## PHASE DETECTOR PD3129

Field Measuring Instruments

Easy-to-read arrow indicator

# No-metal-contact design for the ultimate in safety

### Include in visual reports

A green arrow indicates normal phase, which can be communicated in an easy-to-understand manner by including the phase detector in photographs used to document the proper completion of electrical work.

### LED + clear audio for easy verification

The flashing phase sequence lamps, arrow LED, and tone let you easily and intuitively verify the phase sequence of three-phase power supplies.

### Safe, no-metal-contact design

The no-metal-contact clips need only to be clipped to the outside of each wire's insulation, letting you carry out phase detection work safely.
