, and I think one of the problems has been—and I think I have talked with every Commissioner separately, collectively, and individually a number of times—that the plan itself is not a cure-all. It is not 100-percent perfect, and always there are some people who can find a deficiency in any plan that is submitted.

In fact, we are going to have to recognize and deal with the fact that we can't come up at this late date with a 100-percent cure. So if we are realistic and realize that, I think the thing to do is for the Commission to come up with as near to a 100-percent solution as they can. If it doesn't solve but 20 percent of the industry's problems, at least 20 percent will be saved. Because some percentage can still be saved.

However, I think if this situation that is now in existence is allowed to continue, we are going to reach the point, as Mr. Storer indicated this morning, when UHF will no longer be a factor in this industry. That is tied in not just with the station operation. As I say, if 56 percent of the present numbers of stations on the air are now gone, you can quickly see by simple arithmetic we are going to reach the point where RCA and Admiral and General Electric are going to say, "Let's not bother to produce or try to perfect UHF sets. It looks as though they are on the way out." The same thing happens on Madison Avenue with the advertisers. The same thing happens with any hoped-for improvements in television transmitters.

Senator POTTER. As a matter of fact, I think one of the reasons there is reluctance on the part of advertisers to place their advertising with UHF channels has been the fact that they haven't known whether UHF is going to continue or not.

Mr. JOHNSON. That is right, and we can't tell them. It has got to be told to everybody in the industry by the Federal Communications Commission or by you gentlemen or by someone who has the authority to say "Steps will be taken which will insure that some percent of it will live." Therefore the only request that I have to make is one that has been made before, and I repeat it only for emphasis, that I think it is now time that we must ask the FCC to come up with some plan to solve whatever percentage of it that they can solve in the best manner that they can solve it.

There have been a number of plans submitted to them. Maybe they can take a part of one and a part of another and patch together something that will tend to stabilize a certain percentage of the industry as it now is.

I think if some action is not taken soon—and I say that because the majority of these stations are losing money—it certainly will do no good to prescribe a remedy next year or year after next, or wait 2 more years until we have got only 4 UHF stations left on the air, because it is then too late.

I want to touch, if I may, on one problem that has been brought out, that you mentioned and Chairman Magnuson mentioned, about the effect of tying or hitching UHF sets to color. That unquestionably would be a big help. If the mechanics can be worked out, it would be a big boost. But it is 10 years from now. The UHF unit in that set, is there are no UHF stations, is of no value whatsoever. If something isn't done immediately to preserve some UHF stations, then that long-range plan is of no value at all.

So it looks to me as though there are two steps in that thinking. First, something must be done now to make it worthwhile to figure that it will pay later to have UHF in color sets, because if it isn't done now—Senator Magnuson talked about the local community. He said that he would hope that there could be a local television station in the long future that could operate without a network, because if it is tied to color, maybe all the sets will be UHF.

But I can assure you it seems logical to me that if approximately 156 UHF stations are gone, and 3 or 4 are left 10 years from now, no one is going to suddenly say, "I believe I will try it."

So we can point to a growing number of tombstones, deceased UHF stations, which I think alone testified to all of the other factors as to what is wrong. I think that speaks more eloquently than anything I can say that we are faced with the danger of losing what I think is an important part of our American way of life, and that is the same thing you are concerned about, and Senator Magnuson was concerned about. That is our hometown television station, because too many of them are in the UHF band and, once that is lost, our hometown television station, as such, all across America is gone.

Senator POTTER. Let me ask you this: What percentage of conversion do you have in your area?

Mr. JOHNSON. Approximately 60 percent.

Senator POTTER. Do you have any technical problems such as certain shadows within your area?

Mr. JOHNSON. We are not in rugged terrain, as Mr. Thoms would be in Asheville, but we are in rolling terrain.

Senator ERVIN. Lovely terrain.

Mr. JOHNSON. Lovely terrain. We have some problems, but standing alone they are not a serious factor.

Senator POTTER. The signal you send out is as good a signal as the VHF signal in that area?

Mr. JOHNSON. Within the limited area that we cover, and assuming that the set is fixed properly with the proper antenna and the proper type UHF receiver, I would say our signal is as good as the VHF. But it requires a lot of doing that the average viewer finds it difficult to do.

Mr. COX. Do you continue to have trouble with the installation of antennas and the maintenance of UHF sets?

Mr. JOHNSON. Yes, sir; it is definitely more critical.

Mr. COX. And therefore it is a greater expense to the viewer?

Mr. JOHNSON. A greater expense. Mr. Storer pointed out a tube which—all I know about it is about what he said. Somewhere somebody says GE has a tube which they hope in the future will help.

But what happens is about 6 months after a person buys a UHF set this particular critical tube that controls it will burn out. It has a very limited life. I can go to a meeting of the Rotary Club in Winston-Salem and half a dozen people say, "What happened to your station last night? You went off the air right in the middle of the fights." We didn't go off the air. That tube is getting weak and it fades, and maybe it burned out. They think we went off the air because they can tune in all the V stations but not us.

That itself is a critical problem which, as Mr. Storer said, I think the industry—if the industry believes that the UHF is going to live, I am sure the resources of General Electric and RCA and all the others can go to work, and will go to work, and find the answer to those technical problems.

But I think there is a grave amount of doubt in their own minds. I was in Camden talking with the RCA people 2 weeks ago. I get the impression that these people were not in production, but just from talking with them they are just like the rest of us. They say, "We have got UHF transmitters stacked up in the warehouse. We don't know what to do with them." If that is true, you can't expect them, as intelligent businessmen, to devote a lot of research to try to improve UHF transmitters.

Senator POTTER. Has there been any resistance on the part of the appliance dealers in your area to push UHF sets?

Mr. JOHNSON. Generally speaking, it has not been too bad. There are a number of cases where it is true, because they have so many service problems with the UHF installation. But the real smart appliance dealer sells that set for more; and if he has got a good service department, and we service him all the time, he does push them. But that is almost like a separate business, our relationship with the appliance dealers.

Senator ERVIN. Your terrain is much more favorable than that in Asheville?

Mr. JOHNSON. Yes, sir; very definitely.

Senator ERVIN. Although you have a good deal of rolling country and some pretty steep country. Do you agree that the FCC now has sufficient legal authority to take final action?

Mr. JOHNSON. Legal authority—if my understanding is correct, Senator Ervin, I think so. I think if this committee asks the FCC—and the FCC has had a tremendous problem, I do not discount that—I think if someone pointed the way, for someone has got to take the ball and say to the FCC, "We would like you to come back with some sort of a plan within a specified time."

Senator ERVIN. How long do you think they should reasonably be given? In other words, I sort of share the opinion you have. I think they have been sort of slow in this—terribly slow.

Mr. JOHNSON. I think in view of the fact that this problem is not new to the FCC—they have debated it for some 2 years and a half at least—I should think they could come up with a plan in a matter of weeks rather than months—maybe 8 weeks or 6 weeks or 10 weeks. But I don't think it is a matter of 6 or 12 months.

Mr. COX. Do you generally support Mr. Thomas' suggestion of a resolution setting out certain bases for such a decision by the Federal Communications Commission?

Mr. JOHNSON. I think so, to point the way—that here are certain things that appear logically can be done. Tell us what you can do in this area, and this area, and this area. For example, I understand that one of the engineering firms here in the city has submitted a deintermixture plan which takes care of some 60 markets out of 75 in 1 zone. I am sure the Commission created this allocation situation. I think it is their responsibility to do something about it. I think they have the know-how and I think they can do it.

Senator POTTER. I think we all appreciate the fact that whatever decision the Commission should make, it will be a painful decision to some and beneficial to others. It is not an easy decision.

Mr. JOHNSON. That is right.

Senator POTTER. But I agree with you a decision should be made, and has to be made.

Mr. JOHNSON. Regardless of what it is. Even if it was totally negative; that the people in the UHF industry know that nothing is going to be done, nothing can be done—which isn't the case—and then let them get out of business, because that is what most of them will do.

Senator ERVIN. In other words, you think it will be an act of kindness on the part of the Commission just to commit murder rather than to starve people to death slowly.

Mr. JOHNSON. That is right.

Mr. COX. Do you operate all day, Mr. Johnson?

Mr. JOHNSON. Yes, sir. Well, we operate from about 9:30 until 12 and then we come back on about 2:30 to 11.

Mr. COX. What percentage of your programing is network programing?

Mr. JOHNSON. I would say roughly 60 percent, maybe.

Mr. COX. You are apparently successful, then, in selling the sponsors—or do you get compensated for all of that, or is some of it carried without charge?

Mr. JOHNSON. A lot of it we carry out of faith alone. In an effort to render service to the community, we are doing a number of things that, if our station went off the air, could not be done in our community, because the other stations are so sold out. One of them is not in our city, and they are not interested in our community chest campaign, or our Red Cross, or whatever it might be.

So if we lose our service, our community will lose a lot of television service to the people that I think they deserve, and we are trying to give them that. But it is tough sledding.

Mr. COX. As I understand it, your fear is that if UHF stations continue to leave the air, and there is no incentive to manufacturers to develop equipment, and there is a continuing lack of faith on the part of the advertisers, these channels may to all intents and purposes become useless for all future time, because you could never interest anybody in using them again. Is that substantially correct?

Mr. JOHNSON. That is my opinion, and I honestly say I think there is very little argument to the contrary. There is very little evidence to the contrary—let me put it that way. Because when we were here 2 years ago, Senator Potter, there were people—and logically it made sense—who said, "Well, this UHF is a new thing. A lot of people who are not experienced in the broadcast business have gone into television, and it is reasonable to expect a certain amount of mortality."

Only 10 stations had ceased operation. That argument seemed logical. But to those of us who had some experience and could see this coming, we knew that it was very much deeper rooted than that, and I think now the facts are on our side. About 50 percent of the industry is gone. I don't think there is anyone—I haven't heard anyone—who doesn't think that if you allow this to continue, there is no doubt but what UHF as such will be virtually extinct. I think everybody at the Commission and everybody else would probably believe that is likely to happen.

Senator POTTER. That would be the same as FM in radio.

Mr. JOHNSON. Yes, sir.

Senator POTTER. Do you have any other questions, Senator Ervin?

Senator ERVIN. No.

Senator POTTER. Thank you, Mr. Johnson.

Mr. JOHNSON. Thank you.

Senator POTTER. Mr. Cottone?

Mr. COTTONE. I have arranged to spare you any further testimony in order to permit Mr. Lyman, who is anxious to get back, and who is a UHF operator, to make a short statement. He will not be longer than 10 minutes.

Senator POTTER. Thank you, Mr. Cottone. Mr. Lyman, you may proceed.

STATEMENT OF FRANK LYMAN, JR., PRESIDENT, MIDDLESEX BROADCASTING CORP., CAMBRIDGE, MASS.

Mr. LYMAN. Mr. Chairman and members of the committee, I am Frank Lyman, Jr., president of the Middlesex Broadcasting Corp., of Cambridge, Mass., one of the cities in metropolitan Boston. I have been in the broadcasting industry since 1934, when I bought an interest in station WNB in Vermont, later WKNE. I sold my interest in that in 1949, so I have seen a good many years of the broadcasting industry.

I am here today because I feel that I have a responsibility to apprise you of a serious situation which is rapidly worsening in the broadcast industry. I feel that I need not tell you how important television broadcasting is to the public interest, both on a national and local level.

I believe that we can quickly agree on some basic facts. We have thousands of newspapers throughout the United States which daily communicate to millions of people. We have thousands of radio stations. We have over 50 million telephones used by businesses and individuals. All the preceding means of communication depend upon either sight or sound; however, important as these means of communication are, I feel that it is a basic fact that television is the most powerful communications medium yet developed by man—because television combines both sight and sound.

In a few short years, over 35 million television receivers have been spread across our Nation. Television is well on its way to becoming this Nation's and the world's most important and most influential means of communication.

We currently operate WTAO–AM, WXHR–FM, and WTAO–TV. Our AM station, although only a daylight operation because it might possibly conflict at night with a Canadian clear-channel station, is able to render a fine local service and stand on its own two feet in a keenly competitive market. Let me tell you the story of our FM station, WXHR, which now programs classical music exclusively 17 hours a day. We put WXHR–FM on the air on an experimental basis in 1946. There were, of course, no FM receivers then in existence. We received our commercial permit late in 1947 and operated on a nominal commercial basis with substantially no advertising until the fall of 1950, at which time the receiver population had built up to a level which we felt justified actively soliciting advertising.

The advertising on WXHR has grown at a steady rate ever since, and there is no question that the population of FM receivers in the

Boston area has paralleled this growth. WXHR is a "good music" station, and we are extremely particular about the type and class of advertising we carry. All the musical selections on WXHR are long, of the order of 20 minutes or more, so you do not find any crowding of advertising. These high-grade commercial policies on WXHR have probably been responsible in a considerable measure for the widespread public acceptance and loyal audience of our FM station, WXHR.

We built this service where none had existed; we are anxious to do the same job with our WTAO–TV; however, up to the present time allocations problems have held us back.

WTAO–TV is a real problem. We have operated our UHF station for over 2 years in entrenched VHF territory. We entered upon television, because we considered the medium to be a natural extension of the fine local services which we already provided our community.

Senator POTTER. How many VHF stations are in your area?

Mr. LYMAN. In Boston there are two VHF stations.

Senator POTTER. Do you have a network affiliation?

Mr. LYMAN. We do not at at the present time. We had network service arranged with ABC, but then the station through which we were to get the service in Worcester folded up last fall—went off the air—and our method of getting a program service on such a basis as we could handle financially was cut off. So all we have is film, and some local originations.

Senator POTTER. Was that Worcester station a VHF?

Mr. LYMAN. That was a UHF station, as we are.

Senator POTTER. How were you to get them?

Mr. LYMAN. By air from Worcester.

Senator POTTER. You were going to be a satellite to the Worcester station, is that it?

Mr. LYMAN. We didn't call it that, but we would have relayed with an off-the-air pickup. This we had a firm agreement with ABC on, but this Worcester foldup prevented it.

In 1952 we took the Commission's allocation plan on good faith and placed our resources, experience, and effort into building a local television service for our community. In the time that has since gone by, it is now clearly recognized that the Commission's hope of successful intermixture of television channels was a dream. To us, it has been a nightmare. Intermixture of UHF channels with VHF channels has not worked out.

We feel that the solution to the present television intermixture problem will not be found by allowing the current trend toward monopoly to continue. On this point, if you squeeze this thing down to just 12 channels, there is not much chance for a real competitive system, at least in our part of the country. I don't know about the other sections. It limits it very sharply with 12 channels in a rather densely populated area such as New England. You can't have any variety of service.

While in the initial phases of television development, the large-coverage television station may have been a necessity. The need now is for more stations which will provide the maximum amount of free competition and program choice. Any further grants, or changes in grants, issued by the Commission should recognize the fundamental market-place economics involved in fostering a competitive television system.

I would like to get off on this. There seems to be a rather ludicrous development in this all, that in the planning of this television allocation problem the economics of the situation were almost completely ignored. I don't see how they could have been so beautifully bypassed, but there seems to have been no thought of it in the initial plan.

We believe that the basic hypothesis upon which any readjustment of the allocations should be made is that competition best protects the public interest.

Of the 56 UHF casualties, 4 are from New England: Portland, Lewiston, Providence, and Worcester. These stations died in that sequence. Each flickered out on a rim surrounding the Cambridge location of WTAO-TV. This fading of UHF so close to home has added considerably to our problem of developing a local television service. Every existing difficulty has been increased: network affiliation is less likely, advertiser and agency apathy is more pronounced, and conversions are more difficult to secure.

Senator POTTER. What percentage of conversion do you have?

Mr. LYMAN. I haven't got a good recent figure. It is definitely low. We have never been able to put the millions in that George Storer has been able to put into building conversion, and we are faced with a pretty tough VHF situation with two. Our neighbor out in Worcester did spend rather large sums and even there conversion was not too impressive to me. They had varying figures on it.

Senator POTTER. I assume because of lack of conversion, you haven't been able to get ABC on your own?

Mr. LYMAN. We couldn't possibly afford the cost that would be involved.

Mr. COX. Connection costs and like charges, you mean?

Mr. LYMAN. All of those things, yes; it would be completely out of line. We operate in very small fashion. Our TV is by far the smallest station of our three.

Mr. COX. I assume even if you got the programing, you would still have the problem of persuading the national sponsors to pay for its being broadcast over your station?

Mr. LYMAN. Yes; you certainly would.

Mr. COX. You tend more or less to carry it as a public service, rather than as a source of revenue?

Mr. LYMAN. I am afraid we would have to.

The Commission's Third Survey of Post-Freeze Television Stations confirms the nationwide extent of the intermixture problem. The basic issue involved is whether the people of Boston, New England, and the United States are better served by a few large-coverage stations or these same few large-coverage stations along with a larger number of smaller stations serving their own communities.

We feel that an allocations readjustment which will provide the maximum number of stations engaged in free competition will best protect the public interest. A station's ability to compete hinges upon access to receivers. We only ask for equal access to viewers who can be reached by our immediate competitors. This, we believe, is a fundamental tenet that the Congress and the Commission must recognize and act upon in any basic readjustment of the television allocations. For many agonizing months we have patiently waited for the Commission to take some positive action to permit the development of local community service.

We have written letters to individual Commissioners for their enlightenment in making a decision; we have made personal visits to the FCC to give them the fruits of our experience; we have filed formal petitions.

But all of these efforts have been fruitless since the Commission seems to have become more and more dedicated to preserving a monopoly of very few high-power, high-tower VHF stations serving huge areas, regions, and States—with local expression buried under the exclusive power of a very few men deciding that the national programs which bring them the largest revenue shall be the program that the people shall view and listen to.

Senator POTTER. Do you have any questions, Senator Ervin?

Senator ERVIN. No.

Senator POTTER. Senator Bricker?

Senator BRICKER. No.

Mr. COX. Is it your position, Mr. Lyman, that if you had a like facility in Cambridge—that is, either a drop-in V with a directional antenna, or, if you went the other way, and the area would be deintermixed and made all UHF, that you could operate a competitive station on a local basis in competition with the obviously more powerful stations in Boston?

Mr. LYMAN. Yes; that is exactly my feeling, and I think we pretty much proved that we have been able to do that kind of thing with our FM development. FM started with a zero population of receivers and we have gradually built up to the order of 300,000 receivers in the Boston area. It is a big market area, and this kind of thing can be done. The market will support it easily. It is reported that the television advertising amounts to around $10 million in the Boston area currently.

Senator POTTER. What type of programs do you put on?

Mr. LYMAN. We get film. That is our source, and some local—one cooking school type of program. Our budget is extremely small. The amount of advertising we are carrying on television is negligible.

Mr. COX. How long are you on each day?

Mr. LYMAN. About 2 hours a day.

Mr. COX. Do you think if you could get access to the viewers that you could provide a service that would not only take care of the local needs of Cambridge, but would find viewers in Boston itself?

Mr. LYMAN. In the Boston area—our city is set up a little different than some. We have a good many separate cities that make up metropolitan Boston. They have not been incorporated in the Boston unity. But it is a metropolitan area of around 3 million people. Yes; quite true. Other cities in our area require the same kind of local service, something different than the big New York network program which is about all else that is available.

Mr. COX. Do you subscribe to Mr. Thom's suggestion that this committee should seek by resolution to direct some action on the part of the FCC?

Mr. LYMAN. Yes; I do. I think that only by some congressional act of that sort—committee act—can anything be done about this. I feel this situation of TV becoming a very concentrated type of monopoly is extremely dangerous and only the Congress is in a position to take a firm hand.

Senator POTTER. Thank you, Mr. Lyman.

Senator POTTER. Mr. Patterson.

STATEMENT OF NORWOOD J. PATTERSON, GENERAL MANAGER, KSAN TELEVISION STATION, SAN FRANCISCO, CALIF.

Mr. PATTERSON. Honorable Chairman Magnuson and other members of the committee, I consider it indeed a pleasure to be able to testify this afternoon.

Senator POTTER. Would you identify yourself for the record and give the station you represent?

Mr. PATTERSON. My name is Norwood J. Patterson. I am the son of the owner, S. H. Patterson, of KSAN television, channel 32, in San Francisco, Calif. My father appeared before you some 2 years ago, and I am certainly sure he would rather be here today than where he is. Unfortunately he is in the hospital having a minor operation for a minor hernia.

Senator POTTER. I am sorry to hear that. Convey my best wishes to your father.

Mr. PATTERSON. Thank you. I would like to present this little folder along with the other few words I have to say, as I will be referring to it later on.

Senator POTTER. You may commence your statement. Do you care to read your statement?

Mr. PATTERSON. I would like to read my statement, and I would appreciate very much if you would be kind enough to bring up questions as we go through.

First of all, I would like to review just a little bit our operation in San Francisco. For the past 2 years my father, S. H. Patterson, has been licensee of KSAN television station, UHF channel 32, in San Francisco, Calif. I, Norwood J. Patterson, have been the general manager during this period of time.

KSAN television has been operated according to the rules, regulations, and policies of the Federal Communications Commission as set forth in its sixth order and report, being an intermixed market—that is, VHF television assignments and UHF television assignments assigned together in the San Francisco market. During these 2 years of operations there have been 3 competitive VHF television facilities, namely, channels 4, 5, and 7, operating in San Francisco, licensed for San Francisco; and 1 UHF channel in San Francisco, KSAN-TV, channel 32.

Thus, our 2 years' experience in the television industry has been in a mixed market, with three well-established competitive V's, and a fourth service to the area made possible by the proximity location of the transmitter of channel 13, licensed to serve Stockton, Calif., but in a sense doing the best they can to serve metropolitan San Francisco.

Senator POTTER. Where is their antenna placed?

Mr. PATTERSON. Their antenna is located on a 4,000-foot peak, Mount Diablo, which is considerably closer to San Francisco than it is to Stockton.

I would like to say briefly that my father has been a very successful operator in radio, having been in the radio business since 1926 and having owned and operated one or more radio stations since 1933.

During this 2-year period of time it has been the policy of KSAN-TV to program outstanding programs that were not available through any other television facility, and programs that were in demand to a sufficient extent that these programs would create a desire in the general public to the extent necessary to spend additional sums of money to have their existing television set converted, since there were approximately 1 million existing VHF-only television sets in circulation in the 6-county San Francisco Bay area metropolitan market at the time KSAN television went on the air.

Such programs during this 2-year period have been:

Pacific Coast League baseball nightly, of both Oakland Oaks and San Francisco Seals. These were live telecasts using three-camera coverage of the games.

Intercollegiate basketball—California, Stanford, University of San Francisco, St. Mary's, and other schools, both live and film.

High school football and basketball.

Pacific Coast Conference football—California, Stanford, and so forth.

Boxing—local and national and film.

Wrestling—on film basically.

Thoroughbred horse racing—live telecast with a feature race daily. Incidentally, this was the first time in the history of the United States that, during the entire meet, the feature race was televised.

Then we have played the films, the actual films, that evening of Tanforan, Bay Meadows, and Golden Gate Fields as races were run at their respective tracks.

In addition to this, we had many other local programs. I am not trying to list all of them, but just hitting some of the highlights. These are just a few of the programs, which are in more detail in exhibit A[1] attached, which have caused approximately 25 percent of the people in the San Francisco Bay area owning television sets to convert them to receive UHF television, KSAN-TV, channel 32.

During this period of 2 years, KSAN-TV, channel 32, has increased its effective radiated power from 20,000 to 200,000 watts. With this experience of 2 years, and at the expense of losing hundreds of thousands of dollars, we have proved without a question of doubt that UHF and VHF television cannot successfully compete in a mixed market due to the numerous outstanding advantages VHF has over UHF, such as considerably better propagation characteristics over mountainous terrain which San Francisco encompasses, from sea level to a thousand feet above sea level within the small area 7 miles on each side, thus enabling a VHF station to be received in most instances without an outside antenna, and in shadowed areas for VHF to produce a snow-free picture without the great added expense and careful installation that are necessary to produce a snow-free picture on UHF.

Senator PASTORE. Could I interrupt you at that point? How are you going to hold that against VHF?

Mr. PATTERSON. I beg your pardon?

Senator PASTORE. How are you going to hold it against VHF, the fact that it is superior? Or how are you going to deny it to the public?

Mr. PATTERSON. I am not trying to do either. I am trying to point out that, with the proper allocation, both can live together if they are not trying to survive in the same market.

---

[1] The brochure referred to will be retained in the committee's files.

I will put it this way. If we were all UHF in San Francisco, the general public would in that instance not think it abnormal to have to be scrutinizingly careful with their installation because they would do it on all television stations. If we were all VHF, there would not be the same problem. It is when you mix the two together that the problem is created.

Senator PASTORE. That may be true. But the argument that was made here by one of the members of the Commission—and I think he is right here now this afternoon—was principally along the lines that in many of these locations they have already had both. They have already seen the superior VHF. Under what logic do you take it away from them?

Mr. PATTERSON. I do not propose to take it away from them, Senator. I propose that in areas such as San Francisco, this be made a VHF market; and that in areas which have flat terrain—Sacramento Valley, Stockton, Fresno, Bakersfield—where there is no problem, where UHF produces even a better picture than does VHF—and I will explain reasons why——

Senator PASTORE. I see. I get your argument, now.

Mr. PATTERSON. There should not be VHF in that area, because they do not give either added coverage, nor do they give as good a picture.

Senator POTTER. Do you agree with Mr. Storer's statement this morning that UHF is not desirable for your large metropolitan markets?

Mr. PATTERSON. I did not hear his statement this morning, but basically it is less advantageous in large metropolitan markets than is VHF, because you have more building shadow problems.

In flat terrain such as we have in the Sacramento Valley, in Fresno, Bakersfield, all through that area, all through the Middle West, through Kansas and the eastern part of Colorado and Nebraska and Wyoming, all of that flat terrain area, UHF will actually produce a better picture than will VHF. I say that because of these reasons. It is not subject to interference from manmade interference like electric shavers. When you turn on an electric shaver you can see the lines go through your television set on VHF and your picture has had it. On UHF, that is not the case.

Electric beaters do not bother UHF, but they do VHF. Airplanes going over producing a multiple path of the reflected signal produce a jumpy and a distorted picture on VHF, but does not on UHF. So UHF does have its advantages, and if you put that where it can best be utilized, it actually produces a superior picture and a coverage equal to VHF.

Mr. COX. Is that at maximum power, or can that be done at less than maximum power for a UHF station—to get the geographical coverage, I mean?

Mr. PATTERSON. To get the geographical coverage, you would have to compare maximum power on UHF with maximum power on VHF, if you are going to compare maximum powers both ways to get the coverage.

Mr. COX. Can you, with 1,000 kilowatts, provide the same coverage that a low-band V does at 100?

Mr. PATTERSON. In flat terrain, yes. One other point I would like to point out, and that is that the UHF can produce maximum power at about the same cost that a VHF can produce maximum power, because you can get maximum power in the antennas without the high cost that is necessary in VHF to go to a higher power transmitter. You can use a lower power transmitter and get maximum power.

Mr. Cox. Can you use a high gain antenna?

Mr. PATTERSON. Through the use of a high gain antenna, and those frequencies are much smaller and the antennas are actually less expensive to buy.

Senator PASTORE. In other words, you are actually making the argument, in your opinion one of the great assets to the solution of this problem is selective deintermixture.

Mr. PATTERSON. I think it should, and could, even go further than selective deintermixture.

Senator PASTORE. How far could you go?

Mr. PATTERSON. I believe it is within the Commission's power—I don't have an exact percentage figure, but I think it—I shouldn't say areawise, but marketwise, I think it can be deintermixed completely.

Areawise you will always have some small overlap. This has not been a problem in our particular market, where UHF has been in their own market of Sacramento. There they have been completely successful. Yet they have had service, and there was service from VHF San Francisco stations prior to the UHF station going on the air.

But they were in fringe areas and whenever you are in a fringe area the UHF picture is so much superior that they would much rather listen to the UHF rather than VHF. They will expend the money to convert because they have a poor VHF picture. But when you put it the other way around, when they are already getting a perfect VHF picture, they are very reticent to spend any money to get even a comparable UHF picture.

Senator PASTORE. What kind of a market do you run your UHF station in? How many V's are there in your market?

Mr. PATTERSON. We have three V's in our market licensed for San Francisco. We have one V located—their transmitter—about 30 miles away. It is licensed for Stockton, and it is doing its utmost to sell the San Francisco market. They have applied to the Commission to move to San Francisco, but they were turned down. They operate a remote studio out of San Francisco. So they are doing their utmost to take out the San Francisco dollar, even though the allocation and so forth were supposed to put them over in Stockton.

Senator PASTORE. Your UHF station is in San Francisco?

Mr. PATTERSON. Our UHF is in San Francisco. Our transmitter is located on the same tower that both 5 and 7 are located on.

Senator PASTORE. What networks do you carry?

Mr. PATTERSON. We are completely independent.

Senator PASTORE. What are some of the shows that you carry of national prominence?

Mr. PATTERSON. We do not feel that it is necessary to carry shows of national prominence. We feel that it is necessary to carry shows of local prominence. We carry those itemized in the early part of this program, and summarized a little more in detail in your little red and white brochure.

We brought baseball to the San Francisco market exclusively for the first time every night, both the Oakland Oaks and San Francisco Seals. This was a very costly project, yet we did it. We brought intercollegiate basketball from Stanford and St. Mary's to San Francisco, every night, for the first time to our area.

Senator PASTORE. Have you been running a profitable station?

Mr. PATTERSON. We have been losing considerable money, to the extent that now we have reached the conclusion that we cannot continue to lose the amount of money that we have, that it requires a deintermixing, not only in our market but in everybody else's market. That is this one problem. There is only one problem.

Senator PASTORE. Let me ask you a few more questions in order to be clear in my own mind, Mr. Patterson. At the time you started your UHF station, how many V's were there in the same area?

Mr. PATTERSON. There were three V's. At that time channel 13 was not on the air.

Senator PASTORE. When you say channel 13, is that yours?

Mr. PATTERSON. No, channel 13 is licensed for Stockton, Calif.

Senator PASTORE. That is the one that is trying to come into San Francisco?

Mr. PATTERSON. That is right. When we went on the air, they were not licensed.

Senator PASTORE. Why did you get into this, realizing the fact there were already three V's there? Why did you invest all this money?

Mr. PATTERSON. We invested all this money, no doubt, for the same reason that the Federal Communications Commission made their allocation plan. It has now been proven a mistake, but at the time I am convinced that they did not do it intentionally.

They used their best judgment at the time in creating the sixth report in that allocation plan. We did the same thing. We used our best judgment at the time. We had faith that all manufacturers were going to come out with UHF sets. We believed that the technical advancement of the art would be further along than it is after these 2 years of time.

Mr. COX. Do you think, Mr. Patterson, that if you had a comparable facility—a V in the San Francisco market—you could run a successful station and make a profit as an independent without a network affiliation?

Mr. PATTERSON. There is no question about it, for the very simple reason that with three V's in San Francisco, you cannot buy any time during the A hour when you could put on your own program.

The only time you could do it would be up at 10, 11, or 12 o'clock at night, or early in the afternoon. There is a clamoring for class A availabilities today. We were at one time successful in creating a volume of business, before the stigma of UHF developed as bad as it is now, of approximately $20,000 a month.

Senator PASTORE. Let me clear something up at this point. You already had three V's in San Francisco in addition to your own U station. You are an independent. You are not tied up with any of the three large networks. Am I right?

Mr. PATTERSON. That is correct.

Senator PASTORE. Why do you say that changing from the U to the V will change you from a losing proposition to a profit-making proposition?

Mr. PATTERSON. For the very simple reason that we will then have people that will be able to look at the programs we put on.

Senator PASTORE. You are talking about conversions?

Mr. PATTERSON. Yes.

Senator PASTORE. That is fundamentally——

Mr. PATTERSON. Fundamentally that is the problem.

Senator PASTORE. You have got how many?

Mr. PATTERSON. We have about 25 percent.

Mr. COX. Is it your view that if you could give the advertiser—and I assume there are many local advertisers who cannot buy time at all on the other three stations because it is taken up out of New York——

Mr. PATTERSON. They could neither afford it nor can they get the time.

Mr. COX. But if you could give these advertisers the same coverage in the sense that if your programing would attract viewers, the viewer could see it without added expense, then you could increase your card rates to the extent that your operation would become financially successful?

Mr. PATTERSON. At this stage of the game we wouldn't even have to increase our card rates. It could be that we could sell sufficient——

Mr. COX. You would have that much more business?

Mr. PATTERSON. That is correct.

Senator PASTORE. Did you not know when you applied for your U that you had to have conversion in your locality?

Mr. PATTERSON. That is correct, and that is why we spent over $250,000 for programing during this first 2 years.

Senator PASTORE. Tell me specifically what is the thing in your mind that more or less deceived you on this U business. What is it that caused you to make this tremendous investment in the hope that something would happen that has not happened?

Mr. PATTERSON. If transmitter manufacturers had taken the amount of money that they have lost as of now in their transmitter division and promoted the sale of UHF television sets, they would not have lost the money they lost in the transmitter division, and the UHF television stations would be successful.

But when the manufacturers will discriminate and actually go to the extent of advising their distributors to talk against UHF, that is the thing that kept us from getting the conversion rate that this amount of money and this type of programs would have gotten otherwise.

Senator PASTORE. Will you admit this, that it costs a little more money to manufacture an all-channel set than it does a straight V?

Mr. PATTERSON. There is no question but what it does cost more money.

Senator PASTORE. Then why should the manufacturer compel the consumer, or the buying public, to spend more money than it has to, unless it really has to?

Mr. PATTERSON. I don't feel that they should compel them to, but I feel that if we all are trying to create a nationwide competitive television system, then it behooves all of us to try to sell the public on buying what we are trying to create.

Senator PASTORE. Even if it does cost more money?

Mr. PATTERSON. Even if it costs more money. It costs money to buy the first television set.

Senator PASTORE. I am not quarreling with you. I am trying to get some of these questions answered in my own mind because, after all, we must take the position here that whatever your difficulty happens to be, you cannot push this responsibility on the backs of the buying public.

Mr. PATTERSON. That I agree with.

Senator PASTORE. They should not be placed in the position that they have got to unscramble this mess. They had nothing to do with it.

Mr. PATTERSON. That is correct.

Senator PASTORE. You take a person in a locality where it has been given service—take San Francisco, for instance, with three V's. If they can buy a set and see all 3 V stations and spend, let's say, $25 or $30 less, why should they be compelled to spend $25 or $30 more?

Mr. PATTERSON. Because we can, and have, and will continue to give them programs that the other stations have not.

Senator PASTORE. Is that not the choice that the person should make on whether or not he wants to convert rather than be compelled to the conversion?

Mr. PATTERSON. That is true. But my point is that there is a discrimination against stations that are endeavoring to be competitive, one with the other, that we have no control over. And whenever you are on equal grounds, you have an equal ground for success.

Senator POTTER. Isn't it true that when you buy a V set, you are buying just half of a television set?

Mr. PATTERSON. That is correct.

Senator POTTER. In this case, there is a U in the area, a U which gives them a great community service. Nevertheless, as far as the community is concerned, I think it is much better if the person who buys the set would be able to switch onto any channel. He gets a full set that way. By doing that, he encourages local stations to go on the air and furnish local programs.

Mr. PATTERSON. I feel it is just as erroneous to manufacture a television set that will only get the first 12 stations as it would be to manufacture a television set that would only get the low-band V's.

Since we cannot control the general public, which seems to be the contention here this afternoon, the only thing we do then is to get the general public to the point to where they have no objection to buying UHF.

If there is all UHF in the market—to give you an example, Sacramento, Calif., or Fresno, Calif.—and you can go to many other exclusive U markets—they have no objection, and as a matter of fact they clamor for it because they have been getting fringe VHF reception and here, with this, they get beautiful pictures.

Mr. COX. You think there is some chance that if the manufacture of all-channel sets were expanded, although there might continue to be a differential in cost between all-channel and VHF only, the actual ultimate cost to the consumer could be reduced by mass production?

Mr. PATTERSON. It has been reduced already. RCA has contended that it has reduced it from about $40 to $50, down to about $25. But even so, that does not overcome all of the problems. That helps it. That is curing the effect rather than the cause.

Senator ERVIN. Instead of conversion of sets, you were offering the conversion of market areas. In other words, you are advocating as a real remedy making a given area either all V or all U, depending upon the conditions which would bring out the best features of each set of circumstances.

Mr. PATTERSON. That is absolutely correct.

Senator PASTORE. If you can't get all-channel sets, you have two answers to your problem, don't you? Are you not suggesting two answers, either that we get down to the business of having all-channel sets or you have got to strictly have all V's or all U's?

Mr. PATTERSON. If you or I could control the buying habits of the general public, there would be an alternate solution and that would be to stimulate the purchase of all-channel sets.

But because of the period of time that has evolved and the status that we are in now, I do not believe that that is the solution to our problem.

Senator PASTORE. There are too many V's out now.

Mr. PATTERSON. Our only solution to the problem is a reallocation of the allocation plan that the Commission has put out. There was proposed to them before this time this possibility that might exist, that now does exist, which was presented to the Commission by the Radio Corporation of America. Later on in here I give you the letter and the time and so forth.

They were also advised of this possibility that might exist by DuMont Laboratories, by Dr. DuMont before the allocation plan was put out.

No one knew for sure what would happen. But these experts that had their research behind them and so forth came out and said, "You had better look out; you had better not mix the two in the markets."

Now we have found out by our sad experience over these past 2 or 3 years that they were right, and we should have paid more attention to them at the time. Therefore we have a cause and we have an effect.

Most of the proposals that have been presented to the Commission will correct or help to correct the effect. But if we take those and apply those—that is, directional antennas, reduce separations, utilizing possibly some of the educational channels—if we take all of those things and apply that against the purpose of deintermixture, then we can be successful.

Senator POTTER. I think, Mr. Patterson, one of the economic problems that the Commission is faced with and the committee is faced with, if you go in and deintermix a market—for example, make one market a U market and another market a V market—you have millions of dollars invested by citizens of this country in the V set and you force them if they are going to see television to buy an all-channel set.

Maybe the opposite would be true in another market, where they have money invested in a U set and it turns out to be a V market. They can still use their set but they have paid additional money that is not needed.

That is the economic problem on one hand. Then you have the economic problem on the other of the man who has his money invested in building up his transmitter and other equipment for his business.

So we have two economic problems: One as it affects the public, and the other as it affects the industry.

Do you have any suggestions as to how those two economic conditions could be met?

Mr. PATTERSON. Yes. Those conditions are not anywhere as near serious as looking at them on the outside looks like. Let's take the first case where you have an all UHF market. That condition exists in Fresno, Calif., today. It did exist in Sacramento, and it exists in many other markets throughout the country.

If you put in one VHF, which has been recently proposed—and I guess it is still in contested hearings in Fresno—you are going to already present an economic problem to that group of people to get the excellent reception.

To offer this V, particularly in our outlying areas, you are going to have to make an additional expenditure of a VHF antenna in order to get this television station.

So that economic problem already exists and is being created every day by the Commission as they allocate a VHF station in an all UHF market.

Now, supposing we take out a VHF from the UHF market and give them a UHF. We have not cost that man and the public any additional money. True, he is not using a piece of equipment that he bought, but he did not buy it for a piece of equipment. He bought it to get a facility, to get the programs.

Those programs he is going to get anyway, so he hasn't been deprived of anything.

Senator POTTER. Excepting he bought something that he cannot use. He bought a part of his set which he canont use.

Mr. PATTERSON. That is true, but he has used it for a period of time. He did not buy it to buy a piece of equipment; he bought it to look at a television signal, to look at a picture, so he has not been deprived.

What he spent his money for he is receiving. All he has to do is turn the button and get it at a different place on his television set.

Senator POTTER. Assuming the Commission should agree with your plan of having deintermixture on an area basis, would you recommend that there be a period of time, and if so, how long, for that change to take place?

Mr. PATTERSON. There are many areas currently where it could be done instantaneously. It could be done elsewhere. From past experience with the Commission when they have done such similar things—as the time in 1940 when they reallocated the broadcast band; we had a station at that time. We moved to another frequency. Directional antennas had to be changed and had to be moved, and new engineers had to put them over to new frequencies, and moneys were expended because the whole would be benefited by these moves.

We as the owner of a radio station at that time expended the money necessary to make that move, the move which was made by the Commission.

Usually the Commission in coming out with such new policies as that usually gives a period of from 6 months to a year to accomplish that.

Senator POTTER. The thing that disturbs me, I can see the roof coming off of the Capitol when you force a large portion of your citizens to purchase anything, which you would be doing in this case.

Mr. PATTERSON. That is where it is not true.

Senator PASTORE. It is a political impossibility.

Mr. PATTERSON. I don't think it is an impossibility.

Senator PASTORE. I say, a political impossibility.

Mr. PATTERSON. When you get RCA, NBC, and ABC all advocating the same plan—and I have reference to their comments as filed with the Federal Communications Commission later on in my report here——

Mr. COX. Isn't it it true, Mr. Patterson—to take an example—if the plan outlined by Mr. Storer this morning, which involved the creation of 6 all UHF markets and of a certain number of 1 VHF market, were followed, actually it would not require the expenditure of funds? That is, in UHF markets or areas in which V's are not now on the air, so no one had expended any money in reliance on that.

Mr. PATTERSON. That is what I have been trying to point out. I guess I haven't made it too clear. In the UHF market the public doesn't have to spend any money. You continue that UHF market.

In our market of San Francisco, which is a VHF market, they do not have to expend any money, because all of the television sets already have got VHF.

Mr. COX. Some of those who have made conversions would lose the money they have spent to get the conversion, but they will still be able to get the program now in a better way than they have been able to even with that expenditure.

Mr. PATTERSON. That is correct. They would get it even better than what they are currently getting.

Senator PASTORE. Before you start reading again, Mr. Patterson, one more question. Would subscription television allocated in your particular case alone to you be of any assistance to you?

Mr. PATTERSON. Let's say there again it would help to correct the effect, but wouldn't correct the basic fault.

Senator PASTORE. In other words, you wouldn't say that that would be an answer to your problem?

Mr. PATTERSON. I don't think it is an answer to the problem. I don't think that any time we correct the cause rather than the effect that we have really found the true answer to the problem.

I say we have a great problem whenever it gets to the point that we have to take up the time of all of you Senators here, for I am sure you have many more important things to do than listen to us talk.

Whenever it comes to the point that we have to take up your time, then we have a serious nationwide problem. When you have a serious nationwide problem, it takes drastic means to correct.

VHF is superior in the fact that it is not limited with respect to the television sets capable of receiving their signals, as all television sets ever sold receive VHF.

VHF is superior in that the present status of the art of receiving sets is considerably more sensitive on VHF than UHF, which means to receive a good picture on UHF comparable to VHF it takes much more signal to the UHF set.

UHF, however, has some advantages that makes it superior to VHF.

UHF is not subject to manmade interference from such household devices as electric shavers, vacuum cleaners, electric mixers, etc. UHF is not subjected to the distortion of signal from multipath transmission caused by reflections from terrain, and particularly noticeable from reflections of traveling airplanes. It is possible in the future that UHF may be considerably superior to VHF, but at the present stage of the art this is not the case.

All of this, gentlemen, proves that the deteriorating of a nationwide competitive television system today is caused simply by one thing, and one thing alone, and that is the allocation plan as set up by the Federal Communications Commission in its Sixth Order and Report, in that this report intermixes UHF television facilities with VHF television facilities.

I do not say that the Federal Communications Commission erred willingly in its Sixth Order and Report. I am sure that their decision was based on their best judgment and it was their belief that a mixed allocation plan would best serve the public and most readily create a nationwide competitive television service.

However, I would like to point out that the Commission was warned during the hearings, which culminated in the Sixth Order and Report, by many, that a mixture of UHF and VHF facilities in the same market should be avoided.

This was called to the Commission's attention by the Radio Corporation of America in a letter to the Federal Communications Commission on March 23, 1950, Docket No. 8736. It was also called to the attention of the Commission during these same proceedings by Dr. DuMont, wherein his overall allocation plan did not intermix UHF and VHF facilities.

These technical experts knew, because of their research, of the incompatability of UHF and VHF being successful competitors in the same market. Likewise, Federal Communications Commissioners Hyde and Bartly, who presently are in favor of deintermixture, were in favor of not mixing UHF and VHF in the proceedings that created the sixth order and report.

Incidentally, they are two of the oldest Commissioners on the Federal Communications Commission. I am not referring to their hair. I am referring to their age as Commissioners. Here now, some 2 years later, the one thing that the Commission was warned about by those with experience and know-how has proven in practice to be the downfall of a competitive nationwide television system.

It is not my intention to point a scornful finger at the Federal Communications Commission, as most of the Commissioners that are serving on the Federal Communications Commission now are not the same Commissioners who were responsible for the errors in the sixth order and report; but to point out here that the Federal Communications Commission does have within its power, if they so wanted to, to immediately facilitate a nationwide competitive television service by deintermixing the markets of the United States, making some all UHF where those are particularly well established, and others VHF.

Some have opposed facing this issue squarely in the face because they feel that it is too serious a problem.

Gentlemen, I say when a problem becomes so serious that it takes up the time of our honorable Senators of the United States Government and the Interstate Commerce Committee, then it is a problem that can only be corrected with drastic measures.

There have been many proposals submitted to the Federal Communications Commission, the majority of which are treatments that will help only the effect, and not correct the cause of the trouble. If these many corrective measures are utilized for the purpose of deintermixture, then they will become a correction of the cause rather than the effect, and be successful.

I am referring to reduced mileage separation of VHF transmitting facilities, cochannel as well as adjacent channel, the utilization of directional antenna, reduced power operations for new VHF facilities to minimize interference, to utilize the educational reservations and hours that are not used be available for commercial operations, and permit educational groups to apply on an equal status for the facilities available and to operate them either educational or commercial as they desire.

There are many VHF grants that have recently been made in areas that are 100 percent UHF equipped. These VHF facilties should be reallocated to VHF markets, and UHF facilities allocated to the UHF markets.

RCA—Radio Corporation of America—in their recent comments to the Federal Communications Commission, after discussing intermixture at considerable length, made the following statement:

> The Commission will want to consider whether deintermixture is not of such importance that it should be made a separate phase of this proceeding and given priority.

That was RCA's quotation.

Quoting again from RCA deintermixture:

> One of the contributions the Commission can make to UHF at this time is to deintermix on a sufficiently broad basis to create a number of predominantly UHF markets. Without this, the public may not purchase all channel receivers in such number to justify the continuance of their manufacture.

In the recent comments of the American Broadcasting Co. to the Federal Communications Commission in Docket No. 11532, they said in these comments relative to deintermixture:

> There is a pressing need for immediate action to relieve the acute shortage of comparable television stations in many of the major cities of the country and to preserve UHF until it has had an opportunity to achieve competitive equality with VHF. Failure to act promptly will mean a practical abandonment of UHF before we are in a position to determine that such abandonment will not permanently stunt the television industry and thereby indefinitely continue the existing economy of scarcity. The experience of the last 2 years demonstrates that unless prompt remedial action is taken, very few of the existing UHF stations in intermixed markets will be able to survive.

A further quote in their discussion of deintermixture, the American Broadcasting Co. had the following to say:

> The error in intermixture must therefore be corrected insofar as practicable.

I concur completely with RCA, NBC, and ABC that the deintermixture must take place immediately. However, I disagree with their theory that where there are three VHF's in a market they should not deintermix. I contend that if a UHF cannot survive against one VHF in a market, how can it survive against three VHF's in a market? Therefore, deintermixture must take place also in markets where there are three V's or more.

However, the deintermixture must be by making VHF's available to the UHF stations in those markets, whereas the opposite should occur in markets where there are fewer than three VHF stations; that is, they should become all UHF.

As I have pointed out, there are many tools that can be used to facilitate deintermixture, but unless the apparent attitude of the Federal Communications Commission is immediately changed toward deintermixture, a nationwide competitive television system is doomed, and the television industry will continue with an economy of scarcity and we will never have a nationwide competitive television system, and this scarcity will have been created by a branch of the Government of the United States, the Federal Communications Commission.

Since the Federal Communications Commission has refused in many instances to correct its error of intermixture, it seems that we, the UHF operator and the television industry as a whole, to grow to a large successful competitive enterprise, must rest our case in the hands of the Senate Interstate Committee, with the hope that you will recommend deintermixture to the Federal Communications Commission to such an extent that they will be obliged to follow the recommendations of either this committee or, if necessary, to have this committee cause to be passed legislation through the Congress of the United States, to require the Federal Communications Commission to deintermix UHF and VHF.

Mr. Cox. Just one question, Mr. Patterson. It is your position, as far as the necessity of deintermixing a market which has multiple V's in it, such as San Francisco, that, after your experience there, the availability of additional U's in that market for possible future allocation will never be taken advantage of because no one is going to undertake what you have tried and been unsuccessful at?

Mr. Patterson. I believe that is correct; and further evidence is that channel 20 has been a CP holder even longer than we have been a CP holder, and they have never constructed. With our experience, I don't feel that anyone else is going to try to utilize the other UHF facilities.

Mr. Cox. So the only way to get a fourth facility in San Francisco is to place some kind of a V channel there, whether it is one now in Fresno, or is a drop-in V, or whatever it may be?

Mr. Patterson. That is correct. There is one relatively simple way that one could be brought into San Francisco. Channel 12 has recently been allocated to Fresno. It can be moved to San Jose, which they are presently on 11. That is not much of a move from 11 to 12. Their present equipment could be readjusted. 11 can be moved to San Francisco, and thereby deintermix both Fresno and San Francisco. I am sure there are many such cases all over the country similar to that.

Mr. Cox. Would that meet the Commission's standards for adjacent channel separations?

Mr. Patterson. It is slightly under their present requirements of adjacent channels by a matter of relatively short distance; but it seems to be the contention of the Commission that they are going to reduce these separations in their present proceedings.

Senator Pastore. Any questions, Senator Ervin?

Senator ERVIN. No.
Senator PASTORE. Senator Thurmond?
Senator THURMOND. No.
Senator PASTORE. Thank you very much.[1]

Our next witness is John W. English. Certainly, it is not the purpose of this committee to tell you how you should present your papers here, but I am pretty much convinced that as time grinds on here, all those who are taking the position that has just been stated by the last witness are more or less all going to be saying the same thing in different words.

I mean, is there any way of getting these statements in the record and having summarization? I mean, pointing out the high spots, using more or less different language to express the same thoughts. Otherwise we have to sit here and listed to 12, or 13, or 14 pages read off. How many more witnesses?

Mr. COX. One.

Senator THURMOND. Mr. Chairman, I was rather impressed with the way Senator Ellender conducted the agriculture hearing down in South Carolina. All of them wanted to come up and air their opinions over, and it was just complete repetition. So he confined them to anything new. If you have got a new idea, give it to us. In that way he shortened the hearings tremendously.

Senator PASTORE. I would like to see these statements get in the record. Do you feel that you have got to read all your statement, sir?

STATEMENT OF JOHN W. ENGLISH, WNAO, RALEIGH, N. C., AND WSEE, ERIE, PA.

Mr. ENGLISH. Senator, I don't have to read it all by any means. But there are certain positions that we have taken here that I believe at least in part answer some of the questions that you have previously asked. Whether our answer is correct, of course, is perhaps a matter of opinion.

Senator PASTORE. And you can't do that without reading every word in the statement?

Mr. ENGLISH. I do not have to read every word in the statement, no, sir, and I will be happy to abridge it just as much as possible. Would that be agreeable to the Senator?

Senator PASTORE. It certainly would be convenient for the committee because we are trying to conclude this hearing to the advantage of all parties concerned. Of course the important thing here is to make a record. We make a record by allowing the statement to be printed in its entirety in the record, and then you can comment on the high spots, because it isn't a question of convincing these gentlemen who take the time to come here and listen to you, it is the idea of making the record here for the people who don't have the time to come here and can study the record.

Certainly the statement is going to be in the record whether you read it word for word or have it inserted.

Then that gives you a chance to actually emphasize the points that you think are more important.

Mr. ENGLISH. I will be very happy to do so.

Senator PASTORE. That will be all right? Without objection, this statement will be made a part of the record in its entirety.

[1] See p. 1009 for additional testimony of Mr. Patterson.

(The prepared statement of Mr. English is as follows:)

PREPARED STATEMENT OF JOHN W. ENGLISH, WNAO, RALEIGH, N. C., AND WSEE, ERIE, PA.

Mr. Chairman and members of the committee, please accept my appreciation for this opportunity to appear before the committee representing the stations in which I am interested.

For the sake of the record, I am president of Sir Walter Television Co., operating WNAO-TV on channel 28 in Raleigh, N. C., serving the Raleigh-Durham market. I am a stockholder, director, and general counsel of Great Lakes Television Co., operating WSEE, channel 35, Erie, Pa. As UHF operators in these 2 markets we face 2 different situations which, when described together, run the gamut of the problems of the UHF industry. Our case is thus particularly illustrative of the overall allocations problem, and it should be of great interest to this committee.

In Raleigh, we were the first station in the market, but we are now faced with dominant and destructive VHF competition. In Erie, on the other hand, we were the second station coming in against a prefreeze V, and we are also faced with dominant and destructive VHF competition.

In both markets, we are proud of excellent operational staffs, first-rate physical facilities and superior programing.

In both of these markets, our stations enjoy primary affiliation with and the wholehearted cooperation of the Columbia Broadcasting System, and we also have a secondary program arrangement with the American Broadcasting Co., and show certain programs of the National Broadcasting Co.

In Raleigh, we start programing at 6:45 in the morning until midnight, and have an almost solid network lineup. In Erie, we start programing at 11 in the morning and also enjoy an almost solid network lineup. I am submitting for the record as appendices A and B the program schedules of WNAO-TV and WSEE. And I am distributing 1 copy of pictorial views of our facilities.

[These items will be retained in the committee files.]

The combined Raleigh-Durham market is roughly the 80th market in the United States. The Erie market is the 89th market in the United States. In Raleigh itself, our conversion ratio is in excess of 90 percent and in Durham and the surrounding area, in excess of 60 percent. In Erie, our conversion ratio is in the neighborhood of 50 percent.

It cannot, therefore, be said that in either case we are in an inadequate market, have inadequate facilities, poor programing, an unbusinesslike staff or a failing in the will to fight.

In both markets, however, we have the dubious distinction of having accumulated losses for each station in excess of $300,000. In Erie, we are still losing money. In Raleigh, after tremendous efforts, we are little better than breaking even.

We went into this business in reliance upon the inherent promise of the sixth order and report, that UHF and VHF could exist side by side in the same areas. There has been much discussion here about what was meant by that report, but to us its meaning is typified by the Commission's language in paragraph 197 of that report, which reads as follows:

"Because television is in a stage of early development and the additional consideration that the limited number of VHF channels will prevent a nationwide competitive television service from developing wholly within the VHF band, we are convinced that the UHF band will be fully utilized and that UHF stations will eventually compete on a favorable basis with stations in the VHF. The UHF is not faced, as was FM, with a fully matured competing service.

"In many cases UHF will carry the complete burden of providing television service, while in other areas it will be essential for providing competitive service. In view of these circumstances, we are convinced that stations in the UHF band will constitute an integral part of a single, nationwide television service."

All of this has proved to be only wishful thinking.

Nevertheless, in reliance on that decision, we invested more than $1,300,000 in the two stations and we have lost more than $650,000 in trying to make UHF work in the areas of Raleigh and Erie.

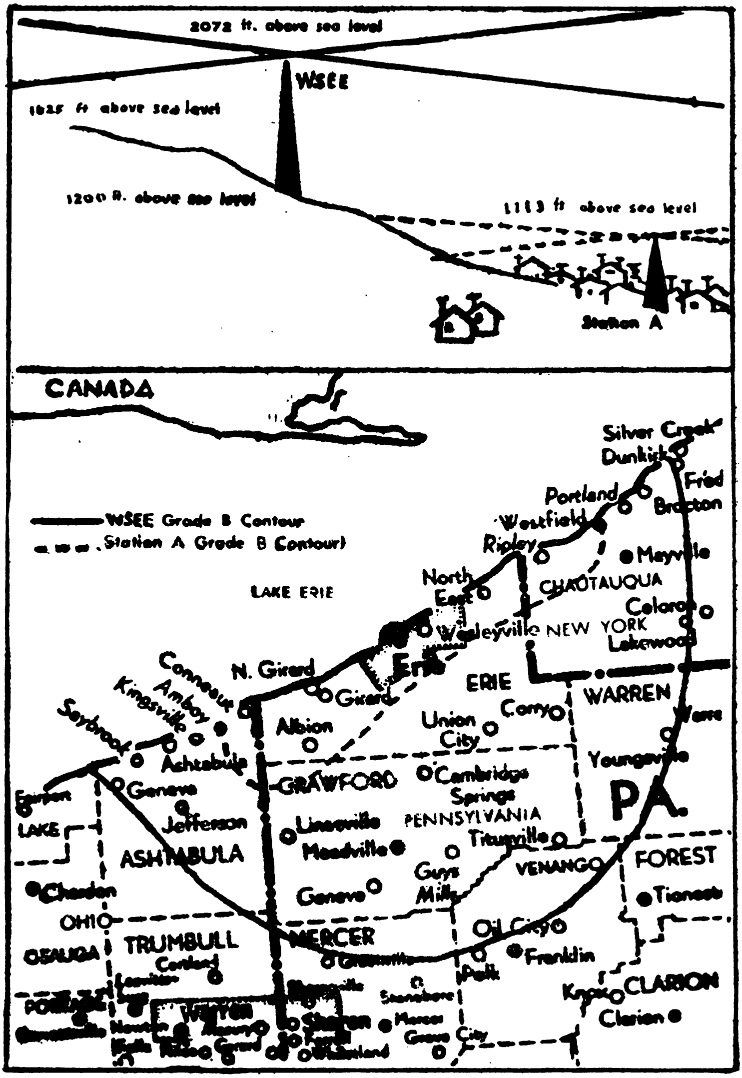
After we began operation in both Raleigh and Erie, we realized from actual experience that the receiver circulation and other problems inherent in intermixture were so great that a basic allocation change was required. Just what are these problems?

The basic problem faced by UHF stations is that most receivers can receive only VHF signals.

It is a question of set circulation since there are never as many converted receivers as there are VHF receivers. Also there is a tendency in the present atmosphere of skepticism about UHF to look with great doubt on UHF claims and at the same time to accept with almost childlike credulity the most exaggerated claims of VHF operators in the same markets.

This magnifies the real difference. Thus, while in Erie we claim 93,000 sets, the VHF station claims 222,000 sets. This is in face of the fact that in that market we cover a larger physical territory with superior facilities. You can see below comparable coverage maps of the two stations.

(The map referred to is as follows:)



In Raleigh our claim of 140,000 sets is contrasted with the VHF claim for Durham of 285,000 sets. This means that we must sell a better product at a savagely lower rate. Local advertisers know the truth and I submit herewith as appendix C the results of a recent drive in the Raleigh-Durham market. This shows incidentally that we are proved to serve many small merchants in the surrounding communities. But the mists generated in Washington have clouded the thinking of time buyers in New York.

(This item has been retained in the committee's files.)

The Commission has so little understood the basic problem that it has discussed yet other channels to be inserted in our picture. So-called VHF channels taken from the military and FM to be turned over to us as their concept of an answer. We are to abandon our hard-won UHF circulation and start over with no circulation. In malice I would like to suggest such a channel for the channel 5 applicants in Raleigh. But in charity I would not wish even my opponents to have such a disastrous assignment.

Suffice it to say that such a new channel could not survive against either an established VHF or UHF in the same market. So that we would then reach the truly fantastic solution that we would require not only deintermixture of UHF and VHF, but also a further category of deintermixture of the new V's, from the old V's and the U's. We would not only have a narrow gage and a broad-gage track but an intermediate gage besides.

The solution to the receiver circulation problem is principally in the hands of Congress. We ask you to create, in effect, a tariff for the protection of this industry, by reduction of the excise tax on all channel receivers (or an approximation thereof) to 5 percent, and by increase in the tax on VHF only receivers to 15 percent. This would mean that all sets manufactured in the future would be all-channel receivers.

As far as the consumer is concerned, by the testimony which was before this committee 2 years ago, he would have to pay no more, or perhaps less, for an all-channel set than he has to pay for a VHF only receiver at the present time.

This provision would cause no substantial tax loss in the long run. We believe that any minor losses to the Government inherent in tax reduction are justifiable for the preservation of this industry; and such losses would be only temporary because the greater circulation of sets resulting from the opening up of more and more TV service would rapidly reduce any revenue loss.

That is the long-range solution.

Equally necessary as a part of the whole plan is immediate action to make facilities in each market compatible. To accomplish this we recommend deintermixture in areas such as Raleigh and Erie. Where UHF is now strong and could grow yet stronger the market should be maintained as all UHF, but where UHF is at a standstill, the Commission by reverse deintermixture should make available more VHF channels in such markets.

WNAO-TV in Raleigh filed the first petition for deintermixture in the United States. Our petition was filed before any VHF station was on the air in that market. That petition was denied, and channel 11 in Durham was allowed to go on the air.

We subsequently filed for deintermixture for Raleigh alone where chanenl 5 is still in hearing status. That petition was also denied without reaching the merits of our petition. We have asked for permission to intervene in the Raleigh channel 5 case. That also has been denied.

We filed a petition for allocation of another VHF channel to Erie. This was also summarily denied.

We have filed our proposals again in the present so-called nationwide allocation proceeding. I am submitting as appendixes D and E, copies of these proposals.

(These items have been retained in the committee's files.)

We do not anticipate that our proposals will be considered in the proper atmosphere. Every action except one that the Commission has taken on petitions, proposing help for UHF, has been directed against UHF. The only exception was one much criticized—the right of networks to own some UHF stations. That slight reprieve for UHF can offer little solace to an independent operator.

Every other action of the Commission has evidenced an obstinate desire to destroy UHF, ever greater coverage for VHF, an ever greater attitude of discouragement for UHF. Either the Commission is ignorant of what it is doing, and on that I can, in charity, make no comment, or it is operating under the fundamental error that UHF should be eliminated.

If so, it should have the courage to come out and say so, and we can meet the issue squarely. In our markets and in many others every legal attempt has been made to obtain redress from the Commission. Every petition has been dismissed without judgment on the merits, with great tenderness for the equities of VHF applicants, with total disregard for the equities of VHF applicants, with total disregard for the equities of our own organization. I have never before realized how far administrative procedure can depart from commonsense due process.

It is significant that the thinking of the Commission has so far changed from the language in paragraph 197 of the sixth report that in the initial decision of the hearing examiner, in the Raleigh channel 5 case, handed down the 19th of April 1955, channel 5 was termed "the dominant TV medium" in the Raleigh area. That means that it is now taken for granted by the Commission that a potential VHF will be the dominant TV medium in a given area. I understand that certain Commissioners have advocated doing away with UHF altogether. That type of thinking is utterly wrong. UHF is every bit as good as VHF. It is subject to artificial disadvantages, however, that could be overcome by applying the principles advocated by us.

We believe that if the Commission does not take positive, immediate, and strong action to assure that UHF will survive and grow strong, the country will be left with only a handful of stations, and the fault will be squarely on the Commission.

What is the choice before Congress and the Commission? It is really the choice between a competitive TV system in the American way and a neat, orderly, regulated, assigned public-utility concept which would create inherent tragedy and ultimately destroy a great industry as we know it. In this fight we feel that we are fighting not only for our own stations in which we have a great stake, but we are fighting for a truly competitive, diversified, nationwide television system for the people.

Network investigations and network or station regulation will not be necessary if enough channels are available to insure competition. But if there are only a few regional stations, investigation, regulation, and an iron straitjacket will be found on our industry. I prefer my poker with reasonable rules, but I don't want to sit in a game where the cards are marked against me. UHF television is that type of game.

There has been much discussion of how to provide service to everyone, but service is not merely the picture on the screen. Service is the possibility of a local picture on the screen. If the Commission crucifies the United States on a V-shaped cross, it will forever deny to hundreds of communities the possibility of local TV stations, and in the development of the art that possibility clearly lies in the future, if UHF survives. Is the Commission so omniscient as to say that the United States will remain forever in its present pattern? There are small communities now in the South and in the West, particularly, which may soon be great communities. Such communities should be entitled to local television. These new areas, and many existing markets, will have that service denied them if UHF does not survive.

Let us make another thing clear, UHF cannot survive in a few isolated areas. There cannot be a few UHF islands in a sea of VHF. It must be some VHF islands in a sea of UHF. That is the way the spectrum is allocated, and that is the way the geography should be.

Finally, as to our specific recommendations for our cities, in Raleigh-Durham, we want the Commission to withhold a grant on channel 5 until it sets down the rules, the final rules, under which we have to operate. We do not care if another station comes in; let the winner of the present hearing come in as a "U," and we will meet their competition on equal terms. This will strengthen UHF. If later, in its ineffable wisdom, the Commission decides that eventually channel 5 should be in Raleigh, as part of an overall assignment, let them grant it, but give us justice at the same time.

In Erie, now a VHF market, the Commission should grant us permission, as we have requested, to operate with a directional antenna on channel 6. Fortunately, Erie, geographically, is an excellent market for such an operation.

But let's not tie these actions to a distant and nebulous future. We have hard business realities to face. We are running up losses that may never be recouped. We cannot long continue to suffer such losses. We want to know, are they going to do something or aren't they? We wanted to know it months ago. And we still want to know it.

Mr. English. Senator, at the outset, I am representing here two television stations, both of them UHF stations, one in Raleigh, N. C., and the other in Erie, Pa. I am president of the Raleigh station, and I am general counsel of the Erie station. They are both high-powered stations in the sense that they have some 185,000 watts effective radiated power.

In Raleigh we have about a 90 percent conversion ratio. We were the first station on the air there. In Erie we went on the air as the second station against a prefreeze V, and therefore we have all of the problems inherent in that situation.

In both stations we have staffs, facilities, physical and otherwise, and studios that are actually superior to the VHF competition.

Senator POTTER. What is your rate of conversion in Pennsylvania?

Mr. ENGLISH. In Pennsylvania it is roughly 50 percent, sir. When I say 90 percent in Raleigh, bear in mind that goes down to, say, some 60 to 65 percent in Durham, 22 miles away, and would vary, depending on the direction of the signal, because VHF competition gets stronger toward Greensboro and Greenville, N. C., where there is a VHF signal coming toward Raleigh.

Senator PASTORE. How much competition do you have in Raleigh? How many stations?

Mr. ENGISH. Channel 11 in Durham, 22 miles away.

Senator PASTORE. That is a V?

Mr. ENGLISH. That is a V, direct competition. We have secondary competition from channel 2 in Greensboro, which is, however, 65 miles away, and channel 7, I believe it is, in Greenville—again some 70 miles away. But it is a fringe proposition.

In Raleigh itself, channel 5 is in contest, and we are one of the stations which has taken the position that channel 5 should not be popped in on top of us after this period of time, but rather that the winner of the channel 5 situation should be given a U until at least we know the final rules we are going to operate under.

When those rules are solidified, you might say, then we will operate according to the rules as we know them now. Under the present state of the situation, sir, the uncertainty of the national situation is our biggest problem.

Senator PASTORE. Let me ask you this, Mr. English: If that new channel coming to Raleigh were a U instead of a V do you feel that the citizens of the area would be given the best type of television reception?

Mr. ENGLISH. Yes, sir, and I will explain that in several ways. First of all, we have an excellent terrain, a beautiful terrain, Senator.

Senator ERVIN. All of North Carolina is that way.

Mr. ENGLISH. We have an excellent terrain from the viewpoint of UHF. Our signal, we feel, is actually superior to a VHF signal under the same approximate given circumstances. If we are given the least modicum of encouragement, we will improve it yet further. But actually a U coming in there can be just as good a job as a V.

Senator PASTORE. Why will the V hurt you? If you have 90 percent conversion and the people who are seeing your programs now have sets on which they can either view a U or a V as they choose, and you say that the U gives you such wonderful reception, then why do you object to a V coming in? I am not being critical, I am just trying to get this on the record. What difference does it make to you?

Mr. ENGLISH. The largest hurt in the present state of the situation, you might say, is not a hurt as far as the local individual or as far as the local advertiser is concerned, but as far as the national advertiser is concerned.

Senator Ervin. It is difficult for a U station to get the national programs where there is a V station; isn't it?

Mr. English. Let me point out something of some interest. I would like not to trespass upon your patience, Senator, but——

Senator Pastore. I have all the time in the world. Don't apologize for our time. We are being paid to 6 o'clock. Don't apologize for taking up our time. That isn't the question at all. I hope we are not misunderstood on that.

Mr. English. I feel I have some things to say here that will be refreshing or otherwise.

Senator Pastore. Go ahead and say it.

Mr. English. Here is what we are talking about. The basic problem faced by UHF stations is that most receivers can receive only VHF signals. That is the general overall national problem. It is a question of sufficient circulation, since there are never as many converted receivers as there are VHF receivers. Even in Raleigh where we have 90 percent, you still have that 10 percent.

Also there is a tendency in the present atmosphere of skepticism about UHF to look with great doubt on UHF claims and at the same time to accept with almost childlike credulity the most exaggerated things that VHF operators say in the same market.

Senator Pastore. In other words, the argument you are making, Mr. English, is this: That even at best, even though you have 90-percent conversion, there is a margin of 10 percent, and that margin of 10 percent means that this new station that comes into the field brand new will have an advantage over you, who have been working that district, by getting better programs from the networks.

Mr. English. That is right. Let me go on. I think I can bear this out with specific examples. This magnifies the real difference. In other words, the acceptance of any UHF claim over a VHF claim actually magnifies the real difference.

Thus while in Erie we claim 93,000 sets, the VHF station claims 222,000. That is what you take to New York with you. This in the face of the fact that in that market, we cover a larger physical territory with superior facilities. You can see this from comparable coverage maps of the two stations which I have in my statement. Actually our tower is higher. Erie is surrounded by a ridge and our signal goes over the ridge and theirs doesn't. Yet the 222,000 claim is accepted, and our claim would be looked upon with great skepticism. That makes it not easy to sell.

Senator Pastore. In Erie, were you there with U before the V came in?

Mr. English. No, sir; that is where we are fighting the uphill fight. In Raleigh, our claim of 140,000 sets is contrasted with a VHF claim for Durham of 285,000 sets. This means that we must sell a better product at a lower rate. Local advertisers know the truth and I submit herewith an appendix C which reflects the results of a recent drive in the Raleigh-Durham market.

In this appendix C, which you all have, we have got 287 new accounts. It is interesting to point out that these are the places where the advertisers were located. In other words, there were advertisers buying our station from surrounding communities, so that there was a pretty good signal there, and these advertisers, local advertisers, were buying our station. But that doesn't sell us in New York.

We can sell locally, and as a matter of fact we are very proud of the fact that we have outsold our VHF competition on the local level consistently.

Senator POTTER. What network do you have there?

Mr. ENGLISH. CBS, sir, in both markets.

Senator POTTER. And Durham has NBC?

Mr. ENGLISH. NBC, that is correct, sir.

Senator POTTER. I assume your fear would be that if this new channel should be allocated in Raleigh, that you would lose your CBS affiliation?

Mr. ENGLISH. That would be a fear, but we have had every assurance that CBS will stay with us. We certainly hope that they will. They have been enormously cooperative with us. In both of these markets we would like to pay a tribute to the fact that CBS has done a terrific job for our UHF stations. They have done a great job, and as a matter of fact, in Erie they left the V, where they were primarily CBS, and came to us, which is a rather extraordinary situation.

Mr. COX. But business conditions might finally force them to make a change?

Mr. ENGLISH. Business conditions could very well change that, and of course without CBS, we could go bury ourselves someplace.

Mr. COX. Do you get paid for the CBS program that you carry?

Mr. ENGLISH. Yes, sir. And as a matter of fact, I submit on this point an appendix A, which is the program schedule of WNAO, which shows that we go on the air at 6:45 in the morning, and stay on until midnight, and we have a very substantial lineup—with two exceptions we have all of the major CBS programs.

In WSEE in Erie, which is another affiliate, we have all the CBS programs. Could we incorporate this?

Mr. COX. It can be incorporated by reference to the fact that it is in the files of the committee, so that anyone wishing to see it can come and pick up one of the copies.

Senator PASTORE. In other words, this exhibit that Mr. English is talking about will be a part of the record and be held in the files of the committee, and will be referred to in the record so that anyone that is interested in it could handily look at it.

Mr. ENGLISH. Yes, sir. Thank you, Senator.

(The document above referred to was incorporated by reference, and will be filed in the committee files.)

Senator ERVIN. What would you say as to the difference between the capacity of advertisers to buy advertising sold for a U station as contrasted with a V station?

Mr. ENGLISH. I am not sure that I understand your question. You mean the rate, sir?

Senator ERVIN. Yes.

Mr. ENGLISH. Our rate is substantially lower than the V.

Senator ERVIN. Your advertisers in these communities here, do you anticipate that if you had only a V station there that they would be able to get advertising at the same rate?

Mr. ENGLISH. I frankly believe, sir, they would find it almost impossible to afford to advertise on a V station, particularly because—the V station is a splendid operation. I don't mean in this testimony to attack either of the opponents. But the V station right now is loaded with national advertising. We are not. We have been fortunate in getting probably a fair share for a U station.

Senator PASTORE. In other words, what you are saying, Mr. English, is the your U gives you perfect reception in your locality?

Mr. ENGLISH. That is correct, sir.

Senator PASTORE. And that you are not objecting to the station coming in so that the public may have 2 instead of 1?

Mr. ENGLISH. Not at all.

Senator PASTORE. But your argument is that if it does come in, it ought to be the same kind of a station as you have. It ought to be another U.

Mr. ENGLISH. Senator, let us put it simply this way: We are perfectly willing to compete with anyone on an equal basis. But we don't want to have the cards marked against us, and in this game, right now, we are playing poker with marked cards against us in UHF television.

Senator PASTORE. Would you take the position that the viewer will be injured if the U makes it in Raleigh?

Mr. ENGLISH. No, sir. And let me tell you why again, because you have Greenville, you have Greensboro, you have a station in Bethel, which is a UHF station; you have a station in Wilmington; in rural North Carolina, for example, they can get us or they can get someone else with a beautiful picture. You have little Washington, N. C., so that actually North Carolina is covered like a tent, and it is well covered. It is a very fortunate State, certainly in the eastern part; we put it that way, because the western part, due to terrain difficulties, as was testified by Mr. Thoms, has many difficulties that are not inherent in the eastern part, the Piedmont, and the coast.

Senator PASTORE. Have you objected to channel 5 coming in?

Mr. ENGLISH. Yes, sir. I will review that for you.

Senator PASTORE. No. I don't want to get into a case here now.

Mr. ENGLISH. Let me say this, Senator: We were the first UHF station in the United States to put in a petition for deintermixture. For good or bad, we feel that we helped to hatch the egg. That was denied before channel 11 went on the air in Durham.

Then subsequently we filed a petition for deintermixture in Raleigh alone, and that was denied. Then we filed a petition to intervene in the channel 5 fight, and that was denied.

So we feel—and I will be perfectly frank, Senator, in saying that I have never felt before that administrative process could so far depart from commonsense due process, because we feel that we have used every legal procedure within our power other than this appeal to Congress, to have some opportunity of preserving our property.

Mr. COX. Did you ever get a hearing from the Commission on that matter?

Mr. ENGLISH. No; we have had no hearing on the merits whatsoever and no decision on the merits whatsoever.

Senator PASTORE. If the Commission decided to drop in a U instead of a V in Raleigh, you would remove your objections?

Mr. ENGLISH. Yes, certainly, as far as the U was concerned; absolutely. As a matter of fact, there is an available channel.

Senator, you have asked a number of questions here. We have certain specific recommendations which we would like to present to the Commission. On page 6 of the statement here, it is suggested that the solution to the receiver circulation problem is principally in the hands of Congress.

We ask you to create, in effect, a tariff for the protection of this industry, by reduction of excise taxes on all-channel receivers or an approximation thereof to 5 percent, and by an increase in the tax on VHF-only receivers to 15 percent.

This would mean that all sets manufactured in the future would be all-channel receivers.

If you recall, Senator, in the previous hearings before this committee, the suggestion was made to remove the excise tax from all-channel sets. Actually that was opposed, if I recall, by the Treasury Department on the basis of the fact that it would constitute too great a financial loss.

I am suggesting a reduction, not a removal, which would cushion the financial loss to the Government; but at the same time the 15 percent wouldn't mean anything because frankly they wouldn't manufacture any VHF-only sets with a 15-percent tax. They would manufacture all-channel.

As far as the consumer is concerned, by the testimony which was presented before this committee 2 years ago, he would have to pay no more or perhaps less for an all-channel set than he has to pay for a VHF-only receiver at the present time.

This provision would cause no substantial tax loss in the long run. We believe that any minor losses to the Government inherent in tax reduction are justifiable for the preservation of this industry, and such losses would be only temporary, because the greater circulation of sets resulting from the opening of more and more TV service would rapidly reduce any revenue loss.

That is the long-range solution. When I say long range, it is understandable that by the obsolescence of TV sets as they now exist, that would mean that all sets would be all-channel in roughly 5 to 7 years, although long prior to that time you would have a very substantial circulation of all-channel sets in all markets. So the other allocation problems would be substantially reduced.

But that is long range. Equally necessary is immediate action to make facilities in each market compatible. To accomplish this we recommend deintermixture again in areas such as Raleigh and Erie. Where UHF is now strong the market should be maintained as all UHF. That is our position in Raleigh. But where UHF is at a standstill, the Commission, by reverse deintermixture, should make available more VHF channels in such markets.

I am not going into the long history of what we have done in Raleigh to try to accomplish that. May I say this. We do not anticipate that our proposals—these proposals that have been offered as part of the record, that we filed with the Commission—will be considered in an altogether favorable atmosphere.

Every single action that the Commission has taken, except one, on UHF has been against UHF. The one is the matter that was much criticized of allowing networks and other large operators to have two more UHF stations. That helped UHF a bit, but it isn't much solace to an independent operator such as we are.

The Commission has had an obstinate desire to destroy UHF, certainly judging by its actions. It has given ever-greater coverage to

VHF—high towers—an ever-greater attitude of discouragement to UHF.

Either the Commission is ignorant of what it is doing—and on that point I make no comment—or it is operating under the fundamental error that UHF should be eliminated. If so, it should take the courage to come out and say so, and we can meet the issue squarely. In our markets and in many others we have taken every legal recourse and we have gotten nowhere.

Senator ERVIN. Let me ask you a question on that. If you could be granted a V station in Raleigh, would that remove your objections to channel 5?

Mr. ENGLISH. Of course it would remove our objections to channel 5, Senator. Frankly we would be very, very happy with a V station in Raleigh. Let me say, however, that the granting of a V station in Raleigh would take care of our problems and we would be very happy and very grateful to the Commission and anyone else who could help us.

But it would not solve the national problem.

Mr. COX. Doesn't it present some engineering problems that are a little greater than the reverse process would be?

Mr. ENGLISH. That is correct. It would present the separation problem. It would present the possible necessity of a directional antenna. Almost every V channel that would be available there would have a slight, not perhaps too serious, but a slight difference in the separation distances involved with cochannels elsewhere.

Mr. COX. Doesn't it also more or less create a top limit, then, of two stations unless you can squeeze in another V? Whereas with U's, there is room to grow because they are rather plentiful?

Mr. ENGLISH. That is correct, sir. Here is the basic thing you are faced with, and it is very basic. What is the choice before the Commission and before this Congress? It is the choice between a competitive television system as we hope it to be and a neat, orderly, regulated public-utility concept. That regulated public-utility concept will have in it inherent tragedy and would destroy television as we know it now.

The only way that you are going to have truly competitive television is to have sufficient channels available. We have discussed, Senator—you have discussed many times—the possibility of network investigations. Network investigations are not necessary. If you have sufficient channels available to allow for true competition between the various networks, to allow room for the growth of programs of another network, certainly to allow room for the growth of local television stations the way they should be allowed to grow——

Senator PASTORE. It stands to reason, doesn't it, that if every locality in this country had 4 channels and you had 3 networks, you would not have any problem about investigating the networks. The competition would take care of itself.

Mr. ENGLISH. Absolutely. They would be fighting for the business.

There has been much discussion about how to provide service, to offer everyone service; but service is not merely the picture on the screen. In other words, there has been a great deal of worrying about whether someone at a certain distance will get a signal and so forth. But it is a lot more than just having a signal. Service is the possibility of a local picture on the screen. If the Commission crucifies the United States on a V-shaped cross, it will forever deny to hundreds of communities the possibility of a local TV station; and in the development of the art, that possibility clearly lies in the future if UHF survives.

Let me say there, Senator, that with the development of all-channel tuners—those will develop with the ingenuity of the manufacturers if they have a reason to develop them—with the development of better antennas, they will also be developed; and incidentally, UHF antennas are not bad at all; in many ways they are better than VHF antennas.

Finally, with the development of modern methods of television, local telecasting, you can bring the cost of this thing down to the point where some communities in our area, Senator, in Goldsboro, in Rocky Mount, in a lot of other communities 50 miles from Raleigh, will never have local television unless UHF survives. They have all got UHF allocations, but they will not be worth the powder to blow them to kingdom come unless something is done about the national picture.

Another matter: UHF can't survive as a few little islands. If we do a fine job in Raleigh—and I think we have done it—we can't get anywhere in Raleigh and in Norfolk and in Wilkes-Barre and in South Bend and a number of other places where UHF has done pretty well; we can't get anywhere if that is UHF.

First of all, the UHF receiver, as I pointed out, has to be a nationwide thing and it can be, without costing any money to the consumer. That is item one.

Item two: If you preserve UHF as we know it now, and if you tell the advertiser in New York—and don't blame him because he has had every reason to be discouraged just as we have; we would be dead if we weren't bullheaded—if you give him some encouragement, he will advertise on UHF stations, particularly when he knows they are good. He does it now, but he doesn't do it often enough.

We want the Commission to withhold in Raleigh-Durham a grant on channel 5 until it sets down the rules, the final rules, under which we have to operate. We don't care if another station comes in.

In Erie, which is a VHF market, we want permission, as we have requested before, and were turned down by the Commission, to operate on a directional antenna on channel 6. Fortunately, Erie is a good place for that. There is only one other thing I would like to mention that I skipped over here, Senator, and that was that the Commission and a number of other people have talked about giving us some channels from the military, the FM. Actually, that is out of Alice in Wonderland, because if you have those channels, those channels couldn't compete with an established U.

If I had malice in my heart, I would suggest that you give that type of a V channel to our opponents on channel 5 in Raleigh. But I wouldn't even wish our opponents such a disastrous assignment. Let me say that you remember the old days in the railroad industry, we used to have narrow-gage and broad-gage tracks. Here they are giving us narrow-gage, broad-gage, and intermediate-gage tracks when they are talking about some of these peculiar V's, so-called.

I thank you for your courtesy.

Senator Pastore. You have been very nice, Mr. English, and have cooperated with the committee. We thank you very much.

Mr. Fillips? First of all, Mr. Fillips, do you want your statement to be made part of the record in its entirety?

STATEMENT OF NICK FILLIPS, WDAV, PITTSBURGH, PA.

Mr. FILLIPS. Yes, sir; both statements.

Senator PASTORE. Without objection, that will be done at this point.

(The prepared statement of Mr. Fillips is as follows:)

STATEMENT OF NICK FILLIPS, WDAV, PITTSBURGH, PA.

My name is Nick Fillips. I was born in Pennsylvania, and reside in the city of Pittsburgh.

First, I want to thank you for this chance to testify. We hope, from the matters presented in this forum, that there may be a better understanding of the problems confronting those broadcasters who operate television stations on what are commonly called the ultrahigh frequencies.

I have studied the UHF problem for the last 8 months. I have talked with station owners, Commissioners, and manufacturers of UHF equipment. I cannot see why UHF cannot be successful. According to a good many of these station owners and station representatives who come before the FCC Commissioners, they are all complaining about UHF and what are the FCC Commissioners going to do for them? As you know, UHF has problems, and the easiest way to solve these problems is to find out the main reason for this failure. I have talked to station owners in the different parts of Pennsylvania. In mixed markets where NBC and CBS carry the two stations, if a third station is in the area, he has no network affiliation, so in order to survive, he must solve the necessary problems to compete with the network shows. Therefore, this calls for a UHF network to produce shows to feed to the stations that are not network affiliated.

UHF's No. 1 problem is power for coverage. Now that the FCC has allowed UHF to go to a million watts, which costs around $250,000, it is more to be added to the station.

No. 2 is the problem of converters. Take, for instance, a market like Pittsburgh, Pa., where there are 700,000 VHF sets in the area and only 300,000 are UHF, so this is a question of conversion. To add a UHF converter and a UHF antenna to pull in the UHF station the average family must spend $50 to $60 more. Before they spend this kind of money they do without it. So UHF is at a standstill. I have contacted several companies who make UHF converters and antennas and they are able to come up with a converter and antenna to be sold to the local people for $5.95 and $9.95. This converter and antenna can be installed by the individual owner of the set without the cost of hiring a serviceman to connect it.

If the average station owners had worked these problems out in the beginning, and gone into these little details, such as converters, power, etc., they would not be in the position they are today. Although it is not the fault of the UHF station owner, it is the fault of the television manufacturer, who did not put UHF and VHF converters in the set when it was sold to the public.

I have also contacted a good many families, and you can go into 10 different homes and say to the average man and his wife, "What is the difference between UHF and VHF?" Eight out of ten will say, "I do not know." Therefore the public has not been educated to the difference between UHF and VHF. Had they been, they would surely demand a UHF and VHF converter on their sets when they purchase them.

It is the duty of the FCC Commission to allow one of the Commissioners to educate the people, so that when buying a television set they will be sure their sets will convert to UHF and VHF. Therefore the average person would not have to spend an extra $50 to $60 to pull in a UHF station.

Most families who are working in Pennsylvania and have 3 or 4 children can hardly afford to keep their families going on the salary they are making, let alone spend an extra $50 to $60 after having paid $200 to $300 for their television set.

I have personally spoken to the heads of families, and feel that, if the Commissioners would appoint somebody to do the same not only in the city but in the suburbs, and ask the family if they know the difference between UHF and VHF, and whether they could pay the difference to convert their sets, their answer would be "No." But if asked whether they could and would pay $5.95 and $9.95 for a converter, they would say the price was reasonable, and they would be happy to buy one.

The No. 3 problem is that a UHF station, after having power for coverage and converters to compete and match with the VHF sets, comes the problem of sponsors. The average sponsor when buying UHF time says, "I can get good shows on VHF stations."

Therefore, in order to survive we must produce terrific shows, and shows that can draw an audience, to be able to tell national accounts that we have shows that can draw a good audience because they have top rating, and also can go one step further. We can help a small account, who wants to get in an area, merchandise his product in the market by getting mass displays of their products in different stores.

I have a plan set up, but it is not for this record. I believe, by taking a station in Pittsburgh, Pa., and producing 8 hours of local shows and feature films, we can send our show from Pittsburgh into other parts of Pennsylvania, such as Johnstown, Harrisburg, Scranton, Allentown, and the stations who have a smaller market to work from, and who cannot afford to produce these live, big shows, until their station is equipped properly, and has converters to compete with the VHF market. Thus, they can sell the local accounts, and be able to compete against some of the big shows that are being put on the air by the networks.

A good many station owners, who came to the hearing of the subcommittee, told what was wrong with the UHF market and the UHF problem, but did not try to solve the problems by going out looking for the answers. I have taken 8 months of my time to study this problem, and to work it out. I believe I now have the answer to the UHF problems. Although NBC and CBS have monopoly in all the major markets, there is no reason why a UHF network could not give them a run for their money. Until the time comes that all manufacturing companies will come out with an all-round UHF and VHF set, which will be 2 or 3 years from now, for the time being we will be on the right track to prove UHF will go forward as long as we have the same standards and the same qualifications that a VHF station has.

To solve the biggest problems, (1) is coverage, (2) is converters, to get more listeners, and (3) good live shows and films. By giving the local public good shows of interest, I am sure the average American family will be happy to enjoy them. With a good merchandising plan that we have in mind, we are also sure that we can get our budget with the national accounts.

I feel that all applicants for television stations would either build the station or turn them back to FCC. They are just sitting and waiting for someone to come up with the answer to solve the UHF problems. For the people who drop in and out, there should be also a stop to that. I feel the FCC Commissioners should give a license to the small fellow to let him get started in a business such as the television field.

Also, I want to be able to put a station on the air, with the idea to help thousands of disabled American veterans to work there. Teaching them to operate a television station, and help themselves to forget their handicaps. I have talked to many disabled veterans, those who are in wheelchairs and those unable to get around. They would like very much to get started in this type of field. We can also open a training school to teach them television work and also for them to practice. In my study, I have run across a lot of talent among disabled veterans. We can find jobs for them to do as copywriters, program directors, technicals, or musicians. There is a lot of good talent among these veterans, and I am sure we will enjoy what we are doing for these disabled boys. All you have to do to prove this point is ask a disabled veteran, who is in a wheelchair, "Would you like to work in a television station?" and you will see what answer he gives. Most of these jobs in the television field are sitting-down jobs at the controls, and the average disabled veteran, who has to spend his life in a wheelchair, will be very glad to learn this exciting work.

I believe you should give the small man a chance in this television field to do something, not for the big companies, but for the American boys who need the help but don't have the kind of money to go into a television station, as it takes a million dollars or more.

I knew ex-Commissioner Hennock was strongly in favor of education, and to help the average American person to become better educated. I feel that if we follow some of Commissioner Hennock's ideas, a small man would be able to get a start.

I am not much for making speeches, but I am bringing out true facts, as the average person would bring them out if they were to appear before you. I wish you would weigh the contents of my statement, and I would be glad to point out and produce the converter and antenna I have talked about at the cost of $5.95 and $9.95 to the average American family, until the time comes that all manufacturers of television sets will have UHF–VHF. I would also like to point out that Senator Johnson's bill for the removal of the excise tax from all UHF receiver sets will also be a big help. Let's give the American people a chance to enjoy television in their homes at a real low cost. Also, have someone appointed or sent out to 10 homes in the area, even in Washington, D. C., to ask the average family about UHF and VHF. Prove these points to yourselves.

Remember, gentlemen, there are millions of people that are in the very low bracket as far as income, and their greatest pleasure and enjoyment is television. Also, old retired people can sit at home and enjoy television. The people in Pittsburgh, Pa., do not have enough television stations, so they can have their choice of different type shows to enjoy in an evening after a hard day's work. If you want to help the average American family, let's give them television at its best, and let them enjoy good entertainment.

I also feel that if everything is put on the UHF band, that would also solve part of this problem. However, it would take 4 or 5 years to convert this to all UHF. If the FCC Commissioners can see that this change is possible, it would also help solve the problem.

It is the firm intent of the founders of National UHF Television, Inc., to locate new and budding talent wherever it may exist in the field of singing, instrumental music, comedy, operas, musical comedy, and in fact, covering every branch of the field of entertainment and to convert this talent into lucrative, professional careers. For we sincerely believe that the unknown of today, given the proper opportunity by means of television will surely become the stars of tomorrow.

It is not our intention to spring this new talent on the viewing public over national television networks only 3 acts at a time, such as is now done, but rather 150 to 200 acts weekly. This new talent will be located by us through local newspapers, music teachers, voice and dramatic coaches and training schools for the theater and concert stages, etc. We will televise these stars of tomorrow, first, to their friends and neighbors in their own States, who will be rooting for them to make good nationally, if they have shown promise to the friendly eyes and ears of their neighbors. And so you will find the little girl from Tennessee finally being acclaimed by the Nation, including the North, while the youngster from Minnesota finds national acceptance throughout our great country, including the South.

There is a great to-do in newspapers and magazines these days about the juvenile delinquency problem. Our talent search I speak of in this announcement will go a long way toward wiping out this era of juvenile delinquency as just a bad memory. The youth of today and tomorrow will be helping to support their parents at earlier years than ever before, instead of being a problem to those loved ones who brought them into the world.

You cannot show me very many stations that carry colored entertainment. Oh, yes, you will find 2 or 3 on a show, but what I am referring to is an hour show of nothing but colored entertainers. There are many good colored singers, dancers, musicians, comedians, etc. You will find young, talented entertainers looking for a chance to show their friends and neighbors just what they can do. They, too, want to see people of their own race on TV shows.

The National UHF Television, Inc., will have headquarters in Pittsburgh for western Pennsylvania and Philadelphia for eastern Pennsylvania. We will televise our shows 8 hours a day to start with and gradually we hope to be able to double our broadcasting period. Of course, we will have professional entertainment field, which I referred to above, new discoveries and also programs of athletic events such as boxing, basketball, football, and baseball games, etc., and have a complete roundup of daily news events as they happen all over the world.

We have contacted many national and local advertisers and they are ready to go to the limit in sponsoring most of our programs. But many of our programs will carry no advertising at all at the beginning, but will be sustained by our own company in the public interest.

In other words, instead of confining ourselves to just making money, this company will pour back a great deal of the gross income we will collect from the sponsors for public services and to start the new talent off on the right foot, as few large business concerns will risk expenditures in sponsoring unknown people.

Now I come to one of the most important phases of these new plans with regard to public services and that is the educational field. We will have at least 1 hour daily of interesting educational programs for youngsters, for adults who have had no schooling, and for everybody in all age groups who have had schooling or not, with televised lectures given by the greatest authorities in every subject, history, science, medicine, domestic and economics, etc.

SOLUTIONS OF UHF PROBLEMS

1. The FCC Commissioners should appoint someone to educate the public in regard to the difference between UHF and VHF television. The people should be told, when buying a television set in a mixed market, to be sure that UHF converters are on the set instead of having the poor people spend extra money to convert their set over to both UHF and VHF.

2. The FCC Commissioners should not let a UHF station go on the air unless they have greater power. These steps will help to solve some of UHF problems.

3. If converters are put out at a low cost to the public, to those who already have sets, it will be easy for them to pull in UHF stations for better programs, more listeners for their money.

4. If the Fillips plan is put in effect, UHF will be on the way to surviving and being able to give the public better television.

5. As a good test for deintermixture, Pennsylvania would be a good State in which to start. There are 49 UHF television stations allocated to the State of Pennsylvania, with only 8 VHF now on the air and 2 more to go on, but not knowing when. These 2 can be stopped; therefore, there are only 8 VHF to worry about against 49 UHF. By giving the VHF stations a year or two to change over to UHF, this can solve some of the problems for deintermixture of UHF and VHF television stations, without going at the problem all over the country.

6. The FCC should consider freezing all applications and all contract permits until this thing is ironed out, which is a very, very important step. With a little cooperation, this thing can be worked very nicely. It is up to the people who make the rules of the FCC to put a few of these new rules in action.

(The witness' second statement, a memorandum coauthored by Norman Baum, is as follows:)

STATEMENT OF NICK FILLIPS, WDVA, PITTSBURGH, PA.

The purpose of this memorandum is to set out, in a concise, manifest form the UHF problem recognized in the Plotkin report and Jones report on the Investigation of Television Networks and the UHF-VHF Problem conducted by the Committee on Interstate and Foreign Commerce in the Senate of the 84th Congress.

The UHF problem set forth herein will be limited to the survival problem that faces the individual UHF station owners. The solutions to this problem, discussed herein, are those that are recommended by the Plotkin and Jones reports and a proposed solution by Mr. Nicholas Fillips for the UHF problem in the State of Pennsylvania.

Television stations are licensed to operate in the public interest, but in order for the station to sustain and maintain this obligation, they are permitted to protect their private interests by selling time on their facilities.

It is the sale of time which enables the station operator to survive economically and fulfill his obligation to serve the public interest. The future of UHF lies in economics. The stations are financial enterprises which exist only when the station owners can earn a profit and serve the public interest.

The specific problems faced by UHF are as follows:

1. Programing. The problem of programing consists of obtaining popular programs which would induce advertisers to sponsor or spot announce the program. The UHF station owner faces exorbitant costs to produce such a program.

2. Receivers. The problem of receivers is that the manufacturers are not producing a sufficient number of all-channel receivers, and the cost of converters is too expensive to induce VHF receiver owners to convert their sets to UHF.

3. Advertisers. Advertisers are not attracted to spend moneys because of the above two problems. Programs which do not attract the public do not induce advertisers to spend money for spot announcement on such programs Where there is poor circulation, advertisers will not spend money because the cost to them would be too exorbitant per receiver.

4. Transmission. The problem of UHF transmission is that the signals do not travel as far as VHF, with many holes occurring in the service, caused by a lack of better high power transmitting equipment.

5. Affiliation preference by network with VHF. Networks prefer affiliation with VHF. One of the principal reasons is that AM affiliates who enter VHF are given network affiliation preference.

Further, when a VHF transmits subsequent to a UHF station affiliate, the UHF affiliation is removed to VHF for several reasons, among which are more area coverage by VHF signal and more abundance of VHF receivers or more availability of VHF receivers.

The above problems are particularly faced by UHF stations in those areas served by two or more VHF sttaions. Where there is no VHF competition or one VHF station, the UHF station can be successful if the market is large and there is good management, in that popular programs and advertising revenues may be obtained from networks. But as soon as a VHF enters the same area, the UHF strangulation commences.

Some of the advantages that the VHF stations enjoy over a nonaffiliated UHF station are:

1. The VHF stations are affiliated with 1 of the 3 networks, that is, NBC, CBS. and ABC The affiliation enables receipt of popular programs from the network and of advertising revenues through the network.

2. All receivers can readily receive VHF signals which thereby enables the VHF station, in addition to receiving advertising revenues through the network, to better obtain national, regional, and local advertisers to spot advertise on their stations before and during nonsponsored network popular programs.

The very existence of UHF depends on profit, which must come solely through the sale of broadcast time. This sale is virtually impossible where there exists, in the same service area, network affiliated VHF stations.

Through lack of obtaining popular programing, there is no inducement for national, regional, or even at times local advertisers to purchase broadcast time, particularly when there is a lack of a sufficient amount of receivers. There can be no doubt that prospects for successful UHF operation under such circumstances are dim.

The solutions recommended by the Plotkin and Jones reports are briefly as follows:

1. Move all VHF to UHF. This is desirable over a long period of time, but cannot be done immediately because billions of dollars' worth of equipment would be rendered obsolete by such a move. This would not be an immediate aid for those UHF stations clinging to the last rung of the ladder before falling into the chasm of complete financial loss and defunct operation.

2. Deintermixture, that is, changing the allocation table. This does not appear practical for immediate aid based on the same reasons as stated above. Also, there are too many intermixed markets, and such a plan would cause tremendous confusion, resulting in many dollars being lost.

This plan can be accomplished in communities which do not yet have an existing VHF operation even though there has been VHF applications approved or permits issued; the moneys lost thereby would be small comparable to the enhancement of nationwide television operations by permitting UHF to be secured in these areas and not be faced with the above problems.

3. All-channel receivers. To encourage manufacturers to produce all-channel receivers, there is a proposal in Congress to remove from all channeled television receivers the excise tax presently levied on television receivers.

A form of this tax relief should be recommended to grant relief if the manufacturer undertakes to market only in the United States all-channel television receivers instead of granting an exemption for all-channel receivers only.

This form would offer more competition with VHF receiver manufacturers. However, removal of the tax is no assurance that this relief would induce manufacturers to make all-channel receivers, and even if they did, it would still take a great number of years before there would be a large circulation of such receivers. Therefore, it is of no immediate aid to the UHF stations presently suffering financial losses and on the brink of closing operations.

To overcome the dire need of programing, obtaining advertisers, and acquiring large circulation of receivers for the UHF signal, individual station owners must show a willingness and ability to underwrite extensive deficits for substantial indefinite periods of time, which is a Herculean task, evidenced by the fact that 118 UHF permits have been canceled or operations have been suspended because of such a devastating economic burden—figure 118 is taken from the Plotkin report.

There now appears an immediate solution for survival to the remaining UHF owners: This solution discussed herein below will be called the Fillips plan. The Fillips plan will overcome economic difficulties that burden the UHF station owner. The plan is as follows:

"All programing will be secured and transmitted by one station and chain broadcasted to several stations. All advertising will be solicited and broadcasted from the one station to the other stations. A converter will be manufactured at a very reasonable cost (at the present time to sell for no more than $5.90 to $9.95 complete, or may be given away free as an inducement to VHF set owners to receive UHF broadcasts, and can be simply self-installed by the owner) with antenna installation, if an antenna is not already installed."

This plan aptly and substantially covers the UHF specific problems discussed hereinabove; that is, programing, advertising, and receivers. The UHF stations will have an opportunity to compete on a favorable basis with the VHF stations for the sale of broadcast time.

The originator of this plan, Mr. Fillips, has the means, methods and procedures of obtaining through national theatrical agencies the necessary talent and management to produce live and interesting programs, both entertaining and educational, as well as film programs, over a sustaining period each day.

Further, Mr. Fillips, a specialist in advertising on national and regional basis, would be able, through this plan, to obtain national, regional, and local advertisers to sponsor programs or advertise on all stations who become a member of the UHF chain broadcasting system.

The various individual UHF station owners, under the Fillips plan, will be relieved of the cumbersome expense of obtaining or producing programs for their stations; they will receive profits from advertisers and be relieved of the burdensome responsibilities of competing for advertisers against popular programs which VHF stations enjoy.

Advertisers can be induced to spend millions of dollars yearly under this plan because their products will be advertised in large areas instead of in one particular locality with a limited number of receivers.

Further, with popular make converters, VHF received owners will be readily able to convert their receivers at nominal expense, and thereby increase their television entertainment.

Stations affiliated under the Fillips plan will have the assurance of a steady source of good programs which are appealing to the public, will have a better possibility for financial success by being relieved from deficit operation, and will have the assurance that their signals will be received.

The individual stations, together, will have a superior position to encourage advertisers to invest their money for advertising to the combined than to a single station.

The potentialities of television's growth are dependant on a healthy UHF system of television plan similar to the Fillips plan. Such a plan exercised throughout the country will serve the public interest by providing a large selection of entertainment to the public and will be a means of increasing the number of television stations in various communities through a reinvigoration of UHF operations by promoting individual stations and by mitigating the economic burdens and difficulties of the station.

The Fillips plan is the start in the right direction for the fastest destruction of the noose that is closing around and strangling UHF; the cycle of no programs—no listeners—no advertisers, by providing adequate programs, establishing receivers, hence listeners, obtaining advertisers.

As a good test for deintermixture, Pennsylvania would be a good State in which to start. There are 49 UHF television stations allocated to the State of Pennsylvania, with only 8 VHF now on the air and 2 more to go but not knowing when.

These two can be stopped, therefore there is only 8 VHF to worry about against 49 UHF. By giving the VHF stations a year or two to change over to UHF this can solve some of the problems for deintermixture of UHF and VHF television stations, without going at the problem all over the country.

The FCC should consider freezing all applications and all contract permits on VHF stations until this thing is ironed out, which is a very, very important step. With a little cooperation, this thing can be worked very nicely. It is up to the people who make the rules of the FCC to put a few of these new rules in action. I thank you.

Mr. Fillips. My name is Nick Fillips. I am from Pittsburgh. I am concerned with the UHF–VHF deintermixture problem.

In the State of Pennsylvania there are 49 UHF stations against 8 VHF stations. Two more V's have been allocated to Pittsburgh, but are not on the air as yet.

My study of the Pittsburgh market shows there are over a million population, with only one VHF station in the area, plus a half a station, which is on the air about 2 or 3 hours a day. One station is off the air, due to the power being off sometime ago. It operates only part time.

In the course of my study on Pennsylvania, I have talked to quite a few of the station owners. Of the 49 that are allocated to Pennsylvania, there are 7 that went off the air completely due to the fact that, like Scranton and Wilkes-Barre, there are 5 TV stations in the area, and only 3 of them are carrying network programs; the other 24 are just holding on.

The TV station in Scranton had to go off the air due to the fact that it had to make changes and tried to change around on local programing, but they are having a tough go of it.

There was the same problem in Allentown, Pa. Harrisburg is also allocated three stations in connection with the same problem. Our plan was to form a UHF network for the whole State of Pennsylvania, being that there are 4 or 5 times as many stations on U's as there are V's, and with Pennsylvania State as a testing State, we would demix the whole State of Pennsylvania and work out the details.

As far as converters, I have worked out some parts on converters, with antennas, that can be produced and delivered to the family for $5.95 and $9.95. This consists of also the antenna that can be attached to any roof that people already have, a VHF antenna.

I have contacted many families in the State of Pennsylvania who have spent $200 to $300 for their television set. When asked if they would pay $50 to $60 to pull another station in, they would definitely say "No, we can hardly afford to feed our families, let alone spend money to pull another station in that is only on the air part time."

I feel that if the FCC Commissioners I have talked to in person and by correspondence would take some of these steps in consideration—the public is not familiar with V's and U's. A lot of markets and a lot of homes I have talked to, Mrs. Jones said, "Are you familiar with V's and U's?" "We never heard of U's." Then they said, "What is UHF?" Then you have to explain to them.

Therefore a lot of people have not been educated to the fact that there is a difference between U's and V's.

The manufacturers of these sets that came out in Pittsburgh were bought by some people. One of our lawyers went into the store and asked for a television set. The storeman did not tell him that he could pull a UHF station in if he bought the all-around set. He bought the VHF set, not knowing that UHF is also on the same market.

The FCC should consider freezing all applications and contracts on the VHF until this thing is ironed out, which is a very important step.

With a little cooperation on the V, the deintermixture problem could be solved in a very short time.

Most of the stations in the State of Pennsylvania will go along and will deintermix the State, if it is possible.

Senator PASTORE. That is a very nice statement. Thanks very much, Mr. Fillips. We are going to study your statement very carefully. I think you feel very much like the other previous witnesses.

Mr. FILLIPS. That is right.

Senator PASTORE. Only you are citing, of course, your particular problem in your particular area, and that is all in the record. We want to thank you, Mr. Fillips.

This meeting is recessed until 10 o'clock tomorrow morning.

(Thereupon, at 4:35 p. m., the committee recessed, to reconvene Tuesday morning, 10 a. m., February 28, 1955, in room G–16, Capitol Building.)

TELEVISION INQUIRY
(UHF–VHF Allocations Problem)

TUESDAY, FEBRUARY 28, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10:05 a. m., in room G–16, United States Capitol, Senator John O. Pastore, presiding.

Present: Senators Magnuson, Pastore (presiding), Potter, and Purtell.

Also present: Commissioner John Doerfer of the Federal Communications Commission.

Senator PASTORE. This hearing will please come to order.

May I caution the people in the audience, out of courtesy and convenience to the witness, that if we must whisper, that we keep it at a very, very low tone so that all who are interested can hear the remarks of the witness.

Mr. Barnes, we are very happy to have you here. You may proceed in any fashion you like.

STATEMENT OF HON. STANLEY N. BARNES, ASSISTANT ATTORNEY GENERAL, ACCOMPANIED BY R. A. BICKS, V. H. KRAMER, AND B. HOLLANDER, ANTITRUST DIVISION, DEPARTMENT OF JUSTICE

Mr. BARNES. Thank you, Mr. Chairman.

Senator PASTORE. Have you copies of your statement?

Mr. BARNES. No; I do not. I won't be very long.

I appear here today at the request of your chairman. My plan is to touch on first a few of the antitrust problems raised by last year's Plotkin and Jones reports. While on this issue, second, to discuss a few broadcasting matters over which this Department has some responsibility.

First, the Plotkin and Jones reports: A good beginning point, I think, is Deputy Attorney General William P. Rogers' comments on these reports to your chairman by letter dated March 4, 1955.

(A copy of this letter follows:)

DEPARTMENT OF JUSTICE,
Washington, D. C., March 4, 1955.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: By letter to the Attorney General dated February 1, 1955, you transmitted a memorandum prepared for the Committee on Interstate and Foreign Commerce entitled "Television Network Regulation and the UHF Problem," by Harry M. Plotkin, special counsel. Your letter requested a preliminary report containing the comments and suggestions of the Department of Justice with respect to that memorandum. Your letter of February 17, 1955, asked that comments and suggestions also be made concerning a progress report prepared for the committee entitled "Investigation of Television Networks and the UHF-VHF Problem" by Robert F. Jones, special counsel.

THE PLOTKIN MEMORANDUM

Although Mr. Plotkin's memorandum deals with both television network regulation and the problems of ultrahigh frequency transmission, we understand that the views of this Department are solicited only with respect to the network problem. Before undertaking to discuss this problem, we emphasize that we regard the questions raised by Mr. Plotkin's memorandum to be of great importance. It is essential in a free society that access to a medium of communication as influential as television be limited only by the public interest and the inherent nature of the phenomena that make broadcasting possible. It is also essential that those granted access to that medium compete without restraint, so that there will be a maximum of competition in the dissemination of ideas. Consequently, all Government agencies charged with jurisdiction in this field must be alert to any possible encroachments upon the broadcaster's ability to compete.

Mr. Plotkin's memorandum requests the Department to reply to three questions.

1. Are there any corrections or additions to make in the report? (P. 42.)

Because the report covers matters other than those of antitrust signficance, we think it inappropriate to comment on matters not hereinbelow specifically covered.

2. Would more effective regulation and promotion of free competition result if the chain broadcasting regulations were abolished and networks held accountable under the antitrust laws? (Pp. 42-43.)

The Department of Justice is not sufficiently informed to express a considered opinion on the question whether the chain broadcasting regulations of the Federal Communications Commission should be abolished. We believe this question should be answered, at least in the first instance, by the Commission rather than by this Department.

Parenthetically, we observe that the concepts "regulation" and "free competition" referred to by Mr. Plotkin (p. 42) are antithetical. Our system of free competitive enterprise rests upon the proposition that competition itself provides the regulatory mechanism; that if opportunity to compete is preserved through enforcement of the antitrust laws, Government regulation will not be necessary to maintain free competition.

Maintenance of a completely competitive market requires that opportunity to enter that market be unrestricted. The telecasting business is not an industry in which unrestrained freedom to enter exists. "There is a fixed natural limitation upon the number of stations that can operate without interfering with one another" (*National Broadcasting Co.* v. *United States*, 319 U. S. 190, 213 (1943)). Government regulation is thus essential to limit and select the applicants for entry into the broadcasting business. Consequently, the interpretation of the antitrust laws in cases involving telecasters must take into account the fact that entry is regulated by the Government.

Section 313 of the Communications Act (47 U. S. C., sec. 313, 48 Stat. 1087) provides that all Federal antitrust laws are "applicable" to interstate telecasting. Despite these provisions, the United States Court of Appeals for the Second Circuit in *Federal Broadcasting System, Inc.* v. *American Broadcasting Co., Inc.* (167 F. 2d 349 (1948)) intimated that different standards of accountability under the antitrust laws apply to networks because of the chain broadcasting regulations. Perhaps as a consequence of the opinion in this case, there is an implication in Mr. Plotkin's second question that, if the chain broadcasting regulations were abolished, the networks would be subject to higher standards of accountability under the antitrust laws than is presently the case. This Department, at the request of the Federal Communications Commission, joined with plaintiff in the above case in petitioning the Supreme Court for review of the ruling on the ground that section 313 rendered the antitrust laws fully applicable to networks. Certiorari was denied (335 U. S. 821 (1948)). This action, of course, was not an indication of the Supreme Court's views on the merits of the controversy.

3. Are proceedings under the antitrust laws against any network warranted? (P. 43.)

Since the Antitrust Division is charged with enforcement of the antitrust laws, it has been on the alert for information indicating that any network is engaged in a violation of those laws.

It would be inappropriate to report upon any particular complaints, but you may be assured that we will continue to investigate any complaints submitted to the Department to determine whether or not any violation of the antitrust laws is involved.

THE JONES PROGRESS REPORT

Mr. Jones' paramount conclusion appears to be that your committee has not as yet gathered sufficient information to allow the formulation of an "any comprehensive program of reform" (p. 29). Therefore, there is no necessity to deal with a comprehensive set of suggestions, such as those made by Mr. Plotkin.

Mr. Jones and Mr. Plotkin appear to be in substantial agreement regarding the basic problems involved; namely, that a sufficient number of desirable television stations is not available to support a satisfactory nationwide television network service. Additionally, they agree that the inability of UHF stations to compete effectively with VHF stations is in large part responsible for this shortage of acceptable stations.

CONCLUSION

Because the Antitrust Division of the Department of Justice is essentially a law-enforcement rather than a regulatory or rulemaking agency, we presume that your committee does not contemplate that the Division should assume any responsibilities involving the telecasting business beyond enforcement of the antitrust laws. The Division will, of course, continue to be alert to possible antitrust violations in the broadcasting field, including those areas encompassed in the reports of Messrs. Plotkin and Jones.

Sincerely,

WILLIAM P. ROGERS,
Deputy Attorney General.

At the outset, this Department and your committee start from the same premise. As Mr. Rogers put it in his letter:

It is essential in a free society that access to a medium of communication as influential as television be limited only by the public interest and the inherent nature of the phenomena that makes broadcasting possible. It is also essential—

he continued—

that those granted access to that medium compete without restraint so that there will be a maximum of competition in the dissemination of ideas.

Consequently, all Government agencies charged with jurisdiction in this field must be alert to any possible encroachments upon the broadcaster's ability to compete.

In achieving our mutual goal, this Department's role is essentially limited. As Mr. Rogers' letter to the chairman suggested, our responsibility touches only on the limited number of television-network problems.

For the sake of emphasis, let me repeat now what was then said: UHF broadcasting, Congress beyond doubt decided, is primarily a matter for the Federal Communications Commission. The problem is basically a technical one. Here the Commission has special responsibilities and peculiar expertise.

Acknowledging this fact, Congress established this expert body and delegated broad responsibilities for regulation. Against this background, any comment by me concerning the UHF problem would have small point.

Turning then to antitrust aspects of network broadcasting, we necessarily begin with the hard fact that here nature itself exercises a primary restraint on trade. I refer, of course, to the fact that the number of television stations that can broadcast at the same time in any given area is limited by the laws of physics.

This meant the Government regulation to determine who shall have that privilege of broadcasting is extremely important.

Congress settled this question by establishing the Federal Communications Commission and authorizing it, subject to broad statutory standards, to determine who shall have the privilege of using the airways. At the same time, Congress provided in section 313 of the Communications Act of 1934, that the antitrust laws shall apply to the broadcasting industry.

Despite the plain language of that section of the act, making the antitrust laws applicable to broadcasting, the courts in determining the reach of the antitrust law to network broadcasting have not ignored the fact that the Federal Communications Commission exercises regulatory power in the field. I refer at this point, of course, to *Federal Broadcasting System* v. *American Broadcasting Company* (167 F. (2d) 349), decided in 1948.

To an extent thus far not precisely delineated, this regulation serves to deflect the full impact of antitrust law strictures. In light of the limited role accorded antitrust, the chain-broadcasting regulations adopted by the Commission in 1941 and subsequently made applicable to telecasting, take on added importance.

Since the Supreme Court in the *National Broadcasting* case (319 U. S. 190) has sanctioned this Commission power, the Federal Communications Commission now reexamines its regulations with a view to determining whether or not they should be modified, enlarged, in order to more effectively promote the public interest in telecasting.

Obviously, until we have the report of the Federal Communications Commission on this subject, further comment by any representative of the Department of Justice would be inappropriate.

I wish to assure you, however, that the Antitrust Division has informed the Commission of its readiness to consult with and advise the Commission regarding antitrust aspects of network regulation. Last spring Chairman McConnaughey of the FCC and I informally discussed the problem of dividing responsibility between us as to the difficult problems raised in the committee reports.

At that time I took the position that problems of network affiliation were by and large better handled by the FCC regulations than by antitrust prosecution. However, I assured Mr. McConnaughey that, were the FCC to undertake the adoption of new rules, the Antitrust Division would stand ready to consult with the Commission as to any antitrust aspects involved.

So much for the Plotkin and Jones reports, as well as FCC projected rule revisions.

Beyond these, I think I should emphasize that the Department of Justice is fully cognizant of the fact that, irrespective of FCC regulation, there remains a substantial area in the broadcasting field where the Department of Justice has a primary responsibility to enforce the Sherman and Clayton Acts.

This responsibility we have endeavored to exercise within the limits of our professional abilities and the financial resources available to the Antitrust Division of the Department of Justice.

For example, we found it necessary to prosecute two newspapers for attempting to monopolize dissemination of news and advertising in their respective areas. In this Loraine Journal case we obtained an injunction, affirmed by the Supreme Court, preventing the publisher of that newspaper from attempting to drive a competing radio station off the air by denying newspaper ad space to advertisers that also frequented the rival radio station.

Within this past year a jury returned a verdict of guilty against the Kansas City Star Co. for attempting to monopolize news and advertising in the Kansas City area. The indictment charged that the company refused to give time to advertisers on its television station unless the advertiser was a constant user of the Star's newspaper advertising columns. That criminal case is pending on appeal. A civil case along the same lines is pending in the lower court until the higher court accepts or rejects the jury's verdict in the criminal conviction.

We have also proceeded against RCA in a very important civil case, charging it has monopolized patent licensing with consequent restraints on manufacture in the radio-television industry. This case is also pending.

In addition, we realize, as the Plotkin report emphasized, that one of the chief factors inhibiting the successful operation of new stations is the paucity of good programing material. Restraints on programing material were the subject of our suit in the National Football League and International Boxing Club cases. In the football case, the courts struck down a number of restrictions—that was tried in Philadelphia before Judge Grim—which the league had placed upon the broadcasting and telecasting of professional football games. And in the boxing case, still awaiting trial, which was dismissed in the lower court, and where it was necessary for us to take appeal to the Supreme Court to get it reinstated in the lower court, we attacked alleged restraints affecting the sale of broadcasting and telecasting rights of championship professional boxing matches.

Finally, only last month, after a rather careful investigation, a Federal grand jury indicted the International Boxing Guild and two of its principal officials and the local guild working under the International Boxing Guild in Ohio for engaging in a boycott of boxing exhibitions staged in, and televised directly from, broadcasting studios without an audience.

The CHAIRMAN. Judge, how does that work, actually—what are the facts involved? Do they say to certain stations "you can take this" or "you can't take it," or just how? I think we would be interested to know how they do operate.

Mr. BARNES. In that particular case, there was picketing of stations involved. The promoters of the boxing bouts want to get not only the revenue, very naturally, that comes from the paid admissions at the scene of the bout, but likewise they of course are interested in what has become increasingly important in the boxing industry, and that is the receipts from television.

Because there is such a lack of good programing material, particularly with regard to athletic events, this particular group desired to merely have their boxing matches televised, without any paid admission. They didn't have the facilities to have the paid admission. The International Boxing Guild, consisting primarily of managers, put up a picket line around the television studio to prevent their having that type of television existing.

The CHAIRMAN. Isn't that Boxing Managers Guild the group that have now been barred in New York State by the New York State Commission?

Mr. BARNES. Yes; that is correct. There have been many developments.

The CHAIRMAN. I have been reading a little about it.

Mr. BARNES. This is but one aspect of it. We have likewise some investigations going on in the wrestling aspect with relation, incidentally, to television.

Senator PASTORE. How does the antitrust phase of it enter into that situation?

Mr. BARNES. Through restraint of trade, boycott.

Senator PASTORE. Boycotting whom?

Mr. BARNES. The studio—they tried to prevent people from going to work in the studio.

Senator PASTORE. What has that to do with the viewing public having the availability of the program?

Mr. BARNES. Because if they wouldn't permit the boxers to go in, there could be no program. The public are deprived of any boxing program.

The CHAIRMAN. In other words, in this case, as I understand it, there was no audience. It was merely to get on television.

Mr. BARNES. Right, and the International Boxing Guild, in its wisdom, decided that wasn't the way they wanted to run boxing. So they took steps to try to prevent it.

The CHAIRMAN. What about wrestling?

Mr. BARNES. As I have said before, Senator——

The CHAIRMAN. Is that classified as a sport by the Supreme Court? [Laughter.]

Mr. BARNES. What I was going to say was, sometimes speaking on the subject of antitrust, I point out how it affects everyone in many phases of living. First we filed suit against the Shubert people—which was recently settled—and sought to open to competition true dramatic productions. Second, we have sought to promote competition in professional sports, for example in the International Boxing Club case. Sometimes we have a combination of two—theater and sport—in the wrestling investigation. That is in the investigatory phase at this time. I am not at liberty to go very much into detail, because there has been no grand jury or civil action trial.

The CHAIRMAN. But as I understand it, what you are looking into is the danger that wrestling could be an absolute monopoly insofar as bookings, and where matches take place, are concerned.

Mr. BARNES. Blacklisting. In fact there are all kinds of activities of that kind.

The CHAIRMAN. Blacklisting and all that goes with that. That I understand is what you are looking into. We don't expect you to testify as to what you have found.

Mr. BARNES. We are looking into various phases of the wrestling industry.

Senator PASTORE. There was a motive, Mr. Barnes, in my asking you the question I did ask you. Why, then, wouldn't the closed circuit be a modification, or a modified form of restraint of trade?

Mr. BARNES. That depends upon contract. I take it your closed circuit is a private matter, of private contract between parties, and does not purport to go to the public. It doesn't fall within the public regulation aspect of television.

Senator PASTORE. But don't you state in the first case that the public interest requires that there be no restraint as to the availability of certain programs to the public? You answered me by saying, "Yes, because if you don't do that, then you won't have a program."

Mr. BARNES. That is right.

Senator PASTORE. Insofar as the public is blocked from seeing this program that is on a closed circuit, why aren't they being improperly blocked from seeing the program?

Mr. BARNES. If you got into a situation where one organization, or one individual, monopolized the situation as far as any particular exhibition was concerned, by closed circuit or otherwise, then you might get into an antitrust violation.

Senator PASTORE. Don't they do that on the championship boxing fights?

Mr. BARNES. Yes.

Senator PASTORE. Doesn't one group come in and monopolize this whole thing?

Mr. BARNES. That is exactly why we have filed suit against them.

Senator PASTORE. You have filed a suit?

Mr. BARNES. We have filed a suit. Of course, we ran into the difficulty that was created by the baseball case, where the Supreme Court held that baseball was a sport and not a business, and hence cannot be a matter subject to interstate commerce.

The CHAIRMAN. You don't expect that trouble in wrestling, though, do you?

Mr. BARNES. No, I don't expect that trouble in wrestling, particularly because, as a result of that baseball case decision, a judge in New York—and a very fine judge—said, "Well, let's see if the Supreme Court means what it says." So he dismissed the International Boxing case, and later another judge in the same court dismissed the Shubert case. He said if this rule that baseball is not a business is really a good rule, let's apply it to boxing and to theatricals.

Both of those cases went to the Supreme Court, and there we successfully maintained our position that there was no exemption as far as boxing or as far as theatrical productions were concerned.

So baseball is sui generis. It is all by itself. I think that is probably where the exemption will stay.

Of course, the Supreme Court says that the reason it decided that way is because Congress didn't take any action, after its original decision for a period of 20 years, to change the rules. Therefore, it wouldn't be fair to now come along and say that, having once ruled that baseball was a sport, we will now rule it is a business.

I might say I think that anyone who has studied the matter will say that there are some inconsistencies in the general problem.

The CHAIRMAN. Of course, Judge, we did in this committee, on the baseball situation, hold some hearings, such as they were, when Senator Johnson was the chairman——

Mr. BARNES. Yes; I recall those.

The CHAIRMAN (continuing). Regarding the matter. But as you say, we didn't take any action. That was because the minor leagues were just disappearing, and are disappearing, because of this whole tangled up situation.

Mr. BARNES. It is a difficult problem.

The CHAIRMAN. Senator Johnson had a very personal interest in the matter.

Mr. BARNES. That is right. I have talked to him many an hour on it. It is a very serious problem, as is exemplified, I think, by the decision of Judge Grim in the football case, where we adopted a rule of reason as far as broadcasting professional football games is concerned, and said it was a restraint of trade if there was a restriction on the broadcasting in areas where the team was not playing but that it was perfectly proper to restrict it in the home area where the team was playing, because if they didn't so restrict it, there would be an effect upon the gate receipts. And hence, using the rule of reason, he said it was all right to restrict it in a limited area, but when you got beyond that, it wasn't a proper restriction; and likewise, that the restrictions could not apply to broadcasting as distinguished from telecasting, because the broadcasting of football games even in the home area did not have an effect upon the gate.

Beyond cases already filed, several investigations are now pending in the broadcasting field. Because they are pending, I am sure you understand I cannot name names or go into too much detail. I can, however, outline broadly the scope of some of our pending investigations.

First, we are currently studying the antitrust questions raised by the exchange between the National Broadcasting Co. and the Westinghouse Broadcasting Co. of radio and television stations in the Cleveland and Philadelphia areas.

Second, we have under study complaints that the networks insist on some occasions that sponsors use programs owned or controlled by the networks. The charge has been made that this is particularly the case in connection with prime time—that is, between 7:30 and 10:30 in the evening. You will recall that the Supreme Court, in the Paramount case, required the control over the exhibition of motion pictures be divorced from their production and distribution. We believe that if a similar situation is to be avoided in the telecasting industry, the networks must not condition access to the airways on use by the advertiser of a network-owned program—providing, of course, that the sponsor has a program which meets reasonable standards of merit in the public interest.

Just as a patentee may not extend the exclusive privilege granted to him by Congress so as to control competition beyond the scope of the patented invention, so telecasters, I think, should be careful to avoid seeking to use their broadcasting privilege to control commerce in an area beyond the scope of their license.

The Paramount case also condemned block booking of motion pictures, the practice whereby an exhibitor desiring to rent only the good pictures was nevertheless compelled to take the bad as well. The Antitrust Division has under current inquiry charges that feature films are being licensed to television stations under similar requirements.

Motion-picture programing is, as you know, especially important to unaffiliated television stations to enable them to meet the competition of network programs. The Antitrust Division thinks it has been, and proposes to be, alert to prevent a recurrence in the broadcasting branch of the entertainment industry of those practices which gave rise in the motion-picture industry to the Paramount case.

I am sure that the broadcasting industry itself will join with us in our efforts to prevent repetition in their industry of the litigation, in some respects almost ruinous, that has faced the motion-picture industry.

Senator PASTORE. What is the distinction that is to be made between the Paramount case, where the producers of moving pictures were not allowed to maintain their own exhibition houses, and a network that owns and operates a station in the locality?

Mr. BARNES. If we assume that there have been the same acts in the telecasting industry that existed in the motion-picture industry, and we assume that the court is going to determine what the remedy should be, then there should be no distinction. There could be the same results, assuming the same violations. In other words, we get into what the court can do to prevent the recurrence of the abuse.

Senator PASTORE. Is that matter now under study by your Department?

Mr. BARNES. We have, as I stated, what we call a preliminary inquiry into the matter. We have had complaints, and they have caused us to take that much of a step. I hesitate a little bit, because sometimes undue emphasis is given by the press and otherwise to words that to us are words of art.

We have, for example, some 307 investigations pending in the Department in the Antitrust Division at this time. Very obviously not all of those will lead to the litigation. So I don't want to infer that simply because we have started an investigation that necessarily means there will be litigation.

Senator PASTORE. It is for that reason I shall not press it any further.

Senator POTTER. Judge Barnes, I am sorry I was not here for most of your statement. Maybe you covered it in your statement. The committee was confronted with the situation a couple of years ago—and also last year—in meeting with television manufacturers in an effort to encourage them to manufacture all-channel sets. Some of the manufacturers were fearful of making any type of commitment for fear that they would be in violation of the Antitrust Act.

Would you care to comment on that?

Mr. BARNES. I recall, Senator Potter, that we conferred with you in the middle of 1954 regarding that question. After careful consideration, we declined to give the requested clearance to commit ourselves to nonprosecution in the event such a plan were worked out, because we believed that it might constitute a possible violation of the Sherman Act.

We felt it was for Congress—not the Attorney General—to amend the antitrust laws to permit such agreement between manufacturers. Further, we felt that the agreement might have had the effect of driving out of business small television manufacturers who would be unable to afford the production of all-wave receivers.

Since the proposed agreement would, in the opinion of the Antitrust Division, have constituted a violation of the Sherman Act, I felt we could not approach it, and I believe we so notified you. Even if we had cleared the agreement, of course, our agreement would not have protected the manufacturers from any possible third-party litigation—treble damage suits against them. I think that, of course, was the most deterring fact upon such possible joining together.

The CHAIRMAN. I think in that case we would have to take the initiative and act, because that precedent down there with you fellows—although all equities might be on the side of doing it—would be a very dangerous one.

Mr. BARNES. That is right. Furthermore, it is purely an advance statement of what the Department of Justice will probably think of a situation in the future. It might very well change with any subsequent Attorney General who has charge of the Department of Justice, and will in no event be binding upon any future holder of the office.

The CHAIRMAN. Might I ask this question, if it is proper, because we do have many pressing problems here in the industry, and the Department of Justice may have a part in helping in the solution of them. On this boxing and wrestling and other sport cases, do you think you could complete what you are doing in a very short time, or is it going to be dragged out a little bit?

Mr. BARNES. I cannot prognosticate, Senator; that is one thing I have learned. Even if I think it is going to be filed tomorrow, I never say so, because there are too many reasons why those things do not happen.

The CHAIRMAN. I understand that.

Mr. BARNES. You say "finished." Of course we started this International Boxing case several years ago, in 1952. We have two matters that have delayed it considerably. One is the fact that we had to go to the Supreme Court to establish the Sherman Act's application to aspects of professional boxing. The second one is that unfortunately we have to file our cases where the acts take place and where the defendants have their place of business.

In championship boxing contests—that means New York—and the southern district of New York, of course, had one of the worst calendar congestions of any Federal district of any place in the country.

I guess I had better be careful about that, for they have been speeding things up so much in the last few months that the situation may have changed somewhat.

But there has been delay there just because of the condition of the calendar. Our case is ready to go to trial up there. We still don't know when it will be tried.

The CHAIRMAN. The reason I asked that is because this committee has been asked on many occasions, by many of the fine sports writers in the country, why we would not go into this matter of boxing and wrestling. I think the majority opinion of the committee was that properly it was a matter that you folks could take hold of easier than by our getting into this problem of programing, because there are some other basic things that we are more concerned with.

We are concerned with that, too, because I have had many, many communications from people who are interested in clean sports along the lines of "Well, the home is open to television and the young boy goes to high school and his high-school coach tells him that you fight fair and sports are clean." Then he comes home and looks at some of these things on television, and looks at his father and probably says "What is this fellow telling me up there at high school?"

It has a serious impact, I think, upon good clean sports in the country.

Mr. BARNES. As a one-time football coach, I agree with you.

The CHAIRMAN. Me, too. Wrestling, of course, I don't know what you do about that.

Mr. BARNES. I think it has to be recognized for what it is—entertainment, not sport.

The CHAIRMAN. I am not against it, but I think something should be done to let everybody know, particularly youngsters, that this is not what it looks like. Maybe the Federal Trade Commission ought to get into that and label it.

Mr. BARNES. Wrestling is a very difficult subject, Senator, because of the fact that in boxing a fighter may have a fight every 3 months, or every 2 weeks at the most. You get into wrestling, and they are working every night in a different part of the country. Most of them are not televised.

We get our foot in the door on most of these things on the television angle, the broadcasting angle, and the interstate commerce that arises. We still can only deal with violations of matters in interstate commerce. So your local wrestling show presents problems to us from an enforcement standpoint.

Again, Senator, may I just say one other thing. It isn't only an antitrust question. Some of our investigation into wrestling, and to a limited extent boxing, indicates that the Criminal Division of the Department of Justice, in its Antiracketeering Division, must have a look at its antitrust features.

The CHAIRMAN. I am sure that none of us have any objection to people who want to go watch these wrestling matches, but when they start to come into the home, I think then they ought to be—the best word I can think of is "labeled," for what they are in some way. I don't know how we can do that. Maybe we ought to inquire of the Federal Trade Commission that handles labeling and advertising.

Senator Potter, as I recall last fall you attended the boxing convention, or whatever they had in Detroit, in which they evidenced some desire to see if they couldn't voluntarily do some of the things that have been suggested by the judge. Is that correct?

Senator POTTER. Yes. I would like to have the judge comment on that, if you would.

Mr. BARNES. I don't know enough to comment upon all the matters that are taking place in boxing particularly, but I can say that I think all of us realize that there has been a vast change in the boxing picture, particularly with regard to the control of the managers over the opportunities to appear in boxing matches within the last several months. In fact, very recent time.

Senator POTTER. Part of that time, unless they had the good word from a man in New York, they didn't box.

Mr. BARNES. There is no question about that, apparently, at least from the testimony of 1 individual who changed his manager and was out for some 3 years, I believe it was—2 years any way—one of the most likely prospects, I understand. He couldn't get a boxing match because he didn't have the right manager. I think there is a great deal that can be done within the industry on a voluntary basis. But there again we get into some of the uglier aspects of it, because there have been strong-arm methods.

In fact, some of my staff accuse me of spending too much time with some of the gentlemen who come in with cauliflower ears and have a tale to tell. But sometimes they don't tell it so well, but if you stay with it, you can get very interesting facts.

We have a lot of individuals who, as soon as they know we are interested, come in and tell us their personal experiences, and a lot of editors—sports editors of different newspapers—who are vitally concerned.

Senator POTTER. The Department of Justice is surveying that industry at the present time?

Mr. BARNES. We have no wholesale boxing investigation. I don't want to mislead you. In connection with our suit on championship professional fights, we have spilled over a lot of other areas, and we are gathering as much as we can and working in cooperation with other agencies and other divisions of the Department of Justice in gathering as much information as we can.

Senator POTTER. But it is your opinion that the industry is cleaning its own house to a certain degree?

Mr. BARNES. I think it is doing a great deal. As to whether or not it can ultimately clean its own house, that is a serious question. As long as some of this force exists, as long as managers get beaten up if they don't kunckle under to the demands, there is actually physical fear existing in the industry. Until that is eliminated, until the right-minded managers, those interested in the sport, believe that they have a chance at coming out on top, we are not going to get the whole story.

Senator POTTER. Unless that industry is cleaned up, the American people are going to lose, completely, respect for boxing, and it will be relegated to the same level as wrestling, unless some action is taken to clean up the sport.

Mr. BARNES. There is no question about that.

The CHAIRMAN. Judge, the point I wanted to make is that I am glad that you have this under active consideration. There have been many requests that we here go into some of these matters, and I think the committee feels we have many other things in this industry that are probably much more important, and that properly you people could put some checks down there on this thing.

Mr. BARNES. I think that is our duty, and we are trying to do it.

Senator PASTORE. Senator Purtell?

Senator PURTELL. No questions.

Senator PASTORE. Our counsel, I understand, has some questions.

Mr. COX. Mr. Barnes, would it be basically the position of the Department of Justice that it has the same fundamental duty to enforce the antitrust laws in the field of radio and television broadcasting as in other industries?

Mr. BARNES. Yes; taking into consideration the fact that all the regulated industries may have different statutory boundaries as to what is regulated. We get into this question of primary jurisdiction, which is a very difficult one. But in general, depending on the law that sets up the regulation, we do within limits have the general obligation to consider and control as best we can the antitrust aspects, even in the regulated industries.

Mr. COX. Isn't it true that in the Communications Act, in section 313, which you cited, there is an express statement of congressional policy that the antitrust laws are to apply in this field, despite the regulation authorized to be exercised by the FCC?

Mr. BARNES. That is correct. I think we have by congressional enactment a stronger or greater responsibility in this field than in some other regulated industries.

Mr. COX. Wouldn't you say that that is perhaps because of this situation: That despite the fact, as you pointed out, that nature has created a primary limitation upon the ordinary forces of free competition, on the other hand, because this is in the realm of expression, Congress has expressly stated a policy that restraints will not go to the extent of censorship, and as a result you you don't have this treated like a regulated utility in the sense, perhaps, that railroads or common carriers regulated by the ICC are handled. But in the television field, since there is an initial restraint, would you say that perhaps special care and vigilance is required in the enforcement of the antitrust laws there to prevent the creation of a monopoly?

Mr. BARNES. I would agree with that 100 percent.

Mr. COX. You mentioned the Federal Broadcasting Co. case, and it is referred to in Mr. Rogers' letter, as perhaps raising some problems, despite the language of section 313. Would the Department be of the opinion that perhaps some clarifying legislation is required to avoid the difficulties posed by that case, and to straighten out this question of primary and secondary jurisdiction?

Mr. BARNES. I would hesitate to give an opinion on that offhand. That case, of course, did not get to the Supreme Court. It might be that it would be better to have the Supreme Court pass on the question before you considered the necessity of legislation. However, I don't know enough about it to comment on that.

Mr. COX. Since it has never been finally approved by the Supreme Court, then is the department taking the position that, despite the decision in that case, it continues to have authority to act in the broadcasting field, even though it is in an area that is entirely under regulation of the FCC as far as certain aspects are concerned? In other words, you are still trying to get a case to the Supreme Court on that issue, if one arises?

Mr. BARNES. Yes; if one arises, we think it should go to the Supreme Court before we feel we are barred by the exact language of the lower court.

Mr. COX. As I understand it, in your testimony before a subcommittee of the House Judiciary Committee yesterday, you indicated, in connection with this matter of the exchange between Westinghouse and NBC, that one of the problems which had to be decided by the Department before going ahead was whether it was debarred from bringing an action by the approval granted to this transaction by the Federal Communications Commission.

Mr. BARNES. If we assume that the restrictive provision of the Communications Act applies only to the common carriers, then probably there is no problem about the finality of the act of the Federal Communications Commission. Under those circumstances, we feel we would be free to proceed.

Mr. COX. But that is a question that is still, I take it——

Mr. BARNES. We think that we have the answer, but sometimes we are wrong, you know. We don't want to be too positive and say this ends all our problems. I think we will have to have a fight to establish that.

Mr. Cox. Suppose the Department of Justice were of the opinion that a particular practice in the broadcasting industry—in the network field, let us say—was violative of the antitrust law. Would it institute an action to enforce the law, even though this practice had been explicitly approved by the Commission?

Mr. Barnes. I don't think I can answer that question directly. I don't think I could answer it in advance.

Mr. Cox. It would have to depend on the facts of the specific case?

Mr. Barnes. The circumstances and facts, yes.

Mr. Cox. In other words, you feel that there may be a possibility, under the present status of the statutory law, that the Federal Communications Commission, in a non-common-carrier field, could put its stamp of approval on a practice which the Department of Justice felt violated the antitrust laws?

Mr. Barnes. Yes. We do not concede that we would be helpless, and it would depend, I think, upon the nature of the stamp of approval that the Commission put upon the particular acts, as well as the particular acts which were approved.

Senator Pastore. Let's get that straight. Would this act be a violation of the antitrust laws that would be condoned because the stamp of approval was put on by a regulatory body? Or would it mean that it does not violate the antitrust law because it is a regulated matter?

Mr. Barnes. If it is a regulated matter and is taken, by the act, out of our jurisdiction, something that we do not have jurisdiction on, then obviously we can't proceed.

Senator Pastore. Who decides that?

Mr. Barnes. We are going to have to make the initial decision, whether we want to contest it. That is why I say we have to look at the facts, we have to look at the order and what it purports to cover, and the area in which it is.

Mr. Cox. But under the express language of section 313, wouldn't it be your feeling that, except possibly for provisions relating to common carriers, that very clearly Congress intended that the fact of——

Mr. Barnes. Concurrent jurisdiction, that is right.

Mr. Cox. The Commission regulation should not bar you?

Mr. Barnes. That is our attitude, that is right.

Mr. Cox. Does the Commission take the same position with regard, not to a continuing practice, but with regard to the grant of a license or of a permit by the Commission which the Department might, in a particular case, feel will result in a restraint of trade?

Mr. Barnes. I cannot answer that. As I have said in my statement, we tried to get together to work in cooperation, and we have had very little opportunity to have any disagreements.

Mr. Cox. Mr. Henley of the Office of the Chief Counsel of the Commission testified briefly last week about liaison which they maintained with the Antitrust Division. Could you tell us what the nature of that liaison practice is?

Mr. Barnes. Yes. The liaison with the Federal Communications Commission is on an informal basis whereby the Commission makes available to the Antitrust Division, upon request, any information in its possession which relates to Federal antitrust questions. Conversely, we agree to make available to the Commission all information which might help the Commission in its regulatory functions.

I have conferred with Mr. Connaughey and with several representatives of the Commission in my office. We have discussed some of our mutual problems—the division of responsibility that is set forth in the letter that Mr. Rogers sent to this committee.

In addition, I informed the Chairman of the Commission that we stood ready, on short notice, with individuals whom we thought were somewhat, at least, qualified to exercise discretion and judgment in the matter, to review any network regulations that the Commission proposed to issue, to advise and consult with them in drafting any such rules on any of the antitrust questions involved.

At one of these meetings we suggested that there be specific individuals designated, 1 on behalf of the Commission, 1 on behalf of the Antitrust Division of the Department of Justice, to stay in contact with each other so that this could be a vital arrangement rather than just a paper one.

I designated Mr. Hollander, who is here with me today, as the individual to represent the Antitrust Division, Department of Justice, in these communications with the Federal Communications Commission. The Federal Communications Commission designated Mr. J. Smith Henley, Assistant General Counsel, on their behalf, and those 2 gentlemen have been in contact when any matters have arisen, and I think that our informal contact has worked out pretty well.

Mr. Cox. Is this a matter of recurring scheduled conferences, or do I get the impression that it is handled on a case-by-case basis when one agency or the other feels that there is occasion for getting together?

Mr. Barnes. It is a case-by-case arrangement, with the caveat that I just put in there, that we have certain understandings that we are interested in these rules and regulations, and that they are interested in getting our opinion, and when that situation develops that they want our opinion or advice, that we will be consulted with regard to it.

Mr. Cox. In your opinion, has this liaison, for instance, worked effectively in connection with the matter of the NBC–Westinghouse exchange?

Mr. Barnes. That is a very difficult question. You are getting into a very involved state of facts.

Mr. Cox. I just wanted your thought.

Mr. Barnes. I would say on the whole I think it has worked pretty well; yes.

Mr. Cox. Is it your policy, where you are investigating a matter which you know is before the Commission for action, to request the Commission to defer action until you can complete your investigation?

Mr. Barnes. It is not. It is not, because of our concurrent primary jurisdiction on matters of that kind. If we think we have sufficient information to exercise our jurisdiction, we should do it. If we do not have, we are in no position to ask the Commission to delay any action on their part.

Mr. Cox. Would you notify the Commission that you were investigating the matter and advise them of the facts which gave rise in your mind to some question as to whether there was an antitrust issue?

Mr. BARNES. We would advise them if it came to our attention that there was any possibility of any action being taken by them which might have any effect upon the ultimate outcome of the matter which we then had under investigation.

Mr. COX. In other words, if there were a case in which you thought that their action might conceivably preclude your subsequent treatment of the case, you would advise them of this fact?

Mr. BARNES. Not necessarily preclude any action on our part, but necessarily have any effect, psychologically or otherwise, upon our action. We would just simply call the matter of our interest to their attention, without any expression of desire on our part that they take one action or another.

Mr. COX. Is this something you have done a number of times during this period of liaison with the Commission?

Mr. BARNES. It has been done, but it has not been done a number of times. We have only had this procedure in operation since last year. As a matter of fact, it was only formalized along in August or September of last year. We had negotiations and conferences prior to that time, but we settled down into a routine that we thought was satisfactory to us as of that date.

Mr. COX. Is this liaison comparable with that which you maintain with other regulatory agencies?

Mr. BARNES. Somewhat. Of course we have a very similar liaison with the Federal Trade Commission, but of course our liaison there is on a daily, or a half-daily, basis rather than the larger interval that exists in our relations with the Federal Communications Commission.

Mr. COX. Didn't you recently state in testimony before a House committee that it would be helpful if the various regulatory agencies would advise the Department of their consideration of matters in which possibly antitrust matters were presented?

Mr. BARNES. I do not recall that specific testimony, but I have no doubt that I might very well have said it because I think that the more information we have, the better job we can do.

Where we have a joint, or even a secondary, responsibility—concurrent or secondary responsibility—very obviously we are interested in what the other regulatory bodies do.

Mr. COX. I think this was again before the House Judiciary Subcommittee sometime late last month. You were testifying, possibly on legislation requiring advance notice of mergers, and you made reference to the fact that it would also be of assistance if the regulatory agencies advised you in advance of these matters.

Mr. BARNES. I have no doubt that is precisely what I said.

Mr. COX. Do you think that legislation could be adopted in this field which would be helpful to the Department in that connection?

Mr. BARNES. That is a question that I do not think I am competent to pass upon. I think we can sometimes have too many regulations. I am much more interested in some of the others we are trying to get on mergers than I am in something like this by statute.

The CHAIRMAN. And that depends upon the people running the departments. You can maintain a good liaison with people if they are anxious to maintain that.

Mr. BARNES. There is no question about it. If you get men of good will, they can do a lot more sometimes without the law than they can with it.

We have been, I think, very successful in maintaining that cooperation between various governmental agencies, including some where there has not been that cooperation in the past.

Mr. Cox. Mr. Plotkin in his report, which was submitted to the Department, recommended that you be asked whether a more effective promotion of free competition would result if the chain broadcasting regulations of the Federal Communications Commission were abolished and the networks simply held accountable under the antitrust laws.

Mr. Rogers replied that the Department was, as of March last year, not sufficiently informed to express a considered opinion on this question, and that it should be answered in the first instance by the Commission. Could you tell the committee whether the Department has, since that time, acquired additional information which would enable it to express an opinion?

Mr. Barnes. No, sir; that is still our position. We would like to see what the regulations are, what the Commission comes up with.

Mr. Cox. You are talking about prospective regulations and not about those which have been in effect since 1941?

Mr. Barnes. Yes, that is right.

Senator Potter. Mr. Cox, along that line, I am wondering, Mr. Barnes, if the Department of Justice, or particularly your division, has reported on a bill that is before the committee at the present time, introduced by Senator Bricker, which would regulate the networks? That is S. 825.

Mr. Barnes. I believe that that is a bill in which we made a comment similar to that made in the letter of Mr. Rogers' that has just been referred to.

Senator Potter. In other words, there has been no position taken by the Department of Justice on the bill at this time?

Mr. Barnes. That is right. That is my recollection. I do not have our records here on that, but I am pretty certain. One of my associates here gave me some of the facts and says that that is his recollection, so I am sure that is correct.

Senator Potter. There has been concern by some people, with the great effect that television has on mass public opinion, that the concentration of power into 2 main networks—or 3 networks—is a large concentration of power in the hands of a few people. Has the Antitrust Division made any investigation on that concentration of power?

Mr. Barnes. Not in this particular field, but from a general standpoint, very obviously, we believe that free enterprise and lack of monopoly—the greater the concentration toward the single monopolies, theoretically the worse the situation is.

Ordinarily, all things being equal, we would rather see 3 competitors than 2 or 1; or 6 rather than 3. Theoretically the public is going to be the gainer if that situation exists.

Senator Potter. It has been suggested that the networks be treated in the same manner as the Associated Press at one time—forcing them to make their programs available to any person that wanted them. Would you care to comment on that?

Mr. Barnes. No, I do not think I should because one came as a result of antitrust litigation. We do not have that as yet in this industry.

Sometimes under the theory that individuals who have violated the antitrust laws should be put in a position a little different than those who have not violated the antitrust laws, we might recommend one thing in one case where we would not recommend it to an industry where there has been no violation established as a matter of law.

I think that is better left unsaid at this time.

Mr. Cox. As I understand it, you have an arrangement, then, with the Commission that, with regard to any future revision of their chain broadcasting regulations, you are to be consulted. Have you, however——

Mr. Barnes. Just a minute. I do not think we have any definite promise. We understand that they propose to consult us, and we have expressed our willingness to be consulted and to cooperate with them to the fullest extent.

Mr. Cox. Have they to this date asked you to comment on their present regulations and give your opinion as to how they affect the Department's enforcement of the antitrust laws?

Mr. Barnes. They have not.

Mr. Cox. Mr. Rogers, in citing the Federal Broadcasting System case in his letter, intimated that, despite section 313, different standards of accountability apparently might be held to apply to the networks because of these chain broadcasting regulations. If in fact, then, these regulations are regarded as putting the Commission's stamp of approval on certain practices that are authorized there, and if in consultation with the Commission you decided that this was an obstacle to the enforcement of the antitrust laws, would the Department then recommend to the Commission that they be set aside or ask corrective legislation from the Congress?

Mr. Barnes. Of course it depends upon how large the area of difference is, how substantial, and how fundamental. If we attempt to negotiate our ideas into the regulations, or at least have careful consideration given to them, and if we at the conclusion thought there was an utter absence of antitrust considerations in these regulations, we would have no hesitancy in either going to Congress or instituting such action as we thought necessary to try to establish a free enterprise.

Mr. Cox. Mr. Henley, again, in his testimony last week suggested, I think, at one point that in the opinion of the Office of the Chief Counsel of the Commission, the Communications Act in setting up the standards of public convenience and interest went further than the antitrust laws in guarding against monopoly. Would you care to comment on that?

Mr. Barnes. I am afraid I could not agree with that because public interest—as I understand the various matters that are contained within that definition of what constitutes public interest—goes far beyond the antitrust laws. Antitrust law enforcement is part of the public interest, but your public interest goes to a larger area. I think I made some remarks on that yesterday.

I pointed out yesterday, in testifying before a House committee, that in construing the Federal Communications Act, the Supreme Court in *Federal Communications Commission* v. *RCA Communications*, which had to do with the establishment of overseas radio-telegraph service, discussed the Commission's finding that competition is—

that is, duplication of radio telegraph facilities would not impair the ability of existing radio carriers and cable carriers to render adequate service. For such reasons the Commission concludes that competition was reasonably feasible.

The courts felt it was improper for the Commission to suppose the standard as adopted was derived without a national policy defined by legislation in the courts. They said:

The trouble arises from the fact that, while the Commission recites that competition may have beneficial effects, it does so in an abstract, sterile way.

If the courts adopt that attitude, they pay practically no attention to the antitrust implications. And we were not happy with that type of decision because we do not think it gives the emphasis to antitrust.

That is part, and only a part, of the public interest that must be preserved.

Mr. Cox. But in your view it is, in its area, a more specific and a stronger statement than the general standard of the public interest?

Mr. Barnes. Yes; because by public interest there are 10 or a dozen other factors that may weigh against antitrust implications. Hence, antitrust law is stronger in preserving free enterprise than the larger public interest, which includes antitrust considerations.

Mr. Cox. You commented briefly on the block booking aspects of the Paramount case and their possible implications for the licensing of feature films over television. Mr. Plotkin, in his discussion of the employment of option time by the networks, suggests that possibly the entire practice, not limited to films, has many of the features of block booking as condemned in the Paramount case. I think this is one phase of his report that Mr. Rogers did not comment on in his letter of last March. Is the Department familiar with option time as it is used in the broadcasting field?

Mr. Barnes. In a general way; yes. I am not prepared to state at this time that a contract giving networks option for a station's time is, standing alone by itself, a violation of section 1 of the Sherman Act. That is our considered opinion at this time. We have not dismissed the problem, but we cannot say that, per se, in and of itself it violates the antitrust law.

The Chairman. I think maybe right here we had better give the reporter a rest, do you not think, of 10 minutes?

Senator Pastore. All right, if it is agreeable with the rest of the committee. Let us have a 5-minute recess.

The Chairman. All right.

(A short recess was taken.)

Senator Pastore. Mr. Cox?

Mr. Cox. I gather, then, at this stage, Mr. Barnes, the Department is not engaged in a broad investigation of the overall operations of option time in television?

Mr. Barnes. That is correct.

Mr. Cox. Has the Department analyzed Mr. Plotkin's description of the practice, and inquired of the FCC as to whether, so far as it knows, the basic factual analysis contained therein is accurate?

Mr. Barnes. We have had conferences and discussed it, and I can assure you that the Plotkin report has been read very carefully and studied in the Antitrust Division, as was the Jones matter. But I don't know that we have ever gone into formal consideration with the FCC as to whether the factual situation is valid, or whether it is not.

Mr. Cox. There is certainly, on the surface, some parallelism between the practice and the block booking system in respect to the theaters.

Mr. Barnes. Yes; as I pointed out in my opening statement, there certainly is, and that is one of the reasons we are concerned.

Mr. Cox. Is there also some possibiilty that the affiliate which is bound to take all programs during the option time is the victim of blind selling, which was also condemned in the Paramount case?

Mr. Barnes. That is my understanding of the possibility, and I believe we have had 1 or 2 complaints along those lines. I recall some correspondence to that effect.

Mr. Cox. And those, I take it, under your policy, are being investigated, as facilities permit?

Mr. Barnes. Yes; just let me say, as I frequently said before, in any matter as fundamental to our economy as television, we don't just put the letters in the wastebasket. On the other hand, we cannot start an investigation on a particular complaint in a particular locality every time we get a letter. We have a general accumulation of evidence that may not be designated as an investigation, which continues all the time on these troublesome subjects.

Mr. Cox. Is there any similarity between the position which the networks occupy by virtue of their time option rights and the master agreements and formula deals which were held illegal in the Paramount case?

Mr. Barnes. I don't think that I could answer that question without a good deal of study to cite a few cases, or find that there were none. So I don't think I should try to answer that question.

Mr. Cox. There has been testimony that NBC and CBS follow a must-buy policy, under which an advertiser, to get on the network at all, must buy time on a minimum of 50 or 55 stations, whether he wants to advertise in all these markets or not? Is there a possibility that this practice might violate the antitrust law?

Mr. Barnes. Yes.

Mr. Cox. Has the Department received complaints with respect to that practice?

The Chairman. I think the Department has knowledge of it. I don't know that there has been particularly one complaint; is that right, Judge?

Mr. Barnes. I recognize it as a problem. I don't specifically recall any complaints. I wouldn't be too certain of that.

Mr. Cox. That is all I have, Judge Barnes.

Senator Pastore. Any further questions?

Senator Purtell. No questions, except that your testimony was most informative and very helpful to us.

Senator PASTORE. Thank you very much for coming, Mr. Barnes.

Mr. BARNES. I should have said for the purpose of the record that I am accompanied here by, on my left, Mr. Robert Bicks, who is legal assistant to the Assistant Attorney General; on my right Mr. Victor Kramer, who is the section chief who has to do with general supervision over television matters; and next to him, Mr. Hollander, who is our liaison representative with the FCC, all of whom have been of aid to me here.

Thank you, sir.

Mr. COX. We appreciate your coming.

Senator PASTORE. We have Congressman Morano here who would like to make a statement for the record and then will leave. Congressman Morano?

STATEMENT OF HON. ALBERT P. MORANO, REPRESENTATIVE IN CONGRESS FROM THE FOURTH DISTRICT OF THE STATE OF CONNECTICUT

Mr. MORANO. Mr. Chairman, thank you for the opportunity to testify briefly. I represent the Fourth Congressional District of Connecticut, which has no local television. The people in my district, though interested in their community problems and activities, elections, and special events, are fed only by programs from New York and New Jersey.

I cannot appear on television in my own district. I cannot reach my constituents by this important medium. Local advertisers cannot reach those whom they would serve through this medium. Consequently, development of the community and the economic expansion in the community are thwarted. Business is directed more toward the cities from which the TV emanates.

I am appalled to find—I have been told this, I don't know whether it is true or not—that approximately one-third of the congressional districts in this country are in the same condition as mine.

Since this important means of public communication is lost to so many, who must depend on TV stations in other districts and in some cases even in other States, this inquiry into the situation is called for, because I believe that I, myself, and a lot of other Congressmen, would like to know the reasons why this situation exists today, and we would like to see some solution—some equitable solution—found, and the problem resolved.

That is all I have to say.

Senator PASTORE. Any questions of the Congressman? Thank you very much for appearing.

Our next witness is Mr. Philip Merryman. I understand that there are several distinguished people with him and they are all welcome to come forward. Mr. Merryman, have you some people with you who might testify?

Mr. MERRYMAN. Yes, sir.

Senator PASTORE. May we please have silence so that with your cooperation our witnesses may be heard.

STATEMENT OF PHILIP MERRYMAN, WICC-TV, BRIDGEPORT, CONN., PRESIDENT OF HOMETOWN TELEVISION, INC., ACCOMPANIED BY DUDLEY JEWELL, MANAGING DIRECTOR, BRIDGEPORT CHAMBER OF COMMERCE, BRIDGEPORT, CONN.; DR. WILLIAM H. ALDERSON, PASTOR OF THE FIRST METHODIST CHURCH OF BRIDGEPORT; THE REV. DAVID F. BANNON, REPRESENTING THE BISHOP OF BRIDGEPORT DIOCESE; MRS. STEPHANIE McCARTHY, DIRECTOR OF RED CROSS FOR BRIDGEPORT; AND MRS. SIMON FRANK, PARENT-TEACHERS ASSOCIATION OF BRIDGEPORT

Mr. MERRYMAN. Mr. Chairman, may I direct an inquiry before I begin?

Senator PASTORE. You may.

Mr. MERRYMAN. Is the record of the hearings before the Potter committee in April or May of 1954 to be incorporated by reference in this proceeding?

Senator PASTORE. It won't be incorporated by reference as a matter of formal incorporation. It is simply a part of the entire record and investigation on the part of this committee. You may rest assured that anything in that report is of notice to the committee.

Mr. MERRYMAN. Does that include the recommendations of the committee? I understand Senator Potter yesterday to say there were recommendations by the subcommittee.

Senator PASTORE. The entire report; yes, sir.

Mr. MERRYMAN. Another question, Mr. Chairman: I have heard that there will be a recess of this committee after tomorrow for about a month, after which the networks will appear.

Senator PASTORE. The chairman can answer that question.

The CHAIRMAN. No. We are setting the dates for these hearings as quickly as possible. We have yesterday and today, and what is the plan?

Mr. COX. We have one Friday.

The CHAIRMAN. One Friday, and then some next week again?

Mr. COX. Probably not next week, but we hope sometime in the middle of the month.

Mr. MERRYMAN. Will the participants in this testimony have an opportunity——

The CHAIRMAN. I might say the networks have written us to the effect that they would like to testify first on this engineering, UHF-VHF problem, and then they would like a few days to come again and testify on the network problem, which is another phase of it. So there may be an interval in between there.

Mr. MERRYMAN. Will there be an opportunity for the other participants to have rebuttal testimony after the networks?

The CHAIRMAN. Yes, you may have all the opportunity you want to testify.

Mr. MERRYMAN. Thank you, sir.

Mr. Chairman, I had expected to present all of these witnesses after I finished my testimony. Two of the gentlemen have planes to make. They have important engagements in Bridgeport this evening. I would like, if I may, to present Mr. Dudley Jewell and Dr. Alderson, first.

Senator PASTORE. All right, if you will identify yourselves and make your statement.

Mr. JEWELL. Mr. Chairman, my name is Dudley Jewell. I am manager of the Chamber of Commerce of Bridgeport, Conn.

We have a particularly exasperating problem, and a frustrating one, in our area, which is Fairfield County, with regard to television service. It is a problem that is difficult of solution, and we are certainly glad to see this committee giving some attention to it.

In Connecticut, we are a small State, but the last time I heard we were still rated as one of the sovereign States. We wonder why, or under what reasoning or what rhyme or reason, 7 television channels have been assigned to 1 city in 1 State, while 2 television channels have been assigned to the entire State of Connecticut.

Senator PASTORE. I am surprised you didn't know that. I have been asking the same question for 2 years.

Mr. JEWELL. Mr. Chairman, we have been asking the question, and we have been unable to get an answer. We have a television station in Bridgeport which has been on the air now for well over 2 years. I am sorry, Phil, I don't remember the exact time that WICC–TV went on the air.

It has been fighting a losing battle, because we have very few sets in the area with tuners to receive that station. Yet we are a metropolitan area of considerable proportion. In our immediate area we service something like 300,000 people in Bridgeport and 4 contiguous communities, a population of important size and consideration.

These people have access only to New York radio and New York television. They are well versed on all of the goings on in the State of New York, and they can tell you what the Governor of New York is doing, or the mayor of New York City, but they have little opportunity to view Connecticut problems.

From time to time we have people running for public office in our State. They have no opportunity to be seen by the voters in Connecticut and in Fairfield County. We have substantial business establishments in our community which have no access to television advertising on a competitive basis with New York stores, for example.

One of the arguments that is always raised against us is that a small area like ours, and with local television programing, perhaps some sacrifice of the New York channel would be required, or maybe the reception quality would be diminished to some extent, and that we can't equal that programing in the public interest.

I would submit to you, Mr. Chairman, that we have the same situation with radio. New York radioblankets our area. You can turn your radio dial just a few marks and you have a different station. But I would point out, and I think Mr. Merryman can support this, that even with that overwhelming type of blanket competition from New York radio, in our area at any given time almost, during the early morning broadcast hours, during the day, during the evening, almost any time, 80 percent of the radio sets in our area which are tuned in are tuned to WICC, Bridgeport.

The reason they are is because of good local programing. WICC is not a network station. Yet by good programing and local interest, they are able to attract by far the majority of the radio audience. We feel sure that a similar showing could be made on local programing by television.

Frankly, there is a channel vacant in our area, and for the life of me I can't see why it shouldn't be made available to WICC—channel 6.

Senator PURTELL. May I interrupt a minute, Mr. Chairman? When you speak of channels—WICC is an ultrahigh?

Mr. JEWELL. Yes, sir.

Senator PURTELL. Now you are talking about a very high frequency channel.

Mr. JEWELL. Yes.

Senator PURTELL. I think we ought to differentiate in talking about channels.

Mr. JEWELL. VHF channel 6. In our area, with 300,000 people, and many thousands of television sets, channel 6 is vacant. You tune to channel 6 and there is nothing.

Yet when we talk to the FCC about this, we are told about some possible interruption in service because Philadelphia is on channel 6 and Schenectady is on channel 6, and there are a few handfuls of people out in the middle somewhere, who get marginal reception at best with booster arrangements on their television sets. So their best service is unsatisfactory, and yet apparently there would be some interference with even that unsatisfactory service.

But we are denying television service to a much larger group of people. We feel that we are entitled to consideration for a regular television channel. We feel that our business people and our industries should have access to television. We have a television station, it is true, but its coverage is very light because, after all, when you talk to Joe Doakes who has a television set and can already receive seven channels of television, it is pretty hard to convince him that he should spend another $50 to add a strip tuner or something and make special alterations on his antenna.

Channel 8 reception, which is VHF—channel 8 reception, which comes out of New Haven, which is 1 of our 2 channels in all of Connecticut, gives us spotty reception in the Bridgeport area, primarily because all of the antennas are beamed toward the New York stations. So in some spots we do have some sets that receive channel 8, but for others, it is simply not available and it is marginal reception.

Our plea to this committee is to give some consideration to relief for our area so that we, too, can enjoy adequate television service, because for all practical purposes now, we have none available to us on a local basis.

Obviously our business people in Bridgeport cannot make use of the many New York channels, because the rates are prohibitive. They simply can't buy that kind of television time.

Senator PASTORE. Any questions?

Senator PURTELL. What you are asking for, then, is relief, as I understand it, Mr. Jewell, in the form of an assignment of a very high frequency to that area; is that correct?

Mr. JEWELL. That is right, Senator.

Senator PURTELL. You are telling the committee that the number of sets able to receive ultrahigh is rather small as compared to the total number of sets there. All sets can get very high. Very few sets—or am I correct in understanding that relatively few sets can get ultrahigh in the Bridgeport area?

Mr. JEWELL. That is right, very few sets.

Senator PURTELL. So they are limited entirely to New York stations, if they haven't a converter to get ultrahigh in the Bridgeport area; is that correct?

Mr. JEWELL. That is right. I might say that we are all indebted to Mr. Merryman for a rather valiant, but losing, battle that he has been putting up out there to maintain television service in the Bridgeport area, and try to service us. But it is almost an insurmountable problem.

Senator POTTER. Are you completely blanketed by the New York stations?

Mr. JEWELL. Yes, we are, Senator. And the reception comes in very strong on all channels. We seem to be in a kind of a contradictory situation. I know many people say, "Well, gentlemen, what are you complaining about? Seven television stations. Out where I live we only have 1 channel, or 2, and even here in Washington I think there are only 4."

So it would look, on the surface, as if we are suffering from a prosperity of television service, when actually we are not, you see. We are in a pocket. We are completely blanketed by New York stations.

The question we have been asking—the question the chairman asked—is: Why does one city rate 7 channels, while a whole State is given only 2 channels?

Senator PASTORE. And that is your frustration, because while it is true that the viewer has the advantage of seven national setups, he doesn't have the local community service that he is entitled to.

Mr. JEWELL. That is right, sir.

Senator PASTORE. I think in a very concise and simple fashion, you have pointed out what is the crux of this whole problem. Unless television begins to assume an aspect of community service, whereby people in a community who want to advertise on television can do so without paying the exhorbitant prices they must if they go to the New York market, eventually, of course, these communities are going to be without that service to which they are entitled.

Mr. COX. For the record, Mr. Jewell, you stated there are only two channels in Connecticut. You mean two VHF channels?

Mr. JEWELL. There are two VHF channels assigned, of which one has been on the air for some time at New Haven.

Mr. COX. The other one is still in contention before the Commission; is that right?

Mr. JEWELL. At Hartford.

Senator PURTELL. The contest is as to whom it shall be assigned.

Mr. JEWELL. But the committee should understand, Senator, regardless of who gets that channel, when it eventually goes on the air, it still doesn't give Bridgeport, and Fairfield County even, Connecticut television.

Mr. COX. That is, your statement was limited to VHF because there are in Connecticut, in addition to the channel on which Mr. Merryman operates, a number of other UHF allocations which are not in use.

Mr. JEWELL. That is right, sir.

Senator PURTELL. Mr. Chairman, may I ask this question? But what you want, if I understand your testimony—and I think I do—is that because VHF is coming out of New York and your people therefore have available to them these seven channels of very high frequency reception, they are therefore not disposed to change their sets to get the ultrahigh frequency which is available to them in Bridgeport.

The answer to that would be, in your opinion, the assignment of a very high frequency channel to Bridgeport, is that correct?

Mr. JEWELL. That is what we would like, Senator. We would like to have channel 6.

Mr. COX. Do you get a really satisfactory picture from these New York stations?

Mr. JEWELL. Yes.

Mr. COX. It is not a fringe service?

Mr. JEWELL. It is not a fringe service at all. It is a class A service.

Mr. COX. We are advised by the Commission you shouldn't do this because it is outside of the area covered, by their standards.

Senator PASTORE. Now if you wait long enough, justice does prevail.

Senator PURTELL. I might say to the distinguished and beloved acting chairman that certainly if we in Bridgeport had two very high frequency stations there we would feel very happy, would we not?

Mr. JEWELL. That is right.

Senator PASTORE. If Pastore had anything to do about it, you would have three of them.

Senator PURTELL. I hope that you do have something to do about it, so we might have three.

Mr. JEWELL. We will be happy with just one.

Senator POTTER. If Pastore and Purtell will work as hard for Cheboygan——

Senator PASTORE. Mr. Merryman, who is your next witness?

Mr. MERRYMAN. I would like to present Dr. William H. Alderson, who will speak for the Interchurch Council of Bridgeport.

Dr. ALDERSON. I am the pastor of the First Methodist Church in Bridgeport, and I have been for 17 years, lacking 2 or 3 months. I think I speak for most of the Protestant people in Bridgeport, and for the Council of Churches, which is our organized group.

In the light of what Dudley Jewell has said, I want to put in a good firm plug, if I may, for hometown television—that is the thing we are after. Primarily, I am interested in Bridgeport, because that is my hometown, but I am thinking of every community like Bridgeport across the country, and what I say applies there equally as it does to Bridgeport.

I think that we are on sound ground when we say that America is made up of a group of communities, and I think that our sense of national unity grows out of our loyalty to our own local community. That is the grassroots. That is where it starts.

If you are loyal to your own community, there is then a foundation on which you can be loyal to your State, or to your section, or to your country as a whole. Therefore, what helps the community helps the country as a whole. That is the point I want to make here.

I think that we will all agree that these large stations which send us programs that are nationally televised have excellent programs and all that. But there is a lack of community consciousness that we miss, that we are unable to get when we hear these large stations.

There is nothing that stirs your loyalty and enthusiasm like that which roots right in your own hometown. I read the New York Times every morning, but because I read the New York Times—which is a great newspaper and covers the whole world—that doesn't mean that I don't read any hometown paper. I am sure every member of this committee, and every Senator here, takes his own hometown paper, although he reads all the great dailies from across the country.

You never see as much enthusiasm generated for the Yankees or the Dodgers or the Cincinnati Reds or whatever they may be, as you do for the hometown team. We are all interested in organized baseball, and we follow it, and we follow it vigilantly. We are not American if we don't.

But when it comes to the old hometown team, the Dodgers aren't in it with that team, you see. Everybody is interested in what is doing in his own hometown.

The same thing is true in a local political fight. We never have a chance to see the faces of our politicians. That may be a blessing, I don't know. [Laughter.]

Senator PURTELL. But you do have a chance to see your statesmen, do you not? [Laughter.]

Dr. ALDERSON. That is right. The statesmen, of course, can command these larger stations, but the local politicians cannot. Therefore, when you only hear their voices—and if it wasn't for our fine radio station we wouldn't even be able to do that—we lose a sense of belonging to a community in which these men live, and of which they are a part.

I have had an unusual privilege for the last 10 years, I think it is, with respect to broadcasting on our local radio station, and also for a year, when Mr. Merryman was able to go down into his own pocket and the pockets of his supporters, and pay for it, we had a service, a Sunday afternoon service, on his television station.

I know—I speak from experience—when I say that there is a value to the people in the local community through religious channels, religious services, hearing the voices of men whom they know and seeing the faces of men whom they see in the community gatherings and whom they pass on the street.

It is not only valuable to the man who has that privilege, it is valuable to the community and it is a great service to the community.

The local station in the community does something which obviously the big station can't do—they do a measure of it, but in the local community, the station carries so much of what I understand is supporting time—although I am not a technician at this point. That is, free programs which they give as a service to the community. It costs nothing. Our religious programs in Bridgeport, which are on the air, cost nothing. For an entire year this station carried the cost of a television service where we have music and a sermon, such as it was, every Sunday afternoon, and without cost to us. It was a service to the community. It helped bring the people of the community together in spirit, where they felt our town is doing something here and doing it for us.

It has a grassroots connection that you don't get from the huge station that blankets the whole country, or that is on a network.

I don't want to take any more of your time. I think that I should have made the point that I want to make, which is that hometown television has a value in this country that can never be gained from the large station, and just as enthusiastically as I can, I want to request that those who are responsible for thinking this question through will arrive at some plan. I do not have the plan because I am not technically trained at this point, but some plan by which Bridgeport and hundreds of other communities across the country can have their hometown television, which in many, many of its programs means more to them than the national hookups can ever mean.

I am very grateful to Mr. Merryman for giving me a chance to say this. I didn't need to be urged to come and say it. I have been awaiting an opportunity to speak this word in behalf of my own community and other communities like it across the country.

The CHAIRMAN. Thank you.

Mr. MERRYMAN. Mr. Chairman, I think my statement will run beyond the recess period. So may I go ahead with the other witnesses?

The CHAIRMAN. Yes; go right ahead.

Mr. MERRYMAN. I would like to present the Reverend Bannon, who will represent the bishop of the diocese of Bridgeport.

Reverend BANNON. Mr. Chairman, my name is the Reverend David Bannon, from Bridgeport, and I come here at the request of His Excellency the Most Reverend Lawrence J. Sheean, bishop of the Diocese of Bridgeport.

I am sure that even way down here in Washington much has been heard about the new and very progressive diocese of Bridgeport, under the direction of the former Washingtonian, Bishop Sheean.

Bishop Sheean at this time is extremely concerned about the lack of a television facility for the benefit of his some 250,000 people living in Fairfield County. He is perfectly acquainted with the television facility that we have and knows very well the handicaps under which it has been laboring.

He is extremely aware of the power for good, in all his efforts to reach his people, that television of a proper kind might service.

I would just like to mention a few of the institutions or organizations directly under his leadership that he feels could benefit and prosper for the spiritual and moral well-being of his people if this new and very influential instrument of propaganda, TV, could be at his disposal.

I am thinking in terms of Catholic charities in the Bridgeport area, which I might say, by the way, is, I think, the No. 1 beneficiary of the United Fund.

Also, the Catholic Youth Organization, catering to the social, recreational, cultural, and religious needs and hungers of the modern youth in our community.

His diocesan school system which could benefit so much by a television time that would reach the people, the Society for the Propagation of the Faith, and mnay other organizations who have, fortunately, not only during his 2-year reign but for the past 10 years, benefited greatly by the hometown radio facilities that recognized a responsibility to, and were most responsive to, the needs of the Catholic population in the area.

Let me insert here that for the last 5 years, through the generous cooperation of Mr. Merryman, station WICC radio, we have been able to bring a daily presentation of the Rosary across the calendar year into countless homes.

I don't think that the diocese of Bridgeport has ever requested a courtesy or time or cooperation of our local radio services and found them wanting in a willingness to give cooperation.

Bishop Sheean assures me that at this moment he has many, many plans and programs that he would like to bring to a local TV service if he felt the local TV service was going to be in a position to serve his people. However, at the present time, as you have been made well aware, we are, on a hometown basis, finding ourselves in a position where we feel we are being terribly neglected—Fairfield County depending completely upon outside television.

Very little, nothing really, of a hometown interest can be brought into our homes, day after day or night after night, that is of local interest to our countless multitudes of people. Therefore I would consider this a privilege to have this opportunity, in the name of the bishop of the diocese of Bridgeport, to present to you a very earnest request, that whatever might be within your power, might be granted to our local TV outlet so that we might be put on a local basis on a par with the outside stations that are now serving our people.

I can assure you that the whole population—and speaking in the name of Bishop Sheean, surely the complete Catholic population of Fairfield County—will indeed be grateful for whatever you can do to help them to have a television service that will be serviceable to their many needs.

Thank you.

The CHAIRMAN. Thank you, Father. Any questions?

Senator PURTELL. No, except to thank the Father for coming down and giving us the information he has.

Mr. MERRYMAN. May I present Mrs. Stephanie McCarthy, director of Red Cross for Bridgeport, who will speak for the community services.

The CHAIRMAN. Before you start, may I ask this question: I don't know. Is there an application before the FCC for this channel?

Mr. MERRYMAN. We have had an application in for nearly 2 years. It is now tied up in this present rulemaking proceeding, the general proceeding.

Senator PURTELL. May I ask a question?

The CHAIRMAN. Yes, sir.

Senator PURTELL. Do I gather, Mr. Merryman, that what you feel is the answer now to your Bridgeport problem—and it is a problem—is a very high channel for Bridgeport?

Mr. MERRYMAN. That is the only solution that will give us immediate relief. We have a plan for long-term relief that we would like to suggest to the committee.

Senator PURTELL. That will be developed, however, in your testimony?

Mr. MERRYMAN. That is right, sir.

The CHAIRMAN. Go ahead, Mrs. McCarthy.

Mrs. MCCARTHY. I am Mrs. Stephanie McCarthy and I am here in a multiple capacity, I might say, representing the Red Cross. The Red Cross is part of the United Fund. I am representing the Council of Social Agencies. There are some 110 agencies in Bridgeport, and, may I add with pride, as a grandmother and a mother—of course I always have to get that in. As a group of social agencies we are extremely interested in providing services to the people of Bridgeport. We need to educate, we need to interpret, we need to promote.

We are making a very valiant effort, I might say, to develop safer living, better living, better civic consciousness. We have tried all the facilities available and feel now, and have felt for some time, that the need for a local hometown television is very, very great.

It has been an up-hill job. We feel sometimes hamstrung. Maybe I should not use that word, referring to television. Let us say we feel handicapped to a great degree; that we cannot put across to the public what we would like to.

Let's take education. What better way is there for us of the various social agencies and various groups in Bridgeport to present to the public what we are trying to do, and what we are giving to them, than the audiovisual facility of hometown television, which has been lost, of course, in Bridgeport.

Let me cite two examples, especially in Red Cross. We live in days of emergency. We never know what emergency the day might bring forth. On the 19th of last August we had the tremendous emergency of the Naugatuck Valley floods, the Eastern States floods. True, the radio supported us mightily, and is very powerful. But how much more powerful it might have been if we had depicted to the public what was happening up and down the valley and the need of immediate relief from everybody.

It is true the public responded very well, but they had a feeling that it was a kind of a long-distance presentation. It was the New York stations that showed pictures, and, of course, people were most anxious to see what the local situation was.

Another emergency that comes up repeatedly with Red Cross, in spite of our beautiful program of blood service, providing blood free for people in hospitals, we hit emergencies. When you hit that emergency there may be a man dying or a child being born, and that child and his mother might die because there is a shortage of a certain type of blood.

True, you can give it to the newspapers, and we do. They do well by it. We give it to the radio. But if you could depict that on your local hometown television—depict that need in an audio and a visual way, it would be much more effective.

I don't believe that there is any other means of education that receives as much time from the average individual as television. To repeat what Dr. Alderson has said, local people are interested in local happenings and local news and local personalities. Therefore a local hometown television, available to all people with sets, is what we need.

The person in Bridgeport is interested in what is going on in Bridgeport. We still get the national and the international activities, but the first interest is what is going on at home. We cannot get that unless we have the proper kind of television in the community.

We of the agencies need to reach hundreds of people. We need to educate them as to what we are doing. We have to picture to them the resources of the agency. Where will the serviceman in difficulty go? Where will—and I am including all agencies—a mentally disturbed person go? If this education could be carried on through television, it would make our job much easier and it would present to thousands upon thousands of people the resources that are available to them.

You may write, and you may speak over the radio, but still you must see things. We have to interpret what we do. People should be interested, if they are not, in what an agency does, and a good interpretation of what is done by an agency will result in what is all mighty important, and that is the raising of funds.

We can't exist without promoting our agencies. We can't exist without promoting the need for funds to carry on humanitarian work, and the best way to present it would be over television in a local capacity.

I am probably talking too long—I always do. At least my husband tells me that. [Laughter.] But you see, this is not merely an effort to get money. It is more important. It is an effort to develop a social and civic responsibility. And believe me, in industrial communities like Bridgeport and many others, it is a rough job to develop that social and civic responsibility among all people.

But when we can visually present to people a feeling for one's fellow men, then our problems can be solved and the results would be a higher caliber of people and a better community.

If you can sell soap or cornflakes, you certainly can sell humanity, and the pattern for decent American living. You see, through the local television, you can set the tone of culture and intelligence and the loyalties of the community.

I would like to say "amen" to everything that Dr. Alderson has said, and Father Bannon, but I would like to repeat also what they have said, that it is so important—terribly important—that we do this on a local basis.

In spite of all the resources of the nationwide networks, and I have all respect for them, there is still need for that effective use of local television. It is a chain—maybe I shouldn't say a chain—it is a bond which will improve local communities. It will improve and coordinate local units of government, and it will result in a better unit of national living and national thinking.

That is all I wish to say, except the one little addendum—if that is the proper word—that we are enormously grateful to Mr. Merryman and the facilities of the radio station which have been given to us at all times at any request.

But we would like to add that Mr. Merryman and Bridgeport need a local television station, as do other towns of the same size and capacity.

Thank you.

The CHAIRMAN. Thank you. Any questions?

Senator PURTELL. No; except again I want to express my appreciation for your coming down to give us this information you have given us.

Mrs. MCCARTHY. Thank you.

Mr. MERRYMAN. May I present Mrs. Simon Frank, who will speak for the parent-teachers' association.

The CHAIRMAN. Yes; we will be glad to hear from you.

Mrs. FRANK. You know, PTA has become the largest lay-professional organization in the world. We have 10 million members nationally. We have members in Alaska and Hawaii.

We have found that it has become a vital and integral part in the business of education. We feel that hometown TV would do a great deal of creating a large amount of interest in showing what our educational administrators do, what the board of education does.

Many people are not aware of the departments in our school administration. They just feel that if you need a band, it is up to the principal of the school. They do not realize that this goes through the board of education; that there are many things involved. If we had these people on hometown TV and planned something whereby they would hear these people speak and know that they are doing something that is actually a part of their children's education, it would stimulate their interest.

I myself do not have UHF because I do not feel I want to put the money out for this UHF. I feel I would like very much to see the programs that come on WICC-TV.

The CHAIRMAN. Is there a UHF channel there?

Mr. MERRYMAN. Yes; I operate a UHF station.

Mrs. FRANK. But still we would have to have special equipment, which is quite highly priced. For that, we have to give up seeing what our local TV does.

We want our hometown people informed and educated. We want to make our hometown people more aware of legislation, the things that go on in Hartford; and we in PTA have a very extensive legislative program.

We would like to make our people aware of the issues, so that they know when they vote what issue is of greater importance at the time.

I do not know what better way there is for children to learn than to learn by visual aids. In the schools we are now getting all types of visual aids. We in the PTA have spent a great deal of money putting in projectors and screens and sending films. We have started a film library.

What a child sees, he can remember. We feel if hometown TV were made available, they would never forget the things that they saw. If there were educational programs, they would really be retained for a greater period of time than just having to read something.

We feel that we could plan programs that would help the adults. We have an adult education program which is very difficult to put over on radio. When you see a person speaking, you pay attention; whereas when it is on the radio, you may be distracted by one thing and another.

Firstly and foremost, we would like to have the children realize that we are working for democracy and freedom and we are very grateful to Mr. Merryman. Many are the times that I have called up WICC and asked him to put on announcements for conventions, for very important pieces of legislation, and he has been very kind.

But by the same token, it does not reach as many people as it would if we had TV.

It is a great privilege to be here and present this to you.

Senator PURTELL. I would like to express my appreciation for your coming down. When you speak of WICC, of course, you are speaking now of the radio station, when you say these announcements can be carried to a great number of people.

Mrs. FRANK. Yes.

Senator PURTELL. When you talk about WICC, your feeling is, is it, because of the limited number of people with ultrahigh receiving sets, they cannot get those messages on television? Is that correct?

Mrs. FRANK. That is right. I myself would have liked to watch certain programs. We just cannot.

Senator PURTELL. Am I correct, then, in assuming that what you listen to, because you do not have an ultrahigh receiving set, is New York stations

Mrs. FRANK. Yes; we would have to put in this special equipment.

Senator PURTELL. Thank you.

The CHAIRMAN. Is most of your programing local for your U station?

Mr. MERRYMAN. It is; I would say, about 50 percent; either local film originations or local programs in the studio.

The CHAIRMAN. But the set situation is such in Bridgeport that that coverage would be very limited?

Mr. MERRYMAN. We have less than 10 percent of the receivers in the area.

The CHAIRMAN. So therefore that hometown programing would reach very few people.

Mr. MERRYMAN. That is right. It was our feeling, when we started the station, that by producing local programs we could convince the local viewers that it would pay them to invest this money in converters. Despite all the efforts we could make with the resources we had available, we still have not been able to persuade them.

Senator PURTELL. Mr. Chairman, may I ask a question?

The CHAIRMAN. Yes.

Senator PURTELL. Is one of your reasons, Mr. Merryman—I do not wish to put words in your mouth; I am trying to find what the answer is, as is everybody on this committee—because the people in Bridgeport have available to them so many very high-frequency station programs out of other cities than Bridgeport, such as New York? Is that correct?

Mr. MERRYMAN. That is right, Senator.

Senator PURTELL. So you have a peculiar situation in that respect, or one that is not common, let me say, to all other ultrahigh stations.

Mr. MERRYMAN. I would say it is peculiar. It is perhaps as severe as any situation in the country. However, we have met the same in radio, and we are way out on top.

The CHAIRMAN. That gets down, of course, to the fact that every radio set can receive any radio station.

Mr. MERRYMAN. That is right, sir. A new radio station goes on the air and immediately every radio receiver can get that station.

The CHAIRMAN. It is down to the problem we have been wrestling with here for a long time—the problem of the set.

Mr. MERRYMAN. That is right, sir.

The CHAIRMAN. And the UHF–VHF problem.

Mr. MERRYMAN. I might add that at this moment, many people like Mrs. Frank have gone to the local retailers and specifically requested a set to get WICC–TV. The retailer, finding it not to his advantage to try to sell the UHF set, has endeavored to persuade them to buy a VHF only set.

Senator POTTER. That happens many places.

The CHAIRMAN. That is true in a lot of places.

I want to say to these good people who are here, we appreciate your coming. I do not think there is a one of us on the committee who also does not appreciate the value of local hometown programing. Many of us have the same complaint.

It is a big city like the one I live in, we are limited to only networks coming in. There are local stations, but network programs—the difficulty of local advertisers. But a lot of it gets on.

Under the FCC programing rules criteria, you would put on a great number of these local programs such as suggested here. Would that not be correct?

Mr. MERRYMAN. We would operate it the same way, sir, that we operate the radio station—in the local public interest.

Senator PURTELL. May I ask one more question. Do I understand, Mr. Merryman, that the conversions total only 10 percent of the total sets in that area?

Mr. MERRYMAN. That is the figure that I deem most reliable.

Senator PURTELL. So actually, then, local merchants attempting to advertise over TV would find it prohibitive in cost to try to do it out of New York, when they are trying to reach a very limited number of people that are out of New York in the Bridgeport market, would they not? They would therefore find it difficult to advertise over TV at all, would they not?

Mr. MERRYMAN. They find it impossible.

Senator PURTELL. Except nationally sold products.

Mr. MERRYMAN. The local merchant competing with the chain store setups—the chain stores can afford to buy the New York stations because they have outlets all over the New York area and they sell in Bridgeport as well in all the other areas, and pull the business to New York.

We do not even try to sell the local merchant our television station because we know that even the small amount of money we charge for it will not give him a return. He cannot, on the other hand, afford to pay the costs of the stations in New York City.

The CHAIRMAN. Let me ask one question for the record, too. You have your application. Are there other applicants for this channel 6?

Mr. MERRYMAN. No, sir; there were two UHF assignments to Bridgeport.

The CHAIRMAN. I meant on the V.

Mr. MERRYMAN. There are no other V applications at the present time.

The CHAIRMAN. There are no other applications? You are technically the only applicant now?

Senator POTTER. It is a rule-making procedure.

The CHAIRMAN. I see. In other words, they have not assigned the channel yet to that area. Then if the channel were assigned to that area, say, you could become an applicant?

Mr. MERRYMAN. That is right. I assume if the Commission did assign a channel to Bridgeport, there would be numerous applicants for that VHF channel.

Seantor POTTER. Then your fight would just begin.

The CHAIRMAN. We want to thank you again.

We will recess the committee now until 2:15.

(Thereupon, at 12:10 p. m., the committee recessed, to reconvene at 2:15 p. m., on the same day.)

AFTERNOON SESSION

The CHAIRMAN. The committee will come to order.

We will insert at this point in the record, without objection, a letter from the Governor of the Commonwealth of Massachusetts, dated February 1, 1956, addressed to the Honorable John F. Kennedy, Senate Office Building, Washington, D. C.

(The letter is as follows:)

THE COMMONWEALTH OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT,
State House, Boston, February 1, 1956.

Hon. JOHN F. KENNEDY,
Senate Office Building, Washington, D. C.

DEAR SENATOR: It is my understanding that a Senate Interstate and Foreign Commerce Subcommitee is now conducting hearings on certain problems raised by the holders of ultra high frequency television licenses, some of whose stations are located in Massachusetts.

It is the claim of this group that recent rulings by the Federal Communications Commission, granting the holders of certain VHF licenses the right to increase their transmitting power and to increase the height of their transmitter towers, unfairly place the holders of UHF licenses in an unfavorable position.

It is held that these Commission rulings will act to centralize television broadcasting in the so-called large stations and to curtail or even wipe out the smaller "home town" stations holding UHF licenses.

In my opinion it is important that "home town" television be maintained on a more healthy basis than at present. Local television stations serving smaller areas can surely serve Massachusetts communities better than the larger stations blanketing wide areas from transmitters located in other States.

My warmest personal regards.

Sincerely,

CHRISTIAN A. HERTER.

The CHAIRMAN. At this point in the record, without objection, we will insert a letter from the Camden Broadcasting Corp., Camden, S. C., signed by H. S. Bowden, president, Camden Broadcasting Corp., dated February 20, 1956, and addressed to the chairman of this committee.

(The letter is as follows:)

CAMDEN BROADCASTING CORP.,
Camden, S. C., February 20, 1956.

Senator WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee, United States Senate, Washington, D. C.

HONORABLE SIR: I have your letter concerning hearings on television broadcasting.

Upon advice of my physician, apparently it would be impossible for me to appear as a witness.

However, I feel that I must not overlook this opportunity to express myself in the matter of UHF television. So, would you please consider this letter as a contribution to the hearing? Or at least, take the ideas contained here under advisement.

As a broadcaster and as a retail dealer in TV sales and service, I cannot help but feel that the American public has been "sold down the river" by the set manufacturers. We have seen in central South Carolina how UHF is superior in so many ways to VHF reception. And yet the set manufacturers have forced the public to say "premium" to see and hear UHF. In short, it costs the consumer from $15 to $80 more for a set which will receive both UHF and VHF. In consequence, the public considers UHF something "extra," but not necessary.

Consider this hypothetical case. Suppose the radio set makers would suddenly decide to make sets which had the radio spectrum only from 600 to 1600 kilocycles—and suppose they charged the public a "small fee" to add the lower 50 kilocycles. Virtually every radio station with assigned frequency under 600 kilocycles would go out of business.

Now, many thousands of American families have already made the investment needed to add UHF reception to their receivers, some of them paid the extra dollars when they bought a new set which would get both. Without immediate and strong measures, the UHF broadcasters are going out of business. In fact, the delay has already killed off many of them. That segment of American public who believed in their local broadcasters and their local service and repair men are left holding a useless bag.

Whether all broadcasters become UHF or all become VHF, the consumer is the loser.

I feel very strongly that UHF is as dead as FM radio for commercial purposes. Congress can correct it. But it will only be done when there is no such thing in the public mind as UHF or VHF. It must all be television from lower to higher numbers on the spectrum.

Radio set manufacturers are required to make sets with all standard frequencies on 1 dial, in 1 set.

Why not TV set markers?

Thank you, and the best of luck in the hearings. I earnestly hope you can come up with the right solution.

Sincerely,

H. S. BOWDEN, *President.*

The CHAIRMAN. Mr. Merryman, we will be glad to hear from you.

STATEMENT OF PHILIP MERRYMAN, WICC-TV, BRIDGEPORT, CONN., PRESIDENT, HOMETOWN TELEVISION, INC., ACCOMPANIED BY BEN ADLER, PRESIDENT, ADLER COMMUNICATIONS LABORATORIES, NEW ROCHELLE, N. Y.

Mr. MERRYMAN. I am here today as president of the Committee for Hometown Television, a group of station operators in New England. I might add we are a corporation organized under the laws of the State of Connecticut as a nonprofit corporation. Our members are largely confined to the States of Connecticut and Massachusetts, but we intend to extend the scope of operations of the Committee of Hometown Television on a nationwide basis.

Between us we represent just about every kind of television operation: VHF as well as UHF operators; hopeful holders of CP's and owners no longer on the air; stations linked with radio operations, and stations standing alone; companies in the black and in the red; stations with and without network affiliations.

The "hometown" in our title, I think, has been very well defined in this morning's testimony by the five witnesses who preceded me.

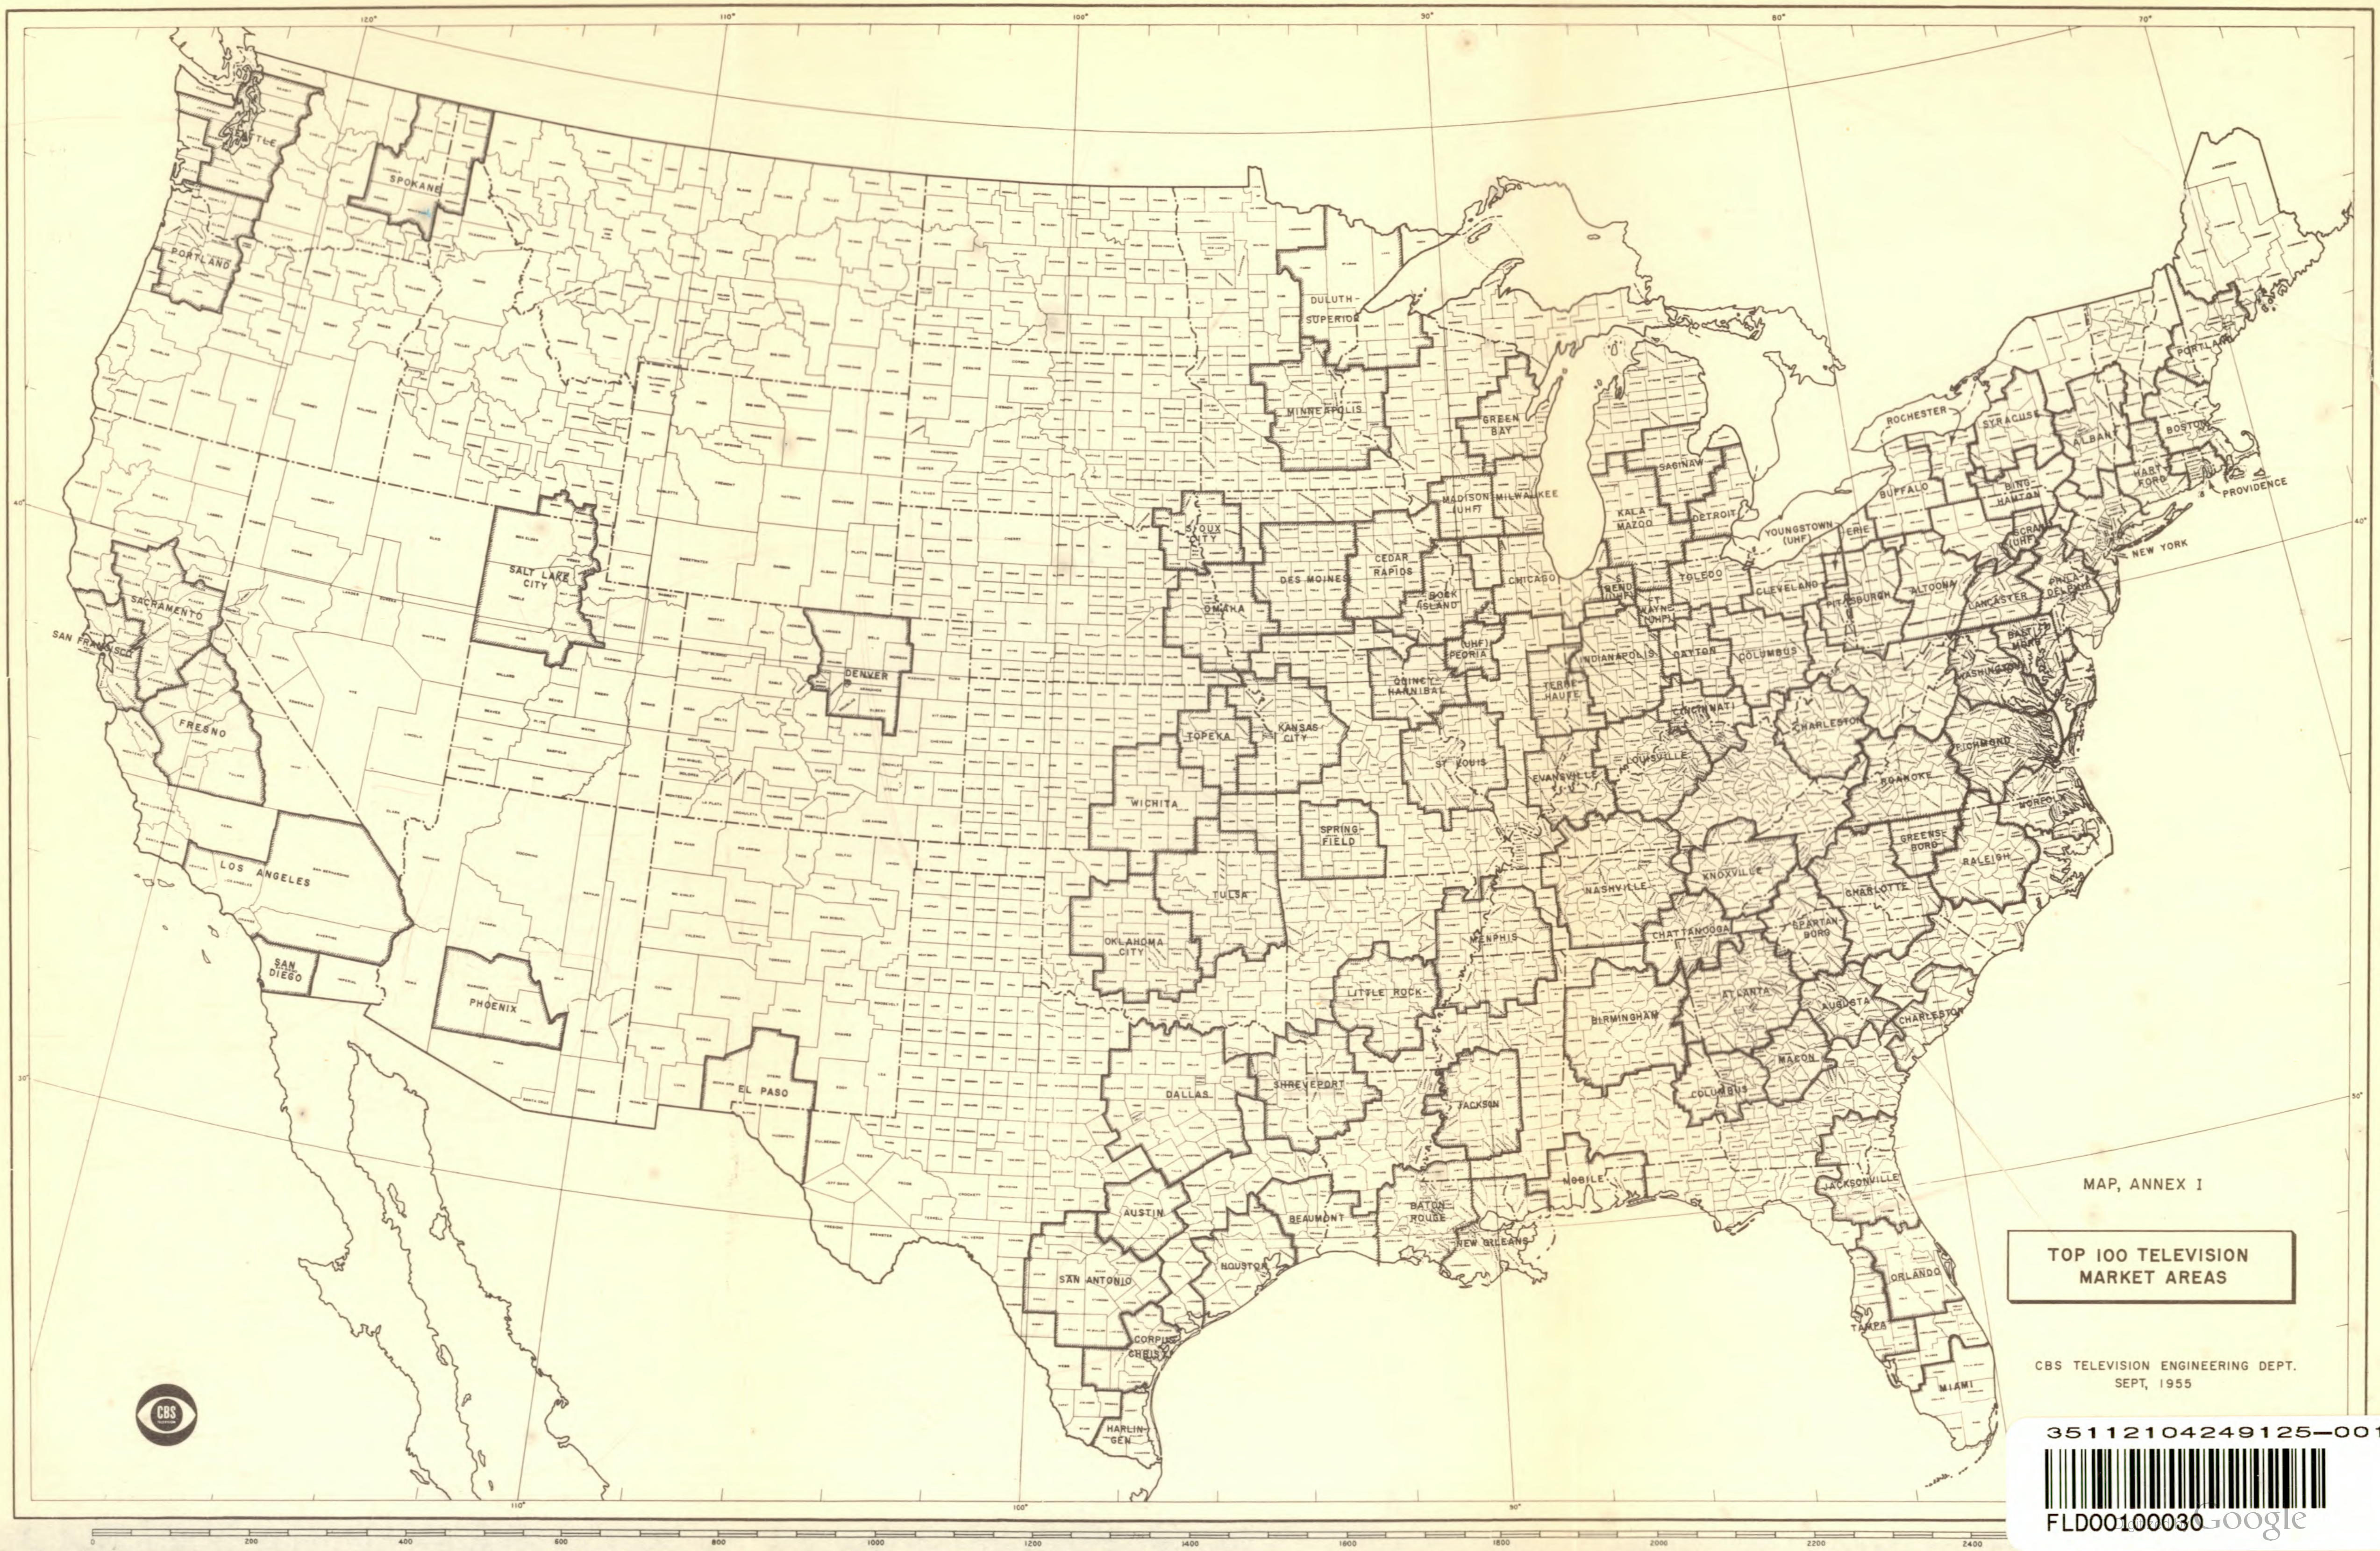
The one tie that binds us all together is this: We are all convinced that our national television system has now reached the point of no return.

What you gentlemen, the Congress as a whole, and the FCC make of our TV system this year will be its pattern for good. Later on there will be no chance to go back and reconsider the decisions of 1956, no use in "taking another look."

Pleaders for the status quo, and those who counsel us to go slow in making changes in the present setup—these people, whether they know it or not, are freezing our national television system forever in its present form, a form wholly inadequate to our country's needs.

What is that form? What are the chief characteristics of our present national television allocation system? Are they so bad, really?

The dominant fact about United States television today is quickly told: Only 295 communities have their own television facility. And



75589 O - 56 Pt. 2 (Face p. 439)

for technical reasons which I will explore later, there is very general agreement that under our present allocations system, no more than 350 of our communities can ever have television facilities of their own.

For instance, only about 30 stations are presently scheduled to begin operation in 1956. In analyzing with the experts here in the last few days, we have changed the figure from 8 to 30; some 6 have been already authorized in 1956, and it would appear that about 25 more would be expected to go on the air in the balance of the year if nothing is done to change the present allocations setup.

Compare this with approximately 1,400 communities which do have their own daily newspaper, and with approximately 1,700 which do have their own radio station. Put another way, some 1,500 communities with populations of 2,500 and over would be barred for good from having TV stations of their own.

I think you will agree that this represents a disgraceful dead-end for what is without question the greatest means of communication yet to be developed. Imagine a regulatory system which limited motion-picture houses to 350 communities, or permitted railroad depots in only 350 towns.

But if that seems incredible, let me point out to you gentlemen that there are today people, both in and out of our own industry, who are prepared to settle for television in a mere 100 communities—and as of now they seem in a fair way to prevail. In this connection may I invite your attention to the comments recently filed with the FCC by the Columbia Broadcasting System.

You have before you this chart showing what CBS proposes as a national television system. You will note that in all of New England, CBS proposes that there be stations in Hartford, Providence, Boston, and Portland, Maine. In your own areas of the United States you can see what CBS proposes for you.

(The map referred to appears facing this page.)

I have mentioned only New England because that is the particular section that our committee is dealing with at this time.

I think this document of CBS is quite important in view of the question you, Mr. Chairman, asked the FCC, who were assembled here en banc last week, whether the story presented in Broadcasting-Telecasting that the chief interest of the Commissioners, after returning from their conversations with the networks in New York, was that there be 3 stations in each of the first 100 communities of the United States.

That indicates to me that the thinking in the Commission is in very close coherence with the proposition made by CBS that the television system of the United States be frozen in 100 markets.

It is not simply that CBS, in their presentation, has said that there should be 3 comparable stations, mostly VHF, in the leading 100 markets. But if you give them this, if you let them have it, then you are going to freeze out every other television station in every community that is not in those 100 markets; and that will be the end of your television system for the United States.

This CBS map I have used illustrates the operation of its plan for limiting television to the 100 major markets.

Since the preservation of the 1955 status quo appears to have strong support inside the FCC itself, their justification for this stand needs some attention. In very brief, it goes like this:

Premise 1: It is regrettable that we may have television stations in only 295 communities, but not too important because nearly everybody in the communities in between will be able to tune in one of the out-of-town stations.

Premise 2: Anyway, at this late date, to make it possible to have stations in more than 295 communities would be inconvenient to lots of people.

An examination of the main premise of the proponents of the status quo takes us right to the heart of the matter. In effect they say: It is not very important as national policy whether a TV viewer gets his program from his own community station or from some out-of-town station.

If we could agree to that premise, then, in fact, there would be very little urgency in these hearings, certainly not so much as recently produced over 350 statements to the FCC on the future of allocations.

What good is a television station to a community? Some of our local people felt so strongly about that they came down here this morning to tell you what good it was to the community.

Well, it provides a forum for local politics; an outlet for local fund raising, for the dissemination of local news, a medium for local advertisers, a channel for civic education, for the encouragement of civic enterprises.

Without a local station, for instance, a local viewer may—and frequently does—watch the political campaign of a man for whom he cannot vote while the local candidate must remain invisible. He may be—and frequently is—urged to contribute to another community's charities while his local organization goes poor.

Again, consider the plight of the local merchant. Without a television station in town, ht cannot use the medium for advertising, because, of course, he cannot afford to go to the wide-coverage, out-of-town station.

This is too bad, but not really so serious. What is serious is that the local merchant's competitor, the chain outlet, having stores in communities all through the area can—and does—afford plenty of time on that wide-coverage, out-of-town station.

Thus we enter on that old and vicious cycle where the big get bigger and the smaller go under. And as any student of urban growth can testify, one result of this cycle is to orient the consumer toward the big city at the expense of his own hometown community.

For illustration, refer to the community of Bridgeport, Conn., during October–November 1955. In Greater Bridgeport, the retail trading area of that city, live nearly 300,000 people. Since reception from New York is splendid, Bridgeport viewers during that period were able to watch such imports as Lassie, the $64,000 Question, Person to Person, and New York weather reports.

Meanwhile, however, these Bridgeporters were completely blacked out on television from such events as the worst flood in local history, the annual United Fund Drive—which fell 40 percent behind its goal, the biennial mayoralty election, the special session of the Connecticut Legislature, and the University of Bridgeport's football season.

Thus, so far as Bridgeporters are concerned, television is no more than the importer of secondhand goods. As of 1955, television has done nothing to serve the interests, meet the problems, or come to the aid of the people of Bridgeport. The question must be asked: How can this happen in a system of allocation and licensing based upon the statutory public-interest standard?

But the total good to the community is more than the sum of such services as I have just enumerated. Since the trial of John Peter Zenger in 1735, this country has recognized the intimate connection between communication and the practice of democracy. Facts are the currency of our freedom, and as the most immediate and vivid purveyor of facts ever devised, television can be withheld from America's hometowns only at our own peril.

But that's not all. There is the reverse of the coin. A television system limited to 295 communities must inevitably result in placing the whole system in the control of a monopoly. If this seems an extravagant statement, may I refer you once again to the CBS statement I mentioned before.

There you will find blueprinted the few easy steps by which our national television system can be reduced to 3 network stations on each of 100 communities. The steps are few and easy because the present FCC policy has brought us today so perilously close to that very pass; very little remains to be done.

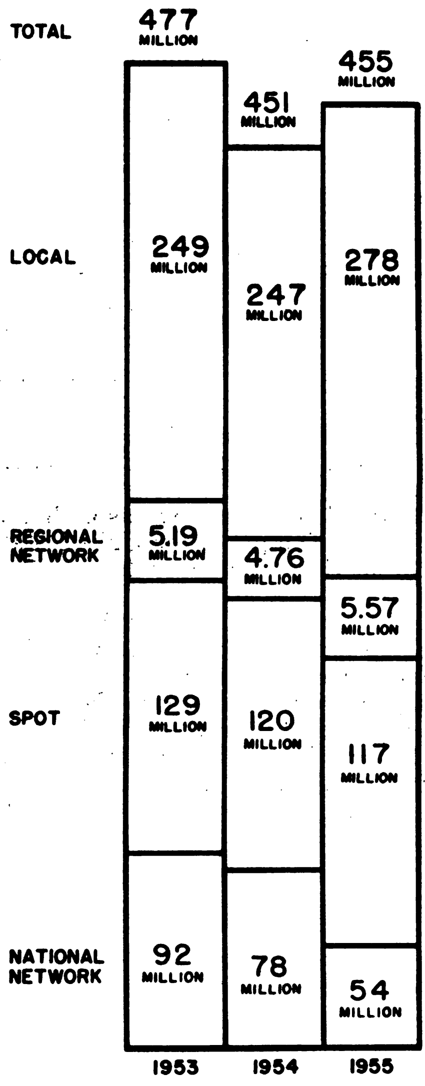
The boldness of the CBS plan makes you gasp. They are asking for one-third of the total television pie of the United States, and they want you to freeze it so that there can never develop the abilities of television as a whole force.

Over the long pull, considerations such as these have a way of asserting themselves and proving out, and the primacy of the community is no exception. Let me show you the record.

Here is a chart showing the sources of income for all radio stations in the United States for the last 3 years; that is, for 1953, 1954, and 1955. You will notice that radio gets income from local sales, from network sales, and from national spot sales. ("National spot sales" are commercial announcements placed directly with the local station, without the intervention of the network.)

A DIP & A RISE

RADIO'S TOTAL NET TIME SALES, AFTER AN ALLTIME HIGH IN 1953, SAGGED SLIGHTLY IN 1954 BUT RALLIED LAST YEAR TO RECOUP SOME LOSSES.



FROM BROADCASTING • TELECASTING
FEBRUARY 20, 1956 VOL 50, NO. 8

Look at the bottom, in the national network segment. See how in 1953 radio stations of the United States sold $92 million worth of network time; how in 1954 that figure dropped to $78 million; and in 1955, to $54 million, showing without question how the influence of the network on radio is rapidly passing out.

After more than 30 years of development, the radio system is finally coming to the point where it is meeting the goal, that was set for it in the beginning, of serving the local advertiser, the local community.

You will see this by looking at the top at the section marked "Local." While the network was going down, in 1953 we had $249 million in local sales. In 1954 it went down a little bit to $247 million—practically no difference. But in 1955 it climbed back up to $278 million.

You see, of course, the regional network, which is of comparatively no importance in the picture. What you see here is the evidence of a long-term curve—a curve representing the importance of networks in radio, a curve going continuously downward. At the same time, the relative importance of local business, of hometown accounts, is going up and up. Radio has been an operative commercial force in the United States for 34 years. As it now approaches maturity, we can perceive its true place in the community—it is obviously a local institution, a community force.

Lest you think this is a fortuitous conclusion, look if you will at this chart, which shows the sources of income for all newspapers in the United States. Here we are looking at the fruits of an evolution which antedates our Republic. Newspapers were published in this country well over 200 years ago. And today, it is patent that this medium finds its true role, its revenue, and its power as a local force, a community force.

(The chart will be found in the official files of the committee.)

There is no network in newspapers. As I said before, I think we are reaching the point where we will not have network in radio. I expect any time to see some entrepreneur come up with a plan whereby the national programs suitable for local broadcasting by radio stations will be furnished to us much in the same manner as we now buy news from the Associated Press or the United Press.

I think you gentlemen will agree with me that this demonstration of the overriding importance of the hometown in communications is no accident. Rather it is the assertion of a truth of which we are all aware: In a democracy, the closer we can get to the needs and aspirations of the individual, the firmer the ground on which we stand.

Finally, here is a chart showing the sources of income for radio as compared to television—television, the golden baby of communications. In its 10th year, television shows network income in the ascendancy, and going up all the time. But let me suggest to you that this curve is definitely not the curve on which to pin a long-term national policy. In its 10th year television shows the same pattern as did radio a quarter of a century ago; and I have no doubt that there was a day when newspaper revenue showed the same picture.

(The chart will be found in the official files of the committee.)

But to conclude that television is somehow to grow up to be the exception to this rule of history is both unwarranted and dangerous. Unwarranted, because all the facts—including my appearance here today—insist that the needs of the community must assert themselves over the long, or policy, run. Dangerous, because considerations based on the kind of country we want to build insist on reserving to the local citizen the basic use and control of his means of community communication. To ignore these factors, it seems to me, is to invite correction—and criticism—and in the very near future, at that.

The broad perspectives of history—and here we have only to go back to the last world war—show very clearly the great dangers inherent in any monopoly of the means of national communication. While I am not for a moment suggesting that the gentlemen in charge of our TV networks have any intention of placing our television system in jeopardy, I cannot refrain from making the point that their plans would unwittingly turn our feet down a perilous path.

From these considerations, I think it is fair to conclude that the limitation of television to 350 communities is a great deal more than "unfortunate" or "regrettable." Viewed as the result of a national policy, such a hamstringing of a great national asset is no less than catastrophic.

I have said that our national television system is at the point of no return, that there will be no chance later to remedy the mistakes of 1956 with the aid of hindsight. I have based my argument on the contention that under our present system no more than 350 communities can have their own television facilities. I would like to examine briefly the facts that make this so.

Previous testimony before you has explored the matter of incompatibility, that is, the impossibility of operating both UHF and VHF stations in the same area. Let me make here just two points on the subject of incompatibility. First, we cannot operate VHF stations under present FCC standards in more than about 350 communities. Second, if we are to raise our sights above that figure, we must resort to VHF drop-ins and ultimately to the UHF station. A revitalized UHF can supply us with television in approximately as many communities as now enjoy radio.

What has happened under the FCC's present policy is quite simply that the VHF stations have been allowed to crowd the UHF stations off the air and off the map, and out of business.

Thus we can make a simple equation: If we want a national television system able to serve our democratic tradition, then we must make wide use of UHF. Therefore, the problem faced by you gentlemen, by the FCC, and most of all by the station operators, comes down to this: How can we make United States television possible for the UHF operator?

Just how impossible UHF operation now is can readily be deduced from some vital statistics:

Since 1952, the total of UHF stations forced out of business is 56; 21 quit in 1955.

Of the 95 UHF commercial stations now in operation, about four-fifths are operating at a loss. A mere 18 are profitable.

One hundred and eleven recipients of construction permits for UHF stations have relinquished them. One hundred and four have construction permits but are sitting on them.

These statistics tell a plain story: UHF in the United States today is nearly dead. What's more, the impressive piles of financial wreckage that now cover the UHF landscape make it highly unlikely that any new capital for UHF will appear on the scene, now or ever—unless something is done about UHF right now, before the 95 stations still operating go under.

Just how urgent this situation is may be seen in the fact that in the last 90 days, 6 more UHF stations went off the air.

After all, neither you gentlemen nor the FCC can simply legislate new UHF stations into being. For every station there has to be a group of businessmen willing to risk their capital in what they consider to be a sound investment; and in the context we are discussing here, these businessmen have to be local businessmen, that is, investors, with limited funds. You can spread just so much business failure on the UHF record, and then these potential investors will turn their backs for good on TV as an investment possibility.

I think you will agree with me that investment in UHF operation has now been brought by FCC policy—or lack of it—very close to the untouchable class. This progress of UHF to the brink of extinction comes as no particular surprise; it had been widely anticipated among UHF operators for some time. In fact, it was just about 2 years ago that I testified before this same committee on this same topic, and made the point that immediate help was needed. Since then the FCC—far from extending us a helping hand—has made it even more difficult for the UHF station to survive.

This is all by way of enlarging on a statement with which I began my testimony here today: This is television's year of decision, and failure to act now on behalf of UHF will foreclose the possibility of any future resurrection.

Now, I have spoken several times of the need for helping the UHF operations, and I wish to make clear to you that what we seek is neither some sort of Federal bounty nor any special legislative dispensations. What we seek now is no more and no less than what the Congress has told the FCC to provide: "A fair, efficient, and equitable distribution of * * * service * * *." In implementing this congressional mandate, the FCC set up two main priorities for the granting of TV licenses:

First, to get some sort of TV signal to everybody.

Second, to put a TV station in every community.

The FCC got these priorities into print, but that is about as far as they went. Some time ago better than 80 percent of our population were able to get some TV signal, and at this point the FCC came to a dead stop. Progress registered toward Priority 2—a TV station in every community—has been virtually nil. The record of the FCC's failure is spread in their files, and in the briefs filed last December 15 with the Commission by TV operators. The story told there is complete, convincing—and disastrous. For as good a summary as any may I refer you to the statement filed by our own Committee for Hometown Television with the FCC in these proceedings.

At this point, Mr. Chairman, I would like to ask that this statement be incorporated into the record.

The CHAIRMAN. All right, it will be incorporated.

(The statement incorporated is as follows:)

THE COMMITTEE FOR HOMETOWN TELEVISION, INC.

Chairman: Charles DeRose, WHYN-TV
President: Philip Merryman, WICC-TV
Treasurer: Edward Taddei, WNHC-TV
Box 9140
Bridgeport, Conn.
Tel. Amherst 8-1601

The Committee for Hometown Television, Inc. has been organized by a group of TV station owners to defend the proposition that every community has the right to a local TV outlet able to provide that community with a local outlet for its own news, politics, charitable, and social and educational undertakings.

This right to hometown television was granted by Congress, reaffirmed by the Federal Communications Commission—and stands today on the brink of extinction.

In November 1955, the FCC acknowledged the imminent danger to hometown television, and invited industry comment. Following is the statement of this committee, filed December 9, 1955, in response to the FCC's request.

We urge you to read it carefully because—

This statement makes the case for the consumer the people's case.

This statement stands in opposition to the network presentation made by CBS, whose case is monopoly's case.

Survival of the principle of hometown television demands wide and immediate support.

On December 15, 1955, the FCC began deliberations which will determine without chance of recall or revision what television is to mean to the United States, whether—

United States television is to become the degraded carrier for network monopolies, or the servant of all the people.

This is your brief.

PHILIP MERRYMAN.

For this committee's articles of association and bylaws see pages 460-461.

THE CASE FOR HOMETOWN TELEVISION

These documents are filed by the Committee for Hometown Television, Inc., a nonprofit organization incorporated under the laws of Connecticut. Among the purposes of the organization as stated in the articles of association are the following:

(*a*) To promote and support the development of hometown television stations.

(*b*) To study and support means for the furtherance of hometown television as a public community service.

The committee presently comprises a group of television stations in New England, organized to defend the proposition that the primary function of a television station is to serve its community. Its membership is open to UHF and VHF stations alike and, in addition, to other persons interested in preserving to the various communities in the United States the maximum opportunity of having their own television stations to serve as outlets for local self-expression.

I. HOMETOWN TELEVISION DEFINED

1. Hometown television connotes the well-established principle—both in the allocation and licensing of communications facilities—that the various cities, towns, and communities in the United States need, and are entitled to have, local radio and television facilities to serve as outlets for local self-expression, and to provide the means for bringing local news, information, intelligence, culture, and entertainment to the residents of such communities.

2. The ability of communities to have their own television stations is important because television stations, like radio stations and newspapers, not only are means for bringing news, entertainment, and culture to the people, but they also serve as outlets for local self-expression. While programs from a distant radio or television station or features in the metropolitan daily are able to keep the people up to date on national and world affairs, only by having their own stations or newspapers can local communities be assured that local issues will get

an airing and that the local citizenry will have an opportunity to have matters of strictly local concern brought to the attention of the public.

3. For illustration, refer to the community of Bridgeport, Conn., during October–November 1955. In greater Bridgeport—the retail trading area of that city—live 49,000 families. Since reception from New York is splendid, Bridgeport viewers during that period were able to watch such imports as Lassie, the $64,000 Question, Person-to-Person, and New York weather reports.

4. Meanwhile, however, these Bridgeporters were completely blacked out on television from such events as the worst flood in local history; the annual United Fund drive (which fell 40 percent behind its goal); the biennial mayoralty election; the special session of the Connecticut Legislature; and the University of Bridgeport's football season.[1]

5. Thus, so far as Bridgeporters are concerned, television is no more than the importer of secondhand goods. As of 1955, television has done nothing to serve the interests, meet the problems, or come to the aid of the people of Bridgeport. This is the plight of hometown television today—not only Bridgeport—but in numerous communities throughout the Nation which lie in the shadow of the wide-coverage VHF stations: One might well question how this could occur in a system of allocation and licensing based upon the statutory public interest standard. We turn to an examination of the history of the hometown television concept and the manner in which its development has been thwarted.

A. Legislative origins

6. The concept underlying hometown television is a basic one finding its roots in the early Radio Act of 1927 wherein[2] the Congress declared:

"* * * the people of all the zones established by section 2 of this Act are entitled to equality of radio broadcasting service, both of transmission and of reception, and in order to provide said equality the licensing authority shall as nearly as possible make and maintain an equal allocation of broadcasting licenses, of bands of frequency or wavelengths, of periods of time for operation, and of station power, to each of said zones when and insofar as there are applications therefor; and shall make a fair and equitable allocation of licenses, wavelengths, time for operation, and station power to each of the States, the District of Columbia, the Territories and possessions of the United States within each zone, according to population. * * *"

7. The above language was carried over to the Communicattions Act of 1934 as section 307 (b) which, as amended in 1936, reads as follows:

"In considering applications for licenses, and modifications and renewals thereof, when and insofar as there is demand for the same, the Commission shall make such distribution of licenses, frequencies, hours of operation, and of power among the several States and communities as to provide a fair, efficient, and equitable distribution of radio service to each of the same."[3]

8. The congressional mandates here set forth have repeatedly been implemented by the Commission in its licensing and regulation of AM broadcasting. In literally scores of cases the concept of providing a community with its first or second local outlet for self-expression has been the articulate premise upon which a choice has been made between qualified applicants.

B. Administrative precedents

9. When television came of age, it was this same principle that dominated the basic structure of the Commission's allocation thinking. After "freezing" action upon new and pending applications in 1948, the Commission on March 22, 1951, issued its third notice of further proposed rulemaking (FCC 51–244) proposing a new table of assignments which, it said:

"* * * endeavored to meet the twofold objective set forth in sections 1 and 307 (b) of the Communications Act of 1934, to provide television service, as far as possible to all people of the United States and to provide a fair, efficient, and

---

[1] By contrast, Bridgeport's radio station WICC devoted 3 full days and nights to informing and helping the area during the floods; 5 weeks of continuous information about, and promotion of the United Fund campaign; night and day coverage and speechmaking for the elections; daily summaries of the special legislative session; and, of course, complete local football coverage.

[2] Radio Act of 1927, ch. 169, sec. 9, 44 Stat. 1166, as amended March 28, 1928, ch. 263, sec. 5, 45 Stat. 373, repealed by act of June 19, 1934, ch. 652, sec. 602 (a), 48 Stat. 1102; U. S. C. A., title 47, sec. 89, 1 RR 20:17.

[3] Communications Act of 1934, ch. 652, sec. 307 (b), 48 Stat. 1083, as amended June 5, 1936, ch. 511, sec. 2, 49 Stat. 1475; July 16, 1952, ch. 879, sec. 5, 66 Stat. 714; U. S. C. A., title 47, sec. 307 (b); 1 RR 10:85.

equitable distribution of television broadcast stations *to the several States and communities.*" [Emphasis supplied.]

10. To implement these objectives the Commission in its third notice adopted five priorities, as follows:

"Priority No. 1: To provide at least one television service to all parts of the United States.

"Priority No. 2: To provide each community with at least one television broadcast station.

"Priority No. 3: To provide a choice of at least two television services to all parts of the United States.

"Priority No. 4: To provide each community with at least two television broadcast stations.

"Priority No. 5: Any channels which remain unassigned to the various communities depending on the size of the population of each community, the geographical location of such community, and the number of television services available to such community from television stations located in other communities."

Note that priorities 2, 4, and 5 are all designed to provide one or more local television stations within each community of the United States.

11. Thereafter, in its sixth report and order,[4] in April of 1952, lifting the so-called freeze, the Commission reiterated its five priorities (par. 63 of sixth report) and, in discussing the general considerations underlying its adoption of the new table of assignments, concluded that the standards set forth in sections 1 and 307 (b) of the act could best be achieved by the adoption of the table because:

"A table of assignments makes for the most efficient technical use of the relatively limited number of channels available for the television service. It *protects the interests of the public residing in smaller cities and rural areas more adequately than any other system for distribution of service* and affords the most effective mechanism for providing for noncommercial educational television * * *" (par. 13, sixth report). [Emphasis supplied.]

12. The Commission likewise recognized that the table of assignments, based upon the aforementioned priorities, was necessary to protect the ultimate future demand for local stations by smaller communities. In paragraph 15 of the sixth report the point was stated thus:

"15. In our opinion there is an equally significant reason why a table of assignments should be established in our rules. For while the record in this proceeding demonstrates that the desire for broadcasting service from local stations, reflecting local needs and interest is widespread, experience has shown that many of the communities which cannot now support television stations but would eventually be able to do so, will in the absence of a fixed reservation of channels for their use, find that available frequencies have been preempted. * * *"

13. Later in the sixth report (par. 67) the Commission described its proposed allocation of UHF channels as implementing the priorities in the following manner:

"The assignment plan for UHF channels was coordinated with and made complementary to the VHF assignment plan. The Commission has always recognized that even with an extensive scattering of VHF assignments, the 12 channels available are not sufficient to meet the objective of providing television service to all the people. With the additional UHF channels, however, the Commission was able to formulate an assignment plan that has the potentiality of fulfilling the objective of section 1 of the Communications Act. If all the VHF and UHF channels are utilized, there should be few, if any, people of the United States residing beyond the areas of television service. (See priorities 1 and 3.) Moreover the table has gone far in fulfilling the needs of individual communities to obtain local television outlets. It has provided at least 1 assignment to over 1,250 communities. (See priority 2.) And it has attempted where possible to provide each community with at least two assignments. (See priority 4.3.)"

14. And, in discarding a DuMont proposal that the smaller communities should depend on the larger ones for service, the Commission forcefully recognized the importance of community-hometown television in these words (pars. 78, 79, and 81, sixth report):

"78. A second policy difference between the DuMont and Commission assignment plans lies in their contrasting views with respect to the importance of indi-

[4] Sixth report and order in FCC Docket No. 8736 et al., *In the Matter of the Amendment of Section 3.606 of the Commission's Rules and Regulations, etc.*, adopted Apr. 11, 1952, 1 RR 91:599.

vidual communities having television assignments. The DuMont view is that emphasis should be placed on locating the assignments, particularly VHF channels, so that the largest number of people will have television service but not necessariy that the largest number of communities should have one or more television stations of their own. This view derives from DuMont's premise that the major cities with their large populations are certain to be able to support expensive television facilities, and that smaller communities which are within appropriate range of these cities should obtain service from stations in the large cities, rather than attempt to support stations with their own less substantial economic resources.

"79. The Commission, on the other hand, believes that on the basis of the Communications Act it must recognize the importance of making it possible with any table of assignments for a large number of communities to obtain television assignments of their own. In the Commission's views as many communities as possible should have the opportunity of enjoying the advantages that derive from having local outlets that will be responsive to local needs. We believe with respect to the economic ability of the smaller communities to support television stations that it is not unreasonable to assume that enterprising individuals will come forward in such communities who will find the means of financing a television operation. The television are is relatively new and opportunity undoubtedly exists for initiating various methods of reducing television costs.

* * * * * * *

"81. The Commission finds that the principles of assignment which DuMont advocates are inadequate in that these principles do not recognize specifically the need to provide an equitable apportionment of channels among the separate States and communities and they do not provide adequately for the educational needs of the primarily educational centers."

15. Thus, as of April of 1952, when the freeze was lifted and the televison industry received the green light from the Commission to implement its new table of assignments by the application process, hometown television was clearly recognized as of paramount importance in the future development of television as, indeed, was required by the Commission's statutory mandates and its basic public interest standard.

C. Commission policy

16. But what has the Commission done since 1952 to implement priority 2? Some time ago the FCC reached an estimated 90 percent of its goal for the first of its priorities: about that much of our population is now within reach of some TV signal. And at this point the FCC came to a dead stop. Progress registered toward priority 2 has been virtually nil. Indeed, it has become obvious that the FCC, far from proceeding with priority 2, has been running backward, kidnapping hometown television as it fled.

17. For, despite the high priority assigned by the Commission to providing local television stations for each community, hometown television, after but 3 short years of experience since the lifting of the freeze finds itself in many important quarters of the Nation to be the stepchild of the Commission and of the television industry. Far from the confident predictions that within a short time after the full-scale advent of television 1,500 to 2,000 television stations would be on the air, the Nation finds itself, almost 10 years after the Commission began licensing television stations, with only 452 stations in 274 separate communities. As was pointed out by Chairman McConnaughey in his November 28 address before the Baseball Leagues Convention in Columbus, Ohio, the stations now on the air "represent fewer than 1 out of every 4 channel assignments which were made available by the Commission in 1952."

18. Moreover, in the absence of immediate and forthright remedial action, it is difficult to see how in the foreseeable future it will be possible to see have more than 75 additional outlets. Thus, in the absence of imaginative and bold steps by the Commission, television will be confined, for a long time to come, to the large cities, and all other communities will have to get along without their own hometown television stations. Any remedy for hometown television must, of necessity, come to grips with the problems of UHF, for the two are dependent and interrelated in their problems. The paragraphs to follow will discuss the part played by UHF in the hometown television problem.

II. HOMETOWN TV AND UHF

19. The role of UHF in hometown television is defined by the fact that it is possible to operate many more UHF than VHF stations in a given area. Consequently UHF is indispensable to hometown coverage; and although expediency has so far caused the UHF stations to be virtually ignored, prudent national policy will depend on them more and more as the indispensable vehicle for hometown television.

20. The reasons for the current plight of hometown television can be found (*a*) in the difficulties confronting UHF and (*b*) in the policies followed by the Commission with respect to UHF and other matters as will be hereinafter detailed.

21. UHF television has been authorized only since 1952. Before that only VHF stations were in existence. VHF had a 6-year head start on UHF. Before a single UHF station was authorized there were already 108 VHF stations in operation in 63 different cities containing about two-thirds of the entire population in the United States. More than 17 million VHF sets had already been sold before a single UHF station was authorized and not 1 of these sets could receive UHF programs. Nor did the opening of the UHF band improve the receiver situation. For it was based upon the monumental miscalculation that once the bands were opened, the set manufacturers would all produce all-channel sets capable of receiving both VHF and UHF signals. That the manufacturers did no such thing is now notorious. Finally, the existing VHF stations had affiliations with the networks; and UHF stations, because of their obvious inferior state, have been unable to secure such affiliations. Without network programs it is extremely difficult if not impossible for a television station to survive. Because of these miscalculations and the resulting economic facs of life, UHF stations in most markets were rendered obsolete almost before they opened.

A. FCC power policies

22. But the difficulties surrounding UHF afford only part of the answer for the small number of hometown television stations in existence today. Commission policies on maximum power also must bear a large share of the blame. Until 1952 VHF stations were limited to maximum power of 50 kilowatts at 500 feet. Stations with higher antennas were required to reduce power proportionately. In 1952 the Commission amended its rules so as to raise the maximum. For stations operating on VHF channels 2–6 the maximum was increased to 100 kilowatts at 1,000 feet, and for stations operating on VHF channels 7–13 the maximum was increased to 316 kilowatts at 1,000 feet.[5]

23. In assessing the impact of the power problem on hometown television it must be remembered that the 108 VHF stations are for the most part located in the large metropolitan centers and enjoy affiliations with the dominant networks—the lifeblood of television operations. New stations have to depend on their ability to acquire network programs which in turn depends on their ability to deliver unduplicated coverage. Obviously the networks are not interested in acquiring new affiliates if their service area is already largely served by an existing affiliate.

24. The following mileage table shows how the increase in power adversely affected the ability of many stations to acquire network programs:

[In miles]

Channel number	Grade A pre-1952	Grade B pre-1952	Grade A 1952	Grade B 1952
2 to 6	23	52	37	70
7 to 13	24	43	46	63

In other words, under the old maximum a community located, for example, 35 or 45 miles from a metropolitan center had every reasonable prospect of having its station acquire a network affiliation with which to support itself. Under the new 1952 maximum the prospects for network affiliation became very slim because too much overlap is involved, a much greater separation appearing to be necessary. Since cities in the Northeastern United States are placed close together, the 1952 maximum in power has very substantially adversely affected

[5] This is the limitation for zone I which includes the populous Northeastern United States. Higher antennas were permitted in other zones.

the ability of stations in many sizable communities to acquire network affiliations.[6]

25. The stifling effect of the Commission's tower and power policies on the development of hometown television is vividly revealed by the experience of New Jersey and Connecticut. In the whole State of New Jersey there is not a single operating television station at the present time.[7] Yet that State is able to support 30 radio stations. The reason for New Jersey being a television desert is that practically all of the population residing in New Jersey are within the range of the superpowered stations located either in New York or Pennsylvania.

26. Thus, when candidates for public office in New Jersey want to use television, they must go either to New York City or Philadelphia stations in order to reach their home constituencies. And in so doing, they must pay for coverage in New York State and Pennsylvania, which is of no earthly use to them in New Jersey. Moreover, if the citizens of Trenton, Passaic, New Brunswick, or any of the other New Jersey communities desire to have local issues aired on television stations, they must be able to convince the large metropolitan stations in New York and Philadelphia that the issues are of sufficient interest to their viewers to warrant carrying the programs.

27. The situation in Connecticut is scarcely better. Thirteen commercial channels are assigned to nine cities in Connecticut. However, lying between the powerful stations of New York, Providence, and Boston, only 5 stations are in operation in Connecticut at the present time, and all but 1 or 2 of them are having very great difficulty in surviving. This is in sharp contrast to the 31 radio stations operating in that State. In Massachusetts, 25 channels are assigned for use in 14 communities. Yet only 1 educational and 6 commercial stations are in operation, and 4 of these are in the metropolitan center of Boston-Cambridge. In radio Massachusetts has 73 stations.

28. The operators of UHF stations have attempted to secure relief but have had no success. The trade organization—dominated by the networks and the successful VHF stations—has done nothing to aid the cause of hometown television. The UHF stations organized last summer and made a strong presentation of their case to Congress. The FCC appeared to be sufficiently moved by the desperate straits of these operators to schedule an oral argument on a series of deintermixture petitions designed to alleviate the UHF problem. Although the FCC indicated that the matter had a high priority, it failed to take any action before beginning its long summer recess in July. It has since denied them, postponing their consideration for the instant rulemaking proceedings.

29. This attitude is in sharp contrast to the Commission's action in two other areas—areas which will help television in metropolitan areas at the expense of hometown television. The first of these moves relates to another increase in power for VHF stations in the northeastern part of the United States. Just before the long summer recess began, the Commission adopted an order which would increase power of VHF stations in zone I to 100 kilowatts at 1,250 feet for stations on channels 2 to 6 and to 316 kilowatts at 1,250 feet for stations on channels 7 to 13. This would mean that stations without antennas higher than 1,000 feet could increase their power in many cases more than twofold, and extend their service areas by 4 or 5 miles. In particular, all 7 stations on the Empire State Building could increase their power; in the case of 6 of the stations the increase in power would be more than twofold.

30. The impact of such an increase in power on television in Connecticut and New Jersey is obvious. For illustration, consider the effect of such a rule upon WNHC-TV, a VHF station serving New Haven, Conn. WNHC-TV, as a VHF station, had no conversion problem and no audience problem such as plague its UHF counterparts. It enjoyed an NBC affiliation. When the FCC asked for comments on a proposal to increase tower heights in zone 1, NBC got the point right away. In January it purchased WKNB in New Britain, Conn. In the latter part of June it gave notice of cancellation of its network contract to WNHC-TV, New Haven, and announced that henceforth WRCA-TV, New York, would give New Haven "coverage" to its advertisers. On July 20, sure enough, the FCC ruled that the maximum tower height in zone 1 could be increased to 1,250 feet.

---

[6] Although the increase in power mainly affected UHF stations, VHF stations in smaller communities were also affected since they also must rely on network programs and their proximity to metropolitan areas adversely affects their ability to secure network programs.

[7] Station WATV is technically licensed to Newark but in practice it is a New York station since it is 1 of the 7 stations operating from the Empire State Building in New York.

31. To WNHC–TV, New Haven's hometown station, this meant that, thanks to this extraordinary action by the FCC, it would henceforth (*a*) be deprived of NBC network income; and (*b*) have to compete with a new station (WRCA–TV) which contributed absolutely nothing to New Haven as a community. A severe blow had been dealt not only to WNHC–TV but to the public of New Haven where the integrity of, and community benefits from, hometown television were scuttled.[8]

B. Superstations and satellites

32. Another FCC move that can have disastrous consequences so far as the fate of hometown television is concerned is the Commission's rulemaking proposal to increase maximum UHF power to 5 million watts. The cost of transmitters capable of producing 5 million watts is exceedingly high and only the large cities can possibly support such power. If this rule goes into effect, it will accelerate the tendency to center television in the large cities at the expense of small community operation.

33. Equally disastrous is the Commission's sanction of satellite operations for both VHF and UHF stations. Announced as a policy matter in a public notice of August 5, 1954 (FCC 54–991), the Commission stated that it would consider applications for UHF stations which did not propose to originate any local programs, where it appears that the economies of such operations would render feasible a station in a community where one might otherwise not be built. Although the policy specifically referred to UHF stations, applications have also been entertained and granted for the satellite operation of VHF stations. (See e. g., Lufkin-Houston, Tex., VHF satellite grant.)[9]

34. It is thus apparent that while the Commission has expressed great and continuing concern for the plight of UHF and hometown television, its proposals and actions have served to solidify and indeed magnify the already desperate situation in which UHF and hometown television find themselves. But even more alarming is the prospect that the Commission may take action on proposals which could forever deprive America's hometowns of their own television facilities. Several of the proposals which the Commission has had brought before it would undoubtedly reach this result.

III. THE CBS AND MULLANEY PLANS

A. The CBS plan

35. On October 6, 1955, in an extraordinary 2½-hour ex parte meeting with the FCC Commissioners, CBS's Dr. Frank Stanton presented an engineering and economic study designed, he declared, "to provide * * * an allocation under which there could be at least 3 competitive services in each of the 100 leading television markets"—the CBS magic supermarkets. Significantly, he defined the study's second objective as "to avoid * * * dislocations and injuries to existing station licenses." No mention was made of the FCC's priority 2. The study bases itself on two premises:

1. The bigger the area covered by a TV signal, the better the national television system; and
2. The smallest community capable of supporting its own television facility contains 22,000 families, or about 75,000 people.

This rather disingenuous document is significant not so much for what it proposes as for the network intentions it reveals. This intention is nothing less than the complete dismantling of hometown television.

36. The CBS proposal advances two alternative reallocation plants each of which spells the death knell for UHF and hometown television. As noted above, both plans have as their purported goal the establishment of 3 substantially competitive facilities in each of the 100 leading "markets" as defined by CBS.

---

[8] While the Commission has recently vacated its July 20 order adopting the increased power and tower height rule for zone 1, its haste and willingness to adopt it in the first instance demonstrates the Commission's penchant for helping the large VHF stations at the expense of hometown television. Moreover, by including the rule as an area of consideration in the broad rulemaking in docket 11532 the proposal still hangs in threat over the heads of UHF and VHF hometown operators (see further report and order in dockets 11181 and 11532 released December 1, 1955).

[9] A recent Pennsylvania proposal underscores the problem. Broadcasting-Telecasting for October 24, 1955 (p. 80) reports a proposal by WGBI, Scranton, to operate experimentally with 5 megawatts power, feeding network programing to stations in Williamsport and Sunbury on a satellite basis. While the proposal may offer temporary benefit to all three stations and although the satellites will originate some local programs, the long-range effect of a continuing operation of this type will be to stifle the Williamsport and Sunbury operations as independent, local hometown television stations.

These markets are not cities or communities alone but large areas comprised of numerous counties and whose boundaries in some instances cross State lines to include parts of more than one State. The area markets are dominated by 100 large cities to which CBS would in practice, confine all television stations.

37. The CBS plan A purports to provide 3 "substantially equal facilities" to all but 16 of the 100 markets. Plan A would be achieved by abandoning all but a few UHF allocations and by dropping in additional VHF assignments to the major cities from smaller outlying hometown television communities.

38. The CBS plan B would utilize three additional VHF channels by taking them from present uses by other services. The UHF band would be completely abandoned. Under plan B all 100 markets would have 3 or more VHF services. Again, shorter mileage separations, drop-ins, and move-ins, are involved. However, CBS admits that channels could not be provided under plan B for 60 currently operating UHF stations. These would have to be abandoned.

39. CBS endeavors to supports its thesis that television stations should be concentrated in the 100 markets by asserting that 85 percent of the families of the United States fall within these markets. This fact, however, does not alleviate the need for or reduce the importance of hometown television. For the 85 percent are by no means located within or indeed in close proximity to the 100 major cities in which CBS would place stations. Rather they are scattered among the many cities and communities—ranging from small to substantial size—which lie within the large "market" areas defined by CBS. Rather they are scattered among the many cities and communities which need and deserve hometown television stations.

40. But the needs of the many small and medium sized communities are of no concern to CBS. The proper area of influence and coverage of the individual station matters not to CBS so long as its network programs reach the eyes and ears of the masses. This attitude completely ignores the vital issue of hometown television and the manner in which it is now smothered under the signals of the powerful VHF stations in the major markets. The optimum size of a station's coverage is, of course, the key question in any allocation system—the very question which has stalled the FCC. But the CBS report smuggles in its answer to this moot question—by disguising it as a premise—"the bigger the better." By so begging the question, Dr. Stanton is able to avoid the awkward task of justifying his theory of coverage; it's just there.

41. It is evident that if the FCC were to follow the CBS plan and equate a station's optimum coverage with its grade B contour at tower height of 1,250 feet and maximum power, then all of New England could be "covered" with signals from four cities. In point of fact, this is precisely what CBS does propose, the four New England cities in its plan being Hartford, Providence, Boston, and Portland; and, by extension, CBS finds that it can "cover" the whole United States from 100 cities.

42. It is evident that such a wide-coverage VHF signal forces the elimination of all UHF signals within its grade B contour; and the scarcity of VHF signals limits additional VHF signals in the same area just as drastically. Therefore the chief consequences of the CBS plan may be stated as an axiom: The wider the coverage, the less the service to the community. For illustration, refer to the fate of Bridgeport and New Haven, cited above. As expressed in terms of the FCC's two top priorities, CBS proposes to overfulfill priority 1 (a TV signal for everybody) by virtually eliminating priority 2 (a TV station for every community).

43. The second CBS premise is no less unusual. With it CBS attempts to bolster its allocation position by the advancement of a gloomy economic prospect for the future of television. Contained in an economic study by Sidney S. Alexander, CBS economic adviser (see text in October 17, 1955, issue of Broadcasting magazine, p. 27), the forecast contends that the country cannot now or in the immediate future support more than 600 television stations, thus denying the possibility of any further technological or economic progress in television. Based upon existing revenues and rates, CBS apparently believes that the status quo will not change and that therefore there is no need to worry about UHF or hometown television because the country cannot support them in any event.

44. By citing the financial status of TV stations in 1954—including those which current FCC policy has rendered in extremis—Dr. Stanton's experts conclude that stations in towns of less than 75,000 are having a hard time. Therefore, they proceed, national long-term policy must be based on the premise

that towns of 75,000 and under are not to have their own television facility—now or ever.

45. But the size of a community is by no means the primary cause for the financial difficulty of its television station. Crossroads aside, the first cause for most financial troubles is not the size of the community served but the nature of the television competition at hand. Today there are communities of less than 75,000 supporting television facilities; and—more to the point—there are many, many communities double and triple that size (e. g., Bridgeport and Worcester) where wide-coverage competition plus UHF signals make a community facility impossible.

46. But certainly there is a minimum size for communities below which a television facility cannot be supported as of 1955—competition or not. This minimum size is a function of the capital cost and operating budget of a minimal television station. The CBS experts assume that these costs—and hence the minimum market's size—will not decrease in the operating future. Such an assumption may appear to be merely silly. But erect on this premise a national allocations system and, technological advances or no, towns below 75,000 won't ever get their hometown stations. For what is planned today in television allocations must, by and large, be planned for good. To erect such a plan on the premise that television's technology is at the end of the road is, to say the very least, irresponsible.

47. Undoubtedly, had the same theoretical and shortsighted techniques been employed in the late thirties, an argument could have been made that the country would support only 800 or 900 radio stations instead of the over 2,500 stations now being supported by our economy. Those entrusted with the public interest cannot afford shortsightedness. Instead, it is their duty to assure that an overall, long-range plan is adopted which will permit the infant television industry to grow and expand and to flex its muscles. There is neither time nor place for the prophets of gloom in the expanding television industry. Instead a sturdy and wide base must be provided upon which to build for the future.

48. The reasons for the crepe-hanging efforts of CBS are not far to seek. With television virtually limited to 3 competitive facilities in each of the 100 markets, CBS can foresee its present dominant network position jelled and set firmly, never to be dislodged by competition. CBS can foresee its network operations—in No. 1 position—covering 97 percent of the families of the Nation from 100 markets with the assurance that competition can only be expected from NBC and the trailing ABC network. By preserving the comfortable status quo, CBS envisions itself as forever protected against the specter of competition from a fourth or fifth network.

49. It is not plausible to suppose that CBS takes its own proposal seriously. But what alarms the Committee for Hometown Television is that, unless the importance of preserving priority 2 is stressed and fully appreciated by the Commission, action may be taken in these proceedings which would give countenance to this shortsighted and wholly self-serving proposal. This is why the committee has found it necessary to band together to remind the Commission of two matters which must not go by the board in any reallocation of facilities; namely, the existence and importance of the FCC's priority 2 and the indispensable and irreplaceable nature of hometown television.

B. The Mullaney plan

50. A second proposal before the Commission is almost equally dangerous to the development of hometown television and to the full growth of a nationwide, competitive system of television. The so-called Mullaney plan, submitted to the Commission in August of 1955 and since supplemented by additional data, provides for at least 3 VHF stations in each of the 100 leading markets by discarding mileage separations and shoehorning VHF assignments into the allocation pattern by directional antennas and limitations upon power and antenna heights. In short, it proposes to convert the television allocation plan to an interference contour protection system as used in AM broadcasting. Under the Mullaney plan the UHF band would be discarded and hometown television would be left to the vagaries of the technical operating characteristics of individual stations. In some cases, local service would no doubt be made possible by the use of low-powered VHF stations of limited coverage, but with consequent loss of service to many who might otherwise receive service if full use were made of the spectrum, including the UHF band. And the Mullaney plan would leave no room for growth. The VHF band cannot possibly provide for a nationwide competitive system of television but the Mullaney plan would confine all television allocations to that band.

IV. THE COMMITTEE'S PLAN

A. General

51. Because the Committee for Hometown Television is engaged in the defense of an established FCC policy from attacks by the networks and others, most of the foregoing has had to be framed as "agin" other plans and pronouncements. In the preceding paragraphs we have set forth at length the difficulties which hometown television faces today. A solution is urgently needed. We realize that the problem is complex and that there are no easy solutions. However, a supreme effort must be made. To this end the committee advances a positive program of action designed to help salvage hometown television and the UHF television service.

52. The committee's platform, curiously enough, is original with the Commission rather than with the committee. Both the Congress and the Commission have agreed that it is categorical national policy to assure the future of hometown television (priority 2). To implement this policy, the Commission must restore its priority 2 as a current objective. Specifically, this means that in making its decisions as to allocations the Commission must guide itself by the criterion, Will it further hometown television? This is a criterion dictated by statutory mandate, yet one which the FCC has yet to fulfill. Furthermore, the Commission having ignored this criterion to the point where hometown television is sick, indeed, the Commission must now apply it rigorously, immediately, and, where possible, retroactively.

53. This is the broad perspective. This is the standard which the Commission has espoused in words but ignored in action. For, as has been indicated, the acts of the Commission discourage rather than implement the standard. Thus, if tower heights are to be changed, then they are increased. If UHF stations are to be given more power, then they are given a maximum out of reach of all but the biggest operations. If a coverage area is in dispute, then the dispute is resolved in favor of the bigger station. If New Jersey has no television stations at all, then let it listen to New York and Philadelphia signals. If a network proposes that hometown television be junked, then give it the in-camera attention of the full Commission. It is from this climate that hometown television must be relieved. In the view of the committee a shift in Commission intentions from do-nothing to enforcement would do more to assure its priority 2 than would any other measure.

B. UHF is necessary for a nationwide competitive system

54. We believe that it is axiomatic that it is not possible to have a nationwide and competitive system of television if only 12 VHF channels are utilized.

55. We also believe that the additional channels must be those in the UHF band. We are aware that much attention has been devoted to attempts to secure additional VHF channels in an effort to solve the problem. We do not believe that such efforts are the answer to the problem, for four reasons. First, it is very doubtful whether any additional VHF channels can be secured. Second, even if some VHF space is found, it is obvious that the new channels will be few in number and will take care of only a few hardship cases. While solving some hardship cases is a worthy objective, the price would be extremely high. It is inconceivable that enough VHF channels can be found to provide enough facilities for the various communities in the United States.[10] Third, any VHF channels that are found would be incompatible—present receivers could not tune to such channels. The difficulties which incompatible UHF channels have faced in competing with VHF channels would also be encountered by station owners operating an incompatible VHF station in competition with a compatible VHF station. A fourth reason against placing our hopes in additional VHF channels is the substantial loss which would be suffered by that portion of the public which has already paid for UHF service. Many of them would have to pay once more to receive a new incompatible service. Their willingness to do so a second time is bound to be diminished, for how can they have confidence that this new band will not be abandoned at an early date. In sum, it appears to us it will take extraordinary effort to make additional VHF channels work, and at best they will provide only an abbeviated nationwide service. We believe it is much

[10] It should be noted that the entire VHF band extends from 30 to 300 megacycles. Even if all these channels were made available for television they would provide for only 45 channels, 2 fewer than now contained in the present allocation table. Moreover, the frequency range of the band is 10 to 1 which would mean a tremendous disparity in propogation of television channels.

better to put the extraordinary effort into making UHF work where success will mean a truly nationwide competitive system of television.

C. The committee's proposal

56. First, let us recite the immediate premises for the committee's plan. A concrete policy for the Commission in its rescue mission begins and virtually ends with the definition of television's basic unit—the coverage area. So long as the Commission was preoccupied with its priority one, the basic unit was one listener; and the definition of a "proper" coverage area was regarded as so unimportant as to require no uniform description at all. But give hometown television its priority, and the Commission is forced to define the dimensions of the hometown, the area which contains all the people who can use a single station to mutual, local advantage.

57. Fortunately, this is a simple job performed many times by experts. A "community" in the sense used here is the precise equivalent of the standard retail trading area, a definition which both fits the needs of local buyers and sellers, and describes the boundaries of the common social endeavor. Beyond those boundaries lie TV's wonderland, where the Governor of New York urges the citizens of New Jersey to vote for him, Bridgeport citizens are importuned to support New York's United Fund, and all the news is foreign news.

58. If the standard retail trading area describes the optimum hometown station coverage, then the means for implementing priority 2 are at hand. The committee envisions the remedy in three basic steps, all interrelated:

Step 1: Each station's signal coverage must be conformed to the retail trading area of its community. In acting upon applications for new stations in other communities, any interference that does not invade this service area should not be considered objectionable. Hand in hand with this limitation must go rejection of any application for increase in tower height or power limit or for satellite stations.

Step 2: In the towns thus uncovered to local television, the Commission should license the operation of stations capable of providing hometown television. In deciding which communities can qualify for licenses in the uncovered areas, three criteria should be applied, namely, (1) Will the new license create a white area? (2) Will the new license provide hometown television? (3) Will the new license provide television to more people than will be deprived of television by the proposal? As a corollary action, an engineering study should be initiated to determine how to provide more signals with smaller separations—a study analogcus to the FCC reappraisal of radio's permissible separations.

Step 3: A policy of deintermixture, favoring UHF operation where practicable, should be instituted.

59. Application of the criteria for new stations listed under step 2 above may result in the retention of an existing VHF operation, in the conversion of an existing VHF to a UHF operation, in the reverse, or in the licensing of a new VHF or UHF station. For example, in an area of VHF saturation, that is, where there are three or more operating VHF stations, the committee would favor the drop-in of a VHF channel for the use of a UHF entrepreneur on a reduced mileage separation basis even though interference might result both to and from the dropped-in station, provided the addition of the new VHF station resulted in a gain of service to more people than would lose service as a result of the proposal.

60. The committee further proposes that when VHF drop-ins as above described are made, the Commission should consider making the VHF assignment temporary only, that is to say, the VHF channel would be authorized for use by a UHF permittee or licensee only until the expiration of 2 years after 85 percent or more of all receiver production is composed of all-channel receivers, or until the expiration of 5 years after the date of grant, whichever is the later. At the end of this period the licensee of the dropped-in VHF would be required to convert back to UHF. In the meantime and during the temporary assignment, the licensee would be required to operate both the UHF and VHF assignments. In this way, immediate help would be provided to the sinking UHF station in the VHF saturation area until such time as a healthful competitive climate could be created, at which time the full benefit of the UHF spectrum could be realized.

D. Compatability

61. But the moribund state of UHF today raises a special problem. The Commission cannot conjure up new UHF stations by fiat to serve the needs of America's hometowns. For each license there must be a group of investors, by and large local, ready to risk capital. At present the investors who might supply such capital are understandably appalled by (1) the fate of UHF oper-

ators who put their faith in the Commission's 1952 prediction that all-channel receivers were on the way; and (2) the Commission's repeated demonstrations that its major policies are based on the continued growth of the very wide coverage VHF stations.

62. The Commission must therefore not only modify its policy to give equal chance of survival to UHF operations; but it must also create an administrative climate favorable to UHF operators and investors. The equal chance UHF seeks translates itself into a demand for Commission help in getting around the incompatability between the UHF and VHF signal. It has been demonstrated time after heartbreaking time that without all-channel receivers a UHF station cannot survive if it must compete with more than one VHF station.

63. The Commission must therefore push forward to the day when the production of all-channel receivers will create a demand for UHF service equal to that enjoyed by VHF stations today. In the committee's view this day may be hastened only by the encouragement of UHF in every avenue of approach to the problem.

64. The reason UHF stations today find it possible to compete with a single VHF signal is that it has been shown that such a division of frequencies will induce most local viewers to buy all-channel receivers or converters, thus solving for them selves the problem of signal compatability. This fact, in turn, underlines the importance of converting all receiver manufacture to all-channel sets—the FCC's original, abandoned goal. Were the Commission by some magic able to transform all receivers in use to all-channel sets as of tomorrow morning, there would be no problem in attracting investors for UHF, in rescuing existing UHF operations, in achieving the goals of hometown television. Lacking magic, the Commission's problem is how to achieve enough of this goal now, and to make its eventual attainment sure enough now, before the indispensable UHF cascades down the drain for good and all.

65. In this context, the equation of station signals to retail trading areas is a major advance in the program of conversion to all-channel receivers since the reintroduction of the UHF signal to television on a competitive basis creates its own demand for such sets. A major guaranty of the same program is to be found in the creation of so-called islands of UHF, that is to say, concentrations of 100-percent UHF-served markets large enough to insure the continued production of all-channel receivers and, more importantly, to increase that production. The committee's opinion of the importance of such islands to the future of hometown television is reflected by the inclusion in its 3-point program of step 3 urging the adoption of a policy of deintermixture, in favor of UHF operation.

66. The committee is convinced that if enough UHF islands are created, manufacturers will begin turning out only all-channel television receivers. We have arrived at this conclusion after discussions with manufacturers' representatives who have indicated to us that when a sufficient number of all-channel receivers are being manufactured, it becomes economically desirable for the manufacturer to maintain only 1 production line turning out the same product—all-channel receivers—rather than 2 production lines—one for all-channel receivers and the other for VHF-only receivers. We do not pretend to know the specific point where is becomes economically worth while for manufacturers to utilize one production line only. We do know, however, that such a point is bound to come when sufficient all-channel sets are sold and that the creation of more UHF islands is one of the most effective methods the Commission possesses for achieving this result.

67. The benefits flowing from creation of UHF islands will be extensive. Not only will those UHF communities be assured of hometown television but, in addition, every community in the United States will be guaranteed an opportunity for expansion as to the number of television stations available to it. If all production becomes all-channel receivers, then UHF can become practicable at a future date in cities like New York, Chicago, Washington, and Baltimore, which have several VHF and UHF assignments, as well as in all-UHF communities. For American business history has shown that if the people in these communities have receivers capable of tuning to UHF channels, entrepreneurs will eventually be found who will risk their money in building such stations to serve them. We realize that it may take several years before this can take place. However, this is no reason for not starting the process which will make the objective possible. It is not necessary that all communities have their maximum number of stations from the outset. Additional growth is necessary for many communities to be able to support that number. What is needed is that type of planning which makes it possible for all communities eventually to have their maximum poten-

tial of television stations. As things now stand, that potential will never be realized.

68. The consumer has frequently been cited as the insurmountable barrier to any widespread conversion to UHF. The argument: The American public has already bought 30 million TV sets, most of them VHF receivers; and the people—burdened by this monstrous investment—must therefore unfortunately be barred forever from the benefits of UHF and hometown television.

69. Fortunately, the problem is not so great as it has been made to appear. In the first place, about 7 million sets will be sold this year, most of them to present users, assuming a replacement cycle which is completed within 5 years. Secondly, the current upsurge in technological advances—from color reception to the curved tube—are calculated to shorten appreciably this already short turnover period.

70. In the third and decisive place, the committee's program is expressly calculated to accommodate the owner of a VHF receiver until he is ready to trade his set in for an all-channel receiver. By guaranteeing the presence of VHF service in any cutback area formerly serviced on a VHF-only basis, the Commission can assure television to the owner of both the VHF set and the all-channel set, pending national conversion to all-channel receivers. By the same token, the committee's program explicitly provides that there shall be no net loss in the number of people able to receive a TV signal, it being understood that this is without the need to buy a new type of receiver.

71. The equity of the consumer in this TV set is, of course, just as important to the plans of the committee as it has been to the deliberations of the Commission. But whereas the Commission has evidently determined that there is no feasible way to get the consumer to relinquish his VHF receiver, the committee believes the conversion can be accomplished in a two-step process:

(1) A commercial inducement for the manufacturer to switch to the manufacture of all-channel sets by the introduction of UHF stations in VHF areas—UHF stations with an even economic chance of survival; and

(2) The normal replacement cycle of TV sets.

72. The same factors which will induce the manufacturer to switch to all-channel production will urge the consumer to trade in his precent UHF set for a new all-channel one. Furthermore, our commercial history attests to the fact that in the early developmental days of a new product the constant flow of radical improvements accelerates the normal cycle of replacement.

73. In the category of radical improvements, the role of color television cannot be too strongly stressed. If it is true that the future of television lies in color, it is just as impressively true that the future of color television under the concept of hometown television must base itself in the first instance on UHF reception. Faced with a consideration as strong as this, the entire industry would have no choice but to devote its best efforts to the improvement, manufacture, promotion, and sale of the all-channel receiver, night and day. Further to expedite conversion the committee has incorporated into its plan the UHF island theory of allocations.

74. In short, the committee is convinced that receiver compatability does not present an insoluable problem. On the contrary, if the committee's plan is adopted, useful and effective tools to remedy the problems caused by incompatability are at once at hand.

E. Other action recommended

75. In addition to the remedial steps heretofore set forth the committee urges the adoption of other action calculated to preserve UHF and hometown television and to establish a strong and healthy nationwide television system.

76. First, we urge the Commission to make the fullest use of the powers granted it by section 303 (i)—to make special regulations applicable to stations engaged in chain broadcasting—to aid hometown television. The experience of operating UHF stations shows that where they are able to carry NBC or CBS programs not otherwise available in the markets, successful UHF operation is possible. Thus far NBC and CBS programs have not generally been made available to UHF stations where VHF stations are available to carry them. A notable exception is the situation where NBC or CBS has contracted to buy a UHF station. In those situations, says CBS in its ex parte proposals, de intermixture is not necessary for UHF can succeed in competition with VHF. It appears to be the network position that the networks can make UHF work but that they will not do so unless they are permitted to own the UHF stations. We urge the Commission to consider that the statutory duty imposed upon it by section 303 (g) of the Communications Act—to encourage the larger and more

effective use of radio in the public interest—requires energic action to save UHF and that this obligation is not discharged unless the Commission uses to the full the authority "to make special regulation application to stations engaged in chain broadcasting" by compelling a greater availability of network programs to UHF stations.

77. Second, we urge the Commission to grant immediate relief to some of the UHF problems by making it possible for all UHF operating stations to operate in the lower part of the UHF band. In the present stage of the art, it is quite beneficial to have one of the lower UHF channels in contrast to the upper UHF channels. This objective is not possible in the use of many UHF stations because of the taboos set forth in section 3.610 of the Commission's rules and regulations. We believe the time has come to review these taboos. In our opinion, developments since the adoption of that rule now make it possible to eliminate or substantially mitigate many of these taboos.

78. Third, we urge the Commission in this proceeding firmly and finally to reject the proposal to permit an increase in antenna height to 1,250 feet for VHF stations in zone 1. Such a move will increase the already large service area of VHF stations located in the large metropolises and will further cripple the cause of hometown television.

79. Fourth, we urge the Commission to revise its polices with respect to satellite stations. The use of such stations is merely another device for extending the service potential of metropolitan stations. As a result of such stations, additional reception may be provided to some areas but their hopes for their own local outlets will be greatly lessened thereby.

80. Fifth. we recommend that the Commission should not permit an increase in UHF power above the 1-million-watt maximum now provided for. Such higher powers can be effectively utilized only by metropolitan stations to the disadvantage of the smaller communities.

81. Finally, we urge the Commission to create the type of psychological atmosphere which shows that the Commission is irrevocably committed to making UHF succeed. We are sorry to say that, although the words the Commission utilizes seems to say that this is the Commission's policy, the acts of the Commission more often point in the opposite direction. For example, the Commission indicated that the UHF deintermixture petitions had a high priority. Nevertheless, the Commission adjourned for a long summer recess without taking any action on them and has now denied them. Nevertheless, it did not permit the long recess to begin before it adopted its order increasing maximum antenna heights for VHF stations in zone 1. No urgency whatsoever existed for this action. Since deeds speak louder than words, it is only fair for a disinterested outsider to conclude that the Commission speaks kindly for UHF but its helping hand is for VHF. We urge the Commission in its action to give the highest priority to the matters affecting UHF so that the public can see that the helping hand as well as the helping word is for UHF.

V. Effects of the committee's plan on the industry

82. What then will be the effect of the committee's plan on the television industry? The CBS October 5 memorandum to the Commission is a good example of the wolf-crying in high places which has served so notably to confuse the issues involved in achieving the sixth report and order's priority 2; and the interest of clarity and sanity require the committee to examine the consequences of its program before someone else does it for them.

83. The wide-coverage VHF station loses audience by retracting its signal. The number of listeners lost will vary from case to case, but because the loss is always at the sparse fringe, never at the concentrated core, it is doubtful that the number will ever exceed 10 percent of the total. In point of economic fact, the elimination of this fringe audience will not diminish either the station's time rate or its income by 1 cent, and for a pertinent reason; the people comprising that fringe audience belong to another hometown, and they neither shop in nor look to that station's community.

84. The networks' hopes for the immediate future are well displayed in the CBS memo: they look forward to achieving maximum coverage with a minimum number of affiliates. Any reduction in affiliate coverage which the committee's plan might cause would require the networks to relinuish their present claim to "bonus" markets or to sign up more affiliates. Since network programing is highly desirable for fledgling stations, it would appear to be in the national interest to encourage the networks so to increase their affiliations. But maxi-

mum or minimum, the income from advertising to the networks under the committee's plan remains undiminished.

85. Indeed, the climate of plenty created by additional potential affiliates may spawn new, competitive networks providing new program sources for the expanding industry. Moreover, it is worth noting that the creation of more network affiliates must inevitably result in increased competition among TV stations at the local or operating level. And—in a cycle familiar to any observer of American competition—such sharpened competition will in turn result in better service to the advertiser, closer relations to the community, and better programing for everybody. Contrast this with the commercial sludge to be induced by the "supermarket" concept of coverage.

86. The national advertiser can hardly be said to have a bona fide standing in this consideration of a national television policy. But to the extent that he does, he is eligible for congratulations. Were the committee's plan in effect, it is just barely arguable that he would be forced to pay more money for the same audience for that brief period during which the networks transferred their giveaway "bonus" markets from an original affiliate to a newly acquired one. But as soon as the demands of local competition asserted themselves, he would be back at the same old cost per thousand, paid under the committee plan to stations laced twice as tight as before to their hometown audiences.

87. Finally, of course, it is the consumer who becomes the major beneficiary of the committees' plan. For only under this plan can the consumer—which is to say, the public—enjoy a television facility administered for his benefit, for his needs, and for his use.

VI. Perspectives and summary

88. It is generally conceded that if the FCC fails to take affirmative action at this juncture, UHF in the United States is dead. To this axiom we may now add a second one: If UHF is allowed to die, then with it will pass all chance we will ever have for hometown television. More than that, for the same reason that the end of UHF spells the death of hometown television, it also must mean the eventual ascendency of that sterile and dangerous concept—the "supermarket system." There is no halfway house.

89. We are, in fact, at a moment of crisis in the history of communications, and our duty now is to recognize that this is a crisis; the perspective of history will make this fact plain enough. The first step toward saving hometown television must be taken in the minds of the Commissioners. They must concede that UHF and hometown television can be rescued by a series of immediate, forthright, and affirmative actions well within the scope of their own authority. This done, the vista is fine:

1. The present retreat into a stifling and dangerous monopoly will be ended.
2. The television industry will obtain better and closer coverage, better programing, more return for the advertising dollar, and—in short—more television.
3. America will get hometown television, an essential aspect of its democratic tradition.

Respectfully submitted.

COMMITTEE FOR HOMETOWN TELEVISION, INC.
By PAUL A. PORTER,

Dated: December 9, 1955.

COMMITTEE FOR HOMETOWN TELEVISION, INC.

ARTICLES OF ASSOCIATION

BE IT KNOWN, That we, the subscribers, do hereby associate ourselves as a body politic and corporate, pursuant to the statute laws of the State of Connecticut regulating the formation and organization of corporations without capital stock, and the following are our articles of association.

ARTICLE 1. The name of said corporation shall be COMMITTEE FOR HOMETOWN TELEVISION, INCORPORATED.

ARTICLE 2. The purposes for which said corporation is formed are the following, to wit:

(a) To promote and support the development of hometown television stations.

(b) To provide a medium for the mutual exchange of information and material concerning the television industry.

(c) To study and support means for the furtherance of hometown television as a public community service.

(d) To work for equal competitive rights among television stations.

(e) To support or oppose public or private plans, programs, legislation, regulations, administrative actions, or activities of any kind which would or might affect the television industry or any part thereof.

(f) In general to work for and promote any matter or action which would be for the general welfare of the television industry and its hometown television stations.

ARTICLE 3. (a) There shall be three classes of membership in this association, as follows:

(1) Station members—consisting of persons, firms, or corporations operating licensed television stations not owned or controlled by a national network.

(2) Industry members—consisting of persons, firms, or corporations engaged in the business of manufacturing, assembling, or distributing television equipment, or otherwise engaged in some branch of the television industry.

(3) Associate members—consisting of any other persons, firms, corporations, foundations, or other organizations interested in the general purpose of this association.

(b) Membership in any class shall be by vote of the board of directors, who shall have the power to exclude from membership any applicant whose business or activities do not qualify it for membership, or are not in harmony with the scope and purposes of this association. No television network shall be eligible for membership in any class.

(c) By vote of two-thirds of the station membership, membership in any class may be canceled for nonpayment of dues or assessments, a change in status rendering it ineligible for further membership, or for any act or course of conduct contrary to the purposes of this association.

(d) There shall be one membership only for each television station qualifying for membership, and the board of directors shall be the final judge of all questions concerning qualifications for and admission to membership. Notwithstanding common ownership of 2 or more stations, each of such stations shall be entitled to 1 membership.

ARTICLE 4. This association shall not be operated for profit and no part of its earnings, funds, or property shall inure to the benefit of any member or individual. No officer or director shall receive any compensation for services or expenses in the performance of his duties.

BYLAWS

Article I—Meetings

Section 1: There shall be an annual meeting of the association to be held at such time and place as the board of directors shall determine.

Section 2: Special meetings of the members of the association may be called by the president, the board of directors or upon written request, stating the reasons therefor, by five members of the association in good standing.

Section 3: Written notice of all regular and special meetings of the association stating the day, hour, place and purposes thereof, shall be mailed or personally delivered at least 5 days prior to the meeting to the address of each member of record.

Section 4: Representation of one-fourth of the membership shall constitute a quorum at all meetings of the association.

Section 5: At each meeting of the members all votes shall be taken by a show of hands, unless voted to be by written ballot, all elections shall be determined by plurality vote and all other matters by majority vote of those voting.

Section 6: Only station members in good standing shall be entitled to vote at any meeting of the association, and each station membership, as determined by the board of directors, shall have one vote. The vote of any firm or corporation holding a station membership may be cast by any authorized officer or member thereof, and any station member may be represented and vote by proxy.

Section 7: Any matter, proposal or project may be determined by mail ballot with the same force and effect as if determined at a regular meeting, at the discretion of the board of directors, the vote of one-third of the station membership being a quorum in such cases.

Article II—Board of directors

Section 1: The general management and control over the affairs, business and property of the association shall be vested in a board of directors consisting of not less than 3 nor more than 15 members, who may also be officers, provided that the station membership shall always hold a two-thirds majority on the board.

Section 2: The board of directors and a chairman thereof shall be elected at the annual meeting to hold office for 1 year or until others are elected in their stead.

Section 3: Meetings of the board of directors shall be held upon the call of the president or one-third of the directors, written notice of which, specifying the time and place, shall be mailed or personally delivered at least 3 days prior to the meeting. The chairman of the board of directors shall preside at its meetings, and a majority of the board shall constitute a quorum.

Section 4: A vacancy shall exist when any director, or the member organization which he represents, resigns from the association, ceases to qualify for membership, or has his membership canceled, and any vacancy for these or any other causes, may be filled by majority vote of the remaining directors for the balance of the term.

Section 5: No public statement of the policy or position of the association on any issue shall be made except on prior authorization of the board of directors.

Section 6: The board of directors may create any such standing or special committees as it may deem appropriate.

Article III—Officers

Section 1: The officers of the association shall be a president, vice president, secretary, assistant secretary, treasurer, and assistant treasurer, to be elected by the members of the association at the annual meeting, for 1 year or until others are elected in their stead. No person may hold two offices, except that the same person may be secretary and treasurer.

Section 2: The president shall preside at all meetings of the members of the association, shall have general management of the affairs of the association, subject to action of the membership and the directors, and shall have the powers and duties normally associated with his office.

Section 3: The vice president shall assist the president in his duties and serve in his stead in case of the absence of disability of the president.

Section 4: The secretary shall record the proceedings of the membership and the directors, give notice of all meetings as required, and keep the records and papers of the association, including a record of all members, and their addresses. The assistant secretary shall assist the secretary in his duties and serve in his absence.

Section 5: The treasurer shall receive all funds due the association and deposit the same as directed by the directors. Checks for the disbursement of funds of the association shall be signed by such officer or officers as the board of directors may from time to time direct. The treasurer shall keep accurate accounts of all receipts and disbursements and report on the same when required. The assistant treasurer shall assist the treasurer in his duties and serve in his absence.

Section 6: A vacancy shall exist when any officer, or the member organization which he represents, resigns from membership, ceases to qualify for membership, or has his membership canceled, and any vacancy for these or any other causes may be filled by majority vote of the board of directors for the balance of the term.

Article IV—Dues and assessments

Section 1: The fiscal year and membership year of the association shall be the calendar year.

Section 2: The dues of station members shall be $100 per station member per year. Dues for industry and associate members shall be as fixed by the board of directors.

Section 3: The voting membership of the association may at any meeting after due notice levy a special assessment upon the membership for the purposes of the association. Any such assessment shall be prorated among operating station members in the ratio of each station's highest published national class A hourly rate. Nonoperating stations shall not be assessed.

Article V—Amendments

These bylaws may be amended by majority vote at a meeting of the voting membership, after due notice, and may also be amended by a two-thirds vote at any meeting of the board of directors, after due notice, subject to changes adopted by the membership.

Mr. MERRYMAN. I believe you all have copies of it.

What all of us are seeking from the FCC, then, is that they accomplish the task the Congress set for them. This would certainly involve some changes in current FCC policy; some steps they have taken will have to be retraced. But I wish to make the point that such changes are needed only to return to the path the Congress set for the FCC in the first place.

The question now becomes: How can we put the FCC and our national television allocation policy back on the track for priority 2—a television facility for every community?

There is evident in testimony given here, and in statements recently filed with the FCC, a tendency to make this problem seem more complex than it really is. This seeming complexity is due largely to the fact that discussion has centered around the engineering problems involved rather than addressing itself to the fundamentals of policy.

If you or I set out to put up an office building, we don't start by calling in the plumber, and then design the building around his pipelines. We call in the architect, and require the plumber to figure out plumbing lines that will fit the architect's plan.

No more should we now let engineeering arguments shape the future of America's television. Policy comes first, and engineering is the servant of policy, not its master.

Long ago Congress, that is, you gentlemen, told the FCC to provide "an equitable distribution" of television facilities, and the FCC at that time set up its allocation priorities as a translation of that policy. But the Chairman of the FCC, in his recent appearance before you, spent most of his time discussing his engineering problems and virtually none defining what his Commission is—or should be—trying to accomplish.

The FCC has virtually abdicated as an instrument of Government policy; instead it seems to be attempting to rewrite your policy by a mystic and unprofessional estimation of which policy creates the least stubborn engineering problems.

I think I am right in saying that the function of these hearings is to reexamine Government policy in the light of television's most recent experiences. In one sense this is an easy task. If we agree with the Chairman of the FCC that priority 1—a TV signal for everybody—

has been about 90 percent fulfilled, then we will also agree th priority 2—a TV station for every community—is now the first or of business.

From there to the imperative need to sustain UHF is an easy st and we could stop right there. You gentlemen could simply say the FCC, "See to it that every town that can—or will be able to—affo a TV station can get one."

But the whole question of TV's future has been allowed to beco clouded in such a welter of special pleadings, has been so obscured indecisiveness, that it may be helpful to examine the terrain fro the perspective of policy.

Almost everybody agrees that television faces a crisis and the div sion of opinion is mainly on what is to be done. There are four gener solutions advanced:

To go all UHF
To reduce VHF coverage and go all VHF
To reduce VHF coverage and drop in V's and U's
To deintermix

All of these plans are based on the recognition of our need to advanc on priority 2. A fifth plan has been advanced by CBS, to reduc television to 100 markets, but since its effect would clearly be retro gressive—moving us even further from priority 2 than we now are—it does not appear to have any standing in these discussions.

It is in the technical arguments against one or another of these solutions that the industry itself and the FCC have lost themselves. And yet these rebuttals are neither so complicated nor so numerous as to resist a layman's analysis. All the counterarguments advanced against these solutions finally boil down to three points, and with your permission I will list them:

Plans involving any cutback in existing signals are criticized for eliminating rural coverage.

Plans involving drop-ins are criticized for eliminating service and for what is euphemistically called degradation of service.

All plans have at one time or another been attacked as violative of the precedent of radio's clear-channel broadcasting.

Now the plain fact is that these counterarguments lack the stature to warrant consideration on a policy level. On close examination, they turn out to be what I might describe as plumber problems.

To take the most often cited problem first, consider the matter of rural coverage. As you know, the objection to a cutback is existing signals, or the exchange of a VHF station for a UHF station under deintermixture, is that the resulting loss in wide coverage signals will deprive the people living away from towns and cities of a signal.

Now let me invite your attention again to this map. (Facing p. 439.) It is a copy of the CBS exhibit used by that company to illustrate how its 100-market plan would work out. I am very fond of this map because it provides a clear illustration of so many facets of the problem we are discussing.

CBS drew it to show the coverage that would result from putting 3 wide-coverage VHF stations in each of the 100 leading markets in the country. If you live inside one of the squares, you are presumed to be able to get a signal—and I guess you probably would. On the other hand, if you live in one of these white areas, you don't get any TV. Look at the size of the white areas. Look how much of the ited States is left uncovered under the CBS plan. The term "white as" may be exactly translated as rural coverage, as you can see from ir locations. So the plain fact is that under the most extreme n yet advanced for the use of wide-coverage stations we will get y nominal rural coverage. I will return to the matter of rural erage again, but let me note now that wide-coverage VHF stations ne obviously do not contain the answer to that problem, and, there-e, any argument based on the need to maintain present power limits nong VHF stations for the sake of rural coverage is either short-hted or something less than frank.

This leads me directly to the so-called clear-channel argument. ow, I have been in the radio-television business my whole life, start-g in 1922, when I built my first radio station, and I think I am as miliar with the history of this industry as anyone. I do not think here has ever been a stronger proponent of the clear-channel stations han I have been throughout my history. But listen as I will to the eople who drag the clear-channel concept into the question of tele-ision allocations, I am still only able to conclude that they are very areless thinkers.

Clear-channel broadcasting made its appearance in radio in 1926 as method of providing this rural coverage we are discussing. Briefly, what clear channel broadcasting describes is a system of allowing certain stations the right greatly to increase the range of their signal at night in order to reach people in isolated rural areas.

The economics strictly determined that that was the only way you could cover the western half of the United States with that service.

These signals reach out in the order of 710 miles in all directions from the sending station, and, of course, the stations permitted to have a clear-channel signal are thereby given a competitive advantage over their sister stations. The theory is that the evil of granting a competitive advantage is outweighed by the good in providing rural coverage—the conventional equation of public policy.

Now we come to television. In the face of a move to retract the signals of certain wide-coverage VHF stations, their owners have raised the cry of "clear channel."

The implication is that any cutback will cause a significant loss of rural coverage, as it would in clear-channel radio stations. Now, the normal maximum coverage of a TV station, according to FCC standards, is a circle with a radius of 60 miles, which means that its maximum coverage area is less than one one-hundredth of that of a clear-channel radio station, and its claim to the protection of public policy stands, I think, in about the same proportion—one to a hundred. So much for the clear-channel and the rural-coverage arguments.

Here is another map of television coverage. This one shows the total coverage of all VHF stations east of the Mississippi. You will notice that the contour lines, outlining station coverage, look quite different from those shown on the CBS map. This is due to the fact that CBS elected to outline its coverage areas by county lines, a method which unhappily masks the fact that there is present an enormous amount of overlap.

I might make this further observation, that these circles were figured on the present powers and antenna heights of every individual VHF station. They do not, by and large, correspond with the claims of coverage of the individual stations themselves.

The stations always claim much greater coverage than this. point is, if they have the greater coverage, the overlap is the grea

When you see this map, you are looking at the effect of having a where from 1 to 10 VHF services in 1 community. Careless anal has led many people to the assertion that unlimited licensing of w coverage VHF stations is the road to the fulfillment of priority TV signal for everybody; and in its pursuit of priority 1, the F seems to have been influenced to a great extent by this canard. As map plainly shows, 1 station per community will fulfill priority 1 j about as well as 10.

Certainly there is value in having competitive services available the viewer. But just as certainly the FCC should not have traveled far down this road that the multipurpose and invaluable UHF s tions were blocked out—as they most certainly have been. Here, seems to me, is a prime illustration of congressional policy bei thwarted simply by being ignored.

Once again, you will observe from this map—which shows how ma ters stand today—that rural coverage is negligible. But it also show something else: Consider for a moment the area covered by the Ne York TV stations, or the Chicago TV stations. Note the overlappin of coverage, composed of a number of stations operating on differen channels. Now suppose an application for a VHF drop-in within th shadow of this wide coverage. What is required for such a drop-in i that the signal of existing VHF stations on the same channel in thi area be pushed back by the signal of the drop-in.

Is the total coverage of the area reduced? Obviously not, since th area is still covered by the remaining stations on other channels. As suming there is any rural coverage, will it have been reduced Obviously not.

Will the station whose signal has been pushed back be put at a disadvantage? Yes, I think it will, though not nearly so great a one as might at first appear.

Is the imposition of such a disadvantage on one such station justifiable? It is here, I think, that we are able to find an honest analogy with the clear-channel argument of radio. Let us assume that the drop-in will provide hometown television to a community otherwise dependent on a foreign signal. Then surely the dictates of public policy will agree that the provision of hometown television to a community will justify whatever minimal hardship may result to the station that has been pushed back.

But that is not all. It is perfectly feasible to project a television allocations plan under which even this minimum hardship to a station will be temporary. This is so because any plan advanced for the salvage of hometown television is based ultimately on the universal use of the all-channel receiver, which permits the pushed-back signal once again to resume its old coverage without drowning hometown coverage.

Now let's look at this matter of drop-ins and elimination of service from a bit closer up. Here is another engineering map. It is the map of a hypothetical area containing 3 VHF stations on the same channel situated at the apexes of an equilateral triangle with sides 170 miles long. That distance, of course, is the minimum separation decreed by FCC rules; and this arrangement of perfectly equal separations between the three stations—an arrangement never found in fact

because cities are not placed that way—is the most unfavorable to a drop-in station that can be conceived. If it work here, it will work anywhere.

The point is, if the drop-ins will work in this situation, they will work in any situation now existing in our economy. You will see that equidistant from all the corners I have placed a hypothetical drop-in VHF station. Its own signal extends in a 10-mile radius without interference, a coverage area of about 300 square miles.

You will notice that the drop-in station creates interference with all 3 of the stations at the corners, pushing each of them back from a theoretical service area of 58 miles to 28 miles in the direction closest to the drop-in, and to lesser distances around the circle to the back end where no appreciable new interference exists.

However, before the dropin, the three stations at the corners interfered each with the other so that the actual new interference is relatively small. When we consider, in addition, the effects of other stations outside the triangle each located exactly 170 miles from the triangle stations, the interference of the dropin becomes even less significant.

But notice that this assumption is much more stringent than the facts are ever likely to be. In the first place, it is highly unlikely that there will not be in this area signals from some other city on a different channel—which signal will, of course, be affected not at all by the new dropin. In the second place, it is becoming increasingly likely that one or more of the three communities at the corners will have more than one station on different channels—and for these, too, the new dropins can create no interference.

Thus, in terms of priority 1—a signal for all—this area remains as it was—overfulfilled. In terms of priority 2—a station for every community—we have made a significant advance. As for elimination of service, practically there has been none. The people living in this area of interference can get their signal from at least as many sources as before.

This brings me to the catch-phrase, "degradation of service." This is a favorite bugaboo of the networks, and appears over and over again in their briefs. What they are talking about is the fact that the old existing signal will be pushed back along this line nearest the center in the circles. To the extent that the original station will serve public policy by having its signal pushed back, its service will have been degraded. However, even the extent of that interference gets exaggerated: The interference area shown on FCC charts do not in fact exist, since modern directional antennas have already reduced interference below the theoretical levels used by the Commission. Engineering considerations aside, this must be so, otherwise we would not find what exists in fact: Many VHF stations serve areas 100 miles or so distant, in contrast to the 60 miles the FCC says is the limit of their service areas.

The public's television will not have been degraded, but on the contrary, enhanced. In short, "degraded service" is an editorial word properly used to describe the feelings of an unwilling servant of the public's interest—and no more.

To return to this map: You will notice that once the underbrush of "clear channel" and "degradation of service" and so on is cleared away, it is possible to drop in many new VHF stations. In other words, without doing damage to any congressional policy or engineering precept, it is possible to increase significantly the number of operative TV stations on the VHF frequencies in any given area. I estimate that every one of the 95 commercial UHF stations now on the air can be accommodated by a VHF drop-in. And many of the 104 holders of construction permits that are now sitting on them can also be accommodated, given the incentive to build those stations.

So far, with these maps I have been discussing mainly the matter of dropping in VHF stations. This procedure does much to ameliorate the crisis of hometown television. But obviously, in terms of long-term, overall solutions, it is inadequate, and we must turn our attention also to the use of UHF.

If we wish to place a UHF hometown station here, where I had placed the hypothetical VHF drop-in, the fact is that evedybody in this area has sets which can receive VHF only, and so will probably never bother to spend the $50 to $100 needed to convert their sets and look at the new UHF station. In other words, even if you put the new UHF station there, who would watch its signal? The answer, as more than 350 UHF operators now know, is—practically nobody.

Therefore, we are faced with the need to take a second step, designed to make it possible for the public to watch the new station without buying converters for its sets.

In the last analysis, the purpose of any step taken at this point is to get all-channel sets in the hands of the public, getting them to buy them in their normal replacement cycle—now figured at about 5 years. With all-channel receivers, free competition is restored, and the provision of hometown service will go on those most competent to supply it.

Here is one method by which this can be achieved:

Step 1: Each station's signal coverage must be conformed, where necessary, to the retail trading area of its community.

Step 2: In the towns thus "uncovered" to local television, the Commission should license the operation of stations capable of providing hometown television.

Criteria for new stations listed under step 2 above can result in the retention of an existing VHF operation, in the conversion of an existing VHF to a UHF operation, in the reverse, or in the licensing of a new VHF or UHF station. For example, in an area of VHF saturation, i. e., where there are three or more operating VHF stations, we would favor the drop-in of a VHF channel for the use of a UHF entrepreneur on a reduced mileage separation basis, even though interference might result both to and from the dropped-in station, provided the addition of the new VHF station resulted in a gain of service to more people than would lose service as a result of the proposal.

The committee further proposes that when VHF drop-ins as above described are made, the Commission should consider making the VHF assignment temporary only, that is to say, the VHF channel would be authorized for use by a UHF permittee or licensee only until the expiration of 2 years after 85 percent or more of all receiver production is composed of all-channel receivers, or until the expiration of 5 years after the date of grant, whichever is the later. At the end of this period the licensee of the dropped-in VHF would be required to convert back to UHF. In the meantime and during the temporary assignment, the licensee would be required to operate both the UHF and VHF assignments. In this way, immediate help would be provided to the sinking UHF station in the VHF saturation area until such time as a healthful competitive climate could be created, at which time the full benefit of the UHF spectrum could be realized.

It is not my purpose here to argue for this or any other particular solution. Rather, I am interested in demonstrating that the arguments that have been raised on an engineering level as a counter to the fulfillment of the Congress' policy are not so weighty as to require abandonment of that policy. It is my own feeling that the engineering solutions now required to implement the congressional mandate for a national television system will probably consist of some combination of deintermixture, cutbacks, drop-ins, and simultaneous UHF-VHF telecasting. But whatever form they may take, all they require is technical ingenuity, some engineering imagination, not black magic. What they require, moreover, is a statement of policy by those responsible for fixing the policy.

I do not think there is a consulting engineer in Washington who practices before the FCC that would take this chair and say to you gentlemen that it is the engineer's responsibility to come up with a national allocations plan for television. I think those engineers almost without exception—if they say to you what they say to me privately—would like to have a policy decision from the Commission to tell them what kind of a television system it is this country needs; and given the policy incentive, the directive to go forward, they will design that television allocations system. They will put the pipelines in the building you put up.

So I think it is permissible to think of our national television system as consisting of a great many hometown stations, plus a great number of wide-coverage, big-town stations. Under such circumstances, let's take another look at the problem of rural coverage. With all-channel receivers for sale all over, we can assume a small, low-cost UHF station in any community that can afford it. And I think that here is where we can find a real and honest answer to the problem of providing rural coverage. How far out can we hope to put these small stations? In other words, how inexpensive can we hope to make them, how small the community that can afford them? Let me show you the trend in costs, and I think you will agree with me that it is not unreasonable to look forward to the day when we can have as many TV stations as we do radio stations—and that will mean five times the rural coverage we have today.

May I direct your attention to the last page of my statement? This is a table which we prepared, as a result of our experience, from presentations made to us by the manufacturers of what the capital costs would be for a small hometown television to serve a small hometown community.

	Tower	Transmitter building	200-watt transmitter (unless noted)	Video equipment	2 film projectors	Audio equipment	Lighting	Test equipment	Total
Adler Commercial Laboratories	10,000	10,000	11,175	19,190	3,990	2,890	1,000	2,125	60,370.
Dage TV division	10,000	10,000	12,875	17,615	4,770	3,110	1,000	2,125	61,495.
Dumont Laboratories	10,000	10,000	(500 watt) 38,850	26,385	4,770	4,254	1,000	2,125	(500 watt) 97,384.
Federal Telecommunications Laboratories	10,000	10,000	6,000 watt only	22,290	3,610	3,110	1,000	2,125	(Less Xmtr.) 52,135.
General Electric	10,000	10,000	5,000 watt only	22,535	9,400	4,747	1,000	2,125	(Less Xmtr.) 49,807.
Kay Laboratories	10,000	10,000	(100 watt) 7,010	15,080	3,990	3,620	1,000	2,125	(100-watt Xmtr.) 52,825.
RCA	10,000	10,000	Prices not listed	22,780	9,500	5,105	1,000	2,125	(Less Xmtr.) 60,510.
Sarkes Tarzian, Inc	10,000	10,000	12,225	18,540	7,390	3,925	1,000	2,125	65,205.

Initial cost less installation charges and taxes.

Those figures are quite different from the figures that have been talked about heretofore. We have listed proposals by eight different manufacturers, all of them, I think, well known to you.

I would like at this point—because I think this is a very great point to establish, that hometowns can afford television—I would like to introduce at this point Mr. Benjamin Adler, who has himself constructed 15 television stations and is certainly an expert who can tell you the facts you want to know about how much it costs to build these stations.

The CHAIRMAN. Go ahead, Mr. Adler.

STATEMENT OF BENJAMIN ADLER, PRESIDENT OF ADLER ELECTRONICS, INC., NEW ROCHELLE, N. Y., FOR THE COMMITTEE FOR HOMETOWN TELEVISION, INC.

Mr. ADLER. Mr. Chairman, I have a short statement here which I would like to read. My name is Benjamin Adler, president of Adler Electronics, Inc., manufacturers of transmission equipment for TV broadcasting stations. I hold the degree of electrical engineer and am licensed as a professional engineer in the State of New York. I have been associated in various degrees with TV broadcast engineering and construction since 1928 and have been personally responsible for the design construction of 15 TV stations in the United States during the past 5 years.

A number of these stations have been in smaller cities. Some of them, of course, have been in larger cities. Many of the cities have been in about the same category as Bridgeport insofar as population to be served is concerned. Some of the stations have been UHF; some have been VHF. They have been divided.

During this period our organization has specialized in facilities for low-cost construction and operation of TV stations. We recognize right from the start that as we were getting into the smaller cities, it was quite difficult to justify the large expenditures that were necessary in order to establish television broadcasting stations, and we started some time back attempting to cut costs and cut corners in order to arrive at economical prices.

It was very difficult to cut them very far because of FCC rules that prevailed at that time. Since then, the Commission has authorized a new set of rules which have not gone as far as we had hoped, but they have reduced the requirements to a point where you can operate with a 100-watt transmitter, provided you do maintain the coverage requirements for covering city limits, grade A and grade B service. It doesn't help us very much as far as reducing costs are concerned, but I do have some figures here, and I would like to go into them.

Reduced costs have been achieved through the combining of aural and visual transmitters into a single transmitter, the elimination of diplexers and vestigial sideband filters, the application of vidicon cameras for both live and film pickup, and the introduction of other mechanical and electrical design features to make equipment simpler and more compact, easier to manufacture, install, maintain, and operate. All this has been accomplished without degradation of performance and reliability.

A transmitter power of 100 to 200 watts has in most cases been found to be sufficient with inexpensive tower and low grain antenna to adequately cover a radius of 5 to 10 miles. I say in most cases; there have not yet been very many stations of that power built, but there have been a sufficient number built to justify the statement that I have made. A suitable hill for the antenna and a higher tower will easily double this range, without increasing the power of the transmitter or spending very much more money.

Simplified operational layout—that is, of the facilities within the building—with facilities for film, network, off-air pickup, and local studio origination has been devised to reduce the operating crew to 1, 2, or 3 people, depending upon the elaborateness of the live show being produced. For program material other than live, one man is sufficient. This has been made possible through the use of a combination audiovideo control console equipped with remote film start-stop and slide-advance facilities.

What we have tried to do here is to pattern the operating requirements of a small TV station after a small local AM radio station where one man does everything. We have been quite successful in doing so for certain types of programs.

Facilities incorporating such features have just recently been placed into operation in Juneau, Alaska, for KINY–TV where a population of 10,000 is being served on channel 8. The equipment used at KINY–TV and costs are shown in the attached schedule A.

SCHEDULE A

Equipment for typical low power TV broadcasting station

Item	Quantity	Description	Price
1	1	VST-150 VHF transmitter, 150 watts, specify VHF channel, including 1 set of operating tubes and crystals	$6,450.00
1A	1	Substitute for item 1 if station is to be UHF: UST-150 UHF transmitter, 150 watts, specify UHF channel, including 1 set of operating tubes and crystals, at $11,370	
2	1	AV12-DM demodulator, VHF. Add $10 for UHF channel, specify channel. Requires 7-inch rack space	275.00
3	2	Design 614 CBVM Bell-Howell 16 millimeters TV projectors, includes pedestal and remote operation facility, at $1,995	3,990.00
4	1	Gray Telojector, 2 by 2 slide projector	695.00
4A	1	Optional substitute for item 4, Selectro-Slide Jr., 2 by 2 slide projector, with 7-inch lens, Spindler & Sauppe, at $297	
5	1	VA-19 video clamp amplifier	185.00
6	1	2,200 TIC synchronizing generator, for rack mounting, including PS-12C regulated power supply and PS-14 bias power supply. Includes built-in linearity pattern generator. Requires 38½-inch rack space	2,650.00
6A	1	410-A synchronizing generator, for rack mounting binary counter type, includes built-in power supply. Requires 10½-inch rack space, at $1,850	
6B	1	Optional substitute for item 6, 400-B synchronizing generator, portable type, complete, at $1,500	
7	1	VSTA-4 VHF vee antenna, 4 stacked elements, omnidirectional, 5 decibel power gain, specify VHF channel	1,900.00

Equipment for typical low power TV broadcasting station—Continued

Item	Quantity	Description	Price
7A	1	Substitute for item 7 if station is to be UHF: USTA-8 UHF antenna, 8 stacked elements, omnidirectional, 9 decibel power gain, specify UHF channel, at $3,500	----------
8	2	300-D Vidicon camera chains, portable, per tabular listing I, at $4,600	$9,200.00
8A	2	Optional substitute for item 8, 300-D Vidicon camera chains, studio type, per tabular listing II, at $4,900	----------
9	1	A-069-3 film camera lens, 3-inch, F/2.5	88.00
10	1	A-069-1 live camera lens, 1-inch, F/1.5	98.00
10A	--------	Optional additional lenses: A-069-2 camera lens, ½-inch, F/1.5 at $99 A-069-4 camera lens, 2-inch, F/1.9 at $88	---------- ----------
11	1	B-052-1 interconnecting cable, pulse, 1 required per camera chain in excess of 10	60.00
12	1	C-077-1 optical multiplexer, complete with stand and single field lens	245.00
13	1	C-080 film camera mounting pedestal	120.00
14	1	Gray Telojector mounting pedestal	195.00
14A	1	Optional substitute for item 14, slide projector mounting pedestal for item 4A consisting of C-0922 base, C-022 pedestal, and B-541 adapter plate, at $100	----------
15	1	AVC-1 audio-video operating console providing audio, video, and projection switching control, with facilities for handling 4 audio and 4 video inputs with monitor and preview switching, and remote control of 2 film projectors and 2 slide projectors; includes CP-11, CP-14, and CP-15 panels, CH-2B console and audio amplifiers (2 preamps, 1 program amplifier and 1 monitor amplifier)	2,100.00
15A	1	Video mixing option: Add video fade and lap dissolve facilities, includes conversion of CP-15 to CP-15A by addition of switch row and fader mechanism, 2 VA-18 modular amplifiers for mixing and RA-8 rack mounting chassis (installed in AVC-1 at factory if ordered with AVC-1, otherwise available as a field modification kit), at $330	----------
15B	1	TT-14B 3-speed 12-inch transcription turntable with cabinet, 106SP tone arm, 2 reluctance cartridges and diamond stylii, 602B equalizer, complete	350.00
15C	1	Audio preamplifier option: Add preamplifier (5116) and tray (5106) to AVC-1 console for converting high-level input to low-level input; includes operating tubes (installed in AVC-1 at factory if ordered with AVC-1, otherwise supplied as field kit), at $109	----------
16	1	M16A master monitor	2,150.00
17	2	PS-12C regulated power supplies for M16A and audio-video amplifiers, requires 10½ inches rack space, at $280	560.00
18	1	CH-3A console housing with sliders, blower and filter; for M16A mater monitor	370.00
19	1	CH-2A console housing, flat top, for portable Vidicon camera controls and power supplies	160.00
20	1	Relay kit for remote control of slide projector, item 4A, at $30	----------
21	1	PS-13 low-voltage power supply, 24-volt direct current, 5 amperes, requires 7 inches rack space	235.00
22	2	K-56 Setchell-Carlson 17-inch picture monitors (camera monitors), at $199	398.00
23	1	K-568 Setchell-Carlson 17-inch picture and sound monitor (announce monitor)	214.00
24	2	R-1 racks, with rear doors	184.00
25	1	A-072-1 camera tripod and friction head, heavy duty	150.00
26	1	B-030-1 3-wheel dolly	45.00
27	1	Senior Colortran lighting kit, code KSR	265.00
28	1	TA-3 plug-in meter for checking power supplies and calibrating M16A master monitor	60.00
29	2	SP-2 side panels for operating console lineup, left and right, at $5	10.00
30	2	SP-1 side panels for R-1 rack, left and right, at $14	28.00
31	1	Hewlett-Packard model 335E TV station monitor, aural modulation, and aural/visual carrier frequency monitor	2,050.00
32	1	AV12 rebroadcast receiver, VHF. Add $10 for UHF channel, specify channel	225.00
33	2	635 EV microphone dynamic, omnidirectional, at $41.40	82.80
33A	2	420 EV desk stand for microphone, at $12	24.00
34	--------	Towers, on application	----------
35	--------	Transmission line, on application	----------
36	--------	Other accessories, on application	----------
		Total	35,811.80

TABULAR LISTING I

Portable broadcast equipment, single camera chain

Item	Quantity	Description
1	1	300-D camera, complete with electronic viewfinder, 3 lens turret, 6326 vidicon and all tubes.
2	1	700-D camera control, 3-inch waveform monitor.
3	1	800-A regulated power supply.
4	1	B-051-1 camera cable, 50 feet.
5	1	A-150-1 pulse terminating plug.
6	1	A-073-1 UG 260/U connector.
7	1	C-027-1 light shield.
8	1	A-357 power cord assembly.
9	1	B-249 cable assembly.
10	1	A-073-3 75-ohm termination.
11	1	A-247-1 pulse cable connector.
12	1	A-080-5 vided cable 4 feet.
13	1	300-D instruction manual (IM-300-D) and Warranty Card.
14	1	800-A instruction manual (IM-810-A) and Warranty Card.

TABULAR LISTING II

Studio broadcast equipment, single camera chain

Item	Qty.	Description
1	1	300-D camera, complete with electronic viewfinder, 3 lens turret, 6326 Vidicon and all tubes.
2	1	710-A camera control console unit, complete with 10-inch picture monitor, 3-inch waveform monitor and electronically regulated power supply for camera, in console housing 13¼ inches wide by 36 inches deep.
3	1	B-051-1 50 feet camera cable (camera to camera control) complete with connectors.
4	1	A-150-1 pulse terminating plug.
5	1	A-073-1 UG 260/U connector.
6	1	C-027-1 light shield.
7	1	A-357 power cord assembly.
8	1	B-249 cable assembly.
9	1	A-187-1 AC cord.
10	1	A-073-3 75-ohm termination.
11	1	300-D-710-A instruction manual (IM-300D) and warranty card.
12	1	600-A instruction manual (IM-600A) and warranty card.
13	1	810-A instruction manual (IM-810A) and warranty card.
14	1	A-247-1 pulse cable connector.
15	1	A-080-5 video cable, 4 feet.

There is also shown a block diagram of the terminal facilities, an approximate floor plan layout and calculated distances to grade A and B contours on UHF and VHF for various antenna heights.

The curves shown do not apply to the KINY installation because obviously that is on VHF and UHF does not apply; but it was added to this exhibit as a matter of interest to show what can be done with a small, low-powered station.

To the equipment list shown totaling $35,811.80 there should be added the cost of a building and land or space in an existing building, a tower, transmission line, shipping and installation costs, furnishings and fixtures. These extra costs might be as low as $5,000, for a situation where TV is being added to an existing AM radio station; or as much as $30,000 to $100,000 where a new building and tower are being constructed for this purpose.

We recognize that you can lay out television programing and operating facilities for as much money as you want to put into it. The big trick is to keep the cost down. That is why I indicate here that it may go as high as $100,000, and I must truthfully say it may even go higher than that if you are not careful in planning and laying it out.

The CHAIRMAN. Are these prices the same on U's as they are on V's?

Mr. ADLER. The U is somewhat higher for the transmitter and the antenna only. All the rest of the equipment is the same. UHF is still somewhat higher for the same power.

Senator PURTELL. When you say "somewhat higher," percentagewise, what would that be?

Mr. ADLER. A case in point is the transmitter we offer. We have a VHF transmitter that sells for $6,450, the transmitter itself, 150 watts. The same power on UHF is about $11,000. That is the transmitter only, and you can see the transmitter represents about a third of the total outlay. The rest of it is approximately the same.

It so happens that on UHF it is a lot easier to get more gain in the transmitting antenna without spending a lot of extra money. In doing so, of course, we get more effective radiated power.

The information and data presented herewith is in support of my testimony to the effect that smalltown TV broadcasting facilities can be established with equipment readily available on the market for this purpose at costs that are, in my estimation, within the economical limitations of such operation.

The CHAIRMAN. This would apply, you say, to what Mr. Merryman discussed as a drop-in?

Mr. ADLER. It could be used as a drop-in. The particular instance that Mr. Merryman explained in his chart used, I believe, 20 kilowatts of effective radiated power. There are many places in the country where this type of station could be dropped in where lower power could be used and still obtain the 10-mile coverage, because of the wider separation between the existing stations.

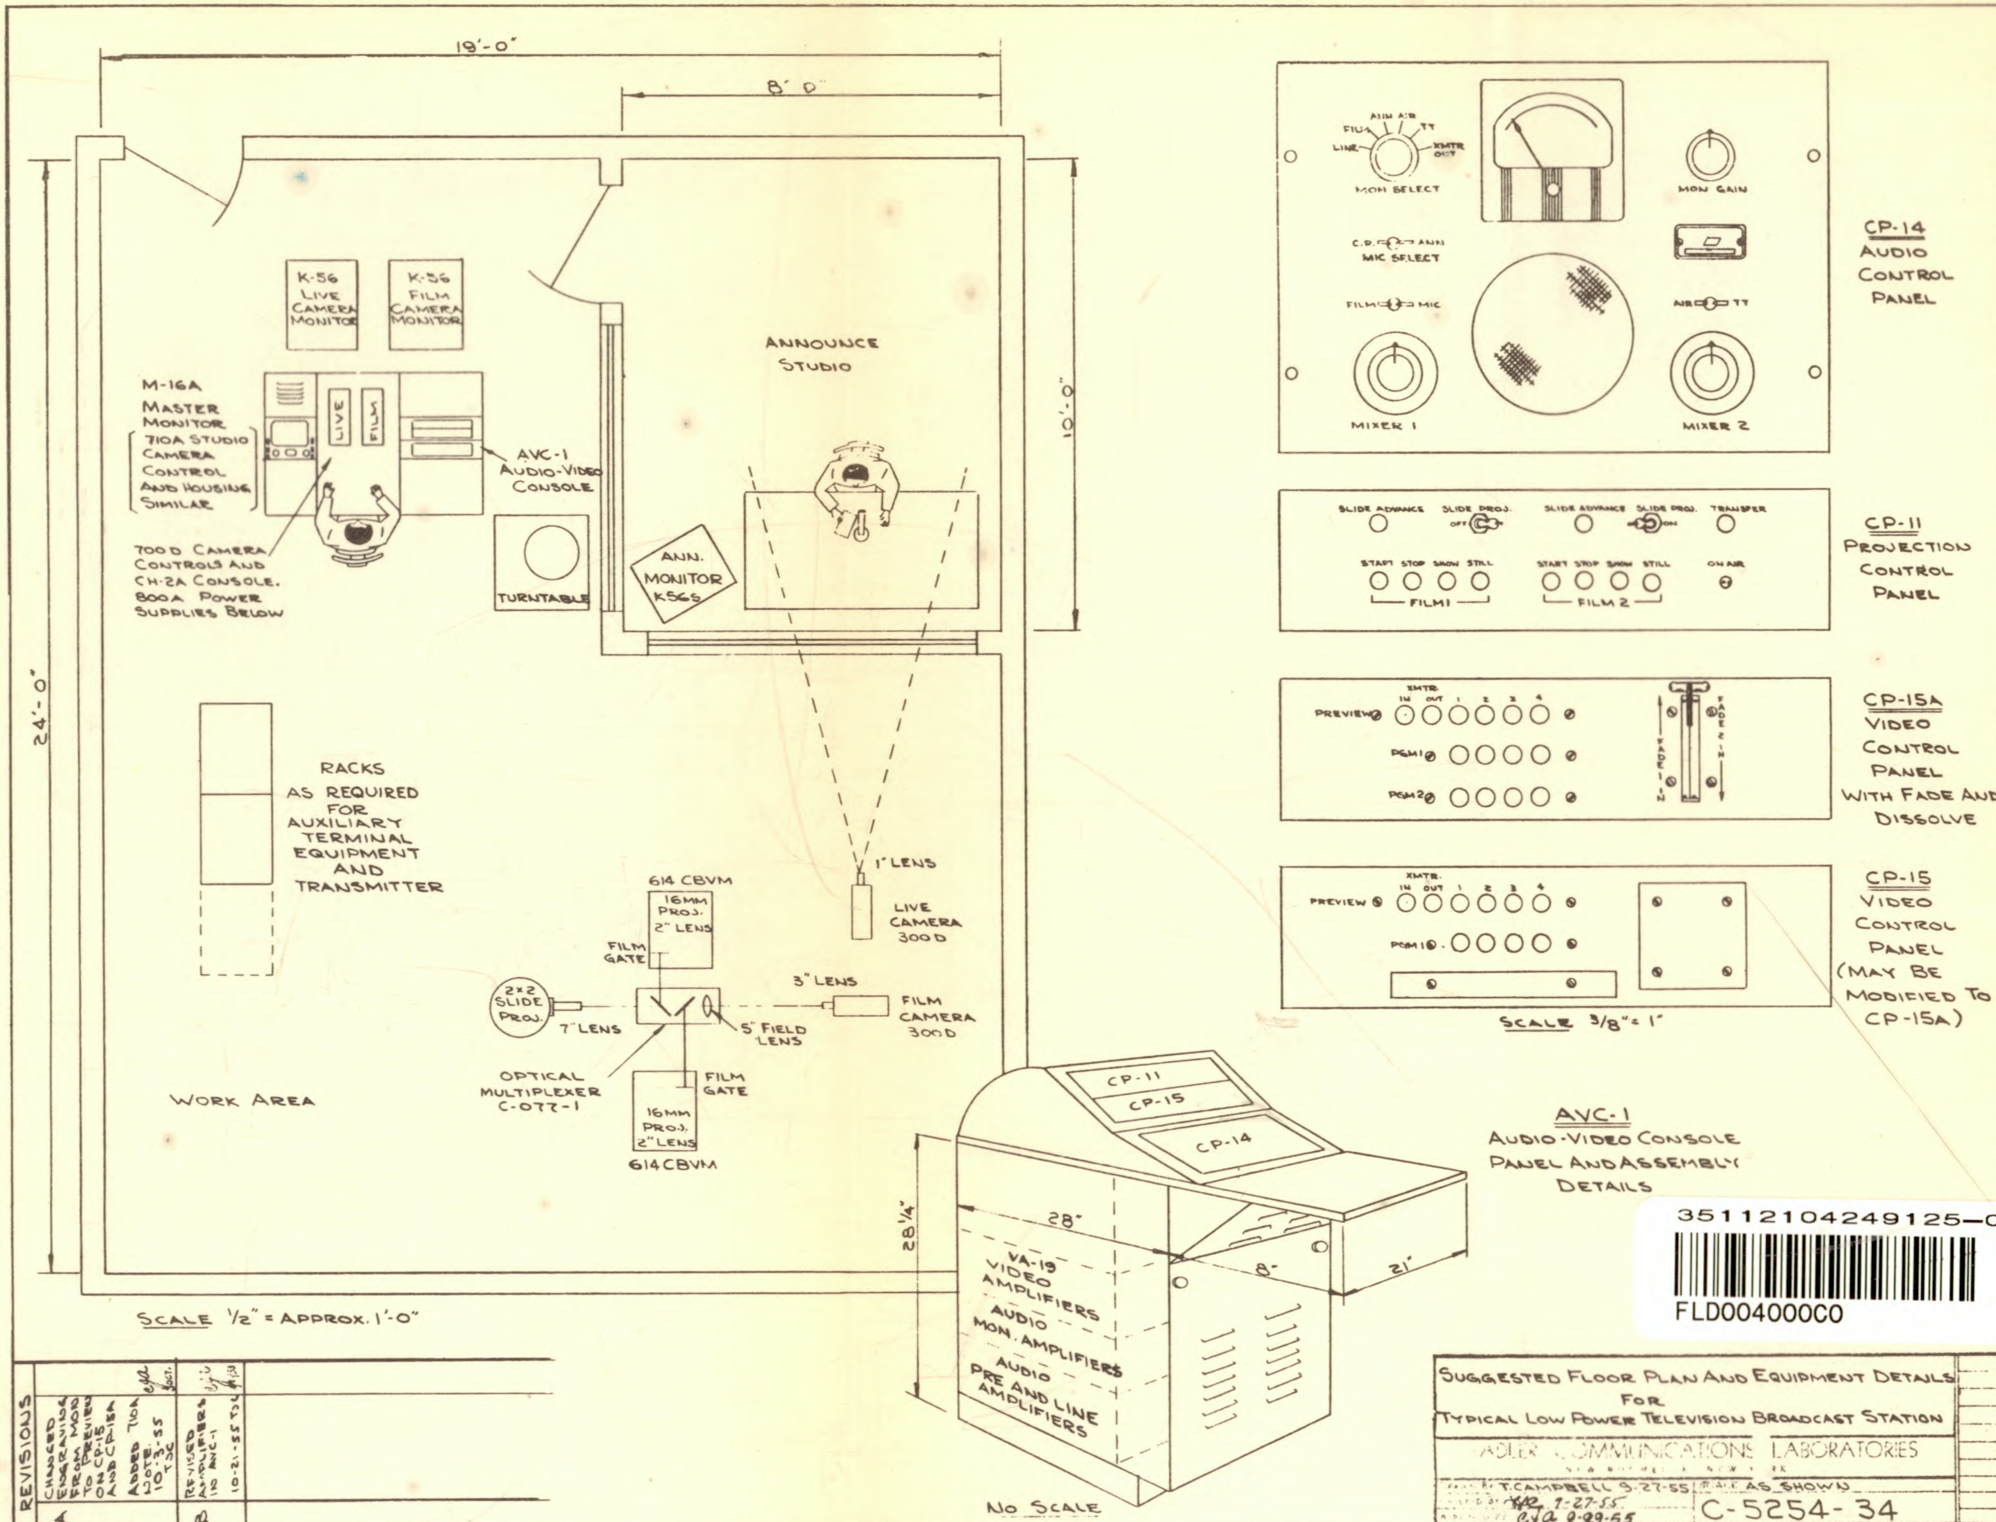
It is difficult to lay down a definite formula about the amount of coverage that you could get from a drop-in because of the spacing between existing stations in the flesh actually operating. Those allocated to the area are not spaced uniformly throughout the country.

The CHAIRMAN. It could be used probably more successfully in the western areas; could it not?

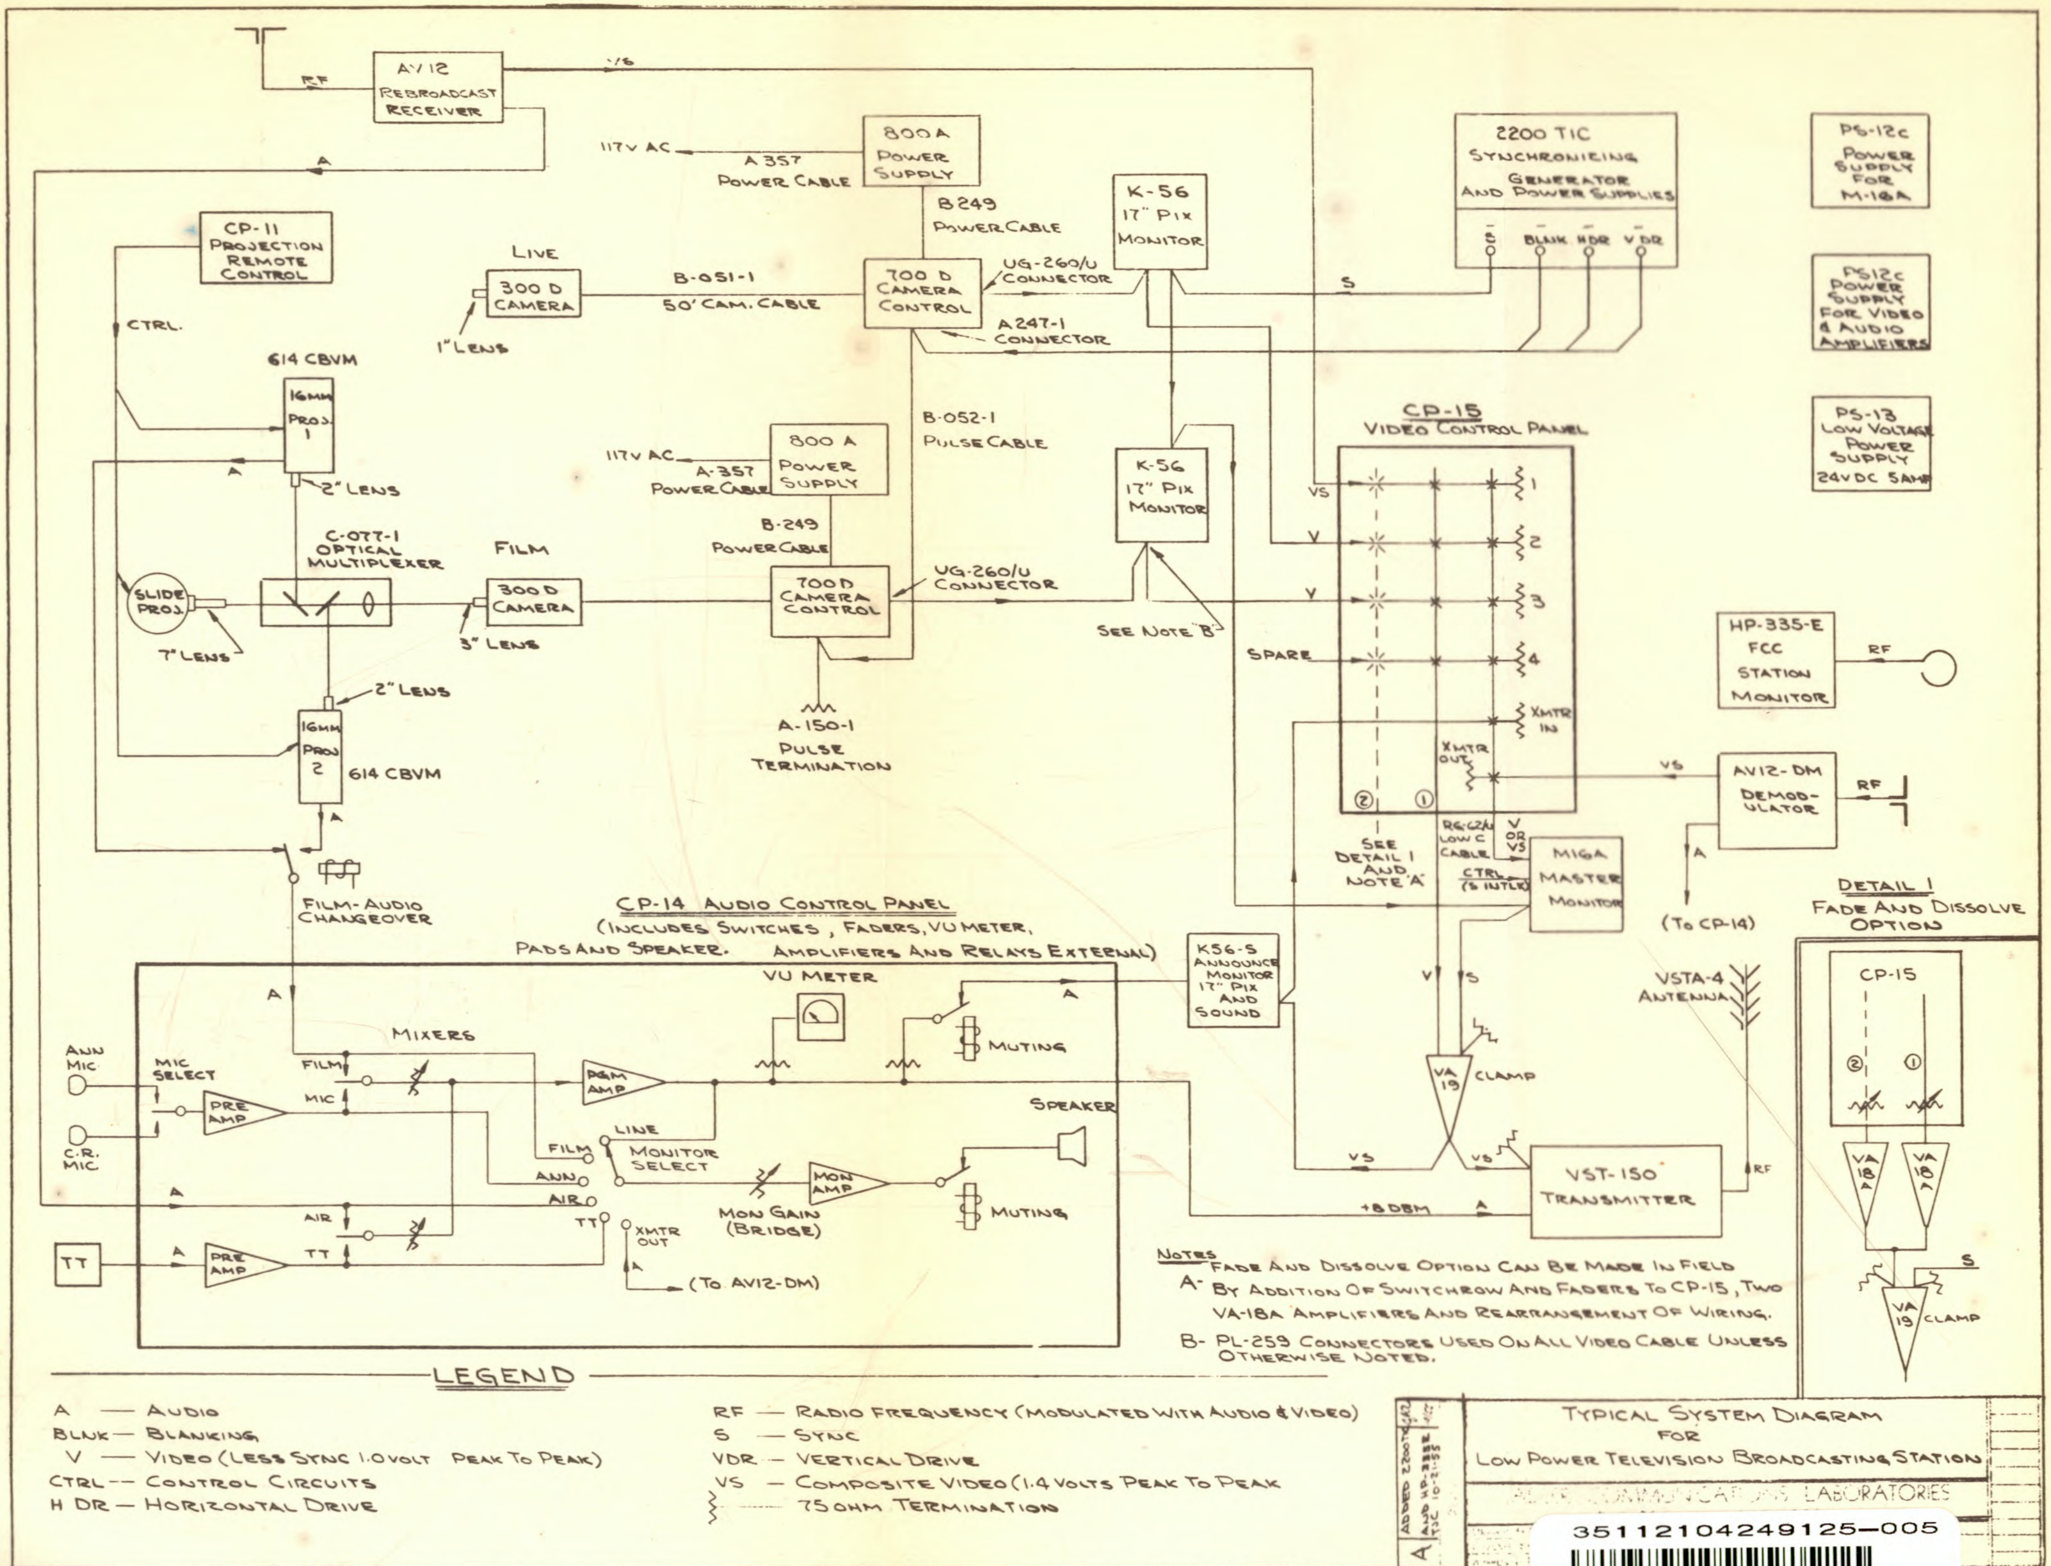
Mr. ADLER. That is probably true, where you do not have the overlap and where the existing VHF stations are not crowded as closely together.

Senator PURTELL. While it is economical in the light of what we know about stations of higher power and cost, still you have the problem, have you not, of profitable markets in which these may be located?

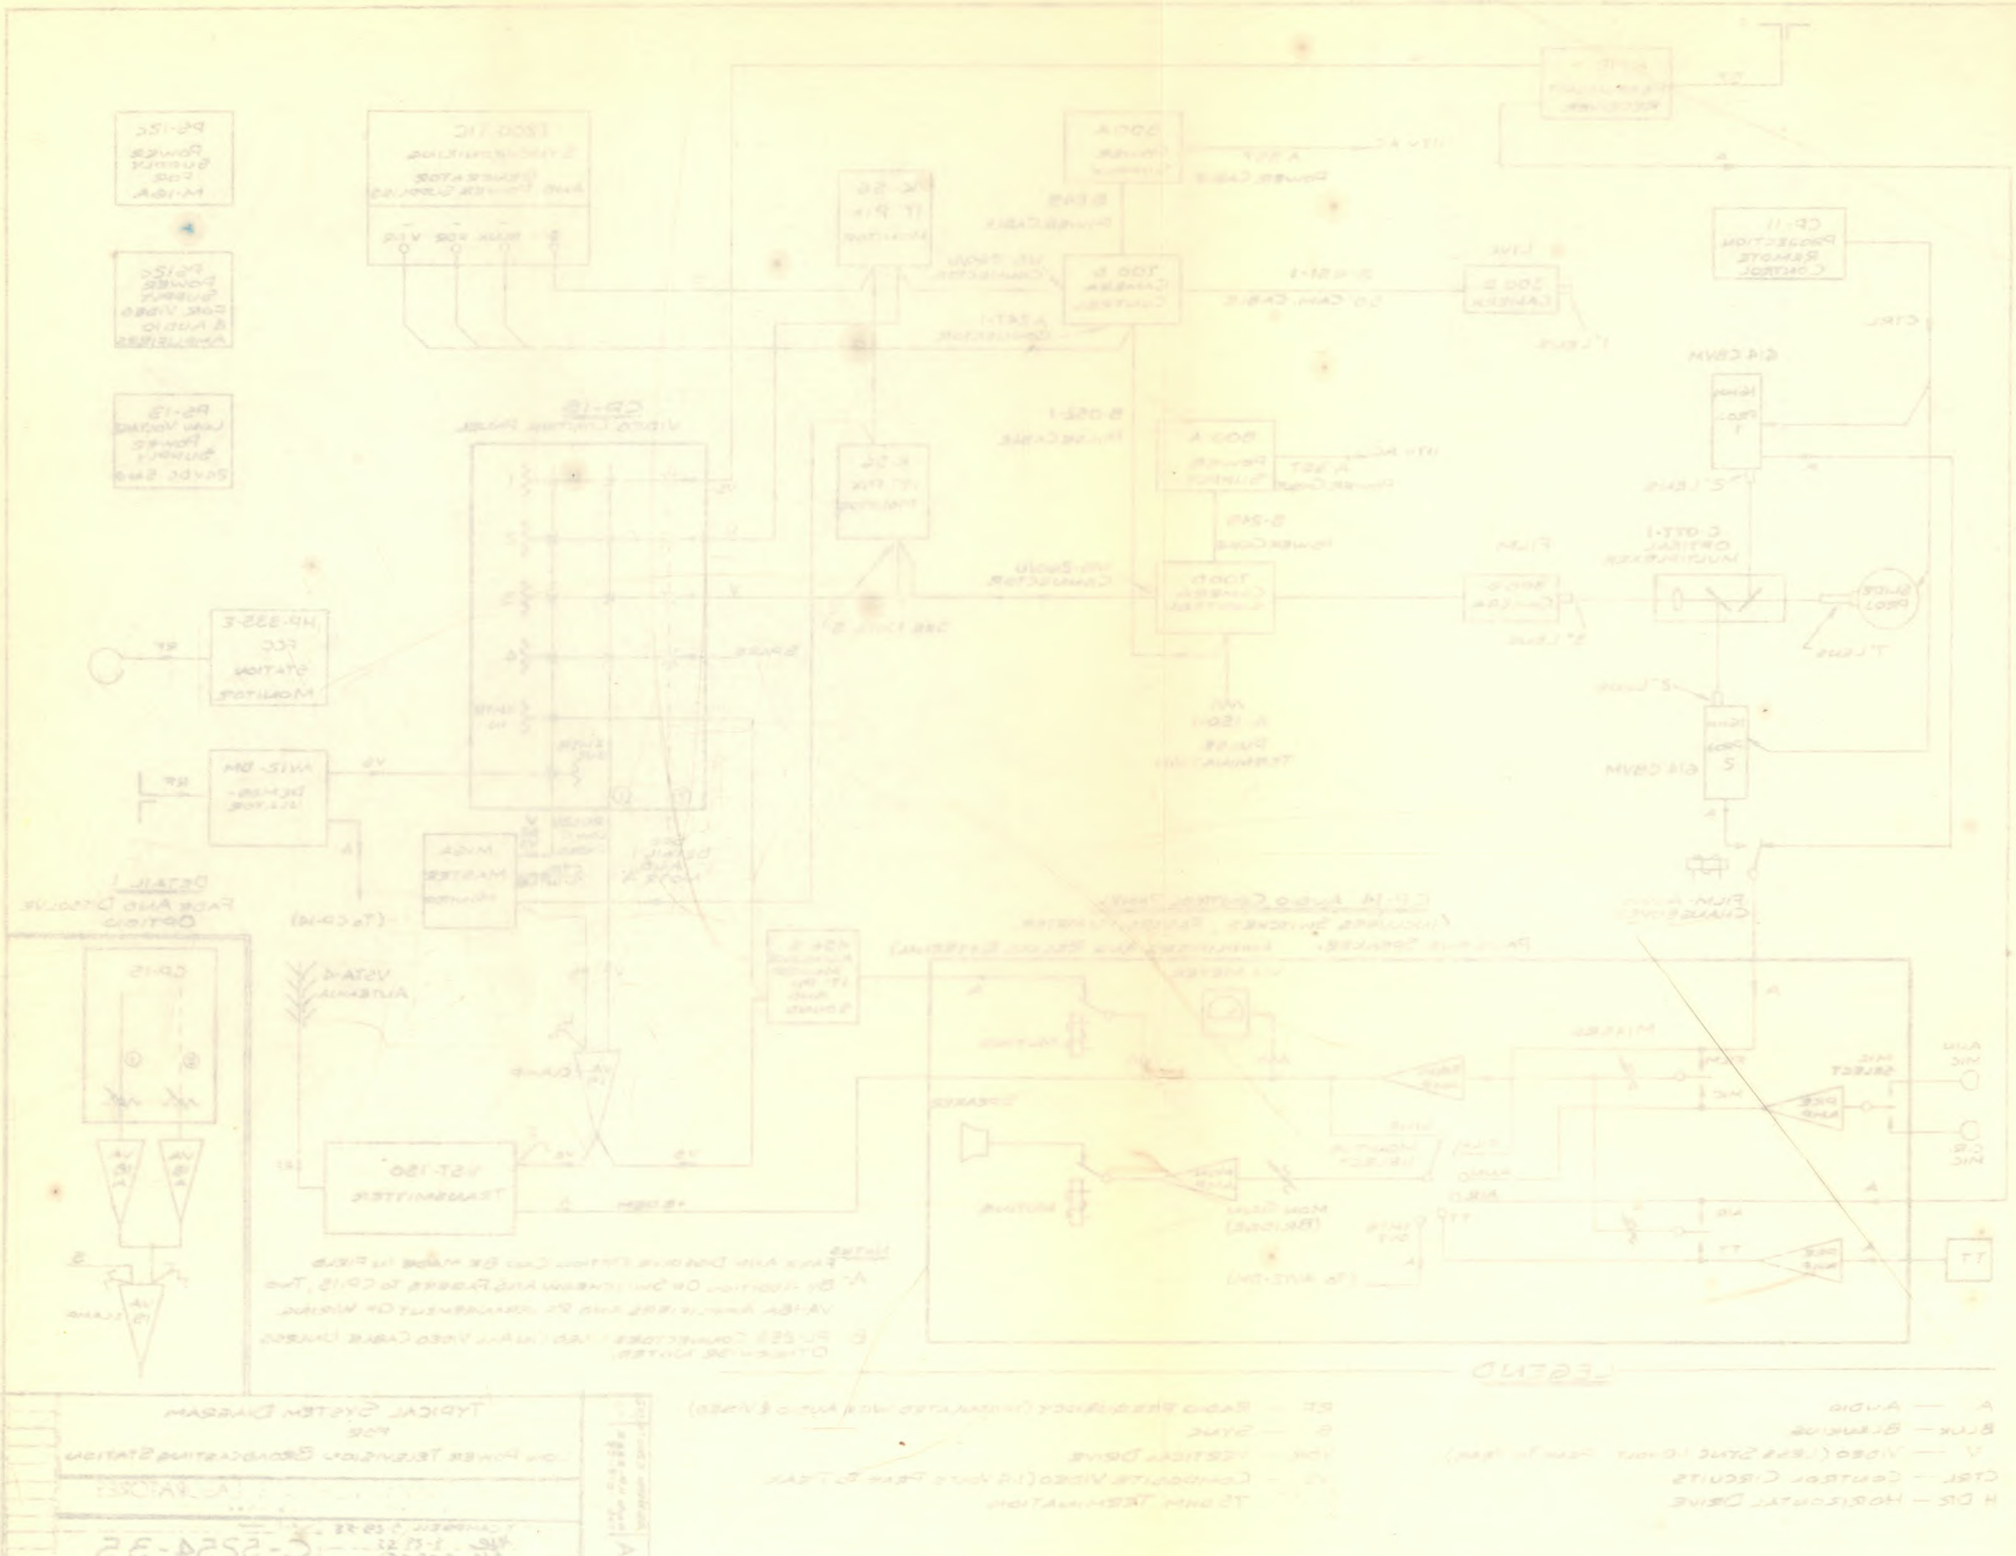
Mr. ADLER. That is a point that is a little beyond my capabilities and experience. I believe Mr. Merryman can answer that question a



75589 O-56 Pt. 2 (Face p. 480) No. 1



75589 O-56 Pt. 2 (Face p. 480) No. 2



little bit better because he, I think, has made a study of how big or small a market you need to produce the revenue required to support this type of station.

Senator PURTELL. I think it is an important question.

The CHAIRMAN. But as the costs come down with capital outlay, you can have the station in a smaller market, naturally.

Mr. ADLER. That is true.

The CHAIRMAN. It is like a newspaper and its market.

Mr. ADLER. That is exactly right. We have paid particular attention to attempting to bring the cost of operation down in relation to the initial costs, because that has been the thing that has broken the backs of a lot of stations that have not been able to develop enough of an audience to justify their existence.

Mr. MERRYMAN. When you operate at these small-town levels, you must necessarily do as the chairman says newspapers have done—tailor your operation to meet the economic ability of the community to support the operation. It is my opinion that the costs stated here by Mr. Adler can, in certain areas of the country, provide support for this type of station in a community of not more than 2,500 at its base.

Senator PURTELL. 2,500?

Mr. MERRYMAN. Population. That is assuming, of course, it is located in an area of high density, rural population around this small town. In the West where the rural population is less dense, the size of the basic community would have to be larger.

The CHAIRMAN. Does the Commission require so many hours on the air?

Mr. MERRYMAN. A minimum of 28 per week, I believe.

Mr. DOERFER. I think that there is some rulemaking under consideration to vary that.

The CHAIRMAN. But it could be made flexible, couldn't it? Supposing the cost of operating one of these stations is too great, say, for a 15-hour telecast. Even if they were only on the air for an 8-hour period, it would still be better than not being on at all—a one-shift operation I am thinking of.

Senator PURTELL. But this proposal fits in with another picture that you have been painting, Mr. Merryman. That is, not where they have no available television now, but in areas where they do have available television. Isn't that correct—drop-in stations?

Mr. MERRYMAN. Yes.

Senator PURTELL. So you really have an economic problem there.

The CHAIRMAN. Or both.

Senator PURTELL. You have both. But I think you just can't blind your eyes to one.

The CHAIRMAN. This could be done in small communities that do not have other stations. It could also be done in what you call the drop-in situation.

Mr. MERRYMAN. That is right.

Senator PURTELL. Where it would afford television in the areas where no television is presently available—of course that is one situation. Now you have got another situation, where you are fitting this to the area where there is television coverage, but you want to use it as a drop-in station. I think your economic problem there is one that will give you a great deal more trouble than it would in an area where there is no present coverage at all.

Mr. MERRYMAN. Senator, I agree that the logic would seem that way. But the important fact is that the local stations would generate such a great percentage of loyalty among the local people, that that problem, in my opinion, has been greatly exaggerated.

Senator PURTELL. It may well be. I don't know. However, I do think that it is something that should be further explored. I think perhaps you agree with me.

Mr. MERRYMAN. We have explored it in Bridgeport. And we are quite ready to operate both a UHF station and a VHF station.

Senator PURTELL. You have a large market area there. I wasn't thinking of that so much as I was in other areas where the market range is substantially less.

The CHAIRMAN. But there is a great deal of difference, I think, if this is possible. I can think of communities out in my area, that are isolated by mountains and otherwise, of from 10,000 to 20,000 people. Anyone might be willing to take a capital risk on serving that area, as a local station, if his investment was $100,000 or under, rather than if he had to make the investment that is now made in a regular television station.

Further, he would have a better chance, too, because those areas now are looking toward the idea that they might be served by cable, or by other means, which costs more and is practically subscription television. That is what it amounts to.

Mr. MERRYMAN. Senator, are those communities you are speaking of supporting radio stations or newspapers?

The CHAIRMAN. Yes.

Mr. COX. That is what I wanted to ask, Mr. Merryman. Could you or Mr. Adler give us some idea of what would be the comparison between these reduced costs of construction of a television station he has been discussing, and the present costs for constructing a radio station for one of these small markets—just roughly?

Mr. MERRYMAN. Roughly I would say about a third, wouldn't you, Ben?

Mr. ADLER. I would think so, for the initial cost. But you will probably find that using some of the new practices that have been adopted, the operating cost would not differ greatly, except for the cost of films and other programs.

The CHAIRMAN. Of course that is a big cost. But if it is a small radio station, some of the costs could be eliminated. They may have a little building and they may have a lot of the stuff around that would have to go into either radio or television, or both.

Mr. COX. That leads to the next question—in your opinion, if a radio station costing roughly a third as much to build is able to operate in a community of this size and make a profit, do you think that the greater advantages of television as an advertising medium and so on would enable an operator to get proportionately higher returns for his investment in television so that he could expect to make a profit and get a return on this greater investment?

Mr. MERRYMAN. Mr. Cox, let me say first of all that the original capital I don't believe is the important thing. After all, the interest on $60,000 a year is not an awful lot of money, and that is what your capital would cost you. Let's say 6 percent on $60,000 a year. That is the cost of your capital, provided you can find the people who are willing to invest their money in this.

What really is important is what does it cost you to operate this facility? I can corroborate Mr. Adler's statements that we have of necessity been forced to this type of operation in Bridgeport, and that for more than a year now our television station has had two full-time employees. We have the services of an announcer who works on the AM station, who comes in and takes the announcements that have to be made during the operating period. We have the services of a secretary or a clerk, who prepares the program schedules daily that are set up by the station. Aside from that, we have operated this station with two full-time employees. We do put on local programs. We do on occasions go out with cameras and film local scenes and bring them back to the television station and put them on.

As a matter of fact, we have actually got into the film-production business. We found that we can produce, particularly for the churches, a 15-minute film program at so much of a reduced cost over what they would have to pay with other film producers, that they can afford to prepare these film programs and use them on television stations in other areas.

The CHAIRMAN. In other words, what you say is that it is possible with new equipment—and I suppose it might even get better as we move along; we always progress—that the high cost of running a TV station, particularly for small coverage, a small operation, can be cut down considerably.

Mr. ADLER. There is no doubt about that.

Senator PURTELL. I was not finding fault, of course, with your statement. It is most intriguing—very interesting. However, isn't your coverage—I am talking about continuing costs—for a radio station, substantially greater than it would be for your TV station?

Mr. MERRYMAN. That is not important, Senator.

Senator PURTELL. Isn't it as far as market goes?

Mr. MERRYMAN. If you cover the retail trading area of your market, you serve the needs of the people in there. The coverage you get outside your retail areas is of very little importance to you. It does make a difference to networks. It does make a difference to people who buy spot advertising on a nationwide basis directly with the stations. But to your local merchant, so long as you are serving the retail trading area—and that is where your big revenue comes from—if you can meet the needs of the local merchant, that is all you need. It doesn't matter if you have X miles out beyond the area that your local merchant wants to draw trade from, or to serve the needs of the people in the community that need the service of television for that community.

Senator PASTORE. If that is the case, Mr. Merryman—and I regret I couldn't hear your statement because I had to attend another meeting; that is one of the problems we have around here of trying to be in two places at once—if what you say is true, then why it there so much pressure on the part of the station to ask for more and more power?

Mr. MERRYMAN. I think they are greedy, Senator. This national business—except for the network business which is relatively unprofitable to an independently-owned station—the national business is quite a bit more profitable than local business. You don't have to service the national business as much as you do the local merchant, and you generally sell the national business at higher rates. So your cost for putting it on the station is lower and you get more money for it. As I said, if you expand the service area of the station, you can convince the chainstore that wants to service all the stores that he owns in a particular area by one buy—naturally it is attractive to him.

The CHAIRMAN. Mr. Merryman, you mentioned simultaneously televising both VHF and UHF; if you put the two of them together, does that cost extra? I don't know the details of that.

Mr. MERRYMAN. It would cost more, Senator. We have either got to do it, or go under.

The CHAIRMAN. So the record will be straight, by that you mean the same program going out on both UHF and VHF?

Mr. MERRYMAN. That is right.

The CHAIRMAN. The studio setup would be the same, would it not?

Mr. MERRYMAN. That is right.

The CHAIRMAN. Would you have two different cameras?

Mr. MERRYMAN. You would have 2 different transmitters—1 for VHF.

The CHAIRMAN. Two transmitters?

Mr. MERRYMAN. That is right.

The CHAIRMAN. The program is the same until it gets up to the transmitters, and then one puts out the U signal of that program and the other the V signal.

Mr. ADLER. You could use a common tower which is quite satisfactory. You have to have separate antennas, separate transmission lines going up to the tower.

Mr. MERRYMAN. But you see, this adds capital cost to the station but it doesn't add operating cost, except for the power you use in the transmitter and the cost of keeping the transmitter in operating condition.

Senator PURTELL. This opens up another avenue of thought: If you were doing this simultaneously in a trading area—let's take in Bridgeport, for instance, where you tell us there is only 10 percent conversion—if simultaneous broadcasts were made both on ultra high and very high, would there not be reluctance to spend the money to make a conversion? Or do you think, however, that this would be a normal result of a desire to get newer sets in the course of time? Is that what you are thinking of?

Mr. MERRYMAN. Senator, you get down to that problem, and it is a problem that I have pondered long. As the chairman has said over and over again, what you finally get back to in this whole question is the all-channel receiver. What we are talking about is a competitive problem. When we say "monopoly," what we mean is that the Commission has allowed the big stations wide coverage so that they have covered the small communities. Then when you try to come in there with a UHF, which is the only thing available to you, you can't compete. Far from our asking for restrictions on competition, we are asking that restrictions on competition be lifted.

It is our hope that in this whole thing we can give the manufacturer sufficient incentive so that it will be to the manufacturer's interest to manufacture all-channel receivers.

Mr. Cox. I don't see how you have accomplished that in what you are discussing so far, Mr. Merryman. You are taking your station, for instance, and converting it to a V. There will be no incentive for the consumer, the viewer, to buy an all-channel set.

Mr. MERRYMAN. Exactly, and the problem is whether we can create sufficient predominantly UHF areas so that a sufficient percentage of the production of the manufacturer will make it profitable for him to shut down his VHF-only production lines, and manufacture nothing but all-UHF receivers. At that point—and that is why I say normal replacements—at that point every receiver that came into Bridgeport would be an all-channel receiver.

Mr. Cox. Then to do that, wouldn't it be true you would have to limit the use of drop-in V's to those areas which were already predominantly V, so that in effect you deintermix them to all-VHF, and require that a local station of this sort in the West should be on a U channel, even though there might be an available V channel there?

Mr. MERRYMAN. The first question, where there is a predominantly VHF area, you have to drop in a V. Where the area is predominantly U—and I don't mean by that all-U; I think you can have 1, and in some cases 2 VHF stations operating in the same community with UHF stations, and at the same time come out on top with a UHF operation. But if you were going to drop in additional stations in that community, you would drop in U's. You would not put in more V's which would retard this business of setting up an incentive for the manufacturer to manufacture all-channel receivers.

Senator PURTELL. May I pursue that a bit? I think maybe I have overlooked something in my questions to you. That may be what you intended to convey; it is not as clear as it might be. Am I correct in thinking that what you had in mind, if you had VHF and UHF simultaneously broadcast out of your local station, that you would then create a desire on the part of the listeners—because of the attractiveness of your local programs and the interest in your local things—to switch over to ultrahigh? Is that what you have in mind?

Mr. MERRYMAN. That is right. You heard these people here this morning. These are community leaders. They understand what the problems of the community are. They know what a local television station means to them. These people will spend the money to get our local channel—even though one of them said that she didn't spend the money, even as important as she thought it was.

How are we going to convince all the people in the Bridgeport area that we can give them a television service that will in most respects be much better than the service they are getting out of New York? You have got to prove it to them, and if you never have a chance to prove it to them, you just can't sell it.

Mr. Cox. Isn't this true, Mr. Merryman: The only incentive to the man in Bridgeport if he becomes interested in your program—that is, you are given a drop-in V for 5 years or some alternative period and you can operate simultaneously so he can get your program on a V—but he is put on public notice, as I get it, that at the end of 5 years, if he wants to continue to get your programs, he must at that time have an all-channel set.

Mr. MERRYMAN. No, sir. When 85 percent of the sets in the area can receive the UHF station, we are perfectly willing to go back to the U.

Mr. Cox. Yes; but throughout this period, as far as the first 5 years are concerned, he can get your programs. He can turn off the New York stations and get your programs on VHF.

Mr. MERRYMAN. That is right. I do not argue with you for a second that we are specifically in Bridgeport providing the incentive to purchase the all-channel receiver.

Mr. Cox. Except that, as I understand it, at the end of 5 years, with or without conversion under your proposal, you would go back to the U?

Mr. MERRYMAN. No, sir. If we get 85 percent before 5 years.

Senator PASTORE. But that is the question. I do not follow that. What inducement is there going to be to a person who has a V set to change or convert to a U, or go out and buy a U, if he can get your program on a V? I do not follow that. Someone will have to explain that to me.

I see your point. If tomorrow we could invent some gimmick whereby every set in this country now in existence, or every new set, would become an all-channel set, I don't think we would have very much of a problem. But the question is: How do you do this?

Mr. MERRYMAN. I understand your difficulty, Senator, and it is something that has given me a lot of difficulty, too.

Senator PASTORE. It isn't a difficulty with me, as much as it is understanding the point you are trying to make.

Mr. Cox. Isn't this what you said, Mr. Merryman? The VHF channel would be authorized for use by a VHF permitee or licensee, which is yourself, only until the expiration of 2 years after 85 percent or more of all receiver production is composed of all-channel receivers, or until the expiration of 5 years after the date of the grant? In other words, if in 5 years you do not get 85 percent, you are back on UHF anyway under these terms.

Mr. MERRYMAN. I am afraid there has been some text left out—that should be "whichever is longer."

Mr. Cox. It is in there. Five years is the cutoff.

The CHAIRMAN. It gives them 5 years——

Mr. Cox. I see. You say if within that time you don't have 85 percent, you go on indefinitely?

The CHAIRMAN. He goes on to explain that there later on. You are near the end of your statement here. You are getting into color now, and you are probably hopeful that at the end of 5 years everybody then will have the color set and probably it will be all-channel. What is the normal turnover—about 3½ or 4 years?

Mr. MERRYMAN. There have been so many advances made in the design of receivers that I think the normal replacement cycle is quite fast.

The CHAIRMAN. Let me ask you this—and you need not read this about color, because we have heard it.

Mr. MERRYMAN. May I, however, Mr. Chairman, on this subject of color, read you a letter and a telegram?

The CHAIRMAN. All right, but let me ask you this. We have been somewhat intrigued with the idea, as the Senator from Rhode Island pointed out, with the problem relating to sets, which is one of the real problems involved here. We do not know how we can handle it now. The manufacturers do not know how, except to take the tax off. It is most exasperating because it involves, from the best information I got from all the amnufacturers, between $8 and $12 a set in manufacturing costs at the factory on a production line. This whole problem is revolving around $10.

When it gets to the retail outlet it is a little different, but here is this small amount that is causing a great deal of this trouble. Now along comes color, and it will move just as fast, of course, as people acquire color sets. The more sets that are acquired, the more programs the networks will put on the air in color. If you have any ideas as to how we can get this little bud that is starting to bloom now and have it bloom right, then maybe in that 5-year period we might not have so many of these problems of UHF and VHF.

Senator PASTORE. Will the chairman yield at that point?

The CHAIRMAN. Yes.

Senator PASTORE. I think one of the Commissioners said that there is no guaranty that these color sets are going to be all-channel sets. That is the thing that is bothering me. We may be still with this same problem.

The CHAIRMAN. There is no guaranty, but I think maybe if we got started right here, we are getting down to the question of $8 or $10 and maybe less as we move on. There would not be much reason why a person buying a color television set, which would run X number of dollars, should not for his own protection pay that little extra amount for an all-channel set.

Mr. MERRYMAN. Senator, may I answer your question in two parts. First, I do not believe you were here yesterday when Mr. English, from Raleigh, N. H., testified.

The CHAIRMAN. I was not.

Mr. MERRYMAN. He came forth with a very novel suggestion. I do not know whether it would work or not. It would work if it were put into effect, I think. But what the legal proposition would be, I do not know.

He suggested that, instead of taking away the tax, you raise the tax on VHF-only receivers to 15 percent and reduce it to 5 percent on all-channel receivers.

The CHAIRMAN. That is not new. I suggested that to the Finance Committee as an alternative to taking the tax off altogether. But what I was thinking of was that, without changing the law, we might be able to eliminate color sets from the tax on sets. I do not know. We are exploring that idea.

But you are right. If we could do that, then the Treasury should not have too much complaint because the same amount would be coming in. But the incentive then would be to buy the other sets, and then the returns from the tax would gradually dwindle as we move up in the other. But that would be worthwhile.

I still repeat: I think if the people who run the finances of this Government knew what a little thing the tax is in comparison to the trouble this thing is causing the whole economy of this industry—what a little thing that tax amounts to, which would help clear it up—I think it would be fair to give a little.

Mr. MERRYMAN. I did some thinking about it last night, Senator, and it occurred to me that maybe you do not have to reduce the tax at all. Just raise the tax, say, 25 percent on VHF-only receivers, and very quickly you will find the manufacturers stopping the manufacture of them.

The CHAIRMAN. We could do that if we had only this problem to deal with. But when we amend a tax bill around here, we open up Pandora's box and everybody gets into the act.

That is frankly why the Finance Committee is reluctant. I think if we could take this problem all by itself we might be able to make some progress.

Mr. MERRYMAN. It was an intriguing idea. I do not have any faith in the excise tax being the solution to the problem. I think in our system of free private enterprise in this country, there might be considerable objection to that approach to the solution of the problem. What we really need to do is to provide the incentive to the manufacturer, to make it profitable for him to manufacture the all-channel receiver.

In connection with your question on color, I would like to read you a letter——

The CHAIRMAN. Or if it is not going to make too much difference to the manufacturer in the long run, since the difference is only $10 or $12, there ought to be some way we could provide the incentive so we could get these sets out.

Mr. MERRYMAN. As I said, Senator Pastore, I have pondered this problem long and diligently. Last Friday I called Dr. W. R. G. Baker, who is a vice president and general manager——

The CHAIRMAN. If you could speak a little louder, Mr. Merryman, I do not think a lot of the people in the back can hear what you are saying.

Mr. MERRYMAN. I wrote Dr. Baker, who is the vice president and general manager of the electronics division of the General Electric Co., and I think he is the chairman of the allocations committee of the Radio-Electronics-Television Manufacturers' Association. I had talked with him on the telephone Friday morning and discussed the proposition with him. As a result of discussing that with him, I sat down and wrote him this letter. It is dated February 24:

It was a pleasure to talk with you this morning on the general problem of how to provide for a wider distribution of UHF-equipped television receivers in our economy. I quite agree with you that it is unreasonable to expect manufacturers to market all-channel receivers unless there is a widespread incentive on the part of the consumer to buy the receivers and I further agree with you that the only real solution to this problem is to provide the incentive to the consumer so that the manufacturer in turn will have a market.

As I told you during our conversation we would expect that the UHF islands would provide such incentive but we also feel that this incentive would be substantially enhanced if color broadcasting were restricted to UHF. Thus, instead of saddling the public with additional billions of dollars invested in color television receivers that would not receive the UHF stations, we could insure that all color television receivers produced would be equipped for UHF. Since large-scale distribution of color receivers is only just beginning and since nearly all color receivers so far manufactured are equipped for UHF, such a plan would protect the public from an investment of doubtful value and would insure that the UHF frequencies could be restored to a useful status within at least the normal replacement cycle of the consumer.

An essential part of the success of this plan would be that the existing VHF stations be authorized a companion UHF station on which to broadcast the same programs in color that are broadcast on the VHF station in black and white. The restriction on the use of color to UHF only could be discontinued at some period in the future when there are sufficient television receivers equipped for UHF in any community to make UHF competitive with VHF.

This, of course, would work a temporary hardship on the existing VHF operations inasmuch as they would have to provide unscrambling equipment so that only the black and white portion of the color signal would go out on the VHF station, and that they would be required to simultaneously operate both UHF and VHF if they would broadcast color.

However, if UHF stations proposing a temporary VHF drop-in as a companion station are willing to undertake to broadcast on both UHF and VHF, this temporary concession in the interests of a healthy national television system is justified. The public, of course, would not lose since the receivers would receive color on either UHF or VHF.

I was pleased to have your endorsement of this proposal in view of the testimony last Tuesday of Commissioners Hyde and Webster, and of the chief engineer of the Commission, Ed Allen, that a better color picture is achieved through a UHF system than through a VHF system.

My purpose in writing you is to obtain your consent to my introducing this letter into the records of the Senate Interstate and Foreign Commerce Committee during my testimony on behalf of hometown television next Tuesday morning. I will call you some time Monday relative to this.

Late last night I received this telegram. The telegram is from Syracuse. It is addressed to me.

This will authorize you to express my general concurrence in the proposal that restricting color to UHF broadcast stations would be one way in which to give vitally needed support to the use of UHF channels. I do not understand your reference to the necessity for unscrambling equipment. I would not think this would be required as a technical matter. If you wish to express my concurrence, I request that it be done by submitting this telegram.

W. R. G. BAKER, *GE Co.*

The CHAIRMAN. Now, if you will proceed with your statement, Mr. Merryman.

Mr. MERRYMAN. Mr. Adler just tells me, with reference to the unscrambling equipment, that RCA sells a color killer filter for $25.

The CHAIRMAN. That would be in the transmitter?

Mr. MERRYMAN. That would be at the transmitter, you see. Under the compatible system, the receiver can take the black and white portion of the color picture and you get a picture.

The CHAIRMAN. I just want to ask one question. All of the color sets now, as far as we know, are being manufactured all-channel. Why would that not continue in the future?

Mr. MERRYMAN. Senator, you eventually get down to a local guy trying to sell a product to somebody who wants to buy it at the cheapest possible price. That is our system of free competition.

The CHAIRMAN. I understand that. That would come about if some manufacturer could make a set cheaper for sale, a color set, without making it all-channel. Is that not correct?

Mr. MERRYMAN. Some manufacturer who would not comply, let's say, with an expression of intent on the part of the big manufacturers and the association. Some other manufacturer sees his chance to get a big market all of a sudden by selling a cheaper color television receiver. So he forces the big manufacturers to also come out with the cheaper sets, and your UHF is then gone.

Senator PASTORE. Take New Haven, for instance. The only station in New Haven is a V station. If you followed your idea of having color go on only through U, what would the people in New Haven do?

Mr. MERRYMAN. As I said, part of this plan involves the necessity to authorize the V's to operate a companion UHF station.

Senator PASTORE. I see. In other words, in the example you have given, a station like the New Haven station would also be authorized to transmit in U?

Mr. MERRYMAN. Yes.

The CHAIRMAN. Somewhat like AM and FM in radio stations.

Mr. MERRYMAN. Yes; and may I remark here that, as I recall—and I do not recall all the circumstances specifically, because it has been a long time ago—I think the Federal Communications Commission spent years examining the proposition of what number of lines gave the best picture on television before they set the standards—the technical standards—for the picture to be produced. If, as the Commissioners and the chief engineer testified, technically you do have a better result through the UHF system, then I think that fact alone justifies the restriction of color to UHF.

The CHAIRMAN. It is getting late. If you would proceed, Mr. Merryman.

Mr. MERRYMAN. I am, happily, about through, Senator.

The CHAIRMAN. I think you can skip the color. We will put that all in the record. We talked about that quite a bit.

Mr. MERRYMAN. Still in terms of these longer perspectives, let me leave with you two final thoughts. Color television is today still in its infancy—about where VHF stood when the FCC froze it. It is possible now in the development of color television to avoid a repetition of the mistakes the FCC made with UHF. Color television belongs on the UHF band—and for the reason that an industry committed to color on UHF will work with greater energy and ingenuity and resources than any Government commission can ever summon to see to it that America is converted to the all-channel receiver.

Finally, I would like to repeat something I said earlier: I am the operator of a UHF station in a VHF area. I have lost money every month since we began operations back in 1953. For 2 years now we have existed on the hope that the Federal Communications Commission would do something about their rules and their engineering standards to give us some relief so we could compete.

We are still a noncompetitive system. As I said before, what I am kicking about is not that I care if the New York stations cover Bridgeport. We have licked them in radio. What I am kicking about is I canont compete with the New York stations in my own town.

I see no immediate prospect of making any money. All that keeps me in operation is the hope that something will be done to make it possible for me to compete on even terms with the VHF monopoly of the air. But hope, gentlemen, is a tender flower and my resources are very nearly at an end. I am quite sure in my own mind that unless there comes from these hearings some positive mandate to the FCC, my hope and my resources will give out very quickly. The only justification for pouring money down a rathole is the expectation that someday I will get it back. If I canont see how it will ever come back, I must close down—and I will.

I have just spoken in the first person singular—something I have tried to avoid in this testimony for hometown television. But I know, and you must also know, that my words are echoed to the last comma by very nearly every one of the 95 UHF operators still on the air. For the 75 or so stations, UHF stations, that are now losing money, I see nothing ahead but more losses, and they are going to shut down.

You have got, on the Commission's latest figures, 18 stations that are making a profit. You can't justify assigning all that vast frequency spectrum of the UHF in order to accommodate 18 stations. So the whole UHF is going down the drain.

What is needed now—by us, by the FCC, by the American public—is an affirmative statement of policy from you gentlemen—a statement of a policy which will give us what I might describe as the "business hope" to keep going until equity can catch up with us.

If I may paraphrase you, Mr. Chairman, in your statement at an earlier session of this committee, "There comes a point when you have to say 'Yes' or 'No.'" Now the point has come when somebody must tell the FCC what its policy is, what this country needs in the way of a national television system.

If no action is taken, then not only will we go under, not only will television be denied forever to America's hometowns, but we will by the sheer force of inertia be delivered into the hands of a monopoly of 3 men: The presidents of the 3 networks. Such a monopoly will, we know, freeze the whole industry; freeze the art of television; freeze the TV film industry. And such a monopoly will inevitably in the public interest require the most stringent type of Government regulation, Government legislation, Government policing.

We are, in fact, at a moment of crisis in the history of communications, and our duty now is to recognize that this is a crisis; the perspective of history will make this fact plain enough. The first step toward saving hometown television must be taken in the minds of the Commissioners. They must concede that UHF and hometown television can be rescued by a series of immediate, forthright, and affirmative actions well within the scope of their own authority. This done, the vista is fine:

1. The present retreat into a stifling and dangerous monopoly will be ended.

2. The television industry will obtain better and closer coverage, better programing, more return for the advertising dollar, and—in short—more television.

3. America will get hometown television, an essential aspect of its democratic tradition.

The CHAIRMAN. Mr. Merryman, I want to thank you. That is a very interesting and very well-prepared statement. We appreciate getting your views on this matter.

Mr. MERRYMAN. Thank you, Senator.

The CHAIRMAN. I think the counsel has some questions—just a few—and then the Senator from Connecticut.

We will take a short recess.

(A short recess was taken.)

Senator PURTELL. I wonder if I might make just one observation.

Mr. Merryman, what you have pointed out here in your testimony—and I might say it was most interesting and I think most informative—you pointed out you feel what you are asking for, are you not, is an opportunity to let the hometown, the local community, see what can be done with a television station operating so that at least more than 85 percent of the people will have that opportunity of judging that program? Is that it?

Mr. MERRYMAN. Well, Senator, that is right. But I might say that I have no doubt about the outcome. Give us the opportunity to compete. We know what the result will be.

Senator PURTELL. I think your whole testimony rather pointed out the fact that if the hometown can have the listeners there, that they would want to continue to get that hometown program.

Mr. MERRYMAN. Yes, I am sure they would. We have proved it in radio—newspapers have proved it—and I see no reason why the same philosophy wouldn't work with television.

Mr. COX. One point I would like to clear up, Mr. Merryman, for the record is this. You do not say, do you, because the map which CBS submitted, and which you have used, shows 100 markets, that those are the only areas in which CBS would contemplate that there would be television stations?

Mr. MERRYMAN. I thought I made that clear in my direct testimony, that the CBS proposal as such does not propose a restriction to those markets. What I did say was that the inevitable result of creating such a triopoly among three networks would freeze all other competition and as a practical result they would be the only stations that could survive and operate.

Mr. COX. Except that if there were V's in that large blank space in the upper Middle West and in the intermountain areas, they would presumably still be able to stay on the air because they are not in direct competition with any of the other principal markets.

Mr. MERRYMAN. That seems like a surface answer. It is one you immediately come to. But consider that this is a sterile concept; that here they are proposing that the only market for the output of television be in these 100 markets. That is, as far as the networks are concerned. So you freeze everything down the line. You kill all of the initiative of the creative thinkers in the field of programs, in the field of engineering, in the field of the television industry. You stop effectively the working of free private enterprise. In my opinion—and it is shared, I think, by a great many others—the practical operation with this sterile concept would be to freeze television at the point which we have now reached.

As I tried to point out when I was showing you the income situation as between newspapers, radio, and television, the ultimate destiny of both radio and television is where the newspapers now are. After a very full history of serving the public interests of communities throughout the land, after 34 years, radio is almost there. Television is only 10 years old. It may be another 25 years before television finally becomes fully practical as a strictly local medium. But that time is coming. It is coming inevitably if we put the machinery there for free private enterprise to operate in.

Mr. COX. That is, your feeling is that with this emphasis upon a television system designed to serve the 100 principal markets, there would be no incentive for independent film producers to go on producing programs other than those which could be absorbed by television networks, and that outside of that there would be no freedom for growth.

Mr. MERRYMAN. Exactly.

Mr. COX. As I understand it, it is your proposal that the power of existing V stations be cut back only where this is necessary to accommodate a V drop-in such as you propose on channel 6 in Bridgeport.

Mr. MERRYMAN. Let me clear that, sir. We do not propose that any VHF station reduce its power. What we are talking about in technical terms is the matter of interference. The chart is gone now, but we showed you how the drop-in station would push back the uninterfered service area of the V station.

We did this deliberately for a number of reasons. First of all, previous witnesses here have shown you that sometimes even a very strong VHF signal is inadequate, even in the market in which the TV station is located. So there is no justification for cutting back the power that the people in that hometown market—with what is now a wide-coverage VHF station—can enjoy.

Secondly, we wanted to leave their plants in such condition that when the time came that competition was restored, without any additional expense to them they would regain the service areas they lost temporarily in the interests of national policy.

Mr. COX. In other words, neither the station operating on channel 6 in Schenectady, nor the one in Philadelphia, would reduce its power. Each would simply lose some of its service area because interference would be created in a portion of that area.

Mr. MERRYMAN. According to the FCC standards. I say no one would lose service because the FCC standards do not take into account the effect of the antenna and the receiver.

Mr. COX. If you were permitted to operate in Bridgeport on channel 6, this would still leave the people in Bridgeport with the choice, if they wanted it, of tuning in the 7 stations in New York. That is true, is it not, sir?

Mr. MERRYMAN. That is true, if some other drop-in station doesn't cut back.

Mr. COX. Suppose the man in Waterbury—where there is a U station on the air—wants a channel, and the only channel available to him is one which is going to duplicate, or at least be adjacent to—as they all are—a channel in New York. Isn't there a danger that if you bring hometown television on these terms to 6 or 8 communities in Connecticut, all large enough to deserve it, that you will have created intereference which will block out the signals of those New York stations and will have reduced the choice of programing in the area?

Mr. MERRYMAN. First of all, sir, let me point out that only 7 of the channels are used in New York City, so it is not inevitable that Waterbury can find a berth only on a New York channel. However, if he could, then I think the public interest of the Waterbury population would justify cutting back the New York station, except that you don't cut it back inside its own trading area.

Mr. COX. What is the minimum separation in zone 1 for an adjacent channel?

Mr. MERRYMAN. Sixty miles.

Mr. COX. Would that permit the location of channels, spaced between those in New York, in central and western Connecticut?

Mr. MERRYMAN. I think, counsel, in view of the considerable advances that have been made in the technical considerations of the receiver, that that adjacent channel separation will also be substantially reduced. I would like you, if you would, Mr. Adler, to comment on that briefly.

Mr. ADLER. There are a lot of ramifications to the problem of channel separation. It seems that when the third order was prepared, which ultimately ended up with the sixth order and report which is now the bible of the industry, which sets forth all the rules, the separations for the various channels—that is adjacent channel and cochannel—were determined pretty much by several factors. One of the important factors was the ability of the receiver to reject an unwanted signal. We all know that receivers have improved tremendously since that original order was written. While we certainly wouldn't want to set up adjacent channels in the same town, I think there are a lot of us who firmly believe, based on measurements that have been made, that the separation of an adjacent channel could be made less than it is now—that is, the 60 miles for VHF and 55 for UHF.

To go a bit further on that matter of drop-ins and changing of separation of stations, I believe that a very important issue has been overlooked in connection with a lot of statements made about that in connection with UHF. We know now it is very difficult, even in the UHF channels, to find a drop-in UHF channel that will fall in line with FCC rules as they are now written. That is because there is a long list of what are called taboos on the location and spacing of stations.

Here again all of these spacings are based on receiver performance. Of course we know that UHF receiver performance has been pretty poor. But it is very difficult to find any of the receiver manufacturers who will admit that their receivers won't do better than the sixth order requires them to do, or states they will do. For instance, right now on UHF we can only space stations six channels apart in the same city. That all ties in with interference between IF's, sound and visual, and other stations. But the point that I want to bring out is that a lot of these so-called taboos on spacing which are now listed in the rules, certainly could be relaxed to a point of not degrading the signals to any extent whatsoever.

Some of us feel that separation between stations, for instance on VHF, 170 miles separation, is something that should probably be relaxed considerably because of directional receiving antennas. The receivers are a lot better.

Senator PASTORE. Let me ask you a question: Do you think that will straighten out the situation in the cities surrounding New York, or adjacent to New York, and still leave the seven channels in New York City?

Mr. ADLER. I haven't personally made a real study of it, but looking at other data that has been prepared by qualified people, I believe that it can be done, and leave the seven stations there; yes. Of course what will happen is that these stations will no longer cover places like Kingston, N. Y., 90 miles away.

Senator PASTORE. Don't you come down fundamentally to the question that was asked: That can only be done by reducing their power? Let's face it.

Mr. ADLER. I don't think you have to reduce the power, but it might be a help if they did.

Senator PASTORE. I am not quarreling about that. I say that maybe that is the desirable thing to do, but we have got to face the realities.

If you are going to begin to drop-in these stations, then I say they should be dropped-in. As a matter of fact, I have been asking them to drop one in Providence——

Senator PURTELL. A particular one. [Laughter.]

Senator PASTORE. You have got to face it. You have got to cut down some of the power of existing stations in adjacent cities. In my city, if you want channel 4 or 7, you have got to tune in Boston. Why does anybody who wants to tune in these channels in Providence have to tune in Boston? Why should Boston be servicing the city of Providence any more than New York should be servicing your city of Bridgeport?

Fundamentally, that is the question, and that young man who talked for the chamber of commerce, I think, put his finger on this whole problem. Unless we are talking about giving each community the right to equality of television service, then I am afraid that we will have to go on and forget the whole business.

Mr. MERRYMAN. Senator, I think Mr. Adler's difficulty—by reducing their power, you mean reducing their service area?

Senator PASTORE. That is right. Qualify it by any name you want it, it is still a rose to me. I want to thank you gentlemen, because I think you have made a fine presentation here. I don't know as you have given us the solution to the problem, because I will admit it is a very, very complex problem. It is not easy.

I know the problems that confront the Commissioners. I think they are approaching them in the proper spirit. I think they would like to adjust this if they can. I think a lot of mistakes were made from the beginning. But I am hoping that somewhere along the line, someone is paying attention to this whole problem and will do something about it. But I still say it will require a lot of courage and a lot of boldness. It can't be all things to all people, and get away with a solution to this problem.

Mr. MERRYMAN. Senator, it isn't difficult to make a policy decision.

Senator PASTORE. All right, we do make a policy decision and then you run into a lot of technical obstacles.

Mr. MERRYMAN. That is what I tried to tell you.

Senator PASTORE. The policy decision you could make, you could state a cliché right here this afternoon. Give everybody everything they want, in the public interest, and then where are you? The big question is: How are you going to do this?

Mr. MERRYMAN. The mistake that has been made, Senator, has been that the policy decision has been thrown to the engineers. What I am suggesting is: Tell the engineers what it is you want, and they will design the system that will give you what you want.

Senator PASTORE. I am hoping you are right. We have a distinguished member of the Commission here, who is making notes. I am hopeful that he will take them back. I have a lot of confidence in you, Mr. Doerfer. You had better straighten that out.

Mr. Fine, how long are you going to be? I am willing to stay here until 5 o'clock.

Mr. FINE. Not more than 10 minutes. I won't read my entire statement. I appreciate the opportunity to present it, if it can be put in the record together with my comments.

Senator PASTORE. Let me say this to you, Mr. Fine. You have got, I hope, a very clear statement that you desire to present to this committee for the purposes of the record. Surely your statement will be in the record for the advantage of all those who would like to read it. But don't try to repeat things that have already been said. Summarize your statement so that you can make your presentation in 10 minutes.

If you think it is going to take more than 10 minutes, I don't want to shut you off, but my suggestion is that you come back tomorrow.

Mr. FINE. I think I can complete it in 10 minutes.

Senator PASTORE. The way this has turned out, I am here all by myself.

Mr. FINE. I appreciate that. I am sure my remarks would fall on sympathetic ears.

STATEMENT OF JESSE D. FINE, WFIE, EVANSVILLE, IND.

Senator PASTORE. Mr. Fine, you go right ahead and summarize your statement, and we will place your prepared copy in the record so that we will have your presentation in full.

Mr. FINE. Thank you, sir.

Mr. Chairman and members of the committee; I am president of Premier Television, Inc., owner and operator of television station WFIE operating on UHF channel 62 in Evansville, Ind. There is another UHF television station serving the Evansville area and market. That is station WEHT operating on channel 50 in Henderson, Ky., some 12 to 15 miles from Evansville, Ind. Both WFIE and WEHT are UHF stations and provide the only appreciable signal in the Evansville market. In addition, beyond our market area UHF station WSIL is operating in Harrisburg, Ill., some 55 miles from Evansville, Ind., and there is an application pending for a UHF station in Owensboro, Ky., some 30 miles from Evansville, Ind.

In bringing the first television service to Evansville in 1953, WFIE invested in excess of $600,000 in facilities and equipment. From the time it went on the air in November 1953 until September 1, 1955, WFIE sustained operating losses approximating $100,000. Since September 1, 1955, the station has been operating profitably and has recouped a small part of its losses.

There are well over 100,000 UHF receivers in the Evansville-Henderson area, and the immediate area surrounding Evansville which is known as the tristate area.

Evansville is recognized as one of the successful UHF markets in the country. UHF circulation is 100 percent in Evansville-Henderson. VHF penetration averages less than 1 percent of the audience.

The people in the tristate area have been enjoying television service from the 2 UHF stations at Evansville for more than 2½ years. WFIE has affiliation contracts with NBC and ABC and WEHT is affiliated with CBS. WFIE operates daily Monday through Friday, 7 a. m., to 12 midnight; Saturdays from 9 a. m. to 12 midnight; and Sundays from 12 noon to 12 midnight. Both stations carried a majority of NBC and CBS programs, together with local live programs as well as local remote shows. We have our own microwave unit. According to all surveys, the percentage of television homes tuning in on programing of the two UHF stations exceeds the national average and this attests to the popularity of programing on our UHF stations as compared to VHF stations in other sections of the country. It also shows the ability of the public to receive a good signal from the UHF stations in our area.

This outstanding service, however, is threatened with destruction because of certain recent actions of the Federal Communications Commission which I desire to comment on today.

VHF channel 7 is allocated to Evansville, Ind., and VHF channel 9 is allocated to Hatfield, Ind., a village about 20 miles east of Evansville. Recently a final decision was issued granting channel 7 in Evansville to an organization known as Evansville Television, Inc. Two applications are pending for channel 9 in Hatfield.

When we began operating in Evansville 2½ years ago, we relied on the Commission's express finding in the Sixth Report and Order that UHF stations could exist in the same areas with VHF stations. As the entire industry and the Federal Communications Commission well know, that has proved to be completely fallacious.

When we realized in 1954 that our station could not exist if two VHF stations came into the market, we petitioned the Commission to delete the VHF allocations and make the area all UHF. We proposed that the Commission do away with 2 VHF allocations in the area in order to make the 6 or more UHF channels in the tristate region workable television assignments. The Commission denied our petition in December 1954, saying among other things that the applicants for channel 7 at Evansville had spent a great deal of money in the hearing. What the Commission did not say was that we had invested many times more money in providing actual television service to the people in an area which would not otherwise have had any kind of television service up to this time.

In January 1955, we again asked for deintermixture. After this committee, through its minority counsel, recommended that deintermixture be considered by the Commission, and after the Chairman of the Commission had made statements indicating that the merits of deintermixture should be explored, a rule-making proceeding was instituted in April 1955. We submitted hundreds of pages of evidence as to the desirability of deintermixture in our area, and we participated in the oral argument held by the Commission in this matter in June 1955. We showed conclusively by sworn statements and photographs that there were no white areas outside our perimeter that would be covered by a VHF station from Evansville and/or Hatfield that were not already covered by two or more TV services. Contrary to what Commissioner Doerfer testified to last week, this Evansville area is not a hilly portion of the country, but is generally flat and at worst is only gently rolling terrain. No problems arise in coverage because of shadows which exist in such rugged terrain as Portland, Oreg., West Virginia, Pittsburgh and the like.

We invite the committee, its staff members, and the Commission—if it wants to take the trouble—to visit our areas and to see that there are no "white areas" in our part of the country.

Despite our showings, no action was taken for several months. But in October 1955 we learned that the Commission intended to ignore our petitions and our extensive showings in the rulemaking proceedings, and to grant VHF stations in Evansville and Hatfield.

In October 1955 we filed petitions requesting stay of the proceedings in the VHF cases. We asked for leave to intervene and participate in such cases to show how the public would suffer if the two VHF stations destroyed UHF service in Evansville and surrounding areas, and we asked the Commission to consolidate the VHF hearings with our petitions for deintermixture.

On November 10, 1955, the majority of the Commission denied our petition for deintermixture without discussing any of the factual matters raised by us. The Commission ignored the informed opinion of many leaders of the industry that deintermixture was the desirable solution to the allocation problem in Evansville.

The next blow came on December 27, 1955, when the Commission granted channel 7 in Evansville and turned down our request for postponement of action on the channel 7 applications. The Commission majority turned us down flatly in our petitions to participate in the channel 7 matter, saying that we were too late.

The Commission said this despite the fact that the destructive effects of intermixture were not known at the time when, according to the Commission's rules, we could have intervened in the VHF proceedings.

The Commission said that the channel 7 grant was made because the rules then provided for channel 7 to be allocated to Evansville, but that in the future, if it was decided to delete channel 7 from Evansville in order to permit UHF to live, the channel 7 station could be required to operate on some other channel.

In other words, although the Commission had admitted that the allocation plan is wrong and should be changed, the majority of the Commission nevertheless sought to compound the errors in this allocation plan and to further complicate the situation by making grants based on a fallacious plan.

Such grants, we and many others contend, may kill UHF in areas such as Evansville before the Commission gets around to correcting the allocation plan, thereby rendering the whole question of UHF survival moot.

We have filed comments in the present nationwide rulemaking proceeding asking that Evansville and similar areas be maintained as exclusive UHF areas. We have proposed a more reasonable method of handling the channel 7 matter; namely, granting the winner of the channel 7 hearing the right to operate on a UHF channel until it is determined definitely whether or not Evansville will be deintermixed.

Gentlemen, we want to make it clear at this time that we have never attempted to stifle TV competition in the Evansville area—to the contrary, we welcome competition. In the future let our area have more service, but let that service and our competition be equal. Let us not create stations with special privileges which will stifle competition.

Based on our experience, the Commission will not now give us a prompt determination of our position. The Commission put us through one rulemaking proceeding in early 1955 and came out with a very brief order of denial of the relief we requested in that proceeding. Now a second proceeding is going on, but the Commission refuses to give us any relief pending the disposition of the second proceeding.

The Commission has had 2 years since the intermixture problem became generally known to take some action to help UHF stations.

But nothing has been done to remedy the intermixture situation. On the contrary, the Commission has taken a succession of actions which strengthen VHF television and, at the same time, weaken the structure of UHF. The hearings held last week by this committee prove my point. Some of the Commissioners are completely undecided, after all this time, about how to help UHF, but they are firmly convinced that there should be more and more VHF grants in UHF markets, and that there should be higher towers for VHF stations outside such markets.

It is utterly unreasonable to grant channel 7, or any other VHF channel, in a successful UHF market when it is known and admitted by the Commission that the UHF stations in such area will be destroyed by VHF. It is utterly unreasonable for the Commission to tell us that the VHF grant may soon be modified so as to provide for operation on another channel. We do not think the Commission would allow a broadcaster to invest tremendous sums in building a VHF station and then turn around and take it away from him.

We ask that this committee express to the Commission that it is desirable and essential to the fair and orderly disposition of the television allocation rulemaking proceeding to postpone the effectiveness of any VHF grant in an area which is presently a successful UHF market, and to postpone the effectiveness of such grants until the nationwide rulemaking proceeding has been definitely concluded and the future standards by which the industry will be governed have been finally adopted. This is the only reasonable thing to do.

It would also be reasonable for the Commission to permit interim operation of presently authorized VHF stations in areas like Evansville on UHF channels. The channels are available and the receivers are circulated in the area as a result of our pioneering, incidentally.

Let us not delude ourselves into thinking that UHF will survive if it is killed off in market after market. There is barely enough UHF television left now to justify the continued manufacture, development, and improvement of UHF transmitting and receiving equipment. If we diminish UHF service in this country instead of increasing it, the development and improvement of such equipment will cease and die.

Since the grant of VHF channel 7 is Evansville, a distributor of a well-known brand of TV sets in Evansville expressed his pleasure at such a grant. When asked the "why" of his position, he explained that this year only 2 of 21 models that his company is manufacturing are equipped with all-channel tuners—that the remaining 19 models would be capable of receiving only VHF signals. Previously his company had made all models available with all-channel tuners as had all other companies. What other TV set manufacturers plan to do we are not informed, but we think it is important that this committee be informed of these facts.

I might add that since the summer of 1953, no VHF-only sets have been shipped into or sold in the Evansville-Henderson area.

Gentlemen, what this committee and the Federal Communications Commission do today—not tomorrow or 6 months from now or 1 year from now—will determine the extent of the TV service the American people will have in the future. If we do not preserve the UHF portion of the spectrum for TV—and that is by far the largest portion available—we are going to have a very limited service for the rest of TV history in this country. If UHF is not saved, we are going to have a mere handful of VHF stations to cover the country.

I was quite impressed the other day with Senator Magnuson's apparent grave concern with the fate of the local advertisers. Believe me, gentlemen, if we don't preserve UHF, you will never have facilities available to the local advertiser—with limited facilities afforded by VHF, the big national advertiser will take up all the TV time available, and the small local advertiser will be deprived of the use of this great medium.

Years ago no one in the radio industry envisioned the growth of that medium to the extent that we would have local radio stations in towns of 5,000 or less. What if we would have limited the AM radio band from 800 to 1,200 kilocycles—we would not have these radio stations in small towns. Let us not limit TV. Let us leave room for it to grow just like radio.

I hope we can keep UHF alive.

(Mr. Fine's oral statement begins at this point.)

I have a little different story to tell than has been told up to this time. I am the president of Premier Television operating WFIE in Evansville. We are operating a successful UHF station in Evansville, and there is another successful UHF station in the area.

The only thing we want to do: We are performing a great service in the area, and we want to keep UHF alive. We think that Evansville is one of the areas where the hope of UHF lies. If we keep it alive in this area, we have saved UHF for further development in the country.

Senator Pastore. Have you any VHF competition?

Mr. Fine. VHF penetration in our area is less than 1 percent. We have 100-percent conversion to UHF in UHF receivers in our area.

Mr. Cox. But you have a V allocated?

Mr. Fine. A V is allocated and has been granted over our objection.

Senator Pastore. Did you oppose the VHF?

Mr. Fine. We did oppose by various means. We now have pending in the court of appeals an appeal from the order of the Commission denying our petition for deintermixing, denying our petition to stay. We have even gone further than that. We asked the circuit court of appeals for a stay pending our appeal, which was denied by a different group of judges than prevailed in the Vail Mills case. By a 2 to 1 vote, our petition to stay pending the appeal was denied.

However, I want to point out that we are doing a good service in this area. We are providing everybody within our service area with good television, network and otherwise, including local live, local remotes, and so forth.

However, this outstanding service is threatened with destruction because of certain recent actions of the Federal Communications Commission which I have outlined to you. They have granted channel 7, which was assigned to Evansville. There is an application pending for channel 9 in Hatfield, Ind., a hamlet of some 400 people which is 20 miles from Evansville.

Senator Pastore. Is that a V?

Mr. Fine. That is a V, too. It is a drop-in V. The reason we didn't oppose these channels sooner, or the granting of these channels, or the allocation of these channels sooner, was because we were led to believe by the sixth report and order that we could live side by side with VHF competition. This has been proven false, as we all know here.

As soon as we realized, in 1954, that our station could not exist if two VHF stations came into the market, we petitioned the Commission to delete the VHF allocations and make the area all UHF, and then we took these subsequent actions about which I just told you.

Senator PASTORE. What is the extent of your area, Mr. Fine?

Mr. FINE. The trading area of Evansville is an approximate circle of 40 miles, I would say.

Senator PASTORE. Would you say it is a grade A or a grade B area?

Mr. FINE. That is the grade A and B.

Senator PASTORE. Let me ask you: If an application were made for a new UHF, would you oppose it?

Mr. FINE. Definitely not. We welcome UHF competition in the Evansville area.

Senator PASTORE. I mean, your position is that you do not oppose another channel coming in order to give people more service. Your opposition is due to the fact that it is a different type of a channel, and for that reason you may lose certain advantages that you have in your contracts with the networks?

Mr. FINE. With the networks and with the national advertisers. We think we have provided a good service. We have sworn documentation to the fact that there are no white areas beyond our perimeter. These areas beyond our perimeter have at least two television services.

Senator PASTORE. The reason I say that, Mr. Fine, is this: You started your remarks by saying your situation is different. After asking you a few questions, I think you state it about the same way as most of those who have come here to testify.

Mr. FINE. The reason I say it is different is that we are operating successfully now. We are performing a good service.

Senator PASTORE. Only because you don't have V competition.

Mr. FINE. Definitely.

Senator PASTORE. That is the point you make. I don't state that as a fact.

Mr. FINE. The next point that I want to make is that I think we are all agreed that we cannot have a nationwide, competitive, and diversified service unless we retain this great UHF spectrum in our field.

Let's keep it alive. We are going to need it. If you kill it now, as the recent Commission's actions are likely to do and as their expected future actions are likely to do, you are going to kill UHF and you will never have it.

Senator PASTORE. I make this statement: I can't for the life of me understand why in areas where they have U and only U, and everyone seems to be happy with it, why, if it is a question of giving more service to the people they don't bring in more U's, to which there seems to be no objection. Only because the argument is made here of the sixth order and report. If that is the fact, they ought to change the sixth order and report.

The fact of the matter is this, where you already have a U established and everybody seems to be happy with it, and it is easy enough to bring in more U's, why do they want to scramble this thing all up and cause all this dissatisfaction and trouble when everyone seems to be happy with their U, provided they leave it U and give them all U's?

I can't for the life of me understand it. If it is the sixth order and report, then change it.

Mr. FINE. Senator, that has been our stand for the last 2 years. You leave me almost speechless when you take the words out of my mouth.

Senator PASTORE. Here is a further argument, then, Mr. Fine. Do you think that if a V was allowed in Evansville, the type of service that the people would get from that V would be better than the type of service that they are getting from you?

Mr. FINE. Definitely not. We are providing all service now.

Senator PASTORE. I mean the quality of the signal.

Mr. FINE. We have a beautiful picture. People who come in from other areas say, "This is a better signal than we are getting from VHF in Chicago," or Indianapolis, and so forth. We have just started operating in the black after 2 years in the red. Otherwise I would say, "Gentlemen, I will pay your expenses. Come out and see it." But I invite you to come out and see it anyway.

Senator PASTORE. Is that all you wanted to say, Mr. Fine?

Mr. FINE. I do want to quote from my statement here just a minute. I want to say that the Commission has had 2 years, since the intermixture problem has come up, to take some action to help UHF stations. But nothing has been done to remedy the intermixture situation. On the contrary, the Commission has taken a succession of actions which strengthen VHF television and at the same time weaken the structure of UHF.

Hearings held last week by this committee proved my point. Some of the Commissioners, you will remember, are completely undecided after all this time—it has been over 2 years—about how to help UHF. But they are firmly convinced that there should be more and more VHF grants in UHF markets, and that there should be high towers for VHF stations outside such markets to poach on the local market.

I want to point out this, that this thing has to be done quickly, if you are going to save UHF.

Senator PASTORE. You say that in your statement.

Mr. FINE. I say that in here. I say this, that let this VHF grant come on. In the interim they could operate on a UHF channel until this question is solved. It will not cost them any more.

I am sure they can go to GE or RCA—they have got plenty of old UHF transmitters on hand that they will gladly loan them, or they will gladly give them full credit on it if they ever change to VHF.

Let's not delude ourselves into thinking that UHF will survive if it is killed off in market after market. Here is one thing that is happening here. Since the grant of the VHF channel 7 in Evansville, a distributor of a well-known brand of TV sets in Evansville expressed his pleasure at such a grant. When asked the "why" of his position, he explained that this year only 2 of 21 models that his company is manufacturing are equipped with all-channel tuners; that the remaining 19 models would be capable of receiving only VHF channels.

Previously this company had made all models available with all-channel tuners, as had all other companies. In other words, what I am afraid of now, if a V is granted, is that the person who wants to buy an all-channel set will have little selection of sets. He may not want the set that is made with an all-channel tuner, and he may be forced to buy a set that gets VHF only.

I just want to emphasize this, if I may read this conclusion. It is two paragraphs.

Senator PASTORE. But I can read that conclusion from your written statement.

Mr. FINE. All right, I want to emphasize this fact. What we will do today—not tomorrow or 6 months from now or a year from now—will determine the extent of the TV service the American people will have in the future. This is it. If we do not preserve the UHF portion of the spectrum for TV—and that is by far the largest portion available—we are going to have a very limited service for the rest of TV history in this country. If UHF is not saved, we are going to have a mere handful of VHF stations to cover the country.

I was quite impressed the other day with Senator Magnuson's apparent grave concern with the fate of the local advertisers. Believe me, gentlemen, if we don't preserve UHF, you will never have facilities available to the local advertiser. With limited facilities afforded by VHF, the big national advertiser will take up all the TV time available, and the small local advertiser will be deprived of the use of this great medium.

Years ago no one in the radio industry envisioned the growth of that medium to the extent that we would have local radio stations in towns of 5,00 or less. What if we would have limited the AM radio band from 800 to 1,200 kilocycles. We would not have these radio stations in small towns. Let us not limit TV. Let us leave room for it to grow just like radio. I hope we can keep UHF alive.

Mr. COX. I have just one question, for Mr. Doerfer's benefit. Do I understand you to say that you had introduced sworn testimony, in certain of these proceedings you referred to, to the effect that in the areas around the perimeter of your UHF service area, viewers in those areas have a choice of at least two acceptable signals, and that there are no white areas?

Mr. FINE. We have documented proof in our comments in our proceedings before the Commission.

Mr. COX. That is based on actual surveys conducted in those areas?

Mr. FINE. Actual surveys taken, with photographs of the signal as it comes over the air from two or more service areas.

Senator, I would like to have our comments in the proceedings before the Commission included in the record.

Senator PASTORE. We will not include it in the record. We will put it in the file and refer to it in the record as an exhibit.

Thank you, Mr. Fine.

(The document—Comments of Premier Television, Inc., and Ohio Valley Television Co., FCC Docket Nos. 11181 and 11532—has been retained in the committee's files.)

Senator PASTORE. At this point we will include in the record, without objection, the statement of Mr. Frank S. Ketcham, representing the Broadcasting and Film Commission of the National Council of the Churches of Christ in the United States of America; and the statement of Rev. Everett C. Parker, director of the office of communication of the Congregational Christian Churches.

STATEMENT OF FRANK S. KETCHAM, THE BROADCASTING AND FILM COMMISSION OF THE NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE UNITED STATES OF AMERICA

My name is Frank S. Ketcham. I am general counsel of the Broadcasting and Film Commission of the National Council of the Churches of Christ in the United States of America.

The Broadcasting and Film Commission was organized a few years ago upon the merger of the Protestant Radio Commission and the Protestant Film Commission into one department of the National Council which represents Protestant and Eastern Orthodox Communions having a total membership of almost 36 million individuals in the United States. The function of the Broadcasting and Film Commission is to encourage the utilization of the media of mass communication by their constituency, to win converts, and to create good will among people of different beliefs.

The development of education has always been of deep interest to Protestant churches. They have been the chief exponents of the free public school, tax-supported and open to all persons, regardless of creed. The first free public schools in this country were started by congregational groups in New England prior to 1700.

The use of audiovisual media in the field of education affords a new emancipation to millions of people around the world who have not had the opportunity of learning the printed word and in some instances are unable to learn the printed word. We subscribe to the fact that radio, television and films represent the newest revolution by mankind in the age-old fight against the tyranny of ignorance.

We, as a people, have always known that education is not confined to the field of curriculum. We are great ones for continuing to study long after we have left school and college. Adult education is important in almost every community in the United States. Now, through educational television, we have a new tool of major importance in furthering the adult education movement. Thousands of people who are eager for new knowledge but are unable to attend extension classes can now continue their education in their homes. The prospect is especially significant in view of the situation of our generation. Our formal education tends to make us specialists in very small areas, yet we are faced with the necessity of knowing more about more things than any other generation of mankind. Modern man needs some knowledge of such diversified things as nuclear physics, geopolitics, and the social and cultural practices of remote people.

The modern world is characterized by our ability to communicate with each other almost instantaneously through the mass media. In television where one can both see and hear, we have the most effective media ever perfected for meeting the problem of transmitting and interpreting information and ideas quickly and accurately. Upon our ability to use television successfully for this purpose may depend our survival as a democratic community. A people which can meet with adequacy the recurring crises of our century must be a people which has a mature understanding of its problems.

It is unthinkable that television should be used solely for commercial purposes or should be controlled entirely by persons who, of necessity, must operate a television station for profit. It has been our experience that commercial broadcasters will not—and possibly cannot—concern themselves with the special needs of the American people for education and information. The history of standard radio shows conclusively that education cannot compete with commercial enterprises. Provision must, therefore, be made for the special situation of education. This the Federal Communications Commission has done in its reservation of channels for educational purposes.

The granting of the reservation for educational purposes was opposed before its inception and is still opposed by many interests which are desirous of obtaining the reserved channels for commercial purposes. Television broadcasting in general apparently is encountering difficulties. It is not within our province to suggest remedies. It is within our responsibility, however, to urge that no remedy be adopted that will have a destructive effect upon the development of educational television by the elimination of the reservation of channels for this purpose.

From time to time the growth of educational television has been criticized as being too slow. Traditionally, institutions of education do not prepare themselves for emergencies in advance of their occurence. As with buildings and facilities, so also with staff and faculties, the needs will be met, or steps will be taken to meet them, only after the needs and consequent demands make possible the necessary actions to solve the problems. Perhaps this must be so because of the order of events inherent in methods of administering and financing education in the United States. Unlike large industries or Federal Government operations, it is exceedingly difficult for educational institutions to justify to their constituencies the provision of buildings and facilities, or staffs and faculties, preparatory for use even in the near future.

With these thoughts in mind, imagine with what educators were confronted when, as if overnight, there emerged television, the greatest medium of mass communication man has ever known. Were educators slow in putting it to use?

In 1950 there was only one television station in the country owned and operated by an educational institution. Today there are 20 educational television stations, 18 of them operating on reserved channels. It is expected that at least 30 such stations will be in operation by the latter part of 1956 with 40 million people living within their coverage areas. Documentary evidence shows that more than $50 million have been raised by public and private interests during the past three years to finance studies throughout the country and to build and operate those stations.

During the past 3 years, 23 State legislatures or governors have appointed committees or commissions to study educational television. These States are: Alabama, California, Connecticut, Florida, Louisiana, Maine, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Vermont, Washington, and Wisconsin; 18 of these States have spent close to $4 million to finance studies and/or help defray construction and operating costs of educational stations.

Alabama has spent about $1.5 million to put a State educational television network into operation. Another State network is under construction in Oklahoma, that State already having spent close to $1 million on construction.

Four other States have enacted permissive legislation enabling educational institutions to provide educational television facilities, and nine other States have appropriated funds as follows for constructing or operating educational television stations or program production centers:

Florida	$100,000	Rhode Island	$150,000
Georgia	400,000	South Dakota	17,500
Louisiana	150,000	Tennessee	100,000
New Jersey	75,000	Wisconsin	75,000
North Carolina	215,200		

These are specific illustrations of increasing interest on the part of the general public in the use of the channels reserved for education. They are by no means inclusive of all that is being done in the field.

Educational television may have been slow in starting. It is well on its way today.

For these reasons we urge your committee, as elected Representatives of the people of our Nation, to use its good offices to see to it that the table of assignments, including the reservation of all television channels presently reserved for educational purposes, be maintained intact by the Federal Communications Commission.

We point out to your committee that two-thirds of the channels reserved for educational purposes are in the UHF band. The development of UHF is, thus, of particular concern to the educational stations. And we urge your committee to see to it that all steps necessary are taken to encourage its growth.

STATEMENT OF REV. EVERETT C. PARKER, DIRECTOR, OFFICE OF COMMUNICATION OF THE CONGREGATIONAL CHRISTIAN CHURCHES

My name is Everett C. Parker. I am director of the office of communication of the Congregational Christian Churches.

Congregational Christian Churches have a membership of 1,310,572 Protestants in 5,536 churches, with a ministry of 5,879 pastors. Church-school membership is composed of 743,532 individuals. Congregational Christian Churches have always been interested in education and active on its behalf. They are responsible for the development of the free public-school system in this country with the organization of the first public-supported free school at Dedham, Mass. The first college, Harvard College, organized in this country was created by Congregationalists. Congregationalists also organized Yale, Dartmouth, and numerous other major institutions of learning, and participated in founding Vassar and Wellesley Colleges. The colleges and universities listed below, though not now denominational in character, have been historically associated with Congregational Christian Churches. Those which have taken official action signify-ing recognition as colleges or universities related to the Congregational Christian Churches are indicated with an asterisk (*).

*Amherst College	1821	Atlanta University	1865
*Beloit College	1865	Bowdoin College	1794

The Congregational Christian Churches are members of the National Council of the Churches of Christ in the United States of America and support without reservation the testimony of Frank S. Ketcham, its general counsel, given today before this committee. It is solely because of the great historical background of the Congregational Christian Churches in the field of education in this country that they have felt impelled to express their individual views.

Among the functions of our office of communications is the responsibility for coordinating and administering the work of the Congregational Christian Churches in radio, television, and films. Consequently, we work closely with others interested in the media of mass communication.

Much of my own experience in these media has been in the field of programing. Prior to my present position as director of the office of communication I served during the years 1951 through 1954 as director of the communications research project, which was sponsored and largely supported by the National Council of the Churches of Christ in the U. S. A., under the supervision of the Yale University Divinity School. The primary purpose of this project was to attempt to understand the effects of religious programs broadcast over radio and television. As an incident to my work in this project, and in my present position, it has been necessary for me to be closely in touch with the activities of educational television stations and to view many of their programs. What I have seen has impressed me greatly. Additionally, I have discussed the programing of educational television stations with individuals living within their service areas and have had the opportunity of hearing their impressions firsthand. Educational television has become a reality for several million Americans living within range of the educational television stations. For them it has added another dimension to the educational and cultural resources of their communities. Live broadcasts to the inhabitants of the areas served by the stations render to them easy access to the institutions of higher learning in their communities. Viewers of the educational television programs in the communities of Detroit, Pittsburgh, Boston, St. Louis, San Francisco, and other cities have become almost part-time students of the universities and colleges in those areas.

Films, too, have played a great part in the development of educational television. Grants totaling about $10 million from the Fund for Adult Education to the Educational and Television Center have made it possible for the center to finance the production of educational programs on educational television stations and also to distribute them on films to all of the educational stations in the country. By this method, the best productions are made available to the greatest number of stations. My information is that the center distributes at the present time about 5 hours a week of program material to educational stations and that plans have been made to increase this service within the next 2 years to about 10 hours a week.

While the center has sought to provide programs of value to a relatively large number of persons, both at the adult and child level, the fundamental interest always has been in what happens to those who view the programs. Numbers of viewers are important in the pragmatic sense, but the success of educational television can never be measured in terms of nose counting. It can only be evaluated in terms of educational results, that is, the degree to which the viewer's information, skills, understandings, or behavior, for example, are changed as a result of the experience.

With these thoughts in mind, I shall comment on a few of the programs distributed by the center with which I have some familiarity.

MUSIC AS A LANGUAGE

Featuring Dr. Howard Hanson, director of the University of Rochester's Eastman School of Music and winner of the Pulitzer Prize for his Fourth Symphony, Music as a Language is a series of 13 half-hour programs designed to show how a composer communicates through his music to an audience. Dr. Hanson demonstrates a number of aspects of composition, orchestration, and instrumentation. In great detail he shows how he and other composers use consonant and dissonant rhythms and harmonies, and he gives a prescription for folk songs and seven differently "colored" white key scales. Most of the material used in the series is a result of nearly 30 years of research and performance in the field of music by one of America's outstanding composers.

LOYALTIES

Undoubtedly one of the most thought-provoking television programs of the current season, Loyalties attempts to answer the question: What motivates men to die for their religion, their country, their ideals? Dr. John W. Dodds, director of humanities, Stanford University, discusses with dignity and warmth the distinctly human character of loyalty; the element of choice in loyalty; and the dilemma of conflicting loyalties. He illustrates his points with objects of art—figures by Rodin, a painting by Breugel, and some early American prints. Highlight of the program is Dr. Dodd's reading of excepts from Steven Vincent Benet's poem, Darkness at Noon. He concludes that today we are fashioning a new loyalty—a worldwide loyalty to the humanity of man. He suggests that unless we do so, there will be nobody to be loyal to.

THE PAINTING

Educational television achieves another first in the serious of seven programs entitled "The Painting," originated over KETC in St. Louis. It's the first time, said a St. Louis reviewer, that an artist has produced a painting before the glaring lights and grinding cameras of the television studio and before a multitude of viewers. Working a rigid, inflexible, split-second deadline, Siegfried Reinhardt turns out a painting entitled "The Man of Sorrows" in the seven half-hour programs, a religious work whose central figure is Christ. Reinhardt brings the painting from bare concept to completion without benefit of "gimmicks." The entire work was done before the cameras strictly on an "ad lib" basis. The series is intended to show, step by step, the way a good painting is produced. It is designed to bring viewers closer to all good paintings and artists by providing insight into the problems and hopes, the frustrations and rewards, which the painter must undergo. Reinhardt enjoys the reputation of being one of America's leading young artists. He teaches some classes at Washington University but spends most of is time creating. The Painting was produced by KETC Production Supervisor Vincent Park, assisted by J. Joseph Leonard.

THE ATOM

Featuring atomic physcist Dr. Edward Teller, The Atom seeks to explain clearly to nonscientists what is known about the nature and structure of the atom. Through charts and other devices Dr. Teller, who has been associated with such atomic developments as the Manhattan Project, demonstrates how and why physicists and chemists were forced to abandon their original simple picture of an atom as they discovered and tried to integrate more and more subtle and ambiguous facts. The series of three programs reveals not only how much, but also how little, science knows; the programs dramatically illustrate how many physical theories are reflected in everyday experience. The series was produced by educational television station KQED in San Francisco.

RELIGIONS OF MAN

The first college accredited course given on TV in St. Louis, this series features Dr. Huston Smith, associate professor of philosophy at Washington University. A survey of the great living religions of the world and how they influenced human history, the course covers Hinduism, Buddhism, Confucianism, Taoism, Judaism, Christianity (Protestant and Catholic), and Islam. Lectures trace the start of these religions, their founders, and what each teaches as life's meaning and the way to its fulfillment. Born in China of missionary parents, Dr. Smith has had firsthand acquaintance with the religions of both East and West. He took his graduate study at the University of California and the University of Chicago, receiving a doctor of philsosopy from the latter in 1945. Dr. Smith is the author of The Purposes of Higher Education, published in 1955 by Harper & Bros.

CHILDREN'S CORNER

The Children's Corner is a half-hour program directed specifically to an audience in the 2 to 12 age bracket, but is also amusing and intriguing to sophisticated adult audiences. Its hostess is a young girl in her twenties, vivacious Josie Carey, who invites viewers into a whimsical world of imaginary friends. These characters, with their appealing idiosyncrasies and original charm, range from the engaging Daniel S. Tiger, who lives in a clock, to Grandpere, who lives in the Eiffel Tower and speaks only French. Others of Josie's friends include: the dignified King Friday of Calendarland, who's in charge of all dates; Henrietta the cat, who is governess of 17 mice; and X Scape. Sometimes Josie takes her young audience to see how life goes on in Small World, where Gramaphone, Rhoda, and Phil Dendren and others reveal their engaging and spritelike personalities. Special guests visit "The Corner" from time to time—Tony Greco, a versatile artist who draws stories; Pat Hamilton who can make flowers from paper towels; Stu Reynolds, a juggler; and Vivian Richman who sings folksongs.

The tone of the series, with songs, riddles, patter, and make-believe, is excellent fare for youngsters whose parents are opposed to currently available wild west programs, yet who want to encourage imagination and creative thinking.

PARENTS AND DR. SPOCK

Informality and spontaneity are the key words in describing this informative series which runs the gamut of problems which mother and father face as they rear their children. With Dr. Benjamin Spock, already a household name across the Nation as a result of his widely read book, Baby and Child Care, guiding the discussions, a group of parents talk about problems of a general nature in each program. Instead of bombarding the doctor with questions, the parents themselves discuss their problems and how they have settled them—with Dr. Spock adding helpful hints. Problems considered range from how much attention should be given children to how they should be disciplined and to those inevitable questions about how the facts of life should be answered. The show is produced by Mrs. John W. Ziegler and directed by Carl Freeborn.

* * * * * * *

The programs that I have discussed are only a sample of what goes on in educational television. Prior to its advent, it was inconceivable that programs of such content and value could be available as a portion of the general diet of television viewers. Certainly, they are beyond the scope of commercial broadcasters. Only the unfettered opportunity for those interested in the educational, cultural and social well-being of our people has made possible this great step forward in our efforts to develop as a mature nation.

The experiences of religious organizations in dealing with commercial interests for the broadcasting of religious programs cause me to view with envy the advantages of educators who have educational television broadcasting at their command—but it is appropriate that it be that way.

It is incomprehensible to us that there could be serious consideration given to suggestions that the precious channels reserved for education be turned over to the influence of Madison Avenue. We urge that it is in the public interest and convenience that the public be assured of the opportunity to view educational programs freed of commercial aspects. We are confident that your committee will agree that the reservation of channels for educational purposes must be maintained.

We reaffirm the views of the Broadcasting and Film Commission of the National Council of the Churches of Christ in the United States of America on this matter as presented to you by Mr. Ketcham.

Senator PASTORE. The committee will recess until 10 o'clock tomorrow morning.

(Thereupon, at 4:50 p. m., the committee recessed, to reconvene Wednesday morning, 10 a. m., February 29, 1956.)

TELEVISION INQUIRY

(UHF–VHF Allocations Problem)

WEDNESDAY, FEBRUARY 29, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, in room G–16, United States Capitol, Senator Warren G. Magnuson (chairman) presiding.

Present: Senator Magnuson.

The CHAIRMAN. The committee will come to order.

Mr. Buchan, we will be glad to hear from you.

STATEMENT OF ALEXANDER BUCHAN, VICE PRESIDENT, MID-AMERICA BROADCASTING CORP., LOUISVILLE, KY.

Mr. BUCHAN. Mr. Chairman and members of the committee. My name is Alexander Buchan. I am vice president of Mid-America Broadcasting Corp., which owns radio station WKLO in Louisville, Ky., and which operated UHF station WKLO–TV on channel 21 during part of 1953 and 1954. During that time our company learned one lesson extremely thoroughly. It is impossible, under existing conditions, for a UHF to compete in a market—even a major market—which already contains two or more established VHF stations. We learned this lesson to the tune of half a million dollars, and we learned it the hard way—through the disinterest of national advertisers and networks to cooperate in any way with the much-needed third television outlet in the Nation's 27th market.

And, to be completely fair, I hold no malice against these advertisers and network officials, since their decisions were based on sound economics, and confirmed fully by recent and continuing curtailment of UHF operations in the mixed markets.

No officer in my company feels that there is any advantage to the public in having subsidies or artificial legislative aides offered to support UHF stations. We all feel, as I am sure you gentlemen do, that in the long run a business, whether it be broadcasting or banking, will only succeed when it can pay its own way and stand on its own feet competitively. For these reasons, I have been somewhat alarmed at complicated plans and schemes worked out to force UHF down the throats of people who neither need it nor want it—just as I have been alarmed at the apparent willingness of some members of the Federal Communications Commission to throw successful UHF stations to the wolves.

In other words, under certain conditions UHF cannot exist. But as was brought out by a witness yesterday afternoon, it can do an excellent job and even return an eventual profit where it does not have to compete with VHF. I refer to the testimony of Mr. Jesse Fine of Evansville, Ind., who indicated that acceptance of his UHF station is extremely good because both Evansville television services are now UHF.

My own current concern is with Lousville, Ky., where no amount of dedicated effort was able to make UHF successful and where no other applicant has been foolhardy enough to risk the gamble that we took, and lost.

The CHAIRMAN. Let me ask you this: Were you in there first, or were the VHF's in there first?

Mr. BUCHAN. The VHF's were in first, sir.

The CHAIRMAN. So when you established UHF in Louisville, you had knowledge that there were two VHF's there?

Mr. BUCHAN. That is quite right.

The CHAIRMAN. I suppose you explored the economic situation in relation to that?

Mr. BUCHAN. That is right. On the surface, it was a fair chance. All this means, very simply, that the present table of allocations has reached the limit of its usefulness, and that any further effort to force further compliance with its provisions will result in two things. First, a complete waste of assigned but unusable UHF channels—and I am speaking practically, now—and second, a withering of some successfully operating UHF stations through placing them in the position of having to compete with forthcoming VHF's in their markets.

As I said before, we do not believe in subsidies or special privileges, but neither do we believe in running counter to the dictates of good judgment and business experience.

There is, perhaps, a simple answer which has already been suggested to this committee. If all sets manufactured were all-channel receivers, then there would, for all practical purposes, be no different between UHF and VHF—or at least no differences other than relatively minor ones of engineering.

The CHAIRMAN. Right there, how many UHF sets are there in your area, percentagewise?

Mr. BUCHAN. At the time we ceased operations, the maximum estimate was 80,000. I rather think it was smaller than that.

The CHAIRMAN. As compared to what total?

Mr. BUCHAN. Set circulation in the Louisville area now, I believe, is around 400,000. That may not be a completely accurate figure.

The CHAIRMAN. We just want it generally.

Mr. BUCHAN. I would say it was about 20 percent.

Here again, if you have all-channel receivers, you have a situation where television is television. It isn't U or it isn't V. But in facing the economics of that matter, I don't believe set manufacturers will manufacture all-channel receivers if the handwriting on the wall indicates that this more expensive commodity is scarcely going to be necessary. And the present trend, if allowed to continue, tells the manufacturers just that. This point may be taken a step further, by adding the obvious corollary that even if all-channel sets are in general supply within a few years, it will be too late, because by that time, there will be remarkably little use for an all-channel set. No more use than there is now for about $4 million worth of converters and antennas in the Louisville area alone.

Which brings me to the printed comments which Mid-America has filed in connection with the present nationwide allocation hearing. These comments describe in detail our proposal for solving a serious lack of television service in Louisville in a manner which is consistent with overall nationwide allocation revision. I have attached a copy of these comments [1] to this statement for your reference, so I will not presume on your time to cover the material orally. These were distributed yesterday afternoon. Instead I will confine myself to a few salient points.

There is a shortage of television service in Louisville. Although it is the Nation's 27th market, and growing fast, there are only 2 VHF stations; many smaller cities have more. For this reason, there is scarcely any local programing in the better broadcast hours. One network, ABC, is represented by only 3 out of 21 available programs in the market, and local advertisers find they cannot use the present stations in any except time periods rejected by national advertisers.

The CHAIRMAN. There are only two VHF channels assigned to the Louisville area?

Mr. BUCHAN. That is correct; yes, sir.

The CHAIRMAN. Only the two?

Mr. BACHAN. Two VHF's. There are four UHF channels. We tried one; the other three have never been in operation.

The CHAIRMAN. There has not been assigned any third VHF channel to the area.

Mr. BACHAN. That is what we are asking at the present time.

The CHAIRMAN. In other words, what you are saying, in effect, is that you would switch over yourselves to VHF if you were now in operation—you would just switch over?

Mr. BACHAN. We have maintained our physical property—our land, tower, and equipment. We are ready to go at any time, except for the transmitter.

The CHAIRMAN. I understand you still run a radio station?

Mr. BUCHAN. That is correct. Incidentally, we are not asking only that one VHF be allocated, as I will point out later. We are asking that two additional channels—three, in all, in addition to the two presently operating ones, be assigned to Louisville.

The CHAIRMAN. How long has your request been on file with the Commission on that?

Mr. BUCHAN. Since July 1, 1954.

The CHAIRMAN. Was that prior to the time you went off the air with your U?

Mr. BUCHAN. It was about 2 months subsequent to our going off. You see, presently there are four unused UHF allocations in Louisville.

The CHAIRMAN. Understand, I am speaking only of the V.

Mr. BUCHAN. Yes. The reason that these U's are useless is that we lost $300,000 capital investment, $197,000 in operating expenses, and the public invested and lost about $4 million in converters and UHF antennas.

[1] The comments referred to have been retained in the committee's files.

The CHAIRMAN. I think the testimony here has been pretty much the same, that the economic possibilities, with the present set situation and network situation, for any U to survive in a market in which there are two V's is somewhat difficult. I think everybody agrees to that.

Mr. BUCHAN. I won't belabor that point any further.

The CHAIRMAN. But they get to a difference of opinion as to whether they can do it with one V. But once you get two V's, the experience has been that the U either had a most difficult time to make it or that it must have a network, as in Mr. Storer's Miami and Portland situation, or else it absolutely goes under.

Mr. BUCHAN. That is correct. This isn't only the city of Louisville that has a shortage of television. It is the entire State of Kentucky. I compared it with neighboring States.

The CHAIRMAN. You probably agree with the premise of Mr. Merryman, then, yesterday, that he thought that the goal of the FCC should be, first, to put at least one television station in every community in the United States—that is the second priority, the first one being service for everyone.

Mr. BUCHAN. I agree with Mr. Merryman to a point. As a basis of comparison, very quickly, Illinois has 18 television stations on the air now. There are 12 in Indiana. There are 20 in Ohio.

In the entire State of Kentucky there are only four—four television services operating. One of those is located at Henderson, and it is living with a pistol at its head, because if the grant that is presently proposed for channel 7 in Evansville goes in, Henderson, which is a U, will probably go under.

The CHAIRMAN. Let us get this. You had had some experience. Let us get this straight here. When you applied for a UHF, I don't think any of the UHF operators will deny the fact that they knew they were taking a calculated economic risk.

Mr. BUCHAN. At the beginning, sir, I don't believe that was the case.

The CHAIRMAN. I was going to come to that. But you knew that there would be a possibility of this happening. But since you started, these other things have happened to change the circumstances, which has made the economic situation more deplorable; is that correct?

Mr. BUCHAN. That is true. In fact, there are just literally——

The CHAIRMAN. In other words, if you went in now and applied for a UHF, no one could weep any particular crocodile tears over what might happen, could they?

Mr. BUCHAN. I believe that is the fact.

The CHAIRMAN. Because you have taken cognizance of the situation.

Mr. BUCHAN. The only place in which I would even consider——

The CHAIRMAN. It is a set of circumstances that have developed, as I understand from the testimony here, subsequent to the application for many of these UHF stations.

Mr. BUCHAN. That is true, Senator. The only place I would consider applying for a UHF now would be a place in which there is no VHF allocation whatsoever, and a complete lack of service. The terrible thing about this is we predicate a system of television for the entire country on the basis of VHF and UHF channels, and now there are literally dozens of UHF frequencies or facilities that will never be applied for.

I can think of one in Connecticut—more than one in Connecticut. There is one at Meriden, Conn., for example, halfway between New Haven and Hartford. There is a transmitter site, a tower, and a building sitting on top of a mountain there. Nobody is ever going to apply for it, because they can't make a go of it. It could cover Hartford and New Haven perfectly well.

So your point is exactly right, that no one would weep tears for the man who tried it now.

The CHAIRMAN. I don't mean literally crocodile tears. I mean economic tears. [Laughter.]

Mr. BUCHAN. To move on to what we consider a solution for this shortage of service, we ask that more VHF channels be allocated to Louisville. By that I mean current VHF between 2 and 13, rather than the so-called military VHF.

The CHAIRMAN. Has the Commission ever indicated to you why they have not done this, or why they haven't acted upon this? What is your understanding as to why they haven't made a decision—let's put it that way—on the question of another V for Louisville?

Mr. BUCHAN. Mainly and very simply——

The CHAIRMAN. I don't suppose you would know, actually, but what is the general reason?

Mr. BUCHAN. The general reason is that the Commission apparently is still going down the line with the present table of allocations. I am informed by Mr. Bader (the witness' counsel) that probably the best answer is that we were denied, on November 10 of last year, with a simple statement that consideration of this would be postponed until there was overall rulemaking.

The CHAIRMAN. In other words, would you say it is the general understanding in the industry that the reason that no decisions have been made in some of these cases—or a denial has been made—is that they are waiting for some rulemaking on the whole matter?

Mr. BUCHAN. Yes, sir. I will point out later that this idea which has generally been called deintermixture was accepted some time ago, but it has gone by the boards now.

Let us see how this works out in practice. We are asking, for example, that channels 7, 9, and 13 be assigned to Louisville to replace the current assignment, not being used, of UHF channels 15, 21, 41, and 51. Of these, only channel 21 was ever constructed and put in operation. To effect this change, channel 13, which we would like to see end up in Louisville, would be moved from Bowling Green, Ky. It hasn't even been applied for there, so that doesn't seem like a bad change. We would replace it with two UHF channels that would be available—17 and 54.

We ask that channel 7 be replaced by channel 39 in Evansville. Thereby we would maintain the integrity of the currently successful UHF operation in Evansville. And we would move channel 9 from Hatfield, Ind.—that has a population of 400 people—and we would replace it there with channel 78. So we would then have all these V's in addition to the two current ones in Louisville, and in the other areas we would have U's where they would be useful.

The CHAIRMAN. In other words, switch them around a little.

Mr. BUCHAN. That is right. Obviously, with two U's operating currently in Evansville, the adidtion of a third U up there in Evansville is only going to make everybody compete on the same level, whereas the V's are going to kill the U's.

First of all, this would provide much-needed service for Louisville. Secondly, it would maintain and preserve the current service at Evansville and still let it expand as their economy grew.

The CHAIRMAN. How far away is Evansville from you?

Mr. BUCHAN. It is about 100 miles. We feel that this proposal would also make much more efficient use of channels 7 and 9 than now is proposed. For example, it is hard to see how channel 9, which is a very desirable channel, would be efficiently used in a town of 400 people—not realistically. And channel 7 certainly would be used better in Louisville, where we are prepared to go on immediately, than it would in Evansville where there would be a V and U conflict.

We can do this without destroying any existing stations. Yet, if the channels were allowed to remain where they are now, in Evansville and Hatfield, they might easily destroy 1 or possibly 2 of the existing U's up there in Evansville.

We also feel that this would mean that Louisville could have a workable and usable educational channel, because we are proposing that channel 9 be reserved for educational use. Then educational organizations would really have a valuable channel that people could get on their sets and could see, if they had good programs.

There are some cochannel stations involved, and there would be a very slight amount of interference with the grade B coverage of one other station, if we move channel 7 down to Louisville. But that interference lies right in the city of Cincinnati, and there are plenty of other local services available in that area. In other words, we would have a little interference on channel 7 from a Dayton station, but it wouldn't be within their market area.

Then you might say up to this point it has been sort of a special pleading for one city, or even for one interested licensee. But we believe sincerely that it is on the basis of realistic plans like this that some relief from the growing allocation problems may be found most quickly.

The CHAIRMAN. I would suggest that a similar situation must exist in other places throughout the United States.

Mr. BUCHAN. Proposals of this type have been sought by leaders in the field. For example, the Chairman of the Federal Communications Commission, on last May 24, told the broadcasting industry right here in Washington that one of the most difficult problems is to devise ways and means of enabling UHF stations to operate on a comparable basis with VHF stations, and that rulemaking proposals had been put out looking to the possibility of deintermixture in certain cities.

Up to this time, no one of these proposals has been carried through. Yet this was thought most urgent about a year ago, for the Nation as a whole. You can consider how urgent it is for us broadcasters, because we have studios, we have towers, we have property waiting to be used. And the people in Louisville are very honestly begging for more service. Yet the Commission has granted channel 7 for operation in Evansville, where two existing stations may be put off the air as a result, and no relief has been granted to Louisville.

The CHAIRMAN. Has anyone applied for channel 7 in Evansville.

Mr. BUCHAN. Oh, yes.

The CHAIRMAN. Was it granted?

Mr. BUCHAN. That has been applied for and has been granted.

The CHAIRMAN. They have made a grant?

Mr. BUCHAN. And that is the face of at least a proposal to delay any grant there—delay any construction—until these changes in rule-making could be considered.

We suggest in the interest of providing service, rather than shackling service, that the Federal Communications Commission allow us to operate WKLO–TV on a temporary basis in Louisville on channel 7. We would willingly do this during the interim period in which these changes in allocation are brought about. Or, if that is too simple, then we could say at least that no further final action be taken——

The CHAIRMAN. You do not want to make anything simple. [Laughter.]

Mr. BUCHAN. If we can't do that, then we suggest that no final action be taken which would prevent our proposal from receiving serious consideration. Even this wouldn't have to prevent the present channel 7 grantee in Evansville from going on the air, because he could go on with a UHF, which would put him right in fair competition with the current stations there, and there would be no problem.

I would like very much to express my appreciation for the chance to address your committee, but I also would like to say that I realize it is a lot easier to elaborate on one or two phases of a problem than it is to weigh all the merits of all the arguments and come up with a final answer. But as a working broadcaster, I am hopeful that this committee will call to the attention of the Commission the tragic results that are flowing from the Commission's present allocation policies. I also hope that the committee will see fit to point out the tremendous need for prompt action in this connection.

Otherwise, major markets like Louisville, and hundreds of lesser markets throughout the country which have inadequate television service now, will be faced with continuing and probably increasing scarcity of viewing.

If there has been any good derived from the present allocations policy—and I believe there has, in the sense that some service has been brought to most of the people of the country—then we must not be hypnotized by this partial achievement of the goals. We must, all of us, be watchful for new ways to increase and improve television service, and I submit that our proposal is the only one which realistically attacks the present problem in Louisville.

Thank you.

The CHAIRMAN. I appreciate your statement. The chairman wants to say again, on all of these matters, what I said at the outset last year at the National Association of Radio and Television Broadcasters convention—that it has been hoped that the fact that this committee has had this inquiry going on for some time—long before I was chairman—that that should not be used as a reason by the Commission not going ahead and doing, as I put it, business as usual.

I think the Commission understands that, too, very clearly.

So with reference to matters such as you suggest, if they have some merit and can be worked out, it is hoped that the Commission will act on some of these things, despite the fact that we still may not have come to all our policy conclusions up here.

I always want to get that straight, so that there will be no suggestion that the fact that we are going into this and many other matters—not only allocation matters—could be any reason for delay if the Commission sees fit to act.

Mr. BUCHAN. I realize that.

The CHAIRMAN. Thank you. Counsel has some questions.

Mr. COX. Mr. Buchan, as I understand it, under the present situation, under the sixth report, for Louisville there are two V channels allocated and four U's. Is that what you said?

Mr. BUCHAN. That is correct.

Mr. COX. Then in the light of your experience, and of the experience of UHF operators throughout the country, showing that this is an impossible competitive situation, despite the fact that there are 6 channels allocated, for all practical purposes an artificial ceiling has been placed on television service in Louisville at 2 channels only.

Mr. BUCHAN. That is exactly the condition as it stands today.

Mr. COX. And your view is that the only way in which this can be dealt with is to add channels that will be fully competitive with those that are already on the air, by reallocating additional V channels in Louisville?

Mr. BUCHAN. That is true. There was a reference made by the Chair to Mr. Merryman's testimony yesterday, in which he was talking about reduced cost installations in small towns. There comes a time when you can reduce the cost down to the point where it isn't practical to put any station on—and particularly in a major market such as Louisville. If you are going to be competitive, you have to be willing to invest, and you have to be willing to invest operating capital to make it competitive with the other two stations.

Mr. COX. I think Mr. Merryman was speaking about a little different situation where that would perhaps be the only local service in the area and would be competing on a different basis.

How about this as a hypothetical matter: What is your own opinion as to the chances of one or more UHF stations competing in a sizable market if there is only one V on the air?

Mr. BUCHAN. The immediate situation is this: If there is one V on the air, it can be taken for granted that that will be affiliated with either NBC or CBS. That is automatic. The chances are that that V will also get the cream of ABC programs.

So if there is only one V on the air, and more than one U, the most favorably situated U will probably have the other major network, and in that case may be able to compete. But even above the network affiliation standpoint, there is a tremendous block in trying to sell time, especially to national advertisers, when you mention U's. Mention channel 22 and they will clam up, but if you mention channel 2, they smile.

Mr. COX. Would it have helped you in your particular situation, or would it help in this hypothetical situation of just one V in a market, if the stations in a particular area were limited to a single primary network affiliation?

Mr. BUCHAN. I think I partially answered that in the sense that if there are only two stations in an area, one V and one U, the U will have a network affiliation. It will manage to get one. But it will have more difficulty in getting national spot business, which is a major factor in television.

Mr. Cox. In your situation, as I understand it, where there are two V's on the air, they divided the network affiliations and you had none; is that correct?

Mr. BUCHAN. We not only had no network affiliation—except that we have a radio affiliation with ABC and we hope to have ABC television—we weren't even allowed to carry the programs with no charge.

Mr. Cox. They preferred to put it on the V?

Mr. BUCHAN. They preferred to put it on the V.

Mr. Cox. Even if they could get only one-seventh of their programs on the air?

Mr. BUCHAN. They sometimes preferred not to have the program on the air, because they were hopeful of getting it on the V eventually.

Mr. Cox. I take it, then, that this petition that you filed for the allocation of additional V channels in Louisville shortly after you went off the air was the product, and based upon, your experience in an effort to compete in that kind of a situation?

Mr. BUCHAN. That is correct.

Mr. Cox. As I understand it, the V's that you are talking about—that you are suggesting be allocated to Louisville—are not presently on the air anywhere?

Mr. BUCHAN. That is correct, yes.

Mr. Cox. So there would be no deprivation of an existing V service to anyone in other markets?

Mr. BUCHAN. I checked late last night. There has been no attempt to start construction of channel 7 in Evansville. The V in Bowling Green has not been applied for, nor is there any construction on the V in Hatfield.

Mr. Cox. Would you be in favor of some action such as was recommended by witnesses, I think on Monday, suggesting that this committee, or the Congress, adopt a resolution directing the Commission to reach an appropriate decision on reallocation matters upon certain suggested bases.

Mr. BUCHAN. If I understand that correctly; yes. I believe that promptness is one of the most important factors in this whole situation.

We were listening yesterday to testimony given, outlining the 2 major goals or 2 major directives to the Commission. We have achieved one of those, which is some service to almost everybody in the country.

Now we are at the point where that is going to crystallize and harden in that situation, without spreading out and giving multiple services. So if promptness is not instituted now, the set manufacturers, of their own accord, are not going to manufacture an all-channel set that costs them several more dollars per set to build. There has to be a reason for it.

If we freeze now, with the U's gradually dwindling, there is less and less reason for the set manufacturers to make all-channel sets, and they are going to make what they can sell.

The CHAIRMAN. Do you think it will ever be possible to make an all-channel set just as cheaply as a V, so it will make no difference?

Mr. BUCHAN. I am not an engineer.

The CHAIRMAN. They are down to only $10 or $12 now.

Mr. BUCHAN. I am not an engineer, Senator, but I will say this, that if we had been able—and this is wishful thinking—if we had been able to start television as television, and not as UHF and VHF (in other words, the same as a radio dial), we wouldn't be having any of this problem, because there is not, basically, enough difference, from the viewer's standpoint, between UHF and VHF. The viewer just wants to see a picture.

The CHAIRMAN. With color, he can get it even better.

Mr. BUCHAN. Even better.

The CHAIRMAN. Of course, that is what I said right at the beginning of this thing. I said that the real problem is the set, and the first thing we did was to call in all the set manufacturers and the makers of tuners, hoping we could do something about it, or help do something about it.

Mr. BUCHAN. But I believe Mr. Merryman indicated—or Mr. Fine indicated—there was going to be less production of all-channel sets in the major lines in this coming year than there has been in the past. Two lines out of 21 models are going to be all-channel.

The CHAIRMAN. What would you think of an amendment to the Communications Act giving the Commission authority to deal with receivers as well as transmitters?

Mr. BUCHAN. If that were done, and it were simply stated that all-channel sets must be manufactured——

The CHAIRMAN. It would give them authority to act in the field, and then if they did, they could make a regulation to that effect.

Mr. BUCHAN. If that action were prompt, it would be very useful.

The CHAIRMAN. I don't know whether they would or not, but they claim now that they do not have the authority to enforce such a regulation, if it were made.

Mr. BUCHAN. It might, on the surface, be difficult to enforce it, but on the other hand, most receivers are made by a few leading manufacturers. It is not a business that has a lot of small manufacturers in it, and in a concentrated group like that, it should not be too hard to enforce that.

The CHAIRMAN. It seems to be something that could be solved. For instance, I do not know what color sets will be costing—maybe $300 or $400 now, the cheapest ones. And here we are with this problem, and we are dealing—the manufacturers say—with a difference of between $8 and $12 per set on the production level. It may be cheaper now. That was last summer.

Mr. BUCHAN. There was one topic yesterday, that of possibly limiting color broadcasting to UHF. I would like to say that that seems a very artificial way of attacking the problem. If you have good stations operating now, and you have plenty of them, for goodness sake let's not artificially go to them and say, "You can't do this."

People want color. Let them see color however they can get it. But let us make it possible for them to get more and more of all broadcasting.

The CHAIRMAN. That is leaving the cause down here with the set, and trying to do it in reverse up above, which is probably not the practical way.

Mr. BUCHAN. I agree with you.

The CHAIRMAN. Thank you.

Mr. BUCHAN. Thank you, sir.

The CHAIRMAN. Mr. Tarzian. You are a manufacturer and owner of WTTV, Bloomington. What Bloomington is that?

Mr. TARZIAN. Indiana.

The CHAIRMAN. There are two Bloomingtons, one in Illinois and one in Indiana.

Mr. TARZIAN. Bloomington, Ind., is a better town. [Laughter.]

STATEMENT OF SARKES TARZIAN, STATION WTTV, BLOOMINGTON, IND.

Mr. TARZIAN. My name is Sarkes Tarzian. I am president of Sarkes Tarzian, Inc., Bloomington, Ind., a corporation engaged in the following:

(1) One of the largest manufacturers of TV tuners;

(2) Operator of TV station WTTV, a pioneer in its field;

(3) Manufacture of low-cost TV station equipment.

All of these three activities have a direct bearing on the subject of this committee's investigation. We are probably unique in covering the various facets of the TV field.

From our TV tuner manufacturing experience—which extends over 10 years—we know that the lowest price full-range UHF tuner that can be mass produced, and meet fringe area and FCC requirements, costs the TV set manufacturer about $7.50. This price is higher now than over a year ago because of increased material and labor costs as well as more stringent radiation limits set by the FCC to present interference between UHF sets, as well as interference to other services. A good VHF tuner in combination with a full-range UHF tuner will cost a TV set manufacturer about $17. The lowest price VHF-only tuner that a TV set manufacturer can buy is $7.60.

From this it is evident that a full-range VHF–UHF set carries a maximum additional cost of $9.40. With transportation charges, et cetera, we can say that this added cost of UHF, when compared with the lowest price VHF receiver, is approximately $10.

In 1954 the percentage of UHF tuners sold by us to manufacturers was 31 percent. In 1955, this percentage dropped to 26 percent. I estimate that, due to popularity of low-priced portable TV receivers, this percentage will drop again in 1956.

I also feel that the price differential in cost of $10, between straight VHF and full-range VHF–UHF sets, will not be materially reduced in the next 3 to 5 years.

I have samples here of a low-price VHF tuner—$7.60—and a combination VHF–UHF tuner, price $17.10.

The CHAIRMAN. What is the difference? Which one do you put on the VHF set to make it an all-channel set?

Mr. TARZIAN. This is a straight VHF tuner, the simplest low-priced VHF tuner. It will go in a straight VHF set, 12 channels only.

This one that we have here is a combination VHF–UHF, in which this is the VHF part [demonstrating], and later on you can put the U on if you wish, or you can ship it out, the two together. But this package, as I have said, costs $17.10.

The CHAIRMAN. If I had a V set—take the other one off—if I had a V set, I would have this, wouldn't I [indicating]?

Mr. TARZIAN. Yes, that costs $9.60.

The CHAIRMAN. How much does this cost [indicating the other portion]?

Mr. TARZIAN. This one, then, will cost about $7.50.

The CHAIRMAN. So I can convert my set for $7?

Mr. TARZIAN. Provided you had a V tuner that could accept the U, you see. You have to pay—now this tuner [pointing to the low-price VHF tuner] costs $7.60, but it can't accept UHF at all in the future, except through a converter.

Here is a VHF tuner that can accept UHF, but it sells for $9.60. So there is $2 that goes into making this tuner so that later on it can accept UHF.

The CHAIRMAN. It can't accept U, the $7.60 one?

Mr. TARZIAN. That is right. That is the problem. You just cannot take a U tuner and stick it alongside a V tuner and have the U tuner cost $7.50 and do the job.

When you go to converters, and use the regular V tuner that is in the set, then of course it costs a lot more—maybe $20 or $25 to buy a converter and put it on your regular set so you can get UHF. So this is really the most economical way, and the best way performancewise, to do it.

We all realize that for a TV station to be successful, it must give a service that people want, regardless of whether the type of transmission is VHF or UHF. I believe we have ample proof of this in the successful UHF operations in Fort Wayne, Ind., for example, where this is the only service available.

We also know that in order to have a free and adequate TV service we need a relatively large number of channels available. VHF channels—of which there are only 12—are not sufficient to give satisfactory, competitive TV service. After much investigation and advice from the industry, the FCC adopted the 82-channel system, in order to give a fully nationwide, free and competitive TV service which would last for a long time.

Unfortunately, due to misinformation, or disregard of the advice given to the FCC, the following factors have hindered the rapid growth of UHF broadcasting:

(1) Inadequate power of earlier UHF broadcasting stations.

(2) An eagerness and anticipation on the part of new broadcasters that profits would be available at once. They overlooked the experience of early VHF broadcasters, who lost money for at least 2 to 3 years.

(3) The inadequate performance and higher price—$30 to $50 more to the people—of earlier VHF-UHF receivers.

(4) Inadequate amount and quality of programing material at reasonable cost to meet the needs of a large number of TV stations.

(5) No large number of sets available for reception of UHF broadcasts.

What is the situation today?

(1) We now have higher power UHF transmitters and amplifiers available—although the cost is still high.

(2) Those who now go into UHF broadcasting know more of the facts of life and therefore have a better chance of survival.

(3) We now have UHF tuners and receivers that give as good fringe-area performance as the average VHF set. About 2 years ago their performance was one-third that of VHF sets. The price differential of manufacturers has been lowered.

(4) We now have more programing material available, and TV film producers are learning how to produce and distribute film programs at much lower prices. Also the stock of older films of the major movie producers is being made available for TV use.

(5) We still do not have a large number of sets in use that can receive UHF broadcasts. Of the almost 8 million sets produced annually, only a small percentage can receive UHF signals satisfactorily. This still remains our unsolved problem.

How can we, practically, solve the UHF receiver circulation problem so that more sets will be built with full-range tuners? That is the real crux of our dilemma.

Unfortunately there is no fast solution to this problem. It is going to take at least 4 or 5 years to put into circulation about 30 million sets that can receive UHF signals as well as the present sets now can receive VHF broadcasts. To accomplish this it is going to take action by Congress to equalize the cost to the consumer of a full-range TV set compared to a VHF-only receiver. This can be done, as recommended about 2 years ago, by lowering the excise tax on full-range TV receivers.

If Congress had done this then, there would now be in use over 15 million full-range receivers, and our problem would have been half solved by now. Since no action of a practical and fundamental nature was taken then, we still continue to haggle and hold hearings.

There is no easy and fast solution to UHF, except a long-range one of governmental help through tax assistance. We have spent tens of billions of dollars abroad to buy friends—why don't we spend a few millions at home to assure a free, competitive TV system? This Government subsidy to assure a free, competitive TV system will not benefit any one group at the expense of the United States Treasury. This subsidy will mean more jobs, more TV stations, and more taxable income so that the Government, over a period of years, will collect more than it loses in tax revenue.

I thank you for the opportunity of appearing before your committee.

The CHAIRMAN. We thank you for your testimony.

The last suggestion was one that was made by the manufacturers when they were here, I think, 8 months ago. Of course, we needn't spend any money for this. It just means that the Treasury would get less.

Mr. TARZIAN. That is right.

The CHAIRMAN. But I am inclined to agree with you that the broadening of our free, competitive TV system through other methods of taxation than now exist would result in the creation of more jobs and more business activity within the system and might adequately make up—or more than make up—to the Treasury for the loss of revenue from this excise tax.

Mr. TARZIAN. That is right.

The CHAIRMAN. Counsel has some questions.

Mr. COX. Mr. Tarzian, will this all-channel tuner that you demonstrated here receive all 82 channels?

Mr. TARZIAN. Yes.

Mr. COX. It is a full-channel receiver?

Mr. TARZIAN. That is right—full range.

Mr. Cox. How many manufacturers are using your all-channel tuner, in general terms?

Mr. TARZIAN. I would say that outside of those manufacturers who build their own tuners we supply most of the others—practically all of the others.

Mr. Cox. Are all major manufacturers of television sets manufacturing at least a limited line of all-channel receivers?

Mr. TARZIAN. Absolutely. They all have it in their line. I do not know of any manufacturer who doesn't produce a line of receivers with full-range tuners in them.

Mr. Cox. Is there much use today of strip converters, or is the practice now, if a man lives in an area with U service, to buy an all-channel set?

Mr. TARZIAN. That strip conversion has been a sham and a delusion. It led, I am sure, a lot of the UHF broadcasters who went into broadcasting to believe that as soon as they got on the air it would be very easy to convert these sets by putting strips in them and they would have a viewing audience.

But, unfortunately, to do that, you see, you have to get a serviceman. It would cost, with the serviceman and the cost for 1 or 2 strips—the charge would probably come to between $20 and $25.

If people were already getting adequate VHF service, if they were getting the programs that they wanted, and the UHF station coming on the air didn't have anything particularly new to offer that they would be interested in spending $25 for, they just didn't convert.

I know the figures for last year. One major manufacturer who uses turret tuners where the strips can be changed—their experience was that only 1 percent of their sets in the field are converted over to accept UHF. So it is a very, very small percentage.

Where you have new UHF service, you need good performance, just like we have on VHF. The only way you can get it is, not through strips but through a full-range tuner of the type we make or other people make.

Mr. Cox. Does this full-range tuner—as I understand your testimony—give as good service in the UHF frequencies as it does in the VHF?

Mr. TARZIAN. That is right. This tuner that we have, which we have had now for over a year and a half, gives on the average as good service as the average VHF set. So now a UHF broadcaster is not at a disadvantage from the standpoint of performance of UHF receivers. Before, he was.

Two years ago, the performance of these UHF receivers, full range or otherwise, with or without converters or strips, was only one-third to one-fifth as good. So as a result, coupled with low power of the UHF stations themselves, they just had no service area. That was another major problem.

Mr. Cox. Do you sell many of the more expensive type of VHF-only tuners that you demonstrated there without the front section?

Mr. TARZIAN. Without the U. We don't sell, relatively, large numbers of the V tuner itself that are later on adaptable to UHF. I would say that our business is probably 10 or 15 percent on that type alone.

Mr. Cox. That is, the decision is usually made initially either to make it only V or to make it all channel?

Mr. TARZIAN. That is right. I think that is the general tendency now. I feel that this year, 1956, we are going to sell less of those V tuners that can later on accept UHF; relatively, percentagewise we are going to sell less of those than we did in 1955, because the thing is now settling down, so that a manufacturer will either make straight VHF sets or he is going to make combination sets, because they realize now that in areas where they need UHF, they have got to have performance.

In those areas where they have VHF service, the way UHF has been going, they don't see any need for putting in something which later on can accept UHF.

Mr. COX. As far as your own operations are concerned, what percentage of the tuners you sell are now the all-channel type?

Mr. TARZIAN. I just gave you that.

Mr. COX. Twenty-six percent in 1955—was that your figure?

Mr. TARZIAN. That is right. In 1954 it was 31 percent. I estimate in 1956 it will be nearer 20 percent.

Mr. COX. Does the construction of a color set present any tuning problems, or does this tuner, or its equivalent, work equally well in a color receiver?

Mr. TARZIAN. We still have some engineering problems to work on to adapt UHF to color, but they are not insurmountable. I feel we have the answer.

So there won't be any problems from an engineering standpoint that would hinder color on UHF. But as things get more competitive, as color sets get more competitive, as more manufacturers make color sets and they lower their prices, I think you are going to find that they are going to make straight VHF color sets. In fact, we have a lot of requests now for samples of straight VHF color tuners. So I think you folks should not labor under the delusion that all color sets are going to be full-range sets.

Mr. COX. That is, the desirable situation in that respect, you think, will change under competitive influence?

Mr. TARZIAN. That is right, just as it has had to change with black and white sets, because of competitive conditions.

Some people labor under the delusion that manufacturers are in collusion not to make full-range sets. That is the most ridiculous thing that anyone can suppose. The reason for it is this: A manufacturer is in business to sell what the public wants. He has to compete with the other manufacturers. If the public wants to pay $20 to $25 more and get a full-range set, the manufacturers are very happy to do it—to build them. But if the public isn't interested in paying for it, how can a manufacturer, with the competition that he has, go out on the market and penalize himself. For every set he sells, his set is going to be $25 higher, when markets like New York, Chicago, and the like don't need this UHF full-range.

So there is no collusion or anything of that kind amongst the manufacturers. The same accusation was made of the manufacturers when we had FM. They thought that the manufacturers were trying to hinder FM, and that if they would just build FM sets, FM would go like a house on fire. Well, the economics were against FM. The manufacturers are in business to build what the public wants. We would be very happy to build all full-range tuners, but the manufacturers don't want full-range tuners. They don't want to pay the $10 more that it costs. So as a result we build 26 percent full-range.

They likewise are in the same situation as we are. The public doesn't want it. They don't want to pay the $20 to $25 more that a full-range set would cost by the time they went to the dealer's store to buy it.

Mr. Cox. That additional cost, over the $10 figure you quote, is because of normal wholesale-retail markups?

Mr. TARZIAN. Markups. But the way I feel about it is this: If Congress would make it possible to lift the excise tax from the lower price UHF sets—let's set a limit of about $15 excise tax credit on a full-range set—then I am sure that the manufacturers will go along and absorb this additional $10, and the dealers will go along and absorb it, so that you will be able to have out on the market full-range sets that will be the same price as VHF sets, which of course then would carry the standard excise tax.

Then in that way you will increase your circulation. The answer to this whole problem is a matter of circulation of UHF. Technically, and from every other standpoint, UHF is a satisfactory service, if we only had the sets out in the field.

We can look at it in this way: Suppose in the early days of television, instead of having VHF, we only had 12 channels of UHF, and all the sets that were out on the market were just UHF. Later on the Commission opened up VHF channels, 70 of them. Those VHF channels would have the same problem that the UHF's are having now. It isn't something that is inherent in VHF or UHF, as such. It is just a matter of working out a means whereby we can get these sets into circulation, so that when a broadcaster goes on the air with his U station, the receivers are there. He knows he has the audience, if he has the programs. Then the advertiser or the network knows that that station can do just as good a job as anyone else, because the circulation is there.

I know the suggestion has come up that in areas where there are already two U's in operation, that is a bad thing for a V to come on the air, that it is going to hurt the U's. But it my feeling is this, that if those two U's have been progressive and aggressive at the same time, and the people have good UHF service which they have had now for 2 or 3 years, that the V is going to have a tough time getting people to watch it, just like in those areas where you have 2 V's, the U has a tough time getting the U station to be watched by the V listeners.

From a technical standpoint, the services are comparable. And if the circulation is there—and it is already there where you have had two U's there in operation over a period of years—then that V is going to have hot competition.

The CHAIRMAN. Of course, in that case where you have, say, 2 or 3 V's or U's, I think the economic experience has been that if a U has a network, it gets along all right.

Mr. TARZIAN. If it has the programing, whether it is network or its own independent—whatever it has in the way of programing, the people want to watch, and it has been there on the air for a number of years——

The CHAIRMAN. You have got to have the type of program that will make the people want to go out and spend that extra money to convert or buy an all-channel set.

Mr. TARZIAN. They have already spent it in the U area. I am talking about where you have two U's on the air. I know the Commission has been criticized for putting another V in an area where there are already two U's. But what I am saying is this, since those U's have been on the air for a number of years now, and all the sets in that area can get now—they have the circulation, they have the full range receivers —a V going in there is going to have a tough time. It isn't going to put the U's out of business.

Mr. Cox. It doesn't have the set-conversion problem because, of course, the all-channel set can receive the signal.

Mr. TARZIAN. That is right.

Mr. Cox. Hasn't there been some evidence, in some of these areas where there are one or more U's on the air and a V is allocated and on the verge of coming in, that the U operators are given advance notice that their network affiliations will or may be terminated?

Mr. TARZIAN. Here is what I would say: If those U's have high towers and have full power, they can do just as good a job as that V is going to do. I think you will find that in those cases that you are talking about where they have got notice of termination, the U has not had a good facility.

Mr. Cox. How many U stations, if you know, are operating at full power in the country?

Mr. TARZIAN. I don't know exactly how many there are, but there are quite a number of them. But there are a lot more who are not operating at the maximum. You will find that most of the V's have gone to the full power and full tower height that is allowed by the FCC rules and regulations.

Mr. Cox. Transmitters for full power V operation were available much earlier, and at much lower cost, than for a U; isn't that right?

Mr. TARZIAN. I think that is true, but the U costs will come down. For instance, a 100-kilowatt UHF transmitter sold by RCA was priced, 3 or 4 years ago, for about $85,000. You can buy that same transmitter now, a new one, for $25,000.

Mr. Cox. What is the price for a 1,000-kilowatt UHF transmitter, which is full power?

Mr. TARZANIAN. Since it is new, it is going to be high. But in time it will come down, too.

Mr. Cox. Will it come down fast enough for this fellow to be able to go to full power, to compete with the V that comes into the market, before he loses his shirt?

Mr. TARZIAN. It all depends on how many of them want to go into it, and do it, you see. If you only build one, the price is very high. If you can build 25 or 30 of them, the price will go down.

Mr. Cox. The maximum market would be about 99; wouldn't it, because that is the total number of U stations on the air?

Mr. TARZIAN. That is a big market for that type of a product, and prices will drop. The other thing is this: These UHF broadcasters would do this—they'd take heart and do it—if they knew that in some way or other, either through this tax proposal or some other proposal, there would be the set circulation for them.

Mr. Cox. Why is it that in a place like Pittsburgh, Pa., with one V and one U on the air, the V has all of the networks and the U is having a terrific time making a go of it?

Mr. TARZIAN. Does the U station in Pittsburgh, Pa., have a high tower and full power so that it does as good a job as the V? It could do that if it wants to do it. When it does that, and when it has the circulation, it can compete on an equal footing.

Mr. COX. Doesn't it have terrain difficulties in Pittsburgh which perhaps it cannot overcome?

Mr. TARZIAN. I don't agree with you on that. With a high tower and full power, you can overcome all those terrain difficulties.

Mr. COX. Mr. Storer seemed to think they would still have trouble in Portland, even with a 1,000-kilowatt transmitter and the highest tower in the area. He still got serious shadow in the hilly terrain there.

Mr. TARZIAN. We have, of course, for instance, around Evansville, Ind.—it isn't the flattest country in the world—but I have gone down there and looked over that terrain, and they get satisfactory reception in that area without too much trouble.

The answer to all this is, I think, you can go to 2,000 feet on UHF and you can go to a million watts. Any station that does that will have just as good service as any of the V's that we are talking about, competitively.

Mr. COX. If the U can give as good service, including the area of coverage, as the V that is coming into the market, is there any affirmative reason for putting the V in there? Why not just put another U in and use the service that is there now?

Mr. TARZIAN. I am not arguing, you see, that they should do this thing. All I am saying is that from a technical standpoint, if you have the circulation, the U's are not at a disadvantage if they have been aggressive and they have been on their toes, and haven't just sat back and waited.

For instance, we are a VHF operator. We started out with a 200-foot tower and a 1-kilowatt transmitter, because we just couldn't buy a bigger transmitter when we went on the air in 1947—when we first started. Our next step was to go to a 600-foot tower and a 5-kilowatt transmitter when we could buy it. Later on we went to a 1,000-foot tower and effective radiated power of 100 kilowatts.

All that costs money. But if you want to stay in business and be competitive, you have to do it. The same thing is true of the U's. If they want to stay in business and compete, they have to do these things.

Mr. COX. There seems to be some sentiment on the Commission that they have to put a V in these places because it will give greater service than even a full power U.

Mr. TARZIAN. I don't think they are correct on that premise. If that is their reason for doing it, they are not correct in their premise, because I think a 1,000- or a 1,500- or a 2,000-foot facility in Evansville, Ind., with a million watts will do as good a job as any V that they can put down.

Mr. COX. Isn't it true as long as the impression prevails, particularly among advertisers, that the V gives greater coverage, that if it appears in the market, it is going to have an advantage over its competitors in selling national advertising?

Mr. TARZIAN. All right, but impressions can be changed. I think a lot of these impressions are created by the UHF people themselves.

They say they have got terrible service. If you were buying advertising, and you heard their stories, what would you say?

Mr. Cox. My understanding is they say they have got a good service, but that they don't think it goes as far out, perhaps, as you seem to think it does.

Mr. TARZIAN. It does if they spend the money and put up the facilities. It will do that. And it is the object of the Commission, in their engineering standards, to set it up that way.

For instance, you take the low channels on VHF—channels 2 to 6. They have set that up as a maximum of 100,000 watts effective radiated power. Then you go to channels 7 to 13, they have set it up as 316,000 watts to equalize it. On UHF they have set it up at 2,000 feet and somebody was telling me about 2 million watts effective radiated power.

They have done that, from an engineering standpoint, to equalize those services. So you can do it. It is feasible from a technical angle to do it, and if you want to stay in the UHF business, you have to do it.

Mr. Cox. You didn't mention any figure—you said it would be high because there were so few of them. Do you have any idea what the cost of a 1,000-kilowatt transmitter for UHF is?

Mr. TARZIAN. I don't, no. I haven't checked up on it, because I personally haven't been interested, at the moment, in going into high-power UHF broadcasting, even though we are interested and have applied for a UHF station at Roanoke, Ind. We believe in UHF. UHF has a future. It is maybe not as good as people thought, in the early days, it would be, nor is it as bad as people now make it out to be. It is a good service, if it is properly handled, and you have the circulation. That is the problem, to get that circulation.

The CHAIRMAN. Thank you, Mr. Tarzian. I appreciate your coming.

We will take a 5-minute recess.

(A short recess was taken.)

The CHAIRMAN. The committee will come to order.

Mr. Steetle, we will be glad to hear from you.

STATEMENT OF RALPH STEETLE, EXECUTIVE DIRECTOR, JOINT COUNCIL ON EDUCATIONAL TELEVISION

Mr. STEETLE. Thank you, sir.

My name is Ralph Steetle, and I am the executive director of the Joint Council on Educational Television. The joint council is a representative body, the 11 constituent organizations of which represent every important segment of American education, at all levels, public and private. The headquarters of the joint council is here in Washington. The predecessor of the joint council is the Joint Committee on Educational Television; the change in name to the Joint Council on Educational Television occurred in December 1955.

I am grateful for this opportunity to report to your committee concerning the development of educational television stations throughout the United States, with particular reference to the manner in which these developments relate to the functions of this committee.

The joint council originally consisted of 7 organizations, all of which had participated in the hearings before the FCC in 1949 and

1950 on which the sixth report and order were based. During 1955 3 additional organizations joined the joint council and this month the 11th organization became a member so that at the present time there are 11 members, as follows:

American Association of School Administrators (joined March, 1955).

American Council on Education.

Association for Education by Radio-Television.

Association of Land-Grant Colleges and State Universities.

Educational Television and Radio Center (joined December 1955).

National Association of Educational Broadcasters.

National Association of State Universities.

National Citizens Committee for Educational Television (joined February 1956).

National Congress of Parents and Teachers (joined July 1955).

National Council of Chief State School Officers.

National Education Association of the United States.

During the hearings on which the sixth report and order were based, the joint council, representing education's interest in television, requested the reservation of channels, both VHF and UHF, for noncommercial educational use. The FCC found that such reservations would be in the public interest, and they were accomplished by earmarking for educational stations 80 VHF and 162 UHF channels—subsequently increased to 86 VHF and 172 UHF channels—located in the principal metropolitan areas and educational centers of the continental United States and its Territorial possessions.

For this reason, educational television has a vitally important stake in both VHF and UHF service. Because VHF television was already a going concern at the time of the sixth report in April 1952, the VHF educational reservations were more immediately valuable than those in the UHF band. The VHF reservations included such major cities as Chicago, St. Louis, Boston, San Francisco, Pittsburgh, Milwaukee, Houston, New Orleans, Minneapolis, and Seattle—and I could name more except I would sound like a train announcer—to mention only those among the first 20 markets in the country. Noncommercial educational stations are now broadcasting on the reserved channels in all of those cities except Milwaukee, New Orleans, and Minneapolis.

In Milwaukee, on February 9, 1956, one of the two applicants for reserved VHF channel 10 has withdrawn its application and it appears that the FCC will shortly grant a construction permit to the remaining applicant, the Board of Vocational and Adult Education. At New Orleans, on February 17, 1956, the Commission granted a construction permit to the Greater New Orleans Educational Television Foundation for an educational station on reserved VHF channel 8. And in Minneapolis-St. Paul, the Twin City Area Educational Television Corp. filed its application for reserved VHF channel 2 on February 9, 1956. Funds are on hand for these three stations and, accordingly, it may be expected that by the end of this year educational stations will be on the air in all of the cities in the first 20 markets in the country where VHF channels have been reserved for educational purposes.

It is the stations on these VHF channels in the largest cities, with their financial resources, that have enabled us to turn educational television from dream to reality, and to begin acquiring the practical experience which is the basis of any highly developed art. In the major metropolitan areas below the first 20, the local situations vary, but good progress toward full use of the reserved channels is being made. In summary, the VHF educational reservations have been, and continue to be, of major significance in the development of educational television in its early stages.

In view of the fact that precisely two-thirds of the educational reservations are in the UHF band, the development of UHF television is of vital importance to the long-range development of educational television.

The CHAIRMAN. By that, you mean you have about absorbed, as I understand it now, the available VHF channels?

Mr. STEETLE. This is where the quick operations have taken place.

The CHAIRMAN. And if we are to look toward the expansion of educational television into communities other than these large centers you mentioned, we will probably have to look toward the UHF band?

Mr. STEETLE. That is true, or else find VHF's for those educational areas, sir.

The CHAIRMAN. That poses a very difficult problem, I think. In other words, if we could work out the availability of educational programing and educational channels in the UHF band, we would have an easier long pull on this thing; wouldn't we?

Mr. STEETLE. And yet this is alined, also, to the successful commercial use of UHF, because we need assistance in encouraging the purchase of sets. In many of the larger cities, especially in the east, all available VHF channels were already occupied by commercial stations before the "freeze" of 1948, and the hearings which led to the sixth report. In these metropolitan areas, no new VHF channels were available for educational use, and, accordingly, the Commission reserved a newly assigned UHF channel.

In 7 of the first 10, and 10 of the first 20 metropolitan areas—including New York City, Philadelphia, Los Angeles, Detroit, Baltimore, Cleveland, and Washington—the present prospects of full-scale educational television are dependent upon the future of UHF service, because it is a UHF channel that is reserved for educational use.

A good example of this, Mr. Chairman: There has been a half a million dollars set aside in Cleveland for the development of an educational television station. Yet the educators there are not proceeding to build this station until they find out whether or not someone else in Cleveland will come along and utilize UHF, so there can be a widespread service to the total population.

The CHAIRMAN. In other words, sound economical UHF stations in these areas would be a great help to a UHF educational station?

Mr. STEETLE. That is true, sir. If UHF languishes and eventually dies, there will be either no educational television service in these cities—which is unthinkable—or VHF facilities will have to be made available for exclusive educational use. It is, therefore, clear that educational television has a vital stake in both VHF and UHF, and with no reason to favor one at the expense of the other, because both are essential.

I should like to emphasize that, although one of the joint council's main tasks has been to request and support educational reservations, education's stake in the television system as a whole extends far beyond the reserved channels. The reservations must be an integral part of a sound television structure, or their worth, as we have already discussed, will be seriously diminished. Educators have never taken the view that the noncommercial stations can or should be the sole medium of education in television. If you can provide educational values by television, it is just as important to provide them through networks or commercial stations as it is through the noncommercial station.

On the contrary, the education and cultural implications and potentialities of the commercial television service are enormous. A multiple, varied television service on a nationwide basis is as important to educators as to any other part of the citizenry. Local television outlets for community use and as a medium of local self-expression are likewise vital to education, and this is especially true in smaller communities that are unable to support more than one television station. Without a healthy UHF service, it is difficult to see how these basic national necessities in the field of telecommunications can possibly be achieved.

The extent to which educators have already made use of the reserved channels is commonly and grossly understated, whether by accident or design. There is attached hereto as exhibit A a list of the 20 educational television stations now on the air.

(The list referred to is as follows:)

EXHIBIT A. EDUCATIONAL TELEVISION ON THE AIR, FEBRUARY 29, 1956

Twenty communities now have noncommercial educational television stations. All 20 stations listed below operate on reserve channels except WKAR–TV at East Lansing, Mich., and KUON–TV at Lincoln, Nebr., which operate on a noncommercial educational basis on channels which are not reserved. These stations and the institutions operating them are:

Date programing commenced	Location	Call letters	Operating institution	Channel No.
Apr. 28, 1955	Birmingham, Ala	WBIQ	Alabama Educational TV Commission.	VHF 10.[1]
May 2, 1955	Boston, Mass	WGBH–TV	WGBH–TV Educational Foundation.	VHF 2.[1]
Aug. 1, 1955	Champaign-Urbana, Ill.	WILL–TV	University of Illinois	VHF 12.[1]
Jan. 8, 1955	Chapel Hill, N. C	WUNC–TV	Consolidated University of North Carolina.	VHF 4.[1]
Sept. 19, 1955	Chicago, Ill	WTTW	Chicago Educational TV Association.	VHF 11.[1]
July 26, 1954	Cincinnati, Ohio	WCET	Greater Cincinnati TV Educational Foundation.	UHF 48.[1]
Sept. 19, 1955[2]	Columbus, Ohio	WOSU–TV	Ohio State University	UHF 34.[1]
Jan. 30, 1956	Denver, Colo	KRMA–TV	Denver Public Schools	VHF 6.[1]
Oct. 3, 1955	Detroit, Mich	WTVS	Detroit Educational TV Foundation.	UHF 56.[1]
Jan. 5, 1954	East Lansing, Mich	WKAR–TV	Michigan State University	UHF 60.
May 25, 1953	Houston, Tex	KUHT	University of Houston and Houston Independent School District.	VHF 8.[1]
Nov. 1, 1954	Lincoln, Nebr	KUON–TV	University of Nebraska	VHF 12.
May 3, 1954	Madison, Wis	WHA–TV	Wisconsin State Radio Council	UHF 21
Aug. 12, 1955	Miami, Fla	WTHS–TV	Lindsey-Hopkins Vocational School of the Dade County Board of Public Instruction.	VHF 2.[1]
Jan. 7, 1955	Munford, Ala	WTIQ	Alabama Educational TV Commission.	VHF 7.[1]
Feb. 13, 1956[2]	Oklahoma City, Okla	KETA	Oklahoma Educational TV Authority.	VHF 13.[1]
Apr. 1, 1955	Pittsburgh, Pa	WQED	Metropolitan Pittsburgh Educational TV Station.	Do.[1]
Sept. 20, 1954	St. Louis, Mo	KETC	St. Louis Educational TV Commission.	VHF 9.[1]

[1] Reserved channels.
[2] Testing.

The nature of the allocation plan and the diverse characteristics of the reserved channels lend themselves to misinterpretation of statistics and percentages. The result has been a prevalent misconception that educators have been slow if not backward in exploiting the opportunity given them by the FCC reservation of numerous channels. It is, indeed, the fact that they are so numerous that gives rise to the misconception.

Within the entire allocation plan there are now 258 reserved channels. Since only 18 educational stations are actually in operation on the reserved channels, and 2 more are operating on nonreserved channels, it is easy for critics of educational television to resort to percentages and exploit the mathematical fact that less than 10 percent of all reserved channels have been taken up in the period of more than 3 years since the reservations were made.

But the answer is, of course, that the reserved channels are not all alike. To begin with, 172 of them are in the UHF band, and educational use of these has encountered obstacles similar to the commercial UHF stations. It is no accident that, in the largest 20 markets, 7 of the 10 VHF reservations are already in use and the other 3 soon will be, while of the 172 UHF reservations, only 4—Cincinnati, Columbus, Madison, and Detroit—are presently in use. True, noncommercial UHF stations, unlike the commercial stations, do not suffer from lack of advertising income which they do not and cannot receive or depend upon. But the educational UHF stations do suffer, just as do the commercial stations, from lack of receivers and audience; for this discourages both the educational broadcaster and his potential subsidizers.

Despite all this, determined and courageous efforts are being made to use several of the UHF reserved channels even under present adverse circumstances, and it is safe to assume that if the Commission now takes action to preserve and stimulate UHF service, the reserved UHF channels will come into rapidly increasing use. In any event, so far as the immediate crisis in television is concerned, it is apparent that the reserved UHF channels are victims rather than cause; and no one has suggested that these reserved UHF channels could be used more advantageously for commercial purposes.

The Commission, in its sixth report and order of 1952, reserved television channels for educational purposes because it was convinced, on the basis of the record made in the hearings, that there was a need for noncommercial educational television stations based upon the important contributions which such stations could make in educating the people both in school—at all levels—and also the adult public. The need for such stations was justified upon the high-quality type of programing which would be available over such stations—programing of an entirely different character from that available on most commercial stations.

It is my opinion, from having personally visited most of the educational stations and having viewed a number of their representative programs, that the programing service now being offered by the educational television stations in operation justifies the conclusions reached by the Commission in 1952 in reserving channels for educational stations. Educational television programing is, in my opinion, already distinctive, generally competent, and sometimes distinguished. The educational resources of the various areas throughout the country are being mobilized through the live programing offerings of the various educational television stations.

Furthermore, through the facilities of the Educational Television and Radio Center at Ann Arbor, Mich., the best programs developed by any of the educational television stations are being made available to all stations. There appears at pages 26 through 68 of exhibit B[2] attached hereto a series of sketches of the principal programing undertakings of each of the educational stations on the air in November 1955. Insofar as written words alone can convey an impression of what is designed for the eye as well as the ear, we think these schedules show that a new and significant and useful dimension has been added to television.

A word about educational television's network. The educational Television and Radio Center was established in December of 1952, and received a grant of $3 million at that time from the fund for adult education to begin its operations. The center not only made available for national distribution the better local programs developed over the educational television stations, but also encouraged and brought to fruition program ideas of educational merit from all available sources. The center began furnishing program service to the Nation's educational stations on an informal basis on January 1, 1954, and inaugurated a formal program service of 5 hours a week in May of 1954. On December 19, 1955, the Ford Foundation announced another grant in the amount of $6,265,000 to the Educational Television and Radio Center for the further development of its programing service to noncommercial educational television stations. At the present time the center is making available to educational television stations 5 hours of programing each week in the fields of history, public affairs, literature, music, the arts, science, and children's programs. The center expects shortly to increase its distribution of programs to approximately 10 hours per week. For example, Mr. Teller, of hydrogen energy fame, describes atomic energy. Howard Hanson, of the Eastman School of Music, discusses music appreciation. Robert Penn Warren discusses literature. They are of this nature. I have seen a number of these programs, and it is my opinion that they are not only well done and interesting, but also educationally significant.

The purpose of the FCC in reserving channels for educational stations was to take these channels from the commercial market place and make possible the development of a truly educational television service. The reservation plan has actually resulted in a real start in the development of such a service, which now consists of 20 educational television stations. Abolition of the VHF reservations would destroy educational television's immediate prospects for growth which lie chiefly—because of the problems that we have been discussing here in the UHF—in the VHF band. Abandonment or deterioration of UHF would destroy educational television's long-range prospects of full development which, like those of the television industry as a whole, must depend upon vigorous exploitation of the UHF frequencies. Once UHF development is assured the UHF reservations, which comprise two-thirds of all of the reservations, will again be of practical importance.

[2] A copy of exhibit B, Comments of Joint Committee on Educational Television in FCC Docket No. 11532, dated December 15, 1955, has been retained in the committee's files.

The CHAIRMAN. Thank you, Mr. Steetle. Do you have some questions?

Mr. COX. Yes. Mr. Steetle, just for the record, could you give us a brief explanation for the delays that have taken place in exercising the rights to reserved channels because of some of the special problems of educators in getting underway on a project that involves an expenditure of money?

Mr. STEETLE. Unlike the commercial entrepreneur who can step around to the bank and establish credit and immediately proceed to establish a station, educational policy develops somewhat more slowly. You have to inform the entire community. You have to gain support for the use of this medium. You have to experiment to see whether or not this is important to education. So you have an awful lot of work to do before you decide this is something that you really want to do.

Then, having made that decision, you have to explore the sources of financing it: How much will come from public gifts, what foundations can you tap, how much will come from the university, what will the school systems chip in, what is the role of the library and the museum? To me, it is somewhat astounding that this process has taken place in so many communities in this short a time.

Mr. COX. Wasn't it actually the purpose of this system of reservations to allow time for that process to work itself out?

Mr. STEETLE. That is precisely the basis upon which the reservations were made, recognizing that educational——

The CHAIRMAN. The Commission, I think, had quite an understanding of the problems of financing educational TV in allowing longer construction time after they had given a permit; did they not?

Mr. STEETLE. I think the Commission has been most sympathetic, Mr. Chairman.

The CHAIRMAN. In many cases, take where a State university is involved, a land-grant school, sometimes the legislature don't meet except every 2 years. You might get the grant and have to wait possibly 2 years before the legislature would make an appropriation, or would work out some problem for the State university to enable it to have educational TV.

Mr. STEETLE. Yet in the long run this is going to have real meaning to the legislatures. The manager of your Seattle station was in a meeting with me in Iowa yesterday, and we got to discussing before this group of educators, talking about educational television, what meaning it had to the University of Washington, for example.

They have a problem there that many major universities have with the need for science training and youngsters coming out of high school without the basic algebra and the mathematical requirements. You either take your entire mathematics department and break them up into sections, all of these incoming students—so-called bonehead math—and then how do you teach your higher levels of mathematics.

The educational station in Seattle is putting the bonehead mathematics on television and, in cooperation with the correspondence division of the University, they are upgrading these incoming youngsters so that they are able to take scientific training, which is one of our major needs.

The CHAIRMAN. And they are creating an interest among younger people to go into this field.

Mr. STEETLE. That is indeed right.

The CHAIRMAN. That is the most important thing they are doing, creating an interest. I think more of these stations, if you can be helpful, ought to do that—put more emphasis on that—because if there is a crying need in this country, it is for people to go into that field.

Mr. STEETLE. Not only that, but I think, Mr. Chairman, if we are going to remain a strong and free country, it is important that all of us have an education—adults as well as the youngsters.

In Pittsburgh, for example, I think they found that the average attainment educationally was about the eighth grade among the adult population. How does an adult who wants a high-school diploma go about doing it? There are night schools, but there is baby-sitting, there is parking. So they put a high-school course specifically for adults on the educational television station, and they are finding that this is so important that the men in industry who are on swing shifts and can't take these, are demanding that they be placed again at another hour.

This always interest me, that in addition to the adults that were free, some of those in the penitentiary also tuned in on these high-school diploma courses; and amazingly enough—or maybe it isn't amazing, because of their greater powers and freedom for concentration—a higher percentage of the convicts finished their courses.

The CHAIRMAN. They had more time. [Laughter.]

Mr. STEETLE. They had more time, I think, and less distraction.

Mr. Cox. What has been the general public response, in and out of penitentiaries, to your educational programing? Have you had evidence of a considerable public interest all across the country where these stations are on the air?

Mr. STEETLE. I think we do indeed. At St. Louis, Prof. Houston Smith of Washington University gave his regeular course in the comparative religions of mankind, but dressed up attractively for television. He had a classroom of 100,000 people in St. Louis who were quite excited about this. Professor Smith says, "I walk down the street, and as I pass the haberdashery the man comes out and says 'Your tie looked a little rough on that television program. Come in and get a new one.'" He said "My secretary went down to reserve a normal academic upper berth for me on a trip, and the girl at the railroad station said 'I can tell on television his legs are too long for that. Get him a roomette.'"

In San Francisco, where they made an audience survey, about 50 percent of the people interviewed were able to identify specific programs on the educational station there. This I think, for a station that has not been on the air for a long time, this is very encouraging, very stimulating.

One more thing here. They did a teen-age program called The Finder on the St. Louis station. An attractive young man in a sports car takes the children, by television, to see how aviation works, to see what the various things of importance are around the St. Louis area. They got to wondering: Do the teen-agers for which this is intended really look at this program? So the next week's program was to be a visit, by television, to a cave about 70 miles outside of St. Louis. So they casually said at the end of the program "Any of you that would like to do this in person are welcome to attend."

They made provisions for the accommodation of 100 or so teen-agers. They had 4,000 of them who showed up ready to go through this cave. They say at St. Louis that while they are quite impressed with what educational television has done, they think that the single most significant accomplishment of the station was that of the 4,000 children that went in, 4,000 came out.

Mr. Cox. Is it true that in a number of instances programs developed on educational stations have been put on the networks?

Mr. STEETLE. Yes, this is true, and it is one of the things we said when we were testifying for these channels. We said this would be stimulating and useful to the industry; that there could be some pace-making programs.

One of the children's programs developed at the educational station in Pittsburgh is carried now on Saturdays at NBC, the Children's Corner, a very effective, no-murder, no-violence, "let's speak French and learn manners" type of program. I think there will be more and more of that kind of thing take place, where the educational station develops a program and then sometimes it is given wider circulation, wider use. I think we welcome that kind of switching of our programs and our ideas.

Mr. Cox. Could you tell us, just approximately, how many of the unused VHF educational reservations are in cities of substantial size, where there seems to be any demand for their release for commercial use?

Mr. STEETLE. I think if you took the first 100 markets and you examined what were the possibilities of finding additional VHF channels for commercial use by taking those unused reservations, I think that the most you could gain would be 6 or 7 out of the first 100 markets. So our belief is that while there is a problem in getting sufficient outlets in our major cities, this would be no answer to it, and you would destroy something which is of immeasurable value and significance to this country.

The CHAIRMAN. Thank you. I have no further questions.

Mr. STEETLE. Thank you. I enjoyed it very much.

The CHAIRMAN. Is John Gunther here? Mr. Reed? Mr. Gunther and Mr. Reed can submit statements for the record.

That winds up our witnesses for today. We meet again at 10 o'clock Friday morning. The committee will recess until 10 o'clock on that day.

(Whereupon, at 11:55 a. m., the committee adjourned, to reconvene at 10 a. m., Friday, March 2, 1956.)

TELEVISION INQUIRY

(UHF–VHF Allocations Problem)

FRIDAY, MARCH 2, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., in room G–16, United States Capitol, Senator John O. Pastore presiding.

Present: Senators Pastore (presiding) and Bible.

Senator PASTORE. The hearing will please come to order.

Our first witness is Mr. Reed.

STATEMENT OF RANDOLPH REED, KBMT, BEAUMONT, TEX.

Mr. REED. My name is Randolph C. Reed. I am president of Television Broadcasters, Inc., Beaumont, Tex., operating UHF channel 31.

Our station went on the air in April 1954, serving the 90th market in this country, comprising primarily the tricities of Beaumont, Port Arthur, and Orange, with an estimated population of 260,000 people, occupying approximately 100,000 wired homes.

At the time we began broadcasting, our market was served by unsatisfactory programs from channel 2 in Houston and channel 11 in Galveston. The cost of an antenna installation to make reception possible from those 2 distant stations was approximately $150.

At the time we began broadcasting we had an affiliation with NBC, CBS, and ABC, but due to the fact that we had no live interconnection, therefore, all programs must be filmed, we receive very few contracts from these three channels.

My reason for not spending the necessary money for microwave connections was the uncertainty of what additional stations would enter our market.

At the time we went on the air there were no other stations in the area; however, channel 4 and channel 6 had been assigned to the Beaumont-Port Arthur territory. A few months later channel 6 was granted to the Beaumont Broadcasting Co., and in April 1955 they went on the air.

With microwave connections they are now showing in excess of 70 CBS and ABC shows each week, and it is my opinion that they must have approximately 80 percent of the listening audience. In the meantime, our revenue has declined each month, until today we have one local advertiser and a few national advertisers for a total gross income of approximately $1,600 per month, compared to approximately $20,000 per month income when we started operations.

I believe that the prime problem for the majority of UHF operators is the delay and indecision of the FCC, and the inability of all of us to anticipate any of their actions. I believe that commonsense and sound business judgment could be applied to a majority of the areas where UHF–VHF problems exist, and satisfactory results could be obtained quickly.

May I hurriedly give you the details of our individual problem and our thoughts toward correction of these problems, not knowing whether or not these facts apply to other areas.

We have an affiliation with NBC wherein we carry about 5 hours of their film programs each week. Were we to have interconnection facilities wherein we could broadcast live, we believe this figure would increase from 5 hours per week to probably 20 hours each week. With this additional programing we could, no doubt, greatly increase our audience and thereby increase our advertising spot sales.

We find it impractical to spend the money for interconnection when the FCC might choose to grant channel 4 at any time. We are quite confident that NBC would move their affiliation to channel 4, because they would then have access to all of the sets in the territory, instead of just those capable of receiving UHF signals.

The Beaumont-Port Arthur-Orange area is not big enough for more than 2 television stations, and I am confident that should there be more than 2, it would be impossible for a third station to operate at a profit.

Were we to receive consent from the FCC to change to channel 12, which I believe was recommended in the CBS report, as well as some others, we could convert in less than 60 days and become interconnected for live broadcast in about the same period of time. It is my personal opinion, should this grant be made, the applicants for channel 4 would not go through with their construction plans.

Having had almost 2 years in the UHF television business, I am convinced that it is almost impossible to make a profit in such a venture without all television sets being equipped for all-channel reception at the point of manufacture.

I also hold the office of president of the Reed Co., in Beaumont, which company serves as distributor for one of the largest manufacturers of television sets in America, and I am fully familiar with the converter, tuner, and all-channel installation problems.

Senator PASTORE. Has anybody applied for channel 12?

Mr. REED. No, sir; it has never been allocated to that area. It was recommended in this report by a number of people.

Senator PASTORE. Let me ask you another question: At the time that you applied for your UHF permit, did you know that channel 4 had been allocated to that city?

Mr. REED. I knew channels 4 and 6 had been assigned but never allocated.

Senator PASTORE. Had been assigned, that is right. You knew that the day was coming when they would come on the air?

Mr. REED. Yes, sir.

Senator PASTORE. Did you protest the granting of the license to channel 4?

Mr. REED. You mean channel 6, probably, because channel 4 has never been granted. Channel 6 is on the air.

Senator PASTORE. Channel 6.

Mr. REED. No, sir.

Senator PASTORE. All right, sir, go ahead.

Mr. REED. It seems to me that the recommendation made long ago regarding excise tax relief on all-channel television sets would have been the greatest and surest solution to the UHF problem.

The sands of time are running out for UHF operators, and I know the days are numbered for our small operation. But I believe that in the not too distant future this committee, the FCC, and all people interested in the future of television will regret the loss of UHF stations. The educational service, the community value, the religious and social benefits of television have only been scratched, but with the very limited number of VHF channels, it will be impossible for television broadcasting to keep up with the demands and progress of the American people.

I am most appreciative of the privilege of being here today, and I trust that I have not overimposed on your valuable time, and may I thank you personally for your efforts in behalf of the UHF industry.

Mr. COX. You were the first station on the air, then, in Beaumont?

Mr. REED. Yes, sir; approximately a year ahead of the others.

Mr. COX. Consequently, at the time channel 6 went on the air, you had no conversion problem up to then?

Mr. REED. That is right.

Mr. COX. Any sets in the area received your signal?

Mr. REED. Not all of them. I would say probably 65 percent of them.

Mr. COX. Some of them made the expenditure to get distant reception from other points?

Mr. REED. There were sets prior to our construction in 1951 and 1952 that didn't have tuners.

Mr. COX. Were you able to get them to convert?

Mr. REED. A great many of them, but not all of them. At that time converter sets cost about $75.

Mr. COX. How do you feel your coverage, areawise, compares with that of the channel 6 station?

Mr. REED. I believe that 95 percent of the people served by channel 6 are in this tricity area that we can serve beautifully. The farthest point from our transmitter is 18 miles in those 3 cities. When you leave those, you get into the piney woods of east Texas, and there are not very many people.

Mr. COX. So far as the economics of the area are concerned, you can serve it fully as well as the V station?

Mr. REED. Yes, sir.

Mr. COX. Yet despite the fact that you have substantial conversions and no real difference in the area to be served, the appearance of the one V station has virtually wiped out the income that you had received up to that time?

Mr. REED. That is correct.

Mr. COX. In your opinion, a second station would be the absolute death knell for your station?

Mr. REED. Yes, sir.

Mr. Cox. Are all-channel sets being sold in Beaumont, or has the appearance of the V tended to induce people to buy only VHF sets?

Mr. Reed. It has fallen from ninety-odd percent to twenty-odd percent.

Mr. Cox. That is all, Mr. Reed. Thank you.

Senator Pastore. Have you anything to document that last statement?

Mr. Reed. About the 90 percent?

Senator Pastore. Yes.

Mr. Reed. Yes, sir. I happen to be a distributor. I have a pretty close tab on set sales without tuners.

Mr. Cox. Could you send us some figures which we can insert in the record?

Mr. Reed. The Association of TV Manufacturers puts out a very precise monthly report.

Senator Pastore. You can realize that is a very important part of your testimony here. If you can document it, it will have some effect in the record.

Mr. Reed. I certainly can.

(This material has not been received by the commitee.)

Senator Pastore. Mr. Putnam. How are you, Mr. Putnam?

Mr. Putnam. I don't have to be sworn in this case; do I?

Senator Pastore. No.

STATEMENT OF ROGER L. PUTNAM, STATION WWLP, SPRINGFIELD, MASS.

Mr. Putnam. My name is Roger L. Putnam.

Senator Pastore. May we have quiet in the room, please, so that the witness may be heard? Thank you very much. You may proceed.

Mr. Putnam. My name is Roger L. Putnam. I am the president of Springfield Television Broadcasting Corp., which is the licensee of WWLP, a UHF television station in Springfield, Mass.

WWLP went on the air March 17, 1953. We are a medium-sized station in a medium-sized community, owned by local people and endeavoring to provide good service to the community to which we are assigned by the FCC. In so doing, we have been severely handicapped by being forced to compete with WNHC–TV, a VHF station licensed to serve New Haven, Conn., far to the south of us. Because it got a headstart during the freeze, and because of the preference of networks and advertisers for VHF stations, WNHC–TV has had a great competitive advantage. Despite our handicaps, we have made good progress in establishing ourselves as a part of our community. UHF receiver conversion in Springfield is now better than 90 percent. I think it is 100 percent, because the latest survey shows that as many people can reach us as the VHF. There are about 5 percent that can't get the VHF, and about 5 percent that can get the VHF but can't get us.

However, the Commission in the near future intends to force us to compete with a second VHF station on channel 3 at Hartford, which, because it will be somewhat closer, will be an even stronger competitor than WNHC–TV. Based upon our observation of what has happened to other UHF stations forced to compete against two VHF stations, we do not expect that WWLP will be able to survive very long after channel 3 goes on the air at Hartford. As a part owner of WWLP, I, of course, have a personal interest in the UHF–VHF problem, but what is far more important to me is that, unless UHF survives, Springfield, Mass., will have no local TV service whatever. As a resident of Springfield, I don't relish the thought of being forced to rely for TV service on distant stations in Hartford or New Haven, any more than Providence would like to be served by a TV station in Boston, which is much nearer to Providence than New Haven is to Springfield.

Senator PASTORE. You took the words right out of my mouth. [Laughter.]

Mr. PUTNAM. Excuse me, sir. I am sorry I didn't let you say it yourself.

Senator PASTORE. I have said it here.

Mr. PUTNAM. As a former mayor of Springfield, from 1938 to 1944, I believe that local officials and candidates should have access to local TV stations, too; and as a Springfield businessman, I would be concerned if the Springfield merchants had no opportunity to advertise over a local TV station. As I have said, that is just what will happen to Springfield if UHF TV does not survive, and the same fate faces most of the other cities in my home State of Massachusetts. There is not a single VHF channel allocated in Massachusetts west of Boston.

I know that I am not alone in believing that Springfield is entitled to its own local TV station—most if not all of the citizens of Springfield agree with me. They have shown their willingness to support a local station by spending substantial sums on UHF conversion and UHF antennas. Recently my son, in a brief appearance on WWLP, explained the threat to local TV in Springfield and asked his listeners to write or wire the Commission about it. I am told that this single short broadcast produced over 600 communications to the Commission.

I think it is more, however, than just a question of Springfield. It seems to me that it is a question of the whole country, of how we want to grow. Do we want to keep medium- and small-sized communities alive as communities, or are we trying to force people into a straitjacket? I think that the Congress, in its basic aim in the FCC legislation, wanted to encourage community TV stations; not big monopolies that were going to make everybody get into a straitjacket, but local communities in the local trading areas.

It is apparently the avowed purpose of FCC to do it, but it is not what their regulations are making come about. I think it is important, because we are a nation of separate communities. We are a Federal Union, in a sense. We have community pride. We have all sorts of community needs—community communications is an example of community needs. We have community newspapers; we have community radio. TV is becoming the most important medium of all for reaching people, and I think it is vitally important to the country that we have community TV.

Take just one example: Local merchants can afford to advertise on a local TV station that reaches their community, because they are getting the listeners they want and they can choose it. If they have to go out of town to advertise on a big station, they can't possibly afford it. They are giving the chainstores and people of that sort the advantage from concentration, and the local merchants are penalized. I think small business is an important backbone of this country, and if we force people into a few big areas we deny local merchants what is obviously one of their most important ways of getting business.

We also deny the local politicians a chance. We in Springfield have no interest in the elections in Hartford, except as neighbors, and except when it is a national election. But think of our Congressman from Springfield having to go to Hartford or New Haven to put his broadcast on the air to reach Springfield people. In the first place, it is putting him to unnecessary expense, and people aren't going to listen in the same way. I think that even more important——

Senator PASTORE. Don't you agree that somewhere along the line we will have to reach a definitive policy as to whether or not TV is going to be used merely to bring to the homes of people national network programs, or whether it is going to be a community service.

Mr. PUTNAM. I think it can be both; I don't see any reason why not. Of course, people want the national programs, but the national programs don't go on all day. There are times in between for the other things. People are going to want to see Groucho Marx, and they shouldn't be denied that privilege.

Senator PASTORE. I think you agree with me, Mr. Putnam, there has got to be a little more than allowing people just to see Groucho Marx or some other national network program. We can't sit back and say, "You have got enough TV because you can see that." There has to be more to it than that. Otherwise I think we have failed in using this tremendous medium of communication.

Mr. PUTNAM. I agree. That is in the act. We feel it ourselves very strongly. One of the reasons we have so many conversions is because we don't go only for Groucho Marx.

Senator PASTORE. We need equitable distribution.

Mr. PUTNAM. We believe that, and we are supposed to do community-service programs as well. We have tried to very hard. I think that is one of the reasons we have been so successful in getting conversions. It is not just an entertainment; it is a community service. I tried to say your own words, Senator; you said them better than I did.

Senator PASTORE. You are gracious, as always, but we both said the same thing.

Mr. PUTNAM. Well, local charities are another example. If our hospital wants to raise money, does it have to go to New Haven and put it on the air? New Haven doesn't want to put it on the air.

Senator PASTORE. Or do without TV.

Mr. PUTNAM. Yes, and the great advantages TV can give them. I won't stress that point. What is happening, I think we all know: Stations are being abandoned, lots of construction permits are not being used, others aren't even applied for in local communities, because it just has turned out not to be profitable, in the local communities, for UHF to compete, in most cases, with VHF. I can say that because I think we are one of the ones who have been able to do so. We are one of the relatively few who are, at the moment, in the black—not much, but a little bit.

Now I have got two suggestions. One of them I am sure is the right one, but I am sure nobody will do it, but I will just say it for the record: I think the right one is for stations to be given only the wattage and the tower height to cover the areas they are assigned for. There is no need that New Haven, for instance, should have coverage reaching up beyond Springfield, 65 miles away, when there are stations allocated for Hartford, Middletown, New Britain, and Springfield. I think that all stations should be given only the power to cover the area they are allotted for. That, I think, is the right solution. I don't think it will be done.

Senator PASTORE. I have been talking with members of the Commission. I am not a technician, but their problem in that direction, and I would like your comment on it, is essentially this: First of all, of course, there is a desire to see that everyone gets TV. There are certain gray areas where you cannot come in unless you give the station a little more power. In other words, if you could tell these radio waves, "You stop at the city line of Springfield and don't go further than that," it would be easy. After all, you are dealing here with the elements of nature. The minute you throw out this wave, something happens to it and it spreads. How far it will go depends upon how much impetus you give it with power.

The argument that the Commission makes—and I am trying to get your opinion on this—is this: That it is not really a question of drawing a circle this way, and drawing a circle that touches it there [indicating], because somehow you get into trouble in here, where you get the clash between the two signals. What they try to do is this sort of thing [indicating again] so that these people, while they may have twice as much as these people, yet no one is being hurt by a confused signal. What do you have to say to that in regard to this problem of confining signals more closely?

Mr. PUTNAM. I would say this on that: That I agree completely with the Commission's philosophy as you drew those pictures, and if the allocation that the Commission made in 1952 was all taken up, there would be no gray areas. What they are doing now, however, is putting a circle as big as that whole block in the middle of it.

Senator PASTORE. In other words, if they take 2 or 3 stations out of New York City, they have got the New England problem solved?

Mr. PUTNAM. That is not what I am saying. I am saying—for instance you drew a circle that interlocked another circle like this [indicating], and what they are doing is putting another circle that covers all of them. That is what I think is wrong. I mean, for instance, again, taking New Haven—they have got allocations for New Britain, Waterbury, New London, 2 for Hartford, 2 for Springfield, and yet they let New Haven have power enough to cover all that area. If channel 3 goes into Hartford, it will have power to cover or blanket at least 6 UHF possible allocations—I think 8.

Senator PASTORE. Let me ask you this question, Mr. Putnam: If you did not intermix the Connecticut Valley, do you think that everyone could be serviced through UHF satisfactorily?

Mr. PUTNAM. I think if you look at a map, Senator, there isn't anybody that wouldn't have at least class A coverage from 2 stations, and most people will have 3 or 4 stations. They can get class A coverage out of the UHF allocations in the Connecticut Valley if they are all taken up. I think there is nobody anywhere who cannot get class A service from at least two stations, and many of them from more. The technicians tell me that. I am not a technician, either.

Senator PASTORE. Yes, sir.

Mr. PUTNAM. Does that answer your question?

Senator PASTORE. Yes.

Mr. PUTNAM. I think, too, there is a difference between the crowded Northeast and the rather open western part of the country. I think Denver, for instance, maybe needs a lot more area to cover than Hartford does, because it is a much bigger trading area. People come from hundreds of miles to trade in Denver. They come from only 30 or 40 miles to trade in Springfield or Hartford.

Senator PASTORE. In other words, you could get more and more overlapping of these circles that I have just drawn on this pad if you would cut down the power and grant a few more permits.

Mr. PUTNAM. That is right; so all the places that have been allocated would find it profitable, or would be capable of putting up stations. Those grants have not all been taken up, because the way the thing is going it has not been possible or profitable for people to do so. It has to be profitable to be possible. So I think they all ought to be cut down.

Senator PASTORE. I have to leave, sir, and Senator Bible will take this meeting over. You be good to our witness. [Laughter.]

Mr. PUTNAM. I want you to know what I think should be done in the Connecticut Valley. Channel 3 should be taken from Hartford and given to Providence. Providence is a VHF area, and the Connecticut Valley is a UHF valley.

Senator PASTORE. You are a diplomat. I will read the testimony.

Mr. PUTNAM. All right, sir.

I was saying, Senator Bible, that I thought the important thing was to keep local community television possible, and that the simplest way to do it was to cut stations down to the size for what they were originally granted for. I said I didn't think that would be done, so I have a second suggestion, and I can see no reason why it should not be done. I have to use our own station somewhat as an example, but I think it applies.

WWLP is one of four stations which, in a case which I understand has been mentioned here before, have urged the Commission to deintermix the Connecticut Valley. This case is usually referred to as the Hartford case, but, as I have indicated, much more than the city of Hartford is involved. I would like to take a few minutes to tell you some of the details of what I call the Connecticut Valley case, because I think I can explain the merits of deintermixture best by showing just what it can accomplish in a particular case, rather than talking generalities. This deintermixture proposal involves the entire Connecticut Valley, from Long Island Sound to the New Hampshire border and possibly north of that. Within this area are the television markets of Holyoke-Springfield, Mass., and Hartford-New Britain, Conn., with a total of 716,200 families and retail sales in 1953 of almost $3 billion. On the border of the area are the television markets of New Haven and Waterbury, Conn., and Adams-Pittsfield, Mass., with about 1,300,000 families and retail sales in excess of $5 billion.

Six television stations presently serve the Connecticut Valley. Five of these are UHF stations. They are, in addition to WWLP, WHYN-TV, Springfield, WGTH-TV, Hartford, WKNB-TV, New Britain, and WATR-TV, Waterbury. The sixth station is WNHC-TV, a prefreeze VHF station which is licensed to New Haven. As you can see, the Connecticut Valley is a predominantly UHF area, with five UHF stations, against a single VHF station. The valley receives no significant VHF service from outside. This is shown by the predicted service contours of the outside VHF stations, confirmed by listener surveys in the area. Channel 3 at Hartford is the only VHF channel which remains available for assignment in the Connecticut Valley.

The five UHF stations which are now on the air provide at least one grade A service to practically all of the valley. Most of the valley receives two or more grade A services from these stations. Other UHF stations situated slightly outside the valley area provide service to substantial portions of the valley. These stations are: WMGT, Adams-Pittsfield, Mass., and WICC-TV, Bridgeport, Conn. When the coverage of these stations is taken into consideration, virtually all of the valley receives at least two grade A UHF services. There are two other channels allocated to the valley that haven't been taken up.

A study of the potential UHF service in this area, based upon the present assignment table, indicates that the entire area would have access to a minimum of eight grade A UHF services. On the basis of grade B coverage, a veritable maze of service is indicated, with the entire area receiving a minimum of 13, and some sectors as many as 27, services.

The valley residents are in general well satisfied with their UHF service. UHF conversion is better than 90 percent in all of the valley, except the area close to New Haven. The relatively favorable position of the valley UHF stations has made it possible for them to obtain network affiliations. WGTH-TV is affiliated with CBS; WKNB-TV is affiliated with NBC; WHYN-TV is affiliated with CBS; and WWLP is affiliated with NBC and ABC.

Notwithstanding the modest success of UHF stations in the valley and their ability to offer a substantial quantity of popular network programs, the New Haven VHF station remained up to recently the dominant station in the valley, not only in its own city, but throughout the area. I am glad to say that in the last 6 or 8 months that situation is improving, and recent surveys show that, I think, we are the dominant station in our area at the moment—but we only have 1 VHF station to compete with, not 2.

Believing that the establishment of a commercial station on channel 3 at Hartford would threaten the continued existence of all of the UHF stations in the valley, as well as absolutely preclude the establishment of any additional stations, four of these stations (WWLP, WHYN-TV, WGTH-TV, and WKNB-TV), petitioned the Commission for the removal of channel 3 from Hartford, giving them another UHF channel instead.

After first denying our petition, the Commission later reconsidered and ordered formal rulemaking on our proposal, as well as on four other similar proposals. Written comments were filed in May of 1955. As requested by the Commission, we submitted a detailed showing, which included extensive engineering and economic data as well as additional information on viewer surveys, network affiliations, and the complete history of the experience of UHF television stations in intermixed markets throughout the country.

Oral arguments was held before the Commission in July of 1955, in which the deintermixture proponents, as well as reviewing the merits of the five specific proposals which were before the Commission, also submitted a plan of selective deintermixture, which showed what could be accomplished by deintermixture on a national basis. I have attached a copy of this plan to my statement and request that it be received for the record.

Senator BIBLE. That will be the order.

(The document referred to is as follows:)

A PLAN OF SELECTIVE DEINTERMIXTURE

The purpose of this memorandum is to explore the possibilities and results of a plan of selective deintermixture "to be uniformly followed, wherever possible, in the effectuation of our allocation table for a nationwide television system." [1] The plan would be limited to substituting UHF channels for ungranted VHF channels in areas now being served by UHF stations and where the conversion to UHF has been substantial enough to provide assurance that the UHF stations will be able to compete effectively if new VHF stations are not authorized.

The plan would keep UHF alive and vigorous in about 25 of the top 100 markets, with the expectation that, through excise-tax relief or otherwise, all-channel receivers will ultimately become universally available, thereby permitting the fulfillment of the objective of a fully competitive nationwide television service and mass utilization of the UHF band over a 3- to 7-year period.

Under the plan, which for illustrative purposes has been limited to the top 100 markets, approximately 14 ungranted VHF channels in 13 markets would be affected. These channels could be reallocated to other areas where additional VHF channels are needed because the VHF stations have so substantial an advantage that UHF cannot compete. (See illustrations which follow.)

The plan of limited deintermixture here proposed would accomplish the following:

(*a*) Maintain and create a substantial number of UHF strongholds in order to provide a continuing market for UHF receivers and give UHF a further opportunity to demonstrate that it can provide a service satisfactory to the public and the advertiser.

(*b*) Bearing in mind the present limitations of economic support for television in the smaller markets, maintain competitive local television in as many markets as possible.

(*c*) Save as many existing UHF stations as possible to preserve the value of current investment in UHF equipment, particularly the public's investment in receiving equipment.

(*d*) Maintain enough UHF stations to justify the manufacture of and improvements in UHF receivers and transmitters, removal of the excise tax, and retention of the 70 UHF channels.

The following propositions are regarded as established by experience to date:

(*a*) No matter what the size of the market, UHF has not been able to compete against two or more local VHF stations or strong VHF signals from outside stations serving the same community.[2]

(*b*) In markets of sufficient size UHF can survive where no more than 1 local VHF station or strong outside VHF signal is present, since this means that 2 of the 3 major networks will have their programs on UHF in these markets.

(*c*) In the smaller markets a single VHF station or strong outside VHF signal is fatal to UHF.

The plan is based on the following principles:

(*a*) No authorized VHF station will be required to shift to UHF. The plan will be limited to ungranted VHF channels, i. e., those now in hearing where final grants have not yet been made.

(*b*) In those markets in the top 75 or 100 that are now served by UHF only or by UHF and not more than one grade A VHF signal, deintermixture will be under taken by not granting the unassigned VHF channels that are still in hearing status and by replacing them with UHF.

---

[1] The quotation is from the Notice of Further Rulemaking, Albany-Schenectady-Troy Assignments, docket 11238, FCC mimeo 18282, April 21, 1955.

[2] There may be 1 or 2 exceptions to this, such as Worcester (32d market) and Akron (45th market), which have no VHF stations of their own but receive 2 or 3 strong VHF signals from outside stations (Boston and Cleveland, respectively). Even in Worcester and Akron, however, conversion to UHF has lagged.

(c) Where two VHF stations now serve an area, deintermixture will be undertaken where a third VHF channel can be added.

(d) In the smaller intermixed markets, additional VHF channels will be allocated where possible, either by "dropins" or by using VHF channels made available through deintermixture of other markets.

(e) Before an ungranted VHF channel is removed from a market, it must be shown that approximately 40 percent or greater conversion to UHF has been accomplished and that adequate additional VHF channels cannot be allocated to take care of all existing UHF stations.

(f) UHF channels will be substituted for the deleted VHF channels, thereby making available for the VHF applicant a channel on which he can compete on equal terms with the existing UHF stations that have pioneered the market.

Applying this plan to the top 100 markets would have the following advantages:

(a) About 25 of the first 100 markets would be either UHF only or markets with 2 or more UHF stations and not more than 1 grade A VHF service. There would be a total of approximately 65 UHF stations in these markets.[8] (See attached map.) About 8 million television families reside in these markets (Television Magazine. Data Book, 1955, pp. 79–87).

(b) The 22 markets which are now allocated only 2 VHF channels would be reduced to about 10.

UHF ONLY

1. Allentown-Bethlehem-Easton, Pa. (2 and probably 3 stations.)
2. Scranton, Pa. (three stations).
3. Wilkes-Barre, Pa. (two stations).
4. Springfield-Holyoke, Mass. (two stations).
5. Springfield-Decatur, Ill. (2 and probably 3 stations).
6. Peoria-Bloomington, Ill. (3 and probably 4 stations).
7. Evansville, Ind.-Henderson, Ky. (2 and probably 3 stations).
8. Fort Wayne, Ind. (three stations).
9. Madison, Wis. (three stations).
10. Youngstown, Ohio-New Castle, Pa. (three stations).
11. Fresno-Tulare, Calif. (3 and probably 4 stations).
12. South Bend-Elkhart, Ind. (three stations).

Total: 36 UHF stations.

TWO OR MORE UHF STATIONS AND NOT MORE THAN ONE GRADE A VHF SERVICE

1. Hartford-New Britain-Waterbury (four UHF stations).
2. Albany-Schenectady-Troy, N. Y.-Pittsfield, Mass. (three UHF stations).
3. Norfolk (three UHF stations).
4. Jacksonville (three UHF stations).
5. Miami-Fort Lauderdale (three UHF stations).
6. Harrisburg, Pa. (three UHF stations).
7. York, Pa. (two UHF stations).
8. Reading, Pa. (two UHF stations).
9. Raleigh-Durham (two UHF stations).
10. New Orleans (three UHF stations).
11. Beaumont-Port Arthur (two UHF stations).

Total: 30 UHF stations.

The plan would require the deletion of 14 ungranted VHF channels in Hartford, Fresno, Peoria, Jacksonville, Miami, Springfield (Ill.), Evansville, Hatfield, New Orleans, Raleigh, Norfolk, Port Arthur, and Madison. It would also make the VHF channels deleted available for use in areas where additional television service is needed but where, because of VHF predominance, UHF cannot do the job. For instance—

1. The Hartford VHF channel could be utilized in the Westerly, Rhode Island area to make Providence a three-VHF market.
2. The Fresno VHF channel could be allocated to Bakersfield to make it a two-VHF station market.
3. The two Miami VHF channels could be utilized to provide a third VHF station in Tampa-St. Petersburg and another VHF channel in one or more of several other Florida cities. If the Miami channel change were tied in

[8] There are an additional approximately 25 UHF stations now in operation in other markets (mostly below the top 100) that also have a reasonable chance to succeed, and approximately 20 other UHF stations that probably will be unable to survive as UHF stations even if this plan of deintermixture is adopted.

with the Jacksonville change, other underserved Florida cities could also get additional VHF channels.

4. The Peoria channel could be allocated to provide a third VHF station in the Rock Island-Davenport-Moline area.

5. The Springfield, Ill., channel could be allocated to provide a fourth VHF channel in St. Louis and a second VHF in the Terre Haute area.

6. The New Orleans VHF channel and the Port Arthur VHF channel could be allocated so as to make Baton Rouge, Lake Charles, and Pensacola each two-VHF station markets.

7. The Madison channel could be reallocated to make the Rockford area a two-VHF area.

June 27, 1955.

Mr. PUTNAM. On November 10, 1955, the Commission decided that notwithstanding the great quantity of material which had been submitted in the five deintermixture cases, it still did not have sufficient information, and that it must start a new and more general rulemaking proceeding in which it would consider various plans, including deintermixture, for a nationwide television reallocation. In the meantime, our proposal to deintermix the Connecticut Valley was "denied without prejudice," with leave to resubmit it at some stage in the general proceeding.

The first and second round of comments in the general rulemaking proceeding were filed on December 15, 1955, and February 8, 1956. About 400 comments and reply comments were filed, but there is little or nothing new in them.

The suggestions that have been made to the Commission boil down to these:

(*a*) Deintermixture—which has widespread support. Most of the major organization in the industry have endorsed deintermixture of one sort or another, including American Broadcasting Co., National Broadcasting Co., and Radio Corporation of America, Columbia Broadcasting System, General Electric Co., and Storer Broadcasting Co.

(*b*) Abandon the UHF entirely and get along with the existing 12 VHF channels—which has almost no support.

(*c*) Move all television to the UHF—which also has almost no support.

(*d*) Abandon UHF and replace it with some additional VHF channels, which would have to come either from frequency bands which are now devoted to national-defense purposes of from bands which are being used by other important services which have made very substantial investments in them.

Because this last proposal has some surface appeal, there is quite a little support for it. It has some substantial drawbacks, however.

First, a station operating on a new VHF channel would be worse off than a UHF station, because to begin with, at least, there would not be a single television set in its area which could receive it. And having started a UHF station in what was a VHF area, I do not think anybody wants to get people to go through a second set of conversions. We had to make everybody spend from $75 to $100 in our area to be able to receive us. We have succeeded in doing that. I would hate to have to do that over again, and think of what the people who have got UHF receivers would feel if they had to convert again.

Senator BIBLE. Is that pretty well established cost of conversion, $75?

Mr. PUTNAM. I think that is a good average; if you are an electrician yourself and can do your own work, you can stick an antenna on your roof, and probably do it for $15 or $20. For the man who isn't a mechanic or electrician it is from $50 to $75.

Senator BIBLE. I understood you to say $75.

Mr. PUTNAM. I should have said $50 to $100, depending on the kind of antenna you use. I think the minimum is $50 and the maximum over $100. I did say $75 as sort of an average, sir.

Second, it is now pretty well recognized that only a handful, if any, additional VHF channels could be made available to television. Let us take a look at what will happen to local television in Springfield and elsewhere if the Commission junks the UHF and adds a few VHF channels. The leading proponent of such a course of action is CBS. CBS has submitted two plans for television reallocation. In its plan II, which it says is the better plan, it recommends the addition of three new VHF television channels.

Springfield falls in what CBS calls the Hartford television market, which is approximately the same area that I have referred to here as the Connecticut Valley. Within the CBS Hartford market are the counties of New Haven, Middlesex, Tolland, Litchfield, and Hartford, in Connecticut, and Hampden and Hampshire in Massachusetts. Its area is 5,606 square miles. It includes 4 cities of over 100,000 population, 2 cities with over 50,000, 2 others with over 40,000, and 9 more with populations between 8,000 and 36,000. Within this area 22 daily newspapers are published and 30 standard and 8 FM radio stations are in operation.

Yet, CBS plan II makes provision for just 3 television stations: 1 on channel 3, 1 on channel 8, and 1 on a new VHF channel, 6C—and all to be located in Hartford or New Haven. This is the sort of television service which the Connecticut Valley will be limited to if the Commission follows the recommendations of CBS. As monopolistic an idea as I think I have ever heard.

While the Commission is pondering how to solve the UHF–VHF problem, it is going right ahead making additional VHF assignments which aggravate that problem. In justification of this action the majority of the Commission asserts that the additional VHF grants will not prejudice its ultimate decision on deintermixture and that, in any case, the decision whether to deintermix a particular city should not turn on the fortuitous circumstance of whether VHF stations are or are not on the air there. I submit that that is arrant nonsense. I submit that both of these reasons are arrant nonsense. The Commission has always been reluctant, and properly so, to disturb existing operations. When in the sixth report it framed the present allocation plan, it went way out of its way to avoid requiring the prefreeze stations to shift frequencies, even from the high to the low VHF band, or vice versa, and not a single station was shifted to the UHF.

Besides, in many areas where additional VFH service is being established, the public, in reliance on that service, will start buying VHF-only receivers. Under such circumstances, taking the VHF service away would became a very serious matter, a matter affecting the public interest in that area, which the Commission could not ignore even if it wanted to. For these reasons, the additional grants now being made are bound to prejudice the eventual decision.

Now, the Commission may be right in suggesting that we will not get enough deintermixture merely by withholding the relatively few VHF channels that are not yet granted. But it is perfectly clear that the first places to deintermix are those in which UHF is already reasonably well established. Those are the places where deintermixture makes the most sense. And high UHF receiver circulation is simply not to be found where two or more VHF stations are on the air. It would be utterly ridiculous to make the Connecticut Valley, which has plenty of UHF receivers, a VHF area, and New York City, which does not have a single UHF receiver, a UHF area.

Whether we have a little deintermixture or a lot, the first places we will have it will be those, like the Connecticut Valley, where UHF receiver circulation is well above 50 percent. I think except for New Haven it is 90 percent north of that. That is, we will have it if there are any such places left when the Commission gets around to deciding on deintermixture.

We pointed these things out in a petition asking the Commission not to make a grant on channel 3 at Hartford until it has been decided where we are going in television allocations and whether the Connecticut Valley is to be deintermixed. Recently the Commission denied the petition and scheduled oral argument on the channel 3 Hartford applications. In our petition we requested the Commission to reconsider its denial of our deintermixture proposal. I understand this request was denied yesterday.

I would like to go back to our proposal to deintermix the Connecticut Valley and discuss its merits briefly. The following are the more significant points favoring the proposal:

(*a*) Unless the valley is deintermixed, it will be limited to a maximum of two grade A VHF services, and a substantial portion will receive no grade A service. No cities in the valley will have local television stations except Hartford and New Haven.

(*b*) Deintermixture in the Connecticut Valley would not result in any "white areas." The UHF stations now operating in the valley provide grade B service to all of the valley and grade A service to all but an insignificant portion. Increase in the powers and antenna heights of the existing stations would wipe out any theoretical grade A "white area" which now exists. If UHF is permitted to prosper in the valley, the stations which could be established on presently allocated UHF channels would provide a multiplicity of services throughout the valley.

(*c*) Deintermixture in Hartford would benefit a large area. The Connecticut Valley, an area approximately 40 miles wide and running 100 miles generally northward from Long Island Sound to the Massachusetts-Vermont border, is a predominantly UHF area which can never hope for adequate VHF service. Competitive and local television in this area depends upon the success of UHF. The existing VHF station in New Haven and the proposed VHF station in Hartford would provide listenable signals throughout the area seriously threatening the existence of all UHF stations in the valley, as well as precluding the establishment of new stations.

(*d*) Deintermixture in Hartford has been supported by a total of 10 stations. The four UHF stations in Holyoke and Springfield, Mass., and Hartford and New Britain, Conn., have petitioned for deintermixture. In addition, letters favoring deintermixture have been filed by WATR, Waterbury, Conn.; WMTG-TV, Adams, Mass.; WWOR-TV, Worcester, Mass.; and WICC, Bridgeport, Conn. These four stations lie outside the Connecticut Valley proper but would be greatly benefited by the success of UHF in the valley. Further support for deintermixture in the Connecticut Valley has been expressed by WNET, Providence, R. I.; WICH (AM), Norwich, Conn.; and WNLC-TV, New London, Conn. Opposition to deintermixture in the Connecticut Valley has been expressed only by the two applicants for channel 3 at Hartford.

(*e*) Deintermixture of the Connecticut Valley would not result in the waste of a VHF channel. If channel 3 is removed from the commercial service at Hartford it can be used to relieve the shortage of VHF channels in Providence and the coastal area south of Providence where UHF has no chance of survival for the foreseeable future. The city of Providence now has two VHF stations on the air and no other VHF channels available. A UHF station operated there for a while until driven off the air by the advent of the second VHF station. The only way to bring competitive television to Providence and the surrounding area is through an additional VHF channel. Channel 3, if removed from Hartford, can serve this purpose.

Now, what are the arguments that have been made against deintermixture in the Connecticut Valley? First, it is claimed that we need the service from channel 3 at Hartford. We agree that the Connecticut Valley needs more television service. But, is putting 1 additional station on the air at the risk of taking 5 off any way to get more television service? As we have shown the Commission by uncontroverted evidence, channel 3 is not needed to erase any "white areas." There are no "white areas." What the Connecticut Valley needs is additional local service in Hartford and in other cities which now have no stations. Channel 3 can provide local service to Hartford, but only at the cost of precluding any local stations in most, if not all, of the other cities in the valley. The answer to more television service in the Connecticut Valley is to strengthen the UHF. In the Providence area more television service is also needed, and here UHF cannot supply the answer, but deintermixture will, by releasing channel 3 for assignment to Providence.

Next, it is argued that deintermixture would be unfair to the channel 3 applicants who have spent a lot of money in a comparative hearing for that channel. Undoubtedly the VHF applicants would be disappointed if channel 3 is moved from Hartford. But unlike the UHF stations which will be forced off the air if channel 3 is granted, the VHF applicants are not faced with the possibility that they will be excluded entirely from the television industry. UHF channels could easily be made available for them, and as UHF operators they would enjoy the benefits of the pioneering work which has been done by the existing UHF stations. Why, then, are they so anxious for channel 3? They want it because they know that with channel 3 they will have an overwhelming competitive advantage, and, in fact, will enjoy a virtual monopoly. I submit that no amount of hearing expenditures would entitle them to such a monopoly. A fair opportunity to compete on an equal basis, which they would have on UHF, is all that any broadcaster should have a right to expect.

75589—56—pt. 2——17

Finally, it is argued that deintermixture is unnecessary—that the UHF stations can survive without it. This flies in the face of all UHF experience to date. A consensus in the industry is that UHF stations cannot survive against the competition of two VHF stations except under very unusual circumstances. I know the question has been covered extensively by earlier witnesses, and I do not believe I should weary you with any more on it.

Thank you very much for listening patiently to this.

Senator BIBLE. Thank you very much, Mr. Putnam. I think your statement certainly is very exhaustive, and I cannot help but comment that it is rather an unusual happenstance that the present chairman comes from the State of Nevada, where our main problem is just to try to get one little feeble signal from one little VHF station wherever we can find it. We have 3 stations, 1 in Reno and 2 in Las Vegas. We have a problem trying to get one little feeble signal. Not to say it is refreshing, but at least your statement poses the other side of the problem.

Mr. PUTNAM. I understand your problem somewhat because I am nearly half a citizen of Arizona, and——

Senator BIBLE. I can't see why you ever went back to Massachusetts. [Laughter.]

Mr. PUTNAM. I go to Flagstaff a great deal. I like it in Massachusetts, too.

Senator BIBLE. They are both great States.

Mr. PUTNAM. It is a completely different problem. I think what is needed in the crowded congested areas may be very different from what may be needed in the more squarsely settled areas.

Senator BIBLE. I recognize that fully.

Mr. PUTNAM. I know the problem Flagstaff has. They have solved it for the moment by piped-in television. They have on the hill a receiver to get the Phoenix stations, and you can get a connection through the telephone company for wires from that receiver down to your home. They are working it in sort of a backhanded way.

Senator BIBLE. Even though we are a small and lightly populated area, the people of Nevada are just as interested in receiving TV as your great populous areas. My main problem at the present time is to see whether we will take a little booster or translator to take a signal from VHF channel 4, San Francisco, to allow some three or four thousand people to see TV. So it does have complex problems. I just couldn't help but comment on the difference in approach.

Mr. PUTNAM. I think the people of Nevada are just as entitled to get TV as the people of Springfield.

Senator BIBLE. I am sure that is so.

Mr. PUTNAM. I think they are entitled to get it as close to home as can possibly support it, because then it will have more of their interest at heart, as we said earlier. I think everybody is entitled to see Groucho Marx, but they also want to know of their own community problems.

Senator BIBLE. Certainly.

Mr. PUTNAM. And what is the right answer in Nevada I do not pretend to know. I think I do know what is the right answer in the Connecticut Valley, and I am quite sure it is different from the right answer to Nevada.

Senator BIBLE. I answered that by way of qualifying the chairman. His problem today does not involve getting too many channels.

Mr. PUTNAM. Please do not let your feeling as to Nevada prejudice you against New England.

Senator BIBLE. I am sympathetic. I hope it can be worked out. I think possibly the committee's counsel may have some questions.

Mr. COX. Thank you, Senator Bible. As I understand it, Mr. Putnam, there are two existing UHF stations in Springfield.

Mr. PUTNAM. Plus the Holyoke station. That is right.

Mr. COX. You mentioned network affiliation for a number of stations in the area. Does your station have a network affiliation?

Mr. PUTNAM. Yes, NBC and ABC, and we have been very fairly treated by all of them.

Mr. COX. Are you interconnected so that you receive live programs?

Mr. PUTNAM. We receive live programs.

Mr. COX. Have you found that the coverage of your area by the station from New Haven impairs your ability to sell national spot advertising in your own market?

Mr. PUTNAM. It did for a long, long while. It has become better, because recently, by spending much more money than we had in local programing and local news and local interests—religious, charitable, and so forth, we have got people gradually to convert. Now we get a very good listening audience. We have just gotten into the black by about that much [indicating] for the moment.

Mr. COX. Are you finding that the local businessmen in the Springfield area do want to advertise over TV and are supporting your station?

Mr. PUTNAM. They do. Actually, our local advertising revenues are now just about equal to what we call our national—that is the national spot. I am not counting what we get from the network, but our local is just about equal to our spot. I have the figures, if you want them, for last year. It is just almost exactly equal.

Mr. COX. Would you feel that if the threat of channel 3 were removed from the valley there would be a development, or an inclination to use the remaining unallocated UHF channels in the area, and that there would be economic support from local and national advertising for those stations as well?

Mr. PUTNAM. I think it would come slowly. I am not sure it would come right away. The experience we have had of 2 years of very substantial losses—and I think our other stations have had the same—would, I think, make people hesitate until they saw us really making money until they jumped in, where our heads are just breathing a little air now. We are not really swimming around enjoying ourselves yet.

Mr. COX. This distinction between your situation and Senator Bible's situation, doesn't that point up the fact that UHF is particularly important in these more densely populated areas, because if you are to get local services on any basis you require more channels than are available in the VHF band?

Mr. PUTNAM. That is what I am trying to say. The populous areas, I think, should be deintermixed; the ones that are predominantly VHF, allocate another VHF channel if they need it, take it away from places in the middle of UHF areas which are well converted.

The Senator's problem is not one of deintermixture at all. It is getting enough. Where we have too many, don't put VHF in. When I say too many, I mean too many to be profitable. The thing I am afraid of, as I said earlier, in our area the local merchants will be put to great disadvantage to the chains if only an area station dominates the whole thing. The Springfield merchant cannot afford to advertise on a station that blankets Hartford, New Haven, and Springfield because the rates will be too high. The chains can.

Senator BIBLE. I think that is all. Thank you very much for your presentation.

Our next witness is Mr. Paul Chamberlain, General Electric Company of Syracuse, N. Y. Before you start your testimony, Mr. Chamberlain, there are a number of insertions for the record:

(1) A letter from Mrs. Kate Hevner Mueller, chairman of the education committee of the American Association of University Women, regarding educational TV.

(2) A letter dated February 15, 1956, from Senator Magnuson to the Chairman of the Federal Trade Commission, Washington, D. C., regarding radio advertising, and the Federal Trade Commission's reply, both of which will be printed in connection with earlier materials on this subject (see pt. I, pp. 250–252).

(3) An editorial on misleading advertising from Variety, under date of February 22, which will be printed in connection with other similar materials (see pt. I, p. 260).

(4) Letters from Senator Styles Bridges and Senator Norris Cotton, of New Hampshire, asking that identical telegrams received by them from Mr. Joseph K. Close, operator of a UHF television station, be inserted in the record.

(5) A letter from Senator Wayne Morse and two statements from Oregon residents;

(6) The statement of J. E. O'Neill, the operator of UHF station KJEO, Fresco, Calif.; and

(7) The Statement of Thomas E. Howard, of the Jefferson Standard Broadcasting Co., WBTV, Charlotte, N. C. These can be inserted in the record at this point, except as noted with respect to items 2 and 3.

(The information referred to is as follows:)

ITEM 1

AMERICAN ASSOCIATION OF UNIVERSITY WOMEN,
HEADQUARTERS OFFICE,
Washington, D. C., January 31, 1956.

Senator WARREN G. MAGNUSON,
Chairman of the Senate Committee on
Interstate and Foreign Commerce, Washington, D. C.

MY DEAR SENATOR MAGNUSON: For many years the American Association of University Women has maintained an active interest in the development of the resources of radio and television for the educational and cultural needs of the American people. For that reason members of the association are deeply interested in the hearings being conducted by your committee on TV Network Regulation and the UHF Problem. We realize that the educational television problem is only one of the many being considered by your committee, but because of the tremendous importance of this medium for education we respectfully urge your committee to continue to protect the interests of education.

The education committee of the AAUW wishes to call to your attention the association's stand as set forth in the attached letter addressed to Miss Mary Jane Morris, secretary, Federal Communications Commission, dated December 14, 1955, in response to its request for comment on the possible amendment of part 3 of the Commission's Rules and Regulations Governing Television Broadcast Stations (docket No. 11532).

May we request that this correspondence be made part of the official record of the hearings?

Respectfully yours,

KATE HEVNER MUELLER,
Chairman, Education Committee.

DECEMBER 14, 1955.

Miss MARY JANE MORRIS,
Secretary, Federal Communications Commission,
Washington, D. C.

DEAR MISS MORRIS: The American Association of University Women, through this letter, wishes to accept the invitation extended by the Federal Communications Commission to comment on the possible amendment of part 3 of the Commission's Rules and Regulations Governing Television Broadcast Stations (docket No. 11532). The association desires to confine its comments to the importance of reservations for educational noncommercial television in the educational and cultural development of the American people.

The American Association of University Women, which was established in 1882 as an educational organization (see exhibit A), is an organization having a membership from all over the United States, of more than 136,000 women, all of whom are college graduates. The AAUW has 1,332 branches, with a minimum of 5 in every State except Rhode Island, and Alaska, Hawaii, and Guam. It has been estimated that about one-third of the members are single and that nearly one-half are married and have children. Furthermore, well over one-half are, or have been, teachers.

The association's program to improve American education has been on a year-in-year-out basis, nationally and internationally, with special efforts wherever and whenever circumstances required. The association has been alert to new developments, including radio and television, which could benefit education and has been prompt in advocating their employment for educational and cultural improvement. At least since 1945, AAUW has had a national policy supporting the educational and cultural use of the new techniques of communication. This policy was reaffirmed at the June 1955 biennial convention as follows:

"We recognize the important effect which libraries, films, radio, and television have upon the education of American children, youth, and adults, and we will continue to work to extend and to improve their educational and cultural use."

The association in 1950 presented, through its education committee, testimony which requested the Federal Communications Commission to set aside specific channels for the development of educational noncommercial television. The committee was pleased when the Federal Communications Commission found it desirable to make these allocations. Further, insofar as refusing to delete any of these reservations, the committee believes that the FCC has followed a policy which is in the public interest.

The education committee has followed very carefully the efforts of the FCC to foster the development of a nationwide competitive television system, and is also aware of the many problems, including those which center around the use of UHF channels, which the FCC has faced and will face as it studies and determines its future policy. However, for the sake of American education, the committee earnestly requests that the FCC continue at this critical time the policy of fixed reservation of channels specifically for educational noncommercial television.

This request is made on the basis of the record of activity to get educational television stations on the air, of AAUW experience in the use of both commercial and noncommercial television and radio over a number of years, experience which has convinced the committee that the fullest development of television for the educational and cultural needs of the people can only be brought about through continued specific television reservations for educational use. The committee wants to make it clear that this recommendation is not an attempt to freeze unthinkingly the status quo, but that it is made particularly in the interest of scientific and educational progress of television for the benefit of future generations.

In recommending the retention of educational noncommercial reservations, the education committee of AAUW is cognizant that only 18 stations of the 258 possibilities are on the air. However, we believe that it is only fair to education to record additional use of reservations in terms of 35 construction permits granted, some of which have already reached a testing stage, and 15 other applications filed. This full record shows that education has been active in taking advantage of the resource put at its disposal.

Education, including AAUW, maintains that this is a case where a mere quantitative evalution will not tell the whole story, and that policy for continuing reservations should be based on an evaluation of all factors in the situation.

By its nature, education is not geared to respond easily or quickly to projects which require extensive financing. This alone would account in part for the seeming delay of educators to take advantage of a priceless opportunity for educational development, but in this case there were in addition many other factors which made it difficult to respond quickly to their opportunity. For example, the very idea of television was still new in 1950, not only to education but to the community and taxpayers and other educational financiers. The importance of this invention as a method of teaching had to be demonstrated both to educators and to the public, and such demonstration could not get underway until after education had some assurance that it would have an opportunity to develop a share of the allocations. This assurance did not come until very late in the academic year 1951–52, which again delayed the educators. Another factor which is an important part of the development story is that about two-thirds of all educational reservations are UHF channels, the critical area on whose development commercial television is asking help.

All points being considered, there seems to be a good deal of evidence to indicate that education had peculiar problems to face in order to take advantage of the educational noncommercial reservations and that it has made significant progress which has already brought great benefit to the public.

AAUW members have been active or leading participants in governmental, citizen, faculty, and interorganizational committees, and have seen these and other factors limiting the speed with which the reservations could be turned into operating stations. To get these stations on the air, AAUW members are hard at work all over the country. A few of the States where they have been active in the last year include Washington, Louisiana, Oklahoma, Pennsylvania, Maryland, Kansas, California, Michigan, Wisconsin, Alabama, New York, Maine, Virginia, and the District of Columbia. Members have contributed time, money, study, and writing and speaking ability; they have carried on information campaigns and conducted surveys; they have supported legislation in favor of establishing educational television. On the basis of such activity it is clear that AAUW would like to see many more educational noncommercial stations in operation; it is also clear why the education committee is presently much concerned lest action taken by the FCC should cut the momentum of public appreciation, understanding, and support now gained for the use of these reservations.

When in 1950 the chairman of the education committee of AAUW testified in favor of reservations for educational noncommercial television, she mentioned the unfortunate experience education had had in getting enough time and appropriate time for educational needs from commercial radio. She also said that similarity of objectives and motivation would likely result in similar problems in commercial television. In the intervenng years, AAUW members have often found this to be so. AAUW has developed television programs of good quality for all ages. One such is the Leaves and Dials project (see exhibit B; also exhibits C and D) for children which has greatly stimulated children's reading. This is the type of program which the AAUW would like to encourage but for which not enough or appropriate time is available on commercial television alone.

Members have reported also, through the Look-Listen project (see exhibit E), which covers many States and to which AAUW contributes, that the quality of commercial programs was often below standards they wished to see in their homes. This reporting is based on years of program evaluation on the basis of carefully developed criteria. The committee realizes that commercial television provides some educational programing, but it believes that because of the nature of the industry and because it must provide for the entertainment needs of the people, it is unfair or even impossible to expect commercial stations to meet all education needs. On the basis of experience, therefore, it seems clear to the committee that if the country is to get the maximum educational benefits from television it is necessary to have educational stations and to encourage them by continuing reserved channels for their creation.

The AAUW educational committee requests continuation of the reservations for another reason: the future needs of the American public for educational and cultural advancement through television. Like other parents and educators, the AAUW members realize that television has a tremendous and increasing power as a teacher. But they also are aware that television is only at the beginning of its development both technologically and in terms of its usefulness. Time is needed for the maturing of both. The committee knows, as do most Americans, that it takes sometimes more than a school or college generation of 4 years to change even a course; in this case, education is confronted with a possibility of changes which could affect the entire educational process and is criticized for not taking full advantage of it in 3 years. This does not seem reasonable to the education committee of AAUW, and, since it seems unwise to expect commercial television to carry this responsibility, the committee believes the needs of the future to be another strong reason for advocating continued reservations for educational noncommercial television.

Finally, the major barrier which the education committee sees to the development of a nationwide competitive system of television lies not in the continuation of reservations for educational television, but in developing UHF channels—a barrier which limits both educational and commercial television. It is clear that deletion of the educational channels will not solve the UHF problem and it is equally clear that it would greatly hinder the cause of public education.

The education committee wishes to summarize its comments thus: In view of the fact that progress in educational television has been substantial and because more time is needed to explore and develop educational television, the committee strongly urges that the Federal Communications Commission confirm the reservations for educational noncommercial television.

Very truly yours,

KATE HEVNER MUELLER,
Chairman, Education Committee.

Exhibits attached.[1]

(Item 2 printed in pt. I at pp. 250–252; item 3 printed in pt. I at p. 260.)

ITEM 4

UNITED STATES SENATE,
February 29, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Committee on Interstate and Foreign Commerce,
Washington, D. C.

DEAR MR. CHAIRMAN: I am enclosing herewith a copy of a telegram I have received from Mr. Joseph K. Close, president of radio station WKNE, relating to the radio and television problem now being considered by your committee.

I would appreciate very much the committee's consideration of Mr. Close's telegram and to have it made a part of the printed record.

Sincerely yours,

STYLES BRIDGES.

KEENE, N. H.

Senator STYLES BRIDGES,
United States Senate, Washington, D. C.:

Will you please call to the attention of the Magnuson committee the necessity of taking prompt action to preserve UHF and small market television. As holders of a construction permit for UHF for Keene and operators of a UHF station in Kingston, N. Y., we know that unless positive and concrete steps are soon taken it is unlikely the United States will have a truly representative television service in the sense that they have a nationwide radio service. In Kingston we have borne staggering losses since June 1, 1954. We cannot carry this load indefinitely unless we see tangible evidence that the FCC is going to give UHF and small markets a real chance to survive and prosper.

JOSEPH K. CLOSE, WKNE.

---

[1] None of the exhibits referred to were forwarded to the committee.

UNITED STATES SENATE,
COMMITTEE ON PUBLIC WORKS,
February 28, 1956.

Senator WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I would appreciate it if the attached communication from Mr. Joseph K. Close, of Keene, N. H., could be made a part of your hearings on UHF problems.

Mr. Close has firsthand experience in the operation of UHF television stations and I believe his views may be helpful to the committee.

With every good wish,

Yours sincerely,

NORRIS COTTON.

(Telegram same as above.)

ITEM 5

UNITED STATES SENATE,
COMMITTEE ON BANKING AND CURRENCY,
February 28, 1956.

Hon. WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee,
United States Senate, Washington, D. C.

DEAR SENATOR: Enclosed are two statements from residents of Oregon to be included in the testimony on TV network regulations and UHF problems during the present hearings before your committee.

The first is from Mr. H. E. Prickett, of Wheeler, Oreg., and the other from Eldon J. Letsom, of Drain, Oreg.

With kindest regards,

Sincerely,

WAYNE MORSE.

STATEMENT OF H. E. PRICKETT OF WHEELER, OREG.

1. I am operating a small TV system in Wheeler, Oreg., with very good success and recently started construction on a like system in Rockaway, Oreg. (population 1,100). Then booster problem appeared and all construction was stopped pending information as to regulation of said device. As public subscription money builds the cable system, I feel a position of trust which is in no way safe at present.

2. Relief of point-to-point microwave restrictions would lower cable TV cost and improve coverage and still create no radiation problems.

3. What method of financing can the proposed translators or boosters depend on? I feel that free riders would eventually destroy public subscription to such support.

4. Excise tax on wired TV seems a little out of line with other low-cost proposals.

5. Translators would require alteration of nearly all sets in fringe areas such as Portland, Oreg., and UHF stations are fast leaving the air.

6. I do not feel that the booster or translator is as well suited to many areas as it may be to a few such as central Washington where population is unduly scattered.

TELEGRAM DATED FEBRUARY 27, 1956, FROM ELDON J. LETSOM RADIO & TV, DRAIN, OREG.

Happy to report Scottsburg, Elkton, and Drain are receiving good TV reception from boosters. All channels received and TV sets are on low frequency. Would cost thousands of dollars to change everything to channels 70 to 83. We have no interference. These community sponsors would like permission to operate without change.

LETSOM RADIO & TV,
By ELDON J. LETSOM.

ITEM 6

STATEMENT OF J. E. O'NEILL, KJEO, FRESNO, CALIF.

Mr. Chairman and members of the committee, my name is J. E. O'Neill; my office address is Shaw and Cedar Streets, Fresno, Calif.; I am the sole owner of O'Neill Broadcasting Co., the permittee of UHF television station KJEO operating on channel 47 at Fresno, Calif.

I am pleased to have been given this opportunity to express my views on two matters which you have under consideration which I believe will have an important effect on the television broadcast service. The first is the deintermixture problem and the second subscription television.

Fresno, up to January 12 of this year, was an all-UHF community and had been so since the inception of telecasting in Fresno more than 2 years ago. On January 12, the Federal Communications Commission granted a VHF permit in Fresno. O'Neill Broadcasting Co. has, as have many other UHF stations similarly situated, sought to have the Commission stay the VHF grants until there could be a determination by the Commission in the general television allocations proceeding.

Although the Commission had earlier, at congressional hearings similar to this, expressed a policy that such grants would be held up, the Commission departed from this policy commencing in November of last year. O'Neill Broadcasting Co. has sought review of these actions by the appellate court and the case is now pending before the court. In similar cases, however, the court has indicated that such matters are the responsibility of the Commission. In a recent case before the court in one of the deintermixture appeals, the court said, "If extinction of UHF stations results from the Commission's policies and actions, the responsibility must lie at the Commission's door."

Despite the fact that Fresno presents an ideal situation for deintermixture, and in face of pending rulemaking proceedings before the Commission designed to consider the reallocation of television channels to provide, among other things, for the possible deintermixture of UHF and VHF, the Commission has, by its action, placed itself beyond the power to provide a deintermixed community. This is for the reason that irreparable damage will accrue in the interval to both the UHF stations and to the public. Any relief that the Commission may deem appropriate is apt to come far too late to be of any value.

I wish to present the following as a picture of the Fresno television community.

Station KJEO has been in actual operation on channel 47 for more than 2 years. Another station, KMJ-TV, operates on UHF channel 24 at Fresno; that station has also been in operation for more than 2 years. In addition, a construction permit on UHF channel 53 at Fresno is outstanding. That station was constructed and was in operation for a brief period, but is now off the air, having encountered economic difficulties.

The nearest community with an operating television station is Tulare, Calif., approximately 45 miles from Fresno. The station there (KVVG) operates on UHF channel 27. The nearest community with either an assigned or operating VHF station is Bakersfield, Calif., 103 miles airline distant from Fresno, where KERO-TV operates on VHF channel 10. Bakersfield has also assigned to it a UHF channel (29) upon which KBAK-TV operates.

Fresno is therefore presently an all UHF community with the 2 operating and 1 nonoperating UHF stations. Only one VHF channel, 12, is assigned to Fresno. An educational station reservation is held on channel 18 but no application has been made for it.

There is no VHF service in Fresno from either local or outside stations, and there will be no commercial VHF service if channel 12 is reassigned.

Fresno received its first television service as a UHF service and there is, consequently, no problem of conversion.

There are at present approximately 175,000 UHF receivers, which are predominantly all channel UHF-VHF receivers as distinguished from converted VHF sets.

Station KJEO transmits from a site approximately 4,300 feet above the level of the community it serves with an effective radiated power of 427 kilowatts.

All of the Fresno trading and market area, including all of the Fresno metropolitan area and considerable additional territory, receives excellent technical service. The signal of KJEO is satisfactorily received at distances of more than 90 miles from Fresno.

There will be no "white" areas in the service at Fresno for the reason that any VHF coverage which might be greater than that of UHF will be in either rugged, sparsely populated, mountainous areas or in areas of population which receive better service from other stations more closely located to them. All of such excess coverage from the VHF station would be in other market and trading areas with their own television stations.

All of the television networks are served by the two UHF stations in Fresno and said stations are operating on a successful commercial basis, but that position has been achieved only after periods of substantial loss in building a UHF community.

Both of the existing stations in Fresno, KJEO and KMJ, operate on full schedules from approximately 6:30 a. m. to midnight, and between them bring to the Fresno area substantially all of the available network programs in addition to a well-balanced schedule of programs of local interest. In addition, KJEO has been devoting approximately 8 hours per week in originating its own local, live, color programs.

O'Neill Broadcasting Co. has a capital investment in its UHF station to date of $615,000. Its accumulated deficit to June 30, 1955, was $335,000.

The grantee of channel 12 would not be harmed or prejudiced by the substitution of channel 18, the most desirable UHF channel in Fresno, or some other UHF channel, and would receive the full benefits of the efforts and expenditures of the existing UHF stations in creating and building a substantial all-UHF audience.

The assignment of channel 12 for educational television would effect a substantial saving in construction and operating costs for the educational broadcasters without any loss in service, and would thus make possible the establishment and maintenance at much lower cost of the non-revenue-producing educational television station than would otherwise be the case.

The assignment of channel 12 to Bakersfield, Calif., would permit both operating stations there to operate on VHF channels and will convert that community to an all-VHF city, thus creating deintermixture in that city.

Station KJEO commenced operation as an ABC network affiliate. It now is also affiliated with the CBS television network. The station's affiliation agreement, however, with the CBS television network is subject to 90-day cancellation.

The grantee in the VHF channel 12 proceedings, California Inland Broadcasting Co., has had, by reason of a historical radio affiliation with CBS, a long-standing commitment for television affiliation in the event it should be the successful applicant on VHF channel 12. California Inland has announced that this commitment has been renewed within the past year, and that the nature of the commitment was such that CBS television network is bound to affiliate with it.

As a consequence of the above reported contractual commitments, KJEO is in immediate danger of losing its CBS affiliation agreement now that the grant of VHF channel 12 to said applicant has been made. With the network will go the national advertisers, for the reasons set forth below.

A situation exists in connection with the placement of advertising business whereby VHF stations are selected over UHF stations. This situation exists not on the basis of any real difference between the services of the stations but on an artificial concept of the values of VHF versus UHF, and has become a custom of time buyers and a tradition of the trade. The present attitude and policy of national and regional buyers of spot advertising upon which KJEO relies for a substantial portion of its revenue is to place their advertising upon a VHF station when that station commences operation in a community. Such advertisers are anxious to place their spot advertising adjacent to the programs of one of the major networks on a VHF station. Thus, a VHF station with a major network, competing with a UHF station, attracts most of such business and becomes the dominant station upon which the bulk of all advertisers seek availabilities.

Under such circumstances, the inception of operation of a VHF station with one of the major networks can result in such a severe loss of revenue to the UHF station that KJEO may be forced to curtail operations. This has been the history of many similarly situated UHF stations when a VHF commences operations in the same community. KJEO can compete with additional UHF stations in the area, with or without network affiliations, but operation of a VHF station, under the circumstances of the present very real, although unjustified, policy of placement of advertising business, constitutes unfair competition to UHF stations in the community; such unfair competition ultimately destroys and terminates UHF television service in the community, to the detriment of the public interest, and this has been the actual case of a number of UHF stations in recent months. While I may have a self-interest in attempting to preserve my UHF station, this interest parallels the public interest, for if the UHF stations must terminate operations in Fresno, the public will be left with 1 VHF station with no choice of programs as against the likelihood of 3 UHF stations, each serving a different network. With the disappearance of the UHF stations the aggregate public investment in the more expensive all-channel receivers will be lost. This investment was made in reliance that the interest of the public in UHF receivers would be safeguarded by the surveillance and protection of the agency of the United States Government charged with jurisdiction over communication matters.

The Commission has knowledge of these problems. This appears not only from the original proposed notice of rulemaking and from the questions designated therein as pertinent in the first deintermixture matter designated for formal rulemaking proceedings, but also from the voluminous data and comments filed in the docketed proceedings and from the oral argument. Furthermore, the Commission has had before it the some 30 petitions seeking reallocation relief and has studied the question in connection with congressional inquiries and statements. In the latest notice of proposed rulemaking in docket No. 11532, the Commission refers to these problems as the familiar difficulties presently facing television broadcasters.

I believe that the prime requirement of a nationwide allocation plan is the establishment of facilities in as many communities as possible on equal competitive footing. This is the backbone of the establishment and continuation of a nationwide competitive system with multiple television services and multiple program choice to the public. There is a great difference between allocation of channels and the allocation of competitive channels to the communities. It has been amply demonstrated that lack of equal or competitive facilities in a market leads to the curtailment of service and the denial of free choice in selection of program, and tends to a monopolistic situation.

The principle of a nationwide competitive television system, therefore, finds its roots in competitive facilities in each individual area. Experience has now amply shown that where UHF and VHF stations are intermixed in a community, the UHF is at a severe competitive disadvantage and the intermixed allocations create an ultimate dimunition of service. In some cases this disadvantage may perhaps arise for technical reasons, but in the vast majority of cases it appears that this disadvantage lies only in psychological concepts, quite real in impact. In numerous communities, UHF, for all practical purposes, will equal and in many respects be superior to VHF, yet the attitude of the advertiser creates a barrier with which the Commission is now familiar and places the UHF station at an artificial but practical competitive disadvantage.

Where UHF can supply completely satisfactory service, the answer is obvious, and that is the establishment of a truly competitive television area on an equal basis by making all outlets UHF; that stations in an all UHF community can operate satisfactorily from the standpoint of both the viewer and the station operator is demonstrated by the current situation in Fresno and by other successful UHF communities. This type of deintermixture not only places the community on a sound basis for competitive television services, but releases VHF channels for use in other areas where the circumstances require that deintermixture be achieved by creating all VHF areas—again, to achieve the same end of equal competitive facilities.

The UHF stations which stand in a position of being obliterated by VHF grants have exhausted their remedies before the Federal Communications Commission. They are now before the courts, but the courts have indicated that such matters are the responsibility of the Commission. It appears that the proper course in order to save the UHF television service and, consequently, a nationwide competitive television service, is some appropriate action by this committee or by the Congress.

With reference to the matter of subscription television, KJEO supports and endorses the position of the Columbia Broadcasting System and believes that neither the public interest nor the interest of television stations would be served by the establishment at this time of a subscription television service.

I believe I would be unnecessarily imposing on the time of the committee if I were to repeat at length the reasons which have been so excellently presented by the Columbia Broadcasting System and I therefore refer to the statement of CBS for material in support of this view.

Thank you for this courtesy and for your interest.

Respectfully submitted.

J. E. O'NEILL.[1]

ITEM 7

STATEMENT OF THOMAS E. HOWARD, VICE PRESIDENT, JEFFERSON STANDARD BROADCASTING CO.

I. INTRODUCTORY

My name is Thomas E. Howard and I am vice president and managing director of the engineering and general services divisions of the Jefferson Standard Broadcasting Co. This statement is submitted in connection with the hearings which commenced on January 26, 1956, concerning the Federal Communications Commission and television developments. It is respectfully requested that this statement be made a part of the hearing record.

II. JEFFERSON STANDARD BROADCASTING CO.

Our company is the owner and operator of television station WBTV, which operates on channel 3 at Charlotte, N. C., with authorized maximum effective radiated power of 100 kilowatts and an antenna height of 1,090 feet above average terrain. Jefferson Standard Broadcasting Co. is also the owner and operator of television station WBTW, which operates on channel 8 at Florence, S. C., with authorized maximum effective radiated power of 316 kilowatts and and an antenna height of 790 feet above average terrain.

Jefferson Standard Broadcasting Co. is wholly owned by the Jefferson Standard Life Insurance Co., which owns 16.59 percent of the Greensboro News Co., which owns 100 percent of the licensee of television station WFMY-TV, which operates on channel 2 at Greensboro, N. C., with maximum effective radiated power of 100 kilowatts and an antenna height of 720 feet above average terrain.

In addition to serving the communities of Charlotte and Florence, WBTV and WBTW provide satisfactory television service to wide areas surrounding the cities. As an operator of television stations, our company is vitally interested in the current committee hearings.

III. EXPERIENCE AND PRESENT DUTIES

I first became associated with the broadcasting industry in 1925 as an engineer and since that time have been continuously engaged in engineering activities associated with broadcasting and communications. The highlights of my activities include the design and installation of the transmitting equipment of the St. Louis Metropolitan Police Department; installation of KSD-TV, St. Louis, which commenced operation in February of 1947 as the Nation's first postwar commercial television station; the design and installation of television station WPIX, New York; supervision of all phases of WPIX's participation in the Empire State Building multiple-antenna project; and the design and installation of television station WBTW, Florence, S. C.

My military service was in the field of communications, both at home and abroad. I entered the service as a first lieutenant and was separated with rank of colonel.

In October of 1953 I became a director of engineering for radio and television of Jefferson Standard Broadcasting Co., and in 1955 I was elected a vice president.

IV. TELEVISION ALLOCATIONS

A. Sixth report and order

As set forth in section 1 of the Communications Act of 1934, the primary duty of the Federal Communications Commission is to regulate "interstate and foreign commerce in communication by wire and radio so as to make available, so far as possible, *to all the people of the United States* a rapid, efficient, nationwide, and worldwide wire and radio communication *service* * * *" [Emphasis added.]

[1] See p. 633 for a further statement by Mr. O'Neill. See p. 679 for a controverting statement by Paul R. Bartlett, California Inland Broadcasting Co., Fresno, Calif.

The act directs the Commission to allocate broadcasting frequencies "among the several States and communities as to provide a fair, efficient, and equitable distribution of radio *service* to each of the same." (Sec. 307 (b), emphasis added.) The act expressly states that persons engaged in broadcasting shall not be deemed to be common carriers (sec. 3 (h)).

In accordance with the above-noted statutory provisions, the Commission, in its sixth report and order released April 14, 1952, promulgated a national television allocation plan. A résumé of the history of television demonstrates that this plan was the result of intensive and comprehensive studies and hearings.

The first application for a commercial television station was filed in 1939. This application led to hearings commencing in 1940, which resulted in the authorization of commercial television under date of April 30, 1941. By May of 1942, 10 commercial television stations were in operation, but World War II halted further expansion.

In 1945 the Commission allocated 13 VHF channels to commercial television broadcasting.[1] At that time, the Commission made clear its opinion that there was insufficient VHF frequency space to provide for an adequate nationwide television broadcasting system.

The Commission imposed the freeze in September of 1948 primarily because of the fact that operating experience indicated that the operation of stations at the then permissible mileage separations was creating unanticipated interference problems.

Shortly after the institution of the freeze, the Commission appointed an ad hoc committee composed of industry and Government experts for the purpose of assisting the Commission in compiling and analyzing propagation information and other matters concerned with an allocation plan. Some of the members of the above-mentioned ad hoc committee (Messrs, Harmon, Lodge, and Wakeman) are now serving on the ad hoc committee recently appointed by this committee.

In July of 1949 the Commission issued a notice of proposed rulemaking setting forth its proposals for a national television assignment plan. Based on a study of the comments received in response to its notice and the evidence received in a hearing held between October of 1950 and January of 1951, the Commission issued its third notice of further proposed rulemaking in March of 1951. After reviewing written and oral responses to the third notice, and upon consideration of the entire record, the Commission issued its sixth[2] report and order in April of 1952 and commenced processing applications for new television stations in July of 1952.

Although notable achievements have been realized in the short period of time since the sixth report and order was released, certain elements in the industry are urging that basic changes in the allocation plan are necessary. Our view is that the basic features of the allocation plan promulgated by the sixth report and order are sound and should be maintained.

B. Accomplishments of statutory objectives under the sixth report and order

Although the allocation plan promulgated in the sixth report and order has been in effect for less than 4 years, tremendous strides have been taken toward accomplishing the statutory objectives of providing service to all the people of the United States and distributing television service fairly, efficiently, and equitably among the several States and communities. In July of 1952 there were only 108 television stations on the air in 63 communities. Today there are some 440 stations in operation in 278 communities. In July of 1952 there were only 23 markets with 2 or more local stations. Today there are 113 markets with 2 or more stations. As the Chairman of the Commission stated before this committee on January 26, 1956, it has been estimated that over 90 percent of the people now receive service from at least 1 television station and perhaps as much as 75 percent of the people receive service from 2 or more stations. As the Chairman of the Commission stated, research estimates place the total number of television receivers in the hands of the public at some 37 million sets at an investment cost of more than $15 billion, and "the annual volume in television advertising, set sales, and servicing, runs close to $3 billion a year" (January 26, 1956, statement to this committee).

The tremendous growth of the television industry indicated by these statistics attests to the basic soundness of the current television allocation plan. It is submitted that television as a service to the public will continue to grow and

[1] In 1948, one of the 13 VHF channels was assigned to nonbroadcast services.
[2] The remaining reports issued by the Commission during the proceeding were of such a nature as to require no discussion at the present time.

prosper under this plan, which to date has not been fully tried or tested. For the reasons set forth below, it is believed that the various proposals to alter the basic television allocation plan are without merit and that any major alterations will result in deterioration rather than improvement of television service to the people of the United States.

C. Reduced separations, etc.

Our company objects to and opposes any revision of the current television plan which would result in an abridgment of the service areas of existing stations, or encroach upon the future service potential of stations utilizing high power and antennas to provide effective service to outlying rural areas. A number of the proposals submitted to this committee and to the Commission in connection with its current television allocation proceeding (docket 11532), would have this undesirable effect. These include various plans for the assignment of additional television channels by reducing the present minimum cochannel and adjacent channel separation requirements; the use of directional antennas or other restrictive devices; reduced maximum operating powers; and a number of other proposals, most of which were considered and rejected by the Commission 4 years ago in its sixth report and order. The sixth report considered and properly rejected, among other proposals, reduced mileage separation (pars. 109, 111–113, 115, 126), reductions in power (pars. 136 to 140), and the use of directional antennas (par. 220).

The wide area coverage which may be effectively obtained through resourceful use of television frequencies is a fundamental and salutary concept of the present national television allocation table, of which the first and most important objective is to provide at least one television service to all parts of the United States. Until there are no longer any television "white areas" (i. e., areas without at least one adequate television signal) in the country, this objective should be the paramount and overriding goal of the Commission's television allocation provisions. In the 3½ years since the promulgation of the sixth report and order, substantial progress has been made in realizing this primary objective. However, based on the Commission's estimate of present coverage, it appears that some 16 million people in this country are still without adequate television service from 1 station. Undoubtedly, a significant portion of the 16 million people residing in the television desert are located in rural and small-town America. It is an engineering and economic fact that wide area coverage by stations located in urban centers is necessary to bring service to many of these people whose needs for the cultural, educational, and entertainment benefits of television exceed the needs of city dwellers. Television service to these areas should be improved rather than degraded, as has been suggested by a number of witnesses who have appeared before you.

According to a recent survey of television farm penetration undertaken by the United States Bureau of Census, approximately 1,700,000 of the Nation's 4,782,000 farms had television sets in operation during October and November 1954. Although this figure represents only slightly more than a third of the entire rural farm market, the investment in television by farmers it reflects is substantial, and amounts in the aggregate to approximately $500 million, assuming an average retail price per television set of $250,[3] and taking into account the well-known fact that television installation costs are considerably higher on farms than in cities because of the special tower and antenna structures required to pick up satisfactory signals from stations in distant cities. Naturally, this entire sum is not at stake, since many farmers live close enough to metropolitan areas to receive adequate service. However, it is of the utmost importance that the immense investment by the rural populace, many of whom even today receive in return only one television signal, of doubtful quality, be recognized and protected by the Commission in any future action it may take looking toward revision of its present television allocation standards. No restriction should be placed on the future efforts of television licensees to provide, through improvement of their facilities, more and better television service to outlying rural regions on the fringe of their service areas. Likewise, no action should be taken which would in any way encroach upon the rural service which has been established to date.

---

[3] This figure is a conservative estimate, based on data reported in the trade press. For instance, Television Digest for January 29, 1955 (p. 9), estimated that the average retail price of the 33⅓ million sets in use on January 1, 1955, was $270. The same publication on November 19, 1955 (p. 1), contained an estimate, based on figures supplied by the statistical department of Radio-Electronics-Television Manufacturers Association, that a total of 7,900,000 new sets would be sold during 1955 for approximately $1.95 billion, or an average retail price of about $247.

D. Status of UHF

It is recognized that the highly publicized plight of the UHF broadcasters is the basic reason for the current review of television allocations by the Commission and this committee. It is claimed that the present plan does not permit competitive coexistence of UHF and VHF operations. It is stressed that although 152 UHF stations commenced operating since the lifting of the freeze in July of 1952, only some 97 commercial stations were on the air in January of 1956 and that a number of the UHF stations presently on the air are operating at a loss.

To some extent the difficulties of UHF have been the result of economic pressures inherent in any competitive industry and which are not within the control of the Commission. It is submitted, however, that these difficulties are not necessarily of a permanent character and that one cannot write off as impractical the objectives embodied in the sixth report and order, or assume that stations in the UHF band are inherently incapable of competing on a successful basis, under present television allocation plans, with stations in the VHF part of the spectrum.

It should be remembered that UHF television operators are at this date going through an initial stage of growth and expansion similar to that which faced the pioneers in VHF television service during the years prior to and during the freeze. Indeed, UHF difficulties during the years since the lifting of the freeze have been in many respects comparable to those faced by the VHF pioneers in the prefreeze period. The basic problem, then as now, was receiver distribution. An examination of the Commission's financial reports for VHF television stations during the years 1948, 1949, and 1950 in comparison with similar information for the UHF television industry for the years 1953 and 1954 shows that a smaller number of VHF stations sustained much larger operating losses during the initial period when set distribution was being built up than UHF stations have sustained during the corresponding postfreeze period of set conversion.

In 1948 the 50 television stations in operation, including those owned and operated by the networks, had aggregate revenues of $8.7 million, aggregate expenses of $23.6 million, and operating losses of $14.9 million. During this year not one television station had an overall profitable operation. During 1949, by which time 98 television stations were on the air, aggregate revenues were $34.3 million, expenses were $59.6 million, and operating losses had grown to $25.3 million. During this year only four television stations operated at a profit. In 1950, more than a year after the freeze had gone into effect, the television industry, with 107 television stations on the air, reported revenues of $105.9 million, expenses of $115.1 million, and overall operating losses of $9.2 million. During that year only half of the stations in operation showed operating profits. Thus in an initial period of 3 years scarcely more than a hundred VHF television pioneers sustained total losses of some $49 million during the period when receiver distribution throughout the country was being built up.

In contrast to the massive operating losses suffered by the relatively few prefreeze television stations during the period when set circulation throughout the country was being built up, the average losses suffered by UHF stations authorized since the sixth report and order have been relatively small, despite the intervening depreciation of dollar values. Thus, according to the Commission's summary of financial conditions during 1953, the first full year of postfreeze operation, a total of 112 UHF stations in operation had total revenues of $10.4 million, expenses of $16.7 million, and operating losses of $6.3 million. For the following year, 1954, a total of 125 UHF stations in operation had revenues of $25.4 million, expenses of $35.4 million, and total operating losses of $10 million. For the first 10 months of 1954, 18 of the UHF stations in operation had an overall profit. Although comparable figures for the year 1955 are not yet available, it is apparent that during the first 2 years after the freeze the UHF television industry, faced with the same set distribution problem as that which originally confronted VHF operators in 1948 and 1949, has suffered nothing like the overall operating losses experienced by the VHF pioneers and that, in addition, the UHF loss has been distributed over a greater number of operators. Whereas less than 100 operating VHF stations sustained total losses of more than $40 million in the calendar years 1948 and 1949, the total operating losses of a larger number of UHF stations during the year 1953 and 1954 amounted to only slightly more than $16 million, or approximately one-third of those sustained in the early days of the VHF service.

The foregoing comparative financial data for UHF and VHF are set forth in a chart attached hereto as exhibit A.

The operating losses suffered by UHF television stations may reasonably be expected to decrease with the gradual process of conversion throughout the country.

In the proceedings leading to the sixth report, the Commission specifically recognized that:

"It is reasonable to assume that economic problems will be faced by UHF broadcasters in areas where VHF broadcasting exists. Similar problems confronted the VHF broadcasters prior to increased receiver distribution in their respective areas." (Sixth report and order, par. 189.)

Because experience since the lifting of the freeze has borne out the above prediction is no reason for abandoning at this early stage the principles of the current allocation plan which was adopted by the Commission, after exhaustive consideration, in a rulemaking proceeding extending over several years.

It is submitted that no serious attempt has been made by most UHF broadcasters to become competitive with VHF broadcasters by utilizing the facilities available to them under the current television allocation plan. The current allocation plan provides that stations in the lower VHF band (channels 2 to 6) may operate with maximum power of 100 kilowatts e. r. p.;[4] that stations in the upper VHF band (channels 7 to 13) may operate with maximum power of 316 kilowatts e. r. p. and that stations in the UHF band (channels 14 to 83) may operate with a maximum power of 1,000 kilowatts e. r. p. Of the 97 UHF stations on the air in January of 1956 only 4 of these stations were using maximum power and 90 were using less than 30 percent of the maximum authorized power with 30 of these 90 operating with 2 percent or less of maximum authorized power.

On the other hand, of the 341 commercial VHF stations, 217 were operating with maximum authorized power. Only 5 of the VHF stations were operating with 2 percent or less of the maximum authorized power. These facts are depicted graphically on the chart attached hereto as exhibit B.

It is submitted that any station, UHF or VHF, which chooses to utilize only 1 percent or 2 percent of available maximum power can hardly be expected to compete successfully with stations utilizing 100 percent of available maximum power.

We maintain that the real crux of the so-called UHF problem is the UHF broadcasters' failure to utilize fully and effectively the facilities offered to them by the Commission and that this fact is mainly responsible for the difficulties experienced in securing set conversions and network affiliations.

The question naturally arises as to whether it would be economically feasible for UHF stations to install the equipment necessary to achieve maximum power. It is submitted that the cost figures set forth below demonstrate that UHF stations can be as competitive with respect to VHF stations as upper band VHF stations are with respect to low-band VHF stations.

The usual antenna-transmitter combination used to achieve 100 kilowatts e. r. p. for channels 2 to 6 is a 25-kilowatt transmitter and an antenna with a gain in the order of 5.9 to 6.5. The usual combination used to achieve 316 kilowatts e. r. p. for channels 7 to 13 is a 50-kilowatt transmitter and an antenna with a gain in the order of 10 to 12. A combination which will achieve 1,000 kilowatts e. r. p. for channels 14 to 83 is a 25-kilowatt transmitter and an antenna with a gain of between 46 to 60, depending on the channel employed.

The cost to broadcasters for the above combinations is as follows:[5]

Channel and ERP	Transmitter	Antenna	Total
Channels 2 to 6, 100-kilowatt ERP	$145,500	$30,750	$176,250
Channels 7 to 13, 316-kilowatt ERP	212,000	38,500	250,500
Channels 14 to 83, 1,000-kilowatt ERP	186,000	49,500	235,500

Thus, from a capital investment viewpoint, the combination necessary to achieve 1,000 kilowatts e. r. p. on UHF channels is cheaper than that used to achieve 316 kilowatts e. r. p. on upper band VHF channels.

With respect to operating costs, the major items are power consumption and tube replacement. From a standpoint of power consumption it is cheaper to operate the 25-kilowatt UHF transmitter (108-kilowatt power consumption) than

[4] E. r. p. is an abbreviation for effective radiated power, which is a combination of transmitter power output, less transmission line losses, multiplied by antenna gain.
[5] Based on RCA catalog prices.

it is to operate the 50-kilowatt VHF transmitter (140-kilowatt power consumption). The cost of complete sets of replacement tubes for each of the transmitters mentioned above is listed below, based on RCA catalog prices:

Channels 2 to 6	$5,505.22
Channels 7 to 13	13,123.85
Channels 14 to 83	13,100.00

In view of the fact that it is reasonable to assume that tube life for UHF 25-kilowatt transmitters will be substantially the same as the tube life of upper band VHF 50-kilowatt transmitters, there appears to be no significant difference in tube replacement cost as between UHF and upper band VHF stations.

The above statistics indicate that there is no reason why UHF stations cannot make the capital and operating expenditures necessary to achieve maximum power and to become competitive with VHF stations in terms of service and coverage. In this connection, it is recognized that in areas of unusually rugged terrain there will be more "white areas" within the normal service areas of UHF stations than within the normal service areas of VHF stations. However, in most cases these areas can be served through the use of low-cost boosters or translators and there is nothing to indicate that a UHF station operating with maximum power of 1,000 kilowatts e. r. p. with adequate antenna height will not be able to cover effectively its market area and thus be competitive with VHF stations. In addition, the Commission has recently issued a proposal to amend its rules so as to authorize maximum power of 5,000 kilowatts e. r. p. for UHF stations. One UHF station (WJMR–TV, New Orleans) now operating with the presently authorized maximum of 1,000 kilowatts e. r. p. has applied for and received permission for experimental operation using 5,000 kilowatts e. r. p. This experienced UHF broadcaster (2⅓ years on the air) is evidently satisfied that UHF is practical, that it is here to stay, and he is taking positive steps to become and to remain competitive. Unfortunately, such a realistic approach to the problems of becoming an effective part of the industry is the exception rather than the rule among UHF broadcasters.

An effective radiated power of 5,000 kilowatts can be reached by employing a transmitter capable of 100-kilowatt output together with the currently available high power, high gain UHF antennas. RCA recently announced successful on-the-air tests on a new type of UHF amplifier tube which produced an effective radiated power of approximately 4,500 kilowatts during these tests. The RCA announcement stated that this power is more than four times the output of the most powerful existing UHF station and that:

"This test of tube and antenna establishes the engineering validity of ultra-high-power, ultra-high-frequency broadcasting. Radiated power in the order of 4 million to 5 million watts would enable UHF TV stations, so equipped, to extend the area of primary coverage and offer improved television service throughout the present so-called fringe or weak-signal areas" (Broadcasting-Telecasting, Feb. 20, 1956, p. 102).

In view of the above, there is every reason to believe that UHF can be competitive with VHF and that no basic changes in the present television allocation plan should be made at this time.

V. CONCLUSION

In reference to the sixth report and order, we believe that there is not too much wrong with a plan (as yet not fully implemented or tested) which today allows more than 440 stations to provide television programs to more than 37 million receivers serving some 90 percent of the population of the United States. No one has quarreled seriously with the proposition inherent in the sixth report and order that UHF as well as VHF channels are needed in order to realize the statutory objectives of providing television service to all the people and distributing such service among the several States and communities in a fair, efficient, and equitable manner. We believe it is apparent that these objectives are being accomplished under the current allocation plan and that no basic changes should be made in the plan. The present allocation plan should be implemented rather than changed, and UHF stations should be urged to achieve the maximum operating powers and antenna heights currently authorized in order to provide their share of the service contemplated under the sixth report and order.

We believe that the current unsavory reputation of UHF television is, in the main, a result of inadequate use of these facilities rather than the result of inherent deficiencies in the virtually untried UHF system itself. Up until the

75589—56—pt. 2——18

present time we have been prone to compare only the front side of the tags on the various stations. The front side of these tags read "UHF station" or "VHF station." This is a misleading comparison. We have not looked at the reverse side of these tags which all too often read "1 percent UHF station" and "100 percent VHF station." Many of us have been led to believe that the cost of purchasing and operating equipment necessary to achieve maximum powered UHF is prohibitive and places the UHF operator at a great financial disadvantage. This is not so. It costs no more to purchase and operate equipment for UHF 1,000 kilowatt effective radiated power than it does to purchase and operate equipment for VHF 316 kilowatts effective radiated power. We are told of the enormous and unbearable losses of many of the UHF stations without being told that it is written in the history of the industry that it is normal for stations (UHF or VHF) to suffer operational losses in the early stages of operation.

In our own case we found this to be true in the early years of WBTV and we are finding it true today. Our VHF station WBTW in Florence, S. C., has been on the air 1⅓ years and is still operating at a loss. It should be remembered that some VHF broadcasters suffered heavy losses for periods longer than 5 years before they enjoyed the privilege of buying their first bottle of black ink.

All television stations now operate within the provisions of the sixth report and order. However, as is evidenced by many of the proposals that have been submitted, some UHF broadcasters are demanding a new set of standards based solely on their reluctance to invest the amount of money in equipment necessary to participate effectively in the industry. In doing so, they completely disregard the effects such a plan would have on the efforts to develop a truly nationwide service and disregard the interests of the public residing in rural and small-town areas. The standards proposed call for a patchwork of low cost, minimum service, and interference-ridden operations to the detriment of the American public. For example, the proposal to limit the coverage area of each television station to one community would practically eliminate television service to rural and small-town America.

Shall we close our eyes to the big picture and adopt a new plan that will hamstring a great and growing service and industry in order to allow a few broadcasters who choose to be noncompetitive to stay in this business a little longer, or shall we maintain a plan that is adding proof of its effectiveness every day in providing service to all of the people?

We believe that full and aggressive use of the facilities available to UHF broadcasters will result in elimination of many of the current difficulties of UHF stations in securing set conversions and program material. Such action would provide UHF stations with the circulation necessary to effective competition. In addition, this action would serve to create confidence in UHF and its future. The emphasis, by action and by word, should be placed on the positive rather than the negative.

In the final analysis, the Federal Communications Commission under existing law and congressional directives has the responsibility for allocating television channels. This is a problem of tremendous scope and complexity. Our view is that the Commission has faithfully carried out its responsibility in providing the present allocation plan and that this plan, if given the necessary time, implementation, and industry cooperation, will lead to truly nationwide competitive television service for the people of the United States.

Respectfully submitted.

THOMAS E. HOWARD,
Vice President and Managing Director of the Engineering and General Services Divisions of Jefferson Standard Broadcasting Co.

FEBRUARY 29, 1956.

Prepared by Jefferson Standard Broadcasting Company

Senator BIBLE. Pardon my interruption, Mr. Chamberlain. You may proceed. Will you identify yourself for the record? And may we have quiet in the room?

STATEMENT OF PAUL L. CHAMBERLAIN, GENERAL MANAGER, BROADCAST EQUIPMENT, TECHNICAL PRODUCTS DEPARTMENT, ELECTRONICS DIVISION, GENERAL ELECTRIC CO.

Mr. CHAMBERLAIN. Thank you, Senator.

My name is Paul L. Chamberlain. I am general manager for broadcast equipment, electronics division, General Electric Co., in Syracuse, N. Y.

I am appearing here today as a representative of a television-equipment manufacturer. My testimony will be concerning UHF broadcasting and receiving equipment and technical problems which have a bearing on UHF broadcasting. For the information of the committee members, the General Electric Co. is one of the pioneers in the television field. We manufacture both UHF and VHF television-broadcast transmitters and studio equipment, television receivers, picture tubes, and receiving tubes. The company conducts an extensive research program in the entire area of communications through the facilities of the General Electric research laboratory in Schenectady, N. Y., and the electronics laboratory in Syracuse, N. Y. The scientists of these laboratories and our extensive engineering organization have been making important basic contributions to the television art in a number of areas, not the least of which is the ultra-high-frequency area.

In my appearance before the Communications Subcommittee on May 20, 1954, I outlined in some detail the technical contribution of the General Electric Co. in developing and producing VHF and UHF broadcast equipment. At that time I was accompanied by two associates who similarly outlined the company's contributions with respect to VHF and UHF receivers and tubes. I would hesitate to take the committee's time to review this record other than to emphasize again that our company delivered the first 12-kilowatt UHF transmitters less than 6 months after the first construction permit was issued by the Commission. At the time I testified we had delivered 44 UHF transmitters, of which 34 were 12-kilowatt transmitters; and we had equipped 100 percent of all stations operating with more than 5 kilowatts of transmitter power and more than 90 percent of all stations over 1 kilowatt.

At that time I predicted delivery of a 60-kilowatt UHF transmitter by the spring or summer of 1956. Despite the fact that economic problems of the UHF broadcasters necessarily affected the incentive to press these developments, the ingenuity of our engineers had enabled us to meet and exceed the predicted effective radiated power. For example, we have had in operation since January 1955 a transmitter/amplifier and antenna operating at WILK, Wilkes-Barre, Pa., producing 1,000 kilowatts of effective radiated power; and we have produced equipment for WGBI, Scranton, Pa., capable of effective radiated power of 2,000 kilowatts. This equipment is currently being installed.

I review these facts as a foundation for the statement that the broadcast equipment industry in general, and General Electric in particular, has utilized every available bit of engineering and research talent to provide successful high-power UHF broadcasting equipment to the broadcast stations, and that, although this effort has been made infinitely more difficult by the economic problems of the industry, nevertheless resourcefulness and ingenuity have been brought to bear to make a substantial technical contribution.

In the company's receiver story, told by Dr. Fink in 1954, the noise factor for UHF receivers was outlined. He reported a then industry average of 20 to 24 decibels, with General Electric UHF receivers closing the previous year at 16 to 20 decibels and then currently running at 12 to 16 decibels. In charts which are a part of the record of that hearing, he demonstrated the significance of this noise factor in terms of received picture on the UHF receiver. He predicted that further gains could be expected from set manufacturers.

In reviewing this situation with my associates of the receiver operation of the company, prior to appearing before you today, I was advised that further progress in the state of the art has, in fact, been made. It is now possible to achieve a noise factor three decibels better than our last report to you by using a radically different receiver tube developed by our engineers. This tiny tube, which could go in the front end of a UHF receiver, is an offshoot of a classified military type.

If you will forget decibels for a moment—and I know most of you are not engineers—I would like to express it in this next sentence: That this improvement in receivers is as effective, as far as the looker and listener is concerned, as quadrupling the effective radiated power of the transmitter. I just happen to have a tube here in my pocket——

Senator BIBLE. That was very thoughtful of you. [Laughter.]

Mr. CHAMBERLAIN. A tiny little fellow, Senator [showing tube].

Senator BIBLE. It certainly is.

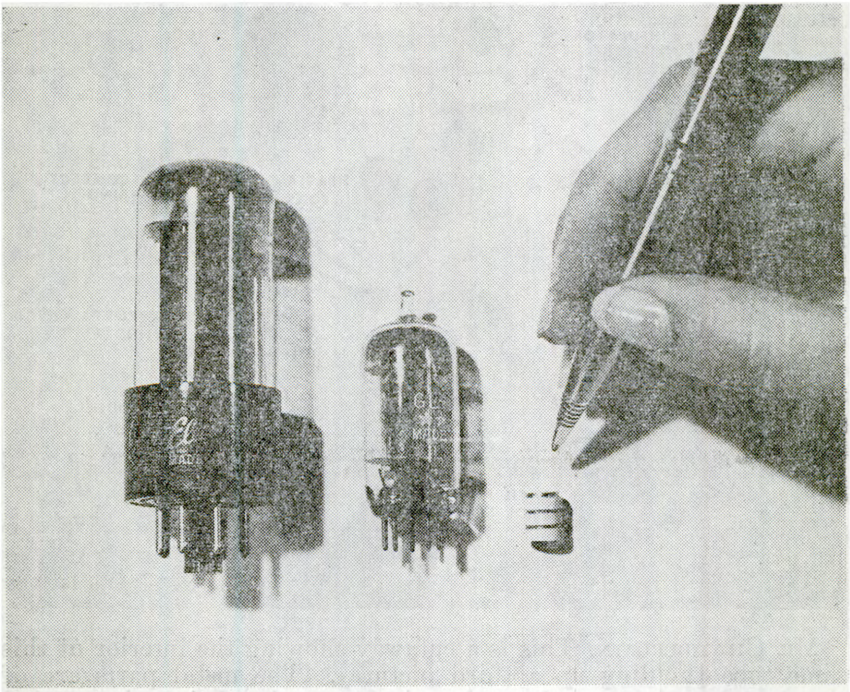
Mr. CHAMBERLAIN. Again, departing slightly from this prepared text, and in an attempt to clarify this just a little bit——

Senator BIBLE. You could almost make that tube a part of the record.

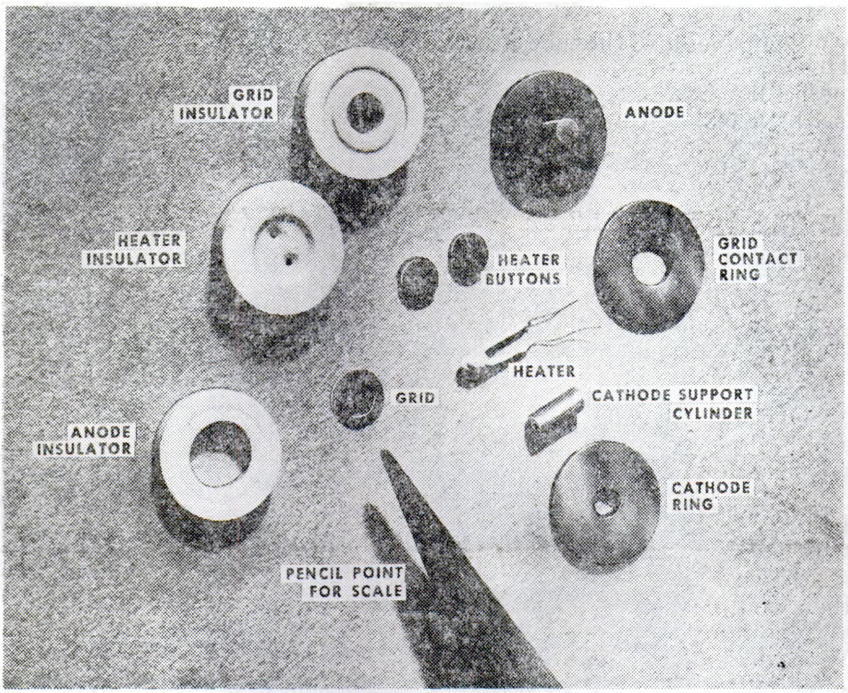
Mr. CHAMBERLAIN. That is right. Here is a picture of that tube compared to a miniature glass tube and the standard-sized glass tube and with the lead pencil in there, as a matter of scale.

Senator BIBLE. It certainly illustrates the point very well. This can be made a part of the record, for the benefit of the committee.

(The picture referred to, together with an enlarged photograph of the components of the tube, are as follows:)



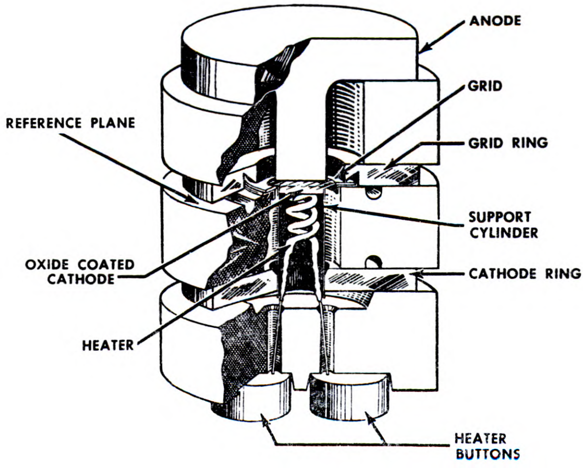
Milestones in radio and television receiving tube development. At left, conventional glass type with plastic base; center, miniature-type tube; right, new ceramic microminiature introduced by General Electric.



Mr. CHAMBERLAIN. This is a cutaway showing the interior of this same tube [holding up a third picture]. The metal parts are of titanium, largely, the body of the tube is ceramic. It is an interesting thing. This tube can be used in certain classified work, including missiles. It is capable of full operation, at great exalted temperatures—temperatures in excess of 700° C.

Senator BIBLE. Let's likewise make this part of the record.

(The picture is as follows:)



G-E MICRO-MINIATURE CERAMIC TUBE, TYPE 6BY4

Mr. CHAMBERLAIN. It looks like a blowtorch at that point. Here are some of the parts that go in there. I will touch on one of them. This structure labeled "grid" in the center portion of this tube is a mesh, like a fly screen, if you want to think of it that way. There is a little bit of difference, though. The wires are four ten-thousands of an inch in diameter. That is about one-fifth as thick as a human hair, and they are spaced 1,000 to the inch.

Mr. COX. Could you tell us, if it is not classified, just generally how the cost of manufacture and of operation of a set with this in it would compare with the present sets?

Mr. CHAMBERLAIN. Would you like me to talk on that now?

Mr. COX. If you have it in the statement later, that will be all right.

Mr. CHAMBERLAIN. I would like to defer that, if I may.

Mr. COX. All right.

Senator BIBLE. I would be interested in that because I just got a bill on my little TV set yesterday for a tube. If it isn't classified, you may develop it in the course of your testimony.

Mr. CHAMBERLAIN. Our tube operation sampled every tuner manufacturer in the industry and every set manufacturer in the industry with free samples of this radical, new tube, offering them our assistance toward the development, by them, of successful applications in their equipment. These initial samples were shipped without cost, and we have made additional samples available at nominal charges. We understand that many companies in the industry have devoted considerable time and effort toward achieving successful applications of this new tube.

We can summarize our receiver story in substantially the words used by Dr. Fink to the effect that the noise factor has been the fundamental limitation on UHF receiver performance and that, although television set manufacturers cannot be complacent, gratifying progress has been and is being made.

I would be the first to concede that I am not qualified to pass on the broader issues involved in this allocations dilemma. My experience has been primarily in the development, manufacture, and marketing of equipment. From that standpoint, it is my unqualified opinion that there is available today UHF transmitting and receiving equipments capable of furnishing an adequate service so far as the technical considerations of the equipment are concerned.

The General Electric Co. did file a statement in the FCC's pending Allocations Rule Making Proceeding, docket 11532. I would like to file with this committee a copy of that statement without taking the time to read it into the record.

Senator BIBLE. How long a statement is that? It can be made a part of the record. Is that attached to your statement?

Mr. CHAMBERLAIN. Yes.

Senator BIBLE. It will be made a part of the record.

(The information is as follows:)

FEDERAL COMMUNICATIONS COMMISSION, WASHINGTON 25, D. C.

Docket No. 11532

In the Matter of Amendment of Part 3 of the Commission's Rules and Regulations Governing Television Broadcasting Stations

COMMENTS OF THE GENERAL ELECTRIC CO.

As a manufacturer of both UHF and VHF transmitters and receivers, the General Electric Co. has from the beginning been closely associated with the matters covered in docket 11532, and it is in this capacity that these comments are being filed.

To those of us who have more particularly developed, manufactured, installed, and checked out UHF transmitter and antenna systems, it is of vital concern that if UHF is to be abandoned, it is not

(1) given up under the mistaken impression that it is incapable of giving an adequate service;

(2) lost by default—through failure to recognize that without positive prompt action to help UHF now, it may soon become economically impossible for UHF to continue as a television service.

If UHF is to be abandoned, we urge that such a drastic irretrievable step be taken only with a full awareness of the consequences, based on a thorough examination of all the critical facts.

In our judgment, based on an intimate day-to-day association with many UHF and VHF stations through our capacity as the supplier of equipment, all that has been established by television operations from the sixth report and order to date is that UHF stations have generally not survived competition with VHF stations in the same markets. Taken to its logical conclusion, this may then force a choice between an all-VHF television service or an all-UHF television service. Although there may appear to be some intermediate solutions, we suggest that any compromise between these two positions will in the long run ultimately prove to require the abandonment, for economic reasons, of the UHF channels. It is for this reason that we conclude that it is essential to examine carefully the ultimate issue at this time.

In any choice between an all-VHF or an all-UHF service, the availability of 70 UHF channels would, in the absence of very special circumstances, tend to weight the balance almost conclusively in the direction of UHF, keeping in mind the Commission's broad objectives as expressed in the sixth report. However, the trend at the moment discloses an almost exclusive preoccupation with the infinitely more limited VHF channels, or compromises based on the use of VHF. The purpose of our comments is to urge that any consideration of the issues in this rulemaking proceeding should start with a thorough objective inquiry into the possibility of an adequate all-UHF television service.

We suggest that although such a study appears to be both the obvious and the logical first step, it has never been the subject of any intensive inquiry[1] and therefore it may well be that no one is today properly qualified to state whether UHF can or cannot give an adequate nationwide competitive TV service.

We wish to make it clear that the General Electric Co. is not supporting (or attacking) the concept of an all-UHF service. Our position is only that the first and primary question to be resolved by the Commission in this rulemaking is whether it is possible to have an adequate television service utilizing UHF channels. Not until this question is definitely settled can it be possible to proceed with assurance to a consideration of the other alternatives—each of which involves infinitely more far-reaching compromises of FCC principles.

An all-UHF television service was in fact originally contemplated by the FCC (Chairman Hyde's testimony before the Communications Subcommittee, p. 132). It has more recently been said that "In theory very significant gains would accrue to the public if this were to happen. And indeed if the decision on television allocations were being made for the first time, it would be difficult to conceive of a good argument against having all television in the UHF * * *" (the Harry M. Plotkin memorandum of February 1, 1955, prepared for the Senate Committee on Interstate and Foreign Commerce: p. 10).

[1] See, for example, par. 25 of the sixth report and the testimony of then Chairman Hyde before the Communications Subcommittee at p. 141 (May 1954).

A major objection has been said to be the cost to the public of converting its receivers.[2] However, any study would presumably include an examination of proposals for a transition period which would be coextensive with the useful life of the great majority of existing television receivers. A move of the television service to UHF over such a 5- to 7-year period, with stations permitted in the meantime both a VHF and a UHF channel, could greatly reduce the economic impact on the public. Such a period would also coincide with the volume sale of color receivers and the peak of the normal monochrome replacement purchases—both of which factors could be helpful in easing the conversion problem. The public would in effect have adequate notice, so that when individuals in the normal course of events came to purchase a color set or a second set or a replacement for their wornout monochrome set, they would buy either a VHF–UHF set or a UHF-only receiver. In this sense at least theoretically there would be no major economic loss suffered by the public. Station operators would in general have time enough to fully depreciate their VHF transmitters, and to use VHF income to cover their investment in UHF equipment. We do not represent that the net effect would be to please every interest: we are faced with a true dilemma where there is no one satisfactory solution. It is necessary for some interests to be intruded upon, and the question is to make sure that all of the interests are adequately evaluated. A transition period of this nature would not seem to foreclose further consideration of this approach when we consider the critical nature of the problem; the 10 years already devoted toward attempting to realize the basic objectives; and the advantages offered by a 70-channel service compared to a 12- or 15-channel service.[3] Furthermore, though it seems essential to program any such conversion over such a period of time, the study may disclose that many major advantages would be realized almost immediately, in the event that such an approach is deemed to be feasible.

Assuming then that there is no controlling reason foreclosing the consideration of an all-UHF service, we wish to express our conviction that a thorough objective study of the performance characteristics of UHF equipment would bring into existence for the first time sufficient evidence to permit a conclusion to be drawn on the technical ability of such equipment to give an adequate television service.

There are respects in which VHF is capable of providing a better television service than UHF.[4] We suggest, however, that this would not necessarily warrant a conclusion that the Commission is, therefore, limited to VHF channels for its television service. A cadillac is superior to a Chevrolet in several respects, but the Chevrolet is capable of providing a more than adequate transportation service. If it were necessary to abandon production of 1 of the 2, it is

---

[2] Note in this respect that since the sixth report many proposals designed to help achieve the objectives of that report and order sought indirectly to require the public to buy all-channel receivers. It was, for example, suggested that manufacturers be required to manufacture only all-channel receivers—either by agreement or statute. The objection made to most of these proposals was not the cost to the public—it was that the proposals were either not practical or not effective. Particularly when viewed over the transition period which has been suggested, the cost to the public—rather than being considered an absolute bar to a move to an all-UHF service—should perhaps be considered and weighed as one of the investments required to achieve the most efficient and effective utilization of a great national natural resource, the spectrum.

[3] We suggest that of all the current proposals, the all-UHF approach could be said to have the highest value potential:

(1) It is the solution most likely to produce the fewest continuing conflicts in the constant struggle for space in the spectrum.

(2) It would both conserve spectrum space and represent an efficient utilization of the spectrum.

(3) It will enable equipment manufacturers to concentrate on accelerating the development and production of advanced designs of transmitters and receivers.

(4) It will serve the anticipated needs of many other critically needed existing FCC services, as well as the military for additional VHF space.

(5) In contrast to the complexity of engineering and administering VHF drop-in programs, it would provide a simple, fundamental, long-term solution to the overall allocation problem.

(6) All television stations would then be on a basis of substantial equality in terms of their ability to compete with each other both for programs and audience.

(7) By the same token, there will be room for one or more additional strong networks since there will be outlets available in key markets having equal desirability, each with the other in those markets.

(8) Long-range future expansion would be more easily facilitated through the use of 70 channels, compared to the severely limited spectrum space available in the very high frequency area.

[4] Note in this connection that the VHF drop-in proposals would inherently appear to destroy at least some of the very characteristic as to which the VHF superiority is most advertised—coverage. There are of course some respects in which UHF is inherently superior to VHF. See in this connection the October 7, 1955, petition of the American Broadcasting Co., pp. 9 and 10.

conceivable that considerations of maximum economy and efficiency in utilization of critical materials might tip the balance toward the Chevrolet—even though it is inferior to the Cadillac in much the same sense that UHF is inferior to VHF. The study we propose of the technical capabilities of UHF would be designed not to compare it with VHF, but to determine whether despite some disparities in that comparative respect, UHF still has an absolute capacity for adequate service which justifies the FCC in considering retaining the 70 UHF channels for the television service.

There is, of course, the problem of whether sufficient assignments could be made in an all-UHF allocation table to permit realization of the objective of a nationwide competitive service. While this would obviously have to be explored, we have a less acute allocation problem with a 70-channel service than with a 12- or 15-channel service, so this does not seem to be the critical consideration at this stage.

Consistent with our approach to this rulemaking proceeding, we refrain from comment on VHF drop-in proposals, proposals for additional VHF channels, and other alternatives, consideration of which must necessarily proceed on the unproven assumption that an all-UHF service is economically or technically impossible, and favorable action on which would probably lead to the practical abandonment of the UHF channels. Disposition of deintermixture proposals also would depend on a determination of the adequacy of UHF.

It would seem of critical importance that existing UHF stations be encouraged to remain in operation during the period of any study such as that suggested in these comments. Should such a study affirmatively establish that UHF is capable of giving an adequate service, we suggest that it is particularly important that there be a nucleus of operating UHF stations to serve as the base on which to build the transition period previously outlined. On the basis of our close association with many of the currently operating UHF stations, it is our firm conviction that it will take some affirmative action from the Commission at this time, if many of these UHF stations are to continue in operation. Whenever the Commission acts to authorize a VHF station whose signal inevitably will enter a market now served by UHF stations, the ability of such UHF stations to continue is definitely jeopardized. We strongly urge that if the Commission concludes that a study should be inaugurated to establish the facts with respect to the ability of UHF to give an adequate television service, it should at the same time adopt a policy of not authorizing any additional VHF stations during such period where the effect of the operation of such a VHF station would be to enter a market now served by UHF stations.

In closing our comments, we again wish to emphasize that the General Electric Co. is definitely not proposing an all-UHF television service. We are urging that before the UHF channels are lost to the television service either by intent or by default, there should be a major effort to determine what the facts are with respect to ability of UHF to furnish an adequate service. We do not, ourselves, know the final answer although we are convinced that there is considerable misunderstanding in this area. We would, therefore, propose that the Commission accept the offer of the RETMA Frequency Allocation Study Committee to conduct those technical studies which the Commission may determine are essential to its consideration of the issues in this rulemaking proceeding; and that the first such inquiry should ideally be into the effective coverage of UHF broadcasting under various conditions of terrain and power. In our opinion, there should be sufficient data fairly readily available on this specific inquiry to permit a highly informative report to be made within 60 to 90 days.

Respectfully submitted.

W. J. Morlock,
General Manager, Technical Products Department, General Electric Co.

Syracuse, N. Y., *December 12, 1955.*

Mr. Chamberlain. However, since this statement has apparently been misunderstood in some quarters, I would like to take time enough to summarize the company's position as outlined in this statement.

To those of us who have developed, manufactured, installed, and checked out UHF transmitter and antenna systems, it is of vital concern that if UHF is to be abandoned it is not—

(1) given up under the mistaken impression that it is incapable of giving an adequate service;

(2) lost by default—through failure to recognize that without positive prompt action to help UHF now, it may soon become economically impossible for UHF to continue as a television service.

If UHF is to be abandoned, we urge that such a drastic, irretrievable step be taken only with a full awareness of the consequences, based on a thorough examination of all the critical facts.

In our judgment, based on an intimate day-to-day association with many UHF and VHF stations through our capacity as a supplier of equipment, all that has been established by television operations from the FCC's sixth report and order to date is that UHF stations have generally not survived competition with VHF stations in the same markets.

It would seem reasonable under these circumstances for a major effort to be directed toward developing and strengthening the use of the 70 channels available in the UHF part of the spectrum. However, to our deep concern, the trend for the past few months has disclosed an amazing preoccupation with the infinitely more limited VHF channels or compromises based on the use of VHF.

The real purpose of our comments before the Commission was to urge that any consideration of the issues in that rulemaking proceeding should start with a thorough, objective inquiry into the possibilities of the more effective use of the UHF frequencies as a condition precedent to achieving an adequate nationwide television service.

We suggest that although such a study appears to be both the obvious and the logical first step, it has never been the subject of any intensive inquiry, and therefore it may well be that no one is today properly qualified to state whether UHF can or cannot give an adequate television service.

Effective utilization of the UHF channels—

(1) offers the solution most likely to produce the fewest continuing conflicts in the constant struggle for space in the spectrum;

(2) would enable equipment manufacturers to concentrate on accelerating the development and production of advanced design of UHF transmitters and UHF/VHF receivers;

(3) would provide a fundamental, long-term solution to the overall allocation problem;

(4) would provide room for one or more additional networks;

(5) would facilitate long-range future expansion.

Assuming there is no overall controlling reason for avoiding use of the ultra high frequencies, it is our conviction that a thorough, objective study of the performance characteristics of UHF equipment would bring into existence, for the first time, sufficient evidence to permit a conclusion to be drawn on the technical ability of such equipment to give an adequate television service.

The study we propose of the technical capabilities of UHF would be designed not to compare it with VHF, but to determine whether, despite some disparities in that comparative respect, UHF still has an absolute capacity for adequate service which justifies the FCC in taking the steps necessary to retain the effective use of the UHF channels for the television service, however radical these steps may initially appear to be.

In closing my comments, I wish to emphasize that the General Electric Co. is definitely not now proposing an all-UHF television service.

We are urging that, before the UHF channels are lost to the television service either by intent or by default, there should be a major effort to determine what the facts are with respect to the ability of UHF to furnish an adequate nationwide service.

Senator BIBLE. Thank you very much, Mr. Chamberlain.

Do you have any questions?

Mr. COX. Yes, sir.

Senator BIBLE. You may proceed.

Mr. COX. Could you comment now, then, on that cost item that we raised a while ago?

Mr. CHAMBERLAIN. The cost of the tube—the selling price, the retail selling price has not been definitely established. Assuming that it is well accepted, and that volume production can be achieved, we think it will be priced under $5 at list, and I hasten to point out that list prices on tubes generally only prevail where the serviceman puts them in the socket. When go you to the store and buy them, generally speaking you buy them for somewhat less than list.

Mr. COX. How does that compare with the existing glass tubes that are in use?

Mr. CHAMBERLAIN. There is no directly comparable existing glass tube. It is certainly higher in price than many tubes used for TV purposes.

Mr. COX. How does its life compare and its performance, powerwise, and so forth?

Mr. CHAMBERLAIN. It is too early to tell about life except in the laboratory. Sometimes those tests are not conclusive. I see no reason why it should not be as long lived as existing tubes. In many respects it is a more stable, rugged tube. It will stand acceleration sufficient to adapt it to missile work, for example. It is entirely free from microphonics. It is built like a brick house, shall we say.

Mr. COX. Does it enter into this problem of whether or not you can get the same service in the high ranges of the UHF band of spectrum as in the lower ranges, or doesn't it relate to that problem?

Mr. CHAMBERLAIN. It does definitely. It is a high-frequency tube. The noise measurements I mentioned were taken at 900 megacycles, which is just above channel 84 in the UHF band. It is designed with this purpose in mind.

Mr. COX. Could you tell us just in general terms what the percentage of all-channel sets now being manufactured is?

Mr. CHAMBERLAIN. I am not sure I could give you the industry figures. I took a reading on it with our own people just the first of this week, and we are currently manufacturing and shipping 18 percent of our production in all-band sets.

Mr. COX. Is that more or less than you have done in the past?

Mr. CHAMBERLAIN. We have been as high as 25 percent at times, and usually found them backing up in the warehouses when that occurred. We have been, I think, as low as 15 percent, so it is pretty close to being an average, I would say.

Mr. COX. Does that include both color and black-and-white sets?

Mr. CHAMBERLAIN. We are not currently building any color receivers.

Mr. COX. Could you tell us what is the cost differential between your VHF-only and your all-channel sets, approximately?

Mr. CHAMBERLAIN. Between $20 and $30, depending on whether it is in the higher price range or the lower price range.

Mr. COX. Is that to the consumer?

Mr. CHAMBERLAIN. Yes. All of these are consumer prices. I think, if I may say so, there has been too much confusion in people quoting manufacturing prices at times, rather than selling prices, and you get a distorted view since we are on the incentive system in this country.

Mr. COX. It is this differential which makes a man make up his mind whether he buys it or not?

Mr. CHAMBERLAIN. Yes, sir.

Mr. COX. In a statement of Mr. Howard which was inserted in the record he quotes some costs for transmitters and antennas which show that the combined cost for transmitter and antenna for the low-band V channels would be about $176,000, for the high-band V channels, about $250,000, and for the UHF band something less than that, around $235,000. Now, that doesn't quite agree with some information we have had. Would that be, in your opinion, more or less accurate?

Mr. CHAMBERLAIN. I assume, Mr. Cox, that these are for the maximum effective radiated powers that are permitted in these bands?

Mr. COX. Yes; 100, 316, and 1,000 kilowatts, respectively.

Mr. CHAMBERLAIN. I can tell you what our list prices are.

Mr. COX. That would be very helpful.

Mr. CHAMBERLAIN. VHF channels for 100 kilowatts, ERP, a 35-kilowatt transmitter with a 3-bay antenna with a gain of somewhat over 3, the selling price is $163,000. In the high channels, 7 through 13, for 316 kilowatts, ERP, using a 50-kilowatt transmitter and the proper antenna, it would amount to $253,000. We can achieve a megawatt of power two ways, and have done so: In WILK we are using a 23-kilowatt transmitter, and an antenna with a gain of 50—the price tag is $226,000. We can get the same megawatt with a 45-kilowatt transmitter and a 25 gain antenna—that comes out to $244,000. I can add one more while you are at it.

Mr. COX. All right.

Mr. CHAMBERLAIN. We can go to 2 megawatts, which is what WGBI has requested permission to use on a temporary experimental basis, at a cost of $270,000.

Mr. COX. How would the power costs of operation in these three categories compare? Are they roughly the same, or do they get more expensive as you go up the spectrum?

Mr. CHAMBERLAIN. It gets progressively higher. I would hasten to point out, however, that when you consider the total operating cost per hour of a TV station, including the investment and talent, programing, and manpower necessary to handle it, and all the rest of it, the power cost is not a large percentage of the total.

Mr. COX. It can cost more than that?

Mr. CHAMBERLAIN. That is right.

Mr. COX. Could you tell us something in general terms about the area coverage efficiency of transmitters in these three categories, assuming, let us say, you are in a region where the terrain is not unfavorable to UHF—that is, where there are not a lot of hills?

Mr. CHAMBERLAIN. That gets to be kind of a tough one to answer, Mr. Cox. The closest I can come, I think, to giving you a factual story on it will not answer your question exactly as you have expressed it, but it will give a measure of comparison on power.

I would like to go back and refer to a chart which was part of my testimony before the subcommittee in 1954 in which I attempted to do just that. This chart was drawn to illustrate the comparative power necessary for given coverage on channels 7 through 13 in the case of a VHF station, and channels 14 through 83 in the case of a UHF station, both stations located in Washington, both stations using the identical tower height of 500 feet.

In order to get grade A coverage for a radious of 10 miles we needed 1.6 kilowatts ERP for VHF and 5 kilowatts for UHF. For a grade A coverage of 24 miles we needed 60 kilowatts ERP on VHF, high channel, and 250 kilowatts on UHF. For 32-mile grade A coverage, 200 kilowatts for VHF and 1,000 kilowatts for UHF. Now, the ratios in power—effective radiated power—as compared between a U and a V vary on these 3 distances from 3 to 1 in the case of the shorter range coverage to 5 to 1 in the case of the longer range coverage.

There should be one thing pointed out, and that is that you can achieve, economically, much higher gain, as we term it, in a UHF antenna than you can in a VHF antenna. Gains of 50 are entirely practical on a UHF antenna. Gains much in excess of 12 are very expensive and difficult to get on VHF, in an economically sound structure, so the disparity between transmitter powers is not as great as the disparity in effective radiated power.

Mr. Cox. In the figures that you gave there, you had gotten the UHF station up to its then permissible maximum power of a thousand kilowatts?

Mr. Chamberlain. That is right.

Mr. Cox. You had the high band V up to 200 kilowatts but it could still go up another 116 kilowatts?

Mr. Chamberlain. That is correct.

Mr. Cox. So that that would have given it some additiinal coverage which could not then be duplicated with the permissible power of the U station?

Mr. Chamberlain. That is correct, as long as you continue the spacings that were set up by the sixth report and order. By that I mean that if you go to any drop-in proposition, such as has been proposed, you will artificially limit in many cases——

Mr. Cox. Interference will enter the picture?

Mr. Chamberlain. Interference will be the governing factor rather than the ability of the transmitter to lay down a signal at a distance. I submit that you can get the same effect any time by examining the AM spectrum. We have had broadcasters using 250 watts on AM who can see their tower lights farther at night than they can hear their stations without interference.

Mr. Cox. Changing our assumptions to allow for some hilly terrain, or for foliage, and so forth, does the differential as between the effective area of the two types of stations become much greater there?

Mr. Chamberlain. I beg your pardon; would you restate that?

Mr. Cox. Let us move it to Pennsylvania where you have hilly terrain. Is the differential between the effective area coverage of a high band V and a U station going to be more unfavorable as far as the U is concerned?

Mr. CHAMBERLAIN. You will have deeper shadow areas if you are on the shadow side of a mountain or something of that sort. It takes more power to fill in satisfactorily. I hasten to point out, though, that as Senator Bible said earlier, translaters, repeaters, satellites, whatever you want to call them, furnish a very economical means of filling in such areas, and probably can be licensed to be operated unattended. I would expect that would be the case.

Mr. COX. With regard to this 2,000-kilowatt transmitter at Wilkes-Barre, has your experience been such as to lead you to believe that that can duplicate the coverage, reasonably closely, of a V station operating at maximum power?

Mr. CHAMBERLAIN. For two reasons, I can't answer that. The first is that the station is not on the air yet with the 2,000 kilowatts, and the second is that there is no V in the area to compare it to.

Mr. COX. Those are two good reasons.

Shifting to another point, there has been some suggestion that UHF has certain advantages over VHF as far as color transmission is concerned. Could you comment on that?

Mr. CHAMBERLAIN. I have heard that statement made. I cannot speak from full knowledge. I have not seen a UHF transmission and a VHF transmission side by side, and I think you would have to see quite a few under varying circumstances, and under controlled conditions, before you could make that statement, and have it proved one way or the other.

There are some slight advantages or disadvantages—paper advantages and disadvantages, at least—on one over the other. The people I have talked to—in both our transmitting and our receiving areas—the engineers doubt if there is any significant difference. They frankly think it is pretty much of a standoff. Now, we do know that on UHF certain types of interference, such as automobile ignition and lightning, are not factors, and they are sometimes bad factors on VHF. That would apply either to black and white or to color.

Mr. COX. You talked about the economics of the broadcasting industry as affecting the development of new equipment, et cetera. Mr. Storer testified regarding a proposal that his company had made for detintermixture and other allocation changes which, in his opinion, would create some 25 markets in the top 100 which would be either all UHF or with only one V station, which he thought would permit the U's to continue to operate. He estimated this would comprise some 20 million families and some 4 million sets. Do you think the preservation, on a sound continuing basis, of that much of a UHF operation would afford sufficient incentive to equipment manufacturers to continue to develop the transmitters and receiving equipment and continue the progress you have been outlining?

Mr. CHAMBERLAIN. I do.

Mr. COX. That is all.

Senator BIBLE. Thank you very much, Mr. Chamberlain, for your very helpful analysis.

The chairman has to make a rather urgent phone call. We will take a 5-minute station break and be back at 11:25.

(There was a short recess taken.)

Senator BIBLE. The committee will come to order, please.

Our next witness is Martin F. Malarkey of the National Community Television Association.

We are very happy to have you with us, Mr. Malarkey. You may proceed.

STATEMENT OF MARTIN F. MALARKEY, JR., PRESIDENT, NATIONAL COMMUNITY TELEVISION ASSOCIATION

Mr. MALARKEY. Thank you very much, Senator.

Mr. Chairman, members of the committee, at the outset I wish to express my sincere appreciation and that of the National Community Television Association for the opportunity you have given to us to appear and present certain facts about the community antenna television reception available in those areas having little or no television service.

The National Community Television Association, as the name implies, is a national organization of community antenna television operators and affiliated manufacturers and suppliers of community antenna television equipment, formed for the purpose of promoting the development of community antenna television. At the present time it represents more than 200 operating companies throughout the United States, as well as 15 manufacturers and suppliers of community antenna television equipment.

During the course of my remarks I will briefly describe the short history, scope, and functions of the community antenna industry, referring to the mode community which has been set up in the hearing room. Then I will discuss the basic problem of securing adequate television reception in fringe reception areas, remote from television broadcast stations.

Senator BIBLE. That I am glad to hear. Go right ahead.

Mr. MALARKEY. Thank you.

I will make certain recommendations toward a solution of these problems. I will also address myself to certain matters which, I understand, have been raised before this committee regarding the legal status of community antenna television and the extent to which, if any, the Federal Communicationss Commission or State regulatory agencies should exercise control over the community antenna industry. I will, of course, welcome any questions from the committee or its counsel.

In the hearing room with me are E. Stratford Smith, general counsel and executive secretary of the National Community Television Association; Mr. Fitzroy Kennedy, chairman of the board of Spencer-Kennedy Laboratories, Inc., of Boston, Mass.; and Mr. Donald-Spencer, president of that company. Spencer-Kennedy Laboratories is a prominent manufacturer and supplier of community antenna television equipment. Mr. Kennedy is also the chairman of an advisory committee of such manufacturers and suppliers affiliated with the association.

Also present is Mr. Milton J. Shapp, president of the Jerrold Electronics Corp., of Philadelphia, Pa., another prominent manufacturer of community television equipment. Mr. Shapp will testify in his own behalf on the fringe area reception problem. I may, with the permission of the committee, call upon these gentlemen to assist me in responding to some of the legal and technical questions which may be addressed to me.

The concept of community antenna television is quite simple. It involves an extension of the apartment house and hotel master antenna systems to an entire community, or part of a community. Generally, community antenna systems will be found in communities where topographic or geographic conditions preclude, or seriously limit, reception from existing stations, and, secondly, where only limited local television service, in terms of network services and number of stations, is available. The model village in the committee room illustrates the basic principle of a community antenna system. In the typical case a master receiving antenna is located on a mountain top where signals of distant stations are to be received. [Indicating on the model.]

You will notice separate antennas are constructed for each channel. Signals are received at this point, amplified and transmitted by means of a coaxial cable down into the community to be served, and at a distribution point within the area suitable line amplifiers, which you see represented in small models here on different poles, are used to amplify the signal. Then the coaxial cable is used to distribute the signal into the individual homes of the public desiring the service.

Senator BIBLE. That cable isn't kept above ground, though?

Mr. MALARKEY. Yes, sir. The cable is mounted on telephone poles and power company poles within the community.

Senator BIBLE. Ordinarily don't you go underground?

Mr. MALARKEY. There have been 1 or 2 systems constructed underground. The majority of them are above ground.

Senator BIBLE. I see. Thank you.

Mr. MALARKEY. It is the usual practice to require an initial payment, sometimes called a connection charge, from each subscriber. This is used to defray, in part, the cost of building the system.

Senator BIBLE. Do you have an average figure on that?

Mr. MALARKEY. The average figure, sir, is about $125.

A monthly maintenance charge, which will average $3.50 per month, is collected from each individual subscriber. Basically, a community system provides an antenna service that delivers to its customers all the program content, without alteration or deletion in any way, of the signals it receives at the master antenna site. It cannot guarantee to bring to its subscribers any particular program, or series of programs. We are not in the business of furnishing a program service. The basic function is that of a master receiving antenna, almost wholly analogous to those found in apartment houses and hotels in large cities.

The industry is hardly more than 5 years old. It dates from the first system installed at Astoria, Oreg., in 1949, which was, as far as we have been able to learn, a noncommercial operation. The first commercial community antenna system is believed to be the one installed at Lansford, Pa., in May 1950. From this beginning the industry has grown to an estimated 465 community antenna systems throughout the United States, serving more than 1,250,000 people. The investment in the industry has been estimated to range from $30 to $50 million. This, of course, is only a very, very small part of the public investment in television, and it is not contended that community antennas constitute a large segment of the television economy. Community antenna television is simply one facet of the overall television industry, but one which plays a very significant part in making television reception available on a truly nationwide basis.

The question into which the committee is inquiring today relates to the development of ways and means for meeting the requirements of what, for the most part, are small cities and towns, for either their first, improved, or additional television service. In these cases, broadcast stations have either not been considered economically practical, or more service than the community could provide through available stations is desired.

The demand of the public for television in these areas is such that it cannot be ignored or denied. The problem, of course, is not new. It has existed almost from the day the first television station went into operation. The community antenna television industry was born out of this requirement for service. In fact, it is the only method, up to this time, which has made significant progress in the direction of making fringe area reception possible. The community antenna industry agrees wholeheartedly with what it knows is the sentiment of this committee—that every reasonable effort must be made to reach communities not now having adequate, or any, service. Moreover, the community antenna industry does not oppose any legal and technically sound methods of bringing television service to remote areas, whether they be translators, satellite stations, or other means. Such other methods will not sound the death knell for community antenna television. We are completely confident that community antenna television systems are, and will remain for a long time, a necessary and significant factor in the fringe area television picture. In fact, we believe that in most instances, if not hampered by unnecessary restrictions, community antenna television can do a superior job at a cost which the public will be willing to pay in exchange for the assurance of continued, high-quality service, furnished by responsible management, financially and technically qualified to serve the public.

Therefore, I wish to emphasize the fact that our industry is not opposed to the establishment by the Federal Communications Commission of a technically and financially sound translator service; and it is our earnest hope that the Commission will be able to finalize its rules and regulations for such a service in the near future. The fact that sound standards should be adopted would seem elementary, since the public should not be misled into purchasing television receivers in situations where the translator operator is neither technically nor financially qualified to furnish and maintain consistent high-quality service.

The community antenna television industry has been, and is continually devoting its energies toward the development of new, low-cost, high-quality equipment to make community antenna television service practical in an increasing number of communities. I do not refer merely to research programs in making this statement. Much of this equipment is now available and more will shortly be announced.

There are ways in which the Federal Government could assist this industry in its endeavors to bring service to more communities at reduced cost. It is the intention of the industry shortly to petition the Federal Communications Commission for permission to utilize certain microwave frequency bands suitable for television transmission to serve community antenna television systems. This can be done without in any way interfering with other users of microwave frequencies. Approval by the Commission of this proposal, when it is presented, could substantially improve the ability of the community antenna industry to serve many more television-starved communities in cases where terrain and distance factors have heretofore made antenna systems impractical. Legislation is not necessary. There is nothing to inhibit amendment by the Commission of its rules to give the community antenna industry direct access to microwave service, once it has been convinced of the practicability of our proposal.

Another matter upon which I wish to touch briefly is the question which, I understand, has been raised before this committee regarding the jurisdiction of the Federal Communications Commission, if any, with respect to community antenna television. The suggestion has been made that the investment in community antenna television systems is "in a more or less dubious state until the question is decided."

I would like to say that the community antenna television industry does not regard its investment in this service to be in a dubious state, or in any way unsound, by virtue of the absence of any ruling by the Federal Communications Commission on the subject. A ruling by the Commission that community television systems are subject to its jurisdiction certainly would not destroy the community television industry. On the other hand, I wish to make it clear that community television operators do not believe that they are, or should be, subject to public utility type regulation by either the Federal or State governments. Community television service, while it is a public service, as are many private businesses which serve the public, is not, in our opinion, a public utility type industry.

Community television systems do not have the protection normally afforded to utilities. They are subject to competition from television stations, satellites, translators, and so forth, and such other methods of providing television service as may be authorized. An increase of power or the relocation of a television transmitter can change the competitive picture for a community antenna television operator by throwing a strong signal into a community which was never before reached. Competition and the threat of competition may be expected to maintain rates and charges at a reasonable level.

With the advent of the translator service, for example, there unquestionably will be even greater competition than exists today, and the proponents of each service will endeavor to convince the public that theirs is the most economical and practical. Accordingly charges must be established by community antenna television operators on a competitive basis. Obviously, also, for competitive reasons, service standards must be kept high. Regulation is only justified where a monopoly is permitted. Community antenna television systems do not enjoy a monopoly in the furnishing of television service. To place the community antenna television systems under utility-type regulations would, in our opinion, have the immediate effect of discouraging the flow of investment capital into the industry, and of equal importance, would substantially impair the ability of existing operators to maintain, improve, or extend their services.

The investing public must be assured of a reasonable opportunity to recover their investment, together with an adequate profit in a business so fraught with change as television. It is doubtful that governmental agencies could or would wish to give to community television the traditional protection against competition that utilities generally enjoy, and which justifies regulation of their rates and services. Utility-type regulations would make investment in community antenna systems unattractive and could be expected to materially retard the further progress of this industry. The loser, of course, would be the public.

Gentlemen, I have endeavored to make this statement brief and to the point. By way of summary, we want the committee to know that the community television industry is as anxious as the committee to provide ways and means to bring television reception to the maximum number of people. We are pleased that the Commission is finally proposing to establish rules of the road governing the operation of low-cost translator stations to assist in resolving this problem. We have not opposed, and do not oppose, such a service if founded on a sound technical and economic basis which will assure to the public continuous, reliable service.

We also plan to develop the use of microwave transmission links on a non-common-carrier basis. As I stated just a moment ago, we believe that the community antenna television industry is a public-service industry, but that it is not a public utility type industry and that it can best flourish and serve the public interest under a concept of free competition with other methods of providing television service.

Thank you very kindly for your courtesy in granting me this time this morning, and I will be pleased to answer to the best of my ability any questions which members of the committee or counsel may have.

Senator BIBLE. Thank you very much, Mr. Malarkey. I am rather interested in what your studies have shown as to the size community which a community antenna system can economically serve.

Mr. MALARKEY. That, Senator Bible, depends entirely on several factors: How close is that community to a signal source. A community of 500 to 1,000 homes—as small as 500 to 1,000 homes—could economically be served by a community antenna TV system if the signal source were a mile or two away on the top of a mountain.

Senator BIBLE. By 500 homes do you mean 500 homes with TV? Is that 500 receiving sets?

Mr. MALARKEY. 500 potential receiving sets.

Senator BIBLE. 500 potential receiving sets?

Mr. MALARKEY. Yes, sir.

Senator BIBLE. Thank you.

Mr. MALARKEY. Yes, sir.

Senator BIBLE. Do you have, in your operation throughout your 200 operating companies, towns of that small population that have community antennas?

Mr. MALARKEY. Yes, sir; there are operations in West Virginia, for example, that serve as few as 25 and 30 homes.

Senator BIBLE. And that is economic?

Mr. MALARKEY. It is economic, because of the fact that the signal is available within a few hundred feet or a half mile away on top of the mountain. You run a coaxial line down into the homes. Usually the systems are built on a cooperative basis.

Senator BIBLE. If you are in an area that is truly an isolated area—and I am pinpointing my own State and thinking of Tonopah Valley, which is hundreds of miles from anywhere. It is 200 miles from Las

Vegas, 200 miles from Los Angeles, 400 miles from San Francisco, and they have the rather sizable Sierra Nevada range, which breaks it off from the coast. Would it be possible to operate a community antenna system in a community like Tonopah, which has about 700 homes? I don't know if I have assumed all the factors necessary for an intelligent answer.

Mr. MALARKEY. It is possible that a community television system would be feasible in Tonopah providing microwave service were made available to us so we wouldn't have the long overland haul into that community.

Senator BIBLE. The size of the community, then—in attempting to sum up what you are saying—the size of the community to be served depends a great deal upon the expense in receiving the signal?

Mr. MALARKEY. Yes, sir; that is correct.

Senator BIBLE. Thank you. You may proceed.

Mr. COX. Are you able, when you go into a community of this sort, to extend service to everyone there who wants it, or do you find that the extension of your lines within the community to serve certain more or less isolated people on the fringes would be uneconomic?

Mr. MALARKEY. No, sir. The standard practice has been to extend the service into the remotest parts of town. If a town grants a franchise, or permission to develop the system, it is usually done on the basis that the system will provide service to all within the confines of the appropriate limits of the town.

Mr. COX. If you have to run a special line out to a man who lives, say, a half a mile or a mile beyond anyone else, does he have any additional connection charge because of that fact, or does he pay just the charge that is paid by everyone else in the community?

Mr. MALARKEY. There have been cases that I am familiar with where that question has been raised. Usually we revert back to the old public utility company concept of contribution in aid of construction, and if a chap who is 2 or 3 blocks or a half a mile away from the end of the line desires the services, we will make it available to him upon his paying a connection charge that would be higher than what the people would pay that are along the regular lines, with the understanding that any homes that desire the service in between his home and the end of the system, when they connect to it, he would be refunded the money. That is usually the case.

Mr. COX. You mentioned a franchise. When you go into a community, you have to then get permission from the governmental authorities to establish your system?

Mr. MALARKEY. Yes, sir.

Mr. COX. Is that usually an exclusive franchise?

Mr. MALARKEY. No, it is not.

Mr. COX. That is, if another operator wanted to come in, the city would still be free to grant him similar permission?

Mr. MALARKEY. That is correct.

Mr. COX. Then you enter into some sort of contractual permissive arangements with the telephone company or power company to permit stringing of your cables?

Mr. MALARKEY. Yes, sir.

Mr. COX. Do any of these systems which have been installed emit radiation in the sense that might, for that limited purpose at least, bring them within the control of the FCC?

Mr. MALARKEY. I would like, if I may, to refer that question to Mr. Smith.

Mr. COX. Certainly. Mr. Smith?

Mr. SMITH. Yes, Mr. Cox. There have been from time to time, problems arise because of the spurious radiation from the components of community antenna systems, and it is possible—technically possible—to minimize this radiation to a point where it does not interfere with off-the-air reception, and the Federal Communications Commission has instituted rulemaking procedures proposeing to limit the amount of radiation from any point on a community antenna system. The Community Television Association has helped the Commission formulate the proposed regulation and filed comments in the proceeding.

We would say that they certainly have whatever jurisdiction they have to control the emissions or radiations from diathermy equipment, TV sets, etc. That would equally be applicable, I think, to community antenna systems. That is not the utility type regulation, however.

Mr. COX. Did you have something further?

Mr. MALARKEY. No, sir.

Mr. COX. You mentioned the average connection cost and average monthly charges. Could you tell us, at least approximately, what would be probably the maximum charge in each of those categories by a member of your association?

Mr. MALARKEY. There are systems that have chraged as high as $160 for a connection, and there are systems who have charged as high as $7.50 per month, as their service and maintenance charge, but in those remote instances I would like to point out that the systems were usually located in communities that were spread wide apart, required tremendous investment in cable and equipment, and in the case of the system that charged $7.50 monthly, they had contracted for microwave from the American Telephone & Telegraph Co., upon which they had to pay an $8,000 or $9,000 monthly rental; and the greater majority of that $7.50 monthly charge was, of course, to pay for the microwave——

Mr. COX. To get the signal into the community?

Mr. MALARKEY. Yes, sir; to enable the people to enjoy reception.

Mr. COX. Would it be reasonable to say that generally both the connection charge and the current monthly charge bear a relation, in the first instance, to the system's capital expenditures and, in the second instance, to its own operating expenses?

Mr. MALARKEY. That is correct.

Mr. COX. Now, doesn't there come a point in time, however, where the system will have recouped its investment in full?

Mr. MALARKEY. Yes, sir.

Mr. COX. Does it continue, either through the initial connection charge or through excess current charges, to take in revenue beyond that point? Is there any reduction then made in the current charge, or is that continued at an even rate for the future?

Mr. MALARKEY. The pattern that has developed over the past 3 years is a pattern of continually lowered connection charges to the customers. The system will charge $125 originally for its initial connections; possibly after the first 500 they will see fit to drop it to $95 and then to $65, then to $35. There is one system that now makes connections at no cost. They just pay the monthly charge.

Mr. Cox. When these are reduced, is there a credit back to the people who paid the higher rate? They pay that for the first service?

Mr. Malarkey. Yes, sir.

Mr. Cox. Do you obtain permission from the originating stations to distribute the signals which you receive?

Mr. Malarkey. No, sir. It is not our practice to ask for permission to receive the signals.

Mr. Cox. Has this ever been challenged by the operator of a station?

Mr. Malarkey. Since we are getting into the legal end of it, I would like to refer that to Mr. Smith.

Mr. Cox. Mr. Smith?

Mr. Smith. Yes, Mr. Cox. I would like first just to amplify Mr. Malarkey's preliminary answer. We do not as a matter of official policy go to TV broadcast stations and say, "Will you please give us permission to receive your signals?" This was done in the early stages of the industry on several occasions, and in some instances the stations immediately wrote out permission because they wanted the additional coverage that could come as a result. However, a lot of station operators realized they didn't know themselves exactly where the property rights, if there are any in a broadcast signal, would lie. For example, a lot of the programs are network programs. The station necessarily wouldn't have authority to grant any property-right permissions, if that issue is basically involved here.

Also, artists' and performers' societies, unions, sponsors, ad agencies, all manner of persons, might very well claim property rights, and the stations really were not in a position to grant any and all necessary permissions, if any permissions were required—and I want to keep emphasizing that. And on several occasions stations, including one of the prominent networks, said, "Don't bother to ask us. We want the additional coverage that your industry provides, but we are not in position to give you formal statements in writing." So we did adopt this practice of not going and officially requesting permission.

In almost every instance, however, the stations are well aware of the fact that their signals are being received, and in a majority of cases they furnish our operators copies of their program schedules, so that they can indicate what is going to be on their particular channel, at what particular time of day.

Now there have been a few isolated instances where broadcasters have undertaken to challenge the right of community systems to pick up their signals. They are so few that I can mention them specifically, if you would like me to.

Mr. Cox. That is unnecessary.

Mr. Smith. All right. The uniform response of the community antenna operators in those instances has been to the effect that the community antenna is operating nothing but a master antenna system, and that once a signal is broadcast into the air, any member of the public has a right to the reception of it in his own home for his private consumption, and that the question of how the signal is received—whether it be on a master antenna, in an apartment house, on a mountain-top, from a pair of rabbit ears on the top of somebody's TV set, or a roof-top antenna—has nothing to do with property rights.

If any rights exist in the broadcast signals, the community antenna operator does not infringe them because he is only exercising the rights of the public to receive the service, and he is only being paid for the purpose of furnishing an antenna system. Briefly, that is the answer that our operators have always given, and thus far we have not actually been taken to litigation on the question.

Mr. Cox. Would you say, then, that that makes a distinction between the FCC's treatment of this question in the Bridgeport booster case, on the ground that you are not providing a rebroadcast, and the booster there was?

Mr. Smith. I would certainly think that that would be the basis for treating, or putting, us in a different category. If we were in a position to have participated in that case and the issue were before us, that is precisely the argument that we would have made. We do not broadcast. We just furnish an antenna service. In the case of the boosters, it is a rebroadcast and the Communications Act itself requires permission of the originating stations for a rebroadcast.

Mr. Cox. Have boosters or translators been installed in areas where community antenna systems are in operation, Mr. Malarkey?

Mr. Malarkey. Yes. There have been several instances, Mr. Cox.

Mr. Cox. Has there been any effect on the quality of your service from such operations?

Mr. Malarkey. We have heard that there have been records of interference, interference signals from the boosters into the receiving antennas of the community antenna systems in that area.

Mr. Cox. That is, they get a second image on the screen?

Mr. Malarkey. A double image, yes, sir.

Mr. Cox. Perhaps this is something on which you would not have any reliable figures, but could you express an opinion as to whether or not the citizens of a community could install and maintain a booster or translator for more, or less, than the average cost of installing and operating a community antenna system?

Mr. Malarkey. I believe Mr. Smith would be more familiar with the economics of that question that I would be.

Mr. Cox. Fine.

Mr. Smith. That, Mr. Cox—and I am also going to take that ball and toss it to another witness you are going to have this afternoon, who is devoting a substantial amount of his presentation to that matter—but it would depend on the individual communities involved to a great extent. We think that over a period of a year or two, in many communities, that it can be demonstrated that the antenna systems will furnish a service at less cost to the public, but Mr. Shapp this afternoon can elaborate on it at length, I think.

Senator Bible. I hope this afternoon is not too many minutes away. [Laughter.]

Mr. Cox. Do your operations tend to discourage the development of a local TV station in the area, or have you primarily operated in areas which, in your opinion, would never support a station?

Mr. Malarkey. We operate primarily in those areas that economically would not support a TV station.

Mr. Smith. Might I supplement that? This is a development that has just been evident through FCC public releases during the last month or two. There is a substantial indication today that potential broadcasters are not hesitating to apply for satellite construction permits in areas occupied, or being served, by community antenna systems. We are seeing more and more of it every day. I really do not believe that we are a substantial hindrance to the development of broadcast service.

Mr. Cox. Do you not in some instances actually operate in areas where there is a local station, where your service consists of additional program choices?

Mr. MALARKEY. That is correct.

Mr. Cox. If that station in that area is a UHF station, and you are able to provide your service without conversion of the viewer's set, do you not possibly impede his attainment of conversion in that area?

Mr. MALARKEY. No, sir. That has not been the case. I can give you a specific instance of a UHF-TV station that today depends primarily upon the coverage given to it, or provided it, through 22 or 25 community antenna systems in the area. If it weren't for those community TV systems, the president of the station tells me that his coverage wouldn't be nearly as great as it is.

Mr. Cox. Could you tell us what station that is?

Mr. MALARKEY. That is WHUM-TV, channel 61, in Reading, Pa.

Mr. Cox. I take it none of your systems provide any locally originated programing at all?

Mr. MALARKEY. There have been systems who have attempted to originate local programs—not because of the commercial value, but because they were endeavoring to supplement the lone signal, or the signals, that they were able to receive at their mountain, and give their customers some additional entertainment on the third channel in the system.

Mr. Cox. In connection with that, do they sell advertising or derive revenues in addition to the monthly charges?

Mr. MALARKEY. Mr. Smith can correct me in this statement if I am wrong, but I understand that of the 2 or 3 operators who have attempted closed-circuit operations on a commercial basis, they have stopped operations.

Mr. SMITH. There are just a limited few still in operation, and going specifically to your question, 1 or 2 of them have attempted to sell commercials for their closed circuit operation. I don't want anybody to get confused on this point, however: They do not sell commercials and interrupt, or in any way alter, the broadcast signals that they receive and insert commercials on those channels. And my understanding also is that the few who have attempted to sell local spots to support their own third channel, or second channel, whatever it may be, haven't found it to be a too successful venture; and most of them do it just for the purpose of making—when I say "most", the few who do—do it for the purpose of making the basic antenna service more attractive to the community and more serviceable to the community.

Senator BIBLE. Mr. Malarkey, just a couple of questions occurred to me. I am wondering how long a contract a subscriber signs when he asks for the community installations in his home.

Mr. MALARKEY. Senator——

Senator BIBLE. A year, or 2 or 3 years?
