		
HOW TO PRODUCE SOAP Bono must collect skeletons from around the castle.	He takes them to his cauldron.	Soap is produced.	Bono takes the soap up a staircase to reach the baths.	His customer is happy.
				
HAZARDS IN THE CASTLE There are many locked doors which cannot be opened without a key.	If Bono treads on a certain part of the floor he releases a volcano of glooks.	There are deadly trapdoors.	Fearsome monsters can be released if he removes the earth around them.	
				
SPIDERS Spiders are harmless unless Bono gets in their way.	They will always keep to the left hand side of a chamber if possible.	They will be lost if they have no wall to follow and will go round in circles.	But they cannot be killed and will eat any bones they find.	And beware — the slightest touch is fatal for Bono.
				
GLOOKS Glooks love the smell of soap and will always move towards a monster who is washing.	If Bono takes soap up a staircase the glooks will move towards it after a few seconds.	The direction in which they are moving is shown on the control panel.	Glooks can kill monsters by trapping them.	But they can also block Bono's route if he takes soap up the wrong staircase.
And be careful that they do not hit Bono when they are moving.				
				
MONSTERS Monsters will always make a beeline for Bono unless their path is blocked.	They can be killed by luring them into trapdoors but their bones will be lost.	If they cannot move in any direction they will suffocate and die.	By carefully positioning the Glooks, Bono can create traps for these deadly creatures.	
				
FOZZY Fozzy is a strong and loyal partner but he is not very bright.	To avoid getting confused he keeps to the right hand wall of a room.	He will stop monsters from attacking Bono	and can protect him from Spiders.	but he will go round in circles if he has no wall to follow. A push from Bono will put him right.
				Keep an eye on him. If he is trapped for a long period of time he will eventually die.
