HighPoint RAID Management Software

Your Choice – Graphical or Text-only interfaces

To make it easier for customers to use our SSD6200 series products, we have developed both graphical and text-based management interfaces for the SSD6202/6204, SSD6202A/6204A NVMe RAID Controllers. To simplify installation and upgrade procedures both interfaces are packaged into a single download, and are available for Windows/Linux operating system platform.

Both management interfaces share universal layouts across all major operating systems, and can be administered locally or remotely via an internet connection. – if you are comfortable with the Windows release, you will have no problem managing NVMe RAID configurations installed for a Linux distribution.

The Web RAID Management Interface (**WebGUI**), is a simple, and intuitive web-based management tool available for Windows and Linux operating systems. It is an ideal interface for customers unfamiliar with RAID technology. The Wizard-like Quick Configuration menu allows even the most novice user to get everything up and running with a few simple clicks. Experienced users can fine tune configurations for specific applications using the Advanced Options menu.

The **CLI** (command line interface) is a powerful, text-only management interface designed for advanced users and professional administrators. The universal command lines work with Windows/Linux platform. Comprehensive user guides are available for the CLI, and are included with the most recent product updates available from the SSD6202/6204, SSD6202A/6204A Software Updates webpage.

OOB (out of band) RAID Management – SSD6200A Series NVMe AIC drives feature an OOB port (accepts USB Type-C monitor connections) and a built-in CLI (command line utility) which allows users to manage and monitor RAID storage without an operating system.

OOB is a handy troubleshooting tool for professional applications, as it allows administrators to examine and diagnose the status of a RAID configuration or NVMe SSD while the host system is unresponsive. [More](#)

Using the HighPoint RAID Management (WebGUI) Software

This guide provides an overview of the Web-RAID Management graphical user interface, also known as the WebGUI. The WebGUI is an intuitive, yet comprehensive management tool designed for users of any experience level.

Starting the WebGUI

How to login WebGUI in Windows

Double click the Desktop ICON to start the software using the system's default web browser. It will automatically log-in to the WebGUI.

The password can be set after the first log-in. To change the password, select **Setting** → **Password Setting** from the menu bar.

The screenshot shows the HighPoint RAID Management WebGUI interface. The top navigation bar includes tabs for 'Global View', 'Physical', 'Logical', 'Setting' (which is selected), 'Event', and 'SHI'. On the left, there is a sidebar with 'System' and 'Email' options. The main content area is divided into two sections: 'System Setting' and 'Password Setting'. The 'System Setting' section includes the following options:

Enable auto rebuild.	Enabled ▾
Restrict to localhost access.	Enabled ▾
Set Background Rate:	Highest ▾
Port Number:	7402
Temperature Unit:	°F ▾

Below these settings is a 'Submit' button. The 'Password Setting' section includes:

Password:	<input type="password"/>
Confirm:	<input type="password"/>

Below these fields is another 'Submit' button.

How to login WebGUI in Linux

Enter <http://127.0.0.1:7402> or <http://localhost:7402> into the **browser** to log into the **WebGUI**, 7402 is the WebGUI's Port Number, which can be modified.

The password can be set after the first log-in. To change the password, select **Setting**→**Password Setting** from the menu bar.

Global View	Physical	Logical	Setting	Event	SHI
System Setting					
System	Enable auto rebuild. <input type="button" value="Enabl"/>				
Email	Restrict to localhost access. <input type="button" value="Disab"/>				
	Set Background Rate: <input type="button" value="High"/>				
	Port Number: <input type="text" value="7402"/>				
	Temperature Unit: <input type="button" value="°F"/>				
	<input type="button" value="Submit"/>				
Password Setting					
	<input type="text"/>				
	<input type="text"/>				
	<input type="button" value="Submit"/>				

Verify the Controller Status

The **Global View** Tab will display the overall status of the controller. The Virtual Disk is listed under **Logical Device Information**. The individual drives are listed under **Physical Device Information**.

For example: SSD6204:

Global View	Physical	Logical	Setting	Event	SHI
HBA Properties			Storage Properties		
Host Adapter model: HighPoint SSD6204			 Total Capacity: 4000 GB Configured Capacity: 0 GB Free Capacity: 4000 GB		
Controller count: 1			<input type="button" value="Configured 0.0%"/>		
Physical Drive: 4					
Legacy Disk: 0					
RAID Count: 0					

Host Adapter model – Display board name

Controller count – Display the number of boards

Physical Drive – Shows the number of physical disks accessed

Legacy Disk – Displays the number of disks after initialization

RAID Count – Displays the number of RAIDs created

Configured 0.0% – Displays the current usage of the disk, 0.0% means no data in the disk

Physical Information

This page shows the **Controller Information** and **Devices Information**

Physical Device Information

Global View	Physical	Logical	Setting	Event	SHI
Controller 1 Devices Rescan		Physical Devices Information			
	Device 1_1	Model Revision Location Max Free Status Serial Num	Samsung SSD 970 EVO Plus 500GB 2B2QEXM7 1/1 0.00 GB Normal S4EVNM0R225852A	Capacity	500.10 GB
	Device 1_2	Model	Samsung SSD 970 EVO Plus 500GB	Capacity	500.10 GB
	Device 1_3	Model	Samsung SSD 970 EVO Plus 500GB	Capacity	500.10 GB
	Device 1_4	Model	Samsung SSD 970 EVO Plus 500GB	Capacity	500.10 GB

Model — model number of the disk connected

Revision — revised version of disk

Location — which controller and port the disk is located in

Max Free — total capacity that is not configured

Status — Current state of drive

Serial Num — Serial number of the disk

Capacity — total capacity of the disk

Creating an Array

1. Open the WebGUI
2. Select the proper **controller** from the drop down on the top left
3. Click the **Logical** tab
4. Click **Create Array**

Example screenshot (SSD6204)

Global View Physical **Logical** Setting Event SHI

Create Array

Logical Device

Rescan

Create Array

Array Type: JBOD(Volume)

Array Name: JBOD(Volume)

Initialization Method: RAID 0
RAID 1
QUICK INIT

Cache Policy:

Block Size: 128K

Select All

Location	Model	Capacity	Max Free
1/1	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB
1/2	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB
1/3	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB
1/4	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB

Available Disks:

Capacity: (According to the max free space on the selected disks) Maximum (MB)

Create

Array Type

This drop-down menu allows you to specify the RAID level. An array is a collection of physical disks that will be one virtual drive by your Operating System (OS).

The SSD6200/6200A is capable of creating the following types of arrays:

- RAID 0 — Striping
- RAID 1 — Mirroring
- JBOD — Spanning

Each RAID level has its pros and cons based on the application you use it for (Note: Refer to RAID level Quick Reference)

Array Name: the name that will be displayed in Logical Device Information (Default: RAID_<level>_<array number>)

Initialization Method

Initialization of a disk sets all data bits to 0, essentially clearing all the data on the drive. It is important to initialize disks as previous data physically stored on the drive may interfere with new data.

- **Quick Init:** This option grants immediate access to the RAID array by skipping the initialization process, but it will delete all data. Note: Skipping initialization is generally not recommended as residual data on disks may interfere with new data in the future.

- **Background:** The array initialization process will have a lower priority. During this time the array will be accessible, but the initialization process will take much longer to complete.

*Note: Using a Samsung 970 EVO Plus 500GB as an example:
RAID 1 Initialization using the Background option would take 1 hours to complete.*

Block Size

Supported block sizes: 128K/256K/512K , default: 128K

Adjusting the block size towards your disk usage can result in some performance gain.

In a typical RAID configuration, data of the virtual drive is striped (or spread across) the physical drives. Having a smaller array block size will increase the likelihood of accessing all physical drives when processing large I/O requests. Multiple physical drives working in parallel increases the throughput, meaning better performance.

For smaller I/O requests (512 bytes to 4 kilobytes), it is better to have each individual disk handle their own I/O request, improving the IOPS (I/O per second), rather than having one tiny I/O request being handled by multiple disks.

Obtaining Logical Device Information

Logical Device

The Logical device tab is the default page after clicking the Logical tab of the HRM. This page contains information about your RAID arrays and the individual disks your system detects.

Global View	Physical	Logical	Setting	Event	SHI																																		
<div style="display: flex; justify-content: space-between;"> <div style="width: 20%;"> <p>Create Array</p> <p>Logical Device</p> <p>Rescan</p> </div> <div style="width: 80%;"> <h3 style="text-align: center; background-color: #0070c0; color: white; padding: 5px;">Logical Device Information</h3> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Name</th> <th>Type</th> <th>Capacity</th> <th>BlockSize</th> <th>SectorSize</th> <th>OS Name</th> <th>Status</th> </tr> </thead> <tbody> <tr> <td> VD_0</td> <td>RAID 0</td> <td>4.00 TB</td> <td>128k</td> <td>512B</td> <td>HighPoint SSD6204</td> <td>Normal Maintenance</td> </tr> </tbody> </table> <h3 style="text-align: center; background-color: #0070c0; color: white; padding: 5px;">Physical Device Information</h3> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Location</th> <th>Model</th> <th>Capacity</th> <th>Max Free</th> </tr> </thead> <tbody> <tr> <td> 1/1</td> <td>Sabrent Rocket 4.0 1TB</td> <td>1.00 TB</td> <td>0.00 GB</td> </tr> <tr> <td> 1/2</td> <td>Sabrent Rocket 4.0 1TB</td> <td>1.00 TB</td> <td>0.00 GB</td> </tr> <tr> <td> 1/3</td> <td>Sabrent Rocket 4.0 1TB</td> <td>1.00 TB</td> <td>0.00 GB</td> </tr> <tr> <td> 1/4</td> <td>Sabrent Rocket 4.0 1TB</td> <td>1.00 TB</td> <td>0.00 GB</td> </tr> </tbody> </table> </div> </div>						Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status	VD_0	RAID 0	4.00 TB	128k	512B	HighPoint SSD6204	Normal Maintenance	Location	Model	Capacity	Max Free	1/1	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB	1/2	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB	1/3	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB	1/4	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB
Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status																																	
VD_0	RAID 0	4.00 TB	128k	512B	HighPoint SSD6204	Normal Maintenance																																	
Location	Model	Capacity	Max Free																																				
1/1	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB																																				
1/2	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB																																				
1/3	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB																																				
1/4	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB																																				

Maintenance

Once an array has been created, the Maintenance menu provides options to maintain or edit it. To access the Maintenance menu, click the Maintenance button towards the right-hand side of the array name.

The screenshot shows the 'Logical Device Information' page with the 'Logical' tab selected. A table lists the logical device VD_0 as RAID 0 with a total capacity of 4.00 TB. An 'Array Information' dialog box is open, showing a tree view of the array structure: VD_0 contains Device_1_1, Device_1_3, Device_1_2, and Device_1_4. A 'Delete' button is highlighted in the dialog, and a 'Close' button is at the bottom right.

Array Information & Maintenance Options: Normal Status

The screenshot shows the 'Logical Device Information' page with the 'Logical' tab selected. The logical device VD_0 is shown as RAID 1 with a capacity of 1.00 TB and a status of 'Normal', which is highlighted with a green box. Below this, the 'Physical Device Information' table lists four physical devices, all of which are Sabrent Rocket 4.0 1TB drives.

Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status
VD_0	RAID 1	1.00 TB		512B	HighPoint SSD6204	Normal

Location	Model	Capacity	Max Free
1/1	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB
1/2	Sabrent Rocket 4.0 1TB	1.00 TB	1.00 TB
1/3	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB
1/4	Sabrent Rocket 4.0 1TB	1.00 TB	0.00 GB

Arrays with the **Normal** status are healthy and functioning properly, and have the following options:

Delete – deletes the selected RAID array

Array Information & Maintenance Options: Critical Status

The screenshot shows the 'Logical Device Information' page in the management interface. The 'Logical' tab is selected. A table lists the logical devices:

Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status
VD_0	RAID 1	1.00 TB		512B	HighPoint SSD6204	Critical Maintenance

An 'Array Information' dialog box is open for VD_0, showing a diagram of the RAID 1 array with one disk offline. The dialog includes buttons for 'Delete', 'Add Disk', and 'Close'.

Arrays in the **Critical** status can be accessed and utilized, but are no longer fault tolerant. A Critical array should be rebuilt as soon as possible to restore redundancy.

A critical status array has all the normal status options except the following:

- **Add Disk** replaces the Verify Disk option

Once the array status changes to critical, the faulty disk will be taken offline and you can either:

- Reinsert the same disk
- Insert a new disk

Reinserting the same disk should trigger the rebuilding status, since data on the disk would be recognized.

If you insert a new disk, clicking Add Disk will give you the option to select that disk and add it to the array.

Array Information & Maintenance Options: Disabled Status

The screenshot shows the 'Logical Device Information' page in the management interface. The 'Logical' tab is selected. A table lists the logical devices:

Name	Type	Capacity	BlockSize	SectorSize	OS Name	Status
New_VD	RAID 0	16.00 TB	128k	512B	HighPoint SSD6204	Disabled Maintenance

An array with the **Disabled** status means that the RAID level does not have enough disks to function.

- Your data will be inaccessible

- Rebuilding will not trigger, since the RAID array does not have enough parity data to rebuild.

Your options in Maintenance are:

- Delete

Delete – will delete the array

Rescan

Clicking **Rescan** will ask the driver to recheck and report the array status.

When Rescan is initiated by the WebGUI; the driver will immediately check and see whether the status of any disk has changed. If there are any changes, the status of the disks and RAID array will be updated to reflect this.

- Disk Status – if any disks were added or removed, or if a disk is no longer responding, the status will change.
- RAID status – the RAID array's status may change depending on the status of the disks.

System Setting

The following topics are covered under system:

System Setting

Global View	Physical	Logical	Setting	Event	SHI
System Setting					
System	Enable auto rebuild. <input type="text" value="Enabled"/>				
Email	Restrict to localhost access. <input type="text" value="Enabled"/>				
	Set Background Rate: <input type="text" value="Medium"/>				
	Port Number: <input type="text" value="7402"/>				
	Temperature Unit: <input type="text" value="°F"/>				
	<input type="button" value="Submit"/>				
Password Setting					
	<input type="text"/>				
	<input type="text"/>				
	<input type="button" value="Submit"/>				

Enable auto rebuild (default: Enabled)

When a physical drive fails, the controller will take the drive offline. Once you re-insert or replace the disk, the controller will not automatically rebuild the array unless this option is enabled.

Restrict to localhost access (default: Enabled)

Remote access to the controller will be restricted when enabled; other users in your network will be unable to remotely log in to the WebGUI.

Set Background Rate (default: Medium)

Port Number (default: 7402)

The default port that the HighPoint WebGUI listens on is 7402. You may change it to any open port.

Temperature Unit (default: °F)

The default temperature unit is Fahrenheit (°F); you can also change it to Celsius (°C)

Password Setting

Changing your HRM password

Under Password Setting, type your new password, confirm it, then click Submit.

Recovering your HRM password

If you forget your password, you can delete the file hptuser.dat. Then, restart the computer and open the WEBGUI to set a new password.

For **Windows** Users:

1. Open file explorer
2. Navigate to **C:/Windows/**
3. Delete **hptuser.dat**
4. Reboot

Email Setting

The following topics are covered under email:

SMTP Setting

Adding Recipient

You can instruct the controller to send an email out to the recipients of your choosing when certain events trigger (for more information, see Event Tab).

SMTP setting

Global View	Physical	Logical	Setting	Event	SHI
SMTP Setting					
System					
Email					
	<input checked="" type="checkbox"/> Enable Event Notification				
	Server Address (name or IP):	<input type="text" value="smtp.mail.yahoo.com"/>			
	Mail From (E-mail address):	<input type="text" value="hptu@yahoo.com"/>			
	Login Name:	<input type="text" value="hptu@yahoo.com"/>			
	Password:	<input type="password" value="*****"/>			
	SMTP Port:	<input type="text" value="465"/>			
	Support SSL:	<input checked="" type="checkbox"/>			
	<input type="button" value="Change Setting"/>				

Note: After you click **Change Setting**, the password field will be reset.

To set up email alerts:

Using a **Yahoo Mail** account as an example:

1. Check the **Enable Event Notification** box.
2. Enter the ISP server address name or SMTP name
For example: **smtp.mail.yahoo.com**
3. Type in the email address of the **sender** (email account that is going to **send** the alert)
For example: **hptu@yahoo.com**
4. Type in the account name and password of the sender
5. Type in the SMTP port (default: **25**)
6. Check the **support SSL** box if SSL is supported by your ISP (note the port value will change to **465**).

Email Precautions

If you want to receive notification mail using a Webmail account, you may need to modify the mailbox's permissions. The following example is for a Yahoo webmail account.

Yahoo Setting:

To change permission settings, please refer to the following link:

<https://help.yahoo.com/kb/account/SLN27791.html?impressions=true>

Procedure:

1. Log in to yahoo email; click **"Sign in"** to log in:

<https://www.yahoo.com>

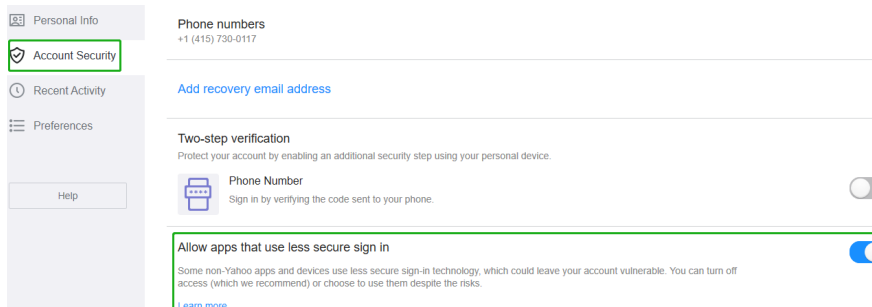

2. After a successful login, click **"Account Info"** under the user name:

3. Go to the **"Account Info"** page, click **"Account Security"**.

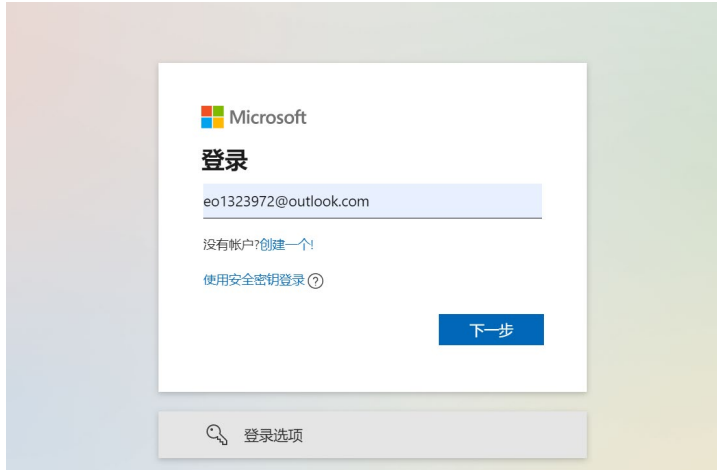

On the **"Account Security"** page, click the **"Allow apps that use less secure sign in"** button:

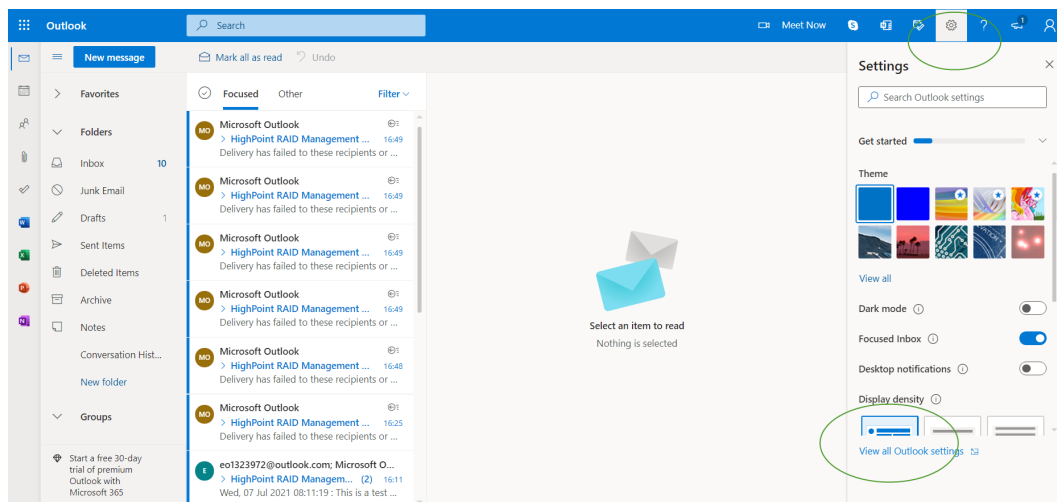

Outlook Setting:

1. Sign in to mail and set it up, Login email address link:

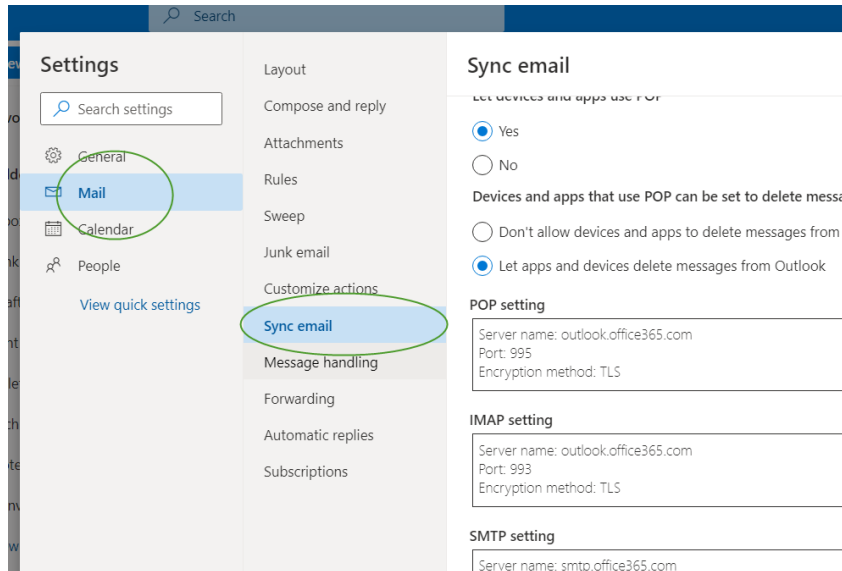

<https://outlook.live.com/mail/inbox>

2. Click **Settings** in the upper right corner, select the lower left corner: **View all outlook settings**

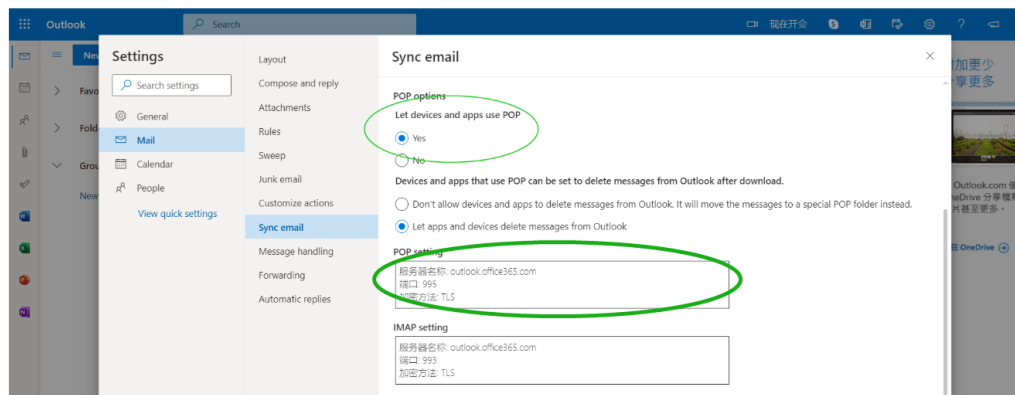

3. Enter the redirect page, select **mail**, then click **Sync email**

4. Let devices and apps use pop select 'yes'
5. choose 'Let app and devices delete messages from Outlook'

Note: The screenshot below can be used as a reference. The POP setting is the mailbox server.

Note: If you are having trouble configuring notification for your Email account, please contact our [Technical Support Department](#)

Add Recipients

You can add multiple email addresses as receivers of a notice.

1. Type the email of the recipient in the **E-mail** text box
2. Type the name of the recipient in the **Name** text box
3. Set which type(s) of events will trigger an email using the respective **Event Level** check boxes.

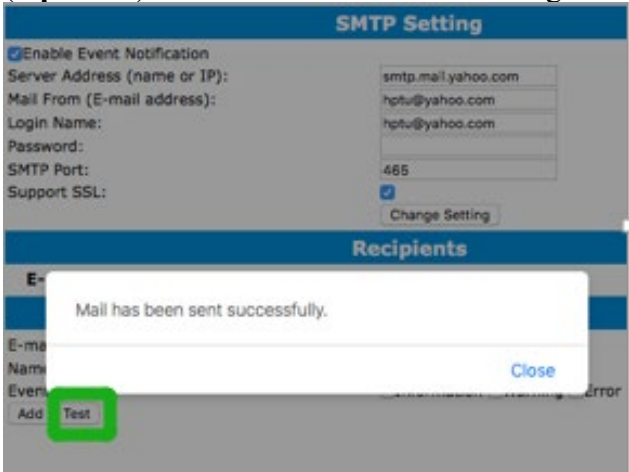

Add Recipient

E-mail:

Name:

Event Level: Information Warning Error

4. (Optional) Click **test** to confirm the settings are correct by sending out a test email

5. Click **add** to add the recipient to recipient list
6. The added recipient will display in under **Recipients**

Recipients

E-mail	Name	Event Level
<input type="checkbox"/> hytu@yahoo.com <input type="button" value="Delete"/>	hpt	Information, Warning, Error

The email will include the output recorded in the event log.

Example email message:

Figure 1. Example event log email

Event Tab

In the event tab, you can see log entries associated with the HighPoint device. The event log provides useful information when troubleshooting your set up.

Date Time	Description
2021/7/30 1:19:34	Array 'VD_0' has been created successfully.
2021/7/30 1:15:52	Array 'VD_0' has been deleted successfully.
2021/7/29 7:32:19	NVMe has been shut down.
2021/7/29 7:5:47	Array 'VD_3' has been deleted successfully.
2021/7/29 7:5:39	Array 'VD_2' has been deleted successfully.
2021/7/29 7:5:31	Array 'VD_1' has been deleted successfully.
2021/7/29 7:5:18	Array 'VD_0' has been deleted successfully.
2021/7/29 7:4:59	Array 'VD_0' rebuilding aborted.
2021/7/29 7:4:29	Array 'VD_2' importing completed.
2021/7/26 0:59:35	NVMe has been shut down.

SHI (Storage Health Inspector)

The following topics are covered under SHI:

- S.M.A.R.T Attributes
- SSD Temperature Threshold Setting

SHI outputs information collected using SMART (Self-Monitoring Analysis and Reporting Technology) Hard Drive Technology. The data provided on this tab helps you to anticipate any disk failures based on a variety of monitored hard disk properties.

How to Enable SMART Monitoring

To access SMART attributes of an individual disk:

1. Log in to the HighPoint RAID Management
2. Select the proper controller using the drop-down menu on the top left
3. Click the **SHI** tab

4. Click **Detail** on the desired disk

Note: The current NVMe Temperature threshold is set to 149 °F. If it does not exceed 149 °F, it will be displayed in “Green”.

Warning and Critical Composite Temperature Threshold - Temperature threshold of the hard drive itself. Note that the set temperature threshold should not exceed Warning Composite Temperature Threshold.

How to Use the Health Inspector Scheduler

The **Health Inspector Scheduler (HIS)** enables you to schedule disk/array checkups to ensure disks/array are functioning optimally.

If you want to check the disk status on a daily, weekly, or monthly basis, you can enable this using the **HIS** function.

For example:

1. Set the 'Task Name' to 't1', select the schedule as 'Daily', and set the time to 10:10
2. After clicking "Submit", the task you created will be shown under the "Task List".

Tasks List

Name	Description
DailyCheckSmart	Check all disks every day at 12:0:0
<input type="checkbox"/> t1	Check all disks every day at 10:10:0

Health Inspector Scheduler

Task Name:

Select a Schedule: Daily Weekly Bi-Weekly Monthly

Select a time: : :

When the operating temperature of the disk exceeds 65°C, a “Warning” event will appear in “Events”:

Event View (1)	
Date Time	Description
2020/5/9 10:9:37	Disk 'Samsung SSD 970 EVO Plus 500GB' (Location: Device_1_E1_2) temperature is higher than threshold.

Redundant RAID arrays (RAID 1) will appear under New Verify Task

1. Log into the WebGUI
2. Select the proper controller from the top left drop down
3. Click **SHI**
4. Click **Schedule**
5. Select the array you want to schedule the verify task
6. Type the name in **Task Name** entry box
7. Choose whether you want to schedule
8. One time verify task on specific date (YYYY-MM-DD) at (HH:MM:SS, 24-hr clock)
9. Or a specific schedule you can adjust based on Daily, Weekly, or Monthly options
10. Click **Submit**

Health Inspector Scheduler

Task Name:

Select a Schedule: Daily Weekly Bi-Weekly Monthly

Select a time: : :

HighPoint RAID Management 2.16.3
Copyright (c) 2021 HighPoint Technologies, Inc. All Rights Reserved

11. Your entry will appear under **Tasks List**

Tasks List

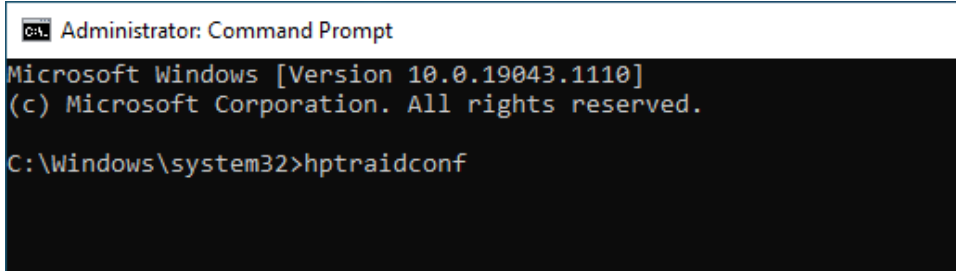

Name	Description
<input type="checkbox"/> T2	Check all disks every week on Monday at 9:0:0

Note: New Verify Task box only appears if you have normal status arrays. If you have a critical array, New Rebuild Task will replace New Verify Task.

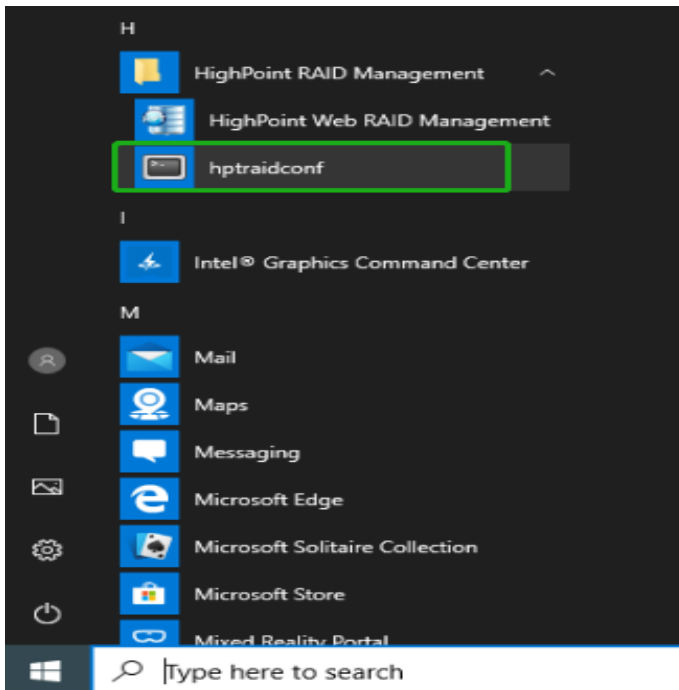

Using the HighPoint Command Line Interface (CLI)

How to use the CLI in Windows

Method1: Run 'Command Prompt' as **Administrator** and enter **hptraidconf** and press Enter

Method2: Click 'Start' to find the **HighPoint RAID Management** folder, and click on **hptraidconf**

How to use the CLI in a Linux system

Open **Terminal** and enter root permissions, then execute the command **hptraidconf** to enter the CLI

```
File Edit View Search Terminal Help
test@test-System-Product-Name:~$ sudo su
[sudo] password for test:
root@test-System-Product-Name:/home/test# hptraidconf
```

CLI Command Reference

This chapter discusses the various HighPoint CLI commands: query, delete, switch, lscard, rescan, events, mail, task, set, clear, help and exit.

Note: The following example is for a Windows system:

Query Commands

Syntax:

query controllers

query devices | query devices {devices_id} |

query arrays | query arrays {array_id}

query controllers

This command reports controller information

Single card:

SSD6202/6202A:

```
HPT CLI > query controllers
ID          Channel      Name
1           1             HighPointSSD6202
-----
```

SSD6204/6204A:

```
HPT CLI > query controllers
ID          Channel      Name
1           1             HighPoint SSD6204
-----
```

query devices

This command will provide the status of each physical device hosted by the controller. It provides a list of device ID's, capacity, model numbers, status, and array attributes. Each device's status will be listed as one of the following: Legacy, NORMAL, DISABLED, RAID.

ID:

A device ID is a string used to represent a disk. It is in the format "controller/channel/device" for NVMe controllers. E.g. 1/1 represents the disk on controller 1 port 1;

Capacity:

The capacity of the disk in GB.

MaxFree:

The Maximum sequence free space on a disk which can be used by creating array.

Flag:

Shows whether the disk is single or has been created RAID.

Status:

This will display the disk status (1 of 4 possible states):

NORMAL: The disk's status is normal.

DISABLED: The disk cannot be used. (may be related to disk failure or removal)

RAID: The disk is a member of a RAID array.

ModelNumber:

The disk's model number.

Example:

SSD6202:

```
HPT CLI > query devices
ID      Capacity  MaxFree  Flag   Status  ModelNumber
-----
1/1     1000.20   0        RAID   NORMAL  Sabrent
1/2     1000.20   0        RAID   NORMAL  Sabrent
```

SSD6204:

```
HPT CLI > query devices
ID      Capacity  MaxFree  Flag   Status  ModelNumber
-----
1/1     1000.20    0        RAID   NORMAL  Sabrent Rocket 4.0 1TB
1/2     1000.20    0        RAID   NORMAL  Sabrent Rocket 4.0 1TB
1/3     1000.20    0        RAID   NORMAL  Sabrent Rocket 4.0 1TB
1/4     1000.20    0        RAID   NORMAL  Sabrent Rocket 4.0 1TB
```

query devices {device_id}

This command presents information for the specified device.

Attributes:

Mode Number:

The disk's model number.

Serial Number:

The disk's Serial number.

Firmware Version:

The disk's Firmware version.

Read Ahead/Write Cache/TCQ/NCQ Status:

Disk's Read Ahead/Write Cache/TCQ/NCQ status could be enabled/disabled/--(**not support**)

Pcie width:

The disk's Pcie width.

Temperature:

The disk's temperature and setting temperature threshold.

S.M.A.R.T Attributes:

S.M.A.R.T Attributes detailed information reported by hard disk.

Example:

```
HPT CLI>query devices 1/1
Mode Number: ██████████
Serial Number: 190806459014
Firmware Version: 201000WD
Capacity(GB): 500.11          TotalFree(GB): 0
Status: RAID                  Flag: NORMAL
PCIe Width: x2                PCIe Speed: Gen 3
Temperature (F): 95
Warning Composite Temperature Threshold (F): 179
Critical Composite Temperature Threshold (F): 186
-----
NVMe S.M.A.R.T Attributes
Critical Warning                0x0

Temperature Sensor 4 (C)        0
Temperature Sensor 5 (C)        0
Temperature Sensor 6 (C)        0
Temperature Sensor 7 (C)        0
Temperature Sensor 8 (C)        0
-----
```

query arrays

This command lists information for all configured arrays. It will list each array's ID, capacity, RAID level, and status information.

Note: An array ID is generally represented by number or set of numbers.

Type:

The array's type. (RAID0, RAID1, JBOD)

Status:

NORMAL: Array status is normal

DISABLED: Array is disabled.

REBUILDING: Array is being rebuilt

INIT(B): Initializing an array using Background mode

CRITICAL: Array is in a degraded status (no data redundancy)

Block:

Array Block size.

Sector:

Bytes per sector.

Cache:

Array Cache Policy

WT: Write Through

WB: Write Back NONE:

No Cache policy enabled

Example:

```
HPT CLI > query arrays
ID      Capacity(GB)  Type      Status  Block  Sector  Cache      Name
-----
1       500.03         RAID1     NORMAL  --     512B    NONE      RAID_1_0
```

query arrays {arrays_id}

This command will present information of each disk of a specified array.

Example:

```
HPT CLI> query arrays 1
ID:          1          Name:         VD_0
Type:        RAID1     Status:      NORMAL
Capacity(GB): 500.04    BlockSize:   --
SectorSize:  512B     CachePolicy: NONE
Progress:    --
-----
ID      Capacity  MaxFree  Flag  Status  ModelNumber
-----
1/1    500.11    0        NORMAL RAID
1/2    500.11    0        NORMAL RAID
```

Create Commands

This command allows you to create a new RAID array, add a spare disk, or expand/migrate an existing array.

Note: A drive must be initialized first before being used to create arrays.

Syntax:

```
create {RAID0|RAID1|JBOD} [create-options]
```

Parameters

You can specify one or more create options for this command, separated by a space. The options can be typed in any order.

disks= specifies member disks which will compose a new array, e.g. disks=1/1,1/2, disks=*. The character * means all available drives.

NOTE: When you enter a complete command with parameters disks=* at the shell prompt, the correct writing is disks="*".

For example:

```
hptraidconf -u RAID -p hpt create RAID0 disks="*"
```

init= specifies the initialization option (background, quickinit). The default option is create-only. The create-only option is applicable for all the RAID types, which is to create an array without any initialization process. Initialization is needed for redundant arrays to provide data redundancy.

background: Initialize an array using background mode. The array is accessible during array initialization.

quickinit: Setup array information blocks and zero out MBR data on the array.

name= specifies the name for the array being created.

If the option is omitted, the utility will assign a default name for the array.

bs= specifies the block size(128k,256k,512k), in KB, for the target array. This option is only valid for striped RAID levels. Default is 128KB.

Examples:

```
HPT CLI > create RAID0 name=VD_0 disks=*
HPT CLI > query arrays 1
ID: 1 Name: VD_0
Type: RAID0 Status: NORMAL
Capacity(GB): 2000.16 BlockSize: 128k
SectorSize: 512B CachePolicy: NONE
Progress: --
-----
ID Capacity MaxFree Flag Status ModelNumber
-----
1/1 500.11 0 NORMAL RAID Samsung
1/3 1000.20 0 NORMAL RAID Samsung
1/2 1000.20 0 NORMAL RAID Samsung
1/4 500.11 0 NORMAL RAID Samsung
-----
HPT CLI >
```

This command instructs the system to create a RAID0 array using the disks attached to controller 1 channels 1,2,3,4 and name it VD_0.

```
HPT CLI > create RAID0 disks=* capacity=* init=quickinit bs=256k
HPT CLI > query arrays 1
ID: 1 Name: VD_0
Type: RAID0 Status: NORMAL
Capacity(GB): 2000.16 BlockSize: 256k
SectorSize: 512B CachePolicy: NONE
Progress: --
-----
ID Capacity MaxFree Flag Status ModelNumber
-----
1/1 500.11 0 NORMAL RAID Samsung
1/3 1000.20 0 NORMAL RAID Samsung
1/2 1000.20 0 NORMAL RAID Samsung
1/4 500.11 0 NORMAL RAID Samsung
-----
HPT CLI >
```

This command instructs the system to create a RAID0 array using the disks attached to controller 1 channels 1/2/3/4, and controller 2 channels 1/2/3/4; capacity is maximum, Block Size is 256KB.

Delete Command

This command allows you to delete an existing RAID array or remove a spare disk. After deletion, the original array and all data on it will be lost. All the member disks will be listed as available single disks.

Note: If you want to use a single disk after deleting the RAID, please restart the system after deleting the RAID. When the single disk status shows the Legacy status in WEBGUI or CLI, it can be used normally.

Syntax

```
delete {array ID}
```

Examples

```
HPT CLI > query devices
-----
ID      Capacity  MaxFree  Flag  Status  ModelNumber
-----
1/1     500.11    0        RAID  NORMAL  Samsung
1/2     1000.20   0        RAID  NORMAL  Samsung
1/3     1000.20   0        RAID  NORMAL  Samsung
1/4     500.11    0        RAID  NORMAL  Samsung
-----

HPT CLI > delete 1

HPT CLI > query devices
-----
ID      Capacity  MaxFree  Flag  Status  ModelNumber
-----
1/1     500.11    500.11   SINGL  NORMAL  Samsung
1/2     1000.20   1000.20  SINGL  NORMAL  Samsung
1/3     1000.20   1000.20  SINGL  NORMAL  Samsung
1/4     500.11    500.11   SINGL  NORMAL  Samsung
-----

HPT CLI >
```

This command instructs the system to delete the array whose id is “1”. You can query the array ID before the deletion.

Rescan Command

This command will rescan all of the physical devices attached to the RAID controller.

Syntax

rescan

Example

HPT CLI> rescan

```
HPT CLI > rescan
HPT CLI > query arrays
ID      Capacity(GB)  Type      Status  Block  Sector  Cache  Name
-----
1       2000.16        RAID0     NORMAL  256k   512B    NONE   VD_0
```

Lscard Command

The lscard command is used to list multiple RAID controllers.

Syntax

lscard

Example

HPT CLI> lscard

```
HPT CLI > lscard
CARD_ID  NAME                                     ACTIVED
-----
0        Controller(1): HighPoint SSD6204       Active
```

Events Commands

The CLI system will automatically record three types of events: Information (shortened to “Inf”), Warning (shortened to “War”), and Error (shortened to “Err”) on the screen output. These commands allow you to query, save, or clear the logged events.

Syntax

events

events save {file_name}

events

This command will display a list of all the logged events.

Example

HPT CLI> events

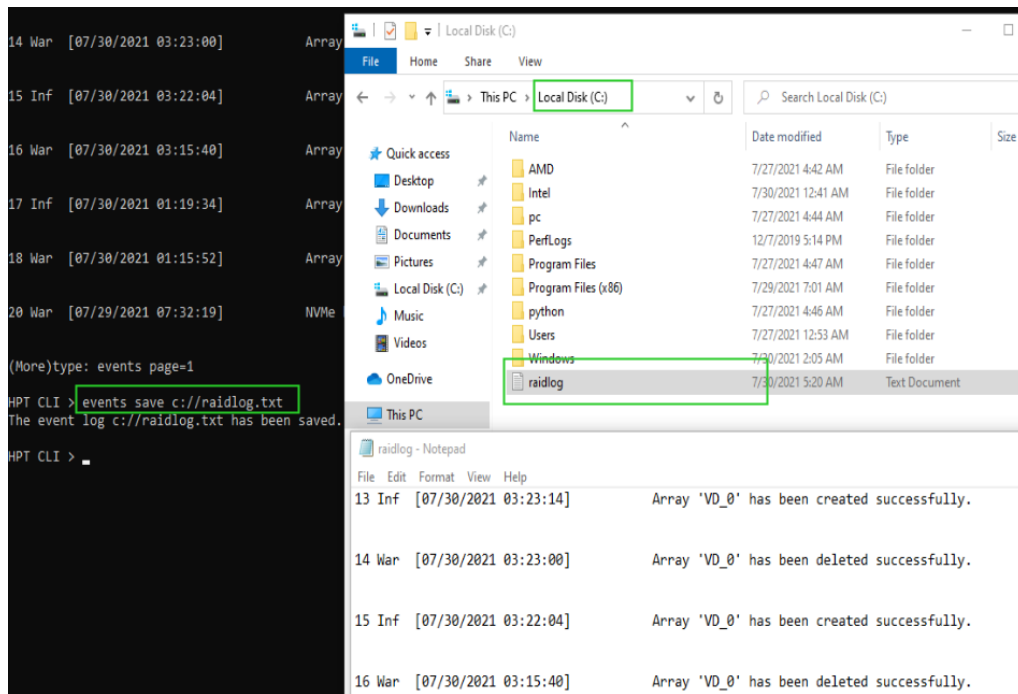

```
HPT CLI > events
1  Inf  [07/30/2021 05:16:03]      Array 'VD_0' has been created successfully.
2  War  [07/30/2021 03:39:24]      Array 'VD_0' has been deleted successfully.
3  Inf  [07/30/2021 03:38:35]      Array 'VD_0' has been created successfully.
4  War  [07/30/2021 03:38:04]      Array 'VD_0' has been deleted successfully.
5  Inf  [07/30/2021 03:36:48]      Array 'VD_0' has been created successfully.
```

events save {file_name}

This command will save all the logged events as a plain text file.

Example

HPT CLI> events save C:/raidlog.txt

The screenshot displays the HPT CLI interface on the left, the Windows File Explorer on the right, and the Notepad application at the bottom. The CLI shows the command 'events save c://raidlog.txt' and a confirmation message. The File Explorer shows the 'Local Disk (C:)' with a file named 'raidlog' highlighted. The Notepad application shows the contents of the saved file, which are the same event logs as shown in the first example.

```
HPT CLI > events save c://raidlog.txt
The event log c://raidlog.txt has been saved.
HPT CLI > _
```

Name	Date modified	Type	Size
AMD	7/27/2021 4:42 AM	File folder

13 Inf  [07/30/2021 03:23:14]      Array 'VD_0' has been created successfully.
14 War  [07/30/2021 03:23:00]      Array 'VD_0' has been deleted successfully.
15 Inf  [07/30/2021 03:22:04]      Array 'VD_0' has been created successfully.
16 War  [07/30/2021 03:15:40]      Array 'VD_0' has been deleted successfully.
```

This command will save all the events to C:/raidlog.txt.

Mail Commands

Syntax

mail recipient

mail recipient add {recipient_name} {mail_address} [Inf|War|Err]

mail recipient delete {recipient_name}

mail recipient test {recipient_name}

mail server

mail server set {server_address} {port} { status } {from_address} [username] [password]

mail server set {a|p|s|m|u|t} {value}

mail recipient

--- List all of the mail recipients

Example

HPT CLI> mail recipient

```
HPT CLI > mail recipient
ID   Name      Mail Address          Notify Types
-----
1    hpt       hytu@yahoo.com        Information Warning Error
HPT CLI >
```

mail recipient add {recipient_name} {mail_address} [Inf|War|Err]

--- Add a new recipient

Example

HPT CLI> mail recipient add lcn lcn@highpoint-tech.com Inf War Err

```
HPT CLI > mail recipient add lcn lcn@highpoint-tech.com Inf War Err
HPT CLI > mail recipient
ID   Name      Mail Address          Notify Types
-----
1    lcn       lcn@highpoint-tech.com Information Warning Error
```

This command will setup the RAID system to send mail to admin@somecompany.com for any logged events.

mail recipient delete {recipient_name}

--- Delete an existing recipient.

Example

HPT CLI> mail recipient delete 'lcn'.

```
HPT CLI>mail recipient
ID   Name      Mail Address          Notify Types
-----
1    lcn       lcn@highpoint-tech.com Information Warning Error
HPT CLI>mail recipient delete lcn

HPT CLI>mail recipient
ID   Name      Mail Address          Notify Types
-----
HPT CLI>
```

mail recipient test {recipient_name}

--- Send a test email to a specified recipient.

Example

HPT CLI> mail recipient test hpt

```
HPT CLI > mail recipient test hpt
HPT CLI >
```

You will receive a test email.

```
Mon, 11 May 2020 07:52:30 :
This is a test mail.
```

mail recipient set {recipient_name} {Inf|War|Err}

--- Set the notification type for a recipient.

Example

HPT CLI> mail recipient set admin War Err

mail server

--- display the SMTP server information

Example

HPT CLI> mail server

```
HPT CLI > mail server
ServerAddress      Port    ssl  Status  Mail From      User Name
-----
secure.emailsrvr.com465  1      Enabled  yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

mail server set {server_address} {port} {ssl} {status} {from_address} [username] [password]

--- Use this command to configure mail server settings.

{server_address} – SMTP server address

{port} – port, generally 25

{ssl} – used ssl, '1' for enable and port need 465, '0' for disable

{status} – status, 'e' for enable or 'd' for disable

{from_address} – mail from address

{username} –mail username

{password} – the user's password

Examples:

HPT CLI> mail server set secure.emailsrvr.com 465 1 e [name@somecompany.com](#)
name@somecompany.com password

```
HPT CLI > mail server set secure.emailsrvr.com 465 1 e yzhang@highpoint-tech.com yzhang@highpoint-tech.com
HPT CLI > mail server
ServerAddress      Port    ssl  Status  Mail From      User Name
-----
secure.emailsrvr.com465  1      Enabled  yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

HPT CLI> mail server set mail.somecompany.com 25 0 e admin@somecompany.com
password

```
HPT CLI > mail server set secure.emailsrvr.com 25 0 e yzhang@highpoint-tech.com yzhang@highpoint-tech.com
HPT CLI > mail server
ServerAddress      Port    ssl  Status  Mail From      User Name
-----
secure.emailsrvr.com25  0      Enabled  yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

mail server set {a|p|s|m|u|t} {value}

--- Use this to separate set your mail server value

Parameters

- a – SMTP server address
- p – port, generally 25
- s – status, ‘e’ for enable or ‘d’ for disable
- m – mail from address
- u – username
- t – user’s password

Examples:

HPT CLI> mail server set a smtp.somecompany.com

--- Change the server address

HPT CLI> mail server set p 465

--- Change the port

```
HPT CLI > mail server set p 465
HPT CLI > mail server
ServerAddress  Port  ssl  Status  Mail From  User Name
-----
smtp.163.com   465  0    Enabled yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

HPT CLI> mail server set s d

--- Disable mail notification

```
HPT CLI > mail server set s d
HPT CLI > mail server
ServerAddress  Port  ssl  Status  Mail From  User Name
-----
smtp.163.com   465  0    Disabled yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

HPT CLI> mail server set s e

--- Enable mail notification

```
HPT CLI > mail server set s e
HPT CLI > mail server
ServerAddress  Port  ssl  Status  Mail From  User Name
-----
smtp.163.com   465  0    Enabled yzhang@highpoint-tech.com yzhang@highpoint-tech.com
```

Task Commands

When an array requires regular verification or rebuilding, you can use the task commands to automate this process in the background. If you have the appropriate privileges, you can add new tasks, and modify or delete existing tasks.

Syntax

task

```
Task Commands
Set tasks for the server.Syntax:
task
task {smart} {name=} {daily|monthly|weekly}={day}
{interval}={interval} start=mm/dd/yyyy end=mm/dd/yyyy time=hh:mm:ss
task delete {task_id}

HPT CLI > task smart name=test1 daily=2 start=4/28/2021 time=12:00:00
HPT CLI >
```

task {smart} {name=} {daily|mothly|weekly}={day}{interval}={interval} start=mm/dd/yyyy end=mm/dd/yyyy time= hh:mm:ss

Example

HPT CLI> task smart name=test1 daily=2 start=7/30/2021 time=11:00:00

```
HPT CLI > task smart name=test1 daily=2 start=7/30/2021 time=11:00:00
HPT CLI > task
ID   Name      Start-Date  End-Date    S-F      Description
-----
1    DailyChec 07/30/2021  N/A         E-D      Check all disks (created by )
2    test1     07/30/2021  N/A         E-D      Check all disks (created by )
```

This command adds a task schedule named test1 to verify the disk at 11:00:00 every 2 days from 7/30/2021.

Task delete {task_id}

Example

HPT CLI> task delete 2

```
HPT CLI > task
ID   Name      Start-Date  End-Date    S-F      Description
-----
1    DailyChec 07/30/2021  N/A         E-D      Check all disks (created by )
2    test1     07/30/2021  N/A         E-D      Check all disks (created by )

HPT CLI > task delete 2
HPT CLI > task
ID   Name      Start-Date  End-Date    S-F      Description
-----
1    DailyChec 07/30/2021  N/A         E-D      Check all disks (created by )
HPT CLI >
```

Set Commands

Syntax

set | set [name]={value}

Show the system settable parameters.

HPT CLI> set -help

```
HPT CLI > set -help
set Command
  Set the system, device or array's param.
Syntax:
  set
    show the system parameters
  set {name= }
    set AR=[y|n]           Auto Rebuild
    set BR=[1-100]        Background Rate
    set TT=[20-100]       Temperature threshold
    set TU=[C|F]          Temperature Unit
    set PS                 Set Password
HPT CLI >
```

set TT={Value}

The current NVMe default Temperature threshold is set to 149 °F.

Example

HPT CLI> set TT=140

set TU={F|C}

The default temperature unit is Fahrenheit(°F); you can also change it to Celsius(°C)

Example

HPT CLI> set TU=C

```
HPT CLI > set TU=C
```

set PS

Set or change your password and confirm it.

Example

HPT CLI> set PS

```
HPT CLI > set PS
The password can only have 8 characters at most!
Password :*****
Confirm  :*****
Password has been changed, please login with your new password.
HighPoint Windows CLI, Please Input
Password:
```

set AR={y|n}

Set enable or disable to the [Auto Rebuild] parameter.

Example

```
HPT CLI> set AR=y
```

```
HPT CLI > set AR=y
```

set BR={1-100}

Set background rate to 1-100.

Example

```
HPT CLI> set BR=66
```

```
HPT CLI > set BR=66
```

Help Commands

Show help about a specific command.

Syntax

```
help | help {command}
```

help

Show generic help about this utility.

Example

```
HPT CLI> help
```

```
HPT CLI > help
help [query|create|delete|switch|lscard
rescan|events|mail|task|set|clear|help|exit]
```

Exit Command

Syntax

Exit from the interactive mode and close the window.

Using the OOB (out of band) RAID Management

SSD6200A NVMe RAID controllers feature an OOB port (accepts USB Type-C monitor connections) and a built-in CLI (command line utility) which allows users to manage and monitor RAID storage without an operating system.

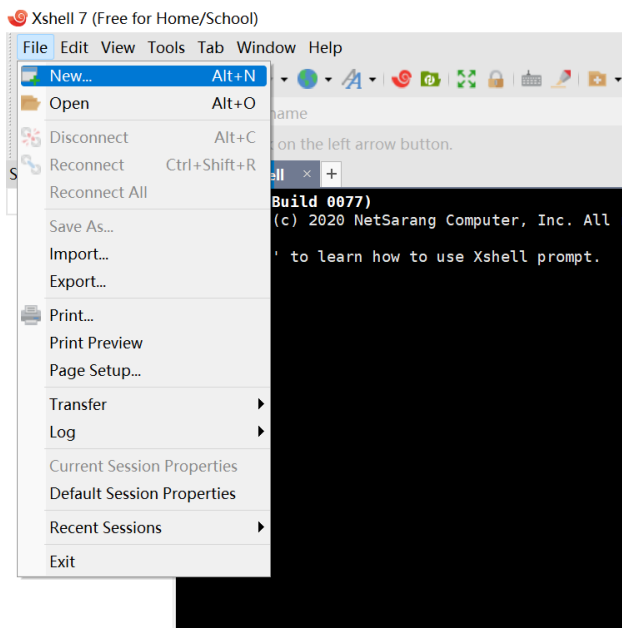

How to use the OOB (Windows)

Insert the SSD6200A into the motherboard and **only use USB-C to USB-A** cable to connect the board card to another host. Install and open the Xshell software on the connected host, and use it according to the following operations:

Xshell download:

[XSHELL - NetSarang Website](#)

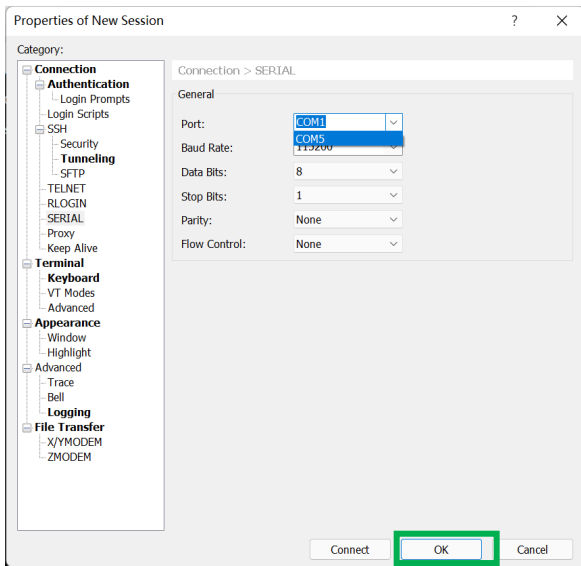

After opening the software, click the **File** in the upper left corner to create a new session window.

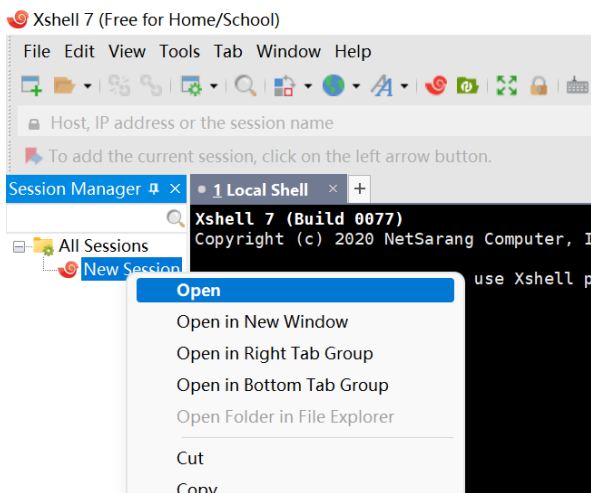

Set Protocol to **SERIAL** in the new setting.

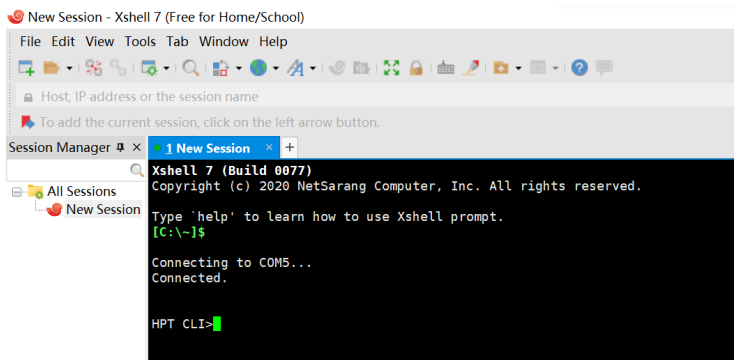

Then click **SERIAL** in the left menu bar to change the Port to the recognized serial port number. This completes the setup.

After creation, right-click and select open to connect to the CLI interface of SSD6200A, and click enter to start use.

CLI Command Reference

This chapter discusses the various CLI commands: info, temperature, fan, beeper, create, delete, help.

Help Commands

Show generic help about this utility.

Example:

```
HPT CLI> help
```

```
HPT CLI>help
help:          display this message.
info:          display hba/pd/vd info, type 'info help' for detail.
create:        create raid or JBOD, type 'create help' for detail.
delete:        delete raid or JBOD, type 'delete help' for detail.
temperature:   show temperature and setting temperature parameters, type 'temperature help' for detail.
fan:           show fan info and setting fan parameters, type 'fan help' for detail.
beeper:        enable or disable beeper, type 'beeper help' for detail.
```

Info Commands

Syntax:

```
info -o [hba/pd/vd]
```

- hba: display adapter info
- pd: display physical disk info
- vd: display virtual disk info

info -o hba

This command is used to display adapter information

Example:

```
HPT CLI>info -o hba
Adapter Information:
-----
NVME UEFI Version:      0.0.0.3
NVME Firmware Version: 1.0.0.1053
HighPoint MCU Firmware Version: 1.0.5
                        Hardware Version: 3.0.10
Sub Device ID : Sub Vendor ID: 6202 : 1103
                        Serial Number: 123453d678910*

PCIe Port: 0
Type:      RootComplex
Link Speed: 8GT/s
PCIe Width: x4

PCIe Port: 1
Type:      RootComplex
Link Speed: 8GT/s
PCIe Width: x4

PCIe Port: 2
Type:      EndPoint
Link Speed: 8GT/s
PCIe Width: x8

RAID Mode Support: 0 1 JBOD
BGA Feature Support: init rebuild Media patrol
Stripe Size Support: 128K 256K 512K
-----
```

Info -o pd

This command will provide the status of each physical device hosted by the controller. It provides a list of slot ID's, model numbers, device firmware, sector size, capacity, temperature, status, and array attributes. Each device's status will be listed as one of the following: IDLE, ASSIGNED.

Example:

SSD6202A:

```
HPT CLI>info -o pd
-----
Slot          Model                Serial Number      Firmware          Sector Size  Capacity  Temperature  Status
-----
0             WDS100T3X0C-00SJG0  184890621671     102000WD         512         1000 GB   40.8 C      IDLE
1             KXG5AZNV256G NVMe SED TOSHIBA 256GB  67RF202GF4RS     AADA5102         512         256 GB     39.8 C      IDLE
-----
```

Info -o vd

This command is used to display virtual disk information. It provides a list of ID, VD's name, Disk Count, PDs, RAID Mode, status, Stripe Size, Capacity and Importable.

Example:

SSD6202A:

```
HPT CLI>info -o vd
ID      Name      Disk Count  PDs  RAID Mode  Status  Stripe Size  Capacity  Importable
-----
0       VD_0      2           0 1  RAID 0     Normal  256 K        511 GB    No
```

Temperature commands

Use this command to adjust the temperature unit and set the temperature threshold to control the fan speed. You can also directly view the current temperature information by directly entering temperature

Syntax:

```
temperature <-u> [c/f] <-l> [(0-200)] <-h> [0-200] <-s> [0/1]
```

-u: Temperature Unit, c: Celsius Degree; f: Fahrenheit Degree

c: Celsius Degree

f: Fahrenheit Degree

-l: temperature Low threshold (used in Smart Fan Mode)

[0:200]: in unit of 'Temperature Unit', if higher than the temperature, fan will speed up

-h: temperature High threshold (used in Smart Fan Mode)

[0:200]: in unit of 'Temperature Unit', if higher than the temperature, fan will be full speed

-s: select temperature sensors for reference when have multiple sensors
(used in Smart Fan Mode)

[0:1]: Temperature ID

Example:

```
HPT CLI>temperature -u c -l 50 -h 70 -s 1
```

```
HPT CLI>temperature -u c -l 50 -h 70 -s 1

Sensor Count:      1
SensorID:          0
Board Temperature: 39 Celsius Degree
Threshold(Low):    50 Celsius Degree
Threshold(High):   70 Celsius Degree
```

```
HPT CLI>temperature
      Sensor Count:      1
      SensorID:         0
      Board Temperature: 38 Celsius Degree
```

Fan commands

Use this command to switch the fan mode between intelligent and manual, and set the threshold of fan speed and the speed ratio in full speed state. You can also enter fan directly to view the current fan settings.

Syntax:

```
fan <-m> [smart/manual] <-l> [(0-100)] <-h> [0-100] <-d> [0-100]
```

-m: Fan Mode

smart: Smart Fan Mode;

manual: Fan Controlled Manually

-l: Fan Low threshold (used in Smart Fan Mode)

[0:100]: Lowest Fan Speed in Smart Fan Mode, in unit of %

-h: Fan High threshold (used in Smart Fan Mode)

[0:100]: Highest Fan Speed in Smart Fan Mode, in unit of %

-d: Control Fan Speed

[0:100]: Ratio of Full Speed, in unit of %

Example:

```
HPT CLI>fan -m smart -l 10 -h 100 -d 90
```

```
HPT CLI>fan -m smart -l 10 -h 100 -d 90
      Fan Count:      1
      Mode:          Smart
      Rate:          10 %
      Speed:         0 RPM
      Threshold(Low): 10 %
      Threshold(High): 100 %
```

```
HPT CLI>fan
Fan Count:      1
Mode:           Manual
Rate:           10 %
Speed:          0 RPM
Set Rate:       100 %
```

Beeper Commands

The beeper command is used to control the switch of the buzzer.

Syntax

beeper off

beeper on

Example

```
HPT CLI> beeper off
```

```
HPT CLI> beeper on
```

```
HPT CLI>beeper off
Beeper Status:      Disable

HPT CLI>beeper on
Beeper Status:      Enable
```

Create Commands

This command allows you to create a new RAID array.

Syntax

```
create -r [0/1/JBOD] -d [0/1/2/3] <-i> [quick/full]
```

Parameters

-r: RAID mode, MANDATORY parameter

0: RAID0 Mode

1: RAID1 Mode

jbod: JBOD Mode

-d: Disks Selected, MANDATORY parameter

[0:3]: use Slot ID to select, use ',' between Slot ID

for example: 0: disk 0; 0,1: disk 0 and disk 1

-i: Init mode. OPTIONAL parameter

quick: quick initiation (default)

full: full background initiation

Example:

```
HPT CLI> create -r 0 -d 0,1 -i quick
```

```
HPT CLI>create -r 0 -d 0,1 -i quick
Command is executed sucessfully!!!
HPT CLI>
```

Delete Commands

This command allows you to delete an existing RAID array. After deletion, the original array and all data on it will be lost. All the member disks will be listed as available single disks.

Syntax

```
delete -i [0/1/2/3]
```

Parameters

[0:3]: RAID ID, only one ID could be used at one time

Example:

```
HPT CLI> delete -i 0
```

```
HPT CLI>delete -i 0
Command is executed sucessfully!!!
HPT CLI>
```

Troubleshooting

Debugging an Abnormal RAID status

Please submit a support ticket using our online service at

<https://www.highpoint-tech.com/websupport/>

Table 1. WebGUI Icon Guide

Critical – missing disk

A disk is missing from the array bringing it to ‘critical’ status. The array is still accessible but another disk failure could result in data loss.

Rebuilding

The array is currently rebuilding meaning you replaced a failed disk or added a new disk to a ‘critical’ state array.

Critical – rebuild required

The array has all disks, but one disk requires rebuilding.

Disabled

The icon represents a disabled array, meaning more than one disk failed and the array is no longer accessible

Initializing

The array is initializing. The type of initialization is Background. (See Initialization)

Legacy

An existing file system has been detected on the disk. These disks are classified as legacy drives.

Normal

The array status is normal

Initializing

The array is initializing, background initialization

Critical – Inconsistency

Data in the array is inconsistent and needs to be rebuilt.

Critical – missing disk

A disk has been removed or experienced failure, and user needs to reinsert disk or add a new disk.

Rebuilding

The array is currently rebuilding.

Disabled

The array does not have enough disks to maintain the RAID level. A disabled array is not accessible.

HighPoint Recommended List Motherboards

HighPoint provides a list of motherboards suitable for use with the SSD6200/6200A. This document is routinely updated, and is available from the SSD6200/6200A Resources webpage:

<https://www.highpoint-tech.com/ssd6200-series-overview>

Contacting Technical Support

FAQ's, technical articles, and trouble-shooting tips are available from our Support web page
