

MOUSE CONTROLLED INTERFACE

If you select option "2" for mouse-based interface at the first menu, the left and right mouse buttons are used to perform the following functions.

The left mouse button is used to fire the active weapon on your car and to begin movement when you enter a town or after you use the menus.

Pressing **the right mouse button** will pause game play and activate the pull down menus. To make a selection from a pull down menu, first press and then release the right mouse button. Place the pointer over the desired title at the top of the screen. The selected menu title will become highlighted and a list of commands will appear beneath the title. Move the pointer over the menu commands and when the desired command is highlighted, press the left button to select it.

The "**Turn off menus**" option can be used to resume game play if you decide not to choose a command.

NOTE: The menus replace most keyboard commands that are available in the joystick mode.
