

ROLAZ GOLD

FIRST TOKENIZED ASSET FROM THE ROLAZ PROTOCOL

ABOUT US

ROLAZ Group is an international holding company, with an expansive presence in Europe, Asia, and America, that invests its business experience, assets, resources, and time in the development of new projects and highly innovative business solutions. Our team of industry professionals offers our clients a great capacity for growth, advanced digital technology systems, and an important component of business adventure on the quest to maximize your business potential and customer impact.

We combine extensive management experience with the desire to participate in innovative projects associated with the combination of technological, financial, and market development. For this, we offer a wide range of high value-added services that accompany the parties in the project development process, managing each activity directly through a single executive, administrative, technical, financial, commercial, and legal structure.

HEDGE FUND

FOR ALL

Carlos Rodrigo - CEO of Rolaz Group

“The natural evolution of the hedge fund industry is to create a more transparent, trusted, and accessible investable universe for all. DeFi (decentralized finance) has grown greatly, enabling progressive and innovative businesses to be at the forefront of change in the industry. DeFi is precisely what the hedge fund industry desperately needs.”

Rolaz Hedge Fund – the first tokenized hedge fund powered by its Blockchain Decentralized Investment Protocol. Set to disrupt a trillion-dollar industry with one of a kind - secure and 360° financial ecosystem. The ability to leverage blockchain technology, Rolaz Group is able to provide a reliable, transparent and traceable way in the form of Rolaz Gold (rGLD) Token for the investors to take part in growing and successful gold exploration operations into a mega project.

The Idea

Rolaz project was conceived as an idea to provide a financial ecosystem in which people could secure their wealth in the event of economic uncertainty. While generating revenues from investments made in tokenized assets from the Rolaz Protocol.

ROLAZ ECOSYSTEM

EXTRACTED FROM THE WHITEPAPER

Protocol is central, is the backbone, powering everything — smart contracts, dapps, oracles, platforms, and other integrations. Designed to systematically tokenize natural, financial and investment assets.

Firstly, there is the entire corporate structure of **ROLAZ GROUP**, which is responsible for managing everything that happens within our ecosystem. The objective is to keep all activities and resources within the framework of legal and financial provisions, especially in harmony with the vision of Founders.

Secondly, there is **ROLAZ HEDGE FUND BOARD**, which focuses on the development of the business through ongoing market research, so that new investment opportunities can be developed by constantly researching traditional markets and emerging markets.

Thirdly, the biggest asset we have is our **COMMUNITY**, who are constantly investing in our products and increasing the value of the token.

Lastly, there are the **DEVELOPERS** whose primary responsibility is to assess and identify new technological solutions.

Businesses and entrepreneurs who are part of our community can use the protocol for financing their project provided it is aligned with the protocol's vision and meets legal and financial requirements.

ROLAZ GOLD (rGLD)

TOKEN

Rolaz Gold (rGLD) token is the first tokenized (natural) asset from the Rolaz Decentralized Investment Protocol. In a nutshell, as the name implies, it's a gold-backed token developed to stabilize and secure our Hedge Fund's ecosystem. Rolaz Gold's major function is to provide a price based on its gold value, in order to reduce volatility and protect our community from price fluctuations.

rGLD is the entry into an ecosystem developed with the objective of creating a decentralized economic model that allows our community to protect its assets in times of economic uncertainty no matter what. This is newsworthy because it provides an alternative to traditional financial systems which are often centralized and vulnerable to instability. The rGLD ecosystem is designed to be resilient and adaptable, giving users more control over their finances.

rGLD is the first step towards a more stable and prosperous future for all. With rGLD, you can have peace of mind knowing that your assets are safe no matter what happens in the world.

With the Rolaz Gold rGLD token investors of all income and risk tolerance will be able to invest in already operational gold mining ventures and be able to reap the rewards of this unique investment opportunity that in the past was only available to privileged few or someone with the right connections, is now openly available with the security and the transparency of blockchain behind it.

WHY GOLD?

As an asset management company, we have taken part in gold-related activities, such as mining (among others). We also relentlessly developed our appetite for cutting-edge technology that led to the merger of all our activities with the disruptive technology of blockchain. Direct participation in this activity has granted us a tremendous advantage in the marketplace, and over others that only act as intermediaries.

The volatile nature of cryptocurrencies is a hallmark of the cryptocurrency market. For this reason, gold plays a role in the stability of our ecosystem that makes it possible to prevent any possible price fluctuations.

SOME KEY BENEFITS

- Corporate structure behind
- Supported by a Decentralized Investment Protocol
- Asset-Backed Token
- Limited Token Supply
- Multiple Staking Scenarios
- Deflationary Token
- Portfolio of Investments

ABOUT THE GOLD BACKING PROCESS

Rolaz Gold, unlike other cryptocurrencies, is not subject to soft or hard caps. This is because it relies on a gold backing process. This process is carried out through cycles of 1 million tokens each. Each time a gold cycle occurs, an internal transaction is made where 70% is backed as an initial phase. Therefore, the Rolaz Group supplies sufficient quantities of gold from its reservoirs to complete the backup process.

- ➔ Why every one million tokens?, because of cost-benefit. All activities required to implement this process reach substantial expenses. For this reason, we have performed a financial analysis to determine the minimum amount necessary to carry out this process.
- ➔ What about the remaining 30%?, comes from the staking process. Operations yield us over 80% annually. So, in a nutshell, we take 50% for token holder's ROI and 30% to back up the remaining, so we can reach 100%.

SOME FACTORS THAT CONTRIBUTE TO THE INCREASE IN THE VALUE OF THE TOKEN

In reality, the market defines the price of the token based on certain criteria. We will provide the most appropriate scenario to help increase the price, among the factors we would like to share:

GOLD: The rGLD token's capitalization is guaranteed by gold, meaning that every dollar raised should have its equivalent in gold. The first factor that will boost the value of a rGLD token is gold's global market.

PROTOCOL: Second factor, are all other assets tokenized by the Rolaz protocol, which will generate a chain of added value through the creation of a governance token to manage them all.

HEDGE FUND: Third factor is the Hedge Fund that will invest on behalf of token holders in traditional and non traditional markets and which 80% of the revenue will be capitalized in rGLD tokens. This process will be carried out by a voting system that only token holders can participate in.

BURNING (DEFLATIONARY SYSTEM): We have measures in place that prevent inflation from worsening in inflationary environments in addition to other safeguards we handle. During the staking process, we burn 50% of the rGLD tokens. So, in total, 50% of the rGLD tokens are paid out upon maturity, while the other 50% is transferred in cryptocurrency.

GOLD BACKUP CYCLE: When a backup cycle completes, the demand for rGLDs rises as it means gold is physically stored.
