VIKINGS

LOADING

Press **SHIFT** and **RUN/STOP** simultaneously. Use Joystick in Port 2.

PLAYING

You, Erik, are the leader of a band of Viking warriors. Your warrior Queen has been captured and you have been sent on a task of revenge and rescue.

Your longboat lands you on Stoney Island, a heavily defended British stronghold. You must take revenge on the British by pillaging their settlement and collecting objects that you will need for the second half of your task. Some objects are hidden in huts which you must burn down. But you need a torch to start any fire. The torch is hidden in a tower and you must first find the scaling ladder to gain access.

Objects are... Oar, Sword, Spear, Torch, Shield, Mast, Ladder, Catapult.

Having successfully collected these, you must then get back to the longboat and sail to Death Island where your Queen is held. You must there plunder the fortresses and rampage through the sacred labyrinth, stealing more treasure and wine. Then raid the enchanted enclosure before finally making for the royal stronghold. Here your Queen is held captive.

CONTROLS

Fire button activates the weapon you are carrying. When standing in front of a hut, the Fire button is used to burn the hut down (providing you have the required objects). Objects are collected by walking over them. The joystick is also used to control the longboat.

HINTS

Objects should be collected in a particular order! On Death Island stand in front of the higher part of the wall and use yor piledriver (with FIRE button only) to get through.
