Q: Can I use the RS6661A to provide power to my Mac system?

A: No. We recommend that you use the power adapter that comes with your Mac, rather than relying on our RS6661A power supply.

The RS6661A power supply has no charging function, and will be unable to provide sufficient power. In addition, attempting to use the RS6661A in this fashion will prevent it from operating properly; the LEDs may fail to illuminate and/or may flash intermittently, and hosted devices may not function properly, or be recognized by the Mac system.
