Soko-Ban

A Strategy Maze Game

You are in the midst of a maze with large, heavy boxes blocking the passages. Your task is to move each and every box (one by one) into a predetermined area of the room. Sound easy? A well-planned strategy is the only way you will ever successfully complete your task. The overhead three-dimensional view of the entire area enables you to contemplate the results of moves before you actually make them. You must think through your next one, two, five, or more moves to be certain your strategy is correct. One wrong move can render the puzzle unsolvable.

Start at level 1 and work your way through the 50 predesigned mazes or randomly select levels to play. Each level becomes more difficult than the previous one. When you feel really competent, challenge up to 3 other players in the competition mode. Design and save another 49 mazes of your own creation.

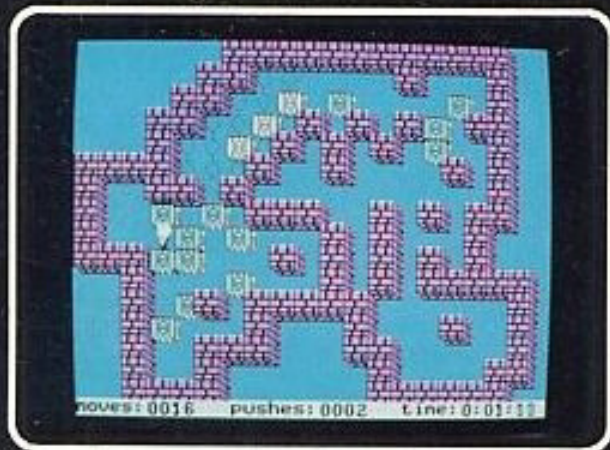

C-64 Version

Scoring is based on number of moves, number of pushes, time required to complete each game and points accumulated. Top scores are automatically recorded and saved, but they can be erased.

With Soko-Ban there is always the challenge to complete just one more maze. And before you know it—you're hooked!

Screens shown are IBM and C-64. Other versions may vary.

IBM Version

FEATURES:

- 50 predesigned mazes
- Create and save 49 additional mazes
- Single player mode OR
- 1 to 4 player competition mode
- Multiple levels of increasing difficulty
- Access to all levels
