Tomahawk™

A Helicopter Simulation

Climb into the cockpit of the most menacing Battle Copter ever to prowl enemy skies: **Tomahawk!**

Tomahawk is a 3-D, real-time flight and combat simulator that accurately re-creates the U.S. Army's AH-64A Apache, the deadliest chopper in the world. This advanced attack helicopter was built to fight and survive, day or night, in the toughest air-war skirmishes.

Whether you're flying at tree-top level, pushing the twin General Electric turbo-shaft engines to almost 200 knots per hour, or pulverizing tanks and aircraft with your lethal arsenal, **Tomahawk** gives you one tracer-hot mission after another!

- Features:**
- 3-D, real-world display;
 - Offensive and defensive flight maneuvers; ground attack and air-to-air interception;
 - Day & Night vision systems; instrument-only flying for bad weather conditions;
 - Selection of combat or training missions; four pilot-rating levels;
 - Complete weapons system including rockets, guns, and laser-guided anti-armour missiles.
