

STRAP IN!

Strap into the pilot's seat of Europe's most advanced combat aircraft, the 'swing wing' Panavia Tornado! This flight simulator must be **FLOWN** in exactly the same way as a real aircraft in a hostile war environment. Against a background of outside views in accurate perspective you will fight extremely able enemy aircraft seen in true 3D. If you can survive, you still have to navigate back to base and land your battle damaged machine, on unfamiliar runways with strong crosswinds. After landing, taxi into a hangar for repairs! (training/practice/ejection-seat modes included).

THE UNIQUE MULTI-USER OPTION

TWO computers can be joined with a special cable (supplied by us). Each aircraft then becomes an 'enemy' aircraft in the other's airspace, each visible and vulnerable to the other! No other program has this option.

TURBO GRAPHICS

Faster and smoother graphics due to 'state of the art' coding adds 'turbo' type processing to your computer.

AUTHOR

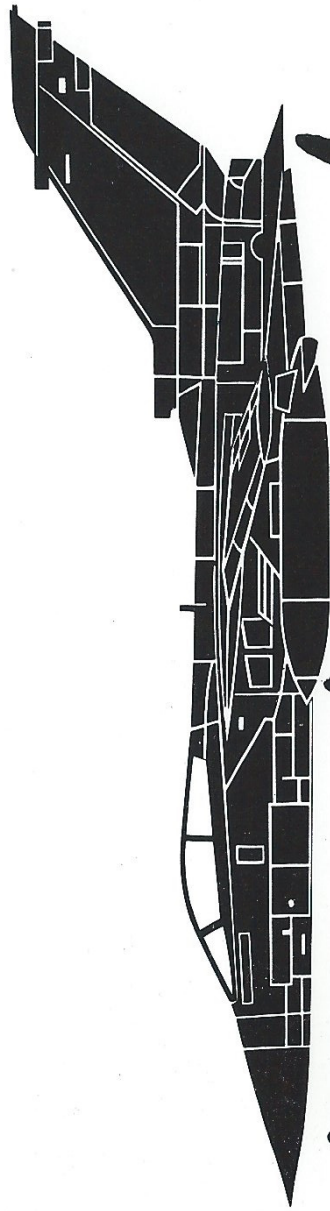

The author worked on the real-life Tornado simulator project, co-designer is a professional jet pilot. Both have appeared on BBC TV's 'Microlive' demonstrating the multi-user flight simulator.
