JET

written by Chris Green
directed by Bruce Artwick

Fly an F-16 Fighting Falcon, the most advanced tactical fighter aircraft in the world. Or put yourself at the controls of a carrier-based F-18 Hornet, the Navy's newest multi-role fighter. Your aircraft is equipped with a full-screen Heads-Up Display for monitoring instruments and environment simultaneously. Multiple 3D window displays let you choose between cockpit, spot plane, tower, full screen, map, and missile's-eye viewpoints.

Free flight mode gets you started. Then you can test your combat performance in a variety of land/sea target strike scenarios, or dogfight against intelligent computer-controlled enemy MiG-21 and MiG-23 fighters. Standard equipment includes a complete arsenal of combat ordnance, search radar, an automatic target tracking computer, and functioning ejection seat. A special multi-player option allows two players using separate machines to dogfight with each other via the serial port connectors.
