## Competence and customer proximity on one spot

Throughout Europe, the name Mitutoyo represents innovational power as well as outstanding quality in the field of sophisticated dimensional measuring solutions. In order to strengthen and synchronise the concerted pan-European activities, Mitutoyo established the European headquarters named Mitutoyo Europe GmbH in Neuss near Düsseldorf/Germany in January 2010.

The headquarters oversees all the activities of Mitutoyo's sales, service and production facilities throughout Europe and adjacent markets, e.g. of Turkey. It also plans and implements the medium and long term business strategies of such European operations. A Mitutoyo Europe GmbH key objective is to promote coordination amongst its European group companies in order to optimise its sales and technical support services in the best interests of customer satisfaction.

More than 260 highly skilled members of staff work for the benefit of our customers in development, service, sales and administration. They are supported by the specialists of Mitutoyo CTL Germany GmbH in Oberndorf on the River Neckar, which focuses solely on developing ground-breakingly powerful and easy to use software for three-coordinate measurement technology. The peripheral fields of coordinate measuring machines, jiggling and loading systems and thermal cabins are covered by KOMEK company based in Saarland.

The range of products offered by Mitutoyo in Europe is divided into eight groups:

Coordinate Measuring Machines

Vision Measuring Systems

Form Measurement

Optical Measuring

Sensor Systems

Test Equipment and Seismometers

Digital Scale and DRO Systems

Small Tool Instruments and Data Management

In addition to top-level measuring and testing equipment, the range of products also includes a wide selection of accessories and – as a further area of focus – sophisticated, high-performance software for coordinate measuring machines and vision measuring systems as well as surface roughness, hardness and form measurement.

The Mitutoyo Information Center of Metrology (MIM) has been demonstrating the manufacturer's commitment to advanced training in all fields of dimensional measurement technology since 1999. The MIM is open to anyone working in the fields of manufacturing, service, science and research. Mitutoyo Europe GmbH is, moreover, a corporate member of "Ausbildung Koordinatenmesstechnik e. V. (AUKOM)". This association is dedicated to providing training schemes for coordinate measuring technology with the aim of ensuring a neutral, comprehensive and state of the art training concept.

Germany has also been home to the Mitutoyo M<sup>3</sup> Solutions Europe division since 2004. The abbreviation M<sup>3</sup> stands for Mitutoyo Measurement Metrology and, as such, for the concept of special measuring solutions developed by Mitutoyo to meet the particular requirements of its customers across the whole breadth of length, form and surface measurement technology. The Mitutoyo Europe GmbH in Neuss offers sample configurations in the 400 m<sup>2</sup> M<sup>3</sup> Solution Center Europe to demonstrate the numerous possibilities. The center also presents the smooth and seamless integration of peripheral systems, such as jigs or feed and climate control systems from KOMEK alongside the measuring equipment.

# Offering High-level Calibration Services Worldwide

Based on highest measurement capabilities of the same level as national standards

## Traceability system

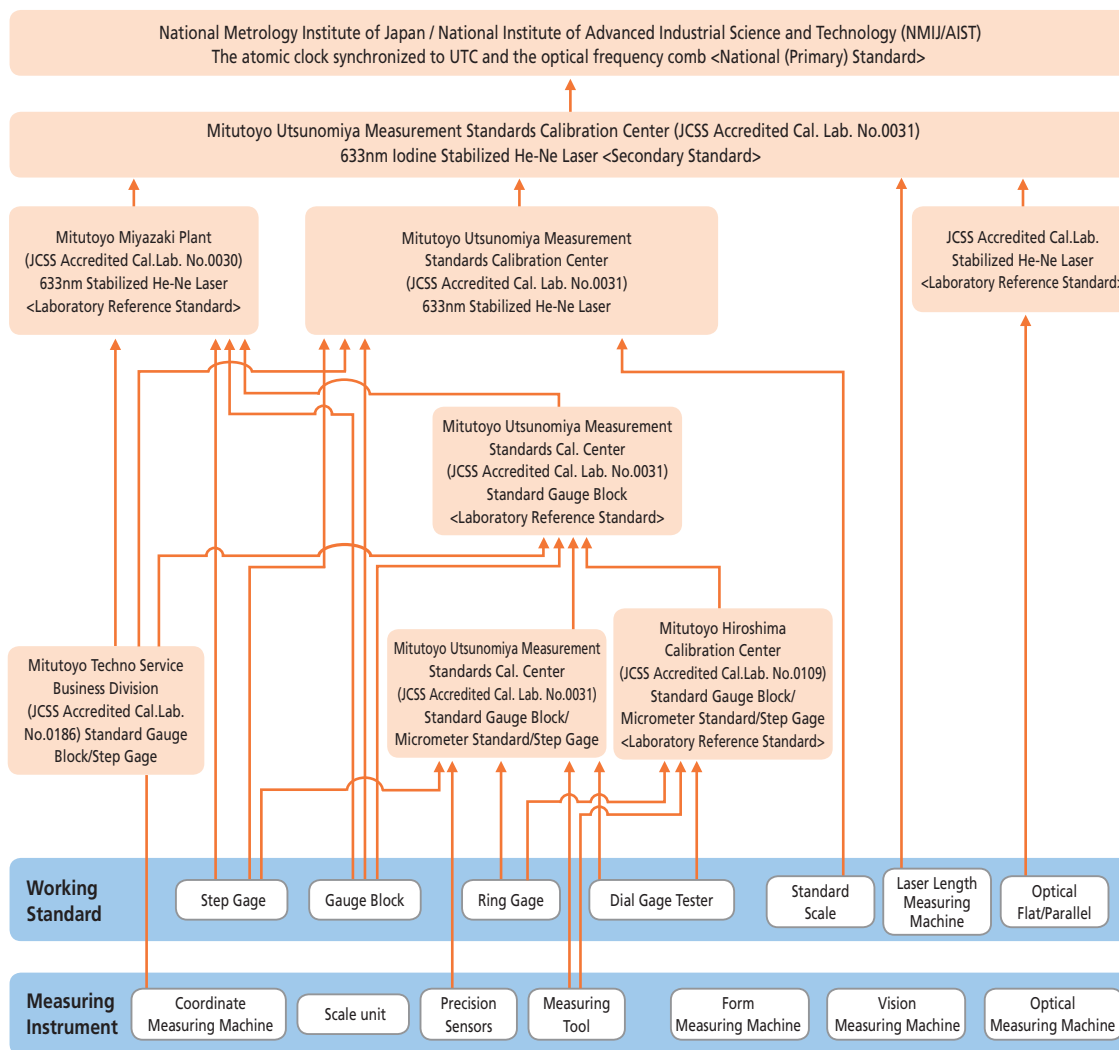

Mitutoyo has a traceability system made possible through an in-house calibration organisation certified by the ISO/IEC 17025 international standard, with length standards directly related to national standards (atomic clock synchronised to UTC and the optical frequency comb) at the highest level.

National standards are mutually recognised by CIPM, and the certified calibration organisation is mutually recognised by ILAC, so that the establishment and maintenance of traceability for Mitutoyo products is achieved both in Japan and overseas.

### Traceability of length

### Traceability of temperature

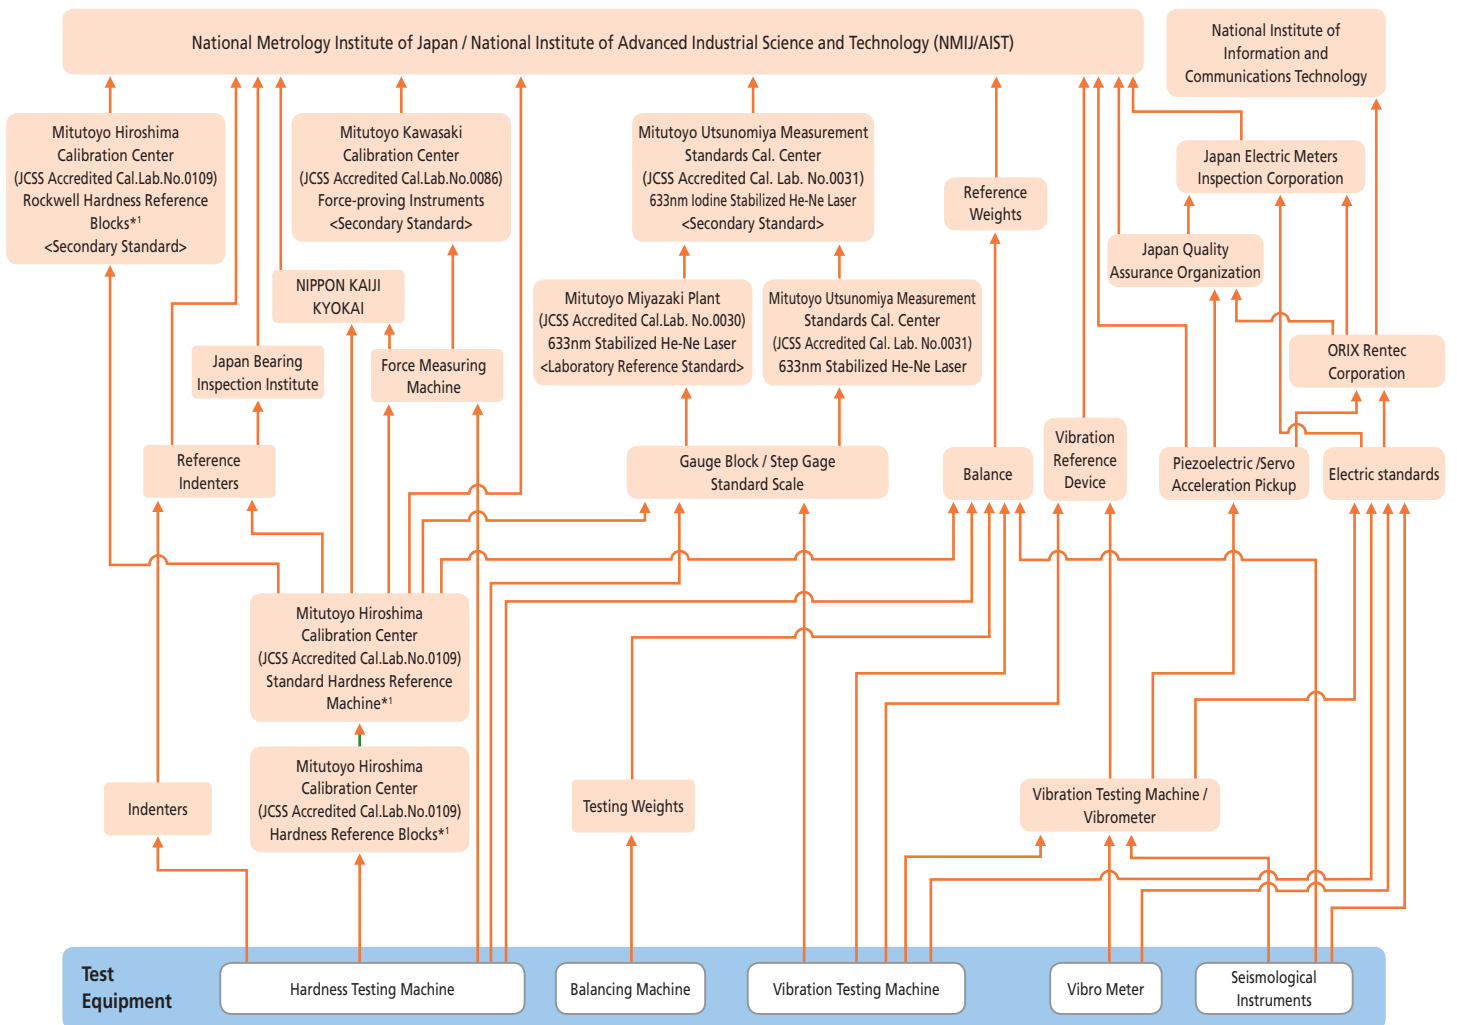

Note: This chart is a simplified representation of Mitutoyo's overall traceability system. Detailed traceability charts are published for each product.

# CE Marking Directives

## Traceability of Test Equipment

\*1 The scope of JCSS accreditation is from 20HRC up to 65HRC in Rockwell Hardness Testing Machines and Hardness Reference Blocks.

**Note:** This chart is a simplified representation of Mitutoyo's overall traceability system. Detailed traceability charts are published for each product.

## CE Marking Directives

CE stands for "Conformité Européenne", a challenging and important task for Mitutoyo in Europe. For Mitutoyo as a manufacturer of measuring electronics and measuring machines this means no sale without CE marking, no CE marking without completed conformity assessment procedure.

# Meaning of Symbols

## ABSOLUTE Linear Encoder

Mitutoyo's technology has realised the absolute position method (absolute method). With this method, you do not have to reset the system to zero after turning it off and then turning it on. The position information recorded on the scale is read every time. The following three types of absolute encoders are available: electrostatic capacitance model, electromagnetic induction model and model combining the electrostatic capacitance and optical methods. These encoders are widely used in a variety of measuring instruments as the length measuring system that can generate highly reliable measurement data.

### Advantages:

1. No count error occurs even if you move the slider or spindle extremely rapidly.
2. You do not have to reset the system to zero when turning on the system after turning it off<sup>\*1</sup>.
3. As this type of encoder can drive with less power than the incremental encoder, the battery life is prolonged to about 3.5 years (continuous operation of 18,000 hours)<sup>\*2</sup> under normal use.

\*1: Unless the battery is removed

\*2: In the case of the ABSOLUTE AOS Digimatic caliper (electromagnetic encoder model)

## Measuring Instruments Shipped with Inspection Certificate

Mitutoyo guarantees product quality as a leading precision measuring instrument manufacturer and ships measuring instruments with an inspection certificate that includes inspection data so that customers can use them with confidence. Mitutoyo also calibrates the purchased measuring instrument and issues, for a fee, a calibration certificate that proves traceability to the relevant standard.

\* For the meaning of the inspection marks shown at left, refer to the detailed description of each product

## Main Unit Startup System

## Installation of Main Unit Startup System

As a part of the enhancement of our export control system, the CNC measuring machines (all the CNC Coordinate Measuring Machines, Vision Measuring Systems, and Form Measuring Machines) are equipped with a Main Unit Startup System (relocation detecting system). This system is designed to take a machine out of operation upon detecting the mechanical shock that accompanies relocation. If you intend to relocate a measuring machine fitted with this system, please contact us beforehand so that our service engineers can assist you. On the other hand, the system may be triggered in the event of a natural event such as a powerful earthquake. In this case, our service engineers will deal with the situation at the earliest opportunity.

## IP Codes

These are codes that indicate the degree of protection provided (by an enclosure) for the electrical function of a product against the ingress of foreign bodies, dust and water as defined in IEC standards (IEC 60529: 2001) and JIS C 0920: 2003. [IEC: International Electrotechnical Commission]

## An Integrated Solution for Quality Data Management

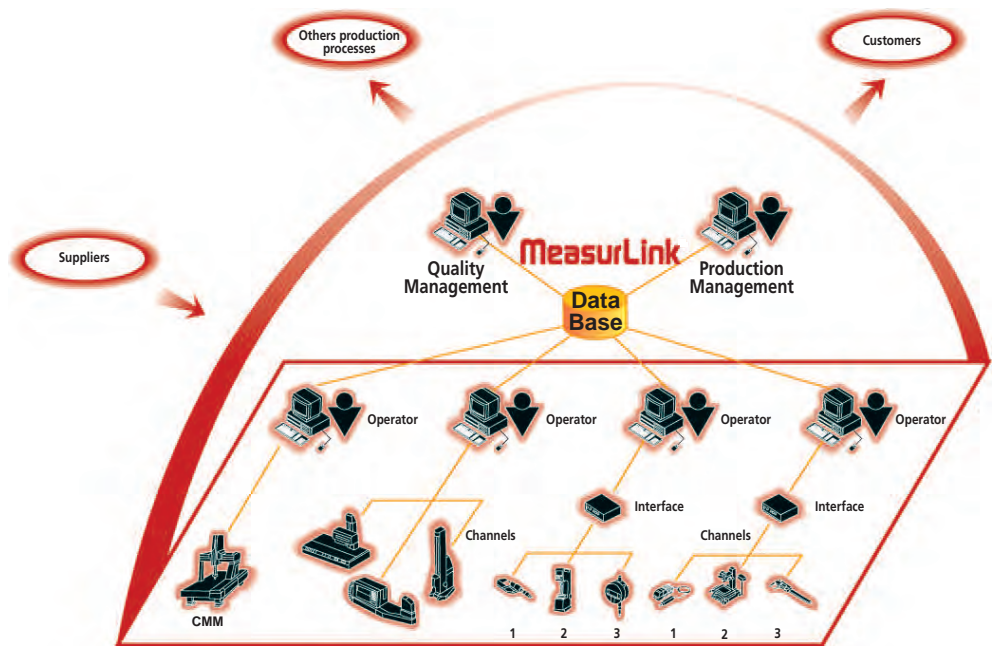

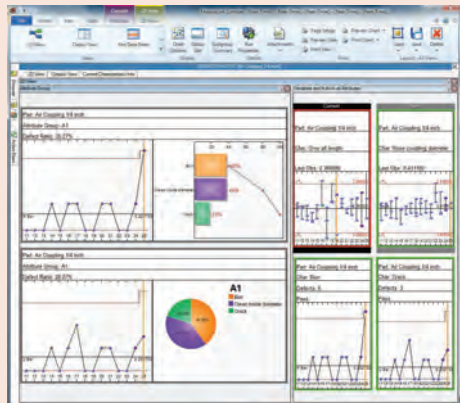

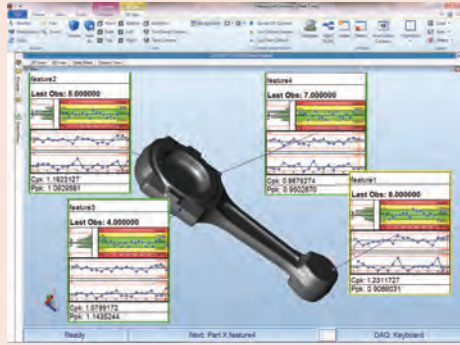

Most of Mitutoyo's electronic instruments can output data via optional connecting cables or wireless transmitters & receivers in the form of the Digimatic code. The Digimatic code can also be converted in RS-232C format by any of several available gage multiplexers. In this way, digital data can be sent to PCs for data acquisition and advanced statistical analysis.

As a client/server application, MeasurLink gives you the performance you need through distributed processing. Combined with a multi-user relational database, MeasurLink delivers a safe and organized data warehousing system making quality data available for viewing and analysis by any member of the production, engineering and managerial staff throughout your company. Inspection in the factory produces data for analysis, corrective action, and various reporting needs. As the backbone of your quality efforts, MeasurLink is guaranteed to reduce your production costs and increase your bottom line.

MeasurLink is capable of linking and managing multiple "islands" of inspection into a common database of part information, statistical data, gage information, process, etc. Information is shared across an entire manufacturing facility.

# Digimatic Data Logger

## Series 63

The Digimatic DL-1000 and 1000 M are data loggers designed for storing measurement data recorded by a Digimatic measuring instrument for subsequent output to a computer. They allow you to collect data when away from a PC, and transfer it later.

These Digimatic Data Loggers offer the following benefits:

- The measuring device is connected to the I/O port of the DL-1000/1000 M with a data cable, and you can transmit data either using the data button on the measuring device or on the DL-1000/1000 M.
- For data transfer the devices are connected via an interface to the target computer.
- Data transfer from the DL-1000/1000 M is executed with the data button or footswitch of an interface or upon request from the respective software. The DL-1000/1000 M is recognised by the measurement device as a Digimatic measurement instrument.
- You can output data directly to a printer equipped with a Digimatic interface.

# Digimatic Micrometer QuantuMike IP65

## Series 293

This is a micrometer with a 2mm spindle pitch, offering movement four times as fast as a standard micrometer.

The Digimatic Micrometer QuantuMike IP65 offers the following benefits:

- Faster measurement is achieved by using a coarser thread which feeds the spindle by 2mm per thimble rotation.
- It delivers approximately four times as fast as standard micrometer with 0,5mm spindle pitch.
- The device has outstanding accuracy, with only  $\pm 1\mu\text{m}$  instrumental error (75mm or less measuring range models).
- The dual function offered by the ratchet on the thimble and the fast drive mechanism ensure easy single-handed or stand operation.
- Excellent resistance against water and dust (IP65 protection level) enables this micrometer to be used in machining situations that include splashing coolant fluid.

# Optical parallels

## Series 157

These Optical Parallels allow you to inspect micrometers and other measuring tools.

They offer the following benefits:

- Using optical interference, they can inspect the measuring faces of micrometers for parallelism and flatness.
- Each set consists of 4 sizes designed for testing at each quarter revolution.

157-903

### Metric

No.	Contents	Range of micrometer to be checked	Sizes of parallels included in set

	157-107		25,25 mm
	157-108		25,37 mm

Testing a micrometer for flatness and parallelism of anvil and spindle faces : flatness is indicated by straightness and regular spacing of interference fringes, and parallelism by how many fringes are visible.

# Optical flats

## Series 158

These optical flats are an essential tool for you to test the flatness of reflective surfaces such as gauge blocks and setting standards, through optical interference technology.

# Fixtures for Micrometer Head

Mitutoyo offers various types of fixture designed for micrometer heads, which you can use for a wide range of applications, that have the following benefits:

- These fixtures are high quality and durable, manufactured from nickel-plated cast iron.
- Two types of fixture for micrometer heads are available, depending on whether the head has a plain stem or is a clamp nut type.

Fixtures for use with plain stem type micrometer heads are split, and clamp the stem by tightening a socket head screw (M3x0.5x12 mm).

## Extension Rods

### Accessories for Bore Gauges

These extension rods help you with deep-hole measurement, and offer you the following benefits:

- Using a single, longer extension rod rather than several short ones reduces error. When several extension rods are joined together there is the possibility of small errors arising from the extra joints involved. Therefore it is good practice not to connect more than 2 rods to a bore gauge at any one time.
- You can use extension rods up to 1000mm.
- If you are using an extension rod longer than 500mm, use the bore gauge in the vertical orientation.
- You can confirm accurate and satisfactory operation after connecting an extension rod.

511-502	100-160	13	570

The ABSOLUTE Digimatic Bore Gauge detects the minimum value (true diameter) and holds it automatically.

Four extension rods (500 mm each) connected together provide a 2 m extension.

The display can be rotated 320° and turned 90°. The handle can also be rotated 320°.

Up to 3 sets of reference values can be preset, including top/bottom tolerance limits.

Even during measurement with a 2 m extension the accuracy is secured, as measured-value transmission is electronic.

\*if the detecting speed is > 50 µm/s the peak value may not be displayed correctly

# ABSOLUTE Digimatic Caliper with Constant Measuring Force

ABSOLUTE®

## Series 573

These Digimatic calipers have a load cell and help you measure elastic workpieces. They offer you the following benefits:

- Due to their low and constant measuring force these calipers are ideal for measuring elastic workpieces such as plastic and rubber parts that standard calipers cannot measure accurately.
- Now equipped with the same AOS (Advanced Onsite Sensor) induction type encoder used in top-of-the-line ABS coolant-proof calipers.
- Thanks to the adoption of the electromagnetic induction type ABS encoder, this caliper can be used without concern for contamination on the scale face during measurement. Detection signal is not affected by dirt (water, oil, etc.) on surface of a scale.
- Character height: 9mm (alleviation of fatigue with the high-contrast LCD)
- The ABS (ABSOLUTE) scale requires no origin setting after power-on and also has no limit to response speed.
- Extraordinary battery life

# Dial Test Indicator Lever Type

## Lever Indicator Overview

### Choices of dial position

Our product lineup offers four models, each with a different dial orientation on the frame to allow best readability in any situation.

- Horizontal type: standard model - with dial on the top of the frame
- Vertical type: dial on the end of the frame
- Horizontal (20° tilted face) type: dial on top of the frame, tilted backward by 20°
- Parallel type: dial on the side of the frame

### Stylus length is on the dial face

The length of the applied stylus affects the indicator's scale factor.

The appropriate length is indicated on the dial face to assist a customer when ordering the correct replacement stylus.

### ø8 stem to fit dovetails is a standard accessory

A ø8mm plain stem (21CAB104) for the Metric models that attaches to any dovetail on the frame is supplied as a standard accessory. Other sizes of stem to fit the dovetails are available as optional accessories:  
ø4mm stem: 21CAB106  
ø6mm stem: 21CAB103

### Attachable limit hands

Limit hands (optional) can be attached to the bezel as for dial indicators, allowing easy identification of the upper and lower limits of tolerance.

### Improved stylus bearing

The conventional method of mounting the stylus pivot bearing screw in the frame is prone to allowing looseness to develop with prolonged use.

A unique sub-plate structure to house this screw has now been incorporated in all models and eliminates this drawback.

# Lever Indicator Horizontal Type - 0,01 mm

## Series 513

- Drastically enhanced durability, sensitivity and visibility.
- Glare-free flat crystal face allows easy reading of graduations.
- Preventing dust and oil from penetrating to the dial face. The O-ring seal on the bezel has the effect of providing smooth rotation and prevents dust and oil from penetrating through to the dial face.
- Multi-layer coatings on the Crystal.
- Hard and non-glare coatings on the crystal inhibit scratches, contamination and glare on the surface.
- Jewelled bearings and precision gears and pinions give you smooth, accurate movement and quick response.

# Gauge Blocks Overview

## Series 516

Precision gauge blocks are the primary standards vital to dimensional quality control in the manufacture of parts. Mitutoyo offers an extensive selection of gauge blocks available in a choice of rectangular or square, metric or inch, and steel or ceramic types.

### Accuracy

Gauge blocks offered by Mitutoyo have such a high accuracy that users can use them complete confidence. Needless to say, Mitutoyo has established a traceability system for our measurement products, up to the Metrology Management Center of the National Institute of Advanced Industrial Science and Technology (AIST) and we have been certified by the Japanese government as an accredited laboratory.

### Wringing

The lapping technique is one of Mitutoyo's specialties. Our advanced technique, developed over more than a half century, enables us to achieve the best flatness and surface roughness needed for gauge blocks and thus maximize the wringing force.

### Abrasion Resistance and Dimensional Stability of Steel blocks

High-carbon high-chrome steel is employed to satisfy a variety of the material characteristics required for gauge blocks. Our advanced heat treatment technology for steel blocks, which involves repeated high and low temperature cycles, simultaneously achieves excellent abrasion resistance and reduces change in length over time to the minimum.

### CERA Blocks

CERA blocks are made of a ceramic material with a superior surface finish, created by Mitutoyo's ultra-precision machining techniques, that provides a premium quality block.

#### 1. Corrosion Resistant

Anti-corrosion treatment is not required when handled normally (i.e. with fingers), resulting in simple maintenance and storage.

#### 2. No Burrs Caused by Dents, etc.

Since the CERA Block is very hard, it will not scratch and is highly resistant to burrs. If a burr is formed, it can easily be removed with a ceramic deburring stone (Ceraston).

#### 3. Abrasion Resistant

CERA Blocks have 10 times the abrasion resistance of steel gauge blocks.

#### 4. Dimensionally Stable

CERA Blocks are free from dimensional change over time.

#### 5. Sizes Clearly Marked

Black characters, indicating the nominal length, are inscribed by laser and are clearly visible against the white surface of the block.

#### 6. Non-magnetic Nature Prevents Steel Swarf Contamination

#### 7. High Wringing Force

Superior flatness and surface finish

#### 8. Superior Material Characteristics of CERA Block

Property	Material	CERA Block (ZrO <sub>2</sub> )	Steel (Fe)	Carbide (WC-Co)	Silicon nitride (Si <sub>3</sub> N <sub>4</sub> )

### Selecting Gauge Blocks

Gauge blocks are designed to offer the construction of practically any size, within the range of a set, using the minimum number of blocks. Long block sets are available if a longer length is required than is provided by the standard sets.

Gauge block sets should be selected in accordance with the minimum length step required. Wear block sets should be used if the application is likely to involve rapid wear of the end blocks in a stack (and the minimum sizes required allow this). This will preserve the life of the set by confining wear to the wear blocks, whose cost of replacement is far less than that of a complete set.

If a set containing a large number of gauge blocks is selected, the number of gauge blocks required for any particular length may be reduced and the number of combinations is increased. Accuracy will be retained and wear will be reduced.

Dedicated gauge block sets for micrometer inspection and caliper inspection are available.

# Gauge Blocks Overview

## Series 516

### 9. Closest Expansion Coefficient to Steel

The thermal expansion coefficient of a CERA Block is quite similar to that of a steel gauge block.

### 10. Highly Resistant to Dropping and Impact

The CERA Block material is one of the toughest ceramics. It is extremely difficult to crack a CERA block in normal use.

### Grade and Application

The following information can be used to select the gauge block grade according to usage (specified by DIN861, BS4311, JIS B 7506 and EN ISO 3650).

#### Grade 2:

These gauge blocks are intended for shop floor use to set and calibrate fixtures as well as precision instruments.

#### Grade 1:

This grade is used within an inspection area to verify the accuracy of plug and snap gauges as well as for setting electronic measuring devices.

#### Grade 0:

These higher accuracy gauges are intended for use within a controlled environment by skilled inspection staff. Mainly used as reference standards for setting high precision measuring equipment and for the calibration of lower grade gauge blocks.

#### Grade K:

Gauge blocks of this accuracy are intended for use within a temperature controlled inspection room or calibration laboratory. They should be used as masters with certificates against other gauge blocks which are calibrated by comparison.

### Certificates

#### ILAC

The International Laboratory Accreditation Cooperation is an international cooperation of laboratory and inspection accreditation bodies. The member bodies signed the ILAC Mutual Recognition Arrangement (MRA) which ensures a cross approval of certificates from accredited laboratories from other countries. The Signatories to the ILAC arrangement are almost all European countries.

#### JCSS

Mitutoyo Gauge Block Sets can be delivered with a JCSS Certificate of Calibration (Japan Calibration Service System). A JCSS Certificate of Calibration is comparable with e.g. DAKKS, COFRAC, RvA or UKAS Certificate of Calibration. Refer to ILAC this calibration result may be accepted internationally.

Mitutoyo Gauge Blocks and Inspection Certificates

A Inspection Certificate is furnished with all Mitutoyo gauge blocks with a serial number on the box (in the case of sets) and an identification number on each block. The deviation of each block from nominal length, at the time of inspection, is stated. For this inspection, each gauge block is measured relative to the upper level master using a gauge block comparator. Grade K gauge blocks are measured by a primary measurement method using an interferometer.

CERA 2-block set

Protection gauge blocks (highlighted in grey above) are placed at each end of the gauge block stack to absorb the wear caused by contact with workpieces.

# Gauge Blocks with a Calibrated CTE

## Gauge Blocks with a Calibrated Coefficient of Thermal Expansion

These are metric gauge blocks with a calibrated coefficient of thermal expansion. They offer you the following benefits:

- Mitutoyo offers top-level gauge blocks (steel and ceramic) which are superior to K class blocks, with their quality supported by Mitutoyo's best technologies.
- They feature an accurately calibrated thermal expansion coefficient measured with a proprietary double-faced interferometer (DFI).
- Each gauge block is calibrated for length on a highly accurate gauge block interferometer (GBI) system.
- Uncertainty of thermal expansion coefficient:  $0,035 \times 10^{-6} / K$  ( $k=2$ ).
- Uncertainty of length measurement: 30 nm ( $k=2$ ), for 100mm blocks.

## Accessory for Gauge Block Maintenance

This accessory for gauge block maintenance offers you the following benefits:

- Alumina-ceramic abrasive stone lets you remove burrs from hard materials such as ceramics, that ordinary stones cannot handle.
- You can use them for both steel gauge blocks and CERA Blocks.

No.	Dimensions (WxDxH)	Mass [g]
601645	100 x 25 x 12 mm	110
601644	150 x 50 x 20 mm	530

Removing burrs

- 1 Wipe any dust and oil films from the gauge block and the Ceraston (or Arkansas stone) using a solvent.
- 2 Place the gauge block on the Ceraston so that the measuring face that has burrs is on the abrasive surface of the stone. While applying light pressure, move the gauge block to and fro about ten times (Fig. 1). Use a block rubber for thin gauge blocks to apply even pressure (Fig. 2).
- 3 Check the measuring face for burrs with an optical flat. If the burrs have not been removed, repeat step 2. If burrs are too large, they may not be removed with an abrasive stone. If so, discard the gauge block.

**Note:** The abrasive surface of a Ceraston must be made flat by lapping it from time to time. After lapping the ceraston, the lapping powder must be completely removed from the surface of the stone to prevent the gauge block from being scratched. Mitutoyo does not offer Arkansas stones.

# Horizontal ABSOLUTE Scale Coolant Proof IP66

## Series 572 - Horizontal

You can use this scale unit in adverse environments with water and cutting oil due to its new detection method (electromagnetic induction).

- Specially designed output cables are developed to maintain the water resistant structure.
- You will have no overspeed error since the ABSOLUTE scale does not depend on counting scale graduations.
- Once an absolute zero (origin) point is set, the Digimatic Scale Unit shows the absolute distance from this point when it is powered on, rather than „0“.

## Series 579 - Electromagnetic induction Absolute Scale

This scale unit leverages Mitutoyo's unique electromagnetic induction technology to provide excellent resistance to oil and water compared with the optical linear encoder type, elevating the ABS AT1100 to the level of a highly reliable NC machine-tool scale suitable for tough shop floor conditions.

- Additional factors in providing the high performance of the ABS AT1100 are the innovative shaping and location of the detector track in the aluminum frame and the extreme coolant resistance of the track-seal material. Together these combine in a highly effective first defence against contamination of the scale and sensor even in extremely severe installation environments.

# Objective Lens M Plan Series

## Series 378

The Mitutoyo 378 Series objectives have one of the world's longest working distances and an infinity-correction optical system. These objectives give you flexible observation at high magnifications and independent correction of chromatic aberration.

### Specifications

- Features**
- The long working distance type objective lenses provide excellent clearance between the lens surface and the workpiece surface in focus, making it possible to observe workpieces which are usually hard-to-focus because of awkward projections.
  - The metallurgical plan apochromatic (M Plan Apo) objective lens is an excellent optical system. This objective provides a flat, chromatic aberration-free image throughout the field of view, making it is suitable for any type of microscope.
  - Specially designed objective lenses are also available with correction for the near-infrared, near-ultraviolet and ultraviolet regions of the spectrum, or various thicknesses of LCD screen glass.
  - The mounting screw threads of objective lenses are designed to conform to JIS B-7141-1994.

### M Plan Apo NIR

Note :  
These objective lenses are designed so that the image of a workpiece remains focused within the focal depth even when the wavelength used is changed from within the visible range up to the near-infrared (480 to 1800 nm). Therefore the M Plan NIR Series are suitable for laser repair. However, when the wavelength used exceeds 1100 nm, the focussing position may deviate slightly from that in the visible range due to changes in glass dispersion and refractive index.

# Measuring Projector PJ-H30 Series

## Series 303

This measuring projector has adjustable incident illumination.

The PJ-H30 offers you the following benefits:

- By rotating the condenser lens and changing the angle of the mirror in the objective, you can represent even poorly reflecting surfaces optimally.
- Improved light intensity of a projected subject thanks to the new optical contour illumination system.
- High measuring accuracy (above JIS standard).
- Measuring stage with rapid single-handed adjustment on both axes enabling you to switch smoothly between quick positioning and fine adjustment.
- Constant current power supply unit with acceleration control to maximize the service life of the halogen lamp.
- Easily read digital counter with large digit display.
- The PJ-H30D models also offer you a built-in precision edge detector (Optoeye).
- RS-232C output.

QM-Data 200

# Data Processing Unit QM-Data 200

## Series 264

The Data Processing Unit QM 200 has been especially designed to process measurement data generated by a profile projector or measuring microscope.

The QM-Data 200 offers you the following benefits:

- Measuring instructions, measuring values and calculation results for various operations are shown on the back-lit LCD in a clear, easy to understand style.
- You can also print measuring results, either on a small and convenient thermal printer (available as a special option) or on an ESC/P printer and continuous paper.
- By connecting an optional floppy disk drive newly created part programs, you can store and/or load measurement results as well as calculation results.

# Edge Detection Sensor OPTOEYE 200

## Series 332

This edge sensor allows you to make accurate measurements whatever your skill level by automatically detecting edges used in measurement.

The Optoeye 200 offers you the following benefits:

- Optoeye 200 reduces the effect of operator skill level on accuracy by automatically detecting edges used in measurement.
- PJ-H30: You can use the Optoeye edge detector on models PJ-H30A (requires adapter plate 12AAG983). The PJ-H30D models have a built-in edge detector.
- PV-5110, PJ-3515F and PJ-A14: You can use the Optoeye edge detector in conjunction with the QM-Data 200.
- PJ-A3000: You can use the Optoeye edge detector on models 302-701/302-702/302-703 in conjunction with the QM-Data 200.
- When you are using the Optoeye all projector scales must be connected to QM-Data 200 directly and built-in counters can no longer be used (except PJ-H30D type).

## Series 178 - Portable Surface Roughness Measuring Instrument

**The SJ-210R – Retract System is a portable measuring instrument for surface roughness that includes a safety system.**

- The detector starts in a safety position, not in contact with the workpiece surface. When measurement starts, the detector is lowered onto the workpiece while the drive unit moves in X measuring direction. During the return movement, the detector lifts up from the workpiece surface before returning to the start position. This is useful for avoiding stylus damage in applications where you cannot easily see the test surface.

### SJ-210S (detailed information further on in this chapter)

- The SJ-210S model is a portable measuring instrument for surface roughness that has a transverse drive capability. This allows you to test shrouded surfaces in the transverse direction, such as crankshaft bearing surfaces, flanged features or deep grooves.

## Series 178 – Portable Transverse Measurement with S-Type Drive Unit

This is an S-Type drive unit for the Surftest SJ-210 and SJ-310 that provides portable transverse measurement.

It offers you the following benefits:

- It is compatible with the conventional drive units of the Surftest SJ-210 and SJ-310.
- You can simply connected it to the display unit.
- A typical application would be to position the S-Type unit on a crankshaft journal bearing, as shown in the photograph below. Once started the S-Type drive will track the stylus across the surface transversely to its own axis and reliably measure surface roughness in the direction of the crankshaft axis. Transverse tracking simplifies the measurement of surface roughness even in very confined situations, which has long been a problem with conventional instruments which allow only longitudinal measurement.

## HM-210/220

### Series 810

This is a high performance hardness testing machine that uses advanced technology and is ideal for quality control. The HM-210/220 series offers you the following benefits:

- Touchscreen and software controlled types
- Its electromagnetic generation system enables nonstop setup for testing force.
- A high performance optical system provides a high quality image of the indentation load.
- A long working distance greatly reduces the possibility of collision.
- A range of six different objectives: 10X, 20X, 50X and 100X for measuring indentation images, and 2X and 5X for enabling wide-range overview images for positioning of indentation patterns.
- LED lighting gives you an observation image in natural colour, with better contrast, as well as longer operation due to lower power consumption.
- You can set different kinds of conditions on a touch panel, and display test results for easy operation.
- Software AVPAK-20 offers a multitude of options for automatic measurement and statistics.
- Test forces starting from as low as **0,4903 x 10-3N** (0,05gf) as well as standard test forces

# Vickers Hardness Testing Software

Software AVPAK-20 for System B,C and D No. 11AAC666

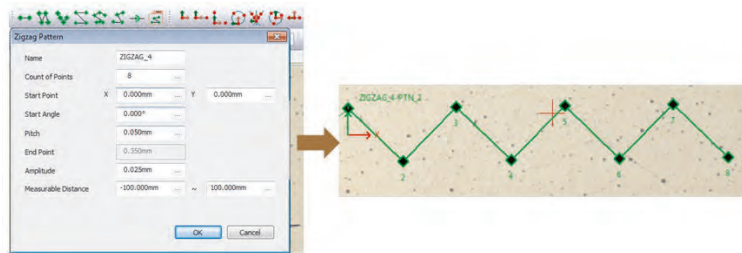

Software to control test sequence, evaluate hardness and make report  
 Supports Windows® 7/10\*, 64 bit operating system  
 \*depending the version.

Indentation analysis function

Turret control function

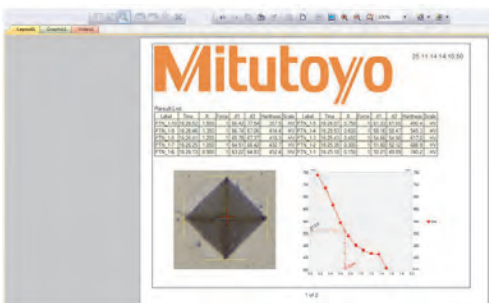

Test pattern function

Available to execute the test according to several patterns (line, zigzag, grid or circle/ arc) or its combination or generated pattern with arranged points done by the operator freely.

Coordinate alignment function

Several alignment methods (1-point, 2-points, 3-points, arc, and centre of circle, bisector, midpoint) are available. Available to establish the coordinate along the contour for the several types of tests (offset, pattern, grid).

Analysis and report function

Provides to display several types of graph (carburise transition, carburize distribution, X-R control chart) and layouts.

It is possible to edit these graphs on the report.

Stitching function

Stage control function

## Functions

### Stitching

Controls camera at lattice-like arranged positions and makes wide area image with several camera images (motorized XY stage is required)

### Indentation analysis function

Analyse an indentation and to measure it's diagonal length according EN ISO 6507-1

### Illumination control function

Control the illumination by 100 levels. Provides to adjust the level according to the specimen automatically and to display saturation on the camera image

### Stage control function

Control the motorized XY stage unit (for type C and D) and the autofocus stage unit (type D) by the joystick on the AVPAK-20 window. Also available to memorize and recall five XY positions

### Turret control function

Provides to change the effective objective lenses or indenter by rotating the turret

### Automatic execution function

Always records executed operations and play back this operation at anytime

# Vickers Hardness Testing Software

Software AVPAK-20 for System B, C and D

Graphic view (of stored images) For displaying the entire specimen and checking the pattern positioning. The digital zoom function can be used to easily magnify and check the indentation site.

## FUNCTIONS

### Layout view

Photos from individual views, graphs, tables, etc., can be laid out freely to create the report in need.

### Stitching

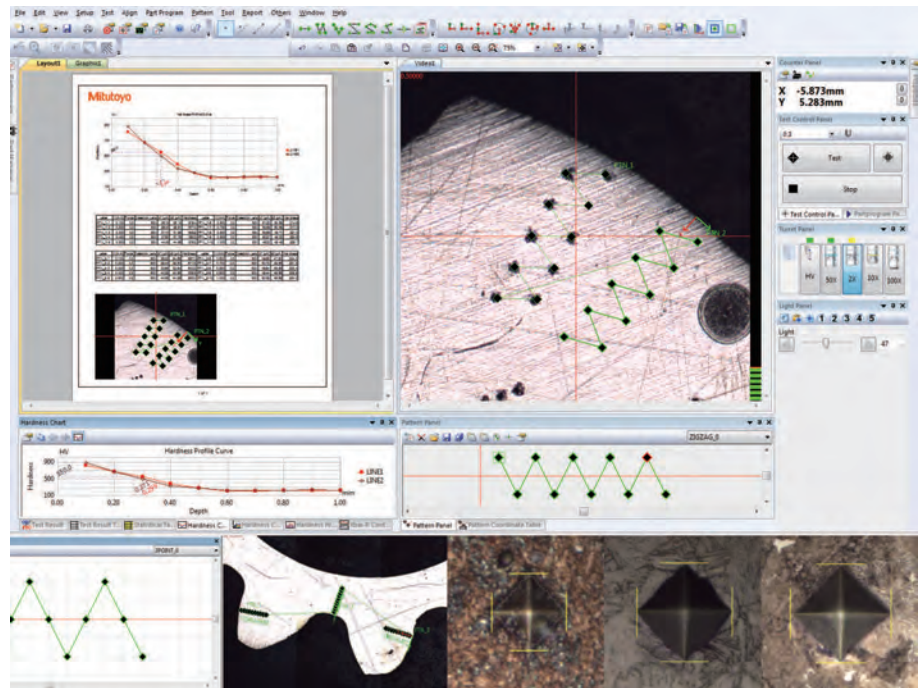

Takes images of an entire rectangular field from the moving stage then combines the images. Use stitching for a complete overview of sample.

### Auto trace

Automatically traces the shape of the sample. Take images as the stage moves along the outer contours of the specimen, then combines the images.

### Navigation function (System B)

When the test position is to be moved during multipoint testing (CHD etc.), this function guides the travel of the XY fine adjustment manual stage to the next position by pop up on screen menu.

Screen layout for control, testing status and result display can be changed freely.

### Handling of multiple specimens

Part program and Part Manager function support testing of multiple and irregular specimens.

### Multi-specimen testing

Executes different part programs for each irregular specimen.

### Parts Manager:

Executes a common part program for specimens having the same shape.

### Pattern creation:

This tool supports the creation of test patterns such as straight lines, zigzag lines and teaching patterns.

### Pattern pasting :

This tool supports the pasting of created test patterns by applying a coordinate system. It adjusts the origin, direction, etc. of the before created pattern.

# Wizhard Rockwell, Rockwell Superficial, Brinell Hardness Testers HR-500 Series

## Series 810

These hardness testing machines give you high performance and improved productivity. The Wizhard Rockwell, Rockwell Superficial, Brinell Hardness Testers HR-500 Series offers you the following benefits:

- Multiple test force generation for Rockwell, Rockwell Superficial and Brinell hardness.
- A dolphin-nose indenter arm gives you easy reach of interior surfaces (min.  $\varnothing 40\text{mm}$  /  $\varnothing 22\text{mm}$ , when using an optional diamond indenter) and exterior surfaces.
- Real-time electronic test force control gives you accurate loading, and completely eliminates load force overshoot.
- An indenter escape function allows you carry out continuous testing at a fixed table position, which eliminates instability caused by table retraction.
- Auto-stop table elevation and automatic preloading provide stable test force generation.
- EXPACK software for simple data collection and statistics 11AAC237
- HR-500L long type with an optional max. specimen height of 395 mm

# Rockwell HR-100/200/300/400

## Series 963

These are five economical Rockwell hardness testing machines to suit practically every application you need.

The Rockwell HR-100/200/300/400 offers you the following benefits:

- The newly designed frame provides maximum clearance for positioning the work piece, all you need is a flat table for mounting these testing machines.
- They are very simple to operate: the analogue types HR-110/HR-210 use an automatic presetting dial gauge.
- HR-110MR does not require a power source, and is considered to be environmentally friendly.
- Digital models HR-430MR/MS use automatic steering wheel braking and load sequencing for easy handling.
- Digital models HR-320MS and HR-430MR/MS can use our Digimatic Mini-processor (DP-1VR) for printing results, and you can use an input tool (USB-ITN-E) to connect to a PC for data transfer, analysis and storage.
- You can perform Brinell hardness tests by using the following optional accessories: a Brinell indenter, a weight set and a measurement microscope.

- Workstage dimension : ø90 mm
- Max. specimen height : 90 mm

#### Testing stand applications

These stands are used to mount Durometers. They allow constant-pressure hardness measurement by ensuring that the Durometer presses vertically on the workpiece surface at all times.

- Anyone can perform repeatable hardness measurement due to fewer possibilities of human error and measurement variations.
- The supplied weights can be attached directly to a Durometer and allow constant-pressure hardness measurement of large samples for which a stand cannot be used.
- The supplied weights are used for calibrating the spring tension of Durometers

# Hardness Test Blocks / Indenters

## Hardness Test Blocks / Indenters

The daily or periodic verification of the hardness testing machine by the user is an important point on the way to a safe test result. In order to ensure perfect functioning of the hardness testing system, an indirect check of the machine by means of calibrated reference materials, also called hardness test blocks, is recommended to be carried out right before the daily use. In the indirect test, all parameters of the hardness testing system (test force, measuring system, indenter) are checked by the indentation on the calibrated reference material block. If the device is used only once a week, the check should only take place on this day. In three-shift operation, a check at the beginning of the shift is useful.

The hardness range of the hardness comparison plates should be selected so as to correspond as closely as possible to the hardness of the material to be tested. Now, at least one indentation, but more preferably several, is generated and evaluated. For example, damage to the indenter, and other disturbances are easily noticed before testing the actual material.

## MiCAT Planner

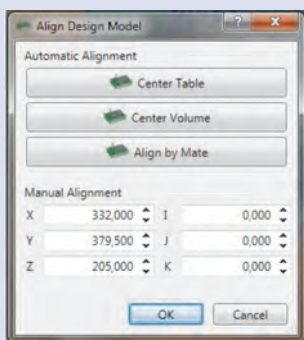

The new CMM software generation for an efficient, safe and automatic CMM programming. MiCAT Planner drastically reduces the programming time and thus will make your work much more efficient!

Programs will now be made within minutes where it took hours or even days before. MiCAT planner is using tolerance information inside the CAD file and creates the complete part program by considering your individual measurement strategy and your specific CMM. This guarantees a collision-free program in the shortest possible time.

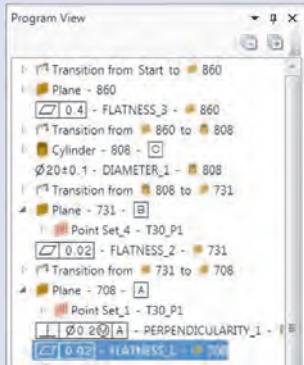

- Automatic program generation in just 5 steps!
- Fully collision controlled
- Program path optimization to reduce measurement time

Step 2: Select the CMM

Step 3: Align CAD model

Step 4: Create the part program

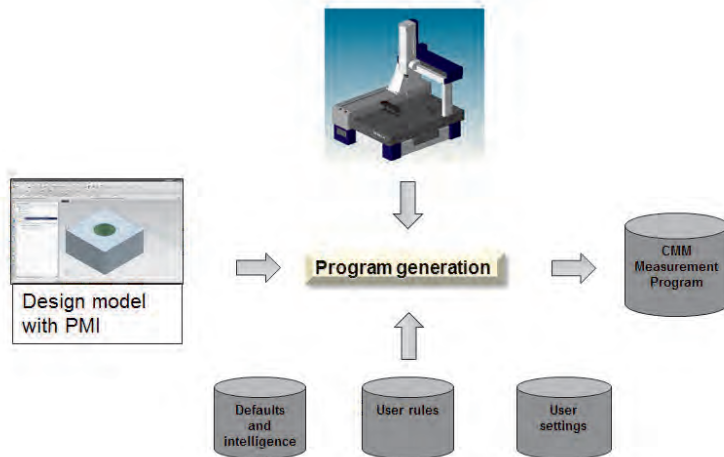

Step 5: Transfer to MCOSMOS

Step 1: Load the CAD model.

- Various CAD translators available: stp, Catia V4/V5, Creo, NX, Parasolid, SolidEdge, SolidWorks, Inventor
- Add missing tolerance information

## MCOSMOS - The Modular Software for all Kinds of Measurement

The heart of your CMM: to organize, execute, calculate and report.

- Organize your measurement programs on the network
- Add comands and instructions to guide the operator
- Create individual reports meeting your customer's needs
- Archieve your results in formats like PDF, XLS, HTML and many other
- SPC with MeasurLink or export data to CAQ systems
- Export detected geometrical elements to CAD systems
- Revision Management for authorised usage of validated partprograms as **standard**
- Meet the requirements of FDA Title 21 CFR Part 11 without extra costs

The following packages are also available for Offline programming.

The so called "**Offline MCOSMOS**" packages allow you to create part programs whilst the CMM is proofing your product quality.

# CMM Probes

## SURFTEST Probe

### Surface Roughness Measurement directly on the CMM!

This latest Mitutoyo probe head closes the gap between typical dimensional CMM measurements and surface roughness inspection. Instead of having to take the workpiece to another measuring instrument or using additional portable systems, the SURFTEST Probe adds roughness measurement capability to your CMM and so avoids all the cost and inconvenience of additional systems. It brings the proven technology of the SJ-310 series to the CMM with all its highly capable range of detectors developed for handling specialist applications such as roughness measurement on gears, inside small holes or deep grooves, in addition to simple flat surface measuring tasks.

- Proven technology from Mitutoyo's SJ-310 SurfTest
- Chose from five types of detector for variant applications
- High accuracy – no CMM movement during measurement
- One CNC measurement cycle produces all results
- Graphical and numerical output
- One Measurement report for all GD&T requirements

Fine control of angle and direction provides illumination for optimal measurement. You can set the angle in the range from 30° to 80°. This type of illumination is effective for enhancing the edge of inclined surfaces or very small steps. Illumination can be controlled independently from back or front, right or left. Measurement with edge enhancement is possible if you form a shadow by illuminating from only one direction.

# Quick Vision ULTRA

## Series 363

This CNC vision measuring system gives you ultra-high accuracy.

The Quick Vision ULTRA offers you the following benefits:

- Axial translation straightness is maximised through the use of a precision air-bearing linear guide system.
- High resolution (0,01 µm) scales, manufactured at an ultra-precision facility located 11 m underground, are used on all axes.
- The scales are made from glass that has a virtually zero thermal expansion coefficient, so your measuring accuracy has minimal variation in changing temperatures.
- The base structure was designed using Finite Element Method analysis; this gives you the optimal stiffness/weight ratio combined with excellent geometrical stability, in terms of axial straightness/ perpendicularity, with changing temperatures.
- Accuracy specification conforming to ISO 10360-7 are available (on request).
- 3D topography measurements are possible with the optional PFF functionality.

By using FEM (Finite Element Method) analysis of the base design, the placement of stiffening ribs and beams has been determined for the Ultra Quick Vision to provide optimal structural rigidity.

Ultra-precision scale manufacturing facility 11 metres underground

Ultra-high accuracy crystallized glass scale with virtually zero thermal expansion. The Ultra Quick Vision is equipped with a crystallized glass scale having a resolution of 0.01 µm and linear expansion coefficient of  $0.08 \times 10^{-6}/K$ . This virtually zero thermal expansion means the Ultra Quick Vision can minimise accuracy fluctuation due to thermal changes.

## Series 365 - CNC Vision Measuring System

This CNC vision measuring system is a multi-sensor machine.

The Quick Vision HYBRID Type 1 offers you the following benefits:

- It allows you to make vision measurements with a CCD camera, and carry out high-speed scanning, by applying a vision measurement unit in parallel with a non-contact displacement sensor.
- The focusing point method minimises the difference in the measuring face reflectance and gives you high measurement reproducibility.
- The double pinhole method (less directivity) is employed as the measurement principle.

Quick Vision H1 APEX 404 PRO

Quick Vision Hybrid system - Type 1

The scanning laser system for Quick Vision HYBRID adds 3D profiling capability. The laser probe with 0.01  $\mu\text{m}$  resolution continuously scans the workpiece surface and gathers coordinate data, enabling the evaluation of surface contours, peak heights, etc. The double pinhole detection method is adopted to prevent measurement being affected by the colour, reflection factor, etc., of the surface.

Available for Quick Vision APEX ; Quick Vision STREAM PLUS ; Quick Vision HYPER and Quick Vision ACCEL models.

## Tracking Auto Focus

### Tracking Auto Focus Function TTL (Through The Lens) \*

For Quick Vision-APEX, Quick Vision-HYPER, Quick Vision-STREAM PLUS, Quick Vision-ULTRA  
The Tracking Auto Focus unit (TAF) allows stable, high-speed measurement in the Z-axis, due to the Knife-edge method adopted in the detection system.

The TAF function tracks the waviness and warp of the workpiece surface in Z direction and enhances throughput compared with normal measuring mode.

When TAF is used on a Quick Vision Stream Plus model, fully non-stop measurements become possible.
