PEGASIS

Pegasus takes us back to an age when the battle between Good and Evil was fought by heroes on winged steeds!

Load the first part of the program by typing **LOAD***8** and pressing **RETURN**. Type **RUN** and press **RETURN**. The rest of the program will load and run automatically. Press the **f1** key to begin the game, and then select a one or two-player game by entering 1 or 2. For a one-player game, use joystick Port 1. For a two-player game, Player 1 uses joystick Port 1, and Player 2 uses joystick Port 2. In a one-player game, your Pegasus is white, and in the two-player game Player 1 has the yellow one and that of Player 2 is orange.

You control the Up/Down movement of your Pegasus by pressing the Fire button. This causes its wings to flap, thus giving you lift. Let go of the Fire button to descend. Left/Right movement is controlled by moving the joystick left or right.

Your Pegasus will "phase in" from the ruins at the bottom of the screen. Your enemies, the Black Riders, will "phase in" near the top. As champion of the forces of Good, you must kill all the Black Riders that appear by swooping down on them from above. The Rider will then topple from his mount to the ground, and you must finish him off by running over him at the bottom of the screen. From level 2 onwards, white stallions walk along the ground to pick up any fallen Riders that you have not killed. If they pick any up, then they become Black Riders and can terrorise you once more. If a Black Rider gets you from above, then you lose your mount.

Other creatures will appear at certain times. The Gadflies appear after level 1 and, although they have a very short life, you must avoid them at all costs. The Chimera is a walking purple dragon that appears after level 4. You must not touch it from above, but if you manage to touch it from below you get an extra bonus. The Fazzir is a flying buzzard appearing after level 8. It can only be attacked from behind for a bonus.

Each player has four mounts. An additional mount is awarded for every 5000 points scored. Mounts are shown as wings beside each player's score. In the two-player game both players must try to score as many points as possible, but neither can harm the other.

Scoring.....	10 -	90	points for toppling a Black Rider
	100 -	700	points for killing the Rider
		1000	points for killing a Chimera
		2500	points for killing a Fazzir

To temporarily stop the game press the **f3** key. Press it again to restart. Your disk should last a lifetime as long as you handle it with care. Don't use it for saving any other programs onto; and always observe the precautions printed on the back of the disk envelope.
