

Title: The COVID-19 SCAM and the Global Coup - David Rasnick

Short Bio - David William Rasnick, PhD (born 1948) is an American biochemist with over 40 years experience, 20 years in the pharmaceutical/biotech industry. He has worked on emphysema, arthritis, parasites, cancer and AIDS. He is known for his leadership of the AIDS dissident movement, which disputes HIV is the cause of AIDS. He was an advisor to President Thabo Mbeki of South Africa and member of the Presidential AIDS Advisory Panel in 2000. He has 42 scientific publications and two published books: *The Chromosomal Imbalance Theory of Cancer: Autocatalyzed Progression of Aneuploidy is Carcinogenesis* (2012) for researchers (Published by Science Publishers, marketed and distributed by CRC Press/Taylor & Francis Group, ISBN 978-1-57808-737-2) and the 2008 novel *Germ of Lies* (self-published through LuLu.com, ISBN-13: 978-0615251288).

Narrative Overview

Using a PCR test to terrorize billions of people, shut down the world, destroy economies and tens to millions of jobs isn't just scientific/medical misconduct, it is a crime against humanity. Training children to accept enslavement in a totalitarian world is even more abominable.

Before addressing your 6 specific questions regarding the use of PCR to control students' access to school, here is some essential background.

“On 31 December 2019, the WHO China Country Office was informed of cases of pneumonia [of] unknown etiology (unknown cause) detected in Wuhan City, Hubei Province of China. From 31 December 2019 through 3 January 2020, a total of 44 case-patients with pneumonia of unknown etiology were reported to

WHO by the national authorities in China. During this reported period, the causal agent was not identified.” (1)

However, just 4 days later, China declared that a “new type of coronavirus” was the cause. Five days after that, on January 12, China shared the genetic sequence with other countries to use in developing specific diagnostic kits. About a month later, China had the capacity to perform 35,000 genetic tests per day.

The first question I had was why go to all that trouble for only 44 cases of pneumonia? China has over 1 million pneumonia cases every year. Pneumonia can be caused by exposure to many things such as chemicals, chronic drug use, chemotherapy, and malnutrition which then makes people susceptible to bacteria and viruses. Just being old is a risk of developing pneumonia. We simply don’t know what caused pneumonia in Wuhan City. The causes may have been different for different individuals.

Second, going from a handful of pneumonia cases to identifying a new viral cause, followed by a “specific” genetic test in a little over a month could not possibly satisfy even minimal scientific standards. It is very difficult and time consuming to definitively prove the existence of a ‘new’ virus as well as proving that it causes the specific symptoms characteristic of a supposedly new disease.

I wasn’t the only skeptic. In mid January, two Chinese and an American colleague were not convinced (2).

“The facts can be argued,” they said, “particularly regarding causality despite these facts having been officially announced.”

“The data collected so far is not enough to confirm the causal relationship between the new type coronavirus and the respiratory disease. The viral-specific nucleic acids were only discovered in 15 patients.”

Even for truly contagious diseases, it’s very difficult to sort out which—if any—of the hundreds of trillions of viruses and bacteria (3) present in each of us, is *THE* cause of a specific disease. This is why vigorous scientific standards and methods must be used to determine what actually causes a disease or pathology.

The fatal error with using PCR (Polymerase Chain Reaction) tests for viral infections is that the results of the tests have not been scientifically validated by comparison with the authentic virus. In order to prove that a specific virus causes a specific disease, it is essential to capture from the host a disease-causing virus completely intact, free from all other infectious agents and artifacts that can be misleading. It is essential that this same virus be purified from the host by independent researchers as confirmation. This has not been done for COVID-19.

PCR can amplify ANY, otherwise undetectable, small segment of RNA or DNA sequence. It is a serious mistake to declare that detecting these small segments of genetic material is equivalent to detecting actual virus (4). In fact, if PCR is the only way to detect a virus, this is strong evidence that the virus is not the cause of the disease.

PCR tests for specific RNA viruses are currently not feasible for a number of reasons but primarily because the genetic sequences of these viruses are very unstable. In order to get around this problem, the tests search for small, relatively stable sequences of RNA that are common to ALL members of a viral family. At best these tests might be specific for a viral family but not for a specific member, as is claimed for COVID-19. But even then, the results are meaningless until it has been conclusively demonstrated that the PCR test results correlate with the presence of ACTUAL virus in human samples.

May 12, 2020, Jessica Watson stated in the *British Medical Journal* :

“No test gives a 100% accurate result; tests need to be evaluated to determine their sensitivity [percent of positives that are true positives] and specificity [percent of negatives that are true negatives], ideally by comparison with a ‘gold standard.’ The lack of such a clear-cut ‘gold-standard’ for covid-19 testing makes evaluation of test accuracy challenging.” (5)

The gold standards in virology are electron microscopy of human tissues for the presence of actual viral particles and laboratory culturing of pure replicating virus from the same tissues.

The PCR tests are called surrogate markers because they do not detect actual virus, but are hoped to highly correlate with the presence of actual virus. A surrogate marker has meaning only after its accuracy has been determined by comparison with the gold standard methods under real world conditions.

For example, license plates are surrogate markers for motor vehicles. If someone walks in with a box of say 100 license plates, a reasonable assumption is that they came from a 100 vehicles. It is not reasonable to assume what type of vehicle correlates with each license plate. It is not reasonable to assume that the license plates correlate with functioning vehicles. Obviously more information is required for accurate results.

The gold standard comparison in this example is to see how well the vehicles corresponding to the 100 license plates actually operate. You may find a correlation anywhere from 0–100%.

If you learn that the license plates all came from a used car dealer, it is reasonable to assume there is a good correlation between the license plates and vehicles you can

actually drive off the lot. Conversely, if the license plates come from a junk yard, you can expect a zero correlation with functioning vehicles.

To the best of my knowledge, the surrogate markers for HIV (antibody tests, western blot, PCR viral load) were the first tests for a virus holding political significance that FAILED gold standard confirmation. HIV set the precedent for suspending gold standard confirmation of surrogate markers for other viruses of political significance—which includes COVID-19.

The World Health Organization's unprecedented rush orchestrated the poor quality work that created the COVID-19 "pandemic." Early April 2020, two papers reported that electron microscopy had detected coronavirus particles "in the setting of COVID-19"—reminiscent of the "setting of HIV."

In the first paper, 6 of 26 Chinese who died of COVID-19 were reported to have coronavirus particles in their kidneys (6). In the second paper, a 63-year-old black man in Switzerland, who tested negative for the virus, was reported to have coronavirus particles in his kidneys (7). May 8, 2020, Sara Miller and her colleague John Brealey disputed the claims in both studies (8).

When I started an electron microscopy company called Viral Forensics I soon became very familiar with the work of electron microscopist Sara Miller. It was essential that I did because she is an authority of great renown on electron microscopic detection and identification of viruses.

Sara Miller's short article (8) demolished the electron microscopy part of the two studies (6,7):

"We read with concern the articles that report the presence of coronavirus in kidney based on electron microscopic evidence. Neither article, in fact, demonstrates the presence of coronavirus in the kidney."

The lack of gold standard confirmation means the reliability of the PCR tests is highly questionable. Indeed, in March 2020, Zhuang Guihua and colleagues reported that 80% of positive test results were wrong (9). The authors recommend against PCR screening "even for those who are in close contact with a confirmed case." Let's address what is meant by "a confirmed case."

There are two reasons why it is not possible to measure the reliability of the tests for COVID-19. As we have seen, the first and most telling reason is the fact that no unique virus has been proved to cause COVID-19. The CDC itself provides the second and perhaps most disturbing reason.

According to the CDC, both COVID-19 and FLU have the same symptoms and complications (10).

Symptoms

- Fever
- Diarrhea
- Vomiting
- Fatigue
- Muscle aches
- Coughing”
- Shortness of breath or difficulty breathing
- Sore throat
- Runny or stuffy nose
- Headache

Complications

- Pneumonia
- Respiratory failure
- Acute respiratory distress syndrome
- Sepsis
- Cardiac injury (e.g. heart attacks and stroke)
- Multiple-organ failure (respiratory failure, kidney failure, shock)
- Worsening of chronic medical conditions (involving the lungs, heart, nervous system or diabetes)
- Inflammation of the heart, brain or muscle tissues
- Secondary bacterial infections

If you have the FLU and don't test positive for COVID-19, it is just the FLU. Conversely, if you test positive to the PCR test, you become a COVID-19 statistic, regardless of whether or not you have any symptoms.

Summary

“It has frequently been observed that terror can rule absolutely only over people who are isolated against each other and that therefore one of the primary concerns of tyrannical government is to bring this isolation about. Isolation may be the beginning of terror; it certainly is its most fertile ground; it always is its result. This isolation is, as it were, pretotalitarian; its hallmark is impotence insofar as power always comes from people acting together, acting in concert; isolated people are powerless by definition.”

The Origins of Totalitarianism
(1951) Hannah Arendt

We are experiencing the most widespread, prolonged, organized, dismantling of global economies and societies ever seen. The push towards isolating individuals is devastating. This can only lead to instability which in turn leads to opportunities for political takeovers, mass control of the populations, and destruction of civil liberties. **The most loathsome aspect of all is the training of children to accept enslavement in a totalitarian world.**

An unreliable PCR test is the weapon. It can turn the FLU into COVID-19, which then shuts down the world, destroys economies and the fabric of society. Millions—perhaps hundreds of millions—of people will die due to the breakdown of society, the lack of food, etc. Those that don't resist will be enslaved.

1. Should we be trusting Dr. Anthony Fauci?

Absolutely not! Fauci is a criminal and has been since 1984 when he became the Head of the National Institute of Allergies and Infectious Diseases (NIAID).

2. Should we trust Dr. Deborah Birx?

No! Another criminal, otherwise she wouldn't have the job.

3. Doctor, according to the Center for Disease Control in the year 2017-2018 80,000 people died from the common flu, however in 2020 there seems to be some confusion about how many people have died from COVID-19...why is there so much confusion about how many people have died from COVID-19?
 - a. <https://www.cnn.com/2018/09/26/health/flu-deaths-2017--2018-cdc-bn/index.html>

According to the CDC, the symptoms and complications of flu and COVID-19 are identical.

Symptoms

- Fever
- Diarrhea
- Vomiting
- Fatigue
- Muscle aches
- Coughing”
- Shortness of breath or difficulty breathing
- Sore throat
- Runny or stuffy nose
- Headache

Complications

- Pneumonia
- Respiratory failure
- Acute respiratory distress syndrome (i.e. fluid in lungs)
- Sepsis

- Cardiac injury (e.g. heart attacks and stroke)
- Multiple-organ failure (respiratory failure, kidney failure, shock)
- Worsening of chronic medical conditions (involving the lungs, heart, nervous system or diabetes)
- Inflammation of the heart, brain or muscle tissues
- Secondary bacterial infections (i.e. infections that occur in people who have already been infected with flu or COVID-19)

Since the PCR test for a tiny fraction of RNA is the only way to distinguish between the FLU and COVID-19, all we have to do to end the “pandemic” is to outlaw the test today. If we do that, the pandemic is over tomorrow.

4. Doctor and Senator Rand Paul recently stated, “If you look at under age 18, the mortality rate is about one in a million, if you look at age 18-45, the mortality rate is about 10 in 100,000. Above that it increases, but interestingly, it is still pretty small, and the vast majority – even people up to 65 years of age, it may well be between 95 and 99 percent have a very mild case of this. So I’m not saying it’s a benign disease, people do get sick and die from this. But your chances are good. We shouldn’t live in fear forever. We should take normal precautions, we should assess the risks. People who are older should take more precautions, but we shouldn’t, you know, cover the faces of our children and say you’re gonna have to live your whole life with your mask on. We shouldn’t do that, and the government definitely shouldn’t mandate it.” Is he correct? I would love to hear your thoughts on this?

We should do all the sensible things we have always done before COVID.

5. Stanford’s Doctor Scott Atlas, Medical Doctor recently said during a White House press conference, “THE DEADLINESS OF THE CORONAVIRUS IS LESS THAN THAT OF THE SEASONAL FLU FOR CHILDREN.” Can you share your thoughts on the deadliness of COVID-19?

COVID-19 is a phony pandemic. There is no coronavirus pandemic. It only exists because of a fraudulent PCR test. Outlaw the test and the pandemic disappears.

6. Hydroxychloroquine has been an FDA approved drug for decades, why are some doctors not being allowed to recommend it for the treatment of COVID-19 patients?

The perpetrators of the phony COVID-19 pandemic permit only their narrative of what to do. Their main weapon is maintaining chronic fear by controlling the narrative of a global pandemic. They cannot permit any other views.

7. We interviewed Dr. Richard Bartlett who was a medical advisor to Governor Rick Perry of Texas for 7 consecutive years and he stated that for \$237 a person can

use a nebulizer and the FDA approved pulmicort / budesonide to successfully treat COVID-19 patients? What are your thoughts on this?

- a. <https://www.usatoday.com/story/news/investigations/2020/09/03/government-coronavirus-crackdown-angers-alternative-health-providers/5660997002/>

See my answer to Question 9 above.

8. The MIT, Duke, and Medical University of South Carolina graduate Dr. Andrew Kaufman, MD, states that the COVID-19 tests being done are producing false positive test results over half of the time...how is this possible?

It's worse than that. It is not possible to determine what a true positive is with the coronavirus PCR test.

The fatal error with using PCR (Polymerase Chain Reaction) tests for viral infections is that the results of the tests have not been scientifically validated by comparison with the authentic virus. In order to prove that a specific virus causes a specific disease, it is essential to capture from the host a disease-causing virus completely intact, free from all other infectious agents and artifacts that can be misleading. It is essential that this same virus be purified from the host by independent researchers as confirmation. This has not been done for COVID-19.

9. Dr. Dan Erickson has stated "You have a 0.02 [percent] chance of dying from COVID in the state of California," Erickson says in a recent video. "Does that necessitate sheltering in place? Does that necessitate shutting down medical systems? Does that necessitate people being out of work?" I would love for you to share more about this?

NO! What more can I say that I haven't already said?

10. Dr. James Meehan, MD has stated that wearing a mask for prolonged periods of time is actually not healthy for the wearer of the mask...I would love to get your take on this?

He is absolutely right. Not only do masks not prevent infections, wearing them for long periods is actually harmful in many ways. Masks restrict gas exchange, decreasing oxygen in lungs and blood, increasing carbon dioxide in lungs and blood. Extended use of face masks concentrates and increases bacteria and other microorganisms in the mouth, nose, lungs and upper digestive tract, which can lead to decaying teeth, receding gum lines, and seriously nasty breath. An early sign is persistent coughing.

People tend to breathe through their mouth instead of their nose while wearing a mask, causing dry mouth, which leads to a decrease in saliva—saliva is what fights bacteria

and cleanses your mouth. Prolonged wearing can lead to more serious conditions such as stroke and increased risk of heart attacks.

11. Dr. Dan Erickson, FOXNews reported that you said, "When someone dies in this country right now, they're not talking about the high blood pressure, the diabetes, the stroke. They're saying 'Did they die from COVID?'" Erickson says in another video. "We've been to hundreds of autopsies. You don't talk about one thing, you talk about comorbidities. ER doctors now [say] 'It's interesting when I'm writing about my death report, I'm being pressured to add COVID. Why is that?...I would love for you to share more about this?"

It's part of driving the narrative of a COVID pandemic, driving up the phony numbers.

12. Dr. Scott Jensen from Minnesota has said that he received an email from the Minnesota Department of Health coaching him how to fill out death certificates related to COVID-19 and that he has never previously been coached on how to fill out death certificates. How is COVID-19 being treated differently than other viruses by health officials?

- a. Listen -

https://www.youtube.com/watch?v=PcOJVKfPaXY&feature=emb_title

Again, it's part of driving the narrative of a COVID pandemic, driving up the phony numbers.

13. Can we trust Dr. Redfield and the Center for Disease Control?

I don't trust anybody in the government or any of its institutions. I especially don't trust the Department of Health and Human Services. In my view, the heads of the various departments and institutes are criminals.

14. What are your thoughts on The "Vaccine King" Bill Gates and his obsession with vaccines?

Gates is the public face of the largely hidden criminal conspiracy driving the world towards a technocratic totalitarian state.

15. What are your thoughts about the potential of mandated Moderna vaccines?

In the 1980s, manufacturers acknowledged that vaccines cannot be made safe. That's why they lobbied Congress, successfully, to pass the National Childhood Vaccine Act of 1986, which exempted manufacturers from all liability regarding injuries and deaths caused by their vaccines.

You cannot sue the vaccine manufacturers for injuries and death caused by their products. The companies can make any damn vaccine they wish, regardless of how

useless and dangerous without fear of any consequence. If that isn't a criminal law I can't imagine what is.

It is illogical and criminal to offer a vaccine against an unproved viral cause. One should never put anything into one's body that doesn't offer real and rigorously proved benefits. A COVID-19 vaccine will provide **NO** health benefits whatever.

The WHO, CDC, and Bill Gates of all people, are using the excuse of COVID-19 to prepare the people of the world for compulsory testing, vaccinations, contact tracing, and a general loss of liberties.

Gates' stated goal of injecting all 7 billion people on earth with a COVID-19 vaccine is to set a precedent of injecting people with genetic material—in this case RNA—instead of protein antigens as with all previous vaccines.

The injection of genetic material will enable the genetic engineering of humans. This is the real purpose of the WARP speed rush to begin vaccinating people before the end of this year.

In addition to a long list of moral objections, there are REAL and EXISTENTIAL dangers with these vaccines because they use completely new and unproved technologies. This strategy, if implemented, will wind up injuring and killing millions—perhaps hundreds of millions—of people. Some have estimated the mortality could be in the billions.

Robert F. Kennedy Jr. is perhaps the World's most knowledgeable person on the dangers of vaccines. I encourage people to go to Children's Health Defense (childrenshealthdefense.org) for more information on the dangers of vaccines.

16. You've got the mic, what is one thing that you want to share with the Thrive Nation before you drop the mic?

Congress, most governors and mayors are complicit in the destruction of the United States, our Constitution and Liberties. The People of the various states should put those responsible on trial for Crimes Against Humanity.

Following that, the Mega-Corporations and Institutions of Global Finance should be put on trial in the various states as co-conspirators in the Global Coup.
