

C O R R E C T I O N

For Commodore 64

THE RAILROAD WORKS

The **Overpass** feature, described on page 4 of your Railmaster Guide, has been modified to enhance the use of intersecting track segments.

When two sections of track intersect at 90° angles to create an overpass, a diamond-shaped symbol will appear at the intersection, as shown below.

Similarly, when two sections of track intersect at 90° angles, *but no such symbol appears at the intersection, no overpass exists*. If two trains were to travel along these two track sections at the same time, they would collide at the intersection.
