

Thank you for your order from www.CustomBrandShop.com

This full-scale, printable PDF file will give you an idea of what your final brand mark should look like. We add a small amount of edge blur to represent the bleed that may occur in most woods.

Please set your printing preferences to 100% or "Full Scale" so that the page isn't reduced or enlarged. If the ruler below doesn't measure accurately then you may need to readjust your settings.

We try to review each design to ensure it will 3D print without issue, but it is highly recommended that you verify that all text is correct and ideally 1/16" tall or larger for best results. Linework will turn out best if it is 1mm thick or more. Please keep in mind that small details like period dots and apostrophe's like ',. or " don't often survive the production and shipping process but can be easily added with a wood burning pen or soldering iron.

Please notify us if you need your design revised.

Branding isn't a perfect science so the final result will vary based on wood species, temperature, time pressed and various other factors. If the backplate creates any shadowing it can usually be removed by sanding, or branding through a piece of masking tape.
