

Export to mp4 on Premiere Pro

To export to mp4, complete the following steps: (Adobe, n.d.)

1. Click File on the top toolbar, far left.
2. Find the Export option and hover over it with your mouse.
3. Select Media. This will open the Export Settings window.
4. Find the Format line under Export Settings and click the drop-down menu.
5. Choose H.264, which is another name for mp4.
6. Click Output Name, name your file, and choose where to save the file. Save your file to your project folder on the Desktop!
7. Hit the export button.
8. Wait. It may take a while. Be sure to wait until it has finished exporting.
9. Before you upload your file to Google Drive, find it in your project folder. It will have an mp4 extension. Open it by double clicking (left) on the file name or right clicking and choosing 'open'. Make sure it plays properly. If it does, you're good to go.
10. Now upload your mp4 video to Google Drive, get a shared link, and submit that link on Google Classroom.
