THE RAILROAD WORKS™

Now model railroading becomes *computer* railroading with **The Railroad Works**, your tool for planning and building your own railroad empires across twelve screens of tracks, towns and terrain!

The Railroad Works runs on your creativity and imagination. Your track layouts can be as simple or as complex as you want. And with clearly organized, picture-driven activity menus, building elaborate networks of trains, tracks and scenery is easier than ever!

Choose between two periods: The Golden Age, with old-fashioned, steam-driven Iron Horses, or The Modern Era, with sleek, diesel Powerhouses. Then plan and build your track layouts across twelve screens. A touch of a button gives you a bird's-eye overview of the whole system as your trains pull out of the station and speed along your tracks full steam ahead. Where should tracks and switches go? Should your trains travel through small town America or booming metropolises? How many and what types of rolling stock-cars should you use? And how fast should your trains travel? *All* the decisions are yours to make.

But that's only part of the excitement of **The Railroad Works**. You can save your best layouts and play out your own scenarios in which you service grain companies, stockyards, post offices, etc. Success depends not only on an efficient track system but on how resourceful you are in loading and unloading the right kinds of freight while staying on schedule. With **The Railroad Works**, working on the railroad has never been more challenging!

Developed by The Connelley Group.

The Connelley Group, a team of creative professionals that includes programmers, graphics experts and sound specialists, has created more than 100 programs for home computer systems since its inception in 1979. Group president James Connelley was one of the founders of Epyx Software.
