BEYOND

CHALLENGING SOFTWARE

Less than human, far more than mere computer

The *Psytron* controls the massive Betula 5 Installation. When the attack comes, it will cope with defensive demands which would leave a human brain unhinged, computer circuits scrambled. Damage in any sector of the base must be assessed and its effect on the fabric of the installation calculated immediately. Human lives will be expended as necessary but if the *Psytron* ever goes down.

*The Spectrum top-seller now converted to the Commodore 64 and better than ever *Psytron* offers...*

Stunning graphics, animation which makes other programmers gasp, a 20 page booklet of hints, tips and help with the discovery of each of six levels of play.

By Tayo Olowu and Paul Voysey
