## Viruses

“In the sciences, people quickly come to

regard as their own personal property that which they have learned and had passed on to them at the universities and academies. If however, someone else now comes along with new ideas that contradict the Credo (that has been recited for years and passed on in turn to others) and in fact even threaten to overturn it, then all passions are raised against this threat and no method is left untried to suppress it. People resist it in every way possible: pretending not to have heard about it; speaking disparagingly of it, as if it were not even worth the effort of looking into the matter. And so a new truth can have a long wait before finally being accepted.” -Goethe

## Introduction

The first isolation of a virus was achieved in 1892 by Russian bacteria hunter Dimitri Iwanowski, who gathered fluid from diseased tobacco plants. He passed this liquid through a filter fine enough to retain bacteria; yet to Iwanowski's surprise, the bacteria-free filtrate easily made healthy plants sick. In 1898 a Dutch botanist, Martinus Willem Beijerinck, repeating the experiment, also recognized that there was an invisible cause and named the infectious agent “tobacco mosaic virus”. In the same year as Beijerinck's report,

German scientists purified a liquid containing filterable viruses that caused foot-and-mouth disease in cattle (viruses were at one time called “filterable viruses,” but eventually the term “filterable” came to apply only to viruses, and was dropped). Walter Reed followed in 1901 with a filtrate responsible for yellow fever, and soon dozens of other disease-causing viruses were found.

In 1935 another American, Wendell M. Stanley, went back to the beginning and created pure crystals of tobacco mosaic virus from a filtered liquid solution. He affirmed that these crystals could easily infect plants, and concluded that a virus was not a living organism, since it could be crystallized like salt and yet remain infectious. Subsequently, bacteriologists all over the world began filtering for viruses, and a new area of biology was born-virology.

Historically, medical science has vacillated on the question of whether a virus is alive. Originally it was described as nonliving, but is currently said to be an extremely complex molecule or an extremely simple microorganism, and is usually referred to as a parasite having a cycle of life. (The term “killed” is applied to certain viral vaccines.)

thus implying an official conviction that viruses live.) Commonly composed of either DNA or RNA cores with protein coverings, and having no inherent reproductive ability, viruses depend upon the host for replication. They must utilize the nucleic acids of living cells they infect to reproduce their proteins (i.e., trick the host into producing them), which are then assembled into new viruses like cars on an assembly line. Theoretically, this is their only means of surviving and infecting new cells or hosts.

## **Birth of Virology - A Miscarriage?**

Underlying the birth of virology was the doctrine of monomorphism—that all microorganisms (herein called microforms) are fixed species, unchangeable; that each pathological type produces (usually) only one specific disease; that microforms never arise endogenously, i.e., have absolute origin within the host; and that blood and tissues are sterile under healthy conditions. This last point warrants immediate comment.

Theoretically, under ideal health conditions the blood might be sterile, though it has an inherent potential to develop morbid

microforms, as discussed in the main text of this book. Long and repeated observation of live blood in the phase-contrast, dark-field microscope, however, shows that the blood can contain various microforms in an otherwise asymptomatic host, or in a condition defined as normal or healthy in orthodox terms. The forms are easily visible before other physical symptoms arise. (Since long and repeated observation has correlated their presence with other disease symptoms and their disappearance with the return of health, they serve as indicators of impending outward signs of disease.)

**Monomorphism** was the cornerstone of developments in 20th-century medical research and treatments. Refusal by the mainstream to examine fairly, much less accept, the demonstrated facts of pleomorphism—that viruses and bacteria (and also yeast and fungi) are evolutions from the microzyma; that microforms can rapidly change their form (evolve and “devolve”) in vivo, one becoming another dependent upon conditions in the inner terrain (environment); that blood and tissues are not necessarily sterile; and that there are no specific diseases, but only specific disease conditions—was the foundation of a latter day “Galileo debate.”

is so called because those who wore the “robes” of scientific authority, reprising the religious fanatics who punished the noted astronomer for his truths, would not be swayed from folly when presented with its contrary proofs. These proofs began in earnest with Antoine Bechamp in the last century (who also endured the indignation of a fanatical clergy).

In the early third of the 20th century, the heated debate took place over filterable bacteria versus non-filterable. This was a major battle concerning micromorphology (discussed briefly below). The orthodox view prevailed: bacterial forms were not small enough to pass, or did not have a smaller, earlier stage. What passed through “bacteria-proof filters was something else, i.e., viruses. Standard medical textbooks long made this fettering distinction between bacteria and viruses. Subsequently, however, the cellular nature of many filterable forms originally thought to be viruses, such as some mycoplasmas, rickettsias, and various other groups, has been established. In this writer’s opinion, with the victory of the monomorphic view, deeper understanding of infectious “disease” was lost, setting the stage for cancer, degenerative symptoms and A.

**Missing Proof for HIV, SARS-CoV-2 etc.**

Wolfgang Weuffen's main journalistic work is the book "Virus Mania" (co-authored by Dr. Claus Köhnlein, MD, Samantha Bailey, MD, Dr. Stefano Scoglio; German edition: "Virus-Wahn"). "Virus

Mania' is masterfully and courageously written," stated Wolfgang Weuffen († 2013), professor of medicine and specialist in microbiology and infection epidemiology.

A decisive thesis of "Virus Mania" is that there is no

evidence that the particles that have been given names like HIV, H5N1 or SARS-CoV-2 are disease-causing viruses—and that these particles may very well be of non-viral origin. One central reason for this is that the particles claimed to be viruses have not been purified in the relevant studies. However, such "purification" is an indispensable prerequisite for detecting viruses and creating valid antibody and PCR tests based on them.

**This is also stated by scientists who are the most renowned in the world, among them:**

**White and Fenner:** "It's an essential prerequisite."

**Luc Montagnier:** "It is necessary."

**Robert Gallo:** "You have to purify."

**Françoise Barré-Sinoussi:** "... you have to purify the virus from all this mess."

**Jean-Claude Chermann:** "Yes, of course... Absolutely."

**David Gordon:** "It's a natural step from obtaining the virus in cell culture to then obtain purified virus."

**Dominic Dwyer:** "The purification, as far as one can go, is important in analysis of any virus or bacteria, for that matter well."

**Wan Beom Park:** "In the outbreak situation, isolation of causative virus is indispensable for developing and evaluating diagnostic tools, therapeutics, and vaccine candidates."

**Robert O. Young:** "The genetic sequencing of the coronavirus is cobbled together from several sources: a piece or pieces of RNA that they have arbitrarily been chosen as "relevant clues"; chosen according to a bias favor of a certain type of 

genetic material totally unrelated to the isolation and purification and culturing of an actual virus."

**What is the proper way to isolate, characterize and demonstrate a new virus?**

## Koch vs Rivers

### Koch (1884)

1. The microorganism found in the ill but not the healthy
2. The microorganism must be isolated from a diseased organism and grown in pure culture.
3. Produce same disease in host
4. Re-isolation of microorganism

### Rivers (1937)

1. Isolation of virus from diseased host
2. Cultivation of virus in host cells
3. Proof of filterability
4. Produce same disease in host
5. Re-isolation of virus
6. Detection of a specific immune response to virus

## Method for Isolating Virus

What is the proper way to isolate, characterize and demonstrate a new virus is outlined on the website of Dr. Andrew Kaufman, MD.

Experts Stating that There Is No Proof that the

# Particles Named SARS-CoV-2 Belong to a Disease-Causing Virus

## Eleni Papadopulos-Eleopulos

Biophysicist and head of the Australian Perth Group; the world's first expert to understand the trouble with (missing) viral isolation/purification and to show unequivocally that HIV has never been detected

## Dr. Kelly Brogan, MD

Holistic psychiatrist, neurologist and medical doctor in private practice in New York; author of the *New York Times* bestselling book "A Mind of Your Own, Own Your Self"

## Dr. Stefano Scoglio, BSc PhD

Expert in microbiology and co-author of "Virus Mania"; nominated for the Nobel Prize in Medicine (2018)

## Dr. Andrew Kaufman, MD

Forensic psychiatrist; with a BSc from M.I.T.  
in molecular biology

### **Dr. Thomas Cowan, MD**

He attended Duke University with a degree in  
biology; author of "The Contagion Myth"

### **Dr. Valendar F. Turner**

Emergency physician and member of the  
Perth Group

### **Prof. Dr. Ivo Juránek, PhD DSc**

Research Professor, physician, biochemist  
and pharmacologist, Laboratory Head of  
Slovak Academy of Sciences

### **Dr. Fabio Franchi, MD**

Former medical director in an Infectious  
Disease Ward, specialized in infectious  
diseases and hygiene and preventive  
medicine, Società Scientifica per il Principio  
di Precauzione (SSPP), Italy; author of the  
book "La catastrofe provocata dal virus che  
non c'è" ("The catastrophe caused by the  
virus that is not there")

## **Celia Farber**

Award-winning journalist; contributor to *Uncover DC*, and in the past she has written for *Harper's*, *Esquire*, *Rolling Stone* and more; author of "Serious Adverse Events: An Uncensored History of AIDS," and the editor of *The Truth Barrier*; she co-hosts "The Whistleblower Newsroom" with Kristina Borjesson on PRN, Fridays at 10am.

## **Torsten Engelbrecht**

Award-winning investigative journalist from Hamburg and author of "Virus Mania" (together with Dr. Claus Köhnlein, MD, Dr. Samantha Bailey, MD, and Dr. Stefano Scoglio), the world's most comprehensive critique of the virus craze that has been rampant for more than 100 years

## **Adv. Anthony Brink**

Advocate of the High Court of South Africa and former district- and regional court magistrate; national chairman of the Treatment Information Group

## **Dr. Kevin P. Corbett**

Independent research consultant and health scientist

## **Dr. Nancy Turner Banks**

Graduate of the Harvard Medical School, author of "AIDS, Opium, Diamonds, and Empire" Christine Massey Canadian former biostatistician in the field of cancer research who submitted FOIs worldwide receiving no record of SARS-COV-2 purification

## **Kamala Taris**

Member of the executive board of the Czech organization RESETHEUS (Return to Essential Scientific Ethos and Transparency)

## **Jon Rappoport**

Free-lance investigative reporter and author of "The Matrix Revealed"

## **Dr. Saeed A. Qureshi, PhD**

30+ years with Health Canada in conducting hands-on and multi-disciplinary laboratory research in pharmaceuticals regulatory

assessment; internationally recognized expert in pharmacokinetics, biopharmaceutics, drug dissolution testing, and analytical chemistry

### **Prof. Francesco Ferella, PhD**

Professor of industrial production of bio-drugs at the University of L'Aquila (Italy)

### **Andrew Johnson**

University Technology Tutor in the UK;  
operator of the site Investigatin the Alleged COVID-19 Pandemic

### **Dr. Barre Paul Lando**

Physician, Kinesiologist - Functional Movement Specialist & Master Gardener;  
MSc in Social Psychology (Utah State University)Dr. Stefan LankaMolecular Biologist

### **Sally Fallon Morell**

Founding president of the Weston A. Price Foundation

### **Amandha Vollmer, BSc**

Argrarian biotechnologist and graduate of the Canadian College of Naturopathic Medicine.

**Robert O. Young, MSc DSc PhD,  
Naturopathic Practitioner**

Commissioner at The International Tribunal of Natural Justice; Universal Diagnostic Medical Center; Author of of over 70 books and 3000 published articles.

**Dr. Urmie Ray, BA, MA, Mmath,  
PhD Cantab**

Former mathematician and professor at the Université de Reims; author of the book "On Science: Concepts, Cultures, and Limits"

**David Šubík**

Sociologist, collaborates with the Czech organization RESETHEUS (Return to Essential Scientific Ethos and Transparency)

**Dr. Melissa Sell**

Health mindset coach and chiropractor  
([drmelissasell.com](http://drmelissasell.com))

## **Dr. Jordan Grant, MD**

Urologist, Paris Healthcare Group

## **Jaroslav Belsky**

Oral surgeon and dentist

## **Dr. John Bergman, DC**

Doctor of chiropractic

## **Dr. William P. Trebing, DC**

Physician, chiropractor and author of "Good-  
Bye Germ Theory!"

## **Dr. Dolores Cahill Reid Sheftall, MD**

## **Adam and Josh Bigelsen**

Holistic wellness coaches and educators for  
the Bigelsen Academy

## **Dr. Ben Tapper Torsten Knackstedt**

## **Dr. Roger Hodkinson**

CEO of Western Medical Assessments; he has been the Company's Medical Director for over 20 years.

## Bob Stagnitto

He was a student of Natural Hygiene since he was 18 (at the beginning of 2021 he was 70); he earned a degree in naturopathy, spinology and acupuncture; he worked with raw food pioneer T.C. Fry for a short while.
