SUPER SKIDMARKS
DATA DISK SET

The data disk set consists of three floppy disks. Two track disks, containing twelve new tracks and a new upgraded program disk.

The new SkidMarks 2.21 program disk features:
• Improved loading routines
• Improved Serial support
• New Championship modes
• A new converter program for Imagine
  users wanting to create their own cars.

Floppy Disk Users

- Insert the SkidMarks program disk into your internal disk drive (DFO:) and switch on your Amiga.

Hard Disk Users

- Read the file on the program disk and then drag the Skidmarks icon into your SkidMarks drawer on your hard drive. The new track disks are installed from within the SkidMarks program.
