& All 100% PC Compatibles  
(CGA or EGA Card required)  
Also Color Monitor

# RASTERSCAN

What would you do if all is you and the heat had left?

With your memory not incorrupt and heading for conjunction termination, would you know how to hack it?

Enter the world of RASTERSCAN.

You are a MSB Droid, Class 4, and you are all that is left functioning after the Spaceship you are on, the Cruiser Class X RASTERSCAN, has been crippled by a freak Electrical Storm.

You know that you must restore the functions of the ship, unfortunately all you can remember is how to repair a few useless kitchen implements. This is not going to be easy.

An animated adventure, taking place in real time, but with unreal difficulty.

The weirdest atmosphere of any game you have ever seen.

A completely logical world, with all the problems presented to you in a graphical format.

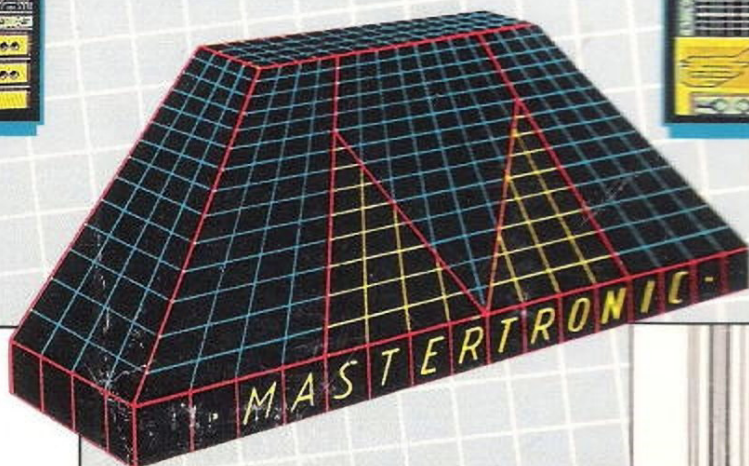

## FEATURING

A wide variety of Challenging Puzzles and lots of screens depicting the spaceship Rasterscan.

Joystick or Keyboard Control

One Player Only

Programs for BOTH the Commodore 64/128, and for IBM PC's and compatibles.
