BONUS GAME! Souls of Darkon

CLASSIC WORKS

Software for Commodore 64 & 128 Computers

Disk Drive and Joystick Required

WARNING! Any similarities to real-life museum robberies are implemented deliberately, with painstaking accuracy.

CLASSIC WORKS

Catch a Thief: You are the Director of Security in a world famous Museum of Fine Arts. Since the museum is being renovated, it is particularly vulnerable to burglars specializing in theft of rare and precious objects. The museum comprises three levels - 81 rooms, 6 corridors and 4 elevators. The building complex can be viewed through any of the three monitors in your office, using the 91 cameras installed throughout the complex. Your salary depends on your success at preventing the theft of the museum's priceless treasures. Varying salary levels increase the difficulty of your task.

You direct the staff of security guards. If you mistakenly send the guard into a room where the thief has disabled the camera, you lose control of that guard until the camera is repaired. You must catch the thief before he leaves the premises, foil his plans and return the masterpiece to its proper position in the gallery. The outside cameras all too accurately pinpoint when you have failed, but may provide a clue to the whereabouts of the *next* thief.

A Sci-Fi adventure fantasy with magical graphics from beyond the sun of Crenal.

Souls of Dakon: You have landed on Megron, a planet where science and sorcery were once used to awesome effect. Long gone is the Grand Council. The obsession for knowledge and power released the evil of DARKON. Your task is to find and destroy him, using your ability to learn and your technical expertise. Only you and your faithful friend KOMPUTA can free the planet.

Get acquainted with the whole line of CLASSIC WORKS** software soon. It's a collection of programs of the same quality you might find in time-tested treasures . . . like a Picasso painting, a Bach cantata, or a story by Dickens.
