Each network must be considered separately. In considering the position of the CBS Television network in any of the markets concerned, the percentage of such market occupied by it must be considered separately from the percentage occupied by other networks. It has not been suggested that there is any combination, horizontal conspiracy or joint action of any kind among the presently existing networks in any of the markets. There is vigorous competition among the networks in every phase of the business. That is the first major distinction between the *Paramount Pictures* case* and the situation presented by the television industry. In the *Paramount* case the major motion picture companies were found to have combined and conspired to restrain trade and competition, which in the court's view justified lumping them together for the purpose of applying the usual tests of monopoly. Since no such conspiracy or

*A digest of this case is included in Appendix A.

combination exists among the television networks, each must be treated separately for antitrust purposes.

In defining monopoly, the issue is whether there exists power to affect price and not the reasonableness of the price actually charged. Therefore, whether profits are high or low is not strictly speaking relevant under Section 2. However, evidence as to profits and whether the level of prices is high or low is usually admitted in monopoly cases and may sometimes throw light on other problems such as the possibility of monopoly or even the extent of power over prices. Properly measured, CBS's profits have not been high. The operating ratio or percentage of margin on sales of the CBS Television Division in 1954 was 7.8% after taxes, while the CBS Television network's margin on sales after taxes was 4.6%.

The national advertising market. The basic business function of network television broadcasting is to furnish a medium for carrying an advertising message to the national public; and in that business it competes with a variety of other media, including newspapers, magazines, radio and national spot television. Of the estimated $5,287,000,000 spent last year in the total national advertising market, only $173,575,800 or 3% was received by the CBS Television network. Clearly the network does not monopolize the national advertising market.*

The television segment of the national advertising market. The CBS Television network does not monopolize the portion of the national advertising market consisting of television ad-

*CBS radio and television broadcast revenues from national advertisers totaled $230,400,000, or 4.3% of total national advertising expenditures in 1955.

75589 O—57—pt. 4——31

vertising. According to the figures for total national television advertising expenditures in the last quarter of 1955, only 27.2% of the total was received by the network. Control of only 27% of a market is clearly not a monopoly. This percentage position of the network is accounted for by the fact that the television segment of the national advertising market is highly competitive within itself.

Within the television segment, the competition between national spot advertising and network advertising is strong. In the last quarter of 1955, 47% of total time expenditures for national television advertising consisted of time charges paid directly to the individual television stations selected by national advertisers for national spot television advertising without any use of networks. 50% of the 50 largest CBS Television network customers are included in the 100 largest buyers of spot time and some of them spend more of their budget for spot than for network broadcasting. Advertisers continue to use both spot and network advertising, and they shift their efforts between the two from time to time depending on their conclusions as to the competitive advantages and utility of each for their needs. The percentage of national television advertising consisting of spot broadcasting has steadily grown and its continuing rapid growth shows that the CBS Television network does not monopolize the television segment of the national advertising market.

Within the television segment of the market there is also vigorous competition among the networks. No one of the three networks is dominant. Of the total network share of television advertising in 1955, CBS had approximately 43%, NBC 41% and ABC 16%. These percentages change frequently. Since 1953 ABC's share has nearly doubled. Moreover, 76% of the 50 largest customers of the CBS Television network also use another network and 58% of the 50 largest time customers of the network in 1955 were among the 50 largest customers of at least one other network.

The fact that there are at present only three regularly operating national networks is not evidence of monopolistic restraint, but is the result of the lack of available comparable broadcast channels and the economics of network broadcasting. In only 4.2% of the nation's localities which now have television stations are there more than three such stations. Thus, assuming that each station will be the primary affiliate of only one network, there are not enough stations in enough localities to support more than three regularly operating national networks at this time, although it can be expected, as the FCC makes more comparable channels available for station broadcast, that one or more additional networks may be possible even without using time on stations now affiliated with one of the present networks.

Nothing in present network practice or FCC regulations prevents the formation of regional or part-time national networks which would rely in large part on use of stations now primarily affiliated with the existing national networks. However, in order to furnish the necessary programs, facilities and interconnection services, large fixed costs and long-term major responsibilities must be assumed by any organization which seeks to operate as a network on a regular basis. That is the economic fact that limits the number and variety of networks operating today.

The "markets" for television broadcast time and for programs. The television segment of the national advertising market from the advertiser's viewpoint concerns the sale of "customer potential"; and from the network and public's viewpoint it concerns the sale of programming service. However, some persons primarily interested in one facet of the business urge that it is reasonable to recognize a separate special market for television broadcast time and a separate special market for programs. Recognition of such special purpose markets seems to distort the real economic fact, since from the viewpoint of the network, the public and the advertiser, only the combination of time and program (programming) is the subject of commerce. In any event, as discussed below and as shown in the chart on page 25 if such "markets" are recognized, the CBS Television network does not monopolize either of them or any part thereof.

Television broadcast time market. As the chart on page 25 above shows, the CBS Television network occupies only 15.0% of the total television broadcast time and, as set forth above, in the last quarter of 1955 received only 23% of the net time billings for national television advertising. In the localities including the cities of over 100,000 population, the CBS Television network occupies only 18.1% of the television station time and only 22.4% of the evening time in such localities.

Television program market. Similarly, as shown on the chart on page 25, of all programs broadcast on television, the

CBS Television network produces only 3.9% alone and produces an additional 2.0% in association with others. Of the programs broadcast in the evening hours in cities with populations of over 100,000, the network produces only 8.3% alone and 2.0% in association with others.

Even if the CBS Television network controlled all programs which it broadcast, it would still control only a small part of the total program market, for, as shown on the aforementioned chart, the network broadcasts only 15.0% of the total hours of programs broadcast on television and 22.4% of the total hours of programs broadcast in the evening hours in cities of over 100,000 population.

The CBS Television network is a major outlet for the programs of independent producers. Of the programs broadcast over the network in the week ending April 7, 1956, the network produced 22.7% alone, and produced 27.1% in association with others, and 50.2% were produced by outside producers. The creation of programs for television broadcasting by independent producers is a highly competitive and rapidly growing business. It is estimated that there are at least 800 independent agencies engaged in that business, ranging in size from small producers with very little investment in staff or facilities to the major theatrical film producers. Some of the concerns producing programs for television have greater assets than any of the existing networks; and the financial resources of the nation's large banking institutions are increasingly being made available to finance program production by independent producers. Employment figures for the month of February, 1956, indicate that in Hollywood alone, employment in the production of independent programs for television has increased more than threefold over the level of 1955. The experience of CBS shows that both the total number and dollar sales of independently produced programs shown on its television net work have increased every year and the percentage of total broadcast programs produced by the network has steadily declined.

Single station localities. The CBS Television network has affiliation agreements with 86 television stations in single station localities. In only 15 of those localities is the single station affiliated solely with CBS. Those facts do not establish that the network has a monopoly in those localities. Even if the network controlled all the broadcast time of its affiliates in such one station localities, it would not, standing alone, constitute an illegal monopoly under Section 2. Mere ownership or control of the sole outlet in a locality does not in itself constitute a violation of the Act. That principle was reaffirmed in the motion picture cases, wherein the Supreme Court emphasized that mere ownership of the only theatre in one theatre localities did not constitute a violation of Section 2. For example, in *United States* v. *Griffith,** the Court said:

> "Anyone who owns and operates the single theatre in a town, or who acquires the exclusive right to exhibit a film, has a monopoly in the popular sense. But he usually does not violate § 2 of the Sherman Act unless he has acquired or maintained his strategic position, or

*A digest of this case is included in Appendix A.

> sought to expand his monopoly, or expanded it by means of those restraints of trade which are cognizable under § 1." (334 U. S. 100, 106)

The court went on to point out that an otherwise lawful monopoly, consisting of the ownership of the sole outlet in a locality, could constitute a violation of the Act, *if* it were coupled with the specific intent to use, or actual use of, the monopolistic position to restrain trade in other markets. As pointed out later, the CBS Television network has not engaged in any of those restraints of trade which are cognizable under Section 1, nor does the network derive any power from its position in one-station areas which could be used to restrain competition in other areas. Moreover, the network does not in fact possess a monopoly, or anything approaching a monopoly, in the one station localities where the single station is affiliated with CBS. As indicated by the chart on page 25 above, even there, the network alone produces only about 5.2% of the hours of programs broadcast and occupies only about 21.1% of the total broadcast time.

b. Attempt to Monopolize

There is no basis for a charge that the CBS Television network has attempted to monopolize under Section 2 of the Act. In the absence of a conspiracy or other conduct prohibited by Section 1, specific intent must be proved in order to support a finding of an attempt to monopolize under Section 2. There is, of course, no evidence of any such intent. In the absence of evidence of specific intent, such intent would have to be inferred from the action of the CBS Television network in one of the markets concerned. But 50% of its 50 largest customers are also included in the hundred largest national spot television advertisers, and, of course, the programs used for such spot broadcasts as well as for 50.2% of the CBS Television network hours are purchased from outside sources. Moreover, of the 50 largest CBS Television network customers, 76% of them are also customers of at least one other television network. Accordingly, it seems clear that the CBS Television network does not in fact endeavor to prevent its purchasers of either broadcast time or programs from purchasing either broadcast time or programs from other sources. The small percentage of the market and various market segments occupied by the network, and the steady increase in the percentage of such market occupied by national spot advertising, other networks and independent program producers, together with the absence of unusually restrictive or unreasonable business practices, make it clear that there is no evidence from which any "attempt" by the network to monopolize could be inferred.

The figures in the foregoing discussion represent the portions of each of the market segments occupied by the CBS Television network, measured by programs and station time. That is the proper measure of market control in considering the applicability of Section 2, since only a part of the option time of affiliates is actually available to the network. The options are exercisable only for commercial programs upon 56 days' notice, are not effective against programs of other networks, are not effective against programs broadcast by local stations because of special public interest, and are not effective with respect to network programs considered by the local station to be "unsuitable or unsatisfactory". That those factors are real limitations on the effectiveness of CBS option control is indicated by comparing the total number of hours theoretically subject to its option control to the total number of hours which it actually occupies.

The chart on page 25 above shows that all time affected by CBS options is not actually under its control. In cities with a population of 100,000 or more, advertisers ordered 73.0% of the evening hours subject to CBS options, and CBS was able to clear as ordered only 62.6% of those hours.

Even if CBS did have control of all time subject to its option, those options would not be evidence of an "attempt to monopolize" any part of the market since, as shown on the chart on page 25, they only apply to 20.7% of the total television broadcast hours of all stations in the United States and to 19.2% of the evening broadcast hours of all stations in the localities containing the nation's cities of over 100,000 population.

c. CBS-Owned Stations

If the non-network revenues and programs of the CBS-owned stations are considered separately or in conjunction with the position of the CBS Television network, the conclusions heretofore reached with respect to Section 2 do not change. As is shown at page 6, each of the CBS-owned stations, including the stations for which CBS has applications pending, is situated in a market with substantial competition. The national spot television time revenues of the CBS-owned stations in 1955 represented only .3% of all national advertising expenditures, only 3.9% of national television time expenditures, and only 8.8% of national spot television time expenditures. The local television time revenues of the CBS-owned stations in 1955 represented only 1.5% of all local television time expenditures.

It will be seen, therefore, that if the CBS-owned stations are considered together with the CBS Television network, they do not substantially change the position of CBS in any of the markets discussed above.

d. Conclusion re Section 2

From the foregoing it is clear that CBS does not approach actual monopoly in the segment of the national advertising market consisting of television advertising or any part thereof, and there is no evidence of any attempt to monopolize. That is a second major difference between the facts of the motion picture cases and the television broadcasting industry. In the *Paramount* case the defendants owned 70% of the theatres in the country's 92 cities of over 100,000 population and received 73% of the domestic film rentals, and together had a position of market dominance in film distribution and exhibition approaching that of actual monopoly. It is important to note that the court did not find even that position to constitute a monopoly or even an attempt to monopolize in itself, but found a violation of Section 2 *only because* that market position had been used as "a definite means of carrying out the restraints and conspiracies we have described".

4. *Section 1 of the Sherman Act (Combination in Restraint of Trade)*

a. General

Section 1 of the Sherman Act provides:

> "Every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several states or with foreign nations, is declared to be illegal."

The functions performed and the practices engaged in by the CBS Television network are reasonably required to meet the needs of the industry, including the requirements of stations, advertisers and the public, serve the "public interest, convenience and necessity", do not prevent or hinder competition in the industry and are not in any respect illegal restraints of trade under Section 1.

There is no evidence of any contract, combination, conspiracy or other joint action among the networks. There is no evidence of combination or conspiracy, contract or agreement among the CBS affiliates.

The term "restraint" in the Act was not meant to include restrictions reasonably related to a legitimate business function. The functions of networks are reasonable and desirable and, as discussed in subsection b below, have been recognized by Congress and the FCC as such. Similarly, the practices of the CBS Television network, including option time, basic-required and programming, as discussed in subsections c, d, and e below, are clearly necessary to the legitimate doing of business, and any restrictions involved therein appear to be reasonably related to serving the network's legitimate business function.

b. Reasonableness of Network Functions

A network's principal business function is to furnish a national medium to advertisers. To do that it must assemble and have available a chain of local stations which together will afford a substantially nation-wide coverage. To that end it obtains affiliates, which, subject to a number of conditions that have already been mentioned, provide the network with reasonable assurance that they will broadcast sponsored programs of the network during certain hours of the broadcast day. The affiliate is the supplier of one element of the national medium, namely local broadcast services. In network broadcasting the affiliate does not buy anything from the network. It simply agrees to put its facilities at the network's disposal for an agreed price.

Network practices are functional. It is the function of a television network to present desirable program material to a large enough national audience to make it worthwhile for advertisers to bear the large expense of program production and transmission necessary for disseminating their commercial messages. Economic factors in the television industry dictate the functions and practices of CBS network broadcasting. Good programs are often expensive; so is the time needed to broadcast them. In order to persuade advertisers to bear these costs, the advertisers must be assured that an audience of sufficient size can be reached. One of the best ways to reach such an audience is to link together many different stations for the simultaneous broadcast of the program. In order to link stations together expensive interconnection facilities must be arranged. And in order to have stations to link, the network must have a call or option on some of the broadcast services of each station and the station must share in national advertising revenues. Finally, the programs must be good individually, and together must present a balanced and attractive whole, to attract and retain the necessary large audience and to preserve the reputation of the stations and the network.

In order to bring programs of the highest quality and proper variety to the nation's public, free of charge, all of these ingredients must be present: a balanced schedule of good programs and broadcast services must be available to the advertiser; interconnection facilities and revenue must be available to the affiliates. The function of a television network is to assemble those ingredients as a national advertising medium. Each television network must and does seek to guarantee the availability of all of these ingredients and, as discussed in subsections c, d and e of this section, the practices of television networks including option time, basic-required and network programming are merely reasonable means to those ends.

Recognition of Network Functions. Both the original Radio Act of 1927 and the Communications Act of 1934 defined chain broadcasting as the simultaneous broadcasting of an identical program by two or more connected stations and gave the FCC express authority to make regulations applicable to radio stations engaged in chain broadcasting. At the time of passage of the 1927 Act, networks had already been established and by 1934 were furnishing nation-wide program coverage; and since that time both television and radio networks have furnished the necessary ingredients for making chain broadcasting feasible and have been accepted by the Communications Commission, Congress, the courts, the stations, business and the public.

The need for networks as a means of realizing the full potential of broadcasting and the contributions made by networks to public enjoyment and the development of broadcasting were described by the FCC in its *Report on Chain Broadcasting,* May 2, 1941. While that report dealt specifically with radio networks, its explanation of the vital role of networks in broadcasting is equally applicable to television networks. The report stated in part:

> "The growth and development of chain broadcasting found its impetus in the desire to give widespread coverage to programs which otherwise would not be heard beyond the reception area of a single station. Chain broadcasting makes possible a wider reception for expensive entertainment and cultural programs and also for programs of national or regional significance which would otherwise have coverage only in the locality of origin. Furthermore, the access to greatly enlarged audiences made possible by chain broadcasting has been a strong incentive to advertisers to finance the production of expensive programs. . . ." (page 4)

The FCC has also recognized not only that networks are necessary for the occasional production of important live programs, but that television networks are necessary to realize the full programming potential of the television medium. Since, as discussed in detail below, it is necessary that most of the best educational and entertainment programs be originated from sources outside the individual stations and be distributed to the stations through an outside organization, it is clear that the responsibility for preserving a well balanced program schedule must in considerable part be placed in that distributing organization. In the report by the FCC on *Public Service Responsibility of Broadcast Licensees* dated March 7, 1946 (page 13) the Commission emphasized the importance of preserving a well balanced program schedule and concluded that in the public interest the networks should undertake responsibility for that function for the program hours which they broadcast. The Commission stated in part:

> ". . . The concept of a well rounded structure can obviously not be maintained if the decision is left wholly or preponderantly in the hands of advertisers in search of a market, each concerned with his particular half hour, rather than in the hands of stations and networks responsible under the statute for over-all program balance in the public interest.
>
> "A device by which some networks and stations are seeking to prevent program imbalance is the 'package' program, selected, written, casted and produced by the network or station itself, and sold to the advertiser as a ready built package, with the time specified by the

station or network. In order to get a particular period of time, the advertiser must take the package program which occupies that period. This practice, still far from general, appears to be a step in the direction of returning control of programs to those licensed to operate in the public interest. . . ."

Similarly in the *Report on Chain Broadcasting* the Commission recognized the importance of the production of programs by networks and emphasized that it had taken care to formulate its regulations so that this vital function would not be impaired. In the *ABC-Paramount Merger* case, 8 R. R. 541, the Commission based its approval of the merger in part on the fact that the large resources of Paramount would strengthen the ABC network and help it to fulfill its responsibility for programming.

c. Reasonableness of Network Option Time

Reasonableness of Option Time. The network must have some assurance that the national medium can be assembled and that each of its parts is available. Thus, if the network is to exist, it must make sure that each station will make available to the network certain hours (network option hours) of its broadcast time.

Each individual station existing alone offers only a limited local market for the would-be national advertiser. If the national advertiser attempts to arrange separately for the station time on each such station, he must make innumerable separate contracts for the stations' broadcast services; and he almost certainly will not be able to arrange for broadcasts at the same time on the various stations. He must deliver fragile and expensive films for his program to each station and must make separate arrangements for the necessary follow-up to ascertain the efficacy of his broadcasting on each station and whether the programs preceding and following his program on each station are of good quality and whether either their commercial message or content conflicts with that of his own. Even if the foregoing obstacles are accepted, the national advertiser dealing with the stations individually can arrange for the broadcast only of programs of the limited variety and quality which are available on film or are produced locally.

Affiliates enter into option agreements with networks because of their free determination that, by participating in the networks and assuring networks of outlets, the affiliates can earn important revenues while furnishing desirable services to national advertisers and top quality programs to their audiences. Without network affiliation, stations would not be able to offer the prestige and public following which come only from the regular broadcast of events of public interest and the other important programs which can be broadcast only through simultaneous live transmission over a large network. Moreover, normally, the station has virtually no sales or promotional expense for the portion of its broadcast day used by a network.

From the foregoing, it is apparent that network options on affiliate's broadcast services are not forced upon the affiliates by any illegal control or coercion. On the contrary, the options are willingly offered by the stations because, as shown above, they are so obviously in the business interest of the stations.

Each affiliate is free to adopt such other arrangements as it may wish. Affiliation agreements usually run for a period of only two years. Network affiliates do not complain about option time, nor do advertisers; thus, the parties who are directly interested in the health of the national television medium apparently recognize the reasonableness and need for option time.

Degree of Restraint on Affiliates' Freedom. Network option time is not an unreasonable restraint upon affiliated stations. Under FCC regulations the options may cover only a maximum of three hours each in the following four time segments: 8:00 a.m. to 1:00 p.m., 1:00 p.m. to 6:00 p.m., 6:00 p.m. to 11:00 p.m. and 11:00 p.m. to 8:00 a.m. CBS affiliation agreements provide for options only in the first 3 segments. Thus, even if all CBS options were exercised, at least 40% of the affiliate's time in each of the segments of the broadcast day would remain free for whatever other use the affiliate wished to make of it. Those segments and the percentage which could be made subject to network options were specifically determined by the FCC after a careful study of the industry and audience listening habits.

But option time is not in any sense under the complete control of the network. The affiliate is always free to reject any program on grounds of suitability; it can pre-empt any network option time for the showing of programs of special local interest; and the option rights of one network are not effective against programs of any other network broadcast by the affiliate. In view of the fact that a network consists of any two stations using interconnection facilities for the simultaneous broadcast of the same program, the fact that network options are ineffective against programs of another "network" is an important limitation. It means that the affiliate may use any hour subject to a network option for a program from any other existing network or any regional network which it may care to create or join, without being subject to any restrictions by virtue of its primary network affiliation; and such a network may easily be created for extended or occasional use merely by arranging for the simultaneous broadcast of the program over two or more interconnected stations.

But in addition to the foregoing limitations on the degree of control resulting from CBS options, there is the important limitation of business practice. As in many other business situations, the realities of the market place can greatly limit the apparent distribution of power resulting from contractual arrangements. It is easy to assume that a legal agreement, such as the options, creates effective power. But the options do not do so, nor are they intended to do so. They are designed to assure *within reason* that the network can be assembled when needed as a national medium. The network does not and could not insist on the strict exercise of its option rights. It requests stations to broadcast sponsored programs during option time, but stations do not automatically accede to such requests nor could they be made to do so. On the contrary, it is the clear understanding of the network and the stations that the option arrangements will be administered reasonably to accommodate the interests of all parties. Thus, stations often broadcast network programs on a delayed basis or refuse to broadcast a program altogether in order to preserve a local schedule which they prefer.

In summary, all these factors prevent network options from actually controlling affiliates during all the hours in which they are theoretically effective. As shown in the chart on page 25, CBS affiliates broadcast CBS Television network programs as ordered during only 41.9% of their hours subject to option.

Option time and local programs. Network option time does not materially restrict program production by local stations. In this respect there is no difference between option time and any other time devoted to programs not produced by the station. In order to bring in sufficient revenues and to attract the audiences on which such revenues depend, most of the station's broadcast hours normally must be used for programs beyond the productive capacity of the local station. The three evening hours covered by network options alone require 1,095 hours of good programs each year. No authority on television contends that any material portion of those 1,095 hours could be filled by programs produced by the local station.

Just as each local newspaper cannot have its own world wide news and picture service and its own national columnist and comic strips, each local television station cannot be expected to produce a major portion of its own programs, and certainly not those with the necessary drawing power required for national advertising. In fact, few individual stations can produce locally even the programs needed for hours outside of option time, and depend on outside sources for many of the programs broadcast during those hours. Of course, the one minor exception to the foregoing is the occasional program of special local interest, such as local political addresses, and network options are not effective against them.

Option time and independent program producers. Option time does not unreasonably restrict the sale of programs produced by independent producers. Independently produced programs are extensively used as a part of the network's programming service both during and outside option hours. Indeed, network broadcasts, including those during option hours, are an important outlet for independently produced programs and there is nothing in option time practice which unreasonably restricts the use of such programs. It is believed that network option time stimulates the sale of independently produced programs even during non-option hours. The revenues and prestige of a station increase as the number of hours for which it is used as a part of a network increases. The station's enhanced prestige attracts advertisers who, in turn, sponsor independently produced programs and part of the station's increased revenues are used to expand its total number of broadcast hours and for the purchase of independently produced programs for use during those increased hours.

Option time and national spot and local advertisers. Nor does option time unreasonably restrict access to station time by national spot and local advertisers. During 1955 expenditures for national spot and local time accounted for 55.7% of total television time expenditures. As shown at page 20, the growth of national spot and local advertising expenditures has not been inhibited by network practices, including network time options, nor do network time options preclude national spot and local advertisers from the so-called prime evening hours. The report of the Television Bureau of Advertising for the first quarter of 1956 shows that 55.5% of national spot television advertising expenditures were for programs and announcements broadcast during evening hours. Network option hours are used by national advertisers to bring the best programs to the stations' public and the largest revenues to the stations. During network option hours the local station is filling its proper role as a part of a national medium and the public properly demands that those hours be used to provide the highest quality entertainment or educational programs. Local advertisers cannot expect to gain access to all of the station's time unless they are able and willing to pay the local station for the valuable commodity they seek, and to give the station high quality programs for broadcast on the hours so purchased.

There is nothing in option time or other network practices which prevents local advertisers from meeting those requirements, and some energetic local advertisers have met them by working with other local advertisers to spread among them the necessary cost of the kind of program required, and by obtaining network time to carry that program, with each affiliate broadcasting a special commercial for the respective local advertiser.

But in any event at least 40% of the local station's time is not subject to network options and remains free for use by national spot and local advertisers.

Option time and per se violations of Section 1. In the course of the large body of cases arising under Section 1 of the Sherman Act, the courts have evolved a further definition of restrictive practices which specifically have been found not to be reasonably related to the doing of business. These restraints are so far removed from reasonable business practice as to be said to be illegal *per se,* without exhaustive analysis of the facts, and the element of intent to restrain trade can largely be inferred from the mere fact that such practices are engaged in. While it is sometimes loosely said that those practices are illegal without any consideration of the facts, analysis of the cases shows that in each case the court did review the facts sufficiently to be certain that an unreasonable restraint resulted, and the rule merely avoids an exhaustive analysis of the degree of the market affected and a detailed showing of intent to achieve such restraint.

For present purposes the field may be narrowed by disposing immediately of the best-known categories of restraints held to be illegal *per se*—those that involve agreements or understanding among competitors for the fixing of prices, the allocation of markets or other methods for eliminating competition which otherwise would have existed among them. There is no competition among the CBS affiliates because each of them is in a separate advertising locality and cannot be said to be competing with any other affiliate in any material sense of the term. There are no agreements or practices between CBS and its affiliates, or among its affiliates, controlling prices or in any other way affecting such competition as might be said to exist among them. At the time of entering into an affiliation agreement with the network, each station agrees on the amount the network is to pay for the station's time used by the network.

The second category of acts said to be illegal *per se* concerns agreements among persons not normally competing but dealing with one another, such as supplier and customer, which agreements restrain the freedom of choice of the customer or the market in which he seeks to deal. It is in this category of cases that the so-called "tie-in" rule discussed below and the rule concerning group "refusals to sell", discussed in subsection (d) below, have been evolved.

Option time and the "tie-in" rule—general. The basic principle of the "tie-in" rule is a simple one. This rule and the cases in which it was developed were reviewed extensively by the Supreme Court in the *Times-Picayune** case. The Court there stated as follows:

> ". . . The common core of the adjudicated unlawful tying arrangements is the forced purchase of a second distinct commodity with the desired purchase of a dominant 'tying' product, resulting in economic harm to competition in the 'tied' market." (page 614)
>
> ". . . By conditioning his sale of one commodity on the purchase of another, a seller coerces the abdication of buyers' independent judgment as to the 'tied' product's merits and insulates it from the competitive stresses of the open market. But any intrinsic superiority of the 'tied' product would convince freely choosing

*A digest of this case is included in Appendix A.

buyers to select it over others, anyway. Thus '[i]n the usual case only the prospect of reducing competition would persuade a seller to adopt such a contract and only his control of the supply of the tying device, whether conferred by patent monopoly or otherwise obtained, could induce a buyer to enter one.' (page 605)

"... But the essence of illegality in tying agreements is the wielding of monopolistic leverage; a seller exploits his dominant position in one market to expand his empire into the next. Solely for testing the strength of that lever, the whole and not part of a relevant market must be assigned controlling weight." (page 611)

The tie-in rule thus depends on both (1) the possession of monopolistic leverage over one item and (2) the use of that leverage to obtain a position in another market.

In brief, the tie-in rule does not apply to CBS Television network practices because they do not in fact involve the "tie" of the sale of one distinct item to the sale of any other. And even if there were a tie-in in the sense of the cases above-mentioned, the rule still would not apply because the CBS Television network does not have the necessary dominance or leverage in any item to make a tie-in sale of it invalid under the rule.

Option time and the tie-in of separate programs. ("block booking") The furnishing of programs by the CBS Television network for broadcast during option time does not constitute an illegal tie-in sale of programs under any of the prior cases, including the motion picture cases. In the *Paramount* case the Supreme Court considered the tying of the sale of exhibition rights in one copyrighted motion picture to the sale of such rights in other copyrighted motion pictures. This tie-in practice, referred to as "block booking", was defined by the Supreme Court as "the practice of licensing or offering for license one feature or group of features on condition that the exhibitor will also license another feature or group of features released by the distributors during a given period." (page 156) The court found the practice to be illegal because "the result is to add to the monopoly of the copyright in violation of the principle of the patent cases involving tie-in clauses" (page 158) and added, "all we hold to be illegal is a refusal to license one or more copyrights unless another copyright is accepted" (page 159).

No tie-in exists. The tie-in rule has no application to option time, because time options do not involve the tying in of the sale or licensing of one program with the sale or licensing of another. Under its option time practices, the network does not sell any program to any station, let alone a block or group of programs. The station simply supplies its broadcast facilities to the network during option time. Under option time practices, the network is granted the right to broadcast, over the station's facilities, commercial programs furnished by the network, for which the network compensates the affiliate on the basis of the hours so used.

Nor does the fact that the station may broadcast several different programs furnished through the network on option time and sponsored by different advertisers constitute "block booking" to the stations of those programs. The basic element of illegality in "block booking", as in all other illegal tie-in sales, is the use of one item to coerce the taking of another and this coercion is not present in option-time practice.

At the time the option is granted, the stations and the network properly consider the entire option right as one item. The fact that option time may eventually be split by the network into separate periods of time for carrying different programs and made available to different advertisers plays no part in the granting of the option, and clearly, no part of the total option time is used to coerce the station regarding any other.

As the CBS Television network persuades each advertiser to sponsor a program during a part of option time, the program might be said to be "booked" on the station, but no one program is accepted by the station because of, or in relation to, other programs. In any event there is no tie-in of separate programs because the station has the right to reject any one or more of them. Experience has shown that the stations use this right of rejection both when they are dissatisfied with a particular program, when they have a local program which they would prefer to broadcast, and when they broadcast the program of another network.

Network programs are certainly not "block booked" to advertisers, as arrangements for each program that is sponsored by an advertiser are made individually by the network. Finally, even if CBS did tie-in the sale of some of the programs which it controls to the sale of other programs which it controls, the tie-in would not be illegal under the rule because CBS has no monopolistic leverage or dominance in the program field. CBS controls only a small percentage of the total programs available for or broadcast on television.

Option time and blind selling. CBS Television network option time practices do not raise any problem under the holding of the court in the *Paramount* case regarding blind selling. As defined in that case, blind selling was the practice of selling licenses on groups of motion pictures before they had been produced or shown to exhibitors. The court found that this practice was not as inherently restrictive of competition as block booking, although capable of some abuse, and, accordingly, required that exhibitors be given the right to reject 20% of the pictures which they bought "blind".

The court's holding in the *Paramount* case on blind selling does not apply to CBS Television network practices, since the network does not sell programs to its affiliates for network broadcast.

Moreover, stations do not broadcast network programs "blind", since the network gives affiliated stations advance information on and description of all programs, and the stations have the right to reject any proffered programs which are unsuitable or unsatisfactory and not merely the 20% required by the court's holding in the *Paramount* case.

d. Reasonableness of the Basic-Required Practice

General purpose. As pointed out above, in order to assure the availability of the ingredients necessary to the operation of a television network as a national advertising medium, the network must incur large fixed charges, including those for facilities, staff and interconnection. In order to operate economically, the network naturally must spread those costs as widely as possible. Also, the network as a national medium must have some continuity and acceptance both by advertisers and the public. Accordingly, the network has adopted the practice of setting a minimum of basic-required stations which any advertiser must use if he wishes to sponsor a program on the network.

The basic-required stations, presently 52 in number, are those whose rates as shared by the network cover the fixed charges of maintaining the network and whose use by an advertiser assures a minimum number of strong popular stations so that the network can be kept available for public use as a national medium. Included in the group are stations necessary to assure national coverage. The determination of which stations shall form the basic-required group is not made arbitrarily by the network. The group is made up of those stations which most advertisers order most often. As a result, CBS has had to expand its facilities, including interconnection, so as to make certain that it can meet the requirements of those advertisers. The network tries to persuade an advertiser to order as many stations as possible. It insists only that the advertiser order at least the basic-required group.

No collective agreement. The basic-required practice does not involve any collective agreement among affiliates or between the affiliate and the network. There is no agreement among the affiliates that there will be any basic-required list whatsoever. Except in the case of one affiliate which has insisted that its affiliation agreement contain a provision that it be included in the basic-required group if any exists, there is no agreement that any particular affiliate or any particular market shall be included on such a list. The network is free to change the affiliates and markets on the list as business factors and interconnection facilities change, without any approval or consultation with the affiliates. Any affiliate or market may be absent from the basic-required line-up at any time because it has elected to broadcast a local program or a program of another network or for any other reason, and none of the other affiliates would be able to interfere or normally would even know of it.

Basic-required defines the network as a medium. From a business point of view the basic-required station list merely defines the basic product which the network has to sell. The network is a national advertising medium and the basic-required list defines the minimum elements which must be assembled to form the national medium; it is an entity different from each of its affiliates as a national magazine is different from its circulation in any one locality. As national advertisers rarely can buy space in the pages of a national magazine for circulation only in limited areas, they cannot expect to use the network for reaching the audiences only in a few areas.

The basic-required station list is reasonably related to the needs of the national advertisers. The national advertisers seek a national audience; they do not generally distinguish between listeners in different cities or localities, but generally desire to cover as much of the national public as is possible at a reasonable cost per thousand. Indeed, almost all advertisers on the CBS Television network order more than the minimum basic-required station list.

Basic-required as a tie-in of stations' time. The reservation or disposition of the broadcast facilities of a group of stations assembled to form a network does not constitute an illegal tie-in sale under any of the prior cases. Such "sale" as might be found is not a tie-in sale of a group of separate items but the sale of a single facility or service. So the rule regarding tie-in sales does not apply. But even if the network were said to be a tie-in of separate items the tie-in would be lawful under the rule because the CBS Television network does not have the monopolistic leverage necessary to make such a tie-in illegal.

A network is a single service or facility. In the CBS basic-required practice there is no tie-in sale of different elements. There is only the sale of a single assembled service.

The Supreme Court recognized that concept in discussing tie-in sales in the *Times-Picayune* case. There it was concerned with the refusal by a publisher of both a morning and evening newspaper to sell advertising space in either separate from the other. After reviewing all the tie-in cases the court stated:

> ". . . The District Court determined that the Times-Picayune and the States were separate and distinct newspapers, though published under single ownership and control. But that readers consciously distinguished between these two publications does not necessarily imply that advertisers bought separate and distinct products when insertions were placed in the Times-

Picayune and the States. So to conclude here would involve speculation that advertisers bought space motivated by considerations other than customer coverage; that their media selections, in effect, rested on generic qualities differentiating morning from evening readers in New Orleans. Although advertising space in the Times-Picayune, as the sole morning daily, was doubtless essential to blanket coverage of the local newspaper readership, nothing in the record suggests that advertisers viewed the city's newspaper readers, morning or evening, as other than fungible customer potential. We must assume, therefore, that the readership 'bought' by advertisers in the Times-Picayune was the selfsame 'product' sold by the States and, for that matter, the Item." (page 613)

In the *Times-Picayune* case, the court held the sale of "readership" in the two papers was essentially the sale of one item and that no part could reasonably be said to be tied-in with itself. That clearly is true in the case of the CBS Television network. The sale to advertisers of "listenership" in the national television audience is the sale of one item; in the words of the court in the *Times-Picayune* case it is the sale of a quantity of "fungible customer potential".

A tie-in sale of stations' time would be legal. Even if the network were held to be a tie-in sale of station time, the tie-in would not be a restraint of trade under the tie-in rule, because CBS does not have the monopolistic position or leverage in any separate segment of station time necessary to bring the rule into play.

First, as pointed out in the discussion of option time above, CBS does not really control the time of its affiliates. 40% of the affiilates' time in each segment of the broadcast day is totally free of any option by CBS, and even the 60% of time under options is not under effective control by the CBS Television network.

But even if CBS options did constitute control over all the affiliates' time, it could not constitute the degree of monopolistic control necessary for application of the tie-in rule, for no one affiliate or group of affiliates can furnish the monopolistic leverage necessary to serve as the tying product to other stations in the network. For example, it cannot be said that CBS's control over its owned stations is the basis of tying in the purchase of other affiliates. CBS network-owned stations obviously do not dominate their markets, for they are all in highly competitive multi-station localities. It would be ineffective for the CBS Television network to try to force purchase of its network by relying on its owned stations as a lever.

Almost all the network affiliates on the basic-required list are similarly in multi-station localities. As shown by the chart on page 25 above, in all the localities on the basic-required list the CBS Television network has options on only 22.1% of the total broadcast time. Such control can not be said to approach the dominant position of the *Times-Picayune* in its market which the court found insufficient for the applicability of the tie-in rule, and clearly it would be ineffective for the CBS Television network to try to force purchase of its network by relying on those affiliates as a lever.

75589 O—57—pt. 4——33

In those two localities on the basic-required list in which the CBS affiliate is the only station, it is clear that the market is relatively so small that its leverage or coercive power is insignificant. In terms of the national market, those one station localities have such a small percentage of the total audience that there is no leverage in threatening to withhold them from any buyer who did not take the network. In any event, in such one station localities the real power of the network is very small. The control of the CBS Television network over its affiliates in single station localities does not in practice prevent them from freely joining other networks or often substituting spot for network programming. The network does not have any effective leverage by reason of its affiliations in one station localities.

Basic-required and refusals to sell. General principle. The so-called rule against "refusals to sell" also is a simple one. As stated by the Supreme Court in the *Times-Picayune* case, "refusals to sell, without more, do not violate the law". As has been demonstrated above, CBS may lawfully require a national advertiser to utilize a minimum number of network stations if he wishes to utilize the network at all. The exercise of this right necessarily means that the network may refuse to sell any one or more of the basic-required stations without the others. Such an individual refusal is not unlawful.

In order to escape that inevitable conclusion, it has been urged that the refusal to sell in the network situation is not an individual refusal on the part of CBS but is a group refusal to sell, the group being made up of CBS and its basic-required affiliates. Although it is sometimes loosely said that all group refusals to sell are illegal *per se*, it is clear that the courts have never so held and have not applied the rule to all group action or to all group refusals to sell. As shown by the cases, the rule applies only to those concerted refusals which are intentionally designed to affect competitors unreasonably or which actually result in unreasonable restraints on competition.

The rule was discussed in detail in *Fashion Originators Guild of America, Inc.* v. *Federal Trade Commission,* 312 U. S. 457 (1941). That case concerned a combination of clothing manufacturers and other textile interests, members of a guild who, among other things, by agreement refused to sell to persons who dealt with other manufacturers who violated guild rules against copying dress designs. The combination had done many other things restraining trade, and the Federal Trade Commission and the Court of Appeals had found that the combination had substantially lessened, hindered and suppressed competition and tended to create a monopoly. The Supreme Court reviewed the restrictive practices and found them in violation of Sections 1 and 2 of the Sherman Act. The rule concerning the group refusal to sell was stated as follows:

> ". . . the aim of petitioners' combination was the intentional destruction of one type of manufacture and sale which competed with Guild members. The purpose and object of this combination, its potential power, its tendency to monopoly, the coercion it could and did practice upon a rival method of competition, all brought it within the policy of the prohibition declared by the Sherman and Clayton Acts." (page 467)

The *Associated Press* case* also concerned a concerted refusal to sell, and none of the several opinions in the case suggested that such a refusal was illegal *per se.* Instead, each of those opinions was based on both the intent of the group and the actual effect of the group action on competition. Similarly, the *First National Pictures* case,* concerned a clear concerted refusal to sell with both the intent to restrain competition and that effect. It is thus another instance where the rule was applied to a concerted group refusal which resulted in a restraint on competition which was found to be both intentional and unreasonable.

Applicability of the rule. The CBS Television network basic-required practice does not violate the rule against individual or collective refusals to sell because there is no unlawful refusal to sell, there is no collective action, and there is no intent to affect competition or adverse effect thereon.

No unlawful refusal to sell. The basic-required practice is merely the definition of the basic network which is available and is offered for sale. The network does not offer an unlimited variety of broadcasting media for basic economic and business reasons explained above. There is nothing in the antitrust laws that requires it to sell other broadcasting media or to sell the time on individual stations or any particular combination of them. The decision is merely the decision to engage in one business, that of network broadcasting, instead of other businesses such as local broadcasting.

---

*A digest of this case is included in Appendix A.

The individual stations do not refuse to sell under the basic-required practice. A large part of their broadcast time remains available for purchase as a local advertising medium and is available for national spot and local advertisers and all of their time remains available for use by any network since options are not effective against other networks. Even as to the part of the affiliate's time which is subject to network option, there is no refusal to sell in the sense of the rule. The affiliate is free to and does sell option time to others than CBS, subject only to the prior option thereon which may be exercised by CBS on 56 days' notice; and of course even that option is subject to all the limits discussed above.

No concerted action. Even if CBS's election to make the network available only as a minimum group of stations is somehow taken as a refusal to sell during those hours, such refusal can hardly be said to be collective, for as pointed out above, the basic-required list was established by and is maintained by the network without any agreement with its affiliates. In all the cases in which the rule has been applied, there has clearly been concerted action by the group; in the case of the network practices there is no such group action, but only an election by CBS to operate in a reasonable manner.

No intent to affect or actual effect on competition. There is no evidence of any material effect on competition from the basic-required practice even if it is a refusal to sell, and such effect on purchasers as may have resulted is not a restraint of trade within the purview of the act. The *Prairie Farmer* case*

*A digest of this case is included in Appendix A.

makes this clear. The facts involved in the *Prairie Farmer* case, including the markets and the effect of the practices in question, are parallel to many of those present in network television operations, and the material differences all emphasize that the restraint there approved was far more severe than that resulting from network practices. For example, CBS has not engaged in discriminatory pricing or other extreme methods of attracting advertisers from competitors as found in that case, and stiff competition is provided by two other networks and national spot television.

In both the case of the farm magazines and the CBS Television network, the principal market concerned is the advertising market. In both instances a grouping of individual units results in better service at cheaper cost, in competition to a certain degree with other individual units. Neither case involves any unlawful refusal to sell or boycott. However, in the *Prairie Farmer* case the better service and lower cost were not available on terms which permitted simultaneous purchases from independents as a practical matter, while CBS practices do not discourage its customers from buying from other networks or from buying non-network programs from affiliated or independent stations individually. In short, the holding of the Court of Appeals in the *Prairie Farmer* case appears to be directly applicable to CBS Television network practices. As the court stated, the inability of some persons in the industry to meet the competition from such acts "is one of the fortunes of development of industrial practices, and its existence should not stamp with the stigma of illegality the act of appellants" (page 984).

e. Reasonableness of Network Programming and Program Production

Network programming and the public interest. The CBS Television network must be responsible for its programming; that is, it must endeavor to make sure that each of the programs broadcast over the network is of high quality and that when considered together the programs furnish an appropriately balanced bill of fare including entertainment programs, educational programs, news and public interest events, all arranged in an appropriate sequence at appropriate times. The network activities in programming serve not only the business interests of all concerned but also the public interest.

Good programming attracts the large audience which affiliated stations must offer if advertisers are to pay the large cost of network advertising. The success of the network enterprise depends on good programming. Like a national magazine, it is the content of the medium on which its existence finally depends, and it would be as unreasonable to remove content control from networks as from magazines. If one program fails to satisfy the public, not only is one advertiser injured and disgruntled, but also other advertisers are disturbed by the injury to the stations' audience prestige from the fault in programming, and the affiliate, the network, the advertisers and the public are all injured. From the viewpoint of the public interest, as the FCC has recognized, the advertisers' individual choices cannot be depended upon to produce an appropriately balanced program schedule, and since most of the better educational and entertainment programs must be furnished by sources outside the individual stations, the networks must be responsible for serving the public interest in programming that portion of the broadcast day which they use.

Programming is the network's business. The CBS Television network is furnishing advertisers a programming service. That programming service is not two separate services consisting of programs and broadcasting, for from the point of view of the advertiser, the affiliate, the network and the public, the two cannot be separated. Indeed, a television program without broadcast services does not exist in the practical terms of any of the markets concerned. Nor do the broadcast services of a station exist in a market without a program worth carrying.

Independent producers and network programming. Network programming, including the production by a network of programs, cannot properly be said to constitute direct or primary competition with independent program producers, any more than an individual station can be said to be in direct or primary competition with such producers when its own staff creates a program which the station broadcasts over its own facilities, or any more than Life Magazine can be said to be in direct or primary competition with independent writers when its own staff prepares the editorial content of its magazines. A magazine is much more than a collection of articles and a television broadcast service is much more than a miscellaneous collection of programs. In both instances there must be policy direction, continuity, variety, and numerous other ingredients which cannot be obtained merely by buying up the chance creations of outsiders.

Historically, the stations and the networks provided both elements of the programming service; in the early years of television the networks arranged for time on affiliated stations and produced almost all the programs which were used in that time. Because the job of producing programs has become too great even for the networks and the stations to handle themselves and because the production of programs by outsiders has become a profitable business, others have begun to help in providing that part of the programming service.

To the extent that the networks and the individual stations do not completely fulfill their own program-producing functions, they provide markets for the products of outside program producers, and the independent producers are in competition among themselves for a share in those markets. The outside producers do not have any "right" to any part of those markets, any more than free-lance writers have a right to share the pages of Life Magazine or The Saturday Evening Post or any more than outside parts manufacturers have a right to share in the production of such assembled products as automobiles, refrigerators, radios, typewriters and cameras.

Extensive markets for programs produced by non-broadcasters do exist in the television field, however, because the magnitude of the task of creating a sufficient number of good programs of new and varied interest to fill a continuous broadcasting schedule is so great that the individual stations and the networks are incapable of performing it alone.

When an advertiser wishes to obtain CBS Television network programming services and offers to furnish the program portion thereof, CBS accepts the program if it is of appropriate quality and fits into the overall program schedule. But when the advertiser does not offer a suitable program, the network must aid him in obtaining one or must be able to furnish him a program itself. The CBS Television network does not make money on the production of programs or in the furnishing of assistance and facilities to program producers or to advertisers in the procurement of programs; the network loses money in those activities. But neither that fact nor the availability of "independent" program material can relieve the broadcasters, the networks or the stations, from their responsibility for programming or exclude them from program production.

The product of the networks being a nation-wide communication medium, their primary competition is with one another and with other media of communication, both national and local, including the local media provided by the individual stations. It is the force of that competition that compels each network to exert maximum effort to make its programming attractive, including, whenever necessary, resort to the products of outside program producers.

Tie-in of time and programs. It has sometimes been alleged that the networks violate the tie-in rule by tying-in the sale of network-produced programs with the sale of network time. But it appears that the CBS Television network does not engage in such a tie-in; and that even if such a tying-in were practiced by it, it would not constitute the kind of restraint proscribed by the tie-in rule, described above.

There are a few exceptional situations* in which the CBS Television network insists that certain programs be broadcast

*These are listed at p. 88, fn. 1, of the Supplemental Memorandum.

at certain hours in order to fulfill its responsibilities to the public, to its advertisers and to its affiliates, but even those are clearly not tie-in sales. They are the key segments of the network schedule which CBS thinks it must offer in order to preserve the proper balance of the over-all programming and to set the flavor and maintain the reputation of the network. For example, the network believes that a top quality news program should be broadcast every evening in the early evening hours. The network will not sell that fifteen-minute period for any other program. There are also entertainment programs, some produced by outsiders, for which the public demand has proved to be so great that the network feels it is in the public interest to insist that such programs be broadcast at appropriate times. Similarly, when it is possible to broadcast an event of great public interest, such as a political convention or a major sports event, the network will not allow the sponsor to substitute his own program.

Those programs are key or anchor programs. The network must be free to offer them in order to preserve its network and to fulfill its public responsibility in programming. The sale of sponsorship in this segment of the programming service is not a tie-in of separate sales of program and time; it is a sale of sponsorship for one commodity—the key part of the network's programming service.

In other instances, where a desirable program is so expensive as to exceed the advertising budget of any one sponsor, the network will enter into agreements with a group of sponsors. No one advertiser could be expected to bear the large program and time costs of "Omnibus". If the public is not to be denied the privilege of seeing such a program, a group of sponsors must be assembled. Obviously no one of them could be given the power to substitute his own program for the portion of "Omnibus" which he has sponsored.

If the foregoing instances can properly be called tie-ins, application of the rule of reason amply justifies them as lawful restraints.

The CBS television network does not tie the sale of programs and time. From a review of the CBS Television network practices and the conditions of the market, it is apparent that the network does not and could not use its control of CBS-produced programs to force the purchase of its network time. Similarly, the network does not and could not use its control of network time to force the purchase of CBS-produced programs.

The hours of CBS-produced programs broadcast over the network indicate that no tie-in of programs and broadcast time is engaged in. As pointed out above, the CBS Television network produces alone only 22.7% of the sponsored programs broadcast over the network, and network advertisers remain very large purchasers of independently produced programs.

In any event, since the network has no monopoly of the tying product, whether it be considered to be network time or network programs, a tie-in of the two would not be unlawful.

f. Conclusion Re Section 1

The CBS Television network practices are not unlawful restraints of trade in violation of Section 1 of the Sherman Act.

On the contrary, they are reasonable and essential to the legitimate conduct of its business. No one of them is employed with any unlawful intent to injure competitors, and no such injury has resulted.

5. *Network Ownership of Stations*

a. General

Ownership by CBS of the four stations which it now owns and of the two stations for which it has applied is lawful under the antitrust laws. CBS built its first station in order to promote the development of television; it acquired its other stations and has retained them in order to continue that development and to aid and preserve the efficient operation of its network.

Background. That the initial ownership of a television station by CBS was necessary and reasonable is hardly open to question. In the beginning, there were no television stations and the only way to develop the medium or to learn how to utilize its apparent potential was to build and operate a station. Later, in order that it might take its proper part in the development and exploitation of the television medium, CBS acquired its stations in Los Angeles and Chicago. In 1955, it acquired the station in Milwaukee. The acquisition of that station, which is a UHF station, followed the FCC order encouraging networks and other multi-station owners to enter the UHF field in order to stimulate its development.

Station operation became profitable before network operation which continued to lose money through 1952. The entire experience of CBS in radio and in television showed that station operation would be a more dependable source of profit than the more speculative network operation. Thus network ownership of stations serves a second important function, namely, as a stable source of funds to support the costly and risky business of network programming. CBS acquired and retains its stations partly as an investment.

Ownership of stations by CBS continues to serve both these purposes: It strengthens the network by giving it a reliable source of revenues, which helps it to continue to incur its large fixed charges and to assume its major long-term responsibilities. It enables CBS to continue to pioneer in the development of television as a national medium—for example, in the field of color television, and as an outlet for its programming developments, especially its major public-service programs and its experimental programs.

b. Status Under the Antitrust Laws

Vertical integration in an industry does not in itself constitute a problem under the antitrust laws. Specifically, in the motion picture cases the courts repeatedly affirmed that there was nothing illegal *per se* in the fact that a producer of entertainment programs also owned some of the outlets through which they were exhibited. None of the opinions in the *Paramount* case held that theatre ownership by the defendant distributors and producers was *per se* illegal, even though they owned 16% of the theatres in the country and 70% of the first-run theatres in the 92 cities of over 100,000 population. In the *Paramount* case, the District Court in its first opinion, 75 F. Supp. 1002, specifically found that, even in the context of the admitted conspiracy to restrain trade and to monopolize, the ownership of a material percentage of the nation's theatres by producers did not violate Section 2 of the Act. The Supreme Court in its opinion did not set aside that finding. On the contrary, having decided to amend the District Court decree in such a way as to require the divestiture of distributor-owned theatres, the Supreme Court instructed the District Court to reconsider whether the ownership of theatres by the distributors should be outlawed either as an integral part of a conspiracy to monopolize or as representing the fruits of such a conspiracy. On its reconsideration of the matter, the District Court again held that vertical integration was not in itself a violation of the Act. The court stated, in part:

> ". . . But here we are presented with a conspiracy among the defendants to fix prices, runs and clearances which we have already pointed out was powerfully aided by the system of vertical integration of each of the five major defendants. Such a situation has made the vertical integrations active aids to the conspiracy and has rendered them in this particular case illegal, however innocent they might be in other situations. We do not suggest that every vertically integrated company which engages in restraints of trade or conspiracies will thereby render its vertical integration illegal. The test is whether there is a close relationship between the vertical integration and the illegal practices. Here, the vertical integrations were a definite means of carrying out the restraints and conspiracies we have described. . . ." (85 F. Supp. 881, 893)

There is no evidence of conspiracy or of illegal restraint of trade in CBS's network operations. And if its present applications are granted, CBS will own only 1.4% of the country's stations. The *Paramount* holding is a direct authority for the proposition that CBS's ownership of six stations would not violate the antitrust laws.

The FCC has extensively considered the desirability of network ownership of stations and has concluded that such ownership is in the public interest. In the *ABC-Paramount Merger* case, the Commission did not disagree with the position taken by the three networks there involved—that network ownership of stations was reasonable as a source of income to support the large risks of network operations, as an outlet for major network programs and as a medium for continued network experimentation. In its efforts to promote the development of UHF television, the Commission has encouraged networks to go into the UHF field and CBS has attempted to cooperate by establishing a UHF station in Milwaukee and seeking a license for one in Hartford.

APPENDIX A

The Cases

a. The First National Pictures Case

In *U. S.* v. *First National Pictures Incorporated, et al.,* 282 U. S. 44 (1930), the United States attacked the establishment by a combination dominating the distribution of films of a uniform set of credit and business arrangements for the exhibition of motion picture film throughout the nation. That case followed the court's holding in the closely related case of *Paramount Famous Lasky Corporation et al.* v. *The United States,* 282 U. S. 30 (1930), which had just been decided and concerned the establishment by the same parties of a Standard Exhibition Contract and Rules of Arbitration throughout the motion picture industry.

The court found in both cases that (a) the combination dominated the motion picture exhibition business and (b) was motivated by the desire to restrain the freedom of action of all parties engaged in that business. The court pointed out that the combination had begun with producers and distributors controlling 60% of the film business who had then combined to deal with local Film Boards of Trade and other distributors who together controlled 98% of the entire business. In the *First National* case the court found that "The obvious purpose of the arrangement is to restrict the liberty of those who have representatives on the film boards and secure their concerted action for the purpose of coercing certain purchasers of theatres by excluding them from the opportunity to deal in a free and untrammeled market." [page 54] In the *Paramount Famous Lasky Corporation* case the court held that the arrangements could not be classed among "those normal and usual agreements in aid of trade and commerce", and added "Certainly it is unusual and we think it necessarily and directly tends to destroy 'the kind of competition to which the public has long looked for protection.'" [page 44] The court further stated: ". . . when under the guise of arbitration parties enter into unusual arrangements which unreasonably suppress normal competition their action becomes illegal." [page 44]

75589 O—57—pt. 4——34

Thus, in both these cases the court was concerned with (a) the clear instance of a concerted refusal to sell which involved almost the entire industry; (b) the clear intent to coerce the entire industry to follow unnatural business practices and (c) the actual effect of an unreasonable restraint on competition. These three elements combined to produce a restraint held illegal under the Sherman Act.

b. Prairie Farmer Publishing Co. Case

Indiana Farmer's Guide Publishing Co. v. *Prairie Farmer Publishing Co.*, 88 F. 2d 979 (7th Cir. 1937), involved charges of monopoly and restraints of trade under both Sections 1 and 2 of the Sherman Act and concerned business practices and markets similar in some respects to those involved in network television broadcasting. The case was considered by both the Federal District Court and the Court of Appeals for the Seventh Circuit on three separate occasions and by the Supreme Court of the United States twice. This extensive consideration of the case, plus the final denial by the Supreme Court of both a petition for certiorari and a petition for its rehearing after the final opinion of the Court of Appeals give to that court's opinion an unusual significance.

The facts described below are largely those set forth in the final opinion of the Court of Appeals.

The plaintiff was the publisher of the "Indiana Farmer's Guide", a weekly state newspaper for farmers, published and having the greatest part of its circulation in Indiana. The five defendants were the publishers of seven other weekly state farm newspapers in the so-called "corn belt" and an advertising agency owned by them, called "Midwest Farm Paper Unit", which solicited display advertising in those papers on a group basis. One of the seven papers was "The Prairie Farmer (Indiana Edition)", published by one of the defendants, a competitor of the plaintiff for circulation in Indiana and for advertising. The newspapers of the other defendants were published outside Indiana and each of them had its primary circulation in another state.

The action was a suit for treble damages under the Sherman Act and centered primarily on the group rates which the defendants offered. The defendants' group rates, which were available only to advertisers who placed their advertising in every paper in the group, were sufficiently lower than the aggregate individual rates of the member newspapers so that an advertiser could advertise in the whole group of seven papers more cheaply than he could advertise in the six non-Indiana papers of the group; hence an advertiser who had been using the plaintiff's newspaper in Indiana and the defendants' papers outside Indiana could, by dropping the plaintiff's newspaper and substituting the defendants' Indiana paper, not only save the total cost of his Indiana advertising but also get his advertising outside Indiana at a lower cost.

After the defendants commenced their group selling, in or about 1928, the plaintiff's newspaper began to lose advertising accounts. During the years 1928 to 1932 it lost some $146,000 of gross revenues from advertisers who had shifted their Indiana advertising to the defendants' Prairie Farmer (Indiana Edition), and plaintiff's net profit decreased from $72,000 in 1928 to $54,000 in 1929. Display advertising was, of course, its principal source of revenue. When the Midwest group operation was started, the five defendant publishers were publishing five out of twelve state farm papers in the corn belt, and were carrying 54% of the aggregate display advertising of those twelve papers. In 1932, of the remaining seven papers (the direct competitors of the defendants' newspapers in 1928), four had been acquired by various defendants and one had gone out of busines; and at the time of trial the defendants were publishing seven out of the nine state farm papers in the group's territory, and those seven papers were carrying 84% of the total advertising of the nine.

The complaint charged that the defendants:

> "entered into a contract, combination and conspiracy for the purpose of obtaining a monopoly of the farm paper business, including the publication, circulation, and distribution of printed matters and of advertisements of peculiar interest to farmers within the territory covered by the aforesaid publications; that in furtherance of this combination and conspiracy, they conceived a plan and design calculated to break down and destroy competition with other farm publications within said territory; that in order to effectuate that purpose

> they agreed upon a combination schedule of advertising rates for their combined publications, including the Indiana Edition of The Prairie Farmer and the Dakota Edition of The Farmer and Farm, Stock and Home, materially below the combined rates for the separate publications; that it was a part of said contract, combination and conspiracy that no other publisher of any farm journal circulating within said territory should be allowed to join with them in carrying any of the advertising business on equally favorable terms as fixed in the combination schedules, ..."

The principal theory of plaintiff's case was a charge of monopolistic purpose and restraint of trade as evidenced by the group selling plan and the resulting damage to competitors whose business was injured. The group selling plan was alleged to be a restraint of trade and the monopolistic purpose was alleged to be established by the use of such means to obtain business advantage. The court was considering defendants' motion for dismissal on the grounds that the evidence was insufficient to support a verdict by the jury. The case presented to the Court of Appeals two basic issues:

1. Whether the adoption and use of the group selling plan, involving the group discount rate, available only on a "whole group basis", and the refusal to admit competitors into the group, was sufficient evidence from which the jury could infer a purpose to monopolize or restrain trade; and

2. Whether there was sufficient evidence to go to the jury on the question whether the actual effect of the plan had been a restraint of trade or a tendency to monopoly in the business of publishing farm newspapers or farm newspaper advertising in the corn belt.

The court fully understood the effect of the group operation on the competitive position of the plaintiff and added that its ultimate effect might likely be that plaintiff would have insufficient advertising to maintain its existence. Notwithstanding, the court found that the activities of the defendants did not violate the antitrust laws, stating:

"Here, appellants, it seems to us, brought about a situation by agreement amongst themselves whereby in association they could reduce the cost of securing sustenance in the way of advertising in competition to a certain degree with national farm papers. What they sought in that respect was conducive to reduction of cost and to efficiency of operation of their businesses. Unfortunately, appellee was not in position to meet that competition; but that fact, it seems to us, is one of the fortunes of development of industrial practices, and its existence should not stamp with the stigma of illegality the act of appellants." [pages 983-4]

c. The Associated Press Case

In *U. S.* v. *Associated Press et al.*, 326 U. S. 1 (1944), the United States attacked the refusal by the members of the Associated Press to sell to competing nonmembers the local news collected by the individual AP members and the national and international news collected by the Associated Press itself. The court found that the Associated Press was the dominant source of news and that denial of access to its news was a serious competitive disadvantage to nonmember papers. The refusal to sell was accomplished through special by-law provisions of the Associated Press which prohibited the sale of news to nonmembers and which had been specifically designed to give each present member the power to deny membership (and hence access to AP news) to any newspaper competing with it. The court found these by-law provisions illegal and enjoined the AP from continuing to deny membership, and hence access) to competing nonmembers as a means of suppressing competition.

The court specifically did not outlaw all "refusals to sell" and carefully stated that it was not adopting a public utility concept which would require all collectively produced items to be sold to all would-be buyers. For example, the court stated:

> ". . . It is further stated that we reach our conclusion by application of the 'public utility' concept to the newspaper business. This is not correct. We merely hold that arrangements or combinations designed to stifle competition cannot be immunized by adopting a membership device accomplishing that purpose. [page 19]

> ". . . But however innocent such agreements might be, standing alone, they would assume quite a different aspect if utilized as essential features of a program to hamper or destroy competition. It is in this light that we must view this case. [page 14]
>
> ". . . They have also pooled their economic and news control power and, in exerting that power, have entered into agreements which the District Court found to be 'plainly designed in the interest of preventing competition.'" [page 16]

The basic element of illegality found in the refusal to sell in the *Associated Press* case was the clear intent of the members to restrain competition between members and nonmembers. That intent was made clear by the absence of any business justification for the collective refusal. The news which the members refused to sell to nonmembers was clearly a product which could have been sold to them; in fact in many cities AP news was sold to several competing papers published in the same city. The second necessary element in the refusal to sell in the *Associated Press* case was the crucial importance of the items which the members refused to sell. The court specifically found that the Associated Press was the dominant news-gathering agency and that denial of access to its news was a serious competitive disadvantage. At no point in the court's opinion, or in any of the concurring or dissenting opinions, did any of the justices attempt to dispose of the issue on the grounds that all concerted refusals to sell were automatically illegal or illegal *per se.* Indeed, all the opinions justified whatever disposition was being urged in terms of the effect on competition and the intent of the defendant, although the case presented a clear instance of a concerted refusal to sell.

d. The Griffith Case

In *United States* v. *Griffith,* 334 U. S. 100 (1947), the United States alleged a violation of Sections 1 and 2 of the Sherman Act on the part of four affiliated corporations and two individuals associated with them as stockholders and officers, who had operated motion picture theatres in eighty-five towns in several states. In thirty-two of those towns there were competing theatres. Fifty-three of the towns (62%) were closed towns, *i.e.,* towns in which there were no competing theatres. A master agreement was usually executed with each distributor covering films to be released by the distributor during an entire season. These master agreements lumped togther towns in which the defendants had no competition and towns in which there were competing theatres; they generally licensed the first run exhibition in practically all of the theatres in which defendants had a substantial interest of substantially all of the films to be released by the distributor during the period of a year; they included second runs and specified a total minimum rental to be paid by the circuit as a whole; they specified that films could be played out of the order of their release, so that a specified film need not be played in a particular theatre at any specified time; and they granted clearances over competing theatres, specifying substantial periods of time after the exhibition of each particular picture by defendants in one of their theatres before competitors could exhibit those pictures. These practices prevented defendant's competitors from obtaining enough first or second run films from the distributors to operate successfully.

The Supreme Court held that defendants' practices should be enjoined. The central point of the case in the court's opinion is that "the use of monopoly power, however lawfully acquired, to foreclose competition, to gain a competitive advantage, or to destroy a competitor, is unlawful." The court found actual monopoly power in the fact that defendants owned the only theatre in many towns; and it found that such monopoly power had been used to obtain discriminatory privileges in film licensing. The court, therefore, found that defendants' action constituted a violation of Sections 1 and 2 of the Sherman Act. In the course of its discussion the court emphasized that the ownership of the single theatre in a town or of the exclusive right to exhibit a film, might constitute a monopoly in the popular sense, but that it would not violate Section 2 of the Sherman Act *unless* such a monopoly either (a) was obtained through restraints of trade recognizable under Section 1, or (b) was coupled with the specific purpose or intent to exercise the power to exclude competition. Since the court had found that the defendants had used their monopoly to injure competition, there was present the necessary purpose or intent to use the monopolistic power.

e. The Paramount Pictures Case

In *United States* v. *Paramount Pictures, Inc., et al,* 334 U. S. 131 (1947), the United States was suing to restrain violations of Sections 1 and 2 of the Sherman Act. The defendants were (1) the five major motion picture companies which produced and distributed most of the first run motion pictures and through subsidiaries or affiliates owned or controlled large numbers of motion picture theatres, (2) two other motion picture companies which produced and distributed motion picture films and (3) another company which was engaged only in the distribution of motion pictures. The District Court found that two price fixing conspiracies existed among the defendants—a horizontal one between all of the defendants and a vertical one between each distributor defendant and its theatre licensees. These two conspiracies resulted in the fixing of minimum admission prices which the exhibitors agreed to charge in their motion picture theatres. The District Court also found a conspiracy to maintain a uniform system of clearances of a fixed and uniform character, whereby it was provided that a period of time must elapse between successive exhibitions of the same motion picture within a particular area or in specified theatres. The District Court also found a combination among the exhibitor defendants, whereby they agreed with each other and their affiliates that some theatres of two or more of them normally competitive would be operated as a unit under a profit sharing arrangement, with the result that many theatres were operated collectively rather than competitively. The District Court also found a combination among certain distributors and certain independent and affiliated theatre circuits in the form of master agreements and franchises, whereby favored exhibitors were given exhibition rights to all motion pictures distributed by certain defendants over long periods of time. The District Court also found that the defendants had discriminated against small independent exhibitors in favor of large affiliated and unaffiliated circuits through various kinds of preferential contract provisions, all in favor of the larger circuits. Finally the District Court held that the practice of licensing or offering for licensing, before production, one feature or group of feature pictures, on condition that the exhibitor will also license another feature or group of features released by the distributors during a given period, was illegal for the reason that it adds to the monopoly of a single copyrighted picture that of another copyrighted picture which must be taken and exhibited in order to secure the first. This enlargement of the monopoly of the copyright was condemned in reliance on the principle which forbids the owner of a patent to condition its use on the purchase or use of patented or unpatented material. The basic fact found in the *Paramount* case was that the defendants were engaged in a series of unlawful conspiracies for the purpose of restraining trade.

The District Court had found no need for ordering the divestiture of theatres owned by the defendants on the ground that there had been no monopoly or attempt to monopolize the exhibition of films, and that the evils of the conspiracy could be satisfactorily dealt with by a decree providing for the competitive bidding for exhibition rights in films plus outlawing the various individual illegal practices. The Supreme Court, however, struck down the competitive bidding section of the District Court's decree on the ground that it would unreasonably involve the courts in continuing supervision of the film industry. The Supreme Court then set aside the District Court's findings on monopoly in exhibition, because, in view of the elimination of the competitive bidding system, (a) it was necessary to make sure that the defendants were not allowed to retain the fruits of their conspiracy, (b) it was necessary to make sure that the defendants were not allowed to retain the instrument of their conspiracy and (c) because it was not clear that the District Court's consideration of monopoly in exhibition had given proper emphasis to the importance of certain separate segments of the market, especially that constituted by the first-run theatres in the nation's 92 largest cities. The Supreme Court emphasized that vertical integration of producing, distributing and exhibiting motion pictures was not illegal *per se,* but that it might be illegal if (a) it had been conceived with a specific purpose and intent to restrain trade or to monopolize, or (b) there were present a specific purpose or intent to misuse monopolistic power resulting from vertical integration, if it in fact existed even though it had innocently arisen.

On remand, the District Court found that the first-run theatres in the country's 92 largest cities constituted an important separate segment of the market, and that defendants' combined ownership of 70% of such theatres, together with their receipt of 73% of domestic film rental and the strategic advantages derived from vertical integration resulted in a monopolistic power to exclude competition when desired. The court then found that the conspiracy to fix prices and restrain trade had been powerfully aided by defendants' theatre ownership and that such ownership was thus illegal because it had actually been used as an active aid to the conspiracy. The District Court also emphasized that it was not holding vertical integration to be illegal and added: "The test is whether there is a close relationship between the vertical integration and the illegal practices. Here, the vertical integrations were a definite means of carrying out the restraints and conspiracies we have described." (85 F. Supp. 881, 893).

In defining the percentage of the market controlled, the District Court gave a comprehensive justification for lumping together the theatre ownership of each of the defendants. The justification included not only a review of extensive illegal agreements among them, but also a careful analysis to show that the defendants' owned theatres did not, in actual fact, compete with each other in any significant number of instances.

f. The Times-Picayune Case

In *Times-Picayune Publishing Co. et al.,* v. *United States,* 345 U. S. 594 (1953), the United States Supreme Court reversed the judgment of the District Court which had found that certain of the practices of defendant publishing company constituted an unreasonable restraint in violation of Section 1 of the Sherman Act and an attempt to monopolize trade in violation of Section 2 of the Sherman Act. The Company published the only morning newspaper in New Orleans (The Times-Picayune) and one (The States) of the two evening newspapers in that City. The Company had adopted a policy of permitting classified and general display advertising to be bought only for combined insertion in both papers and the Department of Justice charged that that practice (referred to as "unit selling") violated Sections 1 and 2 of the Sherman Act.

[X]

The court reviewed extensively its previous decisions with respect to the practice of tying the sale of one item to the sale of another, and the case is especially important on account of this careful study of tie-in sales. The court stated that illegality in such tie-in arrangements depends upon the presence of two factors: (a) dominance or monopolistic control over one item and (b) the wielding of the monopolistic leverage in that item to force the purchase of the other. It pointed out that the market involved was the entire newspaper advertising market in New Orleans and that the Company's morning newspaper accounted for only 40% of such market. The court then added that, if each of the three New Orleans newspapers shared equally in the advertising market, the Company's morning paper would have sold 33%; and it concluded that in the absence of patent or copyright control, the 40% market occupation of the morning newspaper was insufficient to confer the market dominance necessary to make the morning paper a product to which sales of other products could not be legally tied under the Sherman Act.

The court gave a second separate basis for holding the tie-in rule to be inapplicable. It stated that the advertising market was really a market for "readership" and that the morning and evening papers published by the Company were the same in terms of the purchase of "readership" and hence were not properly two separate items which could be said to be tied together. No leverage in one market could be used to exclude competitors in the second because the products were held to be identical and the market the same.

Having held the tie-in rule inapplicable, the court proceeded to test the legality of the action under the general prohibition of unreasonable restraint of trade under Section 1 of the Sherman Act. The court stated that the "unit selling" contracts would be illegal, if unreasonable restraint was either their object or effect, and that the court must decide in terms of the percentage of business controlled and whether the action came from business requirements or evidenced a purpose to monopolize. The court reviewed the history of newspaper advertising in New Orleans and in the country and noted the widespread use of "unit selling". It pointed out that the single independent evening paper (the Item) was prospering and was increasing its sale of advertising. The court then held that the government had proved neither actual unlawful effect nor facts which radiate a potential for future harm. The court also added that the "unit selling" practice had been widely adopted in the United States and was apparently a useful business practice and showed no specific intent to monopolize.

The court also reviewed the Company's refusal to sell advertising in either paper alone, in terms of the cases dealing with refusals to sell. The court discussed group boycotting or concerted refusals to deal in violation of Section 1, and found that individual refusals to sell were illegal only if accompanied by specific illegal intent or other unlawful conduct. The court found, at most, nothing but a simple refusal to sell in the "unit selling" practice.

The court next reviewed the status of the Company's actions under Section 2. It pointed out that since there was no holding of actual monopoly, Section 2 could be violated only if the Company had "attempted" to monopolize, and added that the attempt to monopolize required a finding of specific intent. Since the court had found the unit contracts to be motivated by reasonable business needs and had found no other evidence of specific intent to monopolize, the court held that no attempt to monopolize could be found.

ii

AN ANALYSIS OF SENATOR JOHN W. BRICKER'S REPORT ENTITLED "THE NETWORK MONOPOLY"

INTRODUCTION

On April 30, 1956, Senator John W. Bricker transmitted to the Senate Committee on Interstate and Foreign Commerce a "special report" entitled "The Network Monopoly." The general implications and conclusions of that Report, as well as many of its facts, are inaccurate. It is the purpose of this memorandum to analyze these implications, conclusions and facts. For purposes of clarity, this memorandum will follow the major general sections of the Report:

A. The impact of the networks on the objectives of the Federal Communications Act of 1934.

B. The alleged disproportionate "revenues, profits and income" of the CBS and NBC Television Networks.

C. The alleged problem of "access to network programing."

D. The alleged problem of "overlap."

E. The alleged problem of "superstations" and the proposal to reduce power.

F. The CBS allocation plan.

This memorandum will not deal with the propriety of the Report's publication of figures, submitted to, and hitherto retained by, the Federal Communications Commission in confidence, in the face of the explicit suggestion of the Commission that disclosure of financial figures transmitted by it be in aggregate form so as not to permit identification of particular networks and stations. CBS believes it desirable not to confuse substance with procedure; hence this memorandum will focus solely on the substance of the Report.

Further, this memorandum will not deal with the proposal to abandon any numerical limitation upon ownership of television stations and to substitute a limitation based on aggregate station coverage of a maximum permissible percentage of population. That proposal does not appear to be immediately relevant to the issues concerning network practices. CBS reserves the right to comment on this proposal at such time as it becomes more appropriate.

Nor will this memorandum deal explicitly with the Report's proposal to regulate networks beyond the regulation presently exercised by the FCC in its rules governing the relationship of station licensees to networks. This proposal is dealt with at pages 141-143 of the CBS Supplemental Memorandum. It is there pointed out that the FCC already exercises considerable regulatory powers over a network through its licensing of the stations which are the only outlets the networks have to the air.

Those powers are extensive, and are already being extensively exercised. The Report states (p. 22) that the passage of S.825 would confirm those powers and serve as a directive. But it does not specify the content of the directive. Since the networks are already subject to the regulatory powers of the FCC, so far as the use of the public airwaves is concerned, it must be concluded that the directive to which the Report refers would be to regulate aspects of networking other than those concerned with the use of airwaves. Such an extension of regulation beyond the field in which it is appropriate is contrary to the general philosophy of American public policy that regulation should be confined to those fields in which it *is* necessary and appropriate, and should not be unnecessarily extended to activities not requiring regulation.

So long as the government can, through its licensing of stations, require those stations to operate in the public interest as that interest is determined by the regulatory agency, the public interest is adequately protected. Regulation going beyond what is necessary to protect the public interest, such as regulation of a network as a supplier of program material, or in its business relations with stations or advertisers, would have to be justified by special circumstances in networking not common to the general run of unregulated activities. This memorandum will show that the Report's contention that such special circumstances exist in television networking are unfounded, so that there is no reason to extend the regulation of networks beyond that which is exercised through regulation of their outlets to the airwaves.

A. THE INDUSTRY'S FINANCIAL PATTERN AND THE CONGRESSIONAL OBJECTIVES

It appears to be the basic contention of the Report that the facts and conclusions therein establish that the major objectives embodied by the Congress in the Federal Communications Act of 1934 "have been minimized—even subverted" (p. 1) by the CBS and NBC Television Networks. This contention, in turn, appears to be based largely on the Report's analysis of certain financial data. Thus the Report compares revenues and income of the two television networks and their owned television stations with those of various groups of stations in support of its charge that "*there is an unmistakable and clear-cut pattern in industry finances which operates to defeat each of the three congressional intentions outlined earlier*" (p. 2, italics as in original).

In the succeeding sections of this memorandum, CBS will analyze the financial data presented, in order to illustrate the many errors which pervade the Report. But, at the outset it should be emphasized that the Report fails to relate the data on revenues and income to the basic charge that the networks have defeated the major objectives of the Congress. For the facts are precisely to the contrary: The networks have operated to speed the development of television and to advance, not "subvert," the congressional intentions listed in the Report.

The *first* of these intentions is to preserve and encourage competition. The intensity of competition among the networks is so strong, and so well known, that it need not long be dwelt on. It is also obvious that this competition exists not only on the network level but among the affiliates, each of whose ability to compete is vastly strengthened by its network affiliation. This, too, is universally recognized in the broadcasting industry. It cannot therefore be questioned that the networks have made a major contribution toward the preservation and encouragement of competition in television broadcasting, competition of the keenest kind with immeasurable benefit to the public which is offered programs of a richness and variety unknown in the rest of the world.

The *second* congressional intention is to provide meaningful service to the entire country. Here again the contribution of the networks cannot seriously be challenged. In the course of ten years a fully nationwide television system has been built so that now less than one per cent of the population of the country is outside the service area of television. Certainly the single most effective force behind this remarkable growth of television has been the program leadership of the networks. If television had to depend only on the programming efforts of local stations, the development of a nationwide television system would have been immeasurably delayed. Thus this congressional intention, as well, has been served by the development of network television broadcasting as it has actually taken shape.

The *third* congressional intention, to have as many local stations as possible, has also been well served by the networks as they have developed in this country. Testimony is at hand from the operators of small market television stations concerning the value of a network affiliation to them in helping them get started and in aiding them to continue in operation.[1] This fact too is so well known to all who are familiar with the in-

[1]See, for example, testimony of Murray Carpenter before the Senate Committee. See also the statement filed with the Committee by Frank C. McIntyre, Vice President and General Manager of KLIX-TV, Twin Falls, Idaho, describing the benefits to that station of CBS Television's Extended Market Plan and declaring that "CBS-EMP has given small market operators heart. It's given them the confidence they lacked. *It's proven more than any other single factor that small market television will work*" (italics supplied). Cf. Appendix B of this memorandum.

dustry that it need be supported by no lengthy argument. The simple fact of the matter is that the availability of popular network programs with genuine nationwide appeal means, to any potential station, that it can get a tremendous boost in getting started through a network affiliation. Unfortunately the number of networks is limited, ultimately by spectrum considerations and more immediately by certain shortcomings in the allocation pattern, so that the contribution of a network affiliation to the prosperity of a station in a small market is underlined by the complaints of those few stations (see p. 25, footnote 1, below) which are not in a position to get an affiliation with a leading network. Furthermore, as noted below, the affiliation does not, of course, guarantee all network programs to the affiliates. It does, however, contrary to the Report's statement (see below), give that station access to network programs, access that can be realized in actual occupancy if advertisers can be persuaded to add the station to their line-up.

Therefore, not only do the financial figures presented by the Report fail to substantiate the charge that industry finances operate to defeat each of the three congressional intentions, but the clear and obvious operation of networking in television broadcasting is such as to advance the three objectives. In fact, as CBS has called to the attention of this Committee, of the FCC, and of the general public, such shortcomings as the present television system has with respect to these three objectives proceed almost entirely from imperfections in the allocation system. CBS has done its best to suggest such remedies for those imperfections as seem to be practical in present circumstances.[1]

B. Revenues and Profits[2]

The Report contends that networks and selected affiliates have such disproportionately large revenues and profits that a monopoly exists and regulation of networks is justified. Both the facts and concepts which underlie the conclusions of the Report are erroneous; its conclusions, therefore, must fall. CBS does not deny that since 1952 its television operations have been profitable on an annual basis. Nor does CBS apologize for that success. CBS has assumed that a major—and wholly permissible—business objective of any American enterprise, whether in broadcasting or in any other commercial field, is to operate profitably. So far as CBS is aware, success as measured by profits has never, under any system of free competitive enterprise, been regarded as evil or undesirable.

By no accepted measures does CBS have anything approaching monopoly in the television broadcasting business. See *Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcast Activities of Columbia Broadcasting System, Inc.*, prepared by Cravath, Swaine & Moore, and submitted simultaneously herewith. Neither the revenue nor the profit figures which are emphasized in the Report justify the charge of monopoly. Nor are they abnormal

---

[1]*Proposals and Comments of Columbia Broadcasting System, Inc.*, submitted to the FCC, December 14, 1955, Docket No. 11532.

[2]The Report refers to "revenues," "net income" and "profits" (e.g., p. 3). Since the distinction between net income and profits is not apparent, this memorandum will treat both as "profits."

when measured by the experience in other fields of American commerce.

1. *Revenues.* The Report states (pp. 2-3) that in 1954 the combined gross revenues of the four television networks (CBS, NBC, ABC and DuMont), together with their 16 owned television stations,[1] totaled $306.7 million. This total, according to the Report, was slightly more than one-half of the 1954 revenues of the entire industry. The Report further states that the CBS and NBC Television Networks and their eight owned stations each received more than one-fifth of the revenues of the entire television broadcasting industry.

The irrelevance of the percentage of industry revenues represented by *network* revenues is established by the CBS Supplemental Memorandum (pp. 86-87), submitted to the Senate Committee simultaneously herewith. As there shown, a network's functions are such that necessarily its expenses, and hence its revenues, must be large.[2] Indeed, the Report would appear to concede this, since it states (p. 3) that "gross revenue is important only as it relates to net income."[3]

---

[1]NBC and ABC each owned five television stations in 1954; CBS and DuMont each owned three. The Report mistakenly asserts at page 24 that CBS (as well as NBC and ABC) has "been able to build or purchase . . . 5 stations in the country's top markets." While NBC and ABC each has five VHF stations, CBS has only three. Like NBC, CBS also has a UHF station.

[2]In any event, if the CBS Television Division and the CBS Television Network were treated as separate corporations, their 1954 sales would rank 198th and 227th, respectively, among United States industrial corporations. See *Fortune,* Supplement, July 1955, *The Fortune Directory of the Five Hundred Largest U. S. Industrial Corporations.*

[3]The 1954 network shares of total network revenues are not representative of current shares of network revenues. ABC's share of national television network gross time billing was nine per cent in 1953; rose to 13 per cent in 1955; and was at the rate of 17 per cent as of February 1956.

2. *Profits.* The Report attempts to establish "exorbitant" profits, and hence a monopoly, of the CBS and NBC Television Networks. Even if amount, either absolute or relative, of profits were determinative of the issue of monopoly or to the need for regulation, the Report has resorted to improper and meaningless measurements of profits, and has ignored available facts concerning American business which, by putting the profits of the two networks into proper context, deprive the figures cited by the Report of the significance which the Report seeks to attach to them.

But it should be noted at the threshold that whatever significance profits might otherwise have from the viewpoint of public interest or the justification for special Federal intervention, the touchstone of profits is peculiarly inapposite in the field of broadcasting. For the broadcasting business is unique in that its product for the public—programs—are furnished to the public *free.* The viewer does not pay for the programs. While an infinitesimal fraction of the price of a sponsor's product may be represented by the cost of television advertising, the viewer can, and often does, enjoy the program without ever buying that product. It is exceedingly doubtful that prices of products would be even one penny lower if all television advertising should cease. On the contrary, to the extent that television advertising serves as an efficient tool of distribution and marketing, and thus increases mass manufacture, or supplants less efficient and more expensive marketing tools, it serves to *lower* the prices of the products advertised.

It clearly cannot be established, therefore, that the general public, or that portion of it which views television programs, is in any way adversely affected by the prices which the networks and stations charge advertisers, or the profits which the networks and stations earn. In these circumstances, the Report's emphasis on profits as a justification for regulation is particularly inappropriate.

Irrespective of its inappropriateness, however, the contention of the Report to establish that the two networks' profits are exorbitant or unusually high is without substance.

(a) *The impropriety of measuring profits in relation to net investment.* The Report (see pp. 3, 5-6, 15-17) seeks to establish excessive profits by utilizing the measure of the ratio of such profits to "net investment." "Net investment," as used in the Report, refers only to net tangible property owned and devoted exclusively to broadcast service, as reported to the FCC. Net tangible property consists only of (i) the value of land and (ii) the depreciated value of buildings, equipment, furniture and fixtures. It excludes not only all other tangible assets but also all intangible assets on which the broadcasting business is so heavily dependent. By thus defining "net investment," and measuring profits on so narrow a basis, the Report ignores the other major investments which a network must make in order to be successful. It ignores the $53.1 million which CBS invested through 1952 in television networking before the network earned any profits whatever. It ignores, too, the fact that on a cumulative basis, the CBS Television Network did not earn any profits at all *until 1955.* Clearly, therefore, the measure of the ratio of profits to net investment, as the Report defines it, is misleading, meaningless and inappropriate. The major area of

American commerce in which the ratio of profits to net investment has been accepted as a meaningful measure is that of certain public utilities such as telephone companies and railroads. The central characteristic marking such public utilities is their requirement of a massive investment in land and in plant in order to carry out their basic functions of transmission or transportation—of messages in the case of telephone companies and of freight and passengers in the case of railroads.

The sharply differing nature of broadcasting—as well as most other industries—from public utilities such as these is immediately apparent. The principal asset of a broadcaster, and particularly a network, is its creative and organizational activities. Like a newspaper's circulation, a network's good will, popularity and standing with the viewing public are part of its central asset, built up over the years. The $53.1 million, noted above, is one of the costs of that asset. For a broadcaster's investment is not so much in bricks and mortar as it is in a creative, sales, and service organization.[1] If the networking function were to be broken down into two parts, that of studio operation and physical transmission on the one hand, and program origination and organization and sales on the other, almost all of the tangible

[1]The Report's contention in this respect is not saved by the fact (see Senator Bricker's letter, dated May 23, to John Crosby) that profits have already taken into account operating expenses since, of course, profits represent the difference between revenue and expenses. The profits of 1954 have obviously not taken into account the expenses of previous years which were not met by the revenues of those years. As noted at page 10, on a cumulative basis through 1954, there were no profits. In any event, the letter begs the question. The crux of it is whether (assuming, contrary to the fact, that profits are relevant at all) it is proper to measure the reasonableness of profits in the broadcasting business as a percentage of "net investment," not whether absolute profits are correctly defined.

property can immediately be recognized as attributable to studio operation, and almost all of the profit creativity to the second category of functions. The major activity of the CBS Television Network is not mere studio operation and physical transmission[1] but rather is the business of creating or obtaining programs, organizing the program structure, and selling to advertisers.

The fact is that profitability in broadcasting follows program leadership rather than bricks, mortar and electronic equipment. In broadcasting, profits are the reward for the investment in creative activities and for the exercise of professional skill and not for the use of buildings and equipment. To compare the profits which arise from program and sales leadership with investment in bricks and mortar is to derive a numerical figure that has no relationship to the economics of the business. The Report's use of the public utility concept of profit measurement in the field of broadcasting is like concluding that since a flea can jump over 100 times its own height, and an elephant only a fraction of its height, the flea is more powerful than the elephant.[2]

---

[1]In fact, physical transmission of network programs is largely performed by others than the network—transmission over AT&T lines and broadcasting over the affiliates' transmitters. These are obviously not the tangible property of the network and hence are not included in the investment base on which the ratio of profits is measured.

[2]How inappropriate a measure is return on net tangible investment in a non-public utility field can readily be illustrated. For example, a successful author's total investment in physical property may be only $100 in a typewriter. After years of training, education and effort, he may complete a book for which he receives $100,000. His rate of return, by the measure adopted by the Report, would be 99,900 per cent (assuming that the typewriter qualifies as "net investment"). Yet he is hardly to be condemned for "exorbitant" profits or to be characterized as a monopoly—economic or otherwise.

The arbitrary nature of this method of measuring profits is also indicated by the variations which depend on the irrelevant circumstance of whether

Broadcasting is not unique as a business for which the measure of return on capital investment is inappropriate. There are many other businesses in which physical properties play an even greater share than in broadcasting, but in which the principal profit source is nevertheless creative activity rather than bricks and mortar.

Attached hereto as Appendix A is a table setting out operating profit as a percentage of net tangible property for selected companies in 1954. In the context of such facts, the figures of 108 per cent attributed to the CBS Television Network and owned station activities and of 65 per cent for its network operations alone are neither abnormal nor immodest. As Appendix A illustrates, in a creative industry such as publishing, McGraw-Hill Publishing Co. profits before taxes in 1954 were 526 per cent of net tangible property; Time, Inc. earned 116 per cent; Moody's earned 500 per cent; and New Yorker Magazine, Inc. earned 2000 per cent. But as Appendix A also shows, it is unnecessary to rely only on publishing to show that the networks' percentage of return on tangible property is not uniquely high. Even in the field of manufacturing where bricks and mortar

---

property is rented or owned. For example, it is roughly estimated that the physical property rented by CBS Television has a net value of about $15 million. If CBS Television owned, rather than rented, that property, the 108 per cent which the Report attributes to it would immediately be cut by about a third. The figures relating to the ABC Television Network also underscore the absurdity of this measure. As the Report notes, all of ABC's net tangible property in television broadcasting is assigned to its owned stations. Hence, the day that the ABC Television Network becomes profitable—and that point may already have been reached, since the last publicly available figures are for 1954—the ABC Television Network will have the highest rate of return on net tangible property of any of the three networks. As soon as it earns one dollar in profits, since the denominator is zero, the return under the Report's method of computation will be an infinite percentage.

play a larger part, there are many corporations which earn rates of return on net tangible property very much larger than those conventionally used as a standard in public utility rate-making: Thus, in 1954, Boeing Airplane Co. earned, before taxes, 377 per cent of its net tangible property; Douglas Aircraft Co., Inc., 249 per cent; Lockheed Aircraft Corp., 156 per cent; General Motors Co., 107 per cent; General Electric Co., 80 per cent; Coca-Cola Co., 92 per cent; and Pepsi-Cola Co., 119 per cent.

But it is increasingly being found by regulatory agencies that return on net tangible investment is an inappropriate measure *even in the field of public utilities itself*—and precisely for the same reasons that it is inappropriate in the non-public utilities field. In some public utilities, such as the operation of bus lines, net tangible property plays a much smaller role than in other public utilities such as telephone companies, railroads, or electric power companies. For those lines of public utilities in which the role of net plant investment is smaller, the *operating* ratio—that is, the ratio of expenses to revenues—is coming into use in rate cases instead of the return on net plant investment. One expert points out that there is in process "a revolution in rate regulation of mass transit companies."[1]

The same considerations which led to this revolution in the public utilities field operate even more powerfully to disqualify return on net tangible property as an appropriate measure in television broadcasting. It thus becomes immediately apparent that the reasonableness of profits, the need for regulation, and

[1]Charles Alan Wright, Associate Professor of Law, University of Minnesota Law School, "Operating Ratio—A Regulatory Tool," *Public Utilities Fortnightly,* January 1, 1953.

the question of the existence of a monopoly cannot turn on the inappropriate and meaningless measure advanced by the Report. The measure of ratio of profits to net investment is entirely irrelevant to an evaluation of competition in broadcasting. If this were a proper measure, the Federal Government would be compelled to condemn, intervene in, and regulate an enormous variety of other important industries. Obviously, no such suggestion can be seriously proposed.

(b) *The impropriety of using profits as a measure of monopoly.* The Report also seeks to rest its case for "economic monopoly" and the alleged need for regulation upon the contention that the CBS and NBC Television Networks and their eight owned stations had a disproportionately large share of the industry's net income before taxes. The Report, in so far as CBS is concerned, finds such disproportion in the fact that in 1954 the CBS Television Network and its three owned stations had a net income of slightly more than 28 per cent (of which 14.5 per cent was accounted for by the network and 13.6 per cent by the three stations) of the total net income for the entire television broadcasting industry. When viewed in context, the figure does not support the conclusions which the Report seeks to establish.

At the threshold, it should be emphasized that where, as here, there is no substantial evidence whatever of legally defined monopoly or intent to monopolize, a company's share of industry profits finds far simpler and less sinister—and more accurate—explanations than "economic monopoly" and "economic strangulation." Industry leadership in the field is a less dramatic but a more innocent and accurate underlying explanation. So too in the broadcasting industry, the highest share of profits may quite naturally follow program, sales and organizational leadership. And in this connection, it is, perhaps, something more than coincidence that the programs of the CBS Television Network (whose profits comprise 14.5 per cent of the industry share) *account for at least 26.2 per cent of all U. S. viewing.*[1]

Even if 1954 is viewed in isolation, without taking into account the investments of prior years which necessarily contributed so heavily to the profits of 1954 (see p. 10, above), the CBS Television share of industry profits was not abnormally large. The Report, again, has ignored the general experience of American business so as to create the impression of abnormality.

Similarly, the Report ignores the more normal and meaningful measure of profits—as operating ratio or percentage of margin on sales—a measure which has in fact come to be adopted by regulatory bodies even for some types of public utilities (p. 14, above). In 1954, the CBS Television Division margin after taxes on sales was 7.8 per cent, while the CBS Television Network's margin on sales after taxes was 4.6 per cent. On a *cumulative basis,* the CBS Television Network's return after taxes *through 1955* was 1.03 per cent of sales

[1]Based on the average of the two weeks ending March 10, 1956, and derived from the A. C. Nielsen Television Index report. The percentage of 26.2 is understated: It includes only the viewing of CBS Television Network *commercial* (sponsored) programs, and does not take into account network sustaining programs.

without taking interest payments into account; the return was *only 0.46* per cent if, as they properly should be, interest payments are taken into account. These percentages are to be compared with about 2,400 leading non-financial corporations tabulated by the First National City Bank, showing an average margin on sales in 1954 of 6.1 per cent[1] and a range of 3.9 per cent to 12.6 per cent approved by regulatory bodies for certain types of public utilities.[2]

Nor even when compared to the profits as a percentage of sales within the television broadcasting industry itself are such profits of the CBS Television Division or Network unusually large. As appears at pages 53-55 of the CBS Supplemental Memorandum, the FCC's own *published* figures for 1954 show that the profits after taxes of 377 independently owned television stations correspond to nine[3] per cent of sales—almost twice the percentage of profits of the CBS Television Network, while the average net return, after taxes, on total sales of three television stations operating in Detroit was 22 per cent; of three stations operating in Milwaukee, 21 per cent; of two

---

[1]The Bank tabulated the income statements of 2,691 non-financial corporations. Average profit margins were computed for all the companies included which published sales or gross income figures. These represent about nine-tenths of the total number of reporting companies excluding the finance group.

[2]Professor Wright, in his article referred to in the footnote on p. 14, analyzed 22 cases in which operating ratios rather than net tangible property were used as the basis of rate regulation by public utility regulatory bodies. He found a range of approved ratios, after taxes, of 87.40 per cent to 96.08 per cent—corresponding to a net margin on sales of 3.9 per cent to 12.6 per cent. Approved ratios, before taxes, ranged from 88.12 per cent to 94.20 per cent—corresponding to a pre-tax margin on sales of 5.8 per cent to 11.8 per cent.

[3]Assuming a 52 per cent corporate tax rate in the aggregate.

75589 O—57—pt. 4——36

stations operating in Boston, 25 per cent; and of four stations operating in St. Louis, 22 per cent.[1] Since these percentages are the average percentages for each city, obviously the percentages for particular stations in each market were higher. During the same year, the profits after taxes of the three CBS owned stations in New York, Chicago and Los Angeles, averaged 23 per cent of sales. And CBS has estimated that in 1954, the total net profits of seven CBS Television Network affiliates not owned by CBS exceeded the net profit of *the entire CBS Television Network.*

Not only is the rate of the profits of the CBS Television Division and Network activities thus well within normal range; so also is its share of entire industry profits. The Report (pp. 3-4, 21) is mistaken in its emphasis on the fact that the CBS Television Division in 1954 earned 28 per cent of the net income of the entire industry. That percentage is, in fact, relatively low when compared with the percentage of industry income enjoyed by the leading company in each of a variety of other industries. This is established by the following table showing, for a selected list of industries for 1952, the per-

[1]Assuming a 52 per cent corporate tax rate in the aggregate.

centage of net profits before taxes of each industry which is accounted for by the most profitable company in the industry:[1]

Industry	Percent of Industry's Corporate Profits Reported by Leading Co., 1952	Number of Corporations In the Industry
Manufacturing		
Soap & Glycerine, Cleaning & Polishing Preparations, etc.	83%	1087
Distilled Liquors, etc.	76%	212
Non-alcoholic Beverages	73%	2513
Motor Vehicles (incl. Bodies and Truck Trailers)	73%	560
Tin Cans and Other Tinware	70%	68
Petroleum and Coal Products	51%	697

Periodicals	22%	1389
Trade		
Variety Stores	33%	832
Food—Retail	19%	10275

[1]The year 1952 is the latest year for which authoritative Treasury figures on corporation income for entire industries are available. The data appear in *Statistics of Income for 1952*, U. S. Treasury Department, Part 2. The universe covered comprises all corporations filing income tax returns, including both profitable and unprofitable corporations. The data on profits of leading corporations for 1952 are from *Moody's Industrials* 1953.

The *Statistics of Income* defines profits before taxes as before Federal income and excess profits taxes but after state and some portion of foreign income taxes. The individual firms' profits from *Moody's* were taken before state, foreign and Federal income taxes. Thus, the percentages in the table are slightly overstated.

It is clear, therefore, that the profits of the CBS television operations are well within limits of normality. It is equally clear that it is wholly inappropriate to measure either monopoly or the need for regulation by examining solely the percentage of industry profits represented by the leading corporation in the industry. To do so would, as illustrated, compel regulation and condemnation as monopolistic of a far greater variety of enterprises than the single target of the Report—and with equal absence of justification.[1]

(c) *The unjustified attack on the 1954 testimony of Frank Stanton.* In the course of its discussion concerning the profits of the CBS and NBC Television Networks, the Report, as noted, seeks to establish that the profits were unreasonable by using the inappropriate and meaningless measure of the ratio of profit to investment in tangible property (see pp. 10-12 above). The Report compounds the error by stating (p. 5) that these profit ratios are "difficult to reconcile" with testimony on June 18, 1954, of Dr. Frank Stanton in which he stated before the Senate Communications Subcommittee:

---

[1]It should be noted also that the percentage of industry profits earned by the CBS Television Network in 1954 may well not be typical for the long range future. The continued growth of the ABC Television Network (See page 8, footnote 3) can be expected somewhat to reduce the CBS Television Network's share of network's profits.

Further, the profitability of "other" (non-network owned) and smaller stations can reasonably be expected to increase. The history of radio tends to substantiate a long run tendency for networks and their owned stations to experience a profit trend rising less sharply than that of "other stations." Thus, in 1938—a period in radio's life cycle roughly comparable, chronologically, to 1954 in television's life cycle—the AM networks and their owned stations earned profits before taxes approximately equal to the total profits of the "other stations." By 1945, the AM networks and their owned stations earned profits less than 40 per cent as large as those of "other stations."

> "The television networking business is a complicated and delicate business. Profit margins are relatively small—particularly when one takes into account the enormous investments and operating expenditures involved.
>
> "It is easy to upset the balance of television networking and sink it altogether."

This testimony of Dr. Stanton was accurate both as of June 18, 1954, and as of today.

Dr. Stanton was not, of course, discussing profit margins in terms of profits as a ratio of physical investment. It was, and remains, a fact that profit margins of networks are relatively small in terms of operating investments, expenditures and total sales or revenues[1] particularly in the light of the unusual risks and advance commitments which television networking involves.[2] As noted above, even in 1954 the profits, after taxes, of the CBS Television Network—the most profitable network—were only 4.6 per cent of sales, and on a cumulative basis through the end of 1955, its profits, after interest and taxes, were only *less than one-half of one per cent of sales,* as compared to the *average* percentage margin on sales in 1954 of 6.1 percent of about 2,400 leading non-financial corporations. Clearly, these figures alone fully justify Dr. Stanton's testimony that the profit margins in the "television networking business" are "relatively small."

Further, Dr. Stanton's testimony explicitly dealt not only with the CBS Television Network but with the *entire* "television

[1]CBS Supplemental Memorandum, pp. 11, 17 to 30; see pp. 16-18 above.

[2]CBS Supplemental Memorandum, pp. 50-52, 87.

networking business." The profit margins of the NBC Television Network were lower than those of the CBS Television Network, while both the other television networks, ABC and DuMont earned no profits in 1954 as the Report itself establishes. The most recent data on the entire industry available as of June 18, 1954, when Dr. Stanton testified, were the figures for 1953 given to the same Subcommittee by the then Chairman of the FCC, Rosel H. Hyde. His testimony indicated that the four television networks, in the aggregate, suffered losses of $3 million in 1953. Since, in the same year, all 323 television stations reported on by Mr. Hyde had aggregate profits before tax of over $71 million, Dr. Stanton's conclusion that the profit margins in networking were small and delicate was well justified.

The only actual 1954 figures available to Dr. Stanton as of June 18 were those for the CBS Television Network for the first four months. On that date, the CBS Television Network forecasts had been extended only through September 30 and it was not until August that a forecast was carried through for the whole year. As of June, the forecast for the first nine months of 1954 stood at $91.3 million in net sales and $2¾ million profits, after taxes, or three per cent of net sales. It is to be recalled that 1954 was the year of the first substantial break-through of television networking into significant profits. The situation, while clear now by hindsight, was, in 1954, fluid, and the future hardly certain. As was customary, the major selling for the fall season occurred during the summer and was not completed until the end of August. Hence, when

Dr. Stanton testified, the 1954 profits before taxes of the CBS Television Network of $13.1 million were not predictable with any certainty whatever. Indeed, as of June 1954, the entire profit which had been forecast for the first nine months of 1954 would have been wiped out had only six one-half hour programs per week for the last half of the year been cancelled.

In the circumstances, whether with or without benefit of hindsight, the Report is patently mistaken in finding the facts "difficult to reconcile" with Dr. Stanton's testimony.[1] Both in the light of the facts as they existed on June 18, 1954, and as they later proved to be for the entire year 1954, his testimony that profit margins of "the television networking business . . . are relatively small—particularly when one takes into account the enormous investments and operating expenditures involved" was exactly accurate.

C. "Access to Network Programming"

The Report includes (pp. 6-8, chart on p. 9) a section entitled "Access to Network Programing" which, according to the Report, establishes the existence of an "economic monopoly" (p. 8). Its apparent contentions are that (1) "access to substantial amounts of network programs, is nearly 100 per cent essential to profitable operation of the individual station"[2]

---

[1]Another error in the section of the Report dealing with revenues and income should also be noted: At page 6, lines 6-10, the Report refers to net 1954 income of "ABC and its 5 wholly owned stations" and "DuMont and its 3 wholly owned stations." The income stated in the Report is for the owned stations only.

[2]The remainder of this section of the Report treats such "access" as available only if the station carries 41 to 100 per cent of the commercial programs of the CBS or NBC Television Networks (see, e.g., pp. 6, 8). If the station carries less than 41 per cent, it is treated either as unaffiliated or as lacking "access."

(p. 6); (2) those CBS and NBC television affiliates in the top 20 markets and in Zone I which have such "access" garner a disproportionate share of industry profits; (3) exclusive of selected affiliates with such "access" in Zone I, "television is a losing proposition on the average" (p. 8); and hence (4) an "economic monopoly exists." The underlying premise of this section appears to be that a station can be profitable only if it (a) is in one of the largest markets in the most populous section of the United States and (b) has a CBS or NBC television affiliation.

Both the facts and the premises in which this contention is built are fallacious.

1. *The fallacy of the "access" contention.* The basic fallacy of this section of the Report is its use of the concept of "access" in a manner which ignores basic television (and other) economics and, by so doing, finding sinister indicia of monopoly attributable apparently to wrongdoing by the CBS and NBC Television Networks. The fact is, however, that the economic phenomena which are characteristic of our American economy account for the differences which the Report finds.

This basic error appears at the threshold of the section of the Report dealing with "access."[1] The CBS Television Network does not in fact determine an affiliate's "access" to the commercial schedule. The Report confuses "access" with "occupancy" and ignores the fundamental distinction between the

[1]The same misconception pervades other sections of the Report, particularly that dealing with "overlap," where alleged disparities between stations are attributed to the networks' "furnishing" and "placing" (p. 8) commercial programs on some stations and not others. See pp. 38-41 below.

two. Every CBS Television affiliate—and for that matter, every non-affiliate located in a city (or hyphenated city-group—e.g., Seattle-Tacoma, Houston-Galveston) other than that in which a regular affiliate is located (CBS Supplemental Memorandum, Appendix C, pp. XXXII-XXXIII)—has "access" to every sponsored program.[1] It is the advertiser, by his orders for particular stations, and not the network, who determines on which affiliates the programs will be placed. The fact, therefore, is that those stations which carried less than 41 per cent of the network commercial programs did have "access" to such programs in the sense that had the advertiser been willing to order such stations, the programs would obviously have been offered to them.

Indeed, far from acting to restrict the number of affiliates ordered, the CBS Television Network by its sales efforts, its discount structure and its Extended Market Plan has affirmatively sought to expand the number of stations ordered by advertisers (see CBS Supplemental Memorandum, pp. 78-82, 100-102)—and has succeeded in doing so by increasing, between 1955 and 1956, the average daytime lineup of stations for sponsored programs from 72 to 83, and the average nighttime lineup from 87 to 121. For, it is to be noted, it is to the advantage of the network to sell as large a number of its affiliates as possible for each commercial program.

The Report has thus distorted normal and basic economic phenomena into an allegedly sinister aspect of networking.

[1]As of March 1, 1956, only 36 of the 429 commercial stations were unaffiliated with one of the three networks (CBS Supplemental Memorandum, p. 8). Many of the 36 remaining stations also had "access" as per-program stations.

The explanation of differences among markets lies not in network monopoly or manipulation, but in the structure of the markets and the nature of the stations concerned. The population distribution of the American people is not geographically equal: More people live in some areas than in others. Nor is the economic distribution equal: For example, ten per cent of the counties in the United States account for 70 per cent of all consumer spending in the country. Further, there is the basic factor of cost-per-thousand in television as in all other advertising media (see CBS Supplemental Memorandum, pp. 59-65): The cost-per-thousand of a station reaching a large population is lower than that for a station reaching a small number of people. The former, accordingly, is normally more attractive to the advertiser.

All these natural population and economic phenomena unquestionably account for disparities between stations. Networks must accept them as inevitable and within reasonable limits, take steps, in so far as feasible, to counteract any undesirable effects, as they do (p. 25 above). But they are no more responsible for these factors than the Congress is responsible for the ebb and flow of the tides and the rising and setting of the sun.[1]

[1]To say that an affiliate's profits depend upon the percentage of a leading network's programs carried is to confuse cause and effect. Those stations which are attractive to advertisers will be ordered by more network advertisers, and they will also be ordered by more national spot and local advertisers. They will therefore be the profitable stations. The cause is the advertising value offered by the stations. One effect is the amount of network programs ordered on the station, as well as the amount of national spot and local advertising. Another effect is the station's profitability. The Report has accordingly identified one effect of the advertising value offered by a station, namely the percentage of network programs carried, and has used this effect as an index of another effect, profitability. There is no question that, on the

This section of the Report is, in addition, premised on still another threshold error—that "actual access to substantial amounts of network programs,[1] is nearly 100 per cent essential to profitable operation of the individual station"—the only exceptions being stated to be the stations "in the largest cities" (p. 6). A subsequent section of the Report itself demonstrates this statement to be erroneous. Thus the Report (p. 15) states that stations "in such relatively small markets as Minot, N. Dak.; Great Bend and Pittsburg, Kans.; Kearney, Nebr., and Joplin, Mo." have "prospered" with "reasonable access to network shows." Yet the striking fact for present purposes is that during the week of October 10, 1954, which apparently is the week used by the Report for measuring the percentage of network commercial programs carried, none of these stations

---

average, this is an efficient index. The higher the percentage of network programs carried by a station, the higher will be, on the average, that station's profitability. The mistake is to regard this index relationship as a causal one.

The Report might have directed a similar complaint against Cadillacs, since the owners of Cadillacs receive a disproportionate share of individual incomes. It might then have concluded that access to a Cadillac is essential to a high level of income. This, too, is confusion of cause and effect.

[1]An additional implication of this section of the Report is that the affiliation must be with the CBS or NBC Television Networks if profitability is to be achieved. The implication is mistaken. Many ABC Television affiliates are also profitable. The Report itself discloses (p. 6) that the ABC-owned stations themselves were profitable. Although the profit figures are not available to CBS, CBS believes that a substantial number of other ABC Television affiliates were also profitable. Conversely, the profit figures relating to Zone I CBS and NBC Television Network affiliates are misleading because of the arbitrary cut-off point of 41 per cent of network sponsored programs. Thus, many CBS and NBC Television Network affiliates are excluded, and unquestionably a number of such affiliates carrying less than the 41 per cent suffered losses. Thus the inference is clearly justified that something other than CBS or NBC Television Network affiliation is often the determinative difference between profitable and unprofitable stations. Again, in most cases, the difference arises out of the difference in the structure of the markets concerned—their size and their relative location—as well as in the nature of the stations. These are not factors which are, or can be, governed by CBS or NBC.

carried more than 20 per cent of the commercial network programs originated by its primary affiliated network. Pittsburg, Kansas, carried just 20 per cent. The Kearney station carried only about 11 per cent of the CBS commercial schedule, Joplin and Minot each eight per cent.[1]

The Report itself at page 15, accordingly, squarely refutes what appears to be a central contention of the material at pages 6-8. The short of it is that "access" to network programs, or more accurately network advertisers' orders for stations, is simply one reflection of the economic and geographic complex which govern a station's profitability. The stations listed at page 15 profit because of favorable geographic and economic factors, and they do so without 41 per cent or more of the network schedule.[2]

2. *The fallacy of the statistics relating to the share of industry profits earned by selected groups of affiliates.* The Report seeks to bolster its central contention that "access" to CBS or NBC Television Network programs is essential to profitable operation of a station, and that because these networks con-

---

[1]Kearney also carried 0.8 per cent of NBC's commercial programs and Minot, five per cent. Great Bend, Kansas, did not go on the air until November 15, 1954.

[2]Another error in the "access" section may also be noted: The Report states (p. 6) that "Access to network programs and the accompanying national spot advertising represents access to 77 per cent of all television revenue, as stated by the FCC in its 1954 report." If this means that 77 per cent of all television time sales are attributable to network and national spot advertising (wherever placed), and only 23 per cent to local advertising, it is literally correct. But its implication that stations without "actual access to a substantial amount of network programs" must get along with the 23 per cent of all television revenue accounted for by local advertising is incorrect. Affiliates with less than 41 per cent access, as well, obviously have "access to," and receive, national spot and network revenues and non-affiliates, of course, receive national spot and, occasionally, network revenues as well.

trol "access" they hold an economic monopoly. This attempt is made by setting out a series of statistics relating to the alleged profits of (a) affiliates in the first 20 markets (p. 7) and (b) 73 selected affiliates in Zone I (p. 8). When viewed in context, the statistics are significant only of economic and geographical factors and nothing more.

That the CBS and NBC Television Network affiliates in the first 20 markets[1] earn a substantial share of the industry profits is hardly remarkable. For the 20 largest markets accounted for about 58 per cent of the personal income in the United States, about 52 per cent of the homes, and 61 per cent of the television families. The combined share of evening audience enjoyed by CBS and NBC Television Network affiliates in these markets averaged 75 per cent.[2] Thus it readily appears that the share of profits earned by these stations in the first 20 markets has no sinister significance whatsoever, but stems only from the nature of the markets themselves. Indeed, other material elsewhere in the Report places these figures in proper perspective, for, in dealing with a different point, it states (p. 24) that "relative financial position of station operators is determined

[1]Since the Report did not list the markets considered as the first 20 markets, CBS has been unable to determine to which markets and stations the Report refers. In this memorandum, CBS has assumed that the first 20 markets are those listed in *Investigation of Television Networks and the UHF-VHF Problem* (Progress Report prepared for this Committee by Robert F. Jones). CBS has used Seattle-Tacoma and Houston-Galveston as combination markets. Making these assumptions, there were 74 stations in the 20 markets as compared with the 73 mentioned in the Report, and the CBS and NBC Television Networks each had 19 affiliates, if a point be stretched to count WDTV, Pittsburgh, as a CBS Television Network affiliate. The figures in the text below will accordingly relate to the 36 "remaining stations" rather than the 35 mentioned by the Report.

[2]Telepulse, January 1955, except for Pittsburgh, Pa. and Houston-Galveston, which are February 1955.

by reference to total net populations covered, rather than total number of stations, . . ."

Consideration of the presumptive identity (see p. 29, footnote 1) of the 38 CBS or NBC Television Network affiliates in the first 20 markets on the one hand, and the 36 remaining stations in these markets on the other, reveals the degree to which the comparison made by the Report (p. 7) depends on factors other than those implied. The 38 CBS and NBC Television Network affiliates are, except for seven stations, all well established pre-freeze VHF stations. Of the 36 remaining stations in the 20 leading markets which the Report implies are considerably less profitable because of the absence of NBC and CBS Television Network affiliation, ten are UHF stations in unequal competition with the leading VHF stations in the country, a circumstance which certainly can not be laid at the door of CBS, which has consistently opposed the intermixture of UHF and VHF stations.

Another two (plus five of the UHF stations mentioned above) of these 36 remaining stations were in operation less than one full year in 1954. They should certainly not have been expected to receive a full year's share of revenues in less than a year. Nor should these stations or the three stations among the 36 which started operation only in 1953 be expected to be as profitable in their first or second year on the air as their well established competitors in their seventh to fourteenth years.

Also included in the remaining 36 stations are the six stations in New York and Los Angeles that had no network affiliation, and the four stations with only DuMont affiliation. As shown by the published figures of one of them, KTTV, these stations have been slow in breaking into the black, but they are beginning to do so. They do have prospects of future profitable operation.

That leaves the 11 established ABC VHF affiliates in the 20 leading markets. These are presumably profitable stations and probably account for more than 100 per cent of the profits credited to all 36 "remaining" stations since the losses of the UHF's, new stations, and unaffiliated stations are combined with their profits.

Thus, not only is it reasonable that a major share of the station revenue and profits of the country should be found in the 20 leading markets, but it should also be expected that in those leading markets the old established VHF stations with CBS and NBC Television Network affiliation should be significantly more profitable and do a significantly larger share of the business than the UHF stations, the newly established post-freeze stations, or the unaffiliated stations.

Even more meaningless and misleading is the Report's attempt to show that 73 selected CBS and NBC Television Network affiliates in Zone I earn a disproportionately high share of industry profits and that exclusive of these 73 stations, "television is a losing proposition on the average" (p. 8). The facts are to the contrary.

In order to establish the erroneous conclusion which the Report seeks to advance, it indulges in arbitrary manipulation and exclusions and inclusions. First, it places on one side the profits of the entire industry. Second, the Report selects Zone

I—obviously that area of the United States where the population is most heavily concentrated: Zone I accounted for about 49 per cent of the entire population in 1954 and as of June 1, 1955, accounted for about *58 per cent of all U. S. television homes.* Third, instead of computing all Zone I CBS and NBC Television Network affiliates, it lifts itself by its own bootstraps by arbitrarily including only those CBS and NBC Television Network affiliates which are ordered for at least 41 per cent of the commercial schedule—thus including 34,[1] *but excluding 23*, CBS Television Network affiliates in Zone I, as well as many NBC Television Network affiliates. It may be noted that the CBS Television affiliates in Zone I, which carried 41 to 100 per cent of the CBS Television Network commercial schedule in 1954 had, as a group, an average hourly cost-per-thousand of $1.72, while such cost-per-thousand was $2.42 (41 per cent higher) for the remainder of the CBS Television Network.

It will be seen, accordingly, that important *natural* factors readily account for the relatively large share of profits which these selected affiliates earn. Yet it is only through this highly selective—and hence meaningless—process that the Report can conclude that in 1954 the net income of these 73 stations *plus* the net income of the CBS and NBC Television Networks exceeded the net income of all four networks and 410 stations.

The manipulation is such that there is no significance to the conclusion which the Report derives from the profit data. But

[1]The Report states (p. 6) that 34 affiliates in Zone I carried 41 to 100 per cent of the CBS Television Network schedule. The records of CBS indicates *only 29* such affiliates which carried this percentage of programs over the entire year 1954. During the week of October 10, 1954, there were 35 such affiliates.

it should be noted that even if the Report's manipulations were accepted, its conclusion is still incorrect. The fact is that the 73 selected affiliates plus the CBS and NBC Television Networks in 1954 had a net income, before Federal taxes, slightly *less,* rather than more, than the total net income for the entire industry.[1]

In any event, even if the mathematical error is ignored, the comparison is without meaning. For the Report engages in arithmetical legerdemain; first, it subtracts only enough of the profitable stations so that the remaining profitable stations can be lumped with those which are not profitable in order to arrive at a total net loss. Second, the comparison involves apples and pears since it lumps stations and networks together on both sides of the ledger.

Thus the Report's conclusion that exclusive of the NBC and CBS Television Networks and the 73 selected affiliates in Zone I, "television is a losing proposition on the average" (p. 8), is misleading. Even if the 73 "favored" stations are excluded, there remain many profitable stations. In fact the 1954 profits of profitable stations in the group for which the Report states that television was a losing proposition *amounted to over $38*

---

[1]The Report states that the selected affiliates had a combined net income of $72,377,318 in 1954. To this total, the Report adds the profits of the CBS and NBC Television Networks and arrives at a total of $90,594,406 (p. 8). The difference between the two totals is $18,217,088 which should be the income of the CBS and NBC Television Networks. But Chart I at page 26 of the Report shows the combined income of the two networks at $17,119,065. Therefore, the total income of the 73 stations and the two networks is $89,496,383—just short of the $90.3 which the Report attributes to the entire industry. The Report makes the same error at page 7 in its discussion of the share of industry income earned by the two networks plus the CBS and NBC Television Network affiliates in the first 20 markets.

million, and actually exceeded by $12.8 million the losses of all the unprofitable television stations in the entire country. Only by adding the combined networking losses of ABC and DuMont in the amount of $12 million can the total for all 410 stations minus 73 of the most profitable be brought within reasonable balance of the aggregate loss which the Report seeks to establish.

While CBS does not have access, as the authors of the Report did, to the precise number of profitable stations included in the remaining 337 stations concerning which the Report states that "television is a losing proposition on the average," CBS estimates that about half of these 337 stations were operating on a profitable basis by the end of 1954. Published FCC figures indicate that 229 out of 374 television stations concerning which reports were made were probably in the black by the end of 1954. These include 94 profitable pre-freeze stations, 70 post-freeze stations reporting a profit for the ten-month period covered by the FCC *Third Survey,* and 65 stations reporting profitable operation toward the end of that ten-month period.[1]

If the 73 selected CBS and NBC Television Network affiliates which the Report classifies as being clearly profitable are subtracted, therefore, there remain approximately 156 *other* television stations (or a total of at least 229) operating on a profitable basis by the end of 1954; and doubtless some of the

[1]FCC *Radio and TV Broadcast Financial Data*—1954 (Public Notice 26134) and *Third Survey on Post-Freeze Television Stations* (Public Notice 23055).

36 stations not included in the FCC tabulation but included in the Report's 337 were profitable.

In short, the Report's contention that, exclusive of the 73 selected stations, "television is a losing proposition on the average" proves on analysis to mean nothing more than *even if 73 profitable stations are arbitrarily subtracted, about half of the remaining group were profitable by the end of 1954.*

If the 73 Zone I stations are included—as by any logical standard they should be—this would mean that about 60 per cent of all television stations were profitable by the end of 1954. And the obvious fact that profitability is not confined to the larger of the Zone I affiliates is further confirmed by the CBS estimate that in 1954, the aggregate profits on only 16 stations *outside Zone I* exceeded the total profits of the CBS and NBC Television Networks.

Further, over 70 per cent of the 410 television stations whose profits or losses were considered by the Report were less than two years old by the end of 1954. Some of them were only in operation for a few months. While there have been a few examples of post-freeze television stations in leading markets which earned profits almost from the first day of operation, it would be too much to expect such results in all cases. Many stations which can eventually be expected to earn satisfactory profits undoubtedly suffered losses in the first year or two of their operation. In view of the many years of unprofitable operation of the pre-freeze stations before they broke into the black, it should not be either alarming or surprising that some post-freeze stations should not have earned profits in the first or second calendar years of their life.

In any event, the fallacy of this section of the Report is illustrated by the fact that a picture similar to that attempted to be delineated in the Report for the television industry can, with like manipulation, be drawn for any other industry in the United States. For example, in the prosperous year 1952, 119,000 manufacturing corporations filed income tax returns. One group of only 19,000 corporations earned net income greater than the aggregate of all 119,000.[1] It could be said, accordingly, that 100,000 corporations in the group suffered losses which more than offset profits. To paraphrase the Report, "exclusive of the favored 19,000 manufacturing corporations, manufacturing is a losing proposition on the average." But this conclusion is simply an effective way of obscuring the fact that about 81,000—not just 19,000—manufacturing corporations made profits in 1952.[2] Similarly, the Report's emphasis

[1] *U. S. Treasury Statistics of Income for 1952,* Part 2, page 102. The year 1952 is the latest for which these compilations are available.

[2] Other errors in the section of the Report entitled "Access to Network Programing" may also be noted:

(1) In the next to last paragraph of page 7, the Report states that the share of the 38 CBS and NBC Television Network affiliates in the first 20 markets was equal to 69 per cent of the total net income of the 410 U. S. stations. The percentage cited is the share not of the total net income of the 410 stations alone, but of those stations *plus the four networks.*

(2) At page 8, third paragraph, the Report compares the combined income of 73 selected CBS and NBC Television Network affiliates plus the CBS and NBC Television Networks, and concludes that "If allowance is made for losses of unprofitable stations in the 410 TV stations (sic) of the Nation," the income of those 73 affiliates and the two networks exceeded the total net income for the entire industry. Apart from the fact that the income of the former group did *not* exceed that of the entire industry (pp. 32-34 above), "allowance is made" not only "for loss of unprofitable stations" but also for the unprofitable networks—as it had to be made in order for the Report to reach the conclusion it did.

(3) At page 8, eighth paragraph, the Report asserts that "the vast majority of smaller stations, lacking network programing, suffered heavy losses." First, the great majority of smaller stations in fact have network affiliations:

on the 73 profitable stations masks the fact that at least 229 stations were profitable by the end of 1954.

D. The Problem of "Overlap"

In a section entitled "Overlap" (pp. 8, 10-14), the Report charges that a network "economic stranglehold" is established by the fact that stations in small markets overlapped by stations in larger markets receive fewer network programs and less revenues than the larger market stations. As in the case of the preceding sections, both the principles and the facts embodied in this section are erroneous.

The CBS Television Network, for example, has affiliated with 36 stations each of which covers less than 40,000 television families (CBS Supplemental Memorandum, p. 74 and Chart XVIII). Second, while it is true that losses are more frequent among smaller-market stations than among larger-market stations, the size of the market is not the governing factor in determining whether a station earns profits or suffers losses. To the extent that stations in smaller markets are overshadowed or are UHF, they are less likely to be profitable, but for those two reasons and not simply because they are "small." Where the factors of UHF or overshadowing do not operate, it is not true that smaller-market stations generally suffer heavy loss. For example, among the pre-freeze stations, only one out of the 13 in metropolitan areas with population less than 250,000 suffered losses while six out of the 30 in metropolitan areas with population over 2,000,000 suffered losses. These are VHF stations in markets that, in general, are not overshadowed so that among these station markets the smallest are just about as profitable relative to their revenues as are the largest.

Of course, the six stations reporting losses in metropolitan areas of population greater than 2 million represent, in large part, the unaffiliated stations in Los Angeles and New York. But even if these be excluded from consideration, in the intermediate size group of metropolitan areas, between 500,000 and 2 million total population, the relative frequency of stations reporting loss is higher than among metropolitan areas of population less than 500,000. (Five out of 40 reported losses in 1954 in the larger metropolitan areas, three out of 38 in the smaller. FCC *Radio and TV Broadcast Financial Data, 1954,* Public Notice 26134.)

Similarly, among post-freeze VHF television stations, profits outnumbered losses even among the stations in the smallest metropolitan areas. Of 33 post-freeze VHF television stations in metropolitan areas of population between 75,000 and 175,000, 23 reported profits by the end of the period covered by the *Third Survey* (Table 15), and in metropolitan areas of population under 75,000, 43 of the 64 post-freeze VHF television stations reporting were in the profit group.

The same basic fallacy noted in connection with the "Access to Network Programing" section pervades the "Overlap" section as well—that the revenue and profit differences are the result of a policy of networks in "placing" their programs in the larger stations in preference to the smaller stations. As noted, the differences are caused by advertiser decisions, which in turn are guided by economics, geography and the behavior of electronic signals.

Wholly apart from the fact that the Report misunderstands this vital principle, however, the examples cited by the Report not only fail to support the Report's conclusions but, on the contrary, the facts refute the conclusions.

The Report seeks to establish its point by comparing three pairs of stations in larger and smaller markets: 1) KMTV, Omaha, Nebraska, and KOLN-TV, Lincoln, Nebraska; 2) KMBC-TV, Kansas City, Missouri, and KFEQ-TV, St. Joseph, Missouri, and 3) KTNT-TV, Tacoma-Seattle,[1] Washington, and KVOS-TV, Bellingham, Washington.

---

[1]The report is inaccurate and misleading in treating KTNT-TV as a Tacoma station and comparing the Tacoma market with the Bellingham market. KTNT-TV is, in fact, a station covering Tacoma-Seattle, so that instead of being the 67th market, as the Report states (p. 10), it ranks as the 17th market according to CBS calculations and the 20th market according to the 1950 Census of Metropolitan Areas and the 1955 Sales Management Ranking of Metropolitan Areas.

A second error also appears in the Report's discussion of Tacoma-Seattle, since the Report (pp. 11, 13) compares the coverage of KIRO-TV, Seattle (stated to occupy channel 7), with Bellingham. There is no such station as KIRO-TV and channel 7 in Seattle is still unoccupied. The owners of KIRO, a radio station in Seattle, have applied for channel 7 in Seattle and have proposed the effective visual power and antenna height specified by the Report. The application, however, is still in hearing. In the circumstances, it cannot be contended that KVOS-TV in Bellingham is overlapped by a non-existent station in Seattle.

It is significant, as indeed the Report itself notes, that whatever disparity exists between the larger and smaller stations in each of these three pairs is in no way related to CBS Television Network affiliation practices, for each of the stations in each of the three pairs is in fact *affiliated with the CBS Television Network.*[1]

Thus, like all CBS Television Network affiliates, each of the smaller stations has, as noted above, full "access" to the entire CBS Television Network schedule. The disparity in the amount of CBS Television Network programming carried by the smaller of each of the pairs of stations, and in their resultant revenues and profits, is not due to network practices but rather to advertiser orders which in turn hinge largely on the nature and structure of the markets concerned. Bellingham is smaller than Seattle; Lincoln is smaller than Omaha; and St. Joseph is smaller than Kansas City. It is utterly illogical to condemn networks as monopolies because in television, as in other fields of commerce, revenues flow to larger population units in greater volume than to smaller population units.

The significant fact, however, is precisely the contrary of that which the report seeks to establish: It is that the CBS Television Network, far from neglecting or subordinating the smaller market in each of the three pairs has been of significant value to the smaller stations and has played an important role in their survival. Attached to this memorandum as Appendix B are communications from each of the three smaller stations—

---

[1]Since 1954, KMBC-TV has been replaced by KCMO-TV as the CBS Television Kansas City affiliate.

KOLN-TV, Lincoln, KFEQ-TV, St. Joseph, and KVOS-TV, Bellingham—against which the report contends the CBS Television Network has discriminated. Each of these three letters squarely contradicts the Report's contention. Each station explicitly states the contribution which the CBS Television Network has made to the station. And each establishes the error of the Report's statement (p. 11) that they are "barred from access to network programs" and hold "an affiliation which is of little value." The stations are not, as the Report states (p. 11), in danger of being "forced off the air"; rather, their situation has been constantly improving owing, according to the stations themselves, at least in part to the network's efforts.

The figures which the Report cites in connection with these stations are, further, misleading and untypical. One of the three stations cited by the Report—KVOS-TV—as having had a CBS Television Network affiliation in 1954 and receiving only $1,470 for sale of time to networks (p. 14) was, contrary to the statement in the Report, not even affiliated with the CBS Television Network as of October 1954. It did not become affiliated with the CBS Television Network until December 16, 1954. The second of the three smaller stations specified by the Report—KOLN-TV, Lincoln—did not become affiliated with the CBS Television Network until June 1, 1954—so that its 1954 CBS Television Network revenues represented only a portion of the year.

---

[1]See, however, the figures cited in the letters from these stations, attached as Appendix B. The stations have granted permission to CBS to submit these letters.

While CBS does not feel at liberty to disclose the precise network compensation to particular stations,[1] it is significant that KOLN-TV's revenues from the CBS Television Network were over 225 times higher in 1955 than in 1954; and KFEQ-TV's revenues from the network had increased by almost 50 per cent.[1] The network revenues of the three smaller stations have similarly increased between 1955 and 1956: In March 1956, KOLN-TV's revenues from the CBS Television Network were more than 16 times higher than its revenues in March 1955; KFEQ-TV's CBS Television Network revenues in March 1956 were 1⅓ times higher than those in March 1955; and KVOS-TV's March 1956 revenues were 5½ times greater than those in March 1955.[2]

In summary, the actual facts relating to the three stations which the Report uses to establish network "strangulation" establish precisely the opposite. Despite the disparity of these markets and despite their economic and geographic disadvantages, the CBS Television Network has affiliated with them, has worked actively and successfully in cooperation with the stations to obtain advertiser orders for network programs on the stations, and has been of substantial and increasing benefit to them. As the stations' own statements establish, the picture is not one of "strangulation"—but of sustenance.

---

[1]Since, as noted, KVOS-TV did not become affiliated with the CBS Television Network until the close of 1954, and hence received only $21 from it, there is no basis of comparison between 1954 and 1955.

[2]As of May 1, 1956, KVOS-TV was carrying 32 different network commercial programs representing over 15 hours per week and had been offered two other programs, one a 15-minute commercial program and another a one-and-a-half hour per week commercial program, which it declined to carry.

E. "SUPERSTATIONS"

The section of the Report entitled "Superstations"[1] contends that (1) "large market stations have preempted service areas extending far beyond any limits imposed by economic necessity" (p. 15); (2) such "preemption" is accomplished by large stations' locating their transmitter sites "25 and 30 miles from the city to which their channel is actually assigned" and by using maximum power and antenna heights, "send signals into markets other than their own" (*id.*); (3) "abnormal profits accrue to large stations which preempt adjacent territory"—such "abnormality" being measured by the ratio of profits to "net investment" (p. 15-18); and (4) there is thus reflected a "trend of the 2 major networks to superstations covering as many cities as possible with 1 signal, ignoring all rural and sparsely settled areas"—which has the effect of "a general lowering of quality of signals over much of the entire country" since "only the area adjacent to the station's home city receives a good signal" (pp. 18-19).

On the basis of these premises, the Report proposes a reduction of "permissible service areas of VHF stations in the zone I area . . . , and in other areas . . . of high population density and large-city incidence, in order to restore the integrity of all smaller television cities through reductions in maximum powers and/or antenna heights" (p. 22).

Before examining the grave injury to the public and to television as an advertising medium which would result from the

[1]Since the section entitled "Superstations" and the succeeding section entitled "Answer to Advertiser Argument" are interrelated, this section of the memorandum will treat them together.

adoption of such a proposal (which, it may be noted, relates not to the current phase of the Committee's hearings dealing with network practices, but rather relates directly to the concluded phase of the hearings dealing with allocations), this memorandum will first turn to the four premises listed above. For not only is the conclusion erroneous; so are all of the premises on which it is predicated.

1. *The error of the "preemption" contention.* There is no substance to the charge that "abnormal inequities" between the large-market and small-market stations stem from the fact that the large-market stations have "preempted service areas extending far beyond any limits imposed by economic necessity" (p. 15). To define permissible service areas of "large" stations by the test of "economic necessity" is to inject a measure which lacks meaning. To require the operator of any station, or any other business enterprise, to serve only that number of people which is "economically necessary" is a concept at once impossible of enforcement and inconsistent with the American principle of free competitive enterprise. It would, in effect, socialize television stations, among all American businesses, by limiting their service only to an area which would permit their economic survival—and no more.

But stations do not acquire their service areas by "preemption" but by competition. The permissible service areas are, in general, the same for all VHF stations[1]; stations in small markets

[1]In practice, UHF stations do not generally have as wide a coverage area as VHF stations; there are relatively minor differences between "high-band" and "low-band" VHF stations; and VHF stations in Zones II and III can employ higher antennas with full authorized power than can stations in Zone I. In any one area the maximum allowable coverage is the same for all stations in the same channel group.

may have precisely the same or larger[1] service areas than stations in large markets. Once again, the vice the Report finds is not the geographical *size* of the service area but rather the population served—the fact that more people live in some areas than in others—a condition which no non-totalitarian government can remedy.

2. *The error of the transmitter location contention.* The second premise on which "superstations" are condemned and on which the proposal to reduce power and antenna heights is based is that "large stations often succeed in locating transmitters closer to competing cities than to their own"—a process alleged to be accomplished "by locating transmitter sites 25 and 30 miles from the city to which their channel is actually assigned" (p. 15). The contention appears to be that by these means "superstations" are created through "large" stations locating their transmitters at these specified distances from the city to which they are assigned in order to engulf smaller communities.

Analysis of the facts requires rejection of this contention. There are only 15 instances of station transmitters located 25 or more miles from the city of assignment.[2] They are:

---

[1]For example, the CBS Television Network affiliate in Cedar Rapids (1955 population: 77,200) has an appreciably larger service area than the neighboring affiliate in Rock Island-Davenport-Moline (1955 population: 171,800).

[2]It is interesting that none of the three examples of small stations alleged to be victimized by "overlap" (Report, p. 10) is represented in the group involved in the process of transmitter "preemption." In both Omaha and Kansas City—two of the three "overlapping" markets noted in the preceding section—the television transmitters of the CBS Television affiliate are located almost precisely in the center of their respective cities. The Tacoma transmitter is located outside Tacoma, and somewhat in the direction of Bellingham—in order better to serve the Tacoma-Seattle market. Bridgeport, Waterbury and

Call	Channel	City	Distance[1]	Reason
WMTW	8	Lewiston	56 mi.	Mountain-top
KSWS-TV	8	Roswell	44	Aeronautical problem
KVVG	27	Tulare	38	Mountain-top
KOVR	13	Stockton	35	To serve San Francisco
KBET-TV	10	Sacramento	35	Mountain-top
KID-TV	3	Idaho Falls	31	Mountain-top
KJEO	47	Fresno	31	Mountain-top
KMJ-TV	24	Fresno	28	Mountain-top

WSFA-TV	12	Montgomery	25	Away from large adjoining market
KOLN-TV	10	Lincoln	25	Away from large adjoining market
WIRI	5	Lake Placid	25	Mountain-top
WTTV	4	Bloomington	25	To serve Indianapolis

The largest of the cities to which these stations are assigned is Sacramento which ranks 65th in population among metropolitan areas. The next largest cities of this group are Fresno, which ranks 66th and Stockton, which ranks 90th. Eight of the 15 stations have selected transmitter locations for the wholly legitimate purpose of taking advantage of terrain. In three cases[2]—

Stamford-Norwalk are also cited (p. 18) as "overlapped" by New York City stations—but it is to be noted that the latters' transmitters are located in mid-Manhattan. (The Report (p. 18) similarly lists Norwich, Conn., 113 miles from New York City, but this can hardly be considered an "overlap victim.") These facts serve again to illustrate that natural phenomena—economic, geographical and electronic—and not greed or monopoly underlie the patterns to which the Report objects.

[1]Transmitter site to center of city of assignment. In the case of WMTW, the city of assignment (Lewiston) is shown. The station is licensed to Poland Springs, 50 miles away.

[2]The transmitter of KGUL-TV, Channel 11, Galveston, Texas, is 28 miles from its city of assignment in order to serve Houston. The transmitter of KOVR, Channel 13, Stockton, California, is 35 miles from its city of assignment in order to serve San Francisco. The transmitter of WTTV, Channel 4, Bloomington, Indiana, is located 25 miles from Bloomington in order to serve

KGUL-TV, KOVR and WTTV—the choice of transmitter site involved not a large-city station moving toward small cities but precisely the contrary—a small-city station moving *toward* a larger city in order better to compete with the stations in the larger city. One case—KSWS-TV, Roswell, New Mexico—involved the location of its transmitter to accommodate aeronautical requirements. In two other cases—WSFA-TV and KOLN-TV[1]—the transmitters were located 25 miles away from the city of assignment in order to get *away* from, and thus reduce the overlap with, neighboring large-market stations.

There remains only one case of the location of a transmitter 25 or more miles from the city to which the station is assigned: KBES-TV, Channel 5, Medford, Oregon, whose transmitter is located 28 miles from Medford in order to serve not only Medford but Klamath Falls. The population of Medford—the "large" city—is 19,100, with 6,700 families, and that of Klamath Falls—the "small" city—is 16,200, with 5,400 families.

This, then, is the full extent of what the Report seeks to establish as the sinister and grasping practice of "large stations" moving their transmitter more than 25 miles in order "ab-

---

Indianapolis. In addition, KVVG, a UHF station assigned to Tulare, California, should perhaps be included in this category since its transmitter, located 37.5 miles from Tulare on a mountain top, thus better serves Fresno.

[1]KOLN-TV is located in Lincoln, Nebraska. It is ironic to note that in the section of the Report entitled "Overlap," KOLN-TV is identified (p. 8) as one of the three small markets overlapped by neighboring large-city stations. Thus in the section entitled "Superstations," KOLN-TV appears to be implicitly criticized as a "large" station guilty of preempting an unnecessarily large service area; in the section entitled "Overlap," it is identified as a "small" station overlapped by a neighboring large station. Yet the obvious purpose of its transmitter move was to avoid the very overlap which the Report had earlier charged was victimizing it.

normally [to] depress the economic potential of the smaller market" (p. 15).

3. *The error of the contention that large stations profit abnormally.* The Report's contention (pp. 15-18) that large stations profit abnormally is based on the alleged ratio of the profits of such stations to their "net investment." The fallacy of this measure has been discussed above.[1] It is also relevant to note at this point, however, that in fact profits in the field of broadcasting are also the result of creative and service activity—of program leadership and popularity. Thus the profits of WCBS-TV (the CBS owned television station in New York City and one of the two New York stations to which the Report refers) must be judged in the light of the population which it serves and its program ratings which measure such leadership and popularity. It is estimated that WCBS-TV currently serves about 4.5 million television families. Although competing with six other VHF television stations all of whose transmitters are at the same location in New York City, its all-day, all-week share of audience is estimated at 35 per cent. In the light of such circumstances as these, it is reasonable to expect that the station would be profitable.

---

[1]The inappropriateness of the measure is accentuated in the case of the CBS owned station in New York City. The only "tangible property owned and devoted exclusively to broadcast service" reported by CBS to the FCC for WCBS-TV is its transmitter and it is on this basis that the Report computes the ratio of profits. Transmitter space and antenna support tower are leased from the Empire State Building. All studio and technical equipment requirements of WCBS-TV are rented by the station from the network and all its space and furniture needs are filled by CBS Inc., or the network and charges are allocated to the station. While this is a reasonable bookkeeping arrangement, it makes particularly meaningless the measure of profit ratios which the Report utilizes.

4. *The error of the contention that "superstations" ignore rural areas and result in lowered signal quality.* The contention that networks through the utilization of full power VHF stations "ignore" "rural and sparsely settled areas . . ." is squarely refuted by fundamental factors of allocations engineering. Rural and sparsely settled areas cannot normally support their own television stations. As a rule, therefore, these "sparsely settled areas" can *only* be served by full-power VHF stations in neighboring larger cities. Further improvement of service to sparsely settled areas is to be sought through the use of boosters, translators and satellites. The CBS Television Network encourages action by its present or potential affiliates to improve the service to sparsely settled areas either through increase of power, erection of satellites or boosters, or by welcoming as affiliates smaller stations which bring in new coverage in these sparsely settled areas. Under the Extended Market Plan, in addition, special steps are taken to induce advertisers to place network programs on these stations serving sparsely settled areas. Plainly, this negates the charge that CBS is "ignoring all rural and sparsely settled areas . . ." It is precisely these rural and sparsely settled areas which, demonstrably, will lose the service which they now enjoy if the power of these stations is reduced (pp. 51-61 below).

Equally fallacious is the Report's further contention that "only the area adjacent" to a station's home city "receives a good signal." It is a well-known fact that a "good signal" is received at least 50 miles away from a full-power VHF station and, indeed, the signal received at that distance is often better than that received in the home city itself, where there are propagation difficulties because of tall buildings.

5. *The proposal to reduce service areas.* It will thus be seen that the contentions on which the Report predicates its proposal to reduce service areas "in order to restore the integrity of all smaller television cities" are fallacious. Equally pervasive fallacies underlie the basic proposal itself. Adoption of the proposal to erect an electronic tariff wall protecting one city from the signals of another would result in significant loss of television service for many people now receiving such service and it would seriously injure the medium itself so that there would be a deterioration of service even to those who are still within range of the reduced signals.

The full implications of the Report's proposal to reduce service areas are illustrated by Maps 1-4 at pages 50-51, 54-55 of this memorandum. Maps 1 and 2 illustrate the effect of the proposal in the New York area which is discussed by the Report at pages 15 and 18. Maps 3 and 4 illustrate the effect of the proposal in the Cleveland area, discussed by the Report at page 18.

Based on the Grade B contours shown in Map 1, 14,375,000 people receive in the New York area seven services and an additional 560,000 receive three services.[1] The Grade B contour of WCBS-TV (among others) in New York City includes the cities of Bridgeport and Stamford, Connecticut, and Paterson, New Jersey, to each of which cities a television channel is

---

[1]Actually, since the signal reaches substantially beyond the Grade B contour, the reception figures cited in the text are understated.

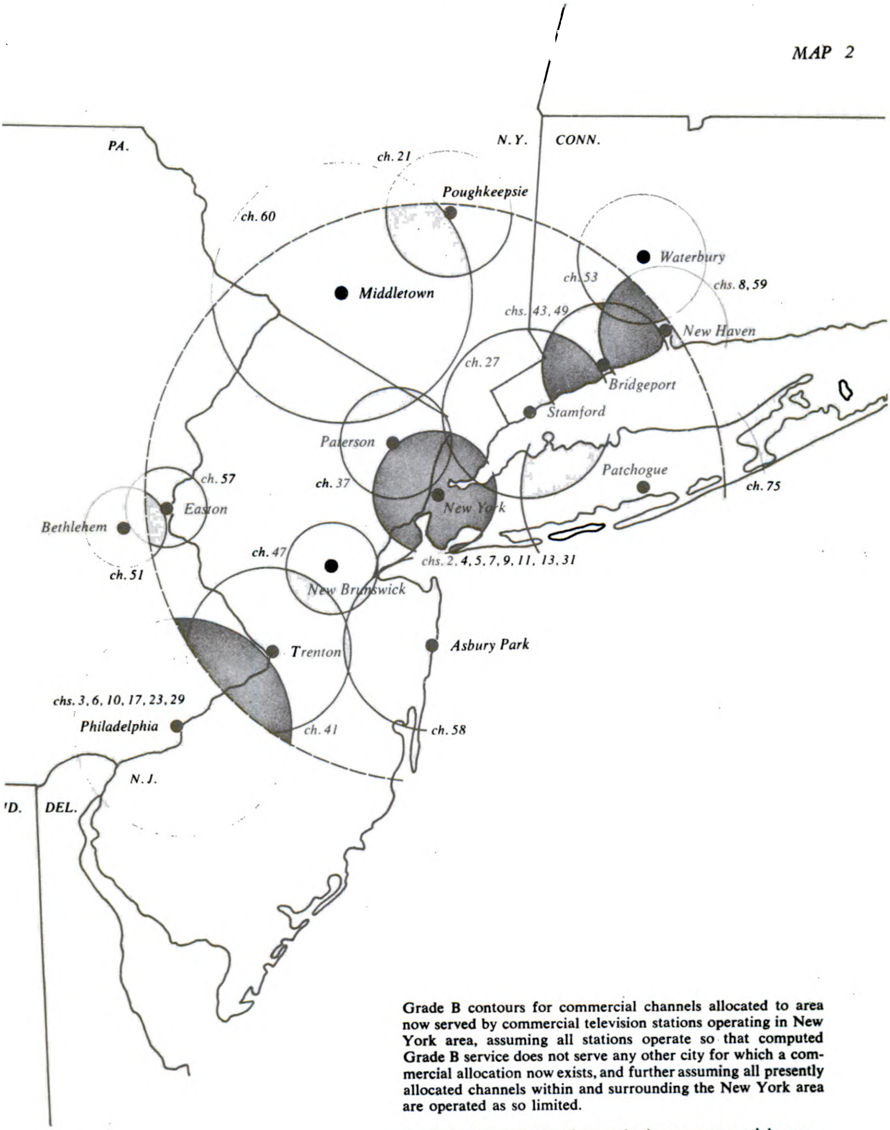
3 services from New York

MAP 2



Grade B contours for commercial channels allocated to area now served by commercial television stations operating in New York area, assuming all stations operate so that computed Grade B service does not serve any other city for which a commercial allocation now exists, and further assuming all presently allocated channels within and surrounding the New York area are operated as so limited.

Analysis of loss of television service in area now receiving service from New York television stations as a result of reduction in service areas as shown.

OPERATING CONDITIONS	*POPULATION (1950 Census)*	*PER CENT (of existing service)*
— — Existing rules:		
3, or more services available from N.Y. City stations	*14,935,000*	*100%*
—— Proposed operation:		
3, or more services	*10,710,000*	*71.7*
2 services	*643,000*	*4.3*
1 service	*2,566,000*	*17.2*
no service	*1,016,000*	*6.8*

allocated. In order to protect Paterson, the nearest of these three cities, the power of WCBS-TV would be required to be reduced to 1/6700 of its present value, or a reduction from an effective radiated power for its visual transmitter of 42 kw (16.2 dbk) to 0.0063 kw (minus 22 dbk).[1] Map 2 shows the effect of this reduction. The City Grade radius of WCBS-TV would be reduced to two miles; its Grade A radius would be reduced to 3.4 miles; and its Grade B radius would be reduced to 14 miles, just touching the nearest boundary of Paterson. Yet, since the minimum radius required to cover all of New York City is 22 miles, under the proposal substantial portions of New York City itself[2] would fail to receive a signal of Grade B level.

Map 2 also shows the loss of service in the New York area, using Grade B contours. In that area, 929,000 people would lose all the seven services they are now receiving; 2,449,000 would be reduced from seven services to a single service; 387,000 would be reduced from seven to two services; and 116,000 would lose between one and four of their services. Further, of the 560,000 people in the area who now have a

---

[1]A curious and doubtless inadvertent inconsistency results: Since the Report proposes reduction of service areas only for VHF stations, a UHF station in the same city would have a vastly greater coverage area and would, indeed, be permitted to do just what VHF stations would be forbidden to do—encroach on the "integrity" of neighboring small television cities. Because no such absurd consequence could have been intended, the calculations in this section of the memorandum have been based on the assumption that UHF stations must, where appropriate to achieve "integrity", be similarly cut back.

[2]As noted below, the signal impairment even in the limited area still served would be great since a 38 db reduction of power would be ruinous of reception of many of the homes within the reduced area.

choice of three services from New York, 87,000 would be deprived of service altogether; 117,000 would be reduced to one service; and 256,000 would be reduced from three to two services. Thus it will be seen that a total of 1,016,000 people in the New York City area would lose all their service; 2,566,000 would be reduced to one service; and 643,000 would be reduced to two services.

Map 4 shows the loss of service in the Cleveland area, using Grade B contours. There, 259,000 people currently receiving a choice of three services would lose all service; 725,000 would be reduced from a choice of three services to one service; and 479,000 people would be reduced from a choice of three services to a choice of two. In addition, of the 216,000 people in the Cleveland area to whom two signals are now available, 38,000 would be deprived of service altogether, and 81,000 would have their choice cut in half—from two to one. Thus, a total of 297,000 people in the Cleveland area would lose all their service and 806,000 would be reduced to one service.

Thus in the New York and Cleveland areas *alone*,[1] 1.31 million people—equal to the population of the cities of Baltimore

[1]Theoretically in the cases of New York and Cleveland, some of the losses can be compensated for by *additional* allocations in the new "white areas." But it is to be noted that such areas are scattered, not concentrated. Further, the process is endless for as each additional community is added, further power reductions would be necessary in order to protect the new allocations. Still further white areas would then be created permitting more allocations until, finally, each home would have its own television transmitter protected, if possible, from each neighboring home. Further, as noted below, even if this process would result in new stations on channels now allocated to smaller cities or new stations on new channel assignments, there would still be a substantial loss of service because the stations in smaller towns would not be ordered by the advertiser as frequently as the current stations in the New York and Cleveland areas.

and Louisville—now enjoying multiple services from those cities would lose those services altogether, while 3.37 million additional people—equal to the combined population of the cities of Philadelphia, St. Louis and Columbus, Ohio—would be reduced to a single program source. Figures such as these should, it would seem, give serious concern to those who purport to be concerned with more service to more people and with avoiding "economic monopoly."

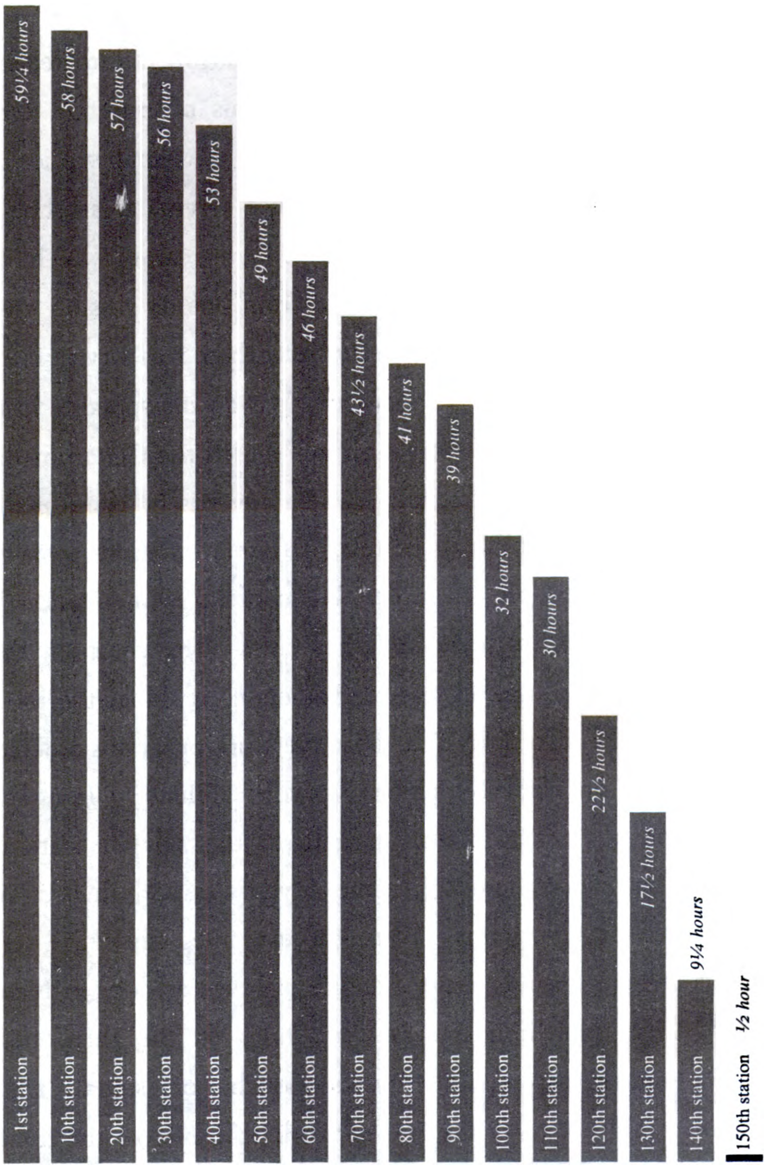
Even these figures, startling as they are, do not provide the full measure of the loss of service; the figures are understated in important respects. The loss is, in fact, far greater than indicated. First, in reducing the New York and Cleveland transmitter powers to the extent necessary, an inevitable corollary effect, along with the shrinkage in the service area, is the reduction in signal strength throughout the area still within the reduced contour. For this reason, a large number of the television receivers located within the atrophied New York contour would fail to get a satisfactory signal. CBS data indicate that more than 60 per cent of the sets in Manhattan have indoor antennas —many of which would be incapable of receiving so weak a signal. Further, it is known that shadowing by New York skyscrapers and apartment seriously weakens television signals. Hence, the reduction of power in New York to 0.0063 kw so as to protect Paterson would deprive millions of people of satisfactory signals even within the theoretically-served area.

Second, the maps and figures do not take into account another serious loss of service which would be incurred by reductions in the service radii of existing stations surrounding Cleveland and

New York. Thus for example, the principle of protection of integrity would, in the New York area, also require a reduction in the service radii of existing stations in New Haven, Philadelphia and Wilmington, Delaware, with still greater consequent loss of service in the areas surrounding New York.

A third and very significant factor would operate to reduce the richness of television service in terms of program fare even for that reduced number of people to whom service is still rendered. If the proposal to reduce service areas should be adopted, there might be substituted in areas in which, in aggregate, many people live, service from one or possibly two stations in small markets where formerly there was service from more stations in the larger markets. It is an indisputable fact, noted throughout the Report itself and which the Government, unless it has power to command where advertisers would place their orders, is helpless to correct, that small stations serving relatively few people are ordered less often by network advertisers than are stations in larger cities. The chart on the following page illustrates this phenomenon. It shows the total commercial hours of CBS Television Network programs ordered and carried on CBS Television Network affiliates. It establishes the obvious fact that in general the smaller station-markets are not ordered by some advertisers and thus carry fewer network programs. Thus, for example, while the residents of Paterson now have a choice of seven stations in New York City—including the full schedules of the three networks—under the proposal they will have but one signal. That station could not carry the full network schedules of the three

TOTAL NETWORK COMMERCIAL HOURS CARRIED BY CBS TELEVISION PRIMARY AFFILIATES FOR WEEK ENDING APRIL 28, 1956 (WITH EVERY 10TH STATION PLOTTED)



58

networks even if it wanted to and had been ordered by advertisers. The proposal might, therefore, benefit the owner of a Paterson television station. It would hardly benefit the residents of Paterson.

It is to be noted that this phenomenon of fewer network advertiser orders for the smaller stations operates wholly apart from what the Report terms "overlap": The Report itself (p. 15) identifies a number of smaller stations, not subject to overlap, which have "prospered" with their network affiliations. And as this memorandum has noted (pp. 27-28), only one of the stations was ordered for as much as 20 per cent of the commercial network schedule.

The experience of these stations demonstrates the additional loss to the public involved in reducing service areas of large stations in order to create a group of smaller stations whose "integrity" is preserved by isolating them from outside signals. For, if a large number of markets like Kearney and Minot are to be artificially created throughout the country, while the "access" of these new small stations to network programs might be somewhat increased, the *public's* access to popular network programs in the service area of these small stations will be greatly reduced. Instead of receiving the 40 per cent to 100 per cent of the network programs which is characteristic of stations in the largest markets, they will get the eight to 20 per cent characteristic of small markets. This simple fact of advertising economics—that fewer advertisers will order stations serving a lesser number of people than will order stations serving a larger number of people—establishes, wholly irrespective of the other losses of service involved, that the fragmentation of television markets proposed by the Report ignores the demonstrated needs and desires of the public.

The rural and smaller city listener's loss of service thus may be of three types: (a) Loss of all service; (b) reduction in number of available signals; and (c) poorer program fare from the available signals. The Report, however, seeks to minimize the likelihood of such injurious consequences to the public by contending ("Answer to Advertiser Argument", pp. 19-20) that "exorbitant" rates which large stations charge, together with "restriction of station affiliation," prevent "the advertiser from buying time on as many stations as he desires" (p. 19).[1] The Report argues that if "large-city" affiliates (a) "cut back service areas," (b) "maintained reasonable rates", and (c) "were satisfied with reasonable profits"[2] then the "advertiser could

---

[1]In so far as this contention is predicated on alleged restrictive affiliation practices, it is without substance. As of March 1, 1956, only 36 of the 429 commercial stations on the air lacked an affiliation with a nationwide network. In any event, it is the practice of the CBS Television Network to permit an advertiser to order a station not affiliated with it as long as it is not located in the same community (or in the case of a hyphenated market such as Houston-Galveston, in the same related communities) as a CBS Television Network affiliate (CBS Supplemental Memorandum, pp. 135-136; Appendix C, pp. XXXII-XXXIII). Thus, far from its affiliation practices "preventing the advertiser from buying time on as many stations as he desires," *a CBS Television Network advertiser is permitted to order stations in every community in the country to which a commercial station has been assigned.*

[2]The Report is ambiguous concerning the method by which "reasonable rates" and "reasonable profits" are to be maintained. It is not clear whether such reductions are intended to be accomplished automatically by reduction of service areas or whether some even greater regulatory intervention is contemplated to require a rate reduction beyond that resulting from service area reduction. If such additional artificial rate depression is contemplated, the proposal would probably be self-defeating. Since, as noted, the larger the circulation, the lower the cost-per-thousand, if the rates of large market stations would be still further reduced beyond a point commensurate with their circulation, the gap between their low cost-per-thousand and the higher cost-per-thousand

buy many more stations and cover more persons with the dollars he is now spending."

The contentions fly in the face of fundamental advertising economics. It is basic in television, as in all other advertising media, that the larger the circulation supplied by a single unit —whether it be a newspaper or a broadcasting station—the lower the cost-per-thousand to the advertiser. See CBS Supplemental Memorandum pp. 59-65, and Charts XIII-XV, showing that (1) the cost-per-thousand to cover 1.6 million readers in New York through 26 different small daily newspapers is *four times* as high as the cost-per-thousand to reach 2 million readers through the *New York Daily News;* and (2) the absolute cost as well as the cost-per-thousand of reaching 1.6 million television viewers through 36 small television stations is *two-and-a-half* times as great as the cost to reach the same number of viewers through a single television station.

Plainly, therefore, the Report is in fundamental error in its contention, since the more stations an advertiser must order to reach the same total of viewers, the higher his total costs as well as his cost-per-thousand.[1] By the drastic reductions in service areas which the Report proposes, therefore, the medium would be fractionated. The dollars which an advertiser would save because of the lowered rate resulting from the reduced coverage area would not be nearly sufficient to buy enough stations to compensate for the loss of circulation even if it were assumed,

of smaller stations would be even greater. The larger stations would then be an even more attractive buy so that *more* advertiser orders would tend to flow *to* them and *away* from the smaller stations.

[1]For the reasons for this phenomenon, see the CBS Supplemental Memorandum, p. 62.

contrary to the fact (see p. 53 above), that the smaller-market stations would reach the population which lost service by virtue of the cut-back. Thus while perhaps more stations could (but not necessarily would) be ordered, the total coverage for the same number of dollars would be significantly less. The statement, accordingly, that "the advertiser . . . could cover more persons with the dollars he is now spending" is patently in error.

And, perhaps even more important, such a process would inevitably make television a less attractive advertising medium since it would artificially distort it into a more expensive and less efficient medium. In all likelihood, the consequence would be to divert many national advertising dollars away from the medium altogether, and into other media. This, obviously, would harm *all* of television—small stations as well as large ones—and, since it is the advertising dollar which provides the life blood for television service, it would also be injurious to the public—wholly apart from the loss of service directly stemming from the reduction of service areas (see p. 53 above) which would thus be deprived of substantial programming.[1]

---

[1]Other factual errors in this section of the Report may be noted.

(1) At page 18, paragraphs 6-10, statements concerning Flint, Michigan are inaccurate. WTAC-TV, the Flint UHF station which went off the air, had been in operation for only five months. While it is true that, as stated, the CBS Television Network cancelled its affiliation "with the station in the third overlapped market," exactly one month *prior* to the date of the Report the cancellation was withdrawn and a new affiliation contract with the station was signed for two years beginning April 1, 1956, with mutual five months' cancellation privileges.

(2) At page 19 of the Report, it is stated that "CBS and NBC station affiliates in the large markets now charge up to $8,400 per hour for station time, with the average running somewhat lower, approximately $2,000 to $4,000 per hour." First, no CBS Television Network affiliate has a rate as high

F. The CBS Allocation Plan

The Report (pp. 20-21) purports to describe the CBS allocation plans previously submitted to the FCC and to the Senate Committee. The Report's description of the plan bears little relationship to the actual proposal.

As the CBS allocation plan itself and the CBS testimony concerning it explicitly establish, the CBS allocation plan is not a "100-market plan" and is *not* limited to 100 markets. The original CBS *Proposals and Comments* in the current FCC Allocation Proceeding (Docket No. 11532), submitted on March 27, 1956, to the Senate Committee stated (p. II-3):

> "Those markets outside the coverage areas of television stations in the 100 leading television markets and large enough to support one or more program-originating stations do not, in general, offer a serious assignment problem. *Because they are situated at some distance from the leading markets they can usually be assigned channels which do not conflict with the assignments to the leading markets. These smaller markets cannot, in general, support more than two television stations."* (Italics supplied)

Nowhere in the CBS *Proposals and Comments* was it suggested that these smaller markets should be deprived of their assignments or their stations. Clearly there is a significant distinction between the CBS statement that the markets below the top 100 "cannot, in general, support more than two tele-

---

as $8,400; only one NBC affiliate does—and that rate is not for network programs. Hence the plural is unjustified. Second, the *average* Class A hourly rate of the ten CBS and NBC Television Network affiliates with the highest rates is just under $3,000; of the highest 20, about $2,140; of the highest 30, about $1,775; and of the highest 50, about $1,375.

vision stations" and the Report's charge (p. 20) that CBS suggested "amputation at the neck" for stations outside the 100 leading television markets.

In testifying before the Senate Committee on March 27, 1956, the CBS witness explicitly addressed himself to the false allegation that the plan proposed stations only for the 100 leading markets. William Lodge, Vice President in charge of Engineering, CBS Television Division, testified (Transcript of Hearings, pp. 1835-1837):

> "Probably the best answer to the charge that CBS is interested only in the 100 leading television markets and is ready to have the rest of the country go unserved is the fact that the CBS Television Network has affiliated with stations not in the 100 leading television markets only, but in 178 markets, covering as much of the country as we can. We have affiliates not only in Detroit and Philadelphia but in Grand Junction, Colorado and Twin Falls, Idaho, with 5300 and 6300 families respectively.
>
> "*In fact, the CBS plans did not propose any alteration in the assignments outside the centers of the 100 leading television markets* except for the four channels so far unapplied for and the seven channels permitted to move toward larger cities. In all except these eleven instances, the community assignments were left unaffected. It certainly does not extend the white areas.
>
> "Our emphasis on the 100 leading television markets was a result of the fact that it was in those markets that we were proposing changes. As noted in Columbia's December 14, 1955 *Comments* to the FCC:

'. . . the imperative present and identifiable need is to increase the number of competitive assignments in larger markets.

'For this reason Plan I and Plan II have been worked out in complete detail only to take care of urgent present needs in the 100 largest television markets. *There are currently a large number of assignments to smaller television markets and additional assignments could be made to them.* (p. 14. Emphasis added.)

'Those markets outside the coverage areas of television stations in the 100 leading television markets and large enough to support one or more program-originating stations do not, in general, offer a serious assignment problem. Because they are situated at some distance from the leading markets they can usually be assigned channels which do not conflict with the assignments to the leading markets. These smaller markets cannot, in general, support more than two television stations'." (p. II-3) (italics in original)[1]

It is plain, therefore, as established by the CBS allocation plan itself and by the CBS testimony concerning it before this Committee, that the purpose and effect of the CBS allocation plan were to *add* stations in the 100 largest markets where there is now current demand for additional stations, while at the same time *leaving unaffected virtually all allocations in the small markets.* Far from "amputation at the neck" the CBS plan, as was explained by Mr. Lodge, added to the total alloca-

[1]In commenting on this phase of Mr. Lodge's testimony, Mr. Cox, special counsel to the Senate Committee stated (Transcript, p. 1889):

"I am interested in what our TV system would look like outside the 100 top markets. You made this morning the very valid point that *you certainly have not denied television service to the areas not covered on your map, . . .*" (Italics added)

75589 O—57—pt. 4——39

tions and made progress toward the objectives not only of nationwide service but of a greater choice of competitive services.[1]

---

[1]Other errors in the section of the Report entitled "CBS Allocation Plan" are as follows:

(1) At page 20, paragraph 4, it is stated that "CBS candidly confirms its intention to create a chain of a few wide-circulation and highly profitable station affiliates." No such statement either explicit or implicit appears in the CBS allocation plans or in any statement by CBS concerning the plans.

(2) At page 20, paragraph 5, the Report states that CBS "states that there are only 100 'market areas' in the country that can support a CBS affiliate station, and it has furnished a map delineating these CBS 'market areas.'" CBS has made no such statement and has furnished no such map. CBS, in describing and testifying concerning its plan, has explicitly stated that there are more than 100 market areas which can support a station; the map referred to illustrated the CBS proposals only for the 100 leading markets because it was in these markets that CBS proposed allocation changes. CBS expressly stated that maps for the remaining markets were not included since for these remaining markets there were already sufficient allocations.

(3) At page 20, paragraph 8, the Report states that "It is CBS' obvious intention to cover only the most densely populated portions of the country via 100 superstation affiliates . . ." CBS has no such intention. It has many affiliates outside the 100 major markets and it proposes to continue those affiliations.

(4) At page 20, paragraph 12, the Report states that the "basic premise" of the CBS allocation plan is "that the size of its suggested 'market areas' is the minimum required to support a station." CBS has made no such statement and has proceeded under no such premise. Rather, CBS has clearly indicated to the contrary. The smallest market area included in the 100 leading television markets specified in the CBS allocation plans was El Paso with 77,500 families (*CBS Proposals and Comments,* Docket No. 11532, pp. 11-25). Yet in the study submitted with the Proposals (*How Many Television Stations Can the United States Support Economically?,* Exhibit V of the Proposals), 22,000 families are given as the minimum total homes per market required to support a television station on the average. The CBS allocation plans focused on the problem of providing at least three competitive stations to each of the 100 leading markets. But this is a far cry from suggesting that no other markets could support any stations.

(5) At page 21, line 2, it is stated that 89 of the proposed market areas lie in Zone I. On the assumption of the Report that the CBS plans included only 100 market areas, this would leave only 11 market areas for the entire United States falling outside Zone I. The fact is that 41 (not 89) of the CBS 100 leading markets are in Zone I and 59 are outside Zone I.

(6) At page 21, lines 3 and 4, it is stated that 35 of the CBS leading market areas in Zone I "contain over 1 million persons, as determined by the Bureau of the Census." According to the Census figures there are 22 (not 35) market areas in Zone I which cover 1 million or more persons.

It is difficult to conceive how these readily ascertainable facts could have been more clearly or explicitly stated. In its plan and in its testimony concerning the plan, CBS stated its belief which, lest there be any doubt, it once again confirms, that there *is* economic room outside the leading 100 television markets for many television stations, that it favors channel allocations for stations outside these 100 markets, and that it has indicated concretely its faith and its interest in these small markets by affiliating with about 80 stations outside those markets and by its special plans to aid those markets.[1]

[1]See CBS Supplemental Memorandum, pp. 81-83, describing the CBS Television Extended Market Plan and the Extended Program Service Plan.

APPENDIX A

Operating Profit as a Percentage of Net Tangible Property for Selected Companies in 1954

Industry	Company	Operating Income (a) (1954) ($ millions)	Net Tangible Property (b) (Jan. 1, 1954) ($ millions)	Profits As A Percentage of Net Tangible Property

LETTERS FROM

(1) KFEQ-TV, St. Joseph, Mo.

(2) KVOS-TV, Bellingham, Wash.

(3) KOLN-TV, Lincoln, Nebraska.

K F E Q
RADIO TELEVISION
ST. JOSEPH, MISSOURI

May 3rd, 1956

Dr. Frank Stanton, President
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York 22, N. Y.

Dear Dr. Stanton:

Upon reading statements made by Senator John W. Bricker, we note that in his attacks on network practices that he has referred specifically to KFEQ-TV, our station in St. Joseph, Misouri, in relationship to KMBC, who at one time was the CBS Television outlet for the Kansas City metropolitan area. In referring to these stations, he has quoted actual sales figures for both stations, network sales, local time sales and total sales.

Our interpretation of this reference to our station in relationship to the Kansas City outlet, as well as our interpretation of his reference to similar situations, such as the Lincoln-Omaha situation, leads us to feel that he is endeavoring to prove that there may be a reluctance on the part of the network to deliver network programs on our station or that there might possibly be either a direct or indirect attempt to minimize the number of network programs that would be fed to our station in St. Joseph.

Because our experience with the CBS Television Network has been so completely different from the situation described above, we felt that it would be very important to go on record with you by saying that we are very conscious of the complete cooperation which we have had on the part of your Sales Department and your Sales-Service Department in their efforts to put every CBS program possible on KFEQ-TV. We have very concrete knowledge of the continued

[II]

efforts on the part of your Sales Service Department to have KFEQ-TV included in practically every network order. Our personal contacts with your Sales Service Department, as well as our day-to-day contact via teletype and long-distance phone, have been continual proof of the complete cooperation which we have received.

Since our first association with the CBS Television Network, our network position has constantly improved. The number of programs carried week-to-week has been increasing, as well as the dollars and cents revenue from network sales. For instance, our total network income in 1954 was $32,953.00; in 1955 our total sales from CBS Network were $51,292, an increase of $18,339.00. To bring this picture down to date, may we compare the first 3 months of 1955 as opposed to the first 3 months of 1956? The total for January, February, March, 1955, network sales for KFEQ-TV—$11,662.00; for the same three months of 1956, network sales totalled $16,130.00; thus, in the first three months of 1956, as compared to the first three months of 1955, we show an increase in network billings of $4,468.

You have our personal assurance that we are extremely well-pleased with the manner in which your Sales and Sales Service Departments work with and in behalf of KFEQ-TV, and we are also gratified with the continual increase, not only in the number of programs which we carry from CBS, but also with the increase in the dollars and cents revenues. We want you to know that we appreciate the support and cooperation which your various departments are giving us, and we are looking forward to a continuation of this very pleasant and increasingly profitable relationship.

With best wishes.

Very truly yours,

G. G. GRISWOLD

Mr. Richard S. Salant
Vice President
Columbia Broadcasting System
485 Madison Avenue
New York 22, N. Y.

Dear Dick:

The Bricker Network Report deserves some comment from KVOS-TV. The Senator's interest in small stations is sound and appreciated. However, some points have been overlooked.

The question of overlapping stations is largely taking care of itself. KVOS-TV and KTNT-TV overlap to a minor degree in their A signal areas. When, and if, KVOS-TV gets permission to use maximum power, this overlap will be increased. CBS-TV has indicated it would welcome this improvement in our facilities and ability to serve the public.

There are other indications that major networks are moving away from the concept of no overlapping coverage. As a matter of fact this monopoly thinking seems to be in the station's mind, and not the network's.

As to the figures quoted by Senator Bricker we would like to bring him up to date. 1954 figures are not fully illustrative of our situation. Probably the same is true for the entire industry. 1954 is too close to the end of the freeze in 1953. In 1954 we were on the Dumont Network. The $1,470 came almost entirely from them. Our CBS-TV contract is dated December 16, 1954. We received only $21 from

CBS-TV in 1954. The Senator is correct in showing a loss for 1954 of $45,115.

By the end of March, 1955, we were starting to get some business from CBS-TV—a pretty fair example of good selling. At that time we had lost $5,782.53 with inadequate charges for depreciation, no interest paid or computed on long-term debt and no salary to the writer.

Our ratio of current assets to current liabilities was 3 to 4, and only the 23rd Psalm stood between us and the sheriff.

Under our CBS-TV contract we can accept or decline business, there is no option time and we can take programs live or delayed as suits our ideas of serving the public.

Gradually our network sales and all income increased in 1955 because of our CBS-TV service. Though network income had only amounted to $391.20 we did twice as much business in March of 1955 as we did in 1954. By the end of March 1956 our gross business was more than double 1955 and nearly four times the first quarter of 1954. Our network income for the first quarter of 1955 was $3,467.74, compared to $870.45 in the same period of 1954.

Our ratio of current assets to current liabilities was 2.19 to 1. We had added over $75,000 in new and useful equipment. By the end of April, as this is written, preliminary figures show our accounts payable are on a 45 day basis, compared to a 155 day basis of a year before. Depreciation allowances are adequate and after 25 months the writer's salary is being paid.

As the 338th market we expect to sell less and make less than our nearest CBS-TV neighbor, KTNT-TV. Practically any business or profession in Bellingham makes less than the same operation would yield in Tacoma or any other of the top 100 markets.

We are now able to serve our A-grade signal area in competition with major market stations, but only because we are an affiliate of a major network. We think major market stations have many advantages, but as free enterprizers we say: Give us CBS-TV programs and we can compete.

[V]

We are grateful for the work that is being done by the Senate Committee in behalf of small stations, but we feel the networks are not to be misjudged. There are other factors that could harm us much more—monopoly minded film distributors, for example.

This letter, we hope, will be of some use to you. It is a sincere expression of appreciation.

Yours,

ROGAN JONES

Dr. Frank Stanton, President
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York 22, New York

Dear Dr. Stanton:

The purpose of this communication is to make reference to the market duplication connotation contained in Senator John W. Bricker's report to the Senate Interstate and Foreign Commerce Committee, wherein specific mention was made to KOLN-TV, Lincoln, Nebraska.

That report indicates during 1954 the diversity of revenue between the Lincoln and Omaha stations due to the dominant position of the one over the other. Out of all fairness it must be made abundantly clear that at that time KOLN-TV had been a network member but a few months and had little opportunity to develop its market story. Most certainly the low station income in 1954 was not due to lack of diligence on the part of the network.

On the contrary, through individual effort KOLN-TV faced its economic plight by developing strong local programs and by building a new transmitting plant designed to serve the total Lincoln-Land area. As a result of this private enterprise, in the short space of a year and a half, we are able to project our 1956 revenue over 1954 as follows: network sales up 600%, local sales up 250% and national spot sales up 300%. By making our market story valid and competitive, it has attracted both national and local advertisers to our facilities. A steady flow of fine network programs has followed. Network officials have been able to place their programs on our facilities because we first created advertiser demand.

In our view, the progress at KOLN-TV is a clear example of private enterprise effectuating an end-result which the strait jacket of bureaucratic control could never accomplish.

With every good wish, I am

Sincerely,

A. JAMES EBEL

Mr. STANTON. The fourth document is A Memorandum Concerning the Statement of Richard A. Moore.

(The document is as follows. See also material at p. 2897 and item 29 in the appendix.)

Memorandum

Concerning the Statement of

Richard A. Moore

PREPARED FOR THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE BY COLUMBIA BROADCASTING SYSTEM, INC.

JUNE 1956

TABLE OF CONTENTS

Memorandum Concerning the Statement of Richard A. Moore

Introduction

On March 26, 1956, Richard A. Moore, President of KTTV, Inc., Los Angeles, California, made a statement (hereinafter referred to as the Statement) before this Committee (Tr. 1569-1660). The Chairman later requested that the networks respond to the Statement.

Mr. Moore's statement consisted primarily of an attack on the validity and propriety of the option time provisions in network affiliation agreements and of the "basic-required" practice of the networks. The relevant facts and the basic legal and other considerations concerning these two issues are fully set forth in "Network Practices, Memorandum Supplementing Statement of Frank Stanton" (Supplemental Memorandum), the Opinion and Memorandum of Messrs. Cravath, Swaine & Moore, and the statement of Frank Stanton, President, Columbia Broadcasting System, Inc. It is not the purpose of this memorandum to restate those facts or contentions, amply documented in the aforesaid submissions. Rather it is the purpose of this memorandum to address itself to certain additional allegations of fact and implications not fully treated in the other documents.

It should be noted at the outset, however, that although the Statement is lengthy, it deals primarily in argumentative conclusions and assumptions, rather than in primary facts. There is in general a noticeable absence of supporting data. On the relatively few occasions when the Statement did deal with facts, they were often wrong. And, when the Statement's facts were technically correct, the inferences which were drawn from them and the multiple assumptions which were built upon them were equally inaccurate or misleading.

Accordingly, it is the purpose of this memorandum to analyze these facts, inferences and assumptions since the Statement bases its fundamental conclusions upon them.

As noted, some of the conclusions in the Statement are treated in other documents submitted herewith. To the extent possible, repetition will be avoided by reference to the pertinent pages of the Supplemental Memorandum.

The Statement contends that the option time provision in affiliation agreements and the basic-required practice (described by the Statement as "must-buy") of the television networks so adversely affect (A) affiliated television stations, (B) syndicated film producers, (C) independent television stations and (D) advertisers, as to result in a denial to the viewing public of its opportunity to receive the widest possible choice of programs. To permit a clear appraisal of the impact on the conclusions of the misstatements and misleading implications in the Statement, the allegations concerning the supposed effects of the network practices on each of these groups will be discussed separately.

A. *Alleged Effects on Affiliated Television Stations.*

This memorandum will consider in turn the contentions that as a result of network option time, television network affiliates become mere mechanical conduits and (1) broadcast an unreasonably large amount of network programs and (2) do not exercise a free choice in the selection of programs during option time, thus abrogating their responsibility as licensees.

1. *The Fallacy of the Contention that Network Option Time Causes Television Affiliates to Carry an Unreasonably Large Amount of Network Programming.*

In attempting to support this contention, the Statement makes two threshold errors of fact. First, it is said that in order for stations to carry high quality network programs, they must agree to carry network programs offered during the "twelve hours" of option time each day (Tr. 1596). Second, it is said that since many hour-long network programs are broadcast partly within and partly outside of—and thus straddle—network option time, the networks effectively add an additional half-hour of option time (Tr. 1593-1594). Both statements are in error.

First, no CBS Television Network affiliation agreement provides for more than *nine* network option hours a day.

Second, it is and has been the position of the CBS Television Network that if a station is ordered for a program which straddles network option time, the option provisions in the affiliation agreement are inapplicable. Thus, this practice, rather than increasing the number of hours subject to the network option, has actually *reduced* that time.

But the statement seeks to find its main support for the contention that option time results in network affiliates carrying an unreasonably large amount of network programming in a study of forty cities in all of which the NBC and CBS Television

75589 O—57—pt. 4——40

Networks each has a basic-required affiliate. The study purported to show that during evening network option time network programs occupied 96.3 per cent of the time on the 80 CBS and NBC affiliates in those markets (Tr. 1590-1592)—and was later used to imply that this percentage applied to *all* network affiliates (Tr. 1601, 1627).

CBS has been unable to understand the significance of the data derived from this study—done as it was in a carefully selected group of cities for carefully selected hours of the day. In any event, the facts negate the implications of the study. That option time has no such results as the statement apparently seeks to establish appears from the following facts derived from an analysis of the CBS Television Network's program clearances during the week of May 19, 1956:

On all CBS Television Network affiliates—

58.1 per cent of all hours subject to network option are available to *non-network* programming.

47.4 per cent of all evening hours subject to network option are available to *non-network* programming.

On all CBS Television Network basic-required affiliates—

38.4 per cent of all hours subject to network option are available to *non-network* programming.

30.4 per cent of all evening hours subject to network option are available to *non-network* programming.

The availability of these hours to non-network programming arises either (i) because affiliates have rejected the network programming offered (during the week analyzed more than 500 hours of option time were ordered by the network but were not cleared as ordered by affiliates), or (ii) because the normal option hours, for one reason or another,[1] were not subject to option by the network. In all other hours of the day, of course, 100 per cent of any affiliate's time is available to non-network programming.

2. *The Fallacy of the Contention That Affiliated Stations Do Not Exercise a Free Choice in Program Selection.*

The assertion of the Statement (Tr. 1584) that the right of an affiliated station to refuse to broadcast a network program is a mere "technicality" is squarely in error. It is a broad and practical right.[2] It is effectively and not infrequently invoked. As noted above, during one week more than 500 option-time hours were ordered by the CBS Television Network and not cleared by the stations as ordered.

CBS, perhaps immodestly, believes that the fact that this figure is not larger is evidence of the high quality of the television network's over-all programming schedule. The Statement, however, appears to urge that in general, the selection by affiliates of network programs in option time must be the result of compulsion since syndicated film programs, it asserts (Tr. 1601), are more popular. Thus, it contends, time options "protect in-

---

[1]The periods which would otherwise be subject to option time were occupied by a "straddling" network program (see p. 3, above) or option time was inapplicable because the network program was unsponsored, or because of difference in time zones, no network program was offered during the period.

[2]The right is *not* limited to the rejection of network programs which the station believes are "contrary to the public interest"; it extends to network programs which the station finds are "unsatisfactory or unsuitable" for its purposes. For the breadth of these rights, see Supplemental Memorandum, pp. 104-105.

ferior network programs against the better programs produced by other program sources" (Tr. 1631).

Its reasoning seems to be that:

(a) Program popularity is the test of a station's programming responsibility. A station should therefore broadcast the most popular programs available.

(b) Syndicated film programs are more popular than network programs.

(c) A station which broadcasts network programs instead of syndicated films has thereby abrogated its programming responsibility.

It should be noted, preliminarily, that popularity is not the only yardstick for measuring the quality or public interest aspects of a program. In order to achieve a well-balanced program structure, stations should and do broadcast programs which are not expected to attain high audience ratings.

However, even assuming that program popularity is the test of a station's programming responsibility, network programs are more popular than syndicated films. The Statement's figures attempting to create a contrary impression are so carefully selected as to be entirely misleading. One of the examples presented in the discussion of syndicate films is that, "In Los Angeles, with seven VHF stations, there were 128 network programs. *Confidential File* had an audience larger than 95 of these network programs" (Tr. 1599). If this statement be accepted, there were *33* network programs more popular than the *most popular* syndicated film. However, there are two *Confidential File* programs broadcast each week in Los Angeles, both on KTTV. One is a live program on Sunday

9:30 p.m. to 10:00 p.m. and the other is a film program on Friday 9:30 p.m. to 10:00 p.m. The Statement has used the live program among its syndicated film examples because the syndicated film *Confidential File* is, in fact, exceeded in popularity by *84* network programs.

No purpose would be served by similarly commenting on the other examples cited in the Statement. Each points inevitably to the same conclusion—that, as the following table shows, network programming as a whole is more popular than syndicated films:[1]

	New York	Los Angeles
Average of ten highest rated shows[2]		
Network	40.6	37.7
Syndicated Film	12.9	16.5
Network Advantage	+215%	+128%
Highest rated show		
Network	57.0	55.6
Syndicated Film	22.4	19.7
Network Advantage	+154%	+182%

The above table uses data from New York and Los Angeles where there are four independent stations which can provide "prime time" for syndicated films. The popularity of network programs as compared to non-network programs throughout the country is shown at page 15, footnote 1, Supplemental Memorandum.

Clearly then, if program popularity is the test, a station licensee can hardly be considered remiss in choosing network

[1]CBS wishes to make clear, however, that it is not seeking in this section of the memorandum, to minimize the important and valuable role of the film syndicators for *all* segments of the industry—for the CBS Television Network, and for stations both affiliated and unaffiliated. CBS herein is only addressing itself to the specific tests which the Statement itself has established.

[2]Data are from American Research Bureau, February, 1956.

programs instead of syndicated film. And equally clearly, option time provisions do not protect inferior network programs against better programs produced by other program sources.

Further to support its contention that option time results in an abdication by affiliates of their responsibilities to the community, the Statement stressed the history of the clearance of *Disneyland*. It states that although *Disneyland* is on film and can be played in each city at the most suitable time for a young audience, the network option time selected for the program (7:30-8:30 p.m. Eastern Standard Time and 8:00-9:00 p.m. Pacific Standard Time) means that children can enjoy *Disneyland* only if they stay up to a late hour. It states further that while *Disneyland* is carried on fifteen network affiliated stations in the Pacific Time Zone, nine of them carry it in the time period dictated by the network (Tr. 1594-1596).

The Statement's reliance on this history is misplaced. *ABC does not have time options on many of the stations which broadcast the program at the time ordered.* In the Pacific Time Zone, of the ten stations[1] which broadcast the program at the "ordered" time, two are owned by ABC. Four of the eight other stations are primarily affiliated with either the NBC or CBS Television Networks, so that ABC does not have option time agreements with those four stations. Throughout the country, more than 36 per cent of the stations which broadcast *Disneyland* at the time it is ordered by ABC do not have option time agreements with ABC.

[1]Program of February 8, 1956. The Statement's reference to nine stations may have been based upon examination of a different day.

Thus, it plainly could not have been network time options which "forced" stations to accept *Disneyland* at the hour ordered by the network. As the Statement itself acknowledges, *Disneyland* is regarded as a program for "children of all ages" (Tr. 1594). The sponsors of *Disneyland* include an automobile manufacturer and a meat packer. Obviously neither is interested primarily in reaching children with commercial messages. CBS cannot be certain, of course, of the reasoning behind the stations' decisions to carry the program as ordered, but it seems likely that popularity of the program among adults who may not be able to watch during the daytime, as well as the wishes of the program's sponsors, had more to do with those decisions than did option time.

Still another contention embodied in the Statement as part of its argument that option time is inconsistent with station responsibility is that network time options constitute blind selling[1] since the station licensee rarely sees the program before it is broadcast and cannot judge whether the program is in the public interest (Tr. 1597).

CBS Television Network affiliates receive advance descriptions of all network program series before the series begin, and, in some instances, the CBS Television Network has provided closed circuit previews of new programs. After a network series begins, each ordered station receives a detailed description of the following week's program several days before it is to be broadcast. That description and a station's

---

[1]Network programs are not sold to affiliated stations at all. See *Opinion of Counsel and Memorandum Concerning the Applicability of Antitrust Laws*, p. 58.

confidence in the judgment of the network are usually adequate for the station to make an informed decision as to the suitability of the individual program. When an affiliate is not satisfied with the regular description, either before or after a series begins, it can and does ask for a more detailed description of the forthcoming program or series, and the network, of course, does its best to satisfy those requests. *And at any time, whether before or after the network series begins, an affiliate can reject a network program which is "unsatisfactory or unsuitable" for the station's purposes.* Supplemental Memorandum, p. 105.

The information which stations receive about non-network distributed programs is not substantially different. Even when a station views a pilot of a syndicated film series, it does not preview every film in the series before it contracts to purchase and broadcast the entire series.

And in fact, an affiliate, as a practical matter, has more leeway to reject a network series after it has begun than it has to reject a non-network series once the station has contracted for the latter. If the affiliate exercises its broad right to reject—noted above—it will, of course, lose the advertising revenue for the programs which it has decided not to broadcast. But it is not penalized financially for the exercise of its right to reject.

In contrast, when a station orders a syndicated film series, it usually must pay for all programs in the series whether or not they are broadcast. Thus, if a station decides to cancel a syndicated film series because it believes the programs to be contrary to the public interest, or otherwise unsuitable or unsatisfactory, it must bear a heavy financial burden. It may be assumed that these consequences will not make any easier a decision to cancel.

On balance, it is clear that an affiliated station is in at least as good a position and is as apt to exercise its judgment on network programs as is any station with respect to syndicated film programs.

Finally, the Statement relies heavily on allegations of fact purporting to establish KTTV's programming superiority (Tr. 1572-1575). The purpose of the recital, apparently, is to lend weight to the contention that a network affiliate, allegedly burdened by option time, cannot operate to serve the public or the interests of the local viewers while an unaffiliated station, with no such "burden", can and does do so.

Even if the argumentative premises be accepted, the facts compel rejection of these contentions. CBS has compared the programs broadcast by KTTV and KNXT, the CBS-owned television station in Los Angeles. That comparison establishes that by any of the normal and available criteria, even as to an affiliate such as KNXT, where the maximum amount of clearance of network programs is to be expected, the programming of an affiliated station compares favorably to that of a non-affiliated station. There follows a summary of the source of programs broadcast by KTTV and KNXT during the week ending April 7, 1956:

	KNXT	KTTV
Network	74 hrs. 15 min.	none
Film, including features and re-run syndicated film with off-camera announcer	9 hrs. 45 min.	63 hrs. 15 min.
Film, as above, with on-camera announcer	16 hrs. 40 min.	39 hrs. 30 min.
First run syndicated film	1 hour	5 hours
Local live	26 hrs. 15 min.	21 hrs. 20 min.

A qualitative breakdown of the local live programming of each station shows that KNXT broadcast 7 hours and 20 minutes of news while KTTV broadcast 2 hours and 30 minutes. KNXT also broadcast 3 hours and 30 minutes of local live agricultural, religious and educational programs, while KTTV broadcast 65 minutes of religious and no educational or agricultural programs.

The Statement claims that (1) KTTV is first in daytime audience among all seven stations in Los Angeles; (2) its average audience for all broadcast hours "substantially" exceeds that of the ABC television station; and (3) it is "closely competitive" with the CBS and NBC television stations during prime evening hours (Tr. 1572-1573).

First, KNXT and KTTV had identical average ratings in the daytime,—3.3.* Second, KTTV's average audience for all broadcast hours did not "substantially" exceed that of the ABC television station: The average rating for KTTV was 4.4 and that of the ABC television station was 4.2. Third, KTTV was not "closely competitive" with the CBS and NBC television stations during "prime" evening hours: From 7:30

*All ratings in this paragraph are from the American Research Bureau Report for February 1956.

p.m. to 10:30 p.m. (the hours specified as "prime" in the Statement) the average rating for KNXT (CBS) was 17.0 and KRCA (NBC) was 16.1—both more than twice as large as KTTV, which was 7.9.

Relative audience acceptance of the program schedules of the two stations is reflected in the American Research Bureau Los Angeles Report for February 1956 which shows that KNXT attracted 26.3 per cent of the average audience throughout the week, while KTTV attracted 18.8 per cent.

Public recognition of the excellent overall programming of KNXT is evidenced by the fact that the station has received 75 awards in the past three years from educational, civic and industry organizations. Many of them are detailed in Appendix D of the Supplemental Memorandum. They include the Academy of Television Arts and Sciences special station achievement award in 1954 and 1955, a record without precedent, and the Peabody Award of "outstanding programming in the public's interest," with a notation that the multiple honors accorded KNXT at this time were "unprecedented in the [Peabody] Committee's history".

In addition, KNXT recently won the two top television awards voted by the California Associated Press Television-Radio Association. KNXT won the "Sweepstakes Award for General Excellence of Locally Originated News Broadcasts." KNXT's *The Big News* received the "First Award" for being the best local, regularly scheduled news program.[1]

[1] In connection with the Statement's claim of the superiority of KTTV's news programming (Tr. 1573), the following editorial comments concerning one of KTTV's news analysts is relevant:

> "[The KTTV news analyst] has indulged in the spread of ugly rumor, innuendo and gossip.

KNXT has demonstrated that, while broadcasting practically a complete network schedule, it can serve the public well, and that there is no basis of fact for the allegation in the Statement that network affiliates "have been required to surrender their responsibility" (Tr. 1590) because of option time.

The present owners of KTTV, in any event, have not always believed that a network affiliation agreement containing option time provisions precludes a station from assuming its responsibilities as a licensee. Before the station went on the air, they sold a 49% interest in the station to CBS. At the time of that sale, they made the following representation to the FCC in support of their application for transfer:

> "In the interest of more effective handling of the television station operation, it has long been the intention of assignor ultimately to establish a separate company for the operation of the station rather than to operate it as a department of the newspaper. The current assignment request is being made for the dual purpose of accomplishing that desirable result and of making possible the cooperation of the Columbia Broadcasting System on a minority-interest basis, thus

---

"His comments have exceeded the dictates both of journalistic responsibility and of good taste.

"Such conduct, whether occurring in a newspaper, on the radio or the television should be repudiated by all who regard the profession of news reporting as a trust, . . . Those who resort to rumormongering and the circulation of irresponsible gossip cast a reflection on the entire process of gathering, reporting and interpreting the news. They arouse unjustified public suspicions, create false alarms and attract the cooperation and ready collaboration of crackpots, fanatics and character assassins. . . ."

The foregoing evaluation appeared on May 5, 1956, as an editorial in the Los Angeles Times, published by the *Times-Mirror Co., which in turn owns KTTV, Inc.*

> securing the benefit of their background and experience in television station programming and operation as well as *the advantages to be gained from network television operation.* It is felt that this action will result in a *distinct improvement* in the service to be rendered the community by Station KTTV." (Italics added).

Option time was in existence when that representation was made. The CBS Television affiliation agreement with KTTV included the usual option time provisions. When seeking to gain the advantages of an affiliation with option time, they were not of the view that they would thereby abrogate or fail to fulfill their responsibilities to the community. In fact, they sought the affiliation to improve their service to the community.

B. *Alleged Effects on Syndicated Film Distributors*

The Statement argues that network practices are harmful to syndicated film distributors in their relations with networks and in their relations with stations. This memorandum will consider in turn the several subsidiary contentions on which the Statement's conclusion is based.

1. *The Fallacy of the Contention that Network Practices Are Harmful to Syndicated Film Distributors in Their Relations with the Networks.*

The Statement contends (Tr. 1627-1628, 1635) that networks "tie-in" the sale of network-produced programs with the sale of desirable network time periods. This activity is allegedly motivated by the profits networks make on the production of programs (Tr. 1629, 1635). In addition, the charge is made (Tr. 1606, 1608) that the networks attempt to take over control of the independently-produced film properties which are offered for broadcast over the networks.

As is stated in the Supplemental Memorandum (pp. 88-95), the CBS Television Network does not discriminate in favor of programs which it produces as against programs produced by independent sources in clearing time for advertisers. On the contrary, the CBS Television Network believes that independent program producers are a vital source of supply to it of excellent programs. Its policy, accordingly, is simply to place in its network schedule the best program—regardless of source—at the best time.

The fact is that a majority of the programs broadcast over the CBS Television Network are not produced by it, and the trend in this direction has increased over the last few years—both for all network broadcasting time and, particularly, in Class A time, the very period during which the tie-in is alleged to obtain.

As is also stated in the Supplemental Memorandum (p. 93), the CBS Television Network not only does not profit on its program production operation; it suffers substantial losses. It produces (or arranges for the production of) programs to fulfill its responsibility to the public by making certain that good programs are always available for the network schedule.

The charge that the networks try "to take over control [of] the film properties which come to them from independent producers" is irresponsible, unsubstantiated and false. When questioned concerning the basis for this charge, the author of the Statement conceded that of his own knowledge he knew of no specific instance where the networks had engaged in such a practice, but that the charge was predicated on the "usual lunch-date complaints."

The fact is that the CBS Television Network acquires a financial interest in an independently produced (or more often, a not yet produced but conceived) program *only* when the outsider submits an idea or a pilot and, to bring the program to completion, the CBS Television Network incurs financial obligations in respect to the program's development and production.

In no case has CBS or the CBS Television Network ever imposed as a condition of acceptance of a program, or of making time available for it, a requirement that it be granted a financial interest.

2. *The Fallacy of the Contention that Network Practices Are Harmful to Syndicated Film Distributors in Their Relations with Stations.*

The assertions underlying this contention are that (a) network option time results in so-called "prime time" being virtually completely occupied by network programs (Tr. 1590-1592), (b) Class B and Class C time is not sufficient for independent films (Tr. 1604, 1606), and (c) as a result, the Statement alleges, stations are prevented from buying the product of syndicated film distributors (Tr. 1604).

(a) The "evidence" offered by the Statement in support of the allegation that network programs completely pre-empt "prime time" is primarily the "96 per cent" argument (Tr. 1590-1592). Whatever relevance that argument may have to other contentions offered by the Statement, it has none in respect of the assertion that stations cannot buy non-network programs. For, as noted above, even the 96 per cent relates only to 80 selected stations in 40 selected markets: It thus ignores more than 80 per cent of the nation's television markets, and even in the 40 markets, it ignores more than one-third of the stations.[1]

A more accurate representation of the ability of syndicated programs to clear Class A time in substantial numbers of markets was given by Mr. Oliver Treyz, President of the Television Bureau of Advertising, in a recent speech which is quoted in part in the Supplemental Memorandum (pp. 120-121).

In his speech, Mr. Treyz listed a large number (but by no means all) of the syndicated film programs which have cleared Class A time in a substantial number of markets. To the examples given by Mr. Treyz can be added the case of *The Rosemary Clooney Show,* a syndicated film program which recently started on 54 stations, including KTTV. On 80 per cent of these stations, the program is being carried between 7:30 and 10:30 p.m. In the other 20 per cent of the cases, the program is being broadcast either between 6:00 and 7:00 p.m. or between 10:30 and 11 p.m.

(b) The contention that Class B and Class C time is inadequate for exposure of syndicated films is equally unwarranted. While it is true that programs broadcast during Class B

[1]According to information available, at the time of the Statement all stations in the 40 markets broadcast more than 2000 half-hours of syndicated film programs a week.

and Class C time do not draw audiences so large as those broadcast during Class A time, time other than 7:30 to 10:30 p.m. may not be written off as useless or unprofitable. There follows a breakdown indicating the average number of homes using television during the other hours of the day, expressed in local station time.[1]

	Number of Homes Tuned to Television (in 1,000's)
8-10 a.m.	4,706
10 a.m.-1 p.m.	6,836
1-2 p.m.	5,393
2-5 p.m.	8,210
5-7:30 p.m.	16,041
7:30-10:30 p.m.	23,015
10:30-11 p.m.	14,049
11 p.m.-1 a.m.	4,019
Average:	10,820
Average excluding 7:30-10:30 p.m.:	8,222

There are, then, very large audiences available throughout the day. The average number of homes using television (8,222,000) in hours other than the "prime evening hours" is greater than the number of homes using television in the hour of *greatest television use* as recently as June, 1951, when the CBS Television Network had been operating for more than two years. And it is to be noted that 63 per cent of total set use occurs during hours other than 7:30 to 10:30 p.m.

[1]These figures were obtained from the American Research Bureau report for February, 1956, applied to CBS estimates of television homes (34,350,000).

75589 O—57—pt. 4——41

That time periods other than Class A evening hours will support high quality programs is evident from an analysis of the programs which the CBS Television Network produces. Of the 36½ hours of programs which were produced by the network alone, or by the network in association with independent producers, during the week ending May 19, 1956, *more than 75 per cent* were originated during hours other than the three evening hours specified by KTTV. Clearly, therefore, as the experience of the CBS Television Network itself establishes hours outside 7:30 to 10:30 p.m. provide sufficient incentive for program production. It is also to be noted that more than 50 per cent of the time revenues the CBS Television Network derives from the sale of time on basic-required stations is from time sold outside 7:30 to 10:30 p.m.

(c) The contention that stations are prevented from buying the product of syndicated film distributors cannot be reconciled with the following table, which shows a partial list of current syndicated films and the approximate number of cities in which each program is broadcast:

Program	Approximate Number of Cities in which Program is Broadcast
Eddie Cantor	67
Badge 714	117
Dr. Hudson's Secret Journal	105
I Led Three Lives	120
Buffalo Bill, Jr.	112
The Man Called X	More than 50
Waterfront	More than 175
Liberace	163

Program	Approximate Number of Cities in which Program is broadcast
Soldiers of Fortune	98
Amos 'N' Andy	73
Mr. District Attorney	56
The Great Gildersleeve	37
Long John Silver	61
Man Behind the Badge	35
Highway Patrol	165
Range Riders	56
Sheena, Queen of the Jungle	More than 50
Death Valley Days	80
Annie Oakley	165
Passport to Danger	More than 50
The Whistler	54
Science Fiction Theatre	126
Douglas Fairbanks	More than 50
San Francisco Beat	40
Racket Squad	More than 50
Sky King	75
Count of Monte Cristo	59
Susie	More than 90
Studio 57	50
Turning Point	75
The Mobile Theatre	68
Patti Page	111

Still other facts—as distinguished from speculation and assumption—further compel the rejection of the contention that option time or other network practices are responsible for any alleged shortage of outlets for syndicated film programs. For the fact is that it is network affiliated stations with option time which make greater use of first-run syndicated film series than do unaffiliated stations (where, of course, no option time obtains). Thus, in the following table, CBS has selected representative CBS Television Affiliates covering a geographical cross section of large, medium and small markets with varying numbers of stations, and compared the number of first-run syndicated film programs broadcast on those stations with the number broadcast on unaffiliated stations in New York and Los Angeles.

CBS Television Network Affiliated Station	Number of first-run syndicated film series broadcast each week	Non-Affiliated Station	Number of first-run syndicated film series broadcast each week
KSBW-TV, Salinas, Calif.	19	*Los Angeles*	
WCAU-TV, Philadelphia	16	KHJ	2
KFXT-TV, Grand Junction, Colo.	15	KCOP	1
KLZ-TV, Denver	15	KTLA	1
WMBR-TV, Jacksonville, Fla.	15	KTTV	13
WBTV, Charlotte, N. C.	15	*New York*	
WCIA, Champaign, Ill.	13[1]	WABD	13[3]
KSL-TV, Salt Lake City	13	WOR-TV	1
KDUB, Lubbock, Texas	12	WPIX	19[4]
WCCO-TV, Minneapolis	12	WATV	0
WBTW, Florence, S. C.	12		
W-TWO, Bangor, Maine	11		
KOIN-TV, Portland, Ore.	9		
KGUL-TV, Houston-Galveston	9		
WMAR-TV, Baltimore	8[2]		
WTOP-TV, Washington, D. C.	7		
Average:	12.3	Average:	6.3

Whatever hypotheses the Statement may have as to why network practices should adversely affect syndicated film distributors, it is apparent, as has been documented in the Supplemental Memorandum (pp. 113-118) that there is

[1]One series broadcast twice a week, and one series broadcast three times a week.

[2]One series broadcast five times a week.

[3]Two series broadcast twice a week.

[4]One series broadcast five times a week, and one series broadcast twice a week.

ample supply of syndicated film available and that syndicated film distributors are, and will continue to, prosper greatly from their sales to networks and to stations alike.

In summary, the evidence is that syndicated film distributors have a large market for their product on the networks, that they have access to a substantial amount of Class A time on stations, and that Class B and Class C time is valuable and accessible to them.

C. *Alleged Effects on Non-Affiliated Stations.*

The Statement asserts that network practices (1) will result in a serious curtailment of the sources of programs available to non-affiliated stations and (2) has resulted in a loss of income to those stations. Neither assertion can be reconciled with the facts.

1. *The Fallacy of the Contention that the Program Sources Available to Non-Affiliated Stations Will Dry Up as a Result of Network Practices.*

The Statement contends that one of the sources of programming (syndicated film) of the non-affiliated station will be cut off or sharply restricted as a result of the network practices complained of (Tr. 1575). The Statement is here attempting to project into the future. As has been indicated earlier in this memorandum (pp. 20-23) and more fully detailed in the Supplemental Memorandum (pp. 113-118) there is no likelihood of a drying up of the production of syndicated films. All the available evidence of the past points to an increase in this product in the future. The pessimistic speculations of the Statement have no sound basis.

2. *The Fallacy of the Contention that the Non-Affiliated Stations Suffer Economic Loss as a Result of Network Practices.*

Such loss, it is claimed, occurs in two ways: first, the basic-required practice of the networks prevents the network advertiser from placing his program on non-affiliated stations in the basic-required markets (Tr. 1616-1617), and second, the networks are charged with exerting improper pressure on advertisers to transfer to network affiliates network programs previously placed on non-affiliated stations (Tr. 1617-1619).

The allegation that the basic-required practice is an illegal agreement among stations is completely unwarranted by the facts.[1] The basic-required practice is based on sound economic reasons arising out of the nature of the television network business itself and the product which it offers—i.e., *nationwide* circulation. The practice does nothing more than define the national medium the network offers for sale. Similar practices are followed by other national advertising media.

The question is whether the basic-required policy prevents—as the Statement suggests it does by the use of the word "boycott" (Tr. 1617)—the network advertiser from advertising on non-affiliated television stations in basic-required markets. KTTV's own list of advertisers readily establishes that the basic-required practice has no such effect. The following products which were advertised on *network* stations in Los Angeles, were

[1]See Supplemental Memorandum (pp. 127-130).

also advertised on KTTV during the period March 3 to March 9, 1956:

Toni Home Permanent	Nestle Products
Kent Cigarettes	Miles Laboratories Products
Carter Products	Pabst Beer
Viceroy Cigarettes	Bristol Myers Products
White Rain Shampoo	Crest Toothpaste
Ivory Soap	Wildroot Shampoo
Spic & Span	L & M Cigarettes
Dash	Armour Products
Coca-Cola	Revlon Products
Winston Cigarettes	Arrid Deodorant

It is true that KTTV has not been able to broadcast certain network programs. But that is wholly irrelevant to the basic-required practice. When an advertiser chooses to use the network as his advertising medium, he elects to have his program broadcast over the network's affiliates—the network is an aggregate of its affiliates, not an *ad hoc* collection of stations unrelated to it except at the whim of advertisers. Here, KTTV is not complaining about the basic-required practice, but rather, either that it is not a network affiliate, or that there is such a thing as a network at all.

The network practice is not different from that of other national advertising media. LIFE magazine does not give an advertiser a rebate because the advertiser would prefer to have his advertisement in another publication in Chicago or in any other market. Similarly, each of the so-called Sunday supplements defines the medium being sold by listing the newspapers in which the advertiser must place his advertising. The advertiser may not arbitrarily place his advertising in another newspaper in one or more markets *in lieu of* a newspaper associated with the Sunday supplement.

The further assertion that networks use improper pressure to induce the transfer of programs from non-affiliates to affiliates is based on a single alleged occurrence, described as follows:

> "KTTV was able to secure an order from an advertiser for *Captain Midnight* which was broadcast over CBS network facilities in 40 other cities. The advertisers's agency said that continued pressure was placed upon it by CBS to move the show to the network station in Los Angeles. Finally, on the telephone, the agency informed KTTV that unless the agency move *Captain Midnight* to the network station, the network would not make time available for *Tales of the Texas Rangers,* to be placed on behalf of a different advertiser by the same agency. Shortly thereafter, the agency did not renew *Captain Midnight* on KTTV, and transferred the program to the CBS station in Los Angeles. At the same time the network cleared time for *Tales of the Texas Rangers.*" (Tr. 1617-1619).

Here again, the Statement's allegations are irresponsible and entirely erroneous. The facts are that when the advertiser first purchased *Captain Midnight* on the network, KNXT, the CBS-owned television station in Los Angeles (and, it may be noted, on the basic-required list) refused to clear the time ordered by the advertiser since that time period was occupied by the educational programs *Shakespeare on TV* and *Child*

Psychology on TV. Thus, in accordance with CBS Television Network policy, the program was made available for placement on another station in the market. KTTV was selected by the advertiser. Thereafter, KNXT and the network continued to negotiate with the advertiser, and when a mutually satisfactory substitute time period was found, *Captain Midnight* moved from KTTV to KNXT.

The *Captain Midnight* negotiations were wholly unrelated to the *Tales of the Texas Rangers* negotiations. One program or one set of circumstances had no bearing on the other. George A. Bolas, Director, Media Activities, Tatham-Laird, Inc., the advertising agency which handled the *Captain Midnight* and *Tales of the Texas Rangers* programs, stated in a letter to CBS: "We were never threatened or informed in any way by CBS that we were jeopardizing the possible time period clearance of *Tales of the Texas Rangers* unless we moved *Captain Midnight* to the CBS network station in Los Angeles. We can also state that we did not inform Mr. Moore that such was the case." That letter is Appendix A, attached hereto.

It is clear that the charge that the program was lost by KTTV because of improper pressure on the advertiser by the CBS Television Network thus collapses. And with it falls the Statement's "proof" that networks utilize improper pressure to induce the transfer of programs.

D. *Alleged Effects on Advertisers.*

After referring to the March 5, 1956 issue of *Advertising Age* listing advertisers allegedly dissatisfied with their treatment by the networks, the Statement charges that it is the basic-required practice and option time which are at the root of the advertisers' problem (Tr. 1611-1612). The article makes no reference to the basic-required practice or to network option time and there is no justification for the Statement's implication that it is those practices which are the source of the alleged dissatisfaction.

CBS has no way of knowing what was in the minds of the advertisers referred to in the article. It does know that it has never had complaints from any of them with respect to network option time or the basic-required practice. And it knows that at least one of the advertisers, identified in *Advertising Age*—Longines-Wittnauer—could not have complained about either of these practices. Its program was not broadcast during network option time, and it was broadcast on far fewer stations than were then included in the basic-required list.

But the Statement has supplied the complaints for the advertisers. It alleges that network practices make the non-network advertiser a second-class citizen, prevent medium-sized and small advertisers from using television, and result in the networks' having undue control over the advertiser's choice of programs and station outlets.

1. *The Fallacy of the Contention That the Non-Network Advertiser Is a Second-Class Citizen.*

Many companies are non-network advertisers by choice. The failure of even large advertisers to use network television often stems from their own business judgment that other media serve their purposes better. It is doubtful whether the label "second-class citizen" can be applied to Hunt Foods, Inc., the Great Atlantic and Pacific Tea Company, Stanley Warner Corporation, Doubleday & Co., Inc., Borg-Warner Corp., or New York Life Insurance Co., none of which used network television in 1955 although each was included in the 100 largest national advertisers for 1955. Of the 100 largest national advertisers, approximately 50 per cent devoted less than half of their national advertising budgets to network television.

There are many other companies, large enough to be able to afford network television, which have decided that spot television can be more valuable than network television in advertising their products. The Philip Morris Company decided to forego sponsorship of what was the highest rated program in television, *I Love Lucy,* to devote its advertising budget to other media, including national spot television. Other companies which chose to use spot television rather than network television in the last quarter of 1955 were: Bulova Watch Company; Motorola, Inc.; Esso Standard Oil Company; Shell Oil Company; Benrus Watch Company; Socony-Mobil Oil Company; Sunshine Biscuit Company; and Salada Tea Company.

Despite these facts, however, the Statement seems to be particularly concerned with the advertisers who prefer non-network television to network television. It attributes second-class citizenship to these advertisers because, it alleges, their commercial messages cannot be broadcast during the more desirable times of the day.

This allegation rests, as so many of the Statement's contentions do, on the premise that network option practices pre-empt all desirable television time for network advertisers. That this contention is unjustified has been shown before (pp. 17-20) and in the Supplemental Memorandum (pp. 118-123).

Another clear indication of the ability of national spot television advertisers to clear time during prime evening hours is the report of the Television Bureau of Advertising for the first quarter of 1956. That report, broken down to show the percentage of national spot expenditures during various periods of the day, is as follows:

TIME OF DAY

	Percentage of Total Expenditures
Day	34.6%
Night	55.5%
Late Night	9.9%

TYPE OF EXPENDITURE

Announcements (including Station-Break announcements):	
Day	28.8%
Night	66.1%
Late Night	5.1%
Programs:	
Day	26 %
Night	61.2%
Late Night	12.8%
Participations in Programs:	
Day	59.1%
Night	21.2%
Late Night	19.7%

In summary, the facts show that non-network television advertisers have access to television and make wide use of it during all hours of the day. Their choice of spot television rather than network television is unrelated to network time options or the basic-required practice.

2. *The Fallacy of the Contention That the Basic-Required Practice Has the Effect of Preventing Medium-Sized and Small Advertisers from Using Television.*

According to the Statement, medium-sized and small advertisers cannot use television because they cannot afford the vast expenditures involved in the basic-required line-ups of networks. It asserts also that advertisers whose sales and distribution patterns do not cover the specific markets which must be purchased suffer the same fate (Tr. 1613-1614).

The basic-required practice has not precluded advertisers from using network television. More than 200 different advertisers sponsored programs on one or more of the three networks during 1955. During the three evening network option hours, 53 different advertisers sponsored programs on the CBS Television Network in 1955. CBS does not know the assets and gross sales of its customers; however, more than 12 per cent of all CBS Television Network advertisers spent less than $100,000 for time *and* programs on the network during 1955. Two advertisers spent less than $5,000 for time *and* programs during 1955.[1]

While local and regional advertisers do not generally seek national nework coverage (see pp. 32-33, below), networks

[1]*Television Magazine Data Book,* 1956.

do make some provision for them. For instance, KTTV broadcasts *The Life of Riley,* an NBC Television Network program, because the network sponsor of that program does not have distribution in the Los Angeles area, among others, and, therefore, is not required to buy the Los Angeles affiliate.

The CBS Television Network also accommodates local and regional advertisers. A group of local advertisers supplying the same or similar products or services can band together and broadcast a network program. This was done until recently by a group of electric companies which sponsored *You Are There* on the CBS Television Network. Each electric company inserted a local announcement in its service area. *Person to Person* is sponsored in the eastern part of the country by the American Oil Company and in the western part of the country by the Hamm Brewing Company. For advertisers who wish to advertise different products in different parts of the country it is possible to use sectional or local cut-in announcements on the network. During the network program *United States Steel Hour,* local commercial announcements are occasionally cut in in 16 different states. Procter & Gamble regularly uses local announcements in numerous states during its CBS Television Network programs. Regional announcements are employed by General Foods in its programs *Our Miss Brooks, I Love Lucy, December Bride,* and *Mama.*

In the main, small and medium sized advertisers are not interested in network television just as they are not interested in advertising in LIFE or *The Saturday Evening Post.* They either have no national distribution or the investment involved is too large. But, as is shown on pp. 118-123 of the Supplemental Memorandum, these advertisers are not being precluded from using television. On the contrary, national spot and local television advertising expenditures (for time and programs) have increased over the years at a rate much greater than network television expenditures. In fact, national spot time expenditures alone were almost equal to network time expenditures during the last quarter of 1955 and the first quarter of 1956, according to reports to the Television Bureau of Advertising. During the last quarter of 1955 over 3,000 different advertisers used spot television. As KTTV itself states (Tr. 1574), one-half of its revenue comes from national advertising. And, as demonstrated above (pp. 17-23), there are ample desirable time periods available for the non-network advertiser.

APPENDIX A

TATHAM-LAIRD INC.
64 EAST JACKSON BOULEVARD
CHICAGO 4, ILL. - HARRISON 7-3700

June 1, 1956

Mr. Craig Lawrence
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York, New York

Dear Mr. Lawrence:

This letter will answer your telephoned request of last week asking for a letter from me covering the accuracy of the following sentence which is an excerpt from page 40 of the "Statement of Richard A. Moore" before the Committee on Interstate and Foreign Commerce of the United States Senate March 26, 1956:

> "Finally, on the telephone, the agency informed KTTV that the network had now told the agency that unless they moved Captain Midnight to the network station in Los Angeles, the network would not make available a time period then under discussion for another program, Tales of the Texas Rangers, to be placed on behalf of a different advertiser by the same advertising agency."

After checking and re-checking other members of the agency who might possibly have had contact with CBS or KTTV on the subject of Captain Midnight or Tales of the Texas Rangers, we believe the following statement is proper and accurate:

"We were never threatened or informed in any way by CBS that we were jeopardizing the possible time period clearance of Tales of the Texas Rangers unless we moved Captain Midnight to the CBS network station in Los Angeles. We can also state that we did not inform Mr. Moore that such was the case."

[1]

75589 O—57—pt. 4——42

We do recall a telephone conversation of approximately one year ago wherein I as a courtesy called Dick Moore to inform him that the possibility of continuing our Captain Midnight schedule on KTTV was nearing an end.

During that conversation, I pointed out that because there would be a lapse of months between the termination of the year contract (August 1955) and the start of the second year contract (October 1955), there would be no opportunity to renew Captain Midnight but would instead require a new contract subject to the terms and conditions in force at the time of our signing such a new agreement. It was obvious to me that any new contract would automatically include a requirement for our client to order all basic CBS stations including Los Angeles. We would have to await the time period offer of KNXT, the CBS Los Angeles station before we could possibly have another opportunity, or need, to insist on our right to place Captain Midnight on another station. When KNXT offered our agency Captain Midnight "clock hour" time, we were automatically obliged to accept that period since it was the period stated as being acceptable in our network order. It seemed only natural for Dick Moore to register keen disappointment at this news and he questioned as to whether a continuation of our agency's firm attitude on the Captain Midnight clearance might not be in order. I advised that we could only honor the terms and conditions of any new contract which we might enter into with CBS, and that only if KNXT again failed to clear our "clock hour", or an acceptable delayed broadcast time period would we be able to re-instate Captain Midnight on KTTV. It was our opinion at that time that KNXT would not once again offer an unacceptable time period. Our opinion proved to be right some weeks later when we started to receive clearances from each of the stations ordered.

During the course of that same telephone conversation with Dick Moore, I also pointed out that we had no desire to create an unfavorable climate for our negotiations on Tales of the Texas Rangers by insisting on a continued departure from the published, and agreed upon, network clearance policies of CBS. It was pointed out that where CBS delivered a less than acceptable time period, we would take such action as the situation required, as in the case of using KTTV for the previous year. On the other hand, when CBS delivered a satisfactory period, we felt no need nor any inclination to insist on any station change.

It is possible that Dick Moore misinterpreted my meaning and felt that I was using this indirect means of advising him of some connection between Captain Midnight and Tales of the Texas Rangers. If this was the case then I can only wish that I had been more lucid and specific.

Again, Mr. Lawrence, I can only re-iterate that we never received any implication that there was the slightest connection between these two programs from anyone at CBS and we were unaware that any such impression had been created anywhere until my attention was called to Dick Moore's testimony.

We know many of your CBS associates and feel only high regard for them. We also know, respect and admire Dick Moore. It is difficult to understand how the misimpression occurred. We have carefully reviewed the events and conversations and hasten to assure you and all concerned that there is little doubt in our minds that we have herein reported the conversation with maximum care and accuracy.

Very truly yours,

GEORGE A. BOLAS
George A. Bolas,
Director, Media Activities

GAB:kv

Mr. STANTON. The latter three documents, as has this statement, have been in your hands since yesterday.[1]

In essence, my statement here will attempt to distill these hundreds of pages of documents. But my statement must confine itself mostly to highlights, whereas these documents represent the concepts, basic facts, and considerations upon which our case rests. Therefore, I respectfully request that my oral statement be considered in conjunction with the documents I have just described. The total situation before us can be fully comprehended in no other way.

THE NETWORKS AND THE PUBLIC

The first, and absolutely primary, aspect of a network is its relationship to the public. A network renders its service to nothing else, and to nothing smaller, than the national American public. This service is its touchstone.

Mr. Cox. In that connection wouldn't it be accurate to say that television also has a local function which can be performed only by your local affiliates, and that the affairs of the network must be conducted in such a way as not to unreasonably interfere with that function?

Mr. STANTON. I would agree with that statement, Mr. Cox. Obviously, I am addressing myself here to the network aspect, but I do believe that all of the licensees have their individual market responsibilities, and as licensees for stations in television, we feel that way about the four stations we own, obviously.

Much of the testimony that has been offered before this committee against networks has come from people who have some special interest. These special interests cannot and must not be isolated from the broadest interests. The broadest interests, I must repeat, are those of the national American public, and nothing in this area can serve the American public more broadly than the instantaneous national interconnection which the networks alone supply—on a continuing basis.

The proposals for change must first, last, and always be subjected to this fundamental test: Not how will the change affect particular stations or groups of program suppliers or scenic designers, but how will it affect the public? Are you sure that the change will add to the public's fare or may the change involve the grave risk, instead, of taking away from the public that which it has demonstrated it wants?

Mr. Cox. Isn't it true, though, that the public is interested in the effects upon the various groups you have mentioned, insofar as they may involve a change in the shape of our television service or may involve a freezing of existing television service at the present level?

Mr. STANTON. To the extent that the public is informed on these subjects, Mr. Cox, I would say yes to that question.

Mr. Cox. In other words, the public, aside from its interest in the quality of your programs and those of the other networks, has a broad interest in the development of a competitive nationwide system of television, which requires the free play of competitive forces and the possibility of growth beyond our present three-network system; and

[1] In addition, CBS, under date of August 15, 1956, submitted partial replies to the questionnaire sent to all networks on May 28, 1956. These and the balance of the materials submitted later have been kept in the committee's files. The standard forms of affiliation agreements included in these replies are set forth in the appendix hereto, at p. 3043.

therefore any policies which serve in any way to impede such development would be contrary to the public interest?

Mr. STANTON. Yes, but I think the essential point, Mr. Cox, is that the public is interested in programs. I think the public is less interested in the mechanism behind the programs. As long as the public is getting an adequate bill of fare, so to speak, I think the public is not looking behind the machinery. I wish that the public would look behind the machinery. I think it is a healthy condition when the community does concern itself with how these things operate. Unfortunately, I think that this is one of the complex mechanisms in this country that the public has given too little attention to.

Mr. Cox. Do you think that the public is getting adequate program fare, regardless of its quality, if it has 3 or 2 real program choices before it?

Mr. STANTON. Well, in most parts of the country it is getting 2- and 3-program choices now, and in many parts of the country more than that.

Your question, sir, is almost like "How high is up?" I wish that we had more channels available. I think that competition is a desirable thing. We have done everything we could do, historically and recently, to see what could be done to help on that matter of additional competitive choices. I think that as I go through my statement—at least I hope I will be able to demonstrate to you that there is ample competition at the present time.

Mr. Cox. Does the public have an interest not only in receiving a program, but possibly in receiving it from a station which has some identification with the locality in which this particular group of people live?

Mr. STANTON. I think you would be disappointed if you were to do an adequate study of the public on that particular point. You and I might wish that the public did have that kind of feeling, but I think you would find that an adequate first-class sampling job of the public might reveal that there isn't as much concern about the local programing and the community participation, if this is the point that you are making, as you and I might suspect, or as you might suspect.

Mr. Cox. That interest exists whether they recognize it or not, and there are people in each community, are there not, who recognize that interest, who would have a use for a local television service if one were available, and who therefore would prefer that this service come from a large number of stations distributed over the country, rather than from a lesser number of more powerful stations in certain selected markets?

Mr. STANTON. Mr. Cox, I think, first of all, today there is a lot of community activity in television operations; the licensees are doing a lot of their local public service community broadcasting. And as to whether or not the public would prefer to have many stations as against fewer stations serving larger areas, I think this will depend on two things: (1) The quality of the signal, or the quality of the service that the public gets; and (2) on the economics of whether or not the advertiser can foot the bill. Because in this country, as you know, the only source of income the broadcaster has is the income he gets from the sale of time, and anything that is done that puts an inordinate burden on the advertisers could kill the goose that lays the golden egg. And I think this is something we have to study very carefully. It certainly would be, I think—to take an extreme situation, if you were to go to the concept of cutting back each station's service area similar to the suggestion that was made in Senator Bricker's memorandum, so that no service area invaded the home town of a market that had an allocation—I think that that, followed to its extreme, if every allocation was granted that was necessary to try to cover the country under those conditions, you would probably increase the number of communities with stations from something like 250 to 260 to around a thousand, provided somebody built them, and you would increase, perhaps, the number of stations from the present count to something like maybe 1,800, the full complement.

And even so, if you did all of that, and if somebody paid the bill to build the transmitters, and the advertisers paid for the present programs that they are now putting on the existing stations, it is estimated that you would cut back service from, oh, say, three and a quarter to three and a half million families who now have television sets, and this is wholly without any discussion as to how many signals you would cut back. But there would be in excess of three million families who wouldn't have any service at all under those conditions. There you would be increasing the number of stations and be denying the public—a substantial cross-section of the public—you would be denying that public any service whatsoever. So I think these things have to be studied very carefully. I realize your question—you didn't say you were going to go to that extreme or that you were proposing that, but we sometimes get carried away with these concepts of dividing and multiplying the units. We get carried away and we lose sight of two things, that is, the service to the public and the cost of doing that.

Senator PASTORE. Isn't it your fundamental concept, Dr. Stanton, that television must be considered from a national point of view rather than from a local one?

Mr. STANTON. No, Mr. Chairman. I think you have to consider it from the individual listener's point of view, wherever he may be. I am only addressing myself here, in the major part of my statement this morning, to the problems of networking. If you were to invite me to participate on the basis of station operation, I would be glad to address myself to it. But I want the record to be perfectly clear that I am not saying that there is—that the national public is any different from the local public. It is "public" wherever it is, sir.

Senator PASTORE. The reason I asked you the question is that you have used that phrase three times already—twice at least—"national American public," and underscored "national." I was wondering what you were driving at in doing that.

Mr. STANTON. Well, I am driving at the point that we are talking here about—networks—and our public is a national public rather than a local public.

Senator PASTORE. I see. From the standpoint of the network.

Mr. STANTON. That is right, sir.

And as you see, I come back to that same point in my next sentence where I say: Once you take your eye off the national American public, you enter endless realms of conflict and confusion. You have lost your base line. You open yourselves immediately to a host of self-serving and self-canceling proposals.

To curtail or destroy the networks' unique quality of instantaneous national interconnection would be a colossal backward step. It would be to make the United States much more like Europe than America. In fact, it would be a step in the direction of the Balkanization, the fragmentation, of the United States.

THE ROLE OF THE ADVERTISER

The second aspect of a network is its relationship to advertising, and this rests upon its primary relationship to the national public.

A great deal of the criticism of networks springs from a lack of understanding of how network services are paid for. The support of all who contribute to the technical and creative aspects of network television comes, very simply, from the advertiser. Directly he supports programs of entertainment. Directly and indirectly he supports programs of information, news, and public affairs.

Network television is in direct and strenuous competition with all other media for the advertising dollar. Advertisers use network television only when they are convinced that it is an economical and effective means of delivering messages to the people and thus stimulating product sales. The total effect of these dollar expenditures far transcends their specific effect in supporting the television networks' economy. Since our overall economy is based upon efficient distribution of information about products, network television advertising represents an important factor in supporting the high level of our economy which relies on mass production and mass consumption.

But the advertiser is not required by law to spend his money with television—either nationally through a network or market by market directly through stations. If advertisers felt that network advertising had less value than spot advertising, they would use spot. If they felt other media were preferable, they would never have come to television in the first place, or stayed with it very long.

Mr. Cox. In that connection, I take it from what you say here, and what is said at a later point in your statement, that this function of promoting the efficient distribution of our products and stimulating the national economy is restricted, in your operations, to the products of those advertisers who can afford to buy a list of stations and who are qualified, in terms of the nature of their market and in terms of their resources, to use an instrument that in terms of programing and sponsorship is, in your view, solely a national instrument for advertising?

Mr. Stanton. Yes, just as an advertiser who uses a mass circulation magazine has to have mass distribution, so we look upon the advertisers who use network radio as those who have substantially coast-to-coast, border-to-border distribution of their products.

There are other forms of television, of course, to accommodate the advertiser who has less than national distribution, or who may be as restricted as a local advertiser is to a single market.

Mr. Cox. Isn't it true that in some fields, at least, local or regional advertisers find themselves in direct competition, within their restricted market places, with national producers of like products who are using network television?

Mr. STANTON. I think that there probably are occasions where that is the case. I think that for the most part there is ample opportunity for the regional or local advertiser with like merchandise to find his way into television locally or regionally.

Mr. COX. Can he do that within the hours of 7:30 to 10:30 at night in the form of a sponsored program? If the——

Mr. STANTON. He is doing it now, sir.

Mr. COX. Is he doing this in major markets with three or less stations?

Mr. STANTON. I can't tell you about the 3 or less, or less than 3. I think he is certainly doing it in the major market with 3 stations at the present time, and I rather suspect analysis would reveal that he is doing it in 2 station markets.

Mr. COX. Is there not, in connection with the use of television for advertising, not only a question of its cost, in terms of circulation cost, but a question of its impact, which makes this a much more vital matter of getting an even break with your competitor or in advertising than might be true in certain other media? Perhaps I don't make myself clear.

Mr. STANTON. I think you make yourself clear. I was going to be sure I gave you a responsive answer. You might argue that a local bottler in Little Rock might not be able to compete with a national bottler of a nonalcoholic beverage that would have the back cover of Life magazine. There is no way for him to compete in Little Rock with the back cover of Life magazine except by using other advertising media. He can't come in and get the back cover of Life for Little Rock. But that doesn't mean the bottler in Little Rock has his hands tied behind him and can't compete. The record shows that many times the local bottler will outstrip the national distributor because he is more ingenious in his use of advertising and promotion. I think that if you are saying that a used-car dealer in some community can't buy Toast of the Town for his community and compete with Lincoln-Mercury with Toast of the Town—or with the Ed Sullivan Show—coast to coast, that is the same story, or the same condition, that exists about the local bottler and back cover of Life. But the used-car dealer, or the small dealer in cars, can certainly get announcements and participations—very effective ones—and it is happening all over the country in television on local stations.

Senator POTTER. Along that line, Mr. Chairman: Dr. Stanton, isn't it true that we have with our network system today, of two major networks and which cover a—where you can receive national coverage, you can have national products that are actually frozen out of the television advertising market? For example, particularly on prime time, option time, you have—I am asking the question, I am not certain how it operates, and I would like to have your comment on it. For example, you can have national products such as automobiles: Maybe Ford advertises on the option time, the prime time, on CBS; possibly General Motors is on NBC. What would happen if Packard-Studebaker wanted to advertise on prime time on CBS?

Mr. STANTON. I don't recall that Packard-Studebaker, Senator Potter, has ever asked for a program service.

Senator POTTER. I am just using that as an example. I don't know.

Mr. STANTON. Yes. But I didn't want to leave the question stand about Packard-Studebaker. We have tried to interest Packard-Studebaker in specific program service.

Senator POTTER. Use any other——

Mr. STANTON. No; to answer your question directly, I don't think that any major national advertiser is frozen out, to borrow your expression, from national network time, even in the prime evening hours.

Senator POTTER. In your contracts with your advertisers for prime option time, do you ever have a provision that a competitor will not be able to use that—beyond the same evening, the same—during that prime time?

Mr. STANTON. No; not in the sense that you are asking the question, Senator Potter. We do have a policy, I don't believe this is a matter of contract, but we have had a policy—and this is not unique to CBS television, this is general practice in the industry, both local spot and network—that competing advertisers of the same product are not put back to back, as we say. In other words, if one advertiser of automobiles had 8:00 to 8:30, you wouldn't then turn around and sell to the competitor the time 8:30 to 9:00. But you would be perfectly within your operating practices to sell the competing advertiser 9:00 to 9:30, let us say.

Senator POTTER. But it is not done?

Mr. STANTON. Oh, yes; it is done, sure. I think if you take the schedule you will find competing products. Later on I can grab my schedule and I can show you on the same night there are competing products that are on the same schedule, separated by as little, I think in one case, as a quarter of an hour. Isn't that right, Jack? And I am sure that this practice is followed by individual station operators as well. This isn't something that is just network in origin.

Mr. COX. Under present conditions, however, you are sold out in prime time, with the exception of one-half hour which is opposed to a rather strong show—isn't that true?

Mr. STANTON. Yes. Look at the show it is opposed to—it is one of the automobile manufacturers that isn't in the group that Senator Potter mentionned as being one of the big national advertisers in the automobile field. I think that we have—yes, that is the only half hour that is currently open, that 7:30 to 8:00 on Wednesday night.

Mr. COX. Would it be fair to say that there are——

Mr. STANTON. Sorry, there is one other hour that is open on alternate weeks, on Thursday night.

Mr. COX. Would it be fair to say that there are, in general, national advertisers who would like to sponsor programs on network television—as long as they can stay out of this particular time slot—who are not able to find time at the present time because there is only so much time in the period, there are just so many networks, and the time is presently occupied by advertisers who apparently wish to continue to use the medium?

Mr. STANTON. Yes; but I think that that story is exaggerated. I haven't been out making solicitations for some time for the sale of time, but I think that you hear the stories about the number of advertisers who are waiting to get into prime evening time on the three networks, and I would suspect that there aren't very many of them around. You occasionally hear about the man who comes and says, "I have got a program if I just could find some time for it." Well, there are advertisers who will sponsor any program in an effort to get into a time period. But there aren't a lot of them, and don't forget that many of the advertisers who are occupying these important franchises today in the prime evening time came into television, network television, when it wasn't a paying proposition in terms of cost per thousand. They were men who had courage and vision and who wanted to try the medium and see how it could be used. I don't think they can be criticized for having established themselves in the medium while their competitor was asleep at the switch.

There is one field, for example, where one advertiser equipped himself with a very imaginative program and stole the lion's share of the distribution for quite some time with a very effective series. And his competitors cried that he had an unfair advantage because he had gone out and got the right kind of show to sell his particular merchandise. Well, that happens every day in every business, where a man will pick the right corner to put his store on, where traffic is going to flow, where he will get some benefit from that. His competitor can't get space in that same building. This happens with people who move into new advertising ventures. The same thing happened in radio in the very early days.

Senator Magnuson. He gets a longer lease than 13 weeks, too; doesn't he?

Mr. Stanton. Well, we are giving longer leases, Senator Magnuson, than 13 weeks. Be glad to talk to you about any. [Laughter.]

These leases aren't 13 weeks, for the most part, in television; they are 52-week leases and the turnover has been such that these leases are renewed pretty—the renewal rate is pretty high on these leases.

Senator Pastore. Dr. Stanton, I think we have touched on a very important point, and I think that all of us recognize the inadequacies and deficiencies involved. But let's be somewhat realistic about this, and practical, too. We only have three major networks: NBC, CBS, and ABC. We used to have four. We have a limited number of stations in various localities; we would all be glad to see many more local television stations, I think we all recognize, but how to do it is the big question. Let's assume, let's take as a predicate the hypothesis that was just advanced by Mr. Cox: That there may be other advertisers who would like to use prime time that is already sold to someone else. But fundamentally under our system of free enterprise, what is the answer to it? How can you change it? Do you know of any way that it can be changed?

Mr. Stanton. Well, it isn't as simple, sir, as creating another network, or creating more networks, necessarily.

Senator Pastore. I say that would be very desirable if it happened.

Mr. Stanton. You and I, or none of the men in this room, can figure out the way to do that, unfortunately. Or at least I don't think we can.

Senator Pastore. No; but you made the argument here that you have got to have a national advertiser in order to support a free national television system. Without that national advertiser you can't have this national network; am I correct?

Mr. Stanton. That is correct.

Senator Pastore. Otherwise, the whole thing becomes localized; something happens as a matter of national crisis and you can't disseminate this word throughout the entire country because it is a local proposition—you don't have a national network. Let's assume, for instance, that there are advertisers who would like to come in on this prime time, but the time is already engaged, do you know of any Federal regulation that can unscramble that mess?

Mr. STANTON. No; I don't know of any Federal regulation that can unscramble that situation; but the national advertiser, sir, is not barred from network television just because he can't get a half hour or an hour in prime evening time. Let me give an example.

Senator PASTORE. He can only go to 2 or 3 stations. All the advertisers in this country, and I assume that there are a lot more national advertisers than we see on television programs——

Mr. STANTON. Yes, sir; but——

Senator PASTORE. But they only have three places to go.

Mr. STANTON. But, they have many hours to go on.

Senator PASTORE. There is only so much time to sell—I am talking about prime hours. What is the use of buying half past ten in the morning?

Mr. STANTON. A good use, sir. Mr. Godfrey is selling an awful lot of merchandise at 10:30 in the morning, coast to coast. That is the point I was coming to. That for many national advertisers——

Senator PASTORE. But how many Godfreys can you have at the same time? You can only have three.

Mr. STANTON. Isn't that enough, sir?

Senator PASTORE. No. [Laughter.]

All right, I will bow to that [laughter] but if we are considering this tremendously vast free enterprise system of the United States, there are only 24 hours around the clock, there are only so many desirable hours. Now, you don't mean to tell me that every hour is a desirable one; you can't compare 8 o'clock in the evening with 10 o'clock in the morning, unless you are trying to reach a specific group of people.

Mr. STANTON. Well, many times——

Senator PASTORE. I hope that we all remain on a very sensible balance here, because I think that we understand, one to the other, exactly what we are trying to bring out. The point I make is that if Godfrey broadcasts at 11 o'clock in the morning—or from 10 to 11, I don't know what his hour is—now that would mean that if he has as sponsors, let's say, 3 advertising agencies with 3 networks, there can only be 9 agencies that can advertise; am I correct? That is not sufficient for our American system of advertising and free enterprise. Now, I ask you the question: Recognizing that fact, what is there that we can do about it?

Mr. STANTON. Well, I am not so sure that I recognize that fact, Senator Pastore.

Senator PASTORE. You don't recognize that fact? You think that three networks are sufficient for the American public?

Mr. STANTON. No. I would like to say what I just said. I would like as many networks as you can possibly have. I would like that absolutely clear.

Sentaor PASTORE. But, they can't get on the air because you don't have enough television stations to sell their programs to. We recognize that fact. We started with four, and rather than this tremendous, large, expanding industry expanding networkwise, it has become constricted.

Mr. STANTON. You only started with 4—if I may say, sir, not on a national basis, you didn't start with 4; but let's not quibble about that, whether it is 3 or 4. The point I want to make is that you look at the prime evening time as though that is the end-all of national advertising opportunities, and I would like to submit that there are opportunities that are being used every day by national advertisers, who are getting excellent results, who aren't necessarily in the prime evening time. Now, there will be certain products that demand or require evening time; there are other products that can be handled just as well in the daytime.

But when you belittle the amount of circulation at 10:30 in the morning—irrespective, now, of the personality involved—when you say that that can't compare with 8 o'clock at night: No. 1, I would say to you that the advertiser gets more commercial time at that time than he would get at night per unit of time sponsored; No. 2, the rate is lower for the daytime, it is scaled down so it isn't as high as the nightime; and No. 3, if that advertiser is skillful in his purchase of time he can buy some daytime in the morning, he can buy some daytime in the afternoon, and the two don't duplicate—many times they would add up to almost as much as he would get in a nighttime period. So when we say that the national advertiser can only be considered for prime evening time, this is nonsense, because the national advertiser uses the entire day, and the schedules are full of advertisers who are doing just what I am describing. And if a man can start in the daytime and build and wait until there is an opportunity at night, he can sometimes get into the nighttime schedule, and I can demonstrate to you in the schedule where that has happened.

Senator PASTORE. Are you trying to tell me that everybody who wants to advertise on television is happy?

Mr. STANTON. I don't think that there are very many happy advertisers any place, whether they are in magazines, newspapers or television.

Senator PASTORE. That is the point I am trying to make. Now, I recognize the fact that there are some people who would like to get on and can't get on, but I really don't see what you can do about it as long as you have three networks—and I don't see what you are going to do about expanding networks as long as you are limited in television stations. And I don't see what you are going to do about television stations as long as you are in intermixture and deintermixture, and the fact that you go beyond the confines of a city. Now, I am perfectly willing to admit that we are in a mess; and the thing that gets me is that we come in here with a lot of fancy words and we try to dress and undress this whole picture, and the fact of the matter is we have certain definite limitations here that I don't see how we can surmount. And I am hoping for the day that someone will be truthful enough to come here and admit it.

Mr. STANTON. I think the record is clear that we have admitted it. And furthermore, we tried to do something about it when we were asked to help. If you go far enough back in the record you will find that we predicted the very mess that you are talking about and describing here. I didn't realize that this discussion this morning was to address itself to the allocation problem.

Senator PASTORE. No, no, no. I am not addressing it to that.

Mr. STANTON. That is the root of all the evil you are talking about.

Senator PASTORE. Absolutely. Unless we get more television stations in the various communities—I don't know how and when you are going to do it—unless you do that, there is going to be no incentive, of course, to spread out on your network base.

Mr. STANTON. May I take that one point. If you could wave a wand and create six networks tonight, there would be unhappy advertisers who couldn't get behind I Love Lucy, or behind Ed Sullivan, or behind some of the other top 10 shows. They are always going to be unhappy because they want to be in Disneyland or they want to be into a top NBC show or a top CBS show. There will always be that.

Senator PASTORE. I realize that, but the picture would be a whole lot better than it is now.

Mr. STANTON. Yes, but I submit, if you created these six networks by magic, that you would have a very tough time filling the fourth one.

Senator PASTORE. I am not saying that you can create these new networks. I am perfectly willing to admit what the limitations are. I can see the efficacy of the arguments that you are making here, Dr. Stanton. I can see the points here raised with these hypotheses that are being presented—that there are many people who would like to get on prime time and just can't get on. I can realize that. But, after all, you people have to allocate this as best you can to the people who are willing to pay the price, if they can afford the price, in order to give this free entertainment to the American public. I can see all that, I can understand that. But I am not perfectly—I am not ready to admit that everything is sweetness in this whole television system, because it isn't.

Mr. STANTON. Well, I wouldn't quarrel with the fact that everything isn't sweetness—particularly as you address yourself to the question of allocation. But, I think you are exaggerating when you talk about us allocating advertisers, because it hasn't been my experience that we have been in that posture for some time. We are selling advertisers, not allocating them. And we have open time, and it is prime evening time, and it is not sold—and if there are advertisers who are so anxious to get into that time I haven't seen them and neither have our salesmen, even though they have been out trying to find them.

Senator ERVIN. Isn't that because it takes such a tremendous amount of economic power to get into that time? Isn't this just an illustration of the fact that the big are growing bigger and the littler folks are in danger, in the television field, of suffering the same economic turn that they have been suffering in the automobile field, particularly with reference to dealers?

Mr. STANTON. Not at all, sir; I think they are two entirely separate subjects. I think that the price on the time that is open in our schedule between 7:30 and 10:30 at night is not priced out of proportion to what advertisers are paying for circulation in other media and in a television medium. And I don't see this as the big getting bigger and the small getting smaller, because we are not talking that way about networks. The smallest of the three has had rather phenomenal growth this year. I think its sales are up 76 percent over a year ago—that can't certainly be getting smaller. So I don't follow the analogy that you are citing about the automobile business.

Senator PASTORE. Well, you used to have about 25 or 30 manufacturers of automobiles and now you have about 6.

Mr. STANTON. That isn't unique to the automobile business, sir.

Senator PASTORE. I know it; that is what bothers me. Everything. It is the general condition in the United States.

Mr. STANTON. I think this is a way of doing business in this country, and we are a large country and you have to be to big manufacturer and have rather considerable distribution channels in order to compete nationally today.

Senator PASTORE. I am not quarreling generally with television except the fact we have a tendency—I agree with you the bigger the country grows the fewer people who have control of particular businesses, which to my mind is rather alarming if there is any way to prevent it.

Mr. STANTON. Well, sir, I don't know how to serve people—35 million television families, you know—without being big. It is a big job and it takes a big budget to do it and a large organization to do it. This is not a local operation that we are talking about here. But we do have many parts of our network which are individualized, in the sense that they are locally owned and locally managed. They are not being squeezed or crowded in any way, shape, or form that I can see in this particular industry. Unlike many other industries, I think television is keeping the local regional ownership. That isn't happening—is contrary to the trend of distribution in many of the appliance fields, for example, where manufacturers of white goods are owning their own distributors and branches now, not having locally owned distributors and branches. We don't operate that way as a network. To be sure, we own four stations, and that is all at the present time. We hope to get our full complement in time. But, even if we did get all that we are allowed to under the regulation, we would only have seven out of the one-hundred-and-eighty-odd that are primary affiliates, and all the rest of those are owned by individuals for the most part. There are some that are multiple owned, but for the most part they are individually owned. Those men aren't being squeezed at all by the networks or any trends in our business, as distinct from the white goods, automobiles, or other businesses where major manufacturers are taking over the ownership of distribution.

Senator PASTORE. But, they are restricted to not over 3—a selection of not over 3 national programs.

Mr. STANTON. No; those stations, sir, are not restricted in any way. They can take from us, they can take from other networks, or they can take from independent package suppliers. They are not restricted to three by any means. As I will develop here in my statement, I hope, I will show you that many of them are taking right now from other sources, other than us.

Senator MAGNUSON. Dr. Stanton, I think maybe we are getting a little bit off here. I apologize for not being here earlier, but I had a little airplane trouble this morning. They are getting bigger, too—the airlines. [Laughter.]

But I think what we would like to do, this committee, is approach this thing on the basis that, after all, this is a public license we are using. It isn't like starting a grocery store or a newspaper or something else, it is a public license. And, therefore, the whole public interest is involved. It is true American advertisers have done a good job, in the American way, to advertise the best products in the world, and they use this medium. But television wasn't created only for the advertisers; it was created for some other things too. It was created in the public interest because, as the Senator from Rhode Island pointed out, there are only so many minutes a day, and it is only possible to have so much space available for advertisers. And I think that we have the problem up here in trying to get the best advice we know how as to how to create this—this new, great medium of expression in the public interest—in the best way, including permitting advertisers to use it, too. So I think we do depart a little bit because there are so many public considerations involved. And I think you agree with me on that.

Mr. STANTON. Yes, Senator Magnuson, I agree with you. I couldn't agree with you more, because in my statement I said that the first touchstone here is the public.

Senator MAGNUSON. I missed the first part of it; I am sorry.

Mr. STANTON. The public is the No. 1 objective.

Senator MAGNUSON. Because somebody, a corporation, can own an automobile plant and they can make any kind of cars they want, that is their business. Anyone can start a newspaper and do what they want, within certain exceptions—but this is another story. This is created in the public interest, and the public have the big stake in it.

Senator POTTER. Along that line, if the Senator will yield, it has been suggested—and I am sure you are familiar with the suggestion, Dr. Stanton—that because of the great impact that television has upon public thinking that the networks should be regulated. Now, can networks be regulated without at the same time regulating advertisers, rates, and so forth? I am speaking now of Government regulation.

Mr. STANTON. I understand your thought. This raises a lot of questions, Senator Potter. I treat with the regulation, in the bill to regulate networks, in my statement.

Senator POTTER. If you do——

Mr. STANTON. If you would allow me to get into that, I will try to treat with it there.

Senator MAGNUSON. I want to say for the record that we do have before the committee some legislation, which is technically the reason for testimony and discussion of these matters. The Senator from Ohio, I understand, will be here this afternoon. The bill he has introduced is S. 825. That is the one before us for discussion.

Mr. STANTON. And I treat with S. 825 in my statement here.

Senator MAGNUSON. Yes; I understand.

Senator PASTORE (presiding). All right, Doctor.

Mr. STANTON. We now come to the second fundamental test.

Senator MAGNUSON. I just wanted to add for the record, if I may, Mr. Chairman, that we also have seven bills now referred to the committee dealing with political broadcasting, and we might get your ideas about that later on.

Mr. STANTON. All right, sir.

Senator Magnuson, I had earlier talked about the first fundamental test being the test of the public. The second fundamental test is: How will the proposal for change affect television as an effective and efficient advertising medium? For if the change should reduce that effectiveness, the sinews which support the medium will be gone. And a network can fulfill its obligation to the national public and its responsibility to its affiliated stations only to the extent that it can maintain its status as a marketing medium competitively attractive to its advertisers.

THE DIMENSIONS OF TELEVISION

With these broad principles and objectives in mind, I would like now to give you a brief picture of the dimensions of the television industry as it exists today. Television today is characterized by a size, a vigor, and a pace which, in itself, refutes clearly any speculation that networks have retarded the growth of this industry. Here are some of these dimensions:

In 10 years, 35 million United States families have invested about $17 billion for television receivers and their maintenance.

Over 99 percent of all United States families live in areas served by television signals.

Senator POTTER. I live in the 1 percent that doesn't. [Laughter.]

Mr. COX. Do those 99 percent of United States families live in what you regard as the service areas of existing television stations, in terms of the 100, 316, and 1,600 microvolt standards that you employ for your affiliation standards?

Mr. STANTON. Mr. Cox, I would like you to address that question, or ask Mr. Lodge to answer that, if you don't mind, because he is familiar with that.

Mr. LODGE. No; that figure is based upon audience research, based upon counties where people report hearing or viewing television signals, but are not the same as the figures that are derived from contour criteria that you mentioned for defining the service areas.

Mr. COX. This would include, then, everyone who sees television via a community antenna system, or through the use of a particularly sensitive receiver, or through the employment of a high and rather expensive private antenna?

Mr. STANTON. Yes; this would include people beyond the normally defined fringe.

Mr. COX. Does it include people who are receiving a signal that you would not regard as an acceptable signal for purposes of selling coverage on one of your stations?

Mr. LODGE. Well, this matter of defining how good a picture somebody else thinks is good enough is a difficult one. So I don't know if I could answer that categorically.

The figure, however, to go back to your original question, would be approximately 95 percent. I think this may clear the point in your mind—if the normal definition that we have used for engineering definition of service were employed.

Mr. STANTON. Mr. Cox, the question that you raise about the 99 percent is covered in footnote 1 on page 8 of the supplemental memorandum.

Out of 100 television families, 94 have the free choice of 2 or more television signals; more than 87 out of 100 receive service from 3 or more stations.

The average television family has a choice of 5.1 signals.

Mr. Cox. Would those be individual program choices, or does this simply mean that he may be able to receive the same program, at least in the nighttime hours covered by network service, from more than one station at a time?

Mr. Stanton. Well, Mr. Cox, this would depend upon the hour of the day and the day of the week, and the week of the year as to whether I would answer that question as being different programs or similar programs. Some of that 5.1 could be the same program, coming from more than one source.

Mr. Cox. Perhaps I can make the point in this way: Isn't it true that there are only some 8 or 10 markets in this country today which have more than 3 television services?

Mr. Stanton. Oh, yes; but there are interstitial areas between markets where you can get from 2 to 3 stations to each market. I can think of places in southeastern Ohio, or southwestern Ohio and southeastern Indiana where you can get signals from Indianapolis, Louisville, Cincinnati, Dayton, Columbus, and I think each of those markets has 3 stations—except Louisville, and that has 2.

Mr. Cox. But you would get, from all of those points, in the prime evening hours probably the lineups of the three national networks?

Mr. Stanton. With some exceptions, yes.

Mr. Cox. Unless there were an affiliate of one of the networks in that region that was not ordered, and therefore had replaced the network program with a national spot program which it had sold itself?

Mr. Stanton. Or one that might have been ordered and didn't clear because they had something of more importance locally to carry, yes. There would be duplication, there is no question about it. But you don't have to confine yourself to 8 or 10 markets in order to get more than 3 signals.

Mr. Cox. But New York, Los Angeles, and the four-station markets are the principal areas in which you have, on a continuing basis, a good local signal which provides you with more than three-program choices?

Mr. Stanton. That is correct.

The average television family watches television some 6 hours a day.

The Chairman. Are we getting that bad with it?

Mr. Stanton. Are we what with it?

The Chairman. Go ahead. I suppose this is based on an average family of, say, four.

Mr. Stanton. I would imagine it is around four. This is family listening, now; this isn't individual listening.

The Chairman. Yes, family. I see.

Mr. Stanton. As we get more and more individual service, I suppose the family listening composite time will remain about the same, but listening will become much more personalized, just as it has in radio.

The Chairman. And some families are getting two television sets.

Mr. Stanton. Yes; we are finding many families now in our surveys that have as many as three. The television public includes more than

7 out of 10 of all United States families and is served by 429 commercial stations, all but 36 of which are affiliated with 1 or more networks.

Mr. Cox. Your network includes about 188 primary and secondary affiliates, doesn't it?

Mr. Stanton. On page 28 and page 29, chart IV in the supplemental memorandum, we have a map showing the CBS television network, the 181 affiliates reaching a total of 33.9 million television families. And that is made up of primary and secondary affiliates and what we call extended market-plan affiliates.

Mr. Cox. Now, within even your primary class of affiliates, these affiliates are not equal in the sense of their coverage areas, their circulation, or of the economic returns that they get from this affiliation, or the programing that they get from the network.

Mr. Stanton. Yes, stations are like human beings; there are no two alike. Some are endowed with more of this world's riches than others, and by that I mean they are in markets that are more successful, growing faster than other parts of the country. The terrain may be different in one place than it is in another, and that affects the coverage area.

The program schedules vary from station to station, not only as far as what the network makes available to the station, but in terms of what the local management of the station does about its own local programing, and its selection of films and things of that kind.

Mr. Cox. You have a chart on page 77 in your supplemental memorandum which indicates, I believe, that only 52 of your affiliates receive as much as 49 hours of network programing?

Mr. Stanton. Yes, that chart, among other things, gives you a distribution of the hours of sponsored network programs by the amount of time each station carries, in broad classifications. One thing it shows, of course, is that network affiliation isn't automatically an answer to getting a lot of programing.

Mr. Cox. And I take it, since the various blocks add up to less than the total number of your affiliates, that you had affiliates who got no programing at all from the network in the month of December 1955.

Mr. Stanton. Well, I am not sure that I want to answer that in the affirmative, Mr. Cox; I would like to check that.

Mr. Cox. Very well.

Mr. Stanton. There may be some reason why that doesn't total. But if I can get the answer, I will give it to you.[2]

These 8 or 9 points that I have just mentioned, I believe, represent a record of growth and achievement unparalleled in American industrial history.

The Chairman. Doctor, I think it is important to get in the record, too—and I assume these facts are correct—there is about a billion dollars a year in television advertising, would that be a good general figure?

Mr. Stanton. That is right.

The Chairman. And I think it is important to know—sometimes we do overlook this—that about half of that, approximately, is in nonnetwork advertising.

Mr. Stanton. It is a little more than that, Senator.

[2] See additional comment on this point at p. 2152 below.

The CHAIRMAN. It used to run about 58 percent. I don't know whether it has gone up or down.

Mr. STANTON. Well, I think on page 21, or possibly 51——

The CHAIRMAN. We will find out.

Mr. STANTON. On page 51 of the opinion of counsel there is this sentence:

> During 1955 expeditures for national spot and local time accounted for 55.7 percent of total television time expenditures.

The CHAIRMAN. It used to run 58, and then it ran higher than that, but it is gradually coming down; but at least it runs now about 50-50, or a little over, for local advertising.

Mr. STANTON. That is right. Well, local and national spot—nonnetwork.

The CHAIRMAN. Nonnetwork spot.

Mr. STANTON. Right.

The CHAIRMAN. That probably could be broken down to local advertising.

Now, that is one of the problems that we are concerned with here—the inability of the local advertiser to find the spot in the time, except for sometimes just pure 1-minute spot announcements.

Mr. STANTON. Senator Magnuson——

The CHAIRMAN. There still is a wide field of local advertising. That is the point I want to bring up.

Mr. STANTON. There is. And about a fourth of that billion dollars, roughly a fourth, is spent by local advertisers. But I think that as you have testimony coming up from individual station operators, they are in a much better position to tell you the story of the local advertiser and his success in using television, or lack of it, than I can.

The CHAIRMAN. Of course, that is the thing we are concerned with. That is the thing that bothers my friend from North Carolina here, that in this great medium of expression there ought to be—we hope we will be able to have a climate whereby the local man will have a chance to use it. But I think it is important that we do realize that it isn't all network advertising going on on television.

Mr. STANTON. By no means, sir.

The CHAIRMAN. Yes.

Mr. STANTON. I was just about to compare the 10 years it took television to reach 35,000,000 homes with the length of time it took now commonplace items to reach that number of homes. I mention these comparisons only as an index of the growth and explosive nature of television and the acceptance of it. It took——

The CHAIRMAN. Did you include the freeze in this calculation?

Mr. STANTON. Yes, the freeze is included in this. And I wish I had some freeze here. [Laughter.]

It took telephone service 80 years, the electric washer 47 years, electric wiring 62 years, the automobile 49 years, and radio 25 years, to reach what television has taken only 10 years to reach. Television's rate of growth, expressed by the public's dollar investment in sets and the extensive use it makes of them, is striking testimony to the regard in which the American public holds television. In fact, were it not for this intense interest on the part of the public neither I, nor any of us, would be here today.

THE ROLE OF NETWORKS

Next, I would like to take up the role of networks. If we allow our minds to go back only 10 short years, we can each of us recall the essentiality of networks—the part networking played in turning idea into reality. The idea of being able to see and hear a moving image in the home captured the imagination of the American public. But no one would manufacture a device to enable the public to see television, and no one would build a transmitter to broadcast a signal, until there was assurance that pictures and sounds would be available to homes as programs broadcast on a regular basis.

Today, as 10 years ago, the networks supplied that assurance. As the New York Herald Tribune noted last December, it was this assurance in the form of program contribution that—

signaled the start of television as a major industry back in June of 1949. And there were few stations then and practically no network to speak of. Within a matter of weeks, people were flocking to their television dealers to buy sets because they wanted to see Milton Berle.

Without the networks' courage in taking enormous financial risks and investing vigorous enemy—energy, there would not——

Senator PASTORE. Either one would be right, sir. [Laughter.]

Mr. STANTON. We are even, sir.

There would not have been the programs to stimulate the public to acquire sets at the rate it did. Without receivers in the home, there would not have been the advertisers to invest in the medium and insure the continuation of the programing. And, without advertising dollars to support them, there would have been no stations to broadcast the programs. Clearly, it was the networks that provided the driving force which brought together the families in the home, the station licensees, the receiver manufacturers, the performers, producers, and writers, which led to the explosion of television on the American scene.

Mr. COX. I think in your supplemental memorandum you use a figure of $53 million which was expended by CBS in television before its networking operations returned a profit to it; is that correct?

Mr. STANTON. 53.1, I believe was the figure.

Mr. COX. Now, is it correct that your owned-and-operated stations, however, started returning a profit to CBS at a somewhat earlier date?

Mr. STANTON. Yes, that is set out in one of the documents here, showing the owned and operateds, and the network, as I recall.

The CHAIRMAN. You are talking only about your television operation, are you?

Mr. STANTON. Yes.

Mr. COX. I take it CBS, Inc., never operated at a loss during this period?

Mr. STANTON. The consolidated corporation?

Mr. COX. Yes.

Mr. STANTON. No; we did not operate at a loss during this period.

The CHAIRMAN. Because of radio.

Mr. STANTON. Yes. As I said at the outset, the Columbia Broadcasting System is made up of 7 operating divisions, and the CBS Television Division is just 1 of the 7.

Mr. COX. So that these expenditures to establish television were defrayed out of the revenues of your overall business, including your then-thriving radio network business.

Mr. Stanton. Yes; and the radio network is still making a profit. I don't want it to be characterized as not thriving.

Senator Butler. Wouldn't it be stretching it a little to say you didn't make a loss simply because you were making a profit out of something unrelated? Certainly you had that capital hazard. It seems you lost money on it.

Mr. Cox. I could perhaps put it this way: That the point I was trying to make was that you were not sinking additional funds of the stockholders of CBS, Inc., in television; you were effecting this transition from one form of radio networking into the more modern form of radio networking out of current revenues.

Mr. Stanton. I could show you some letters I received from stockholders. [Laughter.]

Senator Butler. They thought you were taking it out of their pockets. Those are the people I was thinking about. You were having a tough time convincing stockholders that you weren't losing money.

Mr. Stanton. You are absolutely right, Senator, because there are many stockholders who said, "We are not concerned about television, we are only concerned about getting our dividend." But we thought it was the part of prudent management to restrict our dividend policy and to be in a position to invest in this new medium. And it took $53 million before we turned the corner on networking.

The Chairman. That was the similar experience of NBC, only they had a different, bigger backlog to draw on because of their manufacturing.

Mr. Stanton. That is right.

The Chairman. They had a larger manufacturing division than CBS had.

Mr. Stanton. In fact, at the time we started television, Senator Magnuson, we were not in the receiver manufacturing business.

The Chairman. That is right.

Senator Pastore (presiding). You may proceed, Doctor. I don't think we have to belabor that any more.

Mr. Stanton. Thank you.

The networks, then as now, functioned to serve three separate but closely interrelated groups: The public, the stations, and the advertiser. Let us examine how each of these groups benefits from the services rendered by the networks. And in this examination, let us recognize that no one of these groups can exist without the other two.

First, the networks serve the public: Through network programing the American public—from coast to coast and border to border—receives a richness and diversity of entertainment and culture and information unavailable to even the wealthiest families living in major metropolitan centers a few short years ago. Today, through the networks and with the single requirement of a television set in working order, the entire nation can see programs as diverse as the Sadler's Wells Ballet, the World Series, Peter Pan, the $64,000 Question, The Caine Mutiny Court-Martial, a debate between Paul Butler and Leonard Hall, Disneyland, and a discussion by Joseph Welch on the Constitution—all of them free.

Through the miracle of live television, possible only by the networks' continuing use of telephone lines, the whole Nation will be watching the deliberations of the national conventions, and the elections themselves. The importance of maintaining live television is particularly apparent in times such as these. Through live television the entire Nation can simultaneously be informed and assured of conditions which affect their very being. Today, through live television, the faces and character of our country's leaders can become as familiar to the television viewer as those of his neighbors down the block.

Senator PASTORE. How long after President Eisenhower was stricken with his last illness was the word flashed throughout the Nation by way of television?

Mr. STANTON. I can't give you the precise time, but it was very early in the day on Friday when the news came in about the fact that he had canceled his appointments; and then as the day went on, that news was kept fresh and up to date throughout Friday and, for example, in New York where we operate a station—where we operate not only a television station but a radio station—we kept those stations on the air all night so that we could be of service to the people in the metropolitan area of New York, to give them any word that developed during the night. And of course it was during the night that the operation was performed, and our public was told about it just as quick as we had the word out of Walter Reed Hospital.

Senator PASTORE. Now, only because of the fact that it is a national network was that possible?

Mr. STANTON. That is correct. But I don't want to have the record misleading on the point that on Friday night we did not keep the network on the air all night. This raises considerable problems of traffic arrangements, and so forth, and we didn't think that—we were afraid that if word got out that we had ordered lines for the entire night, that the public generally would feel that something was much more serious than it was. So we were torn between the decision of keeping our New York station on the air without saying anything about it, or making a lot of noise about it, in the sense that just as soon as you order lines coast to coast, everybody would start talking about something that New York knows that they don't know in Fort Wayne or Keokuk or someplace else, and we made that choice.

Mr. COX. Could you tell us in general terms, Dr. Stanton, what percentage of your programing currently is live and what percentage is broadcast on film?

Mr. STANTON. Yes; that is given in the supplemental Memorandum, Mr. Cox, on page 33, chart VI.

The CHAIRMAN. Do you have a breakdown—I haven't read this—but do you have a breakdown of the number of news broadcasts in relation to the amount of time per month in your supplemental memorandum?

Mr. STANTON. I think we have the number, Senator Magnuson.

The CHAIRMAN. Those figures are easy to get?

Mr. STANTON. Yes. Yes; they are in here.

Mr. COX. I take it this represents your total broadcast week. Do you have the approximate breakdown between live and film for the prime evening hours, 7:30 to 10:30?

Mr. STANTON. I can give that to you; but I want to make it clear, Mr. Cox, when you say this represents our total broadcast week, it does to the extent that this represents our total commercial schedule.

Mr. Cox. Commercial; yes.

Mr. Stanton. We broadcast a number of sustaining programs which aren't included in this analysis. If you want those figures, we can get them for you.

Mr. Cox. You have some 14 hours of sustaining programs in addition?

Mr. Stanton. Yes; I would guess that it is of that order. It is about 90 hours a week total scheduled.

Mr. Cox. Would it be fair to say that in the prime evening hours your division between live and film programing is about 50–50?

Mr. Stanton. Yes; that is right.

Second, networks serve stations: Networks supply stations with an overall and varied schedule of commercially sponsored and sustaining programs. Both groups of programs provide a dual benefit to stations. First, the stations are benefited by the revenue which accrues to them from their share of the sponsored program schedule. Even though the functions performed by the network in originating these broadcasts contrast sharply with the functions of the affiliated stations in broadcasting the program, the network and stations share on roughly a 50–50 basis in the money available from the sale of time.

Second (and in many ways equally important), the stations are spared the expense of programing these time periods with either their own local programs or with other programs obtained from outside sources.

Mr. Cox. You also share in the distribution of the stations' share, to the extent of your owned-and-operated stations; is that correct?

Mr. Stanton. Would you mind repeating that question again, please?

Mr. Cox. In other words, this represents a division of these funds between the networking function and the stations' share of time, including your 4 owned-and-operated stations; so that, for instance, in terms of the breakdown you give for the program Climax, where you indicate a time-charge return to CBS network of some $17,000, there would be, in addition to that, the residue received by the 4 owned-and-operated stations of CBS?

Mr. Stanton. Yes, Mr. Cox, for purposes of that analysis, we treated all stations as though they were affiliates.

Mr. Cox. In connection with your reference to the sustaining programs which you furnish, and the figures that we were just talking about, can you give some idea of what they are per week—the difference between 72 and some 90 hours? Is any of that sustaining programing carried in the prime evening hours, 7:30 to 10:30?

Mr. Stanton. Yes; there is the period from 7:30 to 8 on Wednesday night.

Mr. Cox. What program is that, please?

Mr. Stanton. Let me get my schedule. It is Brave Eagle.

Mr. Cox. That is the sustaining program carried opposite Disneyland?

Mr. Stanton. It is.

Mr. Cox. Do you carry any sustaining programs of a public service nature in the 7:30 to 10:30 time period?

Mr. Stanton. Not on a regular basis, but at 7:15, which is adjacent to the 7:30 time, we carry a network news service from 7:15 to

7:30, and on a sporadic basis we carry such programs as See It Now in prime evening time. I think virtually the entire series of 1955–56 has been carried in the periods that you referred to as prime evening time. And of course there are other public service broadcasts on an occasional basis which find their way into the 7:30 to 10:30——

The CHAIRMAN. Are all your newscasts sponsored, or do you have a public service newscast? Does the network carry a newscast at a given hour as a public service, or are they all sponsored?

Mr. STANTON. They are all sponsored, but I don't make a distinction between public service that is sponsored and public service that isn't sponsored. It doesn't affect the news one way or the other.

The CHAIRMAN. Unless you make the newscaster sell the product.

Mr. STANTON. Well, the newscasters—we have long had a policy that our newsmen may not engage in commercials on the network. There is one other network show that comes up at 1 o'clock with Charlie Collingswood every day; at the present time that isn't sponsored, but we maintain that service. And then there is, in the morning, a program called Good Morning, with Will Rogers, Jr., we have news in there; and that is a 1-hour program, but not all news.

And advertisers—this is one of those programs that I was talking about when Senator Pastore——

The CHAIRMAN. The point I am trying to get at is that the networks surely would have the responsibility, over the networks, to give the news to the American public a given number of times a day, wouldn't that be correct?

Mr. STANTON. We look upon that as one of our primary responsibilities.

The CHAIRMAN. I wouldn't know how you would divide up the time, or the amount of time involved. And whether or not that newscast is sponsored, the networks—wouldn't you agree with me—should have the policy of continuing giving that news so many times a day?

Mr. STANTON. Yes.

The CHAIRMAN. And in some cases, I suppose, they have been sponsored and you have continued on with the show when the sponsor maybe quit—in the interim to get a new sponsor?

Mr. STANTON. That is correct. We have, as I indicated we have Charlie Collingwood in the daytime; there is no sponsor today, and we are putting that on every day at 1 o'clock.

The CHAIRMAN. In other words, you keep Charlie on—regardless of whether—you try to get a sponsor, but supposing there might be a time when there was no sponsor available, you would continue to give that news to the American people over the network?

Mr. STANTON. Absolutely, just as long as we had some sponsors in the schedule elsewhere, otherwise, we wouldn't have any income at all.

The CHAIRMAN. I understand that. But there is a certain amount of time that you would have to allocate for that purpose regardless of sponsorship, in my opinion.

Mr. STANTON. That is right. Senator Magnuson, on page 22 of the supplemental memorandum we describe news bureaus and organizations that we keep, and I am not going to go into all the detail, but the CBS television network is now broadcasting 22 news broadcasts a week.

The CHAIRMAN. Is that at a certain time or——

Mr. STANTON. Hit or miss?

The CHAIRMAN. Hit or miss.

Mr. STANTON. No; they are at fixed times.

The CHAIRMAN. Would the other networks compare favorably with that?

Mr. STANTON. I would say, yes.

Mr. COX. I think you indicated that the average daytime lineup for the network is 183 stations and average nighttime, 121. Can you tell us in general terms what would be the average clearance for sustaining public service programing put out over the network?

Mr. STANTON. Well, it is considerably less, Mr. Cox, than the clearance for a commercial broadcast, and these are figures that we look at from time to time because we are trying to get some indirect evaluation of how the stations feel about the sustaining schedule that we are feeding, although even if we were to have an outstanding news broadcast and we didn't get wide acceptance for it, we would maintain that as part of our service.

And as a matter of fact, I suspect that the acceptance lives for some of our public service programs is rather short. This isn't necessarily a reflection on the quality of the program, nor is it a reflection on the part of affiliates. But these are just the facts of life, as far as operating a network is concerned. If you are interested in specific counts, and I don't believe that any is given in the supplemental memorandum, we could supply it on specific programs if you were to request it. But we don't maintain a day-to-day record on that; we only look at it on an occasional basis to keep a file on how the programs are going nationally.

The CHAIRMAN. This sustaining program, then, is a real service and is accepted as such by the stations which might have difficulty selling this time, but a good many of your affiliates in the larger markets, who can sell on national spot, do not clear for your public-service programs because they have sold that time to a national or regional advertiser?

Mr. STANTON. That may be the reason, or there may be another reason. In the field of news, for example, a lot of our affiliates feel that they can do a local or regional news job, which will embrace much of what we do, and yet give them their local participation. Let me give you an example: This Collingwood 10 minutes that we are talking about, that allows the affiliate to come in behind Collingwood, who will give the national and international news for 10 minutes from New York—it allows the local sponsor, or the local operator, to program with 5 minutes of local news in there and fill out a quarter hour that way.

There are two benefits: One to the public, because the public gets not only network news—national and international in character—but it gets local news; and the station benefits because the station may be able to sell that 5 minutes locally—and we have been of help to that station in giving it a lead-in with a strong 10-minute national news service.

The CHAIRMAN. And all of that is taken off the wire services anyway; isn't it?

Mr. STANTON. You are talking now——

The CHAIRMAN. Of the particular—of Charlie's program.

Mr. STANTON. Charlie's? Not at all; we maintain bureaus all over the world that feed——

The CHAIRMAN. Doesn't he use the wire services, too?

Mr. STANTON. That is right—that are supplemented by the wire services. But we have a number of people—again, on page 22 of the Supplemental Memorandum, CBS News maintains "4 American news bureaus, 5 European bureaus and 1 Far Eastern bureau. It employs 600 contract and free-lance correspondents at 263 locations throughout the world."

The CHAIRMAN. So that a news analyst—getting Charlie back in the picture again—such as Charlie, whom we happen to know very well——

Mr. STANTON. Surely.

The CHAIRMAN. He uses the facilities that you have just read to us there: but he also could pick up AP, UP, as I tried to say, and analyze the news; is that correct?

Mr. STANTON. Absolutely right.

The CHAIRMAN. And there would be no editing of that, would there?

Mr. STANTON. By editing——

The CHAIRMAN. Except what he would do.

Mr. STANTON. No. All the copy of all of our news people has to cross the desk of an editor at one of the bureaus, to make sure that we are living within the code that we have set for ourselves of trying to be as objective as possible. And the best of us on occasion will fall over the line, one way or the other.

The CHAIRMAN. What I am trying to get at: It is not only the editing of what CBS—its own news-gathering organization brings it—it is the editing of wire services, CBS, or anything that may be happening. They can use all that material?

Mr. STANTON. Right. Charlie's broadcast is a composite of all those sources.

The CHAIRMAN. Yes, I see. He could put me in or cut me out, any way he wanted to; is that right, the editor? [Laughter.]

No, I don't say this is wrong. In 10 minutes, you can't put it all in.

Mr. STANTON. That is what I was going to say.

The CHAIRMAN. What I say is the editor has leeway to do what he wishes.

Mr. STANTON. These are professional, trained, experienced newsmen who give their best news judgment on what stories are the key stories; and when you are editing for 10 or 5 minutes, it is a much tougher job.

The CHAIRMAN. Than filling 30 minutes. You probably have the raw material taken out, if at all.

Mr. STANTON. That is right; I remember Elmer Davis, in the days when he used to do the 8:55 to 9 news, used to complain of the difficult job it was to write for a 5-minute news period.

Senator PASTORE. But, the point I think we are getting at here, Dr. Stanton, is this: Is there any censorship on the part of the directorship of CBS as to what the commentator decides to put in or to take out, or express his opinion?

Mr. STANTON. There is absolutely no censorship, Senator Pastore, whatsoever. The thing we try to do is to cover all the news as objectively as it is humanly possible to do—and I don't think the public would let us get away with anything else.

The CHAIRMAN. The FCC, I think—I may be wrong in the date, but about 2 years ago—sent word to all the stations that they could "editorialize" if they felt like it. And some of the local stations do, which I think is a good policy. But the networks really don't have the best way—it is just an editing and condensation of the news that is gathered from all of these sources, including your own.

Mr. STANTON. Senator Magnuson, we don't have an editorial page. We did exercise the right to editorialize on one occasion. I did an editorial to the television network, I believe, 2 years ago. But we approach the problem of varying viewpoints a different way. We encourage and invite viewpoints to come on and be cross-examined, or to participate on the air, so that you get these various viewpoints from the person who holds them, rather than an oracle of one particular person.

The CHAIRMAN. Such as your Face the Nation program?

Mr. STANTON. Exactly.

The CHAIRMAN. Yes; and the other networks have the same format.

Mr. STANTON. Absolutely.

Senator POTTER. I have heard criticism of the networks on the question of editorializing by the networks—meeting that problem by granting equal time. And you have a professional newscaster or news analyst who gives one side of a question, and then you invite somebody, who may not be a professional in the field, to have equal time on the other side of the question. Now, do you think that is meeting your test of objectivity?

Mr. STANTON. Senator Potter, that is a—as you stated it, I don't think that that is balancing the books, so to speak. It is very difficult to reduce this to a mathematical equation. Some people are more persuasive than others. By and large, the thing you described does not. I am not talking about him when he gives a prepared speech, have given time to opposing viewpoints when a program that we put on was characterized by the opposition as being in the direction of a special viewpoint. I don't think that the people who came on to answer those programs were in any way in second position because they had not had exposure, or weren't professional in the sense that they were newscasters on a regular basis.

That is one of the reasons why we have steadfastly avoided the commentator approach to our news. We have talked about having newsmen and analysts, and the analyst's job is to try to give the background or the elucidation or illumination, if you will, of the news without leaning one way or the other. Now, this is a pretty difficult thing for a human being to do, but by and large I think that we live with our objectives, or our ideals, pretty well on that score.

But we do not do as some do—allow a man, a newsman, to comment and to take what corresponds to an editorial point of view. I won't deny that there haven't been occasions when people have broken over the lines, but this is just the statistical happening that occurs in any kind of human endeavor, where occasionally you do not—you miss it.

But I think the record over the years reveals that we have been fairly objective. This is a tough thing to do. But I think the public respects us for it, and I think by and large the high regard that the public holds for radio and television news covering in this country, as distinct from the news covering of the other media of mass communication, is largely due to the fact that we have tried to do a balanced and objective presentation. And a minute ago I said, I think in answer to someone, that if we ever broke with that tradition I don't think the public would ever let us get away with it.

Senator POTTER. I think that is right. The effect that television has on the public, as you know, is very great. And if you would let any person, or any group of people, control the editorial policy, if you have an editorial—if you were allowed, if you did editorialize through television, you would run the country.

The CHAIRMAN. Well, the prime example of that is where you have a newspaper that also owns a television station. It is pretty hard to recognize the two mediums on a given day. The newspaper has the perfect right to editorialize, or take the news and change it around, which they do in some cases. But when they get to their television station, they do have a public license and they try and keep it, as you have pointed out.

Mr. STANTON. Yes. I think that just as the generations that have grown up with the traditions of radio and television objectivity in news, so you have generations—and many more of them—who have grown up with the tradition of the newspaper, which does have the right that Senator Magnuson is talking about.

The CHAIRMAN. I don't mean they change the stories, but the format of the paper sometimes. The story is the story, but what they put in is a great deal different than what they would put in the same television story.

Mr. STANTON. That is right.

The CHAIRMAN. And they have a right to do that.

Mr. STANTON. I think that in the news and public affairs field, television has another great string to its bow, if you will, and that is that in programs such as Face the Nation or Meet the Press, or programs of that type, the man can sit, and the family can sit in its living room and watch the elected representative or the public official react to questions much the same way that he would react if he was sitting face to face with that individual. And I don't think there are very many people in this country who don't feel that if you give them 15 or 20 minutes or a half hour with a personality, that they can't form a pretty good impression of whether that man is a squareshooter or not. I am not talking about him when he gives a prepared speech, but I am talking about him in the give and take of conversation.

Senator POTTER. They say in television that you never come away from a television program without leaving some impressions, either good or bad.

Mr. STANTON. That is right. I think one of the great things about it is that it exposes the phony faster than anything else has done in the history of man.

Senator POTTER. It is rough on politicians. [Laughter.]

Mr. STANTON. On the other hand, it is a great thing for politicians and statesmen, because it allows the viewer to form his impression of the man as a whole man, not just as he has issued a press release or as if he had made a transcription. I think the impression that the newspapers are giving to the people are a little—but just as you can form the impression of the kind of guy that is running CBS, the——

Senator POTTER. Of course, I think, by the same token, it is changing the character of politics, too.

Mr. STANTON. One of the things, that rather than everything else, it has taken you away from the town meeting to the State capitol to the National Capitol. This is taking it back now to the precincts.

Senator PASTORE. Dr. Stanton, Edward Murrow is an official of CBS; is he not?

Mr. STANTON. Edward R. Murrow, Senator Pastore, is a news broadcaster and a broadcaster, in television, of special programs such as See It Now. He is not an official of the company as an officer; he is a director of the company, but not an operating officer.

Senator PASTORE. He is a director?

Mr. STANTON. He is a director.

Senator PASTORE. Well, now, as a matter of policy, does the directorship have any censorship over any of his programs?

Mr. STANTON. We have——

Senator PASTORE. I mean is the material, or the expressions that he makes, passed upon by the directors, as such; or is he left much alone when he gets on to his own program, to do it as he pleases?

Mr. STANTON. No; he is not left alone to do it. Neither do the directors pass on what he says, nor is he left alone to do what he pleases. He is treated exactly the same as Senator Magnuson's friend Charlie Collingwood. All of our newsmen receive exactly the same treatment, and Mr. Murrow receives no different treatment because he is a director. We have——

Senator PASTORE. I am not being critical.

Mr. STANTON. No; I am glad you asked.

Senator PASTORE. I think it ought to be on the record.

Mr. STANTON. A number of people have thought, because he was a director, that there was some special privilege that he had. This is not true. So that the record will reflect the way our creative programing activities are handled, there are two programing boards: One for radio and one for television. Mr. Van Volkenburg, sitting to my right, who is president of CBS Television, is chairman of the program planning board for the television division. His counterpart, who is president of Radio, has a similar plans board for radio. The chairman of the corporation, William S. Paley, and myself sit on both of those boards.

In addition to that, in the field of news and public affairs—which is operated centrally in the corporation and isn't in the individual divisions, because news isn't something that originated with television or originates with radio, it originates by event—we have a centralized news-handling operation. There is an editorial board—not editorial in the sense that it decides on what editorial policy shall be, but it is an editorial board that reviews and plans the kinds of programs that are done in the public affairs area and keeps tabs, in a supervisory sense, on our news and public-affairs operation.

That editorial board is made up of the chairman of the corporation, the head of news and public affairs, the head of the radio division, the head of the television division, the vice president, creative program services of the corporation, and Mr. Salant, sitting on my left.

From time to time, we review the program output of the news and public affairs division to make sure that they are living up to policies and are doing the best possible job.

I guess I was at——

The CHAIRMAN. Do you think this would be a good time to break?

Senator PASTORE (presiding). I think so.

The CHAIRMAN. How about 2 o'clock?

Senator PASTORE. We will recess the hearing now until 2 o'clock this afternoon.

(Whereupon, at 12:08 p. m., the committee was recessed, to reconvene at 2 p. m., of the same day.)

AFTERNOON SESSION

Senator PASTORE. The hearing will please come to order. All right, Doctor, you may proceed.

Mr. STANTON. Mr. Chairman, and members of the committee, this morning Mr. Cox asked about a chart, chart XX, on page 77, and was concerned because the totals did not add up to the same number that appeared elsewhere, about the number of affiliates that we have. I would like the record to show that this chart was prepared on data as of December 1955, and at that time we had a number of affiliates equal to the total of 174, which is the figure you had, Mr. Cox.

Subsequent to that time, 7 stations, new stations, have come on the air and account for the difference between 174 and 181 as shown on the map, which gives the figure of 181 at the top. These are stations in the markets of Laredo, Big Spring, Columbia, Marquette, Sweet Water, Odessa, and Memphis.

Mr. Cox. Thank you, Dr. Stanton.

Mr. STANTON. One other question that I believe Senator Potter asked, and that was about the possibility of having competing advertisers, or advertisers dealing in the same products, on the same night in the same peak evening hours. A quick look at the schedule shows two examples. There are others. But on Friday night, for example, from 9 to 9:30, Reynolds Tobacco is in that period. From 10 to 10:30, Brown & Williamson is in that period. So that you have a separation of half an hour. And on Sunday night, Bristol-Myers has the time period 9:30 to 10, and Helene Curtis has the period 10:30 to 11:00. They have many products that compete. Now, they are not back to back, as I indicated this morning, Senator Potter, but they are separated by a half hour on the same night.

Senator POTTER. Do you ever have a contract with your advertiser in which the advertiser insists, if he is going to take an account with you for a certain period of time, that you don't take advertising from a competitor during the prime hours?

Mr. STANTON. I know of no such contract, and we wouldn't write such a contract.

Mr. Cox. In connection with your advertisers, we have had some testimony before the committee by a member of the Federal Communications Commission to the effect that some 25 national advertisers occupy between 50 and 60 percent of the network broadcast time. Would that sound like an accurate approximation of the situation?

Mr. STANTON. Yes. I want, before I sign my name to it, Mr. Cox, to check it, of course, but I don't offhand quarrel with that kind of a general statement. I think that is true in many other fields besides broadcasting, however.

Senator BRICKER. Mr. Chairman——

Senator PASTORE. Yes.

Senator BRICKER. Just one question, Dr. Stanton. Have you any fixed policy in regard to advertising for competitive industries or businesses, and if you have—I wouldn't ask you to do it now, but could you make us a definitive statement as to what your policy might be if there is one, giving equal opportunity to competing industries or competing businesses in the field? If you have such a policy——

Mr. STANTON. Senator——

Senator BRICKER. Or do you take each one on its own merits?

Mr. STANTON. Senator Bricker, we have no policy in that regard, the way we have, for example, in the political field, of giving equal time.

Senator BRICKER. Of course, that is made by statute.

Mr. STANTON. That is right. But as it works out, I am sure, between the major networks or among the major networks you would find that they all get a crack at the audience, so to speak, or can get access to time.

Usually what happens is that if one large national advertiser becomes quite active in a medium—be it newspapers or magazines or radio or television—competitive advertisers in the same field come in pretty quickly because the distributors and the dealers insist on having the same kind of national support for the local sale of the products. And by that token, if one automobile manufacturer comes in, you usually find his competitor coming in fast to offset or to compete with what the first one does. Now, we have never had—in the twenty-odd years I have been in the business I don't recall any time when we ever had an advertiser come to us and complain about not being able to get access. We would like to do business with him. And I think an analysis of what has happened would indicate that those who want the time, who are eager to get the time, have been taken care of. But I could make an analysis for you of what the track record has been, but it is not as a result of a policy.

Senator BRICKER. Not a policy.

Mr. STANTON. It is the way it has worked out.

Senator BRICKER. I suppose the record is in here; that we could dig out. It might be helpful to us, though, if you would do that. Because that is basic to all this, as you understand.

Mr. STANTON. Sure. What I would like to suggest is that we take a number of commodity groups—automotive and soap and cigarettes—broad groups of classifications of products that are advertised and show you how those balance.[3]

Now, you occasionally have some national advertiser who, for reasons of advertising strategy, will go exactly contrary to what the others do.

Senator BRICKER. Yes.

Mr. STANTON. For example, there was a time—and I think I mentioned it in my statement, and if not it is in the supplemental memorandum—where Philip Morris was a very large user of network television. Then, Philip Morris—and at that time Philip Morris,

[3] This analysis is set forth in a letter dated August 10, 1956, and in exhibit B thereto. which will be found beginning at p. 2835.

among other programs, had I Love Lucy, a very popular program. Philip Morris left I Love Lucy and went out of network television completely and went into spot television. They took an entirely different tack. So you occasionally get these breaks in continuity. But those aren't the result of anything that a network does or the medium does. That is a matter of advertising strategy. Sometimes it is very useful. I would like to think, you know, they should stay with the network. But, on the other hand, you do have advertisers who want to change the pace, and they will do that kind of planning and strategy.

Senator PASTORE. If you had that competition even among the networks themselves—if you put on a good program at a certain hour, usually the other network comes up with a rather glamorous program to more or less attract the viewers away from the other program.

Mr. STANTON. Yes, and the public benefits, I would say, Senator Pastore, because they have a choice, then, of 2 good programs, or 3 good programs. That is what happens when you have the free competition that we have in this country. Until the ITV came along in England, the BBC just planned the way it was going to be and it didn't have any competition.

Senator BRICKER. If you could furnish that data, it would be very helpful to the committee.

Mr. STANTON. I will do so, Senator Bricker.

Was I at the paragraph starting with "Stations"?

Senator PASTORE. The second paragraph.

Mr. STANTON. Second, I am sorry. This is on page 12 of my statement.

Second, and in many ways equally important, the stations are spared the expense of programing these time periods with either their own local programs or with other programs obtained from outside sources.

Still talking about the subject of how stations benefit from the networks, stations benefit in a third way from network affiliation. Their affiliation enables them to broadcast a balanced program schedule of wide public appeal, with major, high-cost programs attracting large circulation to their channels. This large circulation attracts nonnetwork revenues directly to the station—revenues from both national spot and local advertisers. It is the network schedule which creates the value of the stations' "adjacencies"—the time periods adjacent to the programs which have attracted the largest audiences.

3. Networks Serve the Advertisers: If you will recall, I was discussing the fact that networks serve first the public, second the stations, and now I am talking about how networks serve the advertisers.

Networks assure value to sponsors by delivering large circulation at specified periods in the schedule at a low-unit cost.

Only networks can efficiently supply advertisers with nationwide television coverage. Through a single order advertisers are assured of the simultaneous exposure of their messages in all markets and as part of a rounded program schedule—in which each program reinforces and adds value to every other program in the schedule. Advertisers' increasing use of network television testifies to their endorsement of the network's function in providing these efficiencies in the marketing and distribution of their products.

THE FUNCTIONS OF A NETWORK

Networks supply a balanced program schedule on an effective nationwide basis which dovetails with the local schedule of the independently owned and operated stations comprising the network. In this way networks provide a television service for the Nation as a whole and create economical circulation for the advertisers.

This sytem has worked. It has worked by any standard of measurement: The approval of the public, the functioning of independently owned stations, and the confidence of advertisers. Simple as it sounds, the mechanism which created it and which has kept it functioning is vastly complex. It would be redundant for those who have read the CBS supplemental memorandum for me to try to summarize what is already a very tight digest of how a network functions.

Mr. Cox. In that connection, Dr. Stanton, despite the very real contributions of the networks to the operations of many of the independently owned affiliates, is it not true that a substantial number of individual licensees are still operating at a loss and that a number of them, representatives of whom have appeared before this Committee, indicate that unless there is some material change in the situation—much of it, of course, depending on the allocations problem—they may be forced out of business?

Mr. Stanton. Mr. Cox, are you referring now to the UHF-VHF situation?

Mr. Cox. To that and to the problem, also, of stations in smaller markets—the entire gamut of economic problems which face individual licensees as distinguished from the network. In other words, the point I am making is this: The system has worked, but as I think you yourself suggested this morning, it has certainly not worked equally well for all affiliates or for, as far as that is concerned, all networks.

Mr. Stanton. Well, Mr. Cox, I won't deny that there are some isolated instances of loss operations. But I also should remind you that earlier in the life cycle of television there were loss operations on the part of a lot of stations which are now making handsome profits. And if you were to go back into a similar life-cycle position in radio and you were to take a look at radio when it was 10 years old as an advertising medium, and look at the picture then as against the picture now in radio, I think you would have found fewer stations and perhaps some loss operations at that particular time in radio's life cycle.

Mr. Cox. Weren't most of the earlier losses in television because of the low percentage of set saturation, and isn't there some ground for concern that for some stations these losses continue, even when we are approaching the high levels of saturation that you have testified to?

Mr. Stanton. Well, now, we have to look at the high level of saturation, Mr. Cox, in terms of individual markets, because some of the markets that you are talking about are small markets, loss markets, being very low in saturation. They don't bulk large when you look at the whole country, but they bulk very large for that operator. That is why, largely as a result of the hearings we held in this very room 2 years ago, when Senator Potter was holding hearings in his committee, I got a number of questions, and I know a number of members of the committee and others here said, "What can we do to help the small station, the small-market stations?"

This is a genuine problem. The large national advertiser is most concerned about the biggest markets first, and he keeps going down—and don't ask me where he cuts off, but there is a cutoff point beyond which, many times, he doesn't go in terms of building up the list of markets that he wants to put on a network. Obviously, we started with the "must buys," but we try to expand that. But there are a lot of small stations in places like Big Springs and Odessa and so forth that were not getting either service or getting income. This posed a real problem for us, because it wasn't economical to give the service to these stations. The advertiser wasn't interested in them on the basis of the rate that we had to charge, because the rate, in relation to the amount of circulation they delivered, just wasn't worth it.

Now, we tried to come back and cope with that problem by setting up what we called the Extended Market Plan, and I will talk to it a little bit later. But that in itself—as I think some of the testimony will show from people who own and operate these EMP stations—that move on our part, of establishing that class of station, where we put a special rate and a special discount and we gave those stations the right to buy TVR's or recordings of our programs at a very low price, so that the people in those very small communities—the public, again—could get the same kind of programs that the people were getting in the big communities——

Mr. Cox. Well——

Mr. Stanton. This is something that the network did in an effort to try to broaden its service and to protect the smaller market from the natural flow of the revenue to the big market. And I think as I get into my statement here—I hope I will—I will show that there is a disproportionate amount of money going to the smaller markets in television today, and a large part of that, I submit, has been accomplished by the things the networks have done. And I am not talking just about CBS television now. Others have done similar things, in an effort to take care of these smaller markets.

THE CBS TELEVISION NETWORK

I was getting ready to say, I guess: However, I think it useful at this point to describe very briefly some of the components of the CBS television network.

The CBS television network aggregates 181 affiliates in the United States and 34 outside the United States, in Canada, Alaska, Hawaii, Mexico, Cuba, and Puerto Rico. Four of these are CBS-owned stations: 3 VHF stations, New York City, Chicago, and Los Angeles; and 1 UHF station, Milwaukee.

The vast majority of these stations are interconnected by American Telephone & Telegraph facilities, and the cost to the CBS television network of using these connections on a regular basis amounts to $13.5 million a year. Without this investment there would be no network. And if these facilities were not used by the network on a regular basis, but were used only sporadically, their costs would increase, perhaps as much as 30 or 40 times per program. Moreover it is likely that some of them, at least, would revert to other uses.

They would then be unavailable to television—even for occasional use—in markets outside the top 40 or 50 cities. As a result, many smaller markets would forever be deprived of live programs except those locally originated.

Mr. Cox. As far as that is concerned, Dr. Stanton, though, isn't it true there could be changes, either of the sort which had been proposed in hearings before this committee or of another nature, in the regulations under which the networks conduct their business, but this would not necessarily mean that the networks would cease to be regular users of the telephone company's facilities, or that because these changes were made the national network system would cease to exist? I realize this anticipates a major part of what you say later. But the point I am trying to make is: Is it a question of all or none, as this seems to imply? Is there not a possibility that there could be alteration in the character of the network service without eliminating it, at least on the stumbling block of the A. T. & T. charges?

Mr. Stanton. Well, Mr. Cox, without knowing what the middle ground might be, of alteration, it is difficult for me to say what would happen.

This much I believe, and that is if some of the proposals that have been talked about before this committee were to become the pattern of operation for the future, I think you would pretty well emasculate what we now have as live national television networks. I think that you would be taking something out of the democratic process, and out of this culture, and out of our economics by that process.

But I can't tell you precisely what is going to happen, or how rapidly it will happen, without addressing myself to specific proposals, which I try to do later.

Mr Cox. All right.

Senator Pastore. Doctor, do you mean by this that the broadness of a network's program depends upon the amount of charges the telephone company will make, as to how far you can go and whether or not an advertiser will be given a certain amount of spread?

Mr. Stanton. Senator Pastore, if I understand your question, I am afraid I didn't make myself clear. All I was trying to say here——

Senator Pastore. Well, let me put it this way. You began by saying that sometimes we would like to go to the smaller community. Well, we can't go that far because the cost would be too great. Now, you start out at a central point when you broadcast a live show. It is that one broadcast that is spread out throughout the country. Now, why does it become expensive if you go to a small community? It is still on the air. Where does the expense come in?

Mr. Stanton. Well, we are charged for our circuits, sir, in terms of the mileage between points that are connected.

Senator Pastore. Is that where the expense lies?

Mr. Stanton. That is where the expense lies. Well, there are other features, but that is essentially it. But we don't change our network from minute to minute or hour to hour. The stations may change it in terms of what they take and what they don't take. But, as far as the service we buy from the telephone company, the interconnections, that is constant, as I understand it, pretty much throughout the 9 hours. They might route us a different direction from one hour to the next, but the net effect is that the service is at each one of these places. The local station may not take it, but the service is there. Once we make an affiliation, or once we decide to go into a community with service, if there is a station there, we don't keep changing that around from hour to hour or day to day. So this doesn't vary, if I am on the same frequency you are here as far as this question is concerned.

Senator PASTORE. Well, I don't know whether we are on the same frequency at all. You start out with a program originating in New York. You have a national network. Now, why does it make any difference to the advertiser, in the amount he must pay, as to how many stations you cover, if those stations are all on your network?

Mr. STANTON. Oh.

Senator PASTORE. Is that an unfair question?

Mr. STANTON. No; not at all. We don't charge advertiser A any differently than we charge advertiser B, as far as the wire lines are concerned, or the interconnections. The difference in charge to the advertiser, sir, is based on the rate the station charges for serving that particular community. For instance, if Providence isn't on the network, then the advertiser isn't charged for Providence; but we are charged for putting the service into Providence nevertheless. In other words, we are charged for it by the fact that we have to amortize a part of the fee for the telephone feed into Providence whether Providence takes the program or not. Perhaps if I turned it around and put it another way: If an advertiser buys 100 stations, the bill that he pays for those 100 stations is based on a printed rate card, with each station charging so much for each time unit. There is nothing on that rate card that charges the advertiser for the telephone lines. Obviously he pays for it as part of the over-all rate. But, it doesn't vary from advertiser to advertiser. Only as it is reflected in the rates charged for the number of stations.

The CHAIRMAN. Excuse me. Are those fixed charges, the telephone company charges?

Mr. STANTON. Yes; they are, if I understand your question, Senator Magnuson.

The CHAIRMAN. Well, what I mean is, you make a contract with them for a period.

Mr. STANTON. Yes; they are blocks of time. I think our contracts are now for—what? Eight-hour days, are they not, in 8-hour units?

Mr. VAN VOLKENBURG. Eight-hour units.

The CHAIRMAN. You make a contract with the telephone company for a certain period of time, or they just charge you a service charge for every given——

Mr. STANTON. Use of it?

The CHAIRMAN. Month?

Mr. STANTON. No; they charge us by the month, but it is a bulk buy of the service. It isn't—we don't buy a minute for this hour and then drop it for the next hour. It is not charged like a long-distance call.

The CHAIRMAN. I understand that. I am just trying to get at your relations with the telephone company; that is CBS. Do they give you a fixed charge like anyone else using their lines for a certain period of time, or do they change those rates on you?

Mr. STANTON. Well, that is a tariff that is established by——

The CHAIRMAN. They must file it; I understand that.

Mr. STANTON. Yes; absolutely, and that is fixed.

The CHAIRMAN. Then that is fixed. So we will understand that. In order to change that tariff—which naturally reflects to the local television station because they pay for it, I mean in the long run—that must be filed with the FCC, the change in charges?

Mr. STANTON. Yes; it must.

The CHAIRMAN. Or can they change you from month to month?

Mr. STANTON. No; they don't change us from month to month.

The CHAIRMAN. Could they?

Mr. STANTON. No. They would have to file that and put us on notice.

The CHAIRMAN. They would have to file it and put you on notice.

Senator BRICKER. File a new tariff which would have to be approved?

The CHAIRMAN. Yes; that is what I am getting at.

Mr. COX. Do I understand, then, that as long as you have 181 affiliates you would be charged the same rate per day, or week, or month for this 8 hours' use of the network, regardless of what your clearances at any time—at any particular time—may be?

Mr. STANTON. There may be some slight deviation because of loops and connections, Mr. Cox, but for the most time, I think the substantial answer to that question is "Yes."

Mr. COX. What is the problem that is posed? You state in some of your documents you have found your experience to be you can't afford to add an affiliate unless it has 40,000 homes and will justify a rate of $150——

The CHAIRMAN. $125 to $150, you say.

Mr. COX. Because of the expenses to the network. Is this an expense of amortizing, over some period of time, the amount of additional charge that will be made because of the addition of this station, whether ordered or not—or in what way does this impose an expense upon CBS?

Mr. STANTON. Well, we have to pay in most of the cases, Mr. Cox, the cost of getting the program to market A, or whatever the market might be. There are some exceptions to that, but for the most part of the 13½—well, all of the 13½ million I talked about here, we pay for. There are some stations, however, whose contracts are not the same as the rest, and who make their own connections to the nearest point to get the service from the network.

Mr. COX. They make payments direct to the telephone company?

Mr. STANTON. They may make——

Mr. COX. When they are connected?

Mr. STANTON. Well, they may make them direct to the telephone company or they may maintain their own connections.

Senator POTTER. You have to pay the line charges whether you use the lines or not?

Mr. STANTON. Oh, yes; we pay for them on a bulk basis.

Mr. COX. You receive a discount for that service, however, that reduces that charge on a per hour basis below what it would be for a single time use, or a less frequency use?

Mr. STANTON. Oh, absolutely. I am not complaining about the rate here, don't misunderstand me. I would obviously like it if it were lower. But the purpose here isn't to get into a question of rate consideration.

Senator PASTORE. Well, in other words, Doctor, every time you go on the air on a national program you reach 181 affiliates in the United States and 34 outside the United States?

Mr. STANTON. In one form or another, Senator Pastore. Because when you say outside the United States, and even some inside the United States, they are not necessarily interconnected. They may get their program service in what we call television recording or on film. There are some of the extended market plan stations—EMP, very small market stations—who get their service by recording rather than by wire or microwave relay. But substantially, the answer is "yes." But I wanted to make sure there were those exceptions.

Senator PASTORE. And this added cost you are talking about is when you bring in new affiliates?

Mr. STANTON. That is right.

Mr. COX. You don't reach that market, though, unless it is ordered? I mean, actually your program will not go out over the transmitter of that station unless the market has been ordered?

Mr. STANTON. Oh, no, not at all.

Mr. COX. Or unless you are providing the program on your extended program service?

Mr. STANTON. Under the extended program service plan, Mr. Cox, some of our programs are made available to stations whether or not the advertiser orders that particular station. Obviously, if the program goes to the station and the advertiser doesn't order the station, the station derives no income from that directly. The station benefits in another way, however, and that is: First, he doesn't have to buy any programing, or provide any programing, which he pays for out of his own pocket; second, if the program is a popular network program, it enhances his program schedule locally, so he can attract local advertisers and perhaps national spot advertisers to buy adjacent thereto.

We don't have the extended program service plan running straight through all of our programs because it is not possible to do them with all programs at this particular time.

The CHAIRMAN. Didn't you give them a package at one time? If they bought one, they could get another?

Mr. STANTON. No, not as far as the network operation is concerned, Senator Magnuson.

The CHAIRMAN. But you are down now to a $50 rate card in some individual cases, aren't you?

Mr. STANTON. In some of the EMP stations, yes.

The CHAIRMAN. As low as $50?

Mr. STANTON. I think that is the lowest.

To perform its functions, the CBS television network required a total of 5,493 people as of March 1956. As of that date, 2,412 of these were employed on a full-time basis. This compares with 427 full-time employees devoted to the activities of CBS television as recently as 1949. Currently, the cost of maintaining this organization and staff amounts to about $700,000 a week.

Senator POTTER. What are the part-time employees?

Mr. STANTON. Part-time employees, sir?

Senator POTTER. Yes.

Mr. STANTON. Musicians, actors, per diem personnel.

Senator POTTER. Program personnel?

Mr. STANTON. For the most part, program personnel—stagehands, ushers, people that come and go as programs come and go.

CBS NEWS AND PUBLIC AFFAIRS

One of the most vital of the network's functions is performed by the CBS news and public affairs department. Through it the network fulfills its responsibility as a medium of mass communication by providing the public with news, science, religious, education and public affairs programs.

The CHAIRMAN. Doctor, do you have broken down—I suppose we can get it—the amount of time in these different categories, in ratio to your pure entertainment programs?

Mr. STANTON. I could provide it. The thing that frightens me a little bit about any analysis of that kind, Senator Magnuson, is that many times in the field of education, for example, we get education in programs that ordinarily wouldn't be classified as education. Let me give you an example. I think that some of the things that have appeared on Ed Sullivan's program, from the ballet and from serious music and so forth, would qualify as very special educational kinds of programs.

On the other hand, I think that the $64,000 Question taught the average man in this country more about income taxes than all the educational programs that we have ever had. [Laughter.]

So I am always nervous when we try to put rigid classification on programs.

The CHAIRMAN. How do you report to the FCC?

Mr. STANTON. We have a questionnaire form from the FCC—I am not very happy about it because education doesn't qualify there unless it is done in conjunction with, as I recall, a bona fide educational institution.

Well, that is all right. I am not saying that educational institutions can't help us. But I think that we occasionally can do educational programs without having to be tied to an educational institution for it. And I don't like not to get credit for it under those circumstances.

The CHAIRMAN. Well, I was going to say it works in reverse, too. Any station, or any network, should get credit for doing these things you mention. And you have to have some yardstick to break them down. You can break down the news in ratio to the number of hours you are on the air. And I would think you could break down the religious part.

Mr. COX. Isn't it true, though, that ——

The CHAIRMAN. And you have certain public affairs programs that are definitely public affairs?

Mr. STANTON. That is right.

Mr. COX. Isn't it true that this report form that you are talking about is employed only in connection with your owned-and-operated stations—that since the network is not itself licensed by the FCC, you do not file any statement showing balanced programing over the network?

Mr. STANTON. Yes, Mr. Cox, you are right. I wasn't referring to the network filing. I was only thinking in terms of what company-owned stations do.

We have been very conscious of this breakdown, however, because when we go into comparative hearings for licenses we have to follow the form that is used for the——

The CHAIRMAN. Well, it becomes a very important part of what service the station is doing for the public.

Mr. STANTON. Yes, except I think, Senator Magnuson—and I don't want to quarrel with you on this—I think that tables can sometimes be very misleading. I could put on a lot of programs that would qualify as education and you wouldn't give them 5 minutes of your time, and neither would anyone else.

The CHAIRMAN. Yes.

Mr. STANTON. And I can put on some other programs that don't technically qualify as education that I think you would say were very good programs.

The CHAIRMAN. Yes.

Mr. STANTON. For example, we had for 4 years an hour and a half program on Sunday afternoon, called Omnibus.

The CHAIRMAN. Yes.

Mr. STANTON. I think Omnibus was an excellent program. Omnibus wouldn't qualify as an educational program, and yet there was much in that program that was far better——

The CHAIRMAN. By that you mean a station to qualify under the FCC in marking their time now—what they do for education—Omnibus couldnn't be put in that category?

Mr. STANTON. That is my understanding of it, sir.

The CHAIRMAN. Yes.

Senator PASTORE. Another one I think needs worthy mention is You Are There. I think it is a good education program. It is a good lesson in history, if you listen to it.

Mr. STANTON. Yes. Only a network that is financially healthy could fully perform these functions. For the CBS news and public-affairs operation represents a substantial loss. Few public-affairs programs are sponsored. One program series, for example, The Search, which reported the research projects of different colleges and universities, took 3½ years to produce. More than $750,000 was spent on it, without recovering any of this cost through sponsorship. The department, with an annual operating budget of $7 million, comprises 103 full-time employees and employs 600 contract and free-lance correspondents at 263 locations throughout the world.

Only a network could maintain a department to produce, and supply, at no charge to stations, programs in the field of education, such as The Search; Adventure, which was produced in conjunction with the American Museum of Natural History; Report Card, a special five-program series devoted to schools and education; such weekly religious programs as Look Up and Live, Lamp Unto My Feet, which, through longstanding CBS policy, are withheld from sale or sponsorship by any groups.

Mr. Cox. As you may have been advised, Dr. Stanton, a witness testified before the committee yesterday—Dr. Everett Parker, of the Congressional Christian Churches—and while commending this last policy of yours with respect to your refusal to sell religious time, was critical, in general, of the policies of the networks and of individual licensees on the ground that there was not enough religious time made available, that it was not good time for the purposes to be served, that the program formats which were customarily employed were not effective, and that organizations outside the networks had developed techniques in the field of religious programing and had tried to persuade representatives of the networks to make use of this kind of programing but without success. Now, I realize that this testimony—you have not had a chance to digest this testimony—and perhaps you prefer to comment on it at a later date, but I think some comment at some time would be appreciated.

Mr. Stanton. Well, I would like to hold that until later. I have some pretty firm convictions in this particular area.

Mr. Cox. Those can be made a matter of the record then, later.

Mr. Stanton. I think we would like to treat with that later, if we may.[4]

Similarly, only a network could produce and supply programs in the field of public affairs, by providing such series as Face the Nation; Years of Crisis, a live broadcast in which CBS news correspondents flown to New York from their overseas posts discussed the year's most significant events; The U. N. in Action; such science programs as the hour-and-a-half Out of Darkness, which examined, through case histories, the problems of mental health.

And it is only a network which is equipped to cope with the complexities of covering the conventions this summer. Convention coverage this summer will present a very special challenge to television, requiring the most exacting kind of thought and planning, and huge resources in both manpower and dollars. The cost of CBS Television's convention coverage this year will run to over $5 million. Over 300 members of our network will be working directly on this giant task. Planning for this year's convention coverage began in earnest in September 1954—23 months before the first "call to order."

And because the two conventions are scheduled so closely together in time, and so far apart in space, we will have the unprecedented task of transporting between 10 and 12 tons of delicate electronic gear 2,000 miles by air—having it in working order in San Francisco's Cow Palace 24 hours after the final gavel falls in Chicago.

Programing such as this amply refutes the charge that networks are merely time brokers who arrange for the distribution of programs.

Senator Purtell. Doctor, when you speak of the $5 million, is that a net cost to you, or is it your intention to intersperse advertising at times throughout the program? Would that be additional advertising that you would not get if you were not covering the conventions?

Mr. Stanton. Let me break your question down into two parts: First, this is part of the cost of the program. We will offset part of this, but not all, by selling time. But most of the time we will sell, Senator Purtell, is time we already sold, so we are not getting advertising that we normally wouldn't get.

Senator Purtell. I see.

---

[4] The comments of CBS on this subject are contained in exhibit A to a letter dated August 10, 1956, which will be found at pp. 2835, 2836.

THE PROGRAM OUTPUT OF THE NETWORK

The complexity and magnitude of networking are also indicated by the staggering size of the CBS television network's annual program output. In 1956, the network—by itself or in association with independent program packagers—will produce and broadcast approximately 2,500 hours of programs. This does not take into account the programs broadcast by the network but produced entirely by others. Compare, if you will, these 2,500 hours of programs with the 427 hours which represent the amount of playing time for all United States feature films produced for release in 1955. In other words, the program product of the CBS television network this year is about six times that of Hollywood's total feature-film output.

THE INTERNAL ECONOMICS OF NETWORKING

The income from the sale of network time and facilities maintains this vast and delicately balanced organization which I have so briefly described.

In the case of broadcast operations, there is an exceedingly slender margin between satisfactory profit and devastating loss. For networking is a double liability business. The loss of a sponsored program entails a double loss. Not only is the revenue for that time sale gone for all time—a half hour unsold is unsold forever—but the network faces the cost of producing a replacement program series in the unsold time. Otherwise, the burden of these programing costs would be thrown on the scores of affiliates in smaller markets which are least able to shoulder that financial burden.

The balance between profit and loss in the case of networks is so delicate that the failure to sell 1 hour between 7:30 and 10:30 p. m. each night for a year (whether because of a refusal of stations to clear time or for any other reason) would, in 1955, have turned the CBS television network's profit into loss.

It is facts such as these which underlie the necessity of the network practices which have been criticized. Proposals affecting such practices would threaten the entire structure of television networking by removing its essential financial stability.

In my description of a network, I have not gone into questions of affiliation or advertisers' standards in evaluating competitive media. Nor have I described the plans by which we have successfully channeled more programs and revenues to small-market stations; our extensive plant facilities; our engineering and audience research; and many other items which are part and parcel of the business of networking. All these, however, are detailed in the supplemental memorandum submitted to the committee.

CHARGES AND PROPOSALS

Let us now examine specifically and factually the charges and proposals which have been presented to this committee.

1. Revenues and profits: The proposal to regulate networks is based largely on the charge that the CBS and NBC television networks receive a disproportionate share of the industry's revenues and profits. The facts relating to revenues and profits destroy this basis.

That revenues of networks are large has no relevance here. A network's functions are such that necessarily its expenses, and hence its revenues, must be large.

And the focus on profits is equally misplaced. We do not deny that since 1952 our television operations have been profitable. Nor do we apologize for that success. I have always assumed that it was a wholly permissible business objective in any field of commerce to operate on a profitable basis. By no accepted principles in our system of free competitive enterprise is business success a justification for Federal intervention.

But even if the issue of the size of our profits were relevant, the facts are that there is nothing abnormal about them. I would like to put our profit figures in context.

(*a*) In 1954, the CBS television network's profit after taxes was 4.6 percent of sales. On a cumulative basis, taking into account all operating costs, the network's return after taxes through 1955 was 1.03 percent or, if interest payments are taken into account, as they should be, only 0.46, less than one-half of 1 percent of sales. Compare these figures with profit figures of other enterprises. The FCC's own published figures for 1954 show that the profits after taxes of 377 independent stations corresponded to 9 percent of sales. The margin on sales in 1954 of about 2,400 leading nonfinancial corporations was 6.1 percent. And the range of profit margins to sales approved by State regulatory bodies even for certain types of public utilities was 3.9 to 12.6 percent.

(*b*) The 28 percent of the industry's net profits——

The CHAIRMAN. Dr. Stanton, I don't want to belabor this point, but there is some difference in comparative figures where the capital investment is much greater than, say, a network system that gives essentially a service, isn't that true—where they have fixed charges and they have to amortize a capital investment. I think there is a little difference there, on that basis, in comparative figures.

Mr. STANTON. Well, Senator Magnuson, forgive me but I don't accept that, because I think that even in certain fields, that is, even in transportation, there is indication that the shift is now going—as we pointed out on one page here in one of the documents—even some of those regulatory bodies are going away from the invested capital concept to the sales concept.

(The chairman nods.)

Mr. STANTON. I think that in any business that is as creative as ours, we have abnormal expenses. Sure——

The CHAIRMAN. You don't have as many fixed charges as some other concerns would have.

Mr. STANTON. Did I misunderstand you? Because maybe I am going down the wrong direction here.

The CHAIRMAN. I don't want to belabor the point. I am just saying in many cases, when you figure profit, you have got to figure the actual capital investment at some of these places where they have big heavy fixed charges, whereas the network is essentially a service organization.

Mr. STANTON. Well, and as a service organization, if you accept that concept, I think the usual measure for a service organization is not its invested capital.

The CHAIRMAN. No; it is what they give.

Mr. STANTON. That is right.

The CHAIRMAN. The services they render.

Senator BRICKER. The real difficulty in assumption of that kind is that you must compare the production for sales in relation to the investment in capital assets necessary for the making of the product, and it is very hard to get a comparable figure, as you have set out here, that has any real bearing on the economics either of production or of service.

Mr. STANTON. Well, Senator Bricker, where some businesses invest in heavy equipment, we can't invest in creative manpower and take it as a capital investment. I sometimes wish we could. I don't know how to——

Senator BRICKER. This serves to go toward expenses, of course.

Mr. STANTON. That is right; and they are reflected in the low level of profits here to sales.

Senator BRICKER. But a great manufacturing corporation can't expense its facilities for the purpose of production or their improvements to their facilities, like one of our big industrial concerns, for instance. They have to capitalize all of their investment, and that is a very heavy capitalization in relation to the amount of annual production.

Mr. STANTON. Well——

Senator BRICKER. Your capital investment is comparatively small in comparison with the total amount of the services you are rendering and the cost of those services or the return.

Mr. STANTON. The only difference, isn't it, sir, is that in the case of the items that can be expensed you take it in 1 year as against writing it off over several years, wherever the particular——

Senator BRICKER. No; it is the relation of the capital investment to the amount of production and the return upon that production, either in goods or in services.

Senator PURTELL. And the continuing capital investment. The huge investment on a part of a manufacturer must be amortized, whereas you write off most of your expenses in the form of personnel that you need, which is your main, I would imagine, item of expenses. You write it off each year. A manufacturer puts a great deal of money into capital equipment and he must amortize that over a period of years.

In other words, after the first year, assuming his amortization period is 10 years, 90 percent of the investment is still there. His money is still in there, 90 percent of it, although 10 percent only could be charged as an item of expense and operations?

Mr. STANTON. That is right.

Senator PURTELL. So there is a great deal of difference.

Now, I do think there is much to be learned from the percentage that we might develop, or you might develop for us, in relation—your profits in relation to your investment, rather than just on sales, because of that vast difference in the amount of money required to operate certain types of businesses and the amount of money required to produce the same dollar sales in your business.

Mr. STANTON. Well, I do develop those figures as I go along.

(b.) The 28 percent of the industry's net profits before taxes which CBS television earned in 1954 (14.5 percent of the industry share for the network and 13.6 percent for the 3 CBS-owned stations) is not disproportionate. The CBS television network was the leading network in 1954.

Mr. Cox. On that point, Dr. Stanton, you stressed the risks, and the heavy commitments that must be made by the networks. Isn't it true that your owned-and-operated stations have not, in recent years, incurred either those risks, or been required to make commitments for long-term personnel contracts or program contracts—and yet they are earning here roughly the same percentage of the broadcast revenues, or net profits, that the network itself earns?

Mr. Stanton. Well now, are you saying that they are earning the same with relationship to sales or share of the total industry?

Mr. Cox. Their share of the total industry approaches that of the network.

Mr. Stanton. Sure.

Mr. Cox. And you have stressed through your documents that the share received by the network is justified because the network, in the very nature of its operations, takes these risks, involves the use of working capital, and so on. Now, the point I am suggesting is that it is not true that the same thing is true in anything like the same degree of your owned-and-operated stations.

Mr. Stanton. No, Mr. Cox. That is one reason we have always wanted to have our full share of stations, is to give stability to the network side of the picture financially.

Mr. Cox. That is——

Mr. Stanton. You are quite right.

Mr. Cox. Their earnings, you feel, are justified because of their contribution to the overall economic health of the network structure?

Mr. Stanton. Their earnings are justified for that reason?

Mr. Cox. Yes. In other words——

Mr. Stanton. No, I don't think they are justified for that reason. I think they are justified for the job they do in each community. It so happens that they contribute a large amount to our earnings: and in radio, as this report shows—I don't know what page it was, but I think we referred to it this morning—there is a table showing the trend—it is on page 131.

Mr. Cox. Yes.

Mr. Stanton. Where the ratio of earnings from the network and the company-owned stations, both for radio and for television—you can see that in 1952, in television, 100 percent of our profits in television came from the stations and zero from the network. And in 1953, 66 percent came from the stations and 34 percent from the network.

Well now, if you go back into the radio picture, in 1950 you will find—and that was the year when radio was still enjoying a high level of income—54 percent of our radio profit came from company-owned stations and only 46 percent from the network.

Mr. Cox. Well, let me put it this way. I think it is clear that the profits, just in terms of dollar amounts, of many of the individual licensed television stations are large. Now, those are largely a function of their rate and the degree to which they are ordered by advertisers—which in turn are largely the product of population, the ownership of a frequency—or the temporary occupancy of a frequency—and a network affiliation.

Now, the investment in the plant and equipment of the station in, let's say, Washington, D. C., is substantial, but not tremendous. Having gotten a frequency, a channel grant here—which is in itself one of a limited number because of the artificial limitations imposed by the frequencies—this man is in a position, because of the program product of the network, and of the necessity of advertisers to get into this market, and your requirement, in fact, through your "must buy" that they order the market—he is in receipt of large revenues, when a station operator with exactly the same degree of skill, the same investment in the same kind of transmitting equipment, in a market half the size, will have much smaller revenue. Now, isn't that roughly true, that the revenues which accrue to the operator of an individual station are not necessarily directly related either to his ability, to the nature of the service he performs to his community, or to his investment?

They are simply a product of the fact that he has a channel in a large market, and he has an affiliation which provides him with desirable programs.

Mr. STANTON. Yes, but I don't think that that is anything that is unique to television.

Mr. COX. Well, there are not very many businesses, are there, where——

Mr. STANTON. And I don't quite go along with you that his plant cost is the same in the smaller market as it is in the large market.

Mr. COX. What would be the difference? He may have more elaborate studios.

Mr. STANTON. He may have more elaborate studios. There are many extras that I think you tend to install in a big market station that you wouldn't in a smaller station.

Mr. COX. He has remote equipment. He has, maybe, more cameras in his studio and does a little more live programing.

Mr. STANTON. These are all items of some basic different percentage which is in his investment.

Mr. COX. But the point I am making is that there is a very great disproportion between the net profits at the end of the year for a man running a good operation in a small city, which has trouble persuading advertisers to buy it, and a man who operates the same kind of a station, in terms of public service and in terms of alert and aggressive salesmanship, in a larger city.

Mr. STANTON. I don't quarrel with the facts, as you put them, about the difference between the large market and the small market, Mr. Cox. I am sorry, I don't follow what you are trying to get across.

Mr. COX. Well, maybe the point I am trying to make is this: The thing that permits him to make this is not, again, his investment, or his ability, or the nature of the service he performs—because those may be at least proportional in the two markets—but by the accident that there are not unlimited channels in the big city and the fact that he has received a grant to operate on what is essentially a part of the public domain, and the fact that he enjoys his friendly relations with your network, or another network, which provides him with a substantial portion of his daily programing, he is enabled to receive a high rate of return which is largely a function of the population of the market in which he is located—to which he has contributed nothing.

And you get a situation in which part of the industry is not just doing well, it is thriving; and the other part of the industry—VHF as well as UHF—is hanging on by the skin of its teeth.

Now, is there a flaw in that analysis; that is, does the man in the big city do something which earns the higher rate of return he gets over and above the man in the smaller city?

Mr. STANTON. Well, I don't think I can account for the entire difference, but I am not prepared to say that there isn't some difference. Many times individuals pick the market where they operate. They had some freedom of choice in where they selected the market to apply for the license. They are not ordered to go into a smaller market. True enough, they may have been there because they were in radio, or because they liked the place, or something else. But there is nothing in the law that says they have to go to that particular market to operate. And even so, I think that some of the moderate-sized markets are making a very good income, either in relation to sales or in relation to invested capital.

Mr. COX. I think you point out at 1 point that 7 affiliates of CBS make more than the network in the course of 1 year?

Mr. STANTON. That is right.

Mr. COX. Now, those stations are largely patching in the network for a substantial part of the time. They may, in fact, enjoy affiliations with 2 networks, so they have the choice of the programs, on a live and delayed basis, of more than 1 network. They are making tremendous returns, and I find it difficult to see that they are performing any higher kind of service for their community than a struggling operator who is putting on live programing, and selling a network show when he can, in a city half or a tenth the size of the bigger one.

Mr. STANTON. Well, I expect there are many newspaper editors in a small town who feel they do just as much news reporting as the man does who is editing a large metropolitan daily, but one gets paid a high salary and the other one gets a very modest salary. I don't quite see where this leads us into the present—as far as the present situation is concerned. Because it is not our fault——

The CHAIRMAN. The value of a franchise is worth more in some places than it is in other places.

Mr. STANTON. Certainly it is, and this is true, I think, in every industry. A bottling franchise in a big market is worth more than a bottling franchise in a small market.

The CHAIRMAN. A Cadillac dealer, say, in Washington, is better off financially than in Fargo, N. D.

Mr. COX. This business, however, operates under a license, granted by the Federal Communications Commission, to occupy a scarce commodity—which is the radio frequency.

The CHAIRMAN. That is the difference.

Mr. STANTON. Yes, except I must say, Mr. Cox, even though we get this distinction, I don't know what it does, or where it advances us in a present dilemma.

Mr. COX. No. I think essentially we are trying to analyze the problem to see if you fundamentally disagree with that analysis of it. It is not relevant, I admit, to the immediate question of the network and the network's earnings. I think perhaps there is as serious a problem in connection with the distribution of earnings among the individual licensees, as distinguished from the network.

Mr. STANTON. Well, I didn't quite finish that sentence and I would like it to be on the record. [Laughter.]

Senator PASTORE. I suppose what Mr. Cox means is if you go to the right place and are lucky enough to get the license, you've got a gold mine.

Mr. STANTON. That is right. [Laughter.]

Senator PASTORE. Let me ask you this question, Dr. Stanton: Does the network have any supervision or control over the amount that an affiliate charges for radio time?

Mr. STANTON. Well, as we say on page 31, I believe—there is a footnote here in the supplemental memorandum. I hope I am right in my footnote reference. No, it isn't.

Senator PASTORE. What page is that, please?

Mr. STANTON. On page 40, sir, footnote 1:

> The station's rate for a network program is set by agreement between the station and the network.

Now, that is for the network program.

> While formerly CBS television affiliation contracts gave the right to the network unilaterally to reduce the station's network rate during the term of the affiliation agreement (a right which was in fact never exercised), current affiliation agreements now preclude the network's reducing the rate except in the event of a general reevaluation and reduction, and even then, if there is a reduction, the station may terminate the agreement.

That is covered in appendix A, schedule A, VI, which has to do with the network contracts.

In practice, however—and I suppose there are some men sitting behind me in this room who would agree to this, although I don't want to put words in their mouths. The network is largely the determining factor in working out these rates. One reason is that it is up to us—I am talking only about the charges for network rates. It is up to us, in operating the network, to keep that network in competition pricewise—that is, in price—in competition with our NBC friends and ABC.

Also, we see the thing in the round and we have to price the various markets in relation to what they contribute to the total circulation. And occasionally there will be stations that overlap one another, and we get involved in trying to untangle the contributions of each affiliate to the total circulation. These are very complex and aggravating problems, as some of these men back here will testify to. So that if you say to me do we do more about setting rates than they do, I would say yes, we probably do.

Senator PASTORE. In other words, if I want to make a political speech during the campaign for 50 minutes back home, I have to pay the rate that CBS said I had to pay?

Mr. STANTON. No, sir. I am only addressing myself now to the charges that are for the network time in Providence. The local rate——

Senator PASTORE. I am trying to get that cleared up.

Mr. STANTON. I am glad you are, because there is a lot of misunderstanding about this. The rate that the station there—there are three kinds of rates that the station might have. First of all, there is the network rate, and that is the one we are just discussing, and that is the one we have a large hand in determining. Then there is the national spot and local rate. That is the rate you would pay on a station-by-station basis.

Senator PASTORE. And you have nothing to do with it?

Mr. STANTON. We have nothing to do with it, except I suspect that the rate that we helped set for the network rate does influence, to a certain extent, the rate that is charged locally, and national spotwise. I wouldn't want to leave you with the impression they may be 100 percent apart, because obviously they are not. They are pretty close.

Senator PASTORE. Well, I have paid the charges, and I think you are right. [Laughter.]

Senator PURTELL. But actually, to complete the answer to the question of Senator Pastore, when and if he runs for President and wants national coverage, you would set the rate, is that correct?

Mr. STANTON. Well, I wouldn't charge him any more than I would charge somebody else. [Laughter.]

The rate that Senator Pastore would pay at that time would be the published rate card. We have the same rate for political broadcasts that we do for commercial, and they don't change except as rates are increased by individual markets—and those are increased only when there is additional circulation to justify the change.

Senator PASTORE. But you do concede this, that insofar as national time is concerned—that is, the national program is concerned—the network has much to do with the amount of rate that is charged on the local level?

Mr. STANTON. By indirection, yes.

Senator PASTORE. By indirection.

Mr. STANTON. That is right.

Mr. COX. Could you tell us how you do deal with this difficult problem of overlap in fixing rates? How do you allocate the receipts in the overlap area as between the stations in the two contiguous markets?

Mr. STANTON. You realize, Mr. Cox, that you are opening a large Pandora's box here. [Laughter.]

Well, let's take an example where we have two basic-required stations and they have substantial overlap. I don't want to say that—perhaps I would like to strike the word "substantial" and say there is some overlap. We think of this in an area of the country where the coverage areas are perfect circles—where there aren't mountains and terrain that would make them into strange shapes—but they are perfect circles. You will have a piece that is overlapped, and generally if they are both basic stations and the markets are roughly equivalent, that is whacked right down the middle. The advertiser is not charged twice for that circulation. Now, there are some spillovers from time to time, and we have to separate, or try to act like a judge, and try to say "This much will go to one, and this much will go to the other." By and large, it is worked out on the basis of a split of that.

Now, then, you have a case—or you could have a case, for example—where a station is added to the network on a per-program basis. It is not a basic station. It is not a primary or a secondary station. It is a per program station. I am giving you the other extreme. Those are usually stations that are in very small markets, or they are stations that have come into existence late in the cycle or the life of television, so there are established stations in the area. The part that the per program station gets—the amount that that station gets is the incremental part that it contributes to the total network circulation.

In other words, if there is a station on the network that has been established, and so forth, and it has a big circle of coverage; and there is a crescent shape [indicating] that you get by adding another one, a per program station—the rate that is charged is applied only to that crescent-shaped area. It doesn't get into the overlap at all. The overlap is credited to the initial station.

Now, those are the two extremes. There will be variations depending upon the situation; and you name it and, brother, we have had it.

Mr. Cox. What if you have a basic affiliate in a large city and a primary affiliate in a smaller city and they have substantial overlap? I think you indicated in your affiliation standards that this might have raised a question in your mind, in the first instance, whether you would affiliate the station in the smaller city. And you point out, for instance, that even though it says initially it is willing to accept only the incremental value——

Mr. Stanton. That is right.

Mr. Cox. That it adds, that later on as it wins viewers in the area of overlap, it will, and naturally, expect to be paid for them. And you seem to feel that you ought to try to avoid this difficulty, the net effect of which, of course, is to always credit the sets there to the metropolitan stations since it is the only one providing CBS service, and to deprive the people in the incremental area of CBS service at all. Isn't that the net effect of being concerned about a future problem of allocating this rate?

Mr. Stanton. Well, yes; that is a net effect. In practice, it doesn't work out that way, because we will not deny service to any station, unless it is a station that is in any market where we have an affiliate—providing, of course, the affiliate that we have is carrying the program, because even here in Washington we feed programs to other than our affiliate here when our affiliate in Washington doesn't clear the program.

So that in practice, if an advertiser wants to buy that station, we will add it on a per program basis; and if enough advertisers want to buy the station, the chances are before long that becomes a secondary or a primary affiliate. It may become a primary affiliate right from the outset.

You see, part of our problem, Mr. Cox, is due to the fact that the industry is extremely young in terms of having a body of facts on coverage in terms of audience reaction. We are growing very rapidly, partly as a result of the freeze—we had this artificial plateau in terms of new stations, and now we have had a whole series of them coming on the air. But as the industry stabilizes itself in the number of stations that are operating and we begin to accumulate audience research information on a county-by-county basis, the problem of separating overlap will solve itself very quickly, because the problem of orienting your antennas pretty well fixes most of the people in these overlap areas. They are either fixed to one market or they are fixed to the market 180° away.

But we don't have enough adequate fieldwork yet in terms of listener research to give us the basis for computing those rates. But when we do get that kind of information, many of these problems that we are talking about now as aggravating problems will resolve themselves, because we will be able to turn to a body of facts which will show us what happens in this overlap county. Does it go to one market or does it go to the other market?

I don't care what engineering maps show. I am most concerned on what the public does. Obviously, the public generally follows what the engineering maps show. But we have learned over a 20- or 30-year experience in this business—not all of it in television, but most of it in radio—that what the listener does is the thing you have to watch. That is why we base so much of what we do on what the audience does, whether it is programing or whether it is how we affiliate stations. Because that is the real test. It is the public reaction, and not what the engineer's contours or what the station manager says.

Mr. Cox. Now—Did you want to change the subject?

Senator Pastore. I am—I simply think we ought to take a minute's recess in order to allow a change here of stenographers.

(A recess was taken.)

Senator Pastore. May we now have quiet, please, so that we may resume the hearings?

Off the record.

(Discussion off the record.)

Senator Pastore. Proceed.

Mr. Stanton. If I may——

The Chairman. Go right ahead. See if you can't go on with your statement and then we can ask these questions afterward.

Senator Bricker. Mr. Chairman, I am rather opposed to taking pictures. I know they have a handsome subject here, and a lot of his colleagues are with him. But this is tremendously inconvenient to have these lights on. I notice one or two of the associates here that are perspiring rather profusely, and it makes it hard to see, and it makes it hard for the witness and hard for the people in the back of the room. So if they could cut it down to the very minimum, I would deeply appreciate it. You are not taking pictures all the time, and it just discommodes the whole committee.

The Chairman. I think they can cut it down.

Senator Pastore. Incidentally, that is NBC. [Laughter.]

Senator Potter. They don't have any film in it, though. [Laughter.]

Senator Bricker. I don't object to taking pictures, but I don't want to inconvenience the hearing, and I know it is very hard on the witness. It is flashing right in his eyes all the time.

Mr. Stanton. Thank you, Senator Bricker. It is a little warmer up here, for more reasons than one. [Laughter.]

I would like to go back and say the 28 percent of the industry's net profits before taxes which CBS television earned in 1954 is not disproportionate. The CBS television network was the leading network in 1954.

CBS television's share of industry revenues is to be compared with the 73 percent of the industry profits earned by the leading company in the nonalcoholic beverage industry in 1952; the 51 percent earned by the leading company in the petroleum and coal products industry; the 50 percent earned by the leading company in the dairy products industry; and the 33 percent earned by the leading company in the tobacco products industry.

The measure of profits as a percent of return on tangible property is wholly inapplicable in the field of broadcasting operations where physical investment plays such a relatively minor part.

But even if we accept this mistaken standard, the figures of 108 percent attributed to the CBS television network and the 3 CBS-owned stations, or of 65 percent attributed to the CBS television network, are neither abnormal nor immodest.

In creative industries, McGraw-Hill Publishing Co. profits before taxes in 1954 were 526 percent of net tangible property; Time, Inc., 116 percent; and New Yorker Magazine, Inc., 2,000 percent.

In the field of manufacturing, where bricks and mortar play a larger part, Boeing Airplane Co. earned, before taxes, 377 percent of its net tangible property; Douglas Aircraft Co., Inc., 249 percent; General Motors Corp., 107 percent; General Electric Co., 80 percent; Coca-Cola Co., 92 percent; and Pepsi-Cola Co., 119 percent.

2. Monopoly: The CBS television network does not constitute a monopoly by any meaningful definition. Our attorneys' opinion and memorandum which we have submitted deal fully with the legal aspects of this issue. To the extent that the charge is based on profits, I trust I have just disposed of it.

The fact is that all network television in 1955 received only 9.8 percent of the national advertising dollar. The CBS television network and the 4 CBS-owned stations received only 3.2 percent of the national advertising dollar and about 20 percent of the television advertising dollar.

The growth of the television networks reflects intensive and vigorous competition as witness the extent to which the position of each of the networks has changed during the past 6 years. During the first quarter of 1949, the networks, according to gross billings, ranked as follows: NBC, CBS, Du Mont, and ABC. Today, on the same basis, it is CBS, NBC, and ABC; Du Mont no longer operates a network. No single network has as much as 50 percent of all the network business. And, contrary to one of the usual indexes of monopoly—a smaller and smaller share for others than the leader—the outstanding recent phenomenon has been the growth of ABC from 9 percent of the total network gross billings in 1953 to 13 percent last year. For the first 3 months of 1956, ABC's gross billings are running 76.2 percent ahead of 1955.

3. Insistence on the use of network-produced programs: The CBS television network has no policy favoring programs it produces. Its policy is to place the right program—regardless of its source—at the right time. The CBS television network schedule itself negates the charge. Of the total hours (72¾) of sponsored programs broadcast by the CBS television network during the week of April 7, 1956, just over half (50.2 percent) were created and produced by 38 independent program producers. And slightly more than half of the remaining hours (27.1 percent) were filled with programs produced by 8 independent producers in association with the CBS television network.

The CHAIRMAN. Just to clear the record there, these independent producers put a show together, is that the way—I am asking this for information—they put a show together; some advertiser wants to put it on the air, and then you give them the time; is that right? Do you participate in the show in any way as to the profits, or do you just sell the time?

Mr. STANTON. If it is an independently produced program, an outside package, we have no participation in any way, shape or form in the profits on that program, and the only thing we provide——

The CHAIRMAN. Is the time and the facilities?

Mr. STANTON. Yes; that is right; the time and the facilities.

The CHAIRMAN. Now, where do most of those programs come from—advertising agencies?

Mr. STANTON. No; most of them come from independent packagers, some come from advertising agencies; if you are interested, we can supply a list. We have a breakdown for a period of time in April, I believe, of 1956, showing the source of all of our programs by three broad types: Those that are produced exclusively by outsiders; those that are produced by outsiders in conjunction with us; and those that are produced exclusively by us.

The CHAIRMAN. I don't say whether this is right or wrong, but it has been suggested that when we talk about monopoly that some of the programs were monopolized by 3 or 4 of the large advertising agencies. That wouldn't be, from your figures, the case here, would it?

Mr. STANTON. Well, do you mean the production of the program, Senator Magnuson?

The CHAIRMAN. Yes.

Mr. STANTON. Or the handling of the time and the production?

The CHAIRMAN. Well, both, or the tying up of talent for an—almost a monopolistic period of time.

Mr. STANTON. Well, I think, first of all, no one has a monopoly on talent or anything approaching it. But it is true that there are large agencies, large advertising agencies——

The CHAIRMAN. What I mean—supposing a big name shows up and gets tied up by one advertising agency, and they in turn would monopolize that production of that program involving, say, a few of the big names in the talent field.

Mr. STANTON. Well, many times if you make a contract——

The CHAIRMAN. I don't know that this is true. I just know that this complaint has been made.

Mr. STANTON. Well, Senator Magnuson, you do have exclusive contracts for talent. And in that sense you do tie them up. But this isn't something that any one advertising agency does, or any one package producer, or for that matter any one network.

The CHAIRMAN. What I am trying to say, if you had—if you have 38 independent program producers, it would probably do a lot to dispel the feeling that this might be too closely held; is that correct?

Mr. STANTON. I think it does dispel that.

The CHAIRMAN. They would maybe bring in new talent?

Mr. STANTON. I think it dispels two things: The fact that there is any person on the outside on an independent basis that has the lion's share of this; and it also dispels the fact that the networks have the lion's share of the picture. Because as I go on to say: The CBS television network produced less than one-fourth (22.7 percent) of its total commercial schedule. The trend is worth noting: In the week of April 1956, 50.2 percent, or 36½ hours, of the network's commercial schedule was occupied by independently produced packages, as compared with 46.6 percent (27¼ hours) in April 1954. The shift in favor of the independent package producer was even more marked during class A time: In April 1956, 57.7 percent (16 hours) of the network's weekly commercial schedule was occupied by independently produced programs, as compared with 38 percent (9½ hours) in April 1954.

Senator PASTORE. Is this intended as an answer to the criticism made by Mr. Moore?

Mr. STANTON. No.

It is clear, therefore, that the charges are refuted by the facts. There is a real paradox in the current criticism directed at us in this area today. Just 10 short years ago, in March 1946, the Federal Communications Commission criticized us for not engaging in program creation and production. This, the Commission said, was a failure on our part to exercise our programing responsibilities. In its report entitled, "Public Service Responsibility of Broadcast Licensees," the Commission said:

> A device by which some networks and stations are seeking to prevent program imbalance is the "package" program selected, written, cast, and produced by the network or station itself, and sold to the advertiser as a ready-built package, with the time specified by the station or network. In order to get a particular period of time, the advertiser must take the package program which occupied that period,. This practice, still far from general, appears to be a step in the direction of returning control of programs to those licensed to operate in the public interest * * *.

We have not gone as far as the Commission urged us to in 1946, we do not tie in time to program. But we do exercise our responsibility for maintaining a sound, overall programing schedule. And it is for this that we are being criticized today.

The CHAIRMAN. But there, too, I think the record ought to be clear. Sometimes I think we miss this point: The licensee—the individual licensee, not the network—is responsible to the FCC for the program, directly.

Mr. STANTON. Yes, but because in the case——

The CHAIRMAN. You are not responsible for programing to the FCC?

Mr. STANTON. Well, Senator Magnuson——

The CHAIRMAN. You may feel responsible.

Mr. STANTON. Well, there are two—it cuts two ways.

The CHAIRMAN. Legally, you are not.

Mr. STANTON. Legally, we are responsible for the program schedule of our four stations that we own and operate.

The CHAIRMAN. Yes. I am talking about the networks, excuse me.

Mr. STANTON. Right. But we have an obligation to the affiliates to provide the kind of balance and programing that we think is the best possible programing.

The CHAIRMAN. But that is a voluntary assumption of responsibility and not—it is not a legal responsibility.

Mr. STANTON. Well, I would like the lawyers to talk to how legal it is, because when we enter into an affiliation contract with the stations, I think they in turn expect a certain kind of performance from us.

Now, that is outside the FCC in one sense, but it comes back in another door awfully fast through their program schedules and through our own.

The CHAIRMAN. It comes back awfully fast if they get checked up, or you give them the wrong program?

Mr. STANTON. That is right.

The fourth charge that I would like to discuss has to do with networks and small market stations.

There is no basis to the charge that networks channel a disproportionate share of television revenues into large market stations and ignore small market stations. The facts are precisely to the contrary.

We have discussed in the CBS supplemental memorandum and in the analysis of Senator Bricker's report the special benefits of a network to the stations in the smaller markets. I touched on them earlier today. But recently I received a document which tells the whole story at firsthand. Frank C. McIntyre, the vice president and general manager of KLIX-TV, Twin Falls, Idaho—with 6,300 families—sent me a copy of part of the reply which he filed to this committee's station questionnaire. In answer to the question, "Has your station benefited from CBS' extended market plan or NBC's program extension plan," this is what he said:

Mr. Cox. Before you read that, could you tell us whether you received part or all of copies of other questionnaires that were filed by your affiliates?

Mr. STANTON. We received all in the case of some affiliates, parts in the case of other affiliates, but a very small proportion of our total affiliates have given us any of the material.

And since that question has come up, Mr. Cox, I would like the record to show that this came to us voluntarily. We didn't ask about it. I didn't know anything about this man's filing; in fact, it came in just as we were trying to prepare some language for this, and it seemed that this man told the story better than we could tell it ourselves, and that is the reason I inserted it into my testimony.

The CHAIRMAN. What is the percentage of replies that we got, the amount of questionnaires?

Mr. Cox. They are probably within 20 or 25 of complete response to the questionnaires.

Mr. STANTON. If you don't get a 100 percent, I will be surprised.

Our station has benefited from CBS' extended market plan to such a degree that I am convinced we would never have succeeded without it. Because CBS aggressively promoted and sold small-market television stations—at a realistic cost per thousand—we were able, from our very first day of operation, to offer our viewers worthwhile TV shows and local, regional and national advertisers attractive adjacencies. While, at the start of operation, we were ordered for only a limited number of network programs, nonetheless, we had enough to use them as "anchor programs" around which to build a schedule.

Thanks to the CBS extended market plan, we could go to our local Studebaker dealer and sell him I Led Three Lives. "You'll be right next to Jack Benny," we told him. Benny brought Three Lives. Three Lives brought AG All Star Theater. Then came Ed Sullivan from CBS. "You can buy Highway Patrol just before Ed Sullivan," was our sales pitch to the Mobilgas dealers. And, they bought. Now—Sunday night is sold out.

And it all started because CBS sold American Tobacco a "pig in a poke"—KLIX-TV. Jack Benny is responsible to a great degree for our SRO status on Sunday night. And, not only do we have hundreds of dollars in local billing, we're filled with blue-chip national advertisers on Sunday night.

Not only did we use the CBS commercials as anchor programs—we could point to these CBS advertisers in our local sales presentations. Ours was a new market—a small, conservative, farming area. We had no "track record." But because of these CBS advertisers, we could show the local skeptic that the smart buyers, the blue-chip clients with their tremendous research and advertising departments, had enough faith in our facilities to come on from the very first week.

It may be a little difficult to comprehend how important this was "sy-cologically." Due to grave financial problems, the opening of our station was delayed for over a year. By the time we did make it our people were more than skeptical. Many of the businessmen were convinced (*a*) we'd never make it, and (*b*) if we did, we'd never last.

Thank God we were able to come into their homes in our infancy with Jack Benny, Private Secretary, Garry Moore, I've Got a Secret, Arthur Godfrey, You Are There, Red Skelton, and a lineup of CBS sustaining shows that cost us $5 each. Yes—$5, instead of $25 to $75 we would have paid for syndicated films. This was positive evidence to our viewers and potential clients that their town did have a television station—and the time buyers in New York knew it.

Have we benefited from the CBS extended market plan? I'm sure there are many secondary market operators who feel as I. It was a blessing for small stations:

1. EMP was the biggest single factor in the success of our station.

2. Without EMP, it is questionable whether our station could have remained on the air due to our inability to underwrite huge losses.

3. EMP made it possible for our operation to attract local and regional sponsors—as we could offer programs and spot adjacencies next to important programs and advertisers.

4. And, perhaps most important of all, EMP gave our station the prestige that's necessary before the mass audience and advertisers will accept a new product.

5. EMP made it possible for our station to quickly move into the black.

6. EMP has been largely responsible for our being ordered for many features from the two competing networks and for considerable additional local, national, and regional business. How? Products advertised on our station through the CBS extended market plan naturally started cutting into the sales of nonadvertised products. Area managers and distributors of the nonadvertised products felt the pinch and convinced their home offices action was necessary. The downward sales curves brought orders from other networks and from our national and regional representatives. And, many local sales have been made to combat the pressure of the CBS advertisers.

7. Without EMP, few network advertisers would have ordered our facilities. The great majority of these buyers are "slide rule" artists. And the slide rule would come up with one answer—don't buy Yuma, Twin Falls, Missoula, and their like. The EMP sales formula—and aggressive EMP sales efforts—convinced a few bellwether accounts that perhaps TV was practical in the hinterlands. So, a few got their feet wet, and the results were such that secondary market television is now accepted on Madison Avenue.

In our case—we have many advertisers who buy our station at a low EMP rate and yet use our station extensively on our established national rate. We proved to them we could solve their sales problems and we were an economical buy and absolutely necessary even at normal rates.

Without EMP—how would we have proved it?

8. Less than a year after we started with little or nothing except an overdraft, long-term indebtedness and a hopeless list of past due accounts payable, our operation is financially sound—the banks which gave up the cold shoulder consider us a good financial risk—we're meeting our notes—the past-due accounts are being whittled down—we're paying our current bills—and our staff has grown from 20 for both radio and television to over 40.

EMP didn't do it all by a long shot. We cleared the land, removed the rocks and plowed the field—but CBS planted the seeds and helped us irrigate and cultivate. And, the best farmer in the world with the best land can't grow a crop without seeds.

I doubt even if CBS comprehends the farflung benefits of their extended market plan. CBS–EMP has given small market operators heart. It's given them the confidence they lacked. It's proven more than any other single factor that small market television will work.

Senator POTTER. You should make that man a CBS vice president. [Laughter.]

Mr. STANTON. Well, that is the end of the quote, and just as a footnote I would like to add to Mr. McIntyre's comments that today the CBS television network has 26 of these EMP stations; and as I said earlier I doubt that we would have ever gone into them as early as we did, in our normal development, if we hadn't had a hearing down here 2 years ago in which Senator Potter asked me some questions about why we weren't doing more for the smaller market stations. And while we had started doing some of that, I went back and scratched my head with my associates and decided we weren't doing enough; and we tried to make something a little better, and we came up with EMP, and this is the result.

Senator POTTER. I would like to take this time to compliment both CBS and NBC for moving into this field to provide programing in the smaller markets. You moved into the area quickly and I think with good results.

Mr. STANTON. Thank you.

Fifth is option time: There is much misunderstanding about what option time is and how it works.

The CBS television network's affiliation agreement provides that during 3 hours of each of 3 segments of the day, a station will accept the sponsored program offered by the network. But there are exceptions and they are not technical—they are substantial.

Option time operates only on at least 56 days' notice. It does not operate against programs of other networks and it does not operate for nonsponsored network programs. As we interpret it, it does not operate for a network program which straddles option time. For example, the CBS television network program Studio One, which is broadcast from 10 to 11 p. m., New York time, is not subject to our option for any part of that period because option time only extends to 10:30. In other words, we lose a half hour of option time.

Most important of all, a station has broad rights to reject a network program during option time. It can do so if it decides that the network program is contrary to the public interest, or if it wants to substitute a program of outstanding local or national importance. Even more than this, it can turn us down during option time if it reasonably believes that our program is "unsatisfactory or unsuitable."

The CHAIRMAN. How does that work out in my country, where there is 4 hours' difference in time? Do they turn it down because of the time?

Mr. STANTON. No, Senator; we adjust the option-time portion of our contracts by time zones, so that as we go through from east to west, or west to east, depending on where the program originates—by and large these are in zoning across the country by time zones. We get a little confused in the summertime because of daylight saving time problems, but for the most part that is in Michigan at the present time.

The CHAIRMAN. So that doesn't work as a handicap to, say, an operator in the Pacific Northwest.

Mr. STANTON. Not at all, not at all. I cannot tell you just how broad this right is because we do not approach it that way. The fact is that a station has very substantial leeway to turn us down if it thinks certain nonnetwork programs will better serve the viewers in its area.

Senator PASTORE. Are you saying by that there has never been a controversy over the exercise of that option?

Mr. STANTON. Well, now, Senator Pastore, I can't recall any controversy over that.

Senator PASTORE. I mean it has been more or less an ex parte procedure up to this time. The station just says: "We think we have a local program of greater interest, and for that reason we cannot take it"; or what?

Mr. STANTON. I went through the files on a couple of programs just to see what accumulation there has been of answers, and many times they don't give us that much of an answer; they simply say, "We don't want to take it." Often, to the extent we can, we try to persuade them to take it; but they don't rule book us in the sense that they refer to the Communications Act that gives them the right, for local programs of public service nature, to turn us down. They say "No," and they may have a flat spot program that they think is better than our program, or they may just plain not like the program we are providing them.

I can think of one case in our current schedule where, at the outset of the season, many of our affiliates didn't take the program. As a matter of fact, some of our basic required stations refused the program, and we offered it to other stations in the community. And I suspect that many of the stations that turned it down didn't think the program was a very good program. As it turned out it became a very popular program. And some of the stations changed their mind, and the acceptance on the program is now much higher than it was when we started out. I can name any number of other examples where the list of ordered stations is larger than the list of cleared stations, and if the program is exceptionally good, we build up. Sometimes we are not as successful as others. But this is not something that we get a long explanation for why a station turns it down. They sometimes just say "No."

Senator PURTELL. Is that option exercised? Percentagewise can you give us any idea as to what the percentage might be of exercise of the option, timewise, now?

Mr. STANTON. Yes, Senator Purtell, I come to that in just a minute in my statement here.

On page 108 in the supplemental memorandum—and I won't clog the record with reading this into the record—but there is a footnote which tells the story of the clearance history on the $64,000 Question, because it illustrates the point that you were making, Senator Pastore, and I would like that reference to be reflected in the record.

Senator PASTORE. In other words, it isn't to the advantage of a local station to exercise this right unless they can get something better?

Mr. STANTON. Looking at it—if I were a station manager I certainly would say "Yes" to that question.

I was saying this is certainly more than a technical and limited right. Resuming the transcript, or my statement, here: Our affiliates' schedules are studded with nonnetwork programs in option time—even in class A option time. We estimate that for a week in May this year, during the class A option time, a total of 815 station hours of sponsored programs were offered to our CBS television network's "basic required" stations and 91 of those hours were not cleared as ordered. In total, on all CBS television network affiliates, during that single week, there were 524 station hours of option time ordered by network advertisers but not cleared as ordered by the stations.

In short, CBS television network option time is not a rigidly invoked legal right and it does not operate as a one-way street. In practice, it is utilized and adjusted for the benefit of both the network and its affiliates. While it is not a rigid right, it is vital to the network and to the affiliates because it is the mechanism by which the network has some reasonable assurance of general clearance by stations. Without its assurance we cannot go ahead to plan our overall day-to-day, week-in-and-week-out, schedule and without which there is nothing at all on the shelf to offer to the advertisers.

In the absence of option time, or its equivalent, and particularly in a period of a declining economy, there would be a real threat of destruction to networks which would be difficult to contain. The inevitability of this conclusion lies in the fact that, without option time, the usefulness of networks to advertisers—the assurance required by network advertisers to secure reasonably complete nationwide coverage on the basis of a single order—would be frustrated. For, if some key market stations would refuse to clear during one half hour, and another group the next, and still another a different half hour, each of these network time periods would then become unsalable to national advertisers. Since no network could afford to program so many time periods on a sustaining basis, the inevitable effect would be to curtail network service. Thus, the onerous burden of program cost would be thrown on the scores of small-market stations which had not refused to clear.

The foregoing are the practical results of prohibiting option time. Without option time or something equivalent, the network function sooner or later would be emasculated. With it would go so much of the magic of live television. The vast majority of stations, and all of the public, would be the losers.

Three unsound premises constitute the basis of criticism of the practice of option time:

First, option time, contrary to the charges, does not restrict non-network program sources. The supply of nonnetwork programs is large and increasing and its use by affiliated and unaffiliated television stations has been extensive. More than four times as many independent suppliers of programs in television exist today as existed 8 years ago. Since 1952, a parallel increase has been recorded in the availability of syndicated film and film series produced especially for television. And last year, many syndicated film distributors reported increases of 50 percent or more in revenues over 1954.

Second, contrary to the charges, option time has not foreclosed availability of time for nonnetwork programs.

First, a vast number of hours are not subject to network options at all, either because the stations are not affiliated with any network (and these cover almost half the population) or because even on affiliated stations only a maximum of 9 hours a days is subject to options at all.

Second, in the schedules of our affiliates, of course, a very considerable percentage of the total option hours are not occupied by CBS television network programs. Even on the 52 CBS television network basic required stations, as I have noted, 91 station hours during 1 week were not cleared as ordered, and there were a substantial number of other periods on these stations in which option time did not operate because of "straddling" or nonoccupancy by sponsored network programs.

Third, and finally, it is not true that option time has restricted the ability of nonnetwork advertisers to use the medium. The use of television for spot advertising has increased from $28.5 million in 1949 to $485 million in 1955—a 1,600-percent increase in gross billings.

Since a major concern of this committee is directed to the financial stability of the smaller market stations, the statement of Murray Carpenter, president of W-TWO, Bangor, Maine, before this committee on May 15 is worth recalling. Mr. Carpenter pointed out the inability of stations such as his to marshal the manpower and money for travel, entertainment and correspondence to sell film programs to replace the loss of network programs which he recognizes as inevitable if option time were banned and network programing were made unavailable to stations such as his. He said:

> What I am saying in plain, blunt terms is that W-TWO would not be where it is today if it were not for the existence of network option time. I don't believe that WABI, our competitor in Bangor, would be where it is today, were it not for the existence of network option time. And the people in the 90,000 television homes of the Bangor area would not be spending 57.8 percent of their evening time watching television were it not for the strong program schedules made possible by the existence of network option time.

And he concluded his statement by saying:

> If network option time were to be abolished or severely restricted, maybe the networks woud be able to devise some other mechanism which would make a large volume of network programs available to stations outside of the top fifty or one hundred markets. Maybe. I hope this committee will decide that it is unwise to exchange a good, efficient, productive, successful system for such a "maybe."

End of Mr. Carpenter's statement.

Sixth, Restriction on stations' choice of program sources: The proposals to deprive stations of their discretion in choosing among program sources have taken two forms: First is the proposal by the American Broadcasting Co. to forbid a VHF station in markets which have a lesser number of VHF stations than there are networks from carrying more than a specified percentage of programs from a particular network. It is also designed to require the station to carry the programs of ABC (or any new networks) for a specified percentage of time. Second, the operator of an unaffiliated station has proposed that stations, in effect, be prohibited from devoting more than three-quarters of their time between 7:30 and 10:30 p. m. to network programs. The practical effect of this proposal, like the ABC proposal, is to place an affirmative requirement on the station—in this case to require it to carry programs for a specified period of time from nonnetwork sources.

Adoption of these proposals would established a dangerous and unsound policy of Government compulsion forcing a licensee to deal with a program source not of its own choosing and to accept programs which it might otherwise reject. It involves a concept squarely contrary to the underlying principle of licensee responsibility embodied in the Communications Act, which puts on the station licensee itself the responsibility of making the determination of which among all programs offered are the most suitable for its audiences. While it is advanced by those who say they want to compete on equal terms, it is the antithesis of competition because it would exclude all networks in the one case, or particular networks in the other case, from competing for the time of a station licensee.

These proposals particularly illustrate the overriding principle which I mentioned at the outset. They are vivid examples of those who have particular interests advancing proposals which may help them but which ignore the public. For the precise result of these proposals is to bar network programs from the public by requiring the station to go to some other source, no matter what the merits of the program and no matter what the demonstrated desires of the public.

Seventh, must-buy stations: The CBS television network has a list of 52 primary affiliates, covering about 82 percent of American television homes, which it designates as "basic required." Except in special cases, the CBS television network requires that an advertiser order these stations as a minimum.

These basic required stations as a group are the indivisible product that we assemble and sell. For a network's function is to provide a nationwide circulation just as Life and Saturday Evening Post serve the entire Nation in the weekly magazine field. The real purpose and function of the basic required policy are simply to define and delineate the product that we have for sale. It is no more sensible to permit an advertiser who wants to use network television to chose a few scattered markets and reject a substantial part of the network than it is to say that an advertiser who buys space in Life or Saturday Evening Post must be permitted to reject the advertisement in those copies of the magazine distributed in Los Angeles, Louisville, or Kalamazoo.

To let an advertiser pick and choose a few scattered stations would make network operations, geared for activity on a far larger scale, uneconomic. Worse than this, it would harm all the vast majority of the stations who are not ordered and for that period would not be a part of the network.

In any event, this issue relating to basic required stations is a false one. The requirement applies only to advertisers and it is obvious that, nationally, advertisers will normally want the basic required list in order to amortize their great program costs. I have never heard any complaint from any network advertiser about this practice. The advertiser in fact usually buys far in excess of the 52 basic required stations; the average station lineup for sponsored programs in April of this year was 83 during the daytime and 121 at night.

In summary, the basic required practice is nothing more than a conformance to the normal demand of national network advertisers and is no different from any other minimum order policy which a supplier adopts where the nature of his product, the requirements of his customers, and the economics of distribution justify it.

Finally, eight is S. 825: This bill provides that the Federal Communications Commission shall be empowered to regulate networks. It does not state what regulation is contemplated and it does not set forth the standards for such regulation.

I had thought that the special report recently transmitted to this committee by Senator Bricker, the author of S. 825, gave rather strong indication of what sort of regulation the bill intends. Senator Bricker has assured me that I am mistaken. In the circumstances, since there is no new light on the purposes of the bill, I think it best for me to turn to my testimony of 2 years ago before the Subcommittee on Communications of this committee, when S. 3456, an identical bill, was then pending. What I said then is, I believe, applicable today:

On its face this bill is a simple one, providing for the regulation of networks. But since the Commission already exercises rather considerable regulatory powers over the networks through its licensing of the stations owned by networks, as well as through its licensing of stations affiliated with networks, the implications of S. 3456 are rather large. In effect, it would regulate, and hence license, anyone entering into the business of networking irrespective of the fact that that network owns no stations and thus makes no use of any portion of the spectrum. And it is the use of the spectrum which has always provided the basis in law for regulating and licensing broadcasters. This concept is abandoned by S. 3456 which thus enters into a novel and dubious realm. Perhaps the bill can most clearly be viewed as though it proposed to regulate and license a network as a supplier of programing material, just as do film producers, independent program packagers, or advertising agencies which produce programs.

This I believe is an extreme concept and we have a number of comments about it. But I think that for the present I should limit my comments here to the particular context of these hearings, that is, in the context of regulation of network affiliations.

If the bill is designed to empower the Commission to require networks to supply particular stations with programs or is designed to require stations to give up particular portions of their time to each network, this is an extremely radical proposal. Constitutional problems of free speech are involved. Keeping in mind that this is an attempt to regulate networks per se and wholly apart from station licensing, it is no different from saying that newspaper wire services or newspaper syndicates should be subject to regulation in order to permit a rule which would provide that if a newspaper chose to carry AP dispatches, it must carry UP and INS dispatches, or if it chose to carry Walter Winchell, it must also carry Drew Pearson, Walter Lippmann, and Leonard Lyons.

I cannot believe that such a proposal can be seriously considered. Television and radio are media of communication and information. Any regulation of networks is necessarily a regulation of freedom of speech. There has been no showing that so extreme a proposal is required in the public interest.

CONCLUSION

Mr. Chairman, it hardly seems possible, but the end of my statement is almost at hand. Most of it has had to do with the economics of television networking because most of the charges and proposals concerning networks have been directed at their economic practices. Yet I would leave an important word unspoken if I did not address myself to one charge that lies outside economics.

This is the charge that the heads of networks exercise an arbitrary and capricious power over what the public sees and does not see on television. I have a five-word answer to that: They do no such thing.

Senator BRICKER. Could they?

Mr. STANTON. Senator Bricker, I would like to address myself as I go into this, on that, and if I don't satisfy you, sir, I would be only too happy——

Senator BRICKER. I am just questioning the power, the authority, if it were arbitrarily exercised, to do such a thing that would end in such control.

Mr. STANTON. They might do it once, sir, but they would never do it again.

Senator BRICKER. That is what I am getting at. Then you would come to exactly what I have proposed?

Mr. STANTON. No, not by the route that you propose, but if you had been here this morning, Senator Potter and I were talking in this general area.

Senator BRICKER. That is the area of editorializing?

Mr. STANTON. That is right. And if I could develop what I want to say here and then come back——

Senator BRICKER. Go ahead. I don't want to break in.

Mr. STANTON. Not at all. I would be only too glad to address myself to the point that you made.

So, I suppose that it could also be said that the heads of the major motion picture companies dictate the kind of movies that people will see; that the heads of the largest television receiver manufacturers dictate the kind of television sets that people will use; and that the heads of the several big soup companies dictate the kind of soup that people will eat.

All these statements have a surface truth. But they are wrong. In each case, the manufacturer, naturally, has the final responsibility of deciding what his company will produce, just as we have the final responsibility for deciding what our program schedule will include. But in the case of all of these industries, the decision is based on the company's best information of the needs and wants of the consuming public—in our case, to satisfy the tastes of the public and to expose it to the widest variety of information, entertainment, and art so that, if it chooses, the public may develop new and different tastes.

In fact, in the business of broadcasting perhaps more than in any other business, the ultimate decision is not ours but the public's. In our business the process is one of pure democracy. Each viewer is completely free to turn his dial on or off or to shop around. He has made no investment in the program. He is as free an agent as there can be.

I would say that in these circumstances it is absolutely impossible for networks or their officers to affront public taste, to deny public taste, to control public taste, to run persistently counter to public taste, or to manipulate public taste to their own ends. For television, the public is the ultimate monitor—the monitor in chief. What it persistently turns off cannot be turned on again by any group of network executives, let me assure you.

For a network draws its validity in precisely the same fashion as an elected official of government—from election by and of the people. But with these important differences: The vote is informal, it is anything but secret, and it is wholly continuous, taking place every minute of every hour of every day of every year. The network that ceased to have the consent of its public, and to be a satisfactory servant to that public, would lose its audience and disappear completely. The prime thing of value it has to offer to the source from which it receives its revenues—the advertiser—derives entirely from the health and strength of the relationship it has to the American public. We regard the public as the touchstone of our success, not just out of theory, not just as a matter of lip service, but because we must please and serve this whole public or else we are out of business.

I think I have said enough to make it evident that the problems of networking are at once delicate and complex, and contain elements of tremendous scope and importance. There is nothing sinister in the management and operation of networks. There is nothing capricious in our practices and procedures. Believe me, we have learned about them the hard way—through much experience and much experiment. Speaking for the Columbia Broadcasting System I can certainly say that we want to stay continually on the frontiers of improvement, wherever they lie. But in the light of the public approval and the success that we have met with up to now, it would be rash and dangerous, and frivolous as well, to act on mistaken or uninformed beliefs, or on the selective submissions of a few special interest groups. The burden of proof that something better, instead of only something different, will in fact be achieved in networking rests on him who makes the proposal.

In thanking the committee for the opportunity to appear at these hearings, I shall ask it once again to consider this oral statement in closely coupled conjunction with the various written statements I have placed before you. Thank you.

Mr. Chairman, I have one document that we have prepared because some questions had been raised about our practices in the scenery design and preparation field. And if it pleases the committee, I would like to submit copies of that for the record, because I think it meets squarely with the issue that has been raised by some of the witnesses and will save the time of the committee if I don't read it into the record, but it is merely made a part of the record.

Senator PASTORE. All right. Without objection, it will be made part of the record as though it were read.

(The document referred to follows:)

THE CBS TELEVISION NETWORK'S POLICY AND PRACTICES CONCERNING PROCUREMENT OF SCENERY

Network scenery policies and practices have been the subject of recent criticism before this committee by three theatrical scenery suppliers of New York City. Their testimony has largely consisted of:

(a) Complaints about their decreasing television volume of business, and

(b) Allegations that this drop has been caused by the networks' implied or express pressure on advertisers and independent television producers to use network constructed scenery.

This statement is submitted in clarification of the policy and practices followed by the CBS television network with respect to the scenery use on programs broadcast from New York by the CBS television network.

THE CBS TELEVISION NETWORK'S POLICY AND PRACTICE

The CBS television network's policy is simple: It wants the best television scenery technically possible at prices its sponsors can afford. The CBS television network welcomes any firm which competes with it in cost and quality, for that must inevitably lead to better scenery and superior programing over the network.

The current steady improvement in the quality of television scenery has not always been the case. In television's early days, the CBS television network turned to theatrical scenery suppliers for a major portion of its scenery needs, hoping to take full advantage of their existing facilities. But stage scenery, built to be seen at a distance through a proscenium arch, cannot generally withstand the close-up scrutiny of the television camera. Equally important was the fact that, faced with a huge new television demand, the handful of established scenery firms in New York were in a position to skyrocket prices. As prices went up, either the CBS television network had to assume all costs above what sponsors could reasonably be expected to pay, or reduce the amounts and types of scenery ordered to bare minimums. Perhaps even more disturbing in the early period of commercial television was the pressing but unsatisfied need to develop television techniques altogether divorced from established theatrical conceptions. Television's scenery needs are almost infinite and tremendously varied and oftentimes extremely urgent. Speed, flexibility and improvisation are essential to keep pace with the ever-increasing complexity of television program production.

As a result, the CBS television network began providing substantially more scenery for the programs it produced and designed. In doing so, the CBS television network has been able to develop many new mechanical, electrical, and lighting devices and scenic projection methods, all of which specifically meet the technical requirements of television production.

It has also made material improvements in such areas as the use of plastics for set-surface coverings and detailed reproductions, optical illusions, color classification, and set assembly. Furthermore, it has created a large reservoir of stock pieces which can be used over again at low cost, in place of the almost all-new, high-priced construction of the theatrical suppliers.

As a consequence of such efforts, as well as the responsibility taken for performance, it may well be that many outside producers now prefer the CBS television network designed and built sets. CBS television network, however, has never required any outside producers of programs or commercials broadcast on its network to use CBS television network-constructed scenery. They are free to procure scenery from any source they may select. Indeed, according to the CBS television network's information, Mr. Peter J. Rotondo, despite the implications of his testimony, is now supplying approximately the same amount of scenery for programs broadcast by the network as he did in the past.

Moreover, some advertisers go to the independent suppliers for scenery for commercials carried on wholly CBS television network-produced programs, even though it would clearly be advantageous to the network to furnish all the scenery for the entire program. For example, the Studio One and Ed Sullivan programs are completely produced by and closely identified with the CBS television network; nevertheless, the commercials broadcast during both of those programs use scenery supplied by theatrical suppliers.

Interestingly enough, Mr. Rotondo has implied in his testimony before this committee that Mr. Louis G. Cowan's becoming a vice president of CBS, Inc., would undoubtedly affect the outside supplying of scenery for CBS television network programs previously created by Mr. Cowan. As a matter of fact, this seems to have worked the other way. Although the CBS television network until comparatively recently had furnished the scenery for the commercials on the $64,000 Question program, that scenery is now being supplied by Mr. Rotondo himself.

SPECIFIC INSTANCES CITED IN TESTIMONY

Mrs. Ashworth of Chester Rakeman Scienic Studios, Mr. Steinberg of Imperial Scenic Studios and Mr. Rotondo of the Peter J. Rotondo Studio have cited alleged instances of pressure by CBS television network on producers or advertisers to use its scenery facilities. The facts with respect to these instances are as follows:

1. Mrs. Ashworth testified that from 1951 through 1954, her studio had constructed the scenery for the Longines-Wittnauer Thanksgiving show and that following the 1954 show the scenery was returned to the studio for the Christmas show. "However, shortly afterward Mr. Alan Cartoun of the Longines organization informed me that CBS–TV insisted that their scenery facilities be employed for the Christmas show. Since then, Longines-Wittnauer has returned these two shows to our studio for the painting and supplying of scenery because they were disgruntled with the service and quality CBS–TV scenery services provided."

In 1954 the CBS television network was asked to bid on the Thanksgiving show but was unsuccessful and the Chester Rakeman Scenic Studio was awarded the job. Later, the CBS television network was asked to bid on the 1954 Christmas show. The award for this show was made to it. In 1955 it was again asked to bid on the Thanksgiving show but was unsuccessful and the Rakeman Studio was awarded the job. In response to a request to comment on Mrs, Ashworth's testimony, Mr. Alan R. Cartoun, director of advertising of Longines-Wittnauer Watch Co., Inc., has written to CBS television as follows:

"CBS constructed the scenery for our Signor Pizzicato TV fairy tale which was presented on our traditional Christmas Day program in 1954. We were extremely pleased with the results and found the quality of the work, as well as the cost, proper in every way.

"The construction for our holiday programs was returned to the Chester Rakeman Studio for Thanksgiving 1955 because of a misunderstanding created at the time of the Christmas 1954 program. The misunderstanding was an unfortunate one in which Mr. Rakeman assumed he had an 'order' to construct the Christmas scenery. This was not the case and the Christmas scenery was done by CBS. I carefully explained to Mr. Rakeman and to Julius Feist, at that time, that I was indeed sorry for the misunderstanding, as having worked with the Rakeman organization for many years. I was grieved to realize that they found themselves in a difficult financial position.

"Because of the above, I then told the Rakeman organization that we would return the Thanksgiving 1955 program to their shop (assuming, of course, their price was competitive). It was this 'moral obligation' that prompted us to give Rakeman the 1955 program. This decision had nothing to do with the quality of the CBS work." (Copy of letter attached.)

2. Mr. Steinberg charges that the CBS television network controlled the Jackie Gleason show "with the understanding that they—the network—would provide all the services and sell it to a sponsor or sponsors as a packaged deal." No such understanding exists; in fact, the scenery for the current Gleason Honeymooners show was handled by the Chester Rakeman Scenic Studios.

3. Mr. Steinberg states that last year he was asked to bid on The $64,000 Question program by the Louis G. Cowan organization but that he was told that although he was the low bidder, the network had informed the Cowan office that if an outside contractor did the show, he would have to remove the scenery after every performance for an extra charge of $400 per week. The CBS television network at no time advised anyone in the Cowan organization that the scenery would have to be removed immediately after every performance so as to incur any overtime or extra charges.

As previously noted in connection with The $64,000 Question, although the network had furnished scenery for the commercials on this program that scenery is now being supplied by Mr. Rotondo's studio. In addition it should be noted, according to a letter received from Mr. Harry Fleischman of the Cowan organization, that after his organization had obtained bids from the CBS television network and from Mr. Steinberg's studio:

"We then totaled these costs together with the costs of storage and hauling in order to determine which of the two bids would represent the more favorable price to us. This very simply established the fact that the same service obtained from CBS would cost less that it would from Imperial. We, therefore, made a completely free decision to do business with CBS at a lower price.

"I might point out that if anyone else came along at that time and offered us scenery, storage, and hauling at a lower cost than now prevails in our arrangements with CBS, we would accept such an offer at once." (Copy of letter attached.)

4. Mr. Steinberg and Mr. Rotondo also charge that the network sets are stored or left in place until the stage or studio is needed again, but that the independents are denied the privilege of paying for such storage or of removal at a period when double-time trucking charges would not apply. The CBS television network does not discriminate in storage or trucking practices against outsiders. All continuing show sets, both the network's and outsiders', are stored at the studio when possible, although at times ousiders may be asked to remove their scenery when the use of studio space for other shows becomes necessary, just as the CBS television network must do when the studio space is required for such purposes. In some instances when outsiders must remove their scenery, the network has shared or assumed the cost of removal. Storage charges are the same for the network and outsiders—30 cents per square foot per week. A letter from Mr. John Egan, executive producer of Compton Advertising, Inc., comments on this question as follows:

"As you know, for almost 3 years we were very happy with the staging services you rendered us for the Guiding Light. About a year ago we decided that in the interests of economy and possibly greater scope of production that we would try an independent scenery house for our sets and props. Our decision to do this was purely voluntary; and since we made the change, I have noticed no lessening in any of the CBS production services rendered to us outside of this area. I was particularly impressed a few months ago when we had a problem of scenery storage. With the great spirit of cooperation on the part of the network, sufficient storage space was made available for our materials at Liederkranz Hall.

"I have always thought that you and your people do a great job of helping us with the many varied details of getting our show on the air day after day. We have always appreciated your extra efforts on our behalf."

(Copy of letter attached.)

CBS TELEVISION NETWORK FINANCIAL STATUS ON SCENERY OPERATIONS

The CBS television network has never made any profit on its scenery operations. It has been fully occupied up to the present time in trying to minimize its historic losses on scenery construction, and only now sees the possibility of coming out of the red.

These scenery losses at one time were considerable. The following chart indicates how the network in New York has managed to cut its losses, until it finally is close to a break-even point.

Year	Billings	Cost	Loss	Percentage loss on billings
1952	$1,714,898	$1,920,047	$205,149	12 0
1953	1,770,500	1,910,886	140,386	7.9
1954	1,935,308	1,962,005	26,697	1.4
1955	1,945,050	1,952,693	7,643	.4

The CBS television network's financial difficulties in scenery operations have principally stemmed from the sudden and tremendous increase in television programing in the late 1940's and early 1950's. At that time, the CBS television network found itself with scattered and inadequately organized scenery-construction facilities. Nor had it had sufficient experience with television-scenery operations to handle the financial and other problems that were involved in this sharp increase in volume and the demand for higher quality scenery for this new medium. For example, when the scenery department attempted to estimate scenery costs in advance in order to establish program budgets, it too often found itself in the position of having underestimated and of being compelled to take the consequent loss itself. In addition, it was found that subcontracting the CBS television network jobs, in whole or in part, to outside firms was an expensive and uneconomical practice.

Initial losses on scenery operations were further aggravated by the pressing need to invest extensive time and money in scenery construction research and development, if scenery was to be available for television in sufficient quality, quantity, and speed. This research and development, of course, have in no sense been income producing, but have been reflected in the steady improvement of the scenery of the CBS television network programs. It was also deemed advisable to begin on a large-scale construction of stock scenery units which would be readily available for repeated use. The cost of this has not yet been fully amortized out of the rental charges for the units.

The CBS television network has now been able to remedy many of its initial scenery problems. All scenery facilities have been collected within one building each in New York City and in Television City in Los Angeles, Calif. The scenery department has gained considerable experience, and can now accurately estimate scenery needs and costs, even from very rough blueprints. Past uneconomic subcontracting practices have been discontinued. Scenery rates have been increased in an attempt to bring the scenery department's income up to a more realistic level. But several factors have slowed down financial progress. Scenery charges on programs produced by the CBS television network or outsiders cannot be raised to such an extent that sponsor's budgets cannot include the best possible sets. Second, sufficient facilities must be at all times maintained to service speedily unanticipated requests; this necessarily results in substantial idle time, equipment, and paint. Third, outside producers cannot be charged prices higher than those charged to CBS television network-produced programs. To do so would obviously be grossly unfair to sponsors and producers of outside packages.

The CBS televisin network has attempted to meet this situation by developing more efficient scenery-construction methods while at the same time maintaining, and striving to improve quality. In this way, the CBS television network is succeeding in operating its scenery department at diminishing losses without increasing its prices to prohibitive levels. Indeed, we believe that our prices are generally, and have always been, in line with those of the trade—neither undercutting the outside scenery suppliers, nor overcharging producers and sponsors. Without changing this pricing practice, the CBS television network scenery operations should reach a profitable level in the near future as efficiency increases even further and a greater supply of stock rental items becomes available.

(The letters referred to follow:)

LONGINES-WITTNAUER WATCH CO., INC.,
New York, N. Y., May 22, 1956.

Mr. PAUL WILSON,
CBS TV Production Center,
New York, N. Y.

DEAR MR. WILSON: In response to your telephone-call request, I should like to say that our asosciation with the CBS–TV scenery and construction department has always been a satisfactory one from our standpoint.

CBS constructed the scenery for our Signor Pizzicato TV fairy tale which was presented on our traditional Christmas Day program in 1954. We were extremely pleased with the results and found the quality of the work, as well as the cost, proper in every way.

The construction for our holiday programs was returned to the Chester Rakeman Studio for Thanksgiving 1955 because of a misunderstanding created at the time of the Christmas 1954 program. The misunderstanding was an unfortunate one in which Mr. Rakeman assumed he had an "order" to construct the Christmas scenery. This was not the case and the Christmas scenery was done by CBS. I carefully explained to Mr. Rakeman and to Julius Feist, at that time, that I was indeed sorry for the misunderstanding, as having worked with the Rakeman organization for many years, I was grieved to realize that they found themselves in a difficult financial position.

Because of the above, I then told the Rakeman organization that we would return the Thanksgiving 1955 program to their shop (assuming, of course, their price was competitive). It was this "moral obligation" that prompted us to give Rakeman the 1955 program. This decision had nothing to do with the quality of the CBS work.

Sincerely yours,

ALAN R. CARTOUN,
Director of Advertising.

LOUIS G. COWAN, INC.,
New York, N. Y., May 29, 1956.

Mr. RICHARD S. SALANT,
Columbia Broadcasting System,
New York, N. Y.

DEAR MR. SALANT: Last spring, when we were in preparation with The $64,000 Question, we obtained bids from CBS and from Imperial Scenic Studios for the building and painting of the physical production.

We then totaled these costs together with the costs of storage and hauling in order to determine which of the two bids would represent the more favorable price to us. This very simply established the fact that the same service obtained from CBS would cost less than it would from Imperial. We, therefore, made a completely free decision to do business with CBS at a lower price.

I might point out that if anyone else came along at this time and offered us scenery, storage, and hauling at a lower cost than now prevails in our arrangements with CBS, we would accept such an offer at once.

Sincerely yours,

HARRY FLEISCHMAN.

COMPTON ADVERTISING, INC.,
New York, N. Y., May 23, 1956.

Mr. PAUL WILSON,
CBS, New York, N. Y.

DEAR PAUL: As you know, for almost 3 years we were very happy with the staging services you rendered us for the Guiding Light. About a year ago we decided that in the interests of economy and possibly greater scope of production that we would try an independent scenery house for our sets and props. Our decision to do this was purely voluntary; and, since we made the change, I have noticed no lessening in any of the CBS production services rendered to us outside of this area. I was particularly impressed a few months ago when we had

a problem of scenery storage. With the great spirit of cooperation on the part of the network, sufficient storage space was made available for our materials at Liederkranz Hall.

I have always thought that you and your people do a great job of helping us with the many varied details of getting our show on the air day after day.

We have always appreciated your extra efforts on our behalf.

Yours truly,

(Signed) John,
JOHN EGAN,
Executive Producer.

Mr. STANTON. It is now 4:30.

The CHAIRMAN. I wonder, Mr. Chairman, Dr. Stanton, I probably won't—I can't be here tomorrow; I am going out to Seattle tonight. But I did want to take advantage of your presence here to ask you one or two things.

No. 1, I know we are not in the allocation field here today, we are not trying to discuss that. But from your experience in CBS, and naturally in communication with other members of the industry, do you think that we would go a long way in providing more free and competitive television—particularly I am thinking of independent stations, where I think there is room for independent stations other than those that have networks—if we could achieve some way here to have all-channel sets?

Mr. STANTON. Of course, Chairman Magnuson, yes; the all-channel set would be a great help to those markets that have both UHF and VHF.

The CHAIRMAN. Yes.

Mr. STANTON. But I would guess that less than 20 percent of the population is served by markets or stations that are mixed, both V and U, now.

The CHAIRMAN. Now?

Mr. STANTON. Now. And if you were to do anything to make it mandatory to manufacture all-wave sets, you would be placing a burden on eight-tenths of the public because that part of the set wouldn't be used.

The CHAIRMAN. Well, I am thinking of that, yes; we run into that problem. But with the advent of color, which would probably, I suppose in 3 or 3½ years, to phase into color television would be so great that everybody would have the same type of set if we were making one type. Wouldn't that be correct?

Mr. STANTON. Yes; except that I——

The CHAIRMAN. We are starting something practically new in color now.

Mr. STANTON. You certainly are; you are starting from the 1-yard line and you have got the whole length of the field to go on color. But color sets at the present time are priced——

The CHAIRMAN. Too high.

Mr. STANTON. Very high; and some of us in the industry feel that perhaps the reluctance on the part of the consumer to purchase color has been due to the price of the receiver.

The CHAIRMAN. Isn't that coming down?

Mr. STANTON. Well, sir, it is not coming down the way I think the average customer thinks it is coming down. I think it is a near miracle that the Radio Corporation of America has been able to put a set on the market under $500. We are not a manufacturer of the size and scope of RCA, but I have gotten my fingers burned and my feet wet in manufacturing to the extent that at least I have great respect for the price that they have put on that receiver. Now, I don' think there is much margin in that.

The CHAIRMAN. No.

Mr. STANTON. There are some who will tell you, probably, that there is no margin in it. So that I don't think those prices are coming down very rapidly. The biggest element of cost in that receiver is the color kinescope, or the picture tube. And we are in the receiving tube and picture tube manufacturing business and I know something, a little, about the cost of producing those units; and I don't see a lot of price reduction in those very rapidly.

So that if you add another unit, such as an all-band tuner, to a color set you are putting the price higher and you are slowing the day—or you are holding off the day—when you are going to have any vast color circulation. And, as you retard that day, you are retarding the day when the networks and the program producers will be putting their programs in color. It begins one of these circular arguments here.

The CHAIRMAN. But the problem we run into here, or we are conscious of, I should say, is the fact that the spectrum is limited to—as you know, the VHF is limited to certain channels, and the only possibility that we have for independent stations or a spread away, other than the networks, would be in the UHF band.

Mr. STANTON. Well, I am acutely aware of that and have been——

The CHAIRMAN. What I am trying to say: Do you think that—you hear the networks operating, ABC, NBC, and Columbia, but in many of these communities there are only the three channels. And I think what concerns us—it does me—is that we seem to be shutting out—and this may get into this monopoly question, we are talking about—it shuts out the possibility of an independent competitive station in even the big market areas, where you are limited by the VHF spectrum.

And I think that the networks themselves should be interested in that because they are going to—a good little strong independent station in an area or two would help, I think, bolster up the networks. Then you would have no one to criticize, then, what you call, or what has been termed, a captive program.

Mr. STANTON. Well, I can make the argument that we would be criticized on another point when that day comes.

The CHAIRMAN. Yes; you would be criticized for a lot of things, regardless.

Mr. STANTON. That is right; but as I said this morning, and perhaps it was before you came here: We have always felt, in the field of radio and in the field of television, Senator Magnuson, that we wanted as many facilities as possible, so there was free and open competition. And it put the emphasis, not on whether or not you had the franchise that Mr. Cox was talking about earlier, but whether you were doing a service for the public.

Because you can't take your eye off the public in this business; this is what we are here to serve. And I think that if there were unlimited facilities, and by unlimited I don't mean 30 or 40 stations for a market, but if there were more than the 3 we have got now in many markets, this would put the competition squarely on programing service or doing a programing job.

The CHAIRMAN. And it would assume the aspects of what I like to call a local station. What bothers me about this whole thing is that unless we break the ice here someplace on this spectrum—whether it be all-channel sets or some other method—the local advertiser, as the networks get better and bigger and have better programs and are more in demand by the national advertiser, which you primarily serve, the local fellow has no chance.

Mr. STANTON. Yes; but let me say something to that point. The philosophy of distribution and selling in this country has undergone a marked change since, let's say, the depression.

The CHAIRMAN. Yes.

Mr. STANTON. More and more national advertisers and national manufacturers are owning and controlling their own distribution as I mentioned this morning; and more and more they are embarking upon broad national selling programs, where, in effect, they are preselling the customer for the local merchant in whatever community he might be in.

And so you can't look at the network or national program as being something apart from the local community.

The CHAIRMAN. No, no.

Mr. STANTON. Because one of the criticisms you get in many fields of distribution today, and I may be stepping on the toes of some of my retailing friends, is that we have forgotten how to sell in this country; that the merchant at the point of delivering the product is really just an order taker, that he isn't really selling.

Now, this could change very quickly depending on what happens to the economy. But it is difficult to get the dealer, in many cases, to really push and sell a product, because he has been learning to depend on the large national advertising campaigns to presell. Now, television has had a part in that.

The CHAIRMAN. Supposing he is a small manufacturer.

Mr. STANTON. May I develop this and come back to that?

Television has had a part in that, Senator Magnuson, because in printed advertising, and even in radio advertising, you didn't do the kind of demonstration that is possible to do with television. In other words, you can really sell as well as advertise when you use television. So that a lot of preselling has been done. You can show the customer how to apply the product in his own home by what television does. So that when we say the local advertiser is getting frozen out, or he might get frozen out, you have got to look at it not only in terms of how much local business he places on the station, but how much local advertising is done on a national basis for his benefit because of the nationally advertised brands.

Now, of course, on the local product, on the local manufacturer, that is a different problem. But there is ample time; there is much time that the local manufacturer or the small dealer or retailer can have on these stations. And I think the record when you examine it, as the affiliates pass before you, will demonstrate what I am saying.

The CHAIRMAN. You still think that there is enough available time at the right cost for the local fellow to use this great new medium of expression?

Mr. STANTON. Part of my job and part of my life, sir, has been a salesman. I think there is never enough time. But there is more time than I think you realize, looking at it from a national point of view. I think if you made a careful analysis of the actual minutes of commercial time that local advertisers are getting; don't just look at the money, and don't just look at the amount of program time they sponsor, but look at the amount of access they have got in terms of commercial impact.

The CHAIRMAN. What I am trying to say is, though, that I think the networks are going to constantly consume, and rightly so, more time on stations as we move along in this field of national advertising; and that as you consume more time, stations will want to take it—shows get better and all of these things—there isn't much left for the local fellow, particularly when we are faced with this VHF restriction.

Mr. STANTON. Senator Magnuson, as Senator Pastore, I think this morning, said, you know, there are only so many hours in the day. We can't expand the hours like a magazine.

The CHAIRMAN. There are only so many channels.

Mr. STANTON. That is right; so we are bound. But there are other things that networks can do.

I don't expect that we will sell a lot more time. You say we will make our programs better: I hope we do. They are a lot better now than they were a year ago. They will be better next year. But this doesn't mean that we are selling more time. This means that the programs we are now selling will be better. You couldn't get much more time, in the night time schedule of the two leading networks, if you used a crowbar, because there is no time to get in there. ABC has some time open.

The CHAIRMAN. We hope the day will come when ABC might probably be in that same position.

Mr. STANTON. I hope the day comes around.

The CHAIRMAN. Then you are limited to the job that you do for the national manufacturer and the national—I don't know where the little fellow gets in.

Mr. STANTON. But the little fellow can't buy coast to coast at night time.

The CHAIRMAN. No; I am talking about the little fellow in his own community. Take the city of Seattle, where there are only three stations: Suppose I make Magnuson soap and I want to tell the people of Seattle about it, or a different kind of oil; I can't get on those stations, I can't afford it. But if there was an independent station I might have a chance to sell my product.

Senator POTTER. Is that a soft soap? [Laughter.]

Mr. STANTON. I would urge you, Senator—even though you could buy the time cheaper, perhaps, on the indepedent nonaffiliated station—to buy your time on the network-affiliated station because I think you would get more circulation.

The CHAIRMAN. But you just said it wouldn't be available at night time, for instance.

Mr. STANTON. Oh, well now, I don't know how much time the Magnuson Coap Co. wants to take. [Laughter.]

The CHAIRMAN. The available channels at night are pretty well taken up by network programs, isn't that correct?

Mr. STANTON. I tried to show that even on the basic required stations, out of the 52 markets there are 91 station hours that weren't cleared as of the week of May 1956. So that there is some time available.

The CHAIRMAN. You don't anticipate that as we move along here, and the big manufacturers get bigger and bigger, that they will start to get into that time?

Mr. STANTON. Well, many times—no, I don't think that this is going to change markedly, as the manufacturers get bigger. I think that ABC will get more business as a result of that, but I don't think we are going to get more business at night as a result of that; or that last——

The CHAIRMAN. I am thinking of a local television station. I think as of now, unless we can solve this problem, the local events can't get on.

Mr. STANTON. Yes, they can. If they are important——

The CHAIRMAN. I don't know how the Seattle baseball team could get on NBC on any night, if they play a night game.

Mr. STANTON. Well, when you said event, I thought——

The CHAIRMAN. Or the local high-school championship football team. I think that has been bothering a lot of us here—that we think there is room for some of these local things.

Let us concede the networks serve a purpose.

Mr. STANTON. May I take the two examples you use—baseball and high school football championships.

We have records, I am sure, in New York, as a result of our relations with our affiliates, which reflect that there are stations presently affiliated with us who are not clearing network programs, as ordered, so that they can take baseball, or—and the fall schedule reflects this in past seasons—will cancel one-time network entertainment programs to take a local championship football game or something of that kind.

The CHAIRMAN. Or a local event?

Mr. STANTON. Or local event, certainly.

The CHAIRMAN. Of course, sometimes the station woudn't take the network program because those putting on the local program can't afford the network rates.

Mr. STANTON. Yes. But many times the affiliate will put on the local football game—and get no income for putting on that event—as a part of his public service.

The CHAIRMAN. I am glad to find you are a little more optimistic about it than I am—about the local fellow.

Senator PASTORE. Then don't you think—inasmuch as you have networks, 3 networks—that you ought to have at least 3 stations in every community? Wouldn't that be in the public interest?

Senator POTTER. I would like to have one in Cheboygan.

Mr. STANTON. Senator——

The CHAIRMAN. Back to Cheboygan and Providence. [Laughter.]

Mr. STANTON. Last September, I believe it was, the Chairman of the FCC talked with me about the problem in pretty much the same way you talked about it, and said "What can we do about this allocations thing? Do you have any ideas?" And I told him that we had been studying this problem since the very beginning. And that we had been reeaxamining what might be done to try to correct and help the present situation—not the perfect plan, but perhaps something that would make a better situation out of what you described this morning as a mess.

And he indicated, he said, "You know, if we could only take care of the top hundred markets—if we could just get three services in the top hundred markets—this would go a long way toward solving some of the problems that the industry has." And I couldn't have agreed with him more.

It so happened that the work we were doing at that time was almost to the point of completion, and I told him about the work that Mr. Lodge and his associates were doing and suggested that if he wanted to have access to it I would be glad to give him that kind of a study. On the 5th or 6th of October, we brought down what has been erroneously characterized as our hundred-station plan. We brought down a proposal—two proposals, in fact—which we called an interim report, which suggested what might be done to try to make the present situation a lot better than it is.

That was accepted informally by the Commission, and later accepted formally by the Commission when it opened its files for the reception of such suggestions from the industry. I think we were the only network in the business who came down and tried to do that kind of a job. We are still picking arrows and darts out of our backs because you can't please everybody. I said in the covering letter, I believe, that one of the great troubles with all the plans—they all have to have something in it for everybody and you can't have a plan like that.

Now, this was not a 100-station plan. We only focused our attention on the top hundred markets because those are the bottlenecks in many cases. Beyond the hundred markets there wasn't any problem. And we have submitted such a plan. It is a matter of record in this hearing, and it is a matter of record before the Commission. And it goes a long way toward getting 3 equal affiliates, or 3 equal stations, in the top hundred markets, at least 3. In many markets it will permit more.

Mr. Cox. For the record, I think that—isn't it true that American Broadcasting Co. also filed such a recommendation with the Commission and that it was directed to a like end, for obvious reasons, since they, of course, would be the primary beneficiaries of the introduction of a third service in the top markets?

Mr. Stanton. I didn't realize, Mr. Cox, that theirs was quite as broad an allocation plan as ours. I certainly don't want to quibble. They did make a contribution. I thought they should have come over and helped pay for all of the work we did on ours, because they certainly would have benefited the most from the proposal we made.

Mr. Cox. I think theirs was perhaps directed specifically to what they would regard as their trouble spots, rather than covering the entire range which was encompassed in your plan.

Mr. Stanton. Yes. The only difficulty is that when you begin to look at this thing piece by piece—when you squeeze this down, something pops up over here. That is the reason Mr. Lodge took the broad view of the entire country rather than just trying to patch in certain places.

Senator Potter. Along the line of questions that Senator Magnuson was pursuing, isn't it true today that with just VHF service, the public is buying half a television set, when the Commission has allocated a portion of the spectrum which includes both VHF and UHF for television service to people. Rather than to deny, as you state, 80 percent of the people—force them to pay for something that they won't need, isn't it true that they are at the present time buying half a set?

Now, if we are going to—if we are going to have what the Commission has stated, a nationwide competitive television system, and to provide for the local type of programing which many people feel is very important, the testimony that we have had certainly gives evidence of the fact that we are going to have to utilize the UHF band.

Now, there have been several proposals before this committee. One proposal: That if the excise tax could be removed for all-channel sets, would that serve as enough of an encouragement to the set manufacturers to encourage them to build all-channel sets? And, particularly as we go into the field of color, to provide a—to repeal the tax on color sets that provide all-channel bands.

Mr. Stanton. Senator Potter, I meant to mention that in connection with Senator Magnuson's question about color, and I am glad that you have brought it into the discussion because I think that the removal of the excise tax—and this has been proposed—would go a long way in encouraging the manufacturers to make all-channel sets in color. But this is going to be a drop in the bucket as far as the current problem is concerned, because I don't see color coming quite that rapidly to solve some of the problems that I think are worrying you and worrying us.

A curious thing is happening in the set manufacturing business at this time, and it is working against, unfortunately, I think the UHF. You are getting a pincers movement. On the high end you have got the expensive color set which is killing sales in the expensive end of black and white. A man is less apt to buy a black and white console today over $250 because, for paying just a little bit more, he can get himself a color set. So that kills off that part of the market. Now, if there isn't a UHF tuner in that color set for the reasons I gave Senator Magnuson—because it adds more cost to it—the manufacturer isn't going to put it in there. So there is no UHF in there.

Now, on the other end—the other side of the pincer—you have the introduction of the small portable receiver, which is so compact that it is pretty difficult to put a UHF tuner in, in the first place. And because they are being sold at a price sometimes under a hundred dollars, there isn't enough room in the price of the unit to include the all-channel set. So it is getting squeezed from that side.

Senator Magnuson. If the tax was off, though, they could put it in, couldn't they?

Mr. Stanton. The removal of the tax at the low end wouldn't have anything like the impact that it would have if you took it off of the color set, Senator Magnuson.

The Chairman. You don't see much future for UHF?

Mr. Stanton. No. We are the owner and licensee of a UHF station in Milwaukee, and we are the purchaser—yet to be approved by the Commission—of a UHF channel in Hartford, and we have gone into those things not for the love of it but because we expect to make money and do a job with it. The unfortunate part about the UHF thing isn't—if you want to go way back, you go back of course to the original allocation, but there is no point in getting into that. But another point along the way where we missed the boat, it seems, is that the multiple-set owner, or multiple-station owner, was denied the privilege of buying UHF stations unless he bought 1 within the 5.

I think if the networks, for example, had been allowed to buy UHF stations in excess of 5—the 5 V's—in the early stages, a number of things might have happened: We would have taken the first olive out of the bottle, so to speak, and the set manufacturer would have sat up and taken notice, because if he had known the networks owned these things, they would have worked; the advertiser on Madison Avenue would probably have had more respect for the UHF stations—and I think the public would have gotten a better deal because we were in a position to give those stations the kind of programing that would have sold the sets.

We missed that second opportunity. UHF may have a third chance; I don't know. But I haven't written UHF off. But there are certain inescapable facts that you have got to face, and I think it is pretty late in the day to be facing those facts. I don't mean in this day, but I am talking in terms of the life cycle of UHF.

Senator PASTORE. Before the mess gets messier.

The CHAIRMAN. If we don't face them, don't you agree, if we don't try we are going to be limited to just a very few channels in a country with growing population and all these things that we hope for expansion.

I wanted—Mr. Chairman, if I may suggest this: You don't have to testify on it now, but I would like to have your views, and those of the other networks, on this very timely and ticklish problem of political time. You can submit it to us in writing. We have 4 or 5 bills here, all different types. But I do think this Committee would like to explore that before we adjourn, because I am afraid if we don't the networks and everybody else are going to have some real problems this fall. There might be some rules of the game that you can suggest.

Mr. STANTON. Well, we have——

The CHAIRMAN. Other than what the law now says.

Mr. STANTON. We have spoken a lot to that subject and we will be glad to give you our thoughts.[5]

The CHAIRMAN. You are always good with plans, Frank, you can suggest one. [Laughter.]

Mr. STANTON. I am still picking the darts out on that hundred-station plan. [Laughter.]

The CHAIRMAN. Well, I would like to have that, if we can, because the networks are going to be faced, I think, with some real practical problems.

Senator BRICKER. Mr. Chairman, may I have just a moment? I do want to compliment you on the presentation. I think you have done a magnificent job. I don't know any other way it could have been done. I am particularly interested in the suggestion, on the last 2 or 3 pages, which you made in regard to whether or not there should be licensing and the effect of it. I think your whole presentation emphasizes more dramatically than anyone could who has not been as familiar with the development as you have, the great public interest that

---

[5] The comments of CBS were furnished in a letter dated June 22, 1956, which was inserted into the record on July 17, 1956, and is printed in the appendix to this volume at p. 2857.

there is in this field. And I am quite confident you have no more question about it than I have, that if there were a licensing system and a regulatory authority over the networks, that there would be no constitutional question involved because it is definitely charged with the public interest, if so declared.

Mr. STANTON. Well, I would like more able minds than mine, Senator Bricker, to address——

Senator BRICKER. That is what I want to discuss with you some day. Not today, necessarily. You mentioned in here that there would be a violation of the right of freedom of speech. I would like to have your lawyers explore a little more fully how this would be true, any more than the regulation of the telephone business is a limitation on the right of free speech. I see no relationship to it at all, under the first amendment to the Constitution, which has been expanded, as you know, to cover Federal law as well as—Federal administration as well as legislation.

That I think we ought to discuss at possibly a later date. But those are the questions that are fundamental in my mind. I am not interested in the details that you have presented here. I think you have done it magnificently.

Now, just one other suggestion in regard to what Senator Magnuson said. I am not interested, directly or indirectly, in any radio or television station except one—and I am vitally interested in that one, as I think you are. We were not permitted to have a VHF station at Ohio State University. We got a UHF. There is no advertising. It is all educational. And most of it is produced by the university facilities and by their own people. I was told yesterday, and this was very encouraging to me, that there have been purchased in our area 20,000 UHF sets, or converters, since that station went on the air, showing that there is a very vital local interest in something more than advertising. And I would like to see this medium, to the extent it is possible, consistent with its proper business management, made to the ultimate degree available for those interests. Now, I hoped in the beginning that it might be by reserved channels for educational purposes. There hasn't been the money available or the ability, I think, in many instances, to do that. We happen to be in a very fortunate position in our community. But that is something I think that maybe should be subject to some administrative authority. That is what I am driving at, that is what I am thinking about, and at a later date I would like to discuss with you, on the record here, those aspects of the bill to which you referred.

Mr. STANTON. I would welcome the opportunity, sir.

Senator PASTORE. One o'clock tomorrow in the same room.

(Whereupon, at 4:57 p. m., the committee adjourned to reconvene at 1 p. m., Wednesday, June 13, 1956.)

TELEVISION INQUIRY

(Network Practices)

WEDNESDAY, JUNE 13, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 1 p. m., in room G–16, the Capitol, Senator John O. Pastore presiding.

Present: Senators Pastore, Monroney, Bricker, Potter, and Payne.

Also present: Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel.

Senator PASTORE. We said 1 o'clock, and 1 o'clock it is. Mr. Cox, it is your turn.

Mr. COX. Thank you, Senator. Dr. Stanton——

Senator PASTORE. Now, may we please have quiet so that those who are interested in hearing the witness may hear him?

Mr. COX. Dr. Stanton, in your testimony yesterday and in some of the documents you filed you have indicated disagreement with the comparison of the rate of your earnings to your investment in tangible assets. You indicate certain other requirements of your business, risks, and so on, and I assume that this also involves the necessity for working capital. Could you give the committee some estimate as to the average working capital which it is necessary for CBS to devote to television networking?

Mr. STANTON. Mr. Cox, I don't have that figure on the tip of my tongue. I will be glad to supply it for the record.

Mr. COX. If you would, please.[1]

Now, I assume that all of the expenses which you list—the important expenditures CBS must make in order to provide the service it does to the public: Your programing expenses, the maintenance of your news organization, the maintenance of your facilities, the payment of your staff—all of these are, of course, charged off in each calendar year before a determination of profits, so that the profit figures which are cited in Senator Bricker's report are profits after you have performed all of these functions and taken care of all of these charges in the ordinary course of business?

Mr. STANTON. Yes; I don't believe there is any exception to that. There might be on some properties that are purchased, where the writeoff is more than 1 year. Those might not be expensed. But for the most part the way you have stated it is essentially correct.

Mr. COX. Now, you referred a number of times to the risks of net-

---

[1] This information was furnished in a letter dated January 23, 1957, which is set forth, so far as is relevant here, as item 27 in the appendix to this volume.

working as being a basis which would justify, if justification were necessary, a higher rate of return. These risks, I take it, are first of all that you may invest funds in the development of a program which either never meets your standards and never gets on the air, or gets on the air and develops into something that does not meet public taste and therefore must be dropped; and that, therefore, you have an investment in that sort of situation which you require in order to be able to continue this service. Would that be one of the risks?

Mr. STANTON. That is certainly one of them.

Mr. COX. Now, can you give us any idea of the extent to which that has really been a problem—of the degree to which CBS has invested money in the development of program ideas and these ideas have not become commercially usable?

Mr. STANTON. Well, you mean you want me to qualify that?

Mr. COX. Yes; just in a rough way.

Mr. STANTON. Well, it runs into millions of dollars, but I can't give you a precise figure at this point.

Mr. COX. You indicated, in connection with your programing costs I believe, that you had a loss—perhaps in a particular year, or maybe this was an estimated annual figure—of about $7 million on commercial programing. Now, would a substantial part of that $7 million be represented by investment in properties which you never were able to use?

Mr. STANTON. In one form or another I think that a part of that falls into that classification, Mr. Cox. A large part of it is the difference between the price that a program might be sold for and what it cost us to produce. For example, we don't recover everything, all the costs, on every program that we put on, whether it is in the entertainment field or whether it is in the public-affairs field.

Just because a program is sponsored, you understand, it doesn't mean that we recover a hundred percent of what the program costs.

Mr. COX. Yes; you indicate in the case of Climax that you had an average loss per week of something on the order of $8,000. You also indicated that that was not typical, that that was largely extraordinary.

The point I am trying to get at is whether this $7 million for a year represents an accumulation of situations like that, where you sold a program to a sponsor for less than it cost you to produce, or whether a substantial part of it might be represented by efforts to develop programs which never caught on at all.

Mr. STANTON. Well, it is both of those points. But when you say "accumulation," you mean accumulation within a calendar year?

Mr. COX. Yes.

Mr. STANTON. Yes.

Mr. COX. In other words, could you tell us—strike that. Are there any programs which you produce which you sell to sponsors at above cost?

Mr. STANTON. Certainly.

Mr. COX. Do you buy, occasionally, outside independently produced programs and sell them to sponsors at more than you paid for the properties?

Mr. STANTON. There may be some infrequent cases of that kind. Sporting events, perhaps. But for the most part, it is about—if we buy the package as a complete package it is just about the price that we had to pay for it.

Mr. Cox. That you then resell it to a sponsor?

Mr. Stanton. The ones where we make the profit are the ones where the idea and the whole program is generated within the framework of our own organization.

Mr. Cox. Well now——

Mr. Stanton. Take a program such as Studio One, for example. I can't tell you offhand—it is not because I don't want to; I don't have the figure in my head. We are making a profit on that particular program.

Mr. Cox. Now, would the profits that you make on those programs where you can sell it for more than your cost—would the aggregate of those profits exceed the aggregate of your losses on programs like Climax?

Mr. Stanton. I suspect not.

Mr. Cox. You would then have a net loss. Now, I assume that the independent producers of programing who must compete with CBS in the sale of their product have to operate on a profit margin in order to stay in business?

Mr. Stanton. Well, it depends on what their business might be. If they were associated with some other business, I suppose that wouldn't necessarily follow.

Mr. Cox. That is, in other words: Isn't it true that a network occupies the position of being able to afford to sell programing for less than cost, because it has a participation in time charges—either directly through the ownership of stations or through its percentage interest in the station rates of its affiliates—so that it can sell the program itself at less than cost and still make a profit on the overall transaction?

Mr. Stanton. Well, that isn't any different, Mr. Cox, than the independent packager who decides to sell a series for $35,000 or $25,000 a unit that might cost $40,000 to make. And he recovers $25,000 from the onetime rights to a network advertiser or to a spot advertiser, and then hopes to get the balance between the 25 and 40, let us say, plus the profit out of either syndication, second runs on a network, or European distribution.

Mr. Cox. Well do you think that it is a common practice among syndicators to sell first-run rights at as substantial a loss as that?

Mr. Stanton. I can't—I obviously can't tell you that it is a common practice. I know that it does exist in many instances.

Mr. Cox. Isn't the real reason that some of them, at least, say they have come to the point where they feel they must sell, initially, a first-run of their film either to a network or to a national advertiser who has network time, the very fact that this is the only way in which they can, within 1 year, recover their cost? And they are perfectly willing, as you suggest, to wait for reruns or the sale of foreign rights to make the profit. But isn't it almost essential, in the nature of their operation, that they recover 100 percent of their investment in the film within a fairly prompt period of time after the film is released?

Mr. Stanton. Well, I think that depends upon the attitude of the various companies, Mr. Cox. I don't think that there is any universal policy on that point.

I think some companies are prepared, just as we are, to take their recoupment in the second and third exposure, rather than in the first exposure. If we feel we can make a program a lot better, and give the advertiser and the public a greater value in entertainment and in circulation—entertainment on the one hand to the public, and circulation to the advertiser on the other—we may elect to delay our recoupment until some later time, whether it is through syndication or whether it is through second run. In some negotiations that we have had recently regarding the preparation of some film the company that—one of the companies that was negotiating with us for the production of those films was willing, I think, to take about 50 percent from us for the first run, and was perfectly willing to put 100 percent more into the package in order to get that back out of second or third runs on television, let's say, or up to any number you want to take. And then to recoup the rest of that, plus, I think, a considerable profit, from theatrical exhibition. I mean, there are no two deals alike in this business.

Mr. Cox. However, you are in the more or less unique position that you can take a loss on the current exhibition of a program you have produced and at the same time, incidental to that exhibition, you can realize a profit by virtue of the time charges which you receive?

Mr. Stanton. Well, we are in that position. But so is the independent producer in that position.

Mr. Cox. How does he—he never participates in the time charges of the network he is with, does he?

Mr. Stanton. Not in the time charges of the network, but he may participate in other use of his product.

Mr. Cox. But those will all be later uses?

Mr. Stanton. Not necessarily; not necessarily at all.

If you are talking about a motion picture company—a Hollywood company that may have written off the cost of the script or the book in connection with theatrical exhibition of many years ago—he has very little cost to the writing on the show, let us say, so that may be carried on his books at a very low price. He is getting reuse out of his material.

Mr. Cox. But he won't have a loss. He would have a profit on the sale of this television use?

Mr. Stanton. That is right; but he may also use some of the material he is developing for television for theatrical exhibition.

Mr. Cox. In connection with Climax, which you set out in your supplemental memorandum, you show a loss of about $8,000 on the programing element. You indicate that this leaves you a net of something like $17,000 of the network's share of the time charges; to which there would have to be added some figure—I don't know precisely what it would be—for the network's owned-and-operated stations' share of the other half of the time charge distribution. So that it would appear that even though you lose $8,000 on the programing, that CBS television is receiving something like $20,000 a week return on its funds which are invested in its venture and on this particular production-exhibition combination? That is you do—you have a cushion here in the form of your time charges, which doesn't make it as important for you to break even, or to make a profit, on the production of entertainment—that is not enjoyed by other producers of entertainment?

Mr. STANTON. Well, it may not be enjoyed by other producers, and certainly is not enjoyed by the producer if you are specifying that he gets part of that offset from the sale of network time. But that is no different, sir, than what an affiliated station does in selling a product.

Senator PASTORE. May I interject at this point. In what way does this defeat or help the public interest? Do we have that developed? I mean, does the viewer get hurt in all this?

Mr. STANTON. Well, I would submit, Mr. Chairman, that the viewer benefits.

Senator PASTORE. In what way does he benefit?

Mr. STANTON. He benefits because I think he gets a superior program by this route. Now, it doesn't always follow that just because you spend more money you get a better program, but by and large programs cost money, and as you invest more money in writing and in production, you may get a better end product than you usually do.

So I submit that when you spend more than you recoup, that the public by and large is getting a better service, and I think the affiliate is getting a better service by that route.

Senator PASTORE. And the advertiser gets a cheaper rate?

Mr. STANTON. The advertiser, I think, gets a cheaper rate when it is translated into cost per unit reached; yes.

Mr. COX. This particular advertiser—in this case, Chrysler—got what you regarded as a better show, it got it at less than cost, and it paid the same time charge that other advertisers would pay who receive no such subsidy or contribution to program costs?

Mr. STANTON. It may or may not have received it. I won't answer that that way, Mr. Cox.

Mr. COX. That is you mean there are a number of instances in which other advertisers also received help in connection with the financing of expensive programs?

Mr. STANTON. Take a program like See It Now—well, Alcoa sponsored that program. Alcoa didn't underwrite the total cost of the program; we underwrote part of the cost of that program. I think that was part a public service we gave the advertiser, and I think in that case Aluminum Corp. got a better show. I certainly think the public got a better program by the extra cost that we put in to make the program a better program.

Mr. COX. And you would regard this as an investment of the network's funds in providing public service entertainment of a higher quality?

Mr. STANTON. Total programing, whether it is sustaining or whether it is commercial. And as I was about to say before, I think you will find many instances where individual stations will produce programs and sell them for less than cost, the same as we are doing. It is part of their job to put the best program in the time period.

Mr. COX. Now, in your press release of April 29, 1956, commenting on Senator Bricker's report, you point out that CBS owns less than 1 percent of the television stations in the country. Would it be approximately correct to say, however, that the four stations which CBS now owns cover something like 24½ percent of all the television sets in the country?

Mr. STANTON. I don't think that is correct, sir. I don't think that figure is correct. Of sets?

Mr. Cox. Yes.

Mr. Stanton. That may be correct, I am not prepared to say whether it is or not.

Mr. Cox. Could you provide us what you would determine to be the percentage of total sets which can receive the signals of your four owned-and-operated stations?

Mr. Stanton. Glad to.

Mr. Cox. And you are——

Mr. Stanton. What do you want to use as the definition of coverage?

Mr. Cox. Well, I would use the definition that you used in determining that 99 percent of the people can receive television signals.[1]

Senator Potter. I believe along that line, if I may interject, I believe there are bills now pending which would limit the television coverage of any one company—I believe it is 25 percent. It is my understanding that NBC, through their own stations, can cover about 25, about 24 percent of the present television audience.

Mr. Stanton. Well, there is a distinction, Senator Potter, between the way you have stated that and the way Mr. Cox asked his question. Yours is referring to population residing within the coverage areas of the stations and he was directing himself to sets.

Senator Potter. I see. Have you made any report at all on the legislation that is pending?

Mr. Stanton. No, we have not.

Senator Potter. Would you be in a position to say whether you favor such legislation or not?

Mr. Stanton. Well, I would like to put it this way: I certainly don't disfavor it; I am not at the moment prepared to say that I would favor it. I have one reservation in my mind, and that is that I think some concern should be shown for where those stations are located. I think it is possible, if some safeguard wasn't put into the legislation on that point that would make sure that those stations were reasonably well distributed around the country, that it is conceivable, for example, that that 25 percent would all be concentrated, let's say, in the States of Michigan, Ohio, and Indiana or in Illinois, if you want to do a 4-State concentration job.

Now, this is something that has always concerned the FCC, and I think this committee in past years, about the undue concentration geographically. It has concerned us, because we think that there is some reason for concern about that undue concentration.

Some years ago when the Commission was studying this problem in connection with trying to fix a limit, we put our minds to it to try to figure out what we might suggest in the way of something that might be a safeguard. At that time I think we suggested that whatever the upper limit might be—whether it is 25 percent of the population served or whether it is 10 stations or whatever it might be—that no more than 2 of those stations might be located in any 1 judicial district. Now the reason we happened onto judicial districts instead of Federal Reserve districts or FCC districts—there are a lot of different districts

---

[1] This information is set forth in a letter dated August 10, 1956, and exhibit C thereto, which will be found beginning at pp. 2835, 2846. It is indicated there that the television stations owned and operated by CBS have an aggregate coverage which would include 22.1 percent of the families in the United States. In a supplemental letter dated August 27, 1956, printed at p. 2856, it is estimated that 25.2 percent of the households having television sets are within range of the signals of CBS-owned television stations.

you could use for setting up these safeguards—but the judicial districts, as I understand it, are set by Congress and aren't subject to the change of an administrative agency, let's say, the way the FCC districts might be changed. So that those—I think there are 11 of those districts and one of them is the District of Columbia, so you wouldn't obviously put two stations in the District of Columbia. So we are really talking about distributing those so they would be in 10 geographical areas that, I think, are largely based on population—so that this thing would break down, not on square miles, but the distribution would be by population.

Now, if you couple something like that with this 25 percent, I think it is something that the multiple station owner could live with very well. I expect there will be some criticism of that kind of limitation because it is going to be difficult for everybody to achieve 25 percent under those limitations. That is the reason I hesitate when I say I don't come forward positively, but I certainly wouldn't oppose it. But, I have some doubt in my mind as to how you can set up the safeguard that wouldn't allow all of those to be in the State of Texas for one person, and all of them to be in, as I say, as I have used before, Michigan, Ohio, Illinois, and Indiana.

Senator POTTER. I think there has been some concern of some independent television operators that with the large markets being taken by the networks, such as CBS, NBC, and ABC, that there might be a constant encroachment upon the total—there would be an effort, maybe, to increase the population coverage by acquisition of additional stations or other means. And I am—I think there is a great deal of interest on the part of individual television operators, independent operators, to have a limit which will not cause the networks who own their own stations to curtail the present effort, but as a limit to keep them from expanding further.

Mr. STANTON. Well, the rule that the Commission operates under now is the rule of 5 on VHF, and you have in the case of ABC and NBC, 2 networks, and you have in the case of George Storer, 1 multiple owner, who is up to his limit now. We have only 3 V's; we are an applicant for a fourth V in St. Louis, and we still have one to go under the rule of 5.

Senator POTTER. But I believe, at the present time—you have 3 V's at the present time and 1 U.

Mr. STANTON. One U.

Senator POTTER. At the present time I believe you have about 20 percent of the population coverage; am I correct?

Mr. STANTON. Is that based on—I expect that that is approximately right.

Senator POTTER. In other words, with a 25-percent limit, if you came up to your full complement which the FCC would allow at the present time, you could conceivably go over the 25-percent limit.

Mr. STANTON. No, not the ones that we think we can get into, and I believe—and I may be wrong on this—but I think that if you take just the coverage areas of the 5 stations that are owned by ABC and NBC, that neither exceeds the 25.

Senator POTTER. That is right.

Mr. STANTON. And I will be glad to settle for those five markets for CBS any day.

Senator POTTER. I was interested in getting your views as to whether CBS had taken any definite position on the legislation that has been introduced.

Mr. STANTON. No; we have not.

As a matter of fact, in our comments on Senator Bricker's memorandum, in which that was mentioned, we said that we purposely were not commenting on it in there because we were addressing ourselves only to the monopoly aspects and not to that particular point. We certainly will be heard from the day this is appropriate for us to comment on.

Senator POTTER. Thank you.

Mr. COX. In connection with furnishing that last figure, could you also tell us then whether or not it is true that if an advertiser wanted to buy equal time on all the television stations in the country it would cost him about 11.7 percent of the total expenditure in order to buy the 4 owned-and-operated stations which you now maintain? In other words, what percentage of the time charge for the purchase of equal time on all stations would go to your 4 stations?

Mr. STANTON. You are saying now of all commercial stations in the country?

Mr. COX. Yes.

Mr. STANTON. Sure.[2]

Mr. COX. I think perhaps it is central to what we are talking about in this phase that we establish this point: Isn't it true—I think perhaps you indicated yesterday— that there is a sort of built in monopoly, or quasi-monopoly, in the television field today because of the shortage of frequencies? That is, there are only 17 markets which have any independent stations. Even when the pending grants now before the FCC are processed, Chairman McConnaughey says that two-thirds of the top 100 markets will have 2 stations or less; and the American Broadcasting Co., of course, frankly states it has great difficulty clearing time in key markets on a competitive basis at the present time. Now, quite obviously none of this is the fault of CBS or NBC, but is not that generally true that such a situation exists?

Mr. STANTON. Well, there is still a lot of open time, but there certainly is a shortage and I wouldn't deny that.

Mr. COX. Now, isn't the central core, therefore, of this phase of the committee hearings relating to network practices an inquiry as to whether, operating in this sort of a naturally constructed medium—constricted medium—on publicly owned channels licensed to station owners to operate in the public interest, whether the networks are pursuing policies which further restrict competition or concentrate control or restrain trade? Isn't that basically the issue that is posed by the contentions made by Mr. Moore and which you have answered in your testimony and in the documents you have filed?

Mr. STANTON. Well, Mr. Cox, I think it is a question as to whether you want to just patch the patient up with adhesive tape, or whether you want to find out what is really wrong with the patient so that he can live over a long period of time. It had seemed to me, when some of the deliberations of this committee began, that you were addressing

[2] This information is set forth in a letter dated August 10, 1956, which will be found at p. 2835. It is there indicated that the card rates for the 4 CBS owned-and-operated stations comprise 5.7 percent of the aggregate card rates of the 443 commercial television stations in the continental United States as of June 10, 1956.

yourselves at that point to getting at the root of the problem here, which is essentially the allocation problem. And I am still not persuaded that there isn't something that could be done to alleviate the condition that you are describing, vis-a-vis ABC.

Mr. Cox. In terms of allocations?

Mr. STANTON. Certainly.

Mr. Cox. I think that would be entirely correct. Now, with the conditions prevailing as they are today, so that there is a constriction placed upon the availability of stations, time, the development of additional networks—isn't there then posed this question: Whether some of the practices which the networks now pursue are further artificial restraints upon freedom in supplying programs, upon choice of program sources by the public and stations, and upon access for all classes of advertising to the medium?

Mr. STANTON. Yes; but you are asking me to describe what I consider to be a temporary condition, sir.

Mr. Cox. Well, it has been temporary for the entire life of television. That is, this is not something that has suddenly come about. These limitations have existed at least ever since the freeze was lifted and the Commission embarked upon the intermixture of UHF and VHF stations.

Mr. STANTON. Well, I quarrel with that definition as to how long it has existed, but I don't think that because it exists today that it has to exist tomorrow.

Mr. Cox. Well, clearly——

Mr. STANTON. It has only existed as long as the business—when the business began to be profitable. It didn't exist when everyone was losing money, and the allocation table was the same then as it is today. It is only the introduction of the fact that some of the industry who were interested enough and had the courage and the resources enough to invest in the bricks and mortar and the electronic gear—and more importantly in the programing—and take those losses for a considerable period of time; it was only when we turned the corner that this thing really began to bind and pinch. It didn't exist through that period. And I say to you that that can be changed.

Mr. Cox. Can it be changed through developments within the industry or only through FCC action on allocations, or how can it be changed?

Mr. STANTON. Well, it can be changed with the FCC.

Mr. Cox. And you would suggest that that is the only way in which it should be changed?

Mr. STANTON. I would suggest that that is the only way it should be changed.

Mr. Cox. You quoted certain instances where single companies in other industries receive a higher percentage of the total net earnings of that industry than is true of CBS in the broadcast field. Isn't the danger, however, of concentration greater in the field of communications, in the transmission of ideas, than it might be in the field of nonalcoholic beverages or coal, which were two of the instances you used?

Mr. STANTON. It would be, sir, if we owned all of the stations that carried our programs. I think then you might have some reason to say what you have just said. But I think you are being unnecessarily critical and apprehensive about the conduct of the 181 affiliates, minus the 4 that we own, that make up the stations of the Columbia Broadcasting System television network.

Senator PASTORE. Well, is that a true measure, or should the measure be the number of people that you cover? You can own 4 stations and cover one-quarter of the population of this Nation, and own 15 and only cover one-tenth. So I think the measure should be the vastness of the coverage.

Mr. STANTON. I certainly don't quarrel with that. I think that should be the measuring stick if we have any at all. Absolutely.

Senator PASTORE. Then I think you would find the control or lack of control in the public interest. I am not quarreling—I am just stating a measure.

Mr. STANTON. I just wanted to say that if we were to take that approach—and if we weren't a network, and if we just were the licensee of four stations—we would still cover the same percent of the country, and I suspect that Mr. Cox would still have the same fears, then, that he has just expressed about the concentration, coast to coast.

Mr. COX. I do not think so, Dr. Stanton. That is, I am suggesting that, of course, you have developed here a network, 1 of 3, which provides a substantial portion of the programing to the country—far beyond the reaches of your 4 stations, it goes to the 181 stations that you mentioned.

Mr. STANTON. Yes, but if you take the average affiliate—and I think this is covered on one of the charts in the supplemental document. If you take the average network affiliate, Mr. Cox, and I think it is on the page facing 123, chart XXIII; there we show the program sources of the average interconnected affiliate's sustaining and commercial schedule; and you will see that over two-thirds of all the programing on the average station affiliated with the CBS television network comes from outside sources.

Now, that does not seem to me to be undue concentration in terms of programing.

Mr. COX. What would the percentage be during the hours 7:30 to 10:30 at night?

Mr. STANTON. From the network it would be considerably higher, of course, than it is here.

Mr. COX. And, of course——

Mr. STANTON. But not necessarily from CBS program sources. As I pointed out yesterday, I think it is something like 22.7 percent from 7:30 to 10:30, from CBS Television.

Mr. COX. You are talking now just in terms of production. I was discussing the mat——

Mr. STANTON. I thought that is what you were addressing yourself to. We don't control the programs produced by outsiders.

Mr. COX. I am talking about the selection—the determination of what programing is going to be, the decision as to what entertainment, what discussion of public issues, who is going to broadcast the news, these matters decided by you in the period 7:30 to 10:30 at night to a substantial measure for 181 stations.

Mr. STANTON. Well, the only way I would change that is I would say that CBS Television, in cooperation with the public, decides what goes into that schedule; we don't decide what goes into that schedule.

Senator PASTORE. May I interrupt for a question?

Dr. Stanton, these stations that are owned by CBS, are they in localities that have less than two?

Mr. STANTON. No, sir. In New York there are 7 and we own 1; in Chicago there are 4 and we own 1; in Los Angeles there are 7 and we own 1; in Milwaukee, I believe, there are 3 V's and 1 U, and we own the U. And believe me that is less than a fourth of that market. [Laughter.]

Senator PASTORE. On any one of your stations, do you employ programs by either NBC or ABC?

Mr. STANTON. Programs originated by them?

Senator PASTORE. Yes.

Mr. STANTON. No, sir.

Senator PASTORE. Exclusively your own?

Mr. STANTON. No, not exclusively our own.

Senator PASTORE. I mean insofar as national programs.

Mr. STANTON. No, if I understand your question. Let us take New York as an example: The schedule in New York is roughly the proportion that we give for the network in terms of produced by us, produced by us in cooperation with outside producers, and produced by independents.

Senator PASTORE. But they all come in over your network?

Mr. STANTON. That is correct.

Senator PASTORE. That is what I mean. In every case the vehicle of channeling is through your own network?

Mr. STANTON. That is correct.

Senator PASTORE. Regardless of what the production background might be.

Mr. STANTON. That is right.

Senator PASTORE. I will be real frank with you, the question I am trying to resolve in my own mind is whether or not there was a situation where you were located in a locality that only had two stations.

Mr. STANTON. No, but ABC, I believe, is located in a market that only has three in the case of Detroit.

Senator PASTORE. All right.

Mr. COX. Yesterday, Dr. Stanton, you were outlining the method of allocating sets for ratemaking purposes in the case of overlap: First between two primary basic stations, that is where you just split down the middle; and second, between a primary basic and an EMP station which was later built near the edge of the service area, in which case you allowed a rate which would only pay the EMP station for the incremental sets added.

Let us take what is perhaps the harder case, 2 primary affiliates, 1 basic and 1 not; and to make it concrete, let's use one of the instances set forth in Senator Bricker's report, the situation as between Kansas City and St. Joe, Mo.—although as I understand it from your statement you have since changed affiliations; your affiliation there is now with KCMO instead of KMBC; is that correct?

Mr. STANTON. I just wanted to say that I don't make any distinction of any substance between those two—the change in call letters—as far as the St. Joe thing is concerned.

Mr. COX. No. This, however—was this just a change in call letters or was this a shift in affiliate?

Mr. STANTON. This was a change in affiliation for good and sufficient reason. But I think, for the purpose of the discussion that you want to have, the fact that we have changed affiliation shouldn't impede your question.

Mr. Cox. All right. Now Kansas City, here, is a basic station on your must-buy list, and St. Joseph is not; is that correct?

Mr. STANTON. That is right.

Mr. Cox. Do you have any idea approximately what percentage of CBS's commercial programing is ordered for St. Joseph?

Mr. STANTON. No, but if one of my associates has the figure in his black book, I would be glad to take it and give it to you.

Senator PASTORE. May we please have quiet? Now, after all, ladies and gentlemen, we have a very distinguished witness here who represents a very large free enterprise in the country. He is a man of great distinction and I suppose in many quarters one of tremendous envy. Now, I do not think there ought to be all this giggling and all this chatting to and fro. Let's have calmness here, please. Let's hear the witness.

Mr. STANTON. The answer to that question, Mr. Cox, is 77 quarter-hours a week.

Mr. Cox. Seventy-seven quarter-hours a week?

Mr. STANTON. That is right.

Mr. Cox. And that is out of a total offering of something like 72 hours—wasn't that what you had in your typical week?

Mr. STANTON. I think it is of that order; 68 as I recall, but you may be right.

Mr. Cox. Now, can you tell us what efforts would be made by the CBS sales organization to sell programs on the St. Joseph station? In other words, as I understand it, there is no problem as regards Kansas City; it is a basic primary station and it must be purchased. Now, what effort is made by CBS to interest advertisers in buying additional stations over and above the basic required list?

Mr. STANTON. Well, I think the best testimony to that is the difference between the basic must-buy list, which is 52, and the average lineup in the daytime, which is 83, and the average lineup at night, which is 121. That is a quantitative answer. I would say that there is considerable effort made saleswise to sell supplementary stations because, essentially, we want to get our programs into the—all the markets that we can possibly get them into.

Mr. Cox. Are you free to make that same effort with respect to a station which is overlapped, in the way KFEQ is, that you are with respect to a smaller market which is, however, a complete entity unto itself and presents no problem of overlap with another CBS affiliate?

Mr. STANTON. I think that question, as far as the station that you are talking about in St. Joe, is discussed by Mr. Griswold's letter of May 3, which is included as an exhibit in the analysis to the Bricker report. It was a letter that describes that in part, at least, that situation of selling effort.

Mr. Cox. He indicated a substantial improvement over 1954 in the amount of programing that CBS had been able to get ordered for this station.

Mr. STANTON. Yes. Reading from his letter, Mr. Cox, he says:

For instance, our total network income in 1954 was $32,2953; in 1955 our total sales from CBS network were $51,292, an increase of $18,339.

Mr. Cox. Now, there is only one station in St. Joseph; isn't there?

Mr. STANTON. If you say so, I will take your word. I am not familiar with every allocation in every city. As I understand it, that is right. Yes.

Mr. Cox. Therefore, the Kansas City affiliate of NBC has no overlap problems in either area?

Mr. STANTON. Well, has no overlap problem with St. Joe.

Mr. Cox. Well in other words, when an advertiser buys Kansas City on NBC, he knows he is not going to be asked to buy any possible duplication of that coverage?

Mr. STANTON. Well, you are looking at this particular market, and without knowing more about the surrounding markets in the NBC television affiliations, I am not sure that I can meet the line that you are taking here. But as it pertains to St. Joe, I would assume that—I mean I would assume no effort is being made to sell St. Joe to the WDAF advertiser.

Mr. Cox. In other words, NBC can sell its Kansas City affiliate as providing an unduplicated service clear out to its 100 microvolt contour, or whatever standard they use?

Mr. STANTON. Depending upon what overlap problems NBC might have in other directions.

Mr. Cox. From other stations?

Mr. STANTON. That is correct.

Mr. Cox. If any. Now, does it tend to make your Kansas City affiliate any less attractive, or to produce any contention about the rate at which it is sold, if KFEQ is being sold on an increasing basis and the advertiser raises the problem that he is now being asked to pay KFEQ and KCMO for the same coverage?

Mr. STANTON. Wherever there is overlap, sir, there is always a problem on the part of the affiliate. Not as it necessarily pertains to the network rate or to the network program situation, but the more programs a station has in the way of service—the more programs two stations have in an overlap area—the greater the difficulty when it comes to establishing circulation for either of those stations on local and national spot business.

Now, in a sense, this isn't quite as critical in television as it was in radio, because in time, I suspect that the orientation of antennas will be frozen either one direction or the other in much of that overlap area.

Mr. Cox. When that time arrives would it be the policy of CBS, then, to credit to each of these stations in accordance with the more or less established viewing habits of the people in the overlap area?

Mr. STANTON. I think that is essentially correct. As I said yesterday, we would place our case in terms of—and to the extent that we can make the measurements—we would place the case on what the viewer does, not what the signal is alleged to do.

Senator PASTORE. Doctor, in the operation of CBS, wherein does lie the area of the keenest competition? What gives you the most competition in the running of your station?

Mr. STANTON. I suppose the keenest competition, sir, is, first, in the area of programing, in the field of ideas. Second, I would say in the field of selling. And, third, in vying for the loyalty and the support and cooperation of our affiliates. But the first one is by all odds the greatest.

Senator PASTORE. You mean programing as against other networks?

Mr. STANTON. Not only against other networks but against our own voracious appetite. There has never been a medium since the beginning of time, I think, that has used up the manpower and money and material that television has.

Senator PASTORE. What is the procedure that is followed in the selling of a program to an advertiser? He buys a program for a specific number of weeks?

Mr. STANTON. Ordinarily he goes into it for a longer period than a given number of weeks, but contractually he generally buys on a 13 weeks' cycle basis. He may say, "I am going to buy this particular program in this time period for 52 weks." But more times than not, he has the right to get out at 13-week intervals, so that if he feels he hasn't made a good buy he can step out at the end of 13 weeks.

Senator PASTORE. But he is tied down ordinarily to 13-week periods?

Mr. STANTON. That is if he buys, yes; that is, I think, a pretty safe answer for the lion's share of the schedule. There are some exceptions.

Senator PASTORE. Has there ever been a case in your experience where a man or an advertiser was tied up for this period of 13 weeks at least, and then you both discovered the fact that the program did not take too well with the viewing public and he was released from his commitment?

Mr. STANTON. I am not sure there has been a case where he has been released from his commitment, as far as the advertising contract was concerned. But there have been cases, sir, where the advertiser and we were not happy with the program that we were supplying, and we have remedied that situation by changing the program and the advertiser has been perfectly happy to live up, then, to the balance of his contract.

Senator PASTORE. And does that usually come about because a competing network, at the same time, has a program that more or less has become more attractive?

Mr. STANTON. No; that doesn't necessarily—if it is within the cycle, to go back to the case that you indicated, that comes about by the fact that we want to be doing business with that man beyond the contractual limits of the contract; and we try to keep him as happy as possible, on the one hand, while on the other hand, we have got to keep up our level of programing not only for the public but for our affiliates. Because if the affiliates aren't satisfied with the program once they get it, once they have tasted of it, they can come back to us and say: "We don't want it."

Senator PASTORE. Well, now, there again I should like to ask you a question, too: For what period of time are they tied up?

Mr. STANTON. Generally, they are ordered for 13 weeks.

Senator PASTORE. No; I mean an affiliate, now.

Mr. STANTON. You mean an affiliate's contract?

Senator PASTORE. You turn on channel 12 in Providence; they say, "This is an NBC station." You turn on—that is pretty conclusive. You can't shuttle back and forth.

Mr. STANTON. It is a 2-year contract.

Senator PASTORE. Whether it is good or bad, I suppose has to stem from the point of origination.

Mr. STANTON. Except that the station does have veto power. For instance, we couldn't feed them something that isn't good, in the sense that the station has to carry it, from the standpoint of serving its local audience, even though the affiliation remains constant. That station can say, "I don't want this program; I don't like it, it is not good for the market." Obviously if we had enough of them saying that we would have to change the program.

Mr. COX. Does he do this part way through the 13 weeks' series?

Mr. STANTON. He has done it part way through the series. Generally, that isn't the case. But that has happened and can happen.

Mr. COX. When that happens, does that indicate that he did not fully understand the nature of the program at the time he first cleared time for it?

Mr. STANTON. It could be that, or it could be that he understood what the program was then, but the program wasn't able to continue the level or the format that started in the first broadcast or 'the second broadcast. It is many times difficult, Mr. Cox, to maintain for the entire cycle the level that you always see in the first dry run, whether it is a live show on a recording to look at, or whether it is a film show.

Everyone in the creative field, like the selling field or anything else, wants to put his best foot forward first. I am more concerned about what the fifth or the ninth program is going to look like than I am about the first program. Everybody has one book in him and one good first show, but it is the next show that I am concerned about.

Senator PASTORE. And that is a continuing responsibility.

Mr. STANTON. Yes, sir; it certainly is. And when you said where is the competition, it is not only competition from other networks and other media of communication, it is competition right within your own family, because you are digging all the time, trying to get better product, and one is vying against the other to put his ideas forth.

Senatore PASTORE. Now, take in a community such as Providence where you have 2 stations, and realizing the fact that you have 3 networks, how much of a leeway has either station got to go to the third network? Or is he shut out by the terms of your contract?

Mr. STANTON. He is not shut out by the terms of our contract.

Senator PASTORE. How much leeway does he have?

Mr. STANTON. As much leeway as he thinks he should have in terms of the products offered by the two networks.

Mr. COX. What is the average record of clearance, however, for ABC stations in two station markets like Providence?

Mr. STANTON. I can't give you that answer, sir; but I would say that it still stands, and the action of the station still stands in terms of what he elects to do. It is nothing that we can force him to do, or contractually that we can force him to do.

Mr. COX. In connection with this matter of Kansas City and St. Joe, if and when you can get to the point that you can measure the viewing preferences of the population in this area of overlap, and you therefore adjust the rates Kansas City and St. Joe have, will not that tend to make St. Joseph a more attractive market in terms of cost per thousand?

Mr. STANTON. It may or may not. It depends on what the figures show at the time, Mr. Cox.

Mr. COX. He can only gain, can't he, to the extent that he gets credit for coverage in the area of overlap?

Mr. STANTON. No; he can gain 2 or 3 ways. First, he can gain in the area that isn't duplicated by increase——

Mr. COX. But I mean with respect to the area of overlap. He can only get a positive benefit from a policy which would credit him with some part of the sets in that area.

Mr. STANTON. Well, he is getting credit for some of that now.

Mr. COX. On what basis?

Mr. STANTON. Well, on the basis of the best information we have got at hand. That will vary market by market, but this is in consultation with the affiliate, with our engineering personnel, and with our audience research personnel.

Mr. COX. Did you ever make a commitment to an affiliate in the larger market—in order either to get the affiliation or to maintain it—that you would not recognize the claims of the overlap station with respect to that area?

Mr. STANTON. I know of no such commitment and I am sure none has been made.

Mr. COX. In chart XVI in your supplemental memorandum you explain why CBS did not affiliate with KOVR in Stockton, because of the overlap situation that would have been created. Now, haven't you created an overlap problem for yourselves by shifting affiliation in Fresno from KJEO to KFRE-TV?

Mr. STANTON. We have a map in here, Mr. Cox, on that situation.

Senator PASTORE. Page 68.

Mr. STANTON. Would you read me the question back, please?

Senator PASTORE. Clerk, can you read the question back?

(Question read.)

Senator PASTORE. You know, it is always very pleasant to hear a stenographer's voice. We seldom ever do. [Laughter.]

Mr. STANTON. I am just trying to locate the map, Mr. Chairman.

Senator PASTORE. Take your time, Doctor.

Mr. STANTON. Mr. Cox, we have increased the overlap in one direction, I would say. At the same time, however, we have filled in much more area than was served before by the UHF station, KJEO-TV.

Mr. COX. Where is that area?

Mr. STANTON. Well, the area is to the south, to the——

Mr. COX. Is this area that is not now covered by KERO, from Bakersfield?

Mr. STANTON. Well, KERO is not the affiliate in Bakersfield according to this map.

Mr. COX. Doesn't it have a dual affiliation?

Mr. STANTON. Well, it is a primary NBC affiliate. KBAK-TV is the affiliate that we are talking about.[3]

[3] In a letter dated June 27, 1956, which was inserted in the record on July 17, 1956, Dr. Stanton commented further on the change of affiliation in Fresno and explained that his reference to KBAK-TV as a CBS affiliate was somewhat premature, since the network was then only considering such an arrangement. This letter is printed at p. 2856.

Mr. Cox. That is the UHF station?

Mr. STANTON. That is correct.

Mr. Cox. And you feel that KFRE will provide you with coverage toward the south which KBAK does not give you, and KJEO?

Mr. STANTON. Did not give; that is correct.

Mr. Cox. Isn't it true that Mr. Lodge advised you that, based on his studies there:

We would credit KFRE under normalized county standard with only one more county (Tuolumne—with 4,500 families) than is presently credited to KJEO?

Mr. STANTON. This, I have to plead ignorance to, because I don't get into the computation of every rate and I know nothing about this evaluation on the part of Mr. Lodge, Mr. Cox.

Mr. Cox. Well, could Mr. Lodge answer whether that was in fact the result of his investigation?

Mr. LODGE. That information was contained in a memorandum I believe I sent to Mr. Shurick at the time of analyzing the difference. I also believe that that memorandum, or other information I gave Mr. Shurick, indicated that our mere measurement of whole counties wherein we went by discreet steps of an entire county minimized the effect of the gain we would obtain by shifting to KFRE.

Mr. Cox. Do you feel, then, that the additional coverage you have obtained here in one direction more than compensates for the increased overlap that you get to the north?

Mr. STANTON. Yes; I think it improves the service of the network, and furthermore we had a commitment to KFRE to affiliate if it got channel 12 and satisfactory terms could be worked out.

Mr. Cox. Why was it that this commitment was strictly conditional upon its obtaining a VHF, as distinguished from a UHF, channel? Simply in order to get the coverage that you are speaking of here?

Mr. STANTON. That is one of the considerations, but another consideration is that that was what our radio affiliate was applying for at the time. The UHF was not a matter of discussion at the time.

Mr. Cox. That is, you were not at the time you made this commitment an affiliate—you had no television affiliate in Fresno?

Mr. STANTON. I would want to look at the letter on that date, Mr. Cox. But my recollection is that there wasn't any affiliation at that time with KJEO-TV. But what I really mean is that at the time we sat down and talked with the applicant for channel 12, he did not talk with us about making the letter conditional or having it read to UHF. He was setting his cap for VHF and was an applicant for the VHF.

Mr. Cox. And he was then your radio affiliate in Fresno?

Mr. STANTON. He was then our radio affiliate and is now our radio affiliate.

Mr. Cox. Now, with respect to the division between the network and the affiliate of the station's time charge, how is that determined?

Mr. STANTON. Could you give me, please, a little footnote to that, because I do not understand your question.

Mr. Cox. How is the percentage split between CBS and its affiliate arrived at? This is specified, is it not, in your affiliation agreement?

Mr. STANTON. Oh, yes; it is very clearly specified. I suppose that is arrived at or was arrived at the same as any other contract percentage stipulation is arrived at. It is arrived at in negotiation.

Mr. Cox. Is there any standard pattern in such matters among your affiliates?

Mr. Stanton. It is very standard. There are very few exceptions to the percentage that is specified in the contract.

Mr. Cox. And that standard is 30 percent to the affiliate and 70 percent to CBS?

Mr. Stanton. No, not 30 percent to the affiliate and 70 percent to us, but in terms of net dollars about 50–50 between the affiliate and us. That 70 percent that you referred to loosely there includes all the gross fees and the agency discount and money that we never get our hands on.

Mr. Cox. I recognize that, sir. It also takes care of the line charges, it takes care of the cost of television recordings and all the other things that you itemized in your statement. But the basic rate of the station is still 30 percent of gross time charge?

Mr. Stanton. Right.

Mr. Cox. Now, there is another factor which enters into the calculation of the affiliate's share and that is the matter of free hours. How is the number of free hours for any particular affiliate determined?

Mr. Stanton. Well, it doesn't vary by affiliates, though there may be 1 or 2 instances where it might. But for the large part it is standardized at 5 free hours. That, I think, is legitimately a case of where you could say there are historical reasons for that; and without trying to be facetious, let me just say that that, I think, is a carryover from the contract form that existed in the days—not in the days of the radio network, but existed when we started our radio network affiliation contracts and continues in both contracts. If we didn't have the 5 free hours—it would be very simple to remove the 5 free hours if that troubles anyone and just adjust the percentage to accommodate that fact. There is no magic to the 5 free hours. It is a carryover. It had its roots in a very logical point in the days of the radio—when it was originated in the radio days.

Mr. Cox. Now, do I understand you to say that there is almost the same degree of uniformity as to free hours as there is to this percentage distribution of time charges?

Mr. Stanton. I would say almost, and I would say further than that, where the 5 free hours don't exist it is all flat 30 percent, and the reason for that variation is because there are some instances, and I can detail the cases; I think as a matter of fact I am luckier than I thought because I have got the sheet right here. There are a number of stations where they pick up the signal—either off the air or they maintain their own links—either with their own investment in equipment or they buy the service, so that in those cases there are no free hours and the station gets a flat 30 percent.

Mr. Cox. Are there any other cases in which there are no free hours?

Mr. Stanton. Well, I am a little nervous about saying absolutely no, but substantially no. Oh, yes, I am glad that that has been brought to my attention. The secondary affiliates don't have the free hours, but I am addressing myself here to what we consider our network, which is basically the primary stations.

Senator PASTORE. You and Mr. Cox, Mr. Stanton, know pretty much what you are talking about, because we are on the professional level; but after all, we develop a record here for a lot of people who don't attend these meetings.

Now, tell us a little bit about how this money is paid out. You make a contract, let's say, with Chrysler Corp. to put on a program. How do you allocate the money that is paid to the individual station, and how is that all figured out? I mean, give us the fundamentals of the procedures involved, and the same thing about this free hours that we are talking about, so that people who read this record will know what you mean.

Mr. STANTON. A large part of that, sir, is set out in this supplemental memorandum, and if the record will reflect that and if I leave out everything——

Senator PASTORE. I mean in a very simple way. You know what I mean, and I think you are capable of doing it.

Mr. STANTON. Well, I suppose it starts out with an idea, and that idea may be on the part of the client or it may be on the part of his advertising agent or it may be on the part of our sales department, as far as interesting a customer in a sale. But before there is an interest in the sale there has to be something to sell, which is a program and facilities. And I would like to start with the sale of the time.

We are assuming, if you will, that we have got a network of X number of stations, and the rate that we charge, or the price that we charge, the advertiser for that time is a standard charge—nighttime has one rate, daytime has a lesser rate. Then if that advertiser indicates that he wants to go to, let's say, 85 percent of the population, and he specifies the markets where he is most interested in getting that coverage and concentration of circulation, we try to give him a network of stations which will match that circulation.

The price that that man is charged—let's say, in this case, Chrysler—the price he is charged for the time is an aggregate of the individual prices that are on each of those stations, so that Providence has one price, Boston has another price, New York has a different price, Philadelphia has still a different price, and so forth. That is the way the time is sold. Now, if he buys that time for 52 consecutive weeks, he gets certain discounts. If he buys it for only 13 weeks, the price per week is higher than if he buys it for 52. In other words, there is a bulk rate for beyond a certain point.

When we make our affiliation contract with the station, and the term of that contract is 2 years, generally, never longer than that. And the length of that contract is fixed by FCC regulation on the affiliate, not on us. When we make that contract there is a discussion, or a negotiation, if you will, about what the price will be for that facility. Whether it is $500, whether it is $600, that will depend upon a lot of factors.

But once that price is agreed upon—and, as I indicated yesterday, we, I think, have more to do with that than the station does. But there are instances where our hands are prettly well tied on what the price is because it may be a station that is switching from one network to another, where in a sense the rate has already been established as the going rate on the property when it was affiliated with another network. But at that time we agree to provide that station a balanced program schedule and we get option time, commitments that are specified in the standard form of contract, which is part of the exhibits here, and that contract is so written that the first 5 hours we get free from the station.

In other words, we put the program on the station and we don't pay the station anything for the first 5 hours. And then, from that point on, he gets 30 percent, as Mr. Cox said, of our gross rate for that station. In net dollars, that translates itself really into 50–50. And that is the way the station part of the deal is set.

Senator PASTORE. You say 5 hours within 24 hours that you get free, or 5 hours out of what?

Mr. STANTON. Five hours out of a week. And thank you for bringing that out, because this is again too much of the professional talk here. That 5 hours out of the week he gets—we get free.

Senator BRICKER. What is the reason for that?

Mr. STANTON. Senator Bricker, it came about in the early days of the radio network where, in exchange for the 5 hours of free programing that they gave us, we committed ourselves to give them a program service. Prior to that time they were paying for our sustaining programs—the ones that we didn't sell to advertisers—and they were buying those from us, and we agreed not to charge them for that if they would give us 5 free hours in exchange.

But as I said to Mr. Cox, it may have been before you came in, that 5 free-hour thing is one that could be adjusted out of the contracts very easily, simply by adjusting the percentage that you pay on the balance of the hours. It is not an insurmountable problem.

Mr. COX. Do you, in general, tell the affiliate now that he gets anything in return for the free hours, or is it purely and simply one step in the computation of this division?

Mr. STANTON. It is both things; he gets a lot for the 5 free hours, in the sense that he gets a lot of sustaining service, he gets a lot of public service broadcasting, he gets the benefit that flows from the whole affiliation.

Mr. COX. But you can't say he gets that in return for free hours any more than you can say he gets it in return for the time charge that is paid over?

Mr. STANTON. That is right; it is not a clear quid pro quo. And I would be perfectly willing, without any hesitation, to adjust the contracts to reflect the 5 free hours and to adjust the percentage. Don't let this 5 free-hour thing get in our way here, because it has just been carried over from an earlier form of doing business.

Mr. COX. Well, in connection with your indication that your standard practice was the 5 free hours per week and there were few, if any, exceptions, we have formed a substantially different opinion based on at least the initial analysis of the replies of your affiliates—a good many of whom indicated, perhaps under misinterpretation of the question, that they were not supplying you with any free time.

Mr. STANTON. Well, that comes as news to me. [Laughter.]

I am sure our accounting department will take note of this in the record. [Laughter.]

No, I think, Mr. Cox, in fairness to the affiliates and to clear the record here: There has been a lot of misunderstanding about the

5 free-hour thing, and particularly on the part of people in television who weren't in radio and didn't have the experience of the genesis of this device.

Mr. Cox. Now, is that 5 free-hour figure specified in your affiliation contract with them?

Mr. STANTON. It is.

Senator PASTORE. Don't misunderstand the tone of my question, but assuming you are in a location where you have 3 stations—1 is tied up with the NBC, 1 is tied up with CBS and 1 with ABC. Now, the life and the existence of that station depends upon your feeding them national programs. Now why do you keep emphasizing the fact that you must do so much catering to the station? It looks to me like the station has to do all its catering to you.

Mr. STANTON. Well, Senator Pastore——

Senator PASTORE. I mean if you shut them off they are out of business.

Mr. STANTON. Yes, but——

Senator PASTORE. You can't go to ABC, it is already tied up; nor to NBC, it is already tied up.

Mr. STANTON. But where are we going to go?

Senator PASTORE. You can go to another affiliate. You can expand your network, but they have no place else, too.

Mr. STANTON. No, I am very sorry, I think we are not on the same frequency today.

Senator PASTORE. Let's get on the same frequency.

Mr. STANTON. I didn't misunderstand your question or the tone of it.

Senator PASTORE. I am not being critical; I am asking you wherein does your competition lie, you say to keep satisfying the broadcasting station, your affiliate.

Mr. STANTON. Sure.

Sentor PASTORE. In other words, you created the impression pretty strongly that you have to do quite a bit of catering to them. To me, it looks like the reverse is true; they have to cater to you, because if they don't meet your conditions and meet your approval, if the contract is not renewed, where else would they go to get a national network?

Mr. STANTON. Well, there are 2 broad classes of affiliates—and I don't think you can divide them all into 2 broad classes, but for the sake of this discussion—there are the ones that are in the markets that are highly sought after. They are the larger markets for the most part, and those affiliates have many opportunities to take business from other sources, other than the network, so that we have to cater to them.

Senator PASTORE. That is in New York, Los Angeles, Washington—Mr. Stanton, you wouldn't say that is so in Providence.

Mr. STANTON. Yes, I would say that is so in Providence.

Senator PASTORE. Why?

Mr. STANTON. Because that is an important market. I am not trying to use any of Senator Magnuson's soap, either.

Senator PASTORE. Neither am I.

Mr. STANTON. No, that is an important market. I would say that once you get past, let's say, let's call it someplace between 70 and 80 markets, then we begin to veer over to the other kind of station that

I am talking about, and that is the one that is wooing us for as much business as it can get. That is a station, a market, let's say, that might be overlooked in trying to find the best places to take the cream off the sale of merchandise by an advertiser. If he has got a limited budget he might say, "I can't afford to buy every station that is on the network, so I will make up the list as far as my money holds out, and it may end at the 82d market." Now, the man who is in the 84th, 85th, and so forth, he comes in and wants to get on that network very badly, not only to get the program but to get the income.

So we have those two broad classes. There aren't pure cases in either extreme.

Senator Pastore. Where would that individual, that station, get its service—from a producer you mean?

Mr. Stanton. He is in bad trouble in my opinion. That is one reason I think it is so important to keep networks alive and to keep them strong and healthy.

Because we channel, as I tried to point out yesterday, I think a disproportionate amount of the advertisers' income into those smaller markets. And the only other way I know how to take care of that smaller market—and I don't know whether this is legal—but the only other way I know to do it, and I don't know of any way to do it in a democracy, is for somebody to say "You can't charge Cleveland this much because you have to take some of this money and put it in Yuma."

We try to do that in a systematic way and to make it as painless for the advertiser, and as beneficial for the small market, as possible. So there are those two groups, the ones that don't need us so much and the ones that need us a lot. But in your 3-station example that you gave, if it is a market with 3 stations and you say: What happens if we cut off that affiliate, what does he do? Well, if it is an important market, he can do pretty well without us. But I am not ——

Senator Pastore. Where would he go? That is the question I am trying to resolve here: Where would he go to get these high-class national programs?

Mr. Stanton. Well, I think he would have a difficult time going anyplace but a network. But there is a lot of good programing made available on film and from the syndicators and so forth, and we have said so in one of these documents here. I think there is a lot of fine programing coming from the independent packager and available to the independent station. But what I wanted to say to you before, sir, is if there are only 3 stations in the market, and there are 3 networks, it is not where does he go, it is where do we go—as ABC knows—if we break with that man? We have no place to go; we must have that market. We cannot afford to be without it.

Mr. Cox. Don't you try to acquire the ABC affiliate?

Senator Pastore. In other words, you would have difficulty, I suppose, in dealing with your advertiser later on if you couldn't furnish that many affiliates?

Mr. Stanton. We couldn't have a map of the United States that had moth holes, or swiss cheese holes, all through it where we didn't have affiliates. We try to get as broad a coverage as we can get.

And to answer your question, Mr. Cox: If we did go to the ABC or the NBC affiliate, then in turn that network would go to one of the others—there would be a game of musical chairs, and that has happened on occasion.

Mr. Cox. Isn't it true you have testified that CBS has, for the last year or two, been the dominant network in terms of gross billings, it has had a preeminent position in terms of popular shows—therefore, isn't it quite likely that the man who is affiliated with you in a three-station market is quite anxious to retain this particular affiliation with your particular network, and that he would not be willing to take risks of offending you if this might involve the necessity of this game of musical chairs you are talking about?

Mr. Stanton. I wish it were that way, sir, but the record, I don't think, will support your point. I think that the stations have a pretty good give and take with the network. I see a number of them in the room here, and I can remember some of the give and take that we have had with them. [Laughter]

Mr. Stanton. And we have an affiliates' advisory board for our radio network and an affiliates' advisory board for our television network—and these have been pretty earthy meetings, at times.

And I think we have resolved a lot of our problems; and we have corrected things that they were doing that we didn't understand, and we have corrected things that we were doing that they didn't understand. So that I don't think that this is a one-sided street by any means.

Senator Pastore. Would you say, Dr. Stanton, that the three networks are getting stiff competition from the independent producers?

Mr. Stanton. As far as program production is concerned?

Senator Pastore. Yes.

Mr. Stanton. Absolutely.

Mr. Cox. Is this in terms of the attractiveness of your produced programs against their programs on the network, or isn't this in terms of the availability of time for them on a syndicated basis?

Mr. Stanton. Well, it is both, Mr. Cox, and I think the trend from 1954 to 1956, in the figures I gave yesterday, demonstrates 1 of the 2. And I think that if you look at the growth of the independent producer, or the independent producer-packager, in terms of his ability to sell these packages on stations, I think that that is pretty good evidence on the second point.

Mr. Cox. That has largely been just incident to the overall growth of television, hasn't it? That is, it is only apparently within recent months that they have begun to encounter real difficulty in finding outlets for their programs?

Mr. Stanton. Well, I still think that if on the average interconnected affiliate that we have got on our network—as I tried to show here in this 1 chart—that if 68 percent of the time is filled by outside-produced packages, that that is a pretty good indication that we haven't got any stranglehold on the programs.

Senator Potter. What would happen, Dr. Stanton, if one of your prime affiliates decided they had an independent show which might be more popular in that area than, for example, I love Lucy, and they asked you to relinquish that time for their independent show?

Mr. Stanton. Well, we would do it. We have affiliates, for example, I suppose—and I hope the representatives of the competing networks will pardon what I am going to say here, but I suppose the most exciting thing that has happened in television as a series program in recent years has been The $64,000 Question. Now, you would normally think that a station would jump at the opportunity to have that program. It was front page news all over the world as that program got under way. And yet, there are stations that have been ordered for that program, and are affiliates, that are not clearing for that program. And as I indicated yesterday, in I think the footnote on page 88, if I am not mistaken—no, that isn't the right footnote. But at any rate, the history of the clearance problem on that particular program is recited in a footnote here which I indicated yesterday.

So that is something that I don't like to see happen, because I am trying to persuade the station to take the program. But believe me, sir, it happens; and the figures that I gave yesterday indicate that out of the—even out of the 52 basic required stations, 91 hours ordered were not cleared as ordered, out of the 52—on the 52 basic stations in 1 week. Now, those basic required stations are all, for the most part, in the larger markets.

Senator POTTER. If they fail to clear a period of time, particularly option time, for a network program, would there be a likelihood of retaliation in the case of a program that they did want in another period of the day?

Mr. STANTON. Absolutely not, and I don't think you will find any of our affiliates that will ever give you any indication that there has been any retaliation in any way. I will say this: That we try to persuade them to think that our program is superior to the program that they might be taking, but the judgment is very simple, it is in the man's hands that has the license.

And as one of my associates just wrote on a piece of paper here, because I had forgotten the figure, of all the network-time periods that we have sold now on the network, only three of them have all the stations cleared that were ordered. Which I think is another way of answering the question that you asked before.

Senator POTTER. Do you think the networks will be confronted with increasingly stiffer competition from the independent producers?

Mr. STANTON. I hope we will be, because that way lies better programing for the public.

Senator POTTER. Now, this development of pictures on tape, won't that have quite a revolutionary effect upon independent programing?

Mr. STANTON. It is difficult to see the shape that that will take at the moment. There are a lot of problems that come up with labor contracts in connection with the employment of that; there are a lot of facilities changes. But this is bound to have a very marked effect on the future pattern of things.

The tape equipment will allow for a great deal of flexibility for the network; will allow for a great deal of flexibility for the station; and I think will allow certain types of stations in small markets to get on the air with, perhaps, lower operating costs. And I think this is the introduction of automatic equipment, in the sense of recording on tape as against recording on film, and then playing it back through electronic equipment. I think this is very healthy for the industry.

To give you one example of how it will—or how it might eventually help the public: It is very simple, too, I think, to tell you this one, because more and more of the country is going to varying time zones. It is not uniform. And this plagues the broadcaster, as I suppose it plagues anyone who goes coast to coast with his service, such as airlines and railroads—and I am sure some of you have been through the mill on this question. But for large parts of the country what happens in the originating center affects the viewing habits where the clock doesn't change at all. And there is no reason the person in Kansas should be upset with his viewing habits because the clocks are changed in New York City.

Now, if we can adjust those time—our schedule for that part of the country through the use of tape, where we give good quality and instantaneous recording, this is a great benefit to the viewer because it doesn't upset his viewing habits twice a year. We have done this in radio, because we have had tape for radio ever since the end of World War II. We haven't got it yet, as far as this application is concerned, for television, but this I think will evolve from this latest development. And that will again benefit the viewer, because it means that the person in New York, when the clock changes, doesn't get any changes—his favorite programs are on at the same time. But the man in Kansas, or the man in some other part of the country that doesn't have daylight time, doesn't get his schedule knocked back an hour simply because the originating point changes.

Senator POTTER. Dr. Stanton and Mr. Chairman, I would like to pursue a couple of more questions on another facet of this problem, and I may have to be called on the floor. So I know that counsel has his questions pretty well integrated, but with the permission of the Chair I would like to ask Dr. Stanton this question. And I assume you probably have answered it in one of your memoranda submitted to the committee, but I will be very frank with you, Doctor, I haven't had an opportunity to go through the memoranda as I would like.

I assume you have refreshed your memory on Mr. Moore's testimony before our committee, where he made many recommendations. One of the—I would like to quote you from Mr. Moore's testimony and I would like to receive your comment on his testimony, and he states:

> The first is the agreement between a network company and the licensees of certain individual stations whereby each station agrees to withhold certain desirable time periods from sale to any advertiser unless the advertiser agrees to purchase equivalent time on all stations throughout the country who are parties to this agreement. These are the so-called must-buy agreements, utilized by CBS and NBC. * * * We were naturally interested, however, in the following excerpt from the recent testimony of the Assistant Attorney General Barnes before this committee.

And he quotes from testimony of Mr. Barnes, who is head of the Antitrust Division of the Department of Justice; and this is in response to a question by Mr. Cox. Mr. Cox' question is as follows, and I quote:

> There has been testimony that NBC and CBS follow a must-buy policy, under which an advertiser, to get on a network at all, must buy time on a minimum of 50 or 55 stations, whether it wants to advertise in all these markets or not. Is there any possibility that this practice might violate the antitrust laws?

Judge Barnes' reply was, "Yes."

And as I say, I assume you probably covered that in one of your memoranda. But the memoranda, as I understand, will not be made a part of the record, but will be used as references to the record. And

I think as long as Mr. Moore's statement has been made a part of the record, it would be desirable to have your comment as to whether you feel that your must-buy agreements are in violation of the Antitrust Act.

Mr. STANTON. Senator Potter, I have before me here the Opinion of Counsel and Memorandum Concerning the Applicability of the Antitrust Laws to the Television Broadcasting Activities of Columbia Broadcasting System, Inc. This was prepared by our counsel, Cravath, Swaine & Moore, and Judge Bromley, a member of that firm, is at the table with me here. He may wish to address himself to your question because I think it might save time and be less costly for the record if he comments, rather than if I do.

Senator POTTER. Yes.

Senator PASTORE. Can you do that, Judge Bromley?

Mr. BROMLEY. I would be very glad to, Mr. Chairman. I think I should say at the outset that my good friend, Judge Barnes, by his own statement had not had an opportunity to study this problem in detail. All he indicated was that he thought there might be a question about its lawfulness. Now, he had not at that time had the opportunity of reading my opinion, either. [Laughter.]

Senator BRICKER. In his new position he might have something to say about that, too. [Laughter.]

Mr. BROMLEY. We treat this, starting on page 58, and point out that the network is in the business not of offering all sorts and kinds of mediums, but it is in the business of offering a network. And there is nothing unlawful in its saying, "Here is what I am offering: I am offering a minimum of 52 stations. I don't want to sell 1 network station to an advertiser, I don't want to sell 2, I am offering a network." And that is, while it is in a sense a restraint, it is a reasonable restraint under the rule of reason which the Supreme Court has applied to all section 1 Sherman Act questions. And an examination of the cases like the Prairie Farmer case, where the publishers offered the advertiser a package of farm papers at a discount price, has been sustained—that kind of a reasonable restraint has been sustained by the Supreme Court time and again. And I am confident it will be sustained here.

Senator PASTORE. In other words, if you don't contract for 55 stations you can't buy wholesale?

Mr. BROMLEY. That is right.

Mr. COX. If you don't buy 55, you can't buy at all?

Senator PASTORE. I suppose the quality of the program is predicated upon the spread.

Mr. STANTON. Absolutely.

Senator PASTORE. And there is a certain cost element involved that depends upon the kind of a spread that you give it.

Mr. BROMLEY. That is right, sir.

Senator PASTORE. And the basic cost of that spread is 55 stations that you have to cover.

Senator POTTER. I assume your 55 stations would give them the nationwide coverage that they seek—that the advertiser seeks? If he wants to advertise regionally——

Mr. STANTON. He wouldn't buy coast-to-coast network.

Senator PASTORE. He wouldn't get I Love Lucy.

Mr. STANTON. Not at the present time.

Mr. Cox. Judge Bromley, is there any possible analogy between this situation and that of the theater chains; where in some markets the chain owned the only theater available and insisted that if you wanted to exhibit your films in their theater, that to get into that market you had to also take their particular theater in 20 or 30 other markets where there was some choice? Now, isn't it true that the two dominant networks have affiliation arrangements in certain of the essential markets in this country, and that through that degree of control of the time available for broadcast in those markets, through a must-buy policy, they are in a position to insist that you take specified stations in other markets—not that you advertise on a national scale, not that you buy another market, but that you take a particular outlet in that market?

Mr. BROMLEY. No. I think you are talking about the Griffith case. I think there is no analogy here because there is no conspiracy. Even you wouldn't suggest there is any combination between the three competing networks. And the the Supreme Court has said there is nothing wrong in an exhibitor owning the only theater in one town. True, he can't tie to that one-theater town a whole lot of other competitors for the purpose, with the intent and with the effect of injuring his competitors in other towns. But I don't look upon the basic required as a tie-in situation at all, because what are we tied to? We don't tie anything to anything in the sense that Griffith did in his situation there. It requires a little keen analysis, Mr. Cox, but I am sure if you read this opinion you will at least see what I am contending for. And that is that there is involved in this national medium, and the minimum stations, no element of tying something of which we have complete control to something that we haven't complete control for the purpose of injuring competition.

Senator BRICKER. If you will yield for just a moment I want to clear up two questions. In case that ordered time is not taken by an affiliate station, is there an adjustment of your basic contract then with the advertiser?

Mr. STANTON. Well, the advertiser, Senator Bricker, is only charged for the stations that he ordered and that accepts; and if they don't clear, then the advertiser is not charged for them.

Senator BRICKER. In the case where the ordered time is not taken by one of the broadcasting stations, how is that explained? Is there anything in the record to show? Is that by the independent producers' programs, or by local programs, or what is the substituted program that is used in most instances, the nature or character of it?

Mr. STANTON. Well, it varies from case to case. Generally, it is either a local program, in the sense it is a local live program, or it is a program that is on film and is bought from an independent package-producer organization.

Senator BRICKER. It might be of particular importance in that community?

Mr. STANTON. It might be or might not be.

Senator BRICKER. Cheaper program; matter of price?

Mr. STANTON. Not necessarily a matter of price. It may be a matter of content. There are occasions when there will be a break in a particular market to broadcast a local event of some importance. That is a one-time break. There may be other instances where the advertiser doesn't clear—I mean the station doesn't clear for a matter of weeks. That may be the illustration of an important series of sporting events locally; it may be the hometown baseball team or something of that kind. Or it may be some other popular program that is on film that some advertiser wants to put into that particular time period.

Senator BRICKER. The only way, then, that you could enforce your ordered time is through payment, first, and withdrawal of the contract—the affiliation contract—in the second place?

Mr. STANTON. Well, yes; except that that is not the way we operate.

Senator BRICKER. I know.

Mr. STANTON. We consider this a very binding contract.

Senator BRICKER. That is what I am getting at.

Mr. STANTON. Absolutely. But, we have never invoked it from a legal sense.

Senator BRICKER. How would you enforce that—cancellation of the contract?

Mr. STANTON. Well, I expect the first remedy we would try would be to get the lawyers to remind them of what is in the contract that they have got. And, in due course, if we didn't have any success there, I suppose we might take some other remedy in the sense of trying to get another affiliate.

Senator BRICKER. There is no enforcement provision that you have in the contract; there is no penalty provision in it in any way, shape, or form. The only enforcement comes that they don't get the money for the time, in the first place; and in the second place you can cancel the contract and go to another affiliate.

Mr. STANTON. That is right. There is another element that I think we are missing here in just reducing it in terms of dollars and legality. And that is that these programs have a great deal of importance to the affiliate for their overall circulation and prestige that they give to the station. So that if the station accepts the program from us, it isn't just a matter of money, but it is a matter of indirect benefits that the station gets by the adjacent time periods that are enhanced by the presence of the network program.

Senator BRICKER. In other words, you get a captive audience at a particular time, or you have an audience—of course, they can shut it off if they want.

Mr. STANTON. That is right, there is a good lead-in, let's put it that way.

Senator BRICKER. Yes.

Senator PASTORE. Just so that we can dispose, on the record, of the other subject that we were just discussing, this must-buy: Isn't it usually the case where a certain type program of a high cost production is sought by the advertiser, that in order to put that program on you have to go out and get two or three advertisers in order to sustain it?

Mr. STANTON. Yes, not all of the programs that we have are sponsored by a single advertiser.

Senator PASTORE. Well, now, what I want to get on the record is why is that so? I want you to explain that on the record. Why, in many cases, do you have to get more than one advertiser in order to put a program on?

Mr. STANTON. Economics is the answer, sir. We might have a program that cost $100,000, just the program; not the time, but the program may be $100,000. We may find it easier to find 3 advertisers to share that $100,000 on an every-week basis than we would to find 1 advertiser to take the $100,000 bill every week. Or you might split it in another direction. Instead of splitting it three ways every week, you might split it half and half on alternate weeks.

Senator PASTORE. But, if one of those 3 advertisers came along and said, "I will take this program, and instead of giving me 55 stations just give me 10"—you couldn't give it to him?

Mr. STANTON. We would not sell it to him. Because what we are selling, sir, is coast-to-coast coverage of a minimum of 52 stations.

Senator POTTER. What would happen if you had an advertiser who would take a show, and your affiliates rejected the show in substantial numbers so they gave you concern—you really had a stinker on your hands. [Laughter.]

What do you do about it?

Mr. STANTON. We try to remedy that very quickly, because it is not only the loss of the affiliates that matters, but that is a distinct interruption to our program schedule, where the stations do carry what you have characterized as a stinker. And the thing that we can't afford to have happen to our schedule is to have the sequence broken, because each program leads into the next program and we put a lot of study and effort into how we phase those programs in terms of sequence or time. And if we had a low point we would do everything we could do to shore that up very fast ourselves, even digging down into our own pocket to fix it up, particularly if it is an outside program. The advertiser would be just as quick to want to change that program as we would be, because he is after the same thing we are after. He is after circulation. His benefit flows from the benefit that flows to us from serving the public. And if we don't have large numbers—this is a mass medium—if we don't have mass circulation, the advertiser isn't interested in us. And I say that I don't want to characterize that as 100 percent, because there are some advertisers who are interested in programs that aren't necessarily the utmost in circulation. But by and large, what the advertiser is buying is circulation.

Senator POTTER. The reason I asked the question, I have heard of cases where an advertiser thought that such and such a show was a fine show and that the stations that had to carry this show thought differently. Now, whether they made—whether they were vocal to the network or to the advertiser, I don't know. But I am just wondering if the case where the advertiser—it is his show, they produce the show or the program, and maybe they have contracted for time for 13 weeks, or whatever it might be. At the end of 5 weeks you found out that it was—you had heard from enough of your affiliates to know that it was hurting your whole network programing. Just what can you—can you force the advertiser to get another show, or can you cancel his contract if the show doesn't come up to standards?

Mr. STANTON. Well, it depends upon the seriousness of the quality of the program as to what limits we would go to. But, it never gets itself into that particular position, Senator Potter, because the advertiser is right there beside us in wanting to fix that situation up. He wants the good will of the public, he wants the good will of the station.

He may be buying network time today, he may be buying spot time tomorrow, and he is in business for the long haul. We are in business for the long haul. And so it isn't looked at on the basis of invoking a clause in the contract. We try to fix the thing up. Because the most precious thing we have got is that audience that is out there, and if we do anything that drives that audience away from our channels to some one else's channels we may never get them back for quite some time. And so we do everything we can do to encourage the viewer to stay with us—not to drive him away. And the affiliates, if they felt that we were feeding them a program that wasn't worthy of the schedule or of their facilities and for the audience in their communities, they—I believe they would not go to the advertiser and complain, they would look to us, and rightly so, for having gotten them into that predicament. We don't obviously do it deliberately, and we have had shows that have gone to pieces for one reason or another—not anything wrong as far as content was concerned, but the quality wasn't as good as the first one. As I indicated a minute ago, we jump in as rapidly as we can to remedy that situation.

Senator PASTORE. We will take a 5-minute recess at this point to give the stenographer a recess.

(A short recess was taken.)

Senator PASTORE. Mr. Cox?

May we have quiet now, gentlemen?

Mr. COX. Dr. Stanton, Senator Potter was asking you about possible instances in which you had received complaints from affiliates and had therefore had to doctor your program schedule. Are there instances in which CBS, itself, has made changes in its program scheduling because it was not satisfied with a program, even though the advertiser concerned may not have agreed?

Mr. STANTON. Mr. Cox, I don't believe I answered Senator Potter the way you phrased the question.

Mr. COX. No; I am shifting now to another point.

Mr. STANTON. I know you are, but I think I did not say what you indicated in setting up your question. I think—I don't recall of any instances where we have changed programs because the affiliates complained to us. I think that—I thought this was a hypothetical question——

Mr. COX. Yes.

Mr. STANTON. That I answered in the case of Senator Potter. That is the way it would work if we didn't step in first. But we, I think, are more sensitive to this problem, perhaps, than even the affiliate, and we would move in very quickly on a situation like that.

Mr. COX. Are there any instances where you have made changes in programing even though the advertiser concerned did not concur in your judgment?

Mr. STANTON. Yes. I think that there have been some instances where that has happened.

Mr. COX. Is CBS now carrying a program called Four Star Playhouse?

Mr. STANTON. At the present time I believe it is in the schedule; it was in the schedule this season. It may be off now, but it was in this season's schedule.

Mr. COX. Do you know how long this has been on the network?

Mr. STANTON. I can't give you precisely that, but all of that information about the Four Star Playhouse, Mr. Cox, is covered in a memorandum which I will be glad to give you for the record.

Mr. COX. I would like to have that. I would also like to discuss some phases of it here.

Senator PASTORE. Do you want that in the record at this point, sir?

Mr. STANTON. I would like it in the record at this point.

Senator PASTORE. Without objection, it is so ordered.

(The document referred to follows:)

Thursday—9:30 to 11 p. m.

FOUR STAR PLAYHOUSE—PLAYHOUSE 90

Four Star Playhouse is 1 of 3 half-hour programs which will be replaced in the fall of 1956 by Playhouse 90, a 90-minute weekly dramatic program.

Four Star Playhouse is currently being broadcast on Thursday evening from 9:30 to 10 p. m., sponsored on an alternate week basis by Bristol-Myers Co. and the Singer Sewing Machine Co. The other programs which were being broadcast in the time period to be occupied by Playhouse 90 at the time plans for it were finalized were the Johnny Carson Show, produced by CBS television and sponsored by General Foods Corp. and Quiz Kids, sponsored by Whitehall Pharmacal Ltd.[4]

CBS television decided in the summer of 1955 to provide and broadcast an hour and a half dramatic show on a weekly basis in the hope that such a program would open up new sources of dramatic material and enrich the viewers' enjoyment of television drama. The decision to assume the financial commitments for this series was made with the hope, but without any assurance that it could be sold. (As a matter of fact, alternate sponsorship has not yet been obtained for the 10 to 11 p. m. portion.)

In recommending Playhouse 90, Mr. Hubbell Robinson, executive vice president of CBS television in charge of network programs, stated in a memorandum, dated June 17, 1955, addressed to Mr. J. L. Van Volkenburg, president of CBS television:

"Bill Dozier and I have been discussing for some weeks now the possibility of doing an hour and a half dramatic show on a weekly basis.

"We believe this may be the next big forward step in evening television. Here are some of the reasons which prompt up toward that conviction.

"1. It opens up a large area of material not available to the weekly 1-hour formula. There are many distinguished authors who will not release their material for a 1-hour adaptation, feeling that is not sufficient time in which to do it justice.

"2. This would be the first show to come to the public each week as an hour and a half. No one else would be doing anything of this size with this frequency.

"3. * * *

"In every phase of the operation this should be a distinguished, an important, and an impressive production.

* * * * * * *

"5. Another attractive aspect of this type of production is that a 90-minute script is practically the perfect length for a motion picture. This would make this project more attractive to authors * * *.

"6. If we were to go ahead with such a project we should decide on it at once. I should think we would think of it in terms of starting in the fall of 1956, but we should use the current season buying and preparing the material. This means we would have the precious time to prepare it carefully. Also, selecting and purchasing it, we would not be under the pressures and urgencies which we always seem to have to contend with and which

[4] General Foods canceled its contract for the Thursday 10 to 10:30 p. m. time period and its contract for the Johnny Carson Show, effective after the broadcast of March 29, 1956. The Arthur Murray Party, sponsored on an alternate week basis by Toni and Hazel Bishop, is currently being broadcast in that time period. Whitehall canceled its sponsorship of Quiz Kids effective after the broadcast of April 12, 1956. That program is now being broadcast on a sustaining basis.

frequently result in our having to pay more than we want to and ending up with a product which could have been better if we had more time.

"7. As to the hour and a half into which this show would go, it obviously does not exist at the moment but it would seem to me that if we start planning and maneuvering now we would have a reasonable chance of making an hour and a half available by the fall of 1956. In fact that would seem to me the only way we could make an hour and a half available.

"8. Such a series would require two teams of producers working alternate weeks. One of these teams could be Markle and McConnor; the other team we will probably have to acquire.

"In conclusion I only want to say that it seems to me as if this could be a tremendously impressive series that could not only be the most important and distinguished dramatic undertaking in television, but one that, by virtue of its stars, stories and frequency, could be television's biggest dramatic audience-getter."

Present plans are that, for the first year, the Playhouse 90 series will consist of 36 live programs to be produced by CBS television and 8 filmed programs, each of which will be repeated during the summer, to be produced by Screen Gems, Inc., a subsidiary of Columbia Pictures Corp. Our arrangements with Screen Gems provide for that organization to produce at least 8, and if requested, up to 13 filmed programs for CBS television during the 1956–57 season. After determining that Playhouse 90 should be broadcast, consideration was given to selecting the most appropriate time period. The Thursday 9:30 to 11 p. m. time period was finally selected because, among other reasons, it was believed that the interest of program sequence would best be served by having the program follow Climax and because of the general weakness of the then programing in the 9:30 to 11 p. m. Thursday period.[5]

Despite the fact that in the opinion of CBS television program executives Four Star Playhouse was not an outstanding program, at no time were sponsors of that program told that the program was not acceptable. On the contrary, the advertising agency for Bristol-Myers and Singer was advised in February of 1956 that if those clients did not desire to participate in the sponsorship of Playhouse 90 but wished to continue to sponsor Four Star Playhouse, CBS television would endeavor to find another suitable time period. At the same time the advertising agency was informed frankly that CBS television could give no assurance that a suitable substitute time period would be available.[6]

In any event, CBS television was not faced with the necessity of attempting to find a substitute time period for Four Star Playhouse because its sponsors decided to participate in the sponsorship of Playhouse 90.

In short, CBS television has never refused to accept Four Star Playhouse. CBS television has never been requested to accept the program in another time period. If such request is made, CBS television will consider the suitability of the program for broadcasting in the specific time period suggested.

In connection with the uncertainty of CBS television in February of 1956 as to its ability to provide a substitute time period for Four Star Playhouse, the following is pertinent: Mr. J. L. VanVolkenburg consulted with representatives of Young & Rubicam as early as August of 1955 concerning the plans of CBS television for a 90-minute dramatic program in the 9:30 to 11 p. m. Thursday

[5] Four Star Playhouse was not a strong program, in the opinion of the program executives of CBS television. During the period from October 1955 through April 1956, its ratings averaged 6.7 points lower than the programs which preceded it (Climax, in 3 weeks of each 4-week period and Shower of Stars every fourth week) and 9.5 points lower than its principal competition, Ford Theater. While the ratings of Four Star Playhouse were less than that of the programs which preceded it, the ratings of its principal competition, Ford Theater, were approximately equal to those of Dragnet, the program which preceded Ford Theater through December, and considerably higher than those of The People's Choice, the program which preceded Ford Theater during January through April of 1956. Furthermore, while the average of the ratings during the period October 1955 through April 1956, both inclusive, of all CBS television network programs broadcast between 6 and 11 p. m. was 25.4, the average rating of Four Star Playhouse for the same period was only 22.9. It is interesting to note that the average rating of Meet Millie, a program produced by CBS television and with which CBS television was dissatisfied, achieved an average rating during the period October 1955 through the first Nielsen rating period in March 1956 of 22.6—for all practical purposes the equivalent of that of Four Star Playhouse. (Ratings used are Nielsen average audience ratings.)

[6] It is our information that the Zane Grey Theatre which will replace Our Miss Brooks, a CBS television produced program, in the fall of 1956 will be produced by an organization, not connected with CBS, in which the equity ownership will be held by many of the same persons as originally held an equity ownership in the organization which produced Four Star Playhouse.

period. Mr. VonVolkenburg was encouraged by the agency's reaction to the plan and its expression of interest on behalf of its clients, Bristol-Myers, Singer, and General Foods. CBS television network program executives kept the agency constantly advised of the progress of the programing and understood that the clients of the agency were interested in participating in the sponsorship of Playhouse 90 as a substitute for the programs which they were then sponsoring. It was not until February of 1956 that CBS television learned that sponsors concerned had some question as to whether or not they wanted to participate in sponsorship of Playhouse 90. In going forward with its plans to broadcast Playhouse 90 CBS television was merely exercising what in its opinion are its programing responsibilities. When, however, questions were raised in the general area of network's programing activities, CBS television held its plans in abeyance and submitted questions involving Playhouse 90 to its general counsel. Only after CBS television received an oral opinion from its counsel that no violation of the antitrust laws was involved did CBS television go forward with its plans. Subsequently at CBS television's request, CBS television received a written opinion confirming the oral opinion.

Mr. Cox. Do you have a copy for the reporter?

Would it be roughly correct to say that it has been on the network since September 1952, now going into its fourth season?

Mr. Stanton. Yes, I would say that is so.

Mr. Cox. Currently that program is sponsored by Singer Sewing Machine Co. and Bristol-Myers; is that correct?

Mr. Stanton. That is correct.

Mr. Cox. Has it had generally good rating by the critics and a good rating as far as your surveys are concerned?

Mr. Stanton. That is covered, sir, in the footnote in the memorandum; or if not in the footnote it is covered in the text. I am referring to footnote on page 3.

Mr. Cox. You indicate that it was not a strong program. What is the current time period that is occupied by this show?

Senator Pastore. At this point, unless you show it to the stenographer, will you please read out loud so that he can take it down.

Mr. Stanton. As a matter of fact, I will be glad to give him this copy and we can both work off of it.

At the present time I think that program is 9:30 to 10 on Thursday nights.

Mr. Cox. And the program has been in that time slot for some time?

Mr. Stanton. It has been.

Mr. Cox. You indicate that it received ratings somewhat lower than Climax, the show that preceded it, and on which you had spent considerable money; and that it also had a rating, at least at some time, considerably below its competition on NBC, which is Ford Theatre. Was this a matter of concern to the advertisers involved?

Mr. Stanton. I suspect it was. It was primarily a concern of ours.

Mr. Cox. That is, they did not come to you with complaints about the problem, and with the request to improve the situation.

Mr. Stanton. Mr. Cox, I can't say whether they did or whether they didn't, as far as all members of the staff are concerned. I have had no conversations with them on that particular point.

Mr. Cox. Did CBS go to them and suggest the possibility of introducing a new program in this time period?

Mr. Stanton. Yes. CBS television representatives went to the agency involved as early as August of 1955 to discuss the possibility of improving the time period and the program.

Mr. Cox. What was the program suggested?

Mr. Stanton. The program suggested, sir, is covered in the memorandum; it is called Playhouse 90.

Mr. Cox. And that would be a program to be produced and controlled by CBS with, as I understand it, some participation by Screen Gems in the production of films for a part of the series?

Mr. Stanton. That is to be an hour and a half program, part of which will be produced live by CBS television and part of which will be produced on film by Screen Gems, a subsidiary of Columbia Pictures, Inc.

Mr. Cox. Four Star Playhouse is a film program which is produced by another independent film agency, which was organized, as I understand it, by the stars who appear on the program, is that correct?

Mr. Stanton. Essentially, yes.

Mr. Cox. What was the reaction of the agency and advertisers' people to this approach of CBS?

Mr. Stanton. Well, the agency representing the client encouraged us to go forward with the plan. That is set forth in the memorandum.

Mr. Cox. You then went forward with your planning and made further recommendations as to the nature of the program?

Mr. Stanton. That is correct.

Mr. Cox. Did you at any stage have a story selected, a producer-director selected, talent lined up, or were you talking largely about a concept of longer drama than was currently being presented in the series?

Mr. Stanton. That is pretty well spelled out in the memorandum. Obviously you start a thing like this with a concept and not with talent. So that you first get the idea and then you begin to assemble the stories and the directors and the producers and the personnel required.

Mr. Cox. Now what was the sponsor of the show in the next time period, which would also be covered by Playhouse 90?

Mr. Stanton. Well, that was General Foods from 10 to 10:30. But that advertiser had indicated that it was not going to stay in the time period.

Mr. Cox. It was voluntarily leaving the time period?

Mr. Stanton. That is correct.

Mr. Cox. The show in that time period was Johnny Carson, which is a CBS property.

Mr. Stanton. It is; it was a CBS-produced program.

Mr. Cox. How was its rating?

Mr. Stanton. Not satisfactory enough to hold the client.

Mr. Cox. Was it doing as well as Four Star Playhouse?

Mr. Stanton. It was not.

Senator Pastore. Let me ask you a question at this point. Let's assume that The $64,000 Question was being produced by an independent producer—can CBS afford to throw that out?

Mr. Stanton. Could we afford to throw it out in the sense that we had the right to, or you mean if it weren't any good?

Senator Pastore. I mean, could you take a program like The $64,000 Question, regardless of who produced it, and eliminate it from the air at this point?

Mr. STANTON. Well, we, I think, would have a revolution on our hands if we were to do that with The $64,000 Question. But if that were a turkey, or, as Senator——

Senator PASTORE. Didn't you have a revolution on your hands when the Four Star Playhouse went off the air?

Mr. STANTON. No; we did not.

Mr. COX. It is not off the air yet?

Mr. STANTON. It is not.

Mr. COX. Therefore, there would be no complaints.

Mr. STANTON. Well, there has been a lot of publicity given to it in the columns.

Mr. COX. Now, the final conclusion as far as the advertisers were concerned was that they were not interested in Playhouse 90 and that they would prefer to continue with the Four Star Playhouse?

Mr. STANTON. I don't understand that to be the final conclusion, sir. I don't see how it could be the final conclusion when the advertisers voluntarily went into the Playhouse 90 series.

Mr. COX. Well, they voluntarily went into Playhouse 90, because if they did not go into Playhouse 90 they would not be on the CBS network at that time, and you indicated grave doubt as to whether you could get other time for them?

Mr. STANTON. Well, we didn't exhaust the second alternative that you suggested there, because we haven't come up to that particular point yet. Long before that and quite before that the agency encouraged us to go forward with the plan because they thought it was something to recommend to the client.

Mr. COX. But was the agency's ultimate recommendation to the client that they should accept this show, or was it that they should continue with Four Star Playhouse?

Mr. STANTON. I assume the ultimate recommendation was to go with Playhouse 90.

Mr. COX. But this was only after there had been an indication that if they did not go with Playhouse 90 they would not be on the network at that time?

Mr. STANTON. I am not absolutely sure on that point, sir.

Senator PASTORE. Are you collecting more money from your advertisers for Playhouse 90 than you were for Four Star Theater—Four Star Playhouse?

Mr. STANTON. Well, we didn't collect any money from the advertisers for Four Star Playhouse, because that was an independently produced package. The amount of money we collect from the advertiser for time is identical in the case of the 9:30 to 10 period, whether it is Four Star Playhouse or whether it is Playhouse 90. We will not make a profit on Playhouse 90. We have gone into the Playhouse 90 program sequence from 9:30 to 11 o'clock because we felt that there was need in television's nighttime schedule for a regular hour and a half drama every week. Now, there are many hour and a half dramas on a sporadic basis, but there is none on a regular basis of this particular kind, especially produced for television. That is why we arrived at the 9:30 to 11 time on—that is why we went into the program. And we selected 9:30 to 11 on Thursday night for it because we thought that was the best place in the schedule to have that kind of programing.

Senator PASTORE. But, had you received any complaints on the Four Star Playhouse?

Mr. STANTON. Complaints from the advertisers?

Senator PASTORE. From any source?

Mr. STANTON. I don't know of any complaints. But, in our opinion, it wasn't a strong show for the long pull. And we felt that some new life was needed in the schedule. We were in very bad condition at that time period.

Senator PASTORE. Is it a policy of CBS to try to get in one of their own produced shows wherever they can?

Mr. STANTON. Absolutely not, sir, and the record refutes it.

Senator PASTORE. In what way?

Mr. STANTON. The record refutes it in the fact that the amount of time that is occupied by our own programs now as against a prior period in time, say 2 years ago; it is down considerably from there.

Senator PASTORE. Well, it might be the chances are the independent producer is producing better shows than you are able to produce, and that is the reason why your solicitude is in that direction. But assuming, where you can—is it a policy of CBS to have its own show where it can have its own show in place of an independently produced one? I think that is a legitimate question. I don't think I should be very much bothered either way you answer it. You have a right to have a policy of producing your own shows if you like.

Mr. STANTON. I have no hesitation in answering your question. Our policy is to get the best possible program in the schedule, and we are not concerned whether it is ours, or whether it is an independent, or whether it is one that is produced jointly.

Senator PASTORE. Well, now, are you telling me——

Mr. STANTON. We have no policy.

Senator PASTORE. That it is a casual situation that you decided to change Four Star Playhouse or Theater, or whatever you call it, or was it a pretty well-designed plan?

Mr. STANTON. It was a very well designed plan. These things are not done casually.

Senator PASTORE. Could you give us the background of what led you to it? In view of the fact that this situation has now been raised by Mr. Cox, I think we ought to have a better background on it because the implication here that Mr. Cox is raising is that, apparently, these people had a satisfactory program, and that because it was an independently produced one, CBS deliberately knocked it off the air because they would like to put on their own show. Now, that is the implication.

Am I right, Mr. Cox? I mean I would like to come to the point. [Laughter.]

Let's come to the point. If that is the implication, I would like to know what your answer to it is.

Mr. STANTON. Well, the implication is without foundation. I will be glad to read the memorandum, which sets forth in as few pages as possible the story, the background, and exactly everything that I think we can supply for the record.

Senator PASTORE. Can you summarize without reading it all, Dr. Stanton? I mean if you feel that you have to read it all. You are pretty well familiar with these documents. I notice you pick up a big book and you go right to the page. Why don't you give us a résumé of what it is, without reading 4 or 5 pages?

Mr. STANTON. The document is in the record anyway, so there is no point in repeating it.

Senator PASTORE. Yes.

Mr. STANTON. The situation is very simple. We didn't think that we had the strongest programing that we might have on Thursday night from 9:30 to 11. We felt there was need for the hour and a half dramatic program that I have just indicated. There is no program of that kind produced for television week in and week out.

Senator PASTORE. How long a program was the Four Star Playhouse?

Mr. STANTON. Thirty minutes.

Senator PASTORE. You took an hour and a half? What are the other programs that were knocked off?

Mr. STANTON. Two programs of our own.

Senator PASTORE. What are their names?

Mr. STANTON. Johnny Carson and Quiz Kids.

Senator PASTORE. Those went off, too?

Mr. STANTON. They will go off; they haven't gone off yet.

Senator PASTORE. I mean the plan is to take those off, too?

Mr. STANTON. I think Carson is already off. But taking it in the heart of last season, as against the heart of next season, the programs were Four Star Playhouse, Johnny Carson, and for part of the season Quiz Kids.

Senator POTTER. Were you influenced in your decision because of your competition on the other networks?

Mr. STANTON. We certainly were, sir. That is one of the reasons why the schedule was going down in terms of— deteriorating in terms of ratings, is because we had very stiff competition, and we analyzed the competition. We analyzed the kind of programs that were available on Thursday night and other nights of the week. We felt that the next big kind of program to put in the nighttime schedule was an hour and a half dramatic program. There is none, now.

There are plenty of hour programs and plenty of half-hour programs. There are many plays and books which cannot be condensed satisfactorily to a half hour or to an hour, and we felt we would be making a contribution to the programing service to the public by putting an hour and a half program in there. We had no thought at any time that this had to be a CBS television package.

As a matter of fact, we went outside to get production help on this, and we have made independent contracts for the production of the program so that this isn't the problem at all. The problem stems completely from the fact that we did not think we had adequate programing in the time period.

Senator POTTER. You know, one of the things that bothers me: You have on one half-hour period maybe three excellent programs. I assume that the competition from the other networks generates better programs than on the other two networks. But then you can have a half an hour or an hour on where you have a pretty lousy show on all three networks. [Laughter.]

Senator POTTER. It would seem to me that if you hit one of those soft spots in there, you can really make some hay.

Mr. STANTON. Senator Potter, your soft spots are other men's strong spots. Believe me we try to keep the whole level of the schedule as high as we can possibly make it. We had a soft schedule on Thursday night. There might be some difference of opinion as to how soft it was. But we had another spot in our schedule where a program was rating just about the same as Four-Star Playhouse, and this one happened—the one I am referring to now happens to be one of ours, and we didn't treat it any differently than we treated Four-Star Playhouse. We got rid of that one, too. So that we are not being any different to our own child than we are to someone else's. As I said at the outset of my statement yesterday, our primary obligation is to put out the best possible service to the public and we watch the public reaction to these programs just as carefully as it is humanly possible to do so.

As new techniques are developed, I think we will be in the foreground of those who are applying them to find out more information about our programs and the public's acceptance of them. The whole thing stems from that.

We had 10:30 to 11 unsold. We had 10 to 10:30 where we were getting a cancellation. We had 9:30 to 10 with a program that we didn't consider a strong program. We also had this concept that we felt that the public deserved to get certain kind of plays that could not be reduced to the hour or the half-hour format without losing a lot that was in the play. So we felt that someplace along the line there had to be an hour and a half series. And with the kind of weakness in the schedule that I just indicated, and with the kind of lead-in that that kind of program would get from Climax we thought that was the logical spot to put Playhouse 90 on.

Let me go back. The idea of having programs—90 minutes isn't anything new. We have no reason to claim any credit there. We had the idea when we started Studio One many, many years ago on Monday night at 10 to 11. After a season or so of Studio One from 10 to 11, we soon discovered that there were many important properties that could not be rewritten and condensed to fit into that hour format, and the producer on that program came and talked with me personally about the concept of an hour-and-a-half show. And we searched our schedule from stem to stern trying to find a place where we could put an hour-and-a-half program in the schedule. And it wasn't that we didn't have the open time periods at that time. The problem was that you couldn't find enough stations to stay with the program from one half-hour to the next, and if you don't have the same programs for the whole 90 minutes, it can be the best show in the world and who wants to see the middle act of it?

So we had to find a place, and we had to put that idea on the shelf until such time as there were enough affiliates available so that we could have a constant network from the beginning of the show to the end of the show. And each year we have examined our schedule to see where that hour-and-a-half show might go. And this season seemed to us to be the logical time to launch the program.

We had the weakness in the schedule, the open time, and we had the idea. And it is as simple as that. There isn't anything sinister to this thing. I have read the press just the same as Mr. Cox has, and I know what people are saying. But, believe me, we are not foolish, on the one hand, to walk into that kind of situation or behave that way. The whole thing that motivated this was to serve the public with better programing.

Senator POTTER. On better programing, I believe it is Tuesday night, the night that everybody has—all networks, apparently, have these terror shows or whodunits. Now, it would seem to me that that might be dispersed throughout the week. I don't know whether it is too——

Senator PAYNE. CBS doesn't on Tuesday night. I can almost recite the programs. [Laughter.]

Senator POTTER. Am I talking to another network?

Senator PAYNE. You may be.

Mr. STANTON. I think you are. What you are describing about having more than one show that you want to look at, that is competition.

Senator POTTER. No; I don't want to look at all the channels. [Laughter.]

Mr. STANTON. Well, all right.

Senator PASTORE. You see the four stations in Washington have spoiled him. [Laughter.]

Senator PASTORE. I was never——

Senator POTTER. I don't get any at home.

Senator PASTORE. I was never spoiled that way. [Laughter.]

Senator PAYNE. Mr. Chairman, I think what Dr. Stanton is talking about is very interesting to me because I used to be, in my earlier days, in the theater business. And it is almost—it almost follows a pattern of theater programing, and of course it is true that there is practically no producer of a moving picture that can take a good seller, a good book, a good novel, and condense it much beyond an hour and 25 to an hour and 30 minutes for moving-picture production, and the same would follow true on television production.

Now, I happen to follow channel 9 here in Washington a lot. So let me just say that as one who, when he has an opportunity, is able to sit at home and watch a program—that I am going to welcome, frankly, the change that he is talking about here.

Now, to get at the matter that Senator Potter mentioned, with respect to these periods when you get some pretty lousy shows fitted into the thing—that is what we used to call in the theater game as feeders, in other words, fillers. We would start off, perhaps, with a news shot, and they would get some fillers in between, and then finally we would wind up with a good feature picture. But, in the meantime, the customer had to sit there and wade through.

On the television, you can shut it off or change over to another channel if you want to. The theater business was a little different in that regard. But it is programing very much in line with theater programing, moving-picture programing.

Mr. Cox. Dr. Stanton, was there, in addition to your concern with the status of your schedule and this interest in this new type of format, any element of financial commitment on the part of CBS which had reached such proportion that you felt you should go ahead with this?

Mr. STANTON. No. We have had financial commitments before and changed our mind on programs. I wouldn't say that the financial commitment had ever gotten to the point where we couldn't have changed our mind.

Mr. Cox. Is there a man named William Hylan on your staff?

Mr. STANTON. William Hylan?

Mr. Cox. Yes.

Mr. STANTON. He is vice president of CBS television in charge of network sales.

Mr. Cox. I have here what purports to be a photostatic copy of a letter he wrote to Mr. Robert P. Mountain of Young & Rubicam, on February 9 of this year, in which he recites the negotiations that have gone before, and says that: "We have reached and gone beyond the 'point of no return' in both of the above areas"—these being commitments for creative personnel and for desirable properties. "There is only one time period that can logically accommodate this program and that is Thursday, 9: 30 to 11 p. m. As we have discussed with you and your associates—we are hopeful that Singer Sewing Machine and Bristol-Myers will sponsor the first half hour and that General Foods will sponsor the last 60 minutes—"

Then he says in the last paragraph:

Although we are most anxious to accommodate all three of the above advertisers, the size of the financial commitment we have already made makes it imperative that we get a decision and a commitment from Bristol-Myers, Singer, and General Foods concerning sponsorship of Playhouse 90 within very near future.

Now, does this mean that if the show is to go on they must have this commitment, or does it mean that the commitment is such that CBS has decided that this must be the show in the time period?

Mr. STANTON. CBS television had decided that this must be the show for the time period, and I think that this is a wholly normal letter for a salesman to write in an effort to get the clients' commitment, so that, if the client says "No," he is free then to go someplace else and offer the time and the program.

Mr. Cox. I would like to read into the record Mr. Robert Mountain's reply of February 9, 1956.

In answer to your letter of February 1, we find that our clients have been placed in a very strange and untenable position—a position which we feel called upon to protest most vigorously. For you to understand our feelings, we need a little history:

Several months ago, you called us in to let us know of your investigations and explorations concerning a new concept—an hour and a half drama to be called Playhouse 90 to be scheduled on the network every week. You told us that for your purposes it would be ideal if this program were scheduled Thursday nights 9: 30 to 11. You asked us if we could explore with our clients—Singer-Bristol-Myers 9: 30 to 10, and General Foods 10 to 10: 30 the possibility that they might be interested in such a change of vehicle. You told us too that at that point you were not in a position to offer this show firm.

Some time later, in another meeting, you told us that Playhouse 90 had become a reality and that now it was only a question of what night it might be scheduled and that you still leaned heavily toward Thursday. We told you that we were interested, as we would naturally be in any new development of the business. We told you that we had explored it with our clients, and that it looked as though General Foods would be in no way interested for two reasons: (1) They have never gone for the dramatic vehicle and (2) That this would be sold to them as an hour instead of a half hour which they are currently using.

We asked you in that meeting, as we did in the first meeting, whether or not this meant this proposal could mean that you were considering taking the time away from these clients, and you told us that you felt constrained to find them another piece of time if this scheduling became a fact. In our last meeting which took place this week, you made it very clear to us that the scheduling was definite for Thursday night and that while you still felt constrained to "use your best efforts" to find another piece of time, you wanted it clearly understood that it was practically an impossibility.

This all boils down to the fact that Bristol-Myers, Singer, and General Foods have now been told by CBS that CBS is not taking their time away from them provided they buy the program that Columbia has arbitrarily put into their time. Also, the fact that no other time is available to them.

Four Star Playhouse has been on the air for 4 years with a consistent record of success and a fine advertising value. This show was developed and created as a collaboration between Don Sharpe and Y. & R. The Johnny Carson show from 10 to 10:30 is a Columbia package developed exclusively by CBS. We gambled on a new personality and on a Columbia package. We lost the gamble.

It is our position that Columbia is asking us to take another gamble on a wholly-owned and exclusive CBS package, and worse than that, we are not being asked—we're being told.

We do not believe that it is proper for CBS to force a client as important as General Foods into the type of entertainment which is in no way consistent with their advertising taste. Nor do we believe that it is any more proper to force a successful program for Singer and Bristol-Myers off the air for an untried format built for the benefit of the network itself.

We cannot accept the statement in your letter of February 1 that there is only one time period (Thursday 9:30 to 11 p. m.) that can "logically" accommodate this program. It is equally logical that it could be scheduled on Sunday, Monday, Tuesday, Wednesday, Friday, or Saturday.

We would appreciate any further thought that you might have on this matter.

Sincerely,

ROBERT P. MOUNTAIN.

Senator POTTER. Who is that letter from?

Mr. COX. That is from a vice president of Young & Rubicam, who I assume was the account representative for the sponsors involved.

Now, in the light of that, would it not appear that there was considerable reluctance on the part both of the agency and of the advertisers involved in making any change, or in making this particular change?

Mr. STANTON. Well, in the light of the letter. But I think you have got to know something of the background of the letter, and I think that what this gets down to is whether you want to turn over this medium, to allow the advertiser to dictate the kind of programs that we are going to give to our affiliates on our stations, or whether we have a responsibility as licensees of our company-owned stations and a responsibility that does not flow through the FCC but certainly flows in our relations with our affiliates to provide what we consider to be the best possible programing.

Mr. COX. No one would contest that the legal responsibility with respect to your stations is in you, and with respect to your affiliates is in them. But this raises the point that you undertook to answer yesterday in the concluding part of your statement, and to which Senator Bricker raised some question, as to the degree of control exercised by yourself and your associates, and by your counterparts in the other networks.

Mr. STANTON. It certainly does go to that, and it flows directly to the statement. Because in that statement, as I recall, I said that the public was the ultimate monitor in chief.

Mr. COX. But the public will be only permitted to make a choice between the showings which are presented by the three networks, after a choice has previously been made as to what is to be offered to them?

Mr. STANTON. Well, Mr. Cox, you are not suggesting that we make these choices in a vacuum, are you?

Mr. Cox. No. Have you ever had a suggestion made to you that the relative merits of two suggested programs be submitted to some kind of public testing?

Mr. STANTON. We do it every day.

Mr. Cox. In what way?

Mr. STANTON. When it is appropriate.

Mr. Cox. In advance of decision on a program?

Mr. STANTON. Many times.

Mr. Cox. In what way?

Mr. STANTON. With what we call—a system called program analysis, where we invite a cross section of the audience in and let them see a dry-run of a show, or if it is a film show let them see some of the episodes.

We have to be careful; it isn't always apropriate. There are certain types of shows that don't lend themselves to this kind of testing. But the idea of testing the program before it goes on the air is nothing new with us, and it is certainly nothing new with other networks, I am sure.

Mr. Cox. Admitting the legal responsibility for the selection of programing to be in you and your affiliates, is it not appropriate, nonetheless, that the other parties concerned be consulted, that their views be given their just weight—and wouldn't, in fact, that process of consultation perhaps produce a more reliable final result than if it is strictly a matter within your organization?

Mr. STANTON. Well, I think it is always better to have the parties to any particular program of change sit down and discuss it in advance, and that is why as far back as, I believe, August of 1955, representatives from our organization visited the agency in question and were encouraged to go forward with this plan.

That the agency didn't keep the client involved informed is something we didn't learn until quite late in the game, and by that time we had already firmed up our decision. And I don't know that the decision would have been any different even if that had been made clear to us right at the outset. Now, Mr. Mountain, I think, was not a member of the organization, and was not involved in these discussions at the time the initial discussions took place. That is one of the unfortunate misunderstandings that exists as background of that particular letter.

Mr. Cox. Now, even to this time, have you furnished to the sponsors any very detailed information as to who the personnel involved will be, the directors, the producers; what the stories will be—and have you been able to furnish any such information to the affiliated stations which you will ask to clear the program?

Mr. STANTON. As to the latter item, I am not certain. As to the former, we have.

Mr. Cox. In what detail—that is, to what extent?

Mr. STANTON. Story lines, producers, directors, names, dates.

Mr. Cox. For the whole series?

Mr. STANTON. Well, you don't go the whole 39 weeks in one sitdown. You go into blocks of programs.

Mr. Cox. Have they expressed themselves as being satisfied with that particular ——

Mr. STANTON. I can only assume that in the case of Bristol-Myers—and this gets into delicate client relationships in business—but I can only assume in the case of Bristol-Myers that Bristol-Myers cannot be too unhappy with the situation. Bristol-Myers is buying the time; this was not the only time that Bristol-Myers could have bought.

Mr. COX. Well, it seems to be suggested that you had not come up with any other time.

Mr. STANTON. May I develop my point, sir?

(Mr. Cox nods.)

Mr. STANTON. This was not the only time that Bristol-Myers could have bought, and second, or third, just recently Bristol-Myers has come back and bought more time in addition to this particular time from CBS television. Now, you don't come back and do more business with someone you think has not done well by you. There is ample time on other networks, and we have got other time even in our schedule.

So that they are not left without any place to go. As a matter of fact, they didn't even choose to go anyplace else. But Bristol-Myers just last week bought a new series—started within 24 hours after they placed the order. You don't do things like that in business if you are unhappy with people you are doing business with.

Mr. COX. That is a show that is now on the air?

Mr. STANTON. It is a show that is now on the air.

Mr. COX. I take it in the nature of your operations there was no consultation with even your affiliates advisory board regarding this proposed change in program scheduling?

Mr. STANTON. I can't testify as to whether the hour and a half program had ever been discussed with the affiliates advisory board, or not. I rather suspect it has been, in reviewing forward-looking plans, because this has been a gleam in our eye for some time. As to whether it had been decided, or discussed as 9:30 to 11 on Thursday night, there is a question that I can't answer.

Mr. COX. I mean in the sense of asking their recommendation with respect to the program? That is, do you ever canvass your affiliates, or those who are on this board, as to their suggestions for ways of improving the schedule, their comments on present programing, and so on?

Mr. STANTON. Yes, we do, and they volunteer long before we canvass them. I don't know whether we had discussed this particular 90 minutes, as I said a while ago. But this is a program of such excellence and such breadth and scope, and it would never occur to me to discuss this kind of a program with an affiliate.

Mr. COX. That is, you expect it to be. In other words, you cannot, as a positive matter, now have any assurance whether either the public or the sponsors would be better served by this series of programs than by any other combination, or a different format entirely.

Mr. STANTON. No. If you give me three $64,000 Questions, or something of that kind, and put them back to back, I will back away from what I said. But talking statistically, or in the realm of experience, and making an estimate as to what is going to happen, there isn't a shadow of a doubt in my mind but what this will be superior programing in terms of quality and in terms of a value from the standpoint of the advertiser, because he will get more circulation

And this all benefits the public, and comes back precisely to where I started yesterday—when I was talking at the biginning of my remarks and at the close of my prepared statement—that the public does determine what happens. I didn't sit in an office and say we've got to kick everybody out from 9:30 to 11 to make room for some pet idea of mine. This would be suicide.

Mr. Cox. Has the public ever indicated, as Senator Payne has, that they would welcome this?

Mr. Stanton. The public has indicated it many times in terms of the attention that they have given to the big special hour and a half shows. The public has indicated it almost from the beginning of the movies, because as Senator Payne pointed out, you have the traditional length there in excess of an hour. And the only difference—he put his finger on it beautifully—the only difference between what happens in the theater, as he described it, and what happens with us, is that they pay their money and they have no other choice in the moviehouse, but with us, they would leave us and go to NBC, ABC, or an independent station.

Mr. Cox. Are you going to be able to devote the same kind of budget to this as you do to your present hour and a half spectaculars?

Mr. Stanton. Well, we don't——

Mr. Cox. Well, if this is a trade secret?

Mr. Stanton. No; not at all. [Laughter.]

There are some of the hour and a half programs that we have had on a special program that have cost less than what this series will cost. There are others that have cost more than what this series will cost. I will say that as a budget, as far as a show goes, this is a very substantial budget for an hour and a half program.

Mr. Cox. You would expect it, therefore, to have the same success as your other shows of similar duration?

Mr. Stanton. I will stick my neck out a little bit farther. I would say that I would expect it to have greater success for one simple reason, and that is it is there every week at the same time on the same station. Therein lies one of the great underpinnings for the mass-circulation media. One of the things that I think would help all programs is to have them on regular time periods, so that the audience knows where they can go to find them. This is not said in any sense of criticism of the quality of the programs that have come on from time to time in isolated positions. But the audience gets very confused as to where these programs are and where they can find them. And the best thing you can do is to lock them into the time schedule so that the public knows, at 9:30 on Thursday night, there is going to be an hour and a half drama worth watching.

Now, it could be one Thursday might—if you had three different programs in there, and you put an hour and a half in once a month—I don't consider that to be as good a program service to the public as putting in the same high quality program every week. So that I think that per dollar spent we will get greater circulation, and the public will get more benefit by having it in there every week, than if we just put it in there once a month and even spent more money for the program.

Mr. Cox. Now, shifting to another subject, but still within the area of programing and of the alleged control of networks—according to this chart XX at page 77, I believe, in your supplemental statement, you show that you furnished some 49 to 60 hours per week of programing to 52 affiliates, which I suppose are your must-buy stations. That would represent, roughly, possibly an average of half, or somewhat less than half, of their total programing, would it?

Mr. STANTON. Well, that will vary.

Mr. COX. Assuming a median of 55 hours for the group.

Mr. STANTON. I don't have—I haven't looked at the operating schedules of all the stations for quite some time, and I know that they are gradually expanding their day. So I don't know whether it is 50 percent or not. But if you are talking from information that is recent, why I will certainly go along with you on that.

Mr. COX. No, this is just my estimate of what I assume to be their usual daily hours on the air. The point I am getting at here is: Don't you have, by virtue of your option time arrangements and your affiliation arrangement, a substantial degree of control, as evidenced by this table, over the program content of these stations, and of course a corresponding financial return from the exhibition of these programs over their stations?

Mr. STANTON. Well, I would quarrel with your use of the word "control." What do you mean by that, Mr. Cox?

Mr. COX. Well, as I understand it, you think your option is a legally enforceable right, and if it is legally enforceable, you control that time subject to the agreement——

Mr. STANTON. Well, the stations have ample opportunity to step aside from that option on legal grounds. If the program is unsuitable, it is spelled out in the contract—let me read you that provision. It is in the appendix where we filed the contract. Where is my copy of this?

Mr. COX. It conforms, generally, doesn't it, to the language of the FCC's regulations?

Mr. STANTON. I am sure it does. [Laughter.]

There are three bases, roughly, for the station to turn down the program. If the station reasonably believes the program to be unsatisfactory or unsuitable, that is one; the second is if the station, or the licensee, feels the program is contrary to the public interest; and the third point would be substituting a program of outstanding local or national importance.

Mr. COX. That, normally, would refer to a one-time, or a series, rejection of programs because of something that was happening at that particular time in a locality?

Mr. STANTON. That is correct, the last one.

Mr. COX. The last one. So that any rejection of an entire program series would be on the ground either that it was contrary to the public interest, or that it was unsuitable or unsatisfactory. Now, has any affiliate ever claimed that a program you were furnishing was contrary to the public interest?

Mr. STANTON. Not that I know of.

Mr. COX. And it would be highly unlikely, I suppose?

Mr. STANTON. You see, the difficulty with your question, Mr. Cox, or the difficulty with me, perhaps, as the witness is that I don't look inside the head of every affiliate when he makes up his mind as to whether he is going to take a program or not take a program, and we don't require him to file with us a written answer, or a written reason for not taking the program.

We think that it is satisfactory, if the station says "We don't want the program," we don't then say "Give us, and specify why, under terms and conditions as outlined in our contract." I doubt that we would be doing business with some of them very long if we became that technical. This business moves swiftly, and we assume that we are in this thing on a partnership basis, and that if there is a reason that they don't clear it, the reason must be good and sufficient.

We don't take the first "No" without hoping to persuade them that they will change their mind. But if it is finally "No," and as I indicated in answer to one of Senator Potter's questions, there are only three programs on the entire schedule where we got all the stations cleared that were ordered. So that we don't look behind the turndown.

Mr. Cox. But in terms actually of the amount of clearance that you get on these 52 stations, you are the ones who have selected the programs—and their control over that programing, if any, has been purely negative, in the form that they have not ruled it unsuitable?

Mr. Stanton. In many cases the stations know about the program before they get the program. Many times they are shown the program before it——

Mr. Cox. They are shown a film, a pilot?

Mr. Stanton. Sure. Many times it can be a program that has had exposure elsewhere, either on our network or on another network, and it is not a program that they are unfamiliar with. And if it is a personality that has established a certain reputation in terms of craftsmanship and ability to build a program and stands for certain quality, you don't question what the show is going to be because you know if it is built around that central character, you are going to have a quality program of a certain level.

Mr. Cox. For new shows—that is involving different ideas or different settings, or possibly new personalities—do the affiliates tend to require of you a considerable amount of detail as to the nature of the show, or do you furnish it in the ordinary course, before they clear it?

Mr. Stanton. I think we furnish it—well, the order and the information generally goes out pretty much at the same time. This varies from program to program. And the amount of information they get varies from program to program, and the sources of the information will vary. Sometimes they have seen a pilot of the program in advance, let's say, at one of our affiliates' conferences. I am not now talking just about the advisory, but I am talking about all the affiliates.

On other occasions, there will be teletype descriptions. And as I have already indicated, on many occasions they are programs that they are familiar with, either in terms of the program format from other exposure or from the personalities involved. But there is no question in my mind—if you are aiming back to this 90-minute situation—there is no question in my mind that you have got to sit down and give each affiliate every detail about a 90-minute dramatic series that we are producing. We stand for a certain quality of production. I think for many, many years our dramatic production in Studio One was preeminent in the field. There have been others that have been equally good elsewhere. But we haven't got a bad track record.

We have tried some things, and the losses that we have indicated earlier come from some of these experiments that haven't proved out. But in the dramatic field, if you have got writing and if you have got good production and direction, and you have got good talent, it is a pretty safe thing. This isn't an untried format, you understand. The dramatic hour and a half isn't anything new. It is just quality, and everything we can——

Senator POTTER. I would assume that you promote most of your new shows ahead of time, not only for the benefit of affiliates but also for the benefit of the public.

Mr. STANTON. Basically for the benefit of the public, because we want the public to know where to find the program scheduled. And we spend a lot of money on that.

Mr. COX. Basically, in terms of your track record, your performance, your affiliates—you would say they are reposing confidence in you and have left the selection of the timing and programing that is to go on to you and to your associates?

Mr. STANTON. No; I wouldn't say that at all. All I am saying is that when we tell them we are going to put an hour and a half dramatic program in there, they don't come back and say "Give us the name of the stagehands."

Mr. COX. Do they clear the time for you without asking detailed questions about the program?

Mr. STANTON. Well, we don't ask them to clear time without giving them information about the program.

Mr. COX. Have you ordered time for this show as yet?

Mr. STANTON. I can't answer that question because I am just not familiar with that detail.

Mr. COX. Now, in answer to certain questions which were posed to him by Senator Bricker when Mr. Moore testified before the committee, Mr. Moore has furnished some extensive answers. Included in this was some information as to the degree of clearance by CBS affiliates in three principal markets. This was for the period 7:30 to 10:30 for the week of January 19 to 25, 1956. On WJKB–TV in Detroit, the record showed it cleared all 21 hours of shows sponsored by CBS, except for 2 programs; and in the case of WCAU–TV in Philadelphia, it had carried all but these same 2 unsponsored half hours and another half hour which it had carried on a delay basis in station time. In the case of KGUL–TV, it had carried all but one of the unsponsored half hours.

Now substantially, of course, that is the same record of clearance that your owned-and-operated stations have. In other words, even your stations in Chicago and Milwaukee did not clear for one of these unsponsored half hours. So that, in a very real sense, these three stations in which CBS owns no interest carried programing determined by CBS to the same extent as if you did own the stations.

Mr. STANTON. Well, I quarrel with your "determined by CBS" again, because that is the whole schedule. I think that is a very unfortunate or deliberate use of the word "determined."

Mr. COX. Well, I mean the selection of the programs which you are going to offer to the public for its final decision was made, with respect to these three stations, by CBS. The public, not being polled except insofar as you rely upon their reaction to prior programing, will have a final say as to the character of the programing you offer only once it is on the air. So that at the time the station is cleared, the station is cleared for programing based on your decisions, your judgment, and their confidence in your ability to interpret the public's taste.

Mr. STANTON. The only difficulty I have with you, Mr. Cox, is that you are talking about this one particular week, and these 21 hours, as though this is a new experience for the public and a new experience for the stations—as though there is a pattern of 21 hours that some political genius in New York has predetermined will be fed out to these stations. This package is not made up of a whole series of new programs each week. These are program series, many of them on for a long, long time. So there is a well-established track record of how the public feels about these programs. This isn't just a brand new experience that is coming to the public in these programs.

Some of our critics may say this is something that is wrong about television. There isn't enough change, perhaps, from program to program in television. That may have been a justifiable criticism from the critic's point of view. But the public, by and large, is pretty well satisfied with it. So that there may be, in that 21 hours, only a few new ones in terms of new series; but for the most part these are things that have been tried for quite some time. This isn't anything new.

Mr. COX. No. But I assume this week was selected because it was relatively current at the time.

Mr. STANTON. I don't quarrel with the selection of the week. All I want to say is take, for example, Studio One that occupied 1 hour of the 21 and that has been on for a long time.

Mr. COX. It was not even new in the preceding fall when you put your programs together; that is, it is something that carried on even from a preceding season.

Mr. STANTON. Yes; there is a dramatic program in there in the summertime; it is not called Studio One.

Mr. COX. Mr. Moore gave us another figure at the time of his testimony. He pointed out in 40 cities having 71½ percent of the television sets in the country—these being the cities in which CBS and NBC each had must-buy stations—that the affiliates had cleared for CBS and NBC, together, 93.7 percent of the network programs offered, or if you included delayed broadcasts, a total of 96.3 percent.

Now, you have made certain comments in your reply to Mr. Moore's testimony with respect to the nature of the sample and so on, but insofar as you know, are these figures accurate? That is, do they represent the actual record of clearance for the 40 cities involved?

Mr. STANTON. I haven't tried to verify those figures, Mr. Cox.

Mr. Cox, turning to page 4 in the Memorandum Concerning the Statement of Richard A. Moore, I would like to read:

> CBS has been unable to understand the significance of the data derived from this study—

referring now to the study that you talked about—

> done as it was in a carefully selected group of cities for carefully selected hours of the day. In any event, the facts negate the implications of the study. That

option time has no such results as the statement apparently seeks to establish appears from the following facts derived from an analysis of the CBS television network's program clearances during the week of May 19, 1956:

On all CBS television network affiliates:

58.1 percent of all hours subject to network option are available to nonnetwork programing.

47.4 percent of all evening hours subject to network option are available to nonnetwork programing.

On all CBS television network basic-required affiliates:

38.4 percent of all hours subject to network option are available to nonnetwork programing.

30.4 percent of all evening hours subject to network option are available to nonnetwork programing.

Mr. Cox. With respect to that, I take it that you would agree that the selection of cities was not a free choice; that actually this is the result of the selections made by CBS and NBC in choosing their must-buy stations. Because as I understand it, the list of cities here involved consists of those 40 cities in which CBS and NBC both have must-buy stations. So that the sample would be a fair one in that sense.

Mr. Stanton. Well, it isn't a sample, it is the universe.

Mr. Cox. It is four-fifths of your——

Mr. Stanton. It is the universe as stipulated by Mr. Moore's definition of NBC and CBS; both have to have basic required stations in there, and these are all there is. That is it. There isn't any sample involved.

I am not quarreling with that. I am simply saying to you if you take all of our stations, if you don't like to take the 52 required, and these are the figures for the week of May 19, 1956.

Mr. Cox. With respect to that, I assume that in each case the first percentage you give, whether for all affiliates or for the basic-required affiliates, takes account of the entire broadcast day, and therefore includes a lot of programing hours which are not regarded as being as desirable as the evening hours.

Mr. Stanton. No, Mr. Cox. Please bear with me while I read that definition once again: It is 58.1 percent of "all hours subject to network option."

Mr. Cox. Your 9 hours of option time?

Mr. Stanton. Absolutely. This is not the entire broadcast time. The figure would be much larger if it were.

Mr. Cox. But in connection with each case, your calculation is made upon the 9 option hours, which include in addition to the 7:30 to 10:30 hours at night, 3 hours in the morning and 3 hours in the afternoon?

Mr. Stanton. That is correct.

Mr. Cox. And those are generally regarded as less desirable broadcast time, subject to your contention yesterday that you quite often could get a better buy for your money. But I mean as reflected by the rates—the rates for the network and for stations are lower in those periods than in the evening hours?

Mr. Stanton. Lower in the daytime than in the evening. Yes, we divide the day, roughly, from 6 to 11 and prior to 6.

Mr. Cox. I assume that the second set in each case, where you say all evening hours, that that is not confined to evening option time; that is confined to the period 6 to 11?

Mr. Stanton. I am very sorry, but I direct you again to the document: "47.4 percent of all evening hours subject to network option are available to nonnetwork programing." We are now talking about the 3 hours that you are talking about, 7:30 to 10:30.

Mr. Cox. All right. Therefore among your must-buy markets in the evening option time, you say that somewhat less than a third of the hours on those stations are available to nonnetwork programing. Does that mean that that 30 percent of those hours was filled by the affiliates with local programing or with national spot?

Mr. STANTON. No, it does not. But it is available to nonnetwork programing. Some of it is filled with network programing and some of it is filled with national spot, and I suppose some of it is filled with local.

Mr. Cox. In other words, some of that time in some markets is filled with the programing of ABC?

Mr. STANTON. No, it is ours.

Mr. Cox. It is your programing?

Mr. STANTON. Some of it is; yes. Brought about in this way: You recall yesterday I said that our interpretation of option time on a program that is straddled from 10 to 11—to go back to the Studio One example, again—if our option time closes at 10:30 but the program straddles from 10 to 11, in other words, it is part in the 3 hours of option time and part of it is out, we do not consider that we have an option on the period from 10 to 10:30 once we do that kind of straddle programing.

Now, some of this is occupied by that.

Mr. Cox. But you regard that, even though it was filled by your programs, as having been available to nonnetwork programing if the station had elected to make it so?

Mr. STANTON. I got lost. I am very sorry. I didn't hear you.

Mr. Cox. In other words, you don't say it is available to nonnetwork programing because it was in fact used by the station for that purpose. You say that because this was a program that straddled, it could have been opened up to nonnetwork programing by the station if it chose?

Mr. STANTON. It is some of that; it is some sustaining programs; some of it because of time zone changes, the option time doesn't apply.

Mr. Cox. In other words, this includes——

Mr. STANTON. It is accessible, put it that way.

Mr. Cox. This includes all the stations that didn't clear Brave Eagle for you, then?

Mr. STANTON. Yes; because option time doesn't hold on sustaining programs.

Mr. Cox. Now, with respect to this matter of programs that straddle, you indicated, I believe, that it was your interpretation that this was not subject to option. Have you ever so advised your affiliates in writing, or amended your affiliation agreements to that effect?

Mr. STANTON. I don't know that we have amended our affiliation agreements to that effect, but our affiliates are aware of it.

Mr. Cox. Is the rate of clearance for the three programs which I think you carry on that basis less than the clearance for half-hour programs completely within option time?

Mr. STANTON. Well, let's look. Yes; as my associates point out, I don't know how many stations have been ordered. I can tell you what is cleared, but I can't tell you what is ordered from the documents I have before me. But this is something that could be determined, Mr. Cox, and could be supplied for the record.

Mr. Cox. Would you do that?

Mr. STANTON. Sure. Let me be sure I understand it. You want to take the hour from 10 to 11 on Monday night, the hour from 10 to 11 on Wednesday night, and the hour from——

Mr. Cox. 9:30 to 11 on Saturday.

Mr. STANTON. 9:30 to 11, once every fourth week on Saturday? That isn't going to give you anything.

Mr. Cox. All right, then, just take the other two.

Mr. STANTON. I would just take the other two and we will compare those with the distribution of half-hour programs cleared in option time.

Mr. Cox. Will you also compare it with the rate of clearance for the half-hour shows carried at 10:30 which are clearly not in option time?

Mr. STANTON. Gladly. And for the record, I will do that for the same week of May 19, 1956, so that there are comparable data here.[7]

Mr. Cox. That will be fine, sir.

Now, you advance these figures, I take it, and certain others that you have presented, to show that there is ample time on evening network stations, under existing option arrangements, for the showing of the product of independent producers; is that correct?

Mr. STANTON. No one is ever going to sign his name to "ample" in that question, Mr. Cox.

Mr. Cox. In your opinion, that there would be substantial.

Mr. STANTON. I would say there would be substantial opportunity for the independent packager; yes.

Mr. Cox. Let's put it this way: Suppose that a film producer is projecting a 39-week series of a completely new film show, which will cost him in the neighborhood of something a little over a million dollars to produce. And he has prepared a pilot and is interested in exhibiting it to advertisers who might possibly be willing to buy it.

If he finds an advertiser who does want it, and this advertiser is not someone who already has a time period on 1 of the 3 networks, can he have any assurance that they can get an outlet on a regular basis for this program in, say, two-thirds of the top hundred markets over the country, unless they do approach the network and make arrangements with the network for provision of time on the network, rather than approaching the spot market?

Mr. STANTON. Well, I am not familiar with the details on this particular transaction, but I read in the trade press the other day where one producer had cleared 65 stations in prime evening time.

Mr. Cox. Were they in the top hundred markets?

Mr. STANTON. I would assume that many of them, and I suppose most of them, were in the top hundred market. I haven't seen the list of markets. But I would rather guess that they were.

Mr. Cox. Then you would be inclined to discount statements by people who are in that business, that if they cannot sell the pilot of a new series either to a network itself, or to a national advertiser who has a time slot on the program schedule of a network, that they will

[7] This information is set forth in a letter dated August 10, 1956, and in exhibit D thereto, beginning at pp. 2835, 2846.

not be able to produce the show with any assurance of being able to get their money back, recover their initial investment, within the first year?

Mr. STANTON. Well, I think I would have to say yes, I don't see how he can. But that is—we experience that all the time, right in our own program production activities.

Senator PASTORE. Do they want us to pass a law to guarantee that to them? [Laughter.]

Mr. COX. No. I think that the proposal which was contained in Mr. Moore's testimony involving a reduction, or a modification, of the present option requirements would clearly produce in the period, 7:30 to 10:30, available time in which such shows could be sold; it being the contention of Mr. Moore and of the film producers that under existing conditions, with option time and "must-buy" as it now is, that the show cannot be exhibited in prime time in the necessary leading markets of the country unless arrangements are made with or through the network.

Mr. STANTON. Let me read, if I may, just a brief paragraph from the supplemental memorandum, page 120.

> Specific evidence of the fact that time is available, that it is desirable time, and that it is being utilized by the nonnetwork advertiser is contained in the following excerpt from an address by Oliver Treyz, president, Television Bureau of Advertising: "Man Behind the Badge, sponsored by Ohio Oil and ordered in 11 stations was cleared on 10 of these in the supposedly difficult class A time. Great Gildersleeve, for Lucky Lager Beer, was ordered in 26 stations and achieved 100 percent class A clearance, 26 class A clearances in 26 markets. Steve Donovan, for Langendorf Bakeries, ordered into 13 stations, cleared in class A time in 11 of them. Racket Squad, for Heilman Brewing Co., ordered in 9 markets, 100 percent class A clearance, 9 markets cleared in class A time. The Turning Point, a new program for General Electric, ordered into 68 markets and 66 markets with class A clearance. Dr. Hudson's Secret Journal for Bowman Biscuit Co.—12 markets ordered, class A clearances in all 12. Socony Mobil Theatre, for Socony Mobil-Oil, primarily a central division order, 56 markets ordered, 56 markets cleared in class A time * * * This is a clear-cut demonstration that there are excellent availabilities in time and that these times can be claimed and can be staked out as franchises for syndicated film programs.

Senator PASTORE. Let me ask you a question at this point, Dr. Stanton. Has any film producer ever approached you with a million-dollar production, a first-run production, to put it over your network, in prime time?

Mr. STANTON. I am hesitating to answer because I think the answer is that no one has ever come with that kind of a production, or anything in that area. We have had conversations with producers who wanted to make such a product if we were interested in taking it for one-time showing, so that they then could take it and show it in the theaters and show it in Europe, and that they would get some of their money from us and some of their money from the theatrical exhibition.

Mr. COX. Perhaps I didn't make myself clear. This is the total cost of the 39-week series.

Mr. STANTON. I am sorry, I thought he was talking about a single program, a single film.

Senator PASTORE. Are these all going to be first-run pictures?

Mr. COX. This is a series of 30-minute programs made especially for television which cost in the neightborhood of $25,000 to $30,000 per week.

Senator PASTORE. Like the Four Star Playhouse?

Mr. COX. Yes. So that the gross expense, gross charge for 1 year, consisting of 39 sequences, would be slightly in excess of a million dollars?

Mr. STANTON. That may or may not be the total cost of the production. Now, to answer your question, if that is what you meant, and I am sorry, I thought you were talking about a single program——

Senator PASTORE. No; I was talking about a single program first.

Mr. STANTON. All right. The answer is "No." But we have had some talks in that dimension, that are on film, just in the idea stage.

Senator PASTORE. The reason I asked is because the group interested in subscription television claims that is the only way the viewer will ever get it—that kind of performance—through subscription television. That is why I asked you the question. Whether or not the proposition of free entertainment was made along that line——

Mr. STANTON. You would forgive me if I disagree with you on that particular subject. But that would keep us both here too long.

Senator PASTORE. I don't want you to go into that. I am just giving you a predicate for my question.

Mr. STANTON. Right.

No; I don't recollect that anyone has ever come in to see me, nor my associates that I have heard of, with a million-dollar film and said, "We want to put it on the network for the first run."

Mr. COX. With reference to the quotation from Mr. Treyz' speech, he is speaking of class A time and that includes more than the 7:30 to 10:30 period, of course; doesn't it?

Mr. STANTON. In his speech it was 7:30 to 10:30, Mr. Cox.[8]

Senator PASTORE. Just so that we clear up the record on this. Apparently this group that Mr. Cox is talking about is interested in prime time, and it raises the question that possibly they are having some difficulty in negotiating with the networks in getting this prime time cleared. The only way that they can do it is through the networks. Now, can you give us any elaboration on that point. Why is it difficult for them to come in on prime time, if that is the question? And why isn't it profitable for CBS or NBC or ABC to give these people prime time? I mean what is the problem really involved. Let's get that on the record in simple language.

Mr. STANTON. I think the problem, sir, is there isn't the time in the schedule to permit them to come in willy-nilly and get the clearances. But that doesn't mean that they don't get their programs into our schedule. Because, as I indicated, over half of our nighttime prime time is filled with programs produced by outside, independent producers that we have nothing to do with at all. Let me give you an experience. We had two of our shows in two half-hour time periods, prime time. And there was some talk about dissatisfaction with the programs, talk in our own shop, because the programs were—had been on for a number of years and all good things must come to an end. You can't stretch these things out forever.

These were not shows that were built around personalities; these were idea programs that were in the time periods. And there had been some talk in the trade about the advertiser and about us both looking for new properties to fill that time. And an officer of an

[8] In a letter dated June 14, 1956, which was inserted in the record on July 17, 1956, Dr. Stanton indicated that, upon checking further, he found that class A time as used by Mr. Treyz was 7 to 10:30 p. m. This letter is printed at p. 2874.

For certain correspondence between Senator Magnuson and the Television Bureau of Advertising, and others, regarding the quoted clearances of class A time for syndicated films, see item 28 in the appendix to this volume.

independent film-producing organization called me to see whether he could come over and see me; and I was puzzled as to why he wanted to see me, because normally programing is something that is handled, for television, by the man in charge of programing for television. But I said I would see him. That is one of the jobs the president of an organization has; there isn't anybody you could push him off onto; you have got to see him. He indicated this was something he had to see me about. He came in and he said, "I have got a whale of a good program series coming up. I haven't got the pilot finished yet, but believe me, this is one of the greatest." Well, every one of them that you hear about is the greatest; there is no point in going into that. But he was very enthusiastic about this half-hour program, and as he told me about it I shared some of his enthusiasm. And I said, "What do you plan to do with it?" He said, "That is what I want to come and talk with you about. We think this is such an expensive program and such a worthwhile program we don't want to sell it on a spot basis—we want to sell it networkwise. What do I have to do?"

I said, "The same thing we have to do, go out and sell it. If we have advertisers in our schedule who would rather have this program than the program they have now got, provided it doesn't break a sequence that we think is terribly important, we will be glad to talk with you about it. The first thing we want to do, however, is to see the pilot. I don't want to talk about anything just on the basis of paper in this particular area. So as soon as you get your pilot, you let me know and we will arrange for a screening." He said, "What do I do after you have seen it?" I said, "If we like it, we will say, 'More power to you,' and we may offer to buy the show from you and pay you the same price and take a chance on selling it, if it is as good as you say it is."

He was puzzled. He felt that something had to take place in order to get time on a network. He hadn't been on networks; he has been very successful on a spot business. He sold that show within a matter of weeks, even before I saw it. I went in to see it even though he didn't come to me. I thought I owed him that courtesy. But he sold that show to replace one of our own shows. Before we could turn on a dime to convince him we had something good on our shelf to sell him this other man sold him. I am glad he did. It is a good program, in my opinion. There is no mystery about this thing. I told him—he told me afterward, he said, "This is a simple thing; I didn't know it was done this way." I suspect that he had been contaminated, if you will, or had been influenced to believe that there had to be some monkey business go on here in order to get that program on the air.

Senator PASTORE. Now, in the situation—in the factual situation that was just raised by Mr. Cox, could those individuals who expect to get this $1 million production over a period of weeks go to one of those advertisers and say, "Look, you are showing such-and-such a show on CBS, why don't you buy this one?" Can they do that?

Mr. STANTON. Certainly.

Senator PASTORE. If they can do that, how has the advertiser got you tied up? Has he bought the show or has he bought the time? Can that advertiser come in and say this is what you will show on the network?

Mr. STANTON. No; he can't.

Senator PASTORE. Then, what good is it to him to sell it?

Mr. COX. He would only buy it conditionally.

Mr. STANTON. He would buy it subject to our approval of the program.

Senator PASTORE. In other words, he could sell it if you like it?

Mr. STANTON. If it is good for the public; certainly.'

Mr. COX. Take a specific instance, however: In the case of the projected program You Can't Take It With You, which was a film program in which one of your advertisers was interested, isn't it true that Carter placed such a conditional order for this program because it seemed to them highly desirable? They were interested in the new property, but when it was shown to you—and by that I mean to CBS—it was rejected on the ground that it was not suitable for the network's program schedule.

Mr. STANTON. It certainly was.

Mr. COX. Now, the program that Carter was then carrying was a CBS package program called, Meet Millie; wasn't it?

Mr. STANTON. That is correct. That is covered, Mr. Cox, in a memorandum I will be glad to submit to the chairman for the record. It is a memorandum entitled "Tuesday, 9 to 9:30 p. m., Meet Millie—Joe and Mabel—You Can't Take It With You."

Mr. COX. All right; fine.

Senator PASTORE. Without objection it is so ordered.

(The document referred to follows:)

TUESDAY, 9 TO 9:30 P. M.

MEET MILLIE—JOE AND MABEL—YOU CAN'T TAKE IT WITH YOU

Prior to January 1955, Talent Associates, Inc., an independent program producer not affiliated with CBS, approached CBS television with the suggestion that Talent Associates produce a series of programs for broadcast on the CBS television network based on characters (Joe and Mabel) created for radio by Irving Nieman. Talent Associates had acquired the rights to such a series from Nieman.

An agreement between CBS television and Talent Associates was entered into as of March 3, 1955, which provided, in substance, that Talent Associates would furnish a series of 30-minute programs for broadcast by CBS television. CBS television agreed to pay Talent Associates specified amounts for each program, together with a percentage of the net profits if the programs became commercially sponsored. CBS television also agreed to provide production facilities and furnish a producer and a director.

An audition television recording of the program entitled "Joe and Mabel" was prepared on March 15, 1955. On the basis of this audition recording, in April 1955, the program was offered to agencies for sponsorship. Also on the basis of the audition the decision was made that the program would be more effective if produced on film than if broadcast "live."

At that time Meet Millie, a program produced by CBS television, occupied the 9 to 9:30 p. m. time period on Tuesdays on the network schedule, sponsored by Carter Products, Inc., and Pharmaceuticals, Inc., on alternate weeks. Except for brief periods. Meet Millie had been on the network since October 25, 1952. During much of this time, the program was broadcast on a sustaining basis. In the judgment of CBS television executives Meet Millie was not a strong program, particularly in view of the competitive programing of NBC and the fact that it was believed to have outlived substantial audience interest.

Accordingly, in February 1955, CBS television agreed to renew the facilities agreements for the 9 to 9:30 p. m. time period on Tuesdays with the agencies for Pharmaceuticals and Carter for an additional 52 weeks, to commence in March 1955, with the understanding that a substitute program for Meet Millie would be obtained. It was also understood that such substitute program would be one acceptable to CBS television and the two sponsors.

Among the substitute programs that were suggested were Our Miss Brooks, a network program produced by CBS television and suggested as a substitute by the agency for Carter Products; You Can't Take It With You, a series to be produced by Screen Gems, Inc. (a subsidiary of Columbia Pictures Corp.) also suggested by the agency for Carter Products; and, when it became available, Joe and Mabel, which was suggested by CBS television.

At no time were the sponsors told or given any reason to believe that Joe and Mabel was the only program which was acceptable to CBS television. On the contrary, they were specifically told that they might use any program, regardless of the identity of the producer, if the program was aceptablce to both of them and, in the opinion of CBS television, met the requirements for the particular time period.

Our Miss Brooks did not become available as a replacement because of the continued interest of its then current sponsor. You Can't Take It With You was rejected, for reasons stated below, as a substitute after serious consideration, including a screening of the pilot film by five CBS television executives.

The acceptability of You Can't Take It With You as a substitute for Meet Millie was further complicated by the fact that the choice involved not only approval by CBS television but also by both of the sponsors. Pharmaceuticals preferred to continue sponsorship of Meet Millie, was agreeable to sponsoring Joe and Mabel, but was reluctant to sponsor You Can't Take It With You. Both Pharmeceuticals and Carter Products agreed to sponsor Joe and Mabel, in the particular time period commencing September 20, 1955, although as previously stated it was made clear that this program was by no means the only possibility for the time period.

The production of Joe and Mabel, which had been assumed by Jamie Television, Inc., a subsidiary of Talent Associates, commenced in July 1955. An unanticipated delay occurred in the production schedule of the series due to a strike called by the Screen Actors Guild. By the middle of September, six programs had been filmed. However, very shortly before the first broadcast was scheduled to commence CBS television decided that these six programs did not fully measure up to CBS television's program standards and, accordingly, after obtaining the agreement of the sponsors, it was decided to continue Meet Millie on an interim basis until such time as satisfactory programs of the Joe and Mabel series could be filmed or another satisfactory substitute program could be agreed upon. This decision was arrived at despite the fact that CBS television had expended approximately $185,000 plus developmental expenses on the Joe and Mabel series and was committed to spend an additional $183,000 under its arrangement with Jamie Television.

Thereafter, in October of 1955, CBS television renegotiated its arrangements with Jamie Television to provide that CBS television would produce the series under a license arrangement with Jamie Television and Nieman. CBS television assumed full control of production and the six programs produced by Jamie Television were discarded. Filming was resumed in November 1955, and 13 episodes of Joe and Mabel were produced under the new arrangements. Production was suspended in February 1956 because of the substantial amounts already expended for the series without assurance of sponsorship.

Carter Products did not renew its facilities agreement for the 9 to 9:30 P. M. time period on Tuesdays, which expired in March 1956, and Pharmaceuticals contracted for the time period on an every-week basis. The agency for Pharmaceuticals then suggested, and CBS television agreed, that Meet Millie be dropped and that Guy Lombardo's Diamond Jubilee, a program produced by Music Corporation of America, be substituted in the time period. Diamond Jubilee was originally scheduled to be broadcast until September 4, 1956, with the possibility of five additional broadcasts. However, because of lack of audience interest, Pharmaceuticals became dissatisfied with Diamond Jubilee after the first few broadcasts.

Joe and Mabel was suggested by CBS television as a substitute for Diamond Jubilee. At no time did CBS television indicate in any way to Pharmaceuticals that Joe and Mabel was the only program which would be appropriate as a substitute. Pharmaceuticals determined that Joe and Mabel was acceptable to it for a 14-week summer period and the series is scheduled to commence on June 19, 1956. The agreement, as yet unsigned, between Edward Kletter Associates, Inc., and CBS television, provides for the furnishing of only 13 films (1 of which is to be repeated) for 14 broadcasts to be sponsored by Pharmaceuticals.

That the decision to substitute Joe and Mabel for Diamond Jubilee was that of Pharmaceuticals' agency, without any pressure from CBS television, is evidenced by a letter dated May 3, 1956, from Edward Kletter, president of Edward Kletter Associates, Inc., to Mr. Frank Burke, editor of Radio Daily.

A copy of Mr. Kletter's letter is attached.

The CBS television executives who viewed the pilot film of You Can't Take It With You were J. L. Van Volkenburg, president of CBS television; Hubbell Robinson, CBS television executive vice president in charge of network programs; Harry Ommerle, CBS television vice president in charge of network programs; William H. Hylan, CBS television vice president in charge of network sales; and Oscar Katz, director of research of CBS television. In addition, Mr. Ommerle reviewed seven story lines proposed for future episodes of the program to determine whether or not they offered promise not inherent in the pilot film. The unanimous decision of these individuals was that You Can't Take It With You was not suitable for the 9 to 9:30 P. M. period on Tuesdays.

Among the bases for their opinion that the program was not suitable for the period for which it was suggested were the nature of the program which was such that it must necessarily tend to go too far in exaggerating reality and the overexaggeration, which while suitable for a one-time play or motion picture, did not suit the requirements of a week-to-week medium which comes into the living room.

Messrs. Hylan and Katz wrote memorandums dated June 16, 1955, and June 10, 1955, respectively, to Mr. Van Volkenburg setting forth their reasons for recommending against the program in the Tuesday 9 to 9:30 p. m. period. A copy of each of these memorandums is attached. In addition, under date of June 13, 1955, Mr. Ommerle wrote two memorandums and on June 14, 1955, a further memorandum to Mr. Van Volkenburg setting forth his conversations with Mr. Stauffer of Sullivan, Stauffer, Colwell & Bayles, Inc., the advertising agency for Carter Products. In these memorandums Mr. Ommerle set forth the views of CBS television with respect to You Can't Take It With You and advice to the agency that CBS television was not insisting on Joe and Mabel as a replacement for Meet Millie. A copy of each of these memorandums is also attached.

CBS television rejected the offer of Screen Gems to submit to a public test the differences of opinion with respect to You Can't Take It With You, despite the fact that the suggestion presented a superficially attractive solution to the problem. The suggestion was rejected because of the belief of the executives of CBS television that it is their responsibility to determine the composition of CBS television network programs and that CBS television cannot abdicate that responsibility to a popularity contest. It was also the belief of the CBS television executives that no matter how carefully the sample audience were selected, it would be impossible for that audience to have any opinion as to the suitability of the program for the time period or as to the possibilities for the future programs of the series.

In addition to offering Joe and Mabel as a substitute for Meet Millie CBS television submitted it to several advertising agencies for their possible consideration. Among the submissions were those to General Foods, Pet Milk, Procter & Gamble and Amoco as replacement for programs taking a summer hiatus. At the same time, CBS television offered Play for Keeps and You're on Your Own, both of which are produced by outside producers in association with CBS television, and reruns of My Favorite Husband.

Joe and Mabel was offered to General Foods for the 9:30 to 10 p. m. Monday period, to Pet Milk for the 9:30 to 10 p. m. Tuesday period, to Procter & Gamble for the 10 to 10:30 p. m. Friday period, and to Amoco for the 10:30 to 11 p. m. Friday period.

General Foods decided to use The Johnny Desmond Show as a summer replacement, Pet Milk, Playhouse of Stars (reruns), Procter & Gamble, Undercurrent (reruns) and Amoco, Pantomime Quiz. CBS television does not own any interest in any of these programs.

(The attachments to the memorandum are as follows:)

EDWARD KLETTER ASSOCIATES, INC.,
New York, N. Y., May 3, 1956.

Mr. FRANK BURKE,
Editor, Radio Daily, New York, N. Y.

DEAR MR. BURKE: In your issue of Thursday, May 3, in your column Tele-Topics, you mention: "After June 12, Guy Lombardo's Diamond Jubilee via CBS–TV will leave the network, because CBS–TV wants its own package, Joe and Mabel, in the Tuesday night 9–9:30 time slot."

Just for the record, please be advised that the decision to replace the Lombardo show with Joe and Mabel was not that of CBS, but of our agency's, on behalf of our client Pharmaceuticals, Inc. Guy Lombardo's Diamond Jubilee program regretfully did not come up to our rating expectations; therefore, after considering several other programs it was our decision in favor of Joe and Mabel.

Very truly yours,

EDWARD KLETTER, *President.*

[Office communication]

CBS TELEVISION, *June 16, 1955.*

To: Mr. Van Volkenburg.
From: Mr. Hylan.

Herewith, my reactions to the pilot of You Can't Take It With You which we screened at the request of S. S. C. & B. as a possibility for the 9:30 p. m. Tuesday period.

Basically, my reactions were quite negative for the following reasons:

1. You Can't Take It With You is farce which we have never had much sucess with. You will recall that it was one of the reasons why My Friend Irma was dropped. It is also partially behind our recommendation that Meet Millie be replaced.

2. The producers, in my opinion, made an unfortunate decision in doing the play (or parts of it) as their pilot. Almost everyone in our business is familiar with the Broadway play, and its success was not at issue. However, there is a big question in my mind as to the ability of the writers of the series to match the quality of a highly polished one-time version by Kaufman and Hart.

3. One of the strongest elements of the Broadway show involved the creation of a feeling of frenzy which mounted throughout the course of the play. Use of the entire stage area and the ability of the audience to see a broad perspective at all times made this possible. The television screen, unfortunately, is not as broad a canvas and is not suited to the type of three-ring circus which contributed so greatly to the success of You Can't Take It With You as a play.

4. Finally, it boils down to the fact that 9 o'clock Tuesday is a key point in our effort to create the tune-in habit to CBS television on that night. All of the elements which I have discussed above indicate that the television version of You Can't Take It With You is, at best, a very risky proposition. With the kind of deals that most packagers insist upon, the program would probably be locked in with a minimum of 39 weeks, and if it were unsuccessful, we would be stuck with it in this important time period.

If Carter wishes to use this particular program, I am sure you would agree that we could schedule it in the 10:30–11 p. m. Thursday period and I will so inform Heagan Bayles and Don Stauffer when we see them tomorrow.

CBS TELEVISION, *June 10, 1955.*

To: Mr. Van Volkenburg.
From: Mr. Katz.

After viewing You Can't Take It With You, I would say that this program does not seem to me to be strong enough to fit into the Tuesday night lineup we are planning for next season. The main reason for this, in my opinion, is that a program dealing with so many "wacky" characters must necessarily tend to go too far in exaggerating reality. And I feel that this overexaggeration is fine for a one-time play or motion picture, but does not suit the requirements of a week-to-week medium which comes into the living room. In short, an audience will accept it once almost as a lark, but the overexaggeration will work against acceptance of this kind of property on a regular basis.

Another aspect is that the physical characteristics of the stage and the motion picture screen makes them more suited than the more confining television screen for depicting all of the "screwy" goings-on that take place simultaneously in You Can't Take It With You. Consequently, I find that even as a one-time show, it has lost a lot of punch in its conversion from the stage and the movies to television.

Finally, I did not think that this audition was a fair one in the sense that the story line and the jokes seemed to be taken right from the stage play. As a result, I felt that what I had viewed was illustrative of a stage-to-television adaption, rather than an example of one episode in a projected week-to-week series.

[Office communication]

CBS TELEVISION, *June 13, 1955.*

To: Mr. Jack Van Volkenburg.
From: Mr. Harry G. Ommerle.

Just for the record, I wanted you to know that I called Don Stauffer Friday afternoon after you, Bill Hylan, Oscar Katz and I saw You Can't Take It With You.

I told Don that we were very disappointed in the show and had our doubts about its being able to produce in the 9 o'clock Tuesday spot.

I pointed out to Don that in essence this was nothing but a condensation of the stage play and the motion picture, and that the same kind of frenzied excitement could not be sustained on a weekly basis. I also told him that it was our feeling that except for the grandfather, the rest of the characters emerged as rather superficial. I promised him, however, that over the weekend I would read the seven-story lines that had been sent to me to determine whether they offered promises that were not inherent in the pilot film.

[Office communication]

CBS TELEVISION, *June 13, 1955.*

To: Mr. Jack Van Volkenburg.
From: Mr. Harry G. Ommerle.

I tried to reach Don Stauffer this morning about You Can't Take It With You, but he was not in the office.

I, therefore, talked to Heagen Bayles and told him substantially what I said to Don on Friday, adding only that the seven-story lines had failed to impress me. I told him quite definitely that it was our feeling that this show lacked the strength for 9 o'clock Tuesday.

In this conversation I was very careful to state that we were not taking the position that Joe and Mabel had to go in there, nor that we were reserving the spot exclusively for CBS shows. It was just that none of us felt that this particular one could consistently deliver a large enough audience to prove to our mutual interests.

Heagen has asked for a meeting and I have agreed to it.

(Signed initials) H. G. O.

[Office communication]

CBS TELEVISION, *June 14, 1955.*

To: Mr. Jack Van Volkenburg.
From: Mr. Harry G. Ommerle.

Bill Hylan and I met with Don Stauffer and Heagen Bayles this morning about You Can't Take It With You.

Much of the same ground was covered as in our previous discussions, but Don did ask if we were taking the position that You Can't Take It With You was completely unacceptable to the network. We told him that this was not the case. We would accept it, for example, at 10:30 Thursday, but that we did not believe it good enough for 9 o'clock Tuesday.

We took this opportunity to reiterate that we were not forcing Joe and Mabel on them, nor were we limiting this time spot to CBS owned or controlled shows. We were most emphatic about this.

Stauffer and Bayles are to meet with Hoyt of Carter Products tomorrow, and I will advise you as soon as I know the outcome of this meeting.

(Signed initials) H. G. O.

Mr. Cox. Just for the record at this point, CBS not only determined that this program was not satisfactory, it then offered in lieu of the CBS package that was then being sponsored by Carter another CBS package referred to as Joe and Mabel; is that correct?

Mr. STANTON. Yes, but the advertiser considered a number of programs, not just Joe and Mabel.

Mr. Cox. He did not take Joe and Mabel, did he?

Mr. STANTON. Well, at that time, no. Because we weren't satisfied with the program after it got into production. And as a result, the program Meet Millie continued in the time period.

But let me make perfectly clear, for the gentlemen who won't read this memorandum, as to why we turned down You Can't Take It With You, because this was a show that had a good track record on Broadway. The reason we turned that program down wasn't because the first showing wasn't a good program, but what had happened in that particular program was that the program packager, in our opinion, had milked the Broadway show for everything and put it all in the first show. And as I said a little while ago, I am not nearly as concerned about the first show as I am concerned about the fifth or the ninth show in a series, because I want to see what is going to come on down the line a ways.

And the feeling of our program executives who viewed that particular pilot was that all of the material that was in the Broadway show had been pretty well put into this half-hour pilot, and we didn't know where the program was going to go to after the first show was on the air.

Mr. Cox. When you are buying a pilot, you are buying that on the basis of characters, a productive team, talent. You don't know, when you ordinarily buy a show, how it is going to go for 39 weeks, do you?

Mr. STANTON. Not for 39 weeks, perhaps, but this was a program staged completely on the basis of the Broadway show, and they had used up the whole book in a half-hour.

Mr. Cox. One of the shows you were referring to which was displaced by Mr. Ziv's program was the show Mama?

Mr. STANTON. That is correct.

Mr. Cox. That was based on a Broadway show and on a book, but I don't suppose that a very large percentage of the 30-minute programs based on that were in any way related to the actual incidents in the original play.

Mr. STANTON. Mr. Cox, I will be glad to show you the first run of Mama and I will take you back over the script of the Broadway show and the book, and if there is anything like the percentage of the Broadway show used in the first half hour of Mama I'll eat it. Now, in the case of You Can't Take It With You, they had condensed the whole show in the first half hour. We had no fault to find with the first show; it was excellent and we so told them. But we said: "Where is the show going to go from here?" We had our competent professional executives look at the material, the scripts, and we didn't feel the show would hold up in the time period. This is not a case of feeling that the first pilot wasn't any good.

Mr. Cox. That is why you thought there was no point in submitting this show to public test, because you yourselves were satisfied with the quality of this one?

Mr. STANTON. Sure, we didn't think that would prove anything and we told them that.

Mr. COX. In connection with option time you have indicated that you regard it as legally enforceable, but you have never had to resort to legal action in that connection. Isn't that because you have been able—isn't this because you have been able to get sufficient clearance with your affiliates without any such resort to legal process?

Mr. STANTON. Well, that is part of the answer. We have been able in the administration of that contract, because I think you live longer that way and you do business better that way. I don't think it is much fun to be in business where you live with a legal contract at your elbow all the time with 181 affiliates.

Mr. COX. You, however, regard option time as being vital to the continued existence of the network.

Mr. STANTON. I tried to make that as clear as I could in as few words as possible in my direct statement yesterday.

Mr. COX. Do you have any primary affiliates as to whom you do not have option time?

Mr. STANTON. I don't know of any, but there might be one deviation someplace in the group. I am going to do——

Mr. COX. Is that so, Mr. Salant?

Mr. SALANT. Yes.

Mr. COX. Do you have any different—I will address this question to you, then—do you have any substantially different clearance experience with the station as to which you do not have option time than in connection with those stations where you do have it?

Mr. SALANT. I don't know.

Mr. STANTON. I think if there is only one case out of the entire network, I don't think that proves anything one way or the other.

Mr. COX. Well, it proves that you clear for that station without any legal basis for the clearance, doesn't it?

Mr. STANTON. Well, I suppose it proves that; but I think that 1 out of 181 is only a sample of one, and I don't think that you can prove anything with that. That is the only point I want to make.

Mr. COX. The point is that he must clear your programs, then, either because he regards them as the best that are offered to him, in the time, or because he values his affiliation with CBS and therefore is willing to clear such a substantial percentage of your programs that you never raise any question with him about them.

Mr. STANTON. I would feel much better qualified to discuss this with you if I knew the particular case and something of the history of it. I don't know this particular one, so you are drawing a blank from me on this one.

Mr. COX. Don't you feel that actually your affiliates generally—all 181 of them—clear time just about like this one unidentified station does—because it needs the program service that you can provide, because CBS is generally highly rated and, therefore, the right to be an affiliate is, at least in the major markets, a valuable one. And that therefore, subject to these deviations that you have pointed out, in general, the affiliate would clear these programs for you regardless of whether you had a legal option.

Mr. STANTON. If I thought that, Mr. Cox, I wouldn't have said what I said to you yesterday in my direct statement. I believe option time is of vital importance to a network. And I think that if anything is done to take it away, I think there is real danger that you are going to emasculate something that I think is mighty important to the public in this country, to the industry and I think, too, in many ways, to Government. Because if you do something that is going to destroy live networks, I don't know what is going to happen when you need the networks for important defense discussions or things having to do with Government, and so forth.

Mr. Cox. No one has any desire to destroy the networks or the valuable service that they perform.

Mr. STANTON. We must have a fully healthy financial operation in order to do it. Because the cost of doing these things is absolutely astronomical.

Mr. Cox. I think you have established that very clearly. But as I understand it your concern about the elimination of option time is that this would result in the rejection of programs by affiliates in major markets scattered over the country in varying time periods.

Mr. STANTON. Yes.

Mr. Cox. That this would make it uneconomical?

Mr. STANTON. I don't want to leave you or any members of the committee with the impression that I am saying we are going to fall apart the day after some decision is made that would change option time. That would be very foolish. I don't think it will happen that way. If you were to cut back on option time, or eliminate option time, I think you would have an erosion process that would start and eat away, period by period—1 market, 1 period; 1 market another period—until the thing would become uneconomical for the advertiser and would grind to a halt. Because we couldn't afford to maintain the $13½ million worth of interconnection, we couldn't maintain the tremendous program costs for sustaining programs, public affairs programs, and entertainment programs, that we now carry. All of that would diminish. And the end result as far as the public is concerned, is that he would get a degraded, in my opinion, program service.

When that is going to come, in time, I don't know. It will depend a lot on how or what is done. But I think that you have got something here that is going, I think it is performing beautifully. There are bits and pieces that could be improved, but anything that is done, where you do something that is very major to this industry, I think it is a pretty dangerous thing. That is the reason I have devoted as much time and energy as I have to the preparation of the documents that we have given to you. This isn't something that we whipped up overnight, you understand.

Even though that questionnaire did come in just a week or so ago. You know you were decent enough——

Mr. Cox. I am glad you understand that.

Mr. STANTON. That is right. It was almost impossible in 8 working days to answer that.

But the reason we approached this thing as seriously as we did, and turned out the documents—basically the supplemental memorandum is something that took a long time to develop. The reason we did that is because, first of all, we felt television is so important that the Members of Congress deserve to have all the facts that could possibly be put before them. I don't object to hearings until the cows come home. I will sit with you as long as you want. The only thing I want to come out with is something of the order that we came in with, because I think the record of the industry is pretty good.

The reason we took this so seriously is that you have a right to know, No. 1; and we wanted to be able to have the record as full as we can make it. So there isn't any question. I have no objection to your asking any questions about anything we have done or anything we plan to do. We haven't withheld one bit of information.

The only thing I plead with you is that you look at all the facts and you weigh them very carefully in the round, not piece by piece, and see where this thing has gone, and what might happen if you change the course of it substantially—and I think doing something to option time would change the course of it substantially.

Mr. Cox. Doing anything to option time?

Mr. Stanton. I think doing anything to option time.

Mr. Cox. In other words, 3 hours works very well, less than 3 hours would not be workable at all, or at least not workable, in your opinion, in maintaining the present level of service?

Mr. Stanton. You can't trim this thing in terms of minutes. You have to trim it really in terms of half hours.

Senator Pastore. May I interject again here? Let's assume we take this 3-hour option time; let's say we cut it down to 2 hours. Where is the public service being served either one way or the other.

I wish that would be expounded on somewhat; even if the counsel has some ideas on it, I would like to hear them. I mean what do we do, what do we accomplish, what do we have to do? I am not interested in CBS as such; I am not interested in the independent producers as such. My job here is to protect the people of the United States and to see they get the best kind of service in every particular where the United States Government is interested as such. I am interested in the public interest here.

Now, how do we better serve the public interest with or without option time, or by cutting it down or expanding it? Can I get some elaboration on that? Let's think of Mr. Average American here.

Mr. Stanton. I am glad you said that because I share that 100 percent.

Senator Pastore. I don't care who gets what program and sells to whom for how much money. [Laughter.]

I am pretty well convinced here that this is a battle of the giants. When we talk here of producing $1 million shows, we are not talking about panhandlers, we are talking about big business. [Laughter.]

And let's get the facts here for the American public. Now, let's assume that we do cut down this option time by a half hour or an hour, Dr. Stanton. How will it help in any way? Do you know of any way it will help. Or how will it hurt in any way?

Mr. Stanton. Well, it is difficult to say precisely what will happen, but let me see if I can talk a little bit to it.

I think there are many stations that won't get as much service as they are now getting in terms of programs. Forget whether they are paid for or whether they are not paid for. They just won't get the programs. I can't tell you, Senator Pastore precisely when and at what list these stations will suffer. But I think that Murray Carpenter put it very well in his testimony that I quoted from the other day. In a market the size of Bangor, if that hour is taken out that you are talking about here, of option time, I think he will lose an hour of network programing at that particular time, or equal programing.

I don't think that Philadelphia or New York is going to suffer much as far as the audience is concerned. I think they will get programing in there. But Mr. Carpenter, in Bangor, is going to have to reach down in his pocket and buy some film to fill that time, because he isn't going to get it from the network—we are not going to be operating in that time. If we can't sell it in the big markets, then we can't afford to furnish the service to him in Bangor. Now, there is something between Bangor and Philadelphia—I don't mean geographically, I mean in size. I don't know where that cutoff point is. But there is going to be a certain group of markets that will be able to fill the time, even perhaps make more money out of the time than they are now making.

I am not sure whether the programs will be as good or——

Senator PAYNE. There are a lot more Bangors than there are Philadelphias.

Mr. STANTON. You are right, Senator Payne.

Mr. COX. Isn't it true that Mr. Carpenter does not now receive a program from CBS unless it is ordered for his station by an advertiser?

Mr. STANTON. Not necessarily, sir.

Mr. COX. Aside from sustaining?

Mr. STANTON. No, not aside from sustaining, Mr. Cox. If it is a sustaining program, he gets it, and if it is an EPS program he gets it.

Mr. COX. He is not on your Extended Program Service; is he?

Mr. STANTON. Certainly he is on the extended program service. That is available to any station that isn't ordered for the program, provided the program is one that can be ordered by EPS. That is spelled out very clearly in the supplemental memorandum. I will give you the reference if you like. You are not confusing that with EMP, are you?

Mr. COX. No. In other words, you make this available to—and I assume there is in his case no overlap. Your primary problem there is you are not making programs available, on the Extended Program Service, where there is any substantial overlap between that and another market which is purchased.

Mr. STANTON. That is one of the problems. There are many problems. Well, we will lose ourselves if we go down that road. All I want to establish here is that he does get more than just the commercial schedule. He gets the sustaining schedules and those EPS programs that are available. So that he will lose by this. But I think that more than that, I think that you are shrinking back the margin of profit that the network is going to have to work with to invest in new program ideas.

Some of them are turkeys, but somebody has got to bear the load of that experimentation. Somebody has got to bear the load of the sustaining schedule. Somebody has got to bear the load of covering conventions and big national events and having these wire lines available.

Now, if you begin to shrink back, I can't tell you precisely, Senator Pastore, where this cutoff point is. All I know is the thing is working pretty well the way it is. I am sure there are some people who would like to change it. But they have got special interests, and I don't think they represent the viewpoint that you have got, and the viewpoint that I have got to have if I am going to be successful in operating a national network.

Anything that is done to take something away from the public, you ought to holler about.

Senator PASTORE. How was this prime time arrived at? Was there a scientific approach? Apparently the three networks have designated this as prime time. Is it in fact prime time, or is it more than prime time? Is there some scientific rule by which this was determined?

Mr. STANTON. I think that is determined pretty much by what the public does. There are more people to a television set after dinner than there would be in the afternoon.

Senator PASTORE. I realize that. But why start at 7:30? Why couldn't you start at 7:45?

Mr. STANTON. Fifteen minutes here or there isn't going to make too much difference. I think most programs come and go on the half hour and not on the quarter hour. I wouldn't start a program on the quarter hour.

Senator PASTORE. You wouldn't want to start at 8 o'clock, either? You wouldn't want to lose that half hour?

Mr. STANTON. We could lose that half hour——

Senator PASTORE. In other words, the point we are trying to determine here—and I am not saying it ought to be regulated by the FCC or any legislative fiat that we might enact in the Congress—but I was wondering if maybe you haven't gone too far in the establishment of this time; whether or not you don't need the whole 3 hours. I think the point Mr. Cox is trying to determine, in order to get all these factions a little more satisfied—or whether you are holding on doggedly to the 3 hours, because that is the 3 hours you want, or is it because that is in fact the prime time. Is there any scientific way this has been arrived at?

Mr. STANTON. Well, I hesitate sometimes to call it science.

Senator PASTORE. Well, you have—what do you call it? The Hooper system. Then we have the Gallup Poll; we have a lot of fancy ways——

Mr. STANTON. It is because you have introduced the word "Gallup" that I am a little sensitive. [Laughter.] Senator Pastore, we know pretty well, and I am sure that the operators of the stations know it better than we for their own communities, what the traffic is at various half hours during the evening. Now, we might have taken 8 to 11; we might have taken 7 to 10. We took 7:30 to 10:30, obviously, because we thought that was the best time span.

I think that is the prime time in the evening. But there are plenty of programs that do very well from 10:30 to 11 and there are many that do well from 7 to 7:30 but we have taken 7:30 to 10:30. I can't answer and say that 15 minutes snipped off of that would upset the applecart. But 15 minutes wouldn't do us any good. Because who wants to look at a 15-minute program in the prime evening hours? You want to look at half-hour programs, hour programs, and I hope an hour-and-a-half program.

So it isn't a 15-minute adjustment we are talking about. These go down in at least steps of a half hour. So I think that we need the 3 hours that we have got. And I think the system is working pretty well.

Mr. Cox. As I understand it this process of erosion that you fear would arise because individual affiliates would reject CBS-offered programing and would substitute some other programing in its place; is that correct?

Mr. Stanton. That is correct.

Mr. Cox. I assume that each station operator, operating under his license and the responsibilities imposed thereby, would do this because, in his construction of the public interest in his market, the program he accepted was better than the one that CBS offered him.

Mr. Stanton. It could be that that would be the reason.

Senator Pastore. For that one spot.

Mr. Stanton. Yes, certainly for that one.

But you see if each station took a different spot in the schedule—let me make one point clear. That when an advertiser looks at a long budget for 39 weeks or 52 weeks—and when you were talking about a show from $20,000 to $25,000, Mr. Cox, in today's market that is not an expensive program, as I am sure you recognize; a program costing $50,000 to $60,000 is much more likely to be a big show at the present time, for a half hour. Now, when a man looks at that kind of a commitment for 52 weeks of, let's say, $50,000, that is $2½ million for the program—and he is looking at approximately that much more in time to put that in. So he is looking at a $5 million budget.

Now, he isn't going to sign his name to a $5 million expenditure today if he doesn't think he can get coast-to-coast coverage and write that expense off over the maximum amount of circulation. If Pittsburgh isn't accepting, or if Philadelphia isn't accepting—if Philadelphia and Boston don't accept—then he says, "Well, maybe the thing I had better do is to buy a cheaper program, because I can amortize that off over less circulation." And when he does that—when he buys a cheaper program—then maybe the man in Detroit says "Well, that isn't as good a program as I had in there last year, so in the next 13 weeks that goes out."

Little by little that erosion continues, and the next time around maybe we can't get an advertiser to put a program in there that cost anywhere near it, so you have lowered your program quality.

I said earlier that by and large quality goes with money. As you lower your budget you are not going to be able to attract the quality of good writing or talent, et cetera. Gradually, this thing is going to be lowered on that basis. I don't know where it is going to end. I say why take a chance? I go along with Murray Carpenter. Maybe? Well, "maybe" isn't good enough.

Mr. Cox. Wouldn't it be fair to say, though, that you view that in terms of the public interest and in view of CBS's interest; and Mr. Carpenter views it in the interest of WTWO?

Mr. Stanton. And his public?

Mr. Cox. And the public in Bangor. And that there might be difference of opinion as to whether the risk there is so great that it could not be taken. Now, isn't it true that you clear substantial time outside of option hours, on at least more stations than were listed with respect to a number of those programs in Mr. Treyz's speech?

Mr. STANTON. Yes, certainly.

Mr. Cox. Now, in a two-station market where ABC does not have an affiliate, your option is not good against an ABC program, is it?

Mr. STANTON. Not good against an ABC commercial program; that is right.

Mr. Cox. Now, would you think that this is approximately correct: That in the 10 markets where there are only 2 stations which, again, are on both the NBC and CBS must-buy lists—excluding only a couple of markets for which data is not available—that on the CBS affiliates, CBS programs were cleared 91.2 percent of the half hours during prime evening option time while ABC programs were being cleared 2.9 percent of the time?

So that in a situation where you do not have an option right enforcible against the program of another network, you are getting clearance at the rate of 30 to 1 as against ABC. Now, in that situation what is the basis for the high preponderance of clearance of CBS programs?

Mr. STANTON. Well, I can only say that the judgment that the affiliate makes in that case, I suppose, is based upon quality of the programing.

Mr. Cox. That is you would say that there is only 2.9 percent of ABC's programing——

Mr. STANTON. No. Let me go on to say that I want the record very clear on that, and I don't want to be misunderstood by anyone in the room that I am saying there is a 30 to 1 differential in programing, because there are other occasions where ABC's programs are being cleared on our primary affiliates, and we are not getting clearances, not in two-station markets. But you have taken a very limited test for your 30 to 1 ratio, sir, and if you were to look at what happens at 8 to 8:30 on Wednesday night I think you would find a pretty good clearance on the part of our affiliates for Disneyland.

Mr. Cox. I have taken all the two-station markets for which data is available.

Mr. STANTON. That is right. But if you added them up they are not going to make or break the network.

Mr. Cox. But they may make a substantial difference as to whether an advertiser will support a program, if he cannot get clearance in these and other markets where the problem is posed.

Mr. STANTON. This is a serious problem, and that is why yesterday when Senator Pastore characterized this thing as a mess, that we are not getting at the thing. The thing here is the allocation problem. We are talking about independent packages, and things of that kind aren't going to solve the problem as far as ABC is concerned.

Mr. Cox. The point I am making, in this connection, is in connection with your claim that option rights are absolutely essential. You are able, on some basis—either quality or simply by virtue of the affiliation arrangement, itself—without option, you are able to clear in these substantial markets at the ratio of 30 to 1 against a competitor as to whose programs you don't have an option right.

75589 O—57—pt. 4——51

Mr. STANTON. Yes, but Mr. Cox, you have got to give some weight in this discussion to the fact that ABC has not been in the competitive position that it is in today for a very long period, and that this is the way it exists today. Next year, I might be sitting down here and the story might be reversed in those markets.

Mr. Cox. In your statement, Dr. Stanton, you object to the proposals made by ABC as to allocation of time in two-station markets, and to the proposals made by Mr. Moore with respect to reduction in option time, on the ground that this would deprive stations of their discretion in choosing among program sources. Now, isn't it true that, by agreement, you and your affiliates have already limited their freedom to take programs from a source other than your network to a far greater degree than would be involved in either of these proposals?

Mr. STANTON. That is by agreement between the stations and us. This isn't by any Government order.

Mr. Cox. But the effect in terms therefore—if this has an effect upon competition for programing, the effect, regardless of the source, would be greater in the case of option time than in the case of these proposals?

Mr. STANTON. Well, there is nothing in the option time situation that says they may not take a program; and as I understand the ABC proposal and the practical effect of the proposal to limit option time is that there is a "shall not" attached to it.

Now, there is no "shall not" in our agreement. And as I have demonstrated with the figures, there are stations that are taking other programs. We are not blocking the free choice of the station there. Those terms we have been over before. But what I understand this to be is that this is a flat restriction—that the station cannot show the program in those particular times.

Mr. Cox. I believe you are correct. But you would feel that a regulation to that effect, if adopted by the FCC—and I assume it would be so adopted only if felt to be in the public interest—would be a more serious restriction on competition, and a more serious threat to television, than is the existing more extensive and purely private limitation which is imposed by the agreements entered into between you and your affiliates?

Mr. STANTON. I think it would not be in the public interest, but I don't like the way you used the word "private" as though there is something dirty about a private agreement.

Mr. Cox. I am a lawyer, and I deal in private contracts all the time. There is certainly nothing dirty about a private contract at all. "Private contract" means it is an arrangement entered into between two private individuals, to distinguish it from the public situation you were suggesting.

Mr. STANTON. I don't think I would have objected to it as much in the transcript when I read it as the way you said it.

Mr. Cox. I am sorry; I didn't mean anything by the tone.

Senator PASTORE. That was a fast recovery, Doctor. [Laughter.] Twenty minutes to 5, since 1 o'clock—it is still good. [Laughter.]

Mr. STANTON. Thank you, Senator Pastore.

Mr. Cox. Are your "must-buy" stations selected in accordance with some formula that CBS has developed?

Mr. Stanton. Well, this is set out in the supplemental memorandum. I will give you the page reference here; it is in the index in the front of the book.

Mr. Cox. I read the memorandum. I don't remember anything other than your indication of this jig-saw process by which you think you have put together the most economical and efficient possible minimum lineup for the use of a national advertising medium.

Mr. Stanton. Mr. Salant has come to my assistance and says it is footnote 4 on page 127.

Mr. Cox. This is with respect to the matter of whether it is a matter of an agreement?

Mr. Stanton. No; read further on.

Mr. Cox. Oh, 175,000 families.

Mr. Stanton. That is right; that is the minimum.

Mr. Cox. All right. Why is it, then, that you have stations on your must-buy list which are smaller than the other primary facilities which are not included?

Mr. Stanton. Well, let me read you the rest of the sentence here:

Stations having a service area containing somewhat less than the minimum of families and stations having a service area containing more than a minimum of families may be included in, or excluded from, the basic required group by reason of considerations other than population. Some of these considerations are conversion rate in case the station is a UHF station, income, retail sales, and buying power of the area served and importance of the principal cities served.

Mr. Cox. All right. Now, why is Phoenix not on your "must-buy" list when it ranks 47th, and Des Moines is on the list, and it ranks 93d?

Mr. Stanton. Are you, Mr. Cox, taking city population?

Mr. Cox. No; I assume this is the rank of the market, but maybe it is the city population.

Mr. Stanton. The market of Phoenix, as we treat with it for our purposes—and this is now not the trading area, but this is the coverage provided by the station—ranks it 79th in cities.

Mr. Cox. Where does Des Moines rank?

Mr. Stanton. Des Moines is much higher than that; Des Moines is 53d.

Mr. Cox. It is 53d as against 79th?

Mr. Stanton. Yes, sir.

Mr. Cox. I see. Do you have a "must-buy" practice in your radio network?

Mr. Stanton. We have—we did have and today the "must-buy" situation in radio isn't the same as it was when radio had much more circulation every half hour than it has now.

Mr. Cox. I think you indicated in your statement that you make exceptions to the "must-buy." In general, under what circumstances do you make exceptions to the practice?

Mr. Stanton. I can treat with those. I think they are set forth again in the footnote. But let me find my—some of these individual cases, Mr. Cox, are best classified as historical and some are on the basis of contracts that flowed from radio over into television. Some are cases where we went with the advertisers in the early days of television, before there were coast-to-coast facilities, and these were advertisers who had distributed, or had limited distribution. And we haven't seen fit to throw them out, just because they came with us in the early days and had developed a good following in those areas where they did have distribution. We haven't said to them "Now you have got to get out just because we go to the coast."

Mr. Cox. What do you do, supplement that in national spot.

Mr. STANTON. Well, it varies. Take a situation where Amoco had distribution on the east coast. Amoco was a sponsor of Edward R. Murrow and the News. In radio Amoco had one part of the country and other advertisers had other parts of the country. So in that particular case we were giving a national program service, but we were giving 2 or 3 regional advertisers access to network programs. And when Amoco entered into the Murrow contract at one stage of the game for his radio news strip it insisted upon, and got from us, the right to sponsor, or to consider sponsorship, when he went into television. And when Murrow went into television with Person to Person, Amoco exercised that option, if you will, and bought Person to Person for a part of the country. We then set out to find an advertiser who either had national distribution and wanted to supplement it, or underscore it by taking the rest of the country, or one who had distribution that would fit in with the Amoco distribution.

Now, you seldom find them that fit perfectly, but we were able to work this out reasonably well. Now, that is the case in the case of Person to Person. Now, there are some stations even in that lineup that aren't ordered either by Amoco or the other advertiser. In those cases we worked out arrangements with the stations and with the program producer—since this is not produced by us, but in association with us—we have worked out arrangements whereby those programs are available to local advertisers for sponsorship.

I can take you down each case if you want it. But there are only 1, 2, 3, 4, 5, 6 cases in the schedule, and 1 of them—1 of the cases in the 6 is only limited, I think, in 1 market.

Senator PASTORE. Have you finished?

Mr. STANTON. I think so. I thought you were getting ready to say something. That is the reason I——

Senator PASTORE. I am. [Laughter.]

Dr. Stanton, I want to thank you on my own behalf and on behalf of the committee for your coming here the past 2 days, for being as patient as you have been for the last 4 hours. It has been a pleasure to have had you here. I hope that you have been helpful.

Now, we will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:48 p. m., the committee adjourned until Thursday, June 14, 1956, at 10 a. m.)

TELEVISION INQUIRY

(Network Practices)

THURSDAY, JUNE 14, 1956

United States Senate,
Committee on Interstate and Foreign Commerce,
Washington, D. C.

The committees met pursuant to adjournment at 10 a. m. in room G-16, the Capitol, Senator John O. Pastore, presiding.

Present: Senators Pastore (presiding), Payne, Magnuson, and Bricker.

Also present: Wayne T. Geissinger, assistant chief counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel.

Senator Pastore. The hearing will please come to order.

Our witness this morning is Mr. Robert W. Sarnoff. Will you, Mr. Sarnoff, identify, for the purposes of our record, your assistants, so that if any questions are propounded to them or they make any answers, we will know who they are?

STATEMENT OF ROBERT SARNOFF, PRESIDENT, NATIONAL BROADCASTING CO., INC., ACCOMPANIED BY DAVID ADAMS, JOSEPH HEFFERNAN, MAL BEVEL, JOHN SONNETT, AND THOMAS ERVIN

Mr. Sarnoff. I will be glad to, Mr. Chairman.

On my left is Mr. David Adams, staff vice president and my assistant; next, Mr. Joseph Heffernan, financial vice president; Mr. Mal Bevel, vice president in charge of planning and development; Mr. John Sonnett, counsel; and Mr. Thomas Ervin, vice president and general attorney.

Senator Pastore. All right. Let me say, Mr. Sarnoff, it is a pleasure to have you here, and you may proceed in your own fashion.

Mr. Sarnoff. Thank you very much, Senator Pastore.

Before beginning I want to also express my appreciation for this opportunity to present NBC's views on some of the matters under consideration.

I have a prepared statement which I would like to read.

In my presentation today I propose to deal with the principal policy issues which have developed in your consideration of television network operations. I feel this would be appropriate, since we have already submitted detailed factual material bearing on specific issues.

On May 25 we filed with this committee a statement of facts describing the network functions and operations. That statement dealt specifically with option time and the so-called "must-buy" policy. Together with the statement, our counsel submitted a legal memorandum. I ask leave to have the statement and legal memorandum of May 25 made part of my testimony in any printed record of your proceedings.

Senator PASTORE. You want it made part of the record itself, or if we incorporate it by reference is that satisfactory?

Mr. SARNOFF. I would prefer to have it made a part of the record. Actually, they are not very large. I think the statement is about 40 pages.

Senator PASTORE. Without objection, it is so ordered.

(The statement of facts and legal memorandum are as follows:)

BEFORE THE

COMMITTEE ON INTERSTATE & FOREIGN COMMERCE

OF THE

UNITED STATES SENATE

STATEMENT OF FACTS

NATIONAL BROADCASTING COMPANY, INC.

May 25, 1956

STATEMENT OF NATIONAL BROADCASTING COMPANY, INC.

TABLE OF CONTENTS

STATEMENT OF NATIONAL BROADCASTING COMPANY, INC.

This Statement, with an appendix of exhibits, is submitted in accordance with a request from the Chairman of this Committee for NBC's views on testimony presented to the Committee on March 26, 1956, by Richard A. Moore, and on a legal memorandum filed with the Committee by Mr. Moore on that date. We are also submitting herewith a memorandum presenting a legal analysis of the claims made by Mr. Moore.

I. Summary.

The narrow issue presented is whether networks are to be permitted to continue their operations and their development of television. The broader issue is whether the public is to be deprived of the type of programming which is provided only by networks—the programming which has made television a vital service in the American home.

A. The Network Service

Networks are the only organizations which furnish stations with a regular, daily program service of diversified presentations. Networks are also the only organizations from which national advertisers can obtain—in one transaction—national television advertising exposure from a specified program, at a specified time period, over a specified lineup of stations from coast to coast.

A network is a creative program organization, not merely a mechanical instrumentality for channelling programs to outlets. The program service it furnishes is distinguished by unique and irreplaceable public values: live programming on a national basis; great entertainment offerings; important information and cultural services, both sponsored and unsponsored; coverage of public events of national interest; and the innovation of new program forms and techniques which have led the way in expanding television's horizons.

2

This network program service has been, and continues to be, the foundation for the growth of television in this country. It created a national television audience, which enabled television to function as an effective advertising medium and provided the basis for the successful operation of hundreds of stations.

The network program service is based on simultaneous national broadcasting. The related network advertising service is based on the national advertising exposure generated by such simultaneous broadcasting.

Option time is the clearance arrangement underlying national simultaneous broadcasting. Without such an arrangement, networks could not conduct a national program or advertising service. Option time is therefore the *operational* essence of networking, just as nationwide interconnections are the *technical* essence of networking.

Option time is also the essence of the network-affiliate relationship. It is an agreed procedure arrived at between affiliated stations and networks, and provided for in the affiliation contracts. It represents the stations' undertaking to carry network programs, which implements the network's undertaking to furnish them with programs. Without option time, there would be no meaning or substance to the affiliation relationship. And without affiliations, there could be no networks.

Option time is specifically provided for in the Chain Broadcasting Regulations of the Federal Communications Commission, which were adopted in 1941 after protracted hearings, and were upheld by the Supreme Court in 1943. The existing contractual provisions as to amount and placement of option time are in exact accordance with the FCC's Regulations.

The "basic network" (or so-called "must-buy") policy is an essential sales procedure in national networking. It establishes a reasonable minimum purchase unit for those who would use the costly facilities of a national network; and precludes national network programs from being limited to a minority of the television population at the instance of an advertiser interested only in limited distribution.

B. The Attack on the Network System

The attack on option time and the policy of selling a basic network is an attack on the very foundation of the network system. Those who call for the elimination of these procedures make the pretense that they are proposing only a few minor adjustments in the network operation. Such "adjustments" would be as minor as cutting off the current from a TV set, on the claim that this would improve the picture.

Who is levelling this attack on the fundamentals of the network service? It is not the viewing public, or the affiliated stations, or the national advertisers—all of whom derive great benefits from this service.

The attack on option time and the basic network policy ostensibly comes from the President of KTTV, Inc., the licensee of an unaffiliated television station in Los Angeles, who testified at length before this Committee on the alleged "restraints" involved in these network procedures.

His testimony falls into clearer perspective in the light of the undisclosed interests for whom he was speaking when he testified before this Committee.

We understand that Mr. Moore's presentation was part of an organized campaign previously agreed upon and financed by a group of film syndicators and related interests, whom Mr. Moore served as Treasurer and to whom he has made periodic progress reports. We further understand that this film group had a series of meetings, agreed upon the retainer of counsel who represented Mr. Moore at his appearance before this Committee, and consulted together on the network attack to be made through Mr. Moore.

Among the members of this film group were Ziv Television Programs, Inc., Television Programs of America, Inc., Official Films, Inc., Screen Gems, Inc., and General Teleradio Corporation (now RKO Teleradio Pictures, Inc.). The first four companies just named are television film syndicators; one of them—Screen Gems—is owned by Columbia Pictures, a major Hollywood motion picture producer. The fifth company, RKO Teleradio Pictures, is part of the RKO motion picture organization with principal interests in Hollywood film production.

We do not know how many other film or related interests have become associated with this group; but if the Committee desires to obtain further information on the matter, Mr. Moore is undoubtedly in a position to supply such information at the Committee's request.

If this film group should succeed in undermining the network system, the great national service provided today by three intensely competitive television networks would ultimately be reduced to the lowest common Hollywood denominator. The wealth of fine entertainment, educational and cultural programs available in the diversified schedules of the networks would be replaced by a continuing flow of stale and stereotyped film product.

In this connection, it should be emphasized that TV film syndicators, such as those represented by Mr. Moore, are by no means the only interests seeking to profit by displacing the network system of national broadcasting.

A wide variety of promoters and financial traders are now entering the television field with masses of old Hollywood film backlog which the motion picture studios are selling to them in bulk packages. Now that television has been developed to a national system serving 37,000,000 homes, these promoters and financial traders are looking to this new public communications medium as a source of quick profit from reruns of the old Hollywood movies, most of which have outlived their theatrical usefulness. To obtain such profit, they must force huge amounts of television time for thousands of these movies; and the disruption of the network service offers an inviting route to achieve this objective.

The magnitude of the financial stakes involved in this current trading of large packages of Hollywood backlog from motion picture studios to promoters to TV distributors is reflected by *Exhibit 1,* which summarizes reported transactions already consummated in this field. As shown there, the Hollywood backlog recently released aggregates 1,888 old Hollywood features, and 4,072 movie shorts. These have been released to television for a total of well over $42,000,000.

Over and above this recent release of movie backlog are more than 7,500 old Hollywood features already in the hands of TV distributors.

In addition, among the transactions in current negotiation is the release for television use of the MGM backlog of 770 feature films and 900 shorts. According to press reports, a value of at least $50,000,000 has been placed on this package.

The foregoing totals over 10,000 full length feature movies, moving into the television market. These, together with the movie shorts now in syndication would absorb *all* the broadcast time of a station operating 16 hours daily for more than three years running. Moreover, the amount of film available for television is constantly increasing and is not reduced through use.

A third group of film and related interests seeking to exploit the national television system are the proponents of pay-as-you-see television. Their purpose is to chain television to a coin box; and although, like the film syndicators, they disavow any intention to supplant the network service, their efforts—if successful—could so disrupt the network system that it could not continue the type of free programming which has made television the vital force it is in American life.

There are various associations between the promoters acquiring the Hollywood backlog for television and the pay-as-you-see promoters. For example, C&C Television, which has acquired the RKO backlog from RKO Teleradio Pictures (a member of the Moore group), is headed by Mr. Matty Fox, associated with Skiatron, a leading advocate of pay-as-you-see television, which has also testified before this Committee.

These film interests and financial traders, if successful in their designs on television, could reap a mountain of profit from the molehill of their contribution to the broadcasting art. But if they achieve their objectives, the American public and the vital new industry of television will be the twin losers.

The networks, which are under direct or indirect attack from these various groups, are the same networks which in thirty years have provided the basis for the creation of three great industries—first radio, then black-and-white television, and now color television.

It was the networks which developed the facilities and skills and undertook the financial risks of building a national television program service—not the film-come-latelys or the promoters with Hollywood backlogs in their portfolios. While the networks were chalking up annual losses of millions of dollars to develop the new medium, the film interests withheld their product from it; and turned to television only after it had been built by others.

Since then, the film syndicators have been expanding rapidly in television. With Mr. Moore as their spokesman, they are now seeking to expedite this expansion by asking the Government to create artificial vacuums in the network service—so that they can move in and occupy the field.

6

The basic claim on which the Moore position rests is that film production for non-network broadcasting is being suppressed by the existence of the network service. This claim is flatly untrue. Television film production and syndication—rather than shrinking—are booming, with more product, more distribution and more sales than ever before—as will shortly be demonstrated by evidence from the very film syndicators who are included in the Moore group. This in itself demolishes the edifice of their argument.

The touchstone for evaluating the Moore claims and proposals is public interest. We believe that adoption of his proposals would put the private interests of a film group ahead of the public interest in the continued development of television as a broadly-based national communications system. It would reverse the progress of an industry which has grown faster than any other in American history.

In the following sections, we shall describe the development of television and discuss the special characteristics of the network service which require and justify option time and the basic network policy. We hope this material will help the Committee determine whether the public interest would be advanced by emasculating the network system in order to give an indirect subsidy to television film syndication.

II. The Network Service and Television Development.

A. The Network Service Created the Television Base

Television was first brought into being as a public service on the basis of years of costly technical development and experimentation, which ultimately resulted in an operating system for the electronic transmission of pictures and sound. RCA and NBC played a leading part in this development. As early as 1928, RCA was operating the first experimental television station, and after a decade of continued development work, NBC started television as a public service in 1939, with a telecast of President Roosevelt opening the New York World's Fair. Over the next two years, experience and data were developed which enabled the Federal Communications Commission to authorize television as a regular commercial service.

On July 1, 1941, the first day commercial television was authorized, NBC's pioneer New York station, WRCA-TV (then WNBT), went on the air with a commercial service. Although there was then a negligible number of TV sets in the hands of the public, this station started with a schedule of about 65 programs a month. In that year, NBC took in less than $7,000 from television; but by that time it had spent over $2 million on the medium.

The war suspended television operations in this country, but a week after the Japanese surrender, NBC was telecasting films of the surrender ceremony over its New York station. During the next several years, NBC moved rapidly ahead in television development, constructing, equipping and operating television stations in Washington, Chicago and Cleveland; developing a regular program schedule; and expanding the interconnected network as fast as the Telephone Company could provide the intercity circuits, so that the network programs could be made available by simultaneous broadcasting to a larger and larger national public.

In 1947, with only 6 television stations in operation, and only 14,000 TV homes in the country, NBC was furnishing regular network programming. In that year, its schedule included the Kraft Television Theater, the World Series, the Theater Guild dramatic series, Howdy Doody and the Louis-Walcott fight. It was the availability of network service like this which gave additional stations a basis for going into operation, and gave members of the public a reason to buy sets. In 1947, NBC took in about $100,000 in time revenue, against television costs for the year in excess of $2 million.

By 1948, the pioneering network service had expanded further. That was the year Milton Berle started on the air in an NBC series and became known to a widening audience as "Mr. Television". It was the first year the political conventions and elections were carried live over the television networks, giving an added impetus to television development. In that year, the operating result for the NBC television network was a net loss of approximately $1,300,000.

In the next several years, while television was still in its infancy, it was the network programming which made television important to the public—through a regular, dependable service featuring nationally famous performers, leading sport classics and coverage of events of national interest, from the Presidential inauguration in 1949 to the hearings of the Kefauver Committee in 1951.

75589 O—57—pt. 4——52

After building an evening program schedule, the networks pioneered the creation of a daytime television schedule at heavy cost, maintaining the service while seeking to develop sponsorships to help defray the cost. An affiliated station going into operation could count on a volume of continuing, audience-building network programs, without cost to it and with a share of the revenue from sales the network could develop.

From 1947 through 1954, the NBC television network was substantially in the red on a cumulative basis. Indeed, it was only last year —in 1955—that the cumulative operating results of the NBC television network first showed a profit.* And even before this point was reached, NBC had undertaken—and is now actively pursuing—a major and costly new development: the development of color television.

With high-attraction network programs available on a continuing basis, television circulation grew by leaps and bounds—to 1,000,000 sets by January 1949; 4,000,000 sets by January 1950; over 10,000,000 by January 1951; and nearly 16,000,000 by January 1952 (See *Exhibit 2*).

With a continuing network service providing the foundation for this growth, hundreds of stations could be established—stations affiliated with networks, and in addition, unaffiliated stations which could draw on the existence of the television circulation in their markets to develop their own operations. By the end of September 1948, when the Federal Communications Commission established a freeze on the authorization of new station construction, there were 37 commercially operating television stations. By the end of the freeze, in July 1952, 109 stations were in operation. Since then, the number has increased to 431 (See *Exhibit 3*).

By 1949, the NBC interconnections linked two groups of stations—an eastern group of seven interconnected markets from Boston to

* Also illustrative of the risks and costs of the network business is its high break-even point, reflected by the ratio of net income to sales. The net income of the NBC television network for the nine years 1947-1955 was 0.4% of its net sales over that period. For the year 1954 the network's net income was 1.1% of net sales, and for 1955 it was 3.4%. The Federal Trade Commission and Securities and Exchange Commission have reported that, for all United States corporations in the size classification in which NBC and the other network companies fall ($100,000,000 or more of total assets), the ratio of net income to net sales for the same nine year period was 6.9%, and that for the years 1954 and 1955 the ratio was 6.5% and 7.4% respectively.

Richmond; and a midwest group of seven additional interconnected markets from Buffalo to St. Louis. On January 12, 1949, as soon as the AT&T completed construction of circuits connecting these two groups through Pittsburgh, NBC expanded to an interconnected network of 15 stations. In September 1951, the last link was completed between East and West Coasts. Since then, NBC has ordered circuits as they became available, so that its interconnected network now consists of 176 stations, with only 26 affiliates served on a non-interconnected basis.

The nationwide audience created by the network service has provided the base for all forms of television advertising: not only national network advertising, but also national spot advertising, used by regional advertisers and by some national advertisers for selected-market campaigns; and local advertising, used by manufacturers and retailers operating within a single market area. All three forms of television advertising have flourished. Indeed, as shown in *Exhibit 4,* national spot and local television advertising volume has had a rate of growth almost precisely parallel to the rate of growth of network advertising volume.

Network advertising volume represents only a small fraction of total national advertising volume, and accounts for approximately one-half of total television advertising, as shown by the following Printers' Ink estimates for 1955:

	% of Total Represented by Advertising Expenditure on National Television
Total advertising expenditure	5.8%
Total national advertising expenditure	9.8%
Total television advertising expenditure	51.7%

B. TV Film Production and Syndication Are Expanding on the Television Base Created by the Network Service.

With the television base established by pioneering networks, a new market was opened for Hollywood film. As stated before, the foundation of the Moore position is that film production and syndication for television are being suppressed by the network service furnished to stations under option time arrangements; on this foundation, his film group constructs a series of other alleged restraints—against affiliated stations, unaffiliated stations and advertisers.

The fact is that television film production and syndication are doing a record business. The film syndicators themselves predict an even greater expansion in their production and sales in the coming year. The catalogue of evidence on this point is so massive that only a few highlight items need be cited here to demonstrate the facts.

Television Programs of America, Inc. (TPA), is one of the film syndicators in the Moore group. On April 18, 1956, TPA's Executive Vice President issued the following statement:

> "TPA's own growth illustrates the TV film industry's progress. When TPA started, less than three years ago (September 1953), the company had one half-hour series. Today there are ten TPA shows on the air and six more, 'Tugboat Annie', 'Last of the Mohicans', 'Captain Kidd', 'New York Confidential', 'Mr. Digby', based on the Saturday Evening Post series of the same name, and 'Shark Malone' in various stages of production. . . .
>
> "In 1955, Hollywood produced 2,835,000 feet, or 500 hours, of theatrical (feature) films. TV production for the same year was 10,538,000 feet, or almost 2,000 hours of entertainment."

Official Films, Inc., is also a member of the Moore group. The trade press reports that:

> "The biggest batch of new offerings during the past year came out from Official Films, which brought 11 half-hour series into syndication" (*Sponsor,* April 16, 1956).

Ziv Television Programs, Inc. is a third member of the Moore group. It has recently issued the following report:

> "Over-all gain of 50% in total Ziv dollar volume of syndicated program sales to all classes of advertisers will be scored by Ziv Tv in '56 if present sales levels continue, M. J. Rifkin, sales v.p., predicted today.

11

"Pace-setters in the syndication upbeat are sales to clients spotting shows on regional or multi-market basis. Latter category is 'a safe bet' to show a '56 gain at Ziv of 80%, Rifkin said.

"Ziv Tv's optimism about syndication market's strength as a prime outlet for new telefilm shows is reflected in firm's latest sales and production strategy.

"Several new telefilm properties, now in various advanced stages of preparation, will bear a 'For Syndication ONLY' sales tag this fall to meet station and sponsor demand for first-run product competitive with top network programs, Rifkin revealed."

Screen Gems, Inc. is the fourth television film syndicator in the Moore syndicate. In a recent press conference, it outlined

"production plans that will call for a $12,000,000 expenditure. Along with a dozen or so new strip shows, the company proposes to turn out several 60 or 90 minute dramatic spectaculars" (*Printers' Ink,* January 13, 1956, p. 23).

A round-up article on the growth of TV film syndication in 1955 states:

"Syndication of TV film series this year brought the industry gross sales of $35,000,000 to $40,000,000, according to informed estimates. This represents an increase of $3,000,000 to $8,000,000 over last year's business" (*The Billboard,* December 31, 1955, pg 3).

The huge expansion in the number and earnings of Hollywood television writers, as officially reported by the Writers Guild of America, also reflects the booming condition of television film production:

"According to WGAw records, the highest number of television writers employed during any week in February 1955 was 79. Records for February 1956 show 276.

"The 1955 figures were exclusive of the networks, with whom the Guild did not at that time have a contract, but included the major studios and independents then active.

"As comparison the number of writers writing for the major film television subsidiaries in February 1955 was 34; this February, 80. The number of writers writing for independent film television producers in February 1955 was 45; this year, 129.

"Television writer income shows a corresponding increase: for the ten months ending January 31, 1955, gross earnings, as reflected in dues paid, were $1,441,500. This past ten months these earnings were $4,583,500 or an increase of $3,142,000 in writer income for a partial year on the West coast" (*WGAw News,* March 1956).

Currently, as indicated by an industry-wide survey conducted by *Television Age,* "film syndicators now have some 224 different series on the market, divided into about 9,184 half-hour episodes. To run through this supply of syndications, *a station would have to broadcast 88 hours of film a week for an entire year*" (*Television Age,* April 1956, p. 56).

In the light of this record, it is difficult to understand the film group's claim that although "during the last two or three years . . . good quality film programs have been available to KTTV . . . we now see the immediate prospect that this source of high quality film will shrink and disappear." Nowhere is there any explanation of what sudden change in circumstances has produced the alleged "immediate prospect" of shrinkage and disappearance of high quality film. Certainly there has been no change in network operations which would bring that about.

Mr. Moore cites several instances in which KTTV was unsuccessful in obtaining a new film series for use only in Los Angeles because a network or national advertiser had bought the series for use on a nationwide basis. The simple economic facts of the syndication business, rather than any network practice, provide the reason for KTTV's inability to get such programs. The producer of a film series will always prefer to sell it initially to a national advertiser or a network, and subsequently to syndicate on a market-by-market basis, because an initial national sale generally covers production cost and eliminates the producer's risk. The principal differences in financial effects between market-by-market syndication and sale of a film series to a national advertiser or a network are summarized in *Exhibit 5.*

If there is any prospect of decrease in the production of *new* film for television syndication, it will not be the result of any aspect of network operations; but rather, the result of the release to television of huge masses of Hollywood backlog, referred to previously and tabulated in *Exhibit 1*. That was the conclusion reached by Mr. C. R. Manby of RKO Teleradio Pictures, one of the members of the Moore group, who has pointed out:

> "A greater share of business during the immediate future will be done with feature films now becoming available from the major studios. This will tend to discourage the manufacturer of new films solely for syndication, and put a concentration on features by default" (*Television Age,* April 1956, p. 121).

Over and above the many thousands of movie films recently released to promoters for television, and the further Hollywood backlog for which distributors are negotiating—plus the 9,000 half-hour film programs made for television syndication—the syndicators use film program series which have completed their network broadcast. For example, a substantial number of film series, which were broadcast on networks during the past season—and were not renewed because they did not make the grade—are now going into syndication. In addition, the inventory of film for syndication is not reduced through use, but is progressively increased through "reruns."

With this plethora of film for television, there is the most active jockeying for television placement of film product.

The film syndicators represented by Mr. Moore are acting as the spearhead in a direct attack on the network system. They want to create a vacuum in the existing service so that they can fill it with their product. If they succeed, they may see it filled—not by their own product—but by repeated re-runs of Hollywood feature films. The accumulated product in Hollywood's vaults—most of it musty and outdated—would hit television with the impact of a tidal wave. The American viewing public would literally drown in a celluloid sea. This likelihood is given added reality by the huge sums at stake in the trading of Hollywood backlog from motion picture studios to promoters to TV distributors.

In the play and byplay for additional film profits from television, the public interest in an expanded television service would be submerged, if the network system is dismantled at the instance of film syndicators and traders. The disruption of the structure of live networking would mean the death of a national communications service of great range and vitality, with rival film interests fighting over the remains of the television system, which would shrink in scope and public value to a tiny fraction of its potential.

In any event, as regards the specific issues raised before this Committee by the Moore presentation, the record is clear that the availability of film programs for use by television stations and advertisers on a non-network basis is *not* being suppressed by the network service. The facts show, on the contrary, that existing television usage of syndicated film is so active and widespread that it has stimulated continued expansion in this field.

With the demolition of the basic charge of suppression of television film production and distribution, the structure of the Moore argument falls apart. The essential nature of option time arrangements and the propriety of the basic network policy in providing a national network service will be discussed in the following sections.

III. Option Time is Essential in the Conduct of the Network Business.

A. Definition of Option Time

Under the contracts between NBC and its affiliated stations, the station agrees to broadcast sponsored programs offered by NBC within designated hours, except that:

a. The station may reject any program offered by the network "which it reasonably believes to be unsatisfactory or unsuitable."

b. The station may reject any program offered by the network "which in its opinion is contrary to the public interest."

c. The station may reject any program offered by the network in order to substitute "a program of outstanding local or national importance."

d. The station has no obligation to broadcast any program offered by the network at a time "during which the station is already obligated to broadcast the program of another network."

The propriety of option time agreements between networks and stations is specifically covered in the Chain Broadcasting Regulations adopted by the Federal Communications Commission in 1941 after protracted hearings, and upheld by the Supreme Court in 1943. These Regulations contain provisions which precisely parallel the terms of the affiliation contracts quoted above.

The range of discretion provided for stations to reject network programs offered in option time, as provided by the Regulations and the contracts, is a far cry from the Moore claim that by virtue of option time, "all affiliated stations are compelled to broadcast during certain periods whatever programs the network company offers, and only those programs."

The Regulations were also carefully designed to prevent stations from optioning too much of their time to networks. Thus, the Regulations divide the broadcast day into four segments, all determined in terms of local time at the station.* Stations are prohibited from granting options to networks on more than three hours of time in any one of these segments. Thus in Class A time, which generally is from 6-11 P. M., a network may not and does not option more than three out of the five hours. Again, the facts do not support the Moore claim that virtually all of the "prime viewing hours" are subject to network option.

The particular hours subject to network option are specified in the affiliation contract. The hours specified in NBC contracts vary from time zone to time zone, since the option arrangement is designed to provide for simultaneous national broadcast, cutting across the four time zones. Generally, NBC options three hours in each of the morning, afternoon, and evening segments—or 9 hours out of the total broadcast day of its affiliated stations. It has never optioned time in the 11:00 P. M.-8:00 A. M. segment. The Moore statement that networks option 12 hours of time a day is simply not true.

---

* These segments are 8:00 A.M. to 1:00 P.M.; 1:00 P.M. to 6:00 P.M.; 6:00 P.M. to 11:00 P.M.; and 11:00 P.M. to 8:00 A.M.

B. The Nature of the Network Service Requires an Option Time Arrangement with Stations

A major premise of the film group's attack on the network system is that film syndicators furnish a service comparable to the network service. Accordingly, they argue, the network operation should be redesigned by government action to eliminate option time, and network practices should be revised to conform to the syndication operation. The fact is that a network's undertaking is fundamentally different from that of the film syndicators and requires option time for its accomplishment.

1. The Network-Affiliate Relationship.

Nobody requires any station to enter into an affiliation contract with a network. Stations seek network affiliation because of the great values they obtain from the network service. The affiliation relationship involves mutual undertakings on the part of the network and the station. For example, among the obligations which NBC undertakes in its affiliation contracts are the following:

a. NBC undertakes to furnish the station with a variety of sponsored and unsponsored programs. The NBC network schedule consists of about 80 hours of programming a week. NBC's talent and production cost of this programming currently averages $1,500,000 a week. NBC assumes these costs, furnishes the programs to stations, and takes the risk of recovering such costs from sales to advertisers. If these costs are not recovered, NBC alone bears the loss.

b. NBC undertakes to provide the interconnections which link the station to others on the network so that the programs can be simultaneously broadcast on a nationwide basis by its affiliates, at the time periods for which the programs are designed. NBC leases from the Telephone Company almost 14,000 miles of intercity circuits on a regular basis for its television network, with a total annual cost for all circuits of over $14,000,000. The existence of such a facility for simultaneous broadcasting, as implemented by the option time arrangements with stations, provides an incomparable means for instantaneous, simultaneous, country-wide communications in times of national emergency.

c. NBC undertakes to share with the station, under an agreed formula, the revenue from the sale of time for sponsored network programs carried by the station. NBC assumes the function of selling network time and programs to national advertisers in competition with magazines, newspapers and other national advertising media. The price charged the advertiser for this time consists of the network rates for each station, aggregated for the total number of stations which the advertiser uses for the particular network program.

On its part, as indicated before, the affiliated station undertakes to broadcast in designated periods of option time the sponsored programs offered to it by NBC, subject to its right to reject any such programs for any of the reasons which have been previously detailed.

These are the basic elements of the obligations assumed by a network and a station in their affiliation relationship. None of these network obligations is assumed by film syndicators. Their business is procuring or producing individual film series or blocks of movie features and selling them to individual stations, for resale by the station at their own risk; or on occasions, selling an individual series to an advertiser who buys individual time periods on selected stations or who buys network time; or selling a series directly to a network. They do *not:*

> Provide stations with a regular daily schedule of morning, afternoon and evening programming, furnished over nationwide interconnection for simultaneous broadcast;
>
> undertake, on behalf of a nationwide aggregate of stations, to sell such programs in specified time periods and to share the sales revenue with the stations;
>
> furnish stations with a varied and balanced program service, including news, special event coverage, sports, public affairs and cultural presentations at their own cost;
>
> maintain any continuing operating relationship with stations.

These are the functions which make option time indispensable in the network-affiliate relationship. The fact that option time does not fit the syndication operation does not mean that it should be removed from the network operation. Moreover, there is nothing to prevent film syndicators from entering into contracts with stations for options on the latters' time. Indeed, in the case of syndicators, there is no regulatory provision—as there is in the case of networks—limiting the amount or placement of time which can be optioned. Presumably if syndicators undertook the costs and risks of furnishing stations with the type of program and advertising service which networks furnish, they too could arrange for time options, and could build their own networks.

In any event, the option time arrangement is the basic undertaking of a station in its network relationship. The destruction of that arrangement would also destroy the network-affiliate relationship on which the network system rests.

2. The Unique Nature of the Network Program Service.

a. *The Content of Network Programming.* Network programming is distinguished from syndicated programs in that it is:

An overall *service*, covering the full range of audience interests, and not a series of unrelated shows;

furnished on a regular daily schedule;

developed under public interest standards, since the networks themselves are licensees of a limited number of the stations carrying the network service; and

based on the technique of *live* presentations.

The latter characteristic makes use of television's special quality—the feature which distinguishes it from all other media: its immediacy and ability to communicate events as they are happening. This attribute is indispensable for certain presentations, such as special event coverage, actuality programming, and sports; and its spontaneity gives added values to many other types of programs.

Live programming on a national basis is possible only through networking. Networking, in turn, requires interconnection facilities and a program clearance arrangement with stations which is accomplished by option time. Without the network service, television would shrink from a national communications system to a film transmission mechanism, supplemented by locally produced shows.

As indicated in *Exhibit 6,* live programs accounted for 88.1% of the total program hours in the NBC network schedule for the typical week of March 18-24, 1956. By contrast, as shown in *Exhibit 7,* KTTV's schedule for a similar week consisted of only 9.8% live programming, with an additional 15.9% combined live and film, and 74.3% completely film.

The network program service is not only unique in the four broad characteristics just listed, but in its individual elements, which also require the networking procedures which are under attack by the film group. These elements include:

(1) *A visual news service in which outstanding reporters and analysts collect, present and interpret the news on a nationwide and worldwide basis.* To provide this daily news service, which is a basic source of information to the public, NBC has its own news organization with a staff of over 250, including commentators, reporters and cameramen working out of NBC foreign offices in London, Paris, Rome, Bonn, Tokyo, Hongkong, Taipeh, Singapore and Cairo. This news organization shoots almost 2,500,000 feet of news film a year. The annual cost of this news operation exceeds $3,000,000. Film syndicators provide no such service to stations and the public.

(2) *Coverage of special events of national importance.* Networks are the only program organizations which, as part of their overall service, undertake to furnish stations with live coverage of important public events such as the political conventions and national election campaigns, addresses by the President and national leaders, the Presidential inauguration, and Congressional hearings; or with comprehensive live sports coverage of leading sports events including the World Series, the major football classics, championship fights, the principal golf matches and tennis tournaments.

(3) *Significant cultural and public affairs presentations on a national basis, for which networks assume the costs and furnish to stations whether or not they are sponsored.* As distinguished from film syndicators, networks furnish stations with programming produced at

the networks' cost as a public service, such as nationally broadcast religious series. Other examples in the field of information and culture are series like "The Search" or "Adventure" on CBS; NBC's "Elder Wise Men" series—which has brought a nationwide audience face-to-face with such outstanding personages as Herbert Hoover, Robert Frost, Wanda Landowska, Pablo Casals, Nehru, Sean O'Casey, Bertrand Russell; or the NBC Opera Theater series, including original works specially commissioned by NBC. The Opera Theater has cost the network over $2,500,000 to date in presenting opera performances on television without a sponsor.*

(4) *The innovation of new program forms and techniques which have tremendously enlarged the value of television to the public.* Film syndicators are program merchants, not program experimenters. Their product falls largely into the standardized pattern of the half-hour drama, adventure, situation comedy or western series. While this type of program has a place in the television service—and is included as one of many elements in the network schedule—it must be recognized that the principal program experimentation and development in television—the type of presentations which have opened new and broader horizons for the medium—have come from the networks, which have undertaken the risks and costs of program innovation. To cite a few examples from the NBC service:

The Spectaculars. This program form did not exist in television until it was created by NBC in 1954. It consists of 90-minute live special entertainment events, with each series scheduled once every four weeks, so that the individual productions can have the benefit of maximum creative attention, long and thorough preparation, and the par-

* The following comment from the New York *Times* is significant here:

"The most vivid laboratory example of a program that meets the ultimate qualitative test for TV is probably the *NBC Opera Theater.* This company's aim has not been merely to do 'opera on television.' Instead, with excitement, imagination and a magnificent refusal to compromise its artistic integrity, it has widened the horizons for all of opera and made a cultural contribution that transcends mere media.

"Is it too rash to hint that the NBC Opera, in terms of its national influence, now is the equal and conceivably even the peer of the Metropolitan? . . ." (New York *Times,* February 6, 1955) ticipation of outstanding talent who are only occasionally available. The results have been such presentations as Sadler's Wells Ballet in "The Sleeping Beauty"; Shakespeare's "Taming of the Shrew" and Shaw's "Devil's Disciple" both with Maurice Evans; "Heidi", "Babes in Toyland", and "Alice in Wonderland"; Robert Sherwood's "Petrified Forest"; "Cyrano de Bergerac"; Katharine Cornell in "The Barretts of Wimpole Street"; and Mary Martin in "Peter Pan". NBC has thus far presented about 70 major productions of this type. They have given the whole television medium a broadened scope and value.

The Telementaries. This is another form developed by the networks. "Victory At Sea", a 26-episode history of the Navy, with a specially-commissioned symphonic score by Richard Rodgers, is one example. Others are the treatments in depth of a given subject like "Three, Two, One, Zero", on the atomic bomb; "Nightmare In Red", a history and analysis of Russian communism; "Assignment India"; and the "Twisted Cross" which documented the rise and fall of Nazi dictatorship—major contributions to public information, furnished in many cases on an unsponsored basis, at NBC's cost.

The Network Service Shows. Network program series like "Home" and "Today", each costing several million dollars a year, would not have been developed by any other program source and scarcely could be produced by any organization other than a national network. "Home", an hour-long program each weekday, presents national authorities dealing with homemaking, health news, child care, fashions, family management and new products. "Today", scheduled two hours daily, five days a week, is a more general news and information show, keeping viewers current on national and international affairs and the forthcoming events of the day; reviewing books, plays and movies; and presenting the leading personalities of our time.

"Wide Wide World". This novel program series takes a nation-wide audience around the country—and to neighboring countries —with *live* cameras, so that viewers can look in on America's ways of life and activities while they are happening. A single program, like the one of May 13, 1956 covering the U. S. Armed Forces, takes several months of planning and preparation; involves the participation of a number of affiliated stations in different parts of the United States;

requires as many as 75 live television cameras; and costs as much as $150,000. It is possible only with live networking.

That television's greatest contributions to the public have come from the network program service is a fact recognized by objective observers and critics of the medium. This is what Jack Gould, radio and television critic of the New York *Times* had to say about "television's progress in some areas of programming and its stalemate in others", in a recent article*:

> "Television's special events—the occasional programs which are entities unto themselves—probably represent the medium's most significant single asset: its capacity to be extraordinarily good. In this season alone the viewer has been afforded the chance to witness George Bernard Shaw's "The Devil's Disciple", with Maurice Evans; Robert Morley in "Edward, My Son"; a superb live version of "The Caine Mutiny Court Martial"; a tour of India with Chester Bowles; an examination of the farm problem that disturbed the Secretary of Agriculture; Noel Coward; Mozart's "Magic Flute"; Sir Laurence Olivier's new film, "Richard III"; Mary Martin in "Peter Pan", and the Sadler's Wells Ballet. . . .
>
> "To represent TV at its best there also is another type of special attraction—the actuality broadcast that takes place outside the studio. The national political conventions, the coronation of Queen Elizabeth, the Kefauver crime hearings, the world series, the Presidential press conference and the heavyweight championship are samples of life itself conveyed into the home. With such broadcasts the world of reality unfolds upon the screen in all its spontaneity and unpredictability. This has been and always will be TV at its most exciting because it is something that only TV can do, which is to enable the viewer to be his own reporter, editor and critic. . . .
>
> "The films especially made for TV? A sorry lot, by and large. Certainly, they cannot stand comparison with the live hour-long dramas and the special events; more than ever, they seem inadequate in characterization and narrative, following the

* "Television Today—A Critic's Appraisal", New York *Times*, Sunday, April 8, 1956.

old fashioned radio way of telling a story. But also with few exceptions, they are trite and artificial, certainly not a good advertisement of the capabilities of Hollywood. . . ."

The full text of Mr. Gould's article and typical articles on network service by other critics are set forth in *Exhibit 8*.

b. *The Structure of Network Programming.* The foregoing has dealt with special characteristics of network programming from the point of view of *content*. It is similarly distinctive in its *structure*. This structure—a schedule of consecutive programs related to each other in a planned sequence—also makes option time arrangements necessary, so that the values of the program structure can be preserved—subject to any station's veto of any program in its market—as it is broadcast nationally over multiple outlets.

The planning of the network program structure has as its objective the scheduling in each period of the type of program—and the particular program within the general type—which will be most effective, in the light of the programs which precede and follow it, the competing programs of other networks, and the type of audience available at the time.

In program selection and the organization of these programs into an overall schedule, the network must be concerned not only with the foregoing elements, but also with the program variety and quality of the total resulting schedule; the creation of new program services which would not be initiated by advertisers, but which they may support after the network has developed such programs; and with the commercial success of the schedule.

c. *Sources and Responsibility for Network Programming.* The decision on what specific programs shall go into which time periods programmed by the network cannot be delegated to the many different program sources on which the network draws. To do so would turn over to others, who have an individual interest only in a particular program or time period, the responsibility for organizing the overall network schedule.

Although the network must itself decide on the development, selection and organization of its program structure, many of its programs come from organizations and individuals outside the network itself. This is desirable, in order that a network service, running over 80 hours

75589 O—57—pt. 4——53

a week of widely diversified programming, will have the benefit of as many different creative talents as possible.

The film producers for whom Mr. Moore speaks are themselves one of the many sources of network programming, and in fact NBC has recently obtained two program series from one of the members of the Moore group. Other sources of network programs are advertisers and advertising agencies; independent producers who furnish the talent and vehicle and undertake the production of live programs; stations; motion picture studios; and the network itself. In NBC's case, more than half of the programs in its schedule are produced by a variety of outside organizations.

In view of the many different organizations which provide programs for the network, there is a wide range of different business arrangements regarding ownership interests in such programs. There are even differing ownership and financial arrangements with respect to network programs obtained from the same type of source, as for example, programs obtained from outside producers.

In the foregoing respects also, the network program service is distinguished from syndicated film programming, in that it is based on a carefully organized, integrated program structure, drawn from many different sources, with a diversity of ownership interests.

It is obvious, as Mr. Moore states, that there may be programs not on the air, which, if given public exposure, might be more attractive than certain programs which are on the air. This truism applies to every entertainment medium, and it would apply to television even if networks did not exist. The appeal of a program cannot be finally tested until it is on the air, and there are always more potential programs than can be broadcast. The networks themselves screen thousands of program ideas, auditions and possibilities, from which the programs of the future are developed. Each network, in fierce competition with the others, strives for hits, and together, they are giving the public the finest program service available in the world.

d. *The Economics of Network Programming.* The provision of this network program service in a highly competitive industry is an undertaking requiring huge financial commitments for talent and program development. The network provides a regular volume of programs whether or not they are sponsored. It takes the risk of obtaining sponsorship on a basis which ultimately will recover the costs of the programming. And when the popularity of an established program or performer declines, the network has to absorb the costs of the long-range commitment it may have had to assume to obtain the program or performer in the first instance.

Accordingly, the significant financial dimension in the network business is money at risk—not just capital employed in the conventional sense, but in addition to that, the financial commitments for talent, program properties and the other elements for which networks must commit on a long-term basis.

In the case of the NBC television network, money at risk may often exceed $100,000,000—only a minor part of which is represented by investment in physical properties. Commitments of this magnitude are the concomitant of developing and maintaining—on a regular, continuing basis—a unique national program service of great scope and diversity, which offers such values to the public and the medium.

Another distinguishing aspect of the network program operation is reflected by the fact that the NBC television network's revenue from program sales falls far short of meeting the network's program costs. This is true because a network—unlike any other organization supplying programs to stations—furnishes costly unsponsored programming from which it obtains no revenue; engages in expensive program development and experimentation at its own cost; maintains programs on the air to build audience pending sale; and furnishes important program services which are designed for use by limited-budget advertisers on a "participation" basis, and which are seldom sold out.

The heavy financial burden inherent in providing programming of the scope and quality of the network program service is another consideration calling for option time, as will be pointed out in the next section.

3. The Unique Nature of the Network Advertising Service.

The ability to provide a program service of the type just described depends on the networks' ability effectively to conduct their related advertising operation—the sale of comprehensive national circulation; and this in turn depends on option time arrangements, which make it possible for a national advertiser to turn to a network, and *in one* *transaction,* buy the national circulation to be generated by a given program over a multiplicity of affiliated outlets in markets the advertiser desires to cover.

Network advertisers want simultaneous broadcasts of the program they are sponsoring—indeed that is one of the main reasons why they use networks. For example, one of the advertisers on the NBC network does not accept *any* delayed (non-simultaneous) broadcasts for its program. In all cases, advertisers are opposed to delayed broadcasts of their network programs, and if there are an excessive number of such delayed broadcasts or if an insufficient number of affiliates accept the program, the network sale is lost.

Accordingly, simultaneous national broadcast of network programs not only is indispensable for certain types of presentations and has important values for many other network shows, but it is generally an advertising necessity for networks.

Indeed, the sale of national advertising opportunities furnished by the simultaneous nationwide broadcast of a program *is the specialized advertising function* filled by a network. In conducting this advertising function, a network competes with every other network and all other national media for the patronage of national advertisers.

This competition is vigorous and intense. Within the network field, it has in the past year resulted in the development of a third television network as a major competitive force. Once the American Broadcasting Company undertook the costs and risks of developing an overall program service of value to stations and national advertisers, its volume of business in terms of sponsored hours, billings and profits has rapidly increased, and in a number of periods, it now has competitive superiority in audience.*

Competition for the national advertiser's dollar is no less intense as among networks and other national media. Network television is far behind magazines and newspapers in national advertising volume. As shown in *Exhibit 9,* national advertising volume for network television in 1955 was $520 million, as against national advertising of $724 million

* Mr. Robert E. Kintner, President of ABC, predicts that "in the next two years ABC will equal CBS and NBC in billings and that it will be the number one network . . . [its] ratings have soared and ABC led in increases on all but Thursday nights, with Saturday ratings up over 120 per cent over a year ago." (*Radio Television Daily,* May 17, 1956, p. 1).

for magazines and $750 million for newspapers. And the latter two long-established media have continued their growth during the years of television's expansion.

In order to compete effectively for the national advertiser's patronage, networks maintain extensive sales organizations supported by a myriad of specialized supporting services. In NBC's case, the television network sales organization has grown from a staff of 10 people in 1947 to 201 in 1955. This sales operation is also assisted by a Planning and Development Department which each year has undertaken a fundamental research project on the advertising effectiveness of television as a medium. These NBC television research studies, each costing over $250,000, have given new impetus to the development of all forms of television advertising. Their results have been made available to the whole broadcasting industry—to other networks, stations, advertisers and their agencies, independent program producers, and film syndicators.

No matter how aggressive and thorough a network's sales operation may be, it would be unproductive if the network could not give the national advertiser some assurance that it is capable of delivering what he wants to buy and *can* buy from other national media: national exposure of his sales message.

When a national advertiser buys space in *Life* magazine or the *Saturday Evening Post,* he has an assurance that his message will get national exposure. In the case of the national magazines, this is automatic. In the case of networks, there is no assurance of national circulation except to the extent it is provided by option time arrangements with affiliated stations. Without option time, networks could not compete effectively with other national media.

C. Option Time Arrangements Enable Affiliated Stations to Discharge Their Responsibilities to the Public.

The stations affiliated with networks recognize that they are able to bring to the public a well rounded high-quality program service because of the network-affiliate relationship and its essential ingredient of option time. They have explicitly asserted that option time is

> "a vital factor in the station-network relationship, strongly influencing the stations' ability to serve the public interest, con-

> venience and necessity" (Resolution of ABC Affiliates, April, 1956).

> "of fundamental importance to continued sound networking" (Resolution of CBS affiliates, April, 1956).

> "necessary to permit television networks to function effectively as national advertising media. If they are prevented from functioning effectively in the field, the networks' ability to provide the overall national television service which the public and the stations need will certainly be impaired and may be destroyed." (Letter of April 18, 1956 from Executive Committee of NBC TV Affiliates to the affiliated stations.)

The high percentage of clearance by stations for network service in option time, upon which Mr. Moore places so much emphasis, is neither sinister nor surprising. Such clearance simply reflects the stations' recognition of the unusual values of the program service furnished by the network, in terms of audience attraction, the strengthening of the stations' standing in their communities, and the economic benefits to it. The Moore group acknowledges these values but asserts that some network programs are "inferior" to available non-network shows. This is, of course, a matter of judgment, and it is the station's judgment that is operative.

The film group represented by Mr. Moore catalogues various non-network programs which obtained higher local audience ratings than a number of network programs in the same market; and from this, it is argued that the affiliate is being "restrained" from carrying "superior" non-network programs. The illustrations used in no way support such a conclusion, because:

a. The non-network programs cited for their superiority were in most cases carried by network affiliates—the very stations claimed to be "restrained"; and

b. The network and non-network programs compared were broadcast at different time periods, against different competing programs, and with different preceding and following programs—factors which strongly influence audience ratings.

It is nonetheless interesting to note that on the Moore reckoning which is based on ratings alone, "Superman", "Death Valley Days" and "Amos 'n Andy" are superior to the 90 minute color production of Ferenc Molnar's "The Good Fairy", with Julie Harris; and to such important public affairs presentations as "Meet the Press," "News Caravan" and "American Forum"!

It is not asserted that every network program is better than any non-network program. However, the validity of the judgments exercised by affiliates in accepting the network programming is clearly demonstrated by the fact that stations carrying the network service consistently obtain a much greater share of audience than non-affiliated stations in the same market (See *Exhibit 10*).

The decisions of affiliated stations on accepting network programs are based upon full information as to their content. The stations are advised, in advance, of the nature of each program series offered by the network and have ample opportunity to pass upon its suitability in the public interest. This information is given when the program series is first offered, and is supplemented with individual program details by means of press releases and promotion kits furnished to the stations in advance of broadcast.

The FCC does not regard an affiliated station's acceptance of network service under option time arrangements as an "abdication" of its licensee responsibility, a contention which the Moore group has put forward. The FCC Regulations specifically provide for option time. Moreover, the applications upon which it grants construction permits for stations set forth the schedule of network service the applicant expects to carry. It is on these applications, often after detailed hearings on the minutiae of the proposed operation, that the Commission makes its findings of public interest, convenience and necessity.

Although the percentage of clearance for network programs in option time is high, there are many cases where an affiliate exercises its judgment to carry a syndicated film show in such time. An analysis has been made of the 11 syndicated programs cited by the Moore group, to determine the extent to which they were carried in evening option time by network affiliates in the 48 markets listed in *Exhibit 11*. The results are set forth in the following tabulation:

Program (Cited by Moore)	Affiliates Carrying Program: In Evening Option Time	Affiliates Carrying Program: Other Time	Affiliates Carrying Program: Total	% Carrying In Evening Option Time
Death Valley Days	6	12	18	33%
Highway Patrol	19	25	44	43
Waterfront	8	17	25	32
Dr. Hudson Journal	9	19	28	32
Science Fiction Theatre	17	24	41	41
Cisco Kid	10	24	34	29
Long John Silver	3	13	16	19
Superman	7	37	44	11
Search for Adventure	2	1	3	67
Confidential File	7	17	24	29
Amos and Andy	5	18	23	22
Total	93	207	300	31%

As appears above, in 44 of the 48 markets, "Highway Patrol" was carried by network affiliates, and in 19 of these cases it was carried in network option time. Another syndicated film series, "Science Fiction Theatre", was carried by network affiliates in 41 of the 48 markets and 17 of these affiliates carried the program in evening option time. All told, 31% of the broadcast time devoted by affiliated stations to carrying these syndicated programs was evening time subject to network option.

It is clear from the foregoing that affiliated stations are not, as Mr. Moore claims, deprived of their freedom of action by option time arrangements.

D. Summary: The Three-Way Need for Option Time.

Option time is the clearance procedure agreed upon between a network and affiliated stations whereby the network program service, consisting of a planned and organized program structure, can be simultaneously broadcast over multiple facilities across the country. This is the essence of network service to (a) national advertisers; (b) stations; and (c) the public.

31

a. For *national advertisers,* option time provides the means for obtaining from a network

> * * * the collective national circulation generated by a specified network program series * * *
>
> * * * which is broadcast at a designated time for which the advertiser has contracted * * *
>
> * * * over multiple outlets which he has ordered across the country for the specified time period and program series.

No network advertiser has objected to the option time policy. Without it, the network system would disappear as an effective medium for national advertisers.

b. For *affiliated stations,* option time enables making orderly provision for receiving from networks a daily volume of programming which provides the stations with their principal audience attractions; builds their audience; increases the value of their time; gives them network revenue directly; and also gives them highly saleable adjacencies from which they obtain national spot and local advertising revenue.

No affiliated station has objected to the option time principle. On the contrary, stations eagerly seek affiliations with networks, and the option time agreement is the heart of the affiliation relationship. It implements both the stations' undertaking to broadcast network programs and the network's undertaking to furnish them with programs. If stations should be barred from entering into such an undertaking, there would be no meaning or substance to the affiliate-network relationship.

In urging the elimination of option time, the film group represented by Mr. Moore proposes that in lieu of this arrangement, stations could enter into contracts with networks to carry a specified program in a specified time period "for firm periods, such as 13, 26, 39 or 52 weeks." Of course, if affiliates entered into such contracts for all network programs, the end result would be the very result which this film group seeks to destroy, but with enormous administrative complications, involving hundreds of separate contracts a year between a network and each of 200 stations on changing lineups ordered by advertisers; and with no advance potential for clearance on the basis of which the sponsor commits his advertising.

But the film interests for whom Mr. Moore speaks realize that even with such an artificial and destructive procedure, the likelihood is that stations *would* contract with networks to carry the network service through program-by-program arrangements, because they want and need the network programs. Indeed, he asserts:

> "I think network service is so important under our present structure to an affiliate that *even without the legal requirement* (sic) *he probably would clear.* He does clear now on station time which he doesn't have to do" (Tr., p. 1603; emphasis supplied).

The prospect that stations, in the exercise of their choice, might clear time for network service without option time arrangements is so disturbing to the film group that they call upon the Government for extraordinary action. They ask the Government to impose a rule which would have the effect of barring stations from carrying network programs for designated periods in each segment of the broadcast day, including approximately one hour between 7:30-10:30 P. M. Apparently they do not trust stations to exercise their choice. They are also heedless of the fact that if such a restriction were imposed on stations, a network like NBC would face an immediate financial crisis; and to avoid a loss operation, would have to eliminate or reduce its program development and its non-revenue producing public services.

c. For the *public,* option time makes possible a responsible, diversified and carefully organized network program service on a national basis, including a world-wide news service, great live programs and major public events. Live programs constitute the bulk of NBC's total programming and embody the essential attribute of television, which distinguishes it from all other communications media.

During the past year and a half, the network service here under attack provided a national public with such live programs as:

The Cradle Song
This Happy Breed
Peter Pan
The Sadler's Wells' Ballet

See It Now
Festival of Music
A Night to Remember
Babes in Toyland
The Caine Mutiny Court Martial
The Barretts of Wimpole Street
The Magic Flute
The Taming of the Shrew
Person to Person
Macbeth
Wide Wide World

Even if only a portion of this programming—which in itself represents only a fraction of the great network offerings—had been foreclosed, the public's pleasure and enlightenment would have been impoverished, and the growth of the television medium toward larger responsibilities would have been curtailed.

IV. The "Basic Network" Sales Policy Establishes a Reasonable Minimum Purchase Unit and Serves the Public Interest.

A. Definition of the Basic Network Sales Policy.

Under this sales policy, NBC establishes a minimum unit of purchase by advertisers, in order to provide against fragmentized use of its national network facilities. This minimum purchase unit consists of a group of "basic" stations, selected on the basis of objective economic criteria described below. Beyond this minimum station group, an NBC advertiser has complete choice in the selection and purchase of almost 150 optional affiliated stations, which provide valuable supplementary coverage and additional penetration of the national market.

Mr. Moore claims that the basic network policy represents an agreement between a network and stations "whereby each station agrees to withhold certain desirable time periods from sale to any advertiser unless the advertiser agrees to purchase equivalent time on all stations throughout the country who are parties to this agreement.''*

This is sheer fantasy. The designation of an affiliate as a basic station is not a matter of agreement between NBC and any station, or between NBC and anyone else. It is a sales policy, arrived at by NBC alone, on the basis of objective standards of market size and economic value.

These facts in themselves destroy the whole elaborate argument that the basic network policy represents a ''collective agreement not to deal'' on the part of the stations among themselves and with the network.

The following summarizes the background and evolution of NBC's basic network policy.

Since NBC provides a national program service desired by all its affiliates, it would be preferable if its minimum purchase unit for advertisers were the full network. This would assure that all sponsored programs would be available to all affiliated stations, and through them, to the total television population. Originally, *all* stations which had affiliation contracts with NBC became basic stations as soon as they were interconnected, and the full interconnected network was the minimum network sold to advertisers.

However, with a great many new stations coming on the air and joining the NBC network beginning in 1953, it was realized that a different procedure was necessary for administering NBC's basic network policy. Although establishing the full network as the unit of advertising purchase might have the public advantage of making all sponsored programs available to all affiliated stations and their communities, such an extreme requirement would not be feasible as an advertising matter because:

1. It would put the NBC network at a disadvantage in competing with such national media as Sunday supplements, newspapers, etc.

* Mr. Moore's further claim that ABC has no basic network policy (and that accordingly such policy cannot be essential in network operation) is not in accordance with the facts. The ABC basic network policy is in terms of a minimum dollar purchase, including the ABC-owned stations, as follows: ''Advertisers are required to purchase a minimum cleared gross for station time equivalent to $50,000 per Class A hour. Advertisers are required to order as part of the applicable minimum the five ABC-owned stations . . . and any other ABC-owned stations added during the effectiveness of this rate card.''

2. Marketing problems of many national advertisers do not require such complete and intensive coverage as would be provided by the full network.

3. The cost of the full network would be too large for various national advertisers to whom network television would be advantageous.

On the other hand, if there were *no* minimum network purchase requirement at all, the national character of NBC's service could be atomized, with the result that network programs could be withheld from a majority of the television-equipped public at the instance of a sponsor with limited distribution; and an advertising operation designed for national scope might be used on a restricted basis that would be uneconomic in meeting the network's costs of providing a national interconnected service.

On these considerations, NBC decided on what it believes to be a reasonable "middle road", through a sales policy which designates a realistic minimum station list to be ordered by the network advertiser. This minimum list is the basic network.

In keeping with sound marketing and media practice, NBC sought to include in the basic network the affiliates in the principal centers of population and distribution. In doing so, NBC had the problem of where to draw the line. After much study, it established a set of economic criteria which determine eligibility for basic status in terms of the following objective economic considerations: In order for an affiliate to qualify as a basic station, the *metropolitan area* of its market must include a designated minimum percentage of the total U. S. population and total U. S. retail sales; and its *coverage area* must also include a designated minimum percentage of total U. S. homes and retail sales.*

As a result of the application of these standards, the NBC basic network now includes 56 stations in major markets which measure up

* To qualify under these criteria, a station must meet at least one of the two "metropolitan area" standards and at least one of the two "coverage area" standards. In a few borderline cases, where these statistical standards are not strictly met, but where the market is regionally important, an exception may be made.

to or exceed the designated economic levels. The Moore group's claim that this policy requires advertisers to order "weak" markets in order to reach "strong" markets is not in accordance with the facts.

B. The Basic Network Sales Policy is Reasonable, and Affirmatively Serves the Public Interest.

The attack on the basic network policy in effect argues that networks, which are national advertising media, should be forced to provide regional or selected-market advertising. That is the precise function of national spot television, and it serves that function well.* To impose this alien function on national networks would artificially limit their service; endanger their economy; reduce their effectiveness as national advertising media; and be injurious to the public.

1. The Advertising and Economic Functions of the Basic Network Policy.

National networks—like national magazines—do not lend themselves to use by advertisers with regional distribution or by national advertisers for special, selected-market campaigns. In the television field, as in the print field, there is a full range of suitable advertising forms for these advertisers, and they use these forms successfully and extensively. This has been indicated by the data previously cited on the rapid growth of national spot billings.

It is also demonstrated by the first of a continuing series of national spot surveys released by the Television Bureau of Advertising on April 16, 1956, covering the last quarter of 1955. For that period, the survey shows that national spot television had gross time sales of $103,872,000, and was used by over 3,000 advertisers. This compares with gross time sales on all networks of $116,336,797, to 247 different advertisers. These facts demonstrate the absurdity of a claim that advertisers are foreclosed from using television for regional or selected market campaigns, or that spot television cannot effectively operate because of the national network service.

A recent brochure of the Television Bureau of Advertising on the same subject disposes of another of Moore's repeated assertions—that

* Indeed, the very term "spot" refers to the geographical "spots"—the individual markets selected for a national spot advertising operation.

a national spot advertiser cannot clear Class A time for a film program. The following tabulation taken from the report shows stations ordered and cleared in Class A time for nine separate national spot advertisers:

Syndicated Film	Advertiser	Stations Ordered	Stations Cleared in "A" Time
Mr. District Attorney	Carter Products	23	22
Man Behind the Badge	Ohio Oil	11	10
Great Gildersleeve	Colonial Stores	11	11
Great Gildersleeve	Lucky Lager Beer	26	26
Steve Donovan	Langendorf Bakeries	13	11
Racket Squad	Heilman Brewing	9	9
The Turning Point	General Electric	77	66 (excludes 9 on-order stations)
Socony Mobil Theater	Socony Mobil Oil	56	56
Dr. Hudson's Secret Journal	Bowman Biscuit	12	12

The purposes for which national advertisers use spot television were recently summarized by an official of a leading national advertiser, whose remarks on this subject are set forth in *Exhibit 12.*

Among the types of television advertising available for regional, selected-market or local purposes are:

(a) announcement participations in non-network programs;*

(b) sponsorship of non-network programs; and

(c) announcements between all programs—whether network or non-network—throughout the broadcast day (so-called "station-break" announcements).

On network affiliates, the latter form of national spot or local advertising is particularly valuable because of the size of the audience which is attracted by the network programs adjacent to the station break.

* In addition, affiliated stations may make local or national spot sales in certain network "participation" programs they carry; and in NBC's case, many stations not ordered for certain network programs by the network sponsor are furnished the program, with network commercials deleted, as a special NBC service and are permitted to use the commercial time in the program for local or national spot sale on their own behalf.

So far as the practical requirements of *national* advertising are concerned, they normally involve advertising exposure going well beyond the basic network. The advertisers who use NBC's network facilities generally desire and order many more affiliated stations than are included in the basic group. Currently, the facilities ordered by NBC advertisers for sponsored evening programs average 129 stations,* although the basic network, which represents the minimum purchase unit, consists of only 56 stations.

There is no merit to the claim that the basic network policy forecloses small-budgeted national advertisers from use of the network medium. Although NBC's minimum *facilities* unit is designed to provide basic national coverage, its *purchase* units are so varied that they make network television advertising available to all types of national advertisers, regardless of the size of their budgets.

For example, on the NBC network, national advertising can be bought in forms ranging from a single advertising message costing a few thousand dollars to annual sponsorship of a color Spectacular series at a cost of over $4,000,000 with every gradation between these extremes, to fit any budget or requirement of national advertisers.

The actual use made by advertisers of this national medium reflects this range and diversity of opportunity. In 1955, the advertiser with the smallest expenditure on NBC was Edison Chemical Company, which bought one announcement in "Home" for $6,700; the advertiser with the largest expenditure was Procter & Gamble, which spent $11,000,000 for a number of NBC daytime and evening programs.

A great variety of small companies with national distribution have used and are currently using network television for low cost campaigns. Through the use of this medium, they are increasing their markets and enlarging their operations. *Exhibit 13* lists in parallel columns a few examples of large and small national advertisers who used the NBC television network in 1955. As shown there, these included relatively small companies with modest budgets—an ironing board manufacturer;

* NBC recently established a special provision for the number of affiliated stations to be ordered for evening sponsored programs in connection with its Program Extension Plan, described in *Exhibit 15*. However, even before the establishment of this provision, evening advertisers were ordering substantially more stations than the basic network. For example, in October 1955, evening sponsors were ordering over 100 stations on the average, and none of these sponsors limited his order only to the basic stations.

a hearing aid company; a silver polish manufacturer; a bird seed concern; and a company making pizza pies—as well as major companies in the automotive, food, drug, soap, tobacco, and appliance fields.

In 1955, the composition of national advertisers on the NBC television network broke down into the following categories, in terms of their gross time expenditure on the network:

Expenditure	Number of Advertisers
Under $50,000	58
$50,000-$99,990	38
$100,000-$249,000	42
$250,000-$499,999	25
$500,000-$999,999	17
$1 million or more	51
Total:	231

The availability of network television to all types of national advertisers is also indicated by the rapid increase in the number of such advertisers using the NBC television network—a number which rose from 48 in 1949 to 231 in 1955, as shown in *Exhibit 14.*

The foregoing puts to rest the claim that the basic network policy has the effect of confining network television to the advertising giants. NBC's television network sales patterns are deliberately designed to democratize the advertising use of the medium for *all* national advertisers. It is absurd to contend that a medium which undertakes the cost and burden of providing a national service with nationwide interconnections cannot properly establish sales policies which guard against such a fragmentary use of its facilities that the result would be uneconomic.

Although NBC's interconnection costs represent only one of the many elements in its fixed cost structure, they illustrate what could result from the elimination of the basic network sales policy. NBC leases intercity circuits which make possible the interconnection of 176 stations. These circuits are generally leased under monthly contract in a minimum unit of 8 hours a day, seven days a week, which represents the most economical way for NBC to buy the service from the Telephone Company.

75589 O—57—pt. 4——54

If NBC could not establish a minimum facilities purchase requirement, presumably it would have to accept the business of an advertiser who wanted to buy only 10 or 15 stations, with revenue to the network which would not even meet its interconnection costs. This is like arguing that *Life* magazine should be forced to sell advertising at one-quarter of its established rates to an advertiser whose distribution is limited to one-quarter of the country, and who wants to buy the circulation *Life* furnishes in that quarter only.

Perhaps a closer parallel in the media field is the Sunday supplements, such as the Metro Sunday Magazine Network, which acts as sales representative for national advertising in Sunday supplements published locally by a group of newspapers. The relationship between Metro and its "affiliated" newspapers has some marks of similarity to that between a network and its affiliated stations, with the significant difference that Metro provides *only* the advertising, and is not responsible for the editorial material in the supplements; whereas a network undertakes the provision of a costly program service to its affiliates, as well as the development of advertising in that service.

Despite the fact that it does not have the fixed cost of producing the supplement, Metro operates under a "must buy" policy in the sale of national advertising in these supplements. In its case, the minimum purchase requirement is a supplement in each of 26 "Basic Group" cities, out of the total Metro group of 30 supplements in 27 cities. The Los Angeles *Times*, published by the owner of KTTV, is a "basic" ("must-buy") affiliate of Metro.

2. **The Basic Network Policy Serves the Public Interest.**

Apart from its advertising and economic justification, NBC's basic network policy serves an important public interest function in assuring that sponsored programs of great public value, which NBC has equipped itself to furnish to a nationwide audience, will be available at least to a majority of that audience*; and assures against the possibility that an advertiser could, by limiting the number of stations he orders, confine the program to a minority of the public.

It is curious that there should be an attack on this sales policy by those who purport to speak for the public interest. Indeed, it is because

* The NBC basic network now covers 80% of all U. S. television homes.

such a policy cannot, as a practical matter, go *far enough* in providing for the availability of sponsored network programs in additional smaller markets, that NBC developed two plans to help affiliates in such smaller markets obtain network sponsored programs which they needed and wanted, but for which they were not ordered by the network advertiser. Until these plans were adopted, the normal practice in network broadcasting was to furnish sponsored programs only to stations ordered by the program sponsor. Accordingly, where the advertiser ordered a relatively small number of stations in addition to the basic group, many communities were deprived of access to the program.

Under the first of these plans—the NBC Program Service Plan established in September 1954—various NBC sponsored programs, with the network commercial announcements deleted, are made available, as a service to optional affiliates which are not ordered by the sponsor. These smaller-market stations have eagerly welcomed this additional network service. As a result of it, they have been able to furnish their communities with popular network shows, which they otherwise would not have received. This in turn has increased television circulation in their markets and has made them more effective elements in the national television system.

A related procedure to make more network sponsored programs available to smaller-market affiliates is provided by NBC's Program Extension Plan, adopted in October 1955. Under this procedure, NBC established a group of some 50 "optional" affiliated stations which were most in need of additional programming. Under the plan, a network advertiser may order these stations at reduced costs by virtue of a "dividend" system, the cost of which is borne by NBC.

Details and the results of these plans are set forth in *Exhibit 15*. As shown there, these plans have brought about a notable increase in network programs for smaller-market affiliates which had great need for such programs. NBC's action in developing these plans was applauded by the stations and by Government leaders. Typical comments are set forth in *Exhibit 16*.

The proposal of the film group to outlaw the basic network policy would foster the opposite results—the withdrawal of network service from many communities at the dictate of any advertiser who sought to use a national medium for restricted coverage.

V. Conclusion.

Option time and the policy of selling a basic network involve no unreasonable restraints.

They are necessary and proper procedures in conducting a national network service.

The network service has been the basis for the development of television to its present scope, and is now the basis on which the new industry of color television is being created. It has been and is the source of television's outstanding contributions to the public. Without an effectively operating network system, there could be no live programming or special event coverage on a national basis; the country's television source would be limited to local programs and film.

Adoption of the film group's proposals would have the effect of supplanting a vital, diversified and responsible service by a flood of standardized film programs and old Hollywood movies. The result would be a contraction of the scope and usefulness of television and a grave disservice to the public.

Respectfully submitted,

NATIONAL BROADCASTING COMPANY, INC.

May 25, 1956.

APPENDIX OF EXHIBITS.

Exhibit 1

Hollywood Film Backlog Recently Released for TV Broadcast

Studio	Backlog Released — Features	Backlog Released — Shorts	Price	Sold to
20th Century-Fox	52		$ 2,300,000	NTA
Warner Bros.	754	1500	$21,000,000	PRM
RKO	740	1000	$15,200,000	C&C
Columbia Pictures	104			Screen Gems
	121	152	Not Known	Hygo-Unity
Universal	14	179	Not Known	NTA
	6		Not Known	Hygo-Unity
	97		Not Known	Quality
Paramount		1450	$ 3,000,000	NTA (Via UM&M)
Selznick	10		$ 1,000,000	NTA
	1898	4281	$42,500,000	

NOTES

The transaction involving the 52 20th Century-Fox features was in the form of a 10 year lease to National Telefilm Associates (NTA), with a guarantee of $2,300,000 to 20th Century-Fox against a percentage of the gross. It is reported that 20th Century-Fox has divided its total backlog into 10 groups of film, of which the first to be released to television was the package listed above. This leaves 9 similar film packages, which if released on the same terms, would involve payments of over $20,000,000. (See *TV Digest,* April 21, 1956, pg. 7)

* * * * *

The Warner Brothers sale to PRM, Inc. was concluded March 1, 1956. PRM is a Canadian-American investment company headed by Mr. Louis Chesler, Chairman of the Board. As reported in *Broadcasting-Telecasting* Magazine (March 5, 1956):

> "Associated with Mr. Chesler as an investor is Eliot Hyman, President of American Artist Productions, New York. . . . It was reported that PRM would absorb the sales division of Associated Artists and install Mr. Hyman as managing-director of the company. . . . The control of PRM, it was reported, recently was acquired by a group headed by Mr. Chesler and George Gardiner, PRM president."

Mr. Chesler has also been in negotiation for the purchase of the MGM backlog. In these negotiations, according to press reports:

> "The Chesler bid is through Ridgeway Corp., a shell corporation listed on the New York Stock Exchange, as was PRM prior to the Warner deal. Ridgeway, according to M. Mac Schwebel, general counsel for the firm, is the successor company to Campbell, Wyant & Cannon Foundry, which was sold to Textron, Inc., for $15,500,000 in cash." (New York *Herald Tribune,* May 17, 1956).

* * * * *

Ex. 1, pg. 2

The RKO sale to C&C was announced December 27, 1955. The distribution of the films is to be handled by C&C Television Corporation, of which Mr. Matthew Fox is president. C&C Television Corporation is a newly-created subsidiary of C&C Super Corporation. According to the New York *Times,* other

> "subsidiaries of C&C Super include Cantrell and Cochrane, manufacturer of the Super Coola soft drink; the Nedick's food chain, a rubber company and a power products company. . . ."
>
> "Mr. Fox speculated that his investment of $15,200,000 would bring a total return of $43,000,000 within five years. He estimated that $30,000,000 would come from television in this country and $15,000,000 from foreign distribution, mostly in theatres.
>
> "The purchase of the films represents another addition to the list of business ventures for Mr. Fox. He obtained his stock in the C&C Super Corporation this year by turning over to it his Western Television Corporation, which owns and distributes 650 Hollywood theatrical films to television.
>
> "Mr. Fox said that Western had owned $15,000,000 worth of air time on television stations. Western had acquired this time in rental payments for films it distributed. In turn the C&C Super Corporation used the time for advertising its soft drink.
>
> "In 1948 Mr. Fox established the American-Indonesian Corporation, a sales and purchasing agency for Indonesia that aroused controversy, including protests by the State Department. The agency was dissolved in 1950.
>
> "In 1947 Mr. Fox introduced Bub-O-Loon, a small wooden pipe that emitted plastic bubbles. The enthusiasm of small children in blowing bubbles set off a national craze." (New York *Times,* December 27, 1955.)

A further account of the financing of the acquisition of this RKO backlog is reported in *Advertising Age:*

> "Coincident with the signing of his contract with RKO, Mr. Fox, a former exec. v.p. of Universal International Pictures, sold his holdings in United Artists Corp. A principal in Skiatron

Electronics Corp., a would-be pay television operator, he has been active in many motion picture and tv film operations.

"He is the major stockholder in C&C Super Corp., having acquired that position through a merger with Western Television Corp., a tv film distributor, and C&C several months ago. At that time Western's films were sub-leased for distribution, and C&C got several million dollars worth of spot tv time Western had obtained in exchange for films.

"Mr. Fox financed the C&C deal with RKO by borrowing $9,200,000 from First National Bank of Boston and $3,000,000 from the Irving Trust Co., New York.

"Reportedly he was able to arrange the financing because of advance sponsor interest. International Latex Corp. was a big help here; this company is interested in using the films in several markets. The parent company of C&C Television Corp., C&C Super, will use some commercial time in the films to promote C&C Super Coola." (*Advertising Age,* January 2, 1956).

* * * * * *

The release by Columbia Pictures of 104 of its old feature films was made through its own subsidiary for TV production and syndication—Screen Gems—and the price has not been announced. As reported by the *Wall Street Journal* (January 3, 1956): "The 104 films Columbia is releasing represents less than 10% of the more than 1,000 films in the studio's vaults. Television stations around the nation were informed that Columbia would release the films through its wholly-owned subsidiary, Screen Gems, which has been producing short subjects and serials for TV use for the past four years."

* * * * * *

The acquisition by NTA of much of the film backlog it is holding came about through its purchase of UM&M TV Corp. for a reported $4,000,000. UM&M had previously acquired Paramount's library of shorts and cartoons. (See *Variety,* May 16, 1956).

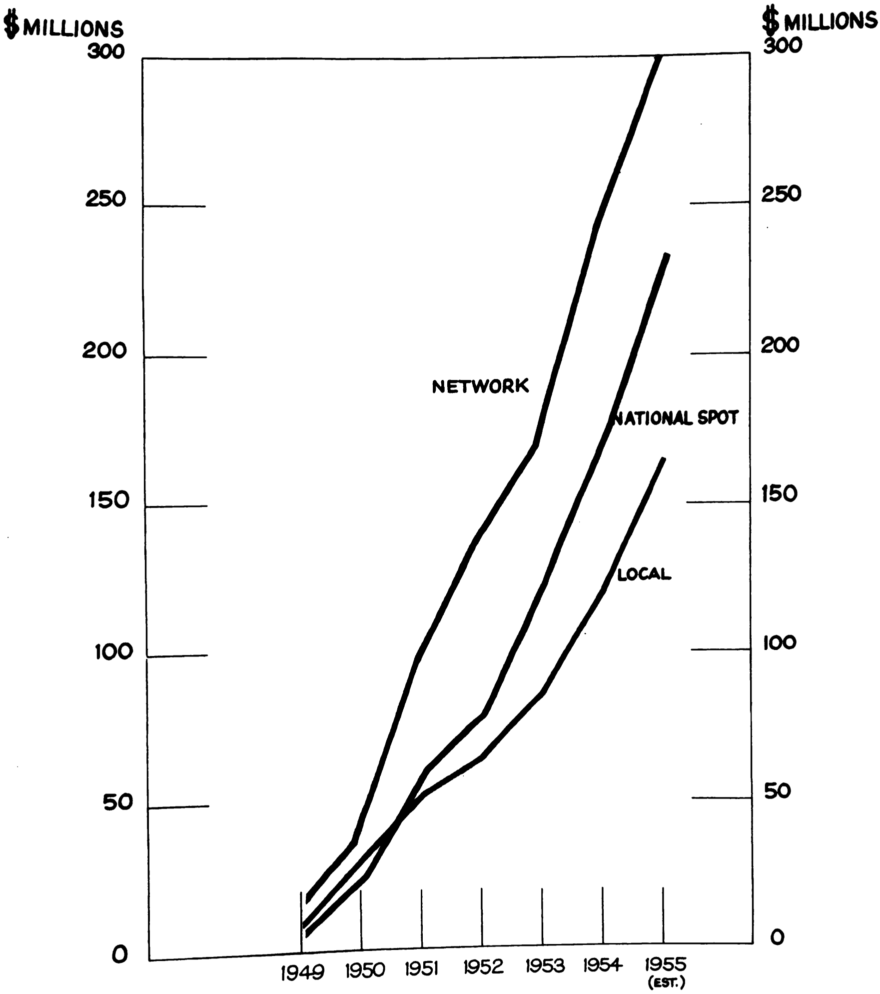

Exhibit 5

Examples of Financial Differences Between National Sale of a Film Series and Market-by-Market Syndication

1. When a film producer sells to a national advertiser or a network, he makes only the number of films ordered, and at most, needs a small revolving fund, because he gets his money back from the advertiser or network either on commencement of production, or upon delivery of the film. When the films are syndicated over individual stations, the producer's recovery is piecemeal, and may be spread over several years, as films are played and paid for in individual markets; on this basis, he generally requires long-term financing which means giving up a portion of profit to the person who furnishes the risk money.

2. When a producer sells to a national advertiser or network, there may be no distribution fee if a fixed price is paid per film; or if the producer sells to a network at cost and participates in profit, there may be a fee of 10% of the sale price. When the films are syndicated, a distribution fee of 35%—40% of gross revenue is deducted to pay for the services of the distributor; in this event, recovery of production cost is further postponed.

3. Print and shipping costs of film series broadcast by a network are generally borne by it. In syndication, because of the multiple prints and many individual shipments required, the distribution cost is higher, and is deducted from film revenues before the producer is paid his share.

4. The network and national advertisers bear most of the cost of promotion when they buy a film series. This cost has to be borne by the producer or syndicator when the film is syndicated, and is deducted as a distribution cost before the producer is paid his share.

Articles on Network Service by Television Critics

"TELEVISION TODAY—A CRITIC'S APPRAISAL".

(From The New York *Times* Sunday, April 8, 1956)

"By JACK GOULD

"Age is creeping up on television; it's in its ninth year. In 1947 the infant medium was tenderly carried from the laboratory to the public stage. At home a handful of hardy pioneers squinted at strange, illuminated windows cut in cumbersome boxes. Before their eyes cavorted an assortment of little figures, the dancing omens of a nation's new way of life.

"Today the TV set ranks with the kitchen stove as a family essential. The youngsters who were introduced this year to the regimen of high school are members of the first TV generation, boys and girls who cannot be expected to remember what life was like without video. The thought is quite a numbing one.

"As perhaps need not be suggested, the advancing years have not always been kind to the viewer; to think back alone on the total number of hours wasted on ancient movies is a little terrifying. But in fairness it must be conceded that the passing of time has been just as cruel, if not crueler, to the TV broadcaster. The video operator, after all, is the only man in the television age who is denied the most exhilarating of intellectual privileges, turning the TV off. In his executive suite he cannot merely sit in contemplation of the ulcer that lies beneath the gray flannel; he must constantly devise new ways to nourish a monster that grows more hungry with every meal.

"How goes life, then, with this unenviable figure, the broadcaster? How well is he succeeding in his multiple role of impresario, educator, journalist, psychiatrist and nursemaid to the millions? Is TV getting better or worse?

"TV has gone through two stages of development and now is in its third. The first stage was the medium's pure technical novelty, when almost anything could be put on the screen and the public would look at it. The second was the era of personality novelty; the sight of a new face periodically refreshened interest in the TV medium. Now, in the third stage, with almost everybody and his brother having had

Ex. 8, pg. 2

a TV debut, the industry is confronted with the realization that it must rely on itself. This is the key both to its progress in some areas of programing and to its stalemate in others.

"Television's special events—the occasional programs which are entities unto themselves—probably represent the medium's most significant single asset: its capacity to be extraordinarily good. In this season alone the viewer has been afforded the chance to witness George Bernard Shaw's 'The Devil's Disciple,' with Maurice Evans; Robert Morley in 'Edward, My Son'; a superb live version of 'The Caine Mutiny Court Martial'; a tour of India with Chester Bowles; an examination of the farm problem that disturbed the Secretary of Agriculture; Noel Coward; Mozart's 'Magic Flute'; Sir Laurence Olivier's new film, 'Richard III'; Mary Martin in 'Peter Pan', and the Sadler's Wells Ballet.

"Granted that the cited attractions would not be immune to some critical reservations, none the less such efforts are not the output of untutored morons; they are thoroughly commendable and sometimes brilliant illustrations of the fact that, when they want to, the broadcasters are entitled to hold up their heads proudly. The boring snobs who have tried to concoct an intellectual superiority out of a noisy refusal to watch television will have to find a more persuasive dodge.

"To be sure, not all special events, some of which have labored under the collossally inept title of 'spectaculars,' have been an unmixed blessing. Quite a number were pretentious cathode atrocities. If the Sadler's Wells Ballet chalked up an impressive total audience of some 30,000,000 viewers, let the record show that Art Linkletter's incredible 'tour' of Beverly Hills allegedly garnered a bigger one. 'Spectacular' is not a reliable synonym for 'culture.'

"But in this respect television differs not a whit from the theatre, movies or book publishing. For every Pulitzer Prize or Oscar winner, there are scores of wretched products in these fields, dismal outrages that constitute huckstering at its worst. A fairer test is the ratio of good to bad. By this criterion, TV's special endeavors stack up rather well.

"To represent TV at its best there also is another type of special attraction—the actuality broadcast that takes place outside the studio.

The national political conventions, the coronation of Queen Elizabeth, the Kefauver crime hearings, the world series, the Presidential press conference and the heavyweight championship are samples of life itself conveyed into the home. With such broadcasts the world of reality unfolds upon the screen in all its spontaneity and unpredictability. This has been and always will be TV at its most exciting because it is something that only TV can do, which is to enable the viewer to be his own reporter, editor and critic. Why television does not venture more often out of the studio continues to be quite baffling; the medium hasn't really begun to explore the vast amount of fascinating programing that may lie between Madison Avenue and the Hollywood Freeway.

"Television's regular events—the programs that turn up according to a fixed schedule—are quite another story. The passing years are taking their toll of both the ingenuity of producers and the durability of viewers. It could not be otherwise after so many hundreds of nights of continuous programing. The creative artists of TV and the set owner are, each in his own way, bound to feel the consequences of 'over-entertainment.' The program producer has done too much and the viewer has seen too much to make their relationship easy.

"Comedy on television is in dire difficulty. The frayed tempers of Arthur Godfrey and Jackie Gleason and the physical exhaustion of other clowns are symptomatic of the law of diminishing returns that goes with trying to fit humor on an assembly line. The routines, mannerisms and gestures that once seemed so amusing inevitably wear thin; they are too fragile to survive repetition. This season Phil Silvers has been a great hit and justly so. But how long can even Sergeant Bilko last?

"No comedian in his right mind, before the coming of TV, would have dreamed of going to the same house once a week and being the life of the party; yet this is what he tries to do in video. It is madness and the toll of comedians is one of TV's great tragedies. The country needs its warm and funny men too much to burn them out. The comedians should restrict their appearances to a few performances a year. Failing that, the viewer can only institute his own rationing system.

"The dramas on television, with changing casts and authors, are perhaps doing best of the regular TV attractions. Some of the plays

75589 O—57—pt. 4——55

Ex. 8, pg. 4

are extremely good and the sustained high quality of acting on TV is astonishing. But drama also is facing troubles. Whereas once there were four hour-long shows, now there are nine every week. There simply are not that many good plays around and many are just soap-opera rubbish in pretentious settings. There is a need for more drawing-room comedy and satire and certainly more theatre of the bravura school. TV drama is topheavy with social discussions conducted in cubbyholes.

"Television variety this season brings one name to the fore: Perry Como. Ironically, his show represents a full turn of the TV wheel; its appeal and charm are based on the qualities of relaxation and informality that made 'Garroway at Large' one of the first video successes. Mr. Como's philosophy might well be a guiding motto of all TV: easy does it. Ed Sullivan's 'Toast of the Town' continues to thrive, perhaps because it also combines the virtues of professionalism and low pressure. Most of the other variety shows seldom sustain themselves for many weeks; they try too hard, including 'Omnibus.'

"The films especially made for TV? A sorry lot, by and large. Certainly, they cannot stand comparison with the live hour-long dramas and the special events; more than ever, they seem inadequate in characterization and narrative, following the old-fashioned radio way of telling a story. But also, with few exceptions, they are trite and artificial, certainly not a good advertisement of the capabilities of Hollywood.

"Of the major studios, Twentieth Century-Fox has done much the best with its extended dramas. Warner Brothers has come up with a satisfactory Western series, but Metro-Goldwyn-Mayer hasn't put its heart into TV. Economics will always assure a place for filmed series on video, but artistically it is shocking how really unimportant they are.

"TV quizzes have come in a few years to the point it took radio quizzes nearly twenty-five years to reach—buying their audiences. 'The $64,000 Question' started it all, of course, and its appeal at once was undeniable: watching a person gamble his knowledge against the possible loss of a fortune. The human values were indubitably there. But the imitations have not been especially successful and now the question is: where does the quiz go next?

"The inexpensiveness of most quizzes is their prime asset and no doubt they will be with us forever. But it surely would be fun if some of those old familiar faces could be replaced. The current members of television's cafe society elite, the mainstays of panel attractions, are fading. Let's bring on the younger girls!

"The regular news programs on TV are not what they should be; journalistically, video is something of a disappointment. The fault does not lie with the backstage laborers in the news vineyards, they are able. But on the policy-making level the TV high brass is not really overly interested in news because it does not have the same commercial sales value as, for instance, vaudeville.

"The best that TV can do, after eight years, is a quick newsreel once-over of the day's events. There is no sustained coverage in depth, little helpful evaluation of the significance of the headline, and virtually no interpretive commentary to stimulate the viewer to do some thinking for himself. TV has all but wrecked night-time radio, where news opinion once flourished, and has failed to offer an adequate substitute in the realm of regular informational programming. This is one of TV's black marks.

"The weekly interview shows in which newspaper men examine front-page personages are consistently interesting, though at times the panels seem inordinately eager either to pack their guests off to jail or to let them off the hook with dismaying gentleness.

"Programs for small children—the older youngsters would not be caught dead looking at children's shows—are not what they should be. 'Captain Kangaroo' is a civilized delight, unhesitatingly recommended. Dr. Frances Horwich, principal of 'Ding Dong School,' is still imploring tots to guide their mothers to the right commercial products, a not too seemly performance for one trained in child education. 'Howdy Doody' is every bit as objectionable as ever.

"Daytime programming has not had much really new for quite a while. 'Home,' with Arlene Francis, has a number of worthwhile features, however, and Garry Moore, with his innocuous high-jinks, is diverting and also one of the most consistently pleasant gentlemen on the air. The 'Matinee' series of hour-long dramas seems to be teetering perilously close to soap opera, which is a pity. And, of course, there are movies and menus at all times.

"The final program classification with a legitimate claim to attention is that of the full-length theatre movies now being shown on TV. Some are uncommonly good, particularly the more recent English features. And it now appears that the motion picture industry's unspoken boycott of TV has been broken with the release of major backlogs of films to TV. The cutting of some of the films for TV purposes, however, has not always been especially judicious. The narrative can become entangled by the interruptions for those blankety-blank, if altogether necessary, commercials.

"What of the future of television programming? Very likely the broad outlines of today's pattern will continue, but no one would be too surprised if TV came to the 'special evening' as opposed to the present 'special event.' This would entail the planning of a night's several shows as part of an integrated whole. Instead of a mixed assortment of bits and pieces, there would be an over-all design and point of view intended to hold an audience, say, 8:30 to 11 o'clock.

"In European television there is the custom of an attractive hostess who appears periodically and provides a thread of continuity throughout an entire night's viewing. American television, in contrast, almost invites a viewer to tune out and look elsewhere every half-hour or hour. With the 'special evening,' presumably, also would come better balance in programming, not one quiz back to back with another quiz but perhaps first a quiz, from 8 to 8:30, then a two-hour play until 10:30, and finally a half-hour of song and dance before the news and bedtime.

"On the other hand, television cannot afford to abandon its present bread-and-butter staples. To suggest that this or that format will be predominant in the days to come is to misunderstand video's requirements: it must have a little of everything. There are some indications already that the 'spectacular' has perhaps become too commonplace. TV's everlasting problem is not to worry so much about what it is doing but what it is not.

"Essentially, both the viewer and the broadcaster are showing their TV years in the same way: they are becoming restless. As a fixture in the living room, television can be accepted as a matter of

Ex. 8, pg. 7

course; as a social force, TV's effects cannot. The people of the nation now see more plays in a year than a professional Broadway drama critic. They are more knowledgeable about vaudeville than the Monday matinee audience at the old Palace; certainly, they've seen the same acts more often. They can identify on sight more celebrities than the traveled cosmopolite of a generation ago.

"Quietly but steadily, television has wiped out 'the sticks' and 'the road' from show business. The erstwhile hayseed is looking at the same things as the supposedly more sophisticated resident of Park Avenue. The economic and geographical barriers that once separated the mass from the arts have simply been taken down. If, under the circumstances, the television impresarios are a little bewildered by the full long-range meaning of what they've started, who isn't?

"The world of TV has a cultural bear by the tail and finds it cannot let go. In inundating the American home with things to watch morning, noon and night, it has set off a gradual process of selectivity on both sides of the screen. It matters not that the majority of millions may prefer the shows with which they are familiar; millions of other persons are willing to track down the unusual. There is a growing body of undeclared set owners who, having absorbed so much TV, are becoming choosy. The impact of TV is proving a double-edged sword: the show that can quickly impress a viewer can also quickly exhaust him.

"The despair of television today—finding enough things to do—in the long run is the hope of television tomorrow. Video's appetite for material is so huge that not even the supply of mediocrity is large enough to go around. To borrow Gore Vidal's immortal line, there comes a time when in sheer desperation it is necessary to scrape the top of the barrel.

"Economically and artistically, television has no real alternative to expanding its interests and lifting its sights; it's done everything else. Undoubtedly it will receive far too much advice about how it should proceed, and unquestionably it will pay much too little attention to most of it. With baffling rapidity it can be expected to be charming and stimulating one moment and completely infuriating and tiring the next. But this should not surprise either viewer or broadcaster unduly. After all, isn't television the lusty child of the arts?"

Ex. 8, pg. 8

"ON THE AIR".

(From New York *Post*, Wednesday, April 11, 1956)

"By Jay Nelson Tuck

"Are CBS and NBC two gigantic monsters who ought to be restrained now before they strangle the rest of the country? This is an argument that is being pressed now before the Senate Commerce Committee in current Washington hearings, before the Dept. of Justice Anti-Trust Division and before the FCC.

"The argument is attractive to politicians because it is being presented by people who represent themselves to be small business men and creative artists standing against two economic Goliaths. If the news reports are accurate, numerous Washington worthies have been so impressed that the two big networks are now decidedly on the defensive.

"No one will dispute that the networks are big. There is a greater demand for their choice hours than they can supply. There being only so much time in a broadcasting day.

"They have used this situation to exert greater and greater control over programming. Less and less is it possible for an advertiser to bring in any show he chooses and buy good network time for it; more and more he must advertise on the program the network wants.

"Moreover, the networks exert some control over the programming of their affiliated stations. As a price of its affiliation, the station agrees to permit the network to take certain choice hours each day for network programs.

"It is on these facts that the attack is based. Advertisers claim they have insufficient opportunity to hawk their wares and too little choice of the program that shall be wrapped around the hawking.

"Stations claim they have insufficient control of their own programming. And salesmen of programs claim they have insufficient opportunity to place their stuff.

"If, in all this welter of noise, anybody has represented the viewer, it has not been reported in the dispatches.

Ex. 8, pg. 9

"And in essence what all these people are suggesting as an alternative to network programming would be poison to any viewer of the grade of boob or better.

"Each of them is really arguing that he could make a quicker buck if there were more cheap film programs on the air, most of them are either moldy junk long since previously run on the networks and thrown off or stuff too trashy ever to have gotten on the networks in the first place.

"This department has been no laggard when it seemed necessary to rip into the networks for what appear to me to be their deficiencies, but when it comes to choosing between their control of programs and control solely by advertisers, I'm with them every time.

"Yes, the networks have put on their share of stinkers, but without them we would never see most of the best programs broadcast. If the drive had not come through the networks, you would never have seen a 'Peter Pan' or a 'Richard III,' almost none of the big 90-minute shows, no 'See It Now,' no 'Adventure' or NBC Opera Theater.

"Whatever their faults, the network men do have a sense of public responsibility. Many sponsors feel responsible only to their stockholders.

"As far as the stations are concerned, they can make more money by broadcasting a cheap film show as a local program than they can by carrying the network offering.

"So take a look at the average program of some of our local stations—Channels 5, 9 and 11 (13 is a special case) and compare it with the network shows. How much creative talent is being smothered because Channels 2, 4 and 7 don't offer more of this?

"No, the fact is that at least until now the network influence with all its failings has been decidedly a good one for the viewer. We could not possibly have gotten most of the good things now on TV without it."

Ex. 8, pg. 10

"JANET KERN: Networks Have Many Faults, but Provide Vital Services".

(From Chicago *American,* Tuesday, April 3, 1956.)

"SOME TIME AGO, a politically astute friend alerted me: 'The one subject both political parties can safely be against in 1956 will be the networks.'

"This prophecy is now on the brink of fulfillment.

"On our legislative agenda we'll soon find investigations, debates, etc., in which 'the networks' are likely to be charged with everything from too noisy commercials through monopoly to stealing from church collection plates.

"Just a glance at any serious TV-radio column will provide fodder on the faults of any network. Few businesses operate under so constant or glaring a spotlight and high-powered a magnifying glass as we of the columning fraternity keep on the broadcasting networks.

"So, perhaps, in justice we should turn our spotlight, for a moment, on the question:

" 'What IS a network?'

* * *

"A NETWORK IS an alliance of stations carrying the same programs, joined by individual contracts under which a broadcasting company agrees to provide and transmit a certain number of national programs in return for the affiliation of each station.

"There are three major networks.

"NBC was formed first, on November 16, 1926, by what is now the Radio Corporation of America, to prove the controversial contention of RCA's Gen. David Sarnoff that radio could become a useful, integral part of every household.

"In 1927, CBS came into being and into bitter competition with NBC, followed by the formation of ABC in 1943.

"Thus, RCA, and then NBC and CBS, poured out the money and took the considerable risk of creating and developing radio. Later, the same three companies gambled again to develop TV.

* * *

Ex. 8, pg. 11

"NEEDLESS to say, these gambles were not unselfishly motivated. RCA wanted to sell radios, and then TV sets, and the transmitters and other equipment which go with the broadcasting business.

"CBS and NBC each wanted to sell programs. So these companies developed a new industry which proved profitable . . . but it might not have.

"Now that broadcasting is fully developed as an industry, where would we be today without the networks? Ninety per cent of our favorite TV shows are network shows—for no single station could afford to assemble the stars, writers, studios, etc., needed for big-league shows.

"Would such events as presidential conventions or inaugurations be covered individually by single stations? Not on your coaxial cable!

"Suppose all the radio networks were to decide today that their business is not profitable enough to continue.

"How would government officials, wishing to speak to the nation in time of emergency (or political campaign), do so?

"What would replace 'Conelrad' if war were to make instantaneous Civil Defense alerts necessary?

• • •

"SPONSORS PAY for network operation, but they complain the networks are arrogant to them.

"The sponsors could put an easy stop to this arrogance by refusing to patronize the networks, for the broadcasting companies are, admittedly, behaving as is frequent in a 'sellers' market'—as some of those same sponsors bullied THEIR customers during wartime shortages.

"Network affiliates moan about excessive demands on their time. But the affiliates ARE the networks and, were they to utilize the strength which lies in union, they could bring any broadcasting company to its corporate knees.

"Some independent stations complain the networks constitute unfair competition for them. Well, it has long been true that he who gives the most for the least price frequently monopolizes us customers.

• • •

Ex. 8, pg. 12

"No One resents the faults of the networks more than I; no one would like to wallop them across their spanking area more often than I yearn to. But even I cannot quite forget that, without the networks, radio and TV could not span continents and oceans, to bring the World Series to hospital wards, comedy and music to old people at home, etc.

"There is much I delight in condemning on all networks . . . but, just between us, I'd hate to have to learn to live without the services only networks can provide—and, in their heated competition, provide in super-abundance."

* * *

Where Do We Use Spot TV?

Let's take a look at the type of situations where we call on spots to augment our network operations.

First—*In testing of new products.* In this case a limited number of markets is selected for actual sales testing of new products prior to national or sectional introduction. We are sure TV will be an important ingredient in any plans for expanded introduction. We attempt to determine the amount of television weight to be put behind broad-scale launching and to simulate as closely as possible this condition in a test-market operation through the use of local TV coverage.

Secondly—*To support our national TV operation.* No matter how good a show is in national ratings, popularity and audience exposure will vary considerably market by market. For instance, Arthur Godfrey's national rating on the daytime show is around 11. On the Pacific Coast it is only 1 or 2. Maybe it's the bad time, hot kine reproduction or the fact that Californians can't take his Chamber of Commerce attitude toward Miami Beach. In any event, we buy special shows on The Coast on a spot basis to support sagging Godfrey exposure in those markets. We do the same thing in other markets where we have not been able to obtain satisfactory time on the network shows.

Thirdly—*Where product situations require a localized approach.* For instance, per capita usage of laxatives is much greater in the South and Southwest, probably because of that famous over-rated Southern cooking. We no longer use network coverage for our laxative product, but concentrate our advertising efforts in areas of highest per capita consumption. This requires a spot operation for TV penetration.

Fourth—We have found with some products, particularly some of our newer brands, that an accelerated advertising program in local

Ex. 12, pg. 2

markets can get the product off to a faster start than if we relied solely on national media. We have gone into selected markets with some products and, in addition to our national advertising, have poured on the coal for relatively short campaigns to create local bonfires under our brands. In this type of concentration or saturation effort, spot TV has proven to be one of our most important and effective tools.

FIFTH—*We have used spot for short-term buys.* For instance, when additional advertising funds have become available and we have not had time to plan a full-scale national effort. Of course, we try to make sure that this is not too frequent an occurrence, but it has been known to happen. In such cases, spot TV has proven to be a very effective sponge in mopping up such an overflow.

SIXTH—*In support of products with a seasonal sales pattern.* This could be cold remedies in the winter time—deodorants in the hot weather months. Here, again, spot TV is a most useful tool for adding additional weight when it is most needed and most effective. * * *

Exhibit 15

NBC Program Service Plan and Program Extension Plan

Program Service Plan (PSP)

The NBC Program Service Plan was established in September, 1954, in order to provide affiliated stations in smaller markets with additional network sponsored programs desired by them. Until this plan was established, there was no procedure for furnishing sponsored network programs to an affiliated station unless the station was ordered by the network advertiser.

Under the NBC Program Service Plan, certain sponsored programs, with commercial announcements deleted, are made available to affiliated stations in many "optional" markets not ordered by the advertiser sponsoring the program. This procedure applies to programs where NBC, under its contractual rights, is able to use the program for such a purpose, and where the mechanics of production permit the deletion of the network advertiser's commercial announcements when the program is broadcast in a market he does not order.

NBC inaugurated this novel plan by making three leading network programs available to those unordered stations which could be fed the program without additional interconnection cost. From time to time since then, additional programs have been added to it, so that 15 programs are now included in the plan.

The purposes of the plan were outlined to advertising agencies in the following letter sent by NBC on March 25, 1955:

> "Dear ....
>
> "We have had inquiries from some of our television clients and their agencies with regard to the purpose of our Program Service Plan which was established last September, and I am writing this letter to explain the basis for the plan and how it operates.
>
> "The premise of the plan is that NBC is a national network with the objective of providing a national service to all of the people of the United States, so far as that is possible. Operating on this premise, it has been NBC's policy to negotiate affiliation

Ex. 15, pg. 2

arrangements with stations serving a population of significant size which would otherwise be without our service. Our success in following this policy is indicated by the fact that the coverage area of the NBC Television Network now includes 90% of all homes in the country and 99.1% of all United States television sets.

"However, the fact that we affiliate a station is in itself no guarantee that the station—and the population it serves—will receive our programs. The clients sponsoring these programs may feel that particular stations affiliated with the network do not offer them sufficient circulation and advertising values to justify their ordering such stations; or their budget limitations may preclude ordering large numbers of stations in smaller markets. Although we seek to persuade our network clients to increase their lineups in order to obtain more comprehensive coverage, we recognize that they are primarily concerned with advertising values—and properly so—and that they have the final decision on which optional stations are needed to serve their particular advertising needs.

"This may meet the situation with regard to NBC's position as an advertising medium, in competition with other media. But it leaves unsolved the problem of how NBC, as a medium operating in the public interest, can make its programs available to the audience in areas served by affiliates which the advertiser does not order. This problem has concerned NBC, just as it has concerned Congressional committees and other agencies of the government. Our Program Service Plan, which has been in effect for some time, is one of the ways in which we are seeking to meet the problem.

"Under this plan, we have selected certain programs which we may, under existing contracts, make available to stations not ordered by the client and we offer such programs to affiliates in a position to receive them over existing interconnection facilities, as well as to non-interconnected affiliates willing to pay the kinescope costs. By following this procedure, we are able to provide popular programs to many viewers who otherwise could not

Ex. 15, pg. 3

enjoy them; we give the program wider national exposure and identity; and we give stations in smaller markets the opportunity to broadcast well known network shows which will help increase their television circulation and thus make them more attractive buys for network advertisers, as well as more effective elements in the broadcasting system of this country.

"We feel that this procedure is in the interest of the public, the stations concerned, and that it is also in the interest of the advertisers using our facilities. We believe that it is important to our public service responsibilities to continue this plan, and we are considering its application to additional programs. I know that you will recognize the importance of the problem which we are seeking to attack and hope that we can count on your cooperation in connection with any program with which you may be concerned."

As of January, 1956, the 15 programs included in the plan averaged 36.75 program hours per week.

These programs were carried by 104 different stations which were not ordered by the sponsors and which otherwise would not have received the programs. This totalled over 1850 station-hours per week of additional programming furnished unordered affiliates.

In cases where contractual rights and mechanics of production permit, the unordered stations furnished the programs are allowed to sell them on a national spot or local basis, and thus are able to obtain station revenue from these network programs, in addition to the other values of the programming.

The following tabulation indicates the number of programs and stations involved in the Program Service Plan as of January, 1956:

Ex. 15, pg. 4

Program	No. of Program Hours Per Week	No. of Unordered Stations Carrying	Station Hours Per Week
Today*	10.	38	380
Home*	5.	46	230

Queen For A Day	2.5	44	110
NBA Basketball*	2.	85	170

Average Program Hours Per Week 36.75

Number of Different Unordered Stations Carrying PSP Programs 104

Total Station Hours of Additional Program Service Per Week 1855.75

* National spot and local commercials can be sold in these programs by unordered stations in the time represented by the deleted network commercials.

** Program broadcast three out of every four weeks.

*** Program broadcast one out of every four weeks.

Program Extension Plan (PEP)

The NBC Program Service Plan, described in the preceding section, is designed to provide affiliated stations in smaller markets with network programs for which they are not ordered by the network sponsor. The NBC Program Extension Plan, described in this section, is a *sales* plan designed to encourage network advertisers to order more of these smaller market stations on a commercial basis, and thus provide these stations with additional network revenue, as well as more programming through this means.

Ex. 15, pg. 5

The NBC Program Extension Plan now applies to 51 affiliated stations in the smaller markets which were selected for inclusion in the Program Extension Plan Group because of their need for additional network programming and network commercial business. Under the plan, an NBC advertiser ordering a designated amount of these "PEP" stations gets additional stations in the "PEP" group as "dividends" without added charge. The more stations in the group he orders, the more he gets as "dividends". By ordering stations whose gross rates aggregate one-half of the total in the group, he gets the other half without charge—a "dividend" of 100%.

As a result of this arrangement, the network advertiser's cost for affiliates in these smaller markets is substantially reduced, so that they become very attractive advertising values, giving the advertiser supplementary coverage and more intense penetration of the national market at a "cost-per-thousand" equivalent to that of stations in the larger, more densely-populated markets.

NBC itself bears the full cost of making the additional "dividend" stations available to the advertiser, compensating such stations at their regular rates.

During the few months in which the Program Extension Plan has been in operation, it has developed a substantially increased volume of sponsored network programs on the small-market affiliates included in the plan, and this has helped them to obtain additional revenue, increase their audience and make television a more effective medium in their communities. The following shows what it has accomplished to date:

> Sponsored NBC programming has been increased 113% on the small-market affiliates included in the PEP group comparing October, 1955—the month before the plan went into effect—with March, 1956.
>
> This represents an increase from approximately 1,040 to 2,212 hours per month of sponsored network programming on these stations.
>
> As a result of the Program Extension Plan, 46 different sponsored evening programs have been ordered on the smaller-market stations in the PEP group, by 56 different NBC television network advertisers.

Ex. 15, pg. 6

The 100-Station Minimum

In connection with the Program Extension Plan and effective simultaneously with it, NBC established a sales policy under which an advertiser ordering less than 100 stations in certain evening hours would have his normal discounts reduced unless he permitted his program to be made available to unordered stations under the Program Service Plan.

This policy was designed to make more sponsored programs available to stations not previously ordered for them, and to maintain commercially-ordered lineups. At the time this policy was announced, all but 12 of the evening advertisers affected by it were ordering 100 or more stations. Under the plan, an advertiser ordering less than 100 stations in these time periods had the choice of (a) ordering additional stations; or (b) permitting his program to be made available to stations he did not order, but at no additional cost to him; or (c) taking a reduction in discounts. None of the advertisers concerned has elected to take a reduction in discounts, and as a result, more stations and more of the public have had an opportunity to receive NBC programs.

Exhibit 16

Excerpts from Typical Letters Commenting on NBC's Program Extension Plan

"You are to be commended for this very important work and I know that it will be deeply appreciated in a state like Nebraska where we have many small TV stations coming into being which must be supported by a 'thin' audience."

(Letter of November 14, 1955
from Senator Carl T. Curtis)

"The National Broadcasting Company is to be commended for having undertaken this extensive program to encourage wide dissemination of the better network television programs."

(Letter of November 2, 1955
from Senator George Smathers)

"Such efforts to promote television development in the smaller communities deserve commendation."

(Letter of October 26, 1955
from Senator Arthur V. Watkins)

"In my opinion this plan will undoubtedly fulfill a long felt need for better television service to the smaller communities.

"NBC is to be congratulated for implementing this plan, and I know that the people of these smaller communities who will benefit thereby will be deeply grateful."

(Letter of October 24, 1955
from Congressman Tom G.
Abernethy)

Ex. 16, pg. 2

"I have given this plan a careful reading, and have come to the conclusion that it represents a giant step in the direction of complete television coverage of the United States, a truly worthwhile objective when consideration is given to the almost unlimited educational and entertainment potential of the television medium.

"I am certain that the P. E. P. will be of great benefit to the Nation's smaller communities. Please accept my congratulations for its conception and best wishes for its success."

(Letter of November 9, 1955
from Congressman Charles A.
Boyle)

"As a resident of one of the smaller communities, and as a Representative of a Congressional District which has a number of small stations, I am especially grateful for the action you are taking to furnish better TV programs to our smaller towns and cities.

"I realize and appreciate the program you have instigated will be an expensive one as far as your Company is concerned, yet it does indicate the real and unselfish interest NBC takes in the welfare of all American people."

(Letter of October 24, 1955
from Congressman Clarence J.
Brown)

"Your Company is to be highly commended in efforts by your new plans to extend television service to the smaller communities throughout the Country."

(Letter of November 3, 1955
from Congressman Oren Harris)

Ex. 16, pg. 3

"I read with interest the new plan of N. B. C. for getting TV programs to the smaller communities. N. B. C. is to be congratulated. It is the sort of progressive thinking that has made your Company the leader in the broadcasting business."

(Letter of November 15, 1955
from Congressman DeWitt S.
Hyde)

"I want to congratulate you for a forward step, particularly as it affects, as I understand it, a number of smaller television stations. I believe your efforts in this direction will be greatly appreciated."

(Letter of November 21, 1955
from Congressman J. Percy
Priest)

"Certainly, this plan will give great impetus to program popularity and appeal of these small stations, and it appears to me also that the program should be most attractive to the advertisers.

"Again, I commend you highly on this farsighted program."

(Letter of October 25, 1955
from Congressman Bob Sikes)

"I think the idea is excellent and that it will not only benefit the viewer in the smaller communities but it should prove a boon to the television industry and advertiser as well."

(Letter of October 31, 1955
from Congressman James E.
Van Zandt)

Ex. 16, pg. 4

"PLAN FOR PEP ANNOUNCED IN YOUR LETTER OF OCT 4TH IS WONDERFUL GREATEST LEG UP SMALLER MARKET TELEVISION HAS EVER GOTTEN FROM ANYONE ANYWHERE DEEPLY APPRECIATE THIS MAGNIFICENT ACTION CONGRATULATIONS"

(Telegram of October 6, 1955
from Edward Breen, KQTV,
Fort Dodge, Iowa)

"I've just been reading your brochure on the Program Extension Plan, which you inaugurated. I would indeed be remiss if I did not let you know how enthusiastic I am. You have really given the stations a 'shot in the arm' that is most valuable. We feel that it is going to be a real help in our programming problems."

(Letter of October 25, 1955
from F. E. Fitzsimonds,
KFYR-TV, Bismarck, N. D.)

"I believe that I speak for the majority of Optional Stations in complimenting you on the PEP plan. All of the operators that I have contacted have expressed approval and their belief that NBC was making a substantial effort toward strengthening those stations who badly need it."

(Letter of November 2, 1955
from James H. Moore,
WSLS, Roanoke, Va., and
member of Optional Stations
Subcommittee of NBC TV
Affiliates Executive Committee)

"After you had issued the initial information on the PEP plan I set about to investigate reaction to it by double-checking the other members of the NBC TV Affiliates Committee who represent the optional stations. This has taken some time but I now have heard from the different parts of the United States and I am able to report a general consensus of the optional stations.

Ex. 16, pg. 5

"There is no doubt but what this is the best and most intelligently thought out plan for both the stations and for the advertisers that has come into being since television began. You have taken into consideration every element of the business and have developed the plan that helps everybody and hurts no one. Only good can come from it. The stations know this and appreciate what has been done."

(Letter of October 28, 1955
from Fred C. Mueller, WEEK-TV,
Peoria, Ill., and Chairman,
Optional Stations Subcommittee,
NBC-TV Affiliates Executive Committee)

"NBC has constantly led the way in pushing sales for the smaller stations. * * * They are building the entire industry so that it can better serve the country by strengthening the base of its operations."

(Letter of November 7, 1955
from William L. Putnam,
WWLP-TV, Springfield, Mass. to
Congressman J. W. McCormack)

BEFORE THE

COMMITTEE ON INTERSTATE & FOREIGN COMMERCE

OF THE

UNITED STATES SENATE

MEMORANDUM OF LAW ON THE APPLICABILITY OF THE ANTITRUST LAWS TO OPTION TIME AND THE "BASIC NETWORK" SALES POLICY OF TELEVISION NETWORKS.

Cahill, Gordon, Reindel & Ohl,
63 Wall Street,
New York 5, New York.
Attorneys for National Broadcasting Company, Inc.

May 25, 1956

TABLE OF CONTENTS.

Table of Cases.

I.

The Sherman Act forbids only unreasonable restraints of trade, not the normal incidents of engaging in a lawful business.

A. Introductory discussion.

There is being submitted simultaneously with this memorandum of law a separate Statement of Facts which describes in detail the business practices of the NBC Television Network. It is clear from this statement that option time and the "basic network" sales policy are necessary to the continued existence of a national network.

Mr. Richard A. Moore, who as a witness before this Committee proposed that these practices be eliminated, undoubtedly realizes that they are essential to the continued operation of networks. His strategy for achieving their elimination is to try to persuade this Committee that the Federal Communications Commission is required by Sections 1 and 2 of the Sherman Act to rewrite its Chain Broadcasting Regulations.

The alleged violations of the Sherman Act contained in the network option time and basic network arrangements are derived entirely from supposed analogies to two decisions of the Supreme Court relating to the motion picture industry, *United States* v. *Griffith,* 334 U. S. 100 (1948), and *United States* v. *Paramount Pictures, Inc.,* 334 U. S. 131 (1948).

The Chain Broadcasting Regulations which the Moore brief attacks were promulgated by the Federal Communications Commission "after protracted hearings and consideration not only of the general public interest but of the Sherman Anti-Trust Act . . .", *Federal Broadcasting System, Inc.* v. *American Broadcasting Co.,* 167 F. 2d 349 (2d Cir. 1948), *cert. denied,* 335 U. S. 821 (1948). Those regulations, which fix the contractual arrangements now in effect between networks and affiliated stations, were "validated" by the Supreme Court in *National Broadcasting Co.* v. *United States,* 319 U. S. 190 (1943); see *United States* v. *Storer Broadcasting Co.,* 24 U. S. L. Week 4256, 4260 (U. S. May 21, 1956).

The short answer to Mr. Moore's contention is, therefore, that the regulations now under attack were issued after exhaustive considera-

75589 O—57—pt. 4——57

tion of the public interest, including the Sherman Act, and that the motion picture cases have nothing to do with this matter.

However, we do not propose to rely only on this ground. We shall show that even if there were no Chain Broadcasting Regulations the practices complained of in the Moore presentation are entirely lawful under all decisions of the courts.

B. The rule of reason.

Section 1 of the Sherman Act, 15 U. S. C. §1, reads as follows:

> "Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several states, or with foreign nations, is declared to be illegal . . ."

As the courts which construed this language soon recognized, every contract is in a sense a restraint of trade. If A contracts to buy a load of coal from B, that is one load of coal less in the market for other sellers.

Such early cases as *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271 (6th Cir. 1898), *aff'd,* 175 U. S. 211 (1899); *Standard Oil Co.* v. *United States,* 221 U. S. 1 (1911); and *United States* v. *American Tobacco Co.,* 221 U. S. 106 (1911), promulgated the so-called "rule of reason". This was expressed as follows in the *American Tobacco* opinion:

> "Applying the rule of reason to the construction of the statute, it was held in the *Standard Oil Case* that as the words 'restraint of trade' at common law and in the law of this country at the time of the adoption of the Anti-trust Act only embraced acts or contracts or agreements or combinations which operated to the prejudice of the public interests by unduly restricting competition or unduly obstructing the due course of trade or which, either because of their inherent nature or effect or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words as used in the statute were designed to have and did have but a like significance. It was therefore pointed out that the statute did not forbid or restrain the power

3

> to make normal and usual contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose'' (221 U. S. 179).

These and other cases are analyzed in *Apex Hosiery Co.* v. *Leader,* 310 U. S. 469 (1940), in an opinion by Mr. Justice Stone, later Chief Justice.

Perhaps the classic statement of the rule of reason is that of Mr. Justice Brandeis in the unanimous opinion in *Chicago Board of Trade* v. *United States,* 246 U. S. 231, 238 (1918):

> ''But the legality of an agreement or regulation cannot be determined by so simple a test, as whether it restrains competition. Every agreement concerning trade, every regulation of trade, restrains. To bind, to restrain, is of their very essence. The true test of legality is whether the restraint imposed is such as merely regulates and perhaps thereby promotes competition or whether it is such as may suppress or even destroy competition. To determine that question the court must ordinarily consider the facts peculiar to the business to which the restraint is applied; its condition before and after the restraint was imposed; the nature of the restraint and its effect, actual or probable. The history of the restraint, the evil believed to exist, the reason for adopting the particular remedy, the purpose or end sought to be attained, are all relevant facts. This is not because a good intention will save an otherwise objectionable regulation or the reverse; but because knowledge of intent may help the court to interpret facts and to predict consequences.''

The Supreme Court has recently cited the *Chicago Board of Trade* case in pointing out that ''competition'' in the abstract is not the goal of the Sherman Act. In *Federal Communications Commission* v. *RCA Communications, Inc.,* 346 U. S. 86, 91-93 (1953), the Court said:

> ''That there is a national policy favoring competition cannot be maintained today without careful qualification. It is only in a blunt, undiscriminating sense that we speak of competition as an ultimate good. Certainly, even in those areas of economic activity where the play of private forces has been subjected

only to the negative prohibitions of the Sherman Law, this Court has not held that competition is an absolute. See Chicago Board of Trade *v.* United States, 246 U. S. 231; cf. Mason, *Monopoly In Law and Economics,* 47 Yale L. J. 34.

"Prohibitory legislation like the Sherman Law, defining the area within which 'competition' may have full play, of course loses its effectiveness as the practical limitations increase; as such considerations severely limit the number of separate enterprises that can efficiently, or conveniently, exist, the need for careful qualification of the scope of competition becomes manifest. Surely it cannot be said in these situations that competition is of itself a national policy. * * *

"The very fact that Congress has seen fit to enter into the comprehensive regulation of communications embodied in the Federal Communications Act of 1934 contradicts the notion that national policy unqualifiedly favors competition in communications. * * * Whatever the reasons, they are not for us to weigh; it is for us to recognize that encouragement of competition as such has not been considered the single or controlling reliance for safeguarding the public interest."

The different application of the rule of reason to regulated industries in general and those subject to the Federal Communications Commission in particular is thus specifically pointed out. On this point the Court said further:

"RCAC's arguments based on comparable language in the Clayton Act, and on decision under that Act and under the Sherman Law cannot, we think, be sustained. What may substantially lessen competition in those areas where competition is the main reliance for regulation of the market cannot be automatically transplanted to areas in which active regulation is entrusted to an administrative agency; for reasons we have indicated above, what competition is and should be in such areas must be read in the light of the special considerations that have influenced Congress to make specific provision for the particular industry" (346 U. S. 98).

As shown by these cases, it is necessary in determining whether a restraint is unreasonable, and hence unlawful, to examine the industry in which the restraint occurs to ascertain whether the restraint is in furtherance of or, as it is often expressed, ancillary to a reasonable business purpose.

The burden is upon those who claim it is not. As the Supreme Court said in *Times-Picayune Publishing Co.* v. *United States,* 345 U. S. 594, 622 (1953):

> "Under the broad general policy directed by §1 against unrea sonable trade restraints, guilt cannot rest on speculation. * * *"

Equally it is not the role of the courts under the Sherman Act to engage in broad revisions of business methods, absent violation of law. Thus the Supreme Court said with respect to the Sherman Act in *United States* v. *Columbia Steel Co.,* 334 U. S. 495, 526 (1948):

> "It is not for courts to determine the course of the Nation's economic development."

Judge Medina in a long and meticulous opinion in *United States* v. *Morgan,* 118 F. Supp. 621 (S. D. N. Y. 1953), dismissed an effort by the Department of Justice to revise the investment banking business through the instrumentality of the Sherman Act. He said:

> "The Sherman Act is not an open door through which any court or judge may pass at will in order to shape or mould the affairs of business men according to his own individual notions of sound economic policy. Nor was it ever intended by the Congress that judges should determine such policy questions as: the desirability of compulsory sealed bidding for new security issues; the propriety of officers or partners of investment banking firms accepting directorships on the boards of issuers; the good or bad effects of the solicitation of proxies by investment bankers; and whether investment bankers should be permitted to advise issuers concerning their financial affairs, the formulation of long range plans for expansion and refunding, the setting up of specific security issues and kindred subjects and also perform services and assume risks in connection with the registration and distribution of such security issues" (118 F. Supp. 633-4).

At another point the Court stated:

> "At the very heart of the case lies the fundamental principle which is implicit in every antitrust case, and which government counsel have never disputed, that the Sherman Act was not designed to compel businessmen in any industry to compete in any particular way, but rather to break up and dissolve monopolistic or restraining combinations, conspiracies or agreements not to compete" (118 F. Supp. 738).

We quote at some length from this opinion because there as here it was sought through general conclusory allegations to establish that the manner in which the industry functioned constituted unreasonable restraint of trade. The complaint was dismissed at the close of the Government's case, and the Government did not appeal.

II.

The manner in which NBC operates its business contains no unreasonable restraints of trade.

From what is said in the accompanying Statement of Facts about the nature of the service to the public which the networks have rendered and are continuing to render, and the manner in which they must operate in order to do this, the reasonableness of option time and basic network policy is apparent. It may be useful, however, to repeat here in capsule form what NBC does.

Its business is to conduct a *national* advertising service through television. In order to do this, it does the following. (1) For the benefit of advertisers, NBC provides for the simultaneous exposure of programs over affiliated stations throughout the country by taking options on the time of these stations in minimum packages of three three-hour intervals a day, under contracts voluntarily made by individual stations. (2) In order that NBC may be a *national* network, advertisers are required to buy national circulation during this option time in the form of a minimum basic network of 56 stations. (3) In order to maintain a national network of stations with broad circulation, NBC prepares and presents a full program service to its affiliated stations, whether sponsored or not.

The reason for this last expensive practice is plain. There must be a national body of viewers in order to sell national circulation. In order to have viewers, there must be stations broadcasting programs. In order for there to be such stations there must be programs. Thus to create a network, or indeed a television industry of any kind, three elements are essential—viewers, stations and programs.

Television is a new industry. It had to start somewhere; the three necessary elements could not be expected to come into existence simultaneously. It could not start with viewers, for the public would not buy television receivers if there were nothing to receive. It could perhaps in time have grown from independent stations. However, the investment in building a station is heavy, and as the Moore brief points out (page 35) the cost of programming is very high. If television had had to wait for the capital to be raised in each community for a local station to begin telecasting and local programming on the venture that sufficient viewers and advertisers would appear, we should in all likelihood still be without television.

The only way was for *programs* to come first, programs sufficiently attractive to build a national audience. Then, as more and more sets came into the hands of the public, television would become an effective national advertising medium for American business.

There were two major industries at the end of World War II with sufficient capital and experience in the entertainment field to make a beginning. One was the radio broadcasting industry, which had great experience with the technical side of radio and with the financing of broadcasting through advertising, but which had no experience or equipment for visual productions.

The other industry was the motion picture industry, which had great experience and equipment for visual productions, had the best known entertainers in the world under contract, and had, moreover, in its vaults a tremendous number of completed films. It could have started television on a network basis through the use of its entertainers in live productions; it could perhaps even have stimulated the creation of unaffiliated local stations by making available to them its existing films.

What happened is well known. NBC and other radio networks stepped into the breach. With no viewers and no sponsors, they built television studios and facilities, created television programs, made commitments for interconnections between stations, and over an increasing number of stations presented a complete and balanced program service. This service brought into being the national television circulation which is the very foundation upon which today's industry rests.

The moving picture producers, on the other hand, fearing in television a competitor to their virtual monopoly of visual entertainment, withheld their product. This story is recounted by Chief Judge Yankwich in his decision in *United States* v. *Twentieth Century-Fox Film Corp.,* 137 F. Supp. 78 (S. D. Cal. 1956). He there dismissed a complaint that the major motion picture producers had *conspired* to boycott television, but the opinion sets out in detail the manner in which each producer individually refused to make its films available to television.

To achieve its national network NBC has had to deal in two kinds of minimums, and it must continue to deal in them. One is a minimum audience. NBC must be able to assure a sponsor of a minimum audience or he will not pay the amount necessary to cover costs. This it can do only by proving to him that through time which NBC has optioned from its affiliated television stations it can, week after week, attract such an audience to his program. It must, therefore, be able to clear time in advance over outlets that provide national coverage. The only practicable way in which this can be done is through its present option time system. This option time is the minimum on the basis of which NBC is allowed by the FCC to deal and does deal with its affiliated stations.

The other minimum is a minimum purchase of national circulation. What NBC has to offer advertisers is nationwide coverage. The minimum which it deems it can sell and remain in the business of being a national network is the audience coverage given by its basic stations.

Before discussing in more detail the reasonableness of these minimums which are the very definition of a national network, it is appropriate to note a fundamental right in the conduct of business which the Sherman Act has not taken away. That is the right to select one's customers. The famous case in this field is *United States* v. *Colgate & Co.*, 250 U. S. 300 (1919). There the Supreme Court decided that although a manufacturer could not make dealers agree to resale prices, it could refrain from dealing with those who did not observe suggested retail prices. The Court held unanimously:

> "The purpose of the Sherman Act is to prohibit monopolies, contracts and combinations which probably would unduly interfere with the free exercise of their rights by those engaged, or who wish to engage, in trade and commerce—in a word to preserve the right of freedom to trade. In the absence of any purpose to create or maintain a monopoly, the act does not restrict the long recognized right of trader or manufacturer engaged in an entirely private business, freely to exercise his own independent discretion as to parties with whom he will deal. And, of course, he may announce in advance the circumstances under which he will refuse to sell" (250 U. S. 307).

This principle was most recently reaffirmed by the Supreme Court in *Times-Picayune Publishing Co.* v. *United States,* 345 U. S. 594, 625 (1953), where the Court said:

> "Beginning with *United States* v. *Colgate & Co.,* 250 U. S. 300 (1919), this Court's decisions have recognized individual refusals to sell as a general right, though 'neither absolute nor exempt from regulation.' "

There has never been a decision, so far as we are aware, which has even suggested that it was improper for a business organization in selecting those with whom it chose to deal to fix a minimum on the quantities that it would offer to buy or to sell. Every business must deal in minimums of some kind, or the cost would become prohibitive. NBC has fixed its minimums at the level at which it estimates that it can best serve the public through the efficient operation of a national network.

The Court of Appeals for the Second Circuit has upheld this manner of doing business against precisely the type of attack made here. *Federal Broadcasting System, Inc.* v. *American Broadcasting Co.,* 167 F. 2d 349 (2d Cir. 1948), *cert. denied,* 335 U. S. 821 (1948), was a treble damage action under §§1 and 2 of the Sherman Act by a radio station against four radio networks alleging conspiracy and monopoly. Among the charges of the complaint were the following:

> "18. * * * Under the elaborate contract structure erected by the chain networks, the local broadcasting stations are tied to the chains by a series of mutually exclusive understandings and arrangements under which the chains are accorded exclusive preemptions on the time of the local affiliates, and the local affiliates are accorded exclusive access to the programs of the chain networks.
>
> "19. Superimposed on top of this myriad of exclusive arrangements between the chains and their exclusive local affiliates is a further series of exclusive arrangements between the chain networks and the national advertisers. Pursuant to these exclusive arrangements between the chains and the national advertisers or their advertising agencies, the national advertiser, who in every case pays the entire cost of producing, distributing and broadcasting the program, is absolutely precluded from offering his own program to a local station not tied to the chain network by an exclusive standard affiliation contract. * * *
>
> "20. Under the chain networks' uniform and exclusive mode of dealing with their affiliates, the affiliate conveys to the chain the option to preempt the most valuable time available over the affiliate's broadcasting facilities. The time over affiliated broadcasting facilities thus made available to the chains is sold by the chains to national advertisers, the chain network price to whom is the aggregate of all the card rates of all the affiliated stations comprising the chain. The affiliates' card rates, that is the price for which the affiliates make available broadcast time over their facilities to advertisers, are fixed by the chains and arbitrarily imposed on the affiliates as one of the terms in the so-called standard exclusive affiliation arrangement."

There is a good deal more in the same vein, raising the questions of option time and basic network policy.

The opinion of the Court was written by Judge Augustus N. Hand, who two years before had written the opinion in *United States* v.

Paramount Pictures, Inc., 66 F. Supp. 323 (S. D. N. Y. 1946), which condemned "block-booking" in the motion picture industry. The other judges sitting were Judge Learned Hand and Judge Thomas W. Swan. This distinguished Court rejected all allegations of conspiracy or monopoly, and said:

> "Plaintiff misconceives the function of a network, which buys time from the stations and sells to the advertisers its facilities and the services of those stations as an aggregate. Not only are the networks not common carriers, but it would be cumbersome if not impractical for them to furnish programs if they did not have authority to deal independently with the advertising concerns instead of leaving the rates to be determined individually by the different stations which they serve. Such control by a network, operating as a single coordinating agency, would seem to be at least desirable in order that it might compete with other networks and advertising media and to assure a more reasonable distribution to every station of the income which the network as a whole may receive. We do not say that it would be impossible for a network to allow each station to set its own rate, but it would seem a less practical course of business and certainly one to which plaintiff can make no claim as of right.
>
> * * *
>
> "We think it improper to grant a preliminary injunction upon the charge that the networks have unlawful 'exclusive' contracts with their stations where the Federal Communications Commission, after protracted hearings and consideration not only of the general public interest but of the Sherman Anti-Trust Act, has specifically sanctioned many of the important terms of the affiliation contracts at present in use and the defendants have given reasonable grounds for denying their exclusiveness or illegality. See F. C. C. Report on Chain Broadcasting, Comm. Order No. 37, Docket No. 5061, May, 1941, p. 46; National Broadcasting Co. *v.* United States, 319 U. S. 190, 223, 63 S. Ct. 997, 87 L. Ed. 1344" (167 F. 2d 351-2).

III.

The reservation of option time is not an unreasonable restraint of trade.

A. Inapplicability of the doctrine of illegality per se.

On what basis can it be said that option time violates the anti-trust laws? Mr. Moore advances but one. He argues that it is forbidden by the discussion in *United States* v. *Paramount Pictures, Inc.,* 334 U. S. 131 (1948), which affirmed Judge Augustus Hand's opinion relating to "block-booking". He argues that because "block-booking" was held illegal *per se,* "option time" is also illegal *per se,* and accordingly no exposition of its necessity or desirability can justify it.

Illegality *per se* is a doctrine that has arisen as an adjunct to the rule of reason. The courts have said that certain types of restraints are inherently of so unreasonable a nature that they violate the Sherman Act regardless of the amount of commerce involved. This doctrine was summarized in *United States* v. *Columbia Steel Co.,* 334 U. S. 495, 522-3 (1948), as follows:

> "A restraint may be unreasonable either because a restraint otherwise reasonable is accompanied with a specific intent to accomplish a forbidden restraint or because it falls within the class of restraints that are illegal *per se.* For example, where a complaint charges that the defendants have engaged in price fixing, or have concertedly refused to deal with non-members of an association, or have licensed a patented device on condition that unpatented materials be employed in conjunction with the patented device, then the amount of commerce involved is immaterial because such restraints are illegal *per se.*"

Inasmuch as "reasonableness" depends upon all the "facts peculiar to the business", as the Supreme Court indicated in the *Chicago Board of Trade* case, the courts have been understandably slow to transfer the tag of "illegal *per se*" or "unreasonable *per se*" from one type of factual situation to another. Thus price-fixing among competitors on sales to the individual customers of each has been held illegal *per se* in *United States* v. *Socony-Vacuum Oil Co.,* 310 U. S. 150 (1940), and other cases; and in fact price-fixing is the prototype of illegality *per se*. Nevertheless, "price-fixing" by a group of investment bankers of the price of a security to be offered to the public by a syndicate of which they are members is not only not unreasonable *per se*—it is reasonable. *United States* v. *Morgan*, 118 F. Supp. 621, 690-1 (S. D. N. Y. 1953).

Against this background we shall now try to ascertain just what, if anything, was held illegal *per se* about "block-booking" in the *Paramount* case.

"Block-booking" was the practice pursued by seven of the eight defendant motion picture producers of "licensing, or offering for license, one feature or group of features on condition that the exhibitor will also license another feature or group of features released by the distributors during a given period" (334 U. S. 156).

Contrary to the impression given in the Moore brief, block-booking was only a small fraction of the *Paramount* case. In the Supreme Court's 38-page opinion the discussion of it covers less than 3 pages. The bulk of the opinion is a finding of conspiracy among the eight defendants to fix prices for admission to theatres and engage in a host of other restrictive practices, and a consideration of various aspects of a charge of joint monopolization against the defendants. What effect the existence of all these conspiratorial and predatory activities had on the Court's approach to block-booking is, of course, impossible to say.

The District Court did not in its discussion of block-booking use the words "illegal *per se*" or "unreasonable *per se*", *United States* v. *Paramount Pictures, Inc.*, 66 F. Supp. 323, 348-50 (S. D. N. Y. 1946), nor did the Supreme Court use those words. What the Supreme Court said was this:

> "The District Court held it illegal for that reason and for the reason that it 'adds to the monopoly of a single copyrighted picture that of another copyrighted picture which must be taken and exhibited in order to secure the first.' That enlargement of the monopoly of the copyright was condemned below in reliance on the principle which forbids the owner of a patent to condition its use on the purchase or use of patented or unpatented materials. See *Ethyl Gasoline Corporation* v. *United States*, 309 U. S. 436, 459; *Morton Salt Co.* v. *Suppiger Co.*, 314 U. S. 488, 491; *Mercoid Corp.* v. *Mid-Continent Investment Co.*, 320 U. S.

> 661, 665. The court enjoined defendants from performing or entering into any license in which the right to exhibit one feature is conditioned upon the licensee's taking one or more other features.
>
> "We approve that restriction. The copyright law, like the patent statutes, makes reward to the owner a secondary consideration. In *Fox Film Corp.* v. *Doyal,* 286 U. S. 123, 127, Chief Justice Hughes spoke as follows respecting the copyright monopoly granted by Congress, 'The sole interest of the United States and the primary object in conferring the monopoly lie in the general benefits derived by the public from the labors of authors.' * * * As the District Court said, the result is to add to the monopoly of the copyright in violation of the principle of the patent cases involving tying clauses.
>
> * * *
>
> "We do not suggest that films may not be sold in blocks or groups, when there is no requirement, express or implied, for the purchase of more than one film. All we hold to be illegal is a refusal to license one or more copyrights unless another copyright is accepted" (334 U. S. 157-9).

Thus if block-booking was held unreasonable *per se,* it was solely on the basis of an extension of the law of patents to copyrights. A patent (or a copyright) is a legal monopoly granted by the Government to an inventor (or author) for the benefit of the public. He will not be permitted to extend that legal monopoly to encompass more than was granted to him by licensing the patent or copyright on condition that something additional will also be taken. That there are limits to the sweep even of this patent-tying ban is shown by such cases as *Transparent-Wrap Machine Corp.* v. *Stokes & Smith Co.,* 329 U. S. 637 (1947), which allowed a patent license to include a condition requiring the licensee to assign improvement patents, and *Automatic Radio Mfg. Co.* v. *Hazeltine Research, Inc.,* 339 U. S. 827 (1950), which allowed a patent license under a group of patents to fix royalties on the basis of a flat percentage of dollar sales of the licensee, whether the patents were used or not.

It is apparent on the face of the matter that this patent-copyright doctrine bears no relation to NBC's option time, for three principal reasons:

(1) NBC does not license or sell anything to its affiliated stations during option time. It obtains time from them on a minimum optioned basis; and during that time, subject to their veto, it presents the programs which generate the circulation it sells to its advertisers.

(2) There is no question of tying anything to anything. NBC merely obtains certain segments of time from its affiliated stations during which it offers a program service under contractual provisions which permit the stations to reject individual programs. The offer of one program is never "tied" to the acceptance of another.

(3) The sponsored programs delivered by the network to the affiliated stations may contain copyrighted program material but such material is not being licensed to the stations for a fee. Instead, the network in effect pays the affiliated station for broadcasting sponsored programs containing the copyrighted material. Therefore, insofar as the affiliated station is concerned, there is no exploitation of copyright and consequently no possibility of an unlawful extension of a copyright monopoly. The basis of the Court's condemnation of block-booking is wholly absent. The legal monopoly granted by the Government to a copyright holder in the public interest is not itself exploited, much less used to try to establish an enlarged monopoly over something else.

There can, therefore, be no question of illegality *per se* of option time. Option time is not of the same category as the restraint involved in block-booking. The only question, then, is whether it is so unreasonable a restraint in the light of all the facts of the industry as to violate the Sherman Act. Such a question has two aspects: (1) What are the affirmative business reasons for option time, and (2) what are the restraints that it imposes?

B. **Affirmative reasons for option time.**

What has been said in the accompanying Statement of Facts shows the role of option time in the operation of a network. The essential point is that the general system of option time is a necessary element in a television network. If a television network is a desirable business enterprise, some form of option time must be reasonable.

As an example, assume that an advertiser wished to present over the NBC Television Network an hour's live show every Tuesday night at 8 P. M. Eastern Standard Time for a year. This desire of the advertiser is, in itself, reasonable. As Mr. Moore points out, page 40, "It is well recognized that radio and television advertising is unlikely to be effective until it has been on the air a considerable length of time." How will NBC go about setting up this program?

At present, assuming the time period has become available on the network, it is relatively simple for all concerned. The network accepts the order from the advertiser for the basic network plus as many optional stations as the advertiser desires and then sends the order to the stations selected. Because of the option time reservation, the advertiser can expect a reasonably good acceptance of the program by the stations.

In the absence of option time, how could this same transaction be accomplished?

At this point Mr. Moore's argument becomes curiously inconsistent. It should be noted in the first place that he recognizes the need for national distribution at page 35 of his brief:

> "The cost of producing a TV program today is far higher than the cost of producing a radio program in 1941. This cost can only be recouped by national distribution of the program paid for by advertisers."

The practical problem of how to get simultaneous national distribution in the absence of option time is disposed of in a paragraph at page 74:

> "Where simultaneous broadcasting is necessary for a live program or even for a film program, time can be effectively cleared by network companies without relying on time options. For example, a network company could enter into bilateral contracts with affiliated stations for firm periods, such as 13, 26, 39 or 52 weeks, covering a specified time period for a specified program or programs. * * * There is not the slightest doubt but that affiliated stations throughout the country would accept high-quality or popular network programs for simultaneous

broadcasting even if they were not under the compulsion of a time option clause."

The point is, of course, that affiliated stations could not accept such programs, even if they wanted to, if Mr. Moore's proposals were adopted. His whole object in eliminating option time is to enable affiliated stations to make firm contracts for non-network programs during what is now option time. That is the entire thrust of his proposed regulation at page 83 of his brief.

If this proposed regulation is to have any effect, as Mr. Moore obviously desires that it will, each station will then begin making firm contracts for non-network programs in what is now option time. Assume that for a few months prior to the approach of the hypothetical advertiser NBC had been carrying at 8 P. M. on Tuesday night an experimental sustaining program. According to Mr. Moore's argument, most of NBC's basic stations would not have accepted this program but would have accepted instead a variety of non-network programs from different program sources for varying lengths of time. Now comes the advertiser seeking to place a program which perhaps would be a milestone in television public service at 8 P. M. on Tuesday. NBC would, of course, have to decline. The network would have ceased to exist on Tuesday at 8 P. M.

The worst of it is that, once broken, Humpty Dumpty could not be put together again. Without a time option, it would be extremely difficult to bring the schedules of the stations back into synchronization. No high quality show could be held suspended until all or most of the stations were free of their other commitments.

Thus the elimination of option time would have necessarily one of two results, both of which Mr. Moore would disavow: (1) the elimination would be ineffective and the stations, realizing that the availability of network service was at stake, would continue to accept network programs in periods formerly under option regardless of the blandishments of the film industry and others, or (2) the stations would make firm contracts with non-network producers and the network would be *pro tanto* destroyed.

It is simply a fact that a network without continuing arrangements for clearance of time on its affiliated stations is not a network. It must have a daily schedule of time on which it may depend. Otherwise it

75589 O—57—pt. 4——58

has no assurance of circulation and nothing to sell to national advertisers. The national media which compete with network television—such as magazines and newspaper supplements—would run away with the national advertising dollar because they could deliver circulation and the networks could not.

Apart from this question of actual survival there is the problem of the mechanics of doing business. Even assuming that some sort of 50% network could be patched together for network advertisers through the week, the complication of negotiations of constantly shifting programs with nearly 200 affiliated stations is apparent. Pertinent here are the words of the Supreme Court in approving a unit policy for advertising in only two newspapers published morning and evening in the same city, *Times-Picayune Publishing Co.* v. *United States,* 345 U. S. 594, 623 (1953):

> "In any event, uncontradicted testimony suggests that unit insertions of classified ads substantially reduce the publisher's overhead costs. Approximately thirty separate operations are necessary to translate an advertiser's order into a published line of print. A reasonable price for a classified ad is necessarily low. And the Publishing Company processed about 2,300 classified ads for publication each day. Certainly a publisher's steps to rationalize that operation do not bespeak a purposive quest for monopoly or restraint of trade."

If a national network is reasonable, the principle of option time is reasonable. If a national network is in the public interest, option time is in the public interest. In adopting the Chain Broadcasting Regulations, the Federal Communications Commission expatiated upon the value of networks in its report on May 2, 1941, saying among other things:

> "We have exercised our jurisdiction upon the premise, generally accepted by the public and the industry, that the network method of program distribution is in the public interest. We subscribe to the view that network broadcasting is an integral and necessary part of radio. The regulations which we are promulgating are designed to preserve without loss the contributions of network broadcasting to the public and to the affiliated

stations, while ensuring that licensees will exercise their responsibilities under the law. We believe that these regulations will foster and strengthen network broadcasting by opening up the field to competition. An open door to new networks will stimulate the old and encourage the new'' (p. 88).

The affirmative reasons for the current time option system are so pressing that it cannot be held violative of the Sherman Act, in view of the limited nature of the option allowed under present regulations.

C. **Reasonableness of the option time arrangements.**

The discussion of the nature of the time option in the Moore brief is highly misleading. The so-called ''prime'' time under option is much less than the discussion implies, and the option is of a much less restrictive nature than the discussion suggests.

The Class A evening network rate is charged on each affiliated station during the period from 6-11 P. M. These are the ''prime viewing hours'' when advertisers are charged the maximum rate. Of this 35 hours, NBC under FCC regulations can option only 21 for any given station. Thus, at a maximum, only 60% of the Class A time is subject to option at all on a given station.

This option can be exercised only in a limited manner. It cannot be exercised at all if the station has made a commitment to another network for the time in question. It cannot exclude competition. Without the consent of the station, an option cannot be exercised except on 56 days' advance notice to the station. Thus, networks have been allowed only a minimum tool to use in putting together their national circulation.

In addition, when the network offers a program, the station is still free to reject it. The clause of NBC's affiliation contracts which governs rejection of programs during option time is as follows:

> ''6. Nothing herein contained shall: (a) prevent or hinder the Station from rejecting or refusing any programs offered hereunder which *it reasonably believes to be unsatisfactory or unsuitable,* or (b) prevent the Station from rejecting or refusing any program offered to or previously accepted by it which *in its opinion is contrary to the public interest,* or (c) prevent the

> Station from substituting therefor a program of outstanding local importance'' (emphasis added).

NBC cannot force unsatisfactory or undesirable programs upon any station under such a contract.

As is apparent from these facts, all the discussion in the Moore brief (*e.g.,* pages 42-6) about saturation of prime viewing time and station responsibility, as illustrated by the examples drawn from the Los Angeles area, amounts only to this—that NBC affiliates prefer in most cases NBC programs. The solicitude of KTTV's president to prevent his competitors from carrying network programs is understandable.

With regard to film producers, it will be recalled that network time options are the result of contracts which stations have made with networks. The amount and placement of the time they can option to networks, and the nature of the option, is limited by the Chain Broadcasting Regulations. There is nothing to prevent non-network program suppliers from negotiating contracts for option time with stations, and as to these no limiting federal regulations would apply. If individual stations do not choose to give film companies time options, presumably it is because they cannot obtain from them a program service of sufficient value or continuity to warrant the granting of the option.

In any event, the reservation of option time does not bar the film producer from the market place. He has full opportunity to sell his product to network affiliated stations in the time periods not under option. As a matter of fact, in the accompanying Statement of Facts, it has been shown that on many occasions film producers have been able to clear network option time for their programs. The unaffiliated station has a constant need for his product since the only other programming source available to the independent is the local live program. Finally, the networks themselves are proving to be excellent customers for the film producer. As a matter of fact, they have been such good customers that this, too, has caused Mr. Moore to complain.

It is clear from the foregoing discussion that the reservation of option time is a reasonable incident of the network business and that it does not unduly restrict either the affiliated station or the producer of non-network programs.

IV.

The "basic network" sales policy is not an unreasonable restraint of trade.

A. **Inapplicability of the doctrine of illegality per se.**

In addition to attacking option time, the Moore brief also charges that it is illegal *per se* for NBC to sell to national advertisers a minimum unit consisting of time on its 56 basic stations. Again the authority is a case relating to the motion picture industry, *United States* v. *Griffith,* 334 U. S. 100 (1948). There, owners of affiliated circuits of motion picture theatres, some of which were the only theatres in their towns, bargained with distributors for first runs in all their theatres and for certain other special competitive advantages. The Supreme Court held it unlawful for the defendants to use the bargaining power of lawful monopolies in the towns in which the defendants had the only theatres as a trade weapon to gain an advantage over the competitive theatres in the other towns.

It is by no means clear from the opinion that the Court found illegality *per se* in this situation. But in any event, this decision is entirely inapplicable to the basic network sales policy of NBC, for two reasons.

(1) Virtually all of the NBC basic stations are located in markets where there are other competing stations. There is no element, as in the *Griffith* case, of using a monopoly of the audience in one area to gain an advantage as an exhibitor in another. NBC's minimum unit covers the major population and distribution centers, and it is in precisely those areas where competition is keenest.

(2) In the *Griffith* situation there was no reason other than to gain a competitive advantage for aggregating theatres and bargaining for them as a group. Each theatre was in a different place, exhibiting different films at different times and charging separate admission prices. NBC, however, charges its advertisers for one homogeneous thing—a nationwide audience. Its basic stations are sold as a group

not for the purpose of obtaining a competitive advantage but to insure that effective use is made of what is essentially a national distribution system. If the NBC programs are not made available to the minimum group of stations necessary to achieve national coverage, then important sections of the public are deprived of program service. And if this happens often enough, the national circulation base begins to disappear. Therefore, the network in order to maintain itself, is certainly entitled to insist on the purchase by an advertiser of a minimum national audience.

Virtually an exact precedent for doing business in this way occurs in *Times-Picayune Publishing Co.* v. *United States,* 345 U. S. 594 (1953). Under attack there was the practice of the publisher of the only morning newspaper in New Orleans, who also published one of the two evening newspapers, in requiring advertisers to purchase a minimum unit of space in both the morning and evening papers. There was, unlike the situation with NBC, the factor that the publisher had a "monopoly" in the morning newspaper field, and the Department of Justice argued that the *Griffith* case was controlling. The Supreme Court rejected this argument. Among other things, the Court said:

> "The District Court determined that the Times-Picayune and the States were separate and distinct newspapers, though published under single ownership and control. But that readers consciously distinguished between these two publications does not necessarily imply that advertisers bought separate and distinct products when insertions were placed in the Times-Picayune and the States. * * * Although advertising space in the Times-Picayune, as the sole morning daily, was doubtless essential to blanket coverage of the local newspaper readership, nothing in the record suggests that advertisers viewed the city's newspaper readers, morning or evening, as other than fungible customer potential. We must assume, therefore, that the readership 'bought' by advertisers in the Times-Picayune was the selfsame 'product' sold by the States and, for that matter, the Item" (345 U. S. 613).

Just as the Supreme Court held that it was not unlawful *per se* for the Times-Picayune to require advertisers to advertise simultaneously in two New Orleans newspapers, on the premise that the defendant was thereby merely selling coverage of New Orleans readers, so the Court would unquestionably hold that it was not unlawful *per se* for NBC to require advertisers to advertise over a reasonable nationwide minimum of stations on the comparable premise that the network was thereby merely selling coverage of nationwide viewers. Any contention that it is illegal *per se* for NBC to fix as a minimum network purchase the audience coverage of its basic stations is plainly without merit.

B. **Affirmative reasons for the basic network policy.**

Apart from its role in public affairs, the great service of a network is that it brings to all its viewers, across the nation, instantaneously, programs upon which time and care can be spent commensurate with the size of the audience. The top quality live shows presented by the networks today could not exist without payments made by advertisers on the basis of national circulation. A network should not be criticized for trying to bring its service to the maximum number of people; only a failure to do so should subject it to criticism.

NBC's basic network policy is the means by which it fulfills its function as a national network. NBC has nearly 200 affiliated stations. But NBC requires currently that its advertisers take only 56 of these. Thus the network insures a minimum national coverage, without ceasing to be competitive with other advertising media.

Apart from the question of service to the public, for business reasons NBC must require that sufficient circulation will be paid for to maintain its national network facilities and finance programs which will attract national audiences. To sponsor a high quality program a national advertiser must pay a minimum amount. In return for that minimum amount he is given circulation over the basic stations. That is the economic reality of the situation.

C. **Reasonableness of the basic network provisions.**

It is a matter of definition that a network must operate as a network and that it must require that those who wish to use its network facilities and programs use them to a certain basic minimum. It is disingenuous for Mr. Moore to say in one breath that he is not trying to destroy the networks but that their advertisers must be allowed to pick and choose among all the stations.

The basic network sales policy is only such as permits existence of a national network. It is true that a company which does not desire national advertising will not want NBC programs, because national advertising is all that the network sells. No one would expect a national magazine or a national newspaper Sunday supplement to be required to sell regional advertisements, for example, and a national television network is in the same position. That, however, does not mean that small advertisers are not able to benefit from national advertising over NBC. The extensive participation by small budget advertisers is shown in the accompanying Statement of Facts. Those who desire local or regional advertising are free to deal and do deal with individual stations, either directly or through various agencies.

As pointed out in the accompanying Statement of Facts, national advertisers are in no way preempted by networks through the basic network policy, nor prevented from engaging in other forms of television advertising. According to a survey by the Television Bureau of Advertising, national spot television had gross time sales of \$103,872,000 in the last quarter of 1955, a figure which does not include local television advertising. This compares to gross time sales of \$116,336,797 on all networks. Networks are simply a medium for those desiring national coverage. Those desiring less have many paths open to them.

To eliminate the requirement that the basic network be utilized by adopting the regulation proposed by Mr. Moore would on the face of the matter eliminate the network. Under the proposed regulation NBC could not require an advertiser to take more than *one* station. Local advertisers in every area would presumably have to be accommodated on each network affiliate. But a single-station network is no network at all. A more effective method of destroying the networks could scarcely be devised.

Conclusion.

At stake is the existence of network television broadcasting. As a matter of plain logic, without an option on a certain minimum of its affiliated stations' time, and without sale of time on a certain minimum number of affiliated stations, a network cannot exist.

That the existence of strong and effective networks is in the public interest cannot be denied, and the Moore group does not deny it. The very existence of the television industry is a product of network enterprise. The networks are the proven innovators and creators in the field of broadcasting, as is once more being shown by their activities in color television.

The film interests represented by Mr. Moore have played no role in creating the industry. Their efforts have rather been to smother it. Now that it is healthy and profitable, however, they seek to take it over and to replace a vital live program service with standardized film shows. They ask for governmental action to achieve this end, action which would strike at the heart of the network system.

They make their attack in the guise of enforcing the antitrust laws, citing inapplicable cases from the film industry. They claim that the networks are restraining other elements in the industry. Yet without the networks the industry itself and these elements of it would not exist. Far from restraining the industry, the networks have created it.

Affiliated stations have been made possible by network programming, which they are free to accept but are not bound to accept. They recognize the value to them of the network relationship and the necessity of option time in maintaining it. They have explicitly asserted that option time is

> "a vital factor in the station-network relationship, strongly influencing the stations' ability to serve the public interest, convenience and necessity" (Resolution of ABC Affiliates, April 1956).
>
> "of fundamental importance to continued sound networking" (Resolution of CBS Affiliates, April 1956).
>
> "necessary to permit television networks to function effectively as national advertising media. If they are prevented from functioning effectively in the field, the networks' ability to provide

the overall national television service which the public and the stations need will certainly be impaired and may be destroyed" (Letter of April 18, 1956 from Executive Committee of NBC TV Affiliates to the affiliated stations).

Unaffiliated stations have prospered on the basis of the audience potential built through promotion of television set sales by availability of network programs. Mr. Moore's own description of the prosperity and circulation of KTTV is ample testimonial to this fact.

Film producers have prospered through the creation of an industry by the networks which furnishes a new outlet. That they are on the threshold of still greater prosperity is shown by the discussion in the accompanying Statement of Facts.

Advertisers have been given a new medium which for many has brought greatly increased sales. National advertisers on NBC in general use far more stations than are included in the minimum unit of the basic network.

The public has a national network available for instantaneous transmission of matters of public importance or interest. In the field of entertainment it has a wide selection of programs from network and non-network sources. High quality, live network programs are made possible by the wide circulation which the networks present to advertisers.

The activities of the networks impose no unreasonable restraints upon anyone.

The antitrust laws do not require, and the public interest forbids, the action urged by Mr. Moore and the group he represents. This Committee should not assist in reducing the television industry to a disorganized group of stations mechanically displaying the wares of the producers of film.

Respectfully submitted,

CAHILL, GORDON, REINDEL & OHL
Attorneys for National
Broadcasting Company, Inc.

May 25, 1956.

Mr. Cox. In that connection, there are two communications received by Senator Magnuson which should be made a part of the record in connection with the statement.

First, is a letter dated May 31, 1956, from Mr. Richard A Moore, of KTTV, regarding some of the matter in the statement; and second, a letter under date of June 11, 1956, from Mr. Sarnoff in further regard to that same material.

Senator PASTORE. Is there any objection to this, Mr. Sarnoff?

Mr. SARNOFF. No objection.

Senator PASTORE. All right. Without objection it is so ordered.

(The letters refered to are as follows:)

KTTV, LOS ANGELES TIMES TELEVISION,
Los Angeles, Calif., May 31, 1956.

Hon. WARREN G. MAGNUSON,
Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: I am writing with reference to the statement filed with your committee by the National Broadcasting Co. in reply to the testimony delivered before the committee March 26, 1956, by Dr. Donald F. Turner and myself on behalf of KTTV, Inc. The NBC statement contains the following on page 3.

"His testimony falls into clearer perspective in the light of the undisclosed interests for whom he was speaking when he testified before this committee.

"We understand that Mr. Moore's presentation was part of an organized campaign previously agreed upon and financed by a group of film syndicators and related interests, whom Mr. Moore served as treasurer and to whom he has made periodic progress reports. We further understand that this film group had a series of meetings, agreed upon the retainer of counsel who represented Mr. Moore at his appearance before this committee, and consulted together on the network attack to be made through Mr. Moore."

These statements are, of course, utterly irrelevant to the question upon which NBC was invited to express its views, namely, the question whether the "option time" and "must buy" policies of the networks are contrary to the antitrust laws and the public interest. However, the frequent references to these allegations throughout the statement and brief would suggest that NBC considers them to be both relevant and true.

For that reason it seems appropriate for me to supply a factual statement concerning the genesis of the KTTV testimony and concerning KTTV's relationship with other companies with reference to the issues with which your committee is concerned.

The true facts are that KTTV prepared its own testimony, engaged and paid its own counsel, paid its own expenses and spoke only for KTTV. KTTV has also taken the leadership in bringing together other companies which are being injured by the unlawful practices of the networks, and has engaged in joint research with them. We will continue to consult with such companies and individuals. But KTTV was not authorized to speak for any such companies, or for anyone else, and it did not do so. Any NBC allegations to the contrary are false.

A complete factual statement is as follows:

In May 1955, following publication of the Plotkin and Jones reports, I consulted in Washington with Mr. Lloyd N. Cutler, of the firm of Cox, Langford, Stoddard & Cutler, to obtain legal advice as to whether certain network practices were violative of the rights of KTTV. KTTV then formally retained Mr. Cutler's firm to provide us with a legal opinion on these questions. His associate, Dr. Donald F. Turner, of Cambridge, Mass., visited Los Angeles in June of 1955, at KTTV's expense, to study the facts of our operation as a basis for further consideration of the legal issues involved. Subsequently, Mr. Cutler advised KTTV that, in the opinion of his firm, the network companies were engaging in violations of the antitrust laws to the detriment of KTTV—particularly those practices known as "option time" and "must buy."

On July 22, 1955, the Federal Communications Commission announced the appointment of a committee of four Commissioners to conduct a study of network broadcasting.

Following further consultations with Mr. Cutler, KTTV, completely on its own initiative and without consulting any other company or individual, prepared a memorandum dated November 5, 1955, describing the effect of certain network practices upon KTTV. The memorandum contained certain recommendations for changes in the regulations together with a statement of the arguments in favor of such changes. Much of this material was later incorporated in my testimony before your committee.

On November 8, 1955, in Washington, I called on Dean Roscoe L. Barrow, of the Network Study Committee of the FCC, and delivered a copy of the memorandum to him. Shortly thereafter, I sent copies to various licensees of independent television stations and to several independent film producers and distributors. My purpose was to stimulate interest in these issues on the part of other companies which were also being adversely affected by certain network practices. I urged each to join in a meeting to discuss our common problems.

On December 8, 1955, such a meeting was held at the offices of WGN–TV, in Chicago. It was attended by representatives of KTTV, WGN–TV, WPIX, General Teleradio, Inc. (licensee of WOR–TV, KHJ–TV, WNAC–TV, WEAT–TV), Official Films, Screen Gems, Television Programs of America, and Ziv Television Productions. I acted as chairman and outlined the effects of the network restraints on free competition. The specific effects of the "option time" and "must buy" practices upon each of our companies were thoroughly discussed.

At my suggestion, a second meeting was held in New York on December 15, 1955, attended by representatives of the same companies. At that meeting, it was unanimously decided that the eight companies would initiate joint factual and legal research concerning the common effect of the network practices upon our respective companies. It was agreed that the results of such research would be available to each company, but with respect to any action, each company would continue to act entirely upon its own. The expenses of this research activity were to be defrayed from a common fund to which each company contributed equally, and I was authorized to make disbursements from this fund.

I was also authorized to engage counsel and I advised the group that, if he were available, I would like to engage Mr. Cutler, particularly in view of his familiarity with the general problem as a result of his work on behalf of KTTV.

Shortly thereafter, I did retain Mr. Cutler on behalf of the group, which status was and is separate and distinct from representation of KTTV.

Meanwhile, we understand, the staff of the network study committee had advised the staff of the Senate Interstate Commerce Committee of the existence of the KTTV memorandum dated November 5. The staff of the Senate committee requested us to supply them with copies, which we did, and Mr. Cutler and I subsequently met with members of the Senate committee staff during the week of January 11, 1956. We also had meetings during that week with the staff of the network study committee. In these meetings, Mr. Cutler and I were representing KTTV. In the course of these meetings, however, we advised both the staff of the network study committee and the staff of the Interstate Commerce Committee that KTTV was one of a group of companies, made up of independent stations and film companies, which were jointly studying the general questions of network practices. We stated that Mr. Cutler had been retained to advise this group apart from and in addition to his representation of KTTV.

At about this time, in the course of a meeting with Mr. Kenneth A. Cox, during which we discussed the KTTV position, Mr. Cox inquired whether I would be willing to testify before the committee, and I told him I would be happy to do so.

At my suggestion, a third meeting of the station-film group was held in New York on March 23, 1956. At that meeting, the question whether to continue any joint activity was discussed, and all the companies except General Teleradio Inc. (we understand that by this date the corporate name may have been changed to RKO-Teleradio Pictures, Inc.) and WGN–TV decided to continue the group activity. With respect to Official, Screen Gems, TPA, and Ziv, they advised the group that they were then taking steps to form an association (which has since been done) and that their participation in the group activity would be conducted through such an association, together with KTTV, WPIX and such other television stations as might wish to participate. The group thereupon retained Mr. Cutler's firm for a period of a year, to continue to advise us on the facts and issues relating to our common problems. Each of the six companies agreed to make an equal contribution to support this activity and it was agreed that I would continue to administer this common fund. The only other meeting of the group was a brief session at the NARTB convention in Chicago on April 18.

1956. No other companies have joined the group or contributed to the fund, although I understand that Hollywood Television Service, a film distributor, is expected to join the film association shortly and to make a proportionate contribution. It may be that others will join with us in the future, but we have no definite information to that effect.

It has been understood at all times that the interests of the respective companies are not identical, and each company will continue to take whatever individual action it desires on any or all issues. It is also understood that each of us shall be free to utilize the results of any legal or factual research done on behalf of the group.

The KTTV testimony which I delivered to the Senate committee on March 26 was prepared by me with the assistance of other employees of KTTV and members of the Cutler firm. No one from KTTV or the Cutler firm consulted with any other company concerning the preparation or content of the KTTV testimony at any time. Dr. Turner was retained by the Cutler firm at KTTV's expense, and his testimony was prepared without consultation with any company other than KTTV. All legal work done by the Cutler firm on behalf of KTTV, including their assistance in the preparation of my testimony, has been accounted for separately, including disbursements, and has been paid for by KTTV alone. KTTV has also paid its own expenses in connection with the preparation of the testimony, such as travel and subsistence for KTTV employees and Dr. Turner in connection with their visit to Washington.

To repeat, I stated in my testimony that I was speaking only on behalf of KTTV and that is the exact truth. Any intimation by NBC or anyone that KTTV was "fronting" for any other companies or for any of the group is utterly false. It is certainly true that KTTV has taken the leadership in stimulating other companies to express themselves with respect to the restrictive and unlawful practices of the networks which adversely affect us all. We shall continue to consult with other companies or individuals who, like KTTV, are the victims of these practices. But in testifying before your committee, KTTV acted wholly on its own and spoke only for itself.

I am glad to set the record straight on this matter, and once again may I express KTTV's appreciation to the committee and its staff for the courteous hearing which they afforded to us. We stand ready at all times to supply any additional information which the committee may desire.

Respectfully yours,

RICHARD A. MOORE, *President.*

NATIONAL BROADCASTING CO., INC.,
New York, N. Y., June 11, 1956.

HON. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce,
United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: Mr. Lloyd Cutler has sent us a copy of Mr. Moore's letter to you of May 31, in which he discusses his relationship with film organizations in connection with proposals for additional regulation of network operations.

It seems to us that the facts now admitted by Mr. Moore completely confirm NBC's understanding of the situation, as set forth in our statement of facts submitted to you on May 25. In that statement, we said that—

"We undestand that Mr. Moore's presentation was part of an organized campaign previously agreed upon and financed by a group of film syndicators and related interests, whom Mr. Moore served as treasurer and to whom he has made periodic progress reports. We further understand that this film group had a series of meetings, agreed upon the retainer of counsel who represented Mr. Moore at his appearance before this committee, and consulted together on the network attack to be made through Mr. Moore."

In his May 31 letter to you, Mr. Moore admitted that the film group he represented as treasurer established a fund to finance their research on network practices, retained the counsel who represented Mr. Moore in his appearance before the Senate committee, and had meetings to discuss their joint activities. However, he asserts that:

"No one from KTTV or the Cutler firm consulted with any other company concerning the * * * content of the KTTV testimony at any time."

This assertion is belied by the record of Mr. Moore's own reports to his group. In one of these reports, Mr. Moore informed the group that he and the attorney retained by the group—

"* * * feel we should suggest an additional clause whereby, during each segment of the broadcast day, the station would be required to reserve at least 1 hour for the presentation of programs other than programs furnished to it by a single network."

He added that—

"* * * we will probably find it advisable to make a suggestion of this kind to the Barrow committee or the Magnuson committee in the very near future. While this amendment would implement the objectives outlined in the December 19 memorandum, the members of our group have never specifically considered and agreed upon this particular suggested regulation. If a majority of you are opposed to this suggestion, Mr. Cutler and I do not feel that we would be authorized to submit it. Therefore, if you have any objection to our doing so, I hope you will let me know at once."

The report containing the foregoing was dated January 19. Thereafter, Mr. Moore included the additional proposal, for which he had asked group approval, in his March 26 presentation to the Senate Committee on Interstate and Foreign Commerce.

In the light of these facts of record, no comment is required on Mr. Moore's claim that his group was not consulted on the content of the presentation he made to the committee.

Yours sincerely,

ROBERT W. SARNOFF.

Carbon copy Kenneth A. Cox, Esq., special counsel to the committee.[1]

Mr. SARNOFF. Earlier this week, we filed with the committee's counsel material in response to a comprehensive questionnaire received from Senator Magnuson on May 28. This supplies additional data on various matters you are studying.

Mr. COX. I think the record should show that that material will be kept in the files of the committee, and incorporated in the record by reference.[2]

Mr. SARNOFF. Fine. Now, in discussing the principal issues I plan to cover the following points:

First, I will sketch briefly what a network is and what it is not, so that you may have a background picture of the special nature of the network service.

Second, I will deal with our program operation, and particularly with the question of network program control.

Third, I will cover the network's advertising function and discuss how it is interwoven with questions of station affiliation.

Fourth, I will take up the economics of networking and give you a brief financial history of our television network.

Fifth, I will try to show you how competition is the very fabric of network television.

Sixth, and finally, I will deal with the facilities problem of television, which is the real root of the issues raised before you.

1. THE SPECIAL RESPONSIBILITIES ASSUMED BY NETWORKS

Now, as to the special responsibilities assumed by networks, my first point:

Since the advent of television as a major medium, a great many different organizations have entered the business of acquiring, developing, selling, and furnishing programs. Of all these organizations,

[1] A further letter with reference to this matter was received from Mr. Moore under date of July 25, 1956. This letter is printed at p. 2875.

[2] The standard forms of affiliation agreements included in the reply to the questionnaire are set forth in the appendix hereto, at p. 3054.

only 3—the 3 television networks—have undertaken the responsibility of providing a comprehensive, balanced, national program service.

That last word—"service"—is the key to a network's program function. This function is the planning and furnishing of a service—not just 1 program, or 1 type of program, or even a few different types of programs—but an overall service, consisting of the full range of presentations of which television is capable. It is this network service which has been the basis for television's growth, and is essential for the continued growth of the medium.

Now, in connection with this service, there are certain characteristics that I would like to describe.

First, (*a*) the network service is comprehensive. Networks present a great variety of entertainment programs. However, this is only one aspect of the network service. The network schedule also includes a regular nationwide and worldwide news service. It provides national coverage of great public events like the political conventions, which millions of Americans will soon be watching, only because the networks undertake this service. The network service gives the leaders of our country and candidates for high office their only opportunity to speak face to face to the whole Nation. It provides important public affairs programs like Meet the Press on NBC and See It Now on CBS.

Networking also provides live coverage of the great sports classics. It offers many programs of information and culture, developed at the initiative of the networks—creative, costly programs like The Search for Adventure on CBS, or its recent fine series on mental health. Other examples are the NBC documentaries on the atomic bomb, on India, on the Nazi movement and on Russian communism; or The NBC Opera Theater, which a leading critic has called the most vital laboratory example of a program which meets the ultimate qualitative test for TV.

I am citing these network programs not boastfully, but to emphasize the basic fact that networks are the only organizations furnishing the public with a comprehensive, responsible national program service which includes entertainment, but goes far beyond it.

(*b*) The network service is based on a planned schedule: It is not just a random assortment of different programs, but an organized structure of programing—similar to the makeup of a national magazine, but of greater scope and variety than any single magazine. In addition, each program must be suited to the time it is broadcast. A particular program can be very effective in one time period, but wasted in another. This depends on the composition of audience available for the specific time periods, the type of surrounding programs, the type of competing programs, and many other factors. The careful planning and organizing of the network schedule is one of the most challenging creative responsibilities in our business.

(*c*) The network service is national in character: Its operation is distinctive in that it furnishes a program service for simultaneous national broadcast. This is made possible through clearance arrangements with independently owned affiliated stations, so that programs which may originate in Washington, New York, Los Angeles, or anywhere else, can immediately travel across the country on electronic tracks. These tracks consist of interconnections which the network leases from the Telephone Co.—at a cost, in NBC's case, of about $14 million a year—to join the stations into a national communications system.

Only through a network system can live programs be broadcast on a national basis. Of course, we have a number of film programs, too, and we think they are good ones. However, live telecasting is indispensable for certain types of programs, and it makes many other programs more effective. Between 80 and 90 percent of the total hours on our network consist of live programs.

Mr. Cox. I believe in the answers to the questionnaire you indicated, in the period 7:30 to 10:30 in the evening, the percentage of your programs which were on film was approximately 29 percent?

Mr. Sarnoff. That is correct.

Mr. Cox. Thank you.

Mr. Sarnoff. I would like to make it clear that in stressing the special values of network service, we are not belittling film as a method of television programing, nor are we attacking film producers and distributors. It is our position, however, that the network service should not be artificially curtailed, as certain film interests have urged, for their own benefit. Such interference with the essential procedures of network operations could result in the destruction of networking.

If that should happen, television's value to the public would shrink to a fraction of its potential, because film distribution could not possibly be an adequate substitute for the comprehensive national communications service rendered by networks. This was one of the basic points made in the statement we filed with this committee on May 25, and I want to reaffirm that statement now.

(*d*) The network service draws on a great variety of program sources: The network seeks the best programs from all available sources, both inside and outside the network organization, just as a magazine draws on many outside writers, as well as its own staff writers. In the case of a network, the outside sources of programing include independent packagers of live programs, independent film producers, motion-picture studios, stations, and advertisers. NBC itself produces less than one-third of the programs in its network schedule.

Mr. Cox. In that connection, the exact figures, as I think they were shown in your questionnaire, were 28 percent for the entire day and about 21 percent for the portion 7:30 to 10:30 p. m.?

Mr. Sarnoff. That is right.

Mr. Cox. I assume, of course, that NBC itself has some interest in, or control over, a good part of the independently produced programs which are released over the network?

Mr. Sarnoff. Well, it varies with individual programs. In some cases the program is under contract to NBC, although it is the property of an outside producer.

(*e*) The network service provides and is dependent upon a specialized advertising function: Network programing is supported by an advertising service which consists of furnishing simultaneous national exposure of sales messages in the network program structure. In the print field advertisers turn to magazines and Sunday supplements to buy national advertising in one transaction. In the broadcast field, a network performs a similar specialized function.

(*f*) The network service is unique: Both in programing and in advertising, a network's function is fundamentally different from any other organization supplying programs to stations. These other organizations acquire or produce individual entertainment programs for sale. They may sell some to a network, or to an advertiser who places them on a network, or on selected stations; or they may sell programs directly to stations.

But the companies producing and selling these programs do not themselves undertake the responsibility for developing a balanced daily program service which includes news, public affairs, information presentations, and special events coverage. They do not assume the costs of furnishing stations and the public with unsponsored public-service programs. These responsibilities they leave to the networks and the stations.

Senator BRICKER. What is the percentage of the stations affiliated that use your news broadcasting service in relation to those that produce their own news broadcasts?

Mr. SARNOFF. I am not sure that I have such a percentage, Senator Bricker. But what we provide is a network national news service which I believe is used by most of our stations in addition to the local news service which they provide themselves.

Mr. COX. Your service, then, is simply a supplemental service covering a broader scope than would normally be covered by their own local press.

Mr. SARNOFF. Well, in general, we cover worldwide and nationwide news, news of the national interest; and the local station, while it, too, through its connections with the wire services, can get some of that information, in effect adds what is of interest locally; is that correct?

Senator PASTORE. Are you talking of a program such as the John Cameron Swayze one now?

Mr. SARNOFF. That is correct, sir.

Senator BRICKER. Is there any of the information on the wire services that you get that is not available to your local stations?

Mr. SARNOFF. Well, it is available to the local stations if they are taking the wire service.

Senator BRICKER. That is what I mean; yes.

Mr. SARNOFF. But most of that information is available through our own—through our own news programs.

Senator PASTORE. It is available to you, I know, of course. You get all of the wire services.

Mr. SARNOFF. That is correct.

Senator PASTORE. And how many of the affiliated stations get the independent wire services, or are dependent entirely on your news service?

Mr. SARNOFF. I don't have the answer to that, Senator. It would depend entirely on what the individual arrangements of a station are with the news services.

Senator PASTORE. That, you don't know?

Mr. SARNOFF. That, I do not know.

Senator PASTORE. You have no control over that at all?

Mr. SARNOFF. No, sir.

And now, if I may, I would like to summarize my first point, which is that a network's function is to furnish the public, through affiliated stations, with a comprehensive, balanced program structure, simultaneously broadcast on a nationwide basis. It is able to do this by means of the revenue it obtains from selling national advertising exposure. Thus, it is built like a triangle. The base of this triangle is service to the public. The other two sides are service to affiliated stations and service to advertisers. These 3 aspects of network service are as inseparable as the 3 sides of a triangle. Only as the network serves the public well will it be able to develop the circulation to give good service to the advertisers and stations. If it does not give good value to the advertiser, it will not obtain the revenue to give good service to the public and the stations.

Network service provided the base for the growth of the entire television industry. As soon as network programs became available in a community, television circulation in that community soared, and with network service available, hundreds of stations went into operation. The national audience developed by the network service also created the advertising base for the medium—not only for network advertising, but for national spot and local advertising, too.

This audience development is still going on. Public interest in television has not slackened, but intensified. The average TV home now uses its set more than 5½ hours a day, an increase of over 21 percent from 6 years ago. TV sets are in simultaneous use in as many as 25 million homes during the evening hours.

Mr. Cox. Would you agree with Dr. Stanton that the period 7:30 to 10:30 p. m. does represent the peak viewing hours and, therefore, the prime time for national television service?

Mr. Sarnoff. I would agree that it represents the peak viewing hours. I think the term "prime time" is too restricted when applied just to those 3 hours.

Mr. Cox. However, that would be the period when the largest audience is available?

Mr. Sarnoff. I believe so.

Mr. Cox. And therefore, in terms of appeal to an advertiser, it would be the most attractive time that the network has to offer, except for specialized audiences perhaps.

Mr. Sarnoff. It would depend on the advertiser's needs. Some advertisers, it would be more attractive than it would be to other advertisers, depending on what they are trying to accomplish.

Individual network programs regularly draw audiences of 20 to 30 million viewers. The record for a single entertainment program is still held by NBC's first broadcast of Peter Pan, with its 67 million viewers.

THE NETWORKS' ROLE IN DETERMINING ITS PROGRAM SCHEDULE

Now, my second point: Although network programs are obtained from many sources, the network is, and must be, responsible for planning and developing its own program structure. This program structure is the network's product, and the network succeeds or fails on the basis of the overall appeal of its product. There has been a good deal of confusion regarding network program "control," and in an effort to clarify the subject, I will break it down into three separate questions:

First, is it proper for a network to decide what programs it will present and in what period each program should be placed—in short, to plan its own schedule?

Second, is it proper for a network to produce programs?

Finally, is it wrong for a network to have a financial interest in programs it presents?

As to the first question—the planning and decision by a network on what should constitute its schedule: We believe that such decisions are an essential responsibility of any network. Only a network can discharge this responsibility, because the network alone is concerned with the balance, variety and effectiveness of its overall schedule.

Mr. Cox. In legal terms, though, isn't it true that the responsibility for programing is imposed directly upon the licensee of the individual station?

Mr. Sarnoff. That is correct.

Mr. Cox. And that the legal basis for NBC's responsibility is, therefore, its holding of licenses for its owned-and-operated facilities?

Mr. Sarnoff. That is correct.

Mr. Cox. And insofar as the programing of the local station is concerned, would you feel that it is permissible for the licensee of that station to delegate the responsibility for determining the program content to the network, or any other agency?

Mr. Sarnoff. I don't believe, in practice, that is what happens. I think that a station in accepting network programs—I believe that is what you are referring to—is exercising responsibility in determining that he does want the network program.

Mr. Cox. In other words, you would feel that it is not a blanket acceptance of the network's offering, but that each program which he carries, when ordered by an advertiser over the network, is accepted because he believes that is the best program available to him in that time period in view of the special needs of his particular community?

Mr. Sarnoff. I believe that is true, yes.

Mr. Cox. Now, you indicate that the network, itself, has a responsibility for balance as far as the programing that it offers to the affiliate is concerned. Now, do you feel that that is a responsibility that is something separate and apart from its responsibility for its owned-and-operated stations—where, of course, it provides its programing for a greater number of hours and on a more localized basis?

Mr. Sarnoff. Well, there is a little confusion as between its own stations and the network and the stations. I might point out that the National Broadcasting Co. has amongst its several divisions, a number of divisions, two independently operating divisions: The network and the stations. The network doesn't own the stations, the National Broadcasting Co. owns the stations as well as owns the network.

Mr. Cox. Then, essentially, the men who are charged with the responsibility of operating your owned-and-operated stations are also accepting initially, the programs determined by other officials in the National Broadcasting Co.?

Mr. Sarnoff. That is correct.

Mr. Cox. Subject to their right of rejection on certain grounds?

Mr. Sarnoff. That is correct.

Mr. Cox. The point I am making, though, is that the managers, say, of WRCA—or whatever your station in New York is—would have a responsibility under the Communications Act for the overall balancing of programing from the time the station goes on the air in the morning until the time it goes off at night, and that would include, of course, a good deal of material that is in no way connected with the network's programing. I think you suggest here that the network is providing a service that it provides to its owned-and-operated stations and to its affiliates, and that within that segment of the over-all programing the network itself has a responsibility for maintaining balance.

Mr. Sarnoff. That is right.

Mr. Cox. Would that be correct?

Mr. Sarnoff. That is right.

Mr. Cox. Now, is that a responsibility which—since you say the network organization is separate from the owned-and-operated stations—should be directly enforcible by the FCC upon the network organization, itself, as a distinct entity and apart from your individually licensed stations?

Mr. Sarnoff. Well, I see nothing to be gained by the FCC imposing regulations on the network, as such, in connection with its responsibility—with the responsibility element of its programing; no.

Mr. Cox. As I understand it, you have two separate organizations: Your owned-and-operated stations, which are licensed and have the statutory responsibility for balance?

Mr. Sarnoff. That is right.

Mr. Cox. And the network organization, which is furnishing a substantial portion of the programing for those stations and for the rest of your many affiliates. And that your feeling is that the balance of the network's programing should be subject to review only insofar as it actually finds its way into the program schedules of individual licensees?

Mr. Sarnoff. That is correct.

Senator Pastore. Have you any information, Mr. Sarnoff, with respect to the number of sets that are covered by the stations owned by you, as against your affiliates that are independently owned?

Mr. Sarnoff. I believe we do have such information.

Senator Pastore. If, without too much trouble, we could have that in the record, please.

Mr. Sarnoff. Twenty-seven percent of all sets are served by the stations which we own and operate.

Mr. Cox. That is the six stations you presently own. As I understand it, you are applying for transfer of a seventh.

Mr. Sarnoff. That is correct.

Senator Pastore. If you do get the seventh, then what would the figure be? Do you have any figures on that?

Mr. Sarnoff. I don't have it offhand, but it would be somewheres between another percentage point and——

Mr. Cox. That is a UHF station in Hartford or New Britain?

Mr. Sarnoff. It is New Britain.

Senator Pastore. But definitely under 30 percent?

Mr. Sarnoff. Definitely.

Senator BRICKER. That is the ratio of the sets which you will reach by your own stations, as compared to the sets which are served by your affiliate stations?

Mr. SARNOFF. Yes, sir.

Senator PASTORE. Your own affiliate stations?

Mr. COX. Or is that a percentage of the total sets in the United States?

Senator BRICKER. That is what I was getting at.

Mr. SARNOFF. It is the percentage of all sets in the United States.

Mr. COX. In the United States?

Senator PASTORE. Well, now, I would like to get the other figure if we can. What percentage of sets are covered by your own stations, as against your affiliates that are independently owned?

Senator BRICKER. That is the affiliates of NBC.

Senator PASTORE. Of NBC?

Senator BRICKER. Yes.

Senator PASTORE. I mean we are talking here about responsibility on the part of the local licensee, the broadcasting station, as against the network's responsibility. All I am trying to do is to get into the record the comparative influence, if we are speaking about influence.

Mr. SARNOFF. We can work that figure out for you.

Senator PASTORE. I would like to get it in the record, if it is not too much trouble. You can put it in later on.

Mr. SARNOFF. Thank you. May we do that?

Senator PASTORE. Give it to me any time during the hearing so that we won't delay this proceeding.

Mr. SARNOFF. Fine.

Senator PASTORE. We will put it in at this point in the record, Mr. Stenographer.

(The information referred to is set forth in a letter dated August 9, 1956, and in exhibit 1 thereto, which will be found beginning at p. 2878. The percentage shown is 26.8 percent.)

Mr. SARNOFF. Thank you.

As I was saying, only a network can discharge this responsibility because the network alone is concerned with the balance, variety, and effectiveness of its overall schedule.

That is exactly what the FCC said in its report on the Public Service Responsibility of Broadcast Licensees, issued in 1946, when it stated:

> The concept of a well-rounded structure can obviously not be maintained if the decision is left wholly or preponderantly in the hands of advertisers in search of a market, each concerned with his particular half hour, rather than in the hands of stations and networks responsible under the statute for overall program balance in the public interest.

The same point was made by Mr. Fairfax Cone, chairman of the board of a leading advertising agency, who said:

> The advertiser is really not in a position to decide what the American people should see. His interest cannot lie in "editorial" judgment of what types of programs should be on the air, if you will.
>
> That should be the job of someone in the position of the periodical editor, who, to be sure, must have his magazine make a profit, but at the same time recognizes his responsibility to provide a balance of all that makes a good, constructive, and always-improving publication.

When network and station executives realize this necessity and assume this responsibility to the public, television will grow up.

That statement was made in 1953—not by a network representative but by a representative of advertisers. The responsibility to which he referred has been progressively assumed by networks so far as their own schedules are concerned, and the principal beneficiary has been the public.

Mr. Cox. Is it to be inferred from that that the network has assumed an increasing degree of control over programing as the years have gone by?

Mr. Sarnoff. I would say it has assumed an increasing degree of control over decisions as to what programing—in other words, control—it has assumed more decision over the structure of its program schedule, as distinguished from control over programs.

Mr. Cox. That is, what programs are to go into the overall schedule and at what point they are to be inserted in that schedule?

Mr. Sarnoff. That is right.

Mr. Cox. That is something that has been growing and has now reached the point of perhaps near saturation in the sense that you are now providing just about the maximum amount of programing, and have produced an integrated schedule, for the entire period for which you serve the network?

Mr. Sarnoff. I do not know about saturation, but I would say that it is generally accepted now that networks do exercise the final responsibility over the structure of the program schedule.

Mr. Cox. I assume in the exercise of that responsibility, however, that you consult with the advertisers concerned, with their advertising agencies, and take due account of their views as to what their programing needs are, what kind of programing is going to be of service to them in return for the financial support that they provide for networking?

Mr. Sarnoff. Yes; we do take into account their views.

Senator Bricker. And do you consult with the local stations that are actually doing the broadcasting?

Mr. Sarnoff. Yes; quite often we do. We have an executive committee of our affiliates and we have regular meetings, and at those meetings we discuss in some detail what our programing plans are.

Mr. Cox. This is in advance of your actual decision on the lineup for a new season, you mean?

Mr. Sarnoff. That is correct.

Mr. Cox. And you consult with them as to whether, in their opinion, the changes you are proposing are going to be desirable in terms of the needs of their own local areas?

Mr. Sarnoff. Well, this committee is selected by the affiliates and cannot speak for each individual affiliate but can give us a general reaction as to how they feel the rest of the affiliates will respond.

I would like to give you a specific example of what I have just been talking about. In 1954 NBC developed and introduced a new program concept for television—the spectaculars—90-minute special-entertainment attractions. They were scheduled every fourth week for a number of advertising and production reasons. To bring these shows to the public, we had to revise the whole pattern of weekly scheduling. The spectaculars series have presented some of television's finest accomplishments—from the Sadlers Wells' Ballet, to Shakespeare, to Broadway musicals. If NBC did not plan and decide its own schedule, the spectaculars concept, which has broadened the whole scope of the television medium, would have remained a dream instead of becoming a reality.

Networks have led the way in such program innovations. They have kept public interest in television refreshed and renewed. The argument that networks should not determine their own schedules is an argument that they should abdicate program judgment and responsibility.

Senator PASTORE. Mr. Sarnoff, at this point, there has been a strong implication here from time to time on the part of other representatives that much of this spectacularism has taken place only because of the recent pressures on the part of independent producers and on the part of those who are interested in subscription television. Now, what is your reaction to that?

Mr. SARNOFF. I would say, Senator Pastore, that there is no truth in that whatsoever. The spectaculars were developed, first, as an important form for television. They were—I might say quite frankly, they were started by NBC in an effort to bolster up its schedule, and its competitive schedule which, at the time they started, wasn't all that it might have been.

And I think that they have not only made possible important properties—important programs and shows and have brought much to the American public that they would not have gotten otherwise; and I think they have been an important factor in color television, for one thing.

So, I think there were many reasons of an operating nature that have nothing whatsoever to do, quite frankly, with——

Senator PASTORE. We have the assurance that, regardless of what else happens, they are here to stay?

Mr. SARNOFF. I do not know that anybody in this business can give such assurance about anything. But I would believe that they are here to stay in one form or another.

Mr. COX. In connection with the time when you first inaugurated these programs—with this different time period and with the every fourth week feature—did you encounter any opposition from advertisers who felt that they were being displaced from their normal time periods, 1 week out of 4, and were therefore in some sense losing the impact of their advertising message?

Mr. SARNOFF. Well, Mr. Cox, as usually happens with anything new—and I cannot give you the specific ones—but there were some advertisers and agencies who felt that it was a change, and it was a change from past procedures where advertisers bought on a, you know, 4-out-of-4-week basis; and they were faced with 3 out of 4, and even though it has a lot of merit on an advertiser's basis it was something difficult for them to reconcile, for some of them.

I might say that since the introduction of the 3 out of 4 principle, with the spectacular every fourth week, many advertisers are now asking us to give them that form. This is a standard evolution in the business.

Mr. COX. To participate in spectaculars?

Mr. SARNOFF. Either to participate in spectaculars or to buy on a 3 out of 4 basis.

Mr. COX. Have they found that the spectacular every fourth week has built up audiences even when the spectacular is not on?

Mr. SARNOFF. Yes, it has created an interest in the days and time periods that they have been in; that is correct.

Senator BRICKER. What was the reaction of your affiliate stations to that kind of programing?

Mr. SARNOFF. Most enthusiastic.

Senator BRICKER. How many of them are utilizing it?

Mr. SARNOFF. Well, I would have to get the actual lineups on the individual spectaculars which would depend somewhat on the orders for them. Do we have that? I think in most cases they are being carried by most of the affiliates. As I cited before, the one example of Peter Pan was 67 million viewers. You have to have pretty complete coverage to have that kind of an audience.

May I suggest——

Mr. COX. Yes, you can furnish that.

Mr. SARNOFF. To furnish that to you? [3]

Mr. COX. Yes. Now, do these spectaculars normally run over into the half-hour period beginning at 10:30 p. m.?

Mr. SARNOFF. No, the Monday spectacular is 8 to 9:30, the Saturday is 9 to 10:30, and this year we have had Sunday night, which has been 7:30 to 9, and this coming season, I believe, instead of Sunday it will be Friday from 9 to 10:30.

Mr. COX. They are all within your evening option time?

Mr. SARNOFF. That is correct.

Mr. COX. Do you have any programs which start in option time and extend into the period after option time?

Mr. SARNOFF. Yes. We have the Lux Video Theater on Thursday night, which is from 10 to 11. I believe that is the only such program—perhaps the fights on occasion, if they run over.

Mr. COX. Now, do you concur with Dr. Stanton in his interpretation that when you have a program which straddles the end of option time, that you are not entitled to an option with respect to that?

Mr. SARNOFF. Well, I am not sure that we operate that way. If we have a good program and—like the Lux Video Theater—and we put it in at 10 o'clock—well, let me put it this way: I think it is academic, actually, because if the station does not want to clear for the second half hour it is free not to take the program at all. So I do not think it is really a matter whether 10 o'clock is option time or 10:30 is not option time, or whether you stop calling 10 o'clock option time.

Mr. COX. In other words, you would never take the position that you were entitled to require them to clear for the first half hour, leaving them, then, with the Hobson's choice of either stopping the program in the middle or providing you with an extra half hour?

Mr. SARNOFF. I would say this: He is free to take the first half hour if the advertiser will accept the station on that basis. That is a practical matter. Of course, that doesn't happen. No, there is no requirement, as you state.

[3] The information is set forth in a letter dated August 9, 1956, which will be found at p. 2878.

Mr. Cox. Would it be generally true that you get the same clearance for the Lux Video Theater, on an average, that you get for programs that are wholly within option time?

Mr. SARNOFF. I do not have the exact clearance figure in my head, but I know that it is very good; and I think the quality of the program has something to do with that clearance.

Senator PASTORE. Mr. Sarnoff, much has been said here—and I think really an important part of this whole hearing is as to the influence, or the hold, that a network has over the independent station, because of a contract between them, on programing.

Now, could you get into that a little bit—your relationship with the independent station? Are they at liberty, ex parte, on their own, to withdraw any time they want from any particular program? I mean, how are they bound by contract and what are their rights, and how much independence do they have or don't they have? I think that is an important thing we are trying to get at; and we go all around it but no one ever asks the question pointblank. Let us get that on the record.

Mr. SARNOFF. The affiliated station is under contract to the network, or has a contract with the network, limited to 2 years by regulation of the Commission; and under that contract the network has certain time periods which you call option time.

There are a number of reasons for which the station may refuse to accept a network offering in those periods. They are spelled out in the contract, and I would just like to read briefly what they are:

> Under the contracts between the NBC and its affiliated station the station agrees to broadcast sponsored programs offered by NBC within designated hours except that, (*a*) the station may reject any program offered by the network which it reasonably believes to be unsatisfactory or unsuitable; (*b*) the station may reject any program offered by the network which in its opinion is contrary to the public interest; and (*c*) the station may reject any program offered by the network in order to substitute a program of outstanding or national importance; and (*d*) the station has no obligation to broadcast any program offered by the network at a time during which the station is already obligated to broadcast a program of another network.

In other words if it is carrying the program of CBS or ABC——

Senator PASTORE. Well, read that first provision again, the first exception there.

Mr. SARNOFF. "The station may reject any program offered by the network which it reasonably believes"—that is, the station—"reasonably believes to be unsatisfactory or unsuitable."

Senator PASTORE. Now, who is the judge of what is reasonable? The station, itself?

Mr. SARNOFF. I would assume that it would be the station manager and his program manager.

Senator PASTORE. I mean you have never had any controversy over the exercise of that exception, or that privilege?

Mr. SARNOFF. Not to my knowledge, no.

Mr. Cox. Do you view your option right as an enforceable legal right which you could, if you wished, insist upon through legal process?

Mr. SARNOFF. Well, Mr. Cox, I am not a lawyer. I believe it is a legally enforceable right, but in practice it is not used that way.

Mr. Cox. Now, would it be fair to say, in line with what Senator Pastore was asking, that when a station manager declines to clear for a program which the network offers—and this means, of course, that he is substituting another program for it—in some instances this may be a single instance, a local event?

Mr. SARNOFF. Yes.

Mr. COX. In which cases as I understand it, he picks this up for you on a delayed basis; he makes up the time. Normally, however, it would simply be as one, either specific or implied, ground that he thinks the program he is putting in there is better than the one offered by the network. That, I take it, is a matter on which the network may have some further discussion with him in an effort to persuade him to clear, but where, in the final analysis, his decision will stand?

Mr. SARNOFF. As a practical matter, that is exactly how it operates.

Mr. COX. As a practical matter, then, if he does not wish to honor your option you do not seek to enforce the option?

Mr. SARNOFF. We do not seek to enforce the option, no. We seek, perhaps, to convince him that either then, or at some later date, he should carry our program because we think it is a good program.

Now, you are quite right—in most cases if he does not accept the order for his station, it is because he has another program in that period.

Mr. COX. Well, then, you would feel, actually, that the clearance which you do get—the high percentage of clearance that you get—is due not to the fact that you have a right here which you would, in practice, enforce against the local operator, but because of the general advantages of being an NBC affiliate and the general high level of your programing, which leads him to accept the program and clear time for it regardless of the option?

Mr. SARNOFF. Well, I believe that there are two factors at play. I think the existence of option time in the contract with the station is an influence in the clearances which we get. And I also think that the quality, if I may use the word, of our programing and its value to the station is also a factor in securing the clearances that we get.

Senator PASTORE. Mr. Sarnoff, have you ever refused to renew a contract of an independent station because they had exercised this perogative of excepting to the option too often?

Mr. SARNOFF. No, sir.

Mr. COX. How about the case of WTVR in Richmond?

Mr. SARNOFF. What about it? [Laughter.]

Mr. COX. Well, the committee has heard testimony from Mr. Wilbur Havens, the president and general manager of the licensee of that station, regarding the circumstances under which his affiliation with NBC was terminated, I think in April of last year. And it was his statement to the committee that NBC never gave him any specific ground for its termination of his contract, but that in his opinion it was caused by two factors: One, the fact that he did not give you what you regarded as satisfactory clearance, because his was the only station in Richmond at the time and he felt, therefore, obligated under policies of the FCC to provide some clearance for the other networks, and felt that in so doing he was serving the public interest of the people of Richmond by providing them with the best selection from the offerings of all three networks; and, in the second place, that you were unwilling to give him the network rate which he felt was provided for under your formula for determining such rates and, that having given him this rate on a delayed basis, you then proceeded to cancel the affiliation in such a way that he had the benefit of the increased rate, I think, for a period of 1 or 2 months.

Senator PASTORE. Before you answer that question, Mr. Sarnoff, let me say this: Are you familiar with that testimony?

Mr. SARNOFF. In general, yes, sir.

Senator PASTORE. Are you prepared to answer it?

Mr. SARNOFF. Yes, sir.

Senator PASTORE. All right.

Mr. SARNOFF. Mr. Cox, I hesitate to run down a witness or a man who has been a veteran in business. I am not going to do that. Of course, it would be hard for Mr. Havens to put emphasis on the reasons why he was disaffiliated, if I can use that word.

One of the basic reasons was he was a difficult man to do business with. And in this business we have to deal with individuals as well as with facilities. And when I say "difficult," I do not mean difficult only in the sense of program clearances, but he was difficult. [Laughter.]

Now, one of the basic issues between us and him was this question of his claim as to coverage, against the evaluation of our own people—our own research department and engineering department—as to what coverage he rightfully could claim in having set for him his network rate. In fact, his coverage, if granted, would have eliminated Norfolk as a market and as a UHF station which is now affiliated with us. In fact, I have been told that his claimed coverage was greater than the whole population in the State of Virginia.

Now, you can have things two ways. It is our effort to maintain stations and keep a service going, and make it possible for all stations to survive. You can, on the other hand, give rates to stations on the basis of their claim of popularity, which we do not feel is justified, and which we do not feel the advertiser would recognize.

Mr. COX. Is it not true that in connection with his claims for a rate increase he furnished you with, not just a calculated coverage map for his station, but with a coverage map based on actual measured field intensities—which showed that, in fact, his signal did cover Norfolk, reach as far north as Alexandria, and as far south as the northern tier counties in North Carolina?

Mr. SARNOFF. Well, I am not actually familiar with the map coverage [turning to Mr. Bevel].

Mr. BEVEL. Yes; he did furnish such a map.

Mr. COX. And it showed coverage of that order?

Now, was one of the problems, perhaps, between NBC and Mr. Havens the fact that NBC has an owned-and-operated station in Washington, and that there was substantial overlap, therefore, between the claim of coverage of the Richmond station and of your own station in Washington, D. C.?

Mr. SARNOFF. No, sir; that was not a factor.

Senator PASTORE. Let me get into this a little bit. This Mr. Havens that we are talking about, he had the only one station in this locality?

Mr. COX. At that time, in Richmond.

Mr. SARNOFF. He was the only station at that time.

Senator PASTORE. Well, that is the peril of monopoly.

Mr. SARNOFF. When a second facility came into the market we decided that we preferred to do business with the second facility.

Senator BRICKER. Getting right down to the essence of this problem, Mr. Sarnoff: You had the sole responsibility of canceling his affiliate contract; you could or could not continue the contract. You could cancel it whenever you desired, regardless of the cause. That is your privilege.

Mr. SARNOFF. Well, we could not renew at the termination of the contract.

Senator BRICKER. That is right. Well, now, do you think——

Mr. SARNOFF. It is not unilateral, it is bilateral. He has the right, too.

Senator BRICKER. I know. Do you think that ought to be solely your responsibility, in light of the great interest in broadcasting, or that there ought to be some review by some authority over your rights in regard to your affiliates?

Mr. SARNOFF. I am sorry; I do not believe there should be some such review.

Senator BRICKER. You object to any authority on the part of the FCC to review your relationships with any of your affiliates?

Mr. SARNOFF. Well, the FCC at present reviews certain facets.

Senator BRICKER. They approve the contract on the basis of the affiliate only; they have no jurisdiction over you at all, except in your direct broadcasting?

Mr. SARNOFF. That is correct.

Senator BRICKER. And you would object to their having any responsibility in regard to the relationship of yourself and your affiliates—regardless of the cause of the cancellation of the contract, or refusal to renew it?

Mr. SARNOFF. Yes, I would, sir.

Mr. COX. Weren't you advised by some of your associates that, based on this engineering study, they should reappraise WTVR's coverage, and that they should attribute certain additional counties to his station; and that your problem was complicated by the fact that the station in Norfolk, affiliated with CBS, which had a slightly—a comparable coverage, had a rate substantially greater than that which WTVR then had?

Mr. SARNOFF. I believe that is correct.

Mr. COX. In fact, did not some of your associates suggest that the rate increase sought by Mr. Havens should be granted?

Mr. SARNOFF. I do not recall offhand, Mr. Cox, whether the specific figure that Mr. Havens recommended—suggested—was recommended by my associates or not.

Mr. COX. Well, at the time of this discussion he had a network rate of $625 and his national spot rate was $875; and it was pointed out to you, was it not, that this was probably the only station in the country which had such a spread between its two rates?

Mr. SARNOFF. Excuse me, Mr. Cox, are you referring to a memo you have there, so I can refresh my memory?

Mr. COX. Yes, I am referring to a memorandum of June 30, 1954, from Mr. Hancock to Mr. Rumpel; or, maybe it is the other way around.

Mr. SARNOFF. I do not have any knowledge of that particular memorandum, obviously.

Well, Mr. Cox, maybe I can put it to you this way—and if you want to get into those details, perhaps I can have Mr. Bevel answer some of them. There was a difference of opinion as between the station as to the rate it should have for the coverage it was claiming and the rate that our people felt it should have on the basis of the scientific information—or as scientific as you can get in this business—that they had as to what it ought to be. Also in the light of the realities of business, we felt that he was claiming more than he had a rightful claim to. He felt that we were not crediting him with as much as he felt he was entitled to. It seems to me it is a matter that is not unique in business; it requires business judgment and business decision and I do not see how it can be——

Senator PASTORE. But, Mr. Sarnoff, if he became disaffiliated, to use your word, with NBC, could he still go to ABC and CBS?

Mr. SARNOFF. He could have gone to either. Remember, Senator Pastore, there was only one station in that market.

Senator PASTORE. Now, fundamentally, of course, you have nothing to do with it, and I do not know how much we are going to have to do with it. But fundamentally, that is the whole problem: It is one man in one community that runs the whole show in broadcasting. That is the one thing that is bothering me in every respect of this television business, from top to bottom.

Mr. SARNOFF. That is correct.

Senator PASTORE. And the big question here is how much real competition is there in it; and sometimes those who come here to complain against the monopolies are in a little monopoly of their own. Only sometimes because it involves one individual they do not think that is quite the case.

Now, here is one community that is confined to one broadcasting station, that has the right to deal with three networks. Now, I agree with Mr. Bricker that we get into the point that sometimes the viewing public is victimized, because it is denied, because of a controversy between an individual and a network, a certain program that it would like to see. But the fact of the matter is that the whole problem could be resolved here if you had four television stations in that community.

Mr. SARNOFF. That is correct.

Senator PASTORE. Then you would have something to compete with.

Mr. SARNOFF. That is absolutely right.

Senator BRICKER. One more question, Mr. Sarnoff. Have you a record of how many of your affiliates have refused to take the various programs that you have furnished under your advertising contracts?

Mr. SARNOFF. Of all the—if I understand your question, it is how many of our stations refused to take——

Senator BRICKER. That is right.

Mr. SARNOFF. Well, I understand that the answer to that specific question is in the questionnaire that we filed.

Mr. COX. I think that is exhibit 9 to your questionnaire, is it not? They have here a series of pages indicating specific programs and stations which have not cleared those programs—either stations that are primarily affiliated with NBC or those which were receiving major services from other networks.

Senator BRICKER. Now, in your advertising contracts with the advertising sponsor, do you take into account, in the rate that is charged, the number of stations that do not carry the programs?

Mr. SARNOFF. Well, the charge to the advertiser is the aggregate of the network rates for those stations on which his program is carried. Therefore if his program is not carried in a particular market which he ordered, but for one reason or another is not able to obtain, he is not charged for that market.

Senator BRICKER. He is not charged for that?

Mr. SARNOFF. No.

Senator BRICKER. That is carried in your contract?

Mr. SARNOFF. That is right.

Senator BRICKER. Your contracts with your affiliates and your advertising contracts generally are in the record?

Mr. COX. Yes.

Mr. SARNOFF. Affiliation contracts are in the record.

Mr. COX. Not the advertising contracts; but the affiliation contracts.

Senator BRICKER. Your advertising contract is made upon the basis, then, of allowance for those stations who do not take the advertising program?

Mr. SARNOFF. Well, it is not exactly allowance, it works the other way. The charge, or payment by the advertiser, is made up by the aggregate of those stations which he does get for his program.

Senator BRICKER. Now, what if a station consistently refused to take a certain program, and you had assured your advertiser that your affiliates would all, or practically all, carry the program? What would be your attitude toward that station?

Mr. SARNOFF. If most of our affiliates had agreed to carry the program and one had decided not to?

(Senator Bricker nods.)

Mr. SARNOFF. We would try to persuade him that he should carry the program, and if the decision on his part was not to carry, that would be the end of the matter.

Senator BRICKER. And have you ever canceled any other affiliates' programs on the basis that they did not carry a proper percentage or share of your advertising programs?

Mr. SARNOFF. You mean cancel affiliation contracts?

Senator BRICKER. Yes.

Mr. SARNOFF. Not on that basis.

Senator BRICKER. Never?

Mr. SARNOFF. Not to my knowledge.

Mr. COX. Have you failed to renew them on that ground?

Mr. SARNOFF. I would say this: That in renewing contracts, as situations change in markets with new stations coming in, with changes in management, with changes in operating quality of the station, with changes in the station's position in the market, that amongst many factors taken into account, if there is a change in affiliation to be taken, conceivably could be the amount of clearance.

Mr. COX. In connection with the Richmond station, is it not true that you timed your cancellation of the contract with WTVR so as to coincide as nearly as possible with the on-the-air date for the second station in the Richmond area, WXEX in Petersburg?

Mr. SARNOFF. Well, actually, the only timing that was possible was the timing that coincided with the termination date of the contract.

Mr. Cox. And you had gotten some assurances from Mr. Tinsley, the owner of WXEX, that he hoped to be on the air about that time?

Mr. SARNOFF. That is correct.

Mr. Cox. Mr. Havens put into the record a copy of the letter notifying him—not initially of cancellation, but simply of notice that you did not wish the contract automatically to be renewed—which was mailed to him on February 10, 1955, and in which you indicated that you simply desired to review the provisions in the contract and that if your study indicated the desirability of proposing any changes in the contract, you would then discuss those proposals with Mr. Havens so that you could formulate with him "a mutually satisfactory basis for continuing the affiliation of your station with the NBC television network." You sent him such a letter, did you not?

Mr. SARNOFF. Well, I did not send it to him.

Mr. Cox. It was sent by Mr. Bannister of NBC?

Mr. SARNOFF. That is correct.

Mr. Cox. Is it not true that at that time NBC had decided they were going to cancel Mr. Havens' affiliation?

Mr. SARNOFF. I believe it was approximately about that time. I might state this is a standard form of letter.

Senator PASTORE. Mr. Sarnoff, it has been called to my attention that there are 3 television stations in that area now, where there was 1.

Mr. Cox. That is true.

Mr. SARNOFF. I believe that is right. Yes.

Senator PASTORE. Now, does your program reach that area?

Mr. SARNOFF. Richmond?

Senator PASTORE. Yes.

Mr. SARNOFF. Yes.

Mr. Cox. You advertise WXEX as your Richmond affiliate?

Mr. SARNOFF. Yes.

Senator PASTORE. Now, as a matter of practice, there have been many complaints here on this question of UHF and VHF—that when you have a UHF station in a locality that is tied up, you have a contract with one of the networks or several of them, and a VHF station comes in, the contracts are usually transferred from UHF to VHF. Now, is that quite common, Mr. Sarnoff?

Mr. SARNOFF. As a matter of it—it is common with us or common in the industry——

Senator PASTORE. Common in the industry? I mean, let us face the facts. I mean, I am not being critical now, I am just trying to find out if it is so. You have your reasons for it, and I would like to know what they are.

Mr. SARNOFF. I am going to touch a little later on UHF in relation to NBC. I think there are cases, Senator, where there have been shifts from UHF stations to V's as they came into the market. They worked the other way, too. In the case of Norfolk, as I mentioned before, we undertook an affiliation with a UHF station where formerly we had had a V.

Mr. Cox. In that case, however, the VHF station had terminated its affiliation contract with you; hadn't it?

Mr. SARNOFF. Well, it would have been possible to maintain a secondary affiliation with them.

Senator PASTORE. I know that is so. But we have had testimony here that VHF is the more powerful medium of broadcasting, and it has a wider coverage. And every time a VHF comes in—and I am not saying it shouldn't come in, we are not getting into that discussion now—but it has been the practice, there have been a number of complaints here during the progress of this hearing, on the part of UHF station owners, that the minute a VHF station is permitted to operate, that the big networks transfer their contracts to the VHF. And because they lose the better quality of program, they are destined to lose viewers and finally shut down. Now, why is that so, if it is so?

Mr. SARNOFF. Well, if it is so, I think one of the problems is one of the things inherent in the problem of facilities, and that is the circulation problem. It is difficult, sometimes—and we must face the fact, there is no point denying it—it is difficult, sometimes, to sell UHF stations to advertisers, on the basis of the lack of circulation presently existing in some markets.

Senator BRICKER. One question that I can't resolve in my own mind, Mr. Sarnoff, and it involves the very nature of the broadcasting business: The individual station is subject to license. It is controlled and regulated by the rules of the Commission; it is responsible to them in the public interest; it is, in fact, a public utility. Now, the networks have complete control over the life or death of a station in many instances. You could make a profitable station, or you can make a station unprofitable by giving or refusing or withholding an affiliation agreement. There is a public interest in the whole aspect of broadcasting. You are in a controlling position in the networks, not only as to the station itself but as to what advertisers shall have available time. Your contract controls that.

For the life of me I cannot see why that isn't charged with the public interest as much as the local broadcasting, because you have the power over the stations—you might as well admit it, we all know it. You likewise have the power over the advertiser. You can put on, or you can refuse to put on. Now, isn't there a public interest in the networks the same as in a local broadcasting station?

Mr. SARNOFF. Well, Senator Bricker, I believe that everything that broadcasting does, it should do to serve the public interest.

Senator BRICKER. I agree with you on that.

Mr. SARNOFF. I know of no alternative to the present competitive system that I think would prove a better or more satisfactory result, or would be more in the public interest, than the present free enterprise, highly competitive system that we now know. And this includes all the problems involved with stations either making a profit or not making a profit; advertisers getting a time period or not getting a time period.

I will touch on this point a little later.

Senator BRICKER. It would still be free enterprise, regardless of whether or not there is a regulatory authority to see that there is a proper handling of the power that you have got.

Mr. SARNOFF. Well, I think that raises certain problems on matters that I think, quite properly, the Government should not be involved in.

Senator BRICKER. Why not?

Mr. SARNOFF. I would like to make reference——

Senator BRICKER. Just explain why the Government should not be involved in it, when the Government controls the nature of the program by the local station—it can withhold or grant licenses to a local station.

Mr. SARNOFF. I will take issue with that, Senator Bricker; the Government does not control the nature of the program. That is one of the very points we are concerned with, that the Government would control the nature of the programing.

Senator BRICKER. But they do have rules and regulations as to the character of the program. If there is a program that is adverse to the public interest, the Government can withhold a license. It has got complete power over the broadcasting station itself, and that must involve the nature of the program—not the program itself, not censorship or anything of that kind, and nobody wants to see a Government censorship of programs.

Mr. SARNOFF. I agree.

Senator BRICKER. I am the last one that ever wants to see that. But it does control the broadcasting business by license, and can refuse a license to a station if it doesn't fulfill its public obligation.

Mr. SARNOFF. That is correct.

Senator BRICKER. Now, here you, the networks, control the life and death of that local station. They, to a degree, control the kind of programs that they put out. They control the advertiser that can get on and cannot get on, or determine the one that can get on and cannot get on.

Why there isn't a public interest in that, and why there isn't a Government interest involved, I cannot understand.

Mr. SARNOFF. Well, I think there is a public interest, and again I say I don't—in the first place, I think the word "control," if I may say so, is perhaps a little bit overused. There isn't the kind of "control" existing that you referred to. There are plenty of times when—well, not plenty of times, all the time. We cannot run a business based on advertising serving industry if we don't take into account the needs of industry.

Now, the fact that one advertiser gets a particular time period because the other one doesn't get it—because the other one has it, this is just the way the world is made. No two bodies can be in the same place at the same time. If the networks don't decide which advertiser is to get the time period, the only alternative is to have a Government body. I certainly don't think——

Senator BRICKER. But there should be a fair dealing with all.

Mr. SARNOFF. There is.

Senator BRICKER. It is charged with the public interest. It has a public utility aspect to it, and if there isn't somebody that can control that, it is left absolutely and arbitrarily to the judgment of the networks—be there 1, be there 2, be there 3.

Mr. SARNOFF. I don't recognize the Government can exercise better judgment over which advertiser has a better program——

Senator BRICKER. Not that they should judge which shall have and which shall not have, but that there should be fair dealing with all. Because they have the power to make or break a business—the networks, themselves.

75589—57—pt. 4——60

Mr. SARNOFF. I think their record to date on building it has been pretty good.

Senator BRICKER. It may be; I have no complaint with the program making that you have got, not at all. There may have been instances, though, of unfair dealing, and there ought to be some authority to which there could be an appeal.

Mr. SARNOFF. I am not quite——

Senator BRICKER. I don't want to leave it in the hands of an individual—what if there should be a consolidation of the two networks? What if there should be one in control of the programing of the country and of the advertisers that should get the advertising rights, and one is excluded and the other admitted?

Mr. SARNOFF. Well, what if there should be one Government controlling the facilities——

Senator BRICKER. There is and should be and will be, I hope.

Mr. SARNOFF. Determining which advertisers, what programs, what kind——

Senator BRICKER. No, not which one, but that there should be fair dealings with all. There is a competitive system of industry in our country, and there should be no individual that has the right to say to this business "you can advertise," and that business "you cannot advertise," under similar circumstances. Each one should be treated fairly and equally, in my judgment.

Mr. SARNOFF. I am not quite clear to what you are referring when you say there should be—or there hasn't been fair dealings, Senator Bricker.

Senator BRICKER. Without conclusion, there might be, there might be. And there must be some jurisdiction——

Mr. COX. Mr. Sarnoff——

Senator BRICKER. Just a minute, please.

There must be some jurisdiction to determine whether or not this great advertising facility of our country that controls so much of business in which the public is interested, and that reaches into practically every home—someday it may reach into every home of the country—there should be some power over that arbitrary discretion which now the networks exercise, or could exercise.

Mr. SARNOFF. They do not exercise arbitrary discretion.

Senator BRICKER. They could exercise, and you know it just as well as I do.

Mr. SARNOFF. I don't believe they could.

Senator BRICKER. What would prevent it?

Mr. SARNOFF. The competitive system and the competitive climate in which they are now operating.

Senator BRICKER. What if we get down to one network—it is a part of Government to see that that should not happen—but what if it should happen? It is a question of power and control and authority in which there is an overweaning Government responsibility representing a great public interest.

Mr. SARNOFF. Well, Senator, if I may, I would like to make this comment: I don't think any of the fears that you have, you need have, in the present situation with the present competitive system we have. I would suggest if the day comes, and I certainly don't believe it will, where there is only one network, then I would suggest you take a look at the situation under those circumstances.

Senator BRICKER. Well, isn't it the responsibility of Government to look at the situation as it is today and the possibilities that might accrue?

Mr. SARNOFF. Yes, but I don't think the——

Senator BRICKER. There are many companies that would like to have an advertising advantage, that are competitive with those that have it?

Mr. SARNOFF. Are you suggesting——

Senator BRICKER. They can't get in.

Mr. SARNOFF. Are you suggesting that the Government decide which advertiser has the time?

Senator BRICKER. It ought to lay down the rules by which fair treatment should be given to all. If that means splitting up the time—whatever it means, I don't know. I am not planning this program at all. But I do know that there is a great public interest in this, far greater——

Mr. SARNOFF. I agree.

Senator BRICKER. Than in those public utilities that are regulated.

Now, someday, someday, if ever the time comes when there isn't a fair approach to this problem on the part of the networks, whenever there isn't competition that will treat all fairly and alike, then you are going to face absolute Government regulation and you are going to face it on a public utility basis—which I don't think is necessary, I wouldn't want to see it at the present time. But I want to see a fair dealing with the public, and with business, and with the various stations that reach the public. I cannot for the life of me understand how you can justify the Government regulation of the stations, themselves, and the networks go absolutely free of any Government regulation, either as to character of the programs or the way you treat business in general.

Mr. SARNOFF. Well, Senator, I touch on that very point in my statement. If I may, I would like to——

Mr. COX. I had just one point in that connection, and that is: What, in your view, would be improper or undesirable about having networks file with the Federal Communications Commission a statement of their affiliation criteria, a statement of their policies with regard to the allocation of advertising broadcast time, and then permitting anyone who feels himself aggrieved to appeal to the Commission—not on routine day-to-day matters, but where he feels that actually, by some affirmative action of a network, he has been injured—give him a right to appeal to the Commission for a determination in the matter?

Mr. SARNOFF. Well, Mr. Cox, as you know the broadcasting business lives in enough of a goldfish bowl as it is. I think that it imposes a situation where, rather than the free play of competition operating and rather than arrangements as between individuals being carried on as they properly should be, quietly—I mean I see nothing to be gained by it, I will put it that way. I see no benefit to be achieved.

Mr. COX. You say that the network industry lives in a goldfish bowl, that is in a sense that particular instances, as they arise, are discussed in trade publications, or may receive even broader attention. But wouldn't it be more orderly to provide a forum for one who felt he has been aggrieved by a network, to have a forum to which he could go for a decision?

Mr. SARNOFF. Well, now, specifically you addressed yourself to affiliation arrangements. I still think that is a private matter between the network and the station. I mean it is a contract negotiation.

Mr. COX. You think, then——

Mr. SARNOFF. I don't think you can set—as I will mention as I get to it—hard and fast rules so that anybody who feels that he can qualify under these set of criteria, from which there is no possible deviation, automatically is entitled to an affiliation. I don't think you can run a business that way.

Mr. COX. Let us take the situation where a man has an affiliation, and you propose to withdraw it from him. He feels that he could convince an impartial body that the only ground for this action on the part of the network is the fact he has not cleared the programs offered to him by the network, and he wishes to attempt to justify his decisions, as a local licensee with the statutory responsibility for programing his station, by showing why he put certain programs on in lieu of those which were offered by the network.

Now, in your view is this an improper interference in contract matters; do you feel that it is absolutely essential that the network, in order to enforce its option rights, must have the unrestricted power of terminating that affiliation at any time?

Mr. SARNOFF. I think the network should be free, absolutely free, in its dealing with its affiliates.

Senator PASTORE. Which leads me——

Mr. SARNOFF. I might say it it not a one-way street.

Mr. COX. They terminate contracts, too?

Mr. SARNOFF. Certainly, they have equal rights.

Senator PASTORE. Looking at this from the point of view of a local advertiser, or the local user of a broadcasting facility, like a candidate for public office running, let us say, on a municipal level or on a State level. We had testimony here yesterday from Dr. Stanton to the effect that the network does negotiate with the station as to the setting of the fee for the time to be used on a national broadcast. Am I correct in that?

Mr. SARNOFF. That is correct.

Senator PASTORE. You follow the same policy?

Mr. SARNOFF. Well, actually, the network determines the rate for the station for that broadcast.

Senator PASTORE. National broadcasts. Now, Dr. Stanton went so far as to admit—and whether or not he did admit it I think it would be a truism—that that in effect does influence the rate that is instituted by the local broadcasting station insofar as a local program is concerned. You heard him say that?

Mr. SARNOFF. I heard him say that.

Senator PASTORE. You heard him. Do you agree with that?

Mr. SARNOFF. I don't know that you can pin it down specifically. I think that you will find in many cases, and I don't have a rate card in front of me——

Senator PASTORE. Wide or narrow, it does have an influence. When you step in and tell a man that a quarter of an hour is worth $200 or $300, he begins to believe it is worth $200 or $300 no matter who wants to buy.

Mr. SARNOFF. I want to make this distinction—I think it probably will have more influence on the national spot rate than it would have on the local rate.

Senator PASTORE. Now, that being the case, that is actually requiring a local advertiser—a small advertiser who wants to use, let us say, 10 or 15 minutes on a local broadcasting station—to pay a fee that actually is promulgated on a national level?

Mr. SARNOFF. No; that is not true.

Senator PASTORE. Explain to me why it isn't? We want to get this in the record.

Mr. SARNOFF. For this reason, I believe: The fact that the national rate may have an effect on the final determination of the national spot and the local rate, it has an effect only in that it has created a certain value for that station. The station under no circumstances—if it is being run by good business management, good business judgment—under no circumstance can set a local rate that is uneconomic, or will not make it possible for local advertisers, and in this case the individual is in the same posture as a local advertiser——

Senator PASTORE. Well, if you had a free market to move in, you would be right. But it just so happens—and there, again, it isn't your fault, it isn't anybody's fault—but in most communities we don't have quite enough broadcasting stations. If we had half a dozen or a dozen of them, I think the prices would come down.

Mr. SARNOFF. Not necessarily, there is another factor. The local station, even though he may not have much competition from other facilities in his market, still has competition from other media.

Senator PASTORE. You mean like a newspaper or a radio?

Mr. SARNOFF. Certainly.

Senator PASTORE. Well, I think, myself, the importance of this hearing spotlights the importance of television.

Mr. SARNOFF. I agree.

Senator PASTORE. I hope we don't have to kick that dead horse.

Mr. SARNOFF. No, no.

Senator PASTORE. Television is a pretty important attractive medium—that is the reason why you are here, and that is the reason why, I hope, I am here at this hearing.

Mr. SARNOFF. Excuse me, sir. The point I was trying to make—the local television rate must take into account the other mediums available. Let us say, for example, the local dealer, the local department store, who has other mediums available to him—maybe not as effective, maybe he would rather have television, but maybe he won't buy it if the local rate is too high.

Senator PASTORE. Are you still saying, Mr. Sarnoff, that the system is such that even though a rate is set for a national program between a network and a local broadcasting station, that there is sufficient leeway on the part of the local broadcasting station to make a lower rate insofar as a local user is concerned?

Mr. SARNOFF. He is absolutely free to set his own rate at any rate that he wants.

Senator PASTORE. Now, let us get into how this works out. You set a specific rate on a national broadcast. Do you mean to tell me that if a local broadcasting service—I am not questioning now, I am merely getting this on the record—if a local broadcasting service exercises the exception to the option, and let us say allows me to go on for 15 minutes to make a political speech for which I have to pay—would it be profitable for that station to exercise its exception to the option and yet charge me—and make money, you see—a price that is lower than the rate that you have set? Now, do I make myself clear on the question?

Mr. SARNOFF. I believe so.

Senator PASTORE. In other words, I am trying to get into the practicalities of this.

Mr. COX. He would retain all of his local rate would he not, whereas, he must share with the network ——

Senator PASTORE. That is what I want him to answer. I want to get this down categorically. I want him to answer it.

Mr. SARNOFF. It would depend on a number of factors. I would say in the case of selling the time to you for broadcast, using his local rate for that purpose and retaining a hundred percent ——

Senator PASTORE. I am talking now about prime time; I want to go on between 8 and 8:15. [Laughter.] I don't want to go on when everybody else is in bed.

Mr. SARNOFF. If he had no program costs and he had ——

Senator PASTORE. Well, he has a program; it is Sunday night, and he has The Colgate Hour. I will put that in the question, too.

Mr. SARNOFF. No; what I meant was if he sells you time for whatever purpose you want, and he doesn't have to provide any additional cost, or it costs him nothing to do that, he merely sells you the time, depending on what his local rate is, and in this case, he would retain a hundred percent of it, minus an agency commission if you were to buy it through an agency; it is possible, and quite likely, that he may in that case retain more money, or as much money, probably not less, than he would have received from his compensation from the network for that same period sold to a national advertiser.

Senator PASTORE. In other words, would it be profitable or unprofitable for him to sell the time to me for less?

Mr. SARNOFF. It would depend on what he was receiving from the network for that period. I can't answer you absolutely because I would have to know more facts. I would have to know exactly what his rate was for the national advertiser ——

Senator PASTORE. Does the cut that he gets from you allow him leeway to give me a reduced rate less than the rate that you have set with your advertiser; that is the point that I am getting at?

Mr. SARNOFF. Yes; it should.

Mr. COX. That is he would get, normally, not more than a third of the gross time charge for his station for a national broadcast; so that he could set a local rate 25 percent under his national network rate, and if he did not have excessive programing costs, retaining 100 percent of that, he would make more money for that time period than if he were on the network?

Mr. SARNOFF. He might; he could. There are a number of instances where the network rate is anywheres from 40 to 50 to more percent higher than the local rate. It is quite a substantial spread.

The point I was trying to make earlier, was that there is a relationship, but in the sense that it is related back to the value of everything that he is receiving from a network, which gives him an opportunity to set a local rate which may be higher than the local rate of his competitor; that is possible.

Mr. Cox. Because of the network service and the reputation that permits him to have in the market?

Mr. Sarnoff. His own local management and what he does in the community.

Mr. Cox. Getting back to the matter touched upon by Senator Pastore: Has not NBC within the past several months terminated its affiliation with station KEDD, in Wichita, a UHF station to affiliate with KARD, a VHF station, and has it not notified WGBS, in Miami, a UHF station, that it is terminating its affiliation to affiliate with a new VHF station to go on the air there?

Mr. Sarnoff. That is right.

Mr. Cox. And this, in terms of your earlier testimony, is because of the additional circulation that you obtain and the greater ease that you will have in selling those markets to national advertisers?

Mr. Sarnoff. No; it is not. In the case of Wichita it was because of difficulties in the management of that station, to the network, failures of equipment, a number of other matters which if you wish, I could go into.

Mr. Cox. Then it primarily did not turn on the UHF–VHF situation?

Mr. Sarnoff. No; it did not; it turned on the management of that station.

Mr. Cox. How about Miami, was that perhaps in terms of the relations of Mr. Trammell to the network?

Mr. Sarnoff. Well, it was in terms of our knowing there would be a V there originally, and the arrangement with the U, I believe, always had been on a 90-day—what we call an interim basis.

Mr. Cox. Mr. Storer had always known that there was a V allocated and would be granted?

Mr. Sarnoff. Yes.

Mr. Cox. And that his affiliation with you was subject to the likelihood of your making a shift when that was available?

Mr. Sarnoff. That is correct.

Senator Pastore. Where V's have been allocated to certain areas that are covered by U's, you usually do it? Your contract with the U is usually on a temporary basis?

Mr. Sarnoff. Yes, and I believe there are a number of cases where the V is on a temporary basis also, pending more facilities in the area.

Mr. Cox. Is this more universal in the case of UHF stations, however?

Mr. Sarnoff. I would believe it is probably more in the case of U's; yes.

Senator Pastore. All right. You are on page 11.

Mr. Sarnoff. Thank you. [Laughter.]

Senator Bricker. You were temporarily delayed. [Laughter.]

Senator Pastore. Let me say this, for the benefit of all that are here, including Mr. Sarnoff, the members of the committee, and the staff of the committee, especially the counsel. We will go until 12:30; we are going to take a short recess for the benefit of the stenographer. This is off the record.

(Discussion off the record.)

Senator PASTORE. Let us have quiet quickly, so that we can get going, please. Thank you very much.

All right, Mr. Sarnoff.

Mr. SARNOFF. Thank you.

On the second question—that is the right of networks to produce their own programs, this is another aspect of the responsibility I have been discussing.

In order to discharge this responsibility, a network must have a creative, experienced program organization. Through its program staff, it produces certain of the entertainment shows it needs for its schedule, develops new stars and writers and builds programs to suit their talents. It also produces other programs which are needed for a well-balanced schedule, but which no advertiser, agency or independent producer takes the initiative to produce. This is true of such NBC programs as Today, Home, and Tonight. It is the case with our Project 20 series of documentaries, our NBC TV operas, Wide, Wide World, many of our other public affairs presentations, and all of our news programs.

These are programs which would not exist if the network had not taken the responsibility for developing and producing them. Nevertheless, we obtain many programs from a variety of outside sources, and as I previously stated, NBC-produced shows account for less than one-third of the programs in our schedule. Not only is it proper for a network to produce programs, but it is essential that it do so if it is to maintain and furnish a comprehensive program service to the public.

As to the third question—should a network have a financial interest in programs: We strongly believe the answer is "yes", because these financial interests grow out of contributions the network makes to program development. We generally own the programs we produce ourselves, but we have no financial interest in programs brought in by an advertiser.

We negotiate for a participation in those programs which are developed or produced at our cost and risk; and in those cases we generally obtain some participation—but not always. When we acquire a program by contract with an outside producer, we may or may not have a financial interest, depending on what we have put into the show. We have described these situations in some detail in answering your questionnaire, but let me briefly outline them here.

The typical situation is one where an outside writer or producer brings us a program idea he would like us to develop. Just developing the idea into a sample program costs a good deal of money. The outside writer or producer may not want to take on this risk himself, and he asks us to do so. If the idea seems to have promise, we may put up the money to make a sample program, and in that case, we negotiate for a participation in the program. Many of these sample programs, or "pilots", as they are called, never go any further. However, if the sample indicates that a satisfactory program can be developed, we may either try to sell the series to an advertiser on the basis of the pilot program, or commit to have the series produced before securing a sponsor. Nobody bats a thousand in show business. When such a program series doesn't live up to expectations, we usually have to absorb the balance of our commitment.

Another situation is one where a producer brings us one or two completed episodes of a new film series and asks us to underwrite the cost of producing the series—which may run as much as a million dollars or more. When we feel that the program has good potential, we assume such a commitment, with the risk of trying to get and keep a sponsor. In these cases, also, we may negotiate for an interest in the program. Sometimes, the interest we get is limited to merchandising rights, with the producer retaining rights to syndicate after the network broadcasts. Sometimes we get a larger interest, and sometimes we get no interest.

Through this sort of risk and undertaking, we have helped others develop many fine programs. Rather than stifling independent production, networks have provided an important encouragement and stimulus for program development by outside producers.

The claim has been made that we give special preference to programs in which we have a financial interest in order to get a profit from the sale of the programs as well as from the sale of the time. I want to deny that charge categorically. Our primary concern is whether or not a program best meets the needs of our planned program structure. This is the decisive element—not who owns the program, or whether or not we have a financial interest in it.

I think this is evident from the fact that our schedule includes a great many outside shows in which we have no interest, even though at the same time, there are a number of NBC developed programs available for broadcast. After all, we are in a highly competitive business. We would soon go under if we didn't give first consideration to programing our schedule with the strongest shows available to us, regardless of their source.

The idea also seems to be around that program production is profitable for a network. Actually, in 1955, our commercial programs cost us $8,600,000 more than we received from the advertisers for these programs. When you add to this our other costs for furnishing a program service—such as the cost of sustaining programs, program staff, and program development—our total unrecovered program cost in 1955 was $24 million.

These facts, I believe, should dispose of the claim that profit—rather than service and competition—is the reason why networks undertake production of their own programs. And they should clear the air of a lot of vague charges about the motivation for network program control.

Programing responsibility is one of the central facts about the network operation. It is interwoven with the network's advertising function and its service to affiliates, which I would like to discuss next.

3. NETWORKS MUST PROVIDE EFFECTIVE NATIONAL ADVERTISING

A network has just one paying customer—the advertiser. Advertiser money supplies the funds for the network programs, not only the sponsored programs, but all the unsponsored public service programs, too. An advertiser has many mediums available to him, and he will buy television advertising from a network only if he gets a good value from it. The network must provide a good advertising value if it is to give the public and the stations a good program service.

Senator BRICKER. In relation to the other services, I think that television advertising is increasing very rapidly, is it not?

Mr. SARNOFF. I believe so.

Senator BRICKER. It is, I would assume, to be the best advertising mediums—best of all the advertising mediums that are available.

Mr. SARNOFF. Well, we believe so.

Senator BRICKER. Well, isn't it generally conceded to be so?

Mr. SARNOFF. Well, I think you would find certain other media who don't agree with us on that score.

Senator BRICKER. Have you any way of ascertaining from the sales impact?

Mr. SARNOFF. Yes, definitely. We do—Mr. Bevel's department does a number of research, undertakes a number of research projects, and does it annually, to prove the effectiveness of advertising both in itself and as it relates to competition from the other mediums.

Senator BRICKER. And what has been the conclusion?

Mr. SARNOFF. The conclusion is that it is one of the most effective media for the sale of products.

Senator BRICKER. And it is increasing in its effectiveness?

Mr. SARNOFF. I believe it is increasing in its effectiveness, and certainly I think the amount of advertising on all levels, national, local, and national spot, is increasing.

Senator BRICKER. How does the relation of the amount of money spent for advertising on television at the present time compare with the amount spent in magazine advertising?

Mr. SARNOFF. Well, the national advertising expenditure for magazines, in 1955, was $724 million, newspapers was $750 million, and network television $520 million.

Mr. COX. That does not include national spot advertising?

Mr. SARNOFF. This is national advertising.

Senator BRICKER. National advertising?

Mr. SARNOFF. Network.

Senator BRICKER. It does not include spot advertising.

Mr. SARNOFF. No, when you include spot and local you have about a billion dollars.

Senator BRICKER. It is higher than any one of the other mediums. I say the total, then, is higher than either one of the other two mediums that you mentioned?

Senator PASTORE. Well, I think there is some doubt there between the witnesses. Let's clear it up. You can take your time on this.

Mr. SARNOFF. In 1955, out of about $9 billion of total advertising throughout the country, television, as a whole, received about a billion, or about 11.1 percent; newspapers, 34 percent.

Senator BRICKER. What was the percentage of television?

Mr. SARNOFF. 11.1.

Senator BRICKER. 11. Newspapers?

Mr. SARNOFF. 34.

Senator BRICKER. Well, that doesn't coincide with the other figures a moment ago.

Mr. SARNOFF. Well, on my other figures—these figures I have just given you are for all advertising, of all kinds in television, all kinds of advertising in newspaper. This—not only national advertising.

Senator BRICKER. I see. The greater proportion, then, of newspaper advertising is on a local level.

Mr. SARNOFF. That is correct.

Senator BRICKER. And what was the amount, the percentage amount?

Mr. SARNOFF. For magazines, it is 8 percent.

Senator BRICKER. Eight percent.

Senator PAYNE. Isn't a lot of that, Mr. Sarnoff, due to the fact—that is the tremendous increase you are getting—that television embodies both essential elements of sight and sound in its ability to carry and take into effect. The two separate elements are available through the other media of advertising, namely, publications is sight, radio is sound alone; whereas you have both. Isn't it generally considered that that is the most effective?

Mr. SARNOFF. That is quite right. And I certainly believe, in the area of advertising, the fact that you are able to demonstrate and show your product in motion has a tremendous impact.

Senator PASTORE. What is the figure on radio?

Mr. SARNOFF. Radio is 6 percent.

Senator PASTORE. Six percent; still pretty high.

Mr. SARNOFF. You might be interested to know that direct mail is 14.1 percent.

Senator PASTORE. Direct mail?

Mr. SARNOFF. Higher than television as of 1955. Maybe we will catch them.

Senator PASTORE. In the middle of the page on page 16.

Mr. SARNOFF. Now, providing a good advertising value—for a network this means delivering national circulation large enough to meet the needs of national advertisers. It also means delivering this circulation at a cost to the advertiser which is competitive with the rival media seeking his business. This directly affects the network system of station affiliations, through which a network delivers advertising circulation.

NBC's objective in affiliating stations is to provide complete national coverage for the public and the advertiser. Our success in doing so is indicated by the fact that over 95 percent of all homes in the United States are in range of stations on the NBC network. We are constantly analyzing the possibilities of improving the effectiveness of our network coverage, and we continue to add affiliates from time to time so that we can provide a better service to the public. This process is still going on, particularly with regard to the smaller markets.

It doesn't follow, however, that every station which wants a network affiliation can be affiliated. Where we have an affiliate in a given community, affiliating a second station in that community would provide a duplicate service, and the public would lose the benefit of a competitive program service. In addition, the network advertiser would not buy the second station, because it would mean added cost for duplicating the coverage he is already receiving.

Similar considerations apply where a community in which we have no affiliate is adequately covered by an affiliate in another city. This situation, however, may present a problem which can only be decided on a case-by-case basis. The problem may arise from the fact that although a station overlaps with an existing affiliate, it also covers an area which the existing affiliate does not cover. In considering the affiliation of such a station, duplication in the overlap area must be balanced against the value of covering some additional population.

Decisions like these are difficult, and they can't be covered by any fixed or simple rules. It is necessary to take into account the size of the population which would be duplicated and the size of the population which would be added, the degree of service already furnished in the area, the type of markets involved, the advertising economics and competition. The weight to be given each of these factors in individual situations is a matter of judgment, not of rule. Moreover, in a highly competitive business like ours, we cannot afford to make such decisions on the basis of whim or generalities. We try to make them carefully and objectively, with the combined knowledge and judgment of our specialists in engineering, research and marketing.

Thus, affiliation decisions are influenced by advertising economics, as well as by the goal of providing a complete national service without wasteful duplication. Even after we weigh all the circumstances and arrive at a conclusion on a desirable affiliation, the decision is not made by us alone. It is the result of a meeting of minds between the network and the station. The framework of this mutual agreement is competition. Networks compete with each other for affiliations and for clearances, just as stations compete with each other for network affiliations.

To take this point one step further, the affiliation of a station is no guarantee that the station will receive all the network programs, and I stress this because there have been inferences in the course of this committee's study that if an affiliate isn't getting enough network programs, it is somehow the network's fault. So far as most affiliates are concerned—and this applies to the 150 optional stations on the NBC network—the network advertiser decides which stations he needs, and not every affiliate is ordered for every program.

If an advertiser does not order a station for his program, the station and its community normally do not get the program. I'd like to tell you how we have applied practical business ingenuity in making it possible for such a community to receive the program.

In September 1954, we developed a new procedure which we call the NBC Program Service Plan. Under this plan, we supply various sponsored programs to a number of affiliates which are not ordered by the sponsors, with provisions for deleting the commercial announcements. By January of this year, 15 important programs included in the plan were being carried by 104 different stations which were not ordered by the sponsors. The volume came to almost 2,000 station hours each week of popular network programs furnished these stations in smaller communities. Without such a plan, none of these stations would have received these particular programs.

Last year, we took another step in the same direction with our Program Extension Plan, popularly known as PEP. It is designed to help the smaller-market stations get network revenue as well as network programs. This additional plan offers a special inducement to the network sponsor to buy the 51 smaller-market stations included in the plan, by giving him some of the stations without charge, depending on the number he orders. The more he orders, the more he gets without charge. As a result, his cost for these stations is substantially reduced, so that they become attractive advertising buys, even though they are in the smaller markets. The cost of the plan is borne by

NBC, with the stations getting compensation at their regular rates.

The PEP plan went into effect last fall. Since then, it has resulted in a 113 percent increase of sponsored NBC programing on the small-market stations included in the plan.

Beyond these specific plans, the network service is of great benefit to all affiliated stations. It is particularly beneficial to stations in smaller markets. For example, it is the continuous network service which makes possible interconnected service to small markets as well as big ones. These are markets which could not be economically interconnected for live network programs if the network service were fragmentized. Also, if the smaller-market affiliates were not part of a national coverage system, the national advertiser would be much more likely to bypass them. As part of the network, they become more attractive to him, since he can include them in his overall buy without additional administrative, clearance or program costs. Networking is of vital importance to small-market affiliates and they would be the first to be hurt if the network system should be disrupted.

Affiliated stations are overwhelmingly in favor of the present system of network broadcasting, and the reason for this is simple. Networks furnish the stations with a balanced program service of a scope and quality far beyond anything which a station could otherwise get. This network service helps the station attract a bigger audience, which increases the value of its time and therefore increases the revenue it can obtain from the sale of national spot and local advertising.

These facts illustrate the basic point that a network service consists of three inseparable aspects—service to the public, stations and advertisers. They are not only inseparable—they are also self-regulating in the free enterprise tradition. If the network service to any one of the three elements is inefficient or inadequate, the network will lose the support of the other two.

In their relationship with networks, stations have been closely regulated by the FCC for many years. And as you know, the FCC has organized a special staff, headed by Dean Barrow of the University of Cincinnati Law School, which is engaged in a comprehensive study of the subject to determine whether any changes should be made in the present regulations. We have already supplied voluminous data in reply to two questionnaires sent us by this group and are now working on a third one.

In connection with the suggestions for regulation of networks, which have been made to this committee in the course of its comprehensive study of television, I would like to stress the dangers inherent in such a course.

These proposals are the first step down the road to Government decision on whether advertiser A or advertiser B should occupy a particular network time period, or whether a network should sell program X or program Y to an advertiser. They would involve a review by Government authority of business judgments on what station should be affiliated; or how the programs of various networks should be divided among the stations in a given community; or what kind of programing should be included in the network schedule.

This could not be done without putting the Government into the broadcasting business. I assume that nobody really wants such a result. Yet the type of regulation I have just referred to has been suggested in one form or another during the course of this committee's consideration of television.

Government directives on which stations should be affiliated and which programs they should receive would force advertisers to obtain their television advertising exposure in accordance with a new set of Government rules or standards. In any event, such regulation of networks would certainly make them an unappetizing medium for the advertiser. There are plenty of other media seeking his advertising which are not subject to Government regulation—newspapers, magazines, billboards and the like. Network revenue would be siphoned off to these media, weakening the economic foundation on which the network program service rests.

For all of these reasons, it is clear that the present competitive system—rather than a system of additional Government regulation—provides the best safeguard for maintaining and improving the television service which networks furnish to the public. Moreover, it is apparent that many of the proposals for regulation result from a lack of understanding of the economics of networking to which I now turn.

4. THE ECONOMIC ASPECTS OF NETWORKING

Television networking is a business of great risks, heavy financial commitments and low profit margins.

Networking combines a show-business enterprise with a communications service to the public, and it rests on an advertising base. Its product is programing, and it is an extremely perishable product. Every week that a time period goes unsold is a week that is gone forever; it cannot be stockpiled for later sale. And when it is not sold, the network not only loses the revenue, but also has to bear the cost of the program, since it undertakes to provide a continuing service.

A network is also subject to all the hazards of having to make program commitments—often long-range ones—on the basis of a judgment as to what will appeal to the public over a long enough period to permit the network to recover its costs. It must risk large amounts of money for program experimentation and development. It also takes the risk of financing network-produced and outside-produced programs, often without any advance assurance that it can sell the programs or keep them sold. In addition, a network undertakes the cost of public service programing which is not sponsored but which is an important part of the responsibility it assumes.

By its very nature, a national network operates on a large scale. For example, the NBC television network presents about 6,500 different programs a year, serves about 200 stations from coast to coast, and does business with over 200 advertisers of all types and sizes. To provide this service, a network has to have a large organization, thousands of employees, a great amount of technical facilities and dozens of studios. Its overhead is very high, and its plant is subject to rapid obsolescence because of continual technical developments, such as the development of color.

Despite the fact that a network's sales volume is large, its profit margins are modest.

As pointed out by the American Institute of Accountants and other authorities, the economic position of any business can best be evaluated by reviewing its financial results over a period of years. In fact, the SEC requires that a prospectus for the sale of securities contain a summary of earnings for a minimum period of five years.

So I would like to review with you the financial results of the NBC television network since 1947, by showing you the network's annual sales and income figures for the past 9 years. I think these figures will be interesting to the committee, and they should help dispel some erroneous impressions about the profitability of network operations.

Mr. SARNOFF. Now, these are the net sales and income of the NBC television network for the period 1947 to 1955. These figures are after Federal taxes for income, and I just call to your attention that the figures in parentheses indicate loss.

These sales and income figures——

Senator PASTORE. These figures will go in the record as though you had read them.

Mr. SARNOFF. Yes, sir.

Senator PASTORE. All right.

(The chart referred to follows:)

Net sales and income, NBC television network, 1947–55

Year	Net sales	Net income after Federal income taxes	Net income as percent net sales	Cumulative net income
1947	$282,000	($643,000)		($643,000)
1948	2,525,000	(1,332,000)		(1,975,000)
1949	10,254,000	(1,799,000)		(3,774,000)
1950	26,052,000	(2,997,000)		(6,771,000)
1951	69,859,000	1,129,000	1.6	(5,642,000)
1952	98,295,000	432,000	.4	(5,210,000)
1953	110,405,000	(249,000)		(5,459,000)
1954	137,689,000	1,457,000	1.1	(4,002,000)
1955	185,320,000	6,317,000	3.4	2,315,000

NOTE.—Figures in parentheses indicate loss.

Net income as percent net sales

9-year average net income as a percentage of net sales	0.4
5-year average net income as a percentage of net sales	1.5

Mr. SARNOFF. These sales and income figures are on a net basis, and by "net income," I mean income after taxes. A before-tax figure can be misleading—in NBC's case considerably more than half of the before-tax figure is paid out in Federal income taxes. I would like to invite your attention to several significant facts shown by these figures.

You will see that the first 8 years of NBC's television network operation—from 1947 through 1954—resulted in a cumulative loss of more than $4 million. This is shown in the last column of the chart. It may be a surprising fact to you—8 years of major effort with major risks, resulting in an overall loss of $4 million—but it is the hard fact.

Only last year, in 1955, did the network finally reach a cumulative profit, and a modest one. For its 9 years of operation, from 1947 through 1955, the total net profit of the NBC television network was only $2,315,000.

These facts show that any claim of exorbitant profits from this high-risk business is not in accordance with the economic realities.

And just as we reach the point of a $2,315,000 profit from 9 years of television network operation, we are taking on the heavy cost and burden of a major new development—color television. To carry on this development, about $13 million in capital costs has already been authorized in the past several months for color television networking alone. The total amount projected over the next 5 years for NBC capital costs is $80 million.

Another important economic fact about television networking is its high break-even point and its tendency to sharp financial swings, which reflect the risks of the business. This is shown by the figures we have just reviewed.

In 1952, for instance, almost $100 million in sales produced less than $500,000 in profit. And in the following year, over $110 million in sales produced no profit at all.

Now that you have the profit story for the television network, I would like to invite your attention to the ratio of profit to sales.

For the 9 years, from 1947 through 1955, the total net income of the NBC television network was less than one half of 1 percent of its total net sales over the same period. For the past 5 years, the total net income was 1.5 percent of net sales. And in 1955, our record year, the ratio was less than 3½ percent.

As you know, NBC engages in operations other than its television network. These include its radio network and its stations. As you may also know, the radio network business is not having an easy time of it these days.

Our VHF television stations were in the red during the first 3 years of the 9-year period I have used, and our UHF station is now in the red. In the last 6 years our VHF television stations have contributed to NBC profits—in the latter years substantially. But all of these station profits have been plowed back into the business—to develop our network service during the many years it was in the red, and to pioneer in color broadcasting—both network color and with the first all-color television station—our Chicago station.

In evaluating the net income of the NBC television network and of NBC consolidated figures, it may be helpful to compare them with what other companies have done.

In making such a comparison, the use of net income as a percentage of net sales is the formula usually employed. The Federal Trade Commission and Securities and Exchange Commission, which publish comparative industry figures, have said that the percentage relationship of income to sales—

is of universal interest as it expresses operating results in terms of volume of business done.

For comparative purposes, I'd like to refer now to the profit-to-sales ratios for other companies, which are shown on the next page.

Senator Pastore. That will be inserted in the record as though you had read it.

(The table referred to follows:)

Company	9-year period, 1947-55	5-year period, 1951-55	Year 1954	Year 1955
Bethlehem Steel	7.0	6.9	8.0	8.6
Chicago Daily News	7.2	5.1	4.5	5.9
Coca-Cola	13.2	11.1	10.7	10.9

All manufacturing companies of $100 million or more of assets	6.9	6.4	6.5	7.4
RCA (consolidated)	5.2	4.5	4.3	4.5
NBC (consolidated)	4.1	4.0	3.5	5.5
NBC television network	.4	1.5	1.1	3.4

[1] 7 years; 1947-48 not available.

Mr. SARNOFF. Thank you.

As these figures show, the average 9-year ratio of profit to sales for all manufacturing companies in the size classification of NBC was 6.9 percent.

Senator BRICKER. That is measured by sales?

Mr. SARNOFF. That is the ratio of profit to sales.

Senator BRICKER. No; I mean your 6.9 is on sales, and your comparison with other companies in the same size classification—your size classification is determined upon sales?

Mr. SARNOFF. That is correct.

I am sorry, Senator. In order to determine the size classification we have used the category of all manufacturing companies of 100 million or more of assets.

Mr. COX. For NBC to be in that category, you have included assets that are not devoted solely to networking, however?

Mr. SARNOFF. Yes.

Mr. COX. In other words, you include other assets of the corporation?

Mr. SARNOFF. Well, we are comparing total company. You notice we have two figures—NBC television network, NBC consolidated—and we are using the ratio of profit to sales as a comparison to other companies.

This compares with less than one-half of 1 percent for the NBC television network. The 5-year figures for the manufacturing companies average 6.4 percent—4 times as much as the television network's ratio. And their 1955 figure was 7.4 percent—twice as much as for the television network. The figures for the consolidated NBC operation are also lower in each case than the average for the other companies.

In considering the network business, you should also recognize that it requires not just the amounts tied up in physical properties, like buildings and equipment, but much larger amounts of money at risk—the financial commitments for programs, performers and all the other elements for which a network must commit on a long-range basis without having covering commitments from advertisers. In the case of the NBC television network, money at risk may often exceed $100 million.

In this high-risk, heavy-commitment business, failure to make a few major sales can mean the difference between profit and loss for a whole year. A network must nevertheless commit funds to programing as a necessary part of providing a competitive network service. I would like to turn next to the nature of this competition.

5. TELEVISION NETWORKING IS INTENSELY COMPETITIVE IN ALL ITS ASPECTS

Competition is woven into the fabric of the television network business. Networks are in fierce and constant competition for the public attention. They vie with one another for audience. They also compete with all other forms of entertainment and with other advertising media. Only as they maintain a competitive service can they survive in the contest for the advertiser's dollar.

The service they provide to their customers is itself an outgrowth of competition. The network advertiser uses television as an important instrument in his own competition for sales against other network advertisers. This sales competition has provided the incentives for our expanding economy. Networks serve this competition and are part of it.

As far as competition within the television network field is concerned, there has been a lot of talk about the two "principal" television networks. But I want to emphasize that any organization has the opportunity to operate effectively in the network field, provided it is willing to undertake the costs and risks of furnishing a strong, well-balanced network program service that can stand up in competition. This opportunity existed for Du Mont, which entered the field early. When Du Mont presented a popular program, like the Bishop Sheen series, it got the clearances it needed, in competition with the other networks. And if it had undertaken development of an overall effective program schedule, it would be a major competitive factor in the network business today.

This point is well illustrated by ABC's history in television. Until ABC took on the job of developing a competitive network program service, it was not a significant factor in the television network field. Recently, it decided to assume that responsibility. As a result—and in the past year—it has increased its sales and sponsored hours at a far faster rate than either CBS or NBC. Now it is operating at a profit, and beats the other networks in audience in a number of time periods.

A television system consisting of 3 actively competing networks, over 400 stations, and scores of program suppliers makes meaningless any claim of monopoly. No network comes near controlling a share of the market large enough to approach a monopoly position. Here are some figures showing NBC's share of the advertising market in the various categories.

Senator Pastore. Those figures will be inserted in the record as though they had been read.

Mr. SARNOFF. Thank you.

	5-year period, 1951–55	Year 1955
	Percent	*Percent*
NBC's advertising revenue as percent of all advertising revenue	2.4	2.7
NBC's national advertising revenue as percent of all national advertising revenue	3.9	4.4
NBC's TV advertising revenue as percent of all TV advertising revenue	22.4	21.7
NBC's national TV advertising revenue as percent of all national TV advertising revenue	27.3	26.3

Mr. SARNOFF. These figures demonstrate that our share of the market is fractional, and the same is true of the other networks.

As for programing, the NBC television network's share of the total is also fractional. We estimate that the broadcast hours occupied by NBC network programs represent 17.2 percent of the total television broadcast hours of television broadcasting in this country. With all of the television stations in the country, and all of the different networks and nonnetwork programs on these stations, it is almost impossible to estimate what percentage of the total number of different programs broadcast each week are NBC programs. It is clear, however, that the percentage is very small. And in every market where the NBC service is available, other television services are also available.

So we see that the NBC television network is part of an intensely competitive television industry, which itself is part of an intensely competitive advertising industry.

THE PRINCIPAL PROBLEM IN TELEVISION IS AN ALLOCATIONS PROBLEM

And now for my sixth and final point: We welcome competition as a stimulus to enterprise in our business and in others. Although there is no restraint on competition in television, additional competition and additional service could be developed if there were more stations. This is the root of the problem in television, and its solution will also solve the problems which are under study by this committee. We therefore urge that the Congress and the FCC focus on this central problem and take affirmative steps to bring about its solution.

This is not a new position on the part of NBC. We have been urging it repeatedly and consistently. We feel that the best prospect for expanding television service is effective use of the 70 UHF channels as well as the 12 VHF channels. Only through such a course can proper provision be made for a multiplicity of stations. We are in favor of a multiplicity of stations, because that would permit maximum competition at both the station level and the network level. It would also provide additional outlets for other program sources, without disrupting the values of the present service. And it would assure the public the widest possible range of program choices.

For all of these reasons, NBC has itself supported UHF wherever practical and possible in operating an effective network service. Our television network includes six basic affiliates operating on UHF channels—stations which must be ordered by the advertiser for every sponsored network program. In total, we have 37 UHF stations as affiliates. These UHF affiliates account for over 40 percent of all UHF stations in commercial operation. We have also undertaken UHF development directly, through acquisition and operation of a UHF station in Buffalo, an intermixed market with well-established VHF stations, and we are following a determined campaign to make UHF successful in that market. We have applied for a UHF station in New Britain and are awaiting final FCC action on our application there.

In connection with the FCC's pending reallocation proceeding, we have urged that it take immediate steps to provide for the maintenance and encouragement of UHF. We did this in comments filed last December and in reply comments filed this February. We outlined a series of principles to be followed so that the maximum number of additional stations could be provided without degrading existing services, particularly to rural and smalltown areas.

These NBC proposals were outlined before this committee at earlier sessions of your hearings, so I will not repeat them again. Our representative on your Ad Hoc Allocations Committee, headed by Dr. Bowles, has carried this position forward in his work with that group.

We believe deeply that the most constructive action which could be taken to broaden television's service to the public would be provision for the maximum number of stations. It is apparent that most other elements in the industry have reached the same conclusion. We hope that this vital objective will not be obscured or diverted by attacks on network operations, which could have such destructive effects on service to the public—at a time when a basic facilities problem is calling for constructive solution.

Senator Bricker. I want to say in passing, Mr. Sarnoff, that there has been no attack made by me when I filed this bill before the Senate, neither now or the former one, on the network system, as such. I recognize the great constructive service that they have rendered, and represent only a public interest to see that it is conducted in the public interest. So the use of the word "attack" is a very unfortunate thing.

Mr. Sarnoff. Well, we are using the word broadly. It is not referring to anything in particular.

Senator Bricker. That makes it all the worse. There had been no broad attacks on the networks at all.

Mr. Sarnoff. Well, there have been attacks on certain practices.

Senator Pastore. Why don't you say, Mr. Sarnoff, that you are using it poetically?

Mr. Sarnoff. Thank you.

Senator Bricker. If you said there had been criticism of certain practices, you would be well within the realm.

Mr. Cox. This refers to criticisms made within the industry—a group of independent film producers, and so on?

Mr. Sarnoff. That is correct.

7. CONCLUSION

And now in conclusion, television networks provide the public with an incomparable service. They alone undertake the responsibility for furnishing a complete, balanced national program structure on a regular daily basis. They are the only means through which live programs are broadcast to the whole Nation. Their programing includes the most ambitious, and the most popular, entertainment attractions, but it is not limited to entertainment. It meets and stimlates the whole range of audience interests, through a wide variety of information, public affairs, and cultural programs developed at heavy cost and often presented on an unsponsored basis.

If the network operation should be restricted by additional Government regulation, the whole delicate balance of network advertising, affiliation relationships, and service to the public could be upset. Moreover, various types of regulation which have been proposed could not be effected without regulating advertisers. Such a step would raise the most serious problems, not only for television, but for the American enterprise system.

While consideration is being given to the practices and operations of networks, which render a service of great public value, the central problem of television—the provision of additional stations through effective use of the UHF band—is begging for solution. A solution of this problem would enlarge the public's stake in television, whereas curtailing the network service would reduce the public's stake in the medium.

It is against these basic facts that this committee must weigh any proposals to change the present system of network operations. The ultimate test is not whether something will help or hurt any individual business interest. The test must be whether it will affect the program service the public now gets; and, if so, will it result in better television for the public?

I am confident that when this committee has weighed all the evidence it will conclude that a restriction of the network operation would not be in the public interest.

Senator BRICKER. Would you advocate taking away the licensing authority of the Commission over the local stations?

Mr. SARNOFF. No; I don't think it is necessary to do that.

Senator BRICKER. Do you think it has been a constructive service to the public.

Mr. SARNOFF. I believe so. And the licensing operation really stems from the problem of allocating the spectrum, so I think there is a justification for it.

Senator BRICKER. That is necessary, you think?

Mr. SARNOFF. I don't know whether it is necessary, but I think it has worked well enough.

Senator BRICKER. You would have utter confusion otherwise; wouldn't you?

Mr. SARNOFF. I think that is quite right.

Senator PASTORE. I say this only in the spirit of competition, because we have been talking about competition—the statement of the NBC was 1 page longer than the statement of the CBS.

Senator BRICKER. But it didn't take as long to present.

Senator PASTORE. Well, we are coming to that. And I only hope that that doesn't serve as a hint to ABC to better the record. [Laughter.]

Can you return at 1:15; would it be better for you?

Mr. SARNOFF. Fine; as it suits you.

Senator PASTORE. Recess until 1:15.

(Whereupon, at 12:25 p. m., a recess was taken until 1:15 p. m. of the same day.)

AFTERNOON SESSION

Senator PASTORE. It is 1:15. All right, Mr. Cox.

Mr. SARNOFF. We are here.

Mr. COX. Thank you, Senator.

In your statement, Mr. Sarnoff, you indicated that when a producer brings in to you a pilot, or a proposal for a development of an outside package—either live or on film—that you sometimes acquire an interest in those shows. Do you ever seek an interest in a program which is owned by an advertiser who wants time to place it on the network—perhaps in terms of exclusive broadcast rights or something of that sort?

Mr. SARNOFF. I don't know whether the word "interest"—we are using the word "interest," in my case it is a financial interest.

Mr. COX. Yes, I am talking now about a lesser interest, a nonparticipating interest, but an arrangement which would give you some rights in, or over, the property.

Mr. SARNOFF. We might seek, on occasion, to have an arrangement where the program—well, let me say this: I think probably not unless we contributed something toward helping develop the program.

Mr. COX. Does the network have any desire to be in a position so that the particular program is tied in with NBC's network operations and could not easily be shifted to another network in case the advertiser becomes dissatisfied with his time, or something like that?

Mr. SARNOFF. We like to feel if a program is successful on the NBC network—and is contributing to the structure and drawing from the structure—we like to feel that it is available to us rather than to the competition.

Mr. COX. You indicated that you do not give special preference to programs in which you have a financial interest. Is it true, sometimes, that having made an expenditure of funds in developing a program that you do try to sway advertisers to make use of this program in preference to one that has been offered to them from other sources, in an effort to at least recoup your investment?

Senator PASTORE. If you say "no" to this I am going to bring this hearing to an end. [Laughter.]

Mr. SARNOFF. Well, Mr. Chairman, I am not going to say "no," but I am going to say "yes" for a different reason. [Laughter.]

We do invest money in developing programs, and we often do have money tied up in programs that we have developed. And if we feel that the development of the program justifies the program going into the schedule, we would seek to have advertisers sponsor it. And at the time that we were seeking it, there is no doubt that others are also trying to get him to buy their programs. This is part of the way the business operates.

Senator PASTORE. And isn't it part of your competition that whatever you produce has to be of better quality than anything that is produced independently that will be in competition with your production?

Mr. SARNOFF. We believe it does; yes, sir.

Mr. Cox. Now, in those situations, at least, there is, then, under consideration for broadcasting in a particular time period under the sponsorship of a particular advertiser, 2 programs: One in which NBC has a financial interest, and 1 in which it perhaps has no financial interest?

Mr. SARNOFF. There could be such a situation, yes.

Mr. Cox. That is the situation you were referring to, isn't it—where you think that a program you have developed fits this time spot and would be suitable to the advertiser; and he, of course, has had other offers and may have tentatively decided that one of these is the program that he wants to broadcast?

Mr. SARNOFF. He might.

Mr. Cox. In that case isn't is true that the final decision as to which of those programs will go into that time spot, with or without the sponsorship of that particular advertiser, will be made by the network?

Mr. SARNOFF. That is right.

Mr. Cox. Now, you indicated that your program production is not a profitable operation; that on your commercial programs alone you lose in the neighborhood of $8,600,000 a year.

Mr. SARNOFF. We did in 1955.

Mr. Cox. In 1955?

Mr. SARNOFF. That is right.

Mr. Cox. Now, does that figure consist in large part of shows which you sought to develop which were unsuccessful, and where you have lost your entire investment because you have never been able to make any use of them?

Mr. SARNOFF. No, that consists——

The CHAIRMAN. May I ask a question, do you mean unsuccessful financially or unsuccessful as a show? There is a little difference.

Mr. SARNOFF. I didn't state that they were for reasons of unsuccessful programs. The statement said that it cost us $8,600,000 more than we received from advertisers for those programs.

The CHAIRMAN. Yes. So you are talking about the financial aspects of the show?

Mr. SARNOFF. That is correct.

The CHAIRMAN. Yes. There may be a show that might be successful with the public that wouldn't bring in a nickel?

Mr. SARNOFF. That is quite possible.

The CHAIRMAN. Yes.

Mr. SARNOFF. The reason for the difference between what we receive from the advertiser and what the program costs; there are a number of reasons. One could be our own fault. It could be that we underestimated the budget of the show, and as a result, in order to maintain the quality of the show, or just pay the prices being charged by talent, we had to put more money in than we were actually receiving from the advertiser.

We have a number of programs on the network that we have developed in order to broaden the base of advertising, programs like Today, Tonight, Home, and Matinee Theater in the afternoon. These are what we call participating programs, where an advertiser can buy a small participation, up to a large participation. They are rarely completely sold out. Therefore, in order to maintain those programs we have to absorb a certain amount of the cost. If they were 100 percent sold there would be no loss, provided we stayed within the budget. As long as they are not a hundred percent sold, part of the cost falls back on us.

That is what makes up the $8,600,000 in——

Mr. Cox. Plus some unsuccessful ventures where you sink money into develping an idea, and it does not develop?

Mr. Sarnoff. That is right.

The Chairman. Mr. Cox, could I ask a question there just for information?

I read part of your statement, but as usual I just got in again off an airplane. On a show like Tonight or Today, is it the common practice that the person in the show buys the time and then the advertising agency reimburses him for the amount of advertising, or that you pay the salary of the person on the show, or the people on the show, the production, and then you try and get advertisers to fill in?

Mr. Sarnoff. Well, in the case of Today, Home, and Tonight, which we developed, we pay all the costs and we make the commitments for the talent.

The Chairman. So you pay Steve Allen or Garroway, or what is that other——

Mr. Sarnoff. Arlene Francis.

The Chairman. Arlene Francis, a salary. You pay the production?

Mr. Sarnoff. That is correct.

The Chairman. And then NBC advertisers come to NBC to take a portion of that show?

Mr. Sarnoff. That is right. In the case of Today, for example, which in effect pioneered a new time period, built an audience in a period that normally was not—in a period where formerly there were no viewers in the early morning hours—we put the program on the air, paid the cost of doing it, fed it to the facilities, and kept it going for quite a period of time until we were able to develop enough audience in order to make it worth while for advertisers to buy it. This cost us a few million dollars. Now, it is——

The Chairman. Now, supposing Mr. A or Miss B would want to buy an hour of time and reverse the procedure, would you sell that? In other words, they pay for the time, and then they would get the advertiser. That is often done; isn't it?

Mr. Sarnoff. Are you speaking in reference to these particular programs?

The Chairman. Well, any amount of time, any place on the schedule?

Mr. Sarnoff. Senator Magnuson, if I understand your question, there are times where the advertiser buys a period of time in which he places a program which we agree is suitable for that time period.

Mr. Cox. But you do not ever sell him the time with complete freedom as to what he will put into the time?

Mr. Sarnoff. No; we do not.

The Chairman. That is the point I was trying to make, because sometimes a personality on TV might want to buy, say, an hour of time, and then go out and try and get the advertisers, but they will pay you a flat price for time. But you wouldn't do that, because it would encroach upon the shows you have developed; is that correct?

Mr. Sarnoff. I am not sure I quite get the import of your question, Senator. In the case of programs like Today and Home——

The CHAIRMAN. Supposing I were Steve Allen, which I am not, and I wanted to buy that time and pay you a flat price.

Mr. SARNOFF. I see what you mean; no, no, no.

The CHAIRMAN. Which is done a lot of——

Mr. SARNOFF. No; we only sell time to advertisers. Steve Allen may produce the package, the program that goes into the time period.

The CHAIRMAN. That is the point. Why couldn't an individual buy the time if he paid you for it?

Mr. SARNOFF. Because we are in the business of selling time for advertising to advertisers.

The CHAIRMAN. And you would only sell to advertisers?

Mr. SARNOFF. We only sell to advertisers.

Mr. COX. Now, you do make——

Mr. SARNOFF. This is not true, of course, in the case of politicals.

The CHAIRMAN. I am not talking about politicals. We have got to pay for it, I know that; yes.

Mr. SARNOFF. We do not—what you are talking about goes into an area of what we call time brokerage. We do not make our time available to an individual, a programer, who in turn then sells the time.

The CHAIRMAN. I see. That is what I am trying to get at. Now, that is sometimes done, as I understand it.

Mr. SARNOFF. Well, it may be done by others.

The CHAIRMAN. But not by networks?

Mr. SARNOFF. Not by NBC.

The CHAIRMAN. By NBC, that is the point I am trying to make.

Mr. COX. Do you make a profit on some of the shows which you produce?

Mr. SARNOFF. Some individual shows do make a profit.

Mr. COX. Do you sometimes make a profit where you buy an outside package and then sell it to an advertiser?

Mr. SARNOFF. It depends on the arrangement, and it also depends on the market, and it depends on the program. It depends on a number of things. There are not very many that I can recall where that happens. It is possible that we might make a profit on a program that we have bought from an outside source.

Mr. COX. Now, you discussed the decisions that have to be made in connection with affiliation; the difficulty of those and so on. But isn't it true that this decision, although it is of obviously vital importance to the local station concerned, this decision is made by the network itself, more or less, and that there is presently no appeal from that decision?

Mr. SARNOFF. This is on the question of affiliating a station?

Mr. COX. Yes.

Mr. SARNOFF. No; it certainly cannot be unilateral; it depends on whether or not the station wants to affiliate with the network.

Mr. COX. But the decision, basically, is in the network in the sense that a station coming on the air these days comes to the network and seeks an affiliation; and the decision as to whether that affiliation will be granted will be made by the officials of your network?

Mr. SARNOFF. In that circumstance, it would be; yes.

Mr. COX. Now, with respect to the matter of the station rates on the network, you expressly reserve in your contract, do you not, the power to change those rates unilaterally?

Mr. SARNOFF. Well, it isn't exactly unilateral. There is a protection period, and I believe that the stations, if they don't wish to accept the change in the rate, have a right to withdraw from the affiliation.

Mr. COX. But subject to that, you have the power either to raise or lower the rate?

Mr. SARNOFF. These are the national rates, yes; that is correct.

Mr. COX. Yes. As I understand it, you base these rates primarily on your own determination of unduplicated coverage furnished to the network by the station?

Mr. SARNOFF. That is right.

Mr. COX. Now, do you have a minimum rate for stations—one that wouldn't be economic if it were lower than that?

Mr. SARNOFF. I believe it is $100.

Mr. COX. I assume the highest rate is the rate of your New York owned-and-operated station?

Mr. SARNOFF. At the present time, I think that is correct.

Mr. COX. And what is that?

Mr. SARNOFF. I think at the moment—it is either $8,600, or $9,000, $7,700. I am not sure offhand.

Mr. COX. Could you tell us, or could you furnish us for the record——

Mr. SARNOFF. Seventy-seven hundred.

Mr. COX. Could you tell us, or furnish us for the record, what percentage of the cost of buying the entire network would be represented by the time charges of your six owned-and-operated stations? As I say, if you don't know that, why, would you furnish it for the record?

Mr. SARNOFF. Yes, we will be glad to furnish that.[4]

Senator PASTORE. Any time you raise the rate, it is to the advantage of the local station, isn't it?

Mr. SARNOFF. It is to the advantage of the local station when we raise their national rate; that is correct.

Senator PASTORE. The fellow who has to pay more is the advertiser?

Mr. SARNOFF. That is right.

Mr. COX. It is also of advantage to the network, isn't it—if the rate is competitive—because you receive your share of the increased rate?

Mr. SARNOFF. It works both ways, right.

Mr. COX. How is the division of the time charge as between the station and the network fixed; that, again, is a matter in your affiliation contract?

Mr. SARNOFF. That is a matter of agreement by contract.

Mr. COX. What is the range of that percentage? Just in general terms.

Mr. SARNOFF. As you know, that is answered in the questionnaire.

Mr. COX. Yes.

Mr. SARNOFF. But in broad terms, the range of percentage—well, it could go as low as 10 and go as high as about 33; 33⅓, I think is about the top.

Mr. COX. Now, in addition to this percentage, you, like CBS, I understand, have arrangements whereby you get free hours, on which the station waives all of its compensation?

[4] This information is set forth in a letter dated August 9, 1956, and in exhibit 2 thereto, which will be found beginning at p. 2878. The percentage indicated is 18 percent.

Mr. SARNOFF. That is right.

Mr. COX. And what is the standard, if there is any, in that area? Twenty-four hours?

Mr. SARNOFF. I think in our case it runs about 24 hours a month. But again it varies with stations.

Mr. COX. And would there be a high and low to that?

Mr. SARNOFF. Yes; some go as high as, I believe, 50 hours, and as low perhaps as none.

Mr. COX. Why would a station give you 50 free hours? I mean, under what circumstances would it be necessary for the network to bargain for that kind of a contribution of time?

Mr. SARNOFF. Well, there are several reasons. It may be an interconnection problem, it may be a problem of economics, it may be a desire on his part to get the program service, and even though from an advertising standpoint it may not be an economic buy.

Mr. COX. Now, do you—in connection with this interconnection charge—do you sometimes require the station to pay those charges directly to the telephone company rather than handling them as part of your national lineup—the $14 million figure you mentioned?

Mr. SARNOFF. The station pay directly to the——

Mr. COX. Telephone company.

Mr. SARNOFF. I don't believe so.

Mr. ADAMS. We have that spelled out in some detail in the questionnaire.

Mr. SARNOFF. Yes, there are a number of stations who do pay the phone company direct. It is listed in the questionnaire.

Mr. COX. If they pay the phone company direct do they get, then, a reduction in the free hours which you require?

Mr. SARNOFF. Well, in those cases the likelihood is that they don't have free hours—we don't have free hours again. But again, it is a matter of negotiation. In most of these cases the decision to pay the phone company charges is made at the time the contract is made, so that all the elements come into play at the same time—free hours, rate of compensation, cost of interconnection.

Mr. COX. Now, unlike CBS, isn't it true that in your contract you spell out that these free hours are to be given to NBC in return for its sustaining program service and for the payment of interconnection charges?

Mr. SARNOFF. Well, it may, Mr. Cox——

Mr. COX. Maybe I misread it.

Mr. SARNOFF. I will read what it says:

> As a means of sharing the cost to NBC of providing network service, including amongst other things the cost of interconnected facilities and of unsponsored programs furnished to the station by interconnection without charge therefor, you will waive to NBC each month compensation—

in this case 24.

Senator PASTORE. Must there be a sense of equality and economic justification with reference to your affiliates; otherwise wouldn't these questions come up at your executive conference that you have every year?

Mr. SARNOFF. They certainly would.

Senator PASTORE. Doesn't A know what B is paying, and right down the line?

Mr. Sarnoff. I think, if we are going to be realistic, we know that they talk to each other; so they know pretty much.

Senator Pastore. So, whatever the pattern is, it is one that keeps everyone happy; otherwise you have a hot potato on your hands.

Mr. Cox. Would you have any objection to having the copies of your affiliation contracts, which are filed with the Federal Communications Commission, made a matter of public record?

Mr. Sarnoff. I would have an objection on the basis that I don't think these matters are matters of public information. I think they are arrangements by private parties. I see no purpose in making them public.

Mr. Cox. Wouldn't it be an assurance to your affiliates as to the question of whether or not they are receiving equal treatment with others whom they feel to be in like circumstances?

Mr. Sarnoff. Well, I don't think it is a matter of like circumstances. Each one is an individual case depending on an individual market—depending upon the circumstances in that market. And no two cases are alike, or can possibly be alike.

Mr. Cox. Don't you, on most of these matters, compare certain markets in terms of their set count, competitive situation in the market, and you are able to arrive at certain conclusions as to their comparability; certain markets have the same rates, certain markets, I assume, also have the same split arrangements on their rates?

Mr. Sarnoff. Are you talking about the rate of compensation?

Mr. Cox. First of all——

Mr. Sarnoff. The rate, itself, and so on.

Mr. Cox. Yes.

Mr. Sarnoff. Well, I think since you are selling a national product you have to evaluate each of the elements of it in relation to one another. But you obviously couldn't have a market that was way out of line or justify another market—it wouldn't be good business judgment to have another market that was way below what its potential was in terms of the rate that you could get from an advertiser. So in that sense there is something of a balance. But there is no arbitrary rule. We, of course, have yardsticks that we use.

Senator Pastore. Since this point is being developed, I am a little confused. I hope you can explain it. Where would the public interest be served in doing this?

Mr. Cox. This matter of filing contracts?

Senator Pastore. Yes. I mean how does this help the average American that looks at his television.

Mr. Cox. That was suggested by either Mr. Plotkin or Mr. Jones, former special counsel to the committee.

Senator Pastore. I don't care about them. [Laughter.] I am asking about the public interest. I don't want to leave the impression here, by this question, that that is how the committee feels about it. I don't mind it being explored, but I was wondering where the public interest is. For the moment I don't see it, but I am always willing to be enlightened. Where is the public interest involved in spreading these things on the record?

Mr. Cox. The suggestion made was that it would produce an equality of dealing between the network and its affiliates, without governmental regulation.

Senator PASTORE. Are the affiliates willing to spread on the records the profits they make, too?

Mr. COX. This is not a matter of profits.

Senator PASTORE. If the public is going to know everything, let us know everything from the bottom up.

The CHAIRMAN. Well, I think that he has answered the question, but we have given the FCC sufficient amounts of money, and they have suggested they want to go ahead with an investigation of network contracts with their affiliates. And they have assured me that they are doing so, and that this committee would have access to whatever they find out, as it progresses; and I think it is up to the committee, as you point out, as to whether or not we feel that it should be made public knowledge.

Senator PASTORE. I mean I don't want to leave the impression now, I think, on behalf of the committee——

The CHAIRMAN. Now, what the FCC is doing about it, I don't know. But the committee will find out before we are through.

Mr. SARNOFF. I made the statement this morning, Senator—I made reference to the fact that this study was underway, and that we had answered a number of questionnaires, with more on the way.

The CHAIRMAN. In other words, they, on the record, said for their appropriation they wanted to go ahead, and we thought they might take that portion of this inquiry or study or investigation—whatever you want to call it—off the hands of the committee, and they could go ahead and do that. And they agreed that they would give us all the information, if we wanted it; and after we get it we should decide what to do with it.

Senator PASTORE. You are perfectly willing to give it to the committee and to the Commission?

Mr. SARNOFF. They are filed with the Commission.

Mr. COX. They are filed with the Commission.

Mr. SARNOFF. Referring to my statement again——

The CHAIRMAN. But I think if the networks are required to do this—which the FCC could require of them—that the affiliates ought to do the same thing.

Mr. SARNOFF. Well, contracts between an affiliate and the network are filed with the Commission.

The CHAIRMAN. Yes, and affiliates ought to be, because they are operating under a public license, too.

Mr. SARNOFF. Quite right.

The CHAIRMAN. Their stations are.

Mr. SARNOFF. That is correct.

This is the type of regulation that I referred to this morning as one of a number of regulations that had been suggested that we are opposed to, because it would inevitably put the Government into business; and this is a business matter as between a network and a station, and the implication would be—if these arrangements were filed—that such arrangements were subject to rules and Government regulation, and I do not think this would serve any purpose.

Senator PASTORE. That isn't my problem. My problem—I asked the simple question, Wherein does the public interest lie in this? That is all I want to know. How will this serve the public interest?

Mr. SARNOFF. We do not feel it will serve it any better than the present arrangement.

The CHAIRMAN. It may or may not.

Mr. COX. Does NBC furnish service to stations on a per-program basis, where you have no formal affiliation with them?

Mr. SARNOFF. There are some cases where we do.

The CHAIRMAN. Before you get off that, I wanted to ask one question again, not prejudging it: In your contracts with the telephone company for a given amount of line, are the contracts with the networks the same, or are there different arrangements with the networks?

Mr. SARNOFF. Well, the tariffs are the same.

The CHAIRMAN. The tariffs are the same, which are filed?

Mr. SARNOFF. Which are filed. But the use that each network makes of the facilities of the phone company depends on its requirements, in accordance with the tariffs set by the——

The CHAIRMAN. What I am trying to get at is that the tariffs are the same, but sometimes the use by a network, the different use, the actual payment may be different in given cases?

Mr. SARNOFF. Some networks' payments may be higher or lower than the other networks.

The CHAIRMAN. Yes.

Mr. SARNOFF. In the aggregate.

The CHAIRMAN. Yes.

Mr. COX. In discussion, this morning, of your attitude toward possible governmental regulation of networks, you said that you thought that proposals of this sort would constitute the first step down the road to a Government decision as to whether one advertiser or another got time, and so on. Now, is it not true that the Federal Communications Commission now regulates option time, and that it could change its regulations with respect to option time and stop right there, without undertaking the overall regulation that you seem concerned about?

This is on page 22, the last paragraph.

Mr. SARNOFF. May I ask you——

Mr. COX. My question simply is whether it would not be possible for the Commission to change its existing regulations regarding option time, for one thing, and stop at that point, and not undertake regulation as to what advertiser would get what time, and whether you would sell a particular program to this one or buy it from that one?

That is, couldn't there be some change in the existing control of broadcasting without getting involved in all the problems that you are envisioning here?

Mr. SARNOFF. Well, it depends on how it is done. I think if the Commission were to change the rules on option time, it isn't necessary that these consequences I have outlined here would follow, no.

Mr. COX. Now, isn't it true that in 1941—or whenever the chain-broadcast regulations were adopted—that the initial form of the regulations promulgated by the Commission barred all option time?

Mr. SARNOFF. The proposal barred all option time, yes.

Mr. COX. Well, I mean actually the initial decision reached by the Commission was that there would not be any more option time?

Mr. SARNOFF. I believe that is true.

Mr. COX. And then shortly thereafter they filed a modification of that which permitted the present 3 hours in each period?

Mr. SARNOFF. That is right.

Mr. COX. Now, prior to that time the networks had had an unlimited option in radio, hadn't they?

Mr. SARNOFF. That is right.

Mr. COX. And isn't it true that at that time representatives of NBC, as well as of CBS, argued that they could not continue in business, and could not provide the network service they were then furnishing the country, unless they continued to have not only unrestricted option, but exclusivity?

Mr. SARNOFF. Well, of course, it is a little before my time, but I believe they made that type of a point, yes.

Mr. COX. And quite obviously their fears were not too well grounded, in view of the growth and prosperity of, first, radio broadcasting and, now, television broadcasting under those rules?

Senator PASTORE. Off the record.

(Discussion off the record.)

Mr. SARNOFF. I think the real concern was with the elimination of option time, actually. Of course, circumstances in the broadcasting industry have changed so greatly since then that I think to refer back to that period, while it is perfectly legitimate for historical reasons, I really don't feel has merit for today's situation.

Mr. COX. For what reason would you feel that option time was more urgently needed now than it was at that time?

Mr. SARNOFF. Well, I think the nature of the business is such today, its size, as I have tried to indicate this morning, the importance of the medium. While radio is certainly as important as ever in terms of the value to the public, television is a different kind of a medium.

Mr. COX. But this is a difference in degree and not in basic kind. That is, in other words, the problem of assuring advertisers of reasonable chance of clearance was the same then as it is now, except that you are talking about a different means of getting the signal out.

Mr. SARNOFF. I believe that is right.

Mr. COX. Now, you discussed this morning the economic aspects of networking, and your profits in relation to sales and so on. Could you tell us, or, if not, furnish for the record, an estimate of the average amount of working capital which is actively employed in your networking operations?

Mr. SARNOFF. About $25 million.

Mr. COX. About $25 million. The figure of over a hundred million dollars which you mentioned as being money at risk includes your physical assets, it includes commitments for properties or for talent to be employed in future years, and a number of other items on which you may never suffer any loss, doesn't it? It is simply a hazard that you have undertaken?

Mr. SARNOFF. That is right.

Mr. COX. Now, on page 26 in your statement——

Mr. SARNOFF. But they are still all at risk.

Mr. COX. Yes. But I mean, for instance, you may have entered into a contract with a particular personality that you would employ him for 5 years at a certain annual fee?

Mr. SARNOFF. Yes.

Mr. COX. And you might find at the end of two and a half years that his popularity had waned, and that you had to absorb the balance of that contract?

Mr. SARNOFF. That is right.

Mr. Cox. On the other hand, if his popularity holds up as long as you thought it would, then you would come out all right on that. The money would have been a risk—not in the sense that you had lent it to anyone, but you had committed yourself to pay it—and you finally get your money's worth?

Mr. SARNOFF. That is right.

Senator PASTORE. Now, on that point, Mr. Sarnoff, what is the longest contract, in term, that you have with personnel at NBC?

The CHAIRMAN. In some cases it is about as long as——

Mr. SARNOFF. I am just trying to think of the longest one.

The CHAIRMAN. Twenty years; is it not?

Mr. SARNOFF. It varies. I would say anywhere from 5, in some cases maybe 20 years. Not necessarily actively performing for that full period.

Senator PASTORE. I do not want to be accused of the Government's getting into your private affairs, but why does it have to be that long?

Mr. SARNOFF. Well, the real reason it has to be that long is that is the way the talent likes it.

Senator PASTORE. Yes. But you have been talking here about tremendous losses that you have suffered. Why do you engage these people for 20 years?

Mr. SAROFF. Really, again it is the competitive market. If you want a particular performer——

Senator PASTORE. You have to take him as long as he lives?

Mr. SARNOFF. Not necessarily, but almost.

Mr. Cox. Otherwise, he will go to CBS; is that it?

Mr. SARNOFF. That is right. You know, they have agents and people working for them that are always trying to get the best deal.

The CHAIRMAN. This is off the record.

(Discussion off the record.)

Senator PASTORE. But you feel that in competition with your competitors that that is necessary?

Mr. SARNOFF. I think it is necessary. I won't say it is desirable, but it is necessary. That is really the exception, though.

The CHAIRMAN. Mr. Sarnoff, do you not use, also, the fact that you tie up a good entertainer for a period of time, but you do not always anticipate he is going to be an entertainer. You may use his experience for other phases of programs—producing or things of that kind, is that not correct?

Mr. SARNOFF. We have some cases where, after a period of active exposure performing on the network, the performer then becomes a producer or a consultant, or an executive, possibly. [Laughter.]

But in any case, he can—there is nothing to prevent his developing into a producer or director and right on up.

The CHAIRMAN. And the way you draw your contracts, you can use him for any purpose; can you not?

Mr. SARNOFF. That is right.

Senator PASTORE. But Senator Magnuson, wouldn't it be nice if you and I could get a contract——

The CHAIRMAN. We are not that popular. [Laughter.]

Senator PASTORE. The best we can do is 6 years. [Laughter.]

Mr. Cox. On page 26——

The CHAIRMAN. Their life is very short-lived in many cases.

Senator PASTORE. So is ours. [Laughter.]

The CHAIRMAN. They become producers and we become lawyers again. [Laughter.]

Mr. COX. On page 26 you set out the figures for net sales and income for NBC television network. Now, as I understand it these are simply for the division of the corporation which operates your network business; is that correct?

Mr. SARNOFF. I missed that one again.

Mr. COX. That is, these are the figures for income—profit or loss—of the NBC television network alone?

Mr. SARNOFF. Of the network alone, that is correct.

Mr. COX. Now, in the years where you show losses here, in 1947 through 1950, and again in 1953, did the corporation as an entirety make a profit?

Mr. SARNOFF. Yes, it did.

Mr. COX. I take it that these figures do not even take account of the revenues of your owned-and-operated stations?

Mr. SARNOFF. Not these figures, no.

Mr. COX. Now, you discussed the capital investments that NBC is proposing to make in color television, and you have, of course, discussed the investments that you made in getting television started.

Mr. SARNOFF. Yes, sir.

Mr. COX. Isn't it true that NBC has a little more favorable position in this regard than the other two networks, in that it has—in fact, it is wholly owned by a major manufacturer of transmitting and receiving equipment, which has had its business built on the developed interest in television that you have been able to build up through your programing?

Mr. SARNOFF. But I don't quite see how that develops a favorable position for the NBC television network.

Mr. COX. Well, what I am suggesting is that your parent corporation, RCA, was in a position to make profits from the sales of receivers and transmitters, even in the years when the network was operating at a loss because you were still building circulation to a point where you could bring in sufficient advertising revenues to support your programing.

Mr. SARNOFF. That is true. But it is also true that a number of other manufacturers made profits from the sale of receivers as a result of the audience built by the network, without having to make any investment in the programing service that the network provided.

Mr. COX. That is very true.

The CHAIRMAN. Well, there have been suggestions made that the law be amended to the effect that—which it has been in cases of other business—where there has been a divorcement of the manufacturer from the operation of the thing manufactured. It even got down to the famous Pullman case. But I think what you are saying to us here is that, without the revenues from the manufacturing division of the RCA, it would not have been possible to take all of these calculated risks for the network; is that correct?

Mr. SARNOFF. I think in the initial stages without the manufacturing——

The CHAIRMAN. Maybe not now, but in the beginning.

Mr. SARNOFF. Yes, I think in the beginning it was the manufacturing organization that made possible the establishment of the network.

If you go back to 1926 when the NBC radio network was first organized for that specific purpose, of building an industry. And after it had built, then the moneys that the NBC radio network and its stations had made were poured into developing black and white television. And now, as I pointed out this morning, now that the NBC television network has turned a corner and is making a profit, those funds are poured into developing color.

If you go back to the origins, you find the origin is a manufacturing company.

The CHAIRMAN. This may be the wrong place to ask this, but RCA has several patents; do they not?

Mr. SARNOFF. I believe they do. [Laughter.]

The CHAIRMAN. Does the network pay the same amount for the usage of those patents as anyone else would have to pay for them?

Mr. SARNOFF. The network is not in the manufacturing business.

The CHAIRMAN. I mean, supposing you use a patent of RCA—the network—do you pay a royalty, the same royalty, a third party would have to pay?

Mr. SARNOFF. We do, but I don't believe we are using any. Do we? (Turning to associates).

I am corrected by my counsel. We have a license agreement and we pay the same as anyone else.

The CHAIRMAN. At least you do it bookkeepingwise?

Mr. SARNOFF. That is right.

Mr. COX. At page 31 in your statement you were discussing the competitive aspects of television.

Mr. SARNOFF. Page 31?

Mr. COX. Yes. Your competition for audience, your competition with other media, your competition with other networks. Isn't it accurate to say, however, that in respect to the matter of competition in the providing of programing through the clearance of time that you and the other networks enjoy certain advantages over your nonnetwork competitors through the existence of the option-time arrangement?

Mr. SARNOFF. Well, I think the advantage, if there is one, accrues from the kind of service that we provide that no one else provides. That was the point I tried to make. That only three organizations in the programing field provide this kind of a comprehensive service.

Mr. COX. That is why an affiliation is so highly desired by a television station?

Mr. SARNOFF. I think so.

Mr. COX. And isn't that really the basic reason why the station then clears for a substantial percentage of the programs that you offer to it?

Mr. SARNOFF. I like to think he feels that the service is superior, yes.

Mr. COX. I think you stated, in commenting on the testimony of Mr. Moore regarding the high percentage of clearance in the 40 markets that he had analyzed, that this was true, but that this was because your affiliates apparently believed that the programing you were furnishing them was better than what they could obtain elsewhere.

Mr. SARNOFF. I think that is right.

Mr. Cox. Now, if your affiliates have made that decision in the past, on the basis of the quality of your programs, and if you expect to be able to maintain that quality for the future, why would not NBC be able to compete for clearance on its affiliates with any outside supplier of programing without the assistance of the option?

Mr. SARNOFF. Well, I think you have to understand the function of the option. I have no qualms about competing with anybody when it comes to programing. We get beaten quite often by different programs from different sources. But, on the whole, I think we have no qualms about competing.

The function of the option time thing is that we are selling national circulation, and we must be in a position to have some assurance that we can deliver that to a national advertiser whose revenue we are seeking in order to support ourselves. And he has to have some assurance that we can deliver what we are selling him; otherwise, he isn't going to make his commitment. That is the basic function of the option time.

Mr. Cox. Suppose you have an affiliate and a particular program broadcast of the network has not been ordered for his station; he must then program that hour or half hour himself?

Mr. SARNOFF. The affiliate?

Mr. Cox. Yes.

Mr. SARNOFF. Not necessarily. He might take from another network.

Mr. Cox. Or buy it from a syndicator?

Mr. SARNOFF. That is correct. Or program it himself with some local programs.

Mr. Cox. Now, if he buys a syndicated film program and places it into this time period for an advertiser and the program has local success in the market, but if for any reason, at a later point in time, the network desires clearance for that time, it can, on the required notice period, require him to evict that advertiser and that program from this station to make way fo clearance of the network program?

Mr. SARNOFF. Well, I wouldn't say "evict." I think our contracts call for what they call a 56-day recapture. But again, as I pointed out this morning, it still is at the election of the station.

Mr. Cox. That is the point I am trying to get at, Mr. Sarnoff. That is: Either this is something that you do because you have a legal right, or it something that you are able to do only because you can persuade the affiliate to do it.

Mr. SARNOFF. Not necessarily. I don't think you can make that clear a distinction. I think the existence of option time in the contract has a persuasive power. The fact we may not invoke our legal rights is a matter of business judgment.

Mr. Cox. As a matter of actual practice, isn't your ultimate recourse in the event a station operator—for whatever reason; whether he believes it in the interest of his local public or whether he is simply interested in the additional revenues he may get—if he refusees to clear systematically for the network, your final recourse is not legal action but to seek another affiliation arrangement?

Mr. SARNOFF. That is right.

Mr. Cox. So that in the final outcome, you don't rely on the option—you rely upon the availability of another facility as a means for clearance in the area?

Mr. SARNOFF. Well, I think that is carrying it pretty far, but I think that——

Mr. COX. That is the way you carry it, isn't it?

Mr. SARNOFF. No, I think that could be a consequence. I don't know that it is a reliance upon it.

The CHAIRMAN. Let's put it this way: That could happen, could it not?

Mr. SARNOFF. Yes, that could happen.

The CHAIRMAN. All right.

Mr. SARNOFF. Remember, that a station—we provide a service——

The CHAIRMAN. Could I ask, does it happen?

Mr. SARNOFF. Well, I stated this morning that I know of no case where it happened for that specific reason.

The CHAIRMAN. Yes.

Senator PASTORE. But insofar as dealing with your advertiser is concerned, on a national level, unless you had a reservation of the option in the beginning when you tie yourself up with your affiliate—before you could actually effectively deal with your advertiser, you would have to go up and buy up options before you could actually agree with him that his program could go on the air? You either do it in the beginning—you have to do it sometime?

Mr. SARNOFF. That is absolutely right. There would be utter chaos if everybody would——

Sentor PASTORE. I mean, unless you had this reservation of options—as much as we do not like the word and the connotations involved—but looking at it from a practical business point of view, unless you had this reservation in the beginning you would have to go up and pick up these options before you could deal with the advertiser?

Mr. SARNOFF. That is correct.

Senator PASTORE. Otherwise, you could not tell him what a spread you could give him.

Mr. SARNOFF. It is an essential element of being able to provide national coverage to an advertiser. If you can't give him that assurance you can't sell your programs to him.

Mr. COX. What you actually do with the option is exactly that in every case; isn't it? That is, you always order, under the option, the number of stations on the network that the particular advertiser is interested in, and it is not until you have had responses from your stations that you can really tell the advertiser what clearance you can give him?

Mr. SARNOFF. I would say technically that is true.

Mr. COX. Well, this is the only time that this station operator has had a chance to exercise this ultimate power of decision, in the light of the interest in his market which you say he must exercise, and which occasionally leads him to reject a program. And therefore you never know until you have had responses to your telegram orders of the markets, whether you can clear for 50 or 100 or 150 stations, except on the basis of average performance?

Mr. SARNOFF. Well, I would say that in practice you take a program like Groucho Marx, you can be fairly certain, based on its performance and based on its acceptance by stations, that you can accept the advertiser's order for renewal in that time period.

Mr. COX. But this is not——

Mr. SARNOFF. You may not get all the stations that he wants, but you will get enough to cover—get your national coverage and get your basics, and some of those that he is ordering. In no case, practically no case, do we ever get as many stations as the advertiser orders, but we know we will get enough.

Mr. COX. But that is not based on the option—that is based on your conviction that, in the exercise of your sound business judgment, X number of your affiliates will clear a program of the proven popularity of Groucho Marx' program?

Mr. SARNOFF. It is based on that experience. It is also based on the fact that we have option time which works to clear national lineups for us.

Senator PASTORE. Well, it is also predicated upon the fact that there is a feeling on the part of the broadcasting station that unless they play ball with you, you are not going to play ball with them when renewal time comes around. I mean, let's face it. Isn't that an important element involved?

Mr. SARNOFF. Well——

Senator PASTORE. I mean at the time the station ties itself up as an affiliate with you, it knows it has certain responsibility; that it has to meet certain of your requirements and requests in order to keep affiliated with you?

Mr. SARNOFF. Well, let me put it this way, Senator. The station affiliates with us because it wants our service. We affiliate a station because it plays an important role in filling out the market coverage for our advertisers. If we do not provide the service that satisfies the station, then he won't want our service and he won't want the affiliation. If he is unable or unwilling to carry our programs, so that we are unable to deliver to the advertiser that market, he is of no value to us. It is as simple as that.

Senator PASTORE. And if he is all alone in one community he is in a very strategic position?

Mr. SARNOFF. He can swing any way he likes.

Senator PASTORE. If he is 1 of 2, well, he still has ABC to go to?

Mr. SARNOFF. That is correct.

Senator PASTORE. But if he is 1 of 4, he has to pretty much tie up with 1 network and stay there; otherwise, he might be out of luck. The fourth man might come in.

Mr. SARNOFF. That is correct.

Mr. COX. Take the 2-station situation: That is, studying 10 markets in which NBC and CBS have affiliations and "must buy" arrangements with the only 2 stations in the market, it would appear that in a typical week NBC has been able to clear, over its affiliates in those markets, over 95 percent of the half hours as against 1.4 percent of the time for ABC.

Now, in this situation you have no claim of option because the stations could clear for ABC and you could not preempt the time; isn't that right? And, therefore, your success in clearing against ABC in those markets, at the ratio of something like 60 to 1, is based on something other than a legal right to preempt the time.

Wouldn't it be fair to say that that is based on the fact, as Senator Pastore mentions, of their desire to maintain their affiliation with NBC, or upon their belief that the programing is the programing they want to present in their markets, and not upon the legal-option right?

Mr. SARNOFF. Well, we do have option arrangements with such stations in those markets, and it is true that the option time is not—does not work against a program carried from another network. Whether or not the reason that the station carries so much of our programing is because of the existence of option time in the contract, or whether it is because he prefers to take our programing over ABC's, is a matter I don't have the answer to. That is something in his head. Or whether it is both—it may be both factors.

Mr. COX. If he refused to clear ABC on the ground that you have an option, that would be in violation of the regulations of the Commission.

Mr. SARNOFF. Well, I don't think that is the way he would operate. He would just inform us that he was not clearing for a program we were offering to him and he was taking something else.

Mr. COX. What has happened is that he has consistently told ABC he will not clear for them, and he does clear for you. In this one situation, at least, it must be perfectly clear that the fact that leads to the clearance is not option time, it is something else—either a desire for the affiliation or a preference for your programing.

Mr. SARNOFF. Well, Mr. Cox, you can't say that option time, per se, delivers clearances. It has a lot to do with the program content and the quality of your overall service. I can only reiterate what I said before, that option time—as a function of advertising, and as a function of the relationship between the network and the stations—does have an effect on clearances.

I think you will find in the questionnaire that we submitted that the clearances in option time, for whatever the reason, are far better than they are in nonoption time periods. So there must be something.

Mr. COX. But you do clear substantial lineups of stations even in nonoption time?

Mr. SARNOFF. Sometimes. Again depending on the program. But even with good programing, the best programing, programing of the best quality, you can find it is still difficult in many cases——

Mr. COX. Isn't that partly because the prime evening hours are the hours in which you have concentrated most of the programs on which you have spent the largest budgets and which are of a character to draw the maximum popular support; and that, therefore, you get a higher rate of clearance then because they are the programs that the local broadcaster must have——

Mr. SARNOFF. I was thinking specifically of a period like 10:30. There is not much distinction, from a viewing standpoint, between 10:30 and 10 o'clock. Yet 10:30 is not option time. It is station time, and up to 10:30 is option time.

Mr. COX. What percentage reduction in your clearances do you get at 10:30?

Mr. SARNOFF. Well, you take This Is Your Life, which is in option time. The client ordered 152 and we, so far, have cleared 120.

Mr. COX. That is in nonoption time?

Mr. SARNOFF. That is in option time.

Mr. COX. That is in option time?

Mr. SARNOFF. We had a 10:30 to 11 period, a program fed by an affiliate; the client ordered 124, cleared 37.

Mr. COX. What was that program?

Mr. SARNOFF. Midwest Hayride.

Mr. COX. Well, that just obviously wasn't a popular program, or one of as broad appeal——

Mr. SARNOFF. I cite that as one example. Anyhow, I think there are some facts in the questionnaire——

Mr. COX. Fine. I just haven't been able to examine that.

Mr. SARNOFF. Which address themselves to that point.

Mr. COX. Now, you have stressed, throughout, the importance of simultaneity in the broadcast operations of the network and the essential part played by the maintenance of the A. T. & T. lines, and so on. What precisely do you mean by simultaneous broadcasts? Does this mean a broadcast that is released in all time zones in the country at the same moment? Or one which is released at the same moment in certain zones and at a different time in other zones?

Mr. SARNOFF. I mean primarily the capacity to transmit a program so that it can be received simultaneously, at the moment it is being transmitted, in all parts of the country.

Mr. COX. That is, in other words, when the President addresses the country, you get a truly simultaneous broadcast so that he is heard by everyone at that moment?

Mr. SARNOFF. That potential is always in existence as long as you have the networks and the lines.

Mr. COX. But in terms of your commercial broadcast operations, isn't it true that you never—except on your spectaculars where they are broadcast in color and you cannot record them for later release too well—don't you ordinarily release programs in the western part of the country at a different time than they are broadcast from New York?

Mr. SARNOFF. Yes, on the west coast we have what we call a "hot kine" operation, so that they are—the programs originating in the East are done on kine at the same time, 7:30. There is a 3-hour delay.[5]

Mr. COX. So that you give them clock-time simultaneity, rather than absolute time?

Mr. SARNOFF. That is right.

The CHAIRMAN. That can't be done on live; can it?

Mr. SARNOFF. Well, if you go through live at 7:30 in the East, it is 4:30 in the West, which isn't——

The CHAIRMAN. My clock is now 11 o'clock. I just came from there.

Sometimes do stations ask for different times, the western stations? I mean, ask you to make a kinescope of it?

Mr. SARNOFF. Well, the time differential is so great on the west coast, as compared to the east coast, that for viewing purposes and for advertising purposes, it is almost essential that we do it at the later hour.

Mr. COX. The network does that itself; that is you feed it on to the network lines at a different hour, don't you?

Mr. SARNOFF. That is right.

Mr. COX. From this kinescope?

Mr. SARNOFF. That is right.

The CHAIRMAN. So you have to pay to do that, then, two cable charges. You are paying for the cable charges——

[5] Further information on this point is set forth in a letter dated August 9, 1956, and in exhibit 3 thereto, which will be found beginning at p. 2878.

Mr. SARNOFF. In effect, you do; yes. You are feeding it to Hollywood; Hollywood is recording it, and then it rebroadcasts it as a kinescope film 3 hours later.

The CHAIRMAN. You can do that because you have the line for so many hours; have you not?

Mr. SARNOFF. That is right.

The CHAIRMAN. And you can send the show out, say, at 8 o'clock here; you could still send that show out at 4 o'clock to my hometown in Seattle, because you are paying for the line anyway, aren't you, for a given number of hours?

Mr. SARNOFF. Well, we have to use the lines to carry our schedules, so whatever is normally fed across country at 4 o'clock, would have to be that particular program.

Mr. COX. Now, isn't there a substantial practice among advertisers who have more than one program—possibly on different networks—to have one or more of these programs broadcast live and simultaneously, and the other broadcast on a delayed broadcast basis throughout the various parts of the country?

Mr. SARNOFF. I don't quite follow that question, Mr. Cox.

Mr. COX. Well, for instance, doesn't Stopette, in sponsoring Caesar's Hour, carry that on a delayed basis, whereas What's My Line? is actually broadcast live across the country?

Mr. SARNOFF. Well, there may be some markets of Caesar's Hour—or in some markets, Caesar's Hour may be on a delayed basis. That may be a decision of the station. It may be that in the case of What's My Line?, which is on another network, that they have secured live clearances right through.

Mr. COX. Isn't this sometimes, though, a choice of the broadcaster? In other words, depending on the time and how it is going to fit into programing in another time zone, he may actually desire to have it broadcast on a delayed basis, rather than on a live basis clear across the country.

Mr. SARNOFF. Well, I would say with the exception of the west coast and certain problems raised by the irregularity of daylight saving time, the desire is always, with those exceptions, to go through live in as many stations as possible.

Mr. COX. You indicate on page 33 of your statement that you estimate that your programs, network programs, occupy something less than 18 percent of the total television broadcast hours of all stations, I assume, broadcasting in the country. Could you tell us, or provide for the record later, what percentage this would be in the hours from 7:30 to 10:30 at night?

Mr. SARNOFF. We'll provide that for the record, if we may.

Mr. COX. All right.[6]

Now, you indicated, in closing your statement, the fundamental problem that is posed by the allocation situation as distinguished from the network practices we have been discussing, and you urge prompt action to solve those. That obviously has taken much time, and perhaps will take more time. Are we to understand that these other program sources, who could be accommodated when additional station

---

[6] This information is set forth in a letter dated August 9, 1956, which will be found at p. 2878. The percentage shown there is 25.58 percent.

facilities are available, should be the ones to wait until this solution is found, and that there could not be any concession on the part of the networks at this time, to open up time for more equal competition in the furnishing of programs on the existing facilities?

Mr. SARNOFF. Well, Mr. Cox, I think there is more competiton than ever in the programing field, more opportunity than ever in the programing field for these so-called independent producers. Their own figures and the figures we have and their own statements indicate a growing volume of business.

I personally see no need, or no reason that would serve the public interest, to impose restrictions upon networks in order to help these individual groups, particularly since the solution to the problem rests in the solution to the allocation problem, and the damage that might be done to the networks' structure, and the imbalance that might be created, I don't think, would be worth whatever might be saved by advancing the solution to the problem, if there is one, by a couple of years, for these independent producers.

Mr. COX. Now, in commenting on the testimony of Mr. Moore regarding the problem of those producers, and the problem of an independent television station seeking programing of a quality to permit it to compete with the network, as I recall it you concede that a syndicator prefers to sell a new series to a network or to a national advertiser having time on the network—because he can, in this way, more easily and more quickly recapture his investment than if he were to go into the syndication business and try to get this back piecemeal, clearing this series in this market when he can and in that market when he can.

Mr. SARNOFF. That is right.

Mr. COX. Now, that being the situation——

Mr. SARNOFF. I assume that is what he would prefer. I mean experience would indicate that that is——

Mr. COX. And your analysis of the problems facing him leads to that conclusion.

Mr. SARNOFF. Yes.

Mr. COX. Now, isn't there great likelihood, then, that a shrewd syndicator of film programs, having weighed these same factors that you outline and come to the conclusion that this is the only way in which he can get a prompt return on his investment, will produce only the quantity of film programing that he can dispose of on a network basis, either directly to the network or to one of its national advertisers?

Mr. SARNOFF. Well, I don't know how, when he begins, he determines what that number is.

Mr. COX. Well, he produces a pilot and he goes to the network—all three networks—he goes to all the advertisers he thinks might be interested. If he finds either a network that is interested, or an advertiser with time, and the network agrees that the program would be suitable, he is in business; he can complete the other 38 films and he has a sale. Wouldn't that be true?

Mr. SARNOFF. Yes.

Mr. COX. Now, if he finds he cannot interest the network, or a national advertiser who in turn can get clearance from the network, isn't it quite likely that this project dies at that point, and he never completes the series?

Mr. SARNOFF. Not necessarily. He can go the route of syndicators. It may be a little harder and take a little longer, but there is nothing in the book saying he has to make his sale immediately and make his cost and get his investment back in one fell swoop.

What has happened is it has become difficult in syndication for reasons which have nothing to——

Mr. COX. Isn't the difficulty somewhat contributed to by the fact that as I——

Mr. SARNOFF. His difficulties are stemming from the increasing volume of films being produced for television, that is his basic problem.

The CHAIRMAN. Can I ask this question, because I am confused here. Suppose the syndicator has got a series of half-hour films and he wants to put them on a network. Maybe time isn't of the essence just when he does it. Wouldn't you sell him that half hour, the 38 half hours, if the time was available?

Mr. SARNOFF. We wouldn't sell it to him.

The CHAIRMAN. Why not?

Mr. SARNOFF. Because we only sell to advertisers.

The CHAIRMAN. You mean no individual can every buy time on a network?

Mr. SARNOFF. We don't sell time to individuals.

The CHAIRMAN. I am not saying whether there is a practical way; I am merely posing the simple qustion: If you have available time, you have a rate card, and Mr. A walks in. You say you wouldn't sell to him unless he is represented by an advertiser that would come in and buy the time from you?

Mr. SARNOFF. Unless he is a user of the time for advertising purposes. In other words, we do not sell time to individuals who in turn sell the time to somebody else. We are in the business of selling time and facilities.

The CHAIRMAN. In other words, what you are saying is that if he bought the time—you wouldn't sell him the time if he was going out, then, and peddling the time to an advertiser; is that correct?

Mr. SARNOFF. That is right.

The CHAIRMAN. Supposing he came in as an individual; he didn't want to peddle anything, he just wanted to buy the time?

Mr. SARNOFF. It would depend on what purpose there was.

The CHAIRMAN. There could be programs, say; a foundation, like the Rockefeller Foundation, wanting to come to you without an advertiser, and to buy a series of half hours of time. Would you do that?

Mr. SARNOFF. We might, in a case like that. Omnibus was a case where the foundation provided——

The CHAIRMAN. Or supposing somebody wanted to legally propagandize a cause of some kind, and the time was open; he is an individual, would you sell him the time?

Mr. SARNOFF. We might in that case offer him the time, actually. It depends——

The CHAIRMAN. You wouldn't offer it to him; he would have to buy it.

Mr. SARNOFF. We might. We do quite often.

The CHAIRMAN. Yes, I know. You do, to general public causes. I understand that. But I am saying suppose he is an individual, he can afford it, he wants to buy it.

Mr. SARNOFF. We normally do not sell time for controversial purposes. We sell our time for advertising purposes. The balance of the time and some of the time that we could sell for advertising we would hold for other purposes, but it would be within the framework of programing that we would provide, mostly in public service programing where you can get discussion and argumentation. But we would not sell a time period to an individual producer of a program for his own purposes.

If he came in—if he came to us with the program and we said the program is fine, and he wanted to produce it himself, and didn't need our help—he just says "I think this is a great program; I would like to see it on the NBC network, and I know such and such an advertiser who is tired of the show he has now and would like to buy this program."

The CHAIRMAN. Supposing he had enough of his own money to buy 2 half-hour periods on NBC that were open; he wanted just—no advertiser or nothing—he just believed that once he put that on it is going to catch on. Would you sell him the time?

Mr. SARNOFF. We would not.

The CHAIRMAN. You would not.

Senator PASTORE. But if he went to an advertising agency, the advertising agency could buy up the time, couldn't they?

Mr. SARNOFF. They could buy it on behalf of their client. They order it for their client.

Senator PASTORE. He would be the client.

Mr. COX. They cannot buy it themselves and control the time for resale to an advertiser?

Mr. SARNOFF. That is right.

The CHAIRMAN. I understand that. But I am making another distinction. Supposing someone wanted to come in and buy the time for a program that is not controversial in any way, entertainment, wanted to take that chance——

Senator PASTORE. Just show the signal for a half hour.

The CHAIRMAN. And the time was open——

Mr. SARNOFF. Well, you know one of the discussions that has been carried on here is the problem of advertisers and not having enough time. So here is——

The CHAIRMAN. No, I am predicating a case where the time was open, and he wanted to put it on. Supposing it is a new play he wanted to put on. Maybe he got some individual to put up the money to buy that time, and they do it themselves without anyone, any advertiser or anything else. Would you sell him the time?

Mr. SARNOFF. I don't think we would, Senator.

Senator PASTORE. Isn't it a fact that every time a program is shown under the auspices of NBC, CBS, or ABC, the prestige of the network it as stake, and you are very much fundamentally interested in the quality of the program?

The CHAIRMAN. I am not——

Senator PASTORE. I am not arguing with you.

The CHAIRMAN. Supposing he has taken a look at NBC programs, and he says: "I have just as good a one"—he believes that. And the quality—I think Mr. Sarnoff will agree with me that some of the programs are bad and some are good. But naturally, it would have to be—NBC would have to approve the type of program. I understand that. But I am assuming that supposing a fellow: Let's use the example again, a new play, and he gets—what do you call it on Broadway—an angel. Is that what they call them?

Mr. SARNOFF. An angel.

The CHAIRMAN. Angel, yes. The angel says: "We ought to put this on television. Let's go and see where we can get half an hour, or an hour's time. I will pay for it, it is good. When we open the show, it might bring more people to the show." He just does it all by himself, but you wouldn't sell him the time?

Mr. SARNOFF. In that case, he would become an advertiser. [Laughter.]

The CHAIRMAN. No, he doesn't come as an advertiser at all. He doesn't know.

Mr. SARNOFF. You just suggested that he would be advertising a program.

The CHAIRMAN. An advertiser is someone that advertises a definite product with commercials.

Mr. SARNOFF. But he is advertising his product here, which is a legitimate Broadway play.

The CHAIRMAN. But he doesn't know whether his product is any good or not. [Laughter.]

I mean, there is a distinction there. Of course, there is always a reason for buying time. If a man buys time for a cause, why there is a reason, he is an advertiser, if you want to make that fine a distinction.

Mr. SARNOFF. I can't recall a situation like that ever arising. If it did, we certainly would have to give it some real hard thought.

The CHAIRMAN. But I think the record ought to be clear, you said "no."

Mr. SARNOFF. I would say offhand we would not, that we will sell time to advertisers and not to individuals who really are the owners of programs.

The CHAIRMAN. Is this a fair question: In any situation such as that that might occur, unless the person, or the applicant for the time, had an advertising agency, you would look a little askance on it, wouldn't you?

Mr. SARNOFF. I wouldn't put it this way. I would look hard at it if it were an individual who was not an advertiser, not a national advertiser certainly.

The CHAIRMAN. Now, this time is supposed to be open for people who put on programs, is it not, or ask for time—programs that naturally will be of the type you would have to clear—but it is supposed to be open; it is a free field, isn't it?

Mr. SARNOFF. Well, I think in such cases as the ones you are suggesting you would really have to take a look at the function that it serves. I mentioned this morning that one of the functions our network serves—or that our network service was actually based on a triangle, serving the public, serving the stations, and serving the advertisers.

Now, I think in any case like the one you are suggesting, if it were to arise, we would have to take a look at it to see whether it was serving all three sides of that triangle. And if it were not, and something else would serve the three sides of that triangle, then I think we would have to give it very serious thought.

The CHAIRMAN. I understand that, that is for most of your available hours. But I am suggesting a case where the half hour, or the time, would be open—it hasn't been sold to an advertiser. The network is not using it, it is available; he is going to pay the card rate.

Mr. SARNOFF. Well, Senator, it gets into a lot of complicated problems. Because what it would mean, in effect, is if there were a half hour—in the first place, there is no such thing as a half hour that isn't being programed, in one form or another. Those that are not sold are being programed sustaining.

The CHAIRMAN. I am coming in to buy it—give you the card rate.

Mr. SARNOFF. All right. Now, you come in to buy it, not for advertising purposes but merely to put your program on.

The CHAIRMAN. That is right. And it is a program that you have to approve of.

Mr. SARNOFF. You would be subsidizing our programing, in effect. Well, I think that raises some serious questions.

Senator PASTORE. Let's put it this way: Let's assume someone, realizing that they have a lot of loose dollars, which is a hot question to ask, but he realizes that South Pacific is a wonderful musical comedy that a lot of people haven't seen, because they can't afford the $6.60. So he has a couple of million dollars and he would like the whole country to see it for half an hour. He is willing to buy up the show and put it on the air once, on television; and he comes to you and says he wants to buy the time. The time is available. He says: "I've got nothing to sell."

The CHAIRMAN. Except his own idea.

Senator PASTORE. "I want 65 million Americans to see South Pacific for nothing." Would you give him the time?

Mr. SARNOFF. Well, if somebody came to us——

Senator PASTORE. I don't know his name, outside of Santa Claus. [Laughter.]

Mr. SARNOFF. If somebody came to us with South Pacific, and wanted to put it on the network and wanted to pay the cost for the network and compensation for the stations, I think we would take a good hard look at it, and probably take it. [Laughter.]

The CHAIRMAN. The point, Mr. Sarnoff, I am trying to get at: I think it doesn't maybe work this way. It has been suggested to me here by a note that no angel would be so stupid as to kill the play. [Laughter.]

Sure, everybody has something to sell—even the Santa Claus he talks about has something to sell. But the point I am trying to get at is that, supposing someone has something new—new talent, new show. Everything else is tied up; he can't get an advertising agency, but he finally digs up enough money to buy a piece of network time. He comes to you as an individual.

You say "What kind of a thing have you got?" So he outlines it to you and it fits within the pattern of the things you put on, entertainmentwise or propagandawise, or any other way. You say that that time would not be available to him?

Mr. SARNOFF. I don't mean to be negative or categorical; it is a situation that has not arisen. I can conceive where under certain circumstances it is quite possible we might do it. You will have to let me backtrack a little on that—on being as positive as I was before.

The CHAIRMAN. Let me pose this; maybe you can answer the question better. Supposing it is a really—an actual real public service program, but you find that you can't fit it in to give it free for public service. So he says, "I will pay you for it, I am not selling anything, I haven't got an advertising agency, I don't want to deal with one, I am not selling a product that is manufactured. I want to buy a half hour of your time. Maybe I want to put on a play that might talk about——"

Mr. SARNOFF. I think actually this could happen. But it would depend on what the program was, who was buying the time, what he represented, all these factors. It is not impossible. Nothing is impossible in this business.

Mr. COX. While we are mentioning public-service programing, you indicated, of course, that one of the principal roles that a network can play is to provide a balanced program service, which you indicated included public-service programing, including news and other services. Could you tell us approximately what percentage of your network broadcast time is devoted to public-service programing?

Mr. SARNOFF. Well, Mr. Cox, I think you get into a bit of a discussion of what public-service programing is. I think this has come up before. It is difficult to specify any particular program as public service. There are a few that you might say are public service. But if you look at the entire schedule, there are many programs, and many elements within programs, which certainly fall into the public-service category. And I think that the idea that only a sustaining program represents public service has pretty much gone by the boards. You can have commercial programing that is equally as important as public service. As a matter of fact, we have at NBC a monthly report—we call it a responsibility report—and this lists all the things that our producers have been able to do, within the programs they are producing, during that month which are of a public service, information, educational, cultural nature. So it would be hard for me to say that the presentation of the Sadler Wells Ballet—ballet for the first time in that form—wasn't public service, or that Nightmare in Red, The Twisted Cross, these fine documentaries of Project 20, aren't public service, even though they were sponsored.

The CHAIRMAN. Let's restrict it, then, to sustaining programs. What percentage, first, of your network broadcasting time, is devoted to sustaining programs?

Mr. SARNOFF. That I believe we can give you.

The CHAIRMAN. I think you have put that—you ought to have all the networks put that in the record.

Mr. COX. I don't think this is in the questionnaire.

The CHAIRMAN. Pardon me.

Mr. SARNOFF. Again, it presents a bit of a problem of terminology, because where you take a program that is only partially sponsored, the part that isn't sponsored is sustaining, yet it is a commercial problem.

The CHAIRMAN. Put this in the record: What portion of so-called—and we can define "public service"—let's not get into ballet; let's get out of that field. [Laughter.]

We can define fairly well "public service"; what portion of your programing time has been in public service, not sponsored?

Mr. SARNOFF. What do you mean by "public service"?

The CHAIRMAN. Well, I can think of all kinds of programs. You mentioned one on the mental-health program.

Mr. SARNOFF. Senator, that is the point I am making. It is difficult——

The CHAIRMAN. Yes. You mentioned—things in the public interest. There are some political discussions. You own Meet the Press, don't you?

Mr. SARNOFF. That is right.

The CHAIRMAN. You have Youth Wants To Know. What happened to that?

Mr. SARNOFF. It is on.

The CHAIRMAN. It is still on?

Mr. SARNOFF. As I understand; yes.

The CHAIRMAN. And things of that nature. I think you can draw a definition of this.

Mr. SARNOFF. Well, I think if you would like, I would be happy to file with the committee a copy of our March 1956 responsibility report which gives some indication of the type of thing I am talking about.

The CHAIRMAN. Don't you file that with the FCC?

Mr. SARNOFF. This is for our own purposes.

The CHAIRMAN. Well, it will be incorporated by reference and kept in the committee files.

(The document referred to will be retained in the committee files.)

The CHAIRMAN. Would you say that the three networks do about the same amount, percentagewise?

Mr. SARNOFF. Public service?

The CHAIRMAN. Yes.

Mr. SARNOFF. I don't know. I haven't actually analyzed the ABC.

The CHAIRMAN. I have always understood—and I may be wrong, correct me—public service broadcasts I have always considered have been put on by the station without a sponsor, whatever definition you want to make, as a public service. That is the percentage I want.

Mr. SARNOFF. We can work up that kind of percentage.[6a] The point I was trying to make——

The CHAIRMAN. Sometimes they are political, sometimes they are of local interest.

Mr. SARNOFF. But the point I was trying to make——

The CHAIRMAN. You always announce this is a public service broadcast of network so-and-so?

Mr. SARNOFF. That is right.

The CHAIRMAN. That is what I want.

Mr. SARNOFF. But the figure doesn't have any particular significance in terms of only that programing which is not sponsored.

The CHAIRMAN. It may have some to us.

Mr. SARNOFF. Would you suggest that I leave out Meet the Press?

The CHAIRMAN. No, no.

Mr. SARNOFF. That is sponsored.

[6a] This information was furnished in a letter dated December 12, 1956, which is set forth (insofar as here pertinent) at p. 3124, appendix. The percentage given in this letter is 43 percent.

The CHAIRMAN. Yes, yes. I mean you can say "We have these public service that we sponsored—the networks sponsor themselves, or they put on themselves—and then we have other programs in the nature of public service that are advertiser sponsored."

Mr. SARNOFF. All right. I think we can work that up.

Mr. Cox. Do you carry any sustaining programs now in evening option hours?

The CHAIRMAN. Noncommercial programs, that is what I am talking about.

Mr. SARNOFF. I understand, sir.

Mr. Cox. Do you carry any sustaining programs in evening option hours?

Mr. SARNOFF. Not on a regular basis. Sometimes we do specials which may be sustaining.

Mr. Cox. That is, all of these discussion type programs that you have mentioned—Meet the Press, and so on—are carried in daytime hours, then?

Mr. SARNOFF. Well, some of them are carried—yes, some of them are carried on Sunday. As a matter of fact, we have one starting this summer which is going to be 8 o'clock Wednesday, Nation's Press Conference.

Mr. Cox. That will be on your program schedule next fall—this summer you say?

Mr. SARNOFF. And Meet the Press is 6 o'clock on Sunday.

Mr. Cox. As I pointed out when Dr. Stanton was testifying, we heard testimony on Monday of this week from Rev. Everett Parker, indicating I think, in the case of NBC, that according to his calculations, NBC was providing sustaining religious programing at the rate of only one half-hour a week, I think, which he indicated was 0.62 percent of your broadcast time. Now would you care to comment now, or could you provide us with a comment later on, as to the network's concept of its responsibility for programing in that field, and whether the network feels that this is an adequate recognition of that phase of our national life?

Mr. SARNOFF. If I may, I prefer to do it later, because I haven't had an opportunity——

Mr. Cox. To examine his testimony?

Mr. SARNOFF. That is right.

Mr. Cox. Very well.[7]

Now, you have indicated in your testimony and in the statement of facts that NBC maintains a basic required or must-buy policy which includes the 56 basic affiliates of NBC, including your owned-and-operated stations. As I understand it, your practice in prime evening hours is to require the advertiser to buy an additional 44, is it, to bring this total up to 100 stations of the network?

Mr. SARNOFF. A minimum of a hundred.

Mr. Cox. And if he does not buy this, he either has to make his program available for your Program Service Plan or he must pay a penalty or lose ——

Mr. SARNOFF. There is an adjustment in discount.

---

[7] The comments of NBC are set forth in a letter dated August 9, 1956, and in exhibit 4 thereto, which will be found beginning at p. 2878.

Mr. Cox. Adjustment in discounts.

Now I think you also indicated that you had certain standards in the selection of your must-buy markets involving two factors: Population or homes, and retail sales for two different areas, one the metropolitan area in which the station is located, and the other the service area of the station; is that correct?

Mr. Sarnoff. That is right.

Mr. Cox. Now isn't it true that you have a number of stations on your must-buy list that are below those standards?

Mr. Sarnoff. I believe so, and I believe the questionnaire addresses itself to that point.

Mr. Cox. The point that I was going to raise is: Do you not have a number of other stations who feel they are in this same general category—not quite meeting your requirements, but they feel they are doing as good a job as others on the list—who are seeking this basic status and have not yet been accorded it?

Mr. Sarnoff. Yes, I believe there are probably—I don't know offhand which ones, but I am sure there must be some who feel that they ——

Mr. Cox. Now isn't this a matter that they bring up periodically with you; that is, they come in with new figures as to population or sales or coverage, and they try to persuade you that you should add them to the basic list and advertise them on your rate card as a part of the basic network?

Mr. Sarnoff. That is right.

Mr. Cox. And you either agree to this or you don't?

Mr. Sarnoff. That is right.

Mr. Cox. But the decision is made by the network?

Mr. Sarnoff. Correct.

Mr. Cox. And I think in your answer to the questionnaire you have also indicated some exceptions to your "must-buy" policy; that is, there are instances in which you do sell——

Mr. Sarnoff. You mean the advertiser?

Mr. Cox. You sell to advertisers who do not take it?

Mr. Sarnoff. There are a couple of instances, one of which is historical, but normally we do not. Normally it is—with these exceptions, they are all on the "must buy."

Mr. Cox. Now the committee heard testimony several weeks ago from a number of independent scenery and set producers in New York who contended that they had been systematically excluded by NBC and CBS in recent years, and by ABC at all times, from furnishing sets for live programs broadcast on the net. And they quoted statistics indicating the sharp decline in the volume of their business with the networks. Now isn't it true that, initially, NBC purchased the greater bulk of the sets that it used from people of this kind who operated independent businesses of furnishing such sets?

Mr. Sarnoff. Well, maybe in the very early days of networking that is possible, but I certainly don't think it is true as we grew and as we found it necessary to maintain our own production facilities.

Mr. Cox. I am sorry, I didn't understand you.

Mr. Sarnoff. I said in the early days of the networking service it is quite possible that, until we had built our own facilities, that we were buying on the outside, where we had a small—you know, our schedule of hours wasn't very great. But as we increased our scheduling and our programing, and our own facilities——

Mr. Cox. Well, isn't it true that as recently as 1952 you were buying a substantial quantity of scenery and sets from these people?

Mr. SARNOFF. Well, I don't know the actual statistics on this, Mr. Cox. I do know a couple of things that have happened, though.

Mr. Cox. All right.

Mr. SARNOFF. There are a number of programs that are no longer being broadcast by NBC, which were being serviced by the outside scenery designers. There are also a number of programs that have moved to the west coast. There has been quite a shift of production from the East to the west coast. Now, as I understand it, the witnesses from the scenery makers are New York operators?

Mr. Cox. Exclusively.

Mr. SARNOFF. Yes. Well, the shift to the west coast could easily affect the volume of their New York business.

Mr. Cox. Has the size and the scope of your own set operation in New York been increasing steadily over the years?

Mr. SARNOFF. Well, there was a period when it increased. At what point it leveled off, I am not quite sure. I don't think it has increased substantially in the last——

Mr. Cox. Do you furnish sets not only for programs which NBC produces but for programs which are produced by live packagers?

Mr. SARNOFF. In some cases we provide sets for NBC-produced shows, and in some cases we provide them for out-produced shows, yes.

Mr. Cox. I think you indicated in your answer to the questionnaire that you operate your staging division, of which this set operation is a part, at a slight profit.

Mr. SARNOFF. Certain elements of it, yes.

Mr. Cox. Now, do you submit a bid to an outside packager for the sets on the show in competition with the independent producer?

Mr. SARNOFF. I am not sure, Mr. Cox, to be perfectly honest, that I am too familiar with the operation of the scenery department.

Mr. Cox. Well, could you perhaps, then, do as Dr. Stanton did, file a statement with us which would be directed to the testimony of the earlier witnesses on that point?

Mr. SARNOFF. Yes, be glad to.[8]

Mr. Cox. Now, as I understand it, NBC operates a spot sales organization which represents its owned and operated stations and also a number of your major affiliates?

Mr. SARNOFF. Yes, it does.

Mr. Cox. Are you seeking to add to the number of affiliates whom you represent?

Mr. SARNOFF. No; I do not think we are. I think we have about what we feel is what our organization can handle at the moment.

Mr. Cox. Was this arrangement one that was originally suggested by the network to the stations, or was service requested by the affiliates?

Mr. SARNOFF. I believe this was a service developed by the O. and O. division.

---

[8] This statement is set forth in a letter dated August 9, 1956, and in exhibit 5 thereto, which will be found beginning at p. 2878. A reply statement from Peter J. Rotondo, one of the independent scenery designers, is printed at p. 2890. A further letter from a representative of the independent designers is set forth as item 31 in the appendix to this volume.

Mr. Cox. Then it was offered by the network to certain affiliates, or to all affiliates?

Mr. SARNOFF. No; it was offered by the station division.

Mr. Cox. By the station division of the network?

Mr. SARNOFF. That is right. Of the company, not of the network.

Mr. Cox. Oh, this is yours——

Mr. SARNOFF. So the sales is a function of the O. and O. division.

Mr. Cox. I see. And operates, therefore, as a part of NBC and separately from the network?

Mr. SARNOFF. That is correct.

Mr. Cox. Does your company make a profit from this representation business?

Mr. SARNOFF. Yes, it does.

Mr. Cox. Does your spot sales organization operate any differently than the private spot representatives who are in business?

Mr. SARNOFF. In accordance with the competitive situation in the spot field.

Mr. Cox. It performs the same functions and receives the same rates?

Mr. SARNOFF. The same functions and same arrangements.

The CHAIRMAN. Right back there, can a fellow come in and get some spot advertising without going through an advertising agency?

Mr. SARNOFF. I guess so, yes.

Mr. Cox. Doesn't your spot sales organization compete for spot revenues with its own clients, in the sense that it is selling spots on your six owned and operated stations at the same time as it is trying to place spots in other markets?

Mr. SARNOFF. No, I don't think that is happening, and I have heard of no complaints from any of the stations that are represented by our spot sales that they are being slighted in any way. As a matter of fact, they seem to be very happy with the performance.

Mr. Cox. Would there ever be a chance that it might be in the interest of NBC, if you had a program period for sale on the network schedule, to try to interest an advertiser with whom you were dealing in placing his advertising budget in this program rather than in a spot campaign to make use of your affiliated stations?

Mr. SARNOFF. You mean are they likely to be influenced toward—I am not quite sure I get the import of your question.

Mr. Cox. Isn't there always a choice on an advertiser's part between whether he is going to devote his budget to the sponsorship of a network program or whether he is going to devote it to national spot, either in terms of sponsoring programs on local stations throughout the country or on a spot announcement campaign?

Mr. SARNOFF. Yes.

Mr. Cox. Now, don't you, therefore, perhaps at times find a situation where the network has an available program it would like to sell and it is trying to interest advertisers in this program; at the same time it is also engaged by its affiliates to represent them in selling and competing for these advertising dollars in the spot market?

Mr. SARNOFF. Well, I would say that the national salesmen are competing with the national spot salesmen all the time.

Mr. Cox. But in this case the network sales staff is competing with the spot sales staff of the same organization, although it may be a different division of NBC?

Mr. SARNOFF. It is no different than different brands of similar kinds of products competing with each other.

Mr. COX. That is, you mean where the manufacturer makes two cars, and he competes with himself? Except that the money, here, would go to different people, wouldn't it. That is in one case it would go to the local station, and in the other case it would go partly to the station and partly to the network on the split of time charges?

Senator PASTORE. The answer to that was "yes"? You see a nod doesn't get in the record, Mr. Sarnoff.

Mr. SARNOFF. I am sorry. Yes.

Mr. COX. Just one question, then, in conclusion, and I am sure this will please Senator Pastore.

Senator PASTORE. Most refreshing.

Mr. COX. Ten minutes ahead of schedule.

If the networks feel that, on top of the natural constriction, and therefore reduction in competition, that is necessarily incidental to the limitation on facilities, that they must have, by contract or other arrangement, additional restrictions upon the free marketing of programs or upon the free access of advertisers to the network in terms of option time and "must-buy," doesn't it seem that this additional artificial restraint upon the free movement of forces in the field—which really cements the position of the network—might require regulation of some kind in the public interest which perhaps would not be necessary if there were no such artificial restraint?

That is awfully long and involved. I am sorry.

Senator PASTORE. Let us ask the witness, do you understand the question?

Mr. SARNOFF. I am not sure I do. Maybe I will try to answer it, anyhow.

Senator PASTORE. Well, if you want it restated I think Mr. Cox would be glad to restate the question.

Mr. SARNOFF. Would you like to?

Mr. COX. All right.

Let us put it this way: We start with the fact, to which you address yourself, of the problem of the shortage of facilities?

Mr. SARNOFF. Right.

Mr. COX. So that at the very outset some problems arise competitively that would not exist if we had ample competitive television channels. Now, it appears to be the position of the networks, including NBC, that on top of this natural limitation on competition, they feel it is essential to the maintenance of their network service that they have option time and "must-buy," which are contractual or other arrangements within the industry which, it is charged, limit competition. Now, doesn't the addition of these artificial restraints perhaps raise a necessity for some form of Government regulation which would not exist if you were going to compete on a first-come, first-served basis with the existing stations in the market?

The CHAIRMAN. That is where my man comes in to buy the time. [Laughter]

Mr. SARNOFF. First of all, I think the so-called artificial restrictions, the "must-buy" and the option time, actually they have been in existence. It is the situation of a limitation of facilities imposed on that that perhaps has created part of the problem.

But I cannot see—and I stand by what I said this morning—I cannot see any regulation that could advance the public interest or any regulation that would not in some way hurt the existing service which is of great benefit to the public. In other words, I see nothing to be gained in a small improvement here, by a major surgery over here. I think that the contribution that networks have made to the public in building up this tremendous industry—which now has four hundred some-odd stations, 35 million television sets, a billion dollar advertising business, hundreds and hundreds of advertisers on the national and local level—that having developed it to this point in 10 years on the basis of the networks' service, now finds itself in the position of a great new enterprise coming ahead, which is color, which will only develop and flourish if the networks are permitted to operate, I cannot see anything in any regulation proposed that could benefit the public by improving the present situation. Just the opposite would happen; I think it would hurt it considerably. And a number of the proposals made, I think, could result ultimately in the destruction of the present national program service as we know it.

The CHAIRMAN. On the reverse side of the coin, we are charged here with the primary responsibility of legislation. Have you any suggestions you would like to make now, or put in the record, as to any changes in the authority given the FCC, or changes in the original FCC Act that are detrimental to what you suggest?

Mr. SARNOFF. Well, there are 2, at least 2 suggestions, Senator Magnuson. First, I think we have to solve the problem of allocation—solve the UHF problem.

The CHAIRMAN. Yes. I want to ask just a couple of questions about that.

Mr. SARNOFF. Secondly—and I think that can be done, as we have suggested on a number of occasions, by selective deintermixture. I think what we have to do is start something. We have to get going. Nobody is going to be able to wave a magic wand and solve the problem tomorrow, but it is at least a step we can take toward solving it.

The CHAIRMAN. And your suggestion to the Commission, under its authority given to it by us, is that they proceed with that?

Mr. SARNOFF. That is correct. And we suggested principles on which they should proceed, namely, selective deintermixture to result in the greatest possible number of new facilities without degrading the existing service.

Secondly, we have urged, and still urge, action be taken on the removal of the excise tax, because that would be another step in the right direction by encouraging the manufacture of all-channel receivers. And here with a new industry coming along—color—which has every indication, regardless of what anybody says, of really breaking through, I think it is giving that indication now, we can find—and I think in a quicker time, in a shorter period than it took to get 35 million black-and-white sets out—we can get out that number, and more, in as short a period of time. And that, too, would help the problem, because part of the problem is UHF circulation.

The CHAIRMAN. I want to say that I may not agree with you on everything you do, but your manufacturing division, I think, has done a good job in trying to hold the line on all-channel sets, and they were courteous enough to come and discuss the matter with us informally, that they were hopeful that something could be done before it became an absolute necessity to break the line, and I think they have done a good job on that.

Mr. SARNOFF. That is right.

The CHAIRMAN. This committee is concerned, of course, with this real problem, tremendous problem, of allocation. And I hope that you don't feel that there is still—I mean I hope you do feel that there is still some hope for UHF.

Mr. SARNOFF. We feel very strongly. This morning in my statement I indicated our belief in UHF based on what we had done. We have better than 40 percent of the UHF stations in the country on the NBC network, and we, ourselves, as you know, have undertaken to develop UHF in Buffalo. We bought a station; we are waiting approval——

The CHAIRMAN. You have three; don't you?

Mr. SARNOFF. We only have one.

The CHAIRMAN. You applied for two?

Mr. SARNOFF. We are awaiting approval of our purchase of a UHF in New Britain. We have right along urged the support of UHF because, to us, it seems to be the only possible solution to the problem of getting more facilities. We think the solution lies in expanding the service in the economy, not restricting what now exists.

The CHAIRMAN. You don't feel that the expansion of new facilities, which would get us further along toward the goal of free and competitive television, would in any way hurt the networks—or do the networks serve a different function?

Mr. SARNOFF. We would welcome it.

The CHAIRMAN. Yes.

Senator PASTORE. Any further questions?

The CHAIRMAN. But my fellow still cannot get time; can he? [Laughter.]

Mr. COX. Maybe he can.

Senator PASTORE. Any further questions?

We said we would terminate it by 3 o'clock. We beat it by 1 minute. Ten o'clock tomorow, and the chairman is presiding—Mr. Magnuson.

(Whereupon, at 3 p. m., the committee adjourned until Friday, June 15, 1956, at 10 a. m.)

(In response to the chairman's general request that the networks comment with respect to the pending bills concerning political time, NBC submitted its views in a letter dated August 2, 1956. This letter is printed at p. 2894.)

TELEVISION INQUIRY

(Network Practices)

FRIDAY, JUNE 15, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m. in room G-16, the Capitol, Senator Warren G. Magnuson, the chairman, presiding.

Present: Senators Magnuson (presiding) and Potter.

Also present: Wayne T. Geissinger, assistant counsel; Kenneth A. Cox, special counsel; Nicholas Zapple, staff communications counsel.

The CHAIRMAN. The committee will come to order. Because we are having long sessions here, we will start before some of the rest of the Senators get here. Mr. Kintner, we will be glad to hear from you. You have a prepared statement which you can read in whole or in part, but it will go in the record in whole.[1]

Mr. KINTNER. Thank you very much, Mr. Chairman.

STATEMENT OF ROBERT E. KINTNER, PRESIDENT, AMERICAN BROADCASTING CO., ACCOMPANIED BY ROBERT H. HINCKLEY, ERNEST LEE JAHNCKE, JR., JAMES STABILE, HAROLD MORGAN, AND FRANK MARX

Mr. KINTNER. It is a privilege for ABC to appear before the committee.

Before reading my statement, I would like to identify the people from ABC in the room who would be available to the committee for any questioning in the various fields:

Mr. Robert H. Hinckley, who is vice president of American Broadcasting-Paramount Theaters and a member of our board of directors; Mr. Ernest Lee Jahncke, Jr., vice president of ABC and assistant to the president; Jim Stabile, general counsel and vice president of ABC; Harold Morgan, vice president and comptroller; and Frank Marx, vice president in charge of engineering.

My name is Robert E. Kintner. I am president of the American Broadcasting Co.

I am sorry, Mr. Chairman, that Senator Pastore is not here, because you will note our statement is 25 pages long, compared to 38 and 39 for NBC and Columbia. [Laughter.]

---

[1] The response of American Broadcasting Co. to the network questionnaire mailed by the committee on May 25, 1956, was delivered to the committee staff on this date and will be retained in the committee files. The standard forms of affiliation agreements included therein are set forth in the appendix hereto at p. 3035.

In addition I would like to give a summary of our position. We believe that the trouble with the television business is a scarcity of stations created by Government inaction, and permitted to continue by the Government, and we believe the networks are operating in the public interest, that their practices are in the public interest. We believe the competitive problems would disappear if there were 3 or more competitive stations in the top 200 markets of the country. That, basically, is our position.

ABC, the youngest of the networks, owns and operates the ABC television network, the ABC radio network, and owns and operates television stations in New York, Chicago, Detroit, Los Angeles, and San Francisco, and radio stations in New York, Detroit, Los Angeles, and San Francisco.

It seems to us that what your committee is basically examining is free competition within the television industry. I feel that I qualify as an expert in this field, since as the youngest and smallest of the television networks we have faced the problems of building a program structure competitive to that of the older networks.

You have heard varied charges against the methods under which television operates on a national and local level. Some of these charges are based on lack of understanding of the business, others on selfish interests, and others were made by those who have a sincere desire to improve an industry which has exploded in a few short years and has revolutionized the home life of most of America.

ABC'S POSITION

ABC's position is a simple one.

One, there is a kind of monopoly in the television business, but it is a Government-created monopoly based on the lack of at least three comparable television stations in the top population markets of the country.

Two, the program offerings of the three networks constitute an important factor in the daily life of America, which is not only in the public interest, but consitutes a major contribution to the economic well-being of the country.

Three, while no one should say that a system cannot be improved, the relationships now established between stations and the networks represent the most efficient method by which all parts of the country can simultaneously receive outstanding entertainment, news, religious, and public interest television programs.

SCARCITY OF COMPETITIVE STATIONS

We believe that the major attention of the Senate committee, and of the Federal Communications Commission, should be directed to the scarcity of stations, because with its solution, alleged monopolistic practices in the industry will disappear, just as they disappeared in radio when the factor of a too limited number of radio stations was removed.

Mr. Cox. What were those practices, Mr. Kintner, that you were referring to there that were of monopolistic nature, but which disappeared when additional stations were made available?

Mr. KINTNER. You remember Mr. Cox, there was a freeze on the granting of radio stations during the period of the war. Similar charges developed due to the scarcity of sufficient stations to accommodate the four networks in top markets. After the freeze was lifted and sufficient stations were put in the markets, the practices of which the networks, the stations, the packagers, et cetera, were accused disappeared, because for the first time there was a freedom of the market place, which you today have in radio. And it is not only because radio perhaps is not as profitable as it used to be, that criticisms aren't directed at the radio networks; it is that by Government action a free play of the forces in the broadcasting, in radio, business have been achieved.

Mr. COX. Were some of the criticisms in that period leveled at the networks criticisms involving option time, must-buy and matters of that sort?

Mr. KINTNER. That is right. They originally started in the 1938 FCC study and continued with the creation of the network rules, on the basis primarily, I believe, that NBC and CBS dominated the business through their relationships with clear-channel stations throughout the country.

The CHAIRMAN. In other words, there is a distinct parallel between the matter before us now, on television, and what the experience—and what happened in a given period during the growth of radio?

Mr. KINTNER. I believe so, Senator; yes, sir.

The CHAIRMAN. And there may be some parallel, wouldn't you say—not on all fours—but between the AM–FM thing and our UHF–VHF.

Mr. KINTNER. Well, I hope there is not a good comparison.

The CHAIRMAN. Some parallel in the problem.

Mr. KINTNER. There is parallel in the problem.

The CHAIRMAN. I say not on all fours, but there is some experience there, I think, we could draw on.

Mr. KINTNER. It is a parallel. I would hope we could solve the UHF problem better than we solved the other problem.

Mr. COX. Largely in the nature of a warning?

Mr. KINTNER. Yes; I think so.

It seems to us a serious indictment of governmental processes when this subject has been under intensive investigation for at least 2 years without adequate solution. I know the committee is interested in contributing to free competition within the television industry, and I can think of no better way to achieve it than by a strong congressional mandate to the Federal Communications Commission, not only to speed up the granting of television stations already allocated, but also to devise new allocations plans whereby 3, 4, or 5 competitive television stations can be established in the larger markets of the country.

ABC, as you know, has filed with the committee, and also with the FCC, a plan whereby we believe a minimum of three stations can be established in the top markets of the country. Since that time we have continued our study, and we will file at a later time with the committee, with your approval, and also with the FCC, a proposed plan which would do the following:

Of the 200 top markets in the country on the basis of population——

The CHAIRMAN. Are you reading from your statement?

Mr. KINTNER. No; I am not.

On the basis of the top 200 markets of the country, through the use of deintermixture, drop-in of stations and similar methods, we feel sure that without a degradation under the present FCC engineering standards, that in the first hundred markets 75 of them could have 3 or more VHF stations, 1 could have 2 VHF stations, 2 could have 1 VHF station, and 22 would have completely UHF service. That totals the top hundred markets. This is the plan that we filed.

The second hundred markets: We believe that 69 markets can be given 3 or more VHF stations, 2 can be given 2 VHF stations, 3 can be given 1 VHF station, and 26 would be all UHF.

This would mean of the total top 200 markets, instead of the terrible scarcity that we now have, there would be 144 markets with 3 or more V's, there would be 3 markets with 2 V's, there would be 5 markets with 1 V, and the ultrahigh frequency would be continued and play an important part in the broadcasting economy by being the exclusive method of broadcasting in 48 cities.

The CHAIRMAN. Now, would that plan, without designating specific markets—that plan would give complete coverage would it not, to practically all sections of the United States with maybe some rare——

Mr. KINTNER. Farm population——

The CHAIRMAN. Topographical situations.

Mr. KINTNER. We think that would do it. We will file, Mr. Chairman, with your permission, the additional plan.[2] The first plan is already in the record of the March hearings.

Let me restate the basic problem of the television business. It is that there are not enough comparable and competitive television stations in many major markets. By comparable and competitive stations, we mean simply stations that are capable of being received by approximately the same number of sets in the hands of the public. The demand for additional network regulation, and the charges of monopoly directed against network practices, are directly traceable to this scarcity of outlets. If the scarcity problem is solved—and it can be solved—the problems that confront us now will be fully and effectively met without the need of additional governmental intervention or regulation.

There are two phases to the problem:

One, the necessity for speedy action by the Federal Communications Commission to grant pending applications in such cities as St. Louis, Boston, and Pittsburgh, so that there will be at least three comparable facilities in such cities. These proceedings have drawn out interminably, some of them dating back as long as 8 years.

Two, reallocations to authorize additional outlets in such cities as Providence, Birmingham, and Louisville, so that there can be at least three comparable television facilities in such cities.

The CHAIRMAN. I am glad you got Providence in there. [Laughter.]

Mr. KINTNER. I thought the Senator was going to be here.

[2] This new allocation plan was forwarded with a letter dated July 25, 1956, and is set forth following Mr. Kintner's testimony, beginning at p. 2507.

Mr. *Cox*. What you mean in that connection, Mr. Kintner, is that in the first category, although there are allocations which would permit three comparable facilities, due to procedural delay the third facility has not yet been made available; and in the other category the allocations are limited to only two competitive facilities?

Mr. KINTNER. That is correct; and I selected typical cities. I understand that the FCC is taking action next week, and I would hope that they would follow this basic principle—and I might say that if they do not, in our judgment, they will compound the evil rather than remove it.

The point becomes brutally clear when remembering that of the major markets only 2 have more than 4 VHF outlets, and only 7 have 4 or more. Only 26 have at least 3 VHF assignments. Thirty-two of these major markets have only 2 VHF assignments, and 18 have only 1 such assignment.

This is hardly a system conducive to free competition among three or more networks. Perhaps I can illustrate that paragraph by telling you that ABC, in the year 1955, had orders that we could not clear time for, so that ABC was deprived of the revenue of $13 million which could have been used in improved programs, in helping the smaller markets, in promoting UHF, and so forth, all due to only one thing: The scarcity factor.

The CHAIRMAN. Well, it would be a great deal like if there could be only two automobile dealers in a given area. They would either be selling Ford or General Motors.

Mr. KINTNER. I think that is correct. Perhaps I can make it more pertinent. It is as though in your race for reelection——

The CHAIRMAN. Let us not talk about that. [Laughter.]

Mr. KINTNER. Your opponent could count votes in all cities and you have five cities excluded from which you could not get votes.

The CHAIRMAN. That scares me. [Laughter.]

Mr. KINTNER. Senator, that is what I was trying to do. [Laughter.]

The CHAIRMAN. The point I am trying to make is that if there is any justification for the monopoly suggestion, it could be removed if there were opportunity for everybody to get into the field.

Mr. KINTNER. There is no question about it.

The CHAIRMAN. Yes.

Mr. KINTNER. These figures, in our judgment—particularly the fact that 32 of the top markets are 2-V markets—make abundantly clear what is the matter with the television business. It is the inability to have equal access to a substantial portion of the population of the country.

Perhaps I can make the point appropriately before this committee by pointing out that from ABC's viewpoint, this is the equivalent of running for office in the State of Pennsylvania with the entire Pittsburgh population being able to vote for your opponent, but no one being able to vote for you.

That was for Senator Duff.

[Laughter.]

Mr. KINTNER. Too many station monopolies in individual markets have been permitted to continue. As a result, too many people have been denied a freedom of choice of programing due to station scarcity. ABC would welcome not only 3 competitive stations in the top markets of the country, but 4 or more stations. We would welcome additional interests entering the network business, which, in our judgment, they could only do with an end of station scarcity. We know that the emergence of ABC as a strong force in the television programing business has served the public interest by giving viewers a greater freedom of choice.

Mr. Cox. Would you think that any suggestion that other interests seeking outlets in the television field should form a new network and try to get stations to give them option time would be very realistic under present conditions?

Mr. KINTNER. I don't think it would, Mr. Cox, be very realistic to go cold into the network business at the present time, as long as there is the scarcity factor in the top markets. If that scarcity factor were removed, there is no reason that someone with capital, with entertainment know-how, with a willingness to take a risk, could not and should not go into television-network business just as we went into the radio-network business.

The CHAIRMAN. At least they would have the opportunity.

Mr. KINTNER. That is correct.

The CHAIRMAN. With any of us it is basic, trying to create an equality of opportunity.

Mr. KINTNER. That is all ABC asks for.

We also know that it has aided the advertising business—a basic part of our economy—by giving advertisers a greater freedom of choice, and it has aided, at least in our judgment, the National Broadcasting Co. and the Columbia Broadcasting System by providing them with additional program competition.

Mr. Cox. Do you think that that desirable fact of competition in programing can be stimulated also by competition from nonnetwork sources as well?

Mr. KINTNER. I think they are at the present time and do provide competition.

Mr. Cox. And their continuation on a healthy basis of competition would be desirable in terms of programing of the other networks as well?

Mr. KINTNER. I think that the more healthy program producers you can have in the business making available product—I don't agree, Mr. Cox, if you are implying in the process the network business should be brought down on the public's heads in order to accommodate——

Mr. Cox. No, I am suggesting that if you feel that ABC has made a contribution to overall programing by the stimulus that its competition has given to the other two networks to improve their programing, that the same would be true with respect to the competitive effect of the offerings of independent program sources in those areas where the networks must compete to hold clearances on stations throughout the country.

Mr. KINTNER. Yes, I would agree with that.

THE HISTORY OF ABC

It may be useful to the committee if we give a brief summary of the history of ABC.

ABC, as a company, is the direct result of the FCC's concern with promoting competition in the network field. What are now the ABC radio and television networks originated when NBC created the Blue Radio Network to provide listeners with another choice of radio fare from that offered by the Red Network. In the course of its investigation of network broadcasting, begun in 1938, the FCC concluded that the dual network systems of NBC had an adverse effect upon competition, and competition would be stimulated if NBC divested itself of 1 of its 2 networks.

In 1943, following this decision, ABC was formed as a separate and independent company under new ownership. So, in effect, ABC was created by the Government for the purpose of supplying additional competition in the broadcasting field.

In this connection, Mr. Chairman, I think it is ironical that the Government created an additional network to give competition by one set of actions, then approximately 10 years later, by another set of actions, handicapped the competition that it had created.

ABC is proud of the progress that it has made in becoming an important third force in the television industry. Our television network gross time billings have increased from $1,392,000 in 1949 to $51,369,000 in 1955, and our billings for this year will be substantially above 1955. Our owned stations occupy important positions in their local communities.

The ABC Television Network has made available outstanding programing to the public over the past few years. In the field of entertainment we are now presenting such outstanding programs as Walt Disney's Disneyland, Walt Disney's Mickey Mouse Club, The Lawrence Welk Show, Warner Brothers Presents, The Voice of Firestone, The DuPont Theatre, The Danny Thomas Show, Ozzie and Harriet, Rin Tin Tin, Crossroads, Wyatt Earp, and The Amateur Hour, to mention a cross-section of our top programs.

In the field of news and public affairs, we have developed an excellent organization headed by John Daly, which produces daily news programs as well as numerous public information programs such as Outside U. S. A., Tomorrow's Careers, Junior Press Conference, and which has continuously made available to our stations coverage of important spot news, such as the recent illness of President Eisenhower.

Mr. Chairman, I can't think of any recent example that is more graphic and more illustrative of the national public service that the networks give—both in radio and television—than in the accuracy and immediacy of the news given concerning the President's illness. From the very hour that it was announced, at 9 o'clock in the morning, over the entire weekend, only through radio and television were up-to-date reports brought to the public. And I think we have an example in this, unfortunate as the illness might be.

Mr. Cox. And it is your position that networking in much its present form would have to be preserved in order that the line facilities which make that possible be preserved for such occasions?

Mr. Kintner. I think there are two points: The one you made, the necessity of the lines; and the second, the type of news organizations that all three networks have lose a tremendous amount of money, and it would seem to me unreasonable business judgment and almost silly for anyone to go into this type of news business as a profitmaking operation. I doubt if any network has ever made any money in news.

In the field of religion we are presenting Bishop Sheen, Dean Pike, and other similar-type programs.

Mr. Cox. In that connection, I asked Dr. Stanton and Mr. Sarnoff regarding the testimony heard on Monday from Reverend Parker. He commented on what he regarded as the lack of adequate time on all of the networks and commented specifically, with respect to ABC, upon the practice of selling time in connection with religious broadcasts. And I think the committee would like to have your comments, either now or filed in the form of a statement at a later date.

Mr. Kintner. I would like to make a comment because of the press reports. I have not read the doctor's testimony, not because of his criticism of ABC.

Religious presentations on our two networks fall into two classifications: One, time that is given free by ABC to Protestant, Catholic, and Jewish faiths; and the second is the sale of religious time to certain churches.

Turning to the ABC Television Network, for the last year we have had Dean Pike on Sunday afternoon for a half-hour, with Dean Pike inviting Protestant, Catholic, and Jewish leaders on his program.

For the fall, we are negotiating with the Jewish Theological Seminary for a half-hour program concerning the Jewish faith. As you know, we have the contract and support of the Society for the Propagation of the Faith, which is the Catholic organization which Bishop Sheen is on, and of course we broadcast Bishop Sheen.

It is ABC's policy to deal basically with 3 organizations: (1) The National Council of Churches; (2) the Catholic group; and (3) a group of Jewish organizations in New York, in consultation on our religious programing. It is our policy on both networks to give time to all three of the major faiths.

Mr. Cox. Now, Dr. Parker was also concerned with the scheduling of this in the daily schedule—with the desire that apparently religious groups have in common with advertisers to get on in the best viewing time that they can get. And he was of the opinion both that the times made available were not such as to be really effective, and that in some degree—although I think this was perhaps directed to other programs—that the format, being more or less in the nature of a miniature church service, was not as effective as certain religious organizations had developed.

Now, I realize, of course, the problem of finding time in prime hours. But I take it that the policy of ABC, as in the case of the other networks, is to give as much time as is possible to these; but that in very few cases is that done in the evening viewing hours, with the exception of Bishop Sheen's program.

Mr. Kintner. Yes. I think you have to start with the exception. There is a certain type of presentation, such as Bishop Sheen, which does attract tremendous audiences and does have a place in the balanced program structure in prime evening hours, and as you know, Bishop Sheen has been broadcast by ABC during the last season at 8 p. m. on Thursdays. There is a much smaller group, as far as audience is concerned, who are generally interested in religious programs, and we believe that Sunday is an appropriate time.

Dean Pike has been broadcast at 1:30 for half the year, and at 4:30 for the remainder of the year, and it would be our plan in giving free time, basically, to use the Sunday afternoon periods.

Mr. Cox. Now, I assume that the bulk of the religious time, and perhaps of the public service time in general that is provided by television stations, is provided by the individual affiliates on a local basis, and that the network, rather than trying to provide a full measure of this, is simply trying to supplement what the local stations can do in these fields?

Mr. KINTNER. That is correct, Mr. Cox.

The CHAIRMAN. How do you handle the so-called smaller groups like Christian Science, or groups of that type that may not fall into those general categories?

Mr. KINTNER. In the case of the Protestant organizations that are not members or associated with the National Council of Churches, we have a policy of making available, irregularly, time to them, not on a regular basis but in proportion to the membership.

The CHAIRMAN. In other words, if you have a program such as Dean Pike—he could put on any of these groups?

Mr. KINTNER. That is right.

The CHAIRMAN. In proportion to their requests?

Mr. KINTNER. And one of our purposes, Mr. Chairman, in establishing the format—which is an interview format—of Dean Pike was so that we could have Protestant, Catholic, and Jewish leaders on that program.

In the field of sports we are presenting major boxing on a weekly basis, and other sporting activities on a seasonal basis.

For the 1956–57 season, ABC has developed 11 new programs which we are hopeful will be in our weekly 1956–57 schedule.

The CHAIRMAN. Of course in the sports field—I do not think in those cases you would consider those public service? They are all sponsored.

Mr. KINTNER. The boxing is sponsored.

The CHAIRMAN. I have never seen a sports program that was not sponsored that I know of.

Mr. KINTNER. Yes. There is various racing that is not sponsored and there have been basketball games, and so forth. And I must confess an error in judgment. We had an unfortunate bid on the football games 2 years ago—while we had it sponsored, we just lost our shirt in the process of it. But I don't think the question whether it is sponsored or not has anything to do with whether it is serving the public.

The CHAIRMAN. No; I think the question is, you try and sprinkle within the overall programing a great amount of sports, which a lot of listeners like to look at.

Mr. KINTNER. We try for a balanced programing that will attract a cross-section of the population.

The CHAIRMAN. Yes, and your contention here is that ABC sprinkles the sports programs in the overall programing sufficient to satisfy the needs of the sports fan.

Mr. KINTNER. That is correct.

The CHAIRMAN. You would not satisfy me on it, because I would want more of it. [Laughter.]

Mr. KINTNER. We are going to have the all-star game in August, so——

The CHAIRMAN. But I sometimes think maybe we might end up, if we can get free competitive television and get the spread you are talking about, maybe with a sports network before we are done.

Mr. KINTNER. I believe that if you have more than 3 stations in the market, and we will say, for example, there are only 3 networks still operating, the fourth station, the so-called independent station, as in radio, almost inevitably turns to local sports and gives a very important contribution to the community.

The CHAIRMAN. I wonder if you would agree with me that in the sports field that is very important, because we are seeing a decline of local sports. For instance, the minor leagues are just about gone because of the fact that they do not have the outlets. The development of sports at the local level.

Mr. KINTNER. I think it is very important.

The CHAIRMAN. I think it is very important.

Mr. KINTNER. Very important. In Detroit, as you probably know, hockey is the most important game, and it is to my mind very important that the local Detroit stations have worked out, together, means by which the hockey games have been carried over the years.

The CHAIRMAN. Because if you had these additional numbers of stations, I think, in most of the local communities throughout the United States—I do not think there would be much trouble to find a local sponsor for a local sporting event.

Mr. KINTNER. I agree with you.

The CHAIRMAN. And that gives the local sponsor, the man I have been talking about so long—it gives him a chance for an outlet for his product, as against a national product.

Mr. KINTNER. I agree. We would be interested in that man who is going to give us, free, South Pacific, if you would like to——

The CHAIRMAN. Well, I do not know about him. I think I ought to make it clearer—practically, this probably would not work at all, but I do think that if this is a public license, that anyone should have the same opportunity.

Now, I do not know that it is practical for anybody to take advantage of it. But it should be there, and apparently under the way this thing is worked it is not there.

Mr. KINTNER. Well, I think basically it is there——

The CHAIRMAN. Basically?

Mr. KINTNER. To the ones who want to use the medium.

The CHAIRMAN. It is like all of our rights, sometimes they are practically not used, but we want to be sure that they are there.

Mr. KINTNER. I think they are there.

We are also developing a group of special programs, including 2 Metropolitan Opera productions, 6 Theatre Guild programs, 2 special ballet performances, and 3 timely and significant documentaries directed by Mr. Daly, dealing with the difficult problems of alcoholism, divorce, and juvenile delinquency.

The Theatre Guild, as you know, Mr. Chairman, is probably the outstanding producer of plays in America. While we are firm believers in film as a method of bringing improved production and top talent to television, we plan to increase our live programing, including the broadcasting of Omnibus, in prime nighttime hours. Over the last year we have increased our programing so that we are supplying service to affiliates from 7 p. m. until 10:30 p. m. 7 nights a week, and afternoon service from 3 p. m. to 6 p. m. It is our planning to expand further our daytime programing during the 1956–57 season.

The CHAIRMAN. In addition to that, I think the record should show that all of the stations and the networks do a lot of public service programing for the military.

Mr. KINTNER. No question about it.

The CHAIRMAN. And for the—really for the Government. The sale of bonds. I notice that now that we have started our new Reserve program for the 6 months' period, very few people in the country understand—or the youngster that is going in—just what it is all about. And I notice that, freely, the networks have thrown in a little 5-minute documentary telling the families of the country, and the boys who may be taken in for that Reserve period, what to do about it. So you do a lot of that.

This testimony—I think the record ought to show that in testimony before me the other day on the Veterans' Administration appropriation bill, we had an argument about whether they should have 15, or 20, so-called public relations men, and we discovered that the work that—that they are able to get with those extra 5, almost $22 million worth of free time and space to advertise and tell the veterans what the veterans' program is and what their rights are under the varying bills. So there is that factor.

Mr. KINTNER. Yes.

The CHAIRMAN. All networks——

Mr. KINTNER. All networks do that. It is not confined to one. For example, for the last year, for the full season we gave a half-hour a week to the Army and the War Department in order to increase recruiting, and I am sure the other networks are just as active in this field.

ABC has the capital; we hope we have the know-how; we know we have the support of the public, of our primary affiliates, of large and small advertisers and of advertising agencies, so that over the next 2 years we feel that we can achieve competitive equality with NBC and CBS, provided that Government action is taken to end the scarcity of television stations.

We are the first to admit that we are still not able to compete with NBC and CBS on equal terms. The reason is the underlying cause for these hearings and of all the complaints you have heard. It is that there are too many important markets in which there are only 1 or 2 competitive stations. NBC and CBS, the older networks, have obtained the basic affiliations in these scarcity markets, with the result that our programs are either shut out entirely or carried at times when many people are not available. The public is the loser. The situation was summed up by the Commission in its 1953 decision approving the ABC-United Paramount Theatres merger, as follows, and I am quoting from the Commission opinion:

> NBC and CBS were in the network-television business before ABC. Because of the extent of their financial resources, they have been able, particularly in the early days of television when large losses were incurred, to give their affiliated stations a better program structure than that supplied by ABC. Furthermore, many of the television licensees are also the owners of NBC and CBS

radio-affiliated stations, and naturally have been inclined to favor NBC and CBS in television station affiliations and clearances. As in radio, NBC and CBS have affiliates with the most important station outlets. Furthermore, in most of the 1-or-2 station markets, the stations have a basic television affiliation with either NBC and CBS, and clear considerably more time for programs of these networks than they do for ABC and Dumont programs. The inability to obtain station clearances poses a very serious competitive problem for ABC, because NBC and CBS try to, and do, attract sponsors of ABC programs to their networks on the basis that they can provide a much larger number of station clearances (8RR 598).

Mr. Cox. The figures that I suggested while Dr. Stanton and Mr. Sarnoff were telling of advantages enjoyed by CBS and NBC in these 2-station markets—on the order of 30 to 1 and 60 to 1 over ABC—would be a very striking illustration of the point that the Commission was making in this connection?

Mr. Kintner. I think that is correct.

Although this statement was made by the Commission in February 1953, it is still true today. In fact, with the greatly increased amount of programing now being offered by all three networks, our clearance problem is an even greater handicap to further growth than it was in 1953. Our competitive disadvantage is shown by a comparison of our clearances with those of CBS and NBC.

Before I give you these clearances, Mr. Chairman, just imagine yourself as a salesman contacting the top companies of the country selling advertising on a national basis and see, if you were the buyer, which of the networks you take. It gives a small idea of the kind of selling burden that is on ABC.

For example, in the peak-viewing period, 7:30 to 10:30 p. m., during the week of December 11 to 17, 1955, ABC's average program station lineup consisted of 84 stations, 49 (58.4 percent) of which carried the program at its "live" time. The remaining 35 carried the program on a delayed basis, at less desirable times.

The Chairman. Can I ask this question for information on this competitive feature? The rate cards—are they the same with all three networks, based upon the number of outlets?

Mr. Kintner. No, they are not.

The Chairman. Is yours lower?

Mr. Kintner. Ours is approximately 10 percent lower than NBC and Columbia's.

The Chairman. And CBS?

Mr. Kintner. They are approximately the same as NBC—perhaps slightly more expensive than NBC.

The Chairman. Depending, of course—naturally it would vary on the number of outlets and variety type of outlet, I suppose.

Mr. Kintner. That is correct.

I am taking the same cities.

For example, in the peak-viewing period, 7:30 to 10:30 p. m., during the week of December 11–17, 1955, ABC's average program station lineup consisted of 84 stations, 49 (58.4 percent) of which carried the program at its "live" time. The remaining 35 carried the program on a delayed basis, at less desirable times. That means, Mr. Chairman, for example, that in those 35—just to take a theoretical case—instead of carrying a program at 8 o'clock on Thursday, the Boston station would carry at 10:30 or 11:00 or 11:30 at night.

As compared with these figures, CBS's average program was carried by 121 stations, 106 (87.1 percent) of which carried the program "live." NBC, with 104 stations for each average program, had 94 (90.1 percent) stations on a "live" basis.

This points up the basic problem of ABC in attracting large advertisers, who don't buy from friendship; they buy for economic reasons and must have results. And it seems to me that these clearances illustrate, as well as any figures you could obtain, the difficult competitive job ABC has.

The CHAIRMAN. Well, may I ask this question: The cost to ABC to bring a given program to X number of stations would be the same as the cost to NBC or CBS, would it not?

Mr. KINTNER. No, it would not.

The CHAIRMAN. Why would it not?

Mr. KINTNER. Because of the large number of delays, which means that we have to send prints and kinescopes, so that it is much more expensive for ABC to deliver the same number of stations.

The CHAIRMAN. That is the point I was making. But say a "live" broadcast.

Mr. KINTNER. In the live time we all pay the same telephone charges.

The CHAIRMAN. You pay the same charge, but your rate card is 10 percent less?

Mr. KINTNER. That is right.

The CHAIRMAN. But your cost to bring that program to X number of stations would be the same as NBC or CBS costs?

Mr. KINTNER. As long as it was——

The CHAIRMAN. Live.

Mr. KINTNER. Live. When it was delayed, it would cost us considerably more.

Even more revealing is the comparison of clearances for the program United States Steel Hour which we lost to CBS. The United States Steel Hour appeared on ABC for the last time on June 21, 1955. It had been with us for 2 years. On that date, 104 stations were ordered, of which 77 cleared the program live, producing 68.2 percent coverage of United States television homes. On July 6, 1955, the program appeared on CBS for the first time. For that date, 110 stations carried the program live, resulting in 91.2 percent coverage of television homes.

This is a classic example, because the clearance we show for ABC on our last broadcast is a result of 2 years of intensive effort of getting the program into 1- and 2-station markets—the program is one of the outstanding programs. It took us years to develop a 68.2 percent coverage, and in 1 week CBS, by the nature of its entrance into the scarcity markets, came up with a 91.2 percent live coverage.

Mr. COX. And that ability to get clearance was the selling point, presumably, on which the sponsor was persuaded to make a change.

Mr. KINTNER. I don't have any doubt of that in my own mind. It is always difficult to analyze the motives.

Another telling example is the difficulty that we are now experiencing in clearing time in 1- and 2-station markets for ABC coverage of the forthcoming national political conventions and elections. Basically, we believe that our coverage——

The CHAIRMAN. Just for information, are the networks going to cover those conventions jointly, or each one separately?

Mr. KINTNER. Basically, they cover them separately, with a pool of broadcasts on the actual proceedings from the convention floor.

Mr. COX. Your problem there, of course, is compounded because that is something that cannot be handled on a delayed basis.

Mr. KINTNER. That is correct. Basically what has happened is what we expected to happen: The 1- and 2-station markets, even though we obtained our order 3 months before NBC, are basically the NBC stations and are carrying the NBC coverage—so that John Daly and his associates will be seen in approximately 77.7 percent of all television homes, rather than the 95 percent or 97 percent which would result if the scarcity factor wasn't there.

Mr. COX. This is a situation, then, where you ordered the time on the NBC station because you obtained a sponsor earlier?

Mr. KINTNER. That is correct.

Mr. COX. Before NBC had placed an order?

Mr. KINTNER. That is correct.

Mr. COX. And in a situation where, under the regulations of the Commission, if your order had been accepted it could not have been preempted under the option of NBC?

Mr. KINTNER. That is correct. That is why we did not, and could not, order the Columbia stations who had the order first.

The CHAIRMAN. Let us take about 5 minutes here.

(A brief recess was taken.)

After the conventions are over and the nominees are selected, do you have any plans as to equal time for both major parties?

Mr. KINTNER. We have met with the chairman of the Republican National Committee and the chairman of the Democratic National Committee.

The CHAIRMAN. Were you in the same room with them? [Laughter.]

Mr. KINTNER. Separately.

The CHAIRMAN. I was going to say you would not get much done.

Mr. KINTNER. And we have told them that the ABC television and radio networks ——

The CHAIRMAN. Charley, we are discussing Republicans and Democrats.

Senator POTTER. It is a good thing I got here to protect myself. [Laughter.]

Mr. KINTNER. We told Mr. Hall and Mr. Butler that we wanted to give equal opportunity on both of our networks to each party. We will begin to sell time for political broadcasting the day after the conventions close and the nominees are selected.

The CHAIRMAN. Well, then, I am to understand by this that the common complaint is that the party that would have the most money to spend could therefore buy the most time?

Senator POTTER. That is not our party. [Laughter.]

Mr. KINTNER. That is correct, Senator. The party that has the largest amount of money for television can obviously buy the most time.

The CHAIRMAN. Well, wouldn't you limit that—the opportunity to buy time?

Mr. KINTNER. No, what we will do is be sure, for the amount of money that each party may have, that they will have equal opportunities to get on our network. If X party has $5 million and Y party has $2½ million ——

The CHAIRMAN. You are a little bit off in your figures, but the five is correct. [Laughter.]

Mr. KINTNER. We don't believe that that is a problem basic to our operation of the broadcasting business, and it is an economic problem in the political area that we can't solve.

The CHAIRMAN. This is off the record.

(Discussion off the record.)

The CHAIRMAN. The portion of the so-called clean elections bill which was introduced by Knowland and Johnson—the portion dealing with radio and television—has been sent to this committee, and we will have to make some decision on it, I think, before we get out of here.

Then we also have about 5 or 6 bills in here. I think you are the author of one of them, Senator Potter, for this. And I think the networks can contribute a great deal with suggestions, because they can tell you the practical obstacles involved that we probably don't see.

But surely, the cost of television in the campaigning today has become so great that you could slip into a situation whereby the candidate—nationally or locally, statewide—that had the most money would have the greatest opportunity to use the best medium of campaigning that I know. That wasn't true as much in the past as it is now. And if we don't do it, and have some solution to this thing or some ground rules, after this campaign is over you are going to have a lot of people that are going to be mad. And they are going to descend upon the next Congress and you are going to have some drastic legislation.

Mr. KINTNER. We would be happy to testify on any legislation.

The CHAIRMAN. Now, this is off the record.

(Discussion off the record.)

Senator POTTER. What is ABC's policy considering a presidential candidate for the Vegetarian Party or the Prohibition Party or the Social Workers Party?

The CHAIRMAN. We have, for instance, a United States Senator who is the candidate of the Prohibition Party. Senator Langer has been nominated. He hasn't made his acceptance speech yet, but they nominated him. [Laughter.]

Mr. KINTNER. The FCC requires us to give time, if we give to the two major parties, to minor parties if they meet certain qualifications connected with the amount of votes they obtained.

The CHAIRMAN. Yes. Wouldn't you say you would have to take, there, the pattern of most States to get on the ballot? There is usually a requirement that the party, to get on the ballot, must have polled X percentage of votes at the last general election. Otherwise, they would be classified as what they call a splinter party.

Mr. KINTNER. This is covered by the FCC regulations, actually.

Mr. COX. It is a matter of statute; isn't it section 315?

Mr. KINTNER. Yes; you are correct.

Mr. Cox. It requires that, regardless of the identification of the party, if the 2 candidates are running for the same office, and time is given to 1 candidate, it must be given on the same basis to the other?

Mr. Kintner. There are other regulations regarding who is a legally qualified candidate. It is necessary to then determine the eligibility of such person as a prospective candidate on the basis of local or State laws as to whether the particular party is a recognized party which may be entitled to a place on the ballot.

The Chairman. Because, if we do not have ground rules in this thing, you are going to have—everybody is going to be mad at the networks or the stations, or something. They are going to attribute—if the fellow is defeated, he is going to attribute his defeat to the fact that they wouldn't let him on television or the other fellow had more money: "He could get on and I couldn't, in the heat of the campaign."

I will bet you that the chairman of this committee will get a phone call, 3 or 4 every day: "Something is wrong. We can't get on. They are favoring this fellow, favoring that fellow."

Mr. Kintner. It is a serious problem; there is no question about it.

The Chairman. And I do hope the networks and yourselves, because you know the practical aspects that we don't, are setting themselves to it, because, otherwise, I think we are going to get in a lot of trouble—which usually results in a more drastic piece of legislation than should be on the books.

Senator Potter. Television has a terrific impact on the voting public. As a matter of fact, it is changing the whole character of politics today. And it is very important that we do have some ground rules.

The Chairman. We even have a bill in the Senate that has gotten down to the fact that you shouldn't use any makeup on television, or get a haircut. [Laughter.]

Mr. Kintner. We have a school where we make available through the country free instruction to the candidates.

The Chairman. On how to look good? There will be two members of the Senate who will want to see you. [Laughter.]

Senator Potter. Better double your staff when Magnuson and I appear. [Laughter.]

The Chairman. And another thing: I think you have to discuss this a little with your affiliates because there may be a policy adopted, and you find they have got another policy for their local problems, and sometimes they may collide. And then the tendency—the fellow who can't make good on his commitment, he is going to blame the other fellow. He is going to place the blame—a local affiliate may say the reason you couldn't get on, maybe the networks put Joe Doakes on nationally, and vice versa. I think you are going to have nothing but trouble and complaints unless we get some ground rules.

And the law is completely inadequate on it, the FCC. The law only says that if I get some free time and call you some names, you have a right to get equal time and call me a name. That is about all it amounts to.

Mr. Kintner. That is the basic principle; yes.

The Chairman. Yes. But this poses an economic problem for every candidate running.

Mr. Kintner. An economic problem, Senator, if I may add, for the networks and the stations.

The CHAIRMAN. Sure, I understand that. That is the practical side. Excuse me. Go ahead.

Mr. KINTNER. Advertisers place their business on the basis of a careful judgment as to how they can economically and effectively reach the potential customers for their products. It is critical for the advertiser to get his message into the markets of importance to him. And when ABC cannot clear time in important markets such as Boston, Pittsburgh, St. Louis, Grand Rapids, New Orleans, Birmingham, Providence, Dayton, Syracuse, Louisville, and many others, we are in the position of fighting with at least one hand tied behind us. We cannot completely satisfy customers, and we cannot in the long run hold programs unless we can get into these markets effectively. And we cannot do this if there are not enough competitive outlets.

SUPPORT FOR ABC

During the past few years, ABC has received increasing support from advertisers and advertising agencies. In the last year, I have talked to the presidents and high officials of more than 50 of the major companies using television for advertising purposes. They have made it clear to me that they want and need a third fully competitive network—and that they do not want to be limited to a choice of only two networks.

I think this is a very important point, that the basic television money on the national basis—to my mind without exception—is strongly in support of having the Government permit ABC to be equal competitively. And the presidents of the companies that advertise extensively feel very strongly that they should have a freedom of choice, with at least 3—and of course they would desire 4, 5, or 6 networks if it were practical.

The CHAIRMAN. That would be only natural; they would want even a fourth, if possible.

Mr. KINTNER. That is correct.

The CHAIRMAN. Because the more competition, the more they figure the price might get a little bit better for them.

Senator POTTER. They are in a better bargaining position.

Mr. KINTNER. That is right.

If we were able to obtain access to more of the important markets, it would be of benefit, basically, to the communities directly involved. But the resulting revenues would also permit us to extend our services into smaller markets, in this way bringing to the smaller communities program fare identical to that enjoyed in the larger cities. It would also enable us to expand and improve programing in larger markets.

I briefly gave you the example of $13 million in revenue which, if we could have obtained it in 1955, would have made a great difference in the extent of the program structure and the character of programs that we could have put on ABC.

Perhaps it will be argued that as representative of the youngest network I am taking a selfish position and one which will benefit ABC most. The basic question is not of benefit to any 1 network, or benefit to any 1 station applicant. It is the simple question of how the television channels can be used best to bring the greatest variety of programing to the largest number of people.

I do not think it necessary at this point for me to describe in detail the intermixture of UHF and VHF television outlets provided for under the rules now in force. You know this. You have heard the story of UHF stations and their inability to compete with VHF stations in the same markets. ABC's contention that UHF cannot prosper against multiple VHF competition has been proven, unfortunately, time and time again. Our recent testimony in these proceedings—the statement on March 26, 1955, by Mr. Ernest Lee Jahncke, Jr., vice president of ABC—spelled the facts out in detail.

Neither do I think it would be fruitful at this point to argue whether the judgment of the Commission, when it adopted the present table of allocations in 1952, was sound in the light of things as they then appeared. Whatever the picture may have seemed to be at that time, we all know that the frequency allocations provided for in the rules now in force have not served their basic purpose. They have in fact prevented the development of the nationwide truly competitive television system they were designed to accomplish. I think by now that this has been recognized by this committee, by the Commission, and by everyone else having even a casual familiarity with the broadcasting field.

I recognize the difficulties that confront this committee and the Commission in their efforts to meet the problem. But, in view of the tremendously important matters at stake, I cannot underscore too strongly the urgency of the situation and the long time that has elapsed since all of us first became aware of the problem. Hard or easy, the decisions must be made. Unfortunately, solving the aggravated condition that exists is the price that must be paid for the delay thus far.

Mr. Cox. Further delay is not going to improve the situation or make it any easier.

Mr. Kintner. It would make it worse.

The Chairman. I think this is a good point to give the stenographer a rest.

(Recess taken.)

The Chairman. The committee will come to order.

Mr. Kintner. I don't know, Senator Potter, whether I should read the next sentence. [Laughter.]

Senator Potter. Read it loud and strong.

Mr. Kintner. All right. What has been done since the Potter hearings?

Ever since last November, when the Commission instituted its television reallocation proceeding, the problem has been worsened, confused, and unfortunately, as well as unnecessarily, further complicated. VHF grants have been made, and the stations authorized have commenced or will soon commence operation, in areas that were well suited for UHF television. Of the VHF grants made in comparative hearing cases in the last 12 months, at least one-third of them—in markets such as Madison, Evansville, and Fresno—introduced VHF stations in areas in which the UHF possibilities could have been effectively protected.

While VHF stations have been authorized and are commencing operation in areas that are logical anchor points for effective UHF service, there has been no final action on pending VHF applications for many communities in which VHF stations should be authorized and in which they are sorely needed. For example, there still has not even been oral argument before the Federal Communications Commission on pending applications for VHF facilities in markets such as Boston, St. Louis, and Pittsburgh.

Senator POTTER. And Cheboygan. [Laughter.]

Mr. KINTNER. And there are a number of equally important cases awaiting final decision after oral argument. As I said, some of these applications have been pending for 8 years.

With its back-breaking workload and limited personnel, the Commission can properly respond that there are only so many hours in the day and that comparative television hearings are complicated proceedings that take a great deal of time to decide. But certainly the emphasis should be on those cases where the need for service is greatest and where the grants will not further complicate the reallocations that must ultimately be made.

ABC has submitted specific allocation revision proposals to the FCC and to this Senate committee. Our proposals included deintermixture and drop-ins in a number of important markets. This would provide a sensible starting point in meeting the immediately pressing allocation problems.

Our proposal would result in three or more competitive outlets in the top markets. It therefore would open the door to far more effective network and local competition. And by setting up a number of strong important UHF markets it would be a highly important step toward retaining and strengthening the use and effectiveness of UHF channels in our television structure.

Under a sensible and realistic television allocations structure, most of the complaints that you have heard would disappear, just as the advent of a sufficient number of radio stations resulted in the virtual disappearance of similar complaints in the radio field.

The CHAIRMAN. Do you have anything to add right there on the problem of all-channel sets that we have discussed so much?

Mr. KINTNER. We believe that the manufacturers should be manufacturing all-channel sets and, in order to aid them in this, that the excise tax should be removed. However, we do not think it should be limited merely to color sets. We believe it should also apply to black and white, which is just as important in our judgment.

The CHAIRMAN. But if that could not be achieved, would you think that because color is—color is a new field, it is coming in—to relieve the tax on color would go at least part of the way, on color sets.

Mr. KINTNER. It would go some of the way. It is a question of your basic judgement as to when you think there will be national color television in America with sufficient sets.

The CHAIRMAN. The practical problem we run into is the Treasury, which, of course, always violently opposses any suggestions that taxes now coming in be eliminated. But in color we are dealing with a tax that is not there—it doesn't produce much revenue, to amount to anything.

We have the practical problem of that opposition. I don't know whether we could do anything about it. We have the suggestion in and we are hopeful we can. Maybe we won't succeed in taking the tax off, because in that case we have the second practical legislative matter, that once we start to touch any one given excise tax that is now there, we open up Pandora's box. And at this time of the year, and this year in particular, I don't think Congress is in the mood to do that.

Senator POTTER. When do you think color will come in on a nationwide basis?

Mr. KINTNER. It is very difficult to judge. We are not in the manufacturing business. However, we don't think there is a possibility of a genuine national color operation, involving 4 or 5 million sets, at least until the fall of 1957.

The CHAIRMAN. But you do agree it might be helpful, as we phase into color over a period of time, that this might be a part of the solution.

Mr. KINTNER. I agree with that. The only question is how much.

Senator POTTER. Of course the investment the individual has to make in a color set is quite substantial at the present time; it probably will come down, I hope it will. But if they start making color sets with just VHF channels we are going to have a real problem on our hands to get the development that is needed in UHF sets.

Mr. KINTNER. I agree with that.

The CHAIRMAN. And then do you agree with this: That even if we could squeeze out of the spectrum some more VHF channels, which has been suggested as a possibility, we still have to change the sets?

Mr. KINTNER. Oh, yes.

The CHAIRMAN. Yes.

Mr. KINTNER. You need the UHF to have a national television structure in our judgment.

The testimony of those who have most vigorously argued against option time and other network affiliate arrangements makes this clear. The difficulties they allege—like the difficulties of ABC—stem directly from a scarcity of outlets. For example, the burden of the argument made to you by Mr. Richard A. Moore and certain other witnesses is that independent program sources have difficulty developing because of a limitation on the possible outlets for their product. This difficulty is ascribed to network option-time arrangements. If it exists at all, it might better be ascribed to the scarcity of available outlets in the major markets—many of which could support not only 3 but 4 or more stations—network and nonnetwork—if the stations were comparable in terms of channel assignment and coverage.

Mr. COX. If ABC has trouble getting clearance in key markets, doesn't it seem likely that nonnetwork sources would have even greater difficulty—and that their difficulty would extend beyond the 2-station market even into the 3-station market?

Mr. KINTNER. Well, as long as there is a scarcity factor the independent packager, and I presume you are referring to the syndicator, will have some trouble. I don't think he will have more trouble than ABC because the station gets 100 percent of the dollar, when he comes with his sale, for the time.

Mr. COX. So he has certain economic advantages in what he can offer the licensee?

Mr. KINTNER. That is correct.

NETWORK OPERATIONS AND PRACTICES

We doubt if even our most severe critics would argue against network operations per se. We believe these critics and this committee will agree that it has been the many millions of dollars of plant, program, and connecting line investment of the networks that have played the major part in developing television as a national medium, simultaneously available to almost all parts of the country. To our minds, there is equally no doubt of the important role that the networks play in the national economy in enabling our national companies to advertise their products throughout the country in the most efficient and productive way. The networks have served the public by providing a great variety in types of programing. They have enhanced the national economy by enabling advertisers to sell in the efficient manner that is an important part of the American competitive system.

The basic obligation of a network, and of individual television stations, is, of course, to the public. In judging the network operation, this fact must be kept uppermost in mind. Secondary to the consideration of the obligation to the viewer is the careful weighing of the effect on the economy. If this nationwide communication service is hampered to such a degree that advertisers find it no longer economic to spend the $1 billion a year that is now supporting our free television system, the result would be to turn the clock backward at a time when increased production, automation, and atomic energy require every aid to the distribution system.

It seems to us that the advantage of network operations can be summarized very briefly:

1. Through network operation, most of the country is able to receive a variety of programing practically at the same time.

2. Through this simultaneous broadcast of expensive network programing to large segments of the population, the advertiser is able to reach the maximum number of people at a minimum cost.

Mr. Cox. What is the particular advantage, in terms of this simultaneity, where the program is on film?

Mr. Kintner. The advantage is to the advertiser, basically, in the ability to advertise his product in the same way in each time zone.

Mr. Cox. Now, does that mean that it is advertised at the same clock hour in each time zone?

Mr. Kintner. No; because the pattern has developed of 1 hour later in the central, and another pattern, because of the great difference in time, to have the east and the west coast the same.

Mr. Cox. So that actually if a man—if an advertiser has a program beamed at an adult audience which is broadcast in New York at 8 o'clock, it would not even be desirable from his standpoint to have that broadcast in the Pacific time zone at 5 o'clock—so that your arrangements are that it is broadcast at 8 p. m., Pacific time, or at least at a later evening hour when the audiences interested in it will be available?

Mr. Kintner. That is correct.

The hot kine process has them at the Pacific coast time, which is equivalent of the New York time. If it is carried 8 o'clock New York time, it is carried in California 8 o'clock Pacific coast time.

Mr. Cox. Basically, if a program is on film, and if the advertiser can get a release in a desirable evening time with desirable adjacencies, it is not a commanding feature that it has to be at the same time in each market, is it?

Mr. KINTNER. Yes; it is of definite advertising advantage. Let's take the central time zone, take a 9 o'clock show in the East, that is 8 o'clock, central time. It is a very great advantage to General Motors, Ford, Chrysler, to mention all three, to advertise in a certain group of newspapers and publications throughout the central time zone that their program is on at 7 o'clock; it is also a big advantage to the dealers in simultaneous use of the displays and the merchandising.

Mr. Cox. Then this is an advantage that is lost to the advertiser who uses national spot for the placement of his program, because in the very nature of that operation he is going to have the program placed in different hours in different markets?

Mr. KINTNER. That is correct. It is also lost whenever a station delays a program and doesn't carry it in the ordered time period.

3. Through the mere line interconnection of stations by the network, regular news, important special events, and matters of public interest, can be brought to all parts of the country at once.

4. By the very nature of the responsibilities being met by the networks, and by the very nature of network competition, the public can only thus be assured of regular and extensive program experimentation designed to improve the type, the variety, and the amount of programing.

Basically, networks are national program services requiring millions of dollars of investment and overhead in order to supply programing on a national basis. In the last analysis, the judgment of a network's success does not lie with the FCC, with congressional committees, nor with the networks themselves. The judgment is completely determined by the public.

Mr. Cox. You stress here again that the networks are providing a national service. How can television serve the local or regional businessman, who is in competition with a national advertiser having a sponsored show, if he finds that in his local market, where he wishes to advertise, that all of the best time in a 1-, 2- or 3-station market is occupied with national programs?

Mr. KINTNER. He can use the local outlet. Let's take a soap company that we will say is just developing——

Senator POTTER. The Magnuson Soap Co. [Laughter.]

The CHAIRMAN. Yes.

Mr. KINTNER. As against Procter & Gamble, which is the largest. First of all, he has available to him all the station time, which is 6 to 7:30 and after 10:30 p. m. and are very popular times, in addition to the daytime.

No. 2, speaking for ABC, we have developed a type of participation program in our Famous Film Festival, on Sunday night, and our Afternoon Film Festival, from 3 to 5, 5 days a week, whereby we make available to the stations locally certain of those spots to sell locally, and the Magnuson Soap Co. could buy in the local community in the Afternoon Film Festival, just as P. & G. could buy in the same show nationally.

Mr. Cox. This gives them the advantage at least of a partial sponsorship, then, so that it permits perhaps a program identification that would be lacking if they were forced to rely simply on spot announcements and station breaks?

Mr. KINTNER. Correct.

In the third area, taking ABC as an example, we make Kukla, Fran, and Ollie available in a very substantial part of the country to local advertisers, to sponsor locally. We also do the same with the John Daly news program, which permits the local advertisers, through what we call a cooperative, to get the advantage of probably the most famous man in news business, Mr. Daly, at a local——

The CHAIRMAN. That is advertising?

Mr. KINTNER. Cost. I had to get that in, Senator.

The CHAIRMAN. But if there could be accomplished what you have suggested in the early part of your statement, those problems of the local advertiser would largely disappear, would they not?

Mr. KINTNER. They certainly would, and they have disappeared in two of the markets. Just take New York City, with seven television stations; there isn't any doubt that any local soap company can get prime time on VHF stations in New York any time they want to pick up the telephone.

The CHAIRMAN. And would you suggest specifically that if the suggestion of at least 3 or more in the first hundred markets and at least 3 in the second hundred markets could be carried out, that you could have local opportunity for advertisers?

Mr. KINTNER. I have no doubt, Senator.

Senator POTTER. Do you know whether your competitors, CBS and NBC, have an arrangement similar to that you have for local participation in advertising?

Mr. KINTNER. I can't speak with authority, but my guess would be that they do in certain of their programs.

The CHAIRMAN. But that is very little that they can get in there. You might have 1 or 2 local companies that might get in, but it doesn't give the spread of——

Mr. KINTNER. It doesn't give the final answer.

The CHAIRMAN. No; it doesn't give the spread of opportunity to all kind of local people that need it, that want to use television as a means of advertising. You might get 1 or 2 and that is all. They would have to be almost in the nature of a big company locally.

Mr. KINTNER. Yes; a substantial company.

The CHAIRMAN. A very big one, yes.

Mr. KINTNER. True.

The network business is never a static one. It is one subject to rise and fall depending upon the public reaction to programing. Let me give but a few examples. On ABC, through the introduction of Disneyland, we were able to obtain a program which has always been among the top 10 in public popularity.

In connection with Disneyland, this illustrates our point as to availability markets. This is to my mind one of the outstanding, if not the outstanding, show in all television. We have 180 stations carrying Disneyland—77 of them carry it in the ordered time, which is 7:30 to 8:30 New York time, and 103 carry it in delays varying from Saturday morning, Saturday afternoon, and 11 o'clock at night. Yet, notwithstanding these poor-time positions, it has always been the second, third, or fourth show on the air in terms of popularity.

Mr. Cox. So when Dr. Stanton used this as an example of ABC's ability to compete when it developed an outstanding show like Disneyland, the effectiveness of that competition is still limited by the fact that you can only get the clearances that he was talking about, on CBS stations, at times that you regard as less desirable?

Mr. KINTNER. That is correct; a very substantial obstacle to our show.

Mr. Cox. Do you have a problem not only of clearing a program like Disneyland into a market, but sometimes a problem of keeping it there once it is established and has won popular acceptance?

Mr. KINTNER. That is correct.

Mr. Cox. That is, there have been stations that have dropped it because of the desire of a network with which they have a basic affiliation that they clear that time for some other program?

Mr. KINTNER. That is correct.

Last year we introduced the Lawrence Welk hour-long program on Saturday night, and it achieved leadership in its time period. On CBS you are all familiar with the spectacular overnight success of the $64,000 question. I Love Lucy still ranks among the top 10 programs in the country, notwithstanding the severest competition. NBC has had great success with the new Perry Como program, taking on heavy competition in the form of Jackie Gleason, and through public approval it has readjusted the viewing habits of the public on Saturday night.

The ability to judge accurately the public taste, whether it be in entertainment, news, documentaries, or special programing, is the key to all network operation, and no one has a monopoly or inside track on what the public actually wants. All day, and through most of the night, millions and millions of homes, by the simple movement of a dial, shop among network and local programing to determine which shows they will watch.

Here again, Mr. Chairman, is the question of scarcity. These people can't shop in New Orleans or in Boston. Our programs aren't there for them to have the opportunity to see.

CRITICISM OF THE NETWORKS

If we analyze the criticisms of network operations, they fall into three categories. Charges that the networks—

1. Unduly and arbitrarily control programing.
2. Through option time dominate affiliated stations.
3. Through buying requirements restrict the operation of the medium.

CONTROL OF PROGRAMING

ABC's firm position is that no network nor company has sufficient creative ability to produce and supply directly more than a small percentage of the needed programing. We welcome today, and we will welcome in the future, programs on the ABC television network that are owned and controlled by advertisers, by independent program producers, and by talent agencies.

The secret of topflight programing, however, is the placing of one or two successful shows in an evening in order that an audience for other programs may be built around them. Therefore, we believe that each network should control certain key programs, in fixed time periods, in the interest of service to the public and to protect its program structure.

The CHAIRMAN. May I just ask there: You have—and I suppose this would apply to all the networks—when you review the program before you accept, do you have a board that does that, or is that one man, or how do you do that?

Mr. KINTNER. It is done collectively through the program department of the network, which is staffed by skilled creative people whose judgment is better than most on whether a program is good or bad. That is the No. 1 review.

The No. 2——

The CHAIRMAN. I don't mean good or bad——

Mr. KINTNER. Creatively, I am talking about.

The CHAIRMAN. Creatively, yes. I am talking about the pure censorship.

Mr. KINTNER. Well, then, No. 2, we also have a review by what is called our continuity acceptance department, which is a review for good taste as far as the general public and the home audience is concerned.

The CHAIRMAN. Is that with all networks together?

Mr. KINTNER. No.

The CHAIRMAN. Do you have a certain code?

Mr. KINTNER. We all belong to the NARTB code, all the stations of the three networks, at least their owned stations. But in addition each network has a code of its own which is in fact stricter than the general code applied throughout the country.

The CHAIRMAN. In other words, the basic code is general, then each network supplements that by their own interpretation of so-called good taste.

Mr. KINTNER. That is right. And we have a department, I would guess of 50 to 60 people, whose job is to do nothing but review.

The CHAIRMAN. Of course, it is hard to control an individual when he gets on the air. Something might happen that you would have no control over.

Mr. KINTNER. That is correct; if he ad libs, it is very difficult.

The CHAIRMAN. I don't like to be too critical, but have you reviewed wrestling?

Mr. KINTNER. We don't carry wrestling. [Laughter.]

We don't carry wrestling on the network.

The CHAIRMAN. I wondered what board that went through. [Laughter.]

Senator POTTER. You don't have an office in television like they do in the motion pictures, like Johnston's office.

Mr. KINTNER. We have the NARTB code, to which you subscribe. In a sense, it is like the Johnston office, in that it is a collective organization and has the power to take the seal away from the station. But we have no czar in the sense of Eric Johnston.

Mr. Cox. You haven't developed much use of the seal, have you; that is, it is not projected——

Mr. KINTNER. We project it every morning and every night. [Laughter.]

This is particularly true in the case of ABC where, due to station scarcity, it is an easier job for NBC and CBS to lure our programs away, than for us to attract their programs. Moreover, it is the public obligation of a network to be certain that programs brought to it by outside sources meet creative and good taste requirements.

There again, Mr. Chairman, on the program brought to us, we go through the same procedure as one which we own and control.

The inability of certain independent packagers to obtain sponsorship because of the lack of quality of their product is often wrongly attributed to network program policy.

If I may just digress for a second, I think the committee should look on arguments that product can't be sold, by taking into account whether the product is good or bad. There are, in Hollywood, literally sufficient pilots, probably, to fill the time of all the networks for a year, but that doesn't mean that they are good pilots and good shows. And many times packagers become outraged when you don't desire to buy their product, when basically the decision is made on your best creative judgment that the show is not of network standard.

Mr. Cox. Aren't there instances, however, of programs that have not been accepted for network broadcast, have been syndicated, have been broadcast by the affiliates of the networks, and have won popular acceptance that ranks with some of the network shows.

Mr. KINTNER. I don't know of any that—there probably are instances, but I specifically don't know of any that the networks have turned down.

Mr. Cox. In connection with the point that you make about your being certain that the programs brought in meet your standards, do you insist—as apparently NBC and CBS do—that in the final analysis, if there is a difference of opinion as to the program under discussion between the network and the advertiser—as to its desirability, whether it will do the job—the network's decision must be final on the matter?

Mr. KINTNER. Basically, the network's decision must be final because we have the public obligation of responsibility for what is on the air.

Mr. Cox. Wouldn't it be desirable to spread participation in decisions on broad policy, at least, in that field to more people than can possibly be brought into the picture in your network organization?

Mr. KINTNER. Not in my judgment. I believe it would be impractical and impossible. What you are saying in effect, if I understand you, Mr. Cox, is that we should bring a representative of Screen Gems, which is an independent packager, into ABC to make our final management decisions concerning product.

Mr. Cox. No, I am suggesting the possibility of some part being played in the process by your affiliates who, as the licensees for the stations which will ultimately carry the program, are the ones having the nondelegable duty to program their stations.

Mr. KINTNER. Well, the affiliates do play a part, and I think basically, in the comments that I have read and heard here, there may be an erroneous understanding of what an affiliate relationship is, or at least should be.

Basically, when you are talking about a network you are talking about a partnership between affiliated stations and the network itself.

In the proper running of a network and its most efficient operation—it can only be with a mutual trust of a partnership, because that basically is the relation between an affiliate and a network. We at ABC do go over all our program plans with representatives of our affiliates, in addition to regular meetings of all our affiliates. In clearing time we have a policy not only of sending them a description of the program, the producers, the story line—but in addition we have made it a practice, many times, of sending out actual first prints to show the station what type of show it is.

In addition, we have used our affiliates in a very major way to develop programing from their local community—such as, for example, Springfield's Ozark Jubliee, where really, basically, the affiliate is giving us the creative judgment, which we approve.

The CHAIRMAN. And I don't know whether you have it, but I know that at CBS they have an affiliates' informal policy committee that meets regularly and discusses matters.

Mr. KINTNER. That is right. We have the television advisory committee, and in addition we hold regular meetings of all our affiliates—which we held last March or April in Chicago, where, for one whole day, to all the primary affiliates of the ABC television network, we went over in detail the programing that we were proposing, telling them the producers, the people who we were planning, the proposed program structure on each night of the week, and obtained their comments, some of which were very good, some of which resulted in changing our 1956–57 plans.

The CHAIRMAN. And if you suggested or gave them a program that they put on that was in bad taste, they would have some influence—you would hear from them pretty fast; wouldn't you?

Mr. KINTNER. One of the difficulties I have in listening to the hearings is that everybody talks about the power of the networks and very few people talk about the power of the stations.

The CHAIRMAN. We are going to hear from them next week. We will see what they think about it.

Mr. KINTNER. I will guarantee you there is no one who has a greater responsibility, and greater authority, than an individual licensee.

Mr. COX. Basically, though, in terms of planning, or of policy decisions in programing, the role that is played by the individual station manager is essentially a negative one? That is, the initial decision as to what program will be offered on the network is made by the network after this consultation that you have described?

Mr. KINTNER. I wouldn't call it negative, if I may interrupt you, Mr. Cox. What I would call it is advisory, because it is positive as well as negative.

Mr. COX. The point I am making is that his final action on this part of your program is to decide whether or not to accept the order when you order time on his station, if the advertiser has requested it.

Mr. KINTNER. That is correct.

Mr. COX. Now, at that point all he can do—if he thinks that a better program can be offered in terms of the needs of the people of his community—is to reject your program and try to find something better from another source?

Mr. KINTNER. That is correct.

75589—57—pt. 4——65

Mr. Cox. He cannot, at that point, do anything to influence what will be on the network in that time period. He must either take it, or reject it and make other plans.

Mr. KINTNER. After the final decision is made, and the program is in the process of broadcast and the local station decides, as it has a right to, that it is not in the public interest to carry the program, or that other programs are more in the public interest, he has many avenues to go to: Local programing; second, he has film syndicators; third, he has live shows that are now sold on the syndicated basis.

So I don't think it is a problem from his point of view if he is unhappy with this particular show.

Mr. Cox. Woudn't it be a fair statement to say that the tastes and the needs of the public vary throughout the country; that is, in different regions, different programing may be required?

Mr. KINTNER. I am not—I am not so sure that that is true. I think across the country there are generally similar tastes. Now, there are certain exceptions; for example, country music is much more popular in the Southwest than it is in New York City. We have a show called the Polka Dance out of Chicago, which is very popular in Chicago and Detroit, and perhaps wouldn't be as popular without the foreign language and foreign descendant groups.

But basically, I think the taste of America is almost identical from Maine across to California.

Mr. Cox. Don't you find rather sharp differences in ratings of the same show in different parts of the country?

Mr. KINTNER. Yes, but that may be due to various factors. It may be due to the facility involved, not being equal to another facility; it may be due to the management of the station, not being an able one. It may be due to the refusal to promote and advertise the show commensurate to the need.

I would question very much—it would be difficult to prove whether there is a great difference in taste throughout the country. And I think in the case of Walt Disney, for example, you see a case of national approval, as you do in I Love Lucy, as you do on The $64,000 Question, and as you do in perhaps most of the top 30 programs on the air.

Mr. Cox. I take it, though, it would be fair to say that in your programing for the network you have sought the forms of program that would meet with this broad national approval, and that you have not been able, of course, in the nature of your operation to program for a special interest in any section of the country?

Mr. KINTNER. What we have done in that connection is, basically, to try to provide programs that will have the greatest popularity. We have also gone into fields where we knew we could not get the ratings of the Disney, and so forth—where there were smaller audiences and very intense; and an example of this is the Ozark Jubilee Show, where perhaps 90 percent of the country is interested in country music and 10 percent is not. It was our decision that, at least in this time period, as contrasted with Disney and Warners, that we would take a show of a more limited potential. The same is true, for example, in Medical Horizons, which is a medical show on ABC. We know that it could never achieve the popularity of a Disney, yet, we think it has a place in the balanced program structure of ABC. The same applies to religious, public service, and similar shows.

The CHAIRMAN. The networks are now comparatively free of the problem, are they not, of what we discussed in this committee some months ago—the so-called pitchman?

Mr. KINTNER. Yes.

The CHAIRMAN. That is mainly a local problem?

Mr. KINTNER. That is correct. I think actually almost completely on television stations through the country——

The CHAIRMAN. Yes; because your national advertiser would be a standard, well-thought-of product of some kind.

Mr. KINTNER. That is right. And I have no doubt that the networks, on their own stations, impose good taste obligations that are perhaps more rigid than the general standard of the industry.

The CHAIRMAN. Well, in that case in your own affiliated stations it would be hard for a station manager, if I come in and say "I am going to sell you—we have washing machines on sale for $59.50," on its face you wouldn't have the chance to run down whether that was a lead or a come-on?

Mr. KINTNER. Yes; we do, we do.

The CHAIRMAN. You try and do that?

Mr. KINTNER. That is what our continuity acceptance department does. Even before they go on the air we check the product.

The CHAIRMAN. With the better business bureaus, places like that?

Mr. KINTNER. That is right.

The CHAIRMAN. Because we did give the Federal Trade Commission a considerable amount of money—in view of the fact that this thing started and got a little bit out of hand, I think—to monitor quite a few of the stations. But I would think the networks as such would be comparatively free of that.

Mr. KINTNER. The networks as such would be free, and I would guess most of the major affiliates of the three networks would be.

The CHAIRMAN. It is more prevalent with local radio stations?

Mr. KINTNER. That is correct.

As I have said, it is a firm ABC policy that our network, in order to program the number of hours required for present and future needs, must draw on every creative source, whether it is from within our own company, or whether the program is produced by the advertisers, advertising agencies, or independent packagers.

There is one field where we do believe that the network should have exclusive control of talent and exclusive supervision. This is in the broad field of news, where we are certain that basic obligation for the presentation of balanced news programs with a variety of viewpoints should be the obligation of the network.

The CHAIRMAN. There, I wanted to ask one question which we have asked all the networks. It is your policy to keep the newscaster free from advertising any product; is it not?

Mr. KINTNER. From being influenced by the advertiser, is that it?

The CHAIRMAN. No; I meant to give the news and also to advertise the product.

Mr. KINTNER. Yes. It is our network policy not to do that.

The CHAIRMAN. That is the policy, I understand, of other networks as of now.

Mr. KINTNER. That is correct.

Senator POTTER. The ABC has excellent news service.

Mr. KINTNER. Thank you very much, sir.

The CHAIRMAN. He is just making a plea for Cheboygan, again. [Laughter.]

Senator POTTER. Do you have a policy concerning editorializing on news?

Mr. KINTNER. We believe the network should have the right to editorialize. However, we have not utilized it because we are not sure (*a*) of our capability at the present time to do it well; (*b*) we haven't solved, in editorializing, how we would present other viewpoints. I think we should have the right, and I think some day a mechanism will be developed whereby it can be done fairly.

We are considering in Chicago at the present time, on our local station, assuming an editorial position in connection with a local problem within the city of Chicago.

Senator POTTER. With the impact that television has on public thinking, do you not feel that that is a great concentration of power, particularly with the limited number of networks we have today, to enter into a field of editorializing; that you may be asking for the very thing that you do not want, Federal regulation of networks?

Mr. KINTNER. You put your finger on the very reason we are reluctant to do it: (*a*) We know the impact, and (*b*) we haven't evolved the mechanism whereby other viewpoints could be protected, and not merely our viewpoint expressed.

The CHAIRMAN. And (*c*), your advertisers?

Mr. KINTNER. We are not so concerned about that, Senator.

The CHAIRMAN. Well, you start to editorialize and they will make it their concern. You want to try and keep it as objective as possible because Republicans and Democrats buy their product.

Mr. KINTNER. Yes; but both Democrats and Republicans advertise in the newspapers.

The CHAIRMAN. I agree with you that you should have the right, the opportunity to do it; and you might be able to work something out, but it is a difficult problem.

Mr. KINTNER. Very, extremely.

The CHAIRMAN. As the Senator from Michigan points out.

Senator POTTER. Of course, you have a little different medium than the newspapers. With the newspapers, it has been an accepted practice, newspaper editorializing. In the first place, they are using their own newsprint that they buy; you are using a public medium, the airways. And I have—I will be frank with you, I do not think that you should editorialize. I think it is a tremendous power that is put in the hands of, at the present time, three networks.

You give me the opportunity to control the editorial policy of the three networks and I will control the thinking of the people of this country.

Mr. KINTNER. There is no question it is a difficult problem.

Here is an analysis of the production source of all programs broadcast by the ABC television network in 1955; and I think this shows without question, at least as far as ABC is concerned, there is no monopoly of control:

Source	*Percentage*
ABC	13.2
Television stations of the ABC network	10.2
Advertising agencies	9.4
Independent film producers	35.8
Independent packagers of live shows	31.4

Mr. KINTNER. If that isn't competition, I don't know what it is.

The CHAIRMAN. Is that timewise?

Mr. KINTNER. Percentage of our broadcasts.

The CHAIRMAN. Timewise?

Mr. KINTNER. That is correct.

These figures, and the figures submitted in these hearings by CBS and NBC, certainly belie the charge, rather recklessly made in our judgment, that networks exercise a monopolistic control over television presentations. Then too, much of the station programing is of local or nonnetwork origin. Our studies indicate that the average station devotes about 47 percent of its time to nonnetwork programing.

Mr. COX. How much would it do in the period 7:30 to 10:30 at night?

Mr. KINTNER. A smaller percentage than that.

This variation in program type and service is as it should be. It means that our medium is being properly used on a national basis to present important and general programing, and is being used on a local basis to fit the requirements of the local community.

NETWORK OPTION TIME

To our mind it is absolutely essential that any network have reasonable assurance that its programs can be broadcast in various parts of the country in prime time. Unless this assurance can be given to the advertisers, we cannot obtain the revenue necessary to finance our investment and overhead—in the case of ABC, for example, over $6 million a year in connecting lines—to finance the millions of dollars to which we are committed in developing entertainment, news, and public information programs.

Mr. COX. Isn't it true, though, that this assurance to advertisers is actually given, in final form, only after you have ordered the time on your stations and have obtained clearance from them?

Mr. KINTNER. Legally, it can only be given after the acceptance of the station. But as I say, this is a partnership and a working arrangement, and patterns develop which result in assurances to advertisers that are satisfactory to them.

Mr. COX. That is, they are assured, essentially, that your relations are such with your affiliates, that they prize their affiliation to such a degree, that they respect the quality of your programs to such an extent that, on an average, you will be able to get clearance in at least the minimum number of desired markets?

Mr. KINTNER. Basically, I think your statement is correct. I wouldn't quite put it the way you put it.

I would put first the character of the programing. The affiliates know it will be of a certain quality, and therefore it is generally reasonable to expect them to accept it.

No. 2, that it will be part of a program structure which they understand, as far as other programs in the evening, and will fit into the program, which will increase their chance of acceptance. Also the assurance that if it is an advertiser show it has been reviewed and is of a network quality.

And basically, over the years, the networks have done rather well in meeting the public taste. That results in a working arrangement assurance which, as you say, obviously can only become firm when the station accepts the show.

Mr. Cox. Wouldn't that working arrangement, and wouldn't all those factors, still operate even if you didn't have the option?

Mr. Kintner. Absolutely not.

Mr. Cox. In what way, what would be missing?

Mr. Kintner. As I say, this is a partnership and a working arrangement of 7:30 to 10:30—taking the nighttime, 7 days a week—where a network can expect that generally most of the time will be filled by programing.

It is a partnership in which the affiliate understands and recognizes the program structure of the network, its management, its personnel. So that if you ended the network option time, in my judgment these assurances would rapidly disappear and the business would become chaotic.

Mr. Cox. Wouldn't the value of this program structure continue to the local station?

Mr. Kintner. Not to the—without this partnership, in my judgment, it would not.

Mr. Cox. Well, that is, I mean without option you could have an affiliation arrangement. You could, by contract, enter into agreements with your affiliates under which you were to provide them with certain programing and agree as to the basis on which this would be offered and accepted. And my question is whether, if you maintain your level of programing so that it can compete on its merits—and if you provide a service, as you have pointed out, in terms of public service, sustaining, news programs, which supplements and does things which the local stations cannot do—would it not continue to be so important to a local station to be an affiliate of one of the major networks that he would continue to accept, with minor deviations, the program structure offered him by the network?

Mr. Kintner. I don't believe it would work the way you say, and I believe that the result would be the destruction of our basic method of network operation. What we are saying to the affiliates in network option time: "We collectively will program this period. You will have the final decision as the affiliate, but as the fair partner to ABC as a network, you will go along with us to a reasonable degree." When that disappears, I believe the relationship disappears.

Mr. Cox. Can't you say all that without couching it in the legal terms of the option?

Mr. Kintner. I don't think so.

Mr. Cox. I take it that ABC, just as the other networks, has never sought to enforce the option?

Mr. Kintner. We never have.

Mr. Cox. Actually, the only sanction you have if a station consistently refuses to accept your programing is to change your affiliation?

Mr. Kintner. No, we have other steps. No. 1, I consider it as a partnership. We have a discussion period as to the reasons which the affiliate has for refusing the program. I believe basically this discussion is much more important than the final decision of losing the affiliation agreement with the network.

Mr. Cox. That is, in other words, if he does not clear upon your first order, you then attempt to persuade him?

Mr. KINTNER. That is correct.

Mr. COX. By giving further details about the programing, by pointing out how it fits into the structure, how it builds towards the commonly desired goal of circulation—you could do all of these without the option, though.

Mr. KINTNER. But I don't believe the working arrangement would be there which would make the relationship effective.

Mr. COX. That is, in other words, in your view the language contained in that part of the affiliation agreement which sets forth the option is more important than the general working arrangement which is contemplated by the entire agreement taken in its four corners?

Mr. KINTNER. Yes. In effect, Mr. Cox, when a station is willing to give you an affiliation contract—network option time—in effect, they are taking the affirmative position in behalf of your program structure, subject to their right to refuse in individual cases in the public interest.

Now, that is a tremendously affirmative asset in selling advertisers on a national basis. And I think without that, national advertising as we understand it today on television could not exist.

Mr. COX. Well, wouldn't the affiliation itself provide that assurance? Wouldn't you be able to go to a national advertiser and point to the fact that you have primary affiliation with fully competitive stations in so many of the top 100 markets, and that as a matter of practice this station has cleared, and you think will continue to clear, nearly all of the programs you place in evening option time? Would that assurance, coupled as it must be even now with the check, then, with the station through a definite order, give you all the basis for providing a national advertising service that you now have?

Mr. KINTNER. In my judgment, no. I think what you underestimate is the affirmative acceptance by the station in giving 7:30 to 10:30, 7 nights a week for network option time, and the specific confidence to a network, which in turn is translated in very complicated selling by a network to national advertisers.

I believe if you withdraw that and remove option time, as I said before, the national advertising on television, as we know it today, will be very detrimentally and very disastrously affected.

Mr. COX. Now, as you said awhile ago, in a two-station market neither NBC nor CBS, even though they have primary affiliations with the stations there, can preempt your programs; yet the record shows that they get clearance and you do not. Since this is done without the option, upon what basis do you think they accomplish that result?

Mr. KINTNER. Well, actually the affiliates in 1- or 2-station markets that clear for ABC programs, clear it in station time. And you will find basically, if you review our programing in 2-station markets, that in general it is put at 10:30, at 7 o'clock, Saturday afternoon, Sunday afternoon.

So, in effect, what the two-station market is doing is saying that the ABC programing, if he does not have a primary affiliation with us, is so important that he is willing to take his own time and broadcast the ABC programs.

Mr. Cox. But now in the prime viewing hours, in which the sponsors of Disneyland would like to have their program presented to the people in the 2-station market, as well as in your 3-station, and where there is no option to contend with on the part of the competition, you end up getting less than half "live" clearance for an outstanding program, and this demonstrated preference in clearance pattern on the part of the basic affiliates of the other networks, since it cannot be rested on the option, can only be explained in terms of their general relationship with their basic net, their desire to maintain that affiliation, and their concern about the integrity of the program structure of that network, all things which are not tied in with the option?

Mr. Kintner. Those factors have an importance in the ability of NBC and Columbia to clear in prime time with the stations. But I think more fundamental is the fact that they have a network option arrangement which permits the station only not to carry the network programs if they conclude that it is in the greater public interest to have local programing of a certain type or other national programing.

Mr. Cox. Now, I think as you suggest a little later on, this judgment is basically and finally that of the station?

Mr. Kintner. There is no question about it.

Mr. Cox. In other words, you do not contest with the station manager and in fact have no way in which you can review his decision. Now, if basically the station manager can reject your program simply on the ground that he prefers another, then the option, if it cannot overcome that situation, is worthless as a legal proposition?

Mr. Kintner. I don't agree. It is correct that the station has the final say and they must conclude, as you know, that another program is in the greater public interest in that particular locality. They have that obligation, it seems to me, which would not exist as far as the network show is concerned if there were not network option time.

Mr. Cox. Now, do you favor the proposal to require sharing of time in the two-station markets? This was initially made by Dr. Du Mont and then I think Mr. Jahncke made some passing reference to it in his earlier testimony.

Mr. Kintner. This is a very difficult question for me to answer. No. 1, we think the problem can be solved by quick Government action to remove the scarcity factor. That is our solution and that we recommend to the committee.

In the event that the Government would not move, and in the event that the scarcity factor would continue, we would be unwilling to say that we are firmly of the belief that the stations in the 1- and 2-station markets must carry all 3 networks in a certain proportion. We do say that this committee and the FCC should carefully weigh the possibility of decreasing the option time for the other two networks, leaving free time for ABC in the option periods.

We are not affirmatively for this; we think it would be a mistake in the business; we think it is the wrong type of regulation. But there is no doubt that if the situation cannot be corrected by other means, it is the obligation of the Government to give the public in these scarcity markets an opportunity to see other programing.

The Chairman. And it might establish a precedent, to come home to roost.

Mr. Cox. As long as the scarcity does exist then, if it were decided by the Commission or by the Congress that some such step should be taken, its effect would be to open up time on NBC and CBS affiliations to ABC. Now, wouldn't it be fair, as long as the scarcity exists, to open up some time in the peak hours to nonnetwork program producers so that they can find an outlet, in terms of competition in quality, with again the final decision being made by the station manager?

Mr. Kintner. No, I don't think so, because I think what you neglected to mention, Mr. Cox, is the national contribution made by all 3 networks in continuous programing availability during the day in the field of news, special events, and I believe that these responsibilities that we 3 networks have taken on entitle us, or anyone else who wants to go in the network business and provide 12 to 16 hours a day of programing—we should be entitled to an increased opportunity to have our programing structure that exists.

Network operation is intricate, delicate, and subject to feast and famine. It involves tremendous capital investments and long-term commitments of millions of dollars in technical and intercity connection facilities, talent arrangements, staff, elaborate studios, and so on. The existence of such an organization—its capacity to make these commitments and provide network services— is completely dependent upon its capacity to attract the advertising dollar to television in competition with other mediums. Only option time gives the network the ability to assure advertisers that programs will be placed in desired markets at the desired times, making possible an efficient and productive advertising buy.

Some of those that argue against network option time, it seems to us, would pull down the entire structure of television broadcasting, for the selfish purpose of permitting them to sell their program product somewhat more easily. They, wittingly or unwittingly, completely fail to grasp the unique day-to-day servicing of stations by a network. They fail to give weight to the right of any affiliate to reject programs, not in the local public interest, offered during option hours. The judgment is the judgment of the station. For example, we have as many as 26 shows—including some that we consider our best—which from 1 to 15 of the stations principally affiliated with ABC are not clearing in ordered time. They also fail to take into account the extent to which broadcasting is completely regulated from the minute a station is started to the time it ceases to operate.

The committee needs only to refer to the Communications Act and the rules and regulations of the Commission to appreciate the full extent of this regulation. The very matter with which we are here concerned—the Commission's rules on option time—are illustrative. They were arrived at after an extensive rulemaking proceeding and have the effect of imposing severe governmental limitations upon the network operation. They were found to be legal and in the public interest. They expressly permit the kind of option-time arrangements that have been so amply described.

Mr. Cox. I take it when you refer to these as having been found to be legal, you refer to the opinion of the Supreme Court in the case where NBC and CBS challenged the chain-broadcasting regulations?

Mr. Kintner. That is correct.

Mr. Cox. Wouldn't it be fair to say that all that the Court decided in that case was that the Commission had authority to limit restrictive practices on the part of the networks, and not, conversely, that it had authority to approve them?

Mr. KINTNER. I can't answer that. We would be happy to file a brief. I am not a lawyer, as you know, so I can't answer it.

Mr. COX. All right. Very well.

Mr. KINTNER. There is one point that, to our mind, has been lost sight of. We do not know of any television station that has been forced by a network to accept affiliation. The stations voluntarily accept affiliation because they know that through the program structure supplied by the network, they can best serve the local community, and because they know that through the revenue and service provided by the network, they can maintain a sound economic operation.

MUST BUYS

ABC believes that must buys, which have been the subject of testimony before the committee, is in the public interest because it results in necessary economic support, both for the stations and for the network. But ABC does not require a network advertiser to purchase a large number of specific markets. It is our belief that the most efficient use of the medium by an advertiser can be realized through the establishment of a minimum gross for network time, and he must generally purchase this amount. ABC's minimum gross for television network sales is $30,000 for a class A half-hour. Within this requirement, advertisers are normally required to include the five television stations owned and operated by ABC.

Mr. COX. What would be their aggregate network rate? If you could furnish that for us.

Mr. KINTNER. $14,100.

Mr. COX. And then the balance of $26,000 is——

Mr. KINTNER. No, that should be——

Mr. COX. $16,000 is placed——

Mr. KINTNER. No, that should be compared not to the $30,000. This is the hourly rate. And it should be compared to the complete stations on a rate card, which is $102,000. So it amounts to about 13 percent of our complete network, if we can clear every one.

Mr. COX. But assuming the man takes only the minimum of $30,000.

Mr. KINTNER. Well, you should take 60 percent of $14,000 or $8,400.

The reason and justification for a minimum gross time requirement is apparent. It assures programs to a large number of ABC affiliates and recognizes the cost of providing the program and related network services. It is axiomatic that a minimum economic base must be maintained if the operation of a network is to be supported. It is a matter of fact that most advertisers using ABC facilities would like to buy higher grosses than we can now deliver.

Actually, on the ABC nighttime television network at the present time, I would say that our average buys are $35,000 gross, not $30,000, and almost without exception advertisers would go up to $40,000 and perhaps beyond, if we could clear the stations.

ABC would not be operating reasonably, as a network, if for example, an advertiser were permitted to purchase a half hour of prime time without meeting some minimum requirements. We require the advertiser to include in his purchase the five network-owned stations because it is, in part, the revenue from these stations that enables us to develop network programing and network services. While the minimum gross buy is a requirement of ABC, we do make exceptions, depending upon the marketing requirements of advertisers, and we use every means at hand within prudent business judgment to give opportunities to the smaller advertisers to use network television.

An example that comes to mind: We had a program sponsored by the Florida Citrus Commission, which does not sell oranges in California. So we did not sell San Francisco and Los Angeles. [Laughter.]

Mr. Cox. Do you have a must-buy or minimum gross requirement in connection with your radio network?

Mr. Kintner. Yes, we do.

Mr. Cox. How long have you had your minimum gross in television network operation?

Mr. Kintner. It started 2 years ago.

Mr. Cox. How were you able to maintain the integrity of your national advertising service prior to that?

Mr. Kintner. Prior to that, there was such a scarcity in stations that a minimum gross would have meant nothing, and there was no purpose to be served by it.

Mr. Cox. Do you suggest to the advertiser the selection of particular stations to fill out the balance of the minimum gross, and beyond that in order to accomplish particular advertising results within varying budgets?

Mr. Kintner. No. Basically the advertiser selects them in accordance with his marketing and advertising program.

Mr. Cox. However, you do perform a sales function for your stations, which I assume would be designed to try to extend that? In other words, to persuade——

Mr. Kintner. As soon as the advertiser has bought and there are stations that are not on the list, we have personnel within our sales department whose job it is to go to the advertiser and try to get him to add the stations that were omitted from the list.

Before leaving the subject of network regulation, I would like to invite your attention to one area where we believe Government appraisal would be helpful. I refer to the extremely high cost of the A. T. & T. line charges that has limited our ability, and that of our affiliates, in providing program service. Your network questionnaire indicates that you recognize that this cost is an important factor in network operation. We agree that these charges should be reviewed carefully to determine whether or not they are justified. Such an investigation should include the question of why the services are provided only on a special overtime basis beyond 8 hours, whereas the normal television broadcasting day will be 12 hours soon in the case of ABC, and is at least 16 hours in the case of the other networks.

The Chairman. Let me ask this question there: A. T. & T. must file their rates with the FCC?

Mr. Kintner. That is correct.

Mr. Cox. In order to get an increase in rate the Commission must approve of it; is that correct?

Mr. Kintner. That is correct.

The Chairman. There have been several filings down at the FCC in which rates have been upped, maybe justifiably so, I do not know; but they have been put into effect without hearings. Now, have the networks ever come in and protested any of these filings?

Mr. KINTNER. In my judgment, I think not.

The CHAIRMAN. I do not think they have. And we have provided that there should be—the FCC in this particular case went ahead and agreed to the upping of the rates and there were no hearings. If someone had asked for a hearing, I suppose there would have been a hearing.

Mr. COX. Isn't it the case that the telephone company has simply filed a proposed tariff, that this tariff has never been finally passed upon, and that the reasonableness or unreasonableness of the rates has never been determined, and that an industry committee—I think under the chairmanship of Mr. Salant—is now looking into the matter, so that the whole thing is still in a condition of flux, but has continued in this condition for some 7 years?

Mr. KINTNER. That is correct. They have not been finalized——

The CHAIRMAN. My point is that there is, under the present administrative procedures, an opportunity for the networks or anyone else to come in and protest.

Mr. KINTNER. As Mr. Cox says, the industry is prepared to come in.

The CHAIRMAN. Apparently there have been no specific protests made.

Mr. KINTNER. Yes; there will be.

The CHAIRMAN. There will be, but there has not to date. There may be.

Mr. KINTNER. That is correct. The hearings haven't been held as yet.

The CHAIRMAN. I think that, frankly, the matter in these cases as well as some other files down there should be aired. Now, they may be entirely justified, but there has been no one come in and really go into them and find out whether they are or not.

Mr. KINTNER. All we are asking for is an inquiry to justify the rates, or not justify them.

In actual operation, ABC suffers more than might appear. The A. T. & T. facilities for which we pay go through cities in which we frequently cannot secure an outlet for our programs. In many cases we have the experience not only of being unable to use the facilities for which we pay, but of having to incur the additional and very substantial expense of sending prints of a program to the cities involved for delayed broadcasting.

SUMMARY

To summarize our position:

1. There is a tremendous obligation on the Government to make possible, speedily and realistically, three or more competitive television stations in each of the major markets of the country.

2. Network television daily proves it is operating in the public interest. To modify the network option arrangements and other business practices would be an extremely dangerous step in a very intricate and complicated business.

3. There is room within the television industry for all types of program producers, and to our mind they are being given opportunities, limited only by their ability to produce good product.

The CHAIRMAN. Now, Mr. Kintner, the committee would be glad to hear—whether you want to put it in the record later or make a statement now; after all, we are concerned with laws up here and regulations—whether or not ABC, in their experience with the Communications Act, has any suggestions for changes in the act. It has been in existence now, as you know, a great number of years, and only sort of—it has been amended sort of haphazardly from time to time. And it was the intention of the committee to probably take another good look at the whole act; some technical amendments are even necessary.

Mr. KINTNER. We would be happy to file a brief and suggestions.

The CHAIRMAN. Yes. We would like your suggestions on that, because you are up against the operation of the act all the time, and you probably could be helpful to us in that.

Mr. KINTNER. It would be a privilege for us to do that.

The CHAIRMAN. I have no further questions. We want to finish this afternoon, or do we want—this is off the record.

(Discussion off the record.)

The CHAIRMAN. I want to say in all these cases—I am sure Senator Pastore, as chairman, has said that we will leave the record open in case you want to make some changes as to figures or other things you would like to add.

Senator POTTER. I am not going to be able to stay for the counsel's questioning, and I am sorry that I missed the first part of your statement. But from what I have gleaned from the statement you have given, I think it has been an excellent statement and you have put your finger on the question we have been wrestling with for some time on this scarcity of outlets.

And I do not know—we seem to have a lot of hearings on this problem and little happens, and I hope that the fire will flame up enough so that we will get some action to bring them to alleviate the scarcity of television as it is today.

Mr. KINTNER. Thank you very much, Senator, we appreciate it.

Mr. COX. We have asked questions of the representatives of the other——

The CHAIRMAN. I merely wanted to say there—this is off the record.

(Discussion off the record.)

The CHAIRMAN. Go ahead.

Mr. COX. I would like to ask you several questions on the matter of your station rates. Does ABC, as the other networks have indicated, get a waiver from its affiliates of compensation on a number of so-called free hours?

Mr. KINTNER. Yes. We basically have, I guess, two types of contracts in the general category: One with our primary affiliates, in which we have 22 free hours and pay 30 percent of the gross; another type, with the one and two stations where we get no free hours and pay varying percentages depending upon what deal we can make.

Mr. COX. Now, is there little or no variation, then, as far as the free hour provision for your primary affiliates is concerned?

Mr. KINTNER. There is little variation on the primary affiliates. Actually, from a monetary viewpoint there is none. In some cases, where there are long line hauls, instead of having the station pay the line haul, we translate it into free hours.

Mr. Cox. Now, are these free hours provided in return for the affiliation arrangement generally, or do you in your dealings with your affiliates indicate that this is to offset line charges or is for sustaining programing or anything of that sort?

Mr. KINTNER. We consider the free hours an initial economic base to provide for the operation of the company, including the programing of sustaining, the overhead, the telephone lines, and so forth. It obviously does not cover it, but basically it covers a portion of our overall expense, whether it be in programing or administration or payments to the A. T. & T.

Mr. Cox. Would you agree with Dr. Stanton that this is basically a historical remnant; that actually it is simply one means of calculating the division of the rate; and that it has little or no significance in and of itself?

Mr. KINTNER. It just has a historical significance as the method that was developed in radio. It obviously could be changed, removing the free hours and changing the percentage of compensation you come to the same result.

Mr. Cox. Suppose you agree on 22 free hours when the station rate is $100, so that you would take the first $2,200 in a given month, and then later the station rate has gone up to $200—now do you take $4,400 of the first revenue, or do you adjust the number of free hours to account for the fact that this provision is bringing you in more revenue than it formerly did?

Mr. KINTNER. No, we keep to the 22 hours. It is part of the building of the business and our sharing in it.

Mr. Cox. Now, in connection with the matter of scenery and sets, does ABC provide all of the sets for "live" shows which are broadcast on the network from its New York studios?

Mr. KINTNER. It does not. I would like to correct the impression that one of the witnesses before you has given concerning our policy on set construction. ABC started in the business by establishing its own set construction department for making the scenery, and so forth. We have never barred outside companies from ABC, providing they meet our union requirements. At the present time, for example, the set of the Amateur Hour was made outside of ABC and there are several other sets.

We actively are in the business of making scenery. We do not make a profit from it. And we actively solicit the business, but in no sense do we stop advertisers or independent producers from bringing in their own scenery.

Mr. Cox. Now, is it the practice of sponsors of programs requiring such sets to ask you to submit a bid on the sets for the program, and then for the advertiser to go out and get a bid from independent suppliers as well?

Mr. KINTNER. I think most careful people in the business do that. If you are in the business continuously, you have an idea of the pricing anyway. But, for example, United States Steel Hour, when it came on ABC, they asked us for estimates on set construction. They also asked independent contractors for estimates and made the decision, which in this case happened to be ABC.

Mr. Cox. Now, do you give a binding price in connection with the scenery and sets, or do you simply provide an estimate which you are then permitted to exceed if you find, in terms of time and materials, that you run over?

Mr. KINTNER. Basically, we follow what is called the rate manual and we give an estimate—generally the advertiser, if the set is more expensive due to change in design, and so forth, has to pay it.

In the early days there were some limitations, or maximums, put on; but I think generally it has disappeared and our rate manual is followed consistently, depending upon the number of hours of carpenters, and so forth.

Mr. COX. Of course, the outside producer would, I assume, have to give a binding quotation, to which he would be forced to adhere even if he found his expenses ran over that?

Mr. KINTNER. I would think not. If they looked at a set which looked as though it took a hundred carpenter-hours a week to make, and then the designer for the advertiser brought in a set that took 140, I would think the advertiser would be willing to pay the independent producer production unit the additional cost.

Mr. COX. Now, if you do not make a profit on the production of your sets, are you not in effect quoting prices which undercut the competition which the independent producer can give you—since, not having a broadcast business to fall back upon, he must make his profits on the sets and the sets alone?

Mr. KINTNER. Not in my judgment. We would make a small profit if our facilities were completely used. So it is sort of like the automobile business, if you aren't manufacturing the maximum number of cars to make for an efficient operation you don't make money. If our carpenter shops, paint shops, and so forth, were used to full capacity, in my judgment we would make a profit.

Mr. COX. Do you feel, generally, that the network should integrate the operations of television as far as possible, so that all of its manifold phases are under the control of the network and carried on by the network, wherever that can be done?

Mr. KINTNER. In what field, Mr. Cox?

Mr. COX. Well, that is, do you feel that it is important for the network to have this scenery and set function within its own organization; to have an expanding program service within its own organization; to have talent arrangements, perhaps, whereby it maintains a pool of talent under contract; and to bring within its control as many of the varied phases of the business as are possible?

Mr. KINTNER. Well, you covered, I think, four topics. No. 1, as far as the back of the house, as we call it, I believe it is our obligation, if we want to sell time for live shows, to have facilities present that the advertiser can use.

As far as the network controlled programs, as I said in my statement, I think a certain percentage of the network program structure should be controlled by the network. I think in the case of news, it should be all controlled.

As far as other programing, I believe the network has the fundamental decision as to whether the program is creatively acceptable, but that it should draw on all sources of programs, whether they be independent packagers, talent agents or advertisers.

The CHAIRMAN. Which is the practice you have now?

Mr. KINTNER. That is correct.

Mr. Cox. Does ABC have a station representation organization within its organization which provides a service to its affiliates?

Mr. Kintner. We do not.

Mr. Cox. Do you have a policy reason for not having adopted this practice which is followed, as I understand it, by the other networks?

Mr. Kintner. We have no policy reason. Originally, we represented our own stations and WMAL, in the field of radio. It was our business judgment that we could do a better business job and make more profit if we went outside and hired individual representatives to represent our stations, and we are now represented by Blair and Petry, at the present time, and begining in the fall there will be an additional representative.

Mr. Cox. So you do not even handle national spot sales for your owned-and-operated stations?

Mr. Kintner. That is correct.

Mr. Cox. Now, do you feel that the network has a function distinct from that which is performed by its owned-and-operated stations as licensees in the five communities where you own television stations?

Mr. Kintner. If I understand the question, yes; in providing a program structure for national distribution.

Mr. Cox. All right. And this is a function of the network; it is a function which is then merged into the operation of the owned-and-operated stations, but those stations have additional responsibilities?

Mr. Kintner. Yes; this is basically a function of the network, and in addition our five stations, as licensees, have certain obligations in local programing, meeting local community demands.

Mr. Cox. Do you feel, then, that the network as such, in connection with this national programing service it provides—do you feel it has any obligation of maintaining balanced programing and objectivity of reporting within its network schedule, as distinguished from its overall responsibility for the programing of its owned stations?

Mr. Kintner. Yes; I think the public is entitled to balanced programs including international news, religion, public information and public service, special events, and so forth.

Mr. Cox. Do you think that the network has an obligation to follow affiliation policies, policies regarding rates, policies regarding access to time for advertisers, that again are separate and distinct from its obligations as a station owner?

Mr. Kintner. I am not sure I follow that. You mean in our affiliation agreements?

Mr. Cox. In other words, part of the functioning of the network is, of course, the way in which the network is built.

Mr. Kintner. That is right. To answer your question, there are certain responsibilities to maintain the station relations department, to handle your relations with your affiliates, to maintain a national sales department, to sell to your national advertisers, to maintain a program department, to give creative continuity acceptance, to check good taste; they are all basic parts of the network.

Mr. Cox. The question I am leading up to, of course, is whether or not there is a possibility that it would be appropriate to make explicit provision for review by the Federal Communications Commission of the performance of the networks of these separate network responsibilities?

Mr. KINTNER. I think not. I think the business is sufficiently and properly regulated on the basis of the individual local licensees.

Mr. COX. In other words, you think the Commission requires no power with regard to the three networks other than the authority it presently exercises over the licenses that are held for the owned-and-operated stations?

Mr. KINTNER. That is correct. And if I may add, Mr. Cox, that is the power of life and death. The five stations of the ABC television network are the profitable part of our operation, and removal of one of our licenses would have a very devastating effect on our position.

Mr. COX. In the history of the Federal Communications Commission, has it ever deprived a station of a license?

Mr. KINTNER. I believe it has; yes. I can't name it off-hand, but I believe it has.

Mr. COX. Is this in radio or television?

Mr. KINTNER. Radio.

Mr. COX. You described the monopoly markets which are created by the allocations situation and the advantage that this gives, of course, to CBS and NBC as regards ABC, and of course the same carries over to other sources of programing. You argue that in addition to this restriction, the networks must have the benefit of option time and "must-buy" in order to exist. Now, isn't this the sort of a situation in which a Government regulation is usually imposed, where you have at least a seminatural monopoly and possible additional restraints?

Mr. KINTNER. You already have Government regulation in the form of the licenses of the stations, and I believe it would be a mistake to fool with the complicated, intricate industry that is serving the public good by network regulations, which I imagine is what you are referring to?

Mr. COX. All right.

The CHAIRMAN. Thank you, Mr. Kintner.

Mr. KINTNER. Thank you, Senator.

The CHAIRMAN. I might say that I am informed by the staff that Monday at 10 o'clock we start with the CBS affiliates in this room, G–16.

(Whereupon, at 12:43 p. m., the committee was recessed, to reconvene at 10 a. m., Monday, June 18, 1956.)

(The new allocation plan proposed by ABC, referred to by Mr. Kintner at p. 2468, is as follows:)

AMERICAN BROADCASTING CO.,
New York, N. Y., July 25, 1956.

HON. WARREN G. MAGNUSON,
United States Senate, Washington, D. C.

MY DEAR SENATOR MAGNUSON: You may recall that during my testimony before your committee on Friday, June 15, 1956, I said that American Broadcasting Co. was preparing a plan for television reallocations in the top 200 markets and that, with your permission, we would file this plan with your committee. Copies of the plan to which I had reference are attached and it is requested that it be made a part of the record of your proceedings.

As study of the plan will show, its adoption would provide: in the first 100 markets of the country, 50 markets with 4 or more VHF services, 25 markets with 3 VHF services, 23 markets with all-UHF service, 1 market with 2 VHF services and 1 market with 1 VHF service; and in the second 100 markets of the country, 17 markets with 4 or more VHF services, 49 markets with 3 VHF services, 29 markets with all-UHF service, 2 markets with 2 VHF services, and 3 markets with 1 VHF service.

Copies of the ABC plan are also being submitted to the Federal Communications Commission.

On behalf of American Broadcasting Co., and of myself personally, I should like to thank you and the other members of the committee for the opportunities which have been afforded me and other executives of the company to make our views known before your committee. I hope that the opinions expressed and data presented by American Broadcasting Co. will be of some assistance to you in your consideration of the problems raised by the current status of the television industry.

Sincerely,

ROBERT E. KINTNER, *President.*

TELEVISION INQUIRY

(Network Practices)

MONDAY, JUNE 18, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., Senator John O. Pastore presiding.

Present: Senators Pastore, Wofford, and Bricker.

Senator PASTORE. This hearing will please come to order. May we have quiet in the room, please, so that those who are interested in hearing the witness may hear him?

Our first witness this morning is Mr. John S. Hayes, president of the Washington Post broadcast division, Washington, D. C. All right, Mr. Hayes, you may proceed.

Mr. HAYES. Thank you, Mr. Chairman.

STATEMENT OF JOHN S. HAYES, PRESIDENT, WASHINGTON POST BROADCAST DIVISION; ACCOMPANIED BY ERNEST JENNES, COUNSEL

Mr. HAYES. For the record, my name is John S. Hayes. I am president of the Washington Post broadcast division. We operate WTOP radio and television in Washington, D. C., and WMBR radio and television in Jacksonville, Fla. Both of our television stations are primary affiliates of CBS television.

I am present here today as chairman of the special committee of CBS television affiliates which was established for the purpose of arranging for a representative group of affiliates to testify here before this committee.

Seated with me is the counsel for our committee, retained by our committee, Ernest Jennes, of Washington, of Covington & Burling.

Let me first tell you why we are here and who we are.

The independently owned and operated affiliates of the CBS television network are deeply disturbed by the attack made before this committee last March on affiliate-network relationships and on certain network practices. At our annual meeting in Chicago last April, completely at the initiative of the affiliates, the CBS television affiliates unanimously adopted a resolution supporting current affiliate-network relationships and other network practices, and authorizing presentation of testimony to this committee by a representative group of affiliates.

The resolution is attached.[1] And, sir, may I tell the committee that at the conclusion of each statement there are several appendixes which we would like to be made part of the record but which we will not read.

Senator PASTORE. As they are presented in your manuscript, or do you want them inserted at various points? For instance the resolution; do you want it inserted at this point?

Mr. JENNES. I would suggest they be inserted at the end of the main testimony.

Senator PASTORE. At the end of the manuscript. I think that is better, because that makes for orderly procedure.

All right.

Mr. HAYES. There are seven witnesses here today altogether. Two of us, one from Philadelphia and one from Washington, represent large multistation metropolitan markets. Two of us, one from Champaign, Ill., and the other from Lubbock, Tex., are from medium-sized VHF markets. Two more witnesses are from relatively small markets, Salinas, Calif., and Grand Junction, Colo. Our seventh witness is from Columbia, S. C., where he operates a UHF CBS affiliate which competes with a VHF NBC affiliate.

We would like to stress at the outset that we affiliates appear here to support not only our own interests but also what we believe to be the public interest. We appear here freely and at our own initiative and at our own expense, and we are stating what we believe to be true.

This committee has heard testimony for many weeks. You now have the difficult task of separating the wheat from the chaff, of separating the various conflicting private interests from the very basic public interest which, after all, is presumably the only concern of this committee.

As these hearings have progressed it has seemed increasingly to us that matters have strayed out of perspective. These hearings started with a study of FCC television allocation matters—the technical problems involved in providing a comprehensive system of television broadcasting for the United States. Somehow the hearings have been converted into a trial of networking and of network affiliates. This change in emphasis has come as a considerable shock to many individual television station operators throughout the country.

It is an extremely significant fact that, despite the many months these hearings have been in progress, not a single television viewer, nor, indeed, any representative of the public, has appeared before this committee to complain about affiliate-network relationships.

Senator PASTORE. That would not happen anyway too easily; would it? I mean that is our function as Members of the Congress. My experience has been, here, that—while it may be unfortunate, and I would like to see it otherwise, of course—our system is not such that you expect the public to come here and present its point of view.

First of all, they do not have the means; second, of course, they take comfort in the feeling that that is the responsibility of the Members of Congress. But I do not think that that proves any substantial point. The mere fact that we have not had a half dozen or

[1] See appendix A to Mr. Hayes' statement, printed at p. 2543.

a million viewers come in here to testify how they feel about this would not prove the case one way or the other, although I think it is a good argument for you to make.

Mr. HAYES. If you think it is a good argument, we are satisfied.

Senator PASTORE. Even that sometimes is overexercised, too, that argument. That is our job here, to protect little John Q. Public who has not the means nor the opportunity to come here. That is what we are sent to Congress for. So you can rest assured that they will be protected whatever the case may be.

Mr. HAYES. I am sure they will be.

Furthermore, not a single CBS network affiliate has appeared to complain about its own relationship with its network. So far as any basic attack on the present system of television networking is concerned, the principal charges have been made here by one person—Mr. Richard Moore, president of KTTV, the Los Angeles Times station in Los Angeles, Calif.

Mr. Moore has said that he has no desire to destroy the networks, and, gentlemen, we have no desire to attack Mr. Moore. But, since we are profoundly convinced that Mr. Moore's proposals would seriously jeopardize the system of nationwide television broadcasting that we have today, we want to meet his contentions head-on.

THE PRINCIPAL QUESTIONS PRESENTED

We suggest to the committee that three principal questions are presented:

First, is the present system of television networking operating to the advantage or disadvantage of the viewing public?

Second, what is the true affiliate-network relationship; and what would be the likely effect of the changes proposed?

Third, does the present system of television networking decrease the proper independence of a network affiliate so that it fails to operate in the public interest?

Let's consider these three questions and their implications for a moment. If the present system of television networking is operating to the advantage of the viewing public, the burden of proof is most certainly on those who attack it to justify the changes they propose.

THE PRESENT SYSTEM OF TELEVISION NETWORKING OPERATES TO THE ADVANTAGE OF THE VIEWING PUBLIC

We believe that the present system of television networking operates to the advantage of the viewing public.

Ten years ago there were half a dozen television stations operating in the United States and only a few hundred television sets. Television was a luxury.

Today—only 10 years later—there are more than 35 million television sets and some 450 television stations throughout the country. More than 9 out of every 10 of these stations are network affiliates so that at least some network programing is available to all but a handful of stations. Virtually every home in the United States is within the coverage area of at least 1 television station, and more than 70 percent of the families in the United States actually own television sets. Television has thus, in an extraordinarily short period of time, become a medium of mass entertainment, education, and communication. It serves the entire public.

Senator PASTORE. At this point may I say this: Of course it is the basic principle of our television law, that is the regulations made with reference to it, to have an equitable distribution of stations. While I agree with you there has been a tremendous coverage nationwide to the extent that at least there is 1 station available to most people, the fact of the matter is that we do have a situation today where some communities have 7 stations and other communities are confined only to 1.

Of course, I think you will have to agree with me that here, basically, of course, is the whole trouble—that is the basic source of the entire trouble that we have to meet here. How we are ever going to resolve it is a question I am not prepared to answer, and I do not think anyone has appeared here to give us a definitive answer that will be a cure-all for the present ills.

But the fact of the matter is, while it is true there is at least one station for most people throughout the Nation, there is not, in my humble opinion, an equitable distribution of the allocations to the extent that each community is getting its fair share of reception media.

Would you agree with that, Mr. Hayes? That is, basically, I think, the fundamental trouble with this whole problem. Now, I would like to get your point of view on that.

Mr. HAYES. I would like to say, first, Senator Pastore——

Senator PASTORE. When you say here it serves the entire public—well, not in equal fashion. You came here to Washington, and I tell you it is a pleasure to have four stations.

As a matter of fact, a little story that is told by one of my assistants. He moved down here—he never came down to Washington before—when I came down as a Senator. Finally, the mother came down to visit with the children—he has two boys—and she was very, very much interested in knowing how well they were doing in Washington. She said, "Do you like it better in Providence or do you like it better in Washington?" And, why, they were a little surprised that she would ask such a silly question. "Of course, we like it better here in Washington." She was set aback by that. She asked them why. They said, "Are you kidding? We have 4 television stations down here, 4 channels, as against maybe 1 or 2 back home."

It was 1 then; now it is 2. But, you see, that points up the point that I am trying to make. Some communities have four, like you have here in Washington. New York has seven. Los Angeles has seven. But where I come from, you only have two.

Now, ABC does not come in, as such, in my community as we would like to have it come in, because out stations are tied up with CBS and NBC. They have to put on an extraordinarily good program that people want to see especially for ABC to come through. Now, if we had a third station, I think most of our people would be much happier than they are.

Now, for us to argue that everything is in the public interest as it is now—while it may be true that at least one channel is available to most people, the fact of the matter is that you do not have what I consider to be an equitable distribution. If you want to make any comment on that, all right. If you want to skip it, that is all right with me, too. Because it is nothing new. I have said this a hundred times already.

Mr. HAYES. The only comment I would like to make is I am delighted that they like Washington and I hope they watch channel 9.

Senator PASTORE. I hope, too, the day will come when they will have 4 back in Rhode Island, so they do not have to make that comparison. That is neither here nor there, but that is basically, I think, most of the trouble.

All right, sir.

Mr. HAYES. Just why has there been this tremendous growth? The reason is that the three networks, and the network affiliated stations, have performed so well that the public has completely accepted the television medium. The public recognizes television as the best buy it can make. For the price of attending a moving picture theater once a week, a family can buy a television set and obtain free—day in and day out—the best of drama, variety and comedy, speeches of public figures, forums on and discussions of important issues, comprehensive news coverage, educational programs, sporting events, events of national importance, and local public service.

Network affiliates throughout the country provide the public a balanced fare of network and local programs. The public wants these programs. It accepts these programs. It likes these programs. We must serve the public in order to survive. We seek to determine public reaction by every method of audience testing that human ingenuity can devise. And when the public shows its dissatisfaction with a program either by complaints or by simply switching off the dial, you can be sure that the program does not long stay on a schedule.

On performance, we think it clear that the great American public which both this Congress and this industry have the responsibility of serving has in fact determined that television networking and affiliate-network relationships are operating to the advantage of the public. We do not believe our critics have proven otherwise.

Let me turn now to the second principal question which has been presented to this committee by the critics of networking. What is the true affiliate-network relationship?

THE AFFILIATE-NETWORK RELATIONSHIP

The affiliate-network relationship is in the true sense of the term a working partnership and the basic practices which have been attacked are sound, proper, and necessary for effective nationwide network television service.

The CBS television network and the CBS television affiliates are in the business of providing a regular, daily, comprehensive, nationwide television service. CBS television alone originates approximately 86 hours of network programs a week, of which over 72 are sponsored and 13½ unsponsored, and of the sponsored programs, almost 56 are live and 17 filmed. This does not take into account the local programs of the individual affiliates.

On a 52-week basis this is a colossal undertaking—some 4,400 hours of annual network television broadcasting. To perform this service effectively, the following interrelated elements must function in harmony with each other:

First, the existence of a network of affiliated stations located throughout the country so that nationwide coverage is possible;

Second, the development of a balanced program structure of high quality for many hours each day so that this network of stations is kept intact and attracts both audience and advertisers;

Third, the sale of a sufficient number of programs over a sufficient number of stations to a sufficient number of advertisers to obtain the revenues necessary to pay for the day-in and day-out schedule of network programing; and

Fourth, the maintenance of a nationwide system of A. T. & T. interconnection services, so that the public throughout the country can have available a comprehensive pattern of live network programing and not have to rely entirely on Hollywood film or locally originated live programs.

We would like to impress on the committee that these interrelated elements operate together in a very delicate balance. If one starts tampering with any of these elements the entire machinery of networking can easily fall apart.

Let me illustrate.

If a sufficient number of stations did not clear time for network programs, obviously advertisers could not buy them.

If advertisers could not be reasonably certain that such clearance would be possible, they could not plan the large advertising budgets necessary to support the programs.

If programs were not ordered over at least a minimum number of stations, it would not be possible for other affiliates, not originally ordered, to approach the advertiser, and to urge their subsequent order.

Senator PASTORE. What would be your answer to this question, because it has been raised from time to time, Mr. Hayes: What if prime time was cut down from 3 hours to 2 hours; what difference would it make to the argument you have just developed?

Mr. HAYES. Well, sir, we get involved in a question of degree. I don't know whether 2 hours 55 minutes or 3 hours 10 minutes is the proper amount of time. I do know this: That we have built this industry over the last 6 years on the fundamental concept of some machinery for clearing time.

Senator PASTORE. Let me put it more specifically, because somewhere along the line these are the important questions that have to be resolved. I realize that a man comes in here and makes a general statement, much of it repetition, but I would like to get it down to cases because, after all, fundamentally that is the one thing we will have to study and decide.

The argument being made—everything you have said thus far—is absolutely true. I do not think anyone can in good logic dispute it. But the argument made, I presume, by Mr. Moore, together with his group, was the fact that the best time, and too much of the time, has been specified as prime time, and they feel that that ought to be cut down so that the stations themselves would have a better opportunity to choose other media of entertainment which, of course, cannot be done now because most of it is tied up with your agreement with the network.

Now, their argument is that if you took this 3 hours—and it has not always been 3 hours, it used to be more than that, then it was cut down to 3 hours. If you use your argument, why do you not make the 24 hours prime time? You have come down to 3 hours. Why it is 3 hours and why is it necessary to keep it 3; and can't it be changed to 2 and still maintain all these things you have argued?

Can you direct your statement to that? That is where we will have to make our decisions.

Mr. HAYES. There is a whole series of questions, Senator Pastore.

Senator PASTORE. I will take it one by one. I do not want to confuse, but I would like the record straight, too. I do not want the record confused either.

The question that I asked specifically: We realize that there must be a must-buy system in order that the network can deal with advertisers.

Mr. HAYES. Correct.

Senator PASTORE. Because unless you pick up your option in the beginning—have it in the beginning at the time of the negotiations—you have to pick up that option before you can get the advertiser's signature on a contract. We all recognize that. I do not think anyone can argue against that.

No. 2, the argument is made that, after all, there are certain times on radio, you see, that are a little better than other times, and it has been decided now as an accepted principle that it is between 7:30 and 10:30. That is your prime time. Now, those who are interested on the other side of this argument say that you have picked up too much time as prime time, to the point that you are shutting them out completely and therefore you are not making this as competitive as it should be.

Now, that is the argument. I say, why should it be three and a half. We do not say you should throw out all prime time. Why should it be three and a half and why can't it be two, and all these things you have talked about still be preserved—network, telephone, everything you have developed.

Can you direct your observation to that question: Why can't it be 2 instead of 3?

Mr. HAYES. I would say, sir, in the first place it has become 3 from the beginning of the industry, and it has been 3. And I think the three works satisfactorily and not to the detriment of these groups that you mention. For instance, in Washington, Senator Pastore, there are today 24 hours available for nonnetwork programing on the 4 television stations at night.

The 3 hours has enabled us to plan our program schedule so we can take care of nonnetwork advertisers. The point I am trying to make is, since we have built the industry on three, I have seen no arguments which would persuade me, at least, that it ought to be less. And I don't see what purpose would be served by making it less.

I can certainly say in Washington, D. C., it would not make available any more time.

Senator PASTORE. Well, in Washington, of course, as I said before, you have 3 operating networks—you have NBC, CBS, and ABC—you have 4 stations. So you see you always have an added outlet. The problem, of course, can't be pinpointed to Washington, D. C.

Mr. HAYES. That is right.

Senator PASTORE. Other communities where you have only 2 with 3 networks, the other independent producers want to come in, the problem is all the more exaggerated. And in the one-station market it is all out of proportion.

Mr. HAYES. I have tried very hard to look into this argument, and tried to find a specific case of a nonnetwork advertiser who wanted to get clearance—not particularly in Washington, but in many communities throughout the country—and I can't find any.

Senator PASTORE. I see.

Mr. HAYES. Now, there may be one, and I may not know about it.

Senator PASTORE. That is your personal experience with this particular station in Washington, or are you expressing now the viewpoint of most of the affiliates?

Mr. HAYES. Well, I have talked to dozens of affiliates and we have discussed this as much as we could, so we could accurately reflect all of the affiliates views. I assure you, Senator, this is about the one charge that confounds everybody. Because there is time and Mr. Rogers is going to testify later—and in addition to operating the station in Texas, he is president of the TVB, Television Advertising Bureau. I know he can amplify this point. I just haven't found this situation to exist.

Senator PASTORE. In order to get you down to a categorical answer, then, your argument is that it would do no good, and it wouldn't serve the public interest any better, and it wouldn't put these people in any better position in getting their programs over, if they really wanted to get them over, if you changed the prime time from 3 to 2 hours?

Mr. HAYES. I don't think so.

Senator PASTORE. Mr. Cox would like to get into this point.

Mr. COX. Isn't it true, Mr. Hayes, that in order for a nonnetwork advertiser, who wishes to advertise on a regional basis, to get an effective presentation of his commercial message through the sponsorship of a program he would have to clear the major markets in the particular region in which he is interested in prime time?

Mr. HAYES. If he wanted prime time; yes, sir.

Senator PASTORE. Well, isn't it agreed that prime time is the best time?

Mr. HAYES. Certainly more people——

Senator PASTORE. Don't kick that around too much. I think we can almost take judicial notice of that.

Mr. HAYES. That is right. I would certainly agree that more people watch television at night.

Mr. COX. If this were not the case, why would your charge be $1,500 for the period 8 to 10:30 p. m., and only $916 for the period 7:30 to 8 p. m., and for the period 10:30 to 11. Don't you, in the quotation of your national spot rates, indicate a fundamental valuation of this time in different terms?

Mr. HAYES. Yes, sir.

Mr. COX. All right. Now then, this man wants to get on in prime time and he wants to get on in the major markets in this region. Isn't it quite likely that a substantial number of those major markets, in any region in the country, are either 2- or 3-station markets?

Mr. HAYES. Yes, sir.

Mr. COX. All right. Now in these 2- or 3-station markets, if all of this prime evening time is subject to the option of one or more networks—if you have a 2-station market—and if that option is legally enforcible and is enforced, how is he going to be in a position to buy this prime time when every station in the market has already obligated itself to hold this time available for network programing?

Mr. HAYES. Well, Mr. Cox, an affiliate doesn't obligate itself per se just to clear for every network order, as I think I will point out on the next page. It doesn't follow that because a network and an affiliate have an option-time arrangement, that automatically every program is on the schedule. In the case of Washington, D. C., in a four-station market all during last season we did not clear 7:30 to 8 on Tuesday and Friday nights, for nonnetwork advertisers.

Mr. COX. You did clear it?

Mr. HAYES. Did not clear—I am sorry, that is right, we did not clear for the network and accepted orders from nonnetwork advertisers.

Mr. COX. Isn't his access, however, to that time dependent upon your determination that the network program offered at that time is unsuitable, unsatisfactory, or contrary to the public interest?

Mr. HAYES. Yes, sir. I think the determination is always the licensee's—it must be. The licensee must judge which program is acceptable.

Mr. COX. All right. And in your judgment, using the illustration you just gave, 1 hour out of the 21 hours of nighttime option time was determined by WTOP not to be satisfactory or suitable.

Mr. HAYES. Well, we determined that the programs offered by the network were less satisfactory or less acceptable.

Mr. COX. Is that all that is necessary—that they be less satisfactory, in your view?

Mr. HAYES. I think so, sir.

Mr. COX. That is they don't have to be, in your judgment, positively unsatisfactory?

Mr. HAYES. Well, Mr. Cox, I think when a network advertiser places an order for the use of your facilities you either determine that the program is more acceptable, less acceptable, or about the same. If you decide it is more acceptable, you accept it; less acceptable, you don't.

Mr. COX. In other words, nonnetwork advertisers come to you, do they, and ask you to clear time for a specific program and you then compare that with the offerings of the network, and if at any point in the network's nighttime schedule you find a program that you regard as weaker or less satisfactory, you feel perfectly free to replace it with this other program of the nonnetwork advertiser?

Mr. HAYES. Yes, sir.

Mr. COX. Even though the program that the network is offering you cannot be said to be contrary to the public interest, nor would you, except by comparison with other programs, have determined it to be unsatisfactory?

Mr. HAYES. That is correct.

I just wish this happened to us oftener than it does, Mr. Cox. I mean, we just don't have this number of clients knocking at our door.

Mr. COX. Do you think that that might be influenced by the fact that you advertise that you are a primary basic CBS affiliate?

Mr. HAYES. No.

Mr. COX. And therefore, on the must-buy list of the network?

Mr. HAYES. No; I don't think so.

Mr. COX. If you had five times as many requests from nonnetwork advertisers for the clearance of time in prime evening hours, are you stating to the committee that you would be happy to clear that time for them, if they brought you good programs, in the face of the network's option?

Mr. HAYES. No, sir; I am not stating that. I am just trying to imagine what situation would arise. If there were that many network advertisers, all attempting to use our facilities—nonnetwork advertisers—I think we would have to sit down and just reexamine our whole situation as to whether we ought to become an independent station, for instance.

Mr. COX. You indicated a moment ago that there were 24 hours available for nonnetwork programing in Washington at the present time.

Mr. HAYES. In Washington, D. C.

Mr. COX. Isn't, however, the major part of that made up by the prime evening hours available on WTTG?

Mr. HAYES. A great percentage of it is, sir, yes.

Mr. COX. As a matter of fact, how much would it be—in the neighborhood of 18, 19, 20 hours?

Mr. HAYES. I would think close to that; yes, sir.

Mr. COX. They are only carrying the network programs that you have rejected; aren't they?

Mr. HAYES. I don't know their schedule that well.

Mr. COX. Well, no network would be in a position, under its contract, to offer them a program unless they had first offered it to you?

Mr. HAYES. That is right—or the other two network stations.

Mr. COX. Yes. So that if the independent station in the market is carrying a program originated by any one of the three networks, it must be because that network, having offered it to its own affiliate, has had it rejected for some reason and then made it available to the Du Mont station?

Mr. HAYES. That is correct.

Senator PASTORE. I am not trying to connote anything evil in this, because after all, let's realize the fact that we have to look at this whole picture realistically. But in the community of Washington, if you exercised your exemption to this option on prime time too often, would there be any question in your mind that CBS would be looking for another channel in this community, rather than yours?

Mr. HAYES. Well, I would think, Senator Pastore, if we did that, we would question in our own mind whether we would remain an affiliate.

Senator PASTORE. They would ask themselves the same question—whether they ought to keep you as an affiliate?

Mr. HAYES. Yes, sir. I think if you start from the premise we are working partners with each other, we would each be questioning what is going on.

Senator PASTORE. I am trying to simplify this question as much as it can be simplified. The argument made here by Mr. Moore is the fact that they can't come in on this prime time. You indicate they could if they wanted to.

Mr. HAYES. They——

Senator PASTORE. How could they if they wanted to. Would they have to use the network with all the network's facilities, or would they deal with each station; and could they do as much by doing it that way?

Mr. HAYES. They would have to deal with each station, fundamentally.

Senator PASTORE. Otherwise, the network.

Mr. HAYES. That is right.

Senator PASTORE. Your argument is that you have cleared certain hours, exempted it from this prime time, option time. What were the programs that you mentioned?

Mr. HAYES. We have—two specific programs.

Senator PASTORE. Yes.

Mr. HAYES. One was the program of Amos and Andy.

Senator PASTORE. From where was that originated?

Mr. HAYES. That is a film program.

Senator PASTORE. From whom did you buy that?

Mr. HAYES. I am not sure, sir, whether that was purchased by the client and brought to us as a film package.

Senator PASTORE. When you say "the client," you mean a local advertiser?

Mr. HAYES. No; this happens to be the case of a national advertiser.

Senator PASTORE. I see. This was a national program that you are talking about.

Mr. HAYES. This was a national client buying a local program, in effect. A program for local use in Washington.

Senator PASTORE. I see. And they dealt with you and you cleared the time.

Mr. HAYES. Yes, sir.

Senator PASTORE. All right. Now, how long did that program take?

Mr. HAYES. A half hour.

Mr. COX. What was the program it displaced?

Mr. HAYES. Name That Tune, which is a CBS program.

It didn't displace it; we did not clear for Name That Tune.

Mr. COX. That is one of the programs that was carried for a time on WTTG?

Mr. HAYES. That is right.

Mr. COX. You later exercised your right to recapture the program?

Mr. HAYES. What happened was the contract for Amos and Andy came to an end; during that time we had been examining how Name That Tune had been doing through the country. The network advertiser who was purchasing Name That Tune approached us: Could we clear time for it?

Senator PASTORE. What are the procedures that you went through with CBS in making this clearance? What are the reactions that you received? Was there resistance?

Mr. HAYES. Let me spell this one out for you.

Senator PASTORE. All right.

Mr. HAYES. As to what happened: We received an order from the network client for Name That Tune through the network. At about the same time we received an order through our national representative for the sale of the nonnetwork program.

Mr. COX. Your national representative is CBS Spot Sales?

Mr. HAYES. CBS Television Spot Sales.

We were then faced with the program judgment: Should we take Amos and Andy or should we take Name That Tune? We have had Amos and Andy on before, and whenever it has been on it has done very well.

At that point, which was the beginning of last season, we were thinking about the possibility of having developed, at 7:30 across the week, certain moods of programing. It seemed to us quite clear, at that point at least, that Amos and Andy fitted better than did Name That Tune.

So what you do then is you simply teletype the network and ask them to inform the network client that you are not clearing. Nothing happens.

Mr. COX. Did they try to talk you out of your decision?

Mr. HAYES. No, sir; they don't—they don't happen——

Senator PASTORE. I am just asking specific questions.

Mr. HAYES. No, sir.

Senator PASTORE. Because these points have been raised through other witnesses.

Mr. HAYES. No, sir.

Senator PASTORE. Did you get any resistance from them?

Mr. HAYES. No, sir. What you normally get is a question asking why.

Mr. COX. What did you tell them?

Mr. HAYES. You say you are clearing for another program. At that point, it usually stops. Now, perhaps 13 weeks later or 26 weeks later, you might get a request again.

Senator PASTORE. Have you any correspondence on this relationship?

Mr. HAYES. Well, we certainly, sir, would have in our file the teletype order.

Senator PASTORE. Would you have any objection to having it inserted in the record so we may have it first hand exactly? What was said by you and what was said by them?

Mr. HAYES. No.

Senator PASTORE. If there is no objection, I would like to have it inserted in the record at this point, because a question was raised as to the reprisal aspect of making this kind of a decision.

Mr. HAYES. Very well.

(The information is as follows, including also WTOP's cancellation of the program Quiz Kids:)

CBS TELEVISION NETWORK

MAY 25.

To: Station Manager.
Re Whitehall Pharmacal Co. "Name That Tune."

Tues. 7:30–8 p. m. CNYT Eff 9/27/55.

Herewith ur firm order on the above thru duration of new contract eff 9/27/55 for 52 telecasts thru & including 9/18/56. Agency is Biow-Beirn-Toigo, N. Y. reservation cancellable by CBS upon 28 days' notice to U. The Whitehall Pharmacal Division of American Home Products Corp. will advertise any & all of the products deemed acceptable by CBS–TV. Pls confirm the above with live clearance or offer suitable TVR period citing adjacencies. Pacific time zone stations pls note: confirm the above for Tues. 6:30 p. m. lcl time on Hot Kine basis via L. A. or offer suitable TVR period citing adjacencies.

Thanks and regards.

JOE FRIEDMAN, CBS TV NY.

CBS TELEVISION NETWORK

To: Station Manager.
Re Whitehall "Name That Tune."

Tues. 7: 30 p. m. CNYT eff 9/27/55.

My records indicate that I am still lacking confirmation from you on firm order for the above. Therefore, here are the details again. Herewith your firm order for duration of 52-week contract eff 9/27/55 thru and including 9/16/56. Agency is Biow-Beirn-Toigo, New York. Reservation cancellable by CBS upon 28 days' notice to you. Please confirm the above on live basis only if you are not available live client desires to know what pgm will be blocking. Thanks & regards.

JOE FRIEDMAN, CBS TV NY.

NEW YORK, N. Y., *September 27, 1955.*

Re Whitehall Name That Tune, Tuesday 7: 30 to 8 p. m., CNYT Effective September 27

STATION MANAGER:

My records indicate you will be unavailable on order for the above. The following describes an unusual aspect of this program, which we hope will merit reconsideration on your part for live clearance now or soonest. (Whitehall is not accepting any TVR's for this quiz show.) The program will include a brand new challenging extra. Any televiewer now has a chance to participate in the new musical marathon of golden medleys, which pays up to $25,000. This will be a race against the clock in which the studio contestant earns a higher reward every time he names a tune correctly. In addition, the home viewer can get into this game by submitting a list of his seven favorite tunes. If the list is chosen and used on the program, the home viewer splits the winnings with the studio contestant. A contestant who cracks the golden medley for a top figure of $10,000 returns the next week along with the home viewer who submitted the medley, the latter being flown in to New York. At this point both partners try to win the $25,000 prize by guessing 5 tunes a week correctly for 5 weeks. Please advise me immediately whether, on the basis of this new idea, it will be possible for you to clear live.

Thanks and regards.

JOE FRIEDMAN, *CBS–TV, New York.*

WASHINGTON, *September 27.*

Re Whitehall, Name that Tune, Tuesday, 7: 30 to 8 p. m.

JOE FRIEDMAN,
CBS–TV New York:

Your records are correct. Live clearance for above impossible.

Regards.

BOB BORDLEY, *WTOP–TV.*

NEW YORK, *September 26, 1955.*

Re Whitehall, Wanted, Thursday 10: 30 to 11 p. m., CNYT.

GEORGE HARTFORD,
WTOP–TV:

Happy to advise client accepts your offer to carry program live. Effective with net show of November 3 and thereafter through remainder of current contract to October 11, 1956.

Thanks.

AL MASINI, *CBS–TV.*

NEW YORK, *January 3, 1956.*

Re Whitehall, Wanted, Thursday, 10: 30 to 11 p. m. CNYT.

To Station Manager:

For your information the above program will change to Quiz Kids effective January 12 and thereafter. Client will remain the same, but only live network will be accepted. Please confirm that you will continue to carry program on live basis when new show goes into effect on January 12.

Thanks and regards.

AL MASINI,
CBS–TV New York.

NEW YORK, *January 9, 1956.*

Re Whitehall, Wanted, Thursday, 10 : 30 to 11 p. m. CNYT.

Station Manager:

I have not yet received an answer from my wire announcing the change of above program to Quiz Kids, effective January 12 and thereafter. I urgently need answer. Please confirm.

If you are going to clear live for this show or if you are presently on TVR basis whether you are going to run out the 28-day cancellation notice with TVRs of Quiz Kids.

AL MASINI, *CBS–TV.*

WASHINGTON, *January 10, 1956.*

Re Whitehall, Wanted, Thursday, 10 : 30 to 11 p. m.

AL MASINI,
CBS–TV, New York:

This confirms change of above program to Quiz Kids, effective January 12, 1956, and thereafter on live basis. Thanks and regards.

NEW YORK, *February 3, 1956*.

Re Whitehall Quiz Kids, Thursday, 10: 30 to 11 p. m. CNYT.

JANE SMITH, WTOP.
DOC SCHOEN, WPRO.

This will confirm that the network show of February 23 will be your last for the above program. You will remain unavailable on order. Thanks and regards.

AL MASINI, *CBS*.

Mr. COX. What if you made this kind of a decision for 7 out of the 21 prime evening hours, instead of for 1? Do you think at that point that you might be getting objections or arguments from the network regarding your policies and their effect upon the network's operation?

Mr. HAYES. Mr. Cox, I don't think that you yourself would ever make the decision to reject the acceptance of network advertiser orders to such a degree that you would not then question whether or not you ought to remain an affiliate. Now, I don't know what that number is. I don't know whether if you didn't clear for half of the network programs you would start to think to yourself, Should I become an independent station or not?

Mr. COX. Do you suppose it might occur to the network that you should become an independent station at that point?

Mr. HAYES. I suspect if you didn't clear for anything they would certainly think about it.

Mr. COX. Certainly, if there is another station available.

Mr. HAYES. If you are not clearing it doesn't make any difference what they do.

Mr. COX. That is, they would be placing, of necessity, their programs on the fourth station anyway, wouldn't they—if they wanted to get into the market.

Mr. HAYES. That is right.

Senator PASTORE. This Amos and Andy was from what time to what time?

Mr. HAYES. 7: 30 to 8.

Senator PASTORE. Well, all right. What was the other clearance that you made? Let's get that one on the record.

Mr. HAYES. The other clearance is a program which is called Highway Patrol. There we have a slightly different situation, in that 7: 30 to 8 on Friday night was, at the beginning of the season, not occupied by a network commercial program. We had received an order for Highway Patrol, which our program board thought was acceptable. We placed the program in our schedule.

Senator PASTORE. You received the order from whom?

Mr. HAYES. From our national representatives. There is a national client, nonnetwork national client. Subsequent to our putting the program in our schedule, we then received an order from a network advertiser. We informed the network that we could not clear Friday night 7: 30 to 8 because we had another program in there which we preferred.

In that case the network advertiser approached us, through the network, and asked was there another half hour available for the presentation of the network program. There was—7:30 to 8 on Wednesday night. We offered that time to the network client; they accepted it, and that is where the program is today.

Mr. Cox. That displaced Brave Eagle opposite Disneyland?

Mr. Hayes. Yes.

Mr. Cox. The program that you placed in the 7:30 hour on Friday was a syndicated film; was it not?

Mr. Hayes. Yes, sir; produced by Ziv.

Mr. Cox. Now, do you insert in contracts with nonnetwork advertisers a provision which entitles you to recover that time on certain specified notice?

Mr. Hayes. Yes, sir. Our policy is this: We are prepared, providing the program is acceptable, to guarantee time to an advertiser as long as he is prepared to guarantee his purchase with us. In other words, if in the case of this particular program the sponsor is willing to sign a 52-week firm noncancelable contract with us, we are willing to sign that with him.

Mr. Cox. You do not reserve the right, during that 52-week period, to recover the time?

Mr. Hayes. In some cases we do, sir; in some cases we do not; and I don't know the answer to this particular program, but I can find out.

Mr. Cox. Now, if you do not reserve the time, reserve the right, suppose the network changes its programing in that period and asks you to clear for the time—you have not previously had a chance to compare this new program with the one you are carrying from the nonnetwork advertiser——

Senator Pastore. Will you answer the question, Mr. Hayes, because a nod doesn't get in the record?

Mr. Hayes. I was nodding that I understand. I didn't realize you had finished your question.

Senator Pastore. I see.

Mr. Cox. Have you still the right to recognize the network's option? Supposing you felt now that its new program was better than Highway Patrol, have you still the right to clear that time if you have not expressly reserved it in your contract with your nonnetwork advertiser?

Mr. Hayes. Well, if we have expressly reserved the right and the program is obviously that much more acceptable, we would. If we had not so reserved the right, we obviously couldn't.

Mr. Cox. Even though, in your opinion, the new program offered by the network was a better program, and even though you have optioned this time to the network and are obligated under the terms of that option to clear this time?

Mr. Hayes. Yes. I think if you got into a situation where you had somehow obligated yourself to a nonnetwork client, and then the situation arose where you were most anxious to clear for a network program because of its acceptability, I think you can work this out, actually, with both clients. Because with all this time available in Washington, there is plenty of space to move and to maneuver.

Mr. Cox. This would not be true, however, in a 2- or 3-station market.

Mr. HAYES. Well, sir, I am not prepared to admit that there is this awful shortage of time. At least, I haven't run across it.

Mr. COX. You don't think there is a shortage of time in prime hours in Boston, with two VHF stations?

Mr. HAYES. I don't know. There are obviously certain markets in this country where time is very tight.

Senator PASTORE. In other words, are you telling us, Mr. Hayes, that if you had no prime time at all and if there were no option time, and if there were no must-buy conditions, that insofar as independent producers are concerned, at your station you wouldn't be showing any more programs of independent producers than you are now? In other words, you are telling us that you are completely satisfied with the present setup?

Mr. HAYES. I am completely satisfied with the present setup; yes, sir. I think if you didn't have must-buy and you didn't have the option time you wouldn't have the network to start with.

Mr. COX. That is, you think that all of the programing of the network in these 21 nighttime hours, with the exception of the two that you have failed to clear, is better than any programing that is available from a nonnetwork source?

Mr. HAYES. Well, "any" is pretty broad, Mr. Cox. I haven't seen them all. But it is certainly as good as.

Mr. COX. That is, in other words, you feel that the programing of the network is not just very good in general—that it is more or less of unequal quality throughout the week? Aren't there some programs on the network schedule that are better than others?

Mr. HAYES. Yes, sir.

Mr. COX. Now, your reason for desiring the affiliation is to get the network programing service featuring, principally, these highly popular programs, isn't it?

Mr. HAYES. Yes, sir.

Mr. COX. And in order to get that, plus its facilities for bringing you live on-the-spot events as they occur and certain sustaining programs, you option your time and agree to take the other programs in the schedule which are not, perhaps, so popular as I Love Lucy and Studio One and some of the other outstanding features—you express yourself as being willing, in general, to clear the time on your station for these other programs which you consider good, although they are not as good as the top programs of the network?

Mr. HAYES. Yes, Mr. Cox.

Mr. COX. Now, taking just this category that you regard as not outstanding—they are still good programs, but they are not outstanding—don't you know, simply from trade publications, circulars that you receive from independent sources of program, that there are other programs which could be made available to you which, in other markets where they have been exhibited, have outdrawn some of the network programs that you are carrying?

Mr. HAYES. I wish I could answer that question simply, Mr. Cox. It just doesn't lend itself to an easy reply.

When you get into this whole area of buying syndicated half hours, you simply cannot say "How did this program do in St. Louis," and assume it is going to do this way in Washington.

Mr. COX. The network does. It assumes if this program does good——

Mr. HAYES. That is right; because it is only a network that can make that assumption. When an affiliate clears for a network program it then takes its proper place in the overall schedule. You know what is before it, and what is after it. You can build a comprehensive schedule. When you now talk about trying to buy an isolated half hour from a syndicated film supplier—the program may have done very well in St. Louis, where, perhaps, it had a certain time against this particular competition on a certain day. But those facts don't obtain in your market. So I have not felt it very helpful when a film salesman comes in and showed me sales promotion, and says, "Look at our ratings in Buffalo." It doesn't make any difference at all, because you have no idea at all what the situation was in which that program was in Buffalo.

Mr. COX. All right then, you look at the program. Is that the system you follow?

Mr. HAYES. The nonnetwork program?

Mr. COX. Yes.

Mr. HAYES. Yes. Sometimes, it is difficult to get a pilot that is representative of the group, but if you can, you certainly try to look at it, yes.

Mr. COX. In your opinion, there were only two that have been shown to you for broadcasting in this year which were better than any of the programs on the network?

Mr. HAYES. Two that were offered to us.

Mr. COX. That is you mean two instances where an advertiser bought it, and wanted to buy time on your station?

Mr. HAYES. That is right.

Mr. COX. That is, you do not generally engage in the practice of buying the Washington rights to a film series and then attempting to find a Washington advertiser to sponsor it?

Mr. HAYES. Or a national advertiser.

Mr. COX. Or a national advertiser?

Mr. HAYES. Not if we can avoid it, Mr. Cox. This is a very expensive business. We have done that at times to fill up a hole in the schedule. But if we can avoid committing ourselves to the film supplier without having a client, we try to duck.

Senator PASTORE. Well, the only observation I have to make is: We hadn't ought to try to tell you that you have a toothache if you feel perfectly all right.

Mr. HAYES. That is right. I was parading some if's that could happen to us——

Senator PASTORE. I just want to make this qualification. We have got a special situation here in Washington, where you have 4 channels and 3 networks. And maybe what Mr. Cox is trying to bring out here is, that may not prevail in another part of the country. And I think we ought to wait for that type of a witness to come before we take that up.

In other words, Mr. Moore has indicated pretty much in his testimony—he didn't say this, but I mean the strong implication is—that most of the broadcasting stations are more or less shackled to the network. You don't feel that way about it?

Mr. HAYES. No, sir.

Senator PASTORE. I guess you have answered the question.

Mr. HAYES. I don't feel that way—not only because of Washington, but as chairman of the CBS Television Affiliates Committee.

Senator PASTORE. And how many affiliates do you have in your organization that have less than three channels in their community?

Mr. HAYES. I don't know, sir.

Senator PASTORE. Well, I would be interested to know that. Because I am afraid that when you get into a locality where you only have 1 or 2 stations, of course the situation might be a little different. Because there I think you have to more or less deal on the terms of the network, much more so than you have to. I mean, it is an economic question; it is being done every day in the week, in every industry of our country.

It all depends on what side of the fence you happen to be dealing.

Mr. HAYES. May I proceed, sir?

Senator PASTORE. Yes.

Mr. HAYES. If the network did not have a reasonable prospect of meeting the huge expense of developing and originating programs and transmitting them over the interconnection lines, it could not provide the comprehensive schedule of contiguous programs—both sponsored and nonsponsored—which interests an individual station in becoming and remaining an affiliate.

If the comprehensive schedule of programs were not being transmitted continuously by the network to a sufficiently large number of affiliates throughout the country, the A. T. & T. interconnection facilities could not long remain available on a regular basis for nationwide television coverage.

Mr. Chairman, this is no parade of mere possibilities. This is the horrible nightmare of networks and affiliates alike.

It is because of this that the working partnership between the network and the affiliates has developed. It is this partnership that holds our various interrelated elements in harmony. It is this partnership which provides the only effective way we know of maintaining a comprehensive network pattern of nationwide television service.

Here are the principal aspects of the affiliate-network relationship. There are three.

1. The affiliate and the network agree that the affiliate will have the right of first refusal to all network sponsored programs ordered by the advertiser in the affiliate's market and to all nonsponsored programs originated by the network. Inasmuch as the network must look principally to a particular station in a particular market to carry its programs in order to maintain a continuity of programing, the affiliate quite properly has the first call on network programs. For the affiliate this is the essential element of the relationship. Indeed, without it every station would be the "affiliate" of every network and no station would be the affiliate of any network.

Second, a schedule of rates for use of the station's facilities is agreed upon between each individual affiliate and CBS television. The advertiser is charged the applicable rate and the station receives a percentage of the rate which is generally 30 percent before any network discounts.

Senator PASTORE. This rate that is fixed by the network: Is that the rate that you usually use with relation to your local advertisers?

Mr. HAYES. It can or cannot be depending on how the operator wishes to set his own rate card. Several stations have three rates: A network rate, a national rate, and a local rate.

Senator PASTORE. And do you have it?

Mr HAYES. No, sir; we have one rate for all advertisers.

Mr. COX. Now, in terms of compensation to the network, in addition to the 70 percent which is retained by the network—and out of which, of course, they pay the telephone charges, the discounts, commissions to the advertising agency, and certain other expenses—according to the testimony of Dr. Stanton it is general practice for the station to waive compensation on certain hours, called free hours. Does WTOP give free hours to the network?

Mr. HAYES. We use—let me answer: There are several methods by which you can arrive at a network rate in negotiation with the network. One would be a flat rate, a flat percentage; or second, you could use the converted hours; or third, you could use the free-hour routine. We like the free-hour routine, and we use it. This is an unfortunate term actually, "free hours," because it isn't actually that. What it is, is a method of arriving at a rate under which you are paid a return for the use of your facilities by network advertisers. This is really an outgrowth of radio.

Mr. COX. Yes. That is what Dr. Stanton said.

Now, however, if in your negotiations you came up with a set of terms which gave you the same percentage, 30 percent, as another station in a comparable market, and that station was not providing the number of free hours that you are, then to that extent that station would have entered into a more favorable relationship with the network?

Mr. HAYES. I don't think so, Mr. Cox. You get involved in an awful lot of statistical mumbo-jumbo in talking about this. But the fact of the matter is that the end result, or the end return to the affiliates—regardless of what formula they use, you end with about a 30-percent return.

Mr. COX. Well now, let's assume that you are giving CBS the more or less standard number of hours which Dr. Stanton testified to—which was 5 a week or 20 a month—and your network rates is $1,500 an hour. That means that on the first 20 hours a month you waive all that compensation, so that instead of taking 70 pecent, the network takes the entire amount?

Mr. HAYES. Yes; if you just had 5 hours a week.

Mr. COX. Well, in effect, on a monthly basis, the first 20 hours' worth of time charges that comes in is kept by the network?

Mr. HAYES. Correct.

Mr. COX. And then on the balance after that, you receive 30 percent of the gross, assuming again this standard figure?

Mr. HAYES. Yes; that is right.

Mr. COX. Now, suppose a station in another market comparable to Washington was not giving any free hours— so that the first $30,000 did not go to CBS—and he was still getting 30 percent of the gross overall time charges. He would be receiving more out of the time charges for his station than CBS is paying you?

Mr. HAYES. If those were the facts, yes, sir. But I would think, in that situation, it would be more likely that he would be accepting perhaps 25 percent.

Mr. Cox. He might be receiving 35 percent as far as you know?

Mr. HAYES. Sure. It would depend on so many situations. But it is pretty hard in this industry for that to get out of hand.

Senator PASTORE. Why?

Mr. HAYES. Well, broadcasters have a certain kinship with each other, and I think I could tell you fairly accurately what happens.

Mr. Cox. Then you would have no objection, personally, to having the terms of these contracts, as they are filed with the FCC, made public—so that you would actually know what the terms are of affiliates in comparable markets?

Mr. HAYES. I don't see what purpose would be served, Mr. Cox, in making them public. I mean we have competitors who would like to know. I suspect that our competition in Washington would like to know more about our revenue.

Mr. Cox. I am not talking about your revenues; I am talking about the terms that you have arrived at with the network as to the division of the revenues derived through the use of your station. It would not be a dollar amount.

Mr. HAYES. It would not be hard to compute backwards. You know what the network rate is—it is not hard to work back to the end figure. I would be just as happy if our competitors didn't know.

Mr. Cox. They, of course, can tell from your published schedules how much network programing you're carrying, they know your network rate, and they can therefore determine, certainly, the first figure, which is the gross revenues that are being derived from the time charges of your station. Now if you have in your conversations with various people in the broadcast industry indicated what your arrangements are with CBS, they could then complete the calculation.

Mr. HAYES. In this answer to Senator Pastore I have been talking about other CBS affiliates.

Mr. Cox. The people you are concerned about, then, as far as this situation is concerned are the other stations in the Washington market?

Mr. HAYES. I am an old-fashioned fellow. I would like to have our competitors work to get information about us.

Mr. Cox. Go ahead.

Senator PASTORE. Not as old fashioned as you think. [Laughter.] All right, sir.

Mr. HAYES. I was talking about the three principal aspects of the affiliate network relationship.

Now, the third: Under the FCC regulations the station is specifically authorized to agree with CBS Television that it will give the network an option to use its facilities for sponsored programs a maximum of 3 hours in each of the 3 time segments each day. This is the so-called option time provision of which so much has been made. But even this provision is often misunderstood. Under the FCC regulations and the network affiliation agreement, the individual station has these further rights:

(*a*) The option may not be exercised by the network on less than 56 days' notice.

(*b*) It may not be exercised to preempt a program during a period when the station has agreed to broadcast a program of another network; and, (*c*) In any event, the station is free to reject or refuse to accept any network program which the station reasonably believes to be unfit or unsuitable, or which, in the opinion of the station, is contrary to the public interest. Furthermore, a station may at any time substitute a program of outstanding local or national importance.

Under the affiliate-network agreement, the affiliate obtains a considerable number of valuable benefits from the network. They include the right of first refusal to all sponsored programs offered over the network which the advertiser wants to place in a particular market; the availability of sustaining programs produced and distributed at the network's expense; the strength that the network programs give to an affiliate's overall program schedule; the revenues directly accruing from network clients; the increase in audience acceptance from network programs which enables the station more readily to sell its locally originated programs to local and nonnetwork national advertisers; the promotional value inherent in network programs; and the ability of the affiliate to concentrate its creative efforts on local programing of a higher quality than would otherwise be possible.

Now, the basic consideration which CBS Television receives in return from the affiliate is the option right; without option time, the network affiliation would be a one-way street, assuming that the networks could survive without option time. And whether the networks could survive without option time is doubtful at best.

A network is principally an instrument for the simultaneous transmission of programs over a number of stations. Nationwide television networks with their present practices have come into being because no advertiser, no advertising agency—no one except the networks—has been able effectively to arrange for a number of programs to be transmitted daily to a large number of stations throughout the United States. (CBS television evening programs, for example, are broadcast, on the average, by some 121 affiliates in virtually every part of the United States.) Option time is essential to enable the networks to clear a substantial number of the markets the advertiser wants. Network and advertiser planning and budgeting, and the production of programs would be most seriously hampered without option time. The strong network schedules would erode, A. T. & T. interconnection facilities would go to other users, and the network machinery could no longer operate effectively. The loser would be the American public.

Mr. Cox. If there were a network providing a schedule of weak programs with option time it would, in your view, have a hard time getting clearance for that schedule if its affiliates were living up to their responsibility for programing in the public interest?

Mr. Hayes. Yes, sir.

Mr. Cox. On the other hand, if the network has a strong schedule of programs, isn't there every incentive on its affiliates to clear time for those programs, option or no option?

Mr. Hayes. Yes, sir; if they are very acceptable programs, of course.

Mr. Cox. That is, in other words, you have determined that of the 21 hours that CBS offers to you in prime evening time, that all but 1 hour is highly desirable and suitable for this market, and you are happy to carry them. Wouldn't you carry those 20 hours of programs even if the network did not have an option?

Mr. HAYES. Well, sir, it is the chicken and the egg. I think if the option time provisions didn't exist we wouldn't have the programs available to start with.

Mr. COX. Why not? Wouldn't these advertisers still desire to advertise on a national basis?

Mr. HAYES. But I don't know how an advertiser could be certain of clearance.

Mr. COX. He is not certain now of clearance until he orders a market and the order is accepted, is he?

Mr. HAYES. That is right.

Mr. COX. He could follow that same procedure without an option. He could order 60, 100, 150 markets, and would get, as he gets now, teletype responses indicating what markets can clear time for him?

Mr. HAYES. Mr. Cox, it doesn't quite work like that. When a national advertiser decides on buying a network program, he must, at that point, have some reasonable assurance of what markets he is going to get, otherwise he can't even begin to plan what kind of a program he is going to do.

If he only gets into 50 markets, and if he has a certain formula for arriving at a cost of program based on markets, that is one kind of a program. If he can only get in 25, then perhaps he has to do a program less expensive. This is purely a machinery for being able to make reasonably certain to an advertiser which markets there will be available. Now, he knows he is not going to get the whole station list. And he knows that some markets will not be able to clear. But he at least has a reasonable assurance of what he is going to get.

Mr. COX. But the only reasonable assurance he has is that if he can come up with a program of such quality that to a high percentage of the affiliates of the network it will seem suitable and desirable only then does he have any reasonable assurance that he can get the clearance?

Mr. HAYES. Well, he has to be reasonably certain that he can produce a program at least as acceptable as anybody else.

Mr. COX. In other words, it is not the option that gets any particular advertiser who deals with the network a clearance in the desired number of markets—it is the quality of the program that he offers and the chances that the individual affiliates, in their own determination of the public interest, will agree that that program should be broadcast in their market in that time?

Mr. HAYES. Well, there is something else too, which is the advertiser has no other way of doing it. There is no other machinery for doing this.

Senator PASTORE. But it is the option that creates the opportunity to sit down and talk about it?

Mr. HAYES. That is right.

Mr. COX. You couldn't talk without the option?

Mr. HAYES. I don't know quite what you would talk about. You would say "Here is a program." He would say "Where is it going to be on." And you would say, "I don't know."

Mr. COX. If—simply assuming this as an extreme possibility—if the option were eliminated, CBS would still exist as a highly organized facility for providing sustaining programs, for providing news service to its affiliates, for providing initial contacts in the top markets of the country with people with whom it has had a history of friendly dealings. It could still represent to national advertisers, couldn't it, that if they came to it with a program of sufficient quality, they would be able to get that cleared in, not all, but a substantial percentage of the top markets of the country which he might desire to order—on the basis of their relations with their affiliates, their affiliates' need for the network service and the quality of the programing?

Mr. HAYES. No, sir, I just don't agree with that, Mr. Cox. It seems to me, once you destroy this machinery and you take away the possibility of any cohesive planning, or the possibility of building a comprehensive schedule, and I can't think of any other word, but erosion is bound to set in.

Here is how erosion sets in. Let's suppose you have five programs cleared on X number of stations, and then this station decides he doesn't want to take it, then that station decides he doesn't want to take another program. You eventually end up with the entire program schedule gone.

Mr. Cox. Why would they do it more without the option than with it?

Mr. HAYES. Because they can't do it under the present system if the program is acceptable.

Mr. Cox. As I understand your testimony, the test of acceptability is not whether you find this positively acceptable, but rather that you just think you have found something that is more acceptable.

Mr. HAYES. Well, I am simply saying, Mr. Cox, that we think that the network program schedule is acceptable, and more than acceptable.

Mr. Cox. You would think that even if they didn't have the option?

Mr. HAYES. I don't think they would have the programs, Mr. Cox, that would make you think the network was acceptable.

Mr. Cox. That is, you think, if the Commission were to decide that the giving of an option was not in the public interest, that the advertisers who have invested advertising budgets in network programing with such satisfactory results to themselves would, at this one stroke of a pen, decide that the network no longer provided them a facility for presenting their national sales message and would decide to abandon television?

Mr. HAYES. No, sir; I think if that unhappy occurrence happened tomorrow, nothing would happen the next day. But I think something would begin to happen the following week, and it would be worse the week after and you would eventually end up without networking.

Mr. Cox. Are you saying that without the option in some way there would be an increased tendency on the part of affiliates to fail to clear network programs?

Mr. HAYES. Yes, sir.

Mr. Cox. Then you mean that the option now operates to clear for programs which the station, in its completely undisturbed discretion, would not have cleared?

Mr. HAYES. I am not sure I understand that question, Mr. Cox.

Mr. Cox. Well, that is, in other words, you think that the option, as it presently works, serves to effect clearance for a program that would not have made it on its own merits?

Mr. HAYES. No, sir, I don't think that at all. I think that—we are talking about, not about a specific program, we are talking about an overall comprehensive program schedule. When you start talking about overall program planning, it is very difficult to pull this one program out of that particular place on the schedule and say this is acceptable, this is not quite as acceptable, this is less acceptable. It belongs in a particular place, and at that particular place it is probably more acceptable than it would be elsewhere.

Senator PASTORE. Aren't you saying this, Mr. Hayes: That if you were contemplating building a shopping center, before you would talk to a tenant of a store—or prospective tenant of a store—you would like to have an option on the purchase of the land.

Mr. HAYES. I wish I had said that.

Mr. COX. However, if you get an option on the purchase of land, that is a contract presently entered into with respect to a particularized transaction for which you have given actual consideration, and it is not a general overall option which the man possessing could not enforce. The option you would get on real estate is a legally enforcible right.

Senator PASTORE. The evil in that—now, I hope that we don't keep kicking a dead horse here, because we have about eight witnesses and we have got to finish them today.

The evil with that, if I may make this observation, is this: That if you have to clear with 60 stations and you have got to start your option operation at the time that you are beginning to talk with your advertiser, when you get to the last 5 those stations will demand their own terms, if you need 60. I mean you have got to have these things in advance if you are going to do it in a reasonable and realistic way.

Now, if you are going to go from station to station to build up your 50 or your 60 must-stations, when you get to the last few, then the terms will be of those last stations. Personally, I wouldn't want to be placed in that position if I were dealing for the network. On the other hand, there is this evil: That you are up against the proposition that the option is so much in advance from the time that you deal with the advertiser, that sometimes it makes it pretty hard for a new man to creep in once the option time is more or less allocated to a certain station or certain network.

But your argument here is that you haven't had any difficulty with the network.

Mr. HAYES. That is right.

Senator PASTORE. I think we ought to wait for a witness that has had. We are trying hard to convince this man he has had a bad deal when he says he has a good one. [Laughter.]

Mr. HAYES. You will find that with CBS affiliates, generally.

Senator PASTORE. I am not prepared to go that far, and I think we ought to wait.

Mr. HAYES. All right.

For these reasons, the affiliates overwhelmingly support the option time provision because we recognize that it operates to our interest, and to the public interest. A few independent stations might benefit if networking were weakened, if not destroyed, but the vast majority of stations in the United States would suffer, and the public would suffer.

THE BASIC NETWORK REQUIREMENT

I would now like to say a few words about the basic network requirement. This is a practice involving the network's relations between it and the advertiser; it is not a practice between the network or the advertiser and the individual station. Yet, I am not able to find a single CBS affiliate which is not sympathetic with this practice, whether or not the affiliate is included on the basic required list.

It is difficult to realize how anyone can seriously challenge the requirement that, if an advertiser wants to use a nationwide network, he must order a sufficient number of stations to justify the use of that network in the first place. An advertiser who wants to place his advertising in a few markets doesn't need a nationwide network for this purpose. Either the national spot sales or the local sales route is open to him. Last year, such nonnetwork television purchases in this country totaled almost one-half billion dollars.

If you piece together the proposals to eliminate option time and the minimum basic network requirement, you will understand why we believe that these proposals would seriously impair, if not destroy, networking. If a nationwide television network had to accept orders when advertisers wanted to exclude the markets which by size and geographic location go to establish the basic network, it would no longer be in the nationwide network business. Thus, if the elimination of option time did not accomplish the end of television networking, the elimination of the basic network requirement would certainly do so.

May I next address myself to the third principal question? Does the present system of networking decrease the proper independence required of an affiliate so that it fails to operate in the public interest? In answer, I would like to explore three charges which have been made against us.

First, the charge that the network, through option time, controls and dominates the affiliate.

Second, the charge that the affiliate, because of this alleged control and domination, does not perform a satisfactory local service.

Third, the charge that network practices preclude affiliates from carrying nonnetwork programing and that nonnetwork program sources are drying up.

OPTION TIME DOES NOT OPERATE TO CONTROL THE AFFILIATE

We do not believe that option time operates to control the affiliate.

It is asserted that either option time permits the network to substitute its judgment for that of the affiliate, in which event it is an evil; or that option time has no effect, in which event it is unnecessary.

Neither of these assertions is correct.

When a station is broadcasting a nonnetwork program in option time and receives an order for a network program, there are three possible situations.

First, the affiliate determines that the network program is clearly more acceptable. Here the station exercises its judgment and presumably accepts the network program.

Second, the affiliate determines that the network program is clearly less acceptable. Here the affiliate is wholly free to reject the network program and continue the nonnetwork program.

Third, the affiliate determines that both the network program and the nonnetwork program are satisfactory and are essentially of the same quality. Here, under the affiliate-network partnership arrangement and the regulations of the FCC, the option will indeed operate to the advantage of the network program. But certainly this is no abdication of the licensee's responsibility to run its own television station. For it is the licensee, in good faith, who decides that the network program is acceptable.

In each of these cases, the station exercises its judgment, taking into account the quality of the network and the nonnetwork programs, its own overall program structure, the programs carried by other stations operating in the same area, the needs of the local area, and all the other factors which any responsible licensee will consider.

We simply fail to see where abdication of responsibility enters into the picture at all.

NETWORK AFFILIATES PERFORM A HIGH QUALITY OF LOCAL SERVICE

We believe that network affiliates perform a high quality of local service.

To suggest to a broadcaster that he is not properly serving his local area is tantamount to suggesting to a Senator that he has failed properly to serve his local constituents. You gentlemen recognize that a matter of national interest is of interest to your local constituents and devote yourself to these matters as well as to matters which are of purely local interest. In the same way, I am sure that you gentlemen will recognize that a network program of national interest is also of interest to the local public which an individual affiliate serves. So it is that I would wish to reject at the outset any notion that to broadcast high quality network programs is a disservice to the local community. If we did not broadcast the great bulk of these network programs, the local public would be the first to object.

But we go further and we state our profound conviction that network affiliates generally perform an outstanding service in originating local programs. Indeed, a network affiliate is able to concentrate its creative efforts upon its local programing to a more intensive degree than can a nonnetwork station whose efforts must, of necessity, be spread over an entire day without network support. CBS television programs are the central core of an affiliate's program schedule but to suggest that we affiliates merely "patch into the network" is simply inconsistent with the facts.

In the case of WTOP-TV in Washington, we originate 51 hours of programs locally out of a total of 124 hours a week. This is an average of more than 7 hours a day of local programing. Our local live programing alone amounts to 17 hours a week or more than 2 hours a day.

Our live, local schedule includes each week 4½ hours of news locally originated, 2 hours of religious programs, a children's educational series and a forum on local affairs. On one of our daily live local programs, the Mark Evans Show, we interview Government officials, authors, playwrights, distinguished citizens, actors, community leaders, and other well-known figures.

We also produce our own special features, which are very substantial undertakings, such as our series on alcoholism, on the rehabilitation of the mentally ill and on social diseases. Only last week we broadcast a program which took 6 months' preparation, including 2 weeks overseas, by our own personnel. This was a film documentary portraying the life of a Government girl in Istanbul and was done in cooperation with the State Department to aid in their recruitment of personnel. Only recently, we broadcast a live play dealing with some of the great individual constitutional rights of this Nation, which was written and produced by our own staff. Appendix B to this statement provides some details on our programing that may be of interest to you. (See p. 2543.)

To serve the public well is uppermost in our thinking. Much of our programing is network programing because it is first-class programing and well balanced, and the public likes it. But we have done, and we will continue to do, everything we are able, including rejecting network programs, to persuade more people to watch WTOP-TV in Washington.

INDEPENDENT PROGRAM SOURCES

Finally, I would like to refer to the charge that network practices preclude affiliates from broadcasting film programs which are independently produced, and that independent sources of programing are drying up.

I have already pointed out that 7 hours of our programing each day on the average is devoted to nonnetwork programing. In the field of first-run syndicated film, WTOP-TV broadcasts more first-run syndicated film programs each week than the average of all the nonaffiliated stations in Los Angeles and New York. Our syndicated film broadcasts in total run over 17 hours per week and we present an additional 17 hours of feature film. Our experience, I believe, is typical. Network affiliates make liberal use of independent program sources.

The charge that nonnetwork sources of programing are drying up was received by every television operator I know with nothing short of amazement. The industry's trade press is available for everyone to read. All available data demonstrates that the number of syndicated film programs produced specifically for television has increased tremendously, the gross revenues from the sale of syndicated film has steadily increased, and the moving picture studios in Hollywood have only recently begun to make available for television large portions of their tremendous libraries of relatively new feature films, westerns, cartoons, and short subjects.

CONCLUSION

It seems to us, gentlemen of the committee, that the existing system of networking and the existing affiliate-network relationship are operating to the great advantage of the viewing public; the basic practices are sound, proper and necessary for effective nationwide network television service; affiliates exercise their own good judgment in operating their stations; network affiliates perform a good job of serving their local communities; and nonnetwork program sources have flourished and have benefited, and have not been injured, by networking.

We do not suggest that this is a perfect industry. Man's creations are never perfect. We do suggest that this industry has grown amazingly and has served the public well. We can understand why this committee is concerned about some of the individual problems of particular communities. But these problems are largely technological, and result from the fact that this industry has expanded so rapidly that it has outstripped its own engineers. We do not pretend to know the answers to these engineering questions. We do assert that problems such as these are wholly distinct from the question of networking and the affiliate-network relationship.

The charges against the affiliate-network relationship brought us here today. We most respectfully submit to this committee that to tamper with this relationship would, in our view, be most dangerous.

Appendix A to the Statement of John S. Hayes, President, Washington Post Broadcast Division

The following resolution was passed unanimously by the CBS television affiliates at their anual meeting in Chicago, Illinois on April 14, 1956:

"Whereas the Senate Interstate and Foreign Commerce Commitee of the United States Senate has recently heard testimony with respect to network option time and other network practices; and

"Whereas it is the consensus of the affiliates of the CBS television network that option time or some similar business arrangement and other network practices are of fundamental importance to continued sound networking; and

"Whereas it is recognized that the economic health of the networks insures the preservation of vital public service on a national and international level; and

"Whereas it is the belief of the affiliates that there have been no seriously detrimental practices and the relationship between the CBS Television Network and its affiliates is one of partnership in which each operates to the benefit of the public and each other: Now, be it and it is here

"*Resolved*, That the undersigned affiliates of the CBS television network request the opportunity to present a representative group of affiliates to said Senate committee to testify as to the essentiality of option time or some similar business arrangement and other network practices."

CBS Television Network Affiliates.

Appendix B to the Statement of John S. Hayes, President, Washington Post Broadcast Division

I. DESCRIPTION OF TYPICAL LOCAL LIVE PUBLIC SERVICE AND PUBLIC AFFAIRS PROGRAMING ON WTOP–TV, WASHINGTON, D. C.

City Side.—(Current.) A weekly half-hour panel show wherein Washington reporters question a figure prominent in the news of Washington and the surrounding area. Problems discussed have ranged from integration in the public schools to an examination of advertising practices. Every fourth week the panel questions the Board of District Commissioners.

Ask-It-Basket.—(Current.) A weekly half-hour program featuring a panel of grade-school children questioning an expert from a cultural, governmental or scientific field. Such topics as Beethoven, plastics, juvenile courts, and cosmic rays have been discussed in the past. Each program is done in cooperation with a different area educational organization. This program was cited by the American Association of University Women during the past week as an outstanding program for school-age viewers.

Mass for Shut-Ins.—(Current.) A weekly half-hour performance of the ritual of the Catholic Mass from a studio chapel at Broadcast House. The Mass is done as a service to Catholics either temporarily or permanently disabled who otherwise would be unable to attend Mass. The archdiocese of Washington produces this program in cooperation with WTOP Television. This program is not broadcast when the Jewish Community Hour is broadcast 1 week each month.

Chapel of the Air.—(Current.) A weekly half-hour religious program done in cooperation with the Protestant chaplains of the United States Air Force under the direction of Gen. Charles I. Carpenter, Chief of Air Force Chaplains. This program reproduces from Broadcast House an actual Air Force Chapel service as it might take place on any Air Force base in the Nation or overseas. This program has been recently commended by the Secretary of the Air Force and plans are underway to film the service for distribution to Air Force bases overseas.

Jewish Community Hour.—(Current.) A monthly half-hour program devoted to a report and discussion of the activities of the Washington Jewish Community. In addition to a news report of Jewish Community activities the program features native Jewish music and explores various facets of Jewish folk culture in a way that is designed to appeal to the nonJewish audience, as well as answer questions that may be in their minds.

Meditations.—(Current.) A 5-minute, twice-daily religious devotional done at the beginning and end of each broadcast day. These programs are rotated among the Catholic, Protestant and Jewish faiths. These daily messages of inspiration have received a wide, favorable response from many viewers who have on numerous occasions asked for transcripts of the messages.

6:30 Spotlight.—(Current.) Presented Monday through Friday, this 15-minute program reports local and national news as well as the weather and news of the entertainment field. WTOP television news programs are produced by the WTOP news division. The news division has the use of the following facilities: AP trunk and radio wires, UP trunk and radio wires, Washington City news service wires, UP sports wire, Western Union sports and weather wires, UP facsimile service, and UP and CBS news film as well as UP still photo service. In addition to the above services the news division has a cameraman for film coverage of local news events as well as complete editing facilities.

11:00 P. M. Report.—(Current.) Presented 6 nights a week, Monday through Saturday, this 15-minute program is a comprehensive report of local, national, weather and sports news. This program has been consistently among the leaders in multiweekly news programs.

Saturday News Special.—(Current.) A weekly 15-minute program devoted to national, local, weather and sports news.

Sunday News Round-Up.—(Current.) A 15-minute report of local and national news with the emphasis placed on reviewing the week's news. A special film report is usually featured either from a CBS overseas correspondent or a local correspondent who has covered a local story of considerable interest.

In addition to the above regularly scheduled, locally originated news programs, a 5-minute portion of the Mark Evans Show daily (discussed further below) is devoted to a report of up-to-the-minute news, and another 5-minute portion of the same program is devoted daily to a newsreel presentation.

To Live Anew.—A series of 13 once-a-week programs presented in cooperation with the District of Columbia Health Department dealing with the problems of rehabilitating the physically handicapped. These programs were largely dramatic in treatment and many scenes were filmed on location by the WTOP Television camera crew. The series received outstanding reviews from the local and national press. The Office of Vocational Rehabilitation in the Health, Education and Welfare Department ordered film recordings for nationwide distribution to television stations.

The Road Back.—Another pioneer series done in cooperation with the District of Columbia Health Department. This was a weekly series of 13 programs dealing with the problems of alcoholism. During the preceding year WTOP Television also did two 13-week series on the problems of mental illness and venereal disease. For its programs in the field of health education, WTOP Television received the John Benjamin Nichols award of the Medical Society of the District of Columbia "for contributions in the health field and distinguished service to the people of the District of Columbia."

You and Traffic.—A weekly series of 13 15-minute programs during which the Director of Traffic for the District of Columbia, Mr. George Kneipp, discussed Washington traffic problems and answered questions from viewers relating to the highway law enforcement situation. Film reports of various trouble spots were integrated into the presentation as were diagrams illustrating the most common road hazards.

Do You Wonder?—A series of 26 religious programs done on a weekly basis. This program was done in participation with the Washington Federation of

Churches and was a Sunday School of the Air for children of the Protestant faith. Puppet plays and dramas were incorporated into the production of this program to illustrate the timeless stories of the Bible.

Meet the Candidates.—These half-hour programs produced by the News Division are scheduled whenever there is an election of importance in the area surrounding the District of Columbia. Free time is given by WTOP Television to the leading candidates in the elections to present their views. This type of program gives an equal forum to the candidates and an opportunity to the voter to hear the major opposing candidates express their views on the same program.

Assignment Istanbul.—A half-hour program on the life of a Government girl overseas. A WTOP reporter and camera crew went to Istanbul, Turkey, to prepare this report. Because of the high incidence of Government employees in the Washington area it was felt that a program of this type would be of special interest. Several months, including 2 weeks overseas, were spent in comprehensively covering all phases of the life of an American girl in one of the world's crossroads as a State Department employee.

The Blessings of Liberty.— A half-hour dramatic program commemorating the convening of the Constitutional Convention. The program dealt with the guaranties of the Bill of Rights and specifically with the freedom of speech and the right of political expression. A little-known historicial event was dramatized concerning the trial in Vermont of a Congressman under the Alien and Sedition Act. This trial, which took place only a few years after the ratification of the Bill of Rights, ended in the Congressman being sentenced to serve a prison term. However, public indignation was so great that the Congressman was reelected from his cell and the Alien and Sedition Act was allowed to expire under the Presidency of Thomas Jefferson.

V–E Plus 10.—This program produced by WTOP television and the Washington Post and Times Herald was presented on the 10th anniversary of V–E Day. Military leaders and statesmen prominent in that victory were interviewed on their reflections of that day's importance and meaning. Among those interviewed were former President Truman, Vannevar Bush, Gen. Walter Bedell Smith, Gen. Carl Spaatz, Gen. Omar Bradley, Admiral Kirk, and a child born on V–E Day. This program was broadcast nationally over the CBS television network.

Heart Sunday.—A special program presented on the occasion of the opening of the Heart Fund Campaign. Heart specialists from the Washington area talked about the necessity of the Heart Campaign and the good accomplished by it. Various heart patients were interviewed about assistance they had received from the fund.

Care Benefit.—A studio party for people attending a local movie premier sponsored by the CARE organization. The entire promotion of this special benefit performance was handled by WTOP television. People purchasing tickets to the benefit were invited to the studio program which was telecast for an hour. Present were Government dignitaries and embassy representatives as well as stars from the entertainment world.

Dedication of Civilian Defense Spotters Tower.—A civil-defense spotters tower was constructed on the roof of Broadcast House and a special program was done on WTOP Television when the tower was dedicated. Present were the Secretary of the Air Force and the Air Force Band.

Community Chest.—A dramatized half-hour program presented on behalf of the community chest in an appeal for volunteer workers. The drama illustrated the work of a volunteer and demonstrated ways in which this work is a service to the community. This program was produced from WTOP in cooperation with the other Washington television stations and was presented jointly over all stations.

Election Returns.—Special programs were devoted to broadcasting the returns from both the Maryland and District of Columbia primary elections. A special election headquarters was set up in our largest television studio with huge boards recording up-to-the-minute reports. In addition, the news division had reporters stationed at party headquarters who were broadcasting the latest news from those points.

Clark Griffith Memorial.—This special program was done in tribute to one of Washington's foremost citizens on the occasion of his death. Filmed highlights of his life and service to baseball and Washington were narrated. Prominent sports figures were on hand to pay their respects to Mr. Griffith.

II. DESCRIPTION OF OTHER TYPICAL LOCAL LIVE PROGRAMING ON WTOP–TV, WASHINGTON, D. C.

Mark Evans Show.—(Current.) An hour-long program of an informative and entertaining nature presented 5 days a week. Presented during the morning hours, the program is designed primarily for a women's audience. Included are cooking and homemaking features of an instructional nature, as well as news and newsreel features referred to above. Among the prominent guests interviewed as a daily feature have been Vice President Nixon, Senators Duff, Neuberger, and Martin, Attorney General Brownell, Secretary of Agriculture Benson, Speaker of the House Rayburn, and the ambassadors from many foreign nations.

Donna Douglas Show.—(Current.) A 15-minute Monday through Friday program concerned with the problems and interests of the housewife. Often instructive in nature, the program has featured explorations into fields of child care, juvenile delinquency, dieting, good reading and fashion, and others. Cooking and food-buying hints are also included in the overall direction of a comprehensive program for the average homemaker.

Pick Temple Show.—(Current.) An hour-long program telecast 6 days a week, Monday through Saturday, with an extra half-hour on Saturday. Pick Temple is a unique western performer—the cowboy without a gun. Pick never wears a gun or does the fancy gun-twirling tricks that are the stock in trade of the cowboy performers. A genuine folksong artist in his own right, Pick has recorded for the Library of Congress Folklore Division as well as on Label X records. Over a hundred thousand Washington-area children are members of the Pick Temple Ranger organization. As a requisite for being a member they fill in a daily cleanliness and obedience chart. Each day 15 members of the organization appear on the program with Pick. Pick has used the program as a vehicle for numerous safety contests in cooperation with the Police Department of Washington and the nearby area. In addition to talking with the guests on the show and playing games with them and singing folksongs, Pick shows a daily film episode based on the exploits of the famous American pioneer, Kit Carson.

Sunday Sports Round-Up.—(Current.) A 15-minute weekly program devoted to a review of the week's news in sports. Featured is an interview with a prominent sports personality. This is a year-round program reporting regularly on such nonseasonal sports as golf, tennis, and bowling as well as the more prominent seasonal sports.

Redskins Football.—A telecasting of the away-from-home schedule of the Washington Redskins football team. The WTOP television mobile unit traveled with the team on all away dates. In addition to telecasting the away-from-home games in the Washington area, WTOP television was the originating station for a network of over 35 stations throughout the South broadcasting all games—home as well as away.

III. DESCRIPTION OF TYPICAL NETWORK AND LOCAL FILM PUBLIC SERVICE PROGRAMING ON WTOP–TV, WASHINGTON, D. C.

Rural America.—(Current.) A weekly 15-minute local film public service program using films from the files of the Department of Agriculture. These films cover current farm problems as well as discuss new farming techniques. Liaison is maintained with the Department of Agriculture in the event they desire a particular film to be presented on the program.

What's Your Trouble.—(Current.) A weekly 15-minute local film public-service program in the religious field. Dr. Norman Vincent Peale, prominent Protestant clergyman, talks about broad Christian principles and how they apply to living in the 20th century.

Letter Home.—A local film public-service program telecast on Christmas Eve. The Armed Forces film messages from troops overseas to their families back home. Several of these filmed interviews were with Washington, Maryland, and Virginia boys. WTOP television assembled as many of these personalized Christmas cards as were available and put them all together in a special program immediately preceding the telecast of Christmas Eve services from the National Cathedral.

Adventure.—(Current.) A half-hour weekly network program produced in cooperation with the Museum of Natural History. These programs explore science and related fields featuring the foremost experts in the country, such as Margaret Meade, Carleton Coon, Willy Ley, and many others. Various topics have been discussed and dramatically illustrated, including Polynesian culture and ethics, Oriental sculpture, space travel, and genetics.

Camera Three.—(Current.) A weekly half-hour network program which has won numerous awards for experimental productions in the field of fine arts. Programs have ranged from readings of the poetry of Dylan Thomas to modern dress Shakespeare and Moby Dick.

Face the Nation.—(Current.) A weekly half-hour panel of newsmen who question a figure prominent on the national or international scene.

CBS Sunday News.—(Current.) A review of the past week's news conducted by Peabody award winner, Eric Sevareid. Film reports from trouble spots around the world are featured, and the purpose of this weekly half-hour network program is to put the events of the past week into perspective and objectively to probe their meaning.

Let's Take A Trip.—(Current.) A weekly half-hour educational program for children, consisting of trips through remote facilities to a different locale of historical or topical significance. Through this program children have been shown through a post office during Christmas rush, the Staten Island Ferry, a powerplant, and an international scouting exhibition.

You Are There.—(Current.) A weekly half-hour network program wherein a significant historical event is recreated from the past. The Trial of Socrates, The Composition of the Star Spangled Banner, Lee's Surrender at Appomattox, The Rise of Adolf Hitler have been recreated with painstaking detail and thorough research into the architecture, dress, mannerisms and general tenor of the times.

See It Now.—(Current.) These special programs of 1 hour and 1½ hours in length were telecast at irregular intervals during the past year. They have explored areas of international tension such as Africa and Israel. In addition to international coverage, the program also discussed the problems of school aid, the farm, and the importance of the Vice Presidency. Each of these programs involved weeks of intensive research as well as thousands of feet of film reporting.

Omnibus.—The weekly hour-and-a-half network series presenting programs of a wide cultural interest from Bach and Beethoven to Tennessee Williams and Louis Armstrong. Artists of stature from all over the world were commissioned to write and perform special programs for this unique and rewarding series.

The Search.—A special series of half-hour network programs that discussed and illustrated research projects being carried out at various American universities. The research in the field of speech therapy at the University of Iowa, and the field of old-age research at the University of Chicago were two areas explored. On-the-spot film coverage of these various projects was a feature of the program.

Now and Then.—A network half-hour series featuring illustrated lectures by Dr. Frank Baxter of UCLA discussing famous literature from Plato to Shaw.

Look Up and Live.—(Current.) A network weekly half-hour religious program rotated among three religious faiths.

Lamp Unto My Feet.—(Current.) A nondenominational Protestant religious program exploring through drama, dance, and music various basic religious truths.

In addition to the above programs which CBS has or is carrying on a regular or series basis, several spot or one-time programs have been presented as a public service. In this category would be the special tribute done to Winston Churchill on the occasion of his retirement from active political life, the memorial program on the night of the death of Albert Einstein, the special on-the-spot reports of President Eisenhower's heart ailment and the more recent special programs telecasting to the Nation on-the-scene reports concerning the President's operation. There have been various Presidential messages as well as messages from members of the Cabinet and speeches by leaders of the major political parties. There was the two-program report on mental illness, Out of Darkness, featuring Dr. Menninger and narrated by Orson Welles, so popular that it was repeated a few weeks after its initial showing. The network has also televised many sporting events including Big Ten Basketball, the Triple Crown Races, the Masters Golf Tournament, and the National Invitational Basketball Tournament. During the month of August the network program structure will be altered for a 2-week period to present on-the-spot coverage of the political conventions, and special coverage will continue up to and including the election.

Senator PASTORE. Senator Wofford.

Senator WOFFORD. Yes, sir. Mr. Hayes, the present FCC broadcast license period is 3 years, as I understand it?

Mr. HAYES. Yes, sir.

Senator WOFFORD. Do you have any views as to whether this is an appropriate period or not?

Mr. HAYES. Senator Wofford, the length of anything temporary is a matter of degree; and obviously in any business the longer the license the better. I think 3 years is better than 2. There has been much discussion in the industry about this very subject and, Senator, I have heard the figure 5 years used most often as perhaps a better figure than 3. I think that 5 years would certainly bring more stability to an industry, to this industry. I think it would not impinge on the authority of the FCC, which already has been authorized to review the performance of a licensee.

Certain so-called nonbroadcast radio services such as industrial radio and petroleum service radio are at 5 years. I would like to see our license period extended to 5 years.

Senator WOFFORD. Mr. Hayes, how do you feel about the length of a network affiliation agreement?

Mr. HAYES. Senator Wofford, that is now for 2 years, as you know. It has never made much sense to me, frankly, to have a license for 3 years and an additional contract which limits the affiliate to only 2 years. I have always felt they both ought to be the same. As long as the Federal term is for 3 years, I would like to see the affiliation for 3 years. If we make them 5 years——

Senator WOFFORD. In other words, you would like to see them identical as to the term, the length?

Mr. HAYES. Yes, sir.

Senator WOFFORD. That is all.

Senator PASTORE. Senator Bricker?

Senator BRICKER. No questions.

Senator PASTORE. Mr. Cox?

Mr. COX. You indicated, Mr. Hayes, that you are the chairman of this affiliates group which was organized to arrange for presentation of the views of CBS affiliates to the committee?

Mr. HAYES. Yes, Mr. Cox.

Mr. COX. Did you, in connection with your work, ask the affiliates of CBS to send you copies of the questionnaires that they had furnished to this committee?

Mr. HAYES. Yes, sir.

Mr. COX. And did you receive substantial compliance from them?

Mr. HAYES. Yes, sir. What we did is this: After the affiliates unanimously adopted the resolution, a copy of which is attached to the statement, the chairman of the CBS affiliates board asked me to serve as a committee of CBS affiliates to organize—chairman, rather, of the committee, to serve and organize this presentation to this committee. He appointed to that committee Mr. Rogers from Lubbock, Tex., and Mr. Meyer from Champaign, Ill., and myself. It seemed to me we wanted to be able very accurately to reflect the views of as many affiliates as we could, to this committee.

So I then addressed a letter to all CBS television affiliates stating we wanted to reflect their views and asking them to send me copies of the questionnaire which the staff of this committee had sent to them. I suggested that perhaps they didn't want to give this committee all the information they had submitted to you, so I told them that the questionnaires would be seen only by our counsel and by myself—which has been the fact—and that we did not want their revenue figures or any other information that they didn't want to give us.

We have received about two-thirds of all the CBS affiliates' questionnaires returned, about 113.

Mr. Cox. Other than yourself and Mr. Jennes, then, their material has not been made available to anyone else?

Mr. Hayes. That is right, sir, and we are sending them back this week.

Mr. Cox. Do you carry any network programs which begin before 10:30 in the evening but extend beyond that time?

Mr. Hayes. Yes.

Mr. Cox. Such as Studio One?

Hr. Hayes. Studio One.

Mr. Cox. Has CBS ever advised you that its option does not apply to programs of this sort?

Mr. Hayes. Yes, that becomes—you mean do we know that that becomes station time?

Mr. Cox. Have they ever indicated to you that their option does not apply to the first half hour of the program?

Mr. Hayes. Yes, sir.

Mr. Cox. Have they indicated this to you in writing?

Mr. Hayes. I just don't recall.

Mr. Cox. Do you remember when they advised you of this interpretation?

Mr. Hayes. No, I know that I know, but I don't know when we were told.

Mr. Cox. Has CBS ordered——

Mr. Hayes. This is our interpretation, too, Mr. Cox.

Mr. Cox. It is?

Mr. Hayes. Yes.

Mr. Cox. Has CBS ordered WTOP for its new program, Playhouse 90, which is to go on the air next fall?

Mr. Hayes. Yes. Has CBS?

Mr. Cox. Yes.

Mr. Hayes. Yes, sir.

Mr. Cox. Or the advertiser in question?

Mr. Hayes. Yes.

Mr. Cox. As I understand it, the program is not completely sponsored, so that CBS has asked you to clear time although it is still looking for sponsors for part of it?

Mr. Hayes. I think that is correct, Mr. Cox.

Mr. Cox. Have you agreed to clear the time regardless of the option?

Mr. Hayes. Oh, yes, I think Playhouse 90 meets a situation that we have been wanting to meet ever since we have been on the air. It is very difficult to get long plays and long books cut down.

Mr. Cox. However, since the option does not apply, your action with regard to this program is entirely in terms of your feeling about its desirability?

Mr. Hayes. Yes.

Mr. Cox. Now, you indicated that your company is also the licensee of a station in Jacksonville, Fla.?

Mr. Hayes. WMBR Television in Jacksonville.

Mr. Cox. That is a two-station market, is it not?

Mr. HAYES. Yes.

Mr. Cox. And your station has a secondary affiliation with the American Broadcasting Co.?

Mr. HAYES. ABC.

Mr. Cox. Could you tell us, just in terms of a general estimate, what percentage of the evening option time that station clears for CBS, and what percentage it clears for ABC?

Mr. HAYES. I can tell you generally, Mr. Cox, without being too precise about it.

Mr. Cox. Yes.

Mr. HAYES. I think we clear in Jacksonville, Fla., for about 9 hours a week of ABC programing, of which I would judge about 1½ or 2 would be in so-called prime time.

Mr. Cox. And the other 18 or 19 hours that are carried on the station are CBS or local origination or national spot?

Mr. HAYES. That is correct.

Mr. Cox. Now, is it your understanding that CBS' option is not effective as against any program of ABC that you might wish to carry?

Mr. HAYES. That is correct, under the FCC regulations.

Mr. Cox. And, therefore, CBS has been able to effect almost total clearance in evening option time without the benefit of the option in that market?

Mr. HAYES. The answer to that, Mr. Cox, is this: We are a primary affiliate of CBS in Jacksonville, Fla. You get right back to this question of building an overall program schedule. There is another station in Jacksonville, Fla., which also has an agreement with ABC.

Mr. Cox. However, it is a primary NBC affiliate?

Mr. HAYES. But it is a primary NBC affiliate. It is difficult to build your program schedule, assuming you can build it, around ABC, when your primary affiliation is with another network.

Mr. Cox. However——

Mr. HAYES. In any event there will be another station there very shortly.

Mr. Cox. Since you stated that the option of CBS would not be effective, your determination to clear this time for CBS was because of the overall desirability of an affiliation arrangement and of this unified program structure, rather than because CBS possessed an effective option in that market?

Mr. HAYES. Well, we go round in a circle, Mr. Cox. We know we are a primary CBS television affiliate in Jacksonville. We try to build our program, our programing, around the CBS schedule. Now and then a program will arrive from ABC which we prefer to take and we do it. But we rather think of ABC in this regard as a—the way we would think of an independent producer of programs.

Mr. Cox. However, ABC has certain protections under the regulations of the FCC against the option of another network that are not now enjoyed by independent programs?

Mr. HAYES. That is right.

Mr. Cox. Despite that protection, however—despite the fact that CBS' option is not legally binding—you clear this substantial percentage of your time for CBS for quite other reasons?

Mr. HAYES. Mr. Cox, I wouldn't say that our affiliation agreement is not legally binding.

Mr. Cox. That is, the network's option is not legally effective against the program of another network?

Mr. Hayes. Oh, that is correct.

Mr. Cox. And, therefore, your grounds for clearing this substantial amount of your time for CBS are based in terms of your fundamental relation with CBS as distinguished from ABC?

Mr. Hayes. That is correct.

Mr. Cox. Your desire to build your programing around the strong program structure of CBS, and you do not clear those 18 or 19 hours because CBS holds an option which they can assert against ABC?

Mr. Hayes. Yes, sir, that is putting it—not the way we like to state it, but the answer would be yes.

Mr. Cox. That is the way it works.

Mr. Hayes. It works that way because we want it to work that way.

Senator Pastore. You said in the opening part of your statement that this was a voluntary appearance on your part?

Mr. Hayes. Yes, sir.

Senator Pastore. Was there any discussion with CBS as to your appearance and what you would say?

Mr. Hayes. No, sir. Some members of this committee met with some people at CBS once to get some statistical information. We wanted to find out who precisely were the affiliates and whether somebody changed from basic optional to any other category. We have never discussed anything that I have said here today.

Senator Pastore. I am not intimating that you did. I just wanted to get this sense of impartiality on the record, as such. Any further questions?

Thank you very much, Mr. Hayes.[2]

Senator Pastore. We are going to have a short recess so that the stenographer may get his sixth wind.

(Short recess taken.)

Senator Pastore. All right, may we have quiet now? We are ready to resume the hearing.

Our witness now is Mr. Rex Howell, president, KREX-TV, Grand Junction, Colo.

All right, sir.

STATEMENT OF REX HOWELL, PRESIDENT, KREX-TV, GRAND JUNCTION, COLO.

Mr. Howell. Mr. Chairman and members of the committee, for the record my name is Rex Howell. I am president and general manager of the Western Slope Broadcasting Co., Inc., licensee of KREX-TV, channel 5, Grand Junction, Colo. KREX-TV is affiliated with all three television networks; however, our primary affiliation is with CBS, in the sense that that is the source of the greater number of our programs.

As a station owner—speaking in terms of the entire broadcasting experience, radio as well as television—for over 30 years, I have been active in almost every phase of the broadcast industry. During this time I have also held several positions in industry organizations.

---

[2] The program schedule of WTOP-TV for the week of April 8 to 14, 1956, will be found starting at p. 2960.

Currently, I am a member of the CBS Television Affiliates advisory board, as the representative of all Extended Market Plan affiliates west of the Mississippi. Like other board members, I was elected by the affiliates whom I represent and my job is to present their views to CBS. I might note in passing that each board member serves without compensation or expense allowance and that CBS plays no part, directly or indirectly, in his selection.

I have come here, not to theorize, but simply to relate the cold, hard facts about a small-business man trying to succeed in operating a television station in what is probably the smallest TV market in America. I sincerely hope that this information will be of value to you gentlemen of the committee. It is largely the case history of KREX–TV, a station that might well not be in business today were it not for the existence of networks operating in their present pattern.

If there were no networks operating with option time and a basic group of stations, CBS would not be able to have an Extended Market Plan. Without this plan, and its counterparts, our station in Grand Junction, Colo., would have found it impossible to survive. And what is infinitely more important, if we had not survived, more than 100,000 people in western Colorado and eastern Utah would be without any television service whatever, for the nearest stations beyond our community are almost 300 miles away. Geographically we are situated about midway between Denver and Salt Lake City on the western slope of the Rocky Mountains.

Indeed, without EMP and similar plans there would be few, if any, small market operations in the Nation. These plans have been the greatest single factor in giving small television stations the means and the courage to enter and to stay in the business of serving the public in the less populous areas of this country—a public to whom TV is a vital and jealously guarded service.

If I may, I would like to tell you something about the CBS Extended Market Plan. Feasible television operation in small markets has been retarded in the past by the relatively high cost to advertisers of covering areas of low population as compared with metropolitan centers. Advertisers are accustomed to paying rates based on cost per thousand viewers. Metropolitan stations can naturally deliver audiences at a fraction of the per thousand cost of the small market station, because of their greater number of viewers, and consequently they are favored by advertisers purely on cost considerations.

I think CBS was the first to recognize that a truly nationwide system of television must, necessarily, include a large number of small-town stations. Unlike radio, television can serve only a relatively small area, even at maximum power. I think you gentlemen of the committee are familiar with the fact that in radio we are accustomed to thinking of a 50,000-watt station as a very powerful station, often encompassing an area of perhaps several States. On the low channels of television, twice that amount of power is used, but due to the inherent characteristic of television of transmitting, generally speaking, to the horizons, the coverage pattern is, of course, much more limited.

Something had to be done to provide service to small markets on an economically sound basis. CBS met this challenge with EMP and a wholly new concept of small-market operation was born.

CBS formed EMP by grouping together a number of small-market stations whose combined circulation, when realistically priced, became attractive to advertisers. CBS also set up special EMP discounts which are given out of CBS's share of the revenues, not the stations', and established a special EMP sales force to concentrate on EMP sales to advertisers. Our smalltown stations were thus provided access to some of the finest programs available, which in turn increased viewer interest, which in turn increased our circulation, and which in turn made our stations more attractive to both network and nonnetwork advertisers.

Senator PASTORE. Is this EMP a network program in the sense that it goes on several small stations at the same time, or do you buy it as a package and you put it on your own station?

Mr. HOWELL. Actually, Senator Pastore, the pricing of the stations was arrived through the basis of combining their circulation, because the combined EMP markets, many of which are small—perhaps not as small as my own, but many of them are small—when put together, looks pretty good because it is a market perhaps larger than the combined Seattle-Tacoma market, with all of us together, but they are not necessarily bought in a package. Is that the answer to your question?

Senator PASTORE. I was wondering how it works. For instance, what I am trying to get clear in the record: Why couldn't an independent producer have done precisely what CBS did? What is the advantage in having CBS do it? That is what I would like to have the record show.

Mr. HOWELL. Certainly. The Extended Market Plan was only possible because CBS did have a healthy nationwide television service.

Senator PASTORE. So they put their good programs on film?

Mr. HOWELL. Not in all cases. Some Extended Market Plan stations are interconnected. In my case I am not, but there are a number of us that do get it by film; yes, sir.

Senator PASTORE. Some get it live?

Mr. HOWELL. Some get it live; yes, sir.

Senator PASTORE. Oh, I see.

Mr. HOWELL. It is the same program structure that the other stations get.

Senator PASTORE. Only because you happen to be servicing a small community, that is taken into account; that comes under a different category and you get a special price for it?

Mr. HOWELL. Yes.

Mr. COX. Isn't the method in which it is made to operate the fact that CBS—in order to get programs into markets of this size—is willing to take a further reduction on its share of your gross time charges by giving special discounts, which tend to encourage advertisers to buy who would not buy at your flat station rate?

Mr. HOWELL. I am sure that has been contributory to their acceptance of our markets; yes, sir.

Although the rate of compensation necessarily was low at the beginning, CBS on its own initiative has periodically reevaluated each EMP market and, as audiences have grown, the rates have been increased. Since joining EMP, our circulation has doubled and so has our rate of payment.

Far more important than the revenue obtained from EMP is the tremendous boost it has given our program structure and our ability to serve our area. Without the assistance of network programing, I seriously doubt whether we could possibly survive. Our costs for programing material would make it economically impossible for us to operate effectively—if at all—in such a small community. Before EMP, we provided only about 3 hours of daily service. Despite our vigorous personal selling efforts, precious few network advertisers purchased our market because of its high cost per thousand. Consequently, a sizable percentage of our program was films—many more than 10 years old and of relatively low viewer interest.

Moreover, these films were quite expensive and we often paid more for a film then we received in revenue from the advertiser sponsoring it. Although 3 hours of daily service was slim fare for our viewers, it was economically impossible for us to offer additional hours with film costs so high and the opportunity for revenue so limited. Of course, we tried to create local live programs, but again we were handicapped by high costs and by the comparatively small volume of material suitable for local live programing; I should say the small volume of suitable program material for extensive local live programing in our small market.

The Extended Market Plan brought dramatic changes to the television diet of the people of Grand Junction. Almost immediately we began to receive orders for some of the fine network programs which augmented our schedule and replaced less attractive programs previously carried.

I think I should perhaps make reference also to the fact that we received, under the extended Program Service Plan of the CBS network, certain other programs that became anchor points in our schedule. In other words, programs for which we did not have a commercial order, but we were permitted to carry the program anyhow, deleting the commercials and substituting public service announcements of some nature.

Senator PASTORE. Could you be more specific? What were the names of some of these programs?

Mr. HOWELL. Well, See It Now was one of the programs, and another one was the one called Meet Millie that I recall immediately. These are programs, Senator Pastore, that the network owns. Therefore, they are in position to make them available to us. If they were owned by someone else, perhaps they couldn't do this. But they have made available a large number of these programs in markets even though the station is not ordered commercially.

Mr. COX. Is my understanding correct that you are permitted to sell spot announcements adjacent to these programs, but as you indicated that you can only insert public service notices in the time made vacant by the deletion of the national advertiser's commercial?

Mr. HOWELL. That is true, Mr. Cox. We are always permitted to sell our adjacencies to all network programs. These programs are furnished us as a public service and we run them as a public service. We get no revenues for them.

Mr. COX. But they do help build the revenues of your station by providing more desirable adjacencies?

Mr. HOWELL. Adjacencies; yes sir. Soon, an increasing number of national advertisers became aware of our market, through the aggressive selling efforts of the special EMP sales department, and we began to be included on their network orders. Our nonnetwork national advertising started growing, too, largely due to the adjacencies that we could offer to fine network programs. In fact, several EMP advertisers have ordered Grand Junction on a national spot basis, too. The result is that we have already been able to increase our daily service from 3 to a minimum of 7 hours daily.

Support from local and regional advertisers also increased rapidly as our overall program structure improved and our circulation increased. Prior to EMP we were unable to sell television advertising, for example, to Safeway Stores, one of the largest advertisers in our area. Today Safeway is one of our major accounts. Moreover, order of Grand Junction by one advertiser usualy induces his competitors to order our station, too. And EMP's attraction of nonnetwork advertisers has increased the volume of syndicated film programs on KREX-TV. We now broadcast 15 first-run syndicated film series each week.

Our network affiliation made possible improvements in our local programing, too. The availability of a framework of network programing enabled us to concentrate on quality rather than mere quantity of local live programs, and we have developed some outstanding public service features which I have summarized in an appendix (see p. 2560) to my statement. These programs have covered every facet of community interest, and range from special event broadcasts to panel discussions of important community issues. We take great pride in these local live programs, but it is doubtful whether their high standards could be maintained without network programs about which to build.

There is also, in that connection, an element of manpower. We operate a combined radio and television station with only 32 people. Obviously we have our limitations and we must use people with multiple skills; where we have a framework of network programing it releases some of these people from less productive use of their skills and we can concentrate on those live shows which we do build to serve the public interest.

I am utterly amazed at the charge that affiliates have been coerced by the networks and have abdicated their basic responsibilities as licensees.

Now, I would not want this to be construed as meaning that I think that all relationships between networks and their affiliates are "a many-splendored thing." I mean we have a business relationship in which we have differences of opinion occasionally, which we sit down and we analyze them and we arrive at satisfactory conclusions on the basis of business negotiations. Because as Mr. Hayes, I think, mentions, we are, in a sense, in a partnership type of business relationship with the networks.

KREX-TV is pretty small by any standard and especially in comparison with the networks. But no network has ever coerced or tried to control us. On the contrary, all three networks have actually helped us to discharge our responsibilities as a licensee. These so-called giants of Madison Avenue, whom their disparagers say are insensitive to local programing needs, have actually leaned over backward to make it possible for us to broadcast programs at times different from those first requested by the advertisers. This has enabled us to plug gaps in our program schedule and to avoid extra programing costs, all for the benefit of our viewers.

I would like to give you a specific example. We were ordered by the Carnation Milk Co. for the Burns and Allen show over CBS, but the alternate week sponsor did not order our market for their half of the program. NBC had another advertiser for our market 2 weeks out of each month, but at a time different from the alternate week availability caused by the partial order for Burns and Allen. We explained the situation to both networks and they immediately arranged for us to alternate the 2 sponsors from the 2 networks during the same time period each week.

Another example of this type of cooperation was the hour-long broadcast of ABC's Grand Ole Opry every fourth week in a period occupied the other 3 weeks by an NBC program. Furthermore, between 7:30 and 10:30 p. m., 50 percent of our hours are devoted to nonnetwork programs. Each network has been very cooperative in rescheduling their orders for our station during this time so as not to interfere with these locally and regionally sponsored programs.

Mr. Cox. I would assume, since your station is not interconnected, that in any event you have more flexibility in that regard since you can present these programs—which are either on film or kinescope—at any time that fits into your overall schedule which may be satisfactory to the advertisers in terms of time period and adjacencies.

Mr. Howell. It is true, Mr. Cox, we do have that added measure of flexibility under the present arrangement. I would like to add, however, we are looking forward to the day when we will have live innerconnection.

Mr. Cox. Do you expect that soon? Do you expect that some time soon?

Mr. Howell. Sir, that is something that depends a great deal on what can be worked out with respect to the availability of microwave facilities from the American Telephone & Telegraph Co.; the economic feasibility of our using their particular facilities. We have explored that matter both from the standpoint of taking an off-the-air pickup from the nearest point to Grand Junction that we can get a satisfactory signal from another station so as to cut these costs. We are a little perplexed, to be honest with you, because we find that we could do it very much cheaper with our own microwave facilities, but unfortunately we have no basis of permanency if we make the investment in our own microwave system. Because under the present regulations, in the event the telephone company, or the common carrier, provides or can provide a service, then we must automatically, within a certain length of time, discontinue the use of our equipment and use theirs.

So far the quotations we have received from A. T. & T. by the month are approximately the same cost that we would pay for each of the several microwave units that we would have to buy if we did the job ourselves. So we don't know exactly how we are going to do it. But we have been told that common carrier facilities will be available, perhaps in the course of another year. Whether they are going to be economically feasible for us remains to be determined. We hope they will.[3]

[3] For other testimony as to rates and policies of A. T. & T. with respect to intercity microwave service see testimony of Murray Carpenter at p. 1660, and of John Boler at p. 983 in pt. II of these hearings.

Mr. Cox. Presumably they would be available on the rates, though, that they have been quoting to you?

Mr. Howell. Yes, sir; that is correct.

I would like also to say that we have never found a program from a network to contain anything that is contrary to our firmly established policies of good taste. However, we have rejected a number of film programs from other sources which we felt did not comply with the standards of good practice of the NARTB code. And incidentally, this brings me to another benefit of our network affiliation. Independent film sources often require a station to buy a whole group of films, some of which are, in our opinion, quite unsatisfactory, in order to get the films the station really wants. With our program schedule bulwarked by network shows, we are far more able to resist these so-called library deals from film companies.

Senator Pastore. Can you document that at all, Mr. Howell?

Mr. Howell. Yes, Senator Pastore.

Senator Pastore. Now, that is an important assertion that you have made here. Independent film sources often require a station to buy a whole group of films, some of which are in our opinion quite unsatisfactory. Now, could you be specific on that?

Mr. Howell. I would like to, because I am afraid maybe my statement in that brief form—which was purposely made brief to conserve time with this committee—but I would certainly be happy to elaborate it.

For example, when we first went on the air, we knew that with a 3-hour schedule, actually, we could only use a fixed number of—I am speaking now of Hollywood films, films that were originally released for use in motion pictures which are now available for use in television. Several of the companies selling these films contacted us and said: "Now, we can give you a very good rate in this small market if you will play a minimum of so many thousand hours"—literally thousands of hours—"of this product." Some of which did not have that many hours in their library, which meant we would be repeating some of these films—running them a second time in a single-station market—which to us was not in the public interest.

Senator Pastore. In other words, it was one of those must-buy deals that they are complaining about on the networks.

Mr. Howell. Not there in the same sense, Senator Pastore, because here the basis of purchase was not for the purpose of obtaining a schedule of a number of stations, but requiring an individual station to carry a minimum number of programs.

Senator Pastore. In other words, if you bought wholesale it would be cheaper.

Mr. Howell. Perhaps it could be put in those words; yes, sir.

Senator Pastore. In other words, the more you would take on, the cheaper the rate.

Mr. Howell. The more you would take on, you might be able to buy the entire product cheaper; but your right of selection as a licensee is thereby reduced because you, perhaps, would be buying programs which you would not ever exhibit to your audiences.

Mr. Cox. Did you have any instances of that practice on the part of these people with respect to film series made especially for television? That is the 39- and 52-week series of half-hour programs?

Mr. HOWELL. Well, we have been able to employ the same basic principles with which we work with networks—that is a matter of business negotiation with these people—and I think we have worked out our problems in each case satisfactorily. I don't think we have any grievances against any of them. It did take a little persuasion on our part to get some of the syndicated producers to realize that in a single-station market most of the people watch television most of the time. And we were amazed to find, for example, after we had been on the air for a year and a half, that if we inadvertently ran a replay of even a single public service program that we had had in the first week of our schedule, people were calling us up, saying "don't you remember that you played this program sometime a year ago May?" Therefore, we had to convince these producers of syndicated programs that the policy, which many of them have used, and undoubtedly quite recently in multiple-station markets, that only so many programs would be available first run, and then in order to get the series you would necessarily have to take 13 repeats—a package of 39 films, you contract for 52, which means you run 13 of them over again.

It took a little negotiation, but I think in all instances we have been able to get those, at least those with whom we do business, to agree that that would not be good programing.

Senator PASTORE. On your station, do you have the authority to pick out what time you will show that program?

Mr. HOWELL. I am sorry, sir; I did not get the question.

Senator PASTORE. We have been talking here about prime time.

Mr. HOWELL. Yes, sir.

Senator PASTORE. And options. How does it work with reference to your station—I mean as between the network and the independent producer. Do you decide what program will go on at what time, or are you committed to the network to show their programs in specific times.

Mr. HOWELL. No, we make the decision, Senator Pastore, always; but as I develop, I think, in the course of my testimony, the EMP stations do not operate at present under an option time arrangement. But again, I would like to say that I am looking forward to the day when my market is of sufficient importance that we can obtain the full benefits of a standard network affiliation arrangement, which would mean getting live programs, and getting the sustaining service, and the other things which we do not get at the moment.

At the moment, we do not offer option time, that is true.

Mr. Cox. In connection with your observation about these film practices, the point I was interested in was whether the syndicators of the film series made especially for television used a tying device—that they wouldn't sell you one film series unless you would buy another film series for that market—or whether the only point on which you had difficulty with them was this practice of 13 repeats in order to fill out the year?

Mr. HOWELL. I think essentially it is the latter practice, although it became more aggravated in the case of the agents for Hollywood motion pictures——

Mr. Cox. Those are feature films?

Mr. HOWELL. Yes—in that the volume was so much greater. And cost control, Mr. Cox, has been the whole secret of our being able to operate in such a small market. And had we been forced to purchase more than we could use, you see, that might have been the difference between our surviving and not, also, in the initial period.

KREX–TV is now a reasonably profitable operation, although many people were pessimistic about our future when we undertook television in so small a market. We are looking forward to the day when our growth and revenue will permit us to increase our present minimum 7–hour daily schedule of programing. We are also looking forward to the day when we can become interconnected and thus be able to provide our viewers with live programing and the highly desirable features which interconnection can provide, such as programs of news, sports, and national events.

We undertook one major effort in live programing for the world series this year. We leased about nine microwave stations from the telephone company for 1 week, that were temporarily set up—mobile mounted between a point outside Salt Lake City and our community—and we carried the world series live, which was quite an accomplishment but a very expensive one for us. And it did give us some indication of the tremendous value that live programing is going to be to us when we can get it.

Our operation is based upon our understanding that we are responsible to the people. And I think this understanding is shared by the industry generally. A broadcaster's investment hangs upon a short term license of only 3 years, issued in the public interest, convenience, and necessity. It is only natural that under the American system of broadcasting, we are most sensitive to the wishes and reactions of the public. The networks, I believe, for identical reasons, are extremely sensitive to the attitude of the public. Jointly, the networks and the stations of this country are meeting their responsibilities to the public in an outstanding way.

If I may I might put this point in that connection. In my little station, of which I own 100 percent of the stock of the corporation, together with my immediate family—it represents my life savings. And yet that investment is only good so long as I can have a license to operate in the public interest—and I do operate in the public interest, convenience, and necessity to justify that license. My investment in real estate and a few pieces of electronic gear would lose its value to almost nothing if I failed in that one concept; because I am, after all, I am using something that belongs to the public when I use the airwaves. I only own the mechanical equipment involved. Therefore, it is the public that is really the deciding factor in all things that we do, because our entire investment hangs upon this very concept that we must continue to first think in terms of the public interest. I believe that if we do—if we make the public interest our primary consideration—all other factors, including the economic ones, sort of have a way of falling into their own proper place. So I think it is a very important part of the whole philosophy of the American system of broadcasting.

As long as the public is receiving outstanding service, surely this committee does not wish to become the arbiter of any intramural dispute between members of our growing industry. The personal interests of a large metropolitan independent station, or those of a small station, are of themselves of no public significance. I have a network affiliation, I have told you, and I am glad of it. If I were not part of a network, perhaps I would be less enthusiastic about its accomplishments, and perhaps I would be less concerned about proposing changes which could destroy the very core of our national pattern of television service. From the vantage point of 30 years' experience in this industry, I am convinced that our American system of television broadcasting, built as it is upon the traditional pattern of free enterprise, is dedicated to and operating in the public interest. And where segments of the industry are not healthy or economically sound, this is probably due to technological problems, or to individual cases of exceptional economic conditions. It certainly is not due, in my opinion, to affiliate-network practices.

In summary, then, may I say that the networks have played a major role in getting television service to the people of western Colorado who otherwise would have been denied service. I am fully satisfied with the present basis of negotiations with the networks. They understand my station's problems. If we are to keep broadcasting in the traditional pattern of the American system, I feel it must not be saddled with any greater degree of Federal interference than necessary under the Communications Act. I think the objectives of the networks and the stations engaged in the television broadcasting industry, whether large or small, are identical. We seek to provide the American public with a service which that public desires and deserves. This is the keystone of the whole concept of American broadcasting, and the contribution to our system which has been made by the networks is of such magnitude that we must not impair their opportunity to serve the public in the manner, and under the pattern of operation, which has proved such a boon to the progress of the art of electronic communication.

Thank you very much.

Appendix to the Statement of Rex Howell, President, KREX-TV, Grand Junction, Colo.

I. DESCRIPTION OF TYPICAL LOCAL LIVE PUBLIC-SERVICE AND PUBLIC-AFFAIRS PROGRAMING ON KREX-TV, GRAND JUNCTION, COLO.

In Town Today.—(Current.) A daily program of interviews and discussion concerning various issues, businesses, activities, and projects in the community. Among the groups to appear have been: American Legion and Women's Auxiliary, Band Mothers, Brotherhood of Railroad Trainmen, Business and Professional Women, Beta Sigma Phi,. Xi Beta and other sororities and fraternities, Brush and Palette, Civil Defense, Stamp Collectors Club, Daughters of American Revolution, dental profession, Disabled American Veterans, Eagles Lodge, Fruitvale Mothers, Girl Scouts, Graduate Newcomers, Grand Junction Chamber of Commerce, Grand Junction Garden Club, Grand Junction Rod and Gun Club, Grand Junction Junior Chamber of Commerce, Grand Junction Junior High Band-Parents Club, Grand Mesa Ski Club, Izaak Walton League, Kiwanis Club, Knights of Columbus, League of Women Voters, Loyal Order of Moose, Lions Club, Mesa Art Center, Mesa Community Concert, Mesa County Farmers Union, Mesa County Medical Association, Mesa County PTA, Mesa County Red Cross, Mesa County Retarded Children, Mesa County Society for Crippled Children, Mineralogical Society, Ministerial Alliance, Mr. and Mrs. Welcome Wagon Club, National Secretaries' Association, Optimist Club, Railbow Girls, Rotary Club, Soroptimist Club, VFW and Women's Auxiliary, Woolgrowers Auxiliary, and Western Slope Cancer Society.

A number of these groups have had projects of such importance that other special programs have been developed for them. Each major church denomination in Grand Junction has had time on this program. Through this program KREX-TV actively has promoted various special civil projects such as Clean Up Week, Health Week, Safety Week, and Fire Prevention Week, and promoted local school activities such as plays, concerts and athletic contests.

Light of the World.—(Current.) A weekly religious program from the Church of Christ in Grand Junction.

Editorial Broadcast.—(Current.) A weekly program dealing primarily with local and regional issues and occasionally with national issues. KREX–TV takes the initiative to express its own views concerning these issues and to invite comments from others. The purpose of the program is to stimulate thought, not to crystallize it. Accordingly, KREX–TV urges other groups to appear to express their viewpoints and actively assists their appearance from a production and promotional standpoint.

Life in Western Colorado.—(Current.) A public information series concerning community matters. Some programs are forum discussions of important issues such as water conservation and school problems. Other programs have dealt with the training and techniques of the police and fire departments, a State teachers convention, square dancing, dog shows, and a variety of other subjects.

Wildlife in Review.—(Current.) A general educational program presented by personnel from the Colorado Game and Fish Department.

Sporting Show.—(Current.) A program for local sportsmen providing information on the conditions of roads and streams. The program offers tips to hunters and fishermen, and sponsors contests for the largest fish caught and the largest game bagged.

News, Weather, and Sports.—(Current.) A daily program of international, national, regional and local news, weather and sports.

In adition to these regular programs KREX–TV carries numerous announcements of local charitable and public interest drives, meetings, causes and events.

II. DESCRIPTION OF TYPICAL OTHER LOCAL LIVE PROGRAMING ON KREX–TV, GRAND JUNCTION, COLO.

Lazy B Ranch.—(Current.) A general children's program with interviews, story telling and talent contests.

Today's Teens.—(Current.) A program primarily for local high school and college students. It features faculty interviews, style shows, discussion of issues of interest to sudents, and includes some entertainment.

III. DESCRIPTION OF TYPICAL NETWORK AND LOCAL FILM PUBLIC SERVICE PROGRAMING ON KREX–TV, GRAND JUNCTION, COLO.

KREX–TV has presented many public service films, from such organizations as the Department of Defense, the American Red Cross, the Department of Agriculture, the American Cancer Society, and numerous others.

We have also filmed our own public service programs. For example, we made our own documentary films on problems of marketing fruit and the control of disease in orchards. These films have been shown on KREX–TV and also have been loaned to organizations such as the Horticulture Society of Western Colorado for use in meetings.

Senator PASTORE. Mr. Cox.

Mr. COX. Mr. Howell, could you tell us approximately how many hours per week of network programing you are now carrying?

Mr. HOWELL. Yes, sir. I have a breakdown of the number of network hours that we are carrying at the present time. Perhaps you would like to have these by time segments, would you, Mr. Cox?

Mr. COX. Yes.

Mr. HOWELL. I have them that way if you like.

In commercial programs between 6 and 11 p. m., we carry 8 hours weekly for CBS, 5 hours for NBC, and 1½ hours for ABC. Of the segment between 7:30 and 10:30 p. m. local time, which has assumed some significance in this hearing, 5 of these hours for CBS, 3 of the hours for NBC, and all of the one-half hours for ABC are carried in the so-called prime evening time.

Of the entire schedule of the day, which totals 47½ hours for the week—and this is a week that we took as a sample, of April 8 to 14, it is the same week in which my appendix shows the summary of live programs and that is why we use it—CBS had 10 hours and 45 minutes, NBC had 6 hours, and ABC had 1½ hours.

I also, if you wish, have the breakdown of the use of syndicated films in the same periods.

Mr. Cox. You might insert that and make it complete.

Mr. Howell. Between 6 p. m. and 11 p. m. in syndicated film shows—by this I am not speaking of old Hollywood movies, I am talking about programs produced for television—we have 9½ hours, of which 9 hours were between 7: 30 and 10: 30.

In the motion picture type of film production we had, between 6 and 11 p. m., 5 hours, only 2 hours of which were between 7: 30 and 10: 30 p. m.

Mr. Cox. Now, looking forward to the day when you will become interconnected, can you tell us what the arrangements are as far as the time of local broadcast in Grand Junction in relation to the originating time in New York? In other words, when does a network program that originates at 7: 30 eastern standard time reach the public in the mountain time zone?

Mr. Howell. My understanding, Mr. Cox, from those stations in the Rocky Mountain area that are now interconnected, is that some programs are now being made into what we call hot kinescopes on the west coast and are actually fed back as far as our State. So that not necessarily do all programs have the 3-hour time separation, which would be the case if they originated only in New York live. That is the situation as of this moment with daylight saving time in effect.

During the part of the year in which we have standard time, of course, only 2 hours—this is one of the very sensitive problems in the Rocky Mountain region because our broadcasters of that area are constantly concerned about the biennial headache that we have because we can't, seemingly, get uniform daylight saving time or uniform standard time, one of the two, in the United States, so it is a problem. But I think the networks, all three of them, are taking such steps as they can to alleviate this by having programs originating in prime evening hours, here at 8 p. m., which would fall 5 p. m. in the mountain zone, when we would normally be programing for children, of course.

In those instances they made available to them kinescope recordings so they can have the flexibility. Then, of course, we are all looking forward to the technological developments in connection with the use of video tape which one day may help us solve this problem materially, with almost instantaneous rerelease of programs by recording.

Mr. Cox. I have here the American Research Bureau report on Denver, which is for a period prior to the inception of daylight time, so there was only the 2-hour differential. It would seem to indicate that, in general, a good many of the programs originating in the East at 7: 30 are carried in the mountain zone at 5: 30—that is, in other words, they come through live and are broadcast at the same identical moment.

Now, does that present some problems in providing a local service—or providing these programs on a local basis at hours that are most acceptable to your viewers?

Mr. Howell. I wouldn't think that it would be, Mr. Cox. Actually you see what it has, in effect—the effect it has in our particular case would be that our network service would probably terminate pretty early in the evening. We would have a lot of open time for local use in what is now the so-called prime hours.

Mr. Cox. Do you know what the option hours are in the mountain time zone for CBS?

Mr. HOWELL. They are standard in all zones.

Mr. Cox. That is, are they 7:30 to 10:30?

Mr. HOWELL. 7:30 to 10:30.

Mr. Cox. Is that in terms of local time?

Mr. HOWELL. My understanding is, sir, it is in terms of New York time in all contracts. I could be wrong, because I do not have that type of a contract.

Senatore PASTORE. I think Dr. Stanton so testified—it would be the same, prime time in the other region. He so testified.

Mr. Cox. My recollection was that it was New York time in the eastern time zone and in the central time zone, and it was local time in the mountain time and pacific time zones.

Senator PASTORE. That is right.

Mr. HOWELL. I am sure you will have witnesses here better qualified to testify than I.

Mr. JENNES. Mr. Cohan, I think, will be able to get you that. He is from California and he has interconnection.

Senator PASTORE. All right.

Mr. Cox. I was interested, however, in noting that in the case of one program which obviously has a very close tie to its time because of its appeal to a special audience—which is the Mickey Mouse Club broadcast by ABC—that apparently the stations in Denver carry that 5 to 6, even though this is not the live time as it would come out of New York. Do you know whether that is generally an adjustment that is made in the area?

Mr. HOWELL. I am sure the fact that it is on film to start with, it does enable the stations to give that a scheduling which best suits the public interest. We carry that program ourselves, and I know, therefore, it is on film.

Mr. Cox. You carry it at that time?

Mr. HOWELL. We purposely—no, I think—it is 5:30 that we carry. We carry it purposely there in order to reach a maximum of juvenile audience.

Mr. Cox. As you indicated, your network programing, when you are interconnected, if it comes through live, will cease fairly early in the evening and you will, therefore, have to look to other sources for your programing in the balance of your evening hours. What will be your primary source of programing for that period?

Mr. HOWELL. I don't know that we would have to be looking so much to an alternate source as it would be to adjust our schedule. We do have, you see, these various other programs which we might—we might conceivably have to move. But again we may not become interconnected until it is possible to do these things on tape, in which case the problem would be academic, because we could run them then at the local time best suited.

Mr. Cox. That is all I have, sir.

Senator PASTORE. All right, Mr. Howell, thank you very, very much.[4]

We will recess now until 2 o'clock this afternoon, in this same room. Senator Wofford will be presiding.

---

[4] The program schedule of KREX–TV for the week of April 8 to 14, 1956, will be found starting at p. 2962.

(Whereupon, at 12:16 p. m., the committee recessed until 2 p. m., the same day.)

AFTERNOON SESSION

Senator WOFFORD (presiding). The next witness will be Mr. W. D. Rogers, Jr.

STATEMENT OF W. D. ROGERS, JR., PRESIDENT, KDUB–TV, LUBBOCK, TEX.

Mr. ROGERS. Mr. Chairman, and members of the committee, Mr. Czarra here is an associate of Mr. Jennes.

My name is W. D. Rogers, Jr., and I'm from Lubbock, Tex. I am president of Texas Telecasting, Inc., licensee of KDUB–TV, channel 13, and KDUB radio in Lubbock, Tex., and KPAR–TV, channel 12, our satellite in Sweetwater, Tex. Both television stations are primary affiliates of the CBS television network.

I have been in the operating end of the television business since 1949 when, as vice president and general manager, I helped to build and put on the air KEYL–TV, now called KENS–TV, in San Antonio, Tex. I operated this property until late 1951. In May 1952, I organized Texas Telecasting, Inc.

Over the years I have been active in several industrywide organizations. I helped to establish the National Association of Radio & Television Broadcasters in its present form and am a member of its board of directors. I am also chairman of the board of directors and cofounder of the Television Bureau of Advertising, an industrywide group which promotes television as an advertising medium. You gentlemen will recall that Mr. Moore, who testified here some weeks ago, is also a member of the board of TvB, and, as a matter of fact, he preceded me as chairman of that organization.

Of course, you understand that I am testifying only as a representative of the CBS affiliates and of KDUB–TV and KPAR–TV.

I appreciate the opportunity to come here today. During these hearings, there's been so much misinformation presented that I wouldn't be surprised if some folks have gotten the wrong idea about television affiliates and their relations with their networks. I'd like to set the record straight.

First, as an affiliate of the CBS television network we, like almost 200 other CBS affiliates, are working partners with CBS–TV. Second, our stations in Lubbock and Sweetwater are a lot smaller than CBS but we are completely independent and responsible and entirely free of coercion and domination by anyone. We operate our stations the way we think is best for our local communities. Third, because of our partnership with CBS, we are able to give to our communities a quantity and quality of television service they couldn't obtain in any other manner. Finally, I think that the affiliate-network partnership, the option-time provision and the practice of requiring advertisers to purchase a basic group of stations (the so-called must-buy practice) are in the public interest because they help us and other affiliates give good public service.

Let me tell you something about the television broadcasting business in Lubbock. There are two stations in Lubbock, both VHF—our station KDUB-TV, channel 13, and KCBD-TV, channel 11, the NBC and ABC affiliate. Lubbock has a population of about 130,000 and so we have there a typical 2-station medium-size market.

I had our experience in San Antonio behind me, where we built up the station from nothing, kept on pouring money in and finally had to sell out b...se some of my partners refused to put in another cent. So, before ...g into the television broadcasting business in Lubbock I took a l...lose look at conditions in that market. Our most obvious prob...ere that few people there had even seen a television set and too ...tional advertisers knew the Lubbock market potential. We k... ...ad to sell television in Lubbock and sell Lubbock to

...televis... stations into operation wasn't easy. It took a lot of ...genuity, and downright hard work. KDUB-TV was pio...freeze station in the country, and the very first television ...the ...kind in a medium-size market in the United States.

...ears of operation we have had to do plenty of hard work. ...ven had to push the manufacturers for sets to have an ...n we went on the air. We have had to scrimp and invent ...e and be a jack-of-all-trades in order to keep our losses ...uilt our own remote control unit out of an old city bus ...ifth of the cost of such a unit fresh from a manufac- ...ve have had to do a real selling job to get advertisers to ...rket.

...station's inception we've made very little profit, we've ...vidends, and what little we have made we've plowed right ...the business.

...e tell you how CBS fits into the picture. Most important, I ...it helps us maintain a top-quality, well-balanced program ...le for the people in the Lubbock area—a program schedule that ...sn't available from any other source. For one thing, we get the ...work entertainment shows. I can assure you that the people in ...bbock appreciate these shows and are just as anxious as the people ...New York, Chicago, or Los Angeles, to see these programs. Now ...on't let anyone tell you we take these network entertainment shows because we are afraid not to. We take them because we think they are of high quality and because our audience likes them and wants them. We and the local NBC affiliate both have nonnetwork syndicated film programs in our evening program schedules. The network programs are consistently the most popular; they are preferred by our audience. And if you could see our mail on network shows we have taken off or failed to carry, you wouldn't doubt this a second.

There are other shows of great importance to the people of Lubbock which they enjoy only because there are television networks. Among these are the many public service programs, the sports programs, and the live programs instantaneously covering events of national importance such as the President's speeches, roundtable discussions, and interviews of important national personalities. I've heard no suggestion how our people in Lubbock, Tex., are going to get these events brought to them without a network.

The network's news programs are especially important. Without the network we couldn't provide the people of the Lubbock area with the news service they now receive, no matter how much money we might spend. Of course, we also provide locally originated news programs. But some of the locally originated news segments are not sold simply because, in a market the size of Lubbock, there are not enough local advertisers who will buy these segments.

If we didn't have network national news coverage, [illegible] would have to reduce our total news coverage. And we would lose [illegible] only news program in which the people of Lubbock see, around di[illegible]time, the details of an important afternoon political developme[illegible] Washington or the details of a disaster that may have struc[illegible] Eng-land only a few hours before. Without the network the p[illegible] would be deprived of the on-the-spot "newsreel" type coverage of [illegible]ents of which television uniquely is capable.

We get other programing help from our partnership [illegible] CBS makes available to us, free of charge, a daily schedu[illegible] taining programs. These sustainers are first-class, gener[illegible] programs. If these sustainers were not available, medium [illegible] tions like KDUB–TV would be forced to reduce their time o[illegible] because they simply couldn't afford to program all of thes[illegible] themselves and stay in business. Such a reduction in hours o[illegible] tion would obviously not be in the public interest.

Also, the revenues that we receive from CBS for carrying ne[illegible] commercial programs are of great importance to us. These rev[illegible] make it possible for us to do a better job of running our station[illegible] whole. Just as important is the revenue that we receive from [illegible] increased value of our spot and program periods which are adja[illegible] to both network commercial and network sustaining programs [illegible] which result from the large circulation that these topflight progra[illegible] help to build for our station. And here's another point. The pop[illegible]larity of the network programs has helped build our total circulatio[illegible] This means that our local programs are able to reach more folks tha[illegible] if they were standing alone.

Our network affiliation is obviously important. But I hope you don't have the idea that a license plus a network affiliation is an automatic formula for success. I can assure you that it takes a good deal more to succeed in this business. A network affiliation doesn't even mean that you automatically are ordered by the advertiser for all of the network sponsored programs you want, or need, or you think you deserve from a market point of view. Persuading an advertiser to order a station for a network program is the station's job, too. I know that CBS tries hard to convince advertisers to order our market, and it is not their fault if the advertiser doesn't jump to order Lubbock, Tex. But when a station is not ordered by the network advertiser on the first go-round, it can't afford to sit back and wait and complain. It has to get out and fight to sell itself to the advertiser in a very competitive business.

In many cases where we have gone to bat in this fashion together with CBS, we have succeeded in getting the advertiser to place his program on KDUB–TV. Of course, now that we have a program schedule worked out, and have sold a number of advertisers on the Lubbock area, we don't have to do this as often as before.

There have been charges made that affiliates abdicate their responsibility to exercise their own judgment as to programing and in otherwise operating their stations. Well, anyone who says that just doesn't know me and the people like me in other stations.

I said before that we are a partner with CBS. CBS does its share by acting as a source of programing and of sales for us. The partnership is a two-way street. We try to do our part by clearing for network programs whenever this is consistent with our concept of public service. CBS does a fine job of helping us program and to convince advertisers to order our station. We would be a mighty poor partner if we didn't do the best we could to provide an effective network outlet in our community with good circulation. This means adequate clearance and aggressive promotion by us of the programs.

But don't let anyone tell you we are not independent. We use network programing as a framework for our station's programing structure. This doesn't mean that we plug into the network in the morning nd pull out the plug when we sign off. No indeed. We do carry a bstantial number of network programs which fit the needs of our rket and which provide a first-class scheduling framework. Around s framework of network programs we build our nonnetwork film ws and local live programs. We like to believe that every program carry fits into our entire schedule, is of good quality, and is of rest and importance to our viewers. I know that our programing result of the exercise of our own judgment whether the program twork or nonnetwork. And this is true whether the program is ption time or station time, or whether it is commercial or sustaining.

I feel that KDUB-TV has been able to do a good job of nonnetwork programing. During the week of April 8 through April 14, 1956, we were on the air a total of 115 hours. However, we broadcast a total of only 70 hours of network programs, the other 45 hours being locally originated programs.

I am particularly proud of our local live programing, especially the local special interest and public service programing. For instance, we present Community Crossroads from 5:30 to 6 p. m., Monday through Friday. Different charitable organizations or service-type organizations present their causes each day, some coming from as far as 120 miles away. Besides helping to raise money for various charities we have carried programs about the school expansion bond issue, the enlargement of city utilities, the long-range traffic dispersal system, a series on income tax conducted by internal revenue agents, the annual meeting of the Negro medical association and programs by local college students and faculty members.

Another local live program is Traffic Report of the Air which we carry from 6:30 to 7 p. m. once a week. This program is produced with the cooperation of the local police, the State highway department and the city traffic commission. We show pictures of accidents and have officials explain to the viewers our highway and traffic problems and what to do about them. For one of our shows the mother of a teen-age girl who had been killed in an automobile accident a week before volunteered to appear to promote safety.

We have a number of other local live programs, too. Plains Talk is our local agricultural program. Final Decision is a weekly panel conducted by area attorneys and judges on legal questions. What is the Answer? and Capital Report are local public forums dealing with area and statewide issues. We have a daily religious program, TV Sermonette. Annually we have an all-night telethon which has raised an average of $25,000 per year for the March of Dimes. This program also led to the installation of the only complete polio-treatment ward in Lubbock County, Tex. Also each year we have a Hallowe'en TV Party in cooperation with the schools and police officials which has been credited with reducing vandalism in our community to a minimum. Further details on our local live and public service programing are contained in appendix A to my statement. (See p. 2570.)

I've heard it said that the networks keep affiliates like us from doing a good job of hometown TV. This is just plain foolishness. The programs I've mentioned merely illustrate the job we do. We'r very proud of the article in the Saturday Evening Post last yea called Hometown TV Makes a Hit. That article is about KDUB-T and a reprint of that article is appendix B to my statement (see 2573). If we did not have a network affiliation we could not begin do the kind of local job which this article describes. This is true fo very simple reason. If we had to pay out money for all our progra ing and gamble entirely on our ability to buy and to sell our comp programing structure, we could not be on the air as much as we today. The plain fact is that a market like Lubbock cannot i pendently develop the volume of programs required for a full da programing.

The existence of option time has no adverse effect on our ability program our station. The fact that we have an option time agreement with CBS-TV does not mean that we cannot reject or preempt a network program. The affiliation agreement specifically gives us the right not to carry a network program during option time whenever, in our reasonable judgment, that program is unacceptable or unsuitable, or to carry a program of public importance.

Of course, when we reject a program in option time, we act in good faith. I personally believe that any flat, arbitrary refusal to carry a network program at all or to carry it at the time requested, regardless of the quality of the program offered and regardless of the quality of the program being carried, would not be in the spirit of our partnership. On the other hand, if the program the network requests us to clear is suitable and acceptable in comparison with the program we are carrying, I don't see a thing wrong in preferring the network program. We still exercise our judgment as station licensees and we are merely acting in good faith to keep up our end of the working partnership with the network.

Option time causes no problems for our operations. When we are carrying a nonnetwork program in option time and CBS-TV requests us to clear for one of their programs, we have usually been able to find a satisfactory alternative time segment either for the local or national advertiser or for the network program on a delayed basis. We have, during option time, refused to carry network programs at the requested time. For example, we refused to carry Wild Bill Hickok at the reqested option time due to conflict with a local church program. We refused to carry Jo Stafford in option time because this came over the network in the time slot we were using for our local early evening news. We have preempted particular network programs in order to carry an important public service program. And in no case where we have rejected or preempted a network program have we been subjected to pressure from CBS.

When you hear talk about abdication of station responsibility you should bear in mind that KDUB–TV has actually had to go out and fight to obtain approximately one-third of the network commercial programs that we carry. I understand station responsibility to mean that the station is responsible for providing an overall schedule of programing which, in its judgment, is good, acceptable to its viewers, and otherwise in the public interest. We do this at least as much with our network programing as we do with our film programing. In both cases we obtain our programs from outside sources, and I don't see that the source of the program has anything to do with station responsibility.

So I say that option time does not interfere with our ability to discharge our responsibility as a licensee. I say also that option time, as well as the basic required group of stations, are of positive benefit to us.

First a few words about the basic required group of stations. The so-called must-buy policy of CBS—and remember that it is a practice between CBS–TV and the advertisers and not between CBS–TV and the affiliates—has the effect of assuring that the advertiser will buy enough circulation to make the purchase a network purchase rather than a spot purchase. After the advertiser has committed himself to the basic network one of two things is likely to happen for the benefit of stations which, like ours, are not in the basic required group. The advertiser may decide to purchase some of the optional and supplementary stations in addition to the basic required group because of the relatively low additional cost per station. If the advertiser does not add the optional and supplementary stations of his own accord, these stations, like ours, have a chance to convince the advertiser to order their markets for his program.

I think that option time is absolutely essential, too. It takes a lot of affiliated stations to cover the economic markets of the United States. If the network is to be able to provide the advertiser with the markets which he wants on short notice, it must be reasonably sure that it can clear most of these markets in a pretty quick fashion. This is especially true of the key markets. Therefore, just as a matter of business machinery, it's essential to have option time even though there may be less of a clearance problem in markets such as Lubbock than in the larger markets. If the advertisers cannot clear prime time in the large key markets where the bulk of the population exists, markets like Lubbock would never get a crack at carrying the network programs in the first place. This is true because if the advertiser couldn't get prime time in the large markets, where he amortizes his huge program production investment, the program wouldn't be on the network at all.

Now, Mr. Moore told you that this would be a good thing because it would mean that his station, KTTV, would be able to get the programs rather than the network stations in Los Angeles. But what Mr. Moore overlooked is that the important question is the public interest. It doesn't make any difference to the public in Los Angeles which station gets the program so long as the public sees the program. The other thing that Mr. Moore overlooked is that if the network doesn't have the program, the chances of that program being carried at all in the Lubbock area and in a great many other areas in the United States our size and smaller, would be far less. Because the fact of the matter is that, if the program weren't on the network to begin with, it would be much more difficult for the Lubbock area to convince the advertiser that he should add another $300 to his budget to get his message to our people.

I have been in this business practically since the beginning of commercial television. And I know that neither the national advertisers nor their agencies are geared to clear large numbers of programs on a nationwide individual purchase basis. The costs would be prohibitive. That is one of the reasons why the present networks came into existence. And take it from me, if you destroy the present networks, film networks will come into existence—and no matter what they call the practices—there will still be option time and must buy.

But remember this, that with film networks replacing our present networks, the huge A. T. & T. interconnection facilities devoted to television today would be devoted to other uses. Without the present networks, the cost of occasional use of these facilities would be prohibitive. Without these interconnection facilities, we could no longer bring to the people the many essential on-the-spot public service, special events, sporting events, and similar programs they enjoy today.

Incidentally, there is one point in connection with syndicated film programs you ought to know. Option time doesn't keep a good syndicated film off the air. TvB recently released figures which show that individual good nonnetwork programs can be cleared in numerous markets in prime time. We carry a number of independently produced programs ourselves—programs such as Annie Oakley, Confidential File, Doug Fairbanks, I Spy, Range Rider, Crunch and Des, Sheena, Telesports, Grand Ole Opry, and Liberace. We could carry a lot more if advertisers would buy them.

When you gentlemen sit down to appraise all of the testimony that you have heard about the television industry, I am sure you will recognize that this industry has faced and solved a lot of problems. If any problems remain they are largely problems which come out of growing pains—technological growing pains, allocation growing pains, and growing pains of businessmen who took business risks and are unhappy about the results. Television's growing pains are no different from any other kind. Let's not lose sight of the tremendous growth and tremendous public acceptance of the industry as it is today. And let's not make the affiliate-network relationship the scapegoat for problems it hasn't caused.

Appendix A to the Statement of W. D. Rogers, Jr., President, KDUB-TV, Lubbock, Tex.

I. DESCRIPTION OF TYPICAL LOCAL LIVE PUBLIC SERVICE AND PUBLIC AFFAIRS PROGRAMING ON KDUB-TV, LUBBOCK, TEX.

Church Remote Telecast.—(Current.) Remote telecast each week from a local church. Time is equally divided among representative denominations of our city. The telecast is 1½ hours in length each Sunday morning.

Plains Talk.—(Current.) Half-hour weekly program conducted by the Lubbock County Agent to keep farmers of the area posted on the latest agricultural developments and offering visual do's and don'ts regarding planting, crop care, safety on farm, etc.

Recipe Roundup.—(Current.) Daily cooking school half-hour per day. Show designed to educate the viewer on diet control, value of proper diet, shortcuts to economy through proper food preparation, tips on avoiding and detecting food spoilage, and nutritional guidance.

News, Sports, and Weather.—(Current.) Seven to eight one-half hours weekly devoted to locally originated news, sports and weather with emphasis on coverage of local events.

TV Sermonette.—(Current.) Five quarter-hours weekly presenting religious talks by a different minister from the local ministerial association.

Community Crossroads.—(Current.) An average of four civic, charitable, or service organizations appear daily on this show, designed to present a cross section of what is going on in the community, covering such items as city improvements, school bond issues, water bond issues, entertainment activities. This program gives country schools and deserving individuals an opporunity to further their causes on TV that they would not otherwise have.

You and Your Garden.—(Current.) Quarter-hour weekly program informing the viewing public of vegetation suited to the area, growing habits and care of individual shrubs, flowers, and garden plants.

Beauty School of the Air.—(Current.) Informs the ladies of latest hair styles and tips on complexion care, beauty aids, and general self-improvement.

Traffic Report of the Air.—(Current.) Half-hour weekly program designed to educate the public on the various hazards encountered through reckless driving. The medium of actual accident photographs from the files of the Lubbock Police Department is employed to emphasize do's and don'ts on the highway as well as in city driving. Discussions are conducted by qualified persons instructing drivers on proper driving habits, automobile care and inspection, safety rules and regulations, and valuable pointers on how to avoid an accident when confronted with various hazards. Authorities referred to above are such people as members of the Citizens' Traffic Commission, police department, State highway patrol, and school driving instructors. Moderator of the program is executive director of traffic safety for the city.

Club Day.—(Current.) Time given to Federated Women's Clubs of Lubbock. Various clubs present book reviews, art reviews, and music recitals to further appreciation of the arts, as well as to promote individual charitable projects of the groups concerned.

March of Dimes Telethon.—Annual yearly program running from 9 p. m. Saturday to 9 a. m. Sunday with all proceeds going to the March of Dimes. Station gives all time and station facilities, and the staff contributes talent and labor free. Local merchants donate merchandise to auction off. Local and national talent provide entertainment. Average of $27,000 raised at each telethon.

South Plains Fair.—Remote telecast of outstanding events of particular agricultural interest to this area.

Physical Therapy Telecast.—Remote telecast of installation of therapy facilities installed for the first time in a hospital in this area.

What is the Answer?—Presented during Texas legislative sessions in cooperation with the Junior Welfare League. Qualified local and areawide civic leaders discuss problems of youth, health, unemploymnet, migratory living conditions, welfare services, child guidance, adult education, and juvenile delinquency.

Capitol Report.—Gives viewers a firsthand opportunity to query a panel of State legislators on problems facing the area or State. This program is broadcast during legislative sessions.

Songs from the Country Chapel.—Nondenominational daily quarter-hour devoted to singing of requested hymns and thoughts for the day.

Final Decision.—(Current.) Panel of area attorneys and judges discussing legal questions submitted by viewers giving general guidance on wills, contracts, mortgages and everyday legal problems confronting the average person.

So You Plan to Build.—A half-hour per week program designed to explain to the prospective home builder the many do's and don'ts of planning and building a new home. Each week an authority appears to discuss the following subjects: Architect, planning of the home; realtor, selection of lot; mortgage loan officer, discussion of different types of loans; plumbers, bricklayers, carpenters, general contractors, electricians, cement contractors, sash and door suppliers, interior decorators, paint contractors, lighting experts, floor and tile contractors. This program is presented for 13 weeks each year preceding the home show.

Halloween TV Party.—An annual program by school students of all ages, presented in cooperation with the school system and the Police Department, designed to entertain and provide youth with wholesome activity, thus reducing vandalism to a minimum.

Texas Public School Week.—Six half-hour programs given to area schools to promote a more active interest in our public schools.

75589—57—pt. 4——70

Your School Superintendent Reports.—(Current.) Quarter-hour monthly program designed to give the superintendent of the Lubbock Independent Schools District an opportunity to report to the people on the problems, the progress and the plans of the school system. This program presents the reasons behind rules and regulations which have been set up within the school system, thereby providing means by which the general public can become familiar with aspects of their children's education. Without such a program it would be humanly impossible for the superintendent to reach all the parents. Through this program he is able to pass along certain information which could not be handled by any other medium of public information.

South Plains Forum.—(Current.) Panel discussion presented in cooperation with Texas Tech adult education program, furthering the growth and development of our area and its individual citizens.

What's Behind the News.—(Current.) Discussion of current news events national, statewide, and local in scope, along with unbiased analysis of political developments.

II. DESCRIPTION OF NETWORK AND LOCAL FILM PUBLIC SERVICE PROGRAMING ON KDUB-TV, LUBBOCK, TEX.

Plainsman Parade.—(Current.) Alternate week half-hour program takes the viewer into the outlying agricultural areas by film, to show improved farming methods and machinery effectively employed in the area.

Man to Man.—(Current.) Prepared by Broadcasting Film Commission of the National Council of Churches. Down to earth religious discussions by Dr. Ralph Sockman and Dr. Louis Evans showing that in basic Christian principles lie the answers to most day-to-day problems.

The Christophers.—(Current.) Hollywood's leading stars dramatically focus attention on what the average person can do in a constructive way to strengthen government, education, entertainment, labor relations and literature.

This is the Life.—(Current.) Prepared by National Council of Churches of Christ in the United States featuring dramatic presentations aimed at the unchurched to emphasize problems that can be overcome through religion.

Confidential File.—(Current.) A behind-the-scenes report on America, with candid closeups of people and places dealing with such critical problems as kid gangs, child molesters, comic books, leukemia, medical quacks, mental breakdown, narcotics, phony charity rackets and pyromaniacs.

Industry on Parade.—(Current.) An informative series depicting progress through industry, depicting developments in science, manufacturing, and the way of life America enjoys.

Adventure.—(Current.) Peabody award winner takes a long, lively look at life through science, showmanship and entertainment. Subjects range from historical triumphs and failures in early expansion of the United States to studies of the complex human body.

Face the Nation.—(Current.) Originating in Washington, D. C., the world's top diplomats, political leaders, and the makers of news participate in lively discussions with the press.

CBS Sunday News.—Weekly review and analysis of top news events.

You Are There.—(Current.) Dramatizations of outstanding events in history.

Let's Take a Trip.—On-the-spot coverage of two youngsters who go everywhere (U. N. Building, fire station, waterfront, powerplant, etc.) and do everything. Hailed by educators, parent-teacher associations, and children of all ages.

Out of Darkness.—A documentary on mental health.

See It Now.—Frequent special hour-long reviews of national and international crisis situations.

Talk Around.—Designed to help youngsters, ages 12 to 14, explore their own feelings and to help parents and children understand each other's viewpoints.

U. N. in Action.—Action reports from U. N. General Assembly.

Report Card.—Five-week series giving comprehensive preview of White House Conference on Education.

The American Week.—A review of Nation's outstanding news events.

The Search.—Peabody award winning series on research at various universities visited each week.

Almanac of Liberty.—Story by Supreme Court Justice W. O. Douglas presented by Anti-Defamation League.

Years of Crisis.—Hour-long, year-end round up of year's events.

Appendix B.

Hometown TV Makes a Hit

By Joe Alex Morris

FOR ITS VIEWERS THIS WEST TEXAS STATION WILL FIND LOST PETS OR GET ERRANT HUSBANDS OFF THE HOOK. IT'S TV WITH A PERSONAL TOUCH

One morning not long ago, Wesley DeWilde Rogers, Jr., president of television station KDUB in the west Texas city of Lubbock, took 3 telephone calls in 11 minutes. The first call was from New York; a television-film distributor talked for 6 minutes while Rogers listened with no show of interest. The second call, from Los Angeles, concerned a national-network program. Rogers rang off after 3 minutes, and turned impatiently to his heavily loaded desk.

The third call was from a house down the street. Rogers picked up the receiver with a frown that quickly changed to a broad smile.

"Mrs. Swillingby? Yes, yes, of course. A lost kitten, eh? Oh, certainly, we'll be happy to help. In fact, we'll put it on the air at noon and again in the afternoon. Gray and white? Wandered away yesterday. Now, just let me write down a few notes."

After assuring Mrs. Swillingby that KDUB–TV had a record of 91.2 percent for finding stray pets, Rogers began pushing buttons. A secretary hurried in to take notes on the color, size and last-known whereabouts of the missing kitten. A voice over the office intercom assured Rogers that the description could be squeezed into a midday program of news and local chatter. An announcer dropped in to say that he would ask listeners on the children's program to keep an eye open for the stray. Rogers turned back to his deskwork with an air of accomplishment.

Now, nobody in his right mind is likely to contend that finding lost kittens is the secret of running a television station. But when you get outside of the big cities, operation of a television station becomes a kind of community enterprise in which missing cats, the high-school play and the local charity drive are as important as a theatrical extravaganza piped in from Hollywood. In smaller cities, the television operator is expected to react like a country-newspaper editor, with the ability to satisfy off-beat demands.

There was, for instance, the night that KDUB–TV was telecasting a local charity auction, and getting along nicely, when the telephone rang. "I'll contribute a hundred dollars," a viewer told the auctioneer, "if that gentleman wearing a dark suit and horn-rimmed glasses will stand on his head in the middle of the stage." The man singled out was Rogers; he promptly took off his glasses and, with some assistance, hoisted his considerable bulk into an upside-down position for the TV camera. His practical-joker friend paid off.

There was also the occasion when a kindergarten class visited the studio to demonstrate what they had learned in school. The master of ceremonies asked a simple question to test the children, and called on a small boy, who had been the first to raise his hand. The camera and microphone crew skillfully moved close to the youngster. "I don't know the answer," the boy said, in a voice that rang out in homes all over town. "But I've got to go to the bathroom."

The inauguration of television in Lubbock in 1952 posed some unusual problems. Few people in the area had ever seen a television set. One of the early demonstrations was at the county fair, where KDUB–TV had a camera and receiving set so arranged that visitors could see themselves on the television screen. A ranch hand in a fancy shirt and 10-gallon hat assumed several impressive poses, after which he spoke to the girl at the reception desk. "If them pictures develop good," he said, "I reckon I'll buy a half a dozen."

Television was not available in the Lubbock area until 1952 for two reasons. The population was too thin for it until after World War II. Then, in 1948, the Federal Communications Commission froze all station construction for 4 years, while it figured out how to allot available channels. Until the 1930's, Lubbock had been a typical west Texas cow town, with about 20,000 inhabitants. With the great production demands of World War II, it began a phenomenal growth. Now it is a booming community of around 115,000 inside the city limits, and almost 150,000 in the metropolitan area. New homes are going up at the rate of about 1,200 a year.

Lubbock is the site of Texas Technological College, with an enrollment of 6,000. The city has a bustling twice-a-day newspaper, the morning Avalanche and the evening Journal; it has approximately 100 churches, 24 theaters, and

15 service and businessmen's clubs, including what was believed to be the largest Lions Club in the world before it was divided into 3 units. The surrounding region is rich farmland. Lubbock is the world's third largest inland cotton market, and the area has 125 grain elevators and 12,000 producing oil wells.

On the city's outskirts, 2 television towers poke almost 1,000 feet into the sky. One of these marks the site of station KCBD–TV, property of the Bryant Radio & Television Co., headed by Joseph H. Bryant, a soft-spoken veteran of theater and radio business, president of the chamber of commerce, an ardent civic worker and one of the most popular businessmen in the South Plains area. The other belongs to KDUB–TV, owned by Texas Telecasting, Inc., of which Rogers is president.

"Maybe you've heard," an old resident said recently, "that in Texas, especially in West Texas, we do things in a big way. We don't get just 1 television station—we get 2. Competition is stiff in a medium-sized market like this, so they both try to give us the best of everything."

At a studio such as KDUB–TV, more than 50 regular employees and a dozen part-time workers are busy from 6 a. m., until midnight every day. Most of them have to double in brass. Local sales manager Jimmie Isaacs, for example, is an announcer as well as a salesman. When the occasion demands, secretary Brooks Fulbright and continuity writer Jane Tindall drop their pencils and take the stage with professional poise.

It takes ingenuity to stretch a small budget so it will cover large ideas. When Ted Simon, who is Wee-Gee the Clown on the children's program, once wanted a steam calliope to provide background music, nobody even thought of buying one. Production manager Vernon Poernor and floor manager Bill Baker found an old organ in a funeral parlor, took it apart, did mysterious things to its insides and put it together again. It's the best imitation of a steam calliope that can be heard this side of the Big Top. On another occasion they dressed up a new guessing game by transforming a battered pinball machine into a mechanical brain that spelled out works in electric lights, counted the score, flashed signals every 10 seconds and rang bells when time was up.

Perhaps the best demonstration of how to operate without busting the budget was the building of KDUB–TV's remote-control unit under supervison of chief engineer Rudy Starnes. A truck fitted to carry such a unit normally costs about $25,000; but Poernor and Baker bought an old city bus, rebuilt its interior, and made their own electrical installations. For $4,500 they had a mobile station ready to roll.

Like the country editor, whose success often depends on the number of hometown names that appear in the social notes, Rogers tries to get as many local faces and events as possible on the television screen. This keeps the remote-control crew and the newsreel unit busy covering such things as the opening of a new shopping center, the unveiling of Peter Hurd's murals at the Texas Tech museum, performances of the Lubbock Symphony Orchestra, and Sunday church services.

All such telecasts invite trouble. Recently, for instance, engineer Bob Jeu-Devine set up the portable microwave relay, known as the "dish," on the top floor of an automobile-parking building. He was going to telecast services at a nearby church. The beam from the dish must be aimed with a telescopic gun-sight at a receiver dish on the station's tower, and a clear view of the tower is necessary. Unhappily, just as the services were about to start, a man parked his automobile in front of the dish.

"Hey!" Jeu-Devine shouted. "Will you park to one side? You're blocking our relay!"

The man didn't want to move his car. Jeu-Devine explained the situation but the man wasn't interested and started to walk away. In desperation the engineer said, "Well, maybe you don't mind a shot of radiation on your car."

"Whadda yuh mean—atomic radiation?"

"This gadget," Jeu-Devine began, "is a high-frequency——"

But the man was in his car and driving away before the engineer could explain—if he meant to explain—that the high-frequency waves from the dish couldn't hurt anybody.

The toughest job in a television station is that of program manager. At KDUB–TV Ray Trent is the man who pulls all the pieces together and makes certain that they fit neatly in a minute-by-minute schedule. On a typical week-day, Trent has to mix a dozen Lubbock shows with a score of network productions, several motion pictures, 5 or 6 reports on the weather, 7 newscasts, including several from Washington or New York, and whatever special events happen to come along. The viewer gets a heavy run of network shows during the morning hours, including such items as the Morning Show and Garry Moore, three soap-opera serials and a half-hour movie. A few more serials—Brighter Day, Secret Storm, On Your Account—come along in midafternoon, and in the evening there are such network productions as Toast of the Town, Burns and Allen, Frankie Laine, Studio One, and Jackie Gleason. Movies of wrestling matches go on 3 nights a week.

Between the network shows and movies are the local programs, which in the morning include a 15-minute sermon by some local minister, a half hour devoted to civic affairs, and a quarter hour of Songs from the Country Chapel by the Rev. Darrell Taylor, a Lubbock pastor. The period from 1 p. m. to 3 p. m. is devoted to local women's clubs, hobbies, flower and garden club activities, cooking lessons and music. The time from 4 p. m. until 6 p. m. is for the younger generation—Children's Theater, Uncle Dirk's Puppets, Wee-Gee the Clown, and a cartoon or serial movie. Local programs in the evening are led off with Community Crossroads, presenting news, civic activities, personalities and talent of the South Plains. Then, on various nights of the week, there are South Plains Forum, a discussion of regional problems; Jack Huddle's Circle 13, the only hillbilly singing over KDUB–TV; a parlor game called Guess What? and special programs prepared by local organizations, such as a debate, a sports event or the Lubbock Symphony Orchestra.

"In the studio, a program gets on the air only because of the coordinated efforts of 22 different persons doing 22 different jobs," Trent said recently. "If just one of them fails in his task, the whole thing can fall apart."

Occasionally, of course, there are bloopers. Once a girl demonstrating nonsneeze pepper cut loose in the middle of a commercial with three healthy sneezes. It was discovered later that she had a cold, but by that time the sponsor had canceled his contract.

On another occasion, an announcer held up a pressurized can of whipped cream that could be sprayed on pastry in enticing curves. "You'll be amazed," he said, "at what this will do for your Thanksgiving pie." He then pointed the nozzle at a large pumpkin pie. For some reason, compressed gas—but no whipped cream—shot out with great force and splattered pumpkin pie for 10 feet across the studio floor.

Director Johnny Williams had a tough time one day with a sponsor who had bought a 15-minute spot and jauntily announced that he would do his own commercials. Williams suggested a rehearsal, but the man brushed the idea aside. The show rolled along smoothly until time for the first commercial. Then the floor director pointed his finger at the sponsor, the microphone boom swung around, and the big camera rolled forward for a close-up shot. Nothing else happened.

The sponsor was bug-eyed and white-faced. His Adam's apple bobbed up and down, but not a word could he utter. In desperation, the announcer tried to get him started with a routine question: "And now, sir, what is your name?"

"Glub," the sponsor replied. "I can't remember."

The announcer finally made a gallant pitch to pass the whole thing off as a joke, and made up his own commercial while the sponsor slunk off the stage.

Experts normally would consider a community the size of Lubbock as hardly large enough for two successful television stations. But Lubbock has a higher per-capita income ($1,818) than any other American city of the same size, and the surrounding market area boosts the total population served above the 400,000 mark. The area around Lubbock has 18,700 farms with an annual income of $316,718,000—around $17,000 apiece. These factors, and continued rapid population growth, have enabled both KCBD–TV and KDUB–TV to flourish. An informal poll of local critics suggests that opinion is evenly divided as to which station is the more popular.

Both stations have connections with big national networks, and both emphasize community service, but their techniques of operation differ. At KCBD–TV, formality prevails on most programs, announcers wear neckties and jackets, the weather and news programs are presented soberly, and the president of the company stays in the background. KDUB–TV is highly informal. Many local programs are played by ear rather than by script. Open-neck sport shirts are popular with announcers, and a comic weather bird enlivens the daily forecast. A firecracker is likely to explode during a hillbilly song program, and the president is frequently in the act.

Wesley Rogers is a husky, vigorous man who has enjoyed getting into the act since he was a small boy in Waco, Tex., where he was born in 1920. His father, a pharmacist, called him "Dub" when he was a baby, and the nickname has stuck. At the age of 6 he began taking clarinet lessons, and became so expert in later years that he worked his way through Baylor University as the leader of a dance orchestra. When he was a senior, he was offered a job with the C. G. Conn Co.; in 1941 he traveled through the Middle West selling band instruments and doing promotion.

He quit to join the Air Force in 1942, and spent the war at the Air Transport Command's big ferrying center near Dallas, where he met Miss Edith Tighe, of Dallas, whom he later married. They have two daughters. Rogers decided at the end of the war that the best opportunity for an ambitious young man was in radio and television. However, he was persuaded to take a job as sales manager for a soft-drink-bottling company with headquarters at Lubbock. "I was quickly sold on Lubbock," he said later. "I knew that west Texas was the place for me."

In 1949 he became vice president of a corporation formed to launch a television station at San Antonio, where he remained until the station was sold in 1952. Rogers headed back to Lubbock, where, in May, he organized Texas Telecasting, Inc., and hired a single employee, accountant John R. Reynolds, who is now 27 years old and the dean of the KDUB–TV staff. A short time later the FCC lifted its freeze on station construction and granted permits for two Lubbock stations.

Rogers wanted to be first on the air. He secretly arranged for studio space in the Lubbock National Bank Building, and for erection of a temporary tower on the roof. For some weeks, work on this temporary station was done at night in a kind of cloak-and-dagger atmosphere.

"Office space was scarce," Rogers recalls, "and our studio was only about 20 feet square, divided into 4 little rooms. We didn't have any place to store props or the products that advertisers wanted to show, so we piled them out in the corridor. For weeks, lawyers and doctors and clerks who worked on our floor had to stumble over vacuum cleaners, live chickens, racks of dresses, and crates of soap flakes."

Nobody in Lubbock had a television set. This meant that the secrecy had to be ended late in October, when Rogers threw a dinner for representatives of television-set distributors, and announced that KDUB–TV would be operating in about 3 weeks. He phoned manufacturers and urged them to speed their products into Lubbock. There wasn't much time, but none of it was wasted. Television sets began arriving by the boxcar load, and aerials popped up on rooftops all over town.

In November, KDUB–TV began running a test pattern of black and white circles for the benefit of workmen who were installing new sets. It also issued a booklet explaining the fundamentals of television. This was only partly effective. A lot of people called in to warn the station that its broadcasting tower must be leaning to one side "because the picture on my set is coming in crooked." During the test-pattern period one indignant woman snapped at Rogers, "I've been sitting here for 2 hours, and there's been nothing on the screen but a crazy bull's-eye. If that's the best television can do, you might just as well close up shop now."

Finally, on November 13, a crowd gathered in the street outside the studio. A big industrial-type switch had been installed on a platform, and a rope several hundred feet long was tied to it. Rogers asked everybody to grab hold of the rope and pull. Slowly the switch was closed and the new station went on the air. Naturally, it was christened KDUB, usually pronounced "Kay-dub," to jibe with Rogers' nickname.

KDUB–TV was the first station in the country to open in a medium-size market. The show-business magazine Variety expressed doubt that many sponsors had "any desire to penetrate East Slippery Rock, Mo., or Lubbock, Tex., or such remote areas that are opening up. It's a real toughie for the networks to hurdle."

When Rogers read Variety's remarks he did a slow burn. He confirmed his suspicion that there is no such town as East Slippery Rock. Then he inserted a page advertisement in the next issue of Variety. It included a photograph of Lubbock's tallest buildings and a cartoon in which a doddering, behind-the-times editor was "cordially invited to fly—at our expense—to Texas to be adequately informed about Lubbock and to return to New York with the astonishing news of 20th-century West Texas."

This proved to be an attention-getter among the big agencies that control advertising budgets, and it paid off double when a Variety reporter showed up.

He wrote an article saying that advertisers had now "learned some new names and found markets where none apparently existed before, such as Lubbock."

Both Lubbock television stations, KDUB and KCBD, are now installed in handsome new buildings and are neck-and-neck in the race for business. Rogers' new plant cost about $279,000 and, in all, some $625,000 has gone into KDUB-TV. In the first 2 years of operation, residents of the area spent approximately $30 million for sets and allied equipment. Today there are close to 80,000 sets in use, with probably 1,500 more being sold each month. In December 1952 KDUB-TV was on the air only 171½ hours and had 31 commercial program hours, half national and half local. Last December it was on the air 400 hours and had 192 commercial program hours, of which 144½ were national.

Rogers and his competitor, Bryant, feel that their success is due largely to the unchecked growth of population in the south Plains region. Naturally, both have emphasized that their stations serve not only Lubbock but the many smaller towns and farming areas nearby.

Apparently, this policy has struck home. Some months ago a disheveled man walked into KDUB-TV and found director Johnny Williams in the corridor, about to start Community Crossroads. "Mr. Williams," the stranger said, "you are always saying your station serves the smaller towns—so here's your chance. I live in Roaring Springs and I want to go on your show right away."

"But what do you want to do on the program?"

"Do?" the man replied. "I don't want to do anything. My car broke down and I can't get home until late. Now, if I telephone my wife and tell her that, she'll think I'm making up an excuse to go out with the boys. But she always watches your program and if she sees me on television and if you tell her——"

"O. K.," Williams said. "Let's get on the air."

It's things like that that make a station manager wonder sometimes whether you can carry this community-service idea just a little bit too far.

Senator PASTORE. Mr. Cox.

Mr. Cox. With regard to this point you were making, Mr. Rogers, regarding the TvB report on clearance for film programs, do you know whether in speaking of prime time they were limiting this to clearance in option hours in the evening, or whether they were talking about clearances in the period 6 to 11 p. m.?

Mr. ROGERS. They were in class A time.

Mr. Cox. That, in terms of the network, is the whole period 6 to 11 p. m.?

Mr. ROGERS. Yes, sir.

Mr. Cox. Do you know whether they were using the network's classification or whether they were using the top classification of the individual markets?

Mr. ROGERS. No, sir, I don't. Only this information which was prepared by TvB, and is documented right here in one of their bulletins, it leads off by saying, "How about class A clearance with spot programs?" and it lists the programs that were cleared in class A time.[5]

If I might read here:

> The fallacy sometimes persists that the clearance of desirable class A time for spot programs ranges from difficult to well-nigh impossible, depending on the markets wanted. Like the unicorn, this just isn't so and in evidence we submit the recent experience of nine typical spot advertisers—both national and regional—who requested class A time segments for their film programs listed below.

In other words, in the case of a syndicated program, Mr. District Attorney, the Carter Products wanted to order 23 markets and they cleared 22 of them in class A time.

[5] The witness later advised the committee that the class A time referred to in the TvB report was the period 7 to 11 p. m.

Mr. Cox. That is class A, though, as distinguished from prime time?

Mr. Rogers. Yes, sir. And Man Behind the Badge, 11 markets, cleared 10; Socony Mobil Theatre was ordered in 56 markets and cleared in 56 markets in class A time. I would be glad to give you one of these if you would like to have it.

Mr. Cox. Yes; we would like to have one for the committee's files, if you have an extra copy available.

Mr. Rogers. Yes, sir.

(The document referred to, entitled "Advertising's All-Purpose Working Tool—A Presentation From TvB," will be retained in the committee's files.)

Mr. Cox. As I understand your statement, it is your own decision, as the licensee in Lubbock, as to which of the television programs that CBS offers to you are acceptable for that market?

Mr. Rogers. Yes, sir.

Mr. Cox. And you said that when you had made a decision that you would not clear for a program, CBS never exerted any pressure on you?

Mr. Rogers. No, sir.

Mr. Cox. Does their station relations department take the matter up with you, find out what the reason is, see if other arrangements can be made, or, in fact, urge you at your earliest convenience to clear for the program?

Mr. Rogers. I have had no discussion—station relations has never contacted me in connection with clearing the program. Normally the station service department will send us a TWX ordering the program, and if for some reason we can't clear it, we so advise them and give them a reasonable reason and we have had no problems.

Mr. Cox. Could you tell us, in general terms at least, what percentage of the programs for which your station is ordered in evening option time you actually clear for?

Mr. Rogers. Well, at the present time we have 13 hours of network programing between—in our option time a week.

Mr. Cox. What is the option time?

Mr. Rogers. 6:30 to 9:30.

Mr. Cox. In your zone?

Mr. Rogers. Yes, sir.

Mr. Cox. You have 17 hours, you say?

Mr. Roger. 13 hours.

Mr. Cox. 13 hours?

Mr. Rogers. Yes, sir.

Mr. Cox. Do you know for how many hours additional you were ordered and you did not clear?

Mr. Rogers. Well, in our particular case, right now I have 3½ hours a week available in prime time, which I would just love to sell. [Laughter.] So if for some reason I can't clear the program at the requested time, I am in a position to offer a good alternative time in option time on another evening. So I am not involved in that type of problem.

Mr. Cox. You are not now currently rejecting any of the programs for which your station is ordered, then?

Mr. Rogers. No, sir. There are occasions when for some reason or other we have to reject it, maybe the advertiser does not agree on this alternative time. In that particular case, well, we don't carry the program.

Mr. Cox. Did you, for instance, not carry at all Wild Bill Hickok or Jo Stafford?

Mr. ROGERS. No, sir; we are carrying those.

Mr. Cox. You carry those on a delayed basis?

Mr. ROGERS. Yes, sir. Wild Bill Hickok conflicted with one of our church programs so we offered an alternative time and the advertiser accepted it. We gave him the reason.

Mr. Cox. So that to date you have usually been able to work out these rejections in terms of another time in your schedule which is satisfactory to the advertiser.

Mr. ROGERS. Yes, sir. We normally take it at the requested time.

Mr. Cox. Are there any CBS programs which you are now carrying which you would refuse to clear time for if the network did not have option time?

Mr. ROGERS. Well, maybe.

Mr. Cox. Do you have any in mind?

Mr. ROGERS. No, none specifically.

Mr. Cox. That is, in other words, with or without option, your station would still desire the quality programs which the network can offer it when you can get your station ordered, you would still desire the revenues that you derive from that sale of time, and you would, therefore, have all of the incentives which lead you to clear time even though the option were removed—as far as your individual operations are concerned?

Mr. ROGERS. Repeat that again, please.

Mr. Cox. In other words, even if there were no option on the part of CBS, you would still desire their programs, you would still desire the revenues from those programs, and, therefore, the incentives that now lead you to clear time for these programs after you have satisfied yourself that they are in the interest of your community, would still remain even though the option had been removed?

Mr. ROGERS. Probably so; we would have to consider it on a case-by-case basis. But where option time plays a big part in our operation is that, as far as I am concerned, without option time we would probably substitute patchwork for network. In other words, if the large advertisers, as I said in my statement, were unable to clear the markets where the huge population exists, then I would never have an opportunity to get that program to begin with.

Mr. Cox. That is, in other words——

Mr. ROGERS. That is where option time benefits me.

Mr. Cox. In other words, you are worried that in the absence of option time some other station licensee in some other market is going to reject the network's programing and that this is going to impair the network's ability to provide a high-quality integrated program service for your station?

Mr. ROGERS. That is true. In other words, it is a machinery of clearance, and if this program is not cleared in the markets that serve the large population of America, then I won't have a chance at it.

Mr. Cox. Now why will the operator in a large market who operates under the same statutory obligation to program in the public interest not clear for the network programs as long as they maintain their present quality?

Mr. ROGERS. Well, that I couldn't answer.

Mr. COX. Can you think of any reason why he would not clear if he were ordered for any one of the top shows that the network now has in the schedule?

Mr. ROGERS. Well, I imagine if I were ordered for one of the top shows and didn't elect to clear it in option time, it would be for possibly the same reasons that we would reject it in our size market—that probably he had a local show there, sold to a local sponsor, or a national spot show or for a public service type program.

Mr. COX. Would you have any way of knowing whether, in general in other markets, instances of that sort can usually be taken care of through adjustment of time?

Mr. ROGERS. Well, with or without option time?

Mr. COX. Under the present situation?

Mr. ROGERS. Well, I feel sure that based on TvB's study we just don't see where there is any problem in clearing nonnetwork programs in class A time, as I just recited here earlier.

Mr. COX. Do you feel, Mr. Rogers, that in all cases you have full enough information, in advance of clearance of programs, as to the nature of a new show that is offered to you—as to the stars of the program, format, story lines—to enable you to make up your mind, in the public interest, as to whether or not you should clear for this series?

Mr. ROGERS. You mean from whom? The network?

Mr. COX. From the network.

Mr. ROGERS. Well, yes, sir, in many cases—in other words, the network, we can determine what the format of the show is from various releases; they at certain times will have a closed circuit.

Mr. COX. How many of those do you have in a year, in which you are shown the contents of a program?

Mr. ROGERS. I would estimate that over the last 12 months we possibly had 5 or 6.

Mr. COX. Now, this is an arrangement by which all of CBS affiliates are placed on closed circuits?

Mr. ROGERS. Yes, sir. All affiliates were connected with the network and they explained the program; and then at the convention when we have affiliates meeting each year, why the network will outline to us their complete plans for programs over the next 12 months. And in some cases they will even show us a pilot print of a show or kinescope.

Mr. COX. On these closed-circuit arrangements, do they show you a pilot then?

Mr. ROGERS. In some cases they show us a pilot; in some cases they explain it.

Mr. COX. In the case of live programs, what information is given to you in advance?

Mr. ROGERS. In the case of a live show it is mostly explaining it, and collection of facts sheets, or facts bulletins that we receive from the network.

Mr. COX. Do you ever get a script of a program in advance?

Mr. ROGERS. No, sir.

Mr. COX. Now, you stated that when the NARTB meets—or when you hold your affiliates meetings, if they meet at different times—that the network will explain their overall program plans for the ensuing year. Have you, as an official of the network affiliates group, had any part prior to that time in determining what new programs will be added to the CBS schedule?

Mr. ROGERS. No, sir. Well, I am not an official of the affiliates group. I mean of the affiliates advisory board.

Mr. COX. I misunderstood you.

Mr. ROGERS. No, sir; I am not. Mr. Howell is the only one of our group that is a member of the affiliates advisory board.

Mr. COX. Do you know whether they are consulted as to advance programing?

Mr. ROGERS. Yes, sir. After they have a meeting with the network, our particular representative down in our area will send us a copy of the minutes of that meeting; and one recently that I can recall from memory is in the case of the changing of the time of the Doug Edwards Show, and the advisory board was involved with that, as I recall. And the network called in a representative cross section of the affiliates across the country—called them in and discussed this matter with them—and I think that I am correct in saying that most of the changes, which the network finally put in existence in connection with this show, came from the recommendations of the affiliates.

And I do know that the network is programing Doug Edwards twice in the evening, 6:45 and 7:15 at the request of this representative group of affiliates.

Mr. COX. Have you cleared any time for new network programs which are scheduled to be on the air next fall?

Mr. ROGERS. Not to my knowledge. We have been approached on the Playhouse 90 for our satellite, but at the present time the advertiser that has bought into it doesn't see fit to buy Lubbock in. So I am going after him.

Mr. COX. You have the cart before the horse.

Mr. ROGERS. Yes, sir.

Mr. COX. That is the only one that you have been ordered for?

Mr. ROGERS. That I know of at the present time; yes, sir.

Mr. COX. How much information have you been furnished regarding that program?

Mr. ROGERS. At the present time, we have had the—there was some information on the original TWX, and I believe in my absence that my sales manager told me last night that a facts sheet had come in on it while I have been away, which I haven't seen.

This Playhouse 90 was also discussed—not in detail, but it was mentioned—at the affiliates meeting in Chicago this year.

Mr. COX. What did they tell you about it?

Mr. ROGERS. Well, in essence, they explained to us the type show it was going to be, that they were going in for a new concept of programing. Naturally, they recognized, and we all recognized, that you can't pack an entire story in 30 minutes, and they were going to attempt to put on this complete drama.

Mr. COX. Then they familiarized you with this concept of a longer dramatic presentation, but they did not give you much information about specific shows that would be so handled, or stars, or the writers, directors, or other people who will have a part in preparing those programs?

Mr. Rogers. I think at that particular time it was a little bit early. We will get that on our facts sheet, I would imagine, within the next 30 days.

Mr. Cox. Is it your understanding that CBS' option does not apply to a program like Studio One, which starts in option time but extends into station time?

Mr. Jennes. Ten to 11 o'clock.

Mr. Rogers. I would say that option time would apply.

Mr. Cox. You would think it would?

Mr. Rogers. Of course, it carries over into station time.

Mr. Cox. CBS has never formally advised you that you could refuse this program because option time does not apply to any part of it?

Mr. Rogers. No, sir.

Mr. Cox. Now, you made the point, in connection with Mr. Moore's testimony regarding problems of his station in Los Angeles, that it did not make any difference to the public whether the program in question went on KTTV or on one of the owned-and-operated network stations in that market.

Mr. Rogers. Yes, sir.

Mr. Cox. Now, using this market simply as an illustration of a market in which there are independent stations, if we assume, in accordance with Mr. Moore's testimony, that as he views the operation of "must buy" and option time on the development of new film programs for television use, that the tendency of producers is to produce only for network release, or for sale to an advertiser with a national time clearance, and he therefore says that not only will the program end up on his network competitor but that if it does not get there it will never be made.

Now, if this were true, to what source can an independent station— or the 4 independent stations in Los Angeles, or the 4 in New York, or the fourth station in Washington, Seattle-Tacoma, Denver, and the other markets fortunate enough to have fourth facilities—to what sources can they look for programing?

Mr. Rogers. Well, from the independent producers. I think that assumption is wrong, because there are many, many syndicated programs available.

Mr. Cox. Do you, of your own knowledge, know of the plans of any of the independent film producers to produce new program series for fall release which will be syndicated only?

Mr. Rogers. Well, of course the only way we know about the new independent releases is as they come out through the advertisements in the trade journals, and then when the film people call on you, or they send out some direct mail information on it. There are a number of shows that are coming out, I can't recall any specifically right now. But we hardly miss a day getting some direct-mail piece from an independent producer.

Mr. Cox. Do you know of any other than the ones which have been sold for network release, Circus Boy, Sir Lancelot, Stanley——

Mr. Rogers. Well, one of the latest shows out, independently produced, and by the way, was sold on a nonnetwork basis, was Rosemary Clooney, purchased by the Foremost Dairy people.[6]

[6] The witness later furnished the following list of programs, compiled by the program director of WTOP-TV from recent contacts with distributors and from recent trade periodicals:

(Footnote continued on following page.)

Mr. Cox. For national spot advertising?

Mr. ROGERS. Yes, sir.

Mr. Cox. And that is a singing program, not a continuity series?

Mr. ROGERS. No; it is a half-hour syndicated show, independently produced, and Foremost placed it on a national-spot basis.

Mr. Cox. Is that campaign underway? I mean is the program on the air now, or is it scheduled for the air in the fall?

Mr. ROGERS. No, sir; it started about 30 days ago.

Mr. Cox. Do you know how much clearance has been obtained?

Mr. ROGERS. No, sir, I do not.

Mr. Cox. Now, you made some statement also about the impossibility of advertising agencies or other sources providing clearance. When a network orders your station under option time, what specifically does it do?

Mr. ROGERS. Well, they will order our station by TWX—if we are fortunate to be in the advertiser's list, they will order us by TWX—and specify the time. Then we will answer by TWX, which they pay for. And if we can clear it we will so state. If we can't, we will try to offer an alternative time and try to get a delayed broadcast, which, like I say, in most cases we are able to do.

Mr. Cox. What is there in that function that could not be performed by someone else?

Mr. ROGERS Well, like I say—in other words, what you are asking me is why an advertising agency couldn't do it by large numbers of programs like I stated in my statement?

Mr. Cox. Well, is it not true that either advertising agencies—strike that.

Is it not true that advertising agencies, working normally with the national spot representatives of the licensees, actually do the job of clearance in many markets, placing it in times as they are available?

Mr. ROGERS. Oh, yes, sir. A few programs, that is. But what I stated was large numbers of programs. I just don't think that they are geared to clear large numbers of programs, and the cost would be prohibitive for each agency to get into a network type of clearance operation.

Mr. Cox. In other words, you are contemplating, then, a situation, however, in which the network was no longer clearing for any pro-

grams, where the advertising agency's clearance, or the national spot representative's clearance, would have to completely replace network clearance rather than supplement it?

Mr. ROGERS. That is true. But if option time were eliminated, then I think the networks would deteriorate.

Mr. COX. Thank you.

Senator WOFFORD. Thank you very much, Mr. Rogers.

Mr. ROGERS. Yes, sir. I appreciate the opportunity.[7]

Senator WOFFORD. The next witness will be John C. Cohan.

You may proceed, Mr. Cohan.

STATEMENT OF JOHN C. COHAN, PRESIDENT, KSBW-TV, SALINAS, CALIF.

Mr. COHAN. Senator Wofford, gentlemen, my name is John C. Cohan. I am president and general manager of the Salinas Valley Broadcasting Corp., licensee of KSBW-TV, channel 8, Salinas, Calif. KSBW-TV is a primary affiliate of CBS and a secondary affiliate of both ABC and NBC.

Since entering broadcasting in 1932, I have held positions in all phases of the business except those requiring technical engineering knowledge. I have also had approximately 25 years' experience in advertising and I operate my own advertising agency in Salinas. In addition to numerous local civic activities, I am national vice chairman of the American Red Cross.

I appreciate the opportunity to tell your committee about television broadcasting in Salinas. I am proud of our industry and our own part in it and I am ready to fight to preserve it. Television would never have reached its present development without networks operating with option time and with a requirement that a minimum basic network purchase be made. Television will stop developing—and will begin to wither on the vine—the minute networking is deprived of these essential business tools.

Television, like any other business, is governed by basic economic facts. A department store will not have customers unless it offers attractive merchandise and it cannot carry a full stock of merchandise until it builds its clientele. This is true of a television station, too.

When we received our permit for channel 8 our first thought was to locate a source of programs so that we could have something to sell. We sought a network affiliation because we believed that was the best way to obtain the kind of programs Salinas desired and deserved. We knew that we could not build an audience with homemade programs alone, or with free film or old movies. And we knew that if an audience were not built we would not attract enough advertisers to stay on the air.

We carried only 2 network programs during the first 18 days we were on the air. However, strong personal selling directly to advertisers, and the sales assistance of all three networks, have enabled us to obtain enough network programs to form a foundation for our overall structure. On that foundation we built the rest.

Our present program structure is the result of constant repetition

[7] The program schedule of KDUB-TV for the week of April 8-14, 1956, will be found starting at p. 2968.

of this process: We would secure a network order. This program would induce viewers to tune to channel 8. This increase in viewers would induce a nonnetwork advertiser to buy time. The nonnetwork program would further increase our circulation and lead to another network order. And so we grew.

Our network affiliations are of great value to us but they do not guarantee success. KSBW–TV's profits after 2½ years in operation are only a thimbleful. We recognize that factual market data and hard selling are necessary to convince an advertiser to order channel 8. We know that they will order our station if it reaches a large enough audience at a low enough cost. And we do not gripe at the networks because business is not handed to us on a platter.

This committee has heard that network practices deprive the public of the benefit of superior nonnetwork programs and force it to watch inferior network shows. Nothing of the kind occurs. KSBW–TV is affiliated with 3 networks, but more than 55 percent of our total air time is devoted to nonnetwork programs. We carry 19 first-run syndicated film series each week, which compares favorably with the number run by other stations, affiliated and nonaffiliated. Significantly, 40 percent of our time between 7:30 and 10:30 p. m. is filled with nonnetwork programs. Is this exclusion?

Superior nonnetwork programs have access to affiliated stations. These programs also have virtually complete access to the 36 nonaffiliated stations which serve more than 43 percent of the total population of the United States. There is a nonaffiliated station whose signal covers our market. If superior nonnetwork programs were excluded from KSBW–TV because of our network affiliation, then as a matter of practical business these same programs would soon be seen in our market on the competing station.

This committee has also been told that network practices deny nonnetwork advertisers access to affiliated stations. This is a fantastic charge. We are an affiliate of 3 networks but we have 28¼ unsold hours per week. One and three-fourths of these hours are between 7:30 and 10:30 p. m., and 6 hours are between 6 and 11 p. m. With any unsold time, do you think that we would turn away a prospective advertiser with an acceptable program? Far from excluding nonnetwork advertisers, we carry a large proportion of national, regional, and local advertising. Of our 52 hours of commercial programs per week, 22½ hours are sponsored by nonnetwork advertisers, and between 7:30 and 10:30 p. m. 6½ of our 19¼ commercial hours are sponsored by nonnetwork advertisers. Only 13 percent of our total billing for March 1956, came from network advertisers, whereas national billings and local and regional billings accounted for 60 and 27 percent, respectively. We wish our network billings were higher.

If programs and advertisers really exist that are being denied access to television, it is strange that a fourth network has not been organized. Not only would present nonaffiliated stations be potential affiliates for such a network, but many affiliates of the three existing networks would add the newcomer, too, provided it offered an equivalent quality product. It is only sound business for a station to show the best programs it can obtain. Television is highly selective. The public is very critical. They look at the station with the best programs. Let any business organization build a better program service and they will attract affiliated stations. The experience of the pioneers would make the road to successful networking much smoother for the newcomers and I am sure that no new network would try to operate without option time and a group of basic stations.

You have also been told that station licensees have abdicated their responsibility to exercise their own judgment in programing. You will see the fallacy of this charge when I tell you how we program channel 8.

In order to make our station the most viewed station—and hence provide the most effective public service—we aim for the greatest number of people at any given time with the very best program available to us. We arrange our programs to suit the audience. We program primarily for housewives in the early afternoon and for children after school. Our news programs concentrate around dinnertime to reach all audience groups, while our evening schedule is aimed at adults. We program for special audience groups, too, as shown by our Mexican language program each Sunday morning. We have found that networks arrange their schedules along the same lines. It is because of their consistently demonstrated quality that we use network programs as a foundation for our overall structure. This is our judgment. Moreover, our total schedule includes programs from all three networks, nonnetwork programs from a variety of sources, and local live programs.

You have also been told that we are afraid of losing our affiliation and so we discriminate against independent program producers and nonnetwork advertisers in placing their business. Let me tell you of a recent case and you decide whether there is discrimination. General Motors ordered our station through CBS for a half-hour live program, during option time, following the $64,000 Question. KSBW-TV did not clear this time for General Motors because we felt our community preferred Badge 714, a syndicated film program sponsored by a local furniture dealer. We offered General Motors alternate film time, in option time, following Disneyland. General Motors wanted only live clearance and refused. CBS backed us up 100 percent and told General Motors that KSBW-TV had done its best to fill the order.

We have cooperated with our partners, the networks, in clearing time for their programs, but a local advertiser has never been taken off channel 8 to make room for a network advertiser.

One other point should be mentioned. Witnesses have emphasized principally the extent of network programing between 7:30 and 10:30 p. m., the evening option period. Although 7:30 to 10:30 p. m. is good time, it is not the only good time nor is it necessarily the best time from the advertiser's point of view. While audiences may not be as large in class B time, neither are the rates as high, so that from the standpoint of cost per thousand—the advertiser's yardstick—class B hours are often better buys than 7:30 to 10:30 p. m. So let us not discount the availability of time on stations other than the evening option period.

Our ability to use network programs as a foundation has enabled us to increase our hours of daily service, which in turn has permitted us to expand our nonnetwork programing. We show an increasing number of independent film programs as our program structure is strengthened and we hope to show more in the future. Far more important, however, our use of network programing allows us to concentrate on quality local live programing.

When a network program is being broadcast our small program staff is free to develop, produce, and rehearse the live programs which are so important to our community. We can afford a staff of only 34 people. Even the most simple television program requires a great deal of money and a surprisingly large number of people. If our staff had to create programing to fill our total schedule, its quality would be so poor that we might be forced out of business entirely and, at the very least, our time on the air would be sharply reduced.

We might add here that independent film programs are expensive so that it is not a practical alternative to program a station in a small city with film alone. And this does not take into consideration the inadequacies of an all-film schedule. Many network programs are not available from other sources. There is no independent producer of live sporting events, or of news, or of presidential speeches, or of congressional hearings, or of national political conventions, or of live religious programs, or of fine operas or concerts. In addition, only networks offer programs which, by their very nature, must be spontaneous and instantaneous in order to be successful. The $64,000 Question falls into this category, and you all know that this show is among the most popular of all television programs.

Through our local live programing, KSBW–TV has been able to build a reputation for public service in our community which has raised the status of television equal with or above the status of newspapers. Channel 8 has been the focal point of every civic issue in Salinas from the day we went on the air. Our first program was a 6-hour broadcast for the Community Chest. We work continually on school problems. We carried the banner for a hospital bond issue that previously had failed. We took the local Red Cross drive over its quota for the first time since World War II and we did this in less than 1 day. We also have received an Academy Award for one of our public service programs. The complete list is enormous and the details of our public service record appear in the appendix to my statement. (See p. 2588.) The point is that without the foundation of publicly accepted network programing we could never have built our circulation to the point where KSBW–TV has become such an effective voice in our community.

Since networks are vital to bring adequate television service to all of the communities across the country, it is essential that networking operations not be impaired. Option time and a basic group of stations are absolutely essential for healthy networking. You must be practical when you spend advertising dollars.

For example, my advertising agency spends a large sum of money to purchase a program on ABC television for the lettuce growers in our area. In order to sell lettuce, it is necessary to reach the metropolitan centers of the United States at specific times. The practical way to accomplish this is to go to the networks, who are a national advertising medium, and who, because of option time and a basic group of stations, are able to sell us the coverage and the time we want, and to do it quickly.

It would be utter chaos if all advertising agencies and all advertisers were trying simultaneously to get nationwide coverage over individual stations. Many advertisers would fail to get their desired pattern of coverage and would switch to other media. There would develop such a seller's market for national spot business in the handful of major metropolitan areas that there would be no national advertising dollars left for a small station in Salinas. While big metropolitan stations might profit more from such a situation, many small-business men such as ourselves would be ruined, and when the small market station goes under it is the public who suffers.

It would be a catastrophe for the public if the network structure is weakened, for only networks provide service for all the people. Lack of knowledge of our industry and understanding of its business practices is prevalent among those who would criticize networking.

As an advertising agency operator, I can assure you that competition between networks is extremely keen and that there is nothing resembling monopoly in this field. Moreover, as a station operator I can assure you that networks recognize their solemn obligation to maintain high program quality. And the public benefits from both these conditions. We must get the special interests to quit grinding their special axes long enough to recognize that the public is being well served now, but that the public would be poorly served if networking is undermined.

Appendix to the Statement of John C. Cohan, President, KSBW-TV, Salinas, Calif.

I. Description of Typical Local Live Public Service and Public Affairs Programing on KSBW-TV, Salinas, Calif.

Names in the News and Feature Page.—(Current.) These two features are 5-minute public service programs included in our evening news broadcast These two segments feature community leaders interested in various projects. For example, during a recent week the programs were devoted to a drive to save minor league baseball for Salinas.

Following is a list of various organizations that have appeared on these programs: 4-H Clubs, Junior Rodeo, Girl Scouts and Boy Scouts, Job's Daughters, Crippled Children, Future Farmers of America, American Legion and American Legion Auxiliary, highway patrol, sheriff's office, policeman's and fireman's benefit balls, Pebble Beach golf tournament and road races (both for charity), women's clubs, junior chamber of commerce, Alisal Chamber of Commerce, American Association of University Women, American Ex-Prisoners of War, Babe Ruth League of Salinas, Inc., B'nai B'rith, Castroville Rod and Gun Club, Knights of Columbus, Palma Mothers' Club and Palma Dads' Club, Community Chest, Elks Exchange Club, Friends of Music, Little League Baseball, Lions Club, Mexican Civic Committee, Monterey County Sheriff's Posse, Monterey Peninsula Council for Retarded Children, National Secretaries Association, Optimists Club, Presbyterian Women's Association, Red Cross blood bank, Rescue Mission, Rotary Club, Salinas Business and Professional Women's Club, Salinas Valley Shrine Club, and World Affairs Council of Salinas.

The World At Your Doorstep.—(Current.) A civic pride program pointing out the many outstanding features of our own area with the theme of "support your own community." A recent program was devoted to the Monterey Bay area, the beaches at Santa Cruz and the big trees near Santa Cruz.

TV News Digest and Final Edition News.—National and local news, weather and sports.

Special agricultural programs are carried 15 minutes each week. A recent program was presented by the California Dried Fruit Research Institute.

Sports Paradise.—A program of hunting and fishing information including safety hints and interviews with game wardens.

Spot Light on Medicine.—Interviews with doctors from the area we serve on a variety of subjects, including infant care, heart trouble, and detection of cancer. The program presented simulated operations and diagnoses. This program won award for public service programs of the Northern California Academy of Television Arts and Sciences.

You and the Law.—Interviews with area lawyers discussing rights and obligations of citizens under the law.

Guide Dogs for the Blind.—A 1-week annual program devoted to the problems of blind persons. (Live and film.)

Code 1180.—A weekly traffic safety program featuring interviews with police and highway patrol officers who present information leading to traffic safety. (Live and film.) This was a small segment of the Black Flag traffic drive by KSBW–TV which ran in 1955.

Christmas Carols.—For 30 days prior to Christmas KSBW–TV presents all of the choirs of the area. This includes all schoolchildren from elementary through high school, the two junior college choirs, church choirs and vocal groups from Fort Ord and the Army Language School.

A Report on Your Schools.—A 30-minute program presented by the Salinas union school system giving a report to the people on current school curriculums.

All Eyes Are on You.—An annual 30-minute documentary on the 10 health and welfare agencies of the Community Chest.

Your Heart.—A complete information program presenting three of the best specialists in our area. This was preceded by a heavy spot announcement campaign on behalf of the Heart Fund during the national drive.

Fort Ord in Review.—A periodic program presented live in conjunction with the Fort Ord public information office explaining the Army training program and news from Fort Ord.

Shrine Band.—KSBW–TV presents a live band concert featuring the Watsonville Sciots Band about every 90 days.

The Red Cross in Action.—KSBW–TV has earned an enviable reputation for its special annual Red Cross programs. During the last 2 weeks of February and the entire month of March we present a series of programs, live and film, dealing with stories of the Red Cross in our area. This is a report to the people on the work of the Red Cross during the previous 12 months. Interviews with approximately 45 people were presented on the air this year during this 6-week period. The station has consistently been in the forefront of the Red Cross drive, putting it over 3 years in a row in 1 day.

Monterey County Industrial Development Report.—A weekly 15-minute live program giving a report to the people on the industrial development of the area.

Salinas Junior Woman's Club.—This was a series of live programs featuring scenes from the annual play presented by the woman's club for the benefit of a school for the mentally retarded children of the area.

Alcoholics Anonymous.—KSBW–TV presents an annual live program for Alcoholics Anonymous featuring members of the organization who wear masks and explain to the public the work of the organization.

KSBW–TV also provides many of the public service functions of a local newspaper:

1. On four occasions KSBW–TV has been instrumental in locating escaped prisoners from Soledad Prison, one of California's largest medium security prisons.
2. During the fall drought of 1955, KSBW–TV broadcast periodic bulletins on fire hazard conditions.
3. During the Christmas week floods of 1955, KSBW–TV assigned 12 employees to the disaster area to give complete news coverage, warnings, and instructions.
4. Black Flag, a special program for traffic safety.
5. KSBW–TV annually collects food, toys, and clothing for needy families at Christmas.
6. Special programs were devoted to Armed Forces Day and United States Army Reserve Week in cooperation with personnel from nearby Fort Ord.
7. The local, State, and National elected representatives of the public make periodic reports to their constituents.
8. KSBW–TV conducts a local employment-placement service program which has found jobs for many persons.
9. A public appeal over KSBW–TV for a very rare type blood vital for an emergency operation resulted in immediate donation of 7 pints of blood which saved the patient's life.
10. Another public appeal located the parents of a girl who had been seriously injured in Seattle, Wash., and who needed emergency surgery. The operation could not be performed without her parents' consent. Within 30 minutes of KSBW–TV's broadcast the parents, a soldier stationed at Fort Ord and his wife, were located and as a result an operation saved the girl's life.

11. KSBW–TV arranged for watermelons to be flown in from another State to satisfy a request of a child dying of leukemia.

12. Public Schools Week—special programs for the schools' open house.

13. Watsonville Boys Home—special boys home program.

14. There have been special live programs for the YMCA on the opening of their swimming pool.

15. Church groups of all denominations are assisted in their various special projects such as Easter, Christmas, revivals, and so forth.

16. KSBW–TV broadcasts all election returns.

17. Other organizations and features presented through this type of public service programing were: Bicycle Safety, Santa Cruz Community Players, Camber Ski Club, St. Vincent de Paul, Catholic Serra Club, County Welfare Commission, Entre Nous Society, Fine Arts Club, Horsemen's Association, League of Women Voters, Methodist Men's Club, Monterey Bay Mineral Society, Monterey County Tuberculosis Society, Newcomers Club, Nurses Association, PTA, Salinas Valley Memorial Hospital, and Salinas Valley Pets.

II. DESCRIPTION OF OTHER TYPICAL LOCAL LIVE PROGRAMING ON KSBW–TV, SALINAS, CALIF.

Program Previews.—A digest of upcoming TV programs of major interest.

Fun Club With Gary Ferlisi.—A daily children's program which includes some film.

La Hora Mexico.—Special Mexican program with film inserts prepared especially for our large Spanish-speaking population.

Your Garden.—A weekly program featuring hints on gardening and presenting various members of the garden clubs in the area.

Your Hobby.—A weekly hobby program presenting the various people in the area interested in a variety of hobbies.

Do It Yourself Program.—A weekly program featuring the manual arts teacher of the high school who explained how to "fix it" and "do it yourself."

III. DESCRIPTION OF TYPICAL LOCAL FILM AND NETWORK PUBLIC SERVICE PROGRAMING ON KSBW–TV, SALINAS, CALIF.

This Is The Life.—A weekly spiritual series of special religious programs prepared by the National Council of Churches of Christ in the United States.

The Christophers.—A weekly program featuring top Hollywood stars with spiritual advice as to how we can better the various phases of life in the United States.

Man to Man.—A special series of religious films featuring Dr. Ralph Sockman, prepared by the National Council of Churches.

The Big Picture.—A weekly half-hour series of films presented by the United States Army, giving the United States citizen a report on his army.

Industry on Parade.—A weekly series showing little-known stories about United States industry by the National Association of Manufacturers.

United Jewish Appeal.—Special film programs presented annually at the time of the United Jewish Appeal Drive.

Red Cross Report.—Special film programs presented in March showing the work of the Red Cross for the previous 12 months.

In addition to these film series, KSBW–TV also presents special film programs such as The Used TV Tube Racket and Helping The Taxpayer presented by the Bureau of Internal Revenue. KSBW–TV also broadcasts film programs from the United States Coast Guard, United States Navy, National Rifle Association, Immigration Service, Veterans' Administration, Boy Scouts of America, Cancer Society, Cerebral Palsy, Civil Air Patrol, Disabled American Veterans, National Foundation for Infantile Paralysis, Veterans of Foreign Wars, Care, Crusade for Freedom, and Community Chest.

Adventure.—A general educational program.

Face the Nation.—Panel questioning of prominent people in the news.

CBS Sunday News.—Review of the week's news highlights.

Out of the Darkness.—A special program on mental health.

The Search.—A discussion of research projects at various colleges.

Let's Take a Trip.—A children's educational program.

Lamp Unto My Feet.—A religious program.

Mr. Cox. Could you tell us, Mr. Cohan, what percentage of clearance you provide for ABC and NBC in evening option hours?

Mr. COHAN. All the time they order.

Mr. COX. All the time they order—that is, the three networks together do not offer Salinas enough to fill your evening time. I think you indicated an hour and a half left?

Mr. COHAN. We have an hour and three-quarters unsold now and 6¼ hours sold locally—local furniture store, people like that.

Mr. COX. Now assuming, not that option time were to be abolished, but that it would be limited in some way, why is it that this would make such a tremendous difference in the pattern of clearance on the part of stations affiliated with CBS, let's say?

Mr. COHAN. Mr. Cox, this thing of option time being impaired or changed or tampered with—let me give you my picture as I see it—and I have been on both sides of the fence, buying time and selling time.

The 3-hour option time arrangement by the network is an orderly distribution of national advertising. Now, the networks can't get into business as a network and provide the tremendous programing that they have provided without something to sell. Now you can't get into the grocery-store business without having merchandise on the shelf, you can't run a railroad without having the tracks.

Now, it is possible that we might say here that "Let's change this thing, let's make it 2 hours, let's make it 5 hours, what difference does it make?" This I think would be a disaster. I am sincere in my belief that the option-time provision of the networks should not be tampered with. It is working now, it is working well.

Nationwide television network programing is less than 4 years old, sir. Give us time; let's get off the ground.

Mr. COX. Do you have any idea how the 3-hour evening option period was arrived at at the time this was specified in the FCC regulation?

Mr. COHAN. No.

Mr. COX. It represented a compromise, didn't it, between the Commission's inital decision that there would be no option time and the insistence of the networks that they had to have unrestricted option time?

Mr. COHAN. I don't know, sir. But I think you have got to take the basic economic facts of advertising. This is where we all come from, we have to sell this time—the networks have to sell this time. You have got to operate at a profit. You can't continually operate at these tremendous losses or we will be asking the Government for a subsidy.

Mr. COX. Do you think it was just sheer good fortune that they happened to hit on 3 hours—that networks would not have developed if they fixed a period of 2 hours or 4 hours?

Mr. COHAN. If it is working now, Mr. Cox, why should we tamper with it? We have the most tremendous television service in the world, it is working. An automobile—you can build an automobile with 3 wheels—but you can't tell that it is going to run just as well as a car with 4 wheels.

Mr. COX. Let's go back to my original question. Just assuming that some change were made in option time, without trying to fix the extent of this. I still have the question, why, if CBS continued to provide the programs of the quality it now provides, and if your station in Salinas still has unsold time in option time even with affiliations with three networks, the network would not be able to sell you these programs in prime time without the option as well as it can with the option?

Mr. COHAN. Would you restate that?

Mr. Cox. Well, assuming some modifications of option time, but that CBS, desiring to continue in the networking business, continues to offer programing of the quality it now provides; and assume that your station still has time unsold despite relations with three networks; now why wouldn't you be as willing to accept this high quality programing from CBS and the other two networks without the option as you now are with the option?

Mr. COHAN. If you tamper with option time, you are going to start an erosion of the networks, piece by piece and bit by bit. Maybe not today, maybe not tomorrow, maybe not next week. But if a network operates, it has got to have something to sell. It is like the grocery store, it has to have something to sell. Now I can't go to an advertiser and say, "I have got something to sell" if I don't have it under option. How could CBS go and say "We want to sell you an hour," and the advertiser would say, "How do you know you can deliver?"

Mr. Cox. Does CBS sell an hour of time on any affiliated station without having previously ordered that hour specifically and gotten confirmation from the station that it will clear time for that program in that time slot?

Mr. COHAN. You mean before they go to see the advertiser, do they sell it?

Mr. Cox. Do they sell the time—that is, do they ever sell time to a national advertiser over any specific station without having specifically ordered that time for that program?

Mr. COHAN. First? You sell—it is my understanding that CBS goes and sells the program and then asks for the clearance, according to their option time contract.

Mr. Cox. Now when they are talking to the network before they send out the TWX, though—to the advertiser, I mean—have they committed themselves to the advertiser that they will clear in any specific market, or in any number of markets?

Mr. COHAN. I understand that our option-time agreement means that CBS has the right to commit us for delivery of our markets before they sign the contract.

Mr. Cox. Do you know whether that is their practice?

Mr. COHAN. Well, it would be if it was mine; if I was selling time, I wouldn't want to walk into a man's office and say, "I want to sell you a program," unless I knew I had stations to deliver.

Mr. Cox. What, however, if when they try to sell Salinas you find the program is less desirable than Badge 714, or that you have committed yourself to a local advertiser and you don't feel you can make way for this national programing? Now what happens at that point to the fact you say they had to be able, in advance, to assure the advertiser that they could clear Salinas?

Mr. COHAN. Well, it hasn't happened and I don't think it will happen. There is still a lot of time for sale on all the networks.

Mr. Cox. On the networks?

Mr. COHAN. Yes, sir.

Mr. Cox. That is unsold?

Mr. COHAN. Yes, sir.
Mr. COX. CBS has a half hour unsold in evening option time, isn't that true?
Mr. COHAN. Well, Mr. Cox, I am a broadcaster. If I am broadcasting 12 hours a day, I have 12 hours to sell; my clock has more than 3 hours. And I have got to, as far as I am concerned. Many daytime programs, many programs directed at women are better than nighttime shows, and there is still lots of time to be sold.
Mr. COX. Now you mentioned the freedom of access for independent film programs on your station—the number of such programs that you carry. Do you have any idea of the relative degree of access which syndicators of such programs have in, say, a 2-station market among the top 50 markets of the country?
Mr. COHAN. Well, of course, I am not familiar with the top 50 markets. I haven't heard of anyone not being able to buy time in the United States today that wants it.
Mr. COX. On a nonnetwork basis in option time?
Mr. COHAN. Any place, anywhere.
Mr. COX. Can he get it in the hours 7:30 to 10:30?
Mr. COHAN. Well I would assume he could, or he could at least in some cases, and if he can't get it into 7:30 to 10:30, why doesn't he take twice as much time in the daytime and get the results? All he wants is results.
Mr. COX. However, if his program is one directed at an adult audience of both sexes, he is never going to be able to duplicate, in daytime, the audience he can get at night?
Mr. COHAN. Eighty-five percent of the purchases in the country today are made by women. I will take the women. I don't care whether men ever look at it.
Mr. COX. Don't the figures also show, though, that even as among women, that you get a higher peak of viewing audience in terms of total numbers?
Mr. COHAN. Not relative to dollars you spend.
Mr. COX. Well, then——
Mr. COHAN. This is an economic business, Mr. Cox.
Mr. COX. Have you ever been able to persuade a national advertiser who asked for clearance in evening option time that, rather than accepting some other evening hour, he should put this on at 10 o'clock in the morning in Salinas?
Mr. COHAN. We have very often recommended that a man can get more for his dollar by taking another segment of programing, even though we have the A time programing available—that he can get more out of other types of advertising.
Mr. COX. This is a program that is shown on the network in evening time.
Mr. COHAN. No, no. I didn't understand your question, if that it what you——
Mr. COX. No. My question is: Suppose that you are ordered for a network show which the network releases in evening option time—you can't clear at that time. Now would you feel that you would be on sound ground if you advised this sponsor, who has designed a program to appeal to the evening audience, that he should accept a time on your station either before noon or in the early afternoon?
Mr. COHAN. We have never been faced with the particular problem.

But in our section, Sunday is sometimes a lot better than at night. Sunday morning, Sunday afternoon.

Mr. Cox. You suggested the possibility of development of a fourth network, and pointed to the fact that there are 36 independent stations which have coverage, I believe you said, of 43 percent of the television sets in the country?

Mr. COHAN. Right.

Mr. Cox. Now isn't it true that the American Broadcasting Co., with its present affiliation arrangements and present ability to clear, can accomplish clearance for far more than that percentage of the market, but still states frankly to this committee that it does not regard itself as yet being in an equally competitive position with the two major networks?

Mr. COHAN. Mr. Cox, give ABC time, they will be. You can't build Rome in a day. Television is only 4 years old. There will be other stations in other markets. You just can't do this thing overnight. This would be like the Government telling the Army, "Go build me a nuclear airplane by day after tomorrow."

There are tremendous technological problems, there are program problems, there are interconnection problems. There has become a gigantic industry overnight. This will be solved. There will be more stations in all markets. There are many stations in hearing now that will soon be allocated, soon be on the air.

Mr. Cox. Are you familiar with the statement of Chairman McConnaughey of the FCC that when all of the in-hearing applications are heard, there will still be fewer stations—66 of the top 100 markets in this country will have 2 or fewer stations that are of equal competitive ability?

Mr. COHAN. I am not familiar with the statement, but you just give the engineers time and they will work it out.

Mr. Cox. I wish I had your confidence.

Mr. COHAN. Well, Mr. Cox, just as a byplay on this, if anyone had ever told me that you could put a picture and voice on tape, I would say you are crazy. And when I sat there, I felt like the man that was in on the discovery of the telephone, running it right back. So give the engineers time; we will work this thing out.

Mr. Cox. That is all.

Senator PASTORE. Thank you very much, Mr. Cohan. We will take about a 2-minute recess.[8]

(A short recess was taken.)

Senator PASTORE. Let the committee come to order.

The next witness we have is Mr. H. Moody McElveen, Jr., from Columbia, S. C.

STATEMENT OF H. MOODY McELVEEN, JR., VICE PRESIDENT AND GENERAL MANAGER, WNOK–TV, COLUMBIA, S. C.

Mr. MCELVEEN. Mr. Chairman and members of the committee, my name is H. Moody McElveen, Jr. I am vice president and general manager of Palmetto Radio Corp., licensee of UHF station WNOK–TV, channel 67, in Columbia, S. C. WNOK–TV is a primary affiliate of CBS and a per program affiliate of ABC. In Columbia there is also a VHF station, WIS–TV, channel 10, an NBC affiliate.

[8] The program schedule of KSBW–TV for the week of April 8–14, 1956, will be found starting at p. 2967.

As a UHF station, WNOK–TV has had special problems. It is difficult to operate a UHF station, especially in competition with a VHF facility. At the outset we were delayed in getting on the air for some 8 months because our equipment supplier was late in producing our transmitter. Instead of having a lead of almost a year on our local VHF competition as we had expected, we went on the air at about the same time. Although we now get out a good signal for the area we cover, we cannot operate at full authorized power, because the equipment is not available to permit it. We have run into resistance from national advertisers, both network and nonnetwork, because of the unfortunate prejudice which exists against UHF operations.

Up until recently there were 2 UHF and 1 VHF stations in Columbia, but things were so rough all around that the other UHF station asked us to buy them out. We made arrangements with them that were agreeable and they ceased operations. This has helped somewhat. However, competing against a VHF facility is still not easy.

I am not here to plead a special case for the problems of the UHF operators. I do want to stress, however, that these problems are not the result of affiliate-network practices. On the contrary, the affiliate-network partnership with CBS, operating with option time and a requirement that a network advertiser purchase a basic group of stations, has been the most important factor in helping WNOK–TV cope with the problems of UHF operation. Without this network affiliation and the tremendous and understanding cooperation of CBS television, our UHF station probably would not be on the air today.

We sought network affiliation upon receipt of our construction permit because we knew that without strong programing we couldn't even hope to survive. Building an audience for a UHF station is difficult, even with good programing. It was obvious that we could never build and hold an audience with local live programs, free movies, and what few top-grade syndicated programs and feature films we could afford. We knew that the public in the central South Carolina area expected television to provide first-class entertainment and that they would prefer live shows. We knew they would want world-wide news, public affairs programs, sports, and other special events. Only a combination of network and local programing could satisfy such broad public tastes and we were determined to attract an audience by appealing to these tastes.

Although our CBS network affiliation today provides the backbone for our programing structure and our ABC programs are a very considerable help, we never have been naive enough to think that a network affiliation alone would directly provide enough programing for successful operation. Just because we are an affiliate does not mean that a network advertiser will order our market for a particular program. The affiliation affords us an opportunity to sell our market to network advertisers. Affiliation is only a backbone to which the station must add the flesh.

It has been an uphill fight to add this flesh to WNOK-TV because national advertisers, purchasing time either on a network or on a national spot basis, are prejudiced against UHF stations. We have been able to obtain national advertisers we could not otherwise have obtained through strong, direct personal selling, combined with an all-out sales effort by our partner, the network. CBS has often put us on the track of advertisers whom they believed could be convinced to order channel 67, and they have helped us to close a number of orders where there was initial advertiser resistance.

It is in this connection that option time and a basic group of stations are essential to sound networking and, in turn, to a truly nationwide system of television.

Option time is no pernicious device conceived by networks to coerce affiliates, as some earlier witnesses have stated. It is a simple practice necessary for sound business operations, and is absolutely essential to orderly operations on the network level. If advertisers could not be assured of live clearance of a large number of affiliated stations on short notice, network television would end. And if networks become ineffective, I doubt if many UHF stations in markets the size of ours would receive much attention from national advertisers whose budgets would be depleted trying to secure access to a handful of VHF stations in large markets. Many advertisers might forsake television altogether in favor of other media. Thus, without option time the high quality television service now available to Americans throughout the country would be found only in a relatively few big cities and the concept of a truly nationwide system would have been dealt a lethal blow.

A basic group of stations is also vital to successful networking and to the nationwide system of television for which Congress, the FCC, and networks and their affiliates all are striving. Without a basic group of required stations an advertiser could purchase the facilities of a network for service to only a few markets. This would soon destroy the function of a network as a nationwide advertising and programing medium, for when its facilities are tied up by orders for a few big markets they are unavailable for service to the rest of the country. Moreover, requiring purchase of a basic group of stations often induces advertisers to buy more than the basic group. In that way the people of Columbia are directly benefited even though WNOK–TV is not a basic required affiliate. Once an advertiser has committed himself to purchase the basic network we have found it much easier to convince him to add $200 to his budget in order to reach the central South Carolina market. The additional cost, in the light of audience delivered, does not increase appreciably his cost per thousand and may actually reduce it. Were an advertiser not required to purchase a basic group of stations, the people in our market might be deprived of our network service for most of the broadcast day because WNOK–TV would be far less successful in convincing a network advertiser to purchase time on channel 67.

The backbone of network programing received through affiliation enables us to provide more and better service to central South Carolina. The fine network programs please the public, add prestige to our station, and increase our circulation. They also free our small staff and limited facilities from the burden of creating an entire program structure and permit concentration on quality local programing. It is during network programs that our personnel prepare and rehearse our local programs. If we had to develop all of our own programs, we would have to reduce drastically our time on the air. Moreover, a UHF station the size of WNOK–TV in a market like ours could not possibly do a creditable job of programing by itself, day in and day out, nor be competitive with the VHF station in the community. Without a backbone of network programing, local live programs—no matter how worthy and important the content—could not receive the careful and thorough preparation that they require. While viewers might be tolerant of low-quality programing in the beginning, their interest would soon disappear and the very purpose of the programs would be defeated.

In return for the many benefits which affiliation brings, we are able to uphold our part of the affiliate-network partnership by providing an outlet for CBS network programing and advertising in central South Carolina. The charge that the practices governing this partnership lead to coercion, domination, or intimidation of affiliates is utterly ridiculous.

If there were a shred of truth in the charge, a small, struggling UHF station would never reject a network order for the top program in the country in favor of a local baseball game. Yet WNOK–TV did just that. We refused to clear, during option time, for the $64,000 Question because we believed that the public would prefer to see the only local baseball telecast in South Carolina. CBS' only comment was a request that we clear time for the program after the baseball season, which we did. There have been similar instances of rejection or preemption of network programs in option period and the cooperative attitude of true partnership has always prevailed.

We believe that it is a privilege to be a licensee of a television station and we resent the charge that, because of affiliation, we have abdicated our responsibility as a licensee. We are keenly aware of our responsibility to the public and our program standards are high. Our schedule includes entertainment, sports, news, religious, educational, agricultural, public event, and general information programs blended to reach and to appeal to all groups in our community. Moreover, these programs come from various sources—networks, film distributors, and our own studios. Within our means we try to present the best program available to us in each category, and this includes our local programs.

We were the first station in South Carolina to televise live Sunday morning church services and we are still the only station rendering this service in our part of the State. Through the auspices of the Columbia Ministerial Association, we also do a daily devotional series entitled, "In His Service." Kim Calling, our half-hour biweekly cultural and local affairs program, is carried in evening option time. We have a local newsreel program, filmed by our own staff within a radius of 50 miles of Columbia, which is also unique in our area. Our local biweekly traffic safety program, The Highway Show, carried in local-option time, received the National Safety Council award. We present a weekly live program in cooperation with the United States Public Health Service and the South Carolina State Board of Health dealing with community health problems. The local civic theater group periodically does live dramatic programs on WNOK–TV. A recent one was on behalf of the American Cancer Society. We recently completed a 26-week live series in cooperation with the Internal Revenue Service entitled "Tax Tips." A more complete description of our public service programing is contained in the appendix to my statement (sec. p. 2598).

The charge that affiliate-network practices deny nonnetwork advertisers and independent programs access to television likewise is false. More than 40 percent of our total program time is from nonnetwork sources. Between 6 and 11 p. m., more than 30 percent and between 7:30 and 10:30 p. m., 19 percent of our program time is from non-CBS network sources. This is far from exclusive, especially when you consider that many of the programs which our community desires are available only through the facilities of networks.

Strong networks are far more necessary in television than they ever were in radio. Strong networks are particularly important to UHF affiliates. The tremendous cost of television programing makes networks operating with option time and a group of basic stations essential if there is to be adequate television service in small and medium size communities like Columbia. The public expects and deserves a variety of constantly superior programs. The affiliate-network partnership is the best way to obtain a backbone of such programing around which a comprehensive schedule can be built. Any action that weakens the ability of this partnership to operate as it now does would destroy or degrade television service to the public.

APPENDIX TO THE STATEMENT OF H. MOODY McELVEEN, JR., VICE PRESIDENT AND GENERAL MANAGER, WNOK-TV, COLUMBIA, S. C.

I. DESCRIPTION OF TYPICAL LOCAL LIVE PUBLIC SERVICE AND PUBLIC AFFAIRS PROGRAMING ON WNOK-TV, COLUMBIA, S. C.

Sunday Morning Church Services.—(Current.) For the past 9 months, we have televised live the Sunday morning church services from the First Baptist Church of Columbia. It is our plan to continue this service indefinitely because of the overwhelming public response.

The Highway Show.—(Current). A live half-hour biweekly program devoted to traffic safety and produced under the auspices of the South Carolina Highway Department.

An Apple a Day.—(Current). A weekly live quarter-hour program in cooperation with the South Carolina State Board of Health and the United States Public Health Service dealing with community health problems.

In His Service.—(Current). A daily live 15-minute devotional program through the auspices of the Columbia Ministerial Association. Each guest minister is selected by the Ministerial Association.

Columbia Newsreel.—(Current.) The only program in this area made up of movie film shot within a radius of 50 miles of Columbia. This program, filmed by our staff, is a commercial weekly half hour that has been aired 2 years.

Local Baseball.—(Current.) We are the only station that does local live baseball in South Carolina. Last year we did 20 games of the local class A South Atlantic League team and this year we are doing 10 live baseball telecasts. Ownership of the ball club changed the first of this year, and the new owners felt that more than 10 televised games would be detrimental to attendance.

Tax Tips.—A recenty completed series of 26 15-minute live programs in cooperation with the United States collector of internal revenue.

Town Theatre.—The Columbia Town Theatre last month did a very fine live dramatic quarter-hour public-service program on our station in behalf of the American Cancer Society.

Columbia Church Choirs.—This half-hour program was done on an interdenominational basis live from our studios each Sunday evening. Each program presented a different choir.

Pixie Panel.—This half-hour weekly program was patterned after a kindergarten and had 8 different youngsters each week in the age group 5 to 7. The program was endorsed by several Sunday schools and PTA groups.

Kim Calling.—(Current.) A cultural and public-affairs program dealing with a variety of topics such as the Speech Correction School, the Crippled Children's Society, the United Fund Campaign, Columbia Art Museum, Columbia Music

Festival, Town Theatre, and so forth. A half-hour biweekly program with Mrs. Kim Difilippo as hostess.

Harmony Boys.—A group of University of South Carolina students who sing gospel music one-half hour weekly.

Teen Time.—A panel of six teen-agers representing the different high schools in the Greater Columbia area with music and current teen-age topics each week for a half hour.

Don Robertson News.—A daily early evening summary of news, weather, and sports; with emphasis on local coverage of news events in and around Columbia.

Final Edition.—A daily late evening news program followed by a sports program. Both the news and sports deal with local, regional, national, and international events.

Election returns.—Complete coverage of local and national contests and primaries. We are the only station in our area that covers these returns with a complete live camera and production crew located at party headquarters.

University Forum.—A biweekly half-hour forum on current events, presented in cooperation with the University of South Carolina, with the director of the university extension division serving as moderator.

Columbia on Camera.—A man-on-the-street program interviewing local people on current issues.

II. DESCRIPTION OF TYPICAL OTHER LOCAL LIVE PROGRAMING ON WNOK–TV, COLUMBIA, S. C.

Country Junction.—(Current.) A weekly half-hour program of country and western music featuring a six-piece band and a vocalist.

Robbie's Roundup.—(Current.) A local girl dressed as a cowgirl reads letters, interviews children, and shows a complete western movie daily.

Christmas Parade.—Annual live coverage of the largest and most colorful parade in South Carolina.

Christmas Choir.—Each Christmas for the past 3 years the all-Negro choir from one of Columbia's largest churches has presented a program of Christmas carols.

III.—DESCRIPTION OF NETWORK AND LOCAL FILM PUBLIC SERVICE PROGRAMING ON WNOK–TV, COLUMBIA, S. C.

The Big Picture.—Produced by the Army Signal Corps to keep the public informed about, and to stimulate interest in, the Army and its recruiting program.

The Pastor.—Produced and distributed by the National Council of Churches.

The Christophers.—Produced and distributed by the Christophers, this program advocates the return to the basic ideals of freedom.

Each week we run a number of public service films. During the week of April 8–14 the following public service films were broadcast: Rehearsal for Disaster, Senator Olin Johnston Reports, Short Cuts in Sewing, ABC's of Beef Cooking, Holiday Paradise, Mightier Than the Sword, Virgin Island Vacation, Pan American Games, and March of Dimes Fashions.

CBS Sunday News.—(Current.) A comprehensive weekend coverage of national and international news.

Face the Nation.—(Current.) Distinguished guests answer questions from a panel of reporters.

Adventure.—(Current.) A series in cooperation with the American Museum of Natural History embracing a wide variety of fields in science, nature, and human relationships among civilized and primitive societies.

Look Up and Live.—(Current.) A religious series presented in cooperation with the New York Board of Rabbis.

Let's Take a Trip.—(Current.) Weekly televisits to unusual and exciting places directed to the Nation's youth.

The Search.—Each week a different research project or unique educational activity in progress at one of the country's leading colleges or universities is described.

United Nations in Action.—Highlights of the activities of the U. N. sessions.

Lamp Unto My Feet.—A religious series in cooperation with the National Council of Churches of America.

Now and Then.—A series of lectures on literature by Dr. Frank Baxter.

Talkaround.—A panel discussion of current events.

VE Plus 10.—A program recalling events of May 8, 1945, the day of victory in Europe, featuring interviews with President Eisenhower, former President Truman, Generals Bradley and Spaatz, Secretary of State Dulles, and others.

Addresses by President Eisenhower.

Special News Broadcast.—The latest results of the British elections.

Special Address.—Adlai E. Stevenson to the 93d Annual Convention of the National Education Association.

Flood—the Story of Main Street.—This program featured Jackie Gleason and promoted nationwide support for the Red Cross and other relief funds designated to aid the flood-stricken communities of the Northeast.

Religion In America.—A special film, including discussion on children and Sunday school.

Special Address.—Secretary of State John Foster Dulles.

Thanksgiving Day Festival.—Symphony orchestra and ballet.

Christmas Eve Program.—A religious program from Boys Town.

Years of Crisis.—A special year-end roundup of news.

Special Address.—Sir Anthony Eden.

Special Address.—Secretary of Agriculture Ezra Taft Benson in answer to Edward R. Murrow's See It Now farm problem broadcast.

Out of Darkness.—A program depicting the nature, causes and treatment of mental illness and demonstrating dramatic evidence of progress in the battle against the Nation's No. 1 health problem.

Salute to Mamie Eisenhower.—A birthday tribute to the First Lady.

Philadelphia Forum.—A debate between Paul M. Butler, chairman of the Democratic National Committee, and Leonard W. Hall, chairman of the Republican National Committee.

Special Easter Morning Services.—A broadcast directly from the National Cathedral in Washington, D. C.

Ringling Brothers Barnum & Bailey Circus.

Special Address.—Senator Alben W. Barkley at the Democratic Committee Woodrow Wilson Dinner.

See It Now.—A series by Edward R. Murrow dealing with such subjects as The Vice Presidency—The Great American Lottery, The Farm Problem—A Crisis of Abundance, and Egypt and Israel.

Mr. Cox. Mr. McElveen, you indicated that, in the period 7:30 to 10:30 p. m., 19 percent of your program time was from non-CBS network sources. Could you tell us what percentage of that 19 percent was occupied by ABC programs?

Mr. McElveen. Yes. I think that 11 percent is from no network at all.

Mr. Cox. And the balance——

Mr. McElveen. And the remaining 8 percent is from ABC, yes.

Mr. Cox. This, of course, is the situation as you find it in your two-station market in Columbia. Do you have any information as to whether there are any like availabilities for nonnetwork programs in larger markets falling in the two- and three-station category?

Mr. McElveen. Mr. Cox, I don't know the exact availabilities there are in other markets. Judging from the testimony which I have heard this morning, it would indicate that the other gentlemen here from television stations say they have time in those periods, so I would assume so.

Mr. Cox. The committee has heard testimony from Mr. Moore that, based upon his study, I think it was, of 40 markets which were on the must-buy lists of both NBC and CBS, it was determined that either 93 or 96 percent, depending on whether you included delayed broadcasts, of the programs offered to the major network affiliate, were cleared in the period 7:30 to 10:30. Now, if that is true, that would leave nothing like the order of your availability in those markets.

Mr. McElveen. I know that we have an awful lot of time to sell. Now, what situation may be in other markets as to their existing availabilities, as I say, I could not give you answer on that.

Mr. Cox. Now, you indicated very clearly the reasons which made you want a network affiliation. Is one—I gather that one of the factors which led you to want an affiliation was a desire to get the outstanding programs that are offered by the network?

Mr. McElveen. That is right, yes.

Mr. Cox. Now, do you feel that all of the programs that are offered by the network are of the same quality?

Mr. McElveen. Oh, no.

Mr. Cox. Is there a possibility, if your market was ordered more extensively by national advertisers, that you would find yourselves being asked to clear for programs which, while not affirmatively unacceptable, did not in your mind hold up to the standards of overall CBS programing?

Mr. McElveen. Well, Mr. Cox, if we could—if I can assume that you mean that if we are ordered for programs that are below the existing standards, is that what you have in mind?

Mr. Cox. Well, let's suppose that you could set some kind of an average.

Mr. McElveen. That we as an affiliate set, all right.

Mr. Cox. That you said this class of program is definitely superior; this class of program, is, we think, of average quality, and then perhaps there are one or two included in the schedule which you would regard as not being of the same level of quality.

Mr. McElveen. Yes, I think that is true, that there are such programs.

Mr. Cox. Now, under the option system, then, is there a possibility that you may find yourself scheduled to clear for these programs which you don't regard, in and of themselves, as of such high quality, but you would be willing to take them because they are a part of the program structure which is offered to you and a large percentage of which you do desire?

Mr. McElveen. Well, in our particular case, Mr. Cox, as I stated, we have time available. Now, if a program meets—there are several standards. One is if we think a program is excellent. One is if we think it is at the other extreme, totally unsuitable. Obviously, if it is totally unsuitable for our community, in our judgment, we would refuse it, regardless of what the source. If on the other hand, the network or any other source would approach us with a program that we thought was a reasonably good program, not superior, and we had the time available, we would certainly try to clear for it, yes.

Mr. Cox. Supposing, though, that you reach the fortunate state where you didn't have all this time available, and they offered you a program which you would put in this second category of not being, you thought, as good as CBS ordinarily did.

Mr. McElveen. Yes.

Mr. Cox. Isn't it the purpose of the option to get you to clear time for that program, even though you might feel that there was a better program available from another source?

Mr. McElveen. As I understand our commitment with the option, this is the way we would try to administer it: If CBS offers us a program that obviously, we feel, is a superior program, we accept it. If, on the other hand, CBS offers us a program that we feel is as good as what we now have in the period, or what we could obtain to put in the period, we would still accept it. Now, we feel there is where the network has the advantage because of the option. We feel they are entitled to that advantage. That is what, actually, they get from us; that is, our giving part of this agreement. If the third case is true, which you mention—or which we are talking about—the network program is obviously far inferior, then I doubt seriously if we would accept the network program.

Mr. Cox. Then you feel that all that the option gives the network is the benefit of the doubt when the network and the nonnetwork program seem to be of about equal quality; is that what you are saying?

Mr. McElveen. I think that we, as independent operators and licensees, have to exercise judgment on all programs, network or otherwise, to the best of our ability.

But from my point of view, and the experience we have had with CBS programs, it is that there have been no truly bad programs, there have been some that we didn't think were as good, from a rating point of view, as others. But if it gets to the question of does the network have a slight advantage over other sources if the program is of equal quality, I would say "Yes." My interpretation is that they are entitled to that advantage. In effect, that is all they have gotten from us.

Mr. Cox. In that situation, however, you have no real incentive to take the nonnetwork program? You would gain nothing in terms of——

Mr. McElveen. In our particular case, we would have an incentive to take any commercial program, if it was at all acceptable, because we need the business.

Mr. Cox. You would actually find time for both of them, as I understand?

Mr. McElveen. We would make every effort to; yes.

Mr. Cox. Can you tell us whether, in general, CBS has been willing to—as willing to affiliate with UHF stations in other markets and to stand by them in the difficulties that they have encountered in competing with VHF competition?

Mr. McElveen. I would say "yes." Now I have a list here that we made of all the CBS–UHF affiliates. Now, there is one, of course, that is a CBS-owned station. So we will discount that. There are 14 that fall in the same basic category that we do, which are basic optional, and they are all interconnected. We are included in that 14. There are 6 additional, to the 14, that are called supplementary, and they are interconnected. One is in South Carolina—Anderson—which I am familiar with. There are 6 in the extended market group, UHF stations that are interconnected, and there is 1 in the extended market group that is not interconnected, UHF.

Mr. Cox. Would you provide us with a copy of the list for the record.

Mr. Jennes. Be glad to do that.

(The list is as follows:)

CBS–UHF Affiliates [9]

BASIC REQUIRED GROUP

City	Call letters	Channel
Milwaukee, Wis	WXIX	19

BASIC OPTIONAL GROUP, INTERCONNECTED

Albany, N. Y	WCDA-TV	41
Baton Rouge, La	WAFB-TV	28
Columbia, S. C	WNOK-TV	67
Erie, Pa	WSEE-TV	35
Fort Wayne, Ind	WIN-TV	15
Harrisburg, Pa	WHP-TV	55
Hartford, Conn	WGTH-TV	18
Henderson-Evansville, Ind	WEHT	50
Montgomery, Ala	WCOV-TV	20
Reading, Pa	WHUM-TV	61
Scranton, Pa	WGBI-TV	22
South Bend, Ind	WSBT-TV	34
Springfield-Holyoke, Mass	WHYN-TV	55
Youngstown, Ohio	WKBN-TV	27

SUPPLEMENTARY GROUP, INTERCONNECTED

Anderson, S. C	WAIM-TV	40
Lima, Ohio	WIMA-TV	78
Madison, Wis	WKOW-TV	27
Peoria, Ill	WTVH-TV	19

Lake Charles, La	KTAG-TV	25
Parkersburg, W. Va	WTAP	15
Salisbury, Md	WBOC-TV	16

EXTENDED MARKET GROUP, NONINTERCONNECTED

Decatur, Ala	WMSL-TV	23

Mr. Cox. Do you have any idea how many UHF stations formerly affiliated with CBS have had their affiliation terminated when a VHF affiliation became available in the market?

Mr. McElveen. I wouldn't be in a position to know that; no.

Senator Wofford. Just one question, Mr. McElveen.

Mr. McElveen. Yes, Senator.

Senator Wofford. In this area of networking and network relations as you know them, do you have any suggestion, or is there any way that you could suggest that this committee might possibly help?

Mr. McElveen. Well, Senator Wofford, I think that it is absolutely imperative that the existing formula or arrangement that now exists for option time and for the basic network be continued and I think that—I feel that any Government-inspired change of this existing system would probably be extremely detrimental to those of us in the smaller markets, certainly. And, I hope that this committee can agree with us that any change would work actually to the disadvantage of the people.

[9] Since Mr. McElveen's appearance the situation as to the UHF affiliates of CBS has changed as follows: CBS has acquired the Hartford station and it and the Albany station have been added to the basic required group; WISC-TV, a VHF station, has replaced WKOW-TV as the affiliate in Madison; and the stations in Reading and Kingston have left the air.

Senator WOFFORD. Thank you very much, Mr. McElveen.[10]

The next witness will be Mr. Donald W. Thornburgh, from Philadelphia, Pa.

STATEMENT OF DONALD W. THORNBURGH, PRESIDENT AND GENERAL MANAGER, WCAU-TV, PHILADELPHIA, PA.

Mr. THORNBURGH. Thank you, sir.

For the record, my name is Donald W. Thornburgh. I am president of WCAU, Inc., which is the licensee of WCAU-TV, the Philadelphia Bulletin television station on channel 10 in Philadelphia. WCAU-TV is a primary and basic required CBS affiliate. There are two other television stations in Philadelphia, one owned and operated by NBC and the other an ABC affiliate. Philadelphia is served by a fourth station, a nonnetwork VHF station in Wilmington, Del., which is approximately 15 miles from the city limits of Philadelphia.

I do not take lightly the responsibility and privilege of appearing before this committee any more than I take lightly the responsibility of managing the WCAU television and radio stations in Philadelphia.

It is perhaps fitting at the outset for me to point out that, like most other broadcasters, we at WCAU are mindful of our duties as citizens and as active members of our local community. I am proud of the contribution which our staff makes to the well-being of the city of Philadelphia, both in the daily operation of our station and in the energetic and enthusiastic devotion of time to a large number of local public service organizations.

I take this committee's time to say this at the outset because, it seems to me, our performance in the operation of our station and the great devotion of our staff to outside community organizations is an appropriate answer to the suggestion that broadcasters see nothing but the dollar sign and only take but never give.

Like most other broadcasters I, too, am greatly disturbed over the attack on network operations and the affiliate-network relationship. In view of the testimony which has already been heard, it would be redundant for me to describe again the great achievements which the television industry has accomplished in so short a period of time. Also, since I believe that the testimony given last week and today clearly demonstrates that the option-time provision and the network's basic network requirement, sometimes referred to as must buy, are absolutely essential to effective networking, I will not attempt to develop these points any further. In my testimony I would like to concentrate on a charge that has been made during these hearings against our station in its relations with the network and its broadcast operations.

Mr. Richard A. Moore, president of KTTV, Inc., of Los Angeles, has seen fit to use WCAU-TV and its programing as one of the major city stations that illustrate his contention that, because of alleged network control, affiliates do not operate their stations in a manner that is responsive to the needs of the local public.

Our principal interest—I repeat, our principal interest— is in operating to the satisfaction of the people of the Philadelphia area, and we are confident that this critical attitude about our operations is not shared by the public we serve. However, since the purpose of this attack is to show that something is wrong with the television networks

[10] The program schedule of WNOK-TV for the week of April 8-14, 1956, will be found starting at page 2969.

and the relations between affiliates and the networks, we are particularly anxious to demonstrate that the conclusions Mr. Moore is trying to persuade this committee to reach are utterly without foundation.

In my testimony, therefore, I will demonstrate the following points:

1. WCAU-TV is responsible for its television operations and is in no manner or means controlled or dominated by CBS Television.

2. WCAU-TV programs the way it does because it believes its programing is in the best interest of the viewing public in the Philadelphia area, and our viewing public has demonstrated that we are correct by their enthusiastic acceptance of our programing.

3. WCAU-TV not only brings to its public an excellent pattern of network programs but also does an outstanding job of local programing and public service programing.

4. Far from being controlled by CBS television, we are a working partner of CBS television and we believe that both of us benefit from what is essentially a cooperative relationship.

5. I shall show that, as in so many other markets, nonnetwork programs are not denied access in the Philadelphia area.

Our general programing policy is to provide the best possible balance of high quality entertainment, education, public information, news, religious, and other programs for the television public we serve. We have attempted to achieve this policy by integration of local live and film programs with the CBS network programs. The top flight programs available through the network are of inestimable value to our station. But it is a truism, going back far into my days of radio, that a good network affiliation alone is not enough, and would not be enough even if there were so such thing as a Federal Communications Commission which periodically reviews the station's programing.

I used to be amazed at the difference in the audience rating among affiliates of the same radio network which, largely, was a result of the local programing concept of the individual station and of the local acceptance of the individual station. What the station does along the line of developing local talent personalities, popular news programs, effective public service, selection of transcribed programs in the case of radio and now film programs in the case of television has a tremendous amount to do with the true success of any broadcast station. And people like me who have spent our lives in this industry become particularly incensed when we hear that all that an operator of a successful large station has to do is "patch into the network." I abhor that phrase and I resent that phrase. And I will show you why I do.

In the first place, I would like to point out to this committee that WCAU-TV has itself built several million dollars worth of programs for the CBS network. The Peabody award winner What in the World was one of our programs. Contest Carnival was another. Kid Gloves and Action in the Afternoon as well as our famous Big Top program, which is now in its sixth year of sponsorship over the CBS network, were all creative products of our staff.

Currently WCAU-TV is originating locally an average of more than 9 hours of programing each day, of which more than 3 hours is live. I emphasize that this includes no network programs whatsoever, and there are a number of television stations in the United States whose total daily program schedule is less than our locally originated programing.

To do an effective job of local programing we have built the finest facilities and established a large staff of qualified personnel. And I am proud to be able to tell this committee that in 1 year WCAU-TV won almost every major award for excellence in local general programing, in education and in public service, including the George Foster Peabody award, the Alfred I. Du Pont award, the Sylvania award, the Ohio State University award, the Variety show management award, the General Federation of Women's Clubs award and the Freedom Foundation award. And, although we have not been able to match this performance in every year, there has not been a single year when we have not won a major award for local station operations.

We are particularly proud of our local public service and public affairs programing. By this I have in mind religious, educational, instructive, and informative, news, forums, panel discussions, speeches and other programs devoted to public issues, special home programs and agricultural programs. It is perhaps appropriate to compare what we do along these lines with what Mr. Moore's nonnetwork station KTTV does in Los Angeles. We made this comparison for a recent week and we discovered that, while we are broadcasting 2 hours a day of local live programs of the above types, KTTV was broadcasting only a little more than an hour a day.

Comparison of certain categories is particularly interesting. We were broadcasting more than four times as much local live educational and instructive and informative programing as KTTV. We were broadcasting almost 50 percent more news programing than KTTV. We were broadcasting more than 2½ hours of agricultural programs in cooperation with Pennsylvania State University and Rutgers University for the farming community in eastern Pennsylvania, southern New Jersey and northern Delaware, while the farmer in southern California had to tune in on a station other than KTTV to find an agricultural program.

Again, I emphasize that I have been discussing only local live programs. If you also take into account our local film programs and network programs in these categories and KTTV's local film programs in the same categories, the disparity becomes even greater. Our total public-service and public-affairs programing from all sources totals 21 hours a week as compared with 11 hours a week for KTTV.

I have singled out KTTV for this comparison not out of malice but to compare the responsiveness of our network-affiliated station to the public interest as compared to the responsiveness of a nonnetwork station of which, certainly, KTTV is one of the best known examples in the country. The facts are as I have just described them.

Included as an appendix to my prepared statement is a brief description of our programing in each of the above categories. (See p. 2609.)

Now, against this background of our local programing, a more valid appraisal may be made of the charge that, because most of our programing in the 7:30 to 10:30 p. m. evening option period is network programing, we are not doing an effective job of service for the people of the Philadelphia area. It is quite true that, with only a few exceptions, our programs during these time segments are principally network programs, but the reason for this is not control by the network as has been suggested. The reason is that we believe that network programs, by and large, are the best programs available, and, in the few instances where they may not be the best, they are certainly as good as anything else available.

For a broadcaster the ultimate test of the adequacy of his programing must be the public acceptance of his programing. We have discovered that network shows with their large budgets and outstanding talent almost invariably have higher audience ratings than nonnetwork shows.

During the week in April 1956 when the American Research Bureau conducted its rating survey covering the three Philadelphia network stations and the Wilmington non-network station, 26 of the leading 50 programs in Philadelphia between 7:30 and 11 p. m. were CBS network programs carried over WCAU-TV. Eight of the first ten programs and fifteen of the first twenty programs were CBS network programs carried over our station. Every single one of the top 50 programs was either a CBS, NBC, or ABC program. Not a single nonnetwork program carried either by the 3 network stations or by the nonnetwork station in Wilmington was among the top 50. The highest ranking nonnetwork show was 69th on the list.

A similar study by the same rating service for the same period in Los Angeles showed the first 41 programs to be network programs and only 4 out of the first 50 programs were nonnetwork programs. The highest ranking of these four nonnetwork programs was a rerun on KTTV of a former NBC network program.

There are 6 half-hour program segments each night in network option time, for a total of 42 half-hour segments a week. This same Philadelphia rating survey shows that in 20 of these segments the program carried over WCAU-TV rated first and in 19 of these segments our program rated second. In 39 out of the 42 segments the Philadelphia audiences regarded our programs as either the best or the second best (and in a number of cases it was a very close second) available over the four stations surveyed. Every one of our programs rated first was a CBS network program. Every one rated second, except one, was a CBS network program.

One of the three WCAU-TV programs which were rated third was a nonnetwork syndicated film program, and this had the lowest rating of any program carried over WCAU-TV during evening option time. Another of our programs which was third in rank was the United States Steel Hour which is not subject to the option provision because it carries over into station time. We carry it because we think it is one of the fine live drama programs on television. Curiously, although it is third in the 10 to 10:30 segment it becomes first in the 10:30 to 11 o'clock segment.

I have reviewed this performance in some detail because I believe, as every responsible broadcaster believes, that the American public is the ultimate "monitor in chief" of television.

And I might point out that the performance of KTTV for the same program week in Los Angeles showed only 1 program out of 42 in first rank. Perhaps the American public is the monitor in chief of television in Los Angeles, also.

I should now like to turn to another aspect of this problem about which I feel most deeply. And this is that the relationship between the network and the affiliate is a true working partnership. It is not just that the individual affiliate has the power to reject or to preempt network programs for other programs if it is dissatisfied. We actually work together in an effort to help develop and improve the network programs. Each and every affiliate can, and many of us do, have a very real influence on network programing, both directly and indirectly.

For example, there was one network children's program where we felt too much emphasis was being placed on selling the youngsters equipment to use in connection with the program and not enough was being placed on the entertainment portion. We told the network of our feeling and indicated that unless a change was made we would no longer carry the program. The program's content was altered and we have continued to carry it.

In the case of a late evening program, we felt that there was a tendency toward too much physical violence. We invited this to the attention of CBS and changes were made in the format which we felt relieved the situation.

Senator Pastore. What was the name of that program?

Mr. Thornburgh. That program's name was Danger.

In addition to suggestions such as these which are made by individual affiliates, we have a CBS television affiliate advisory board, which is selected by the stations and which represents the stations in many aspects of affiliate-network relations. Meetings between this board and the network executives led to the programing of The Morning Show, an early morning show calculated to compete programwise with NBC's Today.

The affiliate board took up with the network the stations' feeling that there were not sufficient sports programs on the network. This led to an increase in the programing of sporting events. As a result of the activities of this board the charge for sustaining kinescopes was reduced. These are, now, just a few of the activities of our affiliate board and they demonstrate that in dealing with the network we are not operating on a one-way street.

The stations and the network are both conscious of the necessity for adequate information with respect to program acceptance so that the stations may properly exercise their judgment as to whether to take a program or not. The affiliates receive detailed written descriptions from the network, generally well in advance, as to the nature and content of the proposed program or series. In addition, there are closed circuit auditions from time to time fed by the network for the benefit of the station management and which enable the stations not only to see the proposed program but to meet the program's producers, personalities, etc. I would like to stress that the opportunity for advance information on network programs is at least equal to the opportunity for advance information on syndicated film programs and often is far better.

When you buy a new syndicated film program you usually see only 1 or 2 pilot films. Moreover, since normally an entire series of syndicated film programs is produced prior to scheduling, there is no opportunity for modification, as is true in the case of live network programs which can be modified from week to week in order to meet criticisms of the public or the stations.

Finally, I would like to refer briefly to the contention that non-network programs are excluded from affiliated stations. The fact of the matter is that WCAU-TV carries 16 first-run syndicated film programs. This compares with 13 carried by KTTV and an average of 6.3 carried by all 8 of the nonnetwork stations in Los Angeles and New York.

Moreover, it is absurd to suggest that there is no market for good film in Philadelphia. During this very week I am testifying, the 3 network stations in Philadelphia are on the air a total of 202½ hours during which they are not carrying network programs, and 38 of these hours are between 6 and 11 p. m. The simple answer is that, if the nonnetwork programs which we do carry in the evening hours did better in terms of public acceptance than they do, this committee can be sure that, as practical businessmen, we would carry more nonnetwork programs than we do.

Senator PASTORE. Even if that weren't the case if you made a complaint to the network they would either have to improve the quality of their programs to properly compete or you would buy from independent producers?

Mr. THORNBURGH. That is right.

The witnesses testifying here today are a cross section of affiliates of the CBS television network. We believe we also are a cross section of American broadcasters. We are here of our own accord because we feel deeply that the present system of television networking operates to the benefit of the public and that the existing pattern of affiliate-network relations is vital to the maintenance of effective networks.

During my testimony I have referred to the programing of WCAU-TV in considerable detail. This was not because I was anxious to single out our station, nor indeed has my intention been to criticize the operation of KTTV in Los Angeles. My only purpose has been to show that the mere fact that a network affiliate carries a substantial volume of network programs does not mean that it has abdicated its responsibility as a licensee or is controlled by the network. My testimony and the testimony of the witnesses who have preceded me today demonstrate that the combination of local and network programing by a network affiliate adds up to a total pattern of service which operates to the very real advantage of the public.

We firmly believe that, without option time and the basic network requirement, the operation of the networks would be seriously endangered. No one can be certain of the result. But the risk is too clear and too great to warrant change. If the wrong step is taken, the individual television broadcasters would, of course, suffer. What is far more important to your committee, the 34 million Americans who have bought television sets in an enthusiastic response to this great new medium would lose the type of television broadcasting they have come to want and to expect.

APPENDIX TO THE STATEMENT OF DONALD W. THORNBURGH, PRESIDENT AND GENERAL MANAGER, WCAU-TV, PHILADELPHIA, PA.

I. DESCRIPTION OF TYPICAL LOCAL LIVE PUBLIC SERVICE AND PUBLIC AFFAIRS PROGRAMING ON WCAU-TV, PHILADELPHIA, PA.

Channel 10 Farm Reporter.—(Current.) A daily half-hour series, presented in cooperation with the Agricultural Extension Services of Rutgers University and Pennsylvania State University, designed to give both urban and rural viewers complete market reports, important home economics information, technical information for farmers, information on lawn care, and other related subjects.

The Weatherman.—(Current.) A daily early morning program to present weather reports to the entire family to aid in planning one's day and attire in accordance with the weather outlook.

Bill Campbell's News and Sports.—(Current.) A daily early morning summary of news and sports, bringing viewers up to date on what happened overnight.

Bless This House.—(Current.) A daily religious program presented in cooperation with the Philadelphia Council of Churches, Philadelphia Catholic Diocese, and the Philadelphia Board of Rabbis. A different clergyman is presented each morning with a spiritual message for the entire family group at the beginning of the day. The time period for the program was selected by the church groups in order to reach the family unit at breakfast time before they separate for the day.

Jean Says.—(Current.) A daily weather program for the housewife and the woman who is about to go shopping.

News with Gene Crane.—(Current.) A daily midmorning news program.

Dividends for Homemakers.—(Current.) A daily information program for the benefit of the homemaker in which a qualified home economist and others in various fields present programs in homemaking, cooking, marketing, etc. There are also included features on women in the news.

News with John Facenda.—(Current.) Daily international, national, regional, and local news and weather, with emphasis on regional and local news and featuring filmed interviews and feature stories of topical interest.

Earl Selby and Mr. Fixit.—(Current.) A daily program featuring the Philadelphia Evening Bulletin's leading columnist, Earl Selby, who does feature pieces involving Philadelphia politics, religious activities and other newsworthy events. His guests represent a cross-section of the city from the mayor on down, who explain various facets of their jobs. Mr. Fixit, a fictional helper of Selby's attempts to solve various viewer problems such as the need for a traffic light, unpaved streets, etc.

News with John Facenda.—(Current.) A late night edition of news—international, national, regional, and local—featuring filmed interviews and feature stories of topical interest.

Weatherman with Phil Sheridan.—(Current.) A complete weather forecast for the entire area served by this station, based upon reports from the United States Weather Bureau. In order to serve our broad coverage area, the report is broken down regionally.

Sports Final with Jack Whitaker.—(Current.) Late roundups of daily sports including complete results of baseball and football games, and featuring commentary and interviews of local interest.

That Man McMahon.—(Current.)—A 5-minute feature show presenting interesting sidelights on the world of entertainment and of outstanding local figures.

Sports Corner with Bill Campbell.—(Current) Commentary and discussion on current points of interest in the sports world, with outstanding sports expert, Bill Campbell.

The Big Idea.—(Current). A weekly program series, now in its sixth year, on which inventors of all ages have a chance to show their skill to a panel of business and other experts from whom they receive suggestions for improvement and ideas for marketing their invention.

Man About Town with Frank Brookhouser.—(Current.) Glimpses into the world of politics, entertainment, and civic affairs of Philadelphia.

Here's How.—A 13-week series, now in its fourth year, produced at the opening of each school season in association with the Philadelphia public schools. Educational program of do-it-yourself ideas and demonstrations by faculty members of the Philadelphia school system.

The Robin Roberts Show.—During the nonbaseball season Robin Roberts, one of the leading pitchers of the National League, talks sports and sportsmanship with a studio group of young enthusiasts. The children take an active part in the show, asking Roberts and his guests questions about sports. The show includes boxing matches, with competent supervision and refereeing, under the aegis of the Police Athletic League.

Let's Go Fishing.—Information on tides, weather, and conditions for the angler, plus tips on new equipment and techniques.

The Bulletin Forum.—A regular series of public discussion and debate programs, on topics of local, national, and international importance, originating from Congress Hall at Independence Square in Philadelphia, and featuring nationally known public figures such as Secretary of State John Foster Dulles, Presidential Adviser on Disarmament, Harold Stassen, and Leonard Hall and Paul Butler, Chairman of the Republican National Committee and Democratic National Committee, respectively.

The Cancer Crusade.—A program specially produced by WCAU–TV in connection with the annual cancer drive to inform the public on research, danger signals, and methods of treatment of cancer. Program featured Dr. Catherine McFarland, outstanding cancer specialist, and Charles Shaw, WCAU news director.

American Bar Association.—A special telecast of the national meeting of the American Bar Association.

Mid-Atlantic Farm and Home Show.—A series of programs from Convention Hall in Atlantic City during the annual Tri-State Farm and Home Show. For this origination WCAU–TV sent an entire production unit and complete remote facilities 65 miles to Atlantic City in order to afford the viewers in our entire coverage area an opportunity to "attend" this show featuring progress in agriculture.

Election returns.—Election returns of local and national races during primary, local, and national contests. On election night, complete camera and production crews were located at the headquarters of the major parties.

University of Pennsylvania Ceremonies.—A special program in connection with the University of Pennsylvania radio–TV course, presented in cooperation with WCAU–TV. Program featured Dr. Harnwell, president of the university, and the entire group of students taking the course.

Report to the People.—A series of reports by the mayor of Philadelphia to the people presented at regular intervals throughout the year.

II. DESCRIPTION OF TYPICAL OTHER LOCAL LIVE PROGRAMING ON WCAU–TV, PHILADELPHIA, PA.

Mr. and Mrs.—(Current.) A daily program featuring a married couple designed to present information of interest to viewers related to community affairs, and includes a segment of entertainment for youngsters. Throughout the program, viewers are kept abreast of time, news, and weather.

Cinderella Weekend.—(Current.) A daily afternoon quiz show for women picked from the studio audience. The questions are primarily written to test the contestants' knowledge of current affairs and the world around them.

Carny the Clown.—(Current.) An imaginative children's show in a playground setting, produced with the aid of various playgrounds in the Philadelphia area.

The Children's Hour.—(Current.) A family show featuring talented youngsters from the Greater Metropolitan Philadelphia area. A 28-year old tradition in Philadelphia now in its eighth year on TV, such talent as Ezra Stone, Kitty Kallen, the Nicholas brothers, Eileen Barton, Eddie Fisher, and Elliot Lawrence sang their first song, or scuffed their first pair of tap shoes on this program. Long accepted as a community project by the people of Philadelphia, The Children's Hour has been cited often as television (and radio) at its best.

Junior Hi-Jinx.—An unusual children's series, running for 6 years on channel 10, wherein a puppet told children stories and impressed upon them good behavior patterns. This program was cited consistently by home and school associations for its contributions.

Please Find.—An audience-participation show which pitted teams from various local charities and welfare organizations against one another in contests for prizes that could be used in furthering the work of the organizations.

Valentine's Day.—A 15-minute variety show featuring up-and-coming Philadelphia personalities in the entertainment business.

Swap Shop.—A series running for 13 weeks which provided an opportunity for people to trade household items.

Jig-Saw Time.—A 13-week series which featured a telephone quiz show with a masked picture revealed little by little. The first person to identify the hidden personality won a prize.

Tops in Pops.—Weekly variety show, featuring a singing master of ceremonies, Jack Valentine, backed by a musical trio and headlining local entertainers. Produced particularly for teen-age audience.

1956 Mummers' Parade.—An annual on-the-spot presentation of the famous New Year's Day mummers' parade in Philadelphia, at which 2 complete remote crews cover the event from 2 vantage points. (The 1956 parade was presented in full color for the first time.)

Thanksgiving Day parade.—The annual on-the-spot presentation of the famous Philadelphia Gimbels' Thanksgiving Parade.

New Years' Eve dance party.—A special 3-hour musical program welcoming the New Year, with members of the Armed Forces as special guests.

July Fourth program.—Annual commemorative holiday program presented live directly from Independence Square in Philadelphia.

Evening Bulletin Christmas Choir.—An annual program of holiday music presented by the choir of the Evening Bulletin newspaper.

Chef Albert.—Early morning series in which Chef Albert, continental chef for over 50 years, prepared menus and gave the benefit of his knowledge to the housewife.

Evening Bulletin tour and dedication.—Special programs marking the dedication of the new Evening and Sunday Bulletin newspaper plant, and on-the-spot tours of its facilities.

III. DESCRIPTION OF TYPICAL NETWORK AND LOCAL FILM PUBLIC SERVICE PROGRAMING ON WCAU-TV, PHILADELPHIA, PA

The Adventurer.—(Current.) Live narration of filmed adventures in the world of the naturalist, drawn from a specially purchased film library of over 1 million feet. This program is produced under the guidance of the Academy of Natural Sciences. The adventures include safaris by Martin and Osa Johnson, and other major explorers, naturalists, and hunters. Featured are the habits and habitat of animals all over the world as well as glimpses of other customs and people.

Hall of Fame.—A weekly series of special documentary programs highlighting the achievements of outstanding persons who have made major contributions to the advancement of science, art, industry, and religion.

Word from Washington.—(Current.) A daily program featuring films supplied by various Government agencies of general interest and information to all viewers.

The Magic Bond.—A special program presented on behalf of the Veterans of Foreign Wars.

Heart of America.—A special program marking the opening of the Heart Association's campaign for funds.

Crusade for Freedom.—A special program relating the purpose and effect of Radio Free Europe, narrated by John Daly.

Having a Grand Time.—A special program marking the observance of Boy Scout Week.

This is Our Faith.—A special program in observance of the Jewish holiday, Hanukah.

Adventure Theater.—A special program presented on behalf of the United Community campaign, marking the kickoff of the annual Red Feather drive.

Memorial Day, 1955.—A special program commemorating the holiday and its significance.

A Time to Remember.—A special program, featuring Danny Kaye, and dealing with the work of UNICEF.

And Then There Were Four.—A safety program presented prior to Independence Day holiday.

That Certain Sound.—A weekly series presented by the Summer Evangelistic Committee and endorsed by the Philadelphia Council of Churches.

Your Neighbor Celebrates.—A special program highlighting various Jewish holidays, presented in conjunction with the Jewish new year holiday.

Man on a Bus.—A special religious program marking the observance of the Jewish holy day, Yom Kippur.

We Believe.—(Current.) A weekly religious series presented by the National Council of Catholic Men.

The Jack Benny Show.—A special program dealing with the problem of retarded children.

This Day We Celebrate.—A special Christmas program presented on behalf of the Christophers.

Christmas Carol.—A special sign-on program Christmas morning.

An Almanac of Liberty.—A special patriotic play presented in conjunction with the B'nai B'rith Anti-Defamation League.

Adventure.—A weekly series of educational programs presented in cooperation with the Metropolitan Museum of Natural History.

The Search.—A weekly series of educational programs dealing with research currently being carried out at leading colleges and universities.

Let's Take A Trip.—(Current.) A weekly educational series consisting of on-the-spot tours of places of interest, such as Independence Hall, a fire department, etc.

Now and Then.—A weekly series of discussions on literature, presented by Dr. Frank Baxter, nationally known Shakespearian authority.

Lamp Unto My Feet.—(Current.) A weekly series of religious dramas and discussions conducted by Dr. Lyman Bryson.

You Are There.—(Current.) A weekly series of dramas dealing with historical incidents and events of the past.

See It Now.—A series of programs dealing with subjects of current interest, ranging from a report on Africa to one on civil rights.

Sports events.—Some of the Nation's outstanding sports spectacles, such as the Kentucky Derby, Masters Golf Tournament, the Orange Bowl games, the Swaps-Nashua race, and the Landy mile.

Presidential Addresses.—President Eisenhower addressing the NARTB, his speech on the 10th anniversary of the United Nations, special foreign policy addresses preceding and following the Geneva Conference, the President's departure from Denver and arrival at Washington after his heart attack, as well as his telecast announcing his availability for renomination.

Government Policy/Political Programs.—Secretary of Agriculture Ezra Benson, in a reply to Edward Murrow's See It Now discussion on the American farmer. Senator Clinton Anderson and Thomas Martin, in a reply to Secretary Benson's rebuttal. Secretary of State John Foster Dulles, reporting on the Geneva Conference.

Out of Darkness.—A special public service program documenting the case history of a victim of mental illness.

Face The Nation.—(Current.) A weekly series featuring national and international figures in the political world, interviewed and questioned by prominent newspapermen.

Labor Day Address.—Former President Truman's speech from Cadillac Square in Detroit.

Talkaround.—A weekly series of teen-age topics discussed by a panel of youths from various parts of the country.

The American Week.—Weekly news review and analysis by correspondent Eric Severeid.

The CBS News.—(Current.) A nightly news review by Douglas Edwards.

Years of Crisis.—A special conclave of CBS correspondents from around the globe, gathered annually to review the events of the previous year.

Special Christmas Services.—Protestant services from the National Cathedral in Washington and Catholic Mass from Boys Town.

Report Card.—A weekly series of programs dealing with the Nation's school problems.

Flood, Story of Main Street.—A special program dealing with the devastating flood of summer of 1955, featuring Jackie Gleason.

Boy Scout Jamboree.—A special on-the-spot program from the annual International Jamboree of Boy Scout Movement.

Advertising Benefits You.—A special program featuring John Daly and Sid Caesar marking National Advertising Week.

Mr. Cox. Could you tell us, Mr. Thornburgh, what is the present approximate percentage of clearance for CBS programs in evening option time?

Mr. Thornburgh. Evening option time, I think we have all periods except three half hours that are network in that time.

Mr. Cox. What do you have in those three half hours?

Mr. Thornburgh. In those three half hours we have—I will have to—not refresh my mind, but understand the questioning; we have Gildersleeve, which is a film program.

Mr. Cox. What does that replace from the network?

Mr. THORNBURGH. That replaced Name that Tune. We had Crunch and Des, which replaced Flicka. As of this week Crunch and Des, by preference, moved up to the 7 to 7:30 time on Friday and we are now putting the Flicka program back into the regular time at 7:30 to 8 on Friday evening. So as of this week, we only have two.

Senator PASTORE. Is that Flicka program the one with the horse?

Mr. THORNBURGH. Yes.

Senator PASTORE. I like it. [Laughter.]

Mr. COX. At the time you did not clear it—at the time it was originally offered and you did not clear time for it—it was not a sponsored program; is that correct?

Mr. THORNBURGH. I think that is correct; yes.

Mr. COX. What is your third program, and the program which it replaces?

Mr. THORNBURGH. The third program is Passport to Danger.

Mr. COX. What does that replace?

Mr. THORNBURGH. I am prompted, the Quiz Kids program.[11]

Mr. COX. Now it is your feeling then that only in those three instances were there programs in the CBS schedule which were inferior to programs that were available to you from other sources?

Mr. THORNBURGH. Yes, reasonably so. I think it would be interesting for me to say that our policy is somewhat different than one that was mentioned this morning. We buy, as a station, many of the leading syndicated film programs that are offered—and we think we buy the best ones that are offered—and sometimes we don't have sale for them. But we put them in when we think that the network structure—I mean when the program structure needs that kind of a program. And I made a list of a few of them that we have bought on that basis. We bought Victory at Sea, Man Called X, we have bought Four Star Playhouse, My Hero with Robert Cummings, Foreign Intrigue, Stories of the Century, a western program, and Man Against Crime.

These are just a few of them that we have bought, regardless of whether we had advertisers to sell them to or not, because we wanted to have the best of the film programs that we could find on our station. And we have had them there.

Mr. COX. In what time periods of the day are those normally scheduled?

Mr. THORNBURGH. We have some scheduled 10:30 at night, some of them 7 to 7:30; we have had a strip 7 to 7:30. We have had some of them 7:30 to 8 when those time periods are open, and others of that sort. Early Sunday evening we have some.

Mr. COX. Now, you indicated at some length, and then referred to the further statement of your public-service programing in your appendix. When are these public-service programs normally broadcast?

Mr. THORNBURGH. Well, they are all through the schedule. I mean according to the type of programs that they may be.

Mr. COX. Are they mostly in the hours prior to 6 p. m.?

Mr. THORNBURGH. 6 p. m.? No.

Mr. COX. No?

[11] The witness later advised the committee that the third program was Highway Patrol, carried in place of the CBS network program, Brave Eagle. It should be noted that the latter was not sponsored and therefore the network's option rights did not apply.

Mr. THORNBURGH. Now, you could count them and maybe they would be mostly. But I mean we have a considerable number after 6 p. m. We have news broadcasts after 6 p. m.; we have sports shows after 6 p. m.; we have a number of public-service programs and informative programs after 6 p. m.

Mr. COX. Are there any of these public-service programs which you feel would attract a wider audience that ought to be interested in them—or which could perform their role more completely—if they could be broadcast in the period 7: 30 to 10: 30?

Mr. THORNBURGH. I don't believe so. As a matter of fact, I think it is interesting to say that we have a news program on at 11 o'clock at night that outrates any of the network programs—news programs—that are broadcast earlier. And that is at 11 o'clock at night. So I don't think that we need to discount, in a metropolitan area like ours, the times that are not right within the 7: 30 to 10: 30 time period.

Mr. COX. Now like WTOP, though, you have a class A rate which is limited to the period 8 to 10: 30, isn't that correct—for national spot, I mean as distinguished——

Mr. THORNBURGH. We have a double A rate.

Mr. COX. Double A rate, yes. And that is limited to the period 8 to 10: 30?

Mr. THORNBURGH. That is right.

Mr. COX. Now you say that by and large——

Mr. THORNBURGH. 7: 30 to 10: 30, as a matter of fact. I think that is right.

Mr. COX. Television Fact Book is in error, then?

Mr. THORNBURGH. Well, make it 8 to 10: 30. [Laughter.] I have a rate card over in my portfolio, but it is not here right now.

Mr. COX. You said by and large you felt that the network programs were the best, or at least as good as others, and you referred to their budgets and the high caliber of talent which is made available in network programs. Now isn't it true that some of these film programs that you referred to feature talent of the quality and the degree of popular acceptance that appear on some of the network shows and that they have budgets which, if anything, are in excess of the cost of some of the live programing on the network?

Mr. THORNBURGH. Could be. But I would like to make a point on that that I think has been overlooked in these discussions. We have talked about a two-way street, but maybe the meaning of that hasn't been made plain.

For instance, a few years ago, I think, we all recognize that the Milton Berle program was so outstanding it was very hard to compete with on any other station. And Columbia made several efforts to put on programs. I am sure they spent hundreds of thousands of dollars to get programs that would compete with the Milton Berle Show. And none of them, particularly, came up to the quality that they had to be in order to compete with that particular show, although they were very good shows in themselves.

We as a local station decided that maybe we could do something about it, and we spent a lot of our money building local programs to try to put in the two half hours opposite the Berle hour, and never did any good with it.

But finally Columbia—and I am sure at expenses probably up around the million dollar mark—worked and worked and worked until they came through with two shows that really successfully competed with Berle, and actually outdid Berle in some situations. And I think that that is the kind of two-way road that we are talking about, when we talk about option time. That the network does—no film syndicator came up and said: "Boys, we will put in this show for 26 weeks and try it out at this time and see if we can't compete with Berle." That is the job we get from the network that I think is tremendously important.

And I think that justifies the option time, because they do that—they spend hundreds of thousands of dollars on programs.

Senator PASTORE. Not only that, but if NBC had a good show like Milton Berle, and they couldn't put their finger on a competitive production to compete with that, and a good independent producer came along with a lollapalooza, they would buy it out and put it on in competition with Berle.

Mr. THORNBURGH. I am sure they would; they would be only too glad to. As a matter of fact, you talk about film programs with high-priced talent and I think you will remember, in the list that I read here, that the Four-Star Theater, which is one of those that you referred to, I am sure, is one that we have purchased on our station without having an advertiser to sell it to.

Mr. COX. Now you talk about the degree of information that you have in advance about programs, and indicated that it was at least equal, if not superior, to the information you have about syndicated programs. Now do you get complaints from the public regarding the contents of programs broadcast on WCAU?

Mr. THORNBURGH. Certainly we get comments, not always destructive criticism; we get constructive criticism that is very favorable many times. But we do get some that are critical.

Mr. COX. Now has the public ever called your attention to an incident—a sequence in a program—which if you had had full knowledge of the content of that particular program, might have led you to not broadcast it?

Mr. THORNBURGH. I suppose we have had such letters; I don't think there is any way, physically, that every program that goes on the air—I mean each episode of every program that goes on the air could possibly be known to the individual person running a television station. I am sure it couldn't be on film; you would never have time to look at them.

Mr. COX. You don't screen the films that you broadcast?

Mr. THORNBURGH. Our department screens every one that goes on.

Mr. COX. Before it is broadcast?

Mr. THORNBURGH. Before we buy films. Not network.

Mr. COX. Before it is broadcast?

Mr. THORNBURGH. Yes; that is right.

Mr. COX. Now you indicated——

Mr. THORNBURGH. But that is not necessarily just to find out whether there is anything bad. We do it for technical troubles and other reasons.

Mr. COX. You indicated the high percentage of the top rated shows in the Philadelphia area that were carried on WCAU, and also indicated that by and large they were all—that every single one of the top 50 programs was a program of one of the three networks?

Mr. THORNBURGH. One of the three networks; that is right.

Mr. Cox. Now was there any programing being carried during this period 7:30 to 11 p. m., with which you were dealing, that was nonnetwork in origin, aside from the three that you referred to that you have inserted into the schedule, and the programing of the independent station in Wilmington?

Mr. THORNBURGH. You mean on the other two affiliated stations and the independent station, was there any nonnetwork programs?

Mr. Cox. Let me rephrase the question. Do you have any idea how many nonnetwork programs were carried, in the period that you were studying here, by the ABC affiliate and the NBC?

Mr. THORNBURGH. Not individually; no.

Mr. Cox. You don't know?

Mr. THORNBURGH. But both of them had nonnetwork programs on them.

Mr. Cox. To a substantial degree?

Mr. THORNBURGH. I don't think to a substantial degree; no.

Mr. Cox. Then primarily you were considering the competition of the programing of the three network stations with the independent station in Wilmington?

Mr. THORNBURGH. No; because the ABC station, WFIL, has a number of syndicated programs in that particular time period, and NBC has some. How many, I am not able to tell you.

Mr. Cox. Your station is on the must-buy list of CBS?

Mr. THORNBURGH. That is right.

Mr. Cox. Is this in any way through agreement with the network?

Mr. THORNBURGH. No. As a matter of fact, as someone said before, that is an agreement between the network and the advertiser. In our case it obviously would make very little difference.

Mr. Cox. Now, the network carries you on its rate card as a must buy?

Mr. THORNBURGH. Certainly.

Mr. Cox. Do you advertise yourself as a primary basic affiliate?

Mr. THORNBURGH. I would doubt whether you could find that in any of our advertising, although there would be no reason for us not to advertise ourselves that way.

Mr. Cox. Do you feel that you could, if you desired, sell time to a local advertiser in evening option time?

Mr. THORNBURGH. Tell me that again.

Mr. Cox. Do you feel that you could, if you desired, sell time to a local advertiser in evening option time?

Mr. THORNBURGH. Oh, there is no question about it; we could.

Mr. Cox. Now, the only situation in which this will ever arise is if he comes in with respect to a time period where you regard the offering of the network as unsuitable?

Mr. THORNBURGH. You say that is the only time we would accept another program?

Mr. Cox. Or that you would regard the offering of the network as less desirable, or as poorer programing, than whatever he had to offer you?

Mr. THORNBURGH. Well, this has gotten me confused to the point——

Senator PASTORE. Let's put it in the positive. You would only let the independent producer come in if he had something better than you could get from the network?

Mr. THORNBURGH. As far as the independent producer, yes. But that would not apply to a public service program that we might want to put on that we felt had a great local interest.

Senator PASTORE. Are you here appearing under any compulsion from CBS?

Mr. THORNBURGH. I certainly am not.

Senator PASTORE You are satisfied with the option time allotment that you make to CBS?

Mr. THORNBURGH. Yes, I am.

Senator PASTORE. Are you satisfied with the prime time that you allocate to them?

Mr. THORNBURGH. Prime time.

Senator PASTORE. That is the prime time specified between 7:30 and 10:30.

Mr. THORNBURGH. Yes.

Senator PASTORE. Are you satisfied with the free time that they take?

Mr. THORNBURGH. Yes. I think that is just simply a matter of our payment.

I would like to say that we have had time open in prime time—no, not the 7:30 to 10:30 necessarily as much as the 10:30 strip. And we didn't clear the network programs that were offered between 10:30 and 11 for some time, because we held those for local sale. And we we unable to sell some of those time periods, and as a result we later took the network programs.

Senator PASTORE. Well, if you don't mind this interpolation, I would like to make a public announcement now: If there is any broadcasting station in the United States of America that is dissatisfied with the way they are being treated by CBS, NBC, or ABC, please let them come forward. I mean, I don't think we ought to be here telling people they ought to be unhappy when they are very happy. [Laughter.]

Mr. Cox. That is all I have.

Senator PASTORE. Thank you.

Mr. THORNBURGH. Thank you.[12]

Mr. JENNES. Mr. Chairman, the next witness is Mr. Meyer who advises me that he would like to offer the bulk of his testimony—have it incorporated into the record at this point and just read the last three pages of his testimony if he may.

Senator PASTORE. All right.

STATEMENT OF A. C. MEYER, PRESIDENT OF WCIA AND THE INDEPENDENT CBS AFFILIATES IN ILLINOIS

Mr. MEYER. My name is A. C. Meyer, president of WCIA in Champaign, Ill. Before referring specifically to our operations in Champaign, I would like to quote from a general statement about television operations and the relationship between networks and their affiliates. This statement was prepared by the television stations serving Illinois, that is, WCIA, KHQA–TV, WREX–TV, WTVH, WHBF–TV and KFVS–TV.

This committee has heard attacks and complaints by critics of network operation; particularly that of the network's relationship with its affiliates. We are affiliates of CBS.

[12] The program schedule of WCAU–TV for the week of April 22–28, 1956, will be found starting at p. 2972.

Do these attacks come from the viewer, the real interested party, and the only person with which this committee should be concerned? They do not.

Do these attacks come from the advertiser who pays the bill, and whose support enables the networks and the affiliates to operate? They do not.

To determine what their motive may be, careful scrutiny should be given these critics since they are not and do not claim to represent the viewing public or the advertiser, the two parties in interest.

Could these critics have a selfish interest? Do they want to tear down the television industry as it now so well operates, in the hope that out of the chaos which we believe would result they could sell film and programing?

Could it be that among these critics are station operators who rushed into television without sufficient analysis of his market and who now cry for help from "Uncle"?

Again we ask, what contribution have these critics made to television? What would our viewers, if any, be receiving today if there had been no networks. Airlines also use the airwaves. Some receive subsidies from the United States Government. As far as we know, television, which also uses the airwaves, receives no subsidy. It has made the advance of the century in a few short years with the help and support of the advertiser and the public.

Gentlemen, we are not here attempting to whitewash the networks. They have the ability, and the facts, to speak for themselves. But we do know by experience that network affiliation is essential for us to render the high quality service which the viewers of grassroots Illinois appreciate and demand. And we do feel that the network operation is a very intricate and complex business, regulation of which by Congress could very well seriously impair the ability of the network to give the public service to which we refer.

We submit also that regulation is not feasible because no regulation can force continued support by the advertiser, who pays the bill so that television is free to our people. It seems to us that the alternative is Government subsidy and Government operation, which we are sure no one wants.

Certainly after a period of only 3 or 4 years since the freeze was lifted by the FCC, it is too early to judge the full effect of the free play of the economic factors which ultimately will govern.

Television is probably the greatest invention since the printing press and has made a tremendous advance in a few short years. To make television the great public service it is today, the television networks pioneered and spent many millions of dollars for development. No one else was willing to gamble, or did gamble, the amount of money involved in a hazardous business venture or had the experience to do the job. And no one else has been proposed who can today do the job—no one has even offered to do the job—that the networks are doing.

This committee has heard attacks and complaints by a few critics of television network operations and of the networks' relations with their affiliates, including ourselves.

We each have an agreement with CBS Television for an option, subject to our control, to use our facilities up to 3 hours daily during each of 3 segments of the broadcast day. This option-time provision enables the network to sell commercial programs to advertisers in sufficient quantity to create an overall balanced program service, including entertainment and public service, and have money left over to furnish additional fine public service programs from a national viewpoint.

We deny that our stations have given up their duty to program under the network option-time provision, as alleged by the critics. If that were true, the FCC has the power and authority to require the offending stations to make their operations conform to the public interest, convenience, and necessity requirement under which all affiliates are licensed by that regulatory body.

On the other hand, if option time is banned from network-affiliate contracts as the critics demand, and the basic network requirement is prohibited, which the critics also want done by Government edict, this could seriously endanger the ability of the networks to furnish the service they now render to stations, which, in turn, we believe might very well downgrade the service which television stations at the grassroots, such as ours, now render to our public.

Option time and basic network groups are essential and a definite service to the advertiser, who is the key in our present system of television. An advertiser who invests in a television program must have reasonable assurance of a maximum amount of time clearances on stations in the market areas which he, the advertiser, feels he must cover for greatest public acceptance of his product or service. The present network-affiliate system is the most convenient and economical way yet devised for the advertiser to reach his prospects on a national television coverage basis.

Under our agreement, advertisers through CBS networks supply to us such programs for entertainment purposes as: The Ed Sullivan Show, What's My Line, Climax, the Arthur Godfrey shows, the Garry Moore shows, the Jackie Gleason shows, the United States Steel Hour, the $64,000 Question, professional football, Captain Kangaroo, and many others.

Under this same agreement, the CBS network supplies such live public service programs as the personal appearance of the President, the national political conventions, Senate investigation hearings, personal appearances of Cabinet members; programs such as Adventure, Face the Nation, Let's Take a Trip, the Douglas Edwards News, Look Up and Live, special religious events, educational programs, and many other special public service programs impossible for the affiliate to produce at the local level.

Our audience is interested in national affairs as well as local. Both are essential to good programing. Without the network, it would be impossible for us to furnish effective public service programing at the national level. At the grassroots level, that is from the viewer, there is no clamor to overhaul the television operation system in America today. The files of stations are full of complimentary letters and congratulations over the job that both the stations and the networks have done in building for the viewer a new world of entertainment, education, and public service.

The public—your constituents and our viewers—heartily approve of the programs which result from the option-time arrangement and the basic network requirement. It is our joint responsibility to protect and to improve an arrangement which can so well serve the public. We certainly can't improve anything by destroying it.

Mr. Moore, representing a station without a network affiliation, and one of seven stations in Los Angeles—the third largest market in the United States—has undertaken to speak for the industry.

Television is supported by markets, and Los Angeles is in no way comparable to Quincy, Rockford, Rock Island-Davenport, Champaign and Cape Girardeau-Cairo. We disclaim Mr. Moore's position as having any application to us.

Could it be that the critic from the area around Los Angeles is speaking for the film industry? We don't need to point out to you that the television networks sponsored and developed television while the film industry was keeping its best product from the television public and releasing only ancient moving pictures. The networks bring the activities of the people of Illinois to the rest of the nation, and likewise, bring the timely activities of the rest of the world to the people of Illinois. This obviously cannot be done by the film industry.

We know somewhat of the many tremendous problems with which this committee has to deal. But our present system of television is of the utmost importance to the public. The television networks are an essential element for us in good programing. We oppose, and we are sure that if the public understood the consequences it would oppose, any proposed regulation which would be detrimental to the television service to which they are now accustomed. Probably no industry has ever had greater public support than television. Public response alone proves the public has been pleased.

The present system of television, anchored as it is on the network system, has proven to be successful. It is our firm conviction that, until and unless a better system is devised and proven, the present system should not be impaired. The risks to the American public and the individual stations of change are too great to make of our present television system a political football.

In conclusion, we reiterate, regulation of the networks is not going to make a Santa Claus out of the advertiser. He is still going to invest his advertising dollars in the manner and in the mediums which he believes will bring him maximum results. Advertising dollars cannot be placed by regulation or wishful thinking. And we cannot emphasize too strongly that television income is received from sponsors and not the public. If regulation makes difficult the use of television by the advertiser who wants to use this powerful result-getting medium, he might take his advertising elsewhere and place it in other mediums.

We submit, if television is left alone to work out its salvation under the present regulatory powers of the FCC, that the law of economics will solve many of the problems that seem perplexing to us today. For it must be remembered that if a television market is not adequate to support a healthy, profitable television station, the station will fail unless subsidized by the Congress.

We are not attempting to tell this committee how television should be operated all over the United States, but we do feel we know what is needed to keep our stations healthy and strong at the grassroots in downstate Illinois, the breadbasket of the Nation. Any regulation of the networks and the industry which would drastically alter or which might destroy present television service would, we are sure, have a tremendously adverse effect upon the people in our Illinois area.

The CBS affiliates serving Illinois feel so strongly about this matter that we have sent to the Illinois Members of Congress the letter which is attached to this statement as exhibit A. (See p. 2623.)

The foregoing is a statement on behalf of the following CBS affiliates which serve Illinois:

WCIA, Champaign, Ill.; August C. Meyer, president.

KHQA-TV, Hannibal, Mo.; Walter Rothschild, general manager.

WREX-TV, Rockford, Ill.; L. E. Caster, president.

WTVH, Peoria, Ill.; Henry Slane, president.

WHBF-TV, Rock Island, Ill.; Leslie C. Johnson, vice president and general manager.

KFVS-TV, Cape Girardeau, Mo.; Oscar C. Hirsch, president.

I understand there is a desire to close the hearing today. I will start with page 9, reading a short summary of the statement.

My name is A. C. Meyer, and I am president of WCIA in Champaign, Ill.

WCIA is a full power and maximum tower television operation in Champaign, Ill. I mention our full power and maximum tower because we serve a great farming area which can best be served with maximum coverage. Champaign itself is not a large city and, from an enonomic standpoint, maximum coverage has been necessary to have a television market in our area that sponsors would support.

We are a primary affiliate of CBS and a secondary affiliate of NBC. There are two stations located at Champaign-Urbana, our station and the University of Illinois educational station. Four UHF stations are located in our general market area.

There are doubtless large metropolitan markets where a nonnetwork station can do a reasonably good job. Without a television network affiliation, we could not operate our station effectively, assuming we could operate it at all.

In the first place, many important types of programs can only be furnished by a network, such as public-service programs of national scope like political conventions and coverage of events like the world series, professional football, and so forth.

In the second place, we discovered in the early period of our operations, when we did not have many network orders, how difficult it was to try to do a good job of public service through local proganing alone. Continuous local live programing is utterly impractical in Champaign, Ill.

We have developed and scheduled nonnetwork programing and fit it into the network progaming so as to provide a broad public service to our area. With a strong network base, we also provide a substantial pattern of local programing, including programing of particular interest to central Illinois. In markets such as Champaign, it would be impossible to render a pattern of service such as this without the network affiliation. Destroy the network affiliation and you will have destroyed television service for the people of central Illinois.

As indicated above, we share the view of the affiliates generally that the basic network requirement—sometimes called "must buy"—and the option-time proviison are not only desirable but are essential from the affiliate's point of view.

WCIA has not accepted programs in option time where local programs were considered important from an overall programing standpoint. An example is the 6:30 p. m., Monday through Friday, time periods which WCIA has retained for its news, weather, and sports coverage. In the case of outstanding special events, which are in great demand by our viewing public, such as University of Illinois basketball and the Illinois State High School basketball tournament, we have preempted network programs in order to carry them in option time. The CBS network has not objected in the slightest to any of our preemptions.

Important as the network programing is to us, I don't want you to get the idea that all of our programing is network programing. Exhibit B shows the distribution of our time. (See p. 2625.) Less than 50 percent of our total programing is network commercial, and including sustaining programs, only approximately 60 percent of our programing is network. And this is true despite the fact that we are affiliated with both CBS and NBC. In the evening hours between 6 and 11 p. m., we have approximately 15 hours with no network commercial programs. Nonnetwork advertisers and nonnetwork programs have ample opportunity on the facilities of WCIA.

The advertiser is not a Santa Claus. The advertiser will place his dollars where they will do him the most good. Advertising dollars cannot be placed by wishful thinking, and certainly not by regulation. Network operations have made it possible for small and medium sized stations to survive. It has not been easy to persuade network advertisers to order medium and small markets, and if the network system is disrupted, then the small and medium markets will suffer. If it is made difficult for the advertiser to use the network as a whole, he will simply stop ordering smaller markets. The larger markets won't suffer nearly as much.

We have not attempted to tell this committee how to run television all over the United States, but we do feel we know what is needed in Illinois and we cannot see how Illinois would be any different from any other place. We are convinced that the existing affiliate-network relationship is basically sound and that the public is being well served Allocations and similar problems should not be confused with network operations.

Certainly, no changes in affiliate-network relations should be undertaken which could possibly weaken the existing system of network operations.

EXHIBIT A

JUNE 11, 1956.

To the Illinois Members of Congress, Washington, D. C.:

GENTLEMEN: Since we both serve the people of Illinois, you by mandate of the voters and we by designation of the FCC, it seems only proper that we should call to your attention criticisms against the television industry and suggestions made to the Senate Committee on Interstate and Foreign Commerce that if followed or adopted would, in our opinion, greatly impair television service to our people.

We believe the purpose of an investigation, if any, should be to improve public service to the viewers. Since the critics are not the public who we serve and since the complaint is not against quality, we naturally inquire into the critics' motives.

The attack is mainly against networks and their relations to their affiliates, including ourselves. We each have an agreement with CBS granting 3 segments of the time 3 hours each per day referred to as option time. Under this agreement, advertisers through CBS networks supply such programs for entertainment purposes to us as The Ed Sullivan Show, What's My Line, Climax, The Arthur Godfrey shows, The Garry Moore shows, The Jackie Gleason shows, U. S. Steel Hour, $64,000 Question, The Douglas Edwards News, Professional Football, Captain Kangaroo, National Political Conventions, and many others.

Under this same agreement, the CBS network supplies such live public service programs as the personal appearances of the President of the United States, cabinet meetings, Senate investigation hearings, personal appearances of Cabinet members, Adventure, Face the Nation, Let's Take a Trip, Horse Racing, Look Up and Live, special religious events, educational programs, and many other special public service programs of a national scope.

Option time enables the network to sell commercial programs to advertisers in sufficient quantity to create an overall balanced program service, including entertainment and public service, and have the added financial strength to furnish fine public service programs from a national viewpoint.

Our audience is interested in national affairs as well as local. Both are essential to good programing. Without the network it would be impossible for us to furnish effective public service programing at the national level. The public, your constituents and our viewers, heartily approve of the programs which result from the option-time arrangement. It is our joint responsibility to protect and to improve an arrangement which, so far, has best served the public. We certainly can't improve anything by destroying it.

Most of the criticism comes from the area around Los Angeles, the film center of the world. We don't need to point out to you that networks, not the film industry, sponsored and developed television. We ask you from experience if you know of any outstanding public service rendered to our people of Illinois by the film industry. We know of none. The networks bring the activities of the people of Illinois to the rest of the Nation and, likewise, bring the timely activities of the rest of the world to the people of Illinois. This obviously cannot be done by the film industry.

These critics would now take over the industry they could not destroy. We are aware of the many tremendous problems facing you. This problem is of the utmost importance. We oppose any proposed regulations which might destroy or impair the effectiveness of the networks, which are such an essential element for us in good programing. Probably no industry has ever had greater public support than television. The networks with the cooperation and support of the affiliates have done a major portion of the job under existing conditions. Public response alone proves the public has been pleased.

The networks as they now operate are essential to our ability to render the kind of public service the people of Illinois deserve. Nothing should be done to impair their ability to render the kind of public service the people of Illinois deserve. Nothing should be done to impair their ability to render this valuable service.

We urge you to acquaint yourselves firsthand with the problem so that the interests of our viewers and your constituents may be protected.

We submit that regulation, if such is necessary, should only be recommended after a careful study is made in the field, at the local level. Therefore, we invite you to visit us, ask questions, observe operations and by so doing acquire informed on-the-ground opinions.

You will find that the station has not given up its duty to program, under the network option provision, as alleged by the critics. On the other hand, if the critics succeed in having option time regulated out of network contracts, they will have destroyed to an important extent the abiliy of the network to furnish the advertiser with the service it now renders—and don't be misled—this is the secret aim.

While we would be the first to admit that the industry today is suffering from growing pains, no new industry has enjoyed greater public acceptance or has shown a greater sense of responsibility in its activity toward the public than the television industry, and the networks in particular, and therefore, we urge you, our Representatives in Congress, to join with us in supporting the present network system of operation. For after all, despite its imperfections, the answer in further improvement of the industry does not lie in the field of more restrictive Government regulation.

Respectfully submitted.

WCIA, Champaign, Ill., August C. Meyer, President; KHQA–TV, Hannibal, Mo., Walter Rothschild, general manager; WREX–TV, Rockford, Ill., L. E. Caster, president; WTVH, Peoria, Ill., Henry Slane, president; WHBF–TV, Rock Island, Ill., Leslie C. Johnson, vice president and general manager; KFVS–TV, Cape Girardeau, Mo., Oscar C. Hirsch, president.

$15\frac{1}{2}$ HOURS
PUBLIC SERVICE OR SUSTAINING FURNISHED BY FILM COMPANIES.
0 HOURS
LOCAL LIVE PROGRAMMING
13 HOURS

Exhibit B

Mr. Cox. Is this exhibit that you show here your overall programming, I take it?

Mr. MEYER. The exhibit?

Mr. Cox. Yes; that covers your entire broadcast day?

Mr. MEYER. Yes; that is over-all.

Mr. Cox. Could you tell us in the period 7:30 to 10:30 approximately how much time you clear for CBS and how much time you clear for NBC?

Mr. MEYER. No; I can't tell you verbatim, but I have our programming here which I could give you as an exhibit or I will submit it in writing.

Mr. Cox. I was wondering whether it would be possible for all of the stations to submit a copy of their program schedules, Mr. Jennes, for a sample week.

I think Dr. Stanton, in some of his figures in his testimony, used the week of April 1 to 7. I wonder if these seven members of your committee could furnish for the record copies of their schedules——

Mr. MEYER. Would April 8 be satisfactory?

Mr. Cox. If he has one worked out.

Mr. JENNES. I think they have been worked out already, although they may not be here. If you would tell us what you would like.

Mr. Cox. If you have worked them out for another week, one week is as good as another. I picked that one because Dr. Stanton used that.

Mr. JENNES. What is the data that you would like to have?

Mr. Cox. Just their schedule for that week and an explanation, by way of addendum, of the source of programs that are not of network origin. In other words, if they could indicate which of these were their local programs, and which of them were film programs, and which were programs received from another network, if they have a secondary relationship.

Mr. JENNES. In other words, an idea of program source by network, local, live, and film.

Mr. Cox. Yes.

Mr. JENNES. Certainly.[13]

Mr. Cox. I think that is all I have.

Senator PASTORE. Our last witness is Mr. Francis E. Busby.

All right, Mr. Busby, you may proceed.

STATEMENT OF FRANCIS E. BUSBY, DIRECTOR, VICE PRESIDENT, WTVY, DOTHAN, ALA.

Mr. BUSBY. Mr. Chairman and members of the committee, my name is Francis E. Busby and I live in Dothan, Ala. I am a stockholder, director, and executive vice president of the licensee corporation of television station WTVY, Dothan, Ala., which operates on VHF channel 9.

Station WTVY began operation on February 12, 1955, and was organized by a group of local civic-minded citizens who pooled their

[13] The program schedules of WTOP–TV, KREX–TV, KDUB–TV, KSBW–TV, WNOK–TV, WCAU–TV, and WCIA–TV for a sample week April 8–14, 1956—(except for WCAU–TV, which used April 22–28, 1956) were furnished later and are printed in the appendix at pp. 2959–2984.

resources in the interests of building a television station for the community of Dothan and the surrounding area, which includes three States, southwest Georgia, extreme north central Florida, and southeast Alabama. The policy of the station owners—and it was made clear to me as executive vice president and general manager—is that profit was most certainly to be secondary to programing and help that we could give the city of Dothan and our good neighbors in Georgia and Florida.

Dothan is in the extreme southeast corner of Alabama, and has a population, according to the 1950 census, of 21,584. It has a wide trading area in southern Alabama, Georgia, and north central Florida. The nearest large centers of population are Columbus, Ga., and Montgomery, Ala., both a little over 100-miles away. Each of these communities has two or more television stations which are affiliated with national networks, and up until the time WTVY went on the air, what service was available to Dothan came from these stations.

WTVY, as a small market station, faced the problem of obtaining quality programs which would attract viewers, and more important, at a cost which was not prohibitive. The budget and staff of WTVY initially was quite low, and although substantially increased since the station went on the air, they are still relatively low when compared with major market stations.

Initially WTVY went on the air as a nonnetwork station, and its staff of necessity was very small—in fact, we had only six full-time employees. Approximately 4 months after the station went on the air, arrangements were completed with the Columbia Broadcasting System whereby WTVY became an affiliate under the CBS Extended Market Plan. Initially CBS programs were provided by kinescope, and subsequently, in the fall of 1955, arrangements were made whereby live programs were available by microwave through the Columbus, Ga. CBS outlet.

This made available to WTVY practically all the top CBS programs. The primary advantage of this arrangement was to provide WTVY with outstanding programs which were not otherwise available, and to permit it to obtain these programs at a comparatively small cost. In addition to sustaining and commercial programs made available to WTVY under this plan, WTVY is able to carry some commercial programs not ordered by the advertiser and delete the commercial announcements of the sponsor, at no additional cost to the station, thus permitting WTVY to carry outstanding features at no additional cost. Such programs include, Person to Person, See It Now, Charles Collingwood and the News, and others.

Top sustaining programs also available at no cost to WTVY include Face the Nation, Front Row Center, Look up and Live, and others, and of course, most important are the on-the-spot broadcasts, such as sports, major political addresses and conventions. Although the revenue from CBS is relatively small, it is sufficient to cover the costs of delivery of programs, and permits WTVY to sell program and announcement adjacencies, which revenues otherwise would not be available. As a result of WTVY bearing the costs of delivery of the programs, CBS receives no free hours under its contract. Incidentally, I think it is of special interest to know that CBS voluntarily increased the network rate of station WTVY from $50 to $100 effective October 9, 1955. This, after only 5 months' affiliation.

The experience of WTVY with the Extended Market Plan has been a very happy one. As stated, the station commenced operation in February, and until the following October, when microwave facilities were available for live programs, the station operated at a loss; but immediately thereafter its operations were in the black, and the profit margins have continued to increase, despite extended hours of operation, increased staff, and other services provided by the station.

Although under its contract WTVY permits CBS to have the usual option hours, this has not prevented the station from carrying programs of local interest, either commercial or sustaining, as CBS has cooperated so that the station might carry CBS commercial programs on a delayed basis where local conflicts arise. Examples are such popular network programs as Arthur Godfrey's Talent Scouts and the Red Skelton program.

The advantages gained from the CBS Extended Market Plan, particularly the increased revenues that have resulted, have made it possible for WTVY to purchase more expensive and more desirable films, and has also made it possible for the station to extend its hours of operation to a schedule from 10 a. m. to 11:30 p. m., which, in my opinion, for a market of some 21,000, is rendering a rather complete service to the public.

Without the consideration which has been given by CBS for small markets such as ours, I doubt that WTVY could remain competitive with the markets in larger cities. Most certainly the viewing public, despite the advantages of local interest and local community spirit, would rather see a top network program than most locally produced or filmed programs. The public in small markets, in my view, is no different in their tastes for quality programs than our good neighbors in the larger markets. Therefore, we must give the viewing public the best in order to attract audiences of all ages and groups, and CBS has provided us with that vehicle.

Without CBS, or other major network service, any small market station, fighting a budget, cannot expect to provide anything approximating network programs and still be able to operate at a profit, or even break even. And just in case I may be misunderstood, in the case of WTVY, we are not putting profit above operating in the public interest, as I previously indicated; however, I think I have demonstrated that with the advantage of profits we have been able to extend our service and increase the quality of our programs. This would not have been practical for a small operation such as WTVY without the help of CBS programing, as we would not have been able to spend such large sums of money to provide network quality programs in order to compete with our large city neighbors.

In closing, I would like to emphasize that it is my belief, and the belief of my fellow stockholders of WTVY, that without the Extended Market Plan of CBS, which was the first such plan to help the small stations of our Nation, it is doubtful that WTVY could continue operating—certainly not in the black—and it is urged that nothing be done by your committee which would jeopardize the continued success of this plan, which, in my opinion, is the greatest single contribution ever made to further the small market station.

Senator Pastore. All right, thank you, sir.

We will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:32 p. m., the committee was recessed, to reconvene at 10 a. m., Tuesday, June 19, 1956.)

(On July 17, 1956, a statement submitted by Paul R. Bartlett, president of KFRE-TV, Fresno, Calif., was inserted in the record. Since that station is affiliated with CBS, Mr. Bartlett's statement is printed at this point, as follows:)

STATEMENT OF PAUL R. BARTLETT

My name is Paul R. Bartlett. I am the controlling stockholder and president of the California Inland Broadcasting Co. which operates radio station KFRE, FM station KRFM, and television station KFRE-TV on channel 12 at Fresno, Calif.

KFRE-TV is one of the newest stations in the Nation, but our interest in television is of long standing. Although we were the first Fresno company to apply for a TV channel, we were the last to enter the business, having gone on the air on May 10 of this year, just 8 years and 26 days after we filed our original application.

On June 5, 1956, KFRE-TV became the Fresno affiliate of the CBS television network. We are a CBS basic or must-buy station, although current CBS advertisers will not be required to add our station until November 3 of this year. From the day we started on May 10, 1956, we have carried a number of CBS programs not previously available in Fresno because the former CBS affiliate in Fresno was also affiliated with ABC, and as a result of its dual affiliation, could not accommodate the full schedule of either network.

In view of our short 6-week history of television operations, it may appear somewhat presumptuous for us to appear before this committee to comment on problems of the television broadcast industry. It is my hope, however, that the very fact that we are an infant in this dynamic industry may offer a fresh viewpoint of the problems encountered by those attempting to enter the field of television broadcasting. I might further comment that after 8 years of attempting to get into television, including 3 years of agonizing, protracted, and exhaustive comparative hearings, we have received a somewhat painful education of the facts of life in the complicated television field, which takes us out of the category of the starry-eyed novice. My participation in this hearing is compelled by two deeply held beliefs:

1. That the present business practices of the networks and the established relationships between affiliates and networks are equitable and essential to both and entirely within the public interest.

2. That no television station should be permitted to skim all of the best network programs within a given market through affiliation with more than one national network, where such dual affiliation tends to reduce the number or potential number of stations which might otherwise economically operate in the market.

NETWORK PRACTICES

Most of the complaints against network practices have been aimed at option time or the must-buy concepts and the record is already replete with statements and evidence indicating that both of these practices are essential to network operation. Likewise, there is plenty of evidence to indicate that healthy national networks form the backbone of the excellent television service the American people enjoy. Consequently, I do not intend to belabor the point by restating here all the arguments which have already been made. But I do want to give you 2 or 3 simple examples of our experiences with CBS television during the brief period we have been affiliated with it.

When we became the primary CBS outlet in Fresno on June 5, 1956, we took over from the former affiliate a substantial schedule of CBS programs. A few of these programs were being carried by the other station on a delayed basis because that station had been sandwiching ABC and CBS shows in together in an effort to accommodate both. Consequently, it was necessary for us to work out new times for such programs. There were other CBS programs which the other Fresno stations had formerly carried at their scheduled times which we wanted to accept only on a delayed basis because of special local program plans we had developed.

In our negotiations with CBS, we found we were able to compromise and settle all these complicated scheduling problems quickly and easily, irrespective of whether or not they fell in option time or station time.

CBS at no time evidenced a desire to coerce or pressure us to do anything in contravention of our own beliefs and convictions as to how we might best serve Fresno; even where we preempted time for local programs which displaced network programs. In this regard, as in others, we found that dealing with CBS in television was similar to the methods followed by us for years in our CBS radio affiliation where, I can unequivocally state, we have never felt undue pressure and have never had any threats, either express or implied, used upon us by CBS in order to get program clearances.

Thus, from our experience, even when we had numerous and complex clearance problems to solve all at once, and at a time when we as a new affiliate might have been most susceptible to all the subtle pressures which could have been applied, we felt we were completely free to exercise our own program selection judgment without encroachments on our rights by CBS. I can think of no better recommendation for their fairness. I may add that I believe option time and the conditions on which it is granted actually afford a measure of protection to the station against any possible attempts of the networks to push it around.

Likewise, the importance of must-buy or basic status has been brought home to us by our own experiences. Despite the fact that Fresno is usually listed among the top 60 markets in the country in importance, there have been several advertisers who have declined to add our station to their lineups until the effective date of our must-buy status.

Among the well-known programs we shall not be carrying until fall for what the advertisers call budget reasons are The $64,000 Challenge, General Electric's 20th Century Fox Hour, General Motors' Do You Trust Your Wife, and Person to Person.

Were it not for the network's must-buy requirement, we might never be ordered for these programs. As a consequence, Dick Moore's station in the huge Los Angeles market might be able to gobble up the extra budget—or the money might be spent in New York, Chicago, or Washington or other markets in the top 10—but in such a case, the million people who can see our station would miss these excellent features and the network would be delivering uneconomic packages to its advertisers and be failing in its efforts to provide truly national coverage.

If this committee wants to make large-market operators richer at the expense of the smaller market stations throughout the country, they need only eliminate must-buys to get the job done. Conversely, if the Congress wants to encourage the growth of television as a competitive medium, it should leave well enough alone on this score.

In summary on this point, let me reiterate that our own experience, short in time as it is, has shown the CBS network to be fair and equitable in its dealings on program clearances and has confirmed the importance of having must-buys so far as the medium- or small-sized market affiliate is concerned.

THE NEED FOR REASONABLE RESTRICTIONS ON DUAL NETWORK AFFILIATION

Commissioner John C. Doerfer has on several occasions suggested that a restriction which would limit a station to a single network affiliation might improve the opportunity for additional stations, since it would make network programing available to more stations. While Commissioner Doerfer's suggestion has been directed primarily to the problem of the UHF stations in obtaining network affiliations in view of the fact that in many communities a VHF station has dual network affiliation while the UHF station has none, I believe his suggestion has merit beyond the UHF problem. In many cases, the dual network affiliation of a station is not based purely on the type of facilities, UHF or VHF, involved, but upon the number of stations or channels available in the community.

As an illustration, the city of Bakersfield, Calif., with a retail trade population of 200,000, now has 2 television stations, one of which is a VHF and the other of which is a UHF. The VHF station has had a dual affiliation with both NBC and CBS and as a consequence, only about one-half of the schedule of either of these networks can be carried by the VHF station. The UHF station is affiliated with ABC. At the present time there are no other channels, UHF or VHF, assigned to Bakersfield. It is completely possible to allocate additional UHF channels to Bakersfield, and since the UHF receiver conversion is virtually complete in the Bakersfield area, new UHF operators would be at no disadvantage as a result of receiver problems.

Under the present circumstances, the VHF station in Bakersfield has a virtual monopoly of the two major networks, which means that the people of Bakersfield do not get the full program schedule of either. This limitation on service in the Bakersfield area exists not because of the difference between the UHF and VHF status of the stations, but because only 2, rather than 3, stations are assigned there.

If, as we suggest, 1 or 2 additional channels are assigned to Bakersfield, the time would not be long coming when each of the 3 networks could have its own full-time affiliate in that city, provided the network rules of the Federal Communications Commission are modified in a manner calculated to bring about this highly desirable result of more television stations.

We believe that the Commission could accomplish this if it would adopt a policy providing, in substance, that no station would be permitted to affiliate with more than one national network where the Commission finds that multiple affiliation will tend to reduce the number or potential number of television stations which might otherwise be able to operate in a community.

Returning to my Bakersfield example, such a policy would prevent the VHF station from monopolizing both major networks so long as two stations operate there and would give ABC a chance at clearances on either or both existing stations. When and if the Commission allocated another UHF or VHF station to the Bakersfield area, each network would have its own affiliate and 3 stations would have the chance to survive where only 2 now exist.

I would like to cite another example of how a policy of restricting dual affiliation could work to the advantage of the public. In the Monterey Bay area of California, there are at least 3 unused UHF channels assigned and yet only 1 VHF station is in operation in this area. This single VHF station is affiliated with three networks and cannot, therefore, carry more than a portion of the schedule of any of them. As a further consequence, there is a very low UHF receiver conversion. If the restriction on dual network affiliation recommended herein were adopted, any UHF operator who wanted to go into the business in this area would be assured of a major network affiliation and could, as a result look forward with some rational optimism to public conversion of the receivers so as to receive UHF.

In this respect, I believe that Mr. Kintner of ABC may have overemphasized the importance of having stations with "comparable" facilities available to each of the national networks. In radio, comparable facilities have never existed and yet there has always been ample room for competition by 4 radio networks as contrasted to the 3 which now operate in television. The argument for comparable facilities loses some of its force when we consider that there is far more disparity between the coverage of a radio station at 550 kilocycles on the dial and 1 at 1500 kilocycles than there is between VHF channel 2 and UHF channel 70.

Yet, in many cities, the radio networks have been able to compete effectively while one is affiliated with a radio station in the 600 kilocycle range and the other is affiliated with a station in the 1500 kilocycle range. I sincerely believe, therefore, that one of the important things necessary to assure more service to the public and more competition in the industry is the adoption of a policy which will prevent large and well-entrenched stations from skimming all of the good network programs in a market by dual or even triple affiliation, rather than the almost impossible attempt to achieve the establishment of "comparable facilities."

In addition to a policy which can be adopted by the Commission prohibiting dual major network affiliation under the circumstances previously discussed, I believe that Congress can take several steps which would improve the status of UHF. One of these methods might be the adoption of legislation prohibiting the shipment of VHF-only sets in interstate commerce, and another might be the granting of special excise tax privileges on all-channel sets. If either or both of these recommendations were enacted, there would be an immediate increase in the number of all-channel receivers manufactured and sold, and a consequent improvement and lowering of the cost of such all-channel sets. While I believe that the adoption of legislation of this type would have a long-term effect upon improving the status of UHF, I believe if such legislation is coupled with a policy of restricting dual network affiliation, improvement could be seen in the status of UHF in a very few weeks or months, as many operators such as myself would be willing to go into communities and utilize UHF facilities if we had some assurance that we could obtain a network affiliation, rather than seeing 1 VHF station skim the programs of all 3 of the national networks.

CONCLUSION

We believe that present business practices of the networks, including those involving option time and "must buys," are fair to the stations, the networks and the public, and essential to the continued growth and excellence of our American television service. We urge that the present FCC rules governing this relationship should not be disturbed.

We further believe that additional television stations will come into being, particularly on UHF channels, if the Commission will adopt a policy of restricting multiple network affiliation by any station where such multiple affiliation may reduce the potential number of stations which might otherwise be able to operate in the community.

TELEVISION INQUIRY

(Network Practices)

TUESDAY, JUNE 19, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a.m., Senator John O. Pastore presiding.

Present: Senators Pastore and Bricker.

Senator PASTORE. Is Mr. Houwink in the room? All right, sir, you may proceed.

STATEMENT OF FREDERICK S. HOUWINK, CHAIRMAN, ABC TELEVISION AFFILIATES ASSOCIATION

Mr. HOUWINK. Thank you, Senator. My name is Frederick S. Houwink. I am general manager of the Evening Star Broadcasting Co., licensees and operators of radio stations WMAL and WMAL-FM and of television station WMAL-TV, in Washington, D. C.

My testimony today is being presented in my capacity of chairman of the board of governors of the ABC Television Affiliates Association. I shall be assisted in the presentation of this testimony by two members of that association: Mr. Harold V. Hough, director of the Fort Worth Star Telegram, stations WBAP, WBAP-FM, and WBAP-TV, in Fort Worth, Tex.; and by Mr. Sarkes Tarzian, president of Sarkes Tarzian, Inc., station WTTV, in Bloomington, Ind. These gentlemen will follow me on the stand and they will submit separate but related statements.

Our association came into being as a direct result of the hearings being held by your committee. The trend of certain testimony previously presented to you created, in our judgment, a distorted picture of the television broadcasting industry. This distortion was so great that our organization passed a resolution which included a plea for this opportunity to present our views before you. Copies of this resolution have been signed by an overwhelming majority of primary ABC television affiliates. These signed resolutions are a part of this testimony.

(A copy of the resolution and a list of signatories appears at the conclusion of this statement, at p. 2639. The original signed resolutions have been retained in the committee files.)

I would like to interpolate one extemporaneous point. In presenting this testimony we have been conscious of the pressures on this committee. As a result we are restricting ourselves, insofar as possible, to new information and are not endeavoring to cover anything that has been presented by anyone else.

Senator PASTORE. We appreciate that.

Mr. HOUWINK. As an aid to better understanding of our position, we wish to give certain background information on our situation.

We ABC television affiliates are the "poor relations" of the television broadcasting field. There is but one group of television stations that faces greater problems than we do; namely, the independent unaffiliated stations. We are sympathetic to their problems because many of us also have been living proof that a competitive television channel license in a major market is no guaranty of profits. Some of us have but recently turned the profit corner after years of red ink. Some are still sustaining operating losses.

While we are the "have nots" of television, we are not asking for outside help in solution of our problems. We do not want Government regulation, or any other outside restriction or influence, to intercede in our behalf in our competitive battle with our strongly entrenched competition which consists of CBS and NBC television affiliates.

We do not fear this strong competition because we know they can be overtaken. We know that our success will be determined by our ability to take audiences away from our competitors. We know that imaginative programing is needed to capture audiences. We are confident that ABC can help us do it.

We look forward hopefully to the day when ABC has equal access to the market through provision of an adequate number of television channels, particularly in the top 50 markets. Such access is essential for ABC to sell programs to sponsors and thus it becomes equally essential to us because it will provide the quality of programing needed to acquire audience.

During the past week, this committee has heard the testimony from the presidents of each of the network broadcasting companies. In the main, the testimony naturally applied to the various aspects of network operation, including programing, affiliations, operations, etc.

However, we feel that there is one basic point which has not been stressed, and which affects the television business in a manner which cannot be controlled by the networks, the Congress, the FCC, or the individual stations—namely, that the distribution of advertising expenditures generally, and with respect to television specifically, is determined primarily by an advertiser's distribution and by market factors completely beyond the control of the medium itself. The selection of markets and stations is determined by location of centers of population and of purchasing power of the population in those centers as related to each individual advertiser's distribution pattern.

Attempts on the part of television stations to influence the selection of markets that an advertiser uses are almost always based on the economic values of the market, such as total retail sales; effective buying income; drug, food, automotive retail sales, etc.; plus the ability of the television station's facilities to deliver as large a market as possible.

The effect of these influences is clearly evident in station sales to national and regional advertisers of spot advertising. In order to obtain a comprehensive picture of business placed by national and regional advertisers, our committee called upon the services of the TvB (Television Bureau of Advertising), and the N. C. Rorabaugh Co., Inc. Rorabaugh publishes quarterly reports on the use of spot television, and this report is recognized throughout the industry as a reliable reference source.

HIGHLIGHTS OF THE FINDINGS OF THE STUDY

An examination of the results of the study reveals that in an advertising medium such as spot television, where advertisers have complete freedom of selection of station and market, the great majority of advertisers and accounts use no more than 50 to 75 stations. These data are shown in tables I, II, and III, which follow page 2637.

1. Among the 3,800 national and regional accounts using spot television during the first quarter 1956, less than 2.5 percent use more than 50 stations. This is shown in table I.

2. A total of 813 advertising accounts used 5 or more television stations. Among these 813 advertisers only 4.1 percent used over 100 stations; 7.6 percent used between 51 and 100, and 88.3 percent used fewer than 50 television stations; 49 percent of these used between 5 and 10 stations. This is shown in table II.

3. According to a report prepared by the Television Advertising Bureau and based on the N. C. Rorabaugh data, the 100 largest national and regional spot television advertisers spent $62,538,600, or over 62 percent of the total spot TV expenditure of $100,209,000 made by 2,702 advertisers during the first quarter of 1956. Among these large investors in spot television only 31 percent use 75 or more stations; 24 percent use between 50 and 75, and 45 percent use less than 50 television stations. This will be seen in table III.

4. Use of spot television, even among the top four advertisers, varies greatly in number of stations. For example, the Procter & Gamble Co., which, according to the N. C. Rorabaugh report, spent $5,782,800 in spot television during the first quarter of 1956, used 184 TV stations for its new toothpaste, Crest, and 16 stations for its washing detergent, Tide. Similar variations are found among the other top spot television advertisers. For example, the Brown & Williamson Co., which used 224 televisions stations for its Kool cigarettes, used only 94 stations for Raleigh cigarettes. This, in spite of the fact that both the Procter & Gamble products and the Brown & Williamson products all have national distribution.

The findings of the study are clear, and the implications are equally clear. National and regional advertisers find it impractical, even with products which have full national distribution, to use television stations in many markets. Equally obvious is the fact that the larger centers of population with greater purchasing power will, in spite of increased competition, draw larger shares of the national advertising dollar than the smaller markets with little or no television station competition. It is inevitable that in television as in newspapers the ratio of national and regional accounts will vary directly with the size of the market.

These figures closely parallel the statements which have been made by the various network officials that their own individual station lineups vary from advertiser to advertiser. We recommend that your committee and the FCC reject any suggestion that networks be required to forgo part or all of the network option time because any such order or regulations would completely disrupt the system whereby instantaneous network programing is made feasible. Option-time provisions are essential for a network to function as such, and provide the means whereby major sponsorship, which is essential to the great programing of the day, can be acquired by the network organization to the benefit of the public, the affiliate, as well as the network. The limiting factor in availability of markets for any type of television programs is the table of channel allocations. No change in network option hours will alter it.

Film programs can run as either a local program or as a network program. Some of the top network programs are on film. Quality of program is the principal determinant of what program is shown. If the film producers can create superior programs, they can sell them and service an increasing amount of the available time. But no governmental regulation can possibly serve as a substitute arbiter of the public taste.

In fact, we find that there is a large amount of prime time available for good television programing during prime viewing hours. On June 12 we sent a wire to 23 ABC stations in the top 50 markets that have 3 or more VHF stations, asking for specific information regarding the number of periods available in prime time, and not programed by the network. The information from 20 of these stations, which is shown in tables IV, V, and VI of this report, reveals that not one station is without a substantial number of half-hour periods within its present network option time and which are available for use by a local, regional, or national advertiser who could purchase, if he so desired, any one of a number of syndicated films to program this time.

We ABC affiliates would be delighted to find sponsors for these availabilities. We sincerely hope that the ABC network will sell virtually all of their evening network option time this fall. When this occurs, we will be able to bring the viewing public in larger measure the superior type of programing that experience has shown can be obtained through the network system.

We think it fair to make the statement that television is the most dynamic means of communication that has been devised by the mind of man, and its impact is having an effect on many aspects of daily life. It has brought education and entertainment, with sight and sound, into the living room, and it has completely changed the methods and concepts of campaigning for political office.

We would like to offer the hope that the progress of this industry could be allowed to continue and develop and further enrich the lives of the American people without any unnecessary burdens other than those which it now has. No system as complex as the television business can possibly have grown so rapidly and be entirely free from imperfection at this stage of the art. The overwhelming majority of station owners and managers and network officials are keenly aware of their heavy responsibility in serving their own communities and their viewing public. Failure to so serve their communities and public inevitably causes a station to lose its viewing public and audience—and when a station loses this it has nothing.

Until such time as the technological advances being made in the industry to allow TV stations to operate without the expensive overheads which currently face all station managers, we believe that the economic factors of this industry should be taken into very careful consideration.

While we do not presume to tell your committee what should or should not be done, nonetheless, we hope the time is not distant when there will be established a sufficient number of stations in those markets which economically justify their existence to the end that as affiliates we, too, may enjoy the type of business that has been offered to our competitors.

We are in agreement that the public should be entitled to receive as much television service as it is possible for this industry to furnish, and we agree that the public be allowed as much choice of variety of program as it is possible for this industry to give. In our judgment, this can be best attained by providing a sufficient number of usable television channels so that old-fashioned American competition can have full play.

(The tables referred to are as follows:)

TABLE I.—*Number of television stations used by all national and regional spot accounts, 1st quarter, 1956*

Number of stations	Accounts using	
	Number	Percent
Over 100	33	0.9
51 to 100	62	1.6
41 to 50	28	.7
31 to 40	49	1.3
21 to 30	65	1.7
20 or less	3,563	93.8
Total	3,800	100.0

(The resolution referred to in the witness' statement and a list of signatories thereto are as follows:)

Whereas testimony regarding network option time and other network-affiliate practices recently was given before the Senate Interstate and Foreign Commerce Committee; and

Whereas the affiliates of the American Broadcasting Co. television network affirm their belief that option time provisions are a vital factor in the station-network relationship strongly influencing the stations' ability to serve the public interest, convenience, and necessity: Therefore, it is hereby

Resolved, That the undersigned American Broadcasting Co. television network affiliates request an opportunity to send a representative group to the Senate Interstate and Foreign Commerce Committee, to testify on how essential option time or some comparable arrangement and other network-affiliate practices are to the economic well-being of the networks and affiliates, with resultant continued vital service to the American people.

The above form was signed by the following individuals on behalf of the stations indicated:

S. Bernard Berk, WAKR-TV, Akron, Ohio.
T. R. Stillwagon, WALB-TV, Albany, Ga.
Charles B. Britt, WLOS-TV, Asheville, N. C.
Harry LeBrun, WLW-A, Atlanta, Ga.
A. H. Constant, KBAK-TV, Bakersfield, Calif.
Ken Carter, WAAM, Baltimore, Md.
Douglas Manship, WBRZ, Baton Rouge, La.
O. W. Myers, WNEM-TV, Bay City, Mich.

Senator PASTORE. Thank you very much.

Mr. HOUWINK. Thank you very much.

Mr. COX. Mr. Houwink, at the present time, what percentage of the commercial programs that ABC offers to WMAL are you clearing for the network?

Mr. HOUWINK. We are clearing a hundred percent at this present moment.

Mr. COX. Do they offer you a full schedule of programs in the hours 7:30 to 10:30 p.m.?

Mr. HOUWINK. No. sir, there are gaps in that schedule.

Mr. COX You have filled those with syndicated film programs or local programing?

Mr. HOUWINK. They were detailed on the exhibit attached. We filled them in part with some syndicated shows which are single-sponsored. We fill them in part with syndicated film programing that we purchase ourselves and use as an announcement carrier on a participating basis. This is a very risky venture on our part. We also carry some network sustaining which we feel is good programing and we fill some of it with feature film.

Mr. COX. Would you clear for these programs because of their quality, whether the network had an option with regard to this time or not?

Mr. HOUWINK. Could you restate that?

Mr. COX. Wouldn't you clear for these programs which the network is offering you whether it had an option on the time or not?

Mr. HOUWINK. On their quality basis we would clear because of the quality of the program; yes.

Mr. COX. I would like to be sure that I understand these tables that you have attached to your statement. The first three tables relate to your investigations as to national and regional spot sales of television; is that correct?

Mr. HOUWINK. Right, sir.

Mr. COX. Now, does this refer to spot announcements or to programs placed on spot or both?

Mr. HOUWINK. Both are included in this.

Mr. COX. That is, in other words, the statistics as to the number of markets covered would reflect the number of markets in which a particular advertiser was even carrying on a spot announcement campaign.

Mr. HOUWINK. Correct, sir.

Mr. COX. Now, is the inference that you draw from these figures that a reduction in the provision of network programing on a nationwide basis would leave only national spot as a source of advertiser support, and that this would result in channeling more of the revenue into larger markets with a resulting loss in program revenues to the smaller markets?

Mr. HOUWINK. That is correct; your inference there is absolutely correct, that the national spot advertiser who is the primary source for revenues for the television stations would naturally be the primary resource to fill the gaps that might be created in the network. On the basis of our study it would merely mean that the major markets would get the business and the smaller markets would not.

Mr. Cox. Isn't it true that under the present system, even with the network option and with the full program schedule that the network therefore offers, that in the smaller market, if it is not ordered on the network—as it may not be—and if it cannot get large-scale national spot sales, that it has to rely, and does now rely, to a much greater extent than in larger markets upon local advertising, local spot, to provide it with its revenues.

Mr. Houwink. That is right.

Mr. Cox. Now, in other words, these first three tables only look at the advertising revenues from the national picture; they do not reflect what revenues are now available, or would be available, on a local basis to provide programing to stations.

Mr. Houwink. That is correct.

Mr. Cox. Now, it is true, isn't it, that even the network's programs did not find their way into all of the local markets that were desired?

Mr. Houwink. I understand that is correct; they do not have complete data on the situation.

Mr. Cox. I do not recall whether Mr. Kinter gave a figure. Do you have any idea what the average lineup, nighttime lineup of ABC is?

Mr. Houwink. No, I do not, sir.

Mr. Cox. Now, with respect to your last three tables, turning to table IV, this is headed "Prime Evening Network Option Time." Now what hours are covered in this report? Just the hours 7:30 to 10:30?

Mr. Houwink. It would be what we in the eastern zone call 7:30 to 10:30, in the Midwest it would be 6:30 to 9:30 and so on adjusted across the country. It is the block of time which is considered prime time in terms of network programing. These are gaps in the network.

Mr. Cox. You have a column here headed "One-Half Hours Weekly Not Programed by Network."

Mr. Houwink. Correct, sir.

Mr. Cox. Are the figures, then, in that column the number of half hours, or are they the number of hours?

Mr. Houwink. Half hours, half-hour units.

Mr. Cox. That is for WABC, there is a quarter of an hour, is that what that would mean?

Mr. Houwink. That is what that would mean, sir.

Mr. Cox. Now I take it, then, that dropping down to KING, in Seattle, your 22d market there, that that indicates that in the 21 hours of nighttime option time there were 9 hours that were not programed by the network.

Mr. Houwink. That is precisely what it means, sir.

Mr. Cox. Now do you have any way of knowing whether any part of those 9 hours were offered to the station but rejected by it for any reason?

Mr. Houwink. I do not have specifics on it on a station-by-station basis. But I am quite sure on the Portland situation they are carrying some local programing instead of some network programing which was offered it. I am quite sure but I could not make it as an absolute positive statement.

Mr. Cox. This would be a matter of their local choice?

Mr. Houwink. Local choice, right.

Mr. Cox. Rather than a shortage of network programing?

Mr. Houwink. Right.

Mr. Cox. Now, with respect to table V this would reflect on the same basis as you cross the country?

Mr. Houwink. Right, and which has the effect of increase, as you will notice, in these data that as you go west the stations have far more hours available between the end of network service and 11 o'clock, the reason being that the network service stops earlier out there.

Mr. Cox. Therefore, again, this does not necessarily reflect any shortage of network programing; it may in part reflect the fact that they have whole blocks of hours for which no network programing would ever be furnished.

Mr. Houwink. Right. But it does point up the fact that there are tremendous blocks of prime evening viewing hours available.

Mr. Cox. In these markets?

Mr. Houwink. In these markets.

Mr. Cox. Then the same thing would be true with respect to your sixth table—that would cover the period between 6 p. m. and 7:30.

Mr. Houwink. It would be between 6 and 7:30 in the East; in the Midwest that would be 7 and 8:30. There is that time variation.

Mr. Cox. That is, the Mickey Mouse Club is carried at 5 o'clock in all the times.

Mr. Houwink. In all the times, yes.

Senator Pastore. You say in your introductory statement that because of the twist the testimony took before the committee, this association was created in order to present your views here. Was there any coercion or influence on the part of ABC toward you to make an appearance here today?

Mr. Houwink. Absolutely none, sir. In fact, I would say they are trying to catch up with us to find out who we are and what we are doing.

Senator Pastore. And in your dealings with ABC, with reference to the exercise of this exception to option time, have you ever been influenced in your decision in making a selection—in going beyond your dealings with ABC, in going to an independent producer—ever been influenced with the fear that there might be a reprisal against you by ABC if you exercised that exception to the option?

Mr. Houwink. Absolutely not, sir.

Senator Pastore. Are you satisfied that the option element of your contract has worked well?

Mr. Houwink. We think it works extremely well. We wish that they used a little more of it.

Senator Pastore. Are you satisfied with this element of prime time?

Mr. Houwink. Yes, we are.

Senator Pastore. Can you give us any examples of instances where you exercised your exception as to option time with ABC and what the background of that relationship was?

Mr. Houwink. We would not be a good example, Senator, because being in a four-station market we are continually short of programing; and in the frame of reference that I think you address your question in, I do not think it would be a relevant point to you. We are hungry for programing and as a result we wouldn't have the pressure situation that I intimate you feel may exist with some stations.

Senator PASTORE. There has been a strong implication here at these hearings that if the contract, and the terms of the contract, between the station and the network were made a source of public knowledge, that that would ameliorate the situation on behalf of the broadcasting stations. Are you for that?

Mr. HOUWINK. I just don't see how it could, in the area of public knowledge, alter the situation. The FCC I believe——

Senator PASTORE. Are you interested in knowing what the terms of the contracts are between the ABC and the other affiliates of the ABC?

Mr. HOUWINK. I think the ABC affiliates, when they meet occasionally around the country, disclose fully to each other what their situations are. I do not think there are any secrets about it.

Senator PASTORE. You are not dissatisfied with that situation?

Mr. HOUWINK. I think we could find that we have that as a matter of common knowledge, as exchange of information between managers. We know what everybody else's basic deal is; we know if anybody has a better deal.

Senator PASTORE. I am not asking these questions in criticism; I am trying to clarify the record.

Mr. HOUWINK. I know.

Senator PASTORE. The only further observation I want to make, Mr. Houwink, is that we appreciate very much your appearance here this morning. You have been very helpful. Thank you very, very much.

Mr. HOUWINK. Thank you, Senator.[1]

Senator PASTORE. Mr. Hough.

STATEMENT OF HAROLD V. HOUGH, WBAP-TV, FORT WORTH, TEX.

Mr. HOUGH. Gentlemen, I have a little brief statement and I will be just as brief as I can. It is a little statement that it occurs to me what might happen if option time were changed. I do not say that it will happen, but it is just something that might happen. It is a pretty serious matter and I will give it to you and then be glad to try to answer any questions.

My name is Harold V. Hough. I am the director of the Fort Worth Star Telegram, stations WBAP, AM, FM, and TV. WBAP radio went on the air in May 1922, and I was there at that time. WBAP-TV was the first television station in the Southwest, starting in September of 1948. I am here as one of the ABC group.

One thing that worries me about this Senate hearing is this option time idea, thus taking an hour off network night time. Here I must remind you that I do not know that it would, but it might. As a television station operator since 1948, I am puzzled as to how I am to fill this vacant hour and, at the same time, keep our people posted on current national events. I don't think there has been any suggestions made as to what hour it would be that would be missing. Would it be 7 to 8, 8 to 9, or 9 to 10? We know that these hours all have different values. The family life reaches the peak at some particular point, depending a great deal on the time zone or the season; and to eliminate a choice hour would be disastrous.

[1] Pursuant to later request, the program schedule of WMAL-TV for a sample week in April 1956 was furnished, and is printed in the appendix at p. 2949.

Senator PASTORE. Mr. Hough, you raise a very, very fine point here that I think has been somewhat overlooked. The argument that you are making now is that, should your option time be cut down from 3 to 2 hours, there may be a possibility that, unless the network has that option time at its disposal, it might not have a national advertiser for that 1 hour that is eliminated from this 3 hour period—and you would have a blank on your hands that you would have to fill in.

Mr. HOUGH. That is right.

Senator PASTORE. Is that what you are saying?

Mr. HOUGH. Yes, sir.

Senator PASTORE. Go ahead. That is novel.

Mr. HOUGH. So the question is how would the stations fill this hour? It will, of course, be filled essentially with the use of films. Live studio shows, which could hold interest 1 hour a night, 7 days a week, cannot be created locally by the average station. There is not enough talent; and it would mean an unbearable financial burden on the small station—such a station would have to establish a production department, a program department, and go into more stage businesses than ever before.

In our own shop, 18.67 percent of our programs, day and night——

Senator PASTORE. Will you raise your voice, Mr. Hough? I think there are a lot of people in this room that would like to hear what you have to say.

Mr. HOUGH. Thank you for the compliment. [Laughter.]

In our own shop, 18.67 percent of our programs, day and night, are live. We have not had much success trying to program live at night. We cannot build consistently strong evening shows which will please the people. So it is mostly a matter of buying half-hour films. I do not like to think what the cost of these might be in such a supply-and-demand market. The stations would be helpless. They would be thrown into a lion's den. Prices would soar.

It is true that the distributors of the half-hour syndicated films have been of considerable help in sales. They send their representatives out to call on the advertisers and they themselves make quite a few sales. They do a good job. I understand, but I am not sure, that their selling commission is 35 percent.

If we do not use these half hour films, it would mean old movies.

Suppose someone along the line decides by law or rule or regulation that there should be 1 hour night nonnetwork. If one tries to take care of this by a movie, we must remember that most of those movies are much over an hour in length. They were originally made for theaters, and probably run for about an hour and a half. It would mean taking an hour-and-a-half story, turning it over to a somewhat inexperienced person in your station and telling him to whittle it down to a 55-minute show but not to lose any of the story value. All of this is an absurd order and is impossible. The viewers get cheated.

I would like to take just another moment in reference to live television. When the viewers now hear the remark that this program is coming to them "live," it stimulates interest. I think that one of these days more programs will have to be produced live in order to hold interest. We would not only lose those, but people could lose instant contact in an emergency with the whole world during 1 hour when most of the family might be in front of the set. To be cut off from a network for this hour means that special events (let us say), a night world-series game or some tragic event, would be cut off. It wouldn't make much sense to schedule a game to the 9th inning and then, on account of the law, have to quit at the 7th inning.

What would happen during the coming political conventions if these rules should be in effect? The whole show would be carried on television, and yet at some night session, when they might be taking the final vote for the candidate for the Presidency, when they get right up to the time to call on how Texas has voted, they have to leave the air. [Laughter.]

Senator PASTORE. Wouldn't you know that pretty much in advance? [Laughter.]

Senator PASTORE. At least, I hope so.

Mr. HOUGH. I think I—well, I don't know.

Senator PASTORE. Well, go ahead.

Mr. HOUGH. But some have said there would be exceptions. In other words, the rules might be made where certain events could be carried. Thus enters censorship, in a form—which is one thing, as I understand it, Congress has certainly tried to avoid—the idea of turning over to some bureau or commission the censorship of programs.

As a television operator, I want more live network shows. I want more one-and-a-half-hour shows. Automatically they probably would be almost eliminated under this setup. So I wish to go on record that the elimination of 1 hour network television time in the prime of the evening would be a disastrous thing for all.

Now, Senator, as I said in the beginning, I do not know that it would happen. If you take the nighttime hour out, the networks might continue, just as they are. And I am sure that we would continue with them, in our case. But when you remove the option time you change the contracts. And suppose that a station here and a station there would decide—well, they get ambitious on this film problem—and they decide, well, we won't use the network program. Well, now, maybe these few stations out might affect the value of the other programs we were getting. In other words, an advertiser wanting particularly those markets, if he could get them, might not be so much interested. I do not know. Frankly, in my own idea, I think the television industry has got too much gumption to go for a thing like that. And I am not saying that the networks are going to close that hour down. It is not a probability, but it might be a possibility. And if the films are going to sell as much as they think they are under this new advent, they are going to get quite a few stations in that prime time, which is what they are talking about so much.

Senator PASTORE. Well, as a station operator, are you convinced that at the time that you tie up with a network as an affiliate of that network, that you must, and it is in your interest to grant them the right of option time at prime time in order that they may be in a position of dealing with national advertisers, which in turn means that you get a national program of good quality?

Mr. HOUGH. Yes; that is pretty much the way I feel about it.

Senator PASTORE. Is that the way you feel about it?

Mr. HOUGH. Yes, sir.

Senator PASTORE. And if you stood by your position that you would want to run your station exclusively of this option time on the part of the network, while it would leave you in a position of choosing whatever program you would want, apart from the network, that in the long run it would not be of an advantage to you?

Mr. HOUGH. We could choose whatever program we wanted, but I doubt if it would be to our advantage. If we give the network clearances—we run, say, the prime time on network shows—the network gets stronger, the shows are better, the people like them and we sell those adjacencies, Senator, and we will get along pretty well with them.

Senator PASTORE. Mr. Cox?

Mr. Cox. Mr. Hough, can you choose any program you want now for broadcasting at any time on your station?

Mr. HOUGH. Can I choose any——

Mr. Cox. Any program that you want now? That is, can you reject a network-offered program and take another program if you consider it to be better in the interest of the people in Fort Worth?

Mr. HOUGH. Yes; we can.

Mr. Cox. And you do that regardless of the option?

Mr. HOUGH. We do not do very much of it.

Mr. Cox. You have an affiliation arrangement also with NBC, do you not?

Mr. HOUGH. Yes, sir.

Mr. Cox. What percentage of the commercial programs offered to your station by ABC and NBC do you accept?

Mr. HOUGH. I should say 90 percent, 95.

Mr. Cox. Can you recall any instances in which you have rejected them, and tell us what program you rejected and what program you substituted in its place?

Mr. HOUGH. Well, I could recall an instance where we rejected ABC on Monday evening in order to take care of Wild Bill Hickok for the kids. But at the moment I do not remember what the offer was to put in there. We haven't had very many. We try to keep cleared up. But at the moment we have, I think you will notice in that statement, 6 half-hours open after 6 o'clock.

Mr. Cox. That is in the period 6 to 11.

Mr. HOUGH. Yes.

Mr. Cox. You have 6 half hours open in a week?

Mr. HOUGH. Yes.

Mr. Cox. Can you tell me for what percentage of the ABC network programs Fort Worth is ordered by the advertisers?

Mr. HOUGH. We are on the basic.

Mr. Cox. You are on the basic?

Mr. HOUGH. Yes, sir.

Mr. Cox. As I understand it, ABC's only basic was a minimum required dollar amount. But your understanding is that generally Forth Worth will be ordered within that $30,000 figure; is that correct?

Mr. HOUGH. Yes, sir.

Mr. Cox. So that you are ordered by ABC advertisers for substantially all of the programs which ABC broadcasts?

Mr. HOUGH. I don't recall any ABC program that we were not ordered for to fill on our time.

Mr. Cox. All right. Now, you indicated you wondered how you would fill an hour of programing in the evening if there was some reduction in the time that the network could option on your station. Now, if you are now providing an outlet for network advertisers—let's say in the period 9:30 to 10:30 at night—if that period were eliminated from option time don't you feel that these advertisers would continue to desire to present their messages in the Fort Worth market?

Mr. HOUGH. Yes, I believe they would.

Mr. COX. And aren't there, generally speaking, film programs of a kind that are now carried on the network, which would be available to these advertisers so that they could order Fort Worth in the period 9:30 to 10:30, and you could carry this program, you would get the same or greater revenues from the program, and your people would get programing of substantially the same type?

Mr. HOUGH. That is right.

Mr. COX. You indicated that in the event of national emergency you were afraid that the elimination of this hour might present a problem because you would be cut off from the network. Isn't it true that you are now cut off from the network many hours of the day?

Mr. HOUGH. Yes, sir, but we are not cut off at night.

Mr. COX. Well, you are connected with the network from the period of 3 p. m. to 6 p. m. and from the period 7:30 to 10:30; is that it?

Mr. HOUGH. I am not sure. I think that is it.

Mr. COX. So that it is only in those limited periods that any reduction in your period of interconnection would pose any such problem?

Mr. HOUGH. The cutoff, however, would be during peak assembly of audience time.

Mr. COX. Now, you indicated that you were afraid that political convention coverage might be influenced in this. Have you read the testimony which Mr. Moore presented before the committee?

Mr. HOUGH. Not all of it.

Mr. COX. Are you aware that, as I recall it, he suggested that the proposed changes in the regulations which he thought should be made would not be applicable to special events such as political conventions, world series, and other live events which, under even his proposal, would be permitted to be carried over the network, regardless of any restriction?

Mr. HOUGH. Well then, I presume that you would have to make up some rules as to what is to be excepted and what is not. So if you have wide variations, after all then it wouldn't amount to much, you could put in a newscast and go right on, can't you?

Mr. COX. I am not sure I understand your point. That is, you feel there would be some problem in having the FCC draft regulations which would provide for the exclusion of political conventions and certain other live events of national interest?

Mr. HOUGH. Well, it looks to me like that if the networks were going to set up lines and get going for this hour it is kind of going down away from them, that there would have to be something, somewhere, to say what shall we make exceptions about, and for. And there are many items. You could say news items—that being the case you could run a 5-minute news program in there and the whole thing wouldn't amount to anything.

Senator PASTORE. In other words, a program of major interest to some member might be a news program like John Cameron Swayze between a quarter to 8 and 8 o'clock; and yet some other people might think that chances are the world series might be important, but to some people it might not be important, or a national championship heavyweight fight? Wouldn't that actually put a Federal agency in the position of censorship as to what is important and what is not important?

Mr. HOUGH. That, I don't see how they can avoid, because there are going to have to be exceptions made under Mr. Moore's suggestion. He says "exception." Who is going to make the exceptions; how are they going to make them?

Senator PASTORE. Or when are they going to make them?

Mr. HOUGH. And when are they going to make them? So they are in the hole, and they are in a censorship business in a direct roundabout way, regardless. So I just cannot, Senator—I just can't get this thing through my nut that it is going to help television at all, to change this option hour time. I think that the station that lines up with the network to serve its folks—and if the network has that 3 hours, the station ought to carry the 3 hours, and give the folks the service.

You give the people what they wish, that is your obligation. You talk about all these terms, for public service and all that sort of thing, of course we are for public service. But we are for public ratings, too. Some of us are not as patriotic, maybe, like we have let on here. [Laughter.]

Mr. HOUGH. In our case down there, Senator, we carry two point sixty-eight, I believe, the last report, public service. That is things like films that are sent out and that sort of thing—of our total daytime and nighttime combined weekly program, out of 118 hours.

We carry 3 percent, 3½ percent of live newsreels that we make there. And we carry 29½ percent, or practically 30 percent, of film today.

Senator PASTORE. You are tied up with two networks at the present time?

Mr. HOUGH. Yes, sir.

Senator PASTORE. Any time an independent producer comes along with a program that you consider to be of better quality than the one that might come in from a national network on option time or prime time, you feel that you have enough flexibility in your contract now to negotiate with that independent producer if you think it is a better program?

Mr. HOUGH. Yes, sir; I do.

Senator PASTORE. All right, Mr. Hough; thank you very much.

Mr. HOUGH. Thank you very, very much.[2]

Senator PASTORE. All right, Mr. Tarzian.

STATEMENT OF SARKES TARZIAN, PRINCIPAL OWNER, WTTV, BLOOMINGTON, IND.

Mr. TARZIAN. My name is Sarkes Tarzian, principal owner of TV station WTTV, Bloomington, Ind., an ABC affiliate.

This is the third time within a 2-year period that I have had the opportunity to testify before this committee. My previous appear-

---

[2] Pursuant to later request, the program schedule of WBAP-TV for a sample week in April 1956, was furnished and is printed in the appendix at p. 2955.

ances were primarily concerned with TV receiver and tuner matters as related to UHF. My recommendation, like many others, was to increase circulation of UHF by eliminating excise tax on full-band TV receivers. If this had been done 2 years ago, there would now be 15 million TV receivers in use that could get UHF broadcasts, and as a result we would have more TV stations on the air. With a great many stations on the air, this hearing relative to network monopoly might not be necessary. Since we have several thousand radio stations operating, no one now is investigating or trying to regulate radio networks. In fact, in many markets it would be a handicap for some stations to have a radio network affiliation. And I am sure that in a few years, with FCC cooperation, enough TV stations will be operating and competition will exist in all markets so that a hearing of this kind will be considered superfluous.

WTTV has been in operation for almost 7 years; we are one of the pioneer TV broadcasters. As a result, we know what TV was in its early days and can give a more complete picture of the role that networks have played in its growth and development.

In my opinion, TV as we know it would not be in existence if it were not for the initiative and the gamble that the networks took to develop programs. As a result, we now have a multibillion dollar industry with almost 40 million TV sets produced, making employment possible for hundreds of thousands of people. It took networks, stations, manufacturers, program sources, engineering advances, and so forth to make this possible.

The American people as a whole have benefited from this combined effort. I feel it is unwise at this time to listen to special interest groups who, for their own benefit, are trying to break up a system that has been productive of the common good. To me, the truth is that the public is served well by a strong network operation, by good film properties, as a matter of fact by any and all legitimate program sources. It is clear that the present system of cooperative station operation and network system contributes more good programing to more people because it is competitive and because it is rooted in a desire to reach and serve the maximum number of people. Conversely, opponents of the present system are not operating from a sense of maximum service but from their own special interests.

Senator BRICKER. Will you designate what you mean by "special interests" and the names of them?

Mr. TARZIAN. I would say that these people who criticize the network option setup and so on, with the idea that they are not able to get their syndicated films in that period, and therefore they are at a disadvantage. I feel that there is a particular, a special-interest condition. They are interested in just their own films.

Senator BRICKER. What other special interests do you designate?

Mr. TARZIAN. That is one of them that I can think of at the moment.

Senator BRICKER. What others?

Mr. TARZIAN. Well, then, there are, I am sure, some people who have ideas that they may have a better chance to do programing on their own, if there weren't these option-time arrangements with the networks and the stations; that they would be freelance operators, that they would have a better chance to do something.

Senator BRICKER. You think those have prompted the legislation that has been filed, do you?

Mr. TARZIAN. I don't know. I am just bringing those two out as some of the things that people are trying to use as a means to defeat the setup that we have now, which to me has accomplished a great deal—in my mind, it has accomplished a great deal for the American public as a whole.

Senator BRICKER. You think there should be no regulation at all, then; no power over the networks at all?

Mr. TARZIAN. I feel that over a period of years this arrangement has worked out well, and as more stations go on the air and we have competition and, for instance, like ABC, as they have more outlets and there are more independent stations, this whole matter will be automatically taken care of just like it has on radio networks.

Senator BRICKER. I think maybe I would agree with you on that. But what if you don't get the more stations and get complete saturation of the ——

Mr. TARZIAN. Well, Senator, I think that is where the Government and the Government agencies can work. It should be in that direction, to work to get more competition, rather than try to keep competition limited and then regulate the people who are in the business.

Senator BRICKER. I think you have got an idea there; but on the other hand, you are regulated, you are licensed, and what logic is there, then, to saying that the networks, which provide the programs and the service, should not be regulated?

Mr. TARZIAN. Well, since we are regulated we are the ones who put these network programs on the air.

Senator BRICKER. That is right.

Mr. TARZIAN. We have the responsibility; then it is up to us to do a good job. And I feel that that is sufficient regulation in itself, in my humble opinion.

Senator BRICKER. What I am getting to: Is there a power to say that you can have a program and your competitor can't; or he can have a program and you can't; or he can sell time to one businessman and refuse it to another?

Mr. TARZIAN. Well, we are in a position—I mean, in my opinion, in my own experience, Senator—we have been operating now for 7 years, as I have said here, and we have operated from a small community, relatively small community, Bloomington, Ind.

Senator BRICKER. I know that, I know where it is; I have been there many times.

Mr. TARZIAN. And we cover a big area, 2½ million people. We cover Indianapolis, Terre Haute, and the rest of them.

Now, it has been our experience—we had one tough job in the early days to program our station 2 hours a day. We were in Bloomington; we didn't have network facilities. And we just had a tough time. We put everybody in the town on the air in order to fill these 2 hours. Now, I am just giving you some of our own personal experience.

Senator BRICKER. I remember those days very well.

Mr. TARZIAN. And then in order to be able to stay on the air longer—at that time you couldn't get films; in fact, the film people were boycotting television. We all know that. They wanted to kill it just like the record people tried to kill radio. And in the end, radio bought out the record industry. And if the film people keep on boycotting television, TV people are going to own the film people, is my honest opinion.

So we put in our own microwave system from Bloomington, Ind., to Cincinnati, and we built it ourselves. A. T. & T. wouldn't do it for us. And in order to get network programs, that is, and we had affiliation with all four networks. Then later, we had to make a decision when other outlets became available in our area, as to which network we were going to affiliate with. And we affiliated with NBC for practically, exclusively, 1 or 2 years. Then we felt that the way ABC—NBC was operating wasn't to our overall interest, nor to theirs; and we were the ones that threw NBC overboard, and tied up with ABC, because we felt that we could do a better job in this area ourselves with ABC.

And there isn't any program that we don't feel free that we could eliminate if we had something of a local interest that we wanted to put in there that is more important. We believe in running this station for the benefit of the people of the area. And if the networks fit into that plan, we will say well and good. If they don't, we just don't use them.

Senator BRICKER. I see, then, what you mean by special interests. The fact is that I just want you assured that this committee approaches this problem with nothing but the public interest. Our public interest is nationwide, instead of localwise, as yours is.

Mr. TARZIAN. Well, because you do that, that is the reason I am here. I wanted to come here and give you the facts as I see them. As an independent station operator that deals with the networks, as long as they serve the public good in our area.

Senator BRICKER. But you have so grown up as a part of your community there, an integral part of the community, that you feel your first and primary interest is in the local community?

Mr. TARZIAN. That is right. To serve the area that we serve. That is our local primary interest, and if the networks have something to offer that the people want in that area, we are going to carry them. When they stop doing that, we are going to stop carrying them; we are going to program some other way.

Senator BRICKER. Do you ever broadcast any football games?

Mr. TARZIAN. Yes, sir. We broadcast all the Indiana University basketball games, all the Purdue basketball games. We have our own microwave system into Lafayette, Ind., and that occurs on network option time. We carried last year 21 basketball games of that type.

Senator BRICKER. You would carry football except for the conference regulation?

Mr. TARZIAN. That is right. We also carry professional football and baseball. These baseball games that we are carrying this year are not network items at all.

Senator BRICKER. Do you carry any of the educational programs or the cultural programs from the university?

Mr. TARZIAN. I certainly do; we have them full time, to give them as much as they feel they can program satisfactorily. We are the only educational outlet in the State of Indiana, I am sorry to say.

Senator BRICKER. I think that is most encouraging. I appreciate your testimony.

Mr. TARZIAN. We have our microwave into Purdue, they put on agricultural programs every day; we have our microwave into Indiana

University and they put on an average of 5 hours a week, some of them for credit, too. Some of the courses are for credit.

Senator BRICKER. You give credit on the TV classes; is that right?

Mr. TARZIAN. Yes, sir. And this year for the first time in the history of Indiana, we carried the commencement of both State universities, Purdue and Indiana University. Each one lasted an hour and half, and we gave that as a public service.

Senator BRICKER. I think you have proved your point, to my satisfaction, anyhow.

Senator PASTORE. And if I were representing you, Mr. Tarzian, I would rest my case at this point, and submit the rest of the statement in the record. [Laughter.]

Mr. TARZIAN. Well, since I came 800 miles to say a few things, I am going to do it. [Laughter.]

Senator PASTORE. Go ahead, go ahead, and spoil it if you want to.

Senator BRICKER. That is like too much cross-examination.

Mr. TARZIAN. It is a fact that TV was something that almost all people in America wanted at the same time. People wanted TV sets, good programs, TV stations and TV networks. The public's thirst for TV has never been matched by anything else, including Fords, phones, bathtubs or air conditioners. The only other item that might be placed in the same category was the demand to "get the boys home" after the war was over.

The unusual combination of engineers, manufacturers, stations, networks, program sources, and advertisers gave America TV in an equally remarkable short time. Everyone involved should be commended for a job well done.

Whatever the contribution which the Federal Government can make to the future of TV, it should be that which is best for the majority of the public. The networks have definitely contributed their part in building the finest record in American industry and communications. Any attempt to throttle their work at the peak of their contribution to the majority of the public, at the behest of a minoriy and special interest group, is unfair to the public interest.

The Government through the FCC should encourage the licensing of new stations. It should eliminate excise tax on full-band TV sets to increase circulation so that TV can grow and develop. The Government's energies should be expended in this direction where it will be for the good of all the people. Then the Government will be working in the public interest and fulfilling its mission.

More operating TV stations necessarily mean more competition and better programs and service to the public. This is the direction in which we should all work.

I wish to thank you for the opportunity of appearing before this honorable committee.

Senator PASTORE. Mr. Cox?

Mr. COX. Mr. Tarzian, you indicated that in some way you had felt that NBC's relation with your station was not working out to the best interest of the network and your station and possibly the public. Could you expand on that a little?

Mr. TARZIAN. Well, since we covered from our transmitter, located halfway between Indianapolis and Terre Haute, which is a distance of about 60 miles—the 2 towns are separated by about 60 miles. We are halfway between. So we are about 30 miles from Indianapolis. Some of the advertisers felt that they would like to buy one of the Indianapolis outlets as well as our own station, you see, thus duplicating programs in the Indianapolis area. Well, we felt that if NBC went along with that, you see, then our work of developing the NBC programs in that area wouldn't be good. We wouldn't be identified as purely an NBC station, which we wanted to be if we were going to be affiliated with a network.

If there would be duplication of programs of that type, then I felt that it wasn't a good thing as far as building up programs on WTTV. For that reason we made this other arrangement. It wasn't anything that the network did to us or anything of that kind.

Mr. Cox. You are the only ABC outlet, then, in the area?

Mr. Tarzian. Yes; I am the only ABC outlet in the area.

Mr. Cox. And you felt it was undesirable from your standpoint to have advertisers buying both your station in Bloomington and the station in Indianapolis, on NBC?

Mr. Tarzian. That is right. To buy competitive stations, with whom we competed all the time, wherein people could get used to seeing NBC programs on the other station—and I felt as a long-range thing it wasn't good policy for NBC, either, because they would be building up a program on a competitive network station.

Mr. Cox. What percentage of the ABC programs that are offered to your station do you carry?

Mr. Tarzian. We carry—I think we are offered—you have our confidential questionnaire on that. We don't carry all that they offer. We carry, I would say, about 70 percent of what they offer.

Mr. Cox. Is that 70 percent of the commercial programs or 70 percent of the combined commercial and sustaining?

Mr. Tarzian. Combined. And then they offer us sustaining programs, too, of which we do not take all because we have, like I said, we have a lot of our own sustaining programs in the way of Indiana and Purdue University programs.

Mr. Cox. Could you tell us what percentage of the commercial programs they offer you that you carry?

Mr. Tarzian. Of their commercial programs, that we carry? Well, I would say it averages around 70 percent of what they offer that we carry.

Mr. Cox. Now, you indicate that you think the public is served by the development of good film properties in addition to the strong network operation, and in fact that the public is served by any and all legitimate program sources. Do you think that the public has an interest in stimulating the development of as many program sources as are possible?

Mr. Tarzian. I think so. Because it would be to their advantage to develop as many program sources as possible, and if we have more stations on the air, that automatically takes care of more programs, you see.

Mr. Cox. Now, looking at the situation as it exists today, however, with the restricted availability of stations, isn't it true that if nonnetwork sources of programing are to develop and thrive, to the public's interest, that the producers of these programs must have access to——

Mr. TARZIAN. To outlets.

Mr. COX. To the major outlets, the major outlets in the major markets of the country; wouldn't that be true?

Mr. TARZIAN. Well, I think that you will find that this isn't true yet in all of the major markets, but I think you will find in a lot of the major markets like New York City, we will say, we have plenty of stations there, a lot of competition. If anyone has anything good, they can go to New York and get it put on the air. It may not be on WRCA, or WCBS, but there are other outlets there——

Mr. COX. How about a two-station market; Louisville, for instance?

Mr. TARZIAN. Well, in stations in places like Louisville, that is where I think the Government, through the FCC, should act and make stations available. Now, for instance, we have applied for channel 21 in Louisville. I don't know whether you know it or not, but there was a channel 21 on the air in Louisville, and they couldn't make a go of it so they went off the air. But we feel that we have a way that we can make this UHF channel 21 work in Louisville. Now, we want the opportunity to try this thing. We want to go on the air with channel 21, but do you know what happens?

The present holder of that CP on channel 21—who has already sold his transmitter and everything else, and who has already petitioned the FCC to move either channel 7 or channel 13 to Louisville—says that it is illegal for us to apply for channel 21 since they have a CP, and that they are going to ask for a renewal of their CP to keep us off the air. Now, it is this kind of thing, you see, that should be straightened out, that the Government could do, so that there will be stations in this market.

Senator PASTORE. Let me ask you a question along that line. What has been the practice in that regard, where a UHF station goes off and sells their equipment? Do they have a right to keep renewing that license just so that they will have a hold on that station, so eventually if a VHF channel comes along they can make first claim on it?

Mr. TARZIAN. Well, I think legally they can, unless the Commission is wise to the situation and turns them down, you see. So on technicalities they will do these things. I will give you another example. In Fort Wayne——

Senator PASTORE. Do you know of any station where a station has shut down for any substantial period of time and the FCC has renewed their license?

Mr. TARZIAN. Well, I am just giving you this as what may happen down there. They have already filed a protest and told the Commission that they should return our application in view of the fact that they are holding the CP for channel 21.

Senator PASTORE. I wish the staff would find out about that case. I think we are interested in that.[3]

Mr. TARZIAN. Here is another one——

Senator PASTORE. After all, I realize the fact that there is an economic interest involved there, and it is unfortunate that these people had to shut down. But when in the public interest, if there

[3] In response to an inquiry from the committee staff, Chairman McConnaughey wrote a letter dated July 5, 1956, relative to this matter, which is printed at the conclusion of Mr. Tarzian's testimony at p. 2657.

is someone who thinks he can make that channel a go in the public interest, they ought to be given that opportunity.

Mr. TARZIAN. All right.

Now, we have another situation in Fort Wayne, Ind., where 2 years ago we found a channel for Huntington, Ind., which is about 10 miles from Fort Wayne. We asked the Commission to assign 21 to Huntington, Ind., which they did. Then we applied for that channel up there. And CAA turned us down because of the fact that it would be an air hazard. So after 2 years of trying to find a spot where we could put this station, we finally—everybody agreed that if we put it 3 miles outside of Fort Wayne, Ind., it would meet CAA requirements, and it would meet FCC requirements, you see. So it is my understanding that as far as the Commission's staff was concerned it was O.K.

But then on a legal technicality they said, "Since you're 3 miles from Fort Wayne, Ind., we don't want to call you a Huntington station; and since you are 3 miles from Fort Wayne, why we will have to have a rulemaking so we can call you a Fort Wayne station—and therefore, we don't want to make you a grant." Now, rulemaking, in general, takes about 6 months. So here we are, we are held up. ABC wants an outlet up there, and we will be very glad to put the thing on the air, and get them an outlet up there. But what happens? As a result we are off the air; the two stations that are there now, it is to their benefit to keep us off the air.

So they work all these technicalities to keep people off the air. A lot of this is going on. These are two I know of personally. I don't know how many more there are.

Senator PASTORE. Any further questions?

Mr. COX. Yes, just a few.

However, with reference to the situation in Louisville, for illustrative purposes: Until something is done about a third channel, isn't it true that any producer of nonnetwork programs who wants to clear Louisville, as one of the major markets of the country, has a difficult time finding clearance in the peak viewing hours in the evening because the two major networks have affiliates with options on that time, and the third network, presumably, has some kind of a secondary relationship with the stations?

Mr. TARZIAN. I agree with you 100 percent. But this is like rationing during the war period, you know. We just have a limited supply so we ration everybody, we regulate it. But the real answer is, increase production and make it available to everybody. Why use the rationing as a crutch to achieve your objective?

Mr. COX. You indicated that you hope through this process that there would be more independent stations developed. Now, isn't it true that both the existing independent stations, and any which may develop in the future, are largely dependent for their quality programing on the nonnetwork film or independent packager sources of supply.

Mr. TARZIAN. That is true. And whatever they can do themselves in the way of local programing.

Mr. COX. Therefore, if these independent stations are going to be able to program in the public interest—to provide a fourth real program choice in the markets where independent stations exist—they have to have a thriving source of programs to which they can look?

Mr. TARZIAN. They have to have a thriving source of stations who can buy their programs, that is true. And the only way, again I say, you are going to have that is to have more stations on the air in the markets where people are interested in spending advertising money.

Mr. COX. Do you find that the broadcasting—that the furnishing of live programs from the network on an eastern time schedule presents any problems as far as programing in the best interests of the people in the central time zone?

Mr. TARZIAN. In the Middlewest: Well, I will tell you it presents problems, but we have been able to handle it. And now with this magnetic tape recorder, I think a lot of those things will be straightened out.

Mr. COX. Are you now broadcasting these live, so they are carried an hour earlier in your time?

Mr. TARZIAN. Yes, that is true. We accommodate ourselves so that we can do that. Then, of course, in some of the cities, they are an hour—in our particular case in Indianapolis, for instance, they did something which wasn't very good as far as the broadcasters were concerned: They went on eastern time the whole year round.

And then when the East went on fast time, then of course that meant a change for us. There was an hour difference there. Whereas, during the winter months we would be on the same time as the East. So that it complicated it. But we worked it out. We lived with it, it isn't a serious disadvantage. Where there is a will there is always a way.

Mr. COX. Thank you.

Senator PASTORE. Any further questions? Thank you very much, Mr. Tarzian.[4]

(The letter from the Federal Communications Commission relative to channel 21 in Louisville, Ky., referred to above, is as follows:)

FEDERAL COMMUNICATIONS COMMISSION,
Washington 25, D. C., July 5, 1956.

HON. WARREN G. MANGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: This letter is in response to a telephoned inquiry from Mr. Nicholas Zapple, of the staff of your committee, concerning the status of channel 21 at Louisville, Ky.

Mid-America Broadcasting Corp., holder of a construction permit for a UHF station on this channel, operated the station from September 7, 1953 until April 20, 1954, when the station went off the air. On May 17, 1956, Mr. Sarkes Tarzian tendered an application for authorization to build and operate a television station on the same channel at Louisville. This application cannot be accepted by the Commission at this time since under its procedure the Commission does not accept applications for television stations on channels on which construction permits are outstanding.

The construction permit held by Mid-America Broadcasting Corp. expires on July 16, 1956, but an application for its extension has been filed by Mid-America, and will be considered by the Commission prior to that date.

Hitherto, in recognition of the difficulties confronting UHF broadcasters generally, the Commission has in most cases granted, on request, the extension of expiration dates of construction permits for UHF stations which have not yet gone on the air, or which having commenced operation, subsequently went off the air. Our policy in this regard is currently under review, taking into account

[4] Pursuant to later request, the program schedule of WTTV for a sample week in April 1956, was furnished and is printed in the appendix at p. 2951.

the length of time covered by successive extensions, the prospects for the commencement or resumption of station operation, and the fact that indefinite preemption of an unused channel by the holder of a construction permit could not be justified.

I am unable, of course, to anticipate what decision the Commission will reach concerning an extension of the construction permit on channel 21 at Louisville, but you may be assured that the matter will be carefully reviewed before a decision is made.

Sincerely yours,

GEORGE C. MCCONNAUGHEY, *Chairman*.

Senator PASTORE. Mr. Donald H. McGannon.

I understand, Mr. McGannon, that you are going to summarize your statement and have the whole statement put in the record.

Mr. MCGANNON. That is right.

STATEMENT OF DONALD H. McGANNON, PRESIDENT, WESTINGHOUSE BROADCASTING CO., INC.

Senator PASTORE. Therefore, without objection, we will have the whole statement inserted in the record in its entirety.

(The statement follows:)

STATEMENT OF WESTINGHOUSE BROADCASTING CO., INC., BY DONALD H. MCGANNON, PRESIDENT

Mr. Chairman, I am Donald H. McGannon, and appear before the committee today as president of Westinghouse Broadcasting Co., Inc.

Our organization has followed the proceedings of this committee for several months and, as these matters have progressed, have been of the opinion that perhaps some viewpoints which we have on the subjects covered would be of interest to the members of the Senate. However, in order to avoid the need to appear on multiple occasions, we have deferred until now our presentation.

I fully appreciate that you are now in the phase relating to network operation and practices. We will talk to this subject first and perhaps fullest but ask your leave to express our opinions regarding other subjects covered earlier. I want to assure the members of the committee that we are very appreciative of this opportunity to have your attention and sincerely hope that this material will aid in some small measure your deliberations of these most serious matters presently being studied.

Westinghouse Broadcasting Co., Inc., owns and operates television stations WBZ-TV, Boston, KYW-TV, Cleveland, and KDKA-TV, Pittsburgh, and a sister corporation entitled Westinghouse Broadcasting Co., Inc. (California) is the owner and operator of television station KPIX, San Francisco. Both of these companies are wholly owned subsidiaries of the Westinghouse Electric Corp., the founder of commercial radio broadcasting at station KDKA in Pittsburgh on November 2, 1920.

Working directly with the Electric Corp., we have been engaged in the development of television since 1926, following carefully and intimately all of the evolutions and successive ramifications in this field—technical and commercial, manufacturing and broadcasting. Prior to 1948, Westinghouse Broadcasting Co. owned and operated five radio stations which still continue in its ownership. In that year, however, it built its first television station, WBZ-TV in Boston, which remained its only television operation until 1953. In the course of the research and study that formed the basis of the establishment and construction of WBZ-TV, and later the experience gained in the operation of this station, Westinghouse Broadcasting Co. amassed a vast amount of additional research and statistics. In addition, its personnel worked closely with the staff of the Federal Communications Commission and other interested elements of the industry in the various developments of the allocation system which were finally set forth in the sixth report and order.

During the period from June 1953 to January 1955, Westinghouse invested almost $25 million in the acquisition of 3 additional television stations. This investment was, of course, in addition to the original cost of establishing WBZ-TV and the very substantial sum later invested, or about to be invested, in the acquisition, installation, and improvement of capital plant and facilities in all four of these locations. This latter sum totals over $6 million.

The philosophy pursued in the operation of our various stations can be best summarized this way: The constant and compelling goal of all our efforts is the highest degree of service we can render to the public of the communities in which we are licensed. In order to do this effectively, we believe we must become an integral, stable, and interested part of these communities, genuinely contributing to their forward progress, to their betterment, and to the solution of their many problems. Beyond this, in order to be thoroughly effective in these efforts, we must have a form or a character in the minds of our viewers and listeners, and when we have achieved that point of being afforded the respect and confidence of our public, then alone will our labors be considered successful.

We are commercial broadcasters and part of a publicly owned corporation, and we therefore properly seek profits that are commensurate with the character of our business and our substantial investments.

I want to take just a moment to tell the committee about our public service activities and to perhaps lend meaning to some of these high-sounding credos I mentioned above. The public-service effort consists of basically three elements.

The first element is the day-by-day cooperation with charitable, educational, religious and other allied organizations and the direct furtherance of their causes by the announcement of prepared messages on our air. In the period from January 1, 1955, to May 31, 1956, these announcements reached the amazing volume of 93,013. This was in addition to other supporting efforts such as interviews, telethons, and so forth, also aimed primarily at public solicitation of funds.

The second element has been a series of projects which have been approached on a group basis; that is, a program or series of programs created by a single production team and in turn utilized on all of our radio and television stations. It has been our conviction that a high quality of work can be accomplished by this method. This is coordinated by a staff of personnel operating at the corporate level, all of whom have had rich backgrounds and experiences in every phase of broadcasting.

One of the primary responsibilities of this staff is to maintain a close feel of the pulse of each of the six markets in which we operate and of the nine individual stations. This day-by-day experience, when coupled with their knowledge of broadcasting happenings and activities in other markets of the country, permits them to function as advisers and counsellors to the individual station managers who are otherwise autonomous. We have found substantial success in this regard both in the public service and commercial field.

During 1955 and 1956 the following constituted our group public service efforts:

Sing Along for Mental Health.—(Radio series.) A project in which we worked cooperatively with the Mental Health Institute and other authorities. The campaign consisted of the production and use of sprightly jingles promoting interest in mental health which were performed by top flight artists. The series won an award "for outstanding service against mental illness" given WBC, Inc., by the National Association for Mental Health.

Of Many Things.—(Radio series.) A program series produced by WBC, Inc., which gives Dr. Bergen Evans, familiar to most Americans as the erudite moderator of the network program Down You Go, a full sounding board for wit and ideas. The programs are in the form of spoken essays and make an important contribution to the cultural stature of radio.

Growing Pains.—(Radio series.) A series of programs conceived and produced by WBC, Inc., with Helen Parkhurst, the world famous educator and child psychologist, founder of the widely known Dalton plan. The program features Miss Parkhurst in intimate interviews with teenagers. The purpose of the program is not to prove anything shocking but, rather, simply to present the teenager's outlook on life and the problems that confront him through the skillful questioning of Miss Parkhurst. The series is currently being presented over three educational stations and WNYC in addition to its weekly presentation on WBC, Inc., stations.

The White House Conference.—(Radio–TV.) 1. Stations covered the local State conferences prior to the actual White House Conference.

2. WBC produced The Big R, four television documentaries pointing up and discussing the agenda problems of the White House Conference, with Raymond Massey as narrator. For radio, a 45-minute documentary on educational problems was produced with Dave Garroway as narrator.

3. WBC sent a five-man TV and radio crew to Washington to cover the conference as follows:

Interviews with delegates and conference officials.

Fifteen minute on-the-spot news reports each evening.

Ninety-second beep summaries for use in news shows.

Following the issuance of the conference report to President Eisenhower, WBC instituted a heavy spot announcement campaign on both radio and TV pointing up to the American public the findings of the conference.

4. Presentation of sets of The Big R television films were made to the National Education Association and the National Citizens Council for Better Schools for varied public service uses to which both organizations might put them. The program series won an honorable mention citation from Ohio State University and has been highly commended by the conference officials, the National Education Association, the Citizens Council for Public Schools and the United States Office of Education.

Coverage of New York Conference of National Citizens Committee for Better Public Schools.—During a 2-day conference at the Waldorf in New York City in February, WBC sent in a special crew and gave the conference coverage similar to that given the White House conference.

Coverage of Atlantic City Convention of the American Association of School Administrators.—Radio coverage of this event by a special team involved recorded interviews with delegates, evening news reports to our stations by phone and a 30-minute panel discussion on educational topics conducted by Hon. Samuel M. Brownell, United States Commissioner of Education, together with preeminent educators from each of WBC, Inc., station areas.

Currently, arrangements are in process for WBC, Inc., coverage of the forthcoming NEA conference at Portland, Oreg., in early July. A 30-minute panel discussion for WBC, Inc., is planned on the subject Manpower and Education which will be moderated by Dr. William G. Carr, executive secretary of NEA, and will include a number of prominent educators. News broadcasts and taped interviews with delegates will also be featured.

The third element of our public service effort consists of an aggressive approach to the problem strictly on the local level. In 1956 this is a four-pronged effort covering chiefly the following:

(*a*) The critical need in America for scientists and engineers.

(*b*) The enhancement of the prestige and position of the American teacher.

(*c*) A higher public enlightenment in the field of American history.

(*d*) A continuation of the drive for mental health.

(*e*) A purely local project varying from market to market which represents an item of great public need, a serious local condition, a community campaign or effort or similar situations.

As an indication of what has been done in the last subdivision of this category, the following are a few particulars:

KYW-TV, Cleveland, produced 11 episodes of 30 minutes each entitled "Juvenile Justice," a series concerned with the serious problem of juvenile delinquency and broadcast in conjunction with the Cleveland Police Department.

KYW, Cleveland, a series entitled "Tower 1-4600," constituting a weekly report to the city of Cleveland by Mayor Celebreze and his staff.

KDKA-TV, Pittsburgh, a project series designed to create public awareness of slum conditions and to stimulate interest in rehabilitating depressed areas.

KDKA, Pittsburgh, 2 weekly series, 1 entitled "Allegheny Round Table" which is a discussion of local community issues, 30 minutes in length, plus School Science Experts, conducted in conjunction with the University of Pittsburgh, Carnegie Institute, and Buhl Planetarium. In addition, the staff of the radio station is working jointly with the television station in the slum rehabilitation project.

KPIX, San Francisco, a series of programs intended to explore and inform the public on the entire problem of rapid transit in the bay area.

WOWO, Fort Wayne, an effort to bring about the establishment of a municipal art center, which to date the city has not had or enjoyed and for which it is felt there is a genuine need.

KEX, Portland, the focusing of attention on the facts, circumstances, and possible solution of the traffic problem that is plaguing Portland as it is other metropolitan areas.

WBZ-TV, Boston, a film documentary on a legislative plan submitted to the legislature by the chamber of commerce for the improvement of Greater Boston.

WBZ, Boston, this consists of two parts: The first is a series of documentaries on pressing Boston problems including parking and traffic, taxation and schools, and the second constitutes a get-out-the-vote campaign.

We have been privileged to win numerous awards in recognition of this effort and take substantial pride in these accomplishments but are convinced that the dynamic character of television lends good justification to our further belief that we have just begun to scratch the surface in this regard. Our efforts and investment in the future will be doubled and redoubled.

It has been our viewpoint that the American television team consists of several players:

First, the advertisers who invest and make available income through network, national spot, and local channels which, in turn, permits commercial broadcasters to operate in a sound and profitable manner and to create public service programs.

Secondly, the networks, about which I will talk in greater detail below, and other programing sources such as film producers and syndicators and package program producers.

Thirdly, groups of well-established, well-managed stations through whose facilities the public has available not only the best of network programs but also equally effective local programing which establishes the station as an integral part of the community. These three forces operating in close and effective cooperation have achieved the present high level of television service to the American people.

From the original establishment of WBZ–TV in Boston in 1948, the station was affiliated with the National Broadcasting Co., which was also true of WPTZ in Philadelphia and now KYW–TV in Cleveland. KPIX in San Francisco has been affiliated with the Columbia Broadcasting System. An unusual situation exists in the case of KDKA–TV, since it operates as the only VHF station in Pittsburgh and has, therefore, adopted the policy of carrying programs from all networks, selecting those which best serve the public need and appetite. This is done without option or free hours and at a uniform rate of compensation. When another VHF station inaugurates service, it is anticipated that KDKA–TV will become affiliated with the NBC television network.

During the period of these various affiliations, a sound relationship has developed between ourselves and the networks. We have been increasingly impressed with the ingenuity, aggressiveness, and creativity of all three television networks. We believe the results of their effort have brought to the American public a new era of enlightenment, and that the true future of television in all of its programing senses and the service to the public rests in a large measure upon at least three genuinely competitive and national television network services.

Obviously, our affiliation agreements (except KDKA–TV) have been of the standard type, providing for option time periods to the network on the station affected. I have read with much interest earlier statements to this committee on the alleged illegality of option hours and also the response by various witnesses including the representatives of network. Although I have had the privilege to be admitted to the bar, I do not believe it would be in the interest of time for me to add my opinion to that expressed by eminent counsel who have thoroughly researched the legalities of option time. However, predicated on the assumption that this is legal under all of our existing laws, including those dealing with antitrust, my company believes that option hours are necessary for an effective network operation. Only through this method can programing be evolved and conceived which will attract national advertisers and their budgets. It is, therefore, our recommendation that no steps be taken to alter or change the concepts surrounding the permissibility of affiliated stations optioning time to the television networks.

Despite our extreme regard and consideration for television networks and the advantages that our stations and the public we serve have received from these networks, this relationship—like so many other relationships—has known periods and occasions of difference between ourselves and the networks. Generally speaking, these have been worked out broadly and amicably with due recognition to the rights of both parties concerned. It is our firm conviction that the success of such a relationship, and in turn its benefit to the public (our common purpose), must in all cases be mutual in order that the station and network can prosper, and in order to insure the broadest expansion and diversification of service.

Whenever one or the other imposes upon the second, there will automatically be a reduction in such service even though that might not be perceptible at that moment. While discussing option hours, I believe that one phase of this deserves consideration before this committee; this is the fact that the networks have programed into local time periods generally in excess of the option periods available to them. It is recognized that the average station has the right to decline to carry such programing. But in the desire to preserve the relationship and the spirit of the affiliation, by far the predominant number of affiliates agrees to carry such addditional programing that is in excess of the option hours.

It is our conclusion that despite the high quality and caliber of the programing going into these additional hours, it brings about a corresponding reduction of the local hours of programing available to the public, a curtailment of the productivity of the station, and hence the earning power of the station.

I believe that in time the stations and networks will succeed in working out this relationship and this will be done on a basis that will be properly cognizant of the problems and responsibilities of both, and hopefully without the need for Commission or other governmental intervention. Such hours, of course, and such maximums considered and agreed to would be exclusive of special and unusual activities of long-running duration—such as conventions, athletic events, public service programing and the like.

There has also been substantial contention that the existence of network option time has thwarted the development of other programing sources. I cannot agree with this position. It is my observation that in the course of the past 5 years, numerous film producers and film syndicators have come into business and have displayed substantial financial success in producing and distributing film to television stations. Further reference has been made, however, to the fact that the existence of option hours has placed beyond the reach of such film and program sources, the availability of "prime" periods.

I wish to urge upon the committee that while these periods represent peak viewing times, network programing has been of such an attractive character in these hours that the viewing audience and reception has been of a premium type. There are at least three opportunities through the NBC, CBS, and ABC networks for such film producers to distribute their product for exposure between 7:30 and 10:30. Furthermore, there is substantial additional opportunity to distribute their films on a local basis directly to the stations concerned. It is my observation, further, that the time periods from 7 to 7:30 p. m. and from 10:30 to 11 p. m. represent and contain many of the characteristics normally attached to the so-called prime periods.

I urge upon this committee that this entire condition is one of pure economics and competitive business factors. I am confident that can be solved and a proper balance achieved, depending on the success attained by each of these producing entities to capture the attention of the public. I certainly strongly recommend against any change in the form of modern-day television networking in order to solve this purported problem.

In further commenting upon the relationship of our stations with our respective affiliated networks, I believe and recommend to this committee that these relationships can be improved if a longer period of affiliation contract were made available to the individual stations, at their option. I would suggest this be of a 5-year duration. The existing 2-year affiliation has not been of sufficiently long duration to permit the individual stations to achieve the desired degree of security in their relationship with the network. This insecurity, I believe, often creates the need for the station operator to concentrate on short-term gains, recoupment of investment, and deferral of the decision to plow back into the business earnings that will enhance service to the public. In eliminating the risk that the affiliation would be lost in a relatively short time, the individual station operator will be more willing to develop sound programs of all types, commercial, public service, educational, and to reinvest additional earnings in a higher degree for public service with more reliance on their own station, local talent, and the sound development of local facilities.

The question concerning the ownership of stations by television networks has been raised by this committee. Our company does not profess to have any operating history or experience to report to the committee concerning this question, but it is our observation, and my personal conviction, that there is not only a foundation for such ownership but even a need. This is especially true when considered in light of the fact that it can be argued that the network will perform a better programing service if it has the benefit of the day-by-day information dealing with the problems attendant upon local station operation. These local stations should be sounding boards for the networks and an internal measure of the effectiveness of their efforts.

However, we have one reservation in this regard. We appreciate that as long as the broad principles of ownership advocated above are in force, it is impossible to control the locations or types of stations which the network should own or seek to own. However, it may be possible, and we urge accordingly, that in the course of a network acquiring or upgrading station properties, it be done in a manner that fully insulates and segregates these station operations from their national network functions. If this segregation could be accomplished in a practical fashion, then their position as a buyer would not be automatically enhanced or made preferential because of their ability to grant or withdraw or fail to renew an affiliation contract.

It is appreciated that the mechanics of working this out are extremely difficult and perhaps in some measure the end could be accomplished if our earlier recommendation concerning a 5-year optional affiliation period were made available to the stations.

The consideration to license and regulate networks is one which we feel we must also strongly urge this committee not to consider favorably. The television network business is a vastly complex and sensitive one and one that is predicated upon the ability to secure, properly coordinate, and direct highly skilled and creative talent and managerial personnel. It is in essence a personal service business and one that involves vast risk capital. The restrictive and atrophying effect of direct Government regulation might well be to offset this balance and destroy qualities of service that cannot be simply legislated into being but are built, developed and created over long periods of experience. These are the qualities, some tangible but many more intangible, that translate program concepts into images on the television tube and into the service of the people. In our opinion, these put television networks out of the category of public utilities or common carriers. Beyond this, the Federal Communications Commission has effective control of the networks through the rules governing stations, including those owned by the networks as well as those affiliated with these networks.

In the course of considering television station purchases and the investments described above, Westinghouse conducted a careful review, study, and analysis of existing broadcasting concepts, their effect upon television and all of the other elements bearing upon the industry, including the engineering and technical problems, the programing challenges, the available sources of programing, the commercial aspects of the market, and the educational and public service opportunities that could be rendered to the communities in which we were or hoped to be licensed. The decision to proceed with such investments was only made after such careful study and founded upon the firm conviction that the industry had developed in a basically sound manner and even though there were many areas yet to be pioneered and developed.

Further, it was considered that the industry, the attitude of the Commission and the regulations affecting television were sufficiently stabilized to warrant such an investment. One thing was certain and clear, however, that television, on each of the successive dates of our station acquisitions, was enjoying a dramatic and unprecedented growth and the public was being well served by the system as it was then being evolved and as it now exists in consequence of the sixth report and order.

It was to be expected on those occasions of acquisition to believe that stations which properly fitted into the system and which, in turn, were properly operated in the public interest, possessed elements of permanence of a degree sufficient to justify an investment of this magnitude. It is mandatory, therefore, in our opinion that any change in such a system as it presently exists must first be measured against the effect on the service to the public in the various communities involved. If, after such measurement, a better service cannot be clearly seen as the result of such a change, then said changes should not be undertaken or should be deferred until it can readily be determined that the service to the American people, and not to any group of station operators or other persons within and without the broadcasting industry, is being enhanced.

Realistically speaking, of course, any major changes in the allocation system are bound to have some concomitant disadvantages since the interests of our population have become directly related to and crystallized in our present system. In other words, the history of the evolution of television cannot be disregarded. However, the test must be the aggregate public good. The problems facing our industry are neither so simple that they can be solved by one stroke of the legislative pen nor so complex that they should be considered insoluble. There is no panacea, but patience, ingenuity, and long-range viewpoints can point out the most desirable course of action.

It is recognized now, as for several years past, that an important segment of the television broadcasting industry has been operating under the most adverse circumstances. Despite the phenomenal growth of this product, the UHF portion of our industry has not been able to keep pace with the remaining elements. Any discussion of further expansion in our television service must automatically involve a discussion of the UHF television facility, and if the expansion is to be a sound one, the UHF facility must favorably compare in its service to that service being rendered to the public by VHF. In the absence of this condition, the whole matter of allocation must remain either as it is presently constituted, or be limited to stopgap or interim measures and improvements.

Our company and its management are keenly aware of the investment necessary to institute or acquire a television service and, in turn, to maintain it, and regards with great seriousness the economic plight of UHF operators who have been unable to succeed in producing a return on their investments. However, despite this, we urge upon this committee the fact that this represents but a segment of our industry and is perhaps in some measure comparable to VHF operators in the late 1940's, before set circulation had achieved sufficient volume to entice advertisers.

The basic norm and measures of at least momentary success as I have repeatedly said above, is "how is the American public faring under our present system?" It has been my observation that the public at large has been the least vociferous, if at all complaining. The present system has brought a television service startlingly close to 100 percent of the population of America, substantially over 90 percent of all television homes having the power of selection between 2 signals and almost 90 percent having the opportunity to select among 3 or more. In the face of this and in the absence of any clear-cut and definite plan to broaden this service to the public, we must strongly recommend that the current practices of licensing VHF stations with full power potential in metropolitan areas be continued. It is basic, we believe, that any attempt to reduce or curtail such service areas, or service powers, of metropolitan stations and provide that the signal coverage of such stations be conformed to the retail trading areas of that community, will result in a shocking reduction in the service to major segments of the population, and particularly to those in the rural areas. There are numerous examples in this regard that could be suggested, and I would just like to touch upon one or two.

For instance, if the coverage of WBZ-TV, Boston, Mass., were so reduced, its signal would not be permitted to penetrate the Lowell area, the Lawrence area, the Worcester area the Brockton area—in fact, it would be essentially confined to the Boston metropolitan area. More than 3 million people would be denied the service from WBZ-TV on which they have relied since 1948. The rural and suburban areas between Lowell, Lawrence, and Worcester, and between Boston and Brockton would, presumably, under these proposals, be served by additional stations, but nothing is said about the ability of those areas to support a station. It is our considered opinion that these communities could not presently support a station, whether it was VHF or UHF.

The citizens (and those in any similar community in the United States) who would lose service under this proposal have a right to, and will demand, a freedom of choice among multiple program sources. Since Lowell and Lawrence have been assigned only one channel each, it is clear that additional programs to permit a freedom of choice (and a competitive broadcasting system) must come from outside areas. This service can only be furnished by the existing VHF channels located in cities large enough to support multiple program sources.

An additional situation is the case involving Bridgeport, Conn., which presently receives signals from 7 stations in New York and 1 in New Haven, in addition to the local signal in Bridgeport. If the decision were reached to curtail the power and/or height of the New York and New Haven stations, and in turn roll back the areas serviced by these metropolitan outlets to the general retail trading areas, the result on Bridgeport would be to reduce it from its present level of 9 signals to 1 or possibly 2. Similarly speaking, but perhaps of equal or even greater importance, would be the consequence that would follow in the form of deterioration of signal strength within the entire area between Bridgeport and New Haven to the east and Bridgeport and New York to the west. Such a devastating impact upon the people of these areas can only begin to be explained by an apparent gain or advantage that would presumably be captured by television operators within the city of Bridgeport. However, it is our considered judgment that the limited broadening of commercial opportunity, principally on the local level, would be so grossly disproportionate to the accompanying disservice that it would fall far short of being a rational justification.

As indicated above, it is virtually impossible to discuss the problem and question of allocation without automatically at the same moment becoming involved with the problems concerning and confronting UHF. Although this portion of the television spectrum offers far more in the form of ability to accommodate a greater number of channels and facilities, it presently has intrinsic limitation in the caliber and the quality of the service that it can render in comparison with the standard established VHF. Historically speaking, UHF started in many areas without a fair opportunity to develop and prosper because of the existence of well-established VHF signals and circulations. The entire fulcrum of success of all television services, and this applies with equal force to UHF and VHF, is the ability to broadcast to an established circulation. The diligent efforts of many broadcasters operating and owning UHF facilities in the past 4 years have proved fruitless because of an inability to convince the public of the need and desire to invest a nominal sum of money in the conversion of VHF receivers so as to receive one or more UHF signals. Even though a good degree of density and circulation has been secured in given areas, maladjustment of receivers and transmitters and unfavorable terrain have resulted in a quality of signal that has impaired the subsequent forward movement of these stations.

In all realism, national advertisers cannot be criticized for their unwillingness to utilize UHF in the broadest and fullest sense. This is compellingly true when existing VHF service is available since, by presently known standards, the ability of the VHF channel to cover a wider area and on an average superior signal is well recognized. An advertiser, therefore, seeking the greatest mileage from his advertising dollars understandably—yes, in fact, of necessity—has invested his advertising budgets on the VHF facility. This same factor has motivated the television networks to seek VHF affiliates in order that they might more completely fulfill their obligations to their client and sponsors and in turn the broadest possible number of people with the best possible signal with their commercial as well as their public service programing.

These factors have created conditions that have brought the development and research in UHF to a virtual standstill. This is applied to receivers as well as to transmitters, and hence, today, there appears to be a virtual stalemate in this tremendous portion of the television spectrum which in many respects offers the broadest scope and vista for the progress which the potential of this dynamic industry demands.

Therefore, any suggested solutions of this problem that resort to changing our existing service would appear to be premature and cannot be logically considered until a full and complete reevaluation of UHF is had. It is of little significance whether this be obtained by the "crash program" suggested by Chairman McConnaughey in a recent address, or by a means similar to that apparently suggested by elements of the manufacturing industry last October.

This last mentioned proposal closely parallels the organizational approach followed in the evolution of the NTSC color standards. This statement is based on the condition that the objective result be founded on an unprejudiced and scientific desire to process the art and realize the ultimate potential of the ultrahigh-frequency bands. Further, this must be done with expediency and dispatch so that those interested in UHF fundamentally (which constitutes in reality the entire broadcasting business and a major segment of the American public, as well as the manufacturing industries) can have an answer to this crucial problem soon.

As previously indicated, all elements of our company stand ready to assist in this. We are convinced that if the ultimate future of television broadcasting in America must bear a proper relation to the broad use of the UHF spectrum, this must be determined before any existing standards, allocations or other services established by the sixth order be disrupted. We are convinced that the ingenuity, resources and ability of modern American industry can tackle and solve this problem within a reasonable period.

In the meantime, it is urged that the present service be left intact. I do not urge this solely to preserve a status quo favorable to our company. I recognize the fact and am keenly aware the Westinghouse Broadcasting Co., has an investment of almost $32 million. However, we have been in the broadcasting business for over three decades and, subject to our conintued ability to serve the public in the highest possible manner, look forward to being in this industry for an indeflenite time in the future. Therefore, our concern is the ultimate good of broadcasting and, in turn, the capability of this industry to serve the American public. This determination of UHF would certainly appear to be the first order of consideration and business before any interim consideration of further use of the existing VHF channels. I have read with interest many of the suggestions made to this committee in this latter connection. I feel some of them do not represent the highest consideration of the public and are perhaps motivated and influenced more by individual and economic circumstances.

While the UHF research is being conducted and, in turn, the entire question of allocations is being reconsidered and determined, it certainly appears to be apropriate to use all available effort to accomplish two goals—an expansion of facilities in maximum number of markets in the first 100 of the country so that at least 3 comparable television facilities be available to insure the economic feasibility and growth of 3 major television networks and provide the public with a greater degree of choice in network programing. This would also generate competition between and among these networks and the further accomplishment of a third genuine national network service.

Secondly, every incentive be given for the public to purchase all-band channel receivers and in order to supply the stimulus and to urge manufacturers to make all-band receivers available to the public, that the excise tax now applied to television receivers be eliminated from all-band receivers and in effect equalize the cost between the UHF and VHF types. I gather that this recommendation is one that has been made by virtually all witnesses who have appeared but, despite this unanimity, I gather that securing such elimination of the excise tax is a more difficult goal to be accomplished than the urging of it.

It is our considered opinion, however, that such action would substantially raise the attractiveness of UHF broadcasting to those interested, first, in investing in the receiver and thereby bolster and enhance the circulation which in turn raises the attractiveness of UHF as a medium for investment by operators and advertisers.

One remaining subject about which I would like to voice opposition is that of toll television. I want to urge this committee and the Commission to deny any application which would provide for the establishment of such a practice. My reason for this recommendation is that when measured against our ultimate standard (the public good), it is our opinion that the American people will subtly and unsuspectingly be anesthetized into the payment of huge sums which, though individually nominal, have a colossal cumulative total. It is this latter fact which forms the basis of the projected success of toll television by the promoters who seek such a system.

We believe it is just as intrinsically impossible for free television and toll television to effectively coexist as it is for the conflicting ideologies of our great Nation to peacefully coexist with those of the Soviet Union. Furthermore, once permitted to be "tested," which its advocates are strongly urging as an initial head-in-a-tent maneuver, the resulting change in position will be so radical and incisive that mere regulation or legislation thereafter will be unable to recapture the lost service to the public.

Again, let me express the appreciation of our company for this chance to make known our views and to voice our hope that they may be of some assistance to you. They have been offered after considerable thought and deliberation with utmost conviction and sincerity, contemplating only a higher and better form of broadcasting for the American people.

Mr. McGannon. Mr. Chairman, with me today is Joseph Baudino, our vice president, Mr. John Steen, legal counsel, and Ralph Harmon, vice president in charge of engineering.

The Westinghouse Broadcasting Co. owns and operates television stations WBZ-TV, Boston, KYW-TV, Cleveland, and KDKA-TV, Pittsburgh, and a sister corporation entitled Westinghouse Broadcasting Co., Inc., California, is the owner and operator of television station KPIX, San Francisco. Both of these companies are wholly owned subsidiaries of the Westinghouse Electric Corp., the founder of commercial radio broadcasting at station KDKA in Pittsburgh on November 2, 1920.

Working directly with the electric corporation, we have been engaged in the development of television since 1926, following carefully and intimately all of the evolutions and successive ramifications in this field—technical and commercial, manufacturing and broadcasting.

Prior to 1948, Westinghouse Broadcasting Co. owned and operated five radio stations which still continue in its ownership. In that year, however, it built its first television station, WBZ–TV in Boston, which remained its only television operation until 1953.

In the course of the research and study that formed the basis of the establishment and construction of WBZ–TV, and later the experience gained in the operation of this station, Westinghouse Broadcasting Co. amassed a vast amount of additional research and statistics. In addition, its personnel worked closely with the staff of the Federal Communications Commission and other interested elements of the industry in the various developments of the allocation system which were finally set forth in the sixth report and order.

During the period from June 1953 to January 1955, Westinghouse invested almost $25 million in the acquisition of three additional television stations. This investment was, of course, in addition to the original cost of establishing WBZ–TV and the very substantial sum later invested, or about to be invested, in the acquisition, installation and improvement of capital plant and facilities in all four of these locations. This latter sum totals over $6 million.

The philosophy pursued in the operation of our various stations can be best summarized this way: The constant and compelling goal of all our efforts is the highest degree of service we can render to the public of the communities in which we are licensed.

In order to do this effectively, we believe we must become an integral, stable, and interested part of these communities, genuinely contributing to their forward progress, to their betterment, and to the solution of their various problems. Beyond this, in order to be thoroughly effective in these efforts, we must have a form or a character in the minds of our viewers and listeners, and when we have achieved that point of being afforded the respect and confidence of our public, then alone will our efforts be considered successful. We are commercial broadcasters and part of a publicly owned corporation, and we therefore properly seek profits that are commensurate with the character of our business and our substantial investments.

I would like just a moment to tell the committee about our public-service activities and to perhaps lend meaning to some of these high-sounding credos I have mentioned above. The public-service effort consists of basically three elements.

The first element is the day-by-day cooperation with charitable, educational, religious and other allied organizations and the direct furtherance of their causes by the announcement of prepared messages on our air. To give an idea of the magnitude of this effort, our stations from January 1, 1955, until May 1, 1956, broadcast 93,013 announcements, plus numerous other programs, interviews, telethons and other efforts in support of these various organizations.

The second element has been a series of projects approached on a group basis, that is a program or series of programs created by a single production team and in turn utilized on all of our radio and television stations. During 1955 these have consisted of a series on radio called Sing Along for Mental Health, for which we received an award for outstanding service against mental illness, given to WBC by the National Association of Mental Health; a second radio series called Of Many Things, a program conducted by Dr. Bergen Evans, which are in the form of spoken essays and make an important contribution to the cultural stature of radio; a third series called Growing Pains, also a radio series, in which Miss Helen Parkhurst discusses with children their attitudes and viewpoints and ideas on what they believe to be their problems and comparisons made as to what we consider to be a major illness today, or major problem in our country, that of juvenile delinquency.

A very major effort has been the White House Conference on Education, on both radio and television. Insofar as the television aspect is concerned a series of half-hour documentary programs were had during double A time, prime periods, with the resulting effect of preempting network shows. These were called the four Big R series, discussing the agenda problems of the White House Conference. We sent a team to Washington, conducting interviews at the time of the conference, with 15 minutes on-spot news reports each evening during the time the conference was in progress, and ninety-second beep summaries for use in news shows. This was finally concluded, when the report was recently issued, by WBC commencing another effort in order to make known the results of the report of the White House Conference.

The third element of this public-service effort is the aggressive approach to the problem strictly on a local level. In 1956 this consists of these elements:

(*a*) The critical need in America for scientists and engineers.

(*b*) The enhancement of the prestige and position of the American teacher.

(*c*) A higher public enlightenment in the field of American history.

(*d*) A continuation of the drive for mental health.

(*e*) A purely local project varying from market to market which represents an item of great public need, a serious local condition, a community campaign or effort or similar situation, concerning whatever their individual circumstances or situations might dictate. For example, in Cleveland the television station has produced 11 episodes of 30 minutes each entitled "Juvenile Justice," a series concerned with the serious problem of juvenile delinquency and broadcast in conjunction with the Cleveland Police Department. KYW, Cleveland, has a radio series entitled "Tower 1–4600", constituting a weekly report to the city of Cleveland by Mayor Celebreze and his staff, and similarly so KDKA in Pittsburgh and our other radio properties as well.

We have been privileged to win numerous awards in recognition of this effort and take substantial pride in these accomplishments but are convinced that the dynamic character of television lends good justification to our further belief that we have just begun to scratch the surface in this regard. Our efforts and investment in the future will be doubled and redoubled in this area.

Generally speaking, it has been our viewpoint that the American television team consists of several players. First, the advertisers who invest and make available income through network, national spot, and local channels which, in turn, permits commercial broadcasters to operate in a sound and profitable manner and to create public-service programs in the fulfillment of their responsibility. Secondly, the networks, about which I will talk in greater detail below, and other programing sources such as film producers and syndicators and package-program producers. Thirdly, groups of well-established, well-managed stations through whose facilities the public has available not only the best of network programs but also equally effective local programing which establishes the station as an integral part of the community. These three forces, we believe, operating in close and effective cooperation over the past 6 or 7 years have achieved the phenomenally high level of television service to the American people.

From the original establishment of WBZ-TV in Boston in 1948, the station was affiliated with the National Broadcasting Co., which was also true of WPTZ in Philadelphia and now KYW-TV in Cleveland. KPIX in San Francisco has been affiliated with the Columbia Broadcasting System. An unusual situation exists in the case of KDKA-TV, which, since it operates as the only VHF station in Pittsburgh, and has, therefore, adopted the policy of carrying programs from all networks, selecting those which best serve the public need and appetite. This is done without option or free hours and at a uniform rate of compensation. When another VHF station inaugurates service, it is anticapated that KDKA-TV will become affiliated with the NBC television network.

Senator PASTORE. Elaborate on that a little bit. What do you mean: "This has been done without option or free hours." How has it?

Mr. McGANNON. It has been done in this manner: As offerings are made by the network they are selected by the station management and taken on 2-week cancellation basis, and continued on that basis. We have no formal or standard affiliation agreement. This is done in the same manner with all three networks, Columbia, National Broadcasting Co., and ABC.

Senator PASTORE. The relationship there has been good and pleasant?

Mr. McGANNON. Yes, it has. Obviously there are great areas of stress because of the limitation of time available, and you not only get involved with the stress from the viewpoint of the desire—legitimate desire—of the network to clear programs, but the advertisers as well who are anxious to have exposure in a market like Pittsburgh, which is about the sixth market in the country. But there have been good relationships.

Senator PASTORE. You say this is done on a 2-week arrangement?

Mr. McGANNON. Yes.

Senator PASTORE. What position does that place the network in dealing with the advertiser?

Mr. McGANNON. That situation is a confused one, in general. The circumstances are such that they cannot clear any more than one-third of the time, or 40 percent of the time, depending on the volume of offerings, and therefore it has represented a constant source of trouble to all networks. They have managed to cover some of this in the case of use of WENS, which is a UHF station operating in town, and also by exhibiting their programs on a Johnstown station and on the Steubenville station.

Senator PASTORE. Are you willing to admit, then, that if this were prevalent as a general rule, the networks would be in a sort of awkward position in dealing with advertisers?

Mr. McGANNON. Oh, very, very much so. I will cover that in a moment.

Senator BRICKER. It only comes about from the fact that you have the only VHF station in Pittsburgh?

Mr. McGANNON. That is right.

Mr. Cox. Is it reasonably accurate to say that in recent weeks you have been carrying programs on approximately this ratio: That of the 42 half hours of evening option time between 7:30 and 10:30 that you carry about 17 half hours of NBC programs, 7 half hours of CBS programs, no half hours of ABC programs, and 18 half hours of nonnetwork programs?

Mr. McGANNON. I cannot vouch for the exact accuracy, but if that is taken from our submission, that is correct.

Mr. Cox. No. This is based on a Telepulse report for the week——

Mr. McGANNON. It certainly is approximately correct, Mr. Cox.

Mr. Cox. In other words, then, in evening option hours NBC to CBS is a ratio of about 2 to 1, or a little better, and ABC has no clearances in that period, and you are clearing for local or syndicated film programs for a number of hours that actually exceeds your clearance for NBC?

Mr. McGANNON. Yes; that is correct.

Mr. Cox. And you clear for these independent and local programs because you consider them superior programing for the people of the community, even over the offerings of all three networks?

Mr. McGANNON. Yes. In light of the fact that we have such a basic limitation of local hours due to only one facility in town. So we think it is important to have in prime time, since there are no other facilities available, an opportunity to have some local programs aired for local advertisers as well as for local programing purposes.

Mr. Cox. Now do you think that the film programs that you present in that prime period are high quality programing, in terms of entertainment and other values, which are in the interest of the public in Pittsburgh?

Mr. McGANNON. In general I do, yes.

Mr. Cox. Now, do you think that the producers of these programs might have some difficulty in getting access for those programs in other areas of 3 or 4 stations where the stations in the market are subject to option time for the period 7:30 to 10:30?

Mr. McGANNON. Insofar as live clearance on a local basis in the individual option hours? Yes, obviously; the time is optioned to the network.

Mr. Cox. Boston is at the present time a two-station market?

Mr. McGANNON. That is correct.

Mr. Cox. NBC has an option with respect to that station?

Mr. McGANNON. Yes, they do.

Mr. Cox. What percentage of your nighttime hours in Boston are cleared for NBC?

Mr. McGANNON. Of the option hours I would say all.

Mr. Cox. All of the evening option hours?

Mr. McGANNON. With the exception of baseball, which we are carrying this summer.

Mr. Cox. Do you have a secondary relationship in Boston with ABC?

Mr. McGANNON. Yes; we do, but we are on a second-relation basis, because all ABC programs in Boston have a first refusal basis with WNAC, which is the CBS outlet in town.

Mr. Cox. So that both of the stations there carry some ABC programing?

Mr. McGANNON. Yes; we do. We just cleared the other day a program which I believe is called Screen Directors Playhouse sponsored by Eastman-Kodak, which was in lieu of an NBC offering because we felt we should give further opportunity for ABC to clear programs on our station, and they couldn't clear on WNAC. This was also true of Pittsburgh.

Mr. Cox. Generally speaking these clearances that you provide for ABC would be on a delayed basis, then?

Mr. McGANNON. In Boston, you mean?

Mr. Cox. Yes.

Mr. McGANNON. In some instances, yes; but we try to make as many live as we are able to do.

Mr. Cox. Now if you are clearing substantially all of the NBC offerings and if Boston is, I assume—are you a must-buy on NBC?

Mr. McGANNON. Yes; we are.

Mr. Cox. So that all advertisers then order Boston and therefore, to the extent that NBC provides a full evening schedule, your evening hours from 7:30 to 10:30 would be programed from the network source?

Mr. McGANNON. From a network source; yes.

Mr. Cox. Normally from NBC, unless you reject an NBC program in favor of ABC.

Mr. McGANNON. That is correct.

Mr. Cox. You mentioned one instance where you did that.

Mr. McGANNON. Just recently, that is one which comes to mind as I sit here and talk to you.

Mr. Cox. What is the situation in Boston of the producer of independent programs who wants to get into Boston as the fourth market, is it, in the country?

Mr. McGANNON. Fourth or fifth.

Mr. Cox. Or the fifth market—and who does not want to deal with the network? I assume quite obviously he doesn't get clearance on your station, or probably on the CBS outlet, in the hours 7:30 to 10:30

Mr. McGANNON. Yes; that is probably true. However, I want to urge upon this committee, and I intended to mention it in a later portion of my presentation, that there doesn't seem to have been sufficient emphasis lent to the value of the time period 7 to 7:30, 10:30 to 11.

Just yesterday I had a survey made by telephone which, in the case of Boston, indicates that the share of audience during the prime time periods runs about 60, whereas 7 to 7:30 it runs 30, and 10:30 to 11 runs 45. Even though this is a less share of audience in these two respective periods it is a very respectable share of audience and represents what we in the station operation consider very, very valuable time periods.

Mr. Cox. In terms of rates, do you have lower rates for these two periods adjacent to option time?

Mr. McGannon. In most cases; yes. In the case of Boston AA starts at 8 o'clock and runs to 10:30, Monday through Saturday, class A starts at 7:30 and runs until 8, and B starts before that time.

Mr. Cox. Now consider the programs that you are carrying in the period 7:30 to 10:30 in Pittsburgh, from independent sources which you feel deserve showing at that time, even though you have three networks to draw on. At what time in the day can these programs of that quality be offered in Boston?

Mr. McGannon. In the two time periods I have indicated; in other desirable time periods both during the daytime schedule and on the weekend schedule.

Mr. Cox. Even though they have what you regard as substantial and favorable audiences, they have below the peak audiences?

Mr. McGannon. Yes; they do.

Mr. Cox. All right.

Senator Pastore. Middle of the page. "During the period of these—"

Mr. McGannon. During the period of these various affiliations, a sound relationship has developed between ourselves and the networks. We have been increasingly impressed with the ingenuity, aggressiveness, and creativity of all three television networks. We believe the results of their effort have brought to the American public a new era of enlightenment, and that the true future of television in all of its programing senses and the service to the public rests in a large measure upon at least three genuinely competitive and national television network services.

Obviously, our affiliation agreements (except KDKA–TV) have been of the standard type, providing for option-time periods to the network on the station affected. I have read with much interest earlier statements to this committee on the alleged illegality of option hours and also the response by various witnesses, including the representatives of the networks. Although I have had the privilege to be admitted to the bar, I do not believe it would be in the interest of time for me to add my opinion to that expressed by eminent counsel who have thoroughly researched the legalities of option time.

However, predicated on the assumption that this is legal under all of our existing laws, Westinghouse believes that option hours are necessary for an effective network operation. Only through this method can programing be evolved and conceived which will attract national advertisers and their budgets. It is, therefore, our recommendation that no steps be taken to alter or change the concepts surrounding the permissibility of affiliated stations optioning time to the television networks.

While discussing option hours, I believe that one phase of this deserves consideration before this committee. This is the fact that the networks have programed into local time periods generally in excess of the option hours available to them. It is recognized that the average station has the right to decline to carry such programing. But, frankly, in the desire to preserve the relationship and the spirit of the affiliation, and this includes the WBC stations, by far the predominant number of affiliates agrees to carry such additional programing that is in excess of the option hours. It is our conclusion that despite the high quality and caliber of the programing going into these additional hours, it brings about a corresponding reduction of the local hours of programing available to the public, and a curtailment of the productivity of the station—and hence the earning power of the station. I believe that in time the stations and networks will succeed in working out this relationship and this will be done on a basis that will be properly recognized and cognizant of the problems and responsibilities of both, and hopefully without the need for Commission or other governmental intervention. Such hours, of course, and such maximums considered and agreed to would be exclusive of special and unusual activities of long-running duration—such as conventions, athletic events, public service programing and the like.

Mr. Cox. You indicate that these clearances are provided not because of the option but because of a desire to preserve the relationship with the network. That is, in other words, the networks indicate to their affiliates an urgent desire that they clear for these time periods just as fully as they clear for the time under option?

Mr. McGannon. Well, there is an order given for the station and obviously it is a selling-type process and they are endeavoring to get the clearance involved.

Mr. Cox. Now if you reject the order on the ground that it is not within the option, they nonetheless make much the same efforts to get you to accept this program as they would to get you to accept a program rejected in option time?

Mr. McGannon. Their station relations department have the function and responsibility of clearing as many as possible and hence urge upon us the clearance of this program even though it be in nonoption time; yes.

Mr. Cox. And they urge this upon you even though you explain to them that your feeling is that this time can be better used for local programing purposes in your market?

Mr. McGannon. Well, you get into an area here, Mr. Cox, which you might call a "never-never land, and that is the understandable potential difference of opinion as to what constitutes the best service. And I am not saying in every instance of an offering, in every instance of a refusal this comes up as an item of discussion, but it is assumed this is what motivates us and what motivates them to try to clear it—not only for the future of the network, but also their belief that this is good programing.

Mr. Cox. I assume if they can program in these hours this is additional revenue for the networks. On the other hand, if you program them locally, this results in a greater return to you because you do not have to share with the network the time charges for that period?

Mr. McGannon. That is true. It cannot be said just that quickly, though, because we must program this time period in addition.

Mr. Cox. You have expenses?

Mr. McGannon. You have this expense attendant upon it. So it is not the difference between the net amount received from the network—after the free hours being interpolated into the percent, which I think would come to 22-plus percent—but in reality would be something higher than that, probably well over 50 percent.

Senator Pastore. Well, does it ever get to the level of squeezing one another's arm? That is the thing we are concerned with here.

Is the relationship such as you encounter in any business transaction, where there is always the sword over your head that unless you do it our way it looks like a reprisal later on and no renewal of the contract.

Mr. McGANNON. I do not want to create the impression that there are improper tactics used by the networks. They use every legitimate means known, including calling our staff in New York and myself and endeavoring to do all of these things to advance their proposition. Obviously they depend upon this clearance and we recognize this. But we are motivated, in turn, by what we think is best for the operation that we are trying to conduct. And we do it in the best way we know how. So I do not wish to create this impression.

Senator PASTORE. All right, sir.

Mr. McGANNON. There has been a substantial contention that the existence of network option time has thwarted the development of other programing sources. I think we have touched upon this in answer to Mr. Cox' question. If I may pass on.

In further commenting upon the relationship of our stations with our respective affiliated networks, I believe and recommend to this committee that these relationships can be improved if a longer period of affiliation contract were made available to the individual stations, at their option. I would suggest this be of a 5-year duration—and in addition to that and not contained within the prepared brief would be consideration to a lengthening of a license period—both of which would add substantially to the ability of the stations to have an element of greater security than they presently have insofar as both of these factors are concerned.

Mr. COX. Excuse me, would you suggest, in that connection, any changes in the terms of the affiliation contracts as to rights of cancellation? That is, are your affiliation arrangements subject to cancellation at the option of the network?

Mr. McGANNON. No, they are not.

Mr. COX. They are not?

Mr. McGANNON. Well, I should qualify this. In the case of the CBS affiliation it is cancellable on a year's notice; in the case of NBC affiliation, which only applies in the case of Boston and Cleveland, they are firm contracts for 2 years.

Senator PASTORE. Mr. McGannon, you are not the first one that has stressed this 5-year term. Has this proposition ever been put to the networks?

Mr. McGANNON. This has been discussed in an oblique way with the networks. We did not consider this is the area we should take the problem to, since obviously, as I understand the situation, there is a limitation on the length of affiliation to 2 years by the Commission rules.

Senator PASTORE. Is that the reason why it is made 2 years, do you think, or is it because they want the flexibility of moving within a community from one station to the other?

Mr. McGANNON. I don't know—

Senator PASTORE. I am trying to get attitudes. After all, you are not the first one who made this suggestion. It is not the first time anybody has thought of it.

Mr. McGANNON. You probably know, Senator, it was investigated, as I understand, in the chain broadcasting investigation, with the resulting 2-year affiiliation being determined. The existing 2-year affiliation has not been of sufficiently long duration to permit the individual stations to achieve the desired degree of security in their relationship with the network.

Mr. Cox. In that connection, Mr. McGannon—excuse me—what element of insecurity exists in this connection, since most affiliations are renewed at the end of the 2-year period?

Mr. McGannon. I guess Mr. Cox, it is always the uncertainty of whether it is most certainly going to be renewed.

Mr. Cox. That is, you have had an NBC affiliation in Boston ever since the station has been on the air?

Mr. McGannon. That is right.

Mr. Cox. A period of 8 years, is it?

Mr. McGannon. Yes.

Mr. Cox. But you feel that the station would be in a stronger position if it had a legal claim on that duration rather than simply an expectation that relations will continue to be friendly?

Mr. McGannon. I do not think this necessarily relates itself only to your rapport with the network. I think it is an attitude which the individual broadcasters could, and should, have if they had a longer period of affiliation; that is, the ability to look long-range on everything they do on their station. I believe many of them do. But it is a tremendous area of exposure to have even the remote possibility that your network affiliation will not be renewed, and you have raised your level of operation into a high-expense area where obviously, with a substantial reduction in income, your situation profitwise could change very very radically. It involves the investment of substantial amounts of money in capital plants and equipment, improvement of tower and transmitting facilities, improvmeent of local programs, which in turn is a very important segment of the broadcasting day when related to audience flow—in that you can give to network programs, and capture the audience flow out by networks into the local periods. It is a mutuality that I think is important. I think the whole matter could be meshed, worked far better if you had this longer period of marriage assured to you rather than have a cancellation even as a remote thing.

Mr. Cox. You would agree, wouldn't you, that certainly a station's affiliation with one of the networks is one of its major assets and one of the strengths which it has in competition in the market?

Mr. McGannon. I agree completely.

Mr. Cox. And that the possibility of loss of this affiliation is not something that any broadcaster would continue with, or would regard with equanimity.

Mr. McGannon. I agree completely.

Senator Pastore. You certainly don't feel that way about your station in Pittsburgh, though?

Mr. McGannon. We do, Senator Pastore. We want to be an NBC affiliate in Pittsburgh ultimately. However, we have a very unique problem here. We are the only facility made available to the City of Pittsburgh at the present moment. Hence we have tried to twist and turn all these situations to bring about the best mix, or the best blending, of all sources available. We have a situation here where we have local advertisers who have no other place to go in television; they certainly cannot go to Johnstown or any of the other fringe stations. In consequence of this we have got to make time available to them. We try to carry a substantial amount of network program during the day, though, because all——

Senator PASTORE. You will admit that the Pittsburgh situation is a little unusual.

Mr. McGANNON. Oh, tremendously so.

Senator PASTORE. All right, sir.

Mr. McGANNON. The question concerning the ownership of stations by television networks has been raised by this committee. Our company does not profess to have any operating history or experience to report to the committee concerning this question, but it is our observation, and my personal conviction, that there is not only a foundation for such ownership but even a need. This is especially true when considered in light of the fact that it can be argued effectively that the network will perform a better programing service if it has the benefit of the day-by-day information dealing with the problems attendant upon local station operation. These local stations should be the sounding boards for the networks and an internal measure of the effectiveness of their efforts.

However, we have one reservation. We appreciate that as long as the broad principles of ownership advocated above are in force, it is impossible to control the locations or types of stations which the network should own or seek to own. However, it may be possible, and we urge accordingly, that in the course of a network acquiring or upgrading station properties, it be done in a manner that fully insulates and segregates these station operations from their national network functions. If this segregation can be accomplished in a practical fashion then their position as a buyer would not be automatically enhanced or made preferential because of their ability to grant or withdraw or fail to renew an affiliation contract. It is appreciated that the mechanics of working this out are extremely difficult, and perhaps in some measure the end could be accomplished if our earlier recommendation concerning a 5-year optional affiliation period were made available to the stations.

Mr. Cox. Can you suggest how this can ever be accomplished? That is, in other words, no matter what measures are taken, the fact would remain that if a network is a prospective purchaser of a station, it is still the network, it is still the agency that can grant or withhold affiliations. How are you ever going to be able to put the network on the same basis as any other potential purchaser?

Mr. McGANNON. Mr. Cox, I recognize this as a problem for which I don't have a full or even partial answer. It occurs to me, though, that these are two distinct businesses. We are in a portion of this business. We own and operate stations. We are not in the network business. They are different businesses, by their very conduct and by their very substance.

It seems to me that there should be proper differentiation made between them, and difference made between them, so that when they go out to buy and operate stations they are operating in one sphere of their activity, and they operate their network in the second sphere. I think it is something that might deserve some consideration in time, and perhaps for this committee and the Commission and the industry to turn on this subject and see what can be done.

Mr. Cox. Now, you sold or exchanged a station in Pittsburgh for the NBC station in Cleveland?

Mr. McGANNON. In Philadelphia.

Mr. Cox. In Philadelphia and Cleveland.

Now, do you feel that in that transaction there was any lack of this solation? Do you feel that Westinghouse was placed at any disadantage because the agency with which it was dealing was also its twork in two other important markets?

M McGANNON. Well, not in relationship to the other markets, no. house had bought this station for $8.5 million in the summer represented a record price for a station, and before pure evaluated our network position and even secured from act that they would renew the affiliation which then had tely 6 months to run.

$8.5 million is a great deal of money and the earning e station—which had been predicated upon a long period ore this could be recaptured or a fair return made on reduction in this revenue would obviously cause estment, and this is not said in derogation to the but it simply was not of either the dollar volume as NBC or CBS then, or even possibly now. greed to the transfer, because the alternative an or independent outlet in Philadelphia. We in fullment of our responsibilities as officers of a ompany, that we could afford to do this. It didn't bear t relationship to our stations.

hat is, in other words, NBC in the exercise of its power withhold affiliation in the Philadelphia market had inat it desired to own a station in Philadelphia. It wished to ase yours if you could come to terms with them. If not, they ated that they would acquire one of the other stations and would withdraw the NBC affiliation from your station; and would n, of course, furnish all of their network programs to the other ation they had purchased. And that this would be the way in which you would end up in Philadelphia as the ABC rather than the NBC affiliate?

Mr. McGANNON. That is correct.

Mr. Cox. Now, in other words, in dealing with you—in seeking to find whether you desired to sell and whether you were willing to sell on any proposed terms—NBC was the only agency which could thus affect your determination to sell, because it was the only agency, the only potential purchaser, who had the power of withdrawing this affiliation?

Mr. McGANNON. That is correct.

Mr. Cox. And because of this, and because of the result that you thought this would have upon the earnings, and therefore the value, of your Philadelphia property, you were willing to sell to NBC—involving the acquisition of its station in Cleveland—whereas, if there were another offer for the exchange of a station in Cleveland for your station in Philadelphia, with the amount of cash that was transferred, would you not have been interested?

Mr. McGANNON. No. We like the Cleveland market, think it is a great market. We are having, I think, some success there. If the matter had not come up, I think we would still be operating WPTZ in Philadelphia.

Mr. Cox. Philadelphia is a larger and more lucrative market?

Mr. McGannon. Yes; it is. It represented our top market insofar as ranking of stations in the country are concerned.

Mr. Cox. Isn't it true, with your acquisition of the station in Philadelphia, that for tax purposes you broke down the price and yo assigned a valuation to the NBC affiliation——

Mr. McGannon. And in turn to national, spot and local contrac which we used to call the adjacency value of the affiliation; yes.

Mr. Cox. What was that figure?

Mr. McGannon. $5 million.

Mr. Cox. This represented $5 million that you were

Mr. McGannon. $5 million is a round figure, I think it 000 something.

Mr. Cox. That is, of the 8 or 8.5 million you were estimated that you were willing to pay approximate that because of the value represented by this pr and above its physical assets, because of the NB

Mr. McGannon. Yes.

Mr. Cox. That was an affiliation which had then, contract, only 6 months to run?

Mr. McGannon. Approximately, yes.

Mr. Cox. And you had assurance from NBC that newed?

Mr. McGannon. That is correct.

Mr. Cox. Was it renewed?

Mr. McGannon. It was renewed.

Mr. Cox. How long after that renewal was the transfer

Mr. McGannon. Well, the actual transfer only occurred in J of this year, January 2, 1956. The contract entering in rangement was signed on, I believe, May 16, 1955. The tiations go back to September 1954.

Mr. Cox. When was the date of the renewal of your

Mr. McGannon. December 30—January 1, 1954. about 9 months after the beginning of the renewed p

Mr. Cox. Now, what was the status of your affilia your other two markets? What time did they then

Mr. McGannon. As I indicated KDKA televisio initial purchase—or at the time of the initial appro didn't own; and since that time we have not had a ment with any network. In the case of Boston I d has run in its normal courses.

Mr. Cox. Were you negotiating for the purchase of at this time?

Mr. McGannon. Shortly afterwards.

Mr. Cox. At the time of the negotiation with NBC?

Mr. McGannon. Shortly after September of 1954.

Mr. Cox. Were you discussing with NBC whether you would be able to continue—was the station in Pittsburgh—was KDKA then an NBC affiliate?

Mr. McGannon. Not primarily. The same arrangement was conducted by the former owners as we are conducting.

Mr. Cox. Did you have any discussions about the continuation of that, or about the station's ultimately becoming an NBC affiliate?

Mr. McGannon. I should say in this regard that this transaction was conducted by others than myself. I was not an officer or director of the company at the time. Much of this went on before I became a party. They were discussing with NBC, and subsequently a letter was secured from NBC, which indicated that we in turn would secure an NBC affiliate when, as and if another VHF service was instituted in Pittsburgh, and become a basic affiliate, with all of the other ramifications of a basic affiliation with NBC.

Mr. Cox. That was furnished you as a part of the negotiations for the sale of the Philadelphia station, or at least concurrently with it.

Mr. McGannon. I cannot say that, and I don't know that to be the

Mr. Cox. It was concurrent with those negotiations?

Mr. McGannon. The negotiations extend over a very broad period of time. As I indicated they started in September of 1954 and the contract was not concluded until the middle of May 1956. So, yes, it occurred during that same period.

Mr. Cox. 1955 you mean?

Mr. McGannon. 1955, yes, May of 1955. So you have a 9- or 10-month period, and lopped in the middle of that was this entire purchase of KDKA-TV by Westinghouse.

Mr. Cox. Thank you.

Senator Pastore. The question has also been raised, and I ask you now if you want to comment on it: Is it, in your opinion, in the public interest for a network to be owning broadcasting stations?

Mr. McGannon. I do consider it in the public interest that they own broadcasting stations.

Senator Pastore. Why?

Mr. McGannon. I can't argue as effectively as the networks can, having a minute experience from having been associated with Du Mont network, but I question whether the average businessman would undertake the financial risk involved in running a network unless he had some supporting means of income; namely, stations. Because the dollar volume they turn over for the relatively small percentage of return and the high-risk element involved I think would preclude this.

Secondly, I am a strong believer in the fact that these stations can be of tremendous value to the network insofar as having an interest and a stake and a participation in broadcasting as an entity, because they are operating stations in major markets and know all the problems of supplying programs to the public and serving the public, and do the public service efforts that their licenses require. I think there is substantial value to this. Beyond that, I approach it negatively and say and wonder why it isn't permissible for them to have it, and I can't think of any compelling reasons. And I merely have suggested one possible limitation in this particular regard, in the course of them acquiring or upgrading stations, as I have mentioned in my prior testimony.

Senator Pastore. All right, sir.

Mr. Cox. Could you tell us this one more thing, Mr. McGannon: What did you regard as the maximum radius of the coverage area of your Philadelphia station?

Mr. McGANNON. Mr. Harmon advises me it is between 60 and 70 miles.

Mr. Cox. My knowledge of eastern geography isn't too good. What is the distance between Philadelphia and New York?

Mr. McGANNON. I understand about 90 miles.

Mr. Cox. Then, assuming that the New York stations have a similar radius, there would be a substantial area of overlap between a station in New York and a station in Philadelphia; is that correct?

Mr. McGANNON. Yes, sir; it would.

Mr. Cox. The FCC has regulations which forbid the ownership of stations in adjacent markets where there is such overlap; is that true?

Mr. McGANNON. I understand there is such a rule, known as the duopoly rule. I understand, however, it has been interpreted to apply only to the overlap incident to the class A contour.

Mr. Cox. What would be the radius of your class A contour?

Mr. McGANNON. I am advised approximately 40 miles. And they either just touch, or slightly overlap, or just fail to touch.

Mr. Cox. So that the substantial area of actual overlap that you were referring to was in your gradeB coverage?

Mr. McGANNON. B contour area; yes.

Mr. Cox. Do you, generally speaking, in the operation of a television station, consider that your grade B coverage provides an adequate service and one which you sell to advertisers?

Mr. McGANNON. Very much so.

Senator PASTORE. All right, sir.

Mr. McGANNON. The consideration to license and regulate networks is one which we feel we must also strongly urge this committee not to consider favorably. The television network business is a vastly complex and sensitive one and one that is predicated upon the ability to secure, properly coordinate, and direct highly skilled and creative talent and managerial personnel. It is, in essence, a personal service business and one that involves vast risk capital. The restrictive and atrophying effect of direct Government regulation might well offset this balance and destroy qualities of service that cannot be simply legislated into being but are built, developed, and created over long periods of experience.

Senator BRICKER. Is there any difference in kind between the development of those programs and what you develop on your own in a local area?

Mr. McGANNON. In basic concept, no Senator Bricker; but in the degree and volume of investment and the availability of high-priced talent, in the ability of writers, comics, and the like, there is a tremendous difference.

Senator BRICKER. There is no interference with your programing on the part of the Government or the FCC because of their licensing power over your local station?

Mr. McGANNON. Only insofar as standards are set up.

Senator BRICKER. That is right. Why shouldn't the same standards be set up for the networks? Why shouldn't the same rule apply?

Mr. McGANNON. I think you deal in an entirely different sphere of things.

Senator BRICKER. Why, except in measure and degree?

Mr. McGANNON. Well, it is more than a question of degree. I think it is a higher level and type of programing. We can't as individual stations, embark upon programing efforts of other than, basically, the service, local program, news type. When we do, the expense far exceeds our ability to either sell it or sustain it. We have, for example, local live programing in every one of our markets. In Cleveland we instituted a local live program the day we took over, February 13, this year, which was the initial inauguration, and we have a program called The Morning Surprise. And it is a program not unlike the general format of Garroway and Today, with extreme local emphasis on what is going on in Cleveland. But this is not a program of great expense. We have one basic talent involved, we conduct interviews, we have a camera on the street, we do remotes from the airport and other places of local interest. And to go into any substantial amount of variety show type expense our entertainment value in this particular area, I think, would make this show prohibitive. When you go from this level of programing into even the, shall I say, lowest level of networking program, I think you involve vastly more in that regard and I really believe, even though perhaps there may be a limitation in my argument to pursuade you, that this would have a substantially curtailing effect upon the ability of the network to render the degree of programing service they are rendering today.

Senator BRICKER. Because of the cost?

Mr. McGANNON. Because of the cost, because of the spirit of the thing.

Senator BRICKER. That cost is overcome by them through their broadcasting stations; is it not?

Mr. McGANNON. No. The cost is overcome primarily through the revenue received from the sale to advertisers.

Senator BRICKER. Do you think that the networks, then, ought to be permitted to cover any loss if there should be a loss, or supplement their profits if there should be a profit, through the broadcasting business directly in competition with those who might be affiliates or those who might be broadcasting on a local level?

Mr. McGANNON. Through the ownership of stations?

Senator BRICKER. Yes.

Mr. McGANNON. Yes; I do.

Senator BRICKER. You do?

Mr. McGANNON. Yes.

Senator BRICKER. In other words, you just approve of the programing as it is, you are willing to go along with it?

Mr. McGANNON. I am willing to go along with it with certain reservations I have pointed out to you, and the belief that this is still comparatively a young industry, there is much yet to be developed and turned over and improved upon, both in terms of relationship and quality——

Senator BRICKER. If there comes an irreconcilable conflict between you in your programing of your local station and that which is required by the network, there is only one result—and that is withdrawal of the network service, isn't there?

Mr. McGANNON. As an affiliation contract, you mean?

Senator BRICKER. Yes.

Mr. McGANNON. Well, I have never known of a case like that that has developed to that point.

Senator BRICKER. It could happen.

Mr. McGANNON. With one single instance resulting in the loss of affiliation. I have heard—I have had no personal experience—of situations of a long history, over a long period of time, of nonclearance and noncooperation, and as a result, I am told, it resulted in loss of affiliation. It could happen.

Senator BRICKER. The public interest could not be served unless there was some way to resolve that irreconcilable conflict, the difference of opinion.

Mr. McGANNON. Perhaps not. I am convinced this is entirely a mutual relationship, the more mutual it is the more satisfactory it is going to be. I don't think networks can exist and prosper without strong aggressive stations on the local level. And by stations I mean of the typical type.

Senator BRICKER. Both owned and affiliated?

Mr. McGANNON. Both owned and affiliated, that is correct. We have an obligation to the networks as well as their having an obligation to us. And this thing must be worked out. I am convinced it can be worked out.

Senator BRICKER. In your Philadelphia transaction you attributed $5 million to the goodwill or whatever you you want to call it—going concern value of your affiliation. Was all of that recouped in your transaction?

Mr. McGANNON. No, Senator, it was not. In the transaction, you mean?

Senator BRICKER. Yes.

Mr. McGANNON. I don't think there was a direct relationship to that. The manner in which the $3 million was evolved was to determine the earning capacity of the 2 stations and then negotiate a price that represented a recoupment of that differential. It was determined at the time, I am told—I was not a participant in these negotiations—that the difference in earning value was approximately $600,000.

Mr. Cox. Per year?

Mr. McGANNON. Per year. And this was predicated on the basis of 5 times those earnings, or $3 million, which represented the cash consideration in the transaction.

Senator PASTORE. Go on, Mr. McGannon.

Mr. McGANNON. These are the qualities, some tangible but many more intangible, that translate program concepts into images on the television tube and into the service of our people. In our opinion, these put television networks out of the category of public utilities and common carriers. Beyond this, the Federal Communications Commission has effective control of the networks through the rules governing stations, including those owned by the networks as well as those affiliated with these networks.

Senator BRICKER. Just one question, you might properly address this to counsel: Should Congress decide that the networks should be licensed and subject to regulation and rules laid down by the Commission, there isn't any question in counsel's mind as to whether or not this is a business charged with a public interest; is there? When you mention it as not a public utility. A public utility becomes one when it is so declared by a governmental authority to be such. And the only test as to whether or not it is is whether there is a public interest in it. Is there any question in your mind about whether there is a public interest in programing of networks in this country?

Mr. McGANNON. No, sir. Obviously the whole effort is based upon the serving of the public interest.

Senator BRICKER. It is wholly a question, then, of whether Congress acts or not? When you say it is not a public utility, you are determining a question of law there.

Mr. McGANNON. I didn't mean to be, to be sure. What I meant was, in determining or considering public utilities or common carriers as we know them today, I don't know of any that has represented the intangible form that television networks represent today.

Senator BRICKER. It is just a bit different.

Mr. McGANNON. I think it is substantially different, if you will forgive me.

Senator PASTORE. You are talking more of character than you are of authority?

Mr. McGANNON. Of authority?

Senator PASTORE. Of jurisdiction?

Mr. McGANNON. Yes; I am.

Senator BRICKER. There has never been any doubt in my mind—and I ask this of counsel, if there has in his—that if Congress would so declare, that there is no court in the land that would set this aside because the programing by the networks is not charged with the public interest.

Mr. STEEN. I believe I would agree with you, Senator.

Senator BRICKER. It is just a question of policy. It is not a question of law. It is a question of policy as to whether Congress desires to act.

Senator PASTORE. I agree with Senator Bricker on that score, on the matter of jurisdiction.

Mr. McGANNON. I was not raising a legal issue when I made the point.

Senator BRICKER. That is what I wanted to clear up.

Mr. Cox. In connection with your comment about the fact that the Commission already has effective control, what substantial change would be made if the Communications Act were simply amended to provide that the Commission would have the authority to license network operations for a specified period, and that in connection with the granting and renewal of those licenses it would consider whether those networks were operating in the public interest, convenience, and necessity?

Mr. McGANNON. Well, there are two aspects of this, I believe, Mr. Cox. The first, as Mr. Steen points out, deals with the questions of types and caliber of programing that probably would be insisted upon as standards which they must follow.

But even more important and more fundamental to this question is this: If you are going to give to the networks the uncertainty—the question as to whether they will or will not be renewed, depending on the action of a regulatory body—I just don't know what would motivate the dollar volume investment required to be made in the network business.

Senator BRICKER. What motivates you in putting your $8 million into Philadelphia, when you have only got a 2-year license?

Mr. McGANNON. Well, the ability, Senator Bricker, to foresee that the manner in which we have operated stations in the past has gotten us renewals; that we do operate, in our opinion, in the public interest. This is our sole and only objective.

But you are going into a whole new field at this moment. When you ask me about licensing them, you must tell me more than just licensing them. Tell me the nature: How is it going to be conducted?

Mr. Cox. What is the nature of the regulation of the individual station? It is simply that they are licensed in the public interest, and that when their license comes up for renewal, a question can and may be raised as to whether they have, in fact, operated in the public interest. Isn't that correct?

Mr. McGANNON. Yes, it is fundamentally correct.

Mr. Cox. If only that issue were raised in connection with the licensing and relicensing of networks, how would there be any problem posed in terms of their programs which is not already posed in terms of whether you operate in the public interest by accepting those programs and carrying them on your station?

Mr. McGANNON. I believe there is substantial difference. I think the difference is one of an individual station declining one program as distinguished from a restrictive form imposed upon the networks in their programing efforts. This is a creative job, a creative effort, and I don't think you can indicate or legislate or determine what is going to be the full scope of this thing if you want this whole medium to develop in the broad and tremendous potential that I believe it possesses.

You have in networks, I believe, in its most fundamental form, another program service. And I don't think there has been any imposition or suggestion about licensing other sources of programing services presently available to the television industry. And hence I don't know why it should relate necessarily to networks.

Senator PASTORE. But why do you take the position that supervision in the public interest destroys creativeness? In what way?

Mr. McGANNON. In the mere existence of it, in my mental viewpoint.

Senator PASTORE. I can see your argument in censorship; I don't think that the Government ought to initiate any rules to tell what kind of a program, or with whom a company should deal in the institution of a program; whether or not a program is obscene, or whether or not a program goes too far. They regulate the station in that respect, don't they?

Mr. McGANNON. Yes, they do. I didn't even have in mind such considerations as these, because I think the area of intangibility goes far beyond obscenity, public acceptance, or propriety.

Senator PASTORE. You are, nevertheless, of the firm conviction that any regulation might be a restriction upon the network?

Mr. McGANNON. Any additional regulation or restriction would be a further limiting factor upon the development of the network.

Senator PASTORE. I think we can kick that around for an hour and a half and we won't change anything because you have stuck to it pretty tenaciously.

Mr. McGANNON. In the course of considering television station purchases and the investments described above, Westinghouse conducted a careful review, study, and analysis of existing broadcasting concepts, their effect upon television and all of the other elements bearing upon the industry, including the engineering and technical problems, the programing challenges, the available sources of programing, the commercial aspects of the market, and the educational and public-service opportunities that could be rendered to the communities in which we were, or hoped to be, licensed. The decision to proceed with such investments was only made after such careful study and founded upon the firm conviction that the industry had developed in a basically sound manner and even though there were many areas yet to be pioneered and developed. Further, it was considered that the industry, the attitude of the Commission and the regulations affecting television were sufficiently stabilized to warrant such an investment.

One thing was certain and clear, however, that television, on each of the successive dates of our station acquisitions, was enjoying a dramatic and unprecendented growth and the public was being well served by the system as it was then being evolved and as it now exists in consequence of the sixth report and order.

It was to be expected on those occasions of acquisition to believe that stations which properly fitted into the system and which, in turn, were properly operated in the public interest, possessed elements of permanence to a degree sufficient to justify an investment of this magnitude. It is mandatory, therefore, in our opinion that any changes in such a system as it presently exists must be first measured against the effect on the service to the public in the various communities involved. If, after such measurement, a better service cannot be clearly seen as the result of such a change, then said changes should not be undertaken or should be deferred until it can readily be determined that the service to the American people, and not to any group of station operators or other persons within and without the broadcasting industry, is being enhanced.

Realistically speaking, of course, any major changes in the allocation system are bound to have some concomitant disadvantages since the interests of our population have become directly related to, and crystallized in, our present system. In other words, the history of the evolution of television cannot be disregarded. However, the test must be the aggregate public good. The problems facing our industry are neither so simple that they can be solved by one stroke of the legislative pen nor so complex that they should be considered insoluble. There is no panacea, but patience, ingenuity and long-range viewpoints can point out the most desirable course of action.

Despite the phenomenal growth of television, the UHF portion of our industry has not been able to keep pace with the remaining elements. Any discussion of such expansion in our television service must automatically involve a discussion of the UHF television facility, and if the expansion be a sound one, the UHF facility must favorably compare in its service to that service being rendered by VHF.

The present system has brought a television service startlingly close to 100 percent of the population of America, substantially over 90 percent of all television homes having the power of selection between 2 signals, and almost 90 percent having the opportunity to select among three or more. In the face of this, and in the absence of any clear-cut and definitive plan to broaden this service to the public, we recommmend that the current practices of licensing VHF stations with full power potential in metropolitan areas be continued. It is basic, we believe, that any attempt to reduce or curtail such service area and/or service powers of metropolitan stations and provide that the signal coverage of such stations be conformed to the retail trading areas of that community, will result in a shocking reduction in the service to major segments of the population, and particularly to those in the rural areas.

For instance, if the coverage of WBZ-TV, Boston, Mass., was so reduced, its signal would not be permitted to penetrate the Lowell area, the Lawrence area, the Worcester area, the Brockton area—in fact, it would be essentially confined to the Boston metropolitan area.

Senator BRICKER. What service is there in Worcester?

Mr. MCGANNON. A UHF station in Worcester.

Mr. COX. It is now off the air.

Senator BRICKER. How far is Worcester from Boston?

Mr. MCGANNON. 40 miles.

Mr. COX. There is a station in Cambridge that recently left the air, also.

Mr. MCGANNON. Yes, sir.

Senator PASTORE. Well, you know, it is funny how we kick around this public interest sometimes. It is a fact that this power that you talk about—which would be a denial of service to more than 3 million people—operates to prevent another station from going into another community like Providence. Because the minute you raise this power tremendously in Boston, you get into this that we are talking about that denies Providence a third station, which is not good for Providence.

Mr. MCGANNON. I understand that.

Senator PASTORE. And we are for Providence. And the result of that is we don't get this competition we are talking about, because as long as we have three networks, I think it ought to be the purpose of the Federal Communications Commission to give three like channel stations to every community of this country if it can be accomplished. Then you have got fair, true competition.

Mr. MCGANNON. I concur.

Senator PASTORE. Then you have ABC coming on, NBC coming on, and CBS coming on. The only trouble is when you try to get 3 stations in the 1 community—a large community like metropolitan Providence—you can't do it because you have too much power in Boston.

Mr. MCGANNON. I am not sure the power is the problem in this case.

Senator PASTORE. You just brought it out very effectively on this page. You say if they don't give it enough power, you have to pull back.

Mr. MCGANNON. You would destroy all service to Boston if you reduced the power.

Senator PASTORE. Not if you put another station beyond a point, so that can cover those same 3 million people.

Mr. MCGANNON. I don't believe there is a metropolitan area, in connection with this specific point, that could support a television station and service those 3 million people.

Senator PASTORE. Well, I question that.

Mr. MCGANNON. This is a rural area, basically speaking, or a non-densely populated area.

Senator PASTORE. It all depends where you put it. I am not quarreling with Boston now, but I am quarreling with this thesis being developed here—that unless you keep adding this power and adding this power and adding this power—because what we are doing here, we are destroying the community service that we are all talking about.

Now, to give you a graphic example of it: Foster Furcolo, when he was a candidate for the United States Senate, I noticed he had to come to Providence and put on part of his broadcast in Providence in order to reach some sections of Massachusetts. And you have to do that in Boston in order to reach some sections in metropolitan Providence. I think if we get into too much power, what we are going to actually do is to deny the services of television to local advertisers who only want to advertise within their own community.

Mr. McGANNON. I think if you will let me pursue—

Senator PASTORE. If you want to put on a show in Bridgeport, you have to go to New York to do it, and pay the New York prices, and I don't think it is in the public interest. I don't know how you are going to rectify it. But somewhere along the line—

Mr. McGANNON. I agree. I don't think the solution lies in rolling back——

Senator PASTORE. I don't know what the solution is. But I don't think the solution lies in rolling forward.

Mr. McGANNON. I am not suggesting an increase in power.

Senator PASTORE. There have been increases in power granted in Boston from time to time which have caused exactly this situation, that now you can't roll back.

Mr. McGANNON. Well, as far as I know, the only power——

Senator PASTORE. I am not quarreling with you. But I mean that is one fundamental problem. We are told in Providence we can't have a third VHF channel because it runs into the power of the neighboring stations.

Mr. McGANNON. But not the Boston station, Senator, to be sure. Because at that closeness, at that proximity, it is my understanding that any station will have either one of two effects: So much cochannel interference that there will be no service between, or a reduction in the power so that you wouldn't even cover the metropolitan area of Boston.

Senator PASTORE. Be that as it may, it is a problem.

Mr. McGANNON. I agree, it is a very serious problem.

Senator PASTORE. We can't solve it here this morning, but fundamentally, it is my understanding there is too much power in some places that denies service to other sections of the country. That is chiefly the problem in the New York area. You have 7 channels in New York and it is that 7 channels in New York that has caused us a mess in New England.

Mr. McGANNON. Yes, there is some truth to this.

Senator PASTORE. Of course, there is a lot of truth in it.

Mr. McGANNON. Historically speaking, UHF started in many areas without a fair opportunity to develop and prosper because of the existence of well-established VHF signals and circulations. The entire fulcrum of success of all television services, and this applies with equal force to UHF and VHF, is the ability to broadcast to an established circulation. The diligent efforts of many broadcasters operating and owning UHF facilities in the past 4 years have proved fruitless because of an inability to convince the public of the need and/or desire to invest a nominal sum of money in the conversion of VHF receivers so as to receive one or more UHF signals.

Even though a good degree of density and circulation has been secured in given areas, it has been coupled with maladjustment of receivers and transmitters; and these and unfavorable terrain have resulted in a quality of signal that has impaired the subsequent forward movement of these stations.

In all realism, national advertisers cannot be criticized for their unwillingness to utilize UHF in the broadest and fullest sense. This is compellingly true when existing VHF service is available since, by presently known standards, the ability of the VHF channel to cover a wider area and on an average superior signal is well recognized. An advertiser, therefore, seeking the greatest mileage from his advertising dollars understandably—yes, in fact, of necessity—has invested his advertising budgets on the VHF facility. This same factor has motivated the television networks to seek VHF affiliates in order that they might more completely fulfill their obligations to their client and sponsors and in turn the broadest possible number of people with the best possible signal with their commercial as well as their public service programing.

These factors have created conditions that have brought the development and research in UHF to a virtual standstill. This is applied to receivers as well as to transmitters, and hence, today, there appears to be a virtual stalemate in this tremendous portion of the television spectrum which in many respects offers the broadest scope and vista for the progress which the potential of this dynamic industry demands. Therefore, any suggested solutions of this problem that resort to changing the existing service would appear to be premature and cannot be logically considered until a full and complete reevaluation of UHF is had. It is of little significance whether this be obtained by the crash program of Chairman McConnaughey, suggested in a recent address, or by a means similar to that apparently suggested by elements of the manufacturing industry last October.

This last-mentioned proposal closely parallels the organizational approach followed in the evolution of the NTSC color standards. This statement is based on the condition that the objective result be founded on an unprejudiced and scientific desire to progress the art and realize the ultimate potential of the ultra-high-frequency bands. Further, this must be done with expediency and dispatch so that those interested in UHF fundamentally (which constitutes in reality the entire broadcasting business and a major segment of the American public as well as the manufacturing industries) can have an answer to this crucial problem soon. As previously indicated, all elements of our company stand ready to assist in this regard.

In the meantime, it is urged that the present service be left intact. I do not urge this solely to preserve a status quo favorable to our company. I recognize the fact and am keenly aware the Westinghouse Broadcasting Co. has an investment of almost $32 million. However, we have been in the broadcasting business for over three decades, and, subject to our continued ability to serve the public in the highest possible manner, look forward to continuing in the industry for an indefinite time in the future. Therefore, our concern is the ultimate good of broadcasting. And while the UHF research is being conducted and, in turn, the entire question of allocations is being reconsidered and determined, it certainly appears to be appropriate to use all available effort to accomplish two goals—an expansion of facilities in maximum number of markets in the first 100 of the country so that at least 3 comparable television facilities are available to insure the economic feasibility and growth of 3 major television networks and provide the public with a greater degree of choice in network programing——

Senator PASTORE. Including Providence, R. I.?

Mr. McGANNON. Including Providence, R. I. [Laughter.]

This would also generate competition between and among these networks and the further accomplishment of a third genuine national network service. Secondly, every incentive be given for the public to purchase all-band or all-channel receivers and in order to supply the stimulus and to urge manufacturers to make receivers available to the public at the highest quality and caliber, that the excise tax, and I put this with emphasis and in quotes, now applied to television receivers be eliminated from all-band receivers and in effect equalize the cost between the UHF and VHF types.

One remaining subject about which I would like to voice opposition is toll television. I want to urge this committee and the Commission to deny any application which would provide for the establishment of such a practice. My reason for this recommendation is that when measured against our ultimate standard (the public good), it is our opinion that the American people will subtly and unsuspectingly be anesthetized into the payment of huge sums, which, though individually nominal, have a colossal cumulative total. It is this latter fact which forms the basis of the projected success of toll television by the promoters who seek the system. We believe it is just as intrinsically impossible for free television and toll television to effectively coexist as it is for the conflicting ideologies of our great Nation to peacefully coexist with those of the Soviet Union. Furthermore, once permitted to be "tested," which its advocates are strongly urging as an initial "head-in-a-tent" maneuver, the resulting change in position will be so radical and incisive that mere regulation or legislation thereafter will be unable to recapture the lost service to the public.

Senator PASTORE. I want to congratulate you on a very magnificent statement.

Mr. McGANNON. Thank you very much.

Senator PASTORE. I like the way you have prepared it, and the way you have condensed it, so we were able to finish here by 12:30.

We have one more witness.

Is Mr. Landau here?

(Mr. Landau rose.)

Senator PASTORE. How long a statement do you have, sir?

Mr. LANDAU. About 30 minutes.

Senator PASTORE. We will recess until 2 o'clock.

(Whereupon, at 12:27 p. m., a recess was taken, to reconvene at 2 p. m., of the same day.)

AFTERNOON SESSION

Senator PASTORE. The hearing will please come to order.
It is now 2 o'clock. The witness may proceed.

STATEMENT OF ELY LANDAU, PRESIDENT OF NATIONAL TELEFILM ASSOCIATES, ACCOMPANIED BY THOMAS WALL, RAYMOND E. NELSON, AND JUSTIN M. GOLENBECK

Mr. LANDAU. Mr. Chairman, and members of the committee, my name is Ely Landau; I am president of National Telefilm Associates, a listed, publicly owned corporation, better known in our industry as NTA.

The gentlemen on my right are Mr. Tom Wall, our Washington counsel, Justin Golenbeck, our house counsel, and Raymond E. Nelson, who is director of sales development for our company.

Our company supplies film programing to over 300 of today's 476 television stations. We are primarily distributors of film programing directly to stations, in contrast with the sale of programing to national advertising agencies or sponsors. We distribute film programing ranging from 5-minute to 30-minute shows, and are one of the primary sources of theatrical motion picture films to the television industry. I appreciate the opportunity of presenting my company's views on the subject of networks and television.

I am here today, basically, to offer to your committee our observations based upon our experiences as a film syndication organization in the television industry, and the steps that we have taken to meet certain of the current problems apparent to all of us. In that connection, I should like to discuss particularly the subject of network monopoly, the control of prime time, and the film syndicator's role in television.

I should like, at the very outset, to make our basic broadcasting philosophy clear. It is a philosophy that we have stated previously. It is one, I might add, that has been expressed before this committee by the operating heads of the three television networks. We are glad that they and NTA are in accord on the fundamental philosophies, because insofar as the health of the television industry is only as good as the health of its component parts, our interests are identical.

We believe in the principle of network broadcasting. We believe that the combined coverage of a united group of stations is essential to fulfill most completely the obligation imposed by "the public convenience, interest and necessity." We believe that there should be, and must be, a method of buying nationwide exposure in a one-transaction operation, an exposure big enough and complete enough to warrant the sizable expenditures national advertisers must make to bring better programing into America's households.

We believe that appreciation and acclaim are due the television networks, the broadcasting organizations which have given to the country's viewers the outstanding programing that has, more than any other factor, made television the social force that it is today. The networks, more than any other element, have enabled an infant television industry to make strides unparalleled in the history of entertainment and communications.

We are, however, at a loss to understand the cloak of unselfishness that some have ascribed to the networks for their contribution to the growth and development of the television industry. We do not think there is anything shameful about self-interest if it makes for progress, and we are rather surprised that there has not been more frank admission of the profit motive in connection with network investments in television.

The motives should not be confused with the accomplishments. There seems to be considerable reluctance about owning up to the motives. In our opinion, there is nothing wrong with putting money into the development of programs so that people will buy receiving sets to receive those programs. There is nothing wrong with putting money into programs to induce more people to turn on their sets to watch those programs. There is nothing wrong with putting money into programs to induce advertisers to buy time for those programs in order to increase the income of your operations.

The fact remains that the networks took grave financial risks in the early days of television and while it may be true that in the latter stages of development advertisers shared that burden, the lion's share of the credit for the development of this dynamic medium must go to the networks.

The question has been raised concerning the existence of monopoly in the television industry. We believe that there can be no question, even in the minds of those who operate the networks, that a monopoly does exist.

We suggest, however, that this monopoly is a monopoly by default.

It is a monopoly born of scarcity, a monopoly sired, fostered, and perpetuated by the Federal Communications Commission, the only agency authorized by law to rectify the situation of its own creation. It is a monopoly brought into being entirely by an inert hand at the throat of broadcasting, stifling competition, the only force that can truly supply the checks and balances that would offset the powers awarded by default to the monopolists of the industry.

However, while much has been made of network monopoly, I would like to bring to the attention of this committee another monopoly. It stems from the same fountainhead, and will require the same remedial action. It is again a monopoly be default and by scarcity; it is the station monopoly.

What I call a station monopoly is best illustrated by the following example. In a market where only one station exists people watch that station or they do not watch television; advertisers buy time on that station, or they do not cover that market; film syndicators sell their product to that station or they do not sell that market. Here, indeed, is monopoly.

Toledo, Ohio, is one of those markets. Toledo, according to Standard Rate and Data Service's 1956 Consumer Market Estimate, is the Nation's 47th ranking consumer market, with a television set count of 358,740.

The station is affiliated with all three networks, but, obviously, can carry only one network's program at any given time. Therefore, the people in this station's coverage area are deprived of much of America's greatest television entertainment, special events, and news coverage. The monopoly here is not a network monopoly; it is a station monopoly.

We do not suggest by inference or intent that the station management is in any way derelict in its service to its community. We do say that the 358,740 television families in that area are denied the privilege of seeing two-thirds of all network programs in the United States today. Try as it may, the Toledo station cannot possibly completely serve the "public convenience, the public interest, and the public necessity" of its community.

The advertiser in this market does not fare any better. The 1-time rate for a nighttime 20-second announcement in this only 1-in-the-market television station is $225—more money than the advertiser would have to pay for the highest priced similar spot in the Dallas–Fort Worth market, the Houston-Galveston market, or in Buffalo, Tacoma, Kansas City, Denver, Louisville, Columbus, and many other cities, all higher up on the consumer market list, but all with 2 or more stations competing for the advertising dollar.

As a matter of fact, in Youngstown, Ohio, the 35th ranking market, an advertiser can buy 3 spots for the price of 1 in Toledo, the 47th market. If instead of this $225 spot in the single station market of Toledo, the advertiser buys a similar spot on the lowest priced station in most markets where there is competition, he potentially has access to far greater circulation at a lower cost. For example, he can buy 20 seconds of class A time in the New York metropolitan area for $37 less than the Toledo buy—and have his message broadcast within range of 4,700,000 TV receivers, as compared to Toledo's 358,740.

In many other major markets like Pittsburgh, Boston, New Orleans, and other important concentrations of population, though they may not necessarily be single station markets, there are severe problems along these same lines. This kind of monopoly constitutes a disservice to the networks, the advertiser, the program source, and most important, to the public. The monopoly shoe can, and frequently does, wind up on the other foot.

This does not mean that the networks are innocent and the stations are guilty, or the other way around. It means that this inquiry should not be a unilateral affair. It means that there are concentrations of control in the broadcast industry, all stemming from the same scarcity. They are all open to accusation, and they are all defensible from a monopoly standpoint on technical grounds. Most of them are being so defended.

The National Broadcasting Co. would defend itself against charges of what is loosely called monopoly in the country's No. 1 market, New York City, by pointing out that its owned-and-separated station, WRCA–TV, is competing with six other VHF stations, all broadcasting from the same transmitter location atop the Empire State Building. That's perfectly true, if you stop at that point.

There is something missing, however. What's missing is the fact that WRCA–TV, given the powerhouse programing of the National Broadcasting Co., sells its 20-second nighttime chain breaks at $2,050 apiece, while one of its competitors, WPIX, gets only $1,750 for a full hour of its prime time. What is missing is the fact that WPIX, denied the powerhouse programing that comes with network affiliation, cannot procure, produce, and sell first-class programing truly competitive to what WRCA can and does offer—without an affiliation with enough stations in enough prime markets to deliver enough audience to an advertiser to defray the high costs of such programing.

If WRCA–TV enjoys an unfair competitive advantage, it is only taking advantage of a situation that it can hardly be accused of having created. WRCA-TV is winning a victory by scarcity. The FCC by keeping the allocation doors shut, has prevented the formation of the additional networks which could give more program strength to more stations, more market places to more advertisers, and mean less monopoly by default in the field of network telecasting.

Much has been said about the hours of time optioned to the networks, but the hours as such are a deceptive measurement. It has been argued that the networks control only so many hours out of the broadcasting day, but the hours they do control are the hours when the greatest number of people do most of their television viewing.

Those are the hours which command the highest ratings; those are the hours that advertisers vie for. Consequently, those are the most expensive and most lucrative hours. Those are the hours that are big-time television, the hours that are known as prime time. Those are the 7:30 to 10:30 evening hours, and they are basically what the shouting is all about.

Do the networks dominate and control and dictate the programing and the disposition of these golden hours? Of course they do. But they control not by contract, not by regulations. They control by circumstances; they control by economics; and, above all, they control by scarcity. Their control is no greater than the controls exercised by the local station operator in a single station market. Again, the responsibility for such undue control lies directly at the door of the FCC which created the situation, and which has consistently failed to do anything about it.

However, network control is not 100 percent control, otherwise there would be no need for film-programing sources such as NTA. On the other hand, we have been relegated to selling our product for use primarily in the second or third best time segments on network-affiliated stations. Film syndicators have built businesses running into many millions of dollars, selling product which seldom is broadcast in prime time.

The viewing public should not be denied access to the kind of programing it has repeatedly shown that it wants to see at the time of day it has the time to see such programing. The people of America who have spent hundreds of millions of dollars for television receivers are being deprived of a vast portion of this programing because of network control. The viewing habits of the public are, therefore, not governed by free selection, but by the decisions of the handful who are empowered by circumstances, and by scarcity, to predetermine what they shall see and what they shall not see.

Even under circumstances where they are programed in fringe time, film programs do command major viewing audiences. Last week's Billboard, a major publication in the entertainment world, carried a chart of feature film programing in 16 major markets. In such off times as early Sunday afternoon, 11 at night, and other class B and C time periods, these films rolled up ratings that would have been highly acceptable to network advertisers using the most expensive time. It might particularly be noted that in the case of one station, WTMJ in Milwaukee, where the station programed a feature picture on Saturday night at 9:30, in prime time, the rating was 45.4.

It is interesting to refer to a statement of facts filed with this committee by one of the leaders of this industry, in whose power it lies to dictate what the people shall see and what they shall not see. Mr. Robert Sarnoff, president of the National Broadcasting Co., in his statement of facts filed with this committee on May 25, 1956, stated in reference to the distribution of motion pictures on television by film syndicators:

If this film group should succeed in undermining the network system, the great national service provided today by three intensely competitive television networks would ultimately be reduced to the lowest common Hollywood denominator. The wealth of fine entertainment, educational, and cultural programs available in the diversified schedules of the networks would be replaced by a continuing flow of stale and stereotyped film product.

I have a copy of a letter that I sent to Mr. Sarnoff which I have submitted to the committee for its own information.

Senator PASTORE. Do you want it inserted into the record at this point?

Mr. LANDAU. Yes, sir.

Senator PASTORE. All right. Without objection, it is so ordered.

(The letter is as follows:)

NATIONAL TELEFILM ASSOCIATES, INC.,
New York, N. Y., June 1, 1956.

Mr. ROBERT SARNOFF,
National Broadcasting Co., Inc.,
New York, N. Y.

DEAR MR. SARNOFF: As president of National Telefilm Associates, Inc., one of the leading distributors of films for television, I feel that I must answer the statement of facts submitted by your company to the Committee on Interstate and Foreign Commerce of the United States Senate.

It seems to me to be fitting that I do so, as mine was one of the few voices raised in defense of network telecasting at the inception of the current hearings, and many of the remarks contained in your statement are strikingly similar to those embodied in my own brief on the subject, which is a matter of public record and on file with the committee. I might add that my organization is not a member of what NBC appears to believe to be a conspiratorial group of film syndicators, seeking to discredit the networks. We do not believe that such a conspiracy exists.

While my company's name did not appear in your statement, which would seem to grant us a certain objectivity of viewpoint, we, for the record, are not particularly overjoyed at this omission. Despite the fact that you do not single us out as members of this alleged cloak-and-dagger fraternity, we'd like to express the strongest possible indignation at your unwarranted attack. The film syndicators, aside from being virtually the only program sources that have enabled the independent stations to survive, have loomed importantly in the nationally sponsored program scheme of things.

We believe in the integrity of the leaders in our industry who have been in the film and/or programing business for many years, and expect to be for many more. Some of them were honored businessmen before the infant industry called television first appeared on the scene. And again, it should be stressed that some of the companies at which you point the accusatory finger are firms with which NBC has had dealings, now has dealings, and with whom, I'm sure, NBC expects to continue business relations, as a vital and necessary source of creative TV programing.

Your statement of facts appears to be following the general principle that the best defense is a good offense. It seems to me, however, that attempting to turn an attack on networks into an attack on the suppliers of television programs on film is pushing a principle a bit too far.

I object strongly to your inference that film programing is undesirable, unorginal, unexciting, and unimportant insofar as network broadcasting is concerned. And I quarrel just as violently with the assumption that the networks have a monopoly on creative thinking. Maybe it's high time that the networks stopped taking the bows for such shows as I Love Lucy and December Bride, produced by Desilu; Private Secretary, produced by Jack Chertok; Schlitz Playhouse of Stars, produced by the Meridian Productions; Ford Theatre, Father

Knows Best, The Adventures of Rin Tin Tin, and some of the other creative efforts of Screen Gems, and it's about time you acknowledged the fact that Halls of Ivy, Lassie, and Captain Gallant are really Television Programs of America productions, and that such audience favorites as My Little Margie, I Led Three Lives, Robin Hood, and Four Star Playhouse and many others owe their existence to such film sources like MCA, ZIV, TPA, and Official Films, not to the networks.

Let's look at the facts, not a "statement of facts," but plain, bedrock, on-the-record facts.

In your exhibit 6 you state that during the week of March 18–24 the NBC network broadcast only 11.9 percent film programing. A further examination of the same page discloses the fact that during the prime 6 p. m. to signoff period, where the viewership far exceeds all the other hours of the day combined, the film percentage was much higher. Eight hours of film programing is listed here as against a total of 25.75 hours of live shows. If you restricted the computation to the really peak viewing hours, 8 to 10:30 p. m., which would eliminate your network's low rating late-at-night live shows, you'd in all probability come up with a far higher film-to-live ratio. All this, mind you, from your own exhibit 6.

This is network telecasting that we're talking about. If you were to add the film programing during station-controlled time, the programing that is the lifeblood of their local operation, you'd get some idea of the true magnitude of the film distributor's role in broadcasting today.

The portions of your statement referring to theatrical motion pictures is, I believe, a direct and uncalled for slap at the TV viewing audiences of America. To condemn feature film programing is to deride a favored form of entertainment, favored by both the viewer, who has clearly expressed himself in survey after survey, and the advertiser, who has found that these shows attract top audiences and move merchandise. They're far and away superior to many of the jerry-built live productions available to today's television set owner who is, in the final analysis, the sole judge of what constitutes good entertainment in his home. National Telefilm Associates is one of the leading distributors of feature pictures for television; we've got some of the best available, and we're going to continue to acquire just as many as we can. We're businessmen, and of course we want to make profits for our stockholders. But I can tell you that the demand for our product hasn't slackened in the last year, but has accelerated at a tremendous rate. Stations demand it because the advertisers and the public want it, which would appear to be the perfect cycle. Were equal or even ample playing in comparable time slots available to the quantity and quality feature films available to TV today I don't think even you could question the fact that ratingwise they would more than hold their own.

Is this feature programing quality programing?

Let's face it; I admire such live producers as Max Liebman and Alex Segal. But, what should be my regard for such creative names as David O. Selznick, Samuel Goldwyn, Cecil B. DeMille, Darryl Zanuck, John Ford, and the many, many others who have made entertainment history?

Are we, then, as your statement alleges, "replacing the wealth of fine entertainment" offered by the networks with "a continuing flow of stale and sterotyped film product"?

Indeed it's true that we're "guilty" of offering the American public such outstanding classics as How Green Was My Valley, The Great Gilbert and Sullivan, Tales of Hoffman, Heidi, The Ox-Bow Incident, Since You Went Away, Notorious, I'll Be Seeing You, A Bill of Divorcement, The Well, Breaking Through the Sound Barrier, Captain's Paradise, and others of comparable quality. We're shortly going to be equally culpable on a similar score, because we're going to be offering the reappearances of such immortals as W. C. Fields, Robert Benchley, Willie and Eugene Howard, yes, even those dread characters in George Pal's Puppetoons—and the Little Lulu cartoon series.

If your network objects to film programing on the grounds of unoriginality, how about some of your own spectaculars by way of—well, shall we say contrast? You accepted some of the most glittering commendations ever awarded by the critics, and you widely promoted the outstanding success of your spectacular production of King Richard III—and, let's face it; King Richard III was somebody else's production, written by a writer you can hardly claim to have discovered, and produced by the same Sir Alexander Korda whose other fine works NTA is proud to carry in its library. In fact, King Richard III was, if you will forgive me for using the words, a feature film.

Then again, there was your own Peter Pan, a truly great show, but which the network aired by the simple process of pointing cameras at somebody else's stage production. The Taming of the Shrew? Shakespeare, period. Barretts of Wimpole Street? Just how long had Katherine Cornell been playing that role before NBC television went into business?

Are all of the feature pictures being offered to the American public four-star pictures? No, they're not, human creativeness being the fluctuating quality that it is. I'll avoid the obvious comparison with run-of-the-mill live programing, and ask another question. Anybody remember Satins and Spurs?

Your statement makes quite a point of the huge investments made by the networks before television reached the turning point. I'm fully aware of these losses—my brief expressed complete sympathy with the networks in this respect. But, let's not forget that "NBC is a service of RCA"—the quote is off your letterhead, by the way—and the investment could conceivably have been exactly that. A service *to* RCA. Let's not ignore the fact that while NBC was incurring these heavy losses, the head of the family, RCA, was busily earning huge sums by manufacturing television sets, TV electronic equipment, and collecting royalties on its many patents used in TV set production by itself and other manufacturers. NBC-RCA's investment in early television can hardly be put in the category of unrestrained altruism.

We of National Telefilm Associates have not been unmindful of our obligation to the industry. You may remember NATS—National Affiliated Television Stations—where another electronic manufacturer, General Electric, and NTA joined forces in a valiant effort to assist floundering television stations to keep their heads above water. An effort that was given a kiss of death by the Commission's action last November. If the networks were around throwing lifelines to these beleaguered broadcasters, the fact was never brought to our attention.

I can't go along with your statement that "networks are the only organizations which furnish stations with a regular daily program service of diversified presentations." "Only" is a strong word. Most of NTA's prime customers are network-affiliated stations; and better than 100 stations have availed themselves of NTA's well-rounded library of television programs on film that ranges from hundreds of 5-minute shows to hundreds of half-hour shows as well as our tremendous library of feature films. The networks are obviously several miles short of completely filling the station's programing needs.

It seems to me that your statement of facts can be construed as a smokescreen to divert the onslaught onto an unrelated target, and that it deliberately obscures the real points at issue.

I said in my committee brief, and I still say, that there's nothing wrong with the general principle of network broadcasting. In my opinion, there should be and there must be an organization which affords an advertiser the opportunity of buying national coverage on a single-transaction basis.

But—and you've brought this "but" into focus—there is something wrong when the workings of the system are complicated by a shortage of networks which, in turn, is caused by a shortage of stations, placing the presently constituted networks in an overwhelming dominant bargaining position.

NBC's own figures give the financial side of the story with extreme clarity. They show that network television got "only" $520 million national advertising dollars in 1955, whereas $724 million went into magazines, and $750 million into newspapers. What's missing is the fact that over half a billion was shared by only three networks; the other dollars were divided among hundreds of magazines, and probably thousands of newspapers. And, also missing is the fact that of this half billion total, a third, or less, went to the station owners, whose individual investments made the whole network structure possible; the lion's share went to the networks themselves.

The simple fact of the matter is that most of a station's best time is devoted to network programing, percentagewise, the least profitable part of its income. I say that if network broadcasting as it is presently constituted is to continue—and I am on record as saying that, in my opinion, it should—a way must be found to make more networks available to more stations, and on a competitive basis that would make it profitable for many, rather than for the few.

Let's face it; the controversy isn't network versus film, as your statement of facts would imply. The question, quite simply, is whether the network structure as it exists today should be changed, done away with—or expanded.

I say let's have more networks. I favor an orderly evolution—an evolution evolved in a competitive market, an American evolution if you will. Let's push for the only change that will eliminate today's bottleneck, today's stranglehold. Let's direct our united voices at the Government agencies that can do something about the situation, the only ones who can. Let's press for a solution of the UHF problem, for deintermixture where deintermixture is the only answer, for more stations, for healthier stations. The true answer to the network dilemma is more stations, broadening the base of broadcasting. More stations must inevitably lead to more networks, which in turn will mean more competition both for affiliates and for the national advertising dollar. Make no mistake about it; the only positive defense against entrenched monopoly is competition, and that's as simple and as basic in broadcasting as it is in the butter-and-egg business.

And I say, let's stop bickering with each other; let's join together in an all-out effort to shore up our industry's structure, rather than trying to tear it down segment by segment. Let's work together for the better health of television, all television, for only by serving the medium can we serve the public—and ourselves.

Sincerely,

ELY A. LANDAU, *President.*

Mr. LANDAU. Mr. Sarnoff's statement also referred to a conspiracy among film syndicators to discredit the networks. While Mr. Sarnoff did not single us out as one of the conspirators, we would like to express the strongest possible indignation at this unwarranted and undignified attack. We are not aware of any such conspiracy nor do we believe that such a thing exists.

More important, however, to condemn film programing is to deride a long accepted form of entertainment, favored by both the viewer and the advertiser who has found that these shows attract top audiences and move merchandise.

The viewing public should not be denied access to the kind of programing it has repeatedly shown that it wants to see at the time of day it has the time to see them.

I would like to quote from the letter I just mentioned, dated June 1, 1956, which I addressed to Mr. Sarnoff and which I am submitting in full to your committee at this time. [Reading:]

I object strongly to the inference that film programing is undesirable, unoriginal, unexciting, and unimportant insofar as network broadcasting is concerned. And I quarrel just as violently with the assumption that the networks have a monopoly on creative thinking. Maybe it is high time that the networks stopped taking the bows for such shows as I Love Lucy and December Bride, produced by Desilu; Private Secretary, produced by Jack Chertok; Schlitz Playhouse of Stars, produced by the Meridian Productions; Ford Theatre, Father Knows Best, The Adventures of Rin Tin Tin, and some of the other creative efforts of Screen Gems; and it is about time you acknowledged the fact that Halls of Ivy, Lassie, and Captain Gallant are really Television Programs of America productions, and that such audience favorites as My Little Margie, I Led 3 Lives, Robin Hood, Four Star Playhouse, and many others owe their existence to such film sources as MCA, ZIV, TPA, and Official Films, not to the networks.

* * * * * * *

Is this feature film quality programing?

Let's face it; I admire such live producers as Max Liebman and Alex Segal. But, what should be my regard for such creative names as David O. Selznik, Samuel Goldwyn, Cecil B. DeMille, Darryl Zanuk, John Ford, and many, many others who have made entertainment history? Are we, then, as your statement alleges, "replacing the wealth of fine entertainment" offered by the networks with "a continuing flow of stale and stereotyped product"?

Indeed it's true that we're guilty of offering the American public such outstanding classics as How Green Was My Valley, The Great Gilbert and Sullivan, Tales of Hoffman, Heidi, The Ox-Bow Incident, Since you Went Away, Notorious, I'll Be Seeing You, A Bill of Divorcement, The Well, Breaking Through the Sound Barrier, Captain's Paradise, and others of comparable quality. We're shortly going to be equally culpable on a similar score, because we're going to be offering the reappearances of such immortals as W. C. Fields, Robert Benchley, Willie and Eugene Howard—yes, even those dread characters in George Pal's Puppetoons—and the Little Lulu cartoon series.

That was the end of the quote from my letter to Mr. Sarnoff.

The motion pictures listed in my letter to Mr. Sarnoff are indicative of the quality of film that NTA is making available to television today. In the best interests of the public, an expanded TV market is necessary to offset the imbalance of power which prevents the selection for telecasting of motion-picture entertainment of this type.

In this connection, it is our opinion that those who have proposed the reduction of network option time as the answer for the ills of network monopoly are not taking a long-range public interest viewpoint. What would be the benefits, and who would be benefited? We, the film syndicators, will benefit to a certain extent; there will be a few more hours weekly for the sale of our product. The advertisers will be afforded some relaxation of the rigid bondage within which they have been forced to operate. But there would not be any more useful broadcasting hours than there were before. As a matter of fact, to some advertisers it would only be a matter of inconvenience, because they would be forced into doing via the more complicated national spot route a clearance job that was difficult enough when they were involved in a network, single transaction operation.

Will the stations benefit by this reduction of option time? Some of them will; some of the major market independents, like WPIX in New York, WGN-TV in Chicago, KTTV in Los Angeles, and others will gain access to some of the advertising dollars currently frozen on their competitors' facilities by network contracts.

But the more important question of all: How does the viewer benefit, to whose service this entire industry is primarily dedicated? How does he make out under a reduced option-time system?

He gets the benefit of more people's thinking, of course, and access to some of the product of creative imagination hitherto denied him. But there would not be any increase of quantity of selection; his viewing would continue to be restricted by the fact that X number of stations in his community could still broadcast only X number of programs during the hours he had available to tune to them. What is needed is wider selection, both in depth and in breadth, and since the hours cannot be stretched, there again is only one solution. Additional stations must be created so that the viewer will have more selection during those broadcast hours. These new stations will make possible an increase in the number of networks, which will increase the amount of high-quality programing available to the country's viewers, and, parenthetically, lessen the station's dependence on its present network program sources.

We of NTA have not been unmindful of our obligations to the industry of which we are proud to be a part. The record will show that as late as last year we tried a noble experiment, wherein we and the General Electric Co. put our time, our money, and our programing behind a sincere attempt to help stations, primarily UHF stations, solve their programing and financial problems. We do not pretend that our motives were purely altruistic. We were trying to expand the market for our product, but the experiment, had it succeeded, would have vastly benefited the participating stations.

It did not succeed, and the reason for its failure stemmed from the still unresolved UHF problem, which the FCC to all intents and purposes has left in a state of suspension. We firmly believe in the principle of network broadcasting—free enterprise broadcasting, so to speak—conducted on fair and competitive lines. Perhaps I can add conviction to that statement by telling you that National Telefilm Associates, through a wholly owned subsidiary, the NTA film network, will shortly be engaged in the network business, the fourth operating television network in the country. It is a network that will operate entirely on film at the outset. It will aim to supply quality programing and sell the time of its affiliated stations.

Senator PASTORE. Are you sincere about that?

Mr. LANDAU. Yes, sir, this is currently in existence and has been for several months.

Senator PASTORE. I applaud you for it.

Mr. LANDAU. I do not want to unduly magnify the scope of the NTA film network; it is very much in its incipient stage. Nevertheless, as of this morning, the network has signed affiliation agreements with stations, ranging geographically from Savannah, Ga., to Anchorage, Alaska—from Richmond, Va., to Milwaukee, Wis.—from Bangor, Maine to San Diego, Calif.

As a matter of fact, while the operation is specified by contract to begin October 1, the NTA film network is already feeding sorely needed programing to 16 of its affiliated stations, and is stepping up its service as fast as possible. We say frankly that this is a small beginning, but, large or small, we have taken the film network out of theory into the realm of fact.

Do we believe in the principle of network broadcasting? Indeed we do. We are putting millions of dollars worth of TV programing and a good many dollars into implementing our belief. I do not think that we can be much more emphatic than that.

The NTA film network is not the cure-all for the ills of the TV industry. That remedy must come from governmental action, either legislative or administrative. If the public is to be truly served, give them more channels to which to tune. If the advertisers and the economy of our industry are to be served, provide more market places in which to shop. To eliminate the dominant controls of the present networks, create the stations that will make more networks, and hence more competition, possible.

If the hearings of your committee can serve to hasten specific, concrete action on the part of the FCC to clarify the allocation problem, to solidify and stabilize the current uncertainties that exist and to aid in the rapid expansion of the overall TV market, I am sure that it will greatly enhance the possibilities of a truly competitive TV broadcast industry to better serve the public interest.

I thank you for the privilege of appearing before you.

Senator PASTORE. Mr. Cox.

Mr. COX. Does NTA produce film programs specifically designed for television or does it largely syndicate the product of Hollywood film companies?

Mr. LANDAU. We have not been primarily in the production of television programing for television. We have, however, acquired from producers of such programing made specifically for television a large number of programs ranging from 5-minute to 30-minute programs. And we do supply, and at the early stages of our business it was the primary source of our sales effort.

Mr. Cox. You indicated that generally speaking you were forced—and other syndicators—to sell this film product, which you indicated won popular support, in second- and third-class time. Now, do you feel that this is because the film product could not compete, if given equal access to the market, with other program sources, or is it because there are arrangements within the broadcasting industry which place you at a disadvantage?

Mr. Landau. I don't know exactly what you mean by "arrangements."

Mr. Cox. I was referring to the option time and must-buy provisions.

Mr. Landau. I would say this comes back to the scarcity of time itself; to the scarcity of stations in any given number of markets.

We primarily program, or sell to stations who program, from 10:30 on in the evening, or Sunday afternoon. I would say that if you took the qualitative elements that go into a motion-picture film, such as How Green Was My Valley, or any of the others that I mentioned, where perhaps twenty or twenty-five or ten thousand dollars per minute has gone into the production value of that program, and compare it to the thousand dollars per minute or the $2,000 per minute that goes into the half-hour film program on the networks today, the elements of quality production and the overall entertainment values that can come forth are not comparable.

However, this great programing is restricted, again, by the scarcity of stations and the scarcity of time.

Senator Pastore. But I Love Lucy, December Bride, Ford Theatre, Lassie—those programs come through on option prime time?

Mr. Landau. I believe that Mr. Cox' question was aimed at the feature film.

Senator Pastore. No, no, no. I am not directing my question as an adjunct to his. I mean, on the thesis that has been developed here, you have developed a thesis here that you have had to go to class B and class C time.

Mr. Landau. We are primarily distributors of motion pictures for television rather than programing made for television. And that was the distinction that I believe Mr. Cox was trying to make.

Senator Pastore. I realize that, but I am getting off that point. I am developing this other point. Now, apparently these fine productions, which are independently produced productions, are getting in on option time and prime time, are they not?

Mr. Landau. Yes, they are.

Senator Pastore. I mean, if a show is good, it gets on. How do you develop this argument that you are being pushed around?

Mr. Landau. I don't think that I am trying to develop an argument that we are being pushed around. I am saying that, with 8 or 9 or 10 or 12 or 20 film sources, the number of I Love Lucys—that the 10 programs that I made mention of here are small indeed, to the comparative amount of time that the 10 or 20 film producers have available to place their programing in, in the event they make a sale.

Senator Pastore. Let's be practical about it. You are a very intelligent man and you stand high because you are the president of a very productive and very prosperous organization.

Now, you have heard the testimony here on the part of many affiliated broadcasting stations, who have all been very joyously saying here for the last 2 or 3 days—[laughter]—that they like to be connected with a network; that they are fundamentally very much satisfied with the relationship; they have even gone so far as to call one another partners; and they run their stations and they would have to buy your film even if you didn't have to have option time. They are ultimately the ones who would have to do the buying of your product.

And they come in here and they tell us here that they are completely satisfied with this option time that they have given the network, and they are completely satisfied with the prime time that they have allocated to the network.

Now, what can we as a Congress—let's be realistic about it—what can we as a Congress do about that when we live under a system of free enterprise?

Mr. LANDAU. Senator Pastore——

Senator PASTORE. I mean, I am not trying to be facetious, I am trying to develop this. I know a lot of people have gripes and they like to come in here and get it off their chests. But after all, we have a specific job here to perform in the public interest as Members of the Congress. Naturally, there are some things that we are being called upon to do.

Now, the question that I am curious about is this: Your shows that are being independently produced, whenever they are very good, they get on. Your argument is, of course, they have to be very, very, very good to get on. But the fact of the matter is that if they are very, very, very good, they do get on. Now, what can we as a Congress do about that—no more than we can tell you what kind of a picture to make? That is the question I would like to propound.

Mr. LANDAU. I don't profess to suggest what you as a Congressman can do.

Senator PASTORE. I mean, that is why you are here, you are here to tell us something to do.

Mr. LANDAU. I think what we can do, sir, is to push for more stations in more prime markets.

Senator PASTORE. I agree with you there.

Mr. LANDAU. In more prime markets, because we have today 9 stations that are not intermixed—9 markets that are not intermixed that have 4 stations or more. We have 20 markets that have 3 stations or more that are not intermixed. And if we can push for, instead of 29, 3-or-more-station markets—and I refer now to the testimony this morning where everyone would be very happy if we had 3 stations in every market—I would be much happier if you had 4 in every market.

Senator PASTORE. I will take three in Providence. [Laughter.] I know that. I know that. That is what I have been, let's say, crying about or begging for.

Mr. LANDAU. In Variety 2 weeks ago they listed a number of shows that were sold this year to sponsors—new shows to sponsors—not necessarily new sponsors. They came up with a list of 10 shows that will go on the air next year. Many of the film syndicators—and I am sure NBC, CBS Music Corporation of America, have as many as 10 shows themselves that they are offering. So that there isn't enough time for even this great programing to get on the air as our current TV economy is constituted.

Senator PASTORE. That is right. And your argument is that we need more stations and more networks. I will go along with that. I am not touching that aspect at all.

Let me put it this way: I will take judicial notice of that, that we ought to have more broadcasting stations; we ought to have more networks. We haven't got them. We are talking about option and prime time. What are we as a Congress expected to do about this, when the final decision is going to rest upon that individual who has come here and said, "I am very happy about what I have. I don't want to do anything to change it."

As a matter of fact, we have had here—we have had all these affiliates coming in here advancing the cause of the networks. I don't know what the connection is, but it is a good connection, whatever it is. [Laughter.] But it all sounded very lovely here. Now, in view of that testimony, what do we do?

Mr. LANDAU. I say that you call some of the fourth stations in a market to come and appear here, the ones that are unaffiliated, the ones that need the programing to buck the I Love Lucy's.

Senator PASTORE. What is stopping them now from coming to you and buying the best you have got to give?

Mr. LANDAU. Because they cannot defray, on a national basis, the cost of producing an I Love Lucy if you have only nine markets in which to place the advertiser's message. You cannot compete with RCA—or I believe Dr. Stanton says he has 181 affiliates. Nine stations cannot go out and buy, or help to produce, a program whose cost can only be defrayed over a small number of markets.

Senator PASTORE. Congress can't subsidize that, can it?

Mr. LANDAU. No, but the Congress can make available, or help, I believe, press for the reallocations, or concrete allocations——

Senator PASTORE. You always come back to the same point. I am willing to admit that.

Mr. LANDAU. If you have penicillin, sir, to cure a virus, you don't look for new sulfa. You try to cure the disease with the known remedy. I believe the known remedy here would be the expansion of the TV market, certainly in the prime markets, to offset the limited economy.

Senator PASTORE. You mean more stations?

Mr. LANDAU. More stations.

Senator PASTORE. Well, I grant you that. We—as a matter of fact, if you are familiar—and you must be, you must read the records of all these hearings—you know how the members of this committee feel about that. We have had the members of the Federal Communications Commission before us; as a matter of fact, I was the one who asked the question: When are you going to resolve this problem? As far back as 5, 6 months ago they told me in about 6 months. It hasn't been resolved yet. I tell you very frankly I am losing my courage—or losing my hope, let me put it that way. But I agree with you, we need more stations. But on this question of option time, and prime time, your honest, truthful opinion or recommendation is what, to the Congress?

Mr. LANDAU. Is that it will not help enough people, it will not do the public enough of a service, sir——

Senator PASTORE. Thank you for saying that. At least it is an honest answer.

Mr. LANDAU. That is my opinion.

Senator PASTORE. That is the problem that confronts us. I have been asking myself for the last 3 days, What am I expected to do, as a Member of the Senate, about this question of prime time or option time that we have been talking about?

Mr. LANDAU. Instead of 3 or 4 film syndicates or program sources selling 10 shows, including the networks for next year, perhaps 2 or 3 more film syndicators or 2 or 3 more program sources will get in and sell another show by reducing the option time. But the long-range benefit I do not believe is there.

Mr. COX. You suggest, don't you, in your testimony, Mr. Landau, that it would provide somewhat greater freedom of choice among programs, that it would provide programs which would permit the existing independent stations to compete more effectively?

Mr. LANDAU. To some degree.

Mr. COX. And that it would be, in your view, a step in the right direction, but perhaps too feeble a step; is that what it amounts to?

Mr. LANDAU. I say that it is an attempt to help a very, very tough situation. It is not the true remedy.

Senator PASTORE. Yes. But you have also said that the reason why you can't develop better shows than I Love Lucy, is because you have got to have a proper spread of these programs in order to invest the money in the cost of the production; is that correct?

Mr. LANDAU. Right.

Senator PASTORE. Now, if it is true that they need this option time in order to guarantee the proper circulation of these programs on a network, then, of course, it is true that if you constrict that you are setting in a process of erosion? Now, I want your honest answer on that, too.

Mr. LANDAU. I would say that you are correct in what you are saying.

Senator PASTORE. Of course I am.

Mr. LANDAU. But, I say that I don't want to—I say I would like to make a few programs as good as I Love Lucy. They don't necessarily have to be better. But I say, unless I can clear time on a network today I cannot sell that program. And I say that unless I can get enough stations in enough markets to be able to sell that program to WPIX in New York, or WGN in Chicago, KEYD in Minneapolis, or KTTV in Los Angeles, I cannot afford to produce that program.

Senator PASTORE. That is right. I can understand that, too. By the same token you can't put on I Love Lucy unless you can get the proper spread on the network and get your number of must stations in order to make it a profitable venture.

Mr. LANDAU. I agree. I say that network broadcasting is necessary.

Senator PASTORE. I mean that is what faces us. There you are. You are on both horns of a dilemma. You realize the fact that, after all, if you are going to get a certain quality of program it has to be channeled off to a specific number of areas in the country in order to make it worth while—otherwise your advertiser will not put up his dollars to do it that way. That creates a problem for you.

But the question I ask myself, fundamentally, is what are we as a Congress, in a system of free enterprise, expected to do about this?

I am afraid if we get into controlling the situation we may start out with a cure that may actually end up as a serious dilemma.

Mr. LANDAU. I am in accord with that, Senator. I believe that the question here is whether the technical problems or the economic pressures are withholding the clarification of the allocation system right now.

Senator PASTORE. Well, I go along with you on that. I think it is a very serious problem. I think it is tied in with this intermixture and deintermixture; I think it is tied in with the tremendous power given to some stations; I think it is tied in with the concentration of 6 and 7 stations in some areas of the country.

You have Toledo here with only one, where they can make their own price. A spot anouncement for 20 seconds you told me cost $225. That, to me—I know nothing about their private affairs, but that sounds to me ridiculously high. But it is either that or you don't go on. That is the thing that faces us.

I think you are right; we do have one-station monopolies in many communities, which in my humble opinion does not serve the public interest. I say this: As long as we have three networks in this country you ought to have at least three channels in every community.

Mr. LANDAU. I say we should have four. [Laughter.]

Senator PASTORE. I say four would be better. Then maybe you fellows can come in with the fourth network. I realize all that. But I keep asking myself the question: What are we being asked to do here? I am afraid we cannot put the FCC in the business of deciding what picture the station is going to buy, or with whom they are going to do business, because, after all, we get into socialism which nobody wants.

Mr. COX. You suggested——

Mr. LANDAU. I didn't mean to infer that that was our suggestion.

Senator PASTORE. No; you didn't say that. That is something I am drawing out of all this, if we are expected to go that far. You made a very intelligent statement.

I don't want to get into this matter between you and Mr. Sarnoff—we leave that for business license, competitive license. You fellows can call each other anything you want within bounds of your legal liability. That is your business. I don't want to get into that at all. If you have a gripe against Mr. Sarnoff, or he has one against you, it is all right if you want to air it out here a little bit, as long as you don't drag me into it.

Apart from that, you have made a very fine presentation. I want to congratulate you for it.

Mr. LANDAU. Thank you.

Mr. COX. You suggested that you thought the suggested change in time option regulations might make available a market for 2 or 3 more programs. Now, assume that a 3-station market—in a 3-station market, through some change in option time regulations, one-half hour in the period 7:30 to 10:30 was removed from the program capabilities of the networks. On 3 stations that would represent 21 half hours in the course of a week. Wouldn't that make a possible market for 21 syndicated film programs of 30 minutes' duration?

Mr. LANDAU. That is in 29 markets, Mr. Cox, out of how many?

Mr. COX. Out of a hundred.

Mr. LANDAU. Twenty-nine markets, I believe we have two hundred some-odd markets. So in 29 markets you might make it possible for——

Mr. COX. In the remaining 60 you would get 14 half-hour periods open, and in possible permutations and combinations of those, assuming one advertiser did not necessarily insist on clearance of all of them, you could perhaps open up something more than that number of program possibilities.

Mr. LANDAU. And I believe that I would be delighted to have the opportunity to vie for the placement of some of our programing in those time periods, as would, of course, all of the other film syndicators. Again, it doesn't give the viewer in a particular area any more of a privilege of tuning instead of to 3 stations or to 2 stations or to 1 station. If you bring it down to the ultimate of seven additional half hours in single station markets, it doesn't give them any greater choice of selection of their programing.

Mr. COX. Nobody denies that that is the only adequate and final solution. But in the period when Senator Pastore is losing hope, and we are giving consideration to other possibilities, you would agree, wouldn't you, that through some such changes these benefits that you have suggested could flow at least in some measure to the public, to independent stations, to the producers of nonnetwork programs?

Mr. LANDAU. I would agree that it is a respite of some sort from the pressures on all three of those groups.

Mr. COX. Thank you.

Senator PASTORE. Thank you again, sir, very, very much.

We will adjourn until 10 o'clock tomorrow morning.

(Whereupon, at 3:49 p. m., the committee adjourned until Wednesday, June 20, 1956, at 10 a. m.)

TELEVISION INQUIRY
(Network Practices)

WEDNESDAY, JUNE 20, 1956

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D. C.

The committee met, pursuant to adjournment, at 10 a. m., Senator John O. Pastore, presiding.

Present: Senators Pastore, Magnuson, and Wofford.

Senator PASTORE. Is Mr. Whitmire here? (He came forward.) I understand that you desire simply to present your statement for the record, sir.

Mr. WHITMIRE. Yes, sir.

Senator PASTORE. All right, sir. Without objection, it is so ordered.

(The statement follows:)

STATEMENT OF B. T. WHITMIRE, GENERAL MANAGER OF TELEVISION STATION WFBC-TV, GREENVILLE, S. C.

My name is B. T. Whitmire. I am general manager of television station WFBC-TV, which operates on channel 4 with maximum power at Greenville, S. C. Station WFBC-TV is a primary affiliate of the NBC television network, but is not included in that network's basic must-buy list.

I personally, and on behalf of station WFBC-TV, appreciate the opportunity to appear before this committee and to record our experiences and thoughts on the matters with which you are now concerned.

The Greenville area is served by three television stations; namely, WFBC-TV, in Greenville on channel 4; station WSPA-TV, in Spartanburg on channel 7; and station WLOS-TV, on channel 13 at Asheville, N. C. Stations WFBC-TV and WSPA-TV both transmit from Paris Mountain, approximately 5 miles from Greenville, and station WLOS-TV is located on Pisgah Mountain, which is approximately 35 air-miles from Greenville. These 3 stations are affiliated with the 3 national networks and, consequently, the people in the area have a wide choice of network and local television programing.

Station WFBC commenced operations in 1933 and became an affiliate of the National Broadcasting Co. in 1936. Greenville is one of the important markets of the country, but it certainly does not rank in the minds of national advertisers with cities such as Cleveland, Philadelphia, and Chicago. Consequently, WFBC-Radio, just as in the present case of WFBC-Television, has always found it necessary to sell national advertisers on the importance of the Greenville market. The affiliation of WFBC-Radio with NBC meant only one thing—that NBC service was available to WFBC's transmitter. It certainly did not mean that any NBC client would or could be forced to buy our facilities. We were delivered the sustaining and public-service programs originated by the network, but it was the job of the station to show to the buyers of network time that the Greenville market was important to them and that the rate charged for it was justified. Of course the NBC sales department offered the station. A network salesman tries always to sell the entire network but seldom does he get an order for every station.

Secondary markets are the ones left out. Therefore, it was my job to go up and down Madison and Michigan Avenues, Peachtree and Canal Streets knocking on agency doors and telling them about the fine radio facility that had become available.

When WFBC–Television commenced operation January 1, 1954, we had obtained an affiliation with the NBC television network; however, history was repeated and I found myself going about the same streets, calling upon many of the same people and using essentially the same words to convince advertisers as to the desirability of using WFBC–Television.

Television networks, in my opinion, are a necessary and essential part of the business of broadcasting. The growth of the television industry, for the most part, has evolved in the past 10 years. The history of television broadcasting, excepting the early developmental period, is presently confined to the past 10 years. Nevertheless, television, in this one decade, and particularly since 1952, has witnessed an entirely unprecedented growth and development, with the result that television stands today as a powerful, highly respected and greatly envied—particularly by its competitors—medium for the dissemination of news, public service, special events, and entertainment, as well as for the advertising of goods and services.

Already, despite the vastness of this Nation, the great majority of the populace has available a multiplicity of television services. It is no longer uncommon to have a television audience of more than 50 million Americans simultaneously witnessing the same public event or outstanding entertainment feature. This growth has not been equaled anywhere else in the world. It hardly appears necessary to further detail any account of the marvelous development of the television medium and the tremendous service rendered for the public good. It should be recognized, however, that the rapidly developing stature of the television industry renders it and its various segments subject to considerable criticism and much exaggerated depreciation by those would-be detractors who would seek radical modifications in the present order for their private gain.

The television networks certainly deserve substantial credit for their pioneering efforts and their continuing contributions to the growth of this great industry. With the rapid changes in transportation and communications media in this country in the past half century, the interests of our citizenry has become far less provincial and our people are more and more concerned with national and international affairs. The television networks are essential if we are to be able to provide simultaneous coverage and presentation of major news and special events of nationwide interest. A network, of course, brings the talent of the world into outlying areas like South Carolina, as well as news coverage, educational programs and events of political and economic importance. Without the backbone of network service, local stations would mostly be magic lanterns broadcasting available movies. I cannot conceive of WFBC–TV without a network affiliation. At best, it would be a difficult and costly job and we could not possibly provide the variety of entertainment and public service that we now broadcast.

We could not possibly produce a show comparable to Dave Garroway's Today. We produce good news shows with our own photographers and reporters and service from Telenews, and so forth, and we have a lot of local and regional news. We also have daily sportscasts, but next week, from NBC, we will have the Olympic tryouts, live.

We have good children's shows, Kids Korral, Uncle Pat and Little Joe, and Dandyland, but we cannot possibly have the budget to produce on the level of Howdy Doody and we certainly would never attempt Peter Pan or Hansel and Gretel. And there's only one Miss Frances and her Ding Dong School.

A few times a year the Greenville Little Theatre Players put on dramatic bits, but can they compare with Robert Montgomery? And how would any single station do The Twisted Cross or A Night to Remember?

Consequently, I feel that a network affiliation is essential for the operation of a station such as WFBC–TV. I would certainly not welcome the idea of trying to operate an independent station in the Greenville market. Not only do the networks provide simultaneous coverage of major public events, they also make available to their affiliates entertainment features of the highest quality and at a cost which would be prohibitive for independent stations. Further, the availability of the network program service makes it possible for the individual station such as WFBC–TV to concentrate its efforts on doing a better production job in presenting local live programs. Our local productions, plus the outstanding program fare made available by our network, plus those film shows which we select as the best available from independent syndicators, permits us to provide a service for more than 18 hours daily and makes available, in our judgment, an ever-improving and already outstanding television service best designed to serve the needs and interests of the people in our area.

Also, in my opinion, option time is necessary for the successful operation of a network. When I enter a time buyer's office and he asks for a certain time, as a salesman, I've got to know that I can deliver the time I offer, otherwise no sale. The same is true in selling a network.

Furthermore, network option hours, in our experience, have not precluded station WFBC-TV from clearing time during prime viewing hours for outstanding programs of transcendent local interest. We have always attempted to accommodate our network's requests for time clearances insofar as possible, and, conversely, NBC has been understanding as to our problems and has recognized our primary and ultimate responsibility to program to best serve the needs of our own particular area. Next week, for example, WFBC-TV is utilizing, for local production, 5 hours and 45 minutes of NBC's class A option time between 7:30 and 10:30 p. m.

Station WFBC-TV has, on occasion, either rejected or delayed on film network programs to accommodate local advertisers. Likewise, in at least one instance, we have rejected a network offering because we were convinced that it was not an outstanding program and that we could substitute a better one.

In summary, we feel that television, in a very brief span of development, has experienced a remarkable growth and has achieved great success and stature. This alone attests to the general soundness of the industry and the current methods of doing business. Most of the current criticism of the television industry, in our opinion, certainly does not reflect any dissatisfaction on the part of the public. We believe that the television networks deserve substantial commendations for their part in the growth of the industry and that their services are a necessary part of the business of telecasting. We also sincerely feel that television, as an industry, has found substantially the right prescription and that major surgery is not indicated. Any significant modifications could well have the effect of depriving the American public of much of the outstanding program service now available and depreciate television both as an advertising and programing medium.[1]

Senator PASTORE. Is Mr. Harold Essex here?

Mr. ESSEX. Yes, sir.

Senator PASTORE. Will you come forward, please?

Mr. ESSEX. Mr. Chairman, in the interest of time, I had just as soon submit mine.

Senator PASTORE. Well, if you so desire. And I do want to say this to you, that Senator Ervin had hoped to be here, but as you know, there is a death in his family, and he has been detained.

Mr. ESSEX. Yes, sir.

Senator PASTORE. Thank you very much. Without objection, it is so ordered—that your statement be put into the record.

STATEMENT OF HAROLD ESSEX, VICE PRESIDENT, WSJS AND WSJS-TV, WINSTON-SALEM, N. C.

I am Harold Essex, vice president and general manager of WSJS and WSJS-TV, Winston-Salem, N. C. WSJS and WSJS-TV are part of the NBC radio and TV networks. I am appearing here because our stations are vitally interested in the investigations and deliberations of this committee concerning network operations and practices.

Let me give you briefly a station's eyeview of the nature of a network and the services it performs for a station such as WSJS-TV. A network should not, in my opinion, be regarded just as the National Broadcasting Co., located in New York City. Rather, in reality a network is a group of many independent stations located throughout the country which together are able to realize the benefits of cooperative action in two fields basic to American broadcasting—creation of programs and obtaining of revenues by selling programs to sponsors.

These many stations pool their resources to help create programs of a quality far beyond the physical and monetary means of any individual station for broadcast by every member of the group; and they pool their product—the

[1] Pursuant to later request, the program schedule of WFBC-TV for a sample week in April, 1956, was furnished and is printed at p. 2984.

time which they sell—so that national coverage can be provided to an advertiser wishing to broadcast his message over every one of the member stations at a time he selects. Both the programing and sales services are carried on for the benefit of the group by some central organization. Because of the obvious benefits of cooperative action by many stations, networks or chain operations as they are sometimes called, are almost as old as radio itself. Some networks have been created along the lines of cooperatives or voluntary associations. Others have been formed by independent entrepreneurs. Whatever the form of organization, the purpose and essential nature of the network is the same: to provide to the many separate stations programs and revenues which each could not possibly hope to provide itself acting alone.

It is, of course, possible for the jointly produced programs to be circulated to each individual station by transcription or film, and such operations are not unknown. But obviously such a method of program distribution does not meet the requirements of many of the most important program subjects—any special event, sports event, or other live production. Such a program has to be carried simultaneously to each station by telephone wire, cable, or microwave and broadcast by such station, if the full value—indeed, if any value—of the program is to be realized.

Thus, the essence of most network service is the simultaneous broadcasting over the many independent outlets throughout the country of an event or program—originated in a remote spot—whether it be a political convention in Chicago, a horse race in Kentucky, an opera in New York, or a peace conference in San Francisco.

This basic element of network service—simultaneous broadcasting by the many individual members of the network—obviously presented serious practical problems of administration. Unless the time that the event occurred or the program originated was free over all or most of the members of the network, the joint programing endeavors would prove abortive, and the sale of the program and the time over the member stations to a national advertiser would be frustrated.

Option time was the method which was developed to enable the 100 or 200 or more individual stations to operate as a team—to realize the objectives of a network service. Option time merely amounts to giving to the executive head of the group of stations, or its central organization or the independent company performing the programing and sales functions for the group, first call on about half of each station's daily time on the air. When an event occurs, or a program is ready to be aired, or a sale of time to a national advertiser can be closed, option time enables the programing and sales agency to assure distribution of the program and the advertiser's message over all or most of the member stations.

Without such distribution, and the advance assurance that such distribution is practicable, sales of time over the network to advertisers would be difficult if not impossible, and investment in and development of high-grade programing would be crippled. Thus, from the point of view of the member stations, option time is a concession by each in the interests of all, a guaranty that the full network will be available to act as a network when the occasion arises; and from the point of view of the sales and programing agency, option time, by enabling it to clear time over all or most of the network, provides the tool necessary for performing the sales and programing function delegated to it. In short, effective network service is vitally dependent upon option time.
