UNIVERSAL  
CYBERNETIC  
CORPORATION  
**INTRODUCTION**

UCC was founded in 1974 by three graduates: Dr. Alan Sargent, Dr. Tom Williams and Professor Henry Matthews. UCC has now been recognised as the world's largest privately owned company for over twenty five years.

From the early days of home micros, UCC's domination in fields of industry as varied as chemical plants, medical research and space exploration was again high-lighted with the launch of our "RX" range of domestic robots.

As you read through this company profile, we hope it gives you an insight into our past and a glimpse of the future.....

Founded way back in 1974, UCC were instrumental in the development of the home micro as they were called then. The company was brought into the public eye with its revolutionary home computer in the early 'eighties made available for the first time at an affordable price. During that same decade, the company marketed a range of computers rapidly advancing in both technological and graphical sophistication. It was this commodity that quickly established our research and development teams as the best in the world.

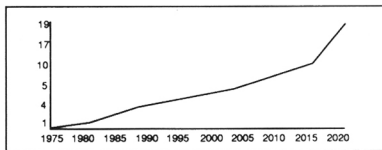

This overwhelming success within a highly lucrative market in so short a period of time resulted in both outstanding corporate success and world-wide recognition.

With the launch of our Voice Activated Computers in the late 1980's, UCC's expansion into new industries was rapid. The company's "RX" range of humanoid robotics made the biggest impact on a world market ever experienced in 1995 when introduced. With a range including industrial, commercial and domestic models, reliable statistics show that now one in three homes has at least one model of the domestic version. All this in just twenty five years since their inception into this lucrative environment!

Expansion continued into the late 'nineties with UCC becoming the largest privately owned corporation in the world by the turn of the century.

The acquisition of U.N.D. Chemicals in 1994 facilitated our move into the drug manufacturing market with the launch of UCC Pharmaceuticals in 1996. This division is now responsible for over 25% of pharmaceutical manufacture in the world.

At the beginning of the twentieth century, we turned our attentions to another exciting field - that of Space Exploration. At that time, the world's Space Agencies had already made many initiatives in this field. However, within fifteen years every leading exploration authority in the world acknowledged us as a major player within this market. Ten years later we had established ourselves as the recognised leader in both Satellite and Space Station technology.

Employees in  
one hundred  
thousands

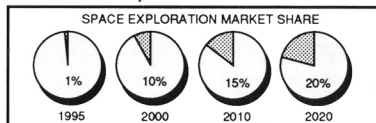

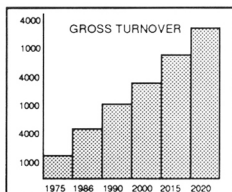

At a time when our space research and development teams were at the forefront of investigative and technological development, another team were investigating with another fascinating aspect of as yet untapped technology - that of Cybematic Re-generation.

## THE FUTURE

The Corporation's strategy remains the same today as it did in 1974. To channel every available energy into the

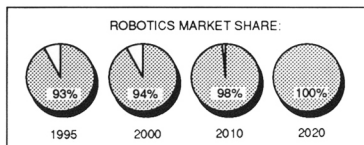

development, improvement and consumer awareness of each and every concept pioneered and marketed by us.

UCC will continue to make every financial resource available to fund projects of commercial, industrial and environmental importance on both a national and international level.

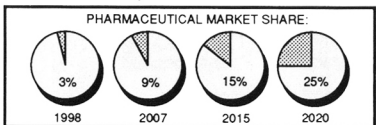

## CUSTOMER PROFILE

UCC's customer base includes some of the world's largest corporate organisations. Time after time, establishments ranging from civil defence departments through to internationally respected research teams have called upon our research, development and technological expertise to advise, liaise and where appropriate, manufacture.

## THE PRODUCTS

### Where to for the 2020s?

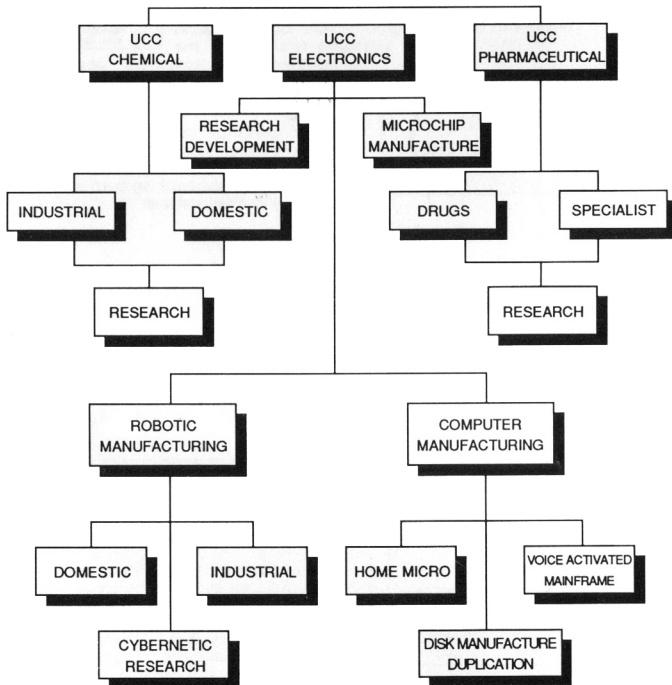

The Universal Cybematics Corporation has been responsible for all the major world-wide technological, scientific and medical advances over the last twenty five years. Our successes in the medical field include the eradication of all forms of cancer forming agents in the human body in 2003 to the cure for Acquired Immune Deficiency Syndrome in 2014.

Our company will make every conceivable effort to increase its world market share of the pharmaceutical market - currently standing at a phenomenal 25%.

Many have recently voiced concern that UCC's 100% market share of the Robotic's manufacturing industry is an unhealthy monopoly. We at the corporation firmly believe that any company that has invested the combination of man-hours, financial support and state-of-the-art technology in any innovative project well deserves this prestigious accolade.
